- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11139
  If the pTokens array contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, then this token **must** be the first token in the array
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11101
  For any element of pTokens, if type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT and the dynamicGeneratedPipelineLayout feature is not enabled, then the pipelineLayout **must** not be VK_NULL_HANDLE
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11102
  For any element of pTokens, if type is either VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT and pipelineLayout is VK_NULL_HANDLE, then the pNext chain **must** include a VkPipelineLayoutCreateInfo struct
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11103
  For any element of pTokens, the offset **must** be greater than or equal to the offset member of the previous tokens
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11104
  For any element of pTokens, if type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT,

VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT, then `shaderStages` **must** contain graphics stages

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11105
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT, then `shaderStages` **must** be VK_SHADER_STAGE_COMPUTE_BIT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11106
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, then `shaderStages` **must** contain VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11107
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT, then the `shaderStages` **must** contain VK_SHADER_STAGE_MESH_BIT_NV
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11108
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, then `shaderStages` **must** contain ray tracing stages
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11109
  If `shaderStages` contains graphics stages then the state tokens in `pTokens` **must** not include VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11110
  If `shaderStages` is VK_SHADER_STAGE_COMPUTE_BIT then the state tokens in `pTokens` **must** only include VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11111
  If `shaderStages` contains ray tracing stages then the state tokens in `pTokens` **must** only include VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT,

VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11112
  The `shaderStages` **must** only contain stages from one of the following:
  - VK_SHADER_STAGE_ALL (if the `descriptorHeap` feature is enabled)
  - graphics stages
  - VK_SHADER_STAGE_COMPUTE_BIT
  - mesh stages and VK_SHADER_STAGE_FRAGMENT_BIT
  - ray tracing stages
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11113
  If `shaderStages` contains VK_SHADER_STAGE_FRAGMENT_BIT, then `shaderStages` **must** also contain VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_CREATE_INFO_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkIndirectCommandsLayoutUsageFlagBitsEXT values
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-parameter
  `shaderStages` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pipelineLayout-parameter
  If `pipelineLayout` is not VK_NULL_HANDLE, `pipelineLayout` **must** be a valid VkPipelineLayout handle
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-parameter
  `pTokens` **must** be a valid pointer to an array of `tokenCount` valid VkIndirectCommandsLayoutTokenEXT structures
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-tokenCount-arraylength
  `tokenCount` **must** be greater than `0`

Bits which **can** be set in VkIndirectCommandsLayoutCreateInfoEXT::`flags`, specifying usage hints of an indirect command layout, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsLayoutUsageFlagBitsEXT {
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT = 0x00000001,
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT = 0x00000002,
} VkIndirectCommandsLayoutUsageFlagBitsEXT;
```

- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT specifies that the layout is always used with the manual preprocessing step through calling vkCmdPreprocessGeneratedCommandsEXT and executed by vkCmdExecuteGeneratedCommandsEXT with `isPreprocessed` set to VK_TRUE.
- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT specifies that the processing of sequences will happen at an implementation-dependent order, which is not guaranteed to be deterministic using the same input data. This flag is ignored when the `shaderStages` is VK_SHADER_STAGE_COMPUTE_BIT as it is implied that the dispatch sequence is always unordered.

```
// Provided by VK_EXT_device_generated_commands
typedef VkFlags VkIndirectCommandsLayoutUsageFlagsEXT;
```

`VkIndirectCommandsLayoutUsageFlagsEXT` is a bitmask type for setting a mask of zero or more VkIndirectCommandsLayoutUsageFlagBitsEXT.

Indirect command layouts for `VK_EXT_device_generated_commands` are destroyed by:

```
// Provided by VK_EXT_device_generated_commands
void vkDestroyIndirectCommandsLayoutEXT(
    VkDevice                                    device,
    VkIndirectCommandsLayoutEXT                 indirectCommandsLayout,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the layout.
- `indirectCommandsLayout` is the layout to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11114
  All submitted commands that refer to `indirectCommandsLayout` **must** have completed execution
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11115
  If `VkAllocationCallbacks` were provided when `indirectCommandsLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11116

If no VkAllocationCallbacks were provided when indirectCommandsLayout was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyIndirectCommandsLayoutEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-parameter
  If indirectCommandsLayout is not VK_NULL_HANDLE, indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-vkDestroyIndirectCommandsLayoutEXT-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-parent
  If indirectCommandsLayout is a valid handle, it **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to indirectCommandsLayout **must** be externally synchronized

Indirect command layouts for VK_NV_device_generated_commands are created by:

```
// Provided by VK_NV_device_generated_commands
VkResult vkCreateIndirectCommandsLayoutNV(
    VkDevice                                    device,
    const VkIndirectCommandsLayoutCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkIndirectCommandsLayoutNV*                 pIndirectCommandsLayout);
```

- device is the logical device that creates the indirect command layout.
- pCreateInfo is a pointer to a VkIndirectCommandsLayoutCreateInfoNV structure containing parameters affecting creation of the indirect command layout.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pIndirectCommandsLayout is a pointer to a VkIndirectCommandsLayoutNV handle in which the resulting indirect command layout is returned.

Valid Usage

- VUID-vkCreateIndirectCommandsLayoutNV-deviceGeneratedCommands-02929
  The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateIndirectCommandsLayoutNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateIndirectCommandsLayoutNV-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkIndirectCommandsLayoutCreateInfoNV structure
- VUID-vkCreateIndirectCommandsLayoutNV-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateIndirectCommandsLayoutNV-pIndirectCommandsLayout-parameter
  `pIndirectCommandsLayout` **must** be a valid pointer to a VkIndirectCommandsLayoutNV handle
- VUID-vkCreateIndirectCommandsLayoutNV-device-queuecount
  The device **must** have been created with at least `1` queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkIndirectCommandsLayoutCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkIndirectCommandsLayoutCreateInfoNV {
    VkStructureType                           sType;
    const void*                               pNext;
    VkIndirectCommandsLayoutUsageFlagsNV      flags;
    VkPipelineBindPoint                       pipelineBindPoint;
    uint32_t                                  tokenCount;
    const VkIndirectCommandsLayoutTokenNV*    pTokens;
    uint32_t                                  streamCount;
    const uint32_t*                           pStreamStrides;
} VkIndirectCommandsLayoutCreateInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- pipelineBindPoint is the VkPipelineBindPoint that this layout targets.
- flags is a bitmask of VkIndirectCommandsLayoutUsageFlagBitsNV specifying usage hints of this layout.
- tokenCount is the length of the individual command sequence.
- pTokens is an array describing each command token in detail. See VkIndirectCommandsTokenTypeNV and VkIndirectCommandsLayoutTokenNV below for details.
- streamCount is the number of streams used to provide the token inputs.
- pStreamStrides is an array defining the byte stride for each input stream.

The following code illustrates some of the flags:

```
void cmdProcessAllSequences(cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsTokens, sequencesCount, indexbuffer, indexbufferOffset)
{
  for (s = 0; s < sequencesCount; s++)
  {
    sUsed = s;

    if (indirectCommandsLayout.flags &
VK_INDIRECT_COMMANDS_LAYOUT_USAGE_INDEXED_SEQUENCES_BIT_NV) {
      sUsed = indexbuffer.load_uint32( sUsed * sizeof(uint32_t) + indexbufferOffset);
    }

    if (indirectCommandsLayout.flags &
VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_NV) {
      sUsed = incoherent_implementation_dependent_permutation[ sUsed ];
    }

    cmdProcessSequence( cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsTokens, sUsed );
  }
}
```

When tokens are consumed, an offset is computed based on token offset and stream stride. The resulting offset is required to be aligned. The alignment for a specific token is equal to the scalar alignment of the data type as defined in Alignment Requirements, or VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minIndirectCommandsBufferOffsetAlignment, whichever is lower.

NOTE A minIndirectCommandsBufferOffsetAlignment of 4 allows VkDeviceAddress to be packed as uvec2 with scalar layout instead of uint64_t with 8 byte alignment. This enables direct compatibility with D3D12 command signature layouts.

Valid Usage

- VUID-VkIndirectCommandsLayoutCreateInfoNV-pipelineBindPoint-02930
  The `pipelineBindPoint` **must** be VK_PIPELINE_BIND_POINT_GRAPHICS or VK_PIPELINE_BIND_POINT_COMPUTE
- VUID-VkIndirectCommandsLayoutCreateInfoNV-tokenCount-02931
  `tokenCount` **must** be greater than `0` and less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxIndirectCommandsTokenCount`
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-02932
  If `pTokens` contains an entry of VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV it **must** be the first element of the array and there **must** be only a single element of such token type
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-09585
  If `pTokens` contains an entry of VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV it **must** be the first element of the array and there **must** be only a single element of such token type
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-02933
  If `pTokens` contains an entry of VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV there **must** be only a single element of such token type
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-02934
  All state tokens in `pTokens` **must** occur before any action command tokens (VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_NV, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_NV, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV , VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_NV)
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-02935
  The content of `pTokens` **must** include one single action command token that is compatible with the `pipelineBindPoint`
- VUID-VkIndirectCommandsLayoutCreateInfoNV-streamCount-02936
  `streamCount` **must** be greater than `0` and less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxIndirectCommandsStreamCount`
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pStreamStrides-02937
  Each element of `pStreamStrides` **must** be greater than `0` and less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxIndirectCommandsStreamStride`. Furthermore the alignment of each token input **must** be ensured
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pipelineBindPoint-09088
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_COMPUTE then the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedCompute` feature **must** be enabled
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pipelineBindPoint-09089
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_COMPUTE then the state tokens in

pTokens **must** only include VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_NV, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV

- VUID-VkIndirectCommandsLayoutCreateInfoNV-pipelineBindPoint-09090
  If pipelineBindPoint is VK_PIPELINE_BIND_POINT_COMPUTE and pTokens includes VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV, then the VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutCreateInfoNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_CREATE_INFO_NV
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pNext-pNext
  pNext **must** be NULL
- VUID-VkIndirectCommandsLayoutCreateInfoNV-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkIndirectCommandsLayoutUsageFlagBitsNV values
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pipelineBindPoint-parameter
  pipelineBindPoint **must** be a valid VkPipelineBindPoint value
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pTokens-parameter
  pTokens **must** be a valid pointer to an array of tokenCount valid VkIndirectCommandsLayoutTokenNV structures
- VUID-VkIndirectCommandsLayoutCreateInfoNV-pStreamStrides-parameter
  pStreamStrides **must** be a valid pointer to an array of streamCount uint32_t values
- VUID-VkIndirectCommandsLayoutCreateInfoNV-tokenCount-arraylength
  tokenCount **must** be greater than 0
- VUID-VkIndirectCommandsLayoutCreateInfoNV-streamCount-arraylength
  streamCount **must** be greater than 0

Bits which **can** be set in VkIndirectCommandsLayoutCreateInfoNV::flags, specifying usage hints of an indirect command layout, are:

```
// Provided by VK_NV_device_generated_commands
typedef enum VkIndirectCommandsLayoutUsageFlagBitsNV {
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV = 0x00000001,
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_INDEXED_SEQUENCES_BIT_NV = 0x00000002,
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_NV = 0x00000004,
} VkIndirectCommandsLayoutUsageFlagBitsNV;
```

- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV specifies that the

layout is always used with the manual preprocessing step through calling vkCmdPreprocessGeneratedCommandsNV and executed by vkCmdExecuteGeneratedCommandsNV with isPreprocessed set to VK_TRUE.

- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_INDEXED_SEQUENCES_BIT_NV specifies that the input data for the sequences is not implicitly indexed from 0..sequencesUsed, but an application-provided VkBuffer encoding the index is provided.
- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_NV specifies that the processing of sequences **can** happen at an implementation-dependent order, which is not guaranteed to be coherent using the same input data. This flag is ignored when the pipelineBindPoint is VK_PIPELINE_BIND_POINT_COMPUTE as it is implied that the dispatch sequence is always unordered.

```
// Provided by VK_NV_device_generated_commands
typedef VkFlags VkIndirectCommandsLayoutUsageFlagsNV;
```

VkIndirectCommandsLayoutUsageFlagsNV is a bitmask type for setting a mask of zero or more VkIndirectCommandsLayoutUsageFlagBitsNV.

Indirect command layouts for VK_NV_device_generated_commands are destroyed by:

```
// Provided by VK_NV_device_generated_commands
void vkDestroyIndirectCommandsLayoutNV(
    VkDevice                                    device,
    VkIndirectCommandsLayoutNV                  indirectCommandsLayout,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the logical device that destroys the layout.
- indirectCommandsLayout is the layout to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyIndirectCommandsLayoutNV-indirectCommandsLayout-02938
  All submitted commands that refer to indirectCommandsLayout **must** have completed execution
- VUID-vkDestroyIndirectCommandsLayoutNV-indirectCommandsLayout-02939
  If VkAllocationCallbacks were provided when indirectCommandsLayout was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyIndirectCommandsLayoutNV-indirectCommandsLayout-02940
  If no VkAllocationCallbacks were provided when indirectCommandsLayout was created, pAllocator **must** be NULL
- VUID-vkDestroyIndirectCommandsLayoutNV-deviceGeneratedCommands-02941
  The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands feature

must be enabled

Valid Usage (Implicit)

- VUID-vkDestroyIndirectCommandsLayoutNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyIndirectCommandsLayoutNV-indirectCommandsLayout-parameter
  If `indirectCommandsLayout` is not VK_NULL_HANDLE, `indirectCommandsLayout` **must** be a valid VkIndirectCommandsLayoutNV handle
- VUID-vkDestroyIndirectCommandsLayoutNV-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyIndirectCommandsLayoutNV-indirectCommandsLayout-parent
  If `indirectCommandsLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectCommandsLayout` **must** be externally synchronized

38.1.2. Token Input Streams

For `VK_EXT_device_generated_commands`, the input streams **can** contain raw `uint32_t` values, existing indirect commands such as:

- VkDrawIndirectCommand
- VkDrawIndexedIndirectCommand
- VkDispatchIndirectCommand
- VkDrawMeshTasksIndirectCommandNV
- VkDrawMeshTasksIndirectCommandEXT
- VkTraceRaysIndirectCommandKHR
- VkTraceRaysIndirectCommand2KHR

or additional commands as listed below. How the data is used is described in the next section.

The `VkBindIndexBufferIndirectCommandEXT` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkBindIndexBufferIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    VkIndexType        indexType;
} VkBindIndexBufferIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as index buffer.
- `size` is the byte size range which is available for this operation from the provided address.
- `indexType` is a VkIndexType value specifying how indices are treated.

Valid Usage

- VUID-VkBindIndexBufferIndirectCommandEXT-None-11117
  The buffer's usage flags from which the address was acquired **must** have the VK_BUFFER_USAGE_INDEX_BUFFER_BIT bit set
- VUID-VkBindIndexBufferIndirectCommandEXT-bufferAddress-11118
  The `bufferAddress` **must** be aligned to the VkIndexType of the `indexType` used

Valid Usage (Implicit)

- VUID-VkBindIndexBufferIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value
- VUID-VkBindIndexBufferIndirectCommandEXT-indexType-parameter
  `indexType` **must** be a valid VkIndexType value

The `VkBindVertexBufferIndirectCommandEXT` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkBindVertexBufferIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    uint32_t           stride;
} VkBindVertexBufferIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as vertex input binding.
- `size` is the byte size range which is available for this operation from the provided address.
- `stride` is the byte size stride for this vertex input binding as in `VkVertexInputBindingDescription::stride`.

Valid Usage

- VUID-VkBindVertexBufferIndirectCommandEXT-None-11120
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT bit set

Valid Usage (Implicit)

- VUID-VkBindVertexBufferIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value

The `VkDrawIndirectCountIndirectCommandEXT` structure specifies the input data for all draw-type tokens.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkDrawIndirectCountIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           stride;
    uint32_t           commandCount;
} VkDrawIndirectCountIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used for draw commands.
- `stride` is the byte size stride for the command arguments.
- `commandCount` is the number of commands to execute.

The corresponding indirect draw structure data will be read from the buffer address.

Valid Usage

- VUID-VkDrawIndirectCountIndirectCommandEXT-None-11122
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set

Valid Usage (Implicit)

- VUID-VkDrawIndirectCountIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value

The `VkIndirectCommandsStreamNV` structure specifies the input data for one or more tokens at processing time.

```
// Provided by VK_NV_device_generated_commands
typedef struct VkIndirectCommandsStreamNV {
    VkBuffer        buffer;
    VkDeviceSize    offset;
} VkIndirectCommandsStreamNV;
```

- `buffer` specifies the VkBuffer storing the functional arguments for each sequence. These arguments **can** be written by the device.
- `offset` specifies an offset into `buffer` where the arguments start.

Valid Usage

- VUID-VkIndirectCommandsStreamNV-buffer-02942
  The `buffer`'s usage flag **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set
- VUID-VkIndirectCommandsStreamNV-offset-02943
  The `offset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minIndirectCommandsBufferOffsetAlignment`
- VUID-VkIndirectCommandsStreamNV-buffer-02975
  If `buffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-VkIndirectCommandsStreamNV-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle

For `VK_NV_device_generated_commands`, the input streams **can** contain raw `uint32_t` values, existing indirect commands such as:

- VkDrawIndirectCommand
- VkDrawIndexedIndirectCommand
- VkDrawMeshTasksIndirectCommandNV
- VkDrawMeshTasksIndirectCommandEXT
- VkDispatchIndirectCommand

or additional commands as listed below. How the data is used is described in the next section.

The `VkBindShaderGroupIndirectCommandNV` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV token.

```
// Provided by VK_NV_device_generated_commands
typedef struct VkBindShaderGroupIndirectCommandNV {
    uint32_t    groupIndex;
} VkBindShaderGroupIndirectCommandNV;
```

- `groupIndex` specifies which shader group of the current bound graphics pipeline is used.

Valid Usage

- VUID-VkBindShaderGroupIndirectCommandNV-None-02944
  The current bound graphics pipeline, as well as the pipelines it may reference, **must** have been created with VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV
- VUID-VkBindShaderGroupIndirectCommandNV-index-02945
  `groupIndex` **must** be within range of the accessible shader groups of the current bound graphics pipeline. See vkCmdBindPipelineShaderGroupNV for further details

The `VkBindIndexBufferIndirectCommandNV` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_NV token.

```
// Provided by VK_NV_device_generated_commands
typedef struct VkBindIndexBufferIndirectCommandNV {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    VkIndexType        indexType;
} VkBindIndexBufferIndirectCommandNV;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as index buffer.
- `size` is the byte size range which is available for this operation from the provided address.
- `indexType` is a VkIndexType value specifying how indices are treated. Instead of the Vulkan enum values, a custom `uint32_t` value **can** be mapped to VkIndexType by specifying the `VkIndirectCommandsLayoutTokenNV::pIndexTypes` and `VkIndirectCommandsLayoutTokenNV::pIndexTypeValues` arrays.

Valid Usage

- VUID-VkBindIndexBufferIndirectCommandNV-None-02946
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_INDEX_BUFFER_BIT bit set
- VUID-VkBindIndexBufferIndirectCommandNV-bufferAddress-02947
  The `bufferAddress` **must** be aligned to the `indexType` used

Valid Usage (Implicit)

- VUID-VkBindIndexBufferIndirectCommandNV-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value
- VUID-VkBindIndexBufferIndirectCommandNV-indexType-parameter
  `indexType` **must** be a valid VkIndexType value

The `VkBindVertexBufferIndirectCommandNV` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_NV token.

```
// Provided by VK_NV_device_generated_commands
typedef struct VkBindVertexBufferIndirectCommandNV {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    uint32_t           stride;
} VkBindVertexBufferIndirectCommandNV;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as vertex input binding.
- `size` is the byte size range which is available for this operation from the provided address.
- `stride` is the byte size stride for this vertex input binding as in `VkVertexInputBindingDescription::stride`. It is only used if `VkIndirectCommandsLayoutTokenNV::vertexDynamicStride` was set, otherwise the stride is inherited from the current bound graphics pipeline.

Valid Usage

- VUID-VkBindVertexBufferIndirectCommandNV-None-02949
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT bit set

Valid Usage (Implicit)

- VUID-VkBindVertexBufferIndirectCommandNV-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value

The `VkSetStateFlagsIndirectCommandNV` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV token. Which state is changed depends on the VkIndirectStateFlagBitsNV specified at `VkIndirectCommandsLayoutNV` creation time.

```
// Provided by VK_NV_device_generated_commands
typedef struct VkSetStateFlagsIndirectCommandNV {
    uint32_t    data;
} VkSetStateFlagsIndirectCommandNV;
```

- `data` encodes packed state that this command alters.
  - Bit `0`: If set represents VK_FRONT_FACE_CLOCKWISE, otherwise VK_FRONT_FACE_COUNTER_CLOCKWISE

A subset of the graphics pipeline state **can** be altered using indirect state flags:

```
// Provided by VK_NV_device_generated_commands
typedef enum VkIndirectStateFlagBitsNV {
    VK_INDIRECT_STATE_FLAG_FRONTFACE_BIT_NV = 0x00000001,
} VkIndirectStateFlagBitsNV;
```

- VK_INDIRECT_STATE_FLAG_FRONTFACE_BIT_NV allows to toggle the VkFrontFace rasterization state for subsequent drawing commands.

```
// Provided by VK_NV_device_generated_commands
typedef VkFlags VkIndirectStateFlagsNV;
```

`VkIndirectStateFlagsNV` is a bitmask type for setting a mask of zero or more VkIndirectStateFlagBitsNV.

The `VkBindPipelineIndirectCommandNV` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV token.

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkBindPipelineIndirectCommandNV {
    VkDeviceAddress    pipelineAddress;
} VkBindPipelineIndirectCommandNV;
```

- `pipelineAddress` specifies the pipeline address of the compute pipeline that will be used in device generated rendering.

Valid Usage

- VUID-VkBindPipelineIndirectCommandNV-deviceGeneratedComputePipelines-09091
  The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature **must** be enabled
- VUID-VkBindPipelineIndirectCommandNV-None-09092
  The referenced pipeline **must** have been created with VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV
- VUID-VkBindPipelineIndirectCommandNV-None-09093
  The referenced pipeline **must** have been updated with vkCmdUpdatePipelineIndirectBufferNV
- VUID-VkBindPipelineIndirectCommandNV-None-09094
  The referenced pipeline's address **must** have been queried with

vkGetPipelineIndirectDeviceAddressNV

Valid Usage (Implicit)

- VUID-VkBindPipelineIndirectCommandNV-pipelineAddress-parameter `pipelineAddress` **must** be a valid VkDeviceAddress value

38.1.3. Tokenized Command Processing

The processing for `VK_EXT_device_generated_commands` is in principle illustrated below:

```
void cmdProcessSequence(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, s)
{
  for (t = 0; t < indirectCommandsLayout.tokenCount; t++)
  {
    uint32_t offset  = indirectCommandsLayout.pTokens[t].offset;
    uint32_t stride  = indirectCommandsLayout.indirectStride;
    VkDeviceAddress streamData = indirectAddress;
    const void* input = streamData + stride * s + offset;

    // further details later
    indirectCommandsLayout.pTokens[t].command (cmd, indirectExecutionSet, input, s);
  }
}

void cmdProcessAllSequences(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sequencesCount)
{
  for (s = 0; s < sequencesCount; s++)
  {
    sUsed = s;

    if (indirectCommandsLayout.flags &
VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT) {
      sUsed = incoherent_implementation_dependent_permutation[ sUsed ];
    }

    cmdProcessSequence( cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sUsed );
  }
}
```

The processing of each sequence is considered stateless, therefore all state changes **must** occur prior to action commands within the sequence. A single sequence is strictly targeting the VkShaderStageFlags it was created with.

The primary input data for each token is provided through VkBuffer content at preprocessing using vkCmdPreprocessGeneratedCommandsEXT or execution time using vkCmdExecuteGeneratedCommandsEXT, however some functional arguments, for example push constant layouts, are specified at layout creation time. The input size is different for each token.

Possible values of those elements of the VkIndirectCommandsLayoutCreateInfoEXT::pTokens array specifying command tokens (other elements of the array specify command parameters) are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsTokenTypeEXT {
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT = 0,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT = 1,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT = 2,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT = 3,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT = 4,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT = 5,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT = 6,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT = 7,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT = 8,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT = 9,
  // Provided by VK_EXT_descriptor_heap with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT = 1000135000,
  // Provided by VK_EXT_descriptor_heap with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT = 1000135001,
  // Provided by VK_EXT_device_generated_commands with VK_NV_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT = 1000202002,
  // Provided by VK_EXT_device_generated_commands with VK_NV_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT = 1000202003,
  // Provided by VK_EXT_device_generated_commands with VK_EXT_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT = 1000328000,
  // Provided by VK_EXT_device_generated_commands with VK_EXT_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT = 1000328001,
  // Provided by VK_KHR_ray_tracing_maintenance1 with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT = 1000386004,
} VkIndirectCommandsTokenTypeEXT;
```

Table 51. Supported Indirect Command Tokens

Common Tokens	Command Data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT	u32[] array of indices into the indirect execution set
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT	u32[] raw data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT	u8[] raw data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT	u32 placeholder data (not accessed by shader)

Common Tokens	Command Data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT	u32 placeholder data (not accessed by shader)
Compute Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT	VkDispatchIndirectCommand
Ray Tracing Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT	VkTraceRaysIndirectCommand2KHR
Graphics State Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT	VkBindIndexBufferIndirectCommandEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT	VkBindVertexBufferIndirectCommandEXT
Graphics Draw Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT	VkDrawIndexedIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT	VkDrawIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT	VkDrawMeshTasksIndirectCommandEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT	VkDrawMeshTasksIndirectCommandNV
Graphics Draw Count Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawIndexedIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawMeshTasksIndirectCommandEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawMeshTasksIndirectCommandNV

The VkIndirectCommandsLayoutTokenEXT structure specifies details to the function arguments that need to be known at layout creation time:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsLayoutTokenEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkIndirectCommandsTokenTypeEXT  type;
    VkIndirectCommandsTokenDataEXT  data;
    uint32_t                        offset;
} VkIndirectCommandsLayoutTokenEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- type specifies the VkIndirectCommandsTokenTypeEXT for data.
- data specifies a VkIndirectCommandsTokenDataEXT containing token-specific details for command execution. It is ignored if type does not match any member of the VkIndirectCommandsTokenDataEXT union.
- offset is the relative byte offset for the token within one sequence of the indirect buffer. The data stored at that offset is the command data for the token, e.g. VkDispatchIndirectCommand.

Valid Usage

- VUID-VkIndirectCommandsLayoutTokenEXT-offset-11124
  offset **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectCommandsTokenOffset
- VUID-VkIndirectCommandsLayoutTokenEXT-offset-11125
  offset **must** be aligned to 4
- VUID-VkIndirectCommandsLayoutTokenEXT-meshShader-11126
  If meshShader or taskShader are not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-rayTracingMaintenance1-11128
  If the rayTracingMaintenance1 feature is not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-deviceGeneratedCommandsMultiDrawIndirectCount-11129
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::deviceGeneratedCommandsMultiDrawIndirectCount is not supported, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT

- VUID-VkIndirectCommandsLayoutTokenEXT-deviceGeneratedCommandsMultiDrawIndirectCount-11130
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::deviceGeneratedCommandsMultiDrawIndirectCount is not supported, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-deviceGeneratedCommandsMultiDrawIndirectCount-11131
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::deviceGeneratedCommandsMultiDrawIndirectCount is not supported, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-descriptorHeap-11332
  If the descriptorHeap feature is not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-type-11333
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT VkIndirectCommandsPushConstantTokenEXT::updateRange.shaderStages **must** be VK_SHADER_STAGE_ALL

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutTokenEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_TOKEN_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-type-parameter
  type **must** be a valid VkIndirectCommandsTokenTypeEXT value
- VUID-VkIndirectCommandsLayoutTokenEXT-pPushConstant-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, the pPushConstant member of data **must** be a valid pointer to a valid VkIndirectCommandsPushConstantTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pVertexBuffer-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT, the pVertexBuffer member of data **must** be a valid pointer to a valid VkIndirectCommandsVertexBufferTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pIndexBuffer-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT, the pIndexBuffer member of data **must** be a valid pointer to a valid VkIndirectCommandsIndexBufferTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pExecutionSet-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, the

pExecutionSet member of data **must** be a valid pointer to a valid VkIndirectCommandsExecutionSetTokenEXT structure

The VkIndirectCommandsTokenDataEXT structure provides token-specific details used to generate the indirect execution layout.

```
// Provided by VK_EXT_device_generated_commands
typedef union VkIndirectCommandsTokenDataEXT {
    const VkIndirectCommandsPushConstantTokenEXT*    pPushConstant;
    const VkIndirectCommandsVertexBufferTokenEXT*    pVertexBuffer;
    const VkIndirectCommandsIndexBufferTokenEXT*     pIndexBuffer;
    const VkIndirectCommandsExecutionSetTokenEXT*    pExecutionSet;
} VkIndirectCommandsTokenDataEXT;
```

- pPushConstant is a pointer to a VkIndirectCommandsPushConstantTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, and VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT tokens
- pVertexBuffer is a pointer to a VkIndirectCommandsVertexBufferTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT tokens
- pIndexBuffer is a pointer to a VkIndirectCommandsIndexBufferTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT tokens
- pExecutionSet is a pointer to a VkIndirectCommandsExecutionSetTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT tokens

The appropriate member of the union **must** be set for each token.

The following code provides detailed information on how an individual sequence is processed. For valid usage, all restrictions from the regular commands apply.

```
void cmdProcessSequence(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, s)
{
  for (uint32_t t = 0; t < indirectCommandsLayout.tokenCount; t++) {
    VkIndirectCommandsLayoutTokenEXT *token = &indirectCommandsLayout.pTokens[t];

    uint32_t offset  = token->offset;
    uint32_t stride  = indirectCommandsLayout.indirectStride;
    VkDeviceAddress streamData = indirectAddress;
    const void* input = streamData + stride * s + offset;

    switch (token->tokenType) {
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT:
      uint32_t *bind = input;
      VkIndirectCommandsExecutionSetTokenEXT *info = token->data.pExecutionSet;
```

```
      if (info->type == VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT) {
        vkCmdBindPipeline(cmd, indirectExecutionSet.pipelineBindPoint,
indirectExecutionSet.pipelines[*bind]);
      } else {
        VkShaderStageFlagBits stages[];
        VkShaderEXT shaders[];
        uint32_t i = 0;
        IterateBitmaskLSBToMSB(iter, info->shaderStages) {
            stages[i] = iter;
            shaders[i] = indirectExecutionSet.shaders[bind[i]].shaderObject;
            i++;
        }
        vkCmdBindShadersEXT(cmd, i, stages, shaders);
      }
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT:
      uint32_t* data = input;
      VkPushConstantsInfoKHR info = {
        VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO_KHR,
        // this can also use `dynamicGeneratedPipelineLayout' to pass a
VkPipelineLayoutCreateInfo from pNext
        indirectCommandsLayout.pipelineLayout,
        token->token.pushConstant.updateRange.shaderStages,
        token->token.pushConstant.updateRange.offset,
        token->token.pushConstant.updateRange.size,
        data
      };

      vkCmdPushConstants2KHR(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT:

        VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT,
        NULL,
        token->token.pushConstant.updateRange.offset,
        addressRange
      };

      vkCmdPushDataEXT(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT:
      VkPushConstantsInfoKHR info = {
```

```
        VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO_KHR,
        // this can also use `dynamicGeneratedPipelineLayout' to pass a
VkPipelineLayoutCreateInfo from pNext
        indirectCommandsLayout.pipelineLayout,
        token->token.pushConstant.updateRange.shaderStages,
        token->token.pushConstant.updateRange.offset,
        // this must be 4
        token->token.pushConstant.updateRange.size,
        // this just updates the sequence index
        &s
      };

      vkCmdPushConstants2KHR(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT:

      VkHostAddressRangeConstEXT addressRange = {
        // this must be 4
        token->token.pushConstant.updateRange.data.size,
        // this just updates the sequence index
        &s
      };

      VkPushDataInfoEXT info = {
        VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT,
        NULL,
        token->token.pushConstant.updateRange.offset,
        addressRange
      };

      vkCmdPushDataEXT(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT:
      VkBindIndexBufferIndirectCommandEXT* data = input;

      vkCmdBindIndexBuffer(cmd, deriveBuffer(data->bufferAddress), deriveOffset(data-
>bufferAddress), data->indexType);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT:
      VkBindVertexBufferIndirectCommandEXT* data = input;

      vkCmdBindVertexBuffers2(cmd, token->token.vertexBuffer->vertexBindingUnit, 1,
&deriveBuffer(data->bufferAddress),
                              &deriveOffset(data->bufferAddress), data->size, data-
>stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT:
```

```
      VkDrawIndexedIndirectCommand *data = input;

      vkCmdDrawIndexed(cmd, data->indexCount, data->instanceCount, data->firstIndex,
data->vertexOffset, data->firstInstance);
      break;
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawIndexedIndirect(cmd, deriveBuffer(data->bufferAddress),  deriveoffset
(data->bufferAddress), min(data->commandCount, indirectCommandsLayout.maxDrawCount),
data->stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT:
      VkDrawIndirectCommand* data = input;

      vkCmdDraw(cmd, data->vertex_count, data->instanceCount, data->firstVertex, data
->firstIndex);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawIndirect(cmd, deriveBuffer(data->bufferAddress), deriveoffset(data-
>bufferAddress), min(data->commandCount, indirectCommandsLayout.maxDrawCount), data-
>stride);
      break;

    // only available if VK_NV_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT:
      VkDrawMeshTasksIndirectCommandNV *data = input;

      vkCmdDrawMeshTasksNV(cmd, data->taskCount, data->firstTask);
     break;

    // only available if VK_NV_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawMeshTasksIndirectCountNV(cmd, deriveBuffer(data->bufferAddress),
deriveoffset(data->bufferAddress), min(data->commandCount, indirectCommandsLayout
.maxDrawCount), data->stride);
      break;

    // only available if VK_EXT_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT:
      VkDrawMeshTasksIndirectCommandEXT *data = input;

      vkCmdDrawMeshTasksEXT(cmd, data->groupCountX, data->groupCountY, data-
>groupCountZ);
     break;
```

```
    // only available if VK_EXT_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawMeshTasksIndirectCountEXT(cmd, deriveBuffer(data->bufferAddress),
deriveoffset(data->bufferAddress), min(data->commandCount, indirectCommandsLayout
.maxDrawCount), data->stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT:
      VkDispatchIndirectCommand *data = input;

      vkCmdDispatch(cmd, data->x, data->y, data->z);
      break;

    // only available if VK_KHR_ray_tracing_maintenance1 is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT:
      vkCmdTraceRaysIndirect2KHR(cmd, deriveBuffer(input));
      break;
    }
  }
}
```

The processing for VK_NV_device_generated_commands is in principle illustrated below:

```
void cmdProcessSequence(cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsStreams, s)
{
  for (t = 0; t < indirectCommandsLayout.tokenCount; t++)
  {
    uint32_t stream  = indirectCommandsLayout.pTokens[t].stream;
    uint32_t offset  = indirectCommandsLayout.pTokens[t].offset;
    uint32_t stride  = indirectCommandsLayout.pStreamStrides[stream];
    stream           = pIndirectCommandsStreams[stream];
    const void* input = stream.buffer.pointer( stream.offset + stride * s + offset )

    // further details later
    indirectCommandsLayout.pTokens[t].command (cmd, pipeline, input, s);
  }
}

void cmdProcessAllSequences(cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsStreams, sequencesCount)
{
  for (s = 0; s < sequencesCount; s++)
  {
    cmdProcessSequence(cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsStreams, s);
  }
```

```
}
```

The processing of each sequence is considered stateless, therefore all state changes **must** occur before any action command tokens within the sequence. A single sequence is strictly targeting the VkPipelineBindPoint it was created with.

The primary input data for each token is provided through `VkBuffer` content at preprocessing using vkCmdPreprocessGeneratedCommandsNV or execution time using vkCmdExecuteGeneratedCommandsNV, however some functional arguments, for example binding sets, are specified at layout creation time. The input size is different for each token.

The `VkIndirectCommandsPushConstantTokenEXT` structure specifies the layout token info for VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, and VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT tokens.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsPushConstantTokenEXT {
    VkPushConstantRange    updateRange;
} VkIndirectCommandsPushConstantTokenEXT;
```

- `updateRange` is the push constant range that will be updated by the token.

The `stageFlags` member of `updateRange` is ignored.

Valid Usage

- VUID-VkIndirectCommandsPushConstantTokenEXT-updateRange-11132
  If the token type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, `updateRange` **must** be contained within the push constant info used by VkIndirectCommandsLayoutCreateInfoEXT
- VUID-VkIndirectCommandsPushConstantTokenEXT-size-11133
  If the token type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, the `size` member of `updateRange` **must** be 4

Valid Usage (Implicit)

- VUID-VkIndirectCommandsPushConstantTokenEXT-updateRange-parameter
  `updateRange` **must** be a valid VkPushConstantRange structure

The `VkIndirectCommandsVertexBufferTokenEXT` structure specifies the layout token info for the

VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsVertexBufferTokenEXT {
    uint32_t    vertexBindingUnit;
} VkIndirectCommandsVertexBufferTokenEXT;
```

- vertexBindingUnit is the vertex input binding number to be bound.

Valid Usage

- VUID-VkIndirectCommandsVertexBufferTokenEXT-vertexBindingUnit-11134
  vertexBindingUnit **must** be less than the total number of vertex input bindings in use by the current graphics state

The VkIndirectCommandsIndexBufferTokenEXT structure specifies the layout token info for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsIndexBufferTokenEXT {
    VkIndirectCommandsInputModeFlagBitsEXT    mode;
} VkIndirectCommandsIndexBufferTokenEXT;
```

- mode specifies the mode to use with this token.

This allows for easy layering of Vulkan atop other APIs. When VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT is specified, the indirect buffer can contain a D3D12_INDEX_BUFFER_VIEW instead of VkBindIndexBufferIndirectCommandEXT as D3D's DXGI format value is mapped to the VkIndexType. It works as both structs are otherwise binary compatible.

Valid Usage

- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-11135
  mode **must** be non-zero
- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-11136
  mode **must** be one of the bits supported in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsInputModes

Valid Usage (Implicit)

- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-parameter
  mode **must** be a valid VkIndirectCommandsInputModeFlagBitsEXT value

Bits which are set in VkIndirectCommandsIndexBufferTokenEXT::mode, specifying how an index buffer is used, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsInputModeFlagBitsEXT {
    VK_INDIRECT_COMMANDS_INPUT_MODE_VULKAN_INDEX_BUFFER_EXT = 0x00000001,
    VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT = 0x00000002,
} VkIndirectCommandsInputModeFlagBitsEXT;
```

- VK_INDIRECT_COMMANDS_INPUT_MODE_VULKAN_INDEX_BUFFER_EXT specifies that the indirect buffer contains VkBindIndexBufferIndirectCommandEXT.
- VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT specifies that the indirect buffer contains D3D12_INDEX_BUFFER_VIEW.

```
// Provided by VK_EXT_device_generated_commands
typedef VkFlags VkIndirectCommandsInputModeFlagsEXT;
```

VkIndirectCommandsInputModeFlagsEXT is a bitmask type for setting a mask of zero or more VkIndirectCommandsInputModeFlagBitsEXT.

The VkIndirectCommandsExecutionSetTokenEXT structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsExecutionSetTokenEXT {
    VkIndirectExecutionSetInfoTypeEXT    type;
    VkShaderStageFlags                   shaderStages;
} VkIndirectCommandsExecutionSetTokenEXT;
```

- type describes the type of indirect execution set in use.
- shaderStages specifies the shaders that will be changed by this token.

Valid Usage

- VUID-VkIndirectCommandsExecutionSetTokenEXT-shaderStages-11137
  Each bit in shaderStages **must** be supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding or VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesShaderBinding

Valid Usage (Implicit)

- VUID-VkIndirectCommandsExecutionSetTokenEXT-type-parameter

type **must** be a valid VkIndirectExecutionSetInfoTypeEXT value

- VUID-VkIndirectCommandsExecutionSetTokenEXT-shaderStages-parameter
  shaderStages **must** be a valid combination of VkShaderStageFlagBits values

Possible values of those elements of the VkIndirectCommandsLayoutCreateInfoNV::pTokens array specifying command tokens (other elements of the array specify command parameters) are:

```
// Provided by VK_NV_device_generated_commands
typedef enum VkIndirectCommandsTokenTypeNV {
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV = 0,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV = 1,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_NV = 2,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_NV = 3,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV = 4,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_NV = 5,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_NV = 6,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV = 7,
  // Provided by VK_EXT_descriptor_heap with VK_NV_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV = 1000135000,
  // Provided by VK_EXT_mesh_shader with VK_NV_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV = 1000328000,
  // Provided by VK_NV_device_generated_commands_compute
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV = 1000428003,
  // Provided by VK_NV_device_generated_commands_compute
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_NV = 1000428004,
} VkIndirectCommandsTokenTypeNV;
```

Table 52. Supported Indirect Command Tokens

Token type	Equivalent command
VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV	vkCmdBindPipelineShaderGroupNV
VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV	-
VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_NV	vkCmdBindIndexBuffer
VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_NV	vkCmdBindVertexBuffers
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV	vkCmdPushConstants
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV	vkCmdPushDataEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_NV	vkCmdDrawIndexedIndirect

Token type	Equivalent command
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_NV	vkCmdDrawIndirect
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV	vkCmdDrawMeshTasksIndirectNV
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV	vkCmdDrawMeshTasksIndirectEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV	vkCmdBindPipeline
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_NV	vkCmdDispatchIndirect

The VkIndirectCommandsLayoutTokenNV structure specifies details to the function arguments that need to be known at layout creation time:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkIndirectCommandsLayoutTokenNV {
    VkStructureType                 sType;
    const void*                     pNext;
    VkIndirectCommandsTokenTypeNV   tokenType;
    uint32_t                        stream;
    uint32_t                        offset;
    uint32_t                        vertexBindingUnit;
    VkBool32                        vertexDynamicStride;
    VkPipelineLayout                pushconstantPipelineLayout;
    VkShaderStageFlags              pushconstantShaderStageFlags;
    uint32_t                        pushconstantOffset;
    uint32_t                        pushconstantSize;
    VkIndirectStateFlagsNV          indirectStateFlags;
    uint32_t                        indexTypeCount;
    const VkIndexType*              pIndexTypes;
    const uint32_t*                 pIndexTypeValues;
} VkIndirectCommandsLayoutTokenNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- tokenType is a VkIndirectCommandsTokenTypeNV specifying the token command type.
- stream is the index of the input stream containing the token argument data.
- offset is a relative starting offset within the input stream memory for the token argument data.
- vertexBindingUnit is used for the vertex buffer binding command.
- vertexDynamicStride sets if the vertex buffer stride is provided by the binding command rather than the current bound graphics pipeline state.
- pushconstantPipelineLayout is the VkPipelineLayout used for the push constant command.

- `pushconstantShaderStageFlags` are the shader stage flags used for the push constant command.
- `pushconstantOffset` is the offset used for the push constant command.
- `pushconstantSize` is the size used for the push constant command.
- `indirectStateFlags` is a VkIndirectStateFlagsNV bitfield indicating the active states for the state flag command.
- `indexTypeCount` is the optional size of the `pIndexTypes` and `pIndexTypeValues` array pairings. If not zero, it allows to register a custom `uint32_t` value to be treated as specific VkIndexType.
- `pIndexTypes` is the used VkIndexType for the corresponding `uint32_t` value entry in `pIndexTypeValues`.

Valid Usage

- VUID-VkIndirectCommandsLayoutTokenNV-stream-02951
  `stream` **must** be smaller than `VkIndirectCommandsLayoutCreateInfoNV`::`streamCount`
- VUID-VkIndirectCommandsLayoutTokenNV-offset-02952
  `offset` **must** be less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV`::`maxIndirectCommandsTokenOffset`
- VUID-VkIndirectCommandsLayoutTokenNV-offset-06888
  `offset` **must** be aligned to the scalar alignment of `tokenType` or `minIndirectCommandsBufferOffsetAlignment`, whichever is lower
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02976
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_NV, `vertexBindingUnit` **must** stay within device supported limits for the appropriate commands
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02977
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, `pushconstantPipelineLayout` **must** be valid
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02978
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, `pushconstantOffset` **must** be a multiple of `4`
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02979
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, `pushconstantSize` **must** be a multiple of `4`
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02980
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, `pushconstantOffset` **must** be less than `VkPhysicalDeviceLimits`::`maxPushConstantsSize`
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02981
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, `pushconstantSize` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxPushConstantsSize` minus `pushconstantOffset`
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02982
  If `tokenType` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, for each

byte in the range specified by pushconstantOffset and pushconstantSize and for each shader stage in pushconstantShaderStageFlags, there **must** be a push constant range in pushconstantPipelineLayout that includes that byte and that stage

- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02983
  If tokenType is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, for each byte in the range specified by pushconstantOffset and pushconstantSize and for each push constant range that overlaps that byte, pushconstantShaderStageFlags **must** include all stages in that push constant range's VkPushConstantRange::stageFlags
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-02984
  If tokenType is VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV, indirectStateFlags **must** not be 0
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-11334
  If tokenType is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV, VkIndirectCommandsLayoutPushDataTokenNV::pushDataSize **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutTokenNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_TOKEN_NV
- VUID-VkIndirectCommandsLayoutTokenNV-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkIndirectCommandsLayoutPushDataTokenNV
- VUID-VkIndirectCommandsLayoutTokenNV-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkIndirectCommandsLayoutTokenNV-tokenType-parameter
  tokenType **must** be a valid VkIndirectCommandsTokenTypeNV value
- VUID-VkIndirectCommandsLayoutTokenNV-pushconstantPipelineLayout-parameter
  If pushconstantPipelineLayout is not VK_NULL_HANDLE, pushconstantPipelineLayout **must** be a valid VkPipelineLayout handle
- VUID-VkIndirectCommandsLayoutTokenNV-pushconstantShaderStageFlags-parameter
  If pushconstantShaderStageFlags is not 0, pushconstantShaderStageFlags **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkIndirectCommandsLayoutTokenNV-indirectStateFlags-parameter
  If indirectStateFlags is not 0, indirectStateFlags **must** be a valid combination of VkIndirectStateFlagBitsNV values
- VUID-VkIndirectCommandsLayoutTokenNV-pIndexTypes-parameter
  If indexTypeCount is not 0, pIndexTypes **must** be a valid pointer to an array of indexTypeCount valid VkIndexType values
- VUID-VkIndirectCommandsLayoutTokenNV-pIndexTypeValues-parameter
  If indexTypeCount is not 0, pIndexTypeValues **must** be a valid pointer to an array of indexTypeCount uint32_t values

The VkIndirectCommandsLayoutPushDataTokenNV structure specifies details to the function arguments that need to be known at layout creation time:

```
// Provided by VK_EXT_descriptor_heap with VK_NV_device_generated_commands
typedef struct VkIndirectCommandsLayoutPushDataTokenNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           pushDataOffset;
    uint32_t           pushDataSize;
} VkIndirectCommandsLayoutPushDataTokenNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pushDataOffset is the offset used for the push data command.
- pushDataSize is the size used for the push data command.

If this structure is in the pNext chain of VkIndirectCommandsLayoutTokenNV, and VkIndirectCommandsLayoutTokenNV::tokenType is set to VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV, this structure defines a push data command layout token.

If this structure is not provided, it is equivalent to setting pushDataOffset and pushDataSize to 0.

Valid Usage

- VUID-VkIndirectCommandsLayoutPushDataTokenNV-pushDataOffset-11335
  The sum of pushDataOffset and pushDataSize **must** be less than maxPushDataSize
- VUID-VkIndirectCommandsLayoutPushDataTokenNV-pushDataOffset-11420
  pushDataOffset **must** be a multiple of 4
- VUID-VkIndirectCommandsLayoutPushDataTokenNV-pushDataSize-11421
  pushDataSize **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutPushDataTokenNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_PUSH_DATA_TOKEN_NV

Structure Chaining

Extends the structure

- VkIndirectCommandsLayoutTokenNV

The following code provides detailed information on how an individual sequence is processed. For valid usage, all restrictions from the regular commands apply.

```
void cmdProcessSequence(cmd, pipeline, indirectCommandsLayout,
pIndirectCommandsStreams, s)
{
  for (uint32_t t = 0; t < indirectCommandsLayout.tokenCount; t++){
    token = indirectCommandsLayout.pTokens[t];

    uint32_t stride   = indirectCommandsLayout.pStreamStrides[token.stream];
    stream            = pIndirectCommandsStreams[token.stream];
    uint32_t offset   = stream.offset + stride * s + token.offset;
    const void* input = stream.buffer.pointer( offset )

    switch(input.type){
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV:
      VkBindShaderGroupIndirectCommandNV* bind = input;

      vkCmdBindPipelineShaderGroupNV(cmd, indirectCommandsLayout.pipelineBindPoint,
        pipeline, bind->groupIndex);
    break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_STATE_FLAGS_NV:
      VkSetStateFlagsIndirectCommandNV* state = input;

      if (token.indirectStateFlags & VK_INDIRECT_STATE_FLAG_FRONTFACE_BIT_NV){
        if (state.data & (1 << 0)){
          set VK_FRONT_FACE_CLOCKWISE;
        } else {
          set VK_FRONT_FACE_COUNTER_CLOCKWISE;
        }
      }
    break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV:
      uint32_t* data = input;

      vkCmdPushConstants(cmd,
        token.pushconstantPipelineLayout
        token.pushconstantStageFlags,
        token.pushconstantOffset,
        token.pushconstantSize, data);
    break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_NV:
      void* data = input;

      VkPushDataInfoEXT pushDataInfo = {
        .sType = VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT,
        .pNext = NULL,
```

```
      .offset = token.pushDataOffset,
      .size = token.pushDataSize,
      .pData = input};

    vkCmdPushDataEXT(cmd, &pushDataInfo);
  break;

  case VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_NV:
    VkBindIndexBufferIndirectCommandNV* data = input;

    // the indexType may optionally be remapped
    // from a custom uint32_t value, via
    // VkIndirectCommandsLayoutTokenNV::pIndexTypeValues

    vkCmdBindIndexBuffer(cmd,
      deriveBuffer(data->bufferAddress),
      deriveOffset(data->bufferAddress),
      data->indexType);
  break;

  case VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_NV:
    VkBindVertexBufferIndirectCommandNV* data = input;

    // if token.vertexDynamicStride is VK_TRUE
    // then the stride for this binding is set
    // using data->stride as well

    vkCmdBindVertexBuffers(cmd,
      token.vertexBindingUnit, 1,
      &deriveBuffer(data->bufferAddress),
      &deriveOffset(data->bufferAddress));
  break;

  case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_NV:
    vkCmdDrawIndexedIndirect(cmd,
      stream.buffer, offset, 1, 0);
  break;

  case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_NV:
    vkCmdDrawIndirect(cmd,
      stream.buffer,
      offset, 1, 0);
  break;

  // only available if VK_NV_mesh_shader is supported
  case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV:
    vkCmdDrawMeshTasksIndirectNV(cmd,
      stream.buffer, offset, 1, 0);
  break;

  // only available if VK_EXT_mesh_shader is supported
```

```
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV:
      vkCmdDrawMeshTasksIndirectEXT(cmd,
        stream.buffer, offset, 1, 0);
    break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV:
      VkBindPipelineIndirectCommandNV *data = input;
      VkPipeline computePipeline = deriveFromDeviceAddress(data->pipelineAddress);
      vkCmdBindPipeline(cmd, VK_PIPELINE_BIND_POINT_COMPUTE, computePipeline);
    break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_NV:
      vkCmdDispatchIndirect(cmd, stream.buffer, offset);
    break;
    }
  }
}
```

38.2. Indirect Commands Generation and Execution

The generation of commands on the device requires a `preprocess` buffer.

With `VK_EXT_device_generated_commands`, to retrieve the memory size and alignment requirements of a particular execution state call:

```
// Provided by VK_EXT_device_generated_commands
void vkGetGeneratedCommandsMemoryRequirementsEXT(
    VkDevice                                    device,
    const VkGeneratedCommandsMemoryRequirementsInfoEXT* pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a VkGeneratedCommandsMemoryRequirementsInfoEXT structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the buffer object are returned.

If the size returned is zero, the preprocessing step can be skipped for this layout.

Valid Usage (Implicit)

- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkGeneratedCommandsMemoryRequirementsInfoEXT structure

- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-pMemoryRequirements-parameter
  pMemoryRequirements **must** be a valid pointer to a VkMemoryRequirements2 structure

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsMemoryRequirementsInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkIndirectExecutionSetEXT      indirectExecutionSet;
    VkIndirectCommandsLayoutEXT    indirectCommandsLayout;
    uint32_t                       maxSequenceCount;
    uint32_t                       maxDrawCount;
} VkGeneratedCommandsMemoryRequirementsInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indirectExecutionSet is the indirect execution set to be used for binding shaders.
- indirectCommandsLayout is the VkIndirectCommandsLayoutEXT that this buffer memory is intended to be used with.
- maxSequenceCount is the maximum number of sequences that this buffer memory can be used with.
- maxDrawCount is the maximum number of indirect draws that can be executed by any COUNT-type multi-draw indirect tokens. The draw count in the indirect buffer is clamped to this value for these token types.

If the action command token for the layout is not a COUNT-type multi-draw indirect token, maxDrawCount is ignored.

Valid Usage

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-maxSequencesCount-11009
  maxSequencesCount **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectSequenceCount
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11010
  If indirectCommandsLayout was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, indirectExecutionSet **must** not be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11151
  If indirectCommandsLayout was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the shader stages used to create the initial shader state of indirectExecutionSet **must** equal the VkIndirectCommandsExecutionSetTokenEXT::shaderStages used to create

indirectCommandsLayout

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11011
  If indirectCommandsLayout was not created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, indirectExecutionSet **must** be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-maxDrawCount-11146
  When not ignored, maxDrawCount × maxSequenceCount **must** be less than 2^24
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectExecutionSet-11012
  If indirectExecutionSet is VK_NULL_HANDLE, either a VkGeneratedCommandsPipelineInfoEXT or a VkGeneratedCommandsShaderInfoEXT **must** be included in the pNext chain

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_MEMORY_REQUIREMENTS_INFO_EXT
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkGeneratedCommandsPipelineInfoEXT or VkGeneratedCommandsShaderInfoEXT
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectExecutionSet-parameter
  If indirectExecutionSet is not VK_NULL_HANDLE, indirectExecutionSet **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-parameter
  indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-commonparent
  Both of indirectCommandsLayout, and indirectExecutionSet that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsPipelineInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkPipeline         pipeline;
} VkGeneratedCommandsPipelineInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` is a valid pipeline object.

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsPipelineInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_PIPELINE_INFO_EXT
- VUID-VkGeneratedCommandsPipelineInfoEXT-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

Structure Chaining

Extends the structures

- VkGeneratedCommandsInfoEXT
- VkGeneratedCommandsMemoryRequirementsInfoEXT

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsShaderInfoEXT {
    VkStructureType       sType;
    void*                 pNext;
    uint32_t              shaderCount;
    const VkShaderEXT*    pShaders;
} VkGeneratedCommandsShaderInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCount` is the size of the `pShaders` array.
- `pShaders` is a pointer to an array of shader objects.

Valid Usage

- VUID-VkGeneratedCommandsShaderInfoEXT-pShaders-11127
  `pShaders` **must** not contain more than one shader object for a given VkShaderStageFlagBits stage

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsShaderInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_SHADER_INFO_EXT

- VUID-VkGeneratedCommandsShaderInfoEXT-pShaders-parameter
  `pShaders` **must** be a valid pointer to an array of `shaderCount` valid VkShaderEXT handles
- VUID-VkGeneratedCommandsShaderInfoEXT-shaderCount-arraylength
  `shaderCount` **must** be greater than `0`

Structure Chaining

Extends the structures

- VkGeneratedCommandsInfoEXT
- VkGeneratedCommandsMemoryRequirementsInfoEXT

With `VK_NV_device_generated_commands`, to retrieve the memory size and alignment requirements of a particular execution state call:

```
// Provided by VK_NV_device_generated_commands
void vkGetGeneratedCommandsMemoryRequirementsNV(
    VkDevice                                    device,
    const VkGeneratedCommandsMemoryRequirementsInfoNV* pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a VkGeneratedCommandsMemoryRequirementsInfoNV structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the buffer object are returned.

Valid Usage

- VUID-vkGetGeneratedCommandsMemoryRequirementsNV-deviceGeneratedCommands-02906
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled
- VUID-vkGetGeneratedCommandsMemoryRequirementsNV-pInfo-09074
  If `pInfo->pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, then the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedCompute` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetGeneratedCommandsMemoryRequirementsNV-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkGetGeneratedCommandsMemoryRequirementsNV-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkGeneratedCommandsMemoryRequirementsInfoNV structure
- VUID-vkGetGeneratedCommandsMemoryRequirementsNV-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGeneratedCommandsMemoryRequirementsInfoNV {
    VkStructureType                 sType;
    const void*                     pNext;
    VkPipelineBindPoint             pipelineBindPoint;
    VkPipeline                      pipeline;
    VkIndirectCommandsLayoutNV      indirectCommandsLayout;
    uint32_t                        maxSequencesCount;
} VkGeneratedCommandsMemoryRequirementsInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBindPoint` is the VkPipelineBindPoint of the `pipeline` that this buffer memory is intended to be used with during the execution.
- `pipeline` is the VkPipeline that this buffer memory is intended to be used with during the execution.
- `indirectCommandsLayout` is the VkIndirectCommandsLayoutNV that this buffer memory is intended to be used with.
- `maxSequencesCount` is the maximum number of sequences that this buffer memory in combination with the other state provided **can** be used with.

Valid Usage

- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-maxSequencesCount-02907
  `maxSequencesCount` **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::`maxIndirectSequenceCount`
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pipelineBindPoint-09075
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_GRAPHICS, then `pipeline` **must** be a valid VkPipeline handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pipelineBindPoint-09076
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, and the `indirectCommandsLayout` was not created with a VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV token, then the `pipeline` **must** be a valid VkPipeline handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pipelineBindPoint-09077
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, and the

`indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV token, then the `pipeline` **must** be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_MEMORY_REQUIREMENTS_INFO_NV
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pipelineBindPoint-parameter
  `pipelineBindPoint` **must** be a valid VkPipelineBindPoint value
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-pipeline-parameter
  If `pipeline` is not VK_NULL_HANDLE, `pipeline` **must** be a valid VkPipeline handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-indirectCommandsLayout-parameter
  `indirectCommandsLayout` **must** be a valid VkIndirectCommandsLayoutNV handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoNV-commonparent
  Both of `indirectCommandsLayout`, and `pipeline` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

With VK_NV_device_generated_commands, to bind a compute pipeline in Device-Generated Commands, an application **must** query the pipeline's device address.

To query a compute pipeline's 64-bit device address, call:

```
// Provided by VK_NV_device_generated_commands_compute
VkDeviceAddress vkGetPipelineIndirectDeviceAddressNV(
    VkDevice                                    device,
    const VkPipelineIndirectDeviceAddressInfoNV* pInfo);
```

- `device` is the logical device on which the pipeline was created.
- `pInfo` is a pointer to a VkPipelineIndirectDeviceAddressInfoNV structure specifying the pipeline to retrieve the address for.

Valid Usage

- VUID-vkGetPipelineIndirectDeviceAddressNV-deviceGeneratedComputePipelines-09078
  The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPipelineIndirectDeviceAddressNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineIndirectDeviceAddressNV-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkPipelineIndirectDeviceAddressInfoNV structure

The `VkPipelineIndirectDeviceAddressInfoNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkPipelineIndirectDeviceAddressInfoNV {
    VkStructureType        sType;
    const void*            pNext;
    VkPipelineBindPoint    pipelineBindPoint;
    VkPipeline             pipeline;
} VkPipelineIndirectDeviceAddressInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBindPoint` is a VkPipelineBindPoint value specifying the type of pipeline whose device address is being queried.
- `pipeline` specifies the pipeline whose device address is being queried.

Valid Usage

- VUID-VkPipelineIndirectDeviceAddressInfoNV-pipelineBindPoint-09079
  The provided `pipelineBindPoint` **must** be of type VK_PIPELINE_BIND_POINT_COMPUTE
- VUID-VkPipelineIndirectDeviceAddressInfoNV-pipeline-09080
  `pipeline` **must** have been created with flag VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV set
- VUID-VkPipelineIndirectDeviceAddressInfoNV-pipeline-09081
  `pipeline` **must** have been created with a VkComputePipelineIndirectBufferInfoNV structure specifying a valid address where its metadata will be saved

Valid Usage (Implicit)

- VUID-VkPipelineIndirectDeviceAddressInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_INDIRECT_DEVICE_ADDRESS_INFO_NV
- VUID-VkPipelineIndirectDeviceAddressInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineIndirectDeviceAddressInfoNV-pipelineBindPoint-parameter
  `pipelineBindPoint` **must** be a valid VkPipelineBindPoint value

- VUID-VkPipelineIndirectDeviceAddressInfoNV-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

To determine the memory requirements for a compute pipeline's metadata, call:

```
// Provided by VK_NV_device_generated_commands_compute
void vkGetPipelineIndirectMemoryRequirementsNV(
    VkDevice                                    device,
    const VkComputePipelineCreateInfo*          pCreateInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pCreateInfo` is a VkComputePipelineCreateInfo structure specifying the creation parameters of the compute pipeline whose memory requirements are being queried.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the requested pipeline's memory requirements are returned.

If `pCreateInfo->pNext` chain includes a pointer to a VkComputePipelineIndirectBufferInfoNV structure, then the contents of that structure are ignored.

Valid Usage

- VUID-vkGetPipelineIndirectMemoryRequirementsNV-deviceGeneratedComputePipelines-09082
  The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature **must** be enabled
- VUID-vkGetPipelineIndirectMemoryRequirementsNV-pCreateInfo-09083
  `pCreateInfo->flags` **must** include VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV

Valid Usage (Implicit)

- VUID-vkGetPipelineIndirectMemoryRequirementsNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineIndirectMemoryRequirementsNV-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkComputePipelineCreateInfo structure
- VUID-vkGetPipelineIndirectMemoryRequirementsNV-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

38.2.1. Indirect Execution Sets

Indirect Execution Sets contain sets of pipelines or shader objects which can be bound individually.

```
// Provided by VK_EXT_device_generated_commands
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkIndirectExecutionSetEXT)
```

Indirect Execution Sets allow the device to bind different shaders and pipeline states using Device-Generated Commands.

Indirect Execution Sets are created by calling:

```
// Provided by VK_EXT_device_generated_commands
VkResult vkCreateIndirectExecutionSetEXT(
    VkDevice                                    device,
    const VkIndirectExecutionSetCreateInfoEXT*  pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkIndirectExecutionSetEXT*                  pIndirectExecutionSet);
```

- `device` is the logical device that creates the indirect execution set.
- `pCreateInfo` is a pointer to a VkIndirectExecutionSetCreateInfoEXT structure containing parameters affecting creation of the indirect execution set.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pIndirectExecutionSet` is a pointer to a VkIndirectExecutionSetEXT handle in which the resulting indirect execution set is returned.

Valid Usage

- VUID-vkCreateIndirectExecutionSetEXT-deviceGeneratedCommands-11013
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateIndirectExecutionSetEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateIndirectExecutionSetEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkIndirectExecutionSetCreateInfoEXT structure
- VUID-vkCreateIndirectExecutionSetEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateIndirectExecutionSetEXT-pIndirectExecutionSet-parameter
  `pIndirectExecutionSet` **must** be a valid pointer to a VkIndirectExecutionSetEXT handle
- VUID-vkCreateIndirectExecutionSetEXT-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkIndirectExecutionSetCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetCreateInfoEXT {
    VkStructureType                     sType;
    const void*                         pNext;
    VkIndirectExecutionSetInfoTypeEXT   type;
    VkIndirectExecutionSetInfoEXT       info;
} VkIndirectExecutionSetCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- type is a VkIndirectExecutionSetInfoTypeEXT describing the type of set being created and determining which field of the info union will be used.
- info is a VkIndirectExecutionSetInfoEXT union containing layout information for the set.

Valid Usage

- VUID-VkIndirectExecutionSetCreateInfoEXT-maxIndirectShaderObjectCount-11014
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectShaderObjectCount is zero or the shaderObject feature is not enabled type **must** not be VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_CREATE_INFO_EXT
- VUID-VkIndirectExecutionSetCreateInfoEXT-type-parameter
  type **must** be a valid VkIndirectExecutionSetInfoTypeEXT value
- VUID-VkIndirectExecutionSetCreateInfoEXT-pPipelineInfo-parameter
  If type is VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT, the pPipelineInfo

member of `info` **must** be a valid pointer to a valid VkIndirectExecutionSetPipelineInfoEXT structure

- VUID-VkIndirectExecutionSetCreateInfoEXT-pShaderInfo-parameter
  If `type` is VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT, the `pShaderInfo` member of `info` **must** be a valid pointer to a valid VkIndirectExecutionSetShaderInfoEXT structure

Values which **can** be set in VkIndirectExecutionSetCreateInfoEXT::`type`, specifying contents of an indirect execution set, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectExecutionSetInfoTypeEXT {
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT = 0,
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT = 1,
} VkIndirectExecutionSetInfoTypeEXT;
```

- VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT specifies that the indirect execution set contains VkPipeline objects.
- VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT specifies that the indirect execution set contains VkShaderEXT objects.

The `VkIndirectExecutionSetInfoEXT` union is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef union VkIndirectExecutionSetInfoEXT {
    const VkIndirectExecutionSetPipelineInfoEXT*    pPipelineInfo;
    const VkIndirectExecutionSetShaderInfoEXT*      pShaderInfo;
} VkIndirectExecutionSetInfoEXT;
```

- `pPipelineInfo` is a pointer to a VkIndirectExecutionSetPipelineInfoEXT structure containing pipeline layout information for the set.
- `pShaderInfo` is a pointer to a VkIndirectExecutionSetShaderInfoEXT structure containing shader object layout information for the set.

The `VkIndirectExecutionSetPipelineInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetPipelineInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         initialPipeline;
    uint32_t           maxPipelineCount;
} VkIndirectExecutionSetPipelineInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `initialPipeline` is the initial pipeline for the set. This pipeline will be automatically added to the set at index `0`.
- `maxPipelineCount` is the maximum number of pipelines stored in the set.

The characteristics of `initialPipeline` will be used to validate all pipelines added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with pipelines is used, `initialPipeline` constitutes the initial shader state.

Valid Usage

- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11015
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesPipelineBinding` does not contain VK_SHADER_STAGE_COMPUTE_BIT, the VkPipelineBindPoint of `initialPipeline` **must** not be VK_PIPELINE_BIND_POINT_COMPUTE
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11016
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesPipelineBinding` does not contain VK_SHADER_STAGE_FRAGMENT_BIT, the VkPipelineBindPoint of `initialPipeline` **must** not be VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11017
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesPipelineBinding` does not contain ray tracing stages, the VkPipelineBindPoint of `initialPipeline` **must** not be VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR
- VUID-VkIndirectExecutionSetPipelineInfoEXT-maxPipelineCount-11018
  `maxPipelineCount` **must** be between `1` and `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT`::`maxIndirectPipelineCount`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11019
  `initialPipeline` **must** not use descriptors of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11153
  `initialPipeline` **must** have been created with VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetPipelineInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_PIPELINE_INFO_EXT
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-parameter
  `initialPipeline` **must** be a valid VkPipeline handle

The `VkIndirectExecutionSetShaderInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderInfoEXT {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        shaderCount;
    const VkShaderEXT*                              pInitialShaders;
    const VkIndirectExecutionSetShaderLayoutInfoEXT* pSetLayoutInfos;
    uint32_t                                        maxShaderCount;
    uint32_t                                        pushConstantRangeCount;
    const VkPushConstantRange*                      pPushConstantRanges;
} VkIndirectExecutionSetShaderInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCount` is the number of members in the `pInitialShaders` and `pSetLayoutInfos` arrays.
- `pInitialShaders` is a pointer to an array containing a VkShaderEXT object for each shader stage that will be used in the set. These shaders will be automatically added to the set beginning at index `0`.
- `pSetLayoutInfos` is `NULL` or a pointer to an array containing a VkIndirectExecutionSetShaderLayoutInfoEXT used by each corresponding `pInitialShaders` shader stage in the set.
- `maxShaderCount` is the maximum number of shader objects stored in the set.
- `pushConstantRangeCount` is the number of members in the `pPushConstantRanges` array.
- `pPushConstantRanges` is a pointer to the array of VkPushConstantRange ranges used by all shaders in the set.

The characteristics of `pInitialShaders` will be used to validate all shaders added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with shader objects is used, `pInitialShaders` constitutes the initial shader state.

If `pSetLayoutInfos` is `NULL`, the descriptor layout parameters are inherited from the shader object.

Valid Usage

- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11020
  All members of pInitialShaders **must** have a stage supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesShaderBinding
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11021
  maxShaderCount **must** not be zero
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11022
  maxShaderCount **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectShaderObjectCount
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11036
  maxShaderCount **must** be greater than or equal to shaderCount
- VUID-VkIndirectExecutionSetShaderInfoEXT-stage-11023
  The stage of each element in the pInitialShaders array **must** be unique
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11154
  Each member of pInitialShaders **must** have been created with VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-10929
  If pSetLayoutInfos is not NULL, the descriptor layout values specified **must** be compatible with the descriptor set layouts defined at the creation of the shader object
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11321
  If any element of pInitialShaders was created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, all elements of pInitialShaders **must** have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11322
  If any element of pInitialShaders was created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, all elements of pInitialShaders **must** have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11323
  If elements of pInitialShaders were created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, pSetLayoutInfos **must** be NULL

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_INFO_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-parameter
  pInitialShaders **must** be a valid pointer to an array of shaderCount valid VkShaderEXT handles
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-parameter
  If pSetLayoutInfos is not NULL, pSetLayoutInfos **must** be a valid pointer to an array of

`shaderCount` valid VkIndirectExecutionSetShaderLayoutInfoEXT structures

- VUID-VkIndirectExecutionSetShaderInfoEXT-pPushConstantRanges-parameter
  If `pushConstantRangeCount` is not `0`, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid VkPushConstantRange structures
- VUID-VkIndirectExecutionSetShaderInfoEXT-shaderCount-arraylength
  `shaderCount` **must** be greater than `0`

The `VkIndirectExecutionSetShaderLayoutInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderLayoutInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        setLayoutCount;
    const VkDescriptorSetLayout*    pSetLayouts;
} VkIndirectExecutionSetShaderLayoutInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `setLayoutCount` is the number of members in the `pSetLayouts` array.
- `pSetLayouts` is a pointer to an array containing VkDescriptorSetLayout objects used by the shader stage. The implementation **must** not access these objects outside of the duration of the command this structure is passed to.

Valid Usage

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-11024
  All members of `pSetLayouts` **must** not contain descriptors of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_LAYOUT_INFO_EXT
- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-parameter
  If `setLayoutCount` is not `0`, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or VK_NULL_HANDLE VkDescriptorSetLayout handles

Destroy an Indirect Execution Set by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkDestroyIndirectExecutionSetEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-11025
  All submitted commands that refer to `indirectExecutionSet` **must** have completed execution

Valid Usage (Implicit)

- VUID-vkDestroyIndirectExecutionSetEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parameter
  If `indirectExecutionSet` is not VK_NULL_HANDLE, `indirectExecutionSet` **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkDestroyIndirectExecutionSetEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parent
  If `indirectExecutionSet` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectExecutionSet` **must** be externally synchronized

The `VkWriteIndirectExecutionSetPipelineEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkWriteIndirectExecutionSetPipelineEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkPipeline         pipeline;
} VkWriteIndirectExecutionSetPipelineEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `index` is the element of the set to update.
- `pipeline` is the pipeline to store in the indirect execution set.

Valid Usage

- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11026
  `index` **must** be less than the value of `VkIndirectExecutionSetPipelineInfoEXT::maxPipelineCount` used to create the set
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11027
  `pipeline` **must** have been created with VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11029
  `index` **must** not be referenced by submitted command buffers
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11030
  The shader stages contained in `pipeline` **must** be supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesPipelineBinding`

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetPipelineEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_PIPELINE_EXT
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

The `VkWriteIndirectExecutionSetShaderEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands with VK_EXT_shader_object
typedef struct VkWriteIndirectExecutionSetShaderEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkShaderEXT        shader;
} VkWriteIndirectExecutionSetShaderEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `index` is the element of the set to update.
- `shader` is the shader to store in the indirect execution set.

Shaders need not be stored in the Indirect Execution Set according to their stage. The only restriction for shader indices within a set is that the value of the index **must** be less than the maximum number of shaders in the set.

Valid Usage

- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11031
  `index` **must** be less than `VkIndirectExecutionSetShaderInfoEXT`::`maxShaderCount`
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-11032
  `shader` **must** have been created with VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkWriteIndirectExecutionSetShaderEXT-pInitialShaders-11033
  A shader created with the same VkShaderStageFlagBits **must** have been passed in the `VkIndirectExecutionSetShaderInfoEXT`::`pInitialShaders` array
- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11034
  `index` **must** not be in use by submitted command buffers

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetShaderEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_SHADER_EXT
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-parameter
  `shader` **must** be a valid VkShaderEXT handle

Pipeline elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetPipelineEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    uint32_t                                    executionSetWriteCount,
    const VkWriteIndirectExecutionSetPipelineEXT* pExecutionSetWrites);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set being updated.
- `executionSetWriteCount` is the number of elements in the `pExecutionSetWrites` array.
- `pExecutionSetWrites` is a pointer to an array of VkWriteIndirectExecutionSetPipelineEXT structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-11035
  `indirectExecutionSet` **must** have been created with type VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-11037
  `executionSetWriteCount` **must** be less than or equal to `VkIndirectExecutionSetPipelineInfoEXT`::`maxPipelineCount`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-11042
  Each element in the `pExecutionSetWrites` array **must** have a unique `VkWriteIndirectExecutionSetPipelineEXT`::`index`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11038
  Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11324
  If `initialPipeline` was created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, each pipeline in `pExecutionSetWrites` **must** also have been created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11325
  If `initialPipeline` was created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, each pipeline in `pExecutionSetWrites` **must** also have been created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11039
  If `initialPipeline` was created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, the layout of each pipeline in `pExecutionSetWrites` **must** be compatible with the `initialPipeline` used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11040

Each pipeline in the Indirect Execution Set **must** have identically defined static and dynamic state values to the `initialPipeline` used to create the Indirect Execution Set

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11147
  Each pipeline in the Indirect Execution Set **must** have identically defined fragment outputs interface to the `initialPipeline` used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11152
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its included shader stages
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11098
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `FragDepth`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11086
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `SampleMask`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11085
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `StencilExportEXT`

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parameter
  `indirectExecutionSet` **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-parameter
  `pExecutionSetWrites` **must** be a valid pointer to an array of `executionSetWriteCount` valid VkWriteIndirectExecutionSetPipelineEXT structures
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-arraylength
  `executionSetWriteCount` **must** be greater than `0`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parent
  `indirectExecutionSet` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectExecutionSet` **must** be externally synchronized

Shader object elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetShaderEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    uint32_t                                    executionSetWriteCount,
    const VkWriteIndirectExecutionSetShaderEXT* pExecutionSetWrites);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set being updated.
- `executionSetWriteCount` is the number of elements in the `pExecutionSetWrites` array.
- `pExecutionSetWrites` is a pointer to an array of VkWriteIndirectExecutionSetShaderEXT structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-11041
  `indirectExecutionSet` **must** have been created with type VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11043
  Each element in the `pExecutionSetWrites` array **must** have a unique `VkWriteIndirectExecutionSetShaderEXT::index`
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11044
  Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11326
  If the shaders in `pInitialShaders` were created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, each shader in `pExecutionSetWrites` **must** also have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11327
  If the shaders in `pInitialShaders` were created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, each shader in `pExecutionSetWrites` **must** also have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11140
  If the shaders in `pInitialShaders` were created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, the descriptor layout of each shader in `pExecutionSetWrites` **must** be compatible with the initial layout info used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11148
  Each fragment shader element in the Indirect Execution Set **must** have identically defined fragment outputs interface to the initial shader state used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-FragDepth-11054
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader

state used to create the Indirect Execution Set in its use of `FragDepth`

- VUID-vkUpdateIndirectExecutionSetShaderEXT-SampleMask-11050
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of `SampleMask`
- VUID-vkUpdateIndirectExecutionSetShaderEXT-StencilExportEXT-11003
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of `StencilExportEXT`

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetShaderEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parameter
  `indirectExecutionSet` **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-parameter
  `pExecutionSetWrites` **must** be a valid pointer to an array of `executionSetWriteCount` valid VkWriteIndirectExecutionSetShaderEXT structures
- VUID-vkUpdateIndirectExecutionSetShaderEXT-executionSetWriteCount-arraylength
  `executionSetWriteCount` **must** be greater than `0`
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parent
  `indirectExecutionSet` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectExecutionSet` **must** be externally synchronized

It is legal to update an Indirect Execution Set that is in flight as long as the element indices in `pExecutionSetWrites` are not in use. Any change to an indirect execution set requires recalculating memory requirements by calling vkGetGeneratedCommandsMemoryRequirementsEXT for commands that use that modified state. Commands that are in flight or those not using updated elements require no changes.

The lifetimes of pipelines and shader objects contained in a set **must** match or exceed the lifetime of the set.

With `VK_NV_device_generated_commands`, the actual generation of commands as well as their execution on the device is handled as a single action with:

```
// Provided by VK_NV_device_generated_commands
void vkCmdExecuteGeneratedCommandsNV(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    isPreprocessed,
    const VkGeneratedCommandsInfoNV*            pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `isPreprocessed` represents whether the input data has already been preprocessed on the device. If it is VK_FALSE this command will implicitly trigger the preprocessing step, otherwise not.
- `pGeneratedCommandsInfo` is a pointer to a VkGeneratedCommandsInfoNV structure containing parameters affecting the generation of commands.

If the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_NV flag was used to create the VkGeneratedCommandsInfoNV::`indirectCommandsLayout` then the order of execution of individual draws through this command **may** execute in any order, and **may** not necessarily be in the same order as specified in VkGeneratedCommandsInfoNV::`pStreams`.

The order of execution of individual dispatches through this command **may** execute in any order and **may** not necessarily be in the same order as specified in VkGeneratedCommandsInfoNV ::`pStreams`.

Valid Usage

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a VkDescriptorSetLayout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdExecuteGeneratedCommandsNV-magFilter-04553
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-magFilter-09598
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample

a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdExecuteGeneratedCommandsNV-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdExecuteGeneratedCommandsNV-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdExecuteGeneratedCommandsNV-cubicRangeClamp-09212
  If the cubicRangeClamp feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-selectableCubicWeights-09214
  If the selectableCubicWeights feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-02696
  Any VkImage created with a VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in

the descriptor sets used by this command

- VUID-vkCmdExecuteGeneratedCommandsNV-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdExecuteGeneratedCommandsNV-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsNV-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsNV-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdExecuteGeneratedCommandsNV-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdExecuteGeneratedCommandsNV-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of

this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBoxFilterQCOM-06973
  If `OpImageBoxFilterQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSSDQCOM-06974
  If `OpImageBlockMatchSSDQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSADQCOM-12420
  If `OpImageBlockMatchSADQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSADQCOM-06976
  If `OpImageBlockMatchSADQCOM` or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06977
  If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06978
  If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09216
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09217

If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdExecuteGeneratedCommandsNV-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsNV-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdExecuteGeneratedCommandsNV-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not

have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR

- VUID-vkCmdExecuteGeneratedCommandsNV-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdExecuteGeneratedCommandsNV-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the Rank of the OpTypeTensorARM of the tensor resource variable **must** be equal to the dimensionCount provided via VkTensorCreateInfoARM::pDescription when creating the underlying VkTensorARM object
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the OpTypeTensorARM of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using OpTensorReadARM or OpTensorWriteARM, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to

OpTensorReadARM or OpTensorWriteARM via the Coordinates operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array

- VUID-vkCmdExecuteGeneratedCommandsNV-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the pNext chain of VkTensorCreateInfoARM, then the number of elements accessed with one OpTensorReadARM or OpTensorWriteARM **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as wraps[dimensionCount - 1] - InnermostCoordinate % wraps[dimensionCount - 1] where InnermostCoordinate is the last component of the coordinates array provided via the Coordinates operand
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsNV-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdExecuteGeneratedCommandsNV-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdExecuteGeneratedCommandsNV-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdExecuteGeneratedCommandsNV-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the

VkGraphicsPipelineCreateInfo structure specified when creating the VkPipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07468
  If any shader executed by this pipeline accesses an OpTypeImage variable with a Dim operand of SubpassData, it **must** be decorated with an InputAttachmentIndex that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' pInputAttachments [InputAttachmentIndex] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a InputAttachmentIndex referenced by VkRenderingInputAttachmentIndexInfo, or no InputAttachmentIndex if VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex or VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are NULL, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have an InputAttachmentIndex if both VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex and VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are non-NULL
- VUID-vkCmdExecuteGeneratedCommandsNV-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an InputAttachmentIndex, the InputAttachmentIndex **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for

VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE with a blend equation where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBoundsTestEnable` is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::`maxMultiviewInstanceIndex`
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::`sampleLocationsEnable` set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07634
  If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06666
  If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `sampleLocationsEnable` is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current

value of depthTestEnable is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07846
  If the depthBounds feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and the state is not inherited, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, and the state is not inherited, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, and the state is

not inherited, then the viewportCount parameter of vkCmdSetViewportWithCount **must** match the scissorCount parameter of vkCmdSetScissorWithCount

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04137
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportWScalingStateCreateInfoNV::viewportCount greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04138
  If the VK_NV_clip_space_w_scaling extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, the current value of viewportWScalingEnable is VK_TRUE, then vkCmdSetViewportWScalingNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08636
  If the VK_NV_clip_space_w_scaling extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, the current value of viewportWScalingEnable is VK_TRUE, then the viewportCount parameter in the last call to vkCmdSetViewportWScalingNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04139
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-shadingRateImage-09233
  If the shadingRateImage feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoarseSampleOrderNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-shadingRateImage-09234
  If the shadingRateImage feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of

shadingRateImageEnable is VK_TRUE, then vkCmdSetViewportShadingRatePaletteNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08637
  If the shadingRateImage feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of shadingRateImageEnable is VK_TRUE, then the viewportCount parameter in the last call to vkCmdSetViewportShadingRatePaletteNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-VkPipelineViewportCreateInfo-04141
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV not enabled, and a VkPipelineViewportSwizzleStateCreateInfoNV structure chained from VkPipelineViewportStateCreateInfo, then the bound graphics pipeline **must** have been created with VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-VkPipelineViewportCreateInfo-04142
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled and a VkPipelineViewportExclusiveScissorStateCreateInfoNV structure chained from VkPipelineViewportStateCreateInfo, then the bound graphics pipeline **must** have been created with VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07878
  If the exclusiveScissor feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV dynamic state enabled, then vkCmdSetExclusiveScissorEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07879
  If the exclusiveScissor feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV dynamic state enabled, and the most recent call to vkCmdSetExclusiveScissorEnableNV in the current command buffer set any element of pExclusiveScissorEnables to VK_TRUE, then vkCmdSetExclusiveScissorNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state

enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be `1`
- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be `1`
- VUID-vkCmdExecuteGeneratedCommandsNV-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of `blendEnable` **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is VK_FALSE, and none of the following is enabled:
  - the `VK_AMD_mixed_attachment_samples` extension

- the VK_NV_framebuffer_mixed_samples extension
- the multisampledRenderToSingleSampled feature

then the current value of rasterizationSamples **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdExecuteGeneratedCommandsNV-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-09362

If the current render pass instance was begun with vkCmdBeginRendering, with a VkRenderingInfo::colorAttachmentCount equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE **must** have been created with an image created with a VkExternalFormatANDROID::externalFormat value equal to the VkExternalFormatANDROID::externalFormat value used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09363
  If there is no shader object bound to any graphics stage, the current render pass instance was begun with vkCmdBeginRendering and a VkRenderingInfo::colorAttachmentCount equal to 1, and a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with an image created with a VkExternalFormatANDROID::externalFormat value equal to the VkExternalFormatANDROID::externalFormat value used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09364
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetColorBlendEnableEXT **must** have set the blend enable to VK_FALSE prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09365
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetRasterizationSamplesEXT **must** have set rasterizationSamples to VK_SAMPLE_COUNT_1_BIT prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09368
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetFragmentShadingRateKHR **must** have set pFragmentSize->width to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09369
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic

state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetFragmentShadingRateKHR **must** have set `pFragmentSize->height` to `1` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07749
  If the `colorWriteEnable` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-attachmentCount-07750
  If the `colorWriteEnable` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the `attachmentCount` parameter of the most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07751
  If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the `pNext` chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `discardRectangleEnable` is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::`discardRectangleCount`
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-09236
  If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the `pNext` chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `discardRectangleEnable` is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::`maxDiscardRectangles`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07880
  If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then

vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08914
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08917
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of

VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-layers-10831
  If the current render pass instance was created with VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE or VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, and the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, then the current render pass instance **must** have a layers value less than or equal to VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-06185
  If the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a

sample count equal to the corresponding element of the pColorAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-06186
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of the depthStencilAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-06187
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of the depthStencilAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07285
  If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07286
  If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07287
  If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment-

>imageView

- VUID-vkCmdExecuteGeneratedCommandsNV-pNext-07935
  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdExecuteGeneratedCommandsNV-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsNV-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-08965

If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state

enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and `alphaToCoverageEnable` was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdExecuteGeneratedCommandsNV-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set `alphaToCoverageEnable` to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07625
  If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound,

then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07632
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `conservativeRasterizationMode` is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-conservativePointAndLineRasterization-07499
  If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of `conservativeRasterizationMode` **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07633
  If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state enabled, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated

in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08669
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current lineRasterizationMode is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current alphaToCoverageEnable, alphaToOneEnable and sampleShadingEnable states **must** all be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07639
  If the depthClipControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09650
  If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of `depthClampEnable` is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07640
  If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV dynamic state enabled, then vkCmdSetViewportWScalingEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07641
  If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic state enabled, then vkCmdSetViewportSwizzleNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07642
  If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCoverageToColorEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07643
  If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `coverageToColorEnable` is VK_TRUE, then vkCmdSetCoverageToColorLocationNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07644
  If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCoverageModulationModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07645

If the VK_NV_framebuffer_mixed_samples extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageModulationMode is any value other than VK_COVERAGE_MODULATION_MODE_NONE_NV, then vkCmdSetCoverageModulationTableEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07646
  If the VK_NV_framebuffer_mixed_samples extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageModulationTableEnable is VK_TRUE, then vkCmdSetCoverageModulationTableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07647
  If the shadingRateImage feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetShadingRateImageEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-pipelineFragmentShadingRate-09238
  If the pipelineFragmentShadingRate feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFragmentShadingRateKHR **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07648
  If the representativeFragmentTest feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRepresentativeFragmentTestEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07649
  If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoverageReductionModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07471

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass

- VUID-vkCmdExecuteGeneratedCommandsNV-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater than or equal to the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` parameter used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater than or equal to the `rasterizationSamples` parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with `multisampledRenderToSingleSampledEnable` equal to VK_TRUE, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the `rasterizationSamples` member of that structure
- VUID-vkCmdExecuteGeneratedCommandsNV-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsNV-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsNV-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and

VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE, then the number of active color attachments **must** not exceed advancedBlendMaxColorAttachments

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10862
  If a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the rasterizationStream to zero
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the `sampleLocationsInfo.sampleLocationGridSize.width` in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::`maxSampleLocationGridSize.width` as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a `samples` parameter equaling `rasterizationSamples`
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the `sampleLocationsInfo.sampleLocationGridSize.height` in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::`maxSampleLocationGridSize.height` as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a `samples` parameter equaling `rasterizationSamples`
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-coverageModulationTableEnable-07488
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV state enabled, and the last call to vkCmdSetCoverageModulationTableEnableNV set coverageModulationTableEnable to VK_TRUE, then the coverageModulationTableCount parameter in the last call to vkCmdSetCoverageModulationTableNV **must** equal the current rasterizationSamples divided by the number of color samples in the current active color attachment
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07489
  If the VK_NV_framebuffer_mixed_samples extension is enabled, and if the current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current rasterizationSamples **must** be the same as the sample count of the depth/stencil attachment
- VUID-vkCmdExecuteGeneratedCommandsNV-coverageToColorEnable-07490
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV state enabled and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-09420
  If the VK_NV_fragment_coverage_to_color extension is enabled, and a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT
- VUID-vkCmdExecuteGeneratedCommandsNV-coverageReductionMode-07491
  If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV or VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the current values of coverageReductionMode, rasterizationSamples, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-07493
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-09421
  If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any graphics stage, then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07494
  If the VK_NV_framebuffer_mixed_samples extension is enabled, and the coverageReductionMode feature is not enabled, or the current value of coverageReductionMode is not VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV, and the current value of rasterizationSamples is greater than the sample count of the color attachment, then sample shading **must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07496

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07850
  If dynamic state was inherited from VkCommandBufferInheritanceViewportScissorInfoNV, it **must** be set in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-nextStage-10745
  For each shader object bound to a graphics stage, except for the shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08684
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of

VK_SHADER_STAGE_VERTEX_BIT

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT

call **must** not have any VkShaderEXT bound

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-09372
  If the current render pass instance was begun with vkCmdBeginRendering and a VkRenderingInfo::colorAttachmentCount equal to 1, a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, and a fragment shader is bound, it **must** not declare the DepthReplacing or StencilRefReplacingEXT execution modes
- VUID-vkCmdExecuteGeneratedCommandsNV-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdExecuteGeneratedCommandsNV-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render

pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10677
  If the per-tile execution model is enabled, the tileShadingPerTileDraw feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdExecuteGeneratedCommandsNV-multiviewPerViewViewports-12262
  If the multiviewPerViewViewports feature is enabled, then the index of the most significant bit in the current render pass instance viewMask **must** be less than the current value of viewportCount
- VUID-vkCmdExecuteGeneratedCommandsNV-multiviewPerViewViewports-12263
  If the multiviewPerViewViewports feature is enabled, then the index of the most significant

bit in the current render pass instance `viewMask` **must** be less than the current value of `scissorCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-11521
  If the current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::`flags` which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT ::`customResolve` as VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::`customResolve` as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11861
  If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT ::`colorAttachmentCount` equal to VkRenderingInfo::`colorAttachmentCount`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11862
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `resolveImageView` not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::`pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11863
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `resolveImageView` equal to VK_NULL_HANDLE **must** have the corresponding element of

VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11866
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11869
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the

value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects

must have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13362
  If there are any shader objects bound that were created with `flags` that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a `setLayoutCount` not equal to 0, and with `pSetLayouts` not equal to `NULL`, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-12491
  If there are any shader objects bound that were created with `flags` that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a `pushConstantRangeCount` not equal to 0, and with `pPushConstantRanges` not equal to `NULL`, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13363
  If there are any shader objects bound that were created with `flags` that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::`stageFlags` set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::`stageFlags` set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04007
  All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or VK_NULL_HANDLE buffers bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04008
  If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02721
  If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in Vertex Input Description
- VUID-vkCmdExecuteGeneratedCommandsNV-format-10389
  For each vertex attribute accessed by this command, if its VkVertexInputAttributeDescription::`format` or VkVertexInputAttributeDescription2EXT::`format` is a packed format, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in Vertex Input Calculation, **must** be a multiple of the size of the `format`
- VUID-vkCmdExecuteGeneratedCommandsNV-format-10390

For each vertex attribute accessed by this command, if its VkVertexInputAttributeDescription::format or VkVertexInputAttributeDescription2EXT::format is not a packed format, and either the legacyVertexAttributes feature is not enabled or format has 64-bit components, the value of attribAddress, calculated as described in Vertex Input Calculation, **must** be a multiple of the component size of the format

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07842
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY dynamic state enabled then vkCmdSetPrimitiveTopology **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicPrimitiveTopologyUnrestricted-07500
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY dynamic state enabled and the dynamicPrimitiveTopologyUnrestricted is VK_FALSE, then the primitiveTopology parameter of vkCmdSetPrimitiveTopology **must** be of the same topology class as the pipeline VkPipelineInputAssemblyStateCreateInfo::topology state
- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10286
  If a VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage is bound, then the current value of primitiveTopology **must** be VK_PRIMITIVE_TOPOLOGY_PATCH_LIST prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10747
  If vkCmdSetPrimitiveTopology set primitiveTopology to VK_PRIMITIVE_TOPOLOGY_PATCH_LIST prior to this drawing command, then a VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage **must** be bound
- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10748
  If vkCmdSetPrimitiveTopology set primitiveTopology to VK_PRIMITIVE_TOPOLOGY_POINT_LIST prior to this drawing command, the maintenance5 feature is not enabled, both a VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT and VK_SHADER_STAGE_GEOMETRY_BIT stage are not bound, then the Vertex Execution Model **must** have a PointSize decorated variable that is statically written to
- VUID-vkCmdExecuteGeneratedCommandsNV-pStrides-04913
  If the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE dynamic state enabled, but without the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled, then vkCmdBindVertexBuffers2 with a non-NULL pStrides parameter or vkCmdBindVertexBuffers3KHR with setStride set to VK_TRUE **must** have been called and not subsequently invalidated in the current command buffer prior to this draw command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-13118
  If the bound graphics pipeline was created without the VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE dynamic state enabled, without the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled, and vkCmdBindVertexBuffers3KHR was called and not subsequently invalidated in the

current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been VK_FALSE

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04914
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled then vkCmdSetVertexInputEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this draw command

- VUID-vkCmdExecuteGeneratedCommandsNV-Input-07939
  If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not enabled, and there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` **must** contain a location in VkVertexInputAttributeDescription2EXT::`location`

- VUID-vkCmdExecuteGeneratedCommandsNV-Input-08734
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled and either the `legacyVertexAttributes` feature is not enabled or the SPIR-V Type associated with a given `Input` variable of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be the same as VkVertexInputAttributeDescription2EXT::`format`

- VUID-vkCmdExecuteGeneratedCommandsNV-format-08936
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled and VkVertexInputAttributeDescription2EXT::`format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** be 64-bit

- VUID-vkCmdExecuteGeneratedCommandsNV-format-08937
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding VkVertexInputAttributeDescription2EXT ::`format` **must** have a 64-bit component

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09203
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled and VkVertexInputAttributeDescription2EXT::`format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` **must** not use components that are not present in the format

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04875
  If there is a shader object bound to the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage or the bound graphics pipeline state was created with both a VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage and the VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT dynamic state enabled, and the current value of `primitiveTopology` is VK_PRIMITIVE_TOPOLOGY_PATCH_LIST, then vkCmdSetPatchControlPointsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04879
  If there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE dynamic state enabled then vkCmdSetPrimitiveRestartEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09637
  If the `primitiveTopologyListRestart` feature is not enabled, the input assembly is VK_PRIMITIVE_TOPOLOGY_POINT_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST, VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY, or VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY, there is a shader object bound to the VK_SHADER_STAGE_VERTEX_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE dynamic state enabled, then vkCmdSetPrimitiveRestartEnable **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10909
  If the `primitiveTopologyPatchListRestart` feature is not enabled, the input assembly is VK_PRIMITIVE_TOPOLOGY_PATCH_LIST, there is a shader object bound to the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE dynamic state enabled then vkCmdSetPrimitiveRestartEnable **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsNV-stage-06481
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::`stage` member of any element of VkGraphicsPipelineCreateInfo::`pStages` set to VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08885
  There **must** be no shader object bound to either of the VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT stages
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07619
  If a shader object is bound to the VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stage and the VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT dynamic state enabled, then vkCmdSetTessellationDomainOriginEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12239

If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12240
  If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the orientation of triangles, they **must** be the same
- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12241
  If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the segment spacing, they **must** be the same
- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12242
  If a shader is bound to both the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT and VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT stages, and if both stages contain an OpExecutionMode instruction specifying the output patch size, they **must** be the same
- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-02970
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdExecuteGeneratedCommandsNV-isPreprocessed-02908
  If isPreprocessed is VK_TRUE then vkCmdPreprocessGeneratedCommandsNV **must** have already been executed on the device, using the same pGeneratedCommandsInfo content as well as the content of the input buffers it references (all except VkGeneratedCommandsInfoNV::preprocessBuffer). Furthermore, pGeneratedCommandsInfo's indirectCommandsLayout **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV bit set
- VUID-vkCmdExecuteGeneratedCommandsNV-pipeline-02909
  VkGeneratedCommandsInfoNV::pipeline **must** match the current bound pipeline at VkGeneratedCommandsInfoNV::pipelineBindPoint
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02910
  Transform feedback **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsNV-deviceGeneratedCommands-02911
  The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdExecuteGeneratedCommandsNV-pGeneratedCommandsInfo-parameter
  pGeneratedCommandsInfo **must** be a valid pointer to a valid VkGeneratedCommandsInfoNV structure
- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-recording
  commandBuffer **must** be in the recording state

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdExecuteGeneratedCommandsNV-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdExecuteGeneratedCommandsNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdExecuteGeneratedCommandsNV-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action Indirection

Conditional Rendering

vkCmdExecuteGeneratedCommandsNV is affected by conditional rendering

The `VkGeneratedCommandsInfoNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGeneratedCommandsInfoNV {
    VkStructureType                         sType;
    const void*                             pNext;
    VkPipelineBindPoint                     pipelineBindPoint;
    VkPipeline                              pipeline;
    VkIndirectCommandsLayoutNV              indirectCommandsLayout;
    uint32_t                                streamCount;
    const VkIndirectCommandsStreamNV*       pStreams;
    uint32_t                                sequencesCount;
    VkBuffer                                preprocessBuffer;
    VkDeviceSize                            preprocessOffset;
    VkDeviceSize                            preprocessSize;
    VkBuffer                                sequencesCountBuffer;
    VkDeviceSize                            sequencesCountOffset;
    VkBuffer                                sequencesIndexBuffer;
    VkDeviceSize                            sequencesIndexOffset;
} VkGeneratedCommandsInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBindPoint` is the VkPipelineBindPoint used for the `pipeline`.
- `pipeline` is the VkPipeline used in the generation and execution process.
- `indirectCommandsLayout` is the VkIndirectCommandsLayoutNV that provides the command sequence to generate.
- `streamCount` defines the number of input streams.
- `pStreams` is a pointer to an array of `streamCount` VkIndirectCommandsStreamNV structures providing the input data for the tokens used in `indirectCommandsLayout`.
- `sequencesCount` is the maximum number of sequences to reserve. If `sequencesCountBuffer` is VK_NULL_HANDLE, this is also the actual number of sequences generated.
- `preprocessBuffer` is the VkBuffer that is used for preprocessing the input data for execution. If this structure is used with vkCmdExecuteGeneratedCommandsNV with its `isPreprocessed` set to VK_TRUE, then the preprocessing step is skipped and data in this buffer will not be modified. The contents and the layout of this buffer are opaque to applications and **must** not be modified outside functions related to device-generated commands or copied to another buffer for reuse.
- `preprocessOffset` is the byte offset into `preprocessBuffer` where the preprocessed data is stored.
- `preprocessSize` is the maximum byte size within the `preprocessBuffer` after the `preprocessOffset` that is available for preprocessing.
- `sequencesCountBuffer` is a `VkBuffer` in which the actual number of sequences is provided as single `uint32_t` value.
- `sequencesCountOffset` is the byte offset into `sequencesCountBuffer` where the count value is stored.
- `sequencesIndexBuffer` is a `VkBuffer` that encodes the used sequence indices as `uint32_t` array.

- `sequencesIndexOffset` is the byte offset into `sequencesIndexBuffer` where the index values start.

Valid Usage

- VUID-VkGeneratedCommandsInfoNV-pipeline-02912
  The provided `pipeline` **must** match the pipeline bound at execution time
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02913
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV, then the `pipeline` **must** have been created with multiple shader groups
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02914
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV, then the `pipeline` **must** have been created with VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV set in `VkGraphicsPipelineCreateInfo`::`flags`
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02915
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV, then the `pipeline`'s `VkPipelineLayout` **must** match the VkIndirectCommandsLayoutTokenNV ::`pushconstantPipelineLayout`
- VUID-VkGeneratedCommandsInfoNV-streamCount-02916
  `streamCount` **must** match the `indirectCommandsLayout`'s `streamCount`
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09084
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, then the `pipeline` **must** have been created with the flag VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09085
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, then the `pipeline` **must** have been created with a VkComputePipelineIndirectBufferInfoNV structure specifying a valid address where its metadata will be saved
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09086
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, then vkCmdUpdatePipelineIndirectBufferNV **must** have been called on that pipeline to save its metadata to a device address
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09087
  If `pipelineBindPoint` is of type VK_PIPELINE_BIND_POINT_COMPUTE, and if VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV is used, then `pipeline` **must** be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsInfoNV-sequencesCount-02917
  `sequencesCount` **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::`maxIndirectSequenceCount` and VkGeneratedCommandsMemoryRequirementsInfoNV::`maxSequencesCount` that was used to determine the `preprocessSize`

- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-02918
  `preprocessBuffer` **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set in its usage flag
- VUID-VkGeneratedCommandsInfoNV-preprocessOffset-02919
  `preprocessOffset` **must** be aligned to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::`minIndirectCommandsBufferOffsetAlignment`
- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-02971
  If `preprocessBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkGeneratedCommandsInfoNV-preprocessSize-02920
  `preprocessSize` **must** be at least equal to the memory requirement's size returned by vkGetGeneratedCommandsMemoryRequirementsNV using the matching inputs (`indirectCommandsLayout`, ...) as within this structure
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02921
  `sequencesCountBuffer` **can** be set if the actual used count of sequences is sourced from the provided buffer. In that case the `sequencesCount` serves as upper bound
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02922
  If `sequencesCountBuffer` is not VK_NULL_HANDLE, its usage flag **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02923
  If `sequencesCountBuffer` is not VK_NULL_HANDLE, `sequencesCountOffset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minSequencesCountBufferOffsetAlignment`
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02972
  If `sequencesCountBuffer` is not VK_NULL_HANDLE and is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02924
  If `indirectCommandsLayout`'s VK_INDIRECT_COMMANDS_LAYOUT_USAGE_INDEXED_SEQUENCES_BIT_NV is set, `sequencesIndexBuffer` **must** be set otherwise it **must** be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02925
  If `sequencesIndexBuffer` is not VK_NULL_HANDLE, its usage flag **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02926
  If `sequencesIndexBuffer` is not VK_NULL_HANDLE, `sequencesIndexOffset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minSequencesIndexBufferOffsetAlignment`
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02973
  If `sequencesIndexBuffer` is not VK_NULL_HANDLE and is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-07078
  If the `indirectCommandsLayout` uses a token of

VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV, then the pipeline **must** contain a shader stage using the MeshNV Execution Model

- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-07079
  If the indirectCommandsLayout uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV, then the pipeline **must** contain a shader stage using the MeshEXT Execution Model

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsInfoNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_INFO_NV
- VUID-VkGeneratedCommandsInfoNV-pNext-pNext
  pNext **must** be NULL
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-parameter
  pipelineBindPoint **must** be a valid VkPipelineBindPoint value
- VUID-VkGeneratedCommandsInfoNV-pipeline-parameter
  If pipeline is not VK_NULL_HANDLE, pipeline **must** be a valid VkPipeline handle
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-parameter
  indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutNV handle
- VUID-VkGeneratedCommandsInfoNV-pStreams-parameter
  pStreams **must** be a valid pointer to an array of streamCount valid VkIndirectCommandsStreamNV structures
- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-parameter
  preprocessBuffer **must** be a valid VkBuffer handle
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-parameter
  If sequencesCountBuffer is not VK_NULL_HANDLE, sequencesCountBuffer **must** be a valid VkBuffer handle
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-parameter
  If sequencesIndexBuffer is not VK_NULL_HANDLE, sequencesIndexBuffer **must** be a valid VkBuffer handle
- VUID-VkGeneratedCommandsInfoNV-streamCount-arraylength
  streamCount **must** be greater than 0
- VUID-VkGeneratedCommandsInfoNV-commonparent
  Each of indirectCommandsLayout, pipeline, preprocessBuffer, sequencesCountBuffer, and sequencesIndexBuffer that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Referencing the functions defined in Indirect Commands Layout, vkCmdExecuteGeneratedCommandsNV behaves as:

```
uint32_t sequencesCount = sequencesCountBuffer ?
```

```
      min(maxSequencesCount, sequencesCountBuffer.load_uint32(sequencesCountOffset) :
      maxSequencesCount;

cmdProcessAllSequences(commandBuffer, pipeline,
                       indirectCommandsLayout, pIndirectCommandsStreams,
                       sequencesCount,
                       sequencesIndexBuffer, sequencesIndexOffset);

// The stateful commands within indirectCommandsLayout will not
// affect the state of subsequent commands in the target
// command buffer (cmd)
```

NOTE It is important to note that the values of all state related to the `pipelineBindPoint` used are undefined after this command.

Commands **can** be preprocessed prior to execution using the following command:

```
// Provided by VK_NV_device_generated_commands
void vkCmdPreprocessGeneratedCommandsNV(
    VkCommandBuffer                             commandBuffer,
    const VkGeneratedCommandsInfoNV*            pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer which does the preprocessing.
- `pGeneratedCommandsInfo` is a pointer to a VkGeneratedCommandsInfoNV structure containing parameters affecting the preprocessing step.

Valid Usage

- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-02974
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdPreprocessGeneratedCommandsNV-pGeneratedCommandsInfo-02927
  `pGeneratedCommandsInfo->indirectCommandsLayout` **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV bit set
- VUID-vkCmdPreprocessGeneratedCommandsNV-deviceGeneratedCommands-02928
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPreprocessGeneratedCommandsNV-pGeneratedCommandsInfo-parameter
  `pGeneratedCommandsInfo` **must** be a valid pointer to a valid VkGeneratedCommandsInfoNV

structure

- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPreprocessGeneratedCommandsNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdPreprocessGeneratedCommandsNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdPreprocessGeneratedCommandsNV-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdPreprocessGeneratedCommandsNV is not affected by conditional rendering

The bound descriptor sets and push constants that will be used with indirect command generation for the compute pipelines **must** already be specified at the time of preprocessing commands with vkCmdPreprocessGeneratedCommandsNV. They **must** not change until the execution of indirect commands is submitted with vkCmdExecuteGeneratedCommandsNV.

If push constants for the compute pipeline are also specified in the VkGeneratedCommandsInfoNV ::`indirectCommandsLayout` with VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV token, then those values override the push constants that were previously pushed for the compute pipeline.

With VK_EXT_device_generated_commands, the actual generation of commands as well as their execution on the device is handled as a single action with:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdExecuteGeneratedCommandsEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    isPreprocessed,
    const VkGeneratedCommandsInfoEXT*           pGeneratedCommandsInfo);
```

- commandBuffer is the command buffer into which the command is recorded.
- isPreprocessed represents whether the input data has already been preprocessed on the device. If it is VK_FALSE this command will implicitly trigger the preprocessing step, otherwise not.
- pGeneratedCommandsInfo is a pointer to a VkGeneratedCommandsInfoEXT structure containing parameters affecting the generation of commands.

If the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT flag was used to create the VkGeneratedCommandsInfoEXT::indirectCommandsLayout then the execution of sequences through this command **may** use implementation-defined ordering which is not guaranteed to be coherent using the same input data. It does not affect the order of token processing within a sequence. This is the implied ordering with VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT.

After a call to vkCmdExecuteGeneratedCommandsEXT, command buffer state will become undefined according to the tokens executed. This table specifies the relationship between tokens used and state invalidation.

Table 53. Indirect Execution State Invalidation

Common Tokens	States Invalidated
VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT	Bound shaders and pipelines
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT	Push constant data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT	Push constant data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT	Push data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT	Push data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT	Index buffer
VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT	Vertex buffer

Valid Usage

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that include a LOD bias or any offset values
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07888

If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdExecuteGeneratedCommandsEXT-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-02696
  Any VkImage created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage

corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsEXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdExecuteGeneratedCommandsEXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSADQCOM-12420
  If OpImageBlockMatchSADQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSADQCOM-06976
  If OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and

addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06977
  If OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06978
  If any command other than OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09215
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09216
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09217
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdExecuteGeneratedCommandsEXT-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09600
  If a descriptor with type equal to any of

VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdExecuteGeneratedCommandsEXT-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the `pNext` chain of VkTensorCreateInfoARM, then the number of elements accessed with one `OpTensorReadARM` or `OpTensorWriteARM` **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as `wraps`[`dimensionCount` - 1] - InnermostCoordinate % `wraps`[`dimensionCount` - 1] where InnermostCoordinate is the last component of the coordinates array provided via the `Coordinates` operand
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource heap **must** be a multiple of tensorDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this

command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsEXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdExecuteGeneratedCommandsEXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered

before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdExecuteGeneratedCommandsEXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by VkRenderingInputAttachmentIndexInfo, or no `InputAttachmentIndex` if VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` or VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are `NULL`, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09596

Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` and VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are non-`NULL`

- VUID-vkCmdExecuteGeneratedCommandsEXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an

attachment, storage image, or sampled image by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE with a blend equation where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the

current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthBoundsTestEnable is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07634
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06666
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value

of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07846
  If the depthBounds feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state

enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and the state is not inherited, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, and the state is not inherited, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, and the state is not inherited, then the viewportCount parameter of vkCmdSetViewportWithCount **must** match the scissorCount parameter of vkCmdSetScissorWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04137
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportWScalingStateCreateInfoNV::viewportCount greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04138
  If the VK_NV_clip_space_w_scaling extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, the current value of viewportWScalingEnable is VK_TRUE, then vkCmdSetViewportWScalingNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08636
  If the VK_NV_clip_space_w_scaling extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, the current value of `viewportWScalingEnable` is VK_TRUE, then the `viewportCount` parameter in the last call to vkCmdSetViewportWScalingNV **must** be greater than or equal to the `viewportCount` parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04139
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportShadingRateImageStateCreateInfoNV::`viewportCount` greater than or equal to the `viewportCount` parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-shadingRateImage-09233
  If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCoarseSampleOrderNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-shadingRateImage-09234
  If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `shadingRateImageEnable` is VK_TRUE, then vkCmdSetViewportShadingRatePaletteNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08637
  If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `shadingRateImageEnable` is VK_TRUE, then the `viewportCount` parameter in the last call to vkCmdSetViewportShadingRatePaletteNV **must** be greater than or equal to the `viewportCount` parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-VkPipelineViewportCreateInfo-04141
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV not enabled, and a VkPipelineViewportSwizzleStateCreateInfoNV structure chained from VkPipelineViewportStateCreateInfo, then the bound graphics pipeline **must** have been created with VkPipelineViewportSwizzleStateCreateInfoNV::`viewportCount` greater than or equal to the `viewportCount` parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsEXT-VkPipelineViewportCreateInfo-04142
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled and a VkPipelineViewportExclusiveScissorStateCreateInfoNV structure chained from VkPipelineViewportStateCreateInfo, then the bound graphics pipeline **must** have been created with VkPipelineViewportExclusiveScissorStateCreateInfoNV ::`exclusiveScissorCount` greater than or equal to the `viewportCount` parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07878
  If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV dynamic state enabled, then vkCmdSetExclusiveScissorEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07879
  If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV dynamic state enabled, and the most recent call to vkCmdSetExclusiveScissorEnableNV in the current command buffer set any element of `pExclusiveScissorEnables` to VK_TRUE, then vkCmdSetExclusiveScissorNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the

shader stages of the bound graphics pipeline write to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the primitiveFragmentShadingRateWithMultipleViewports limit is not supported, and any shader object bound to a graphics stage writes to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsEXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of blendEnable **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and none of the following is enabled:
  - the VK_AMD_mixed_attachment_samples extension
  - the VK_NV_framebuffer_mixed_samples extension
  - the multisampledRenderToSingleSampled feature

  then the current value of rasterizationSamples **must** be the same as the current color and/or depth/stencil attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render

pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-09362
  If the current render pass instance was begun with vkCmdBeginRendering, with a VkRenderingInfo::colorAttachmentCount equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE **must** have been created with an image created with a VkExternalFormatANDROID::externalFormat value equal to the VkExternalFormatANDROID::externalFormat value used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09363
  If there is no shader object bound to any graphics stage, the current render pass instance was begun with vkCmdBeginRendering and a VkRenderingInfo::colorAttachmentCount equal to 1, and a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with an image created with a VkExternalFormatANDROID::externalFormat value equal to the VkExternalFormatANDROID::externalFormat value used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09364
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which

was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetColorBlendEnableEXT **must** have set the blend enable to VK_FALSE prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09365
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetRasterizationSamplesEXT **must** have set `rasterizationSamples` to VK_SAMPLE_COUNT_1_BIT prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09368
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetFragmentShadingRateKHR **must** have set `pFragmentSize->width` to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09369
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, the current render pass instance was begun with vkCmdBeginRendering, and it includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID resolve mode, then the last call to vkCmdSetFragmentShadingRateKHR **must** have set `pFragmentSize->height` to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07749
  If the `colorWriteEnable` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-attachmentCount-07750
  If the `colorWriteEnable` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the `attachmentCount` parameter of the most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::discardRectangleCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::maxDiscardRectangles
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo ::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08914
  If the current render pass instance was begun with vkCmdBeginRendering, the

dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08917
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the

dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-layers-10831
  If the current render pass instance was created with VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE or VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, and the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE, then the current render pass instance **must** have a layers value less than or equal to VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-06185
  If the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the corresponding element of the pColorAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-06186
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of the depthStencilAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-06187
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline was created with a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of the depthStencilAttachmentSamples member of VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV used to create the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-

07285
If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07286
If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07287
If the bound pipeline was created without a VkAttachmentSampleCountInfoAMD or VkAttachmentSampleCountInfoNV structure, and the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-pNext-07935
If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-06198
If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-08963
If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be

VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708

If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and alphaToCoverageEnable was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set alphaToCoverageEnable to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07625
  If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state

enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07632
  If the VK_EXT_conservative_rasterization extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of conservativeRasterizationMode is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-conservativePointAndLineRasterization-07499
  If the VK_EXT_conservative_rasterization extension is enabled, conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state enabled, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08669
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics

pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current lineRasterizationMode is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current alphaToCoverageEnable, alphaToOneEnable and sampleShadingEnable states **must** all be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07639
  If the depthClipControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09650
  If the depthClampControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of depthClampEnable is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07640
  If the VK_NV_clip_space_w_scaling extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV dynamic state enabled, then vkCmdSetViewportWScalingEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07641
  If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic state enabled, then

vkCmdSetViewportSwizzleNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07642
  If the VK_NV_fragment_coverage_to_color extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoverageToColorEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07643
  If the VK_NV_fragment_coverage_to_color extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageToColorEnable is VK_TRUE, then vkCmdSetCoverageToColorLocationNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07644
  If the VK_NV_framebuffer_mixed_samples extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoverageModulationModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07645
  If the VK_NV_framebuffer_mixed_samples extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageModulationMode is any value other than VK_COVERAGE_MODULATION_MODE_NONE_NV, then vkCmdSetCoverageModulationTableEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07646
  If the VK_NV_framebuffer_mixed_samples extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageModulationTableEnable is VK_TRUE, then vkCmdSetCoverageModulationTableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07647
  If the shadingRateImage feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV dynamic state enabled, and

the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetShadingRateImageEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-pipelineFragmentShadingRate-09238
  If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetFragmentShadingRateKHR **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07648
  If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetRepresentativeFragmentTestEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07649
  If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCoverageReductionModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater than or equal to the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` parameter used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater than or equal to the `rasterizationSamples` parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09211
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure

- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE, then the number of active color attachments **must** not exceed advancedBlendMaxColorAttachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10862
  If a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the `rasterizationStream` to zero
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if

sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.sampleLocationGridSize.width in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.sampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageModulationTableEnable-07488
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV state enabled, and the last call to vkCmdSetCoverageModulationTableEnableNV set coverageModulationTableEnable to VK_TRUE, then the coverageModulationTableCount parameter in the last call to vkCmdSetCoverageModulationTableNV **must** equal the current rasterizationSamples divided by the number of color samples in the current active color attachment
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07489
  If the VK_NV_framebuffer_mixed_samples extension is enabled, and if the current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current rasterizationSamples **must** be the same as the sample count of the depth/stencil attachment
- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageToColorEnable-07490
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV state enabled and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-09420
  If the VK_NV_fragment_coverage_to_color extension is enabled, and a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the last call to vkCmdSetCoverageToColorEnableNV set the coverageToColorEnable to VK_TRUE, then there **must** be an active color attachment at the location selected by the last call to vkCmdSetCoverageToColorLocationNV coverageToColorLocation, with a VkFormat of VK_FORMAT_R8_UINT, VK_FORMAT_R8_SINT, VK_FORMAT_R16_UINT, VK_FORMAT_R16_SINT, VK_FORMAT_R32_UINT, or VK_FORMAT_R32_SINT
- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageReductionMode-07491
  If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV or VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the current values of coverageReductionMode, rasterizationSamples, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-07493
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-09421
  If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any graphics stage, then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07494
  If the VK_NV_framebuffer_mixed_samples extension is enabled, and the coverageReductionMode feature is not enabled, or the current value of coverageReductionMode is not VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV, and the current value of rasterizationSamples is greater than the sample count of the color attachment, then sample shading **must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines

feature **must** be enabled and VkPhysicalDeviceLimits::`strictLines` **must** be VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsEXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::`stage` member of an element of VkGraphicsPipelineCreateInfo::`pStages` set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07850
  If dynamic state was inherited from VkCommandBufferInheritanceViewportScissorInfoNV, it **must** be set in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-nextStage-10745
  For each shader object bound to a graphics stage, except for the shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08684
  If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_VERTEX_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08685
  If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08686
  If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08687
  If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08688
  If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08689

If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any VkShaderEXT bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-09372
  If the current render pass instance was begun with vkCmdBeginRendering and a VkRenderingInfo::colorAttachmentCount equal to 1, a color attachment with a resolve mode of VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID, and a fragment shader is bound, it **must** not declare the DepthReplacing or StencilRefReplacingEXT execution modes
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment

shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdExecuteGeneratedCommandsEXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of

VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10677
  If the per-tile execution model is enabled, the tileShadingPerTileDraw feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdExecuteGeneratedCommandsEXT-multiviewPerViewViewports-12262
  If the multiviewPerViewViewports feature is enabled, then the index of the most significant bit in the current render pass instance viewMask **must** be less than the current value of viewportCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-multiviewPerViewViewports-12263
  If the multiviewPerViewViewports feature is enabled, then the index of the most significant bit in the current render pass instance viewMask **must** be less than the current value of scissorCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-11521
  If the current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::flags which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and

vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11861
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound

graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11866
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and VkRenderingInfo::`pDepthAttachment->resolveImageView` was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::`depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::`pDepthAttachment->resolveImageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, VkRenderingInfo::`pDepthAttachment->resolveImageView` was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::`depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::`pDepthAttachment->resolveImageView`, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and VkRenderingInfo::`pStencilAttachment->resolveImageView` was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::`stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11869
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and VkRenderingInfo::`pStencilAttachment->resolveImageView` was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::`stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::`pStencilAttachment->resolveImageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, VkRenderingInfo::`pStencilAttachment->resolveImageView` was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::`stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::`pStencilAttachment->resolveImageView`, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::`colorAttachmentCount` parameter greater than `0` and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::`pColorAttachments` array with a `resolveImageView` not equal to VK_NULL_HANDLE, the `resolveImageView` **must** have been created with a

sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with

VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::`stageFlags` set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11045
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11046
  If `isPreprocessed` is VK_TRUE and vkGetGeneratedCommandsMemoryRequirementsEXT did not return a required size of zero then vkCmdPreprocessGeneratedCommandsEXT **must** have already been executed on the device before this command executes, and the preprocessing command **must** have used the same `pGeneratedCommandsInfo` content as well as the content of the input buffers it references (all except VkGeneratedCommandsInfoEXT::`preprocessAddress`)
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11047
  If `isPreprocessed` is VK_TRUE then the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11141
  If the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` was created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set, then `isPreprocessed` **must** be VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-preprocessAddress-11142
  The contents of the `preprocessAddress` member of `pGeneratedCommandsInfo` **must** not have been previously used to record another vkCmdExecuteGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11048
  If `isPreprocessed` is VK_TRUE then the bound descriptor sets and push constants **must** match identically with those bound during recording of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-10198
  If `isPreprocessed` is VK_TRUE then the conditional render state and its predicate value **must** match identically with the state and value set during execution of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11049
  If `isPreprocessed` is VK_TRUE and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a draw token, then the graphics state bound on `commandBuffer` **must** match identically with the graphics state bound on the `stateCommandBuffer` passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11149
  If `isPreprocessed` is VK_TRUE, then the queue family index of `commandBuffer` **must** be the same as the queue family index used to allocate the `stateCommandBuffer` passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11051

If isPreprocessed is VK_TRUE and the indirectCommandsLayout member of pGeneratedCommandsInfo contains a dispatch token, then the compute state bound on commandBuffer **must** match identically with the compute state bound on the stateCommandBuffer passed to vkCmdPreprocessGeneratedCommandsEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11052
  If isPreprocessed is VK_TRUE and the indirectCommandsLayout member of pGeneratedCommandsInfo contains a ray tracing token, then the ray tracing state bound on commandBuffer **must** match identically with the ray tracing state bound on the stateCommandBuffer passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11053
  If the token sequence of the passed VkGeneratedCommandsInfoEXT::indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the initial shader state of VkGeneratedCommandsInfoEXT::indirectExecutionSet **must** be bound on commandBuffer
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11004
  If indirectCommandsLayout was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token and indirectExecutionSet was created using VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT, every executed VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token **must** bind all the shader stages set in the VkIndirectCommandsExecutionSetTokenEXT::shaderStages used to create indirectCommandsLayout
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11055
  If isPreprocessed is VK_TRUE and the token sequence of the passed VkGeneratedCommandsInfoEXT::indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the members of VkGeneratedCommandsInfoEXT::indirectExecutionSet accessed by this command **must** not have been modified since the preprocess buffer was generated
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11056
  If the indirectCommandsLayout member of pGeneratedCommandsInfo contains a draw token, then the active render pass **must** not have a specified fragment density map
- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommandsTransformFeedback-11057
  If deviceGeneratedCommandsTransformFeedback is not supported on device, transform feedback **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectExecutionSet-11058
  If transform feedback is active, VkGeneratedCommandsInfoEXT::indirectExecutionSet **must** be VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommands-11059
  The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11060

The bound shader stages **must** be supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages

- VUID-vkCmdExecuteGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11061
  Only stages specified in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages **can** be set in pGeneratedCommandsInfo->shaderStages
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11062
  If a rendering pass is currently active, either the view mask **must** be 0 or indirectExecutionSet **must** be VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11143
  commandBuffer **must** not have been recorded with VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-10769
  If the indirectCommandsLayout member of pGeneratedCommandsInfo contains a draw token, this command **must** not be called outside a render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-12202
  If the indirectCommandsLayout member of pGeneratedCommandsInfo does not contain a draw token, this command **must** not be called inside a render pass instance

Valid Usage (Implicit)

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdExecuteGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
  pGeneratedCommandsInfo **must** be a valid pointer to a valid VkGeneratedCommandsInfoEXT structure
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdExecuteGeneratedCommandsEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdExecuteGeneratedCommandsEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdExecuteGeneratedCommandsEXT-bufferlevel
  commandBuffer **must** be a primary VkCommandBuffer

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action Indirection

Conditional Rendering

vkCmdExecuteGeneratedCommandsEXT is affected by conditional rendering

The `VkGeneratedCommandsInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkShaderStageFlags              shaderStages;
    VkIndirectExecutionSetEXT       indirectExecutionSet;
    VkIndirectCommandsLayoutEXT     indirectCommandsLayout;
    VkDeviceAddress                 indirectAddress;
    VkDeviceSize                    indirectAddressSize;
    VkDeviceAddress                 preprocessAddress;
    VkDeviceSize                    preprocessSize;
    uint32_t                        maxSequenceCount;
    VkDeviceAddress                 sequenceCountAddress;
    uint32_t                        maxDrawCount;
} VkGeneratedCommandsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderStages` is the mask of shader stages used by the commands.
- `indirectExecutionSet` is the indirect execution set to be used for binding shaders.
- `indirectCommandsLayout` is the VkIndirectCommandsLayoutEXT that specifies the command

sequence data.

- `indirectAddress` is an address that holds the indirect buffer data.
- `indirectAddressSize` is the size in bytes of indirect buffer data starting at `indirectAddress`.
- `preprocessAddress` specifies a physical address of the `VkBuffer` used for preprocessing the input data for execution. If this structure is used with vkCmdExecuteGeneratedCommandsEXT with its `isPreprocessed` set to VK_TRUE, then the preprocessing step is skipped but data in this address **may** still be modified. The contents and the layout of this address are opaque to applications and **must** not be modified outside functions related to device-generated commands or copied to another buffer for reuse.
- `preprocessSize` is the maximum byte size within `preprocessAddress` that is available for preprocessing.
- `maxSequenceCount` is used to determine the number of sequences to execute.
- `sequenceCountAddress` specifies an optional physical address of a single `uint32_t` value containing the requested number of sequences to execute.
- `maxDrawCount` is the maximum number of indirect draws that can be executed by any COUNT-type multi-draw indirect tokens. The draw count in the indirect buffer is clamped to this value for these token types.

If `sequenceCountAddress` is not `NULL`, then `maxSequenceCount` is the maximum number of sequences that can be executed. The actual number is `min(maxSequenceCount, *sequenceCountAddress)`. If `sequenceCountAddress` is `NULL`, then `maxSequenceCount` is the exact number of sequences to execute.

If the action command token for the layout is not a COUNT-type multi-draw indirect token, `maxDrawCount` is ignored.

Valid Usage

- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11063
  If vkGetGeneratedCommandsMemoryRequirementsEXT returns a non-zero size, `preprocessAddress` **must** not be `0`
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11064
  `VkDeviceMemory` objects bound to the underlying buffer for `preprocessAddress` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the VkMemoryRequirements structure returned by vkGetGeneratedCommandsMemoryRequirementsEXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11065
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in VkIndirectCommandsPushConstantTokenEXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11066
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in

VkIndirectCommandsPushConstantTokenEXT

- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-11067
  `maxSequenceCount` **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectSequenceCount` and VkGeneratedCommandsMemoryRequirementsInfoEXT::`maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11068
  If `sequenceCountAddress` is not `NULL`, the value contained in the address **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectSequenceCount` and VkGeneratedCommandsMemoryRequirementsInfoEXT::`maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-10246
  `maxSequenceCount` **must** not be zero
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11069
  `preprocessAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT usage flag set
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11144
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there is a descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, the pipeline layout **must** be compatible with the descriptor and push constant layout info used by `indirectExecutionSet`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11328
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11329
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was a descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11330
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, shaders in `indirectExecutionSet` **must** have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT

- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11331
  If the indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was a descriptor and push constant layout info provided either by pipelineLayout or through a VkPipelineLayoutCreateInfo in pNext of the VkIndirectCommandsLayoutCreateInfoEXT used to create indirectCommandsLayout, shaders in indirectExecutionSet **must** have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11002
  If indirectCommandsLayout was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the shader stages used to create the initial shader state of indirectExecutionSet **must** equal the VkIndirectCommandsExecutionSetTokenEXT::shaderStages used to create indirectCommandsLayout
- VUID-VkGeneratedCommandsInfoEXT-preprocessSize-11071
  preprocessSize **must** be greater than or equal to the memory requirement's size returned by vkGetGeneratedCommandsMemoryRequirementsEXT using the matching inputs (indirectCommandsLayout, ...) as within this structure
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11072
  The underlying buffer for sequenceCountAddress **must** have the VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR bit set in its usage flag
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11073
  If sequenceCountAddress is not NULL, sequenceCountAddress **must** be aligned to 4
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-12407
  The underlying buffer for indirectAddress **must** have the VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR bit set in its usage flag
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-11074
  indirectAddress **must** be aligned to 4
- VUID-VkGeneratedCommandsInfoEXT-indirectAddressSize-11077
  indirectAddressSize **must** be greater than zero
- VUID-VkGeneratedCommandsInfoEXT-maxDrawCount-11078
  When not ignored, maxDrawCount × maxSequenceCount **must** be less than 2^24
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11079
  If indirectCommandsLayout was created using a VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token and shader objects are not bound then the bound graphics pipeline **must** have been created with VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE in pDynamicStates
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11083
  If the token sequence of the passed indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the indirectExecutionSet **must** not be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-10241
  If the token sequence of the passed indirectCommandsLayout does not contain a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the

indirectExecutionSet **must** be VK_NULL_HANDLE

- VUID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-11080
  If indirectExecutionSet is VK_NULL_HANDLE, a VkGeneratedCommandsPipelineInfoEXT or VkGeneratedCommandsShaderInfoEXT **must** be included in the pNext chain

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_INFO_EXT
- VUID-VkGeneratedCommandsInfoEXT-shaderStages-parameter
  shaderStages **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-parameter
  If indirectExecutionSet is not VK_NULL_HANDLE, indirectExecutionSet **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-parameter
  indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-parameter
  indirectAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-parameter
  If preprocessAddress is not 0, preprocessAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-parameter
  If sequenceCountAddress is not 0, sequenceCountAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-commonparent
  Both of indirectCommandsLayout, and indirectExecutionSet that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Referencing the functions defined in Indirect Commands Layout, vkCmdExecuteGeneratedCommandsEXT behaves as:

```
uint32_t sequencesCount = sequenceCountAddress ?
      min(maxSequenceCount, sequenceCountAddress.load_uint32()) :
      maxSequenceCount;

cmdProcessAllSequences(commandBuffer, indirectExecutionSet,
                       indirectCommandsLayout, indirectAddress,
                       sequencesCount);

// The stateful commands within indirectCommandsLayout will not
// affect the state of subsequent commands in the target
// command buffer (cmd)
```

NOTE It is important to note that the affected values of all state related to the `shaderStages` used are undefined after this command. This means that e.g., if this command indirectly alters push constants, the push constant state becomes undefined.

Commands **can** be preprocessed prior to execution using the following command:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdPreprocessGeneratedCommandsEXT(
    VkCommandBuffer                             commandBuffer,
    const VkGeneratedCommandsInfoEXT*           pGeneratedCommandsInfo,
    VkCommandBuffer                             stateCommandBuffer);
```

- `commandBuffer` is the command buffer which does the preprocessing.
- `pGeneratedCommandsInfo` is a pointer to a VkGeneratedCommandsInfoEXT structure containing parameters affecting the preprocessing step.
- `stateCommandBuffer` is a command buffer from which to snapshot current states affecting the preprocessing step. When a graphics action command token is used, graphics state is snapshotted. When a compute action command token is used, compute state is snapshotted. When a ray tracing action command token is used, ray tracing state is snapshotted. It can be deleted at any time after this command has been recorded.

NOTE `stateCommandBuffer` access is not synchronized by the driver, meaning that this command buffer **must** not be modified between threads in an unsafe manner.

Valid Usage

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-11081
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-11082
  `pGeneratedCommandsInfo`'s `indirectCommandsLayout` **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set
- VUID-vkCmdPreprocessGeneratedCommandsEXT-indirectCommandsLayout-11084
  If the token sequence of the passed VkGeneratedCommandsInfoEXT::`indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the initial shader state of VkGeneratedCommandsInfoEXT::`indirectExecutionSet` **must** be bound on `stateCommandBuffer`
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-11138
  `stateCommandBuffer` **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsEXT-deviceGeneratedCommands-11087
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-vkCmdPreprocessGeneratedCommandsEXT-

supportedIndirectCommandsShaderStages-11088
Only stages specified in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages **can** be set in pGeneratedCommandsInfo->shaderStages

Valid Usage (Implicit)

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-parameter
commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
pGeneratedCommandsInfo **must** be a valid pointer to a valid VkGeneratedCommandsInfoEXT structure
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-parameter
stateCommandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-recording
commandBuffer **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-cmdpool
The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPreprocessGeneratedCommandsEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdPreprocessGeneratedCommandsEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdPreprocessGeneratedCommandsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPreprocessGeneratedCommandsEXT-bufferlevel
commandBuffer **must** be a primary VkCommandBuffer
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commonparent
Both of commandBuffer, and stateCommandBuffer **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to stateCommandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdPreprocessGeneratedCommandsEXT is not affected by conditional rendering

The bound descriptor sets and push constants that will be used with indirect command generation **must** already be specified on `stateCommandBuffer` at the time of preprocessing commands with vkCmdPreprocessGeneratedCommandsEXT. They **must** match the bound descriptor sets and push constants used in the execution of indirect commands with vkCmdExecuteGeneratedCommandsEXT.

If push constants for shader stages are also specified in the VkGeneratedCommandsInfoEXT ::`indirectCommandsLayout` with a VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT token, then those values override the push constants that were previously pushed.

All State-setting commands that are bound on `stateCommandBuffer` will be used. Any parameters set by those commands **must** be set identically in a command buffer that vkCmdExecuteGeneratedCommandsEXT is recorded into, at the point vkCmdExecuteGeneratedCommandsEXT is recorded. If conditional rendering is used, the predicate value at preprocessing time **must** match the one at execution time. The queue family index `stateCommandBuffer` was allocated from **must** be the same as the queue family index of the command buffer used in vkCmdExecuteGeneratedCommandsEXT.

On some implementations, preprocessing **may** have no effect on performance.

vkCmdExecuteGeneratedCommandsEXT **may** write to the preprocess buffer, no matter the isPreprocess parameter. In this case, the implementation **must** insert appropriate synchronization automatically, which corresponds to the following pseudocode:

- Barrier
  - srcStageMask = DRAW_INDIRECT
  - srcAccessMask = 0
  - dstStageMask = COMMAND_PREPROCESS_BIT
  - dstAccessMask = COMMAND_PREPROCESS_WRITE_BIT | COMMAND_PREPROCESS_READ_BIT

- Do internal writes
- Barrier
  - srcStageMask = COMMAND_PREPROCESS_BIT
  - srcAccessMask = COMMAND_PREPROCESS_WRITE_BIT
  - dstStageMask = DRAW_INDIRECT
  - dstAccessMask = INDIRECT_COMMAND_READ_BIT
- Execute

Chapter 39. Sparse Resources

As documented in Resource Memory Association, `VkBuffer` and `VkImage` resources in Vulkan **must** be bound completely and contiguously to a single `VkDeviceMemory` object. This binding **must** be done before the resource is used, and the binding is immutable for the lifetime of the resource.

Sparse resources relax these restrictions and provide these additional features:

- Sparse resources **can** be bound non-contiguously to one or more `VkDeviceMemory` allocations.
- Sparse resources **can** be re-bound to different memory allocations over the lifetime of the resource.
- Sparse resources **can** have descriptors generated and used orthogonally with memory binding commands.

39.1. Sparse Resource Features

Sparse resources have several features that **must** be enabled explicitly at resource creation time. The features are enabled by including bits in the `flags` parameter of VkImageCreateInfo or VkBufferCreateInfo. Each feature also has one or more corresponding feature enables specified in VkPhysicalDeviceFeatures.

- The `sparseBinding` feature is the base, and provides the following capabilities:
  - Resources **can** be bound at some defined (sparse block) granularity.
  - The entire resource **must** be bound to memory before use regardless of regions actually accessed.
  - No specific mapping of image region to memory offset is defined, i.e. the location that each texel corresponds to in memory is implementation-dependent.
  - Sparse buffers have a well-defined mapping of buffer range to memory range, where an offset into a range of the buffer that is bound to a single contiguous range of memory corresponds to an identical offset within that range of memory.
  - Requested via the VK_IMAGE_CREATE_SPARSE_BINDING_BIT and VK_BUFFER_CREATE_SPARSE_BINDING_BIT bits.
  - A sparse image created using VK_IMAGE_CREATE_SPARSE_BINDING_BIT (but not VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT) supports all formats that non-sparse usage supports, and supports both VK_IMAGE_TILING_OPTIMAL and VK_IMAGE_TILING_LINEAR tiling.
- *Sparse Residency* builds on (and requires) the `sparseBinding` feature. It includes the following capabilities:
  - Resources do not have to be completely bound to memory before use on the device.
  - Images have a prescribed sparse image block layout, allowing specific rectangular regions of the image to be bound to specific offsets in memory allocations.
  - Consistency of access to unbound regions of the resource is defined by the absence or presence of `VkPhysicalDeviceSparseProperties`::`residencyNonResidentStrict`. If this property is

present, accesses to unbound regions of the resource are well defined and behave as if the data bound is populated with all zeros; writes are discarded. When this property is absent, accesses are considered safe, but reads will return undefined values.

  - Requested via the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT and VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT bits.
  - Sparse residency support is advertised on a finer grain via the following features:
    - The `sparseResidencyBuffer` feature provides support for creating `VkBuffer` objects with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidencyImage2D` feature provides support for creating 2D single-sampled `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidencyImage3D` feature provides support for creating 3D `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency2Samples` feature provides support for creating 2D `VkImage` objects with 2 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency4Samples` feature provides support for creating 2D `VkImage` objects with 4 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency8Samples` feature provides support for creating 2D `VkImage` objects with 8 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency16Samples` feature provides support for creating 2D `VkImage` objects with 16 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.

    Implementations supporting `sparseResidencyImage2D` are only **required** to support sparse 2D, single-sampled images. Support for sparse 3D and MSAA images is **optional** and **can** be enabled via `sparseResidencyImage3D`, `sparseResidency2Samples`, `sparseResidency4Samples`, `sparseResidency8Samples`, and `sparseResidency16Samples`.
  - A sparse image created using VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT supports all non-compressed color formats with power-of-two element size that non-sparse usage supports. Additional formats **may** also be supported and **can** be queried via vkGetPhysicalDeviceSparseImageFormatProperties. VK_IMAGE_TILING_LINEAR tiling is not supported.
- The `sparseResidencyAliased` feature provides the following capability that **can** be enabled per resource:

  Allows physical memory ranges to be shared between multiple locations in the same sparse resource or between multiple sparse resources, with each binding of a memory location observing a consistent interpretation of the memory contents.

  See Sparse Memory Aliasing for more information.

39.2. Sparse Buffers and Fully-Resident Images

Both `VkBuffer` and `VkImage` objects created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT or VK_BUFFER_CREATE_SPARSE_BINDING_BIT bits **can** be thought of as a linear region of address

space. In the VkImage case if VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT is not used, this linear region is entirely opaque, meaning that there is no application-visible mapping between texel location and memory offset.

Unless VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT or VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT are also used, the entire resource **must** be bound to one or more VkDeviceMemory objects before use.

39.2.1. Sparse Buffer and Fully-Resident Image Block Size

The sparse block size in bytes for sparse buffers and fully-resident images is reported as VkMemoryRequirements::alignment. alignment represents both the memory alignment requirement and the binding granularity (in bytes) for sparse resources.

39.3. Sparse Partially-Resident Buffers

VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT bit allow the buffer to be made only partially resident. Partially resident VkBuffer objects are allocated and bound identically to VkBuffer objects using only the VK_BUFFER_CREATE_SPARSE_BINDING_BIT feature. The only difference is the ability for some regions of the buffer to be unbound during device use. After creating a VkBuffer with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT, the entire buffer region is considered unbound.

39.4. Sparse Partially-Resident Images

VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT bit allow specific rectangular regions of the image called sparse image blocks to be bound to specific ranges of memory. This allows the application to manage residency at either image subresource or sparse image block granularity. Each image subresource (outside of the mip tail) starts on a sparse block boundary and has dimensions that are integer multiples of the corresponding dimensions of the sparse image block. After creating a VkImage with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, all image subresources are considered unbound.

NOTE

Applications **can** use these types of images to control LOD based on total memory consumption. If memory pressure becomes an issue the application **can** unbind and disable specific mipmap levels of images without having to recreate resources or modify texel data of unaffected levels.

The application **can** also use this functionality to access subregions of the image in a “megatexture” fashion. The application **can** create a large image and only populate the region of the image that is currently being used in the scene.

39.4.1. Accessing Unbound Regions

The following member of VkPhysicalDeviceSparseProperties affects how data in unbound regions of sparse resources are handled by the implementation:

- residencyNonResidentStrict

If this property is not present, reads of unbound regions of the image will return undefined values. Both reads and writes are still considered *safe* and will not affect other resources or populated regions of the image.

If this property is present, all reads of unbound regions of the image will behave as if the region was bound to memory populated with all zeros; writes will be discarded.

Image operations performed on unbound memory **may** still alter some component values in the natural way for those accesses, e.g. substituting a value of one for alpha in formats that do not have an alpha component.

> Example: Reading the alpha component of an unbacked VK_FORMAT_R8_UNORM image will return a value of 1.0f.

If a value was previously written to the same unbound sparse memory location in the same shader invocation, that value **may** be returned instead; using the `VolatileTexel` image operand, the `Volatile` memory semantic, or the `Volatile` decoration to load the value will prevent prior stored values from being returned.

NOTE	Getting the value of the previous store is possible as implementations are free to optimize multiple accesses in the general case. There are other ways this **can** be prevented, but using volatile loads is by far the simplest.

See Physical Device Enumeration for instructions for retrieving physical device properties.

> **Implementor's Note**
>
> For implementations that **cannot** natively handle access to unbound regions of a resource, the implementation **may** allocate and bind memory to the unbound regions. Reads and writes to unbound regions will access the implementation-managed memory instead.
>
> Given that the values resulting from reads of unbound regions are undefined in this scenario, implementations **may** use the same physical memory for all unbound regions of multiple resources within the same process.

39.4.2. Mip Tail Regions

Sparse images created using VK_IMAGE_CREATE_SPARSE_BINDING_BIT (without also using VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT) have no specific mapping of image region or image subresource to memory offset defined, so the entire image **can** be thought of as a linear opaque address region. However, images created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT do have a prescribed sparse image block layout, and hence each image subresource **must** start on a sparse block boundary. Within each array layer, the set of mip levels that have a smaller size than the sparse block size in bytes are grouped together into a *mip tail region*.

If the VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT flag is present in the `flags` member of

VkSparseImageFormatProperties, for the image's format, then any mip level which has dimensions that are not integer multiples of the corresponding dimensions of the sparse image block, and all subsequent mip levels, are also included in the mip tail region.

The following member of VkPhysicalDeviceSparseProperties **may** affect how the implementation places mip levels in the mip tail region:

- residencyAlignedMipSize

Each mip tail region is bound to memory as an opaque region (i.e. **must** be bound using a VkSparseImageOpaqueMemoryBindInfo structure) and **may** be of a size greater than or equal to the sparse block size in bytes. This size is guaranteed to be an integer multiple of the sparse block size in bytes.

An implementation **may** choose to allow each array-layer's mip tail region to be bound to memory independently or require that all array-layer's mip tail regions be treated as one. This is dictated by VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT in VkSparseImageMemoryRequirements::flags.

The following diagrams depict how VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT alter memory usage and requirements.

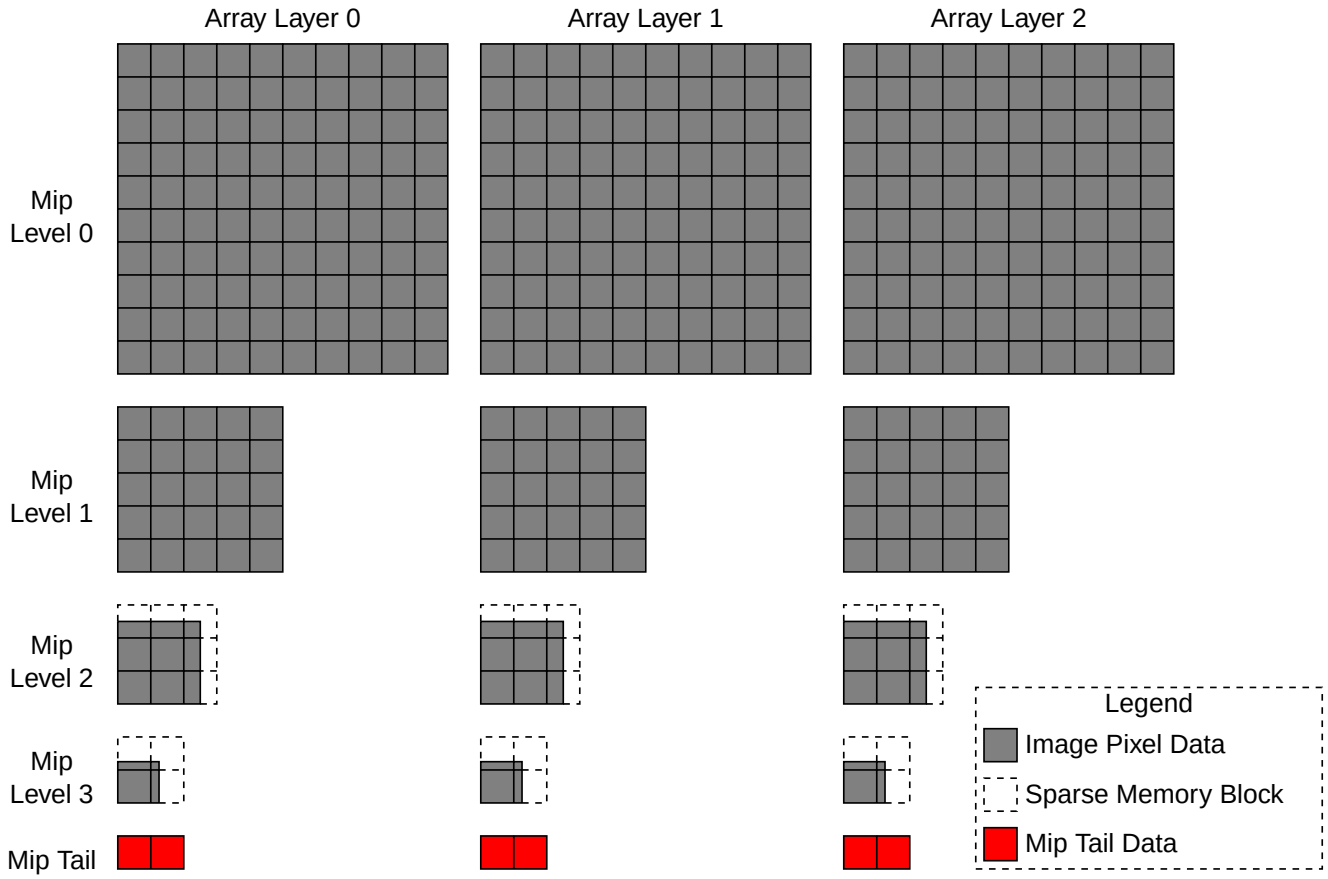

Figure 22. Sparse Image

In the absence of VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, each array layer contains a mip tail region containing texel data for all mip levels smaller than the sparse image block in any dimension.

Mip levels that are as large as or larger than a sparse image block in all dimensions **can** be bound

individually. Right-edges and bottom-edges of each level are allowed to have partially used sparse blocks. Any bound partially-used-sparse-blocks **must** still have their full sparse block size in bytes allocated in memory.

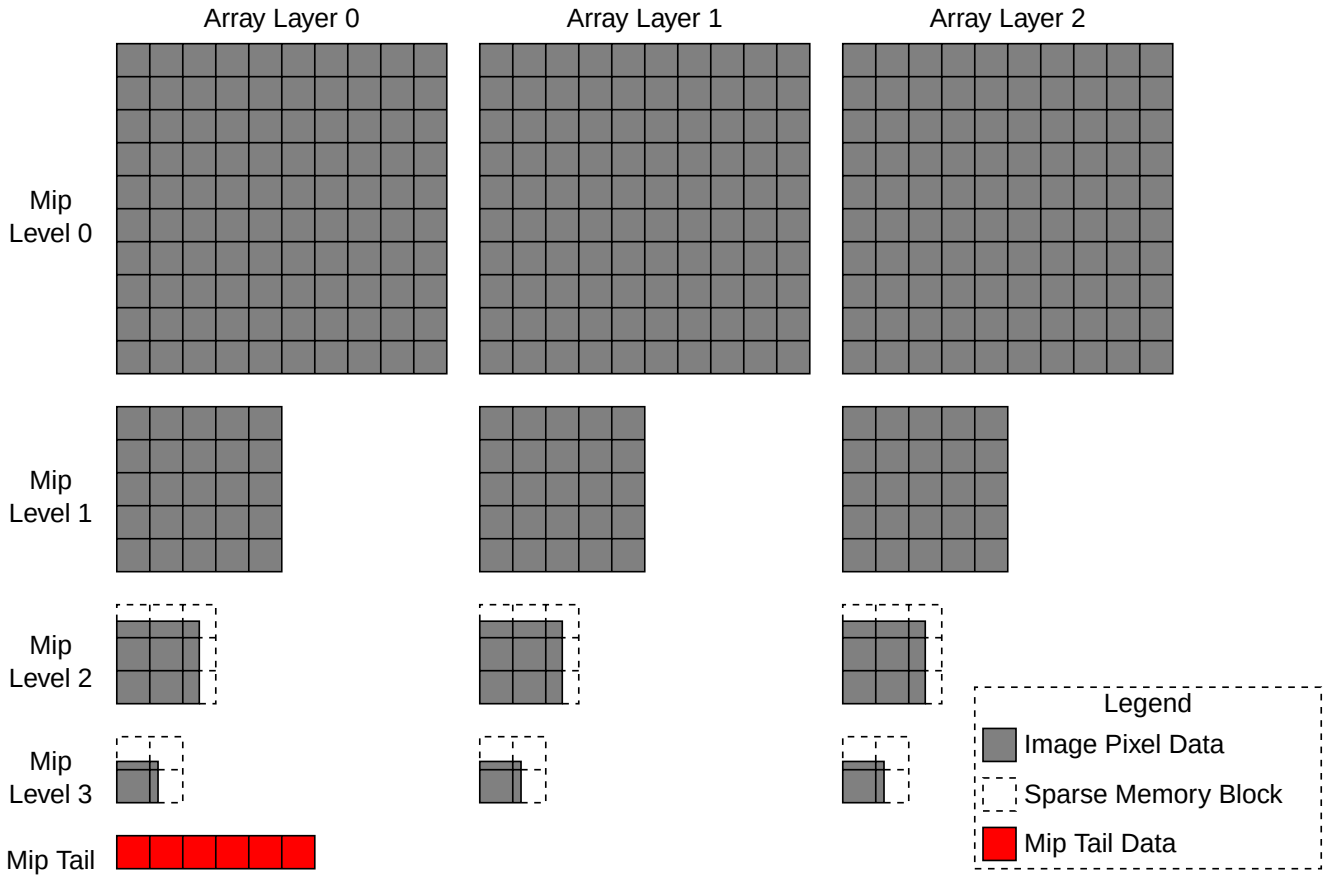

Figure 23. Sparse Image with Single Mip Tail

When VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT is present all array layers will share a single mip tail region.

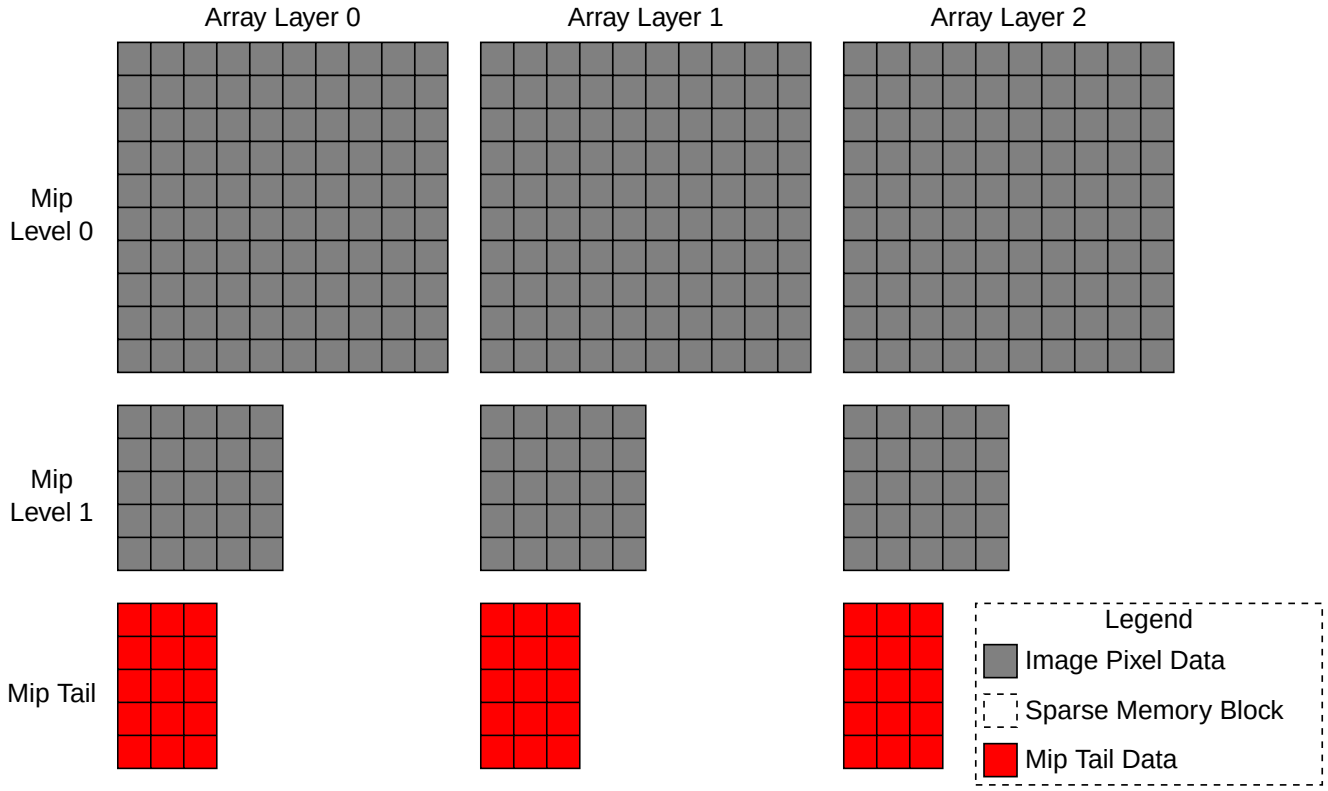

Figure 24. Sparse Image with Aligned Mip Size

NOTE	The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT is present the first mip level that would contain partially used sparse blocks begins the mip tail region. This level and all subsequent levels are placed in the mip tail. Only the first N mip levels whose dimensions are an exact multiple of the sparse image block dimensions **can** be bound and unbound on a sparse block basis.

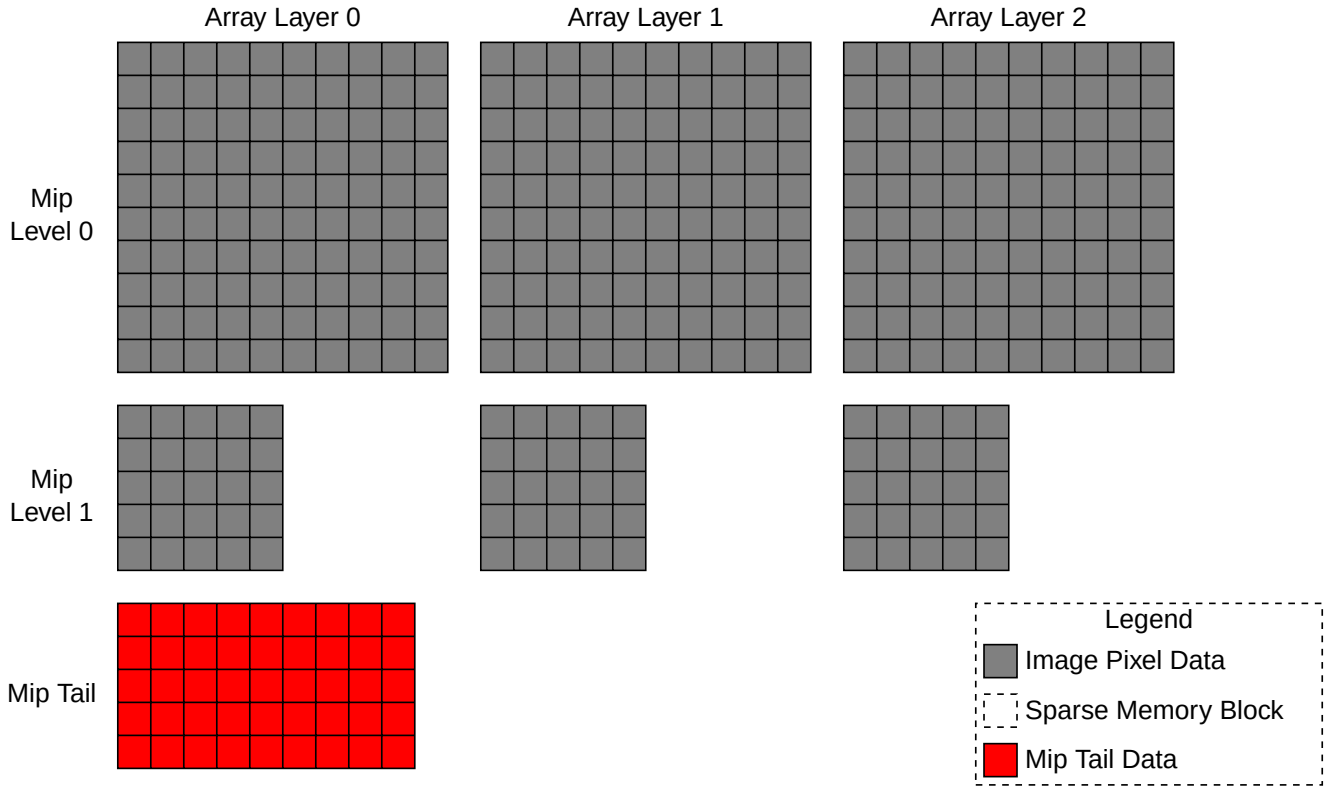

Figure 25. Sparse Image with Aligned Mip Size and Single Mip Tail

NOTE	The mip tail region is presented here in a 2D array simply for figure size reasons. It is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When both VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT are present the constraints from each of these flags are in effect.

39.4.3. Standard Sparse Image Block Shapes

Standard sparse image block shapes define a standard set of dimensions for sparse image blocks that depend on the format of the image. Layout of texels or compressed texel blocks within a sparse image block is implementation-dependent. All currently defined standard sparse image block shapes are 64 KB in size.

For block-compressed formats (e.g. VK_FORMAT_BC5_UNORM_BLOCK), the texel size is the size of the compressed texel block (e.g. 128-bit for `BC5`) thus the dimensions of the standard sparse image block shapes apply in terms of compressed texel blocks.

NOTE	For block-compressed formats, the dimensions of a sparse image block in terms of texels **can** be calculated by multiplying the sparse image block dimensions by the compressed texel block dimensions.

Table 54. Standard Sparse Image Block Shapes (Single Sample)

TEXEL SIZE (bits)	Block Shape (2D)	Block Shape (3D)
8-Bit	256 × 256 × 1	64 × 32 × 32
16-Bit	256 × 128 × 1	32 × 32 × 32
32-Bit	128 × 128 × 1	32 × 32 × 16
64-Bit	128 × 64 × 1	32 × 16 × 16
128-Bit	64 × 64 × 1	16 × 16 × 16

Table 55. Standard Sparse Image Block Shapes (MSAA)

TEXEL SIZE (bits)	Block Shape (2X)	Block Shape (4X)	Block Shape (8X)	Block Shape (16X)
8-Bit	128 × 256 × 1	128 × 128 × 1	64 × 128 × 1	64 × 64 × 1
16-Bit	128 × 128 × 1	128 × 64 × 1	64 × 64 × 1	64 × 32 × 1
32-Bit	64 × 128 × 1	64 × 64 × 1	32 × 64 × 1	32 × 32 × 1
64-Bit	64 × 64 × 1	64 × 32 × 1	32 × 32 × 1	32 × 16 × 1
128-Bit	32 × 64 × 1	32 × 32 × 1	16 × 32 × 1	16 × 16 × 1

Implementations that support the standard sparse image block shape for all formats listed in the Standard Sparse Image Block Shapes (Single Sample) and Standard Sparse Image Block Shapes (MSAA) tables **may** advertise the following `VkPhysicalDeviceSparseProperties`:

- `residencyStandard2DBlockShape`
- `residencyStandard2DMultisampleBlockShape`
- `residencyStandard3DBlockShape`

Reporting each of these features does *not* imply that all possible image types are supported as sparse. Instead, this indicates that no supported sparse image of the corresponding type will use custom sparse image block dimensions for any formats that have a corresponding standard sparse image block shape.

39.4.4. Custom Sparse Image Block Shapes

An implementation that does not support a standard image block shape for a particular sparse partially-resident image **may** choose to support a custom sparse image block shape for it instead. The dimensions of such a custom sparse image block shape are reported in `VkSparseImageFormatProperties`::`imageGranularity`. As with standard sparse image block shapes, the size in bytes of the custom sparse image block shape will be reported in `VkMemoryRequirements`::`alignment`.

Custom sparse image block dimensions are reported through `vkGetPhysicalDeviceSparseImageFormatProperties` and `vkGetImageSparseMemoryRequirements`.

An implementation **must** not support both the standard sparse image block shape and a custom

sparse image block shape for the same image. The standard sparse image block shape **must** be used if it is supported.

39.4.5. Multiple Aspects

Partially resident images are allowed to report separate sparse properties for different aspects of the image. One example is for depth/stencil images where the implementation separates the depth and stencil data into separate planes. Another reason for multiple aspects is to allow the application to manage memory allocation for implementation-private *metadata* associated with the image. See the figure below:

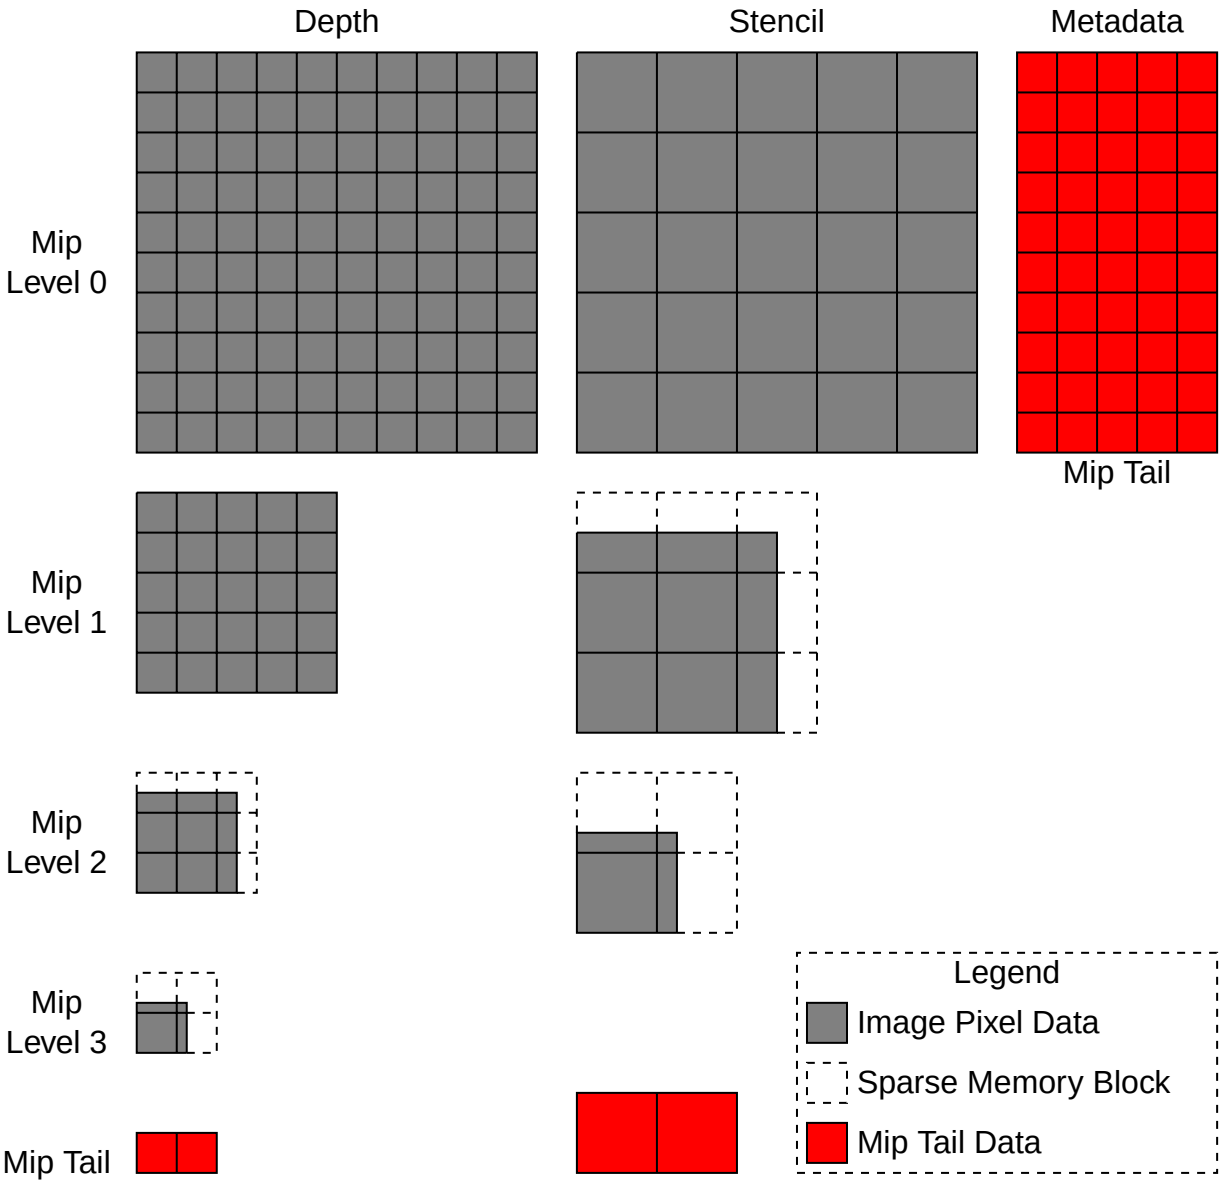

Figure 26. Multiple Aspect Sparse Image

NOTE The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

In the figure above the depth, stencil, and metadata aspects all have unique sparse properties. The per-texel stencil data is ¼ the size of the depth data, hence the stencil sparse blocks include 4 × the number of texels. The sparse block size in bytes for all of the aspects is identical and defined by

`VkMemoryRequirements::alignment`.

Metadata

The metadata aspect of an image has the following constraints:

- All metadata is reported in the mip tail region of the metadata aspect.
- All metadata **must** be bound prior to device use of the sparse image.

39.5. Sparse Memory Aliasing

By default sparse resources have the same aliasing rules as non-sparse resources. See Memory Aliasing for more information.

`VkDevice` objects that have the `sparseResidencyAliased` feature enabled are able to use the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT and VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flags for resource creation. These flags allow resources to access physical memory bound into multiple locations within one or more sparse resources in a *data consistent* fashion. This means that reading physical memory from multiple aliased locations will return the same value.

Care **must** be taken when performing a write operation to aliased physical memory. Memory dependencies **must** be used to separate writes to one alias from reads or writes to another alias. Writes to aliased memory that are not properly guarded against accesses to different aliases will have undefined results for all accesses to the aliased memory.

Applications that wish to make use of data consistent sparse memory aliasing **must** abide by the following guidelines:

- All sparse resources that are bound to aliased physical memory **must** be created with the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT / VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flag.
- All resources that access aliased physical memory **must** interpret the memory in the same way. This implies the following:
  - Buffers and images **cannot** alias the same physical memory in a data consistent fashion. The physical memory ranges **must** be used exclusively by buffers or used exclusively by images for data consistency to be guaranteed.
  - Memory in sparse image mip tail regions **cannot** access aliased memory in a data consistent fashion.
  - Sparse images that alias the same physical memory **must** have compatible formats and be using the same sparse image block shape in order to access aliased memory in a data consistent fashion.

Failure to follow any of the above guidelines will require the application to abide by the normal, non-sparse resource aliasing rules. In this case memory **cannot** be accessed in a data consistent fashion.

NOTE	Enabling sparse resource memory aliasing **can** be a way to lower physical memory use, but it **may** reduce performance on some implementations. An application

> developer **can** test on their target HW and balance the memory / performance trade-offs measured.

39.6. Sparse Resource Implementation Guidelines (Informative)

This section is Informative. It is included to aid in implementors' understanding of sparse resources.

Device Virtual Address

The basic `sparseBinding` feature allows the resource to reserve its own device virtual address range at resource creation time rather than relying on a bind operation to set this. Without any other creation flags, no other constraints are relaxed compared to normal resources. All pages **must** be bound to physical memory before the device accesses the resource.

The `sparseResidency` features allow sparse resources to be used even when not all pages are bound to memory. Implementations that support access to unbound pages without causing a fault **may** support `residencyNonResidentStrict`.

Not faulting on access to unbound pages is not enough to support `residencyNonResidentStrict`. An implementation **must** also guarantee that reads after writes to unbound regions of the resource always return data for the read as if the memory contains zeros. Depending on any caching hierarchy of the implementation this **may** not always be possible.

Any implementation that does not fault, but does not guarantee correct read values **must** not support `residencyNonResidentStrict`.

Any implementation that **cannot** access unbound pages without causing a fault will require the implementation to bind the entire device virtual address range to physical memory. Any pages that the application does not bind to memory **may** be bound to one (or more) "placeholder" physical page(s) allocated by the implementation. Given the following properties:

- A process **must** not access memory from another process
- Reads return undefined values

It is sufficient for each host process to allocate these placeholder pages and use them for all resources in that process. Implementations **may** allocate more often (per instance, per device, or per resource).

Binding Memory

The byte size reported in `VkMemoryRequirements`::`size` **must** be greater than or equal to the amount of physical memory **required** to fully populate the resource. Some implementations require "holes" in the device virtual address range that are never accessed. These holes **may** be included in the `size` reported for the resource.

Including or not including the device virtual address holes in the resource size will alter how the implementation provides support for VkSparseImageOpaqueMemoryBindInfo. This operation **must** be supported for all sparse images, even ones created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.

- If the holes are included in the size, this bind function becomes very easy. In most cases the resourceOffset is simply a device virtual address offset and the implementation can easily determine what device virtual address to bind. The cost is that the application **may** allocate more physical memory for the resource than it needs.
- If the holes are not included in the size, the application **can** allocate less physical memory than otherwise for the resource. However, in this case the implementation **must** account for the holes when mapping resourceOffset to the actual device virtual address intended to be mapped.

NOTE

If the application always uses VkSparseImageMemoryBindInfo to bind memory for the non-tail mip levels, any holes that are present in the resource size **may** never be bound.

Since VkSparseImageMemoryBindInfo uses texel locations to determine which device virtual addresses to bind, it is impossible to bind device virtual address holes with this operation.

Binding Metadata Memory

All metadata for sparse images have their own sparse properties and are embedded in the mip tail region for said properties. See the Multiaspect section for details.

Given that metadata is in a mip tail region, and the mip tail region **must** be reported as contiguous (either globally or per-array-layer), some implementations will have to resort to complicated offset → device virtual address mapping for handling VkSparseImageOpaqueMemoryBindInfo.

To make this easier on the implementation, the VK_SPARSE_MEMORY_BIND_METADATA_BIT explicitly specifies when metadata is bound with VkSparseImageOpaqueMemoryBindInfo. When this flag is not present, the resourceOffset **may** be treated as a strict device virtual address offset.

When VK_SPARSE_MEMORY_BIND_METADATA_BIT is present, the resourceOffset **must** have been derived explicitly from the imageMipTailOffset in the sparse resource properties returned for the metadata aspect. By manipulating the value returned for imageMipTailOffset, the resourceOffset does not have to correlate directly to a device virtual address offset, and **may** instead be whatever value makes it easiest for the implementation to derive the correct device virtual address.

39.7. Sparse Resource API

The APIs related to sparse resources are grouped into the following categories:

- Physical Device Features
- Physical Device Sparse Properties
- Sparse Image Format Properties
- Sparse Resource Creation
- Sparse Resource Memory Requirements
- Binding Resource Memory

39.7.1. Physical Device Features

Some sparse-resource related features are reported and enabled in `VkPhysicalDeviceFeatures`. These features **must** be supported and enabled on the `VkDevice` object before applications **can** use them. See Physical Device Features for information on how to get and set enabled device features, and for more detailed explanations of these features.

Sparse Physical Device Features

- `sparseBinding`: Support for creating VkBuffer and `VkImage` objects with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT and VK_IMAGE_CREATE_SPARSE_BINDING_BIT flags, respectively.
- `sparseResidencyBuffer`: Support for creating VkBuffer objects with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag.
- `sparseResidencyImage2D`: Support for creating 2D single-sampled `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidencyImage3D`: Support for creating 3D VkImage objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency2Samples`: Support for creating 2D VkImage objects with 2 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency4Samples`: Support for creating 2D VkImage objects with 4 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency8Samples`: Support for creating 2D VkImage objects with 8 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency16Samples`: Support for creating 2D VkImage objects with 16 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidencyAliased`: Support for creating VkBuffer and `VkImage` objects with the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT and VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flags, respectively.

39.7.2. Physical Device Sparse Properties

Some features of the implementation are not possible to disable, and are reported to allow applications to alter their sparse resource usage accordingly. These read-only capabilities are reported in the VkPhysicalDeviceProperties::`sparseProperties` member, which is a `VkPhysicalDeviceSparseProperties` structure.

The VkPhysicalDeviceSparseProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceSparseProperties {
    VkBool32    residencyStandard2DBlockShape;
    VkBool32    residencyStandard2DMultisampleBlockShape;
    VkBool32    residencyStandard3DBlockShape;
    VkBool32    residencyAlignedMipSize;
    VkBool32    residencyNonResidentStrict;
} VkPhysicalDeviceSparseProperties;
```

- residencyStandard2DBlockShape is VK_TRUE if the physical device will access all single-sample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (Single Sample) table. If this property is not supported the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for single-sample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyStandard2DMultisampleBlockShape is VK_TRUE if the physical device will access all multisample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (MSAA) table. If this property is not supported, the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for multisample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyStandard3DBlockShape is VK_TRUE if the physical device will access all 3D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (Single Sample) table. If this property is not supported, the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for 3D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyAlignedMipSize is VK_TRUE if images with mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block **may** be placed in the mip tail. If this property is not reported, only mip levels with dimensions smaller than the imageGranularity member of the VkSparseImageFormatProperties structure will be placed in the mip tail. If this property is reported the implementation is allowed to return VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT in the flags member of VkSparseImageFormatProperties, indicating that mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block will be placed in the mip tail.
- residencyNonResidentStrict specifies whether the physical device **can** consistently access non-resident regions of a resource. If this property is VK_TRUE, access to non-resident regions of resources will be guaranteed to return values as if the resource was populated with 0; writes to non-resident regions will be discarded.

39.7.3. Sparse Image Format Properties

Given that certain aspects of sparse image support, including the sparse image block dimensions,

may be implementation-dependent, vkGetPhysicalDeviceSparseImageFormatProperties **can** be used to query for sparse image format properties prior to resource creation. This command is used to check whether a given set of sparse image parameters is supported and what the sparse image block shape will be.

Sparse Image Format Properties API

The VkSparseImageFormatProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageFormatProperties {
    VkImageAspectFlags          aspectMask;
    VkExtent3D                  imageGranularity;
    VkSparseImageFormatFlags    flags;
} VkSparseImageFormatProperties;
```

- aspectMask is a bitmask of VkImageAspectFlagBits specifying which aspects of the image the properties apply to.
- imageGranularity is the width, height, and depth of the sparse image block in texels.
- flags is a bitmask of VkSparseImageFormatFlagBits specifying additional information about the sparse resource.

Bits which **may** be set in VkSparseImageFormatProperties::flags, specifying additional information about the sparse resource, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseImageFormatFlagBits {
    VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT = 0x00000001,
    VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT = 0x00000002,
    VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT = 0x00000004,
} VkSparseImageFormatFlagBits;
```

- VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT specifies that the image uses a single mip tail region for all array layers.
- VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT specifies that the first mip level whose dimensions are not integer multiples of the corresponding dimensions of the sparse image block begins the mip tail region.
- VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT specifies that the image uses non-standard sparse image block dimensions, and the imageGranularity values do not match the standard sparse image block dimensions for the given format.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseImageFormatFlags;
```

VkSparseImageFormatFlags is a bitmask type for setting a mask of zero or more

VkSparseImageFormatFlagBits.

vkGetPhysicalDeviceSparseImageFormatProperties returns an array of VkSparseImageFormatProperties. Each element describes properties for one set of image aspects that are bound simultaneously for a VkImage created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

WARNING	This functionality is superseded by vkGetPhysicalDeviceSparseImageFormatProperties2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceSparseImageFormatProperties(
    VkPhysicalDevice                            physicalDevice,
    VkFormat                                    format,
    VkImageType                                 type,
    VkSampleCountFlagBits                       samples,
    VkImageUsageFlags                           usage,
    VkImageTiling                               tiling,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties*              pProperties);
```

- physicalDevice is the physical device from which to query the sparse image format properties.
- format is the image format.
- type is the dimensionality of the image.
- samples is a VkSampleCountFlagBits value specifying the number of samples per texel.
- usage is a bitmask describing the intended usage of the image.
- tiling is the tiling arrangement of the texel blocks in memory.
- pPropertyCount is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkSparseImageFormatProperties structures.

If pProperties is NULL, then the number of sparse format properties available is returned in pPropertyCount. Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If pPropertyCount is less than the number of sparse format properties available, at most pPropertyCount structures will be written.

If VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT is not supported for the given arguments, pPropertyCount will be zero upon return, and no data will be written to pProperties.

Multiple aspects are returned for depth/stencil images that are implemented as separate planes by the implementation. The depth and stencil data planes each have unique

VkSparseImageFormatProperties data.

Depth/stencil images with depth and stencil data interleaved into a single plane will return a single VkSparseImageFormatProperties structure with the aspectMask set to VK_IMAGE_ASPECT_DEPTH_BIT | VK_IMAGE_ASPECT_STENCIL_BIT.

Valid Usage

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-01094
  samples **must** be a valid VkSampleCountFlagBits value that is set in VkImageFormatProperties::sampleCounts returned by vkGetPhysicalDeviceImageFormatProperties or vkGetPhysicalDeviceImageFormatProperties2 with format, type, tiling, and usage equal to those in this command

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-format-parameter
  format **must** be a valid VkFormat value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-type-parameter
  type **must** be a valid VkImageType value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-parameter
  samples **must** be a valid VkSampleCountFlagBits value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-usage-parameter
  usage **must** be a valid combination of VkImageUsageFlagBits values
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-tiling-parameter
  tiling **must** be a valid VkImageTiling value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkSparseImageFormatProperties structures

vkGetPhysicalDeviceSparseImageFormatProperties2 returns an array of VkSparseImageFormatProperties2. Each element describes properties for one set of image aspects that are bound simultaneously for a VkImage created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceSparseImageFormatProperties2(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties2*             pProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceSparseImageFormatProperties2
void vkGetPhysicalDeviceSparseImageFormatProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties2*             pProperties);
```

- `physicalDevice` is the physical device from which to query the sparse image format properties.
- `pFormatInfo` is a pointer to a VkPhysicalDeviceSparseImageFormatInfo2 structure containing input parameters to the command.
- `pPropertyCount` is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of VkSparseImageFormatProperties2 structures.

`vkGetPhysicalDeviceSparseImageFormatProperties2` behaves identically to vkGetPhysicalDeviceSparseImageFormatProperties, with the ability to return extended information by adding extending structures to the `pNext` chain of its `pProperties` parameter.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pFormatInfo-parameter
  `pFormatInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSparseImageFormatInfo2 structure
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkSparseImageFormatProperties2 structures

The VkPhysicalDeviceSparseImageFormatInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSparseImageFormatInfo2 {
    VkStructureType          sType;
    const void*              pNext;
    VkFormat                 format;
    VkImageType              type;
    VkSampleCountFlagBits    samples;
    VkImageUsageFlags        usage;
    VkImageTiling            tiling;
} VkPhysicalDeviceSparseImageFormatInfo2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceSparseImageFormatInfo2
typedef VkPhysicalDeviceSparseImageFormatInfo2
VkPhysicalDeviceSparseImageFormatInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the image format.
- `type` is the dimensionality of the image.
- `samples` is a VkSampleCountFlagBits value specifying the number of samples per texel.
- `usage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the image.
- `tiling` is the tiling arrangement of the texel blocks in memory.

Only usage flags representable in VkImageUsageFlagBits are returned in `usage`. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, all usage flags are returned in VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-01095
  `samples` **must** be a valid VkSampleCountFlagBits value that is set in `VkImageFormatProperties`::`sampleCounts` returned by `vkGetPhysicalDeviceImageFormatProperties` or vkGetPhysicalDeviceImageFormatProperties2 with `format`, `type`, `tiling`, and `usage` equal to those in this command

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SPARSE_IMAGE_FORMAT_INFO_2

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkImageUsageFlags2CreateInfoKHR
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-format-parameter
  `format` **must** be a valid VkFormat value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-type-parameter
  `type` **must** be a valid VkImageType value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-parameter
  `samples` **must** be a valid VkSampleCountFlagBits value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-usage-parameter
  `usage` **must** be a valid combination of VkImageUsageFlagBits values
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-tiling-parameter
  `tiling` **must** be a valid VkImageTiling value

The `VkSparseImageFormatProperties2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageFormatProperties2 {
    VkStructureType                 sType;
    void*                           pNext;
    VkSparseImageFormatProperties   properties;
} VkSparseImageFormatProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkSparseImageFormatProperties2
typedef VkSparseImageFormatProperties2 VkSparseImageFormatProperties2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `properties` is a VkSparseImageFormatProperties structure which is populated with the same values as in vkGetPhysicalDeviceSparseImageFormatProperties.

Valid Usage (Implicit)

- VUID-VkSparseImageFormatProperties2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SPARSE_IMAGE_FORMAT_PROPERTIES_2
- VUID-VkSparseImageFormatProperties2-pNext-pNext
  `pNext` **must** be `NULL`

39.7.4. Sparse Resource Creation

Sparse resources require that one or more sparse feature flags be specified (as part of the VkPhysicalDeviceFeatures structure described previously in the Physical Device Features section) when calling vkCreateDevice. When the appropriate device features are enabled, the VK_BUFFER_CREATE_SPARSE_* and VK_IMAGE_CREATE_SPARSE_* flags **can** be used. See vkCreateBuffer and vkCreateImage for details of the resource creation APIs.

NOTE	Specifying VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT or VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT requires specifying VK_BUFFER_CREATE_SPARSE_BINDING_BIT or VK_IMAGE_CREATE_SPARSE_BINDING_BIT, respectively, as well. This means that resources **must** be created with the appropriate *_SPARSE_BINDING_BIT to be used with the sparse binding command (vkQueueBindSparse).

39.7.5. Sparse Resource Memory Requirements

Sparse resources have specific memory requirements related to binding sparse memory. These memory requirements are reported differently for VkBuffer objects and VkImage objects.

Buffer and Fully-Resident Images

Buffers (both fully and partially resident) and fully-resident images **can** be bound to memory using only the data from VkMemoryRequirements. For all sparse resources the VkMemoryRequirements ::alignment member specifies both the binding granularity in bytes and the **required** alignment of VkDeviceMemory.

Partially Resident Images

Partially resident images have a different method for binding memory. As with buffers and fully resident images, the VkMemoryRequirements::alignment field specifies the binding granularity in bytes for the image.

Requesting sparse memory requirements for VkImage objects using vkGetImageSparseMemoryRequirements will return an array of one or more VkSparseImageMemoryRequirements structures. Each structure describes the sparse memory requirements for a group of aspects of the image.

The sparse image **must** have been created using the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag to retrieve valid sparse image memory requirements.

Sparse Image Memory Requirements

The VkSparseImageMemoryRequirements structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryRequirements {
    VkSparseImageFormatProperties    formatProperties;
    uint32_t                         imageMipTailFirstLod;
    VkDeviceSize                     imageMipTailSize;
    VkDeviceSize                     imageMipTailOffset;
    VkDeviceSize                     imageMipTailStride;
} VkSparseImageMemoryRequirements;
```

- `formatProperties` is a VkSparseImageFormatProperties structure specifying properties of the image format.
- `imageMipTailFirstLod` is the first mip level at which image subresources are included in the mip tail region.
- `imageMipTailSize` is the memory size (in bytes) of the mip tail region. If `formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, this is the size of the whole mip tail, otherwise this is the size of the mip tail of a single array layer. This value is guaranteed to be a multiple of the sparse block size in bytes.
- `imageMipTailOffset` is the opaque memory offset used with VkSparseImageOpaqueMemoryBindInfo to bind the mip tail region(s).
- `imageMipTailStride` is the offset stride between each array-layer's mip tail, if `formatProperties.flags` does not contain VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT (otherwise the value is undefined).

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSparseMemoryRequirements(
    VkDevice                                    device,
    VkImage                                     image,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements*            pSparseMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `image` is the VkImage object to get the memory requirements for.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements` structures.

If `pSparseMemoryRequirements` is `NULL`, then the number of sparse memory requirements available is returned in `pSparseMemoryRequirementCount`. Otherwise, `pSparseMemoryRequirementCount` **must** point to a variable set by the application to the number of elements in the `pSparseMemoryRequirements` array, and on return the variable is overwritten with the number of structures actually written to `pSparseMemoryRequirements`. If `pSparseMemoryRequirementCount` is less than the number of sparse

memory requirements available, at most pSparseMemoryRequirementCount structures will be written.

If the image was not created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT then pSparseMemoryRequirementCount will be zero and pSparseMemoryRequirements will not be written to.

NOTE

It is legal for an implementation to report a larger value in VkMemoryRequirements::size than would be obtained by adding together memory sizes for all VkSparseImageMemoryRequirements returned by vkGetImageSparseMemoryRequirements. This **may** occur when the implementation requires unused padding in the address range describing the resource.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetImageSparseMemoryRequirements-image-parameter
  image **must** be a valid VkImage handle
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter
  pSparseMemoryRequirementCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter
  If the value referenced by pSparseMemoryRequirementCount is not 0, and pSparseMemoryRequirements is not NULL, pSparseMemoryRequirements **must** be a valid pointer to an array of pSparseMemoryRequirementCount VkSparseImageMemoryRequirements structures
- VUID-vkGetImageSparseMemoryRequirements-image-parent
  image **must** have been created, allocated, or retrieved from device

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageSparseMemoryRequirements2(
    VkDevice                                    device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetImageSparseMemoryRequirements2
void vkGetImageSparseMemoryRequirements2KHR(
    VkDevice                                    device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `pInfo` is a pointer to a VkImageSparseMemoryRequirementsInfo2 structure containing parameters required for the memory requirements query.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements2` structures.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageSparseMemoryRequirements2-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkImageSparseMemoryRequirementsInfo2 structure
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirementCount-parameter
  `pSparseMemoryRequirementCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirements-parameter
  If the value referenced by `pSparseMemoryRequirementCount` is not `0`, and `pSparseMemoryRequirements` is not `NULL`, `pSparseMemoryRequirements` **must** be a valid pointer to an array of `pSparseMemoryRequirementCount` VkSparseImageMemoryRequirements2 structures

To determine the sparse memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageSparseMemoryRequirements(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceImageSparseMemoryRequirements
void vkGetDeviceImageSparseMemoryRequirementsKHR(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

- `device` is the logical device intended to own the image.
- `pInfo` is a pointer to a VkDeviceImageMemoryRequirements structure containing parameters required for the memory requirements query.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements2` structures.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSparseMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceImageSparseMemoryRequirements-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDeviceImageMemoryRequirements structure
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter
  `pSparseMemoryRequirementCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter
  If the value referenced by `pSparseMemoryRequirementCount` is not `0`, and `pSparseMemoryRequirements` is not `NULL`, `pSparseMemoryRequirements` **must** be a valid pointer to an array of `pSparseMemoryRequirementCount` VkSparseImageMemoryRequirements2 structures

The `VkImageSparseMemoryRequirementsInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageSparseMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
} VkImageSparseMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkImageSparseMemoryRequirementsInfo2
typedef VkImageSparseMemoryRequirementsInfo2 VkImageSparseMemoryRequirementsInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to query.

Valid Usage (Implicit)

- VUID-VkImageSparseMemoryRequirementsInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_SPARSE_MEMORY_REQUIREMENTS_INFO_2
- VUID-VkImageSparseMemoryRequirementsInfo2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageSparseMemoryRequirementsInfo2-image-parameter
  `image` **must** be a valid VkImage handle

The `VkSparseImageMemoryRequirements2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageMemoryRequirements2 {
    VkStructureType                     sType;
    void*                               pNext;
    VkSparseImageMemoryRequirements     memoryRequirements;
} VkSparseImageMemoryRequirements2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkSparseImageMemoryRequirements2
typedef VkSparseImageMemoryRequirements2 VkSparseImageMemoryRequirements2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryRequirements` is a VkSparseImageMemoryRequirements structure describing the memory requirements of the sparse image.

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryRequirements2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SPARSE_IMAGE_MEMORY_REQUIREMENTS_2
- VUID-VkSparseImageMemoryRequirements2-pNext-pNext
  `pNext` **must** be `NULL`

39.7.6. Binding Resource Memory

Non-sparse resources are backed by a single physical allocation prior to device use (via `vkBindImageMemory` or `vkBindBufferMemory`), and their backing **must** not be changed. On the other hand, sparse resources **can** be bound to memory non-contiguously and these bindings **can** be altered during the lifetime of the resource.

NOTE It is important to note that freeing a `VkDeviceMemory` object with `vkFreeMemory` will not

cause resources (or resource regions) bound to the memory object to become unbound. Applications **must** not access resources bound to memory that has been freed.

Sparse memory bindings execute on a queue that includes the VK_QUEUE_SPARSE_BINDING_BIT bit. Applications **must** use synchronization primitives to guarantee that other queues do not access ranges of memory concurrently with a binding change. Applications **can** access other ranges of the same resource while a bind operation is executing.

NOTE

Implementations **must** provide a guarantee that simultaneously binding sparse blocks while another queue accesses those same sparse blocks via a sparse resource **must** not access memory owned by another process or otherwise corrupt the system.

While some implementations **may** include VK_QUEUE_SPARSE_BINDING_BIT support in queue families that also include graphics and compute support, other implementations **may** only expose a VK_QUEUE_SPARSE_BINDING_BIT-only queue family. In either case, applications **must** use synchronization primitives to explicitly request any ordering dependencies between sparse memory binding operations and other graphics/compute/transfer operations, as sparse binding operations are not automatically ordered against command buffer execution, even within a single queue.

When binding memory explicitly for the VK_IMAGE_ASPECT_METADATA_BIT the application **must** use the VK_SPARSE_MEMORY_BIND_METADATA_BIT in the `VkSparseMemoryBind::flags` field when binding memory. Binding memory for metadata is done the same way as binding memory for the mip tail, with the addition of the VK_SPARSE_MEMORY_BIND_METADATA_BIT flag.

Binding the mip tail for any aspect **must** only be performed using VkSparseImageOpaqueMemoryBindInfo. If `formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, then it **can** be bound with a single VkSparseMemoryBind structure, with `resourceOffset` = `imageMipTailOffset` and `size` = `imageMipTailSize`.

If `formatProperties.flags` does not contain VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT then the offset for the mip tail in each array layer is given as:

```
arrayMipTailOffset = imageMipTailOffset + arrayLayer * imageMipTailStride;
```

and the mip tail **can** be bound with `layerCount` VkSparseMemoryBind structures, each using `size` = `imageMipTailSize` and `resourceOffset` = `arrayMipTailOffset` as defined above.

Sparse memory binding is handled by the following APIs and related data structures.

Sparse Memory Binding Functions

The `VkSparseMemoryBind` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseMemoryBind {
    VkDeviceSize               resourceOffset;
    VkDeviceSize               size;
    VkDeviceMemory             memory;
    VkDeviceSize               memoryOffset;
    VkSparseMemoryBindFlags    flags;
} VkSparseMemoryBind;
```

- `resourceOffset` is the offset into the resource.
- `size` is the size of the memory region to be bound.
- `memory` is the VkDeviceMemory object that the range of the resource is bound to. If `memory` is VK_NULL_HANDLE, the range is unbound.
- `memoryOffset` is the offset into the VkDeviceMemory object to bind the resource range to. If `memory` is VK_NULL_HANDLE, this value is ignored.
- `flags` is a bitmask of VkSparseMemoryBindFlagBits specifying usage of the binding operation.

The *binding range* [`resourceOffset`, `resourceOffset` + `size`) has different constraints based on `flags`. If `flags` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range **must** be within the mip tail region of the metadata aspect. This metadata region is defined by:

metadataRegion = [base, base + `imageMipTailSize`)

base = `imageMipTailOffset` + `imageMipTailStride` × n

and `imageMipTailOffset`, `imageMipTailSize`, and `imageMipTailStride` values are from the VkSparseImageMemoryRequirements corresponding to the metadata aspect of the image, and n is a valid array layer index for the image.

`imageMipTailStride` is considered to be zero for aspects where `VkSparseImageMemoryRequirements::formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT.

If `flags` does not contain VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range **must** be within the range [0,VkMemoryRequirements::`size`).

Valid Usage

- VUID-VkSparseMemoryBind-memory-01096
  If `memory` is not VK_NULL_HANDLE, `memory` and `memoryOffset` **must** match the memory requirements of the resource, as described in section Resource Memory Association
- VUID-VkSparseMemoryBind-resourceOffset-09491
  If the resource being bound is a `VkBuffer`, `resourceOffset`, `memoryOffset` and `size` **must** be an integer multiple of the `alignment` of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with the buffer resource

- VUID-VkSparseMemoryBind-resourceOffset-09492
  If the resource being bound is a `VkImage`, `resourceOffset` and `memoryOffset` **must** be an integer multiple of the `alignment` of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with the image resource
- VUID-VkSparseMemoryBind-memory-01097
  If `memory` is not VK_NULL_HANDLE, `memory` **must** not have been created with a memory type that reports VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit set
- VUID-VkSparseMemoryBind-size-01098
  `size` **must** be greater than `0`
- VUID-VkSparseMemoryBind-resourceOffset-01099
  `resourceOffset` **must** be less than the size of the resource
- VUID-VkSparseMemoryBind-size-01100
  `size` **must** be less than or equal to the size of the resource minus `resourceOffset`
- VUID-VkSparseMemoryBind-memoryOffset-01101
  `memoryOffset` **must** be less than the size of `memory`
- VUID-VkSparseMemoryBind-size-01102
  `size` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-VkSparseMemoryBind-memory-02730
  If `memory` was created with VkExportMemoryAllocateInfo::`handleTypes` not equal to `0`, at least one handle type it contained **must** also have been set in VkExternalMemoryBufferCreateInfo::`handleTypes` or VkExternalMemoryImageCreateInfo::`handleTypes` when the resource was created
- VUID-VkSparseMemoryBind-memory-02731
  If `memory` was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryBufferCreateInfo::`handleTypes` or VkExternalMemoryImageCreateInfo::`handleTypes` when the resource was created

Valid Usage (Implicit)

- VUID-VkSparseMemoryBind-memory-parameter
  If `memory` is not VK_NULL_HANDLE, `memory` **must** be a valid VkDeviceMemory handle
- VUID-VkSparseMemoryBind-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkSparseMemoryBindFlagBits values

Bits which **can** be set in VkSparseMemoryBind::`flags`, specifying usage of a sparse memory binding operation, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseMemoryBindFlagBits {
    VK_SPARSE_MEMORY_BIND_METADATA_BIT = 0x00000001,
} VkSparseMemoryBindFlagBits;
```

- VK_SPARSE_MEMORY_BIND_METADATA_BIT specifies that the memory being bound is only for the metadata aspect.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseMemoryBindFlags;
```

VkSparseMemoryBindFlags is a bitmask type for setting a mask of zero or more VkSparseMemoryBindFlagBits.

Memory is bound to VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseBufferMemoryBindInfo {
    VkBuffer                     buffer;
    uint32_t                     bindCount;
    const VkSparseMemoryBind*    pBinds;
} VkSparseBufferMemoryBindInfo;
```

- buffer is the VkBuffer object to be bound.
- bindCount is the number of VkSparseMemoryBind structures in the pBinds array.
- pBinds is a pointer to an array of VkSparseMemoryBind structures.

Valid Usage (Implicit)

- VUID-VkSparseBufferMemoryBindInfo-buffer-parameter
  buffer **must** be a valid VkBuffer handle
- VUID-VkSparseBufferMemoryBindInfo-pBinds-parameter
  pBinds **must** be a valid pointer to an array of bindCount valid VkSparseMemoryBind structures
- VUID-VkSparseBufferMemoryBindInfo-bindCount-arraylength
  bindCount **must** be greater than 0

Memory is bound to opaque regions of VkImage objects created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageOpaqueMemoryBindInfo {
    VkImage                      image;
    uint32_t                     bindCount;
    const VkSparseMemoryBind*    pBinds;
} VkSparseImageOpaqueMemoryBindInfo;
```

- `image` is the VkImage object to be bound.
- `bindCount` is the number of VkSparseMemoryBind structures in the `pBinds` array.
- `pBinds` is a pointer to an array of VkSparseMemoryBind structures.

NOTE

This structure is normally used to bind memory to fully-resident sparse images or for mip tail regions of partially resident images. However, it **can** also be used to bind memory for the entire binding range of partially resident images.

If the `pBinds`[i].flags of an element *i* of `pBinds` does not contain VK_SPARSE_MEMORY_BIND_METADATA_BIT, the `resourceOffset` is in the range [0, VkMemoryRequirements::`size`). This range includes data from all aspects of the image, including metadata. For most implementations this will probably mean that the `resourceOffset` is a simple device address offset within the resource. It is possible for an application to bind a range of memory that includes both resource data and metadata. However, the application would not know what part of the image the memory is used for, or if any range is being used for metadata.

If the `pBinds`[i].flags of an element *i* of `pBinds` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range specified **must** be within the mip tail region of the metadata aspect. In this case the `resourceOffset` is not **required** to be a simple device address offset within the resource. However, it *is* defined to be within [`imageMipTailOffset`, `imageMipTailOffset` + `imageMipTailSize`) for the metadata aspect. See VkSparseMemoryBind for the full constraints on binding region with this flag present.

Valid Usage

- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-01103
  If the `flags` member of any element of `pBinds` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range defined **must** be within the mip tail region of the metadata aspect of `image`

Valid Usage (Implicit)

- VUID-VkSparseImageOpaqueMemoryBindInfo-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-parameter

`pBinds` **must** be a valid pointer to an array of `bindCount` valid VkSparseMemoryBind structures

- VUID-VkSparseImageOpaqueMemoryBindInfo-bindCount-arraylength
  `bindCount` **must** be greater than `0`

Memory **can** be bound to sparse image blocks of `VkImage` objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBindInfo {
    VkImage                          image;
    uint32_t                         bindCount;
    const VkSparseImageMemoryBind*   pBinds;
} VkSparseImageMemoryBindInfo;
```

- `image` is the VkImage object to be bound.
- `bindCount` is the number of VkSparseImageMemoryBind structures in the `pBinds` array.
- `pBinds` is a pointer to an array of VkSparseImageMemoryBind structures.

Valid Usage

- VUID-VkSparseImageMemoryBindInfo-subresource-01722
  The `subresource.mipLevel` member of each element of `pBinds` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01723
  The `subresource.arrayLayer` member of each element of `pBinds` **must** be less than the `arrayLayers` specified in VkImageCreateInfo when `image` was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01106
  The `subresource.aspectMask` member of each element of `pBinds` **must** be valid for the `format` specified in VkImageCreateInfo when `image` was created
- VUID-VkSparseImageMemoryBindInfo-image-02901
  `image` **must** have been created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBindInfo-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-VkSparseImageMemoryBindInfo-pBinds-parameter
  `pBinds` **must** be a valid pointer to an array of `bindCount` valid VkSparseImageMemoryBind structures
- VUID-VkSparseImageMemoryBindInfo-bindCount-arraylength
  `bindCount` **must** be greater than `0`

The VkSparseImageMemoryBind structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBind {
    VkImageSubresource         subresource;
    VkOffset3D                 offset;
    VkExtent3D                 extent;
    VkDeviceMemory             memory;
    VkDeviceSize               memoryOffset;
    VkSparseMemoryBindFlags    flags;
} VkSparseImageMemoryBind;
```

- subresource is the image *aspect* and region of interest in the image.
- offset are the coordinates of the first texel within the image subresource to bind.
- extent is the size in texels of the region within the image subresource to bind. The extent **must** be a multiple of the sparse image block dimensions, except when binding sparse image blocks along the edge of an image subresource it **can** instead be such that any coordinate of offset + extent equals the corresponding dimensions of the image subresource.
- memory is the VkDeviceMemory object that the sparse image blocks of the image are bound to. If memory is VK_NULL_HANDLE, the sparse image blocks are unbound.
- memoryOffset is an offset into the VkDeviceMemory object. If memory is VK_NULL_HANDLE, this value is ignored.
- flags are sparse memory binding flags.

Valid Usage

- VUID-VkSparseImageMemoryBind-memory-01104
  If the sparseResidencyAliased feature is not enabled, and if any other resources are bound to ranges of memory, the range of memory being bound **must** not overlap with those bound ranges
- VUID-VkSparseImageMemoryBind-memory-01105
  memory and memoryOffset **must** match the memory requirements of the calling command's image, as described in section Resource Memory Association
- VUID-VkSparseImageMemoryBind-offset-01107
  offset.x **must** be a multiple of the sparse image block width (VkSparseImageFormatProperties::imageGranularity.width) of the image
- VUID-VkSparseImageMemoryBind-extent-09388
  extent.width **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01108
  extent.width **must** either be a multiple of the sparse image block width of the image, or else (extent.width + offset.x) **must** equal the width of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01109
  offset.y **must** be a multiple of the sparse image block height

(VkSparseImageFormatProperties::imageGranularity.height) of the image

- VUID-VkSparseImageMemoryBind-extent-09389
  extent.height **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01110
  extent.height **must** either be a multiple of the sparse image block height of the image, or else (extent.height + offset.y) **must** equal the height of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01111
  offset.z **must** be a multiple of the sparse image block depth (VkSparseImageFormatProperties::imageGranularity.depth) of the image
- VUID-VkSparseImageMemoryBind-extent-09390
  extent.depth **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01112
  extent.depth **must** either be a multiple of the sparse image block depth of the image, or else (extent.depth + offset.z) **must** equal the depth of the image subresource
- VUID-VkSparseImageMemoryBind-memory-02732
  If memory was created with VkExportMemoryAllocateInfo::handleTypes not equal to 0, at least one handle type it contained **must** also have been set in VkExternalMemoryImageCreateInfo::handleTypes when the image was created
- VUID-VkSparseImageMemoryBind-memory-02733
  If memory was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryImageCreateInfo ::handleTypes when image was created

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBind-subresource-parameter
  subresource **must** be a valid VkImageSubresource structure
- VUID-VkSparseImageMemoryBind-memory-parameter
  If memory is not VK_NULL_HANDLE, memory **must** be a valid VkDeviceMemory handle
- VUID-VkSparseImageMemoryBind-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkSparseMemoryBindFlagBits values

To submit sparse binding operations to a queue, call:

```
// Provided by VK_VERSION_1_0
VkResult vkQueueBindSparse(
    VkQueue                                     queue,
    uint32_t                                    bindInfoCount,
    const VkBindSparseInfo*                     pBindInfo,
    VkFence                                     fence);
```

- `queue` is the queue that the sparse binding operations will be submitted to.
- `bindInfoCount` is the number of elements in the `pBindInfo` array.
- `pBindInfo` is a pointer to an array of VkBindSparseInfo structures, each specifying a sparse binding submission batch.
- `fence` is an **optional** handle to a fence to be signaled. If `fence` is not VK_NULL_HANDLE, it defines a fence signal operation.

`vkQueueBindSparse` is a queue submission command, with each batch defined by an element of `pBindInfo` as a VkBindSparseInfo structure. Batches begin execution in the order they appear in `pBindInfo`, but **may** complete out of order.

Within a batch, a given range of a resource **must** not be bound more than once. Across batches, if a range is to be bound to one allocation and offset and then to another allocation and offset, then the application **must** guarantee (usually using semaphores) that the binding operations are executed in the correct order, as well as to order binding operations against the execution of command buffer submissions.

As no operation to vkQueueBindSparse causes any pipeline stage to access memory, synchronization primitives used in this command effectively only define execution dependencies.

Additional information about fence and semaphore operation is described in the synchronization chapter.

Valid Usage

- VUID-vkQueueBindSparse-fence-01113
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-vkQueueBindSparse-fence-01114
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkQueueBindSparse-pSignalSemaphores-01115
  Each element of the `pSignalSemaphores` member of each element of `pBindInfo` **must** be unsignaled when the semaphore signal operation it defines is executed on the device
- VUID-vkQueueBindSparse-pWaitSemaphores-01116
  When a semaphore wait operation referring to a binary semaphore defined by any element of the `pWaitSemaphores` member of any element of `pBindInfo` executes on `queue`, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueueBindSparse-pWaitSemaphores-03245
  All elements of the `pWaitSemaphores` member of all elements of `pBindInfo` referring to a semaphore created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY **must** reference a semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueueBindSparse-queue-parameter
  `queue` **must** be a valid VkQueue handle
- VUID-vkQueueBindSparse-pBindInfo-parameter
  If `bindInfoCount` is not `0`, `pBindInfo` **must** be a valid pointer to an array of `bindInfoCount` valid VkBindSparseInfo structures
- VUID-vkQueueBindSparse-fence-parameter
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be a valid VkFence handle
- VUID-vkQueueBindSparse-queuetype
  The `queue` **must** support VK_QUEUE_SPARSE_BINDING_BIT operations
- VUID-vkQueueBindSparse-commonparent
  Both of `fence`, and `queue` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR
- Host access to `fence` **must** be externally synchronized

Command Properties

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkBindSparseInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBindSparseInfo {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     waitSemaphoreCount;
    const VkSemaphore*                           pWaitSemaphores;
    uint32_t                                     bufferBindCount;
    const VkSparseBufferMemoryBindInfo*          pBufferBinds;
    uint32_t                                     imageOpaqueBindCount;
    const VkSparseImageOpaqueMemoryBindInfo*     pImageOpaqueBinds;
    uint32_t                                     imageBindCount;
    const VkSparseImageMemoryBindInfo*           pImageBinds;
    uint32_t                                     signalSemaphoreCount;
    const VkSemaphore*                           pSignalSemaphores;
} VkBindSparseInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- waitSemaphoreCount is the number of semaphores upon which to wait before executing the sparse binding operations for the batch.
- pWaitSemaphores is a pointer to an array of semaphores upon which to wait before the sparse binding operations for this batch begin execution. If semaphores to wait on are provided, they define a semaphore wait operation.
- bufferBindCount is the number of sparse buffer bindings to perform in the batch.
- pBufferBinds is a pointer to an array of VkSparseBufferMemoryBindInfo structures.
- imageOpaqueBindCount is the number of opaque sparse image bindings to perform.
- pImageOpaqueBinds is a pointer to an array of VkSparseImageOpaqueMemoryBindInfo structures, indicating opaque sparse image bindings to perform.
- imageBindCount is the number of sparse image bindings to perform.
- pImageBinds is a pointer to an array of VkSparseImageMemoryBindInfo structures, indicating sparse image bindings to perform.
- signalSemaphoreCount is the number of semaphores to be signaled once the sparse binding operations specified by the structure have completed execution.
- pSignalSemaphores is a pointer to an array of semaphores which will be signaled when the sparse binding operations for this batch have completed execution. If semaphores to be signaled are provided, they define a semaphore signal operation.

The first synchronization scope of each semaphore signal operation defined by this structure includes all sparse binding operations defined by this structure.

The second synchronization scope of each semaphore wait operation defined by this structure includes all sparse binding operations defined by this structure.

Valid Usage

- VUID-VkBindSparseInfo-pWaitSemaphores-03246
  If any element of `pWaitSemaphores` or `pSignalSemaphores` was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then the `pNext` chain **must** include a VkTimelineSemaphoreSubmitInfo structure
- VUID-VkBindSparseInfo-pNext-03247
  If the `pNext` chain of this structure includes a VkTimelineSemaphoreSubmitInfo structure and any element of `pWaitSemaphores` was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then its `waitSemaphoreValueCount` member **must** equal `waitSemaphoreCount`
- VUID-VkBindSparseInfo-pNext-03248
  If the `pNext` chain of this structure includes a VkTimelineSemaphoreSubmitInfo structure and any element of `pSignalSemaphores` was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then its `signalSemaphoreValueCount` member **must** equal `signalSemaphoreCount`
- VUID-VkBindSparseInfo-pSignalSemaphores-03249
  For each element of `pSignalSemaphores` created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::`pSignalSemaphoreValues` **must** have a value greater than the current value of the semaphore when the semaphore signal operation is executed
- VUID-VkBindSparseInfo-pWaitSemaphores-03250
  For each element of `pWaitSemaphores` created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::`pWaitSemaphoreValues` **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than `maxTimelineSemaphoreValueDifference`
- VUID-VkBindSparseInfo-pSignalSemaphores-03251
  For each element of `pSignalSemaphores` created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::`pSignalSemaphoreValues` **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than `maxTimelineSemaphoreValueDifference`
- VUID-VkBindSparseInfo-pNext-09753
  If the `pNext` chain of this structure includes a VkFrameBoundaryTensorsARM structure then it **must** also include a VkFrameBoundaryEXT structure

Valid Usage (Implicit)

- VUID-VkBindSparseInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_SPARSE_INFO

- VUID-VkBindSparseInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDeviceGroupBindSparseInfo, VkFrameBoundaryEXT, VkFrameBoundaryTensorsARM, or VkTimelineSemaphoreSubmitInfo
- VUID-VkBindSparseInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBindSparseInfo-pWaitSemaphores-parameter
  If `waitSemaphoreCount` is not `0`, `pWaitSemaphores` **must** be a valid pointer to an array of `waitSemaphoreCount` valid VkSemaphore handles
- VUID-VkBindSparseInfo-pBufferBinds-parameter
  If `bufferBindCount` is not `0`, `pBufferBinds` **must** be a valid pointer to an array of `bufferBindCount` valid VkSparseBufferMemoryBindInfo structures
- VUID-VkBindSparseInfo-pImageOpaqueBinds-parameter
  If `imageOpaqueBindCount` is not `0`, `pImageOpaqueBinds` **must** be a valid pointer to an array of `imageOpaqueBindCount` valid VkSparseImageOpaqueMemoryBindInfo structures
- VUID-VkBindSparseInfo-pImageBinds-parameter
  If `imageBindCount` is not `0`, `pImageBinds` **must** be a valid pointer to an array of `imageBindCount` valid VkSparseImageMemoryBindInfo structures
- VUID-VkBindSparseInfo-pSignalSemaphores-parameter
  If `signalSemaphoreCount` is not `0`, `pSignalSemaphores` **must** be a valid pointer to an array of `signalSemaphoreCount` valid VkSemaphore handles
- VUID-VkBindSparseInfo-commonparent
  Both of the elements of `pSignalSemaphores`, and the elements of `pWaitSemaphores` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

To specify the values to use when waiting for and signaling semaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE, add a VkTimelineSemaphoreSubmitInfo structure to the `pNext` chain of the VkBindSparseInfo structure.

If the `pNext` chain of VkBindSparseInfo includes a `VkDeviceGroupBindSparseInfo` structure, then that structure includes device indices specifying which instance of the resources and memory are bound.

The `VkDeviceGroupBindSparseInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDeviceGroupBindSparseInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           resourceDeviceIndex;
    uint32_t           memoryDeviceIndex;
} VkDeviceGroupBindSparseInfo;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkDeviceGroupBindSparseInfo
typedef VkDeviceGroupBindSparseInfo VkDeviceGroupBindSparseInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `resourceDeviceIndex` is a device index indicating which instance of the resource is bound.
- `memoryDeviceIndex` is a device index indicating which instance of the memory the resource instance is bound to.

These device indices apply to all buffer and image memory binds included in the batch pointing to this structure. The semaphore waits and signals for the batch are executed only by the physical device specified by the `resourceDeviceIndex`.

If this structure is not present, `resourceDeviceIndex` and `memoryDeviceIndex` are assumed to be zero.

Valid Usage

- VUID-VkDeviceGroupBindSparseInfo-resourceDeviceIndex-01118
  `resourceDeviceIndex` and `memoryDeviceIndex` **must** both be valid device indices
- VUID-VkDeviceGroupBindSparseInfo-memoryDeviceIndex-01119
  Each memory allocation bound in this batch **must** have allocated an instance for `memoryDeviceIndex`

Valid Usage (Implicit)

- VUID-VkDeviceGroupBindSparseInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_BIND_SPARSE_INFO

Structure Chaining

Extends the structure

- VkBindSparseInfo

Chapter 40. Window System Integration (WSI)

This chapter discusses the window system integration (WSI) between the Vulkan API and the various forms of displaying the results of rendering to a user. Since the Vulkan API **can** be used without displaying results, WSI is provided through the use of optional Vulkan extensions. This chapter provides an overview of WSI. See the appendix for additional details of each WSI extension, including which extensions **must** be enabled in order to use each of the functions described in this chapter.

40.1. WSI Platform

A platform is an abstraction for a window system, OS, etc. Some examples include MS Windows, Android, and Wayland. The Vulkan API **may** be integrated in a unique manner for each platform.

The Vulkan API does not define any type of platform object. Platform-specific WSI extensions are defined, each containing platform-specific functions for using WSI. Use of these extensions is guarded by preprocessor symbols as defined in the Window System-Specific Header Control appendix.

In order for an application to be compiled to use WSI with a given platform, it **must** either:

- `#define` the appropriate preprocessor symbol prior to including the `vulkan.h` header file, or
- include `vulkan_core.h` and any native platform headers, followed by the appropriate platform-specific header.

The preprocessor symbols and platform-specific headers are defined in the Window System Extensions and Headers table.

Each platform-specific extension is an instance extension. The application **must** enable instance extensions with `vkCreateInstance` before using them.

40.2. WSI Surface

Native platform surface or window objects are abstracted by surface objects, which are represented by `VkSurfaceKHR` handles:

```
// Provided by VK_KHR_surface
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSurfaceKHR)
```

The `VK_KHR_surface` extension declares the `VkSurfaceKHR` object, and provides a function for destroying `VkSurfaceKHR` objects. Separate platform-specific extensions each provide a function for creating a `VkSurfaceKHR` object for the respective platform. From the application's perspective this is an opaque handle, just like the handles of other Vulkan objects.

NOTE On certain platforms, the Vulkan loader and ICDs **may** have conventions that treat

the handle as a pointer to a structure containing the platform-specific information about the surface. This will be described in the documentation for the loader-ICD interface, and in the `vk_icd.h` header file of the LoaderAndTools source-code repository. This does not affect the loader-layer interface; layers **may** wrap `VkSurfaceKHR` objects.

40.2.1. Android Platform

To create a `VkSurfaceKHR` object for an Android native window, call:

```
// Provided by VK_KHR_android_surface
VkResult vkCreateAndroidSurfaceKHR(
    VkInstance                                  instance,
    const VkAndroidSurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkAndroidSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

During the lifetime of a surface created using a particular ANativeWindow handle any attempts to create another surface for the same ANativeWindow and any attempts to connect to the same ANativeWindow through other platform mechanisms will fail.

NOTE In particular, only one `VkSurfaceKHR` **can** exist at a time for a given window. Similarly, a native window **cannot** be used by both a `VkSurfaceKHR` and `EGLSurface` simultaneously.

If successful, `vkCreateAndroidSurfaceKHR` increments the ANativeWindow's reference count, and `vkDestroySurfaceKHR` will decrement it.

On Android, when a swapchain's `imageExtent` does not match the surface's `currentExtent`, the presentable images will be scaled to the surface's dimensions during presentation. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum image size supported by the consumer. For the system compositor, `currentExtent` is the window size (i.e. the consumer's preferred size).

Valid Usage (Implicit)

- VUID-vkCreateAndroidSurfaceKHR-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateAndroidSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkAndroidSurfaceCreateInfoKHR structure

- VUID-vkCreateAndroidSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateAndroidSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkAndroidSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_android_surface
typedef struct VkAndroidSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkAndroidSurfaceCreateFlagsKHR  flags;
    struct ANativeWindow*           window;
} VkAndroidSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `window` is a pointer to the ANativeWindow to associate the surface with.

Valid Usage

- VUID-VkAndroidSurfaceCreateInfoKHR-window-01248
  `window` **must** point to a valid Android ANativeWindow

Valid Usage (Implicit)

- VUID-VkAndroidSurfaceCreateInfoKHR-sType-sType

sType **must** be VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR

- VUID-VkAndroidSurfaceCreateInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkAndroidSurfaceCreateInfoKHR-flags-zerobitmask
  flags **must** be 0

To remove an unnecessary compile time dependency, an incomplete type definition of ANativeWindow is provided in the Vulkan headers:

```
// Provided by VK_KHR_android_surface
struct ANativeWindow;
```

The actual ANativeWindow type is defined in Android NDK headers.

```
// Provided by VK_KHR_android_surface
typedef VkFlags VkAndroidSurfaceCreateFlagsKHR;
```

VkAndroidSurfaceCreateFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.2. Wayland Platform

To create a VkSurfaceKHR object for a Wayland surface, call:

```
// Provided by VK_KHR_wayland_surface
VkResult vkCreateWaylandSurfaceKHR(
    VkInstance                                  instance,
    const VkWaylandSurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkWaylandSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateWaylandSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle

- VUID-vkCreateWaylandSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkWaylandSurfaceCreateInfoKHR structure
- VUID-vkCreateWaylandSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateWaylandSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkWaylandSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_wayland_surface
typedef struct VkWaylandSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkWaylandSurfaceCreateFlagsKHR  flags;
    struct wl_display*              display;
    struct wl_surface*              surface;
} VkWaylandSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `display` and `surface` are pointers to the Wayland `wl_display` and `wl_surface` to associate the surface with.

Valid Usage

- VUID-VkWaylandSurfaceCreateInfoKHR-display-01304
  `display` **must** point to a valid Wayland `wl_display`
- VUID-VkWaylandSurfaceCreateInfoKHR-surface-01305
  `surface` **must** point to a valid Wayland `wl_surface`

Valid Usage (Implicit)

- VUID-VkWaylandSurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR
- VUID-VkWaylandSurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkWaylandSurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

On Wayland, `currentExtent` is the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that the surface size will be determined by the extent of a swapchain targeting the surface. Whatever the application sets a swapchain's `imageExtent` to will be the size of the window, after the first image is presented. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum supported surface size. Any calls to vkGetPhysicalDeviceSurfacePresentModesKHR on a surface created with `vkCreateWaylandSurfaceKHR` are **required** to return VK_PRESENT_MODE_MAILBOX_KHR as one of the valid present modes.

Some Vulkan functions **may** send protocol over the specified `wl_display` connection when using a swapchain or presentable images created from a `VkSurfaceKHR` referring to a `wl_surface`. Applications **must** therefore ensure that both the `wl_display` and the `wl_surface` remain valid for the lifetime of any `VkSwapchainKHR` objects created from a particular `wl_display` and `wl_surface`. Also, calling vkQueuePresentKHR will result in Vulkan sending `wl_surface.commit` requests to the underlying `wl_surface` of each The `wl_surface.attach`, `wl_surface.damage`, and `wl_surface.commit` requests **must** be issued by the implementation during the call to vkQueuePresentKHR and **must** not be issued by the implementation outside of vkQueuePresentKHR. This ensures that any Wayland requests sent by the client after the call to vkQueuePresentKHR returns will be received by the compositor after the `wl_surface.commit`. Regardless of the mode of swapchain creation, a new `wl_event_queue` **must** be created for each successful vkCreateWaylandSurfaceKHR call, and every Wayland object created by the implementation **must** be assigned to this event queue. If the platform provides Wayland 1.11 or greater, this **must** be implemented by the use of Wayland proxy object wrappers, to avoid race conditions.

If the application wishes to synchronize any window changes with a particular frame, such requests **must** be sent to the Wayland display server prior to calling vkQueuePresentKHR.

The implementation **must** ensure that no `wp_color_management_surface_v1` object exists for a surface, which has no swapchains, or only swapchains with a `imageColorSpace` of VK_COLOR_SPACE_PASS_THROUGH_EXT associated with it.

```
// Provided by VK_KHR_wayland_surface
typedef VkFlags VkWaylandSurfaceCreateFlagsKHR;
```

`VkWaylandSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.3. Win32 Platform

To create a VkSurfaceKHR object for a Win32 window, call:

```
// Provided by VK_KHR_win32_surface
VkResult vkCreateWin32SurfaceKHR(
    VkInstance                                  instance,
    const VkWin32SurfaceCreateInfoKHR*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkWin32SurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateWin32SurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateWin32SurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkWin32SurfaceCreateInfoKHR structure
- VUID-vkCreateWin32SurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateWin32SurfaceKHR-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Some Vulkan functions **may** call the SendMessage system API when interacting with a VkSurfaceKHR

through a VkSwapchainKHR. In a multithreaded environment, calling SendMessage from a thread that is not the thread associated with pCreateInfo->hwnd will block until the application has processed the window message. Thus, applications **should** either call these Vulkan functions on the message pump thread, or make sure their message pump is actively running. Failing to do so **may** result in deadlocks.

The functions subject to this requirement are:

- vkCreateSwapchainKHR
- vkDestroySwapchainKHR
- vkAcquireNextImageKHR and vkAcquireNextImage2KHR
- vkQueuePresentKHR
- vkReleaseSwapchainImagesKHR
- vkAcquireFullScreenExclusiveModeEXT
- vkReleaseFullScreenExclusiveModeEXT
- vkSetHdrMetadataEXT

The VkWin32SurfaceCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_win32_surface
typedef struct VkWin32SurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkWin32SurfaceCreateFlagsKHR    flags;
    HINSTANCE                       hinstance;
    HWND                            hwnd;
} VkWin32SurfaceCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- hinstance is the Win32 HINSTANCE for the window to associate the surface with.
- hwnd is the Win32 HWND for the window to associate the surface with.

Valid Usage

- VUID-VkWin32SurfaceCreateInfoKHR-hinstance-01307
  hinstance **must** be a valid Win32 HINSTANCE
- VUID-VkWin32SurfaceCreateInfoKHR-hwnd-01308
  hwnd **must** be a valid Win32 HWND

Valid Usage (Implicit)

- VUID-VkWin32SurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR
- VUID-VkWin32SurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkWin32SurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

With Win32, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of a Win32 surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to the above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

```
// Provided by VK_KHR_win32_surface
typedef VkFlags VkWin32SurfaceCreateFlagsKHR;
```

`VkWin32SurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.4. XCB Platform

To create a `VkSurfaceKHR` object for an X11 window, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkResult vkCreateXcbSurfaceKHR(
    VkInstance                                  instance,
    const VkXcbSurfaceCreateInfoKHR*            pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkXcbSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is

no more specific allocator available (see Memory Allocation).

- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXcbSurfaceKHR-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateXcbSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkXcbSurfaceCreateInfoKHR structure
- VUID-vkCreateXcbSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateXcbSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkXcbSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_xcb_surface
typedef struct VkXcbSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkXcbSurfaceCreateFlagsKHR      flags;
    xcb_connection_t*               connection;
    xcb_window_t                    window;
} VkXcbSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `connection` is a pointer to an `xcb_connection_t` to the X server.

- `window` is the `xcb_window_t` for the X11 window to associate the surface with.

Valid Usage

- VUID-VkXcbSurfaceCreateInfoKHR-connection-01310
  `connection` **must** point to a valid X11 `xcb_connection_t`
- VUID-VkXcbSurfaceCreateInfoKHR-window-01311
  `window` **must** be a valid X11 `xcb_window_t`

Valid Usage (Implicit)

- VUID-VkXcbSurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR
- VUID-VkXcbSurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkXcbSurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

With Xcb, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of an Xcb surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to the above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified xcb connection when using a swapchain or presentable images created from a VkSurfaceKHR referring to an xcb window. Applications **must** therefore ensure the xcb connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with xcb-based swapchains **must**

- Avoid holding a server grab on an xcb connection while waiting for Vulkan operations to complete using a swapchain derived from a different xcb connection referring to the same X server instance. Failing to do so **may** result in deadlock.

```
// Provided by VK_KHR_xcb_surface
typedef VkFlags VkXcbSurfaceCreateFlagsKHR;
```

VkXcbSurfaceCreateFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.5. Xlib Platform

To create a VkSurfaceKHR object for an X11 window, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkResult vkCreateXlibSurfaceKHR(
    VkInstance                                  instance,
    const VkXlibSurfaceCreateInfoKHR*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkXlibSurfaceCreateInfoKHR structure containing the parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXlibSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateXlibSurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkXlibSurfaceCreateInfoKHR structure
- VUID-vkCreateXlibSurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateXlibSurfaceKHR-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkXlibSurfaceCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_xlib_surface
typedef struct VkXlibSurfaceCreateInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkXlibSurfaceCreateFlagsKHR    flags;
    Display*                       dpy;
    Window                         window;
} VkXlibSurfaceCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- dpy is a pointer to an Xlib Display connection to the X server.
- window is an Xlib Window to associate the surface with.

Valid Usage

- VUID-VkXlibSurfaceCreateInfoKHR-dpy-01313
  dpy **must** point to a valid Xlib Display
- VUID-VkXlibSurfaceCreateInfoKHR-window-01314
  window **must** be a valid Xlib Window

Valid Usage (Implicit)

- VUID-VkXlibSurfaceCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_XLIB_SURFACE_CREATE_INFO_KHR
- VUID-VkXlibSurfaceCreateInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkXlibSurfaceCreateInfoKHR-flags-zerobitmask
  flags **must** be 0

With Xlib, minImageExtent, maxImageExtent, and currentExtent **must** always equal the window size.

The currentExtent of an Xlib surface **must** have both width and height greater than 0, or both of them 0.

NOTE

Due to the above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified Xlib `Display` connection when using a swapchain or presentable images created from a VkSurfaceKHR referring to an Xlib window. Applications **must** therefore ensure the display connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with Xlib-based swapchains **must**

- Avoid holding a server grab on a display connection while waiting for Vulkan operations to complete using a swapchain derived from a different display connection referring to the same X server instance. Failing to do so **may** result in deadlock.

Some implementations may require threads to implement some presentation modes so applications **must** call `XInitThreads`() before calling any other Xlib functions.

```
// Provided by VK_KHR_xlib_surface
typedef VkFlags VkXlibSurfaceCreateFlagsKHR;
```

`VkXlibSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.6. DirectFB Platform

To create a `VkSurfaceKHR` object for a DirectFB surface, call:

```
// Provided by VK_EXT_directfb_surface
VkResult vkCreateDirectFBSurfaceEXT(
    VkInstance                                  instance,
    const VkDirectFBSurfaceCreateInfoEXT*       pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkDirectFBSurfaceCreateInfoEXT structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDirectFBSurfaceEXT-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateDirectFBSurfaceEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDirectFBSurfaceCreateInfoEXT structure
- VUID-vkCreateDirectFBSurfaceEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDirectFBSurfaceEXT-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDirectFBSurfaceCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_directfb_surface
typedef struct VkDirectFBSurfaceCreateInfoEXT {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDirectFBSurfaceCreateFlagsEXT  flags;
    IDirectFB*                       dfb;
    IDirectFBSurface*                surface;
} VkDirectFBSurfaceCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dfb` is a pointer to the `IDirectFB` main interface of DirectFB.
- `surface` is a pointer to a `IDirectFBSurface` surface interface.

Valid Usage

- VUID-VkDirectFBSurfaceCreateInfoEXT-dfb-04117
  `dfb` **must** point to a valid DirectFB `IDirectFB`
- VUID-VkDirectFBSurfaceCreateInfoEXT-surface-04118
  `surface` **must** point to a valid DirectFB `IDirectFBSurface`

Valid Usage (Implicit)

- VUID-VkDirectFBSurfaceCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DIRECTFB_SURFACE_CREATE_INFO_EXT
- VUID-VkDirectFBSurfaceCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDirectFBSurfaceCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

With DirectFB, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the surface size.

```
// Provided by VK_EXT_directfb_surface
typedef VkFlags VkDirectFBSurfaceCreateFlagsEXT;
```

`VkDirectFBSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.7. Fuchsia Platform

To create a `VkSurfaceKHR` object for a Fuchsia ImagePipe, call:

```
// Provided by VK_FUCHSIA_imagepipe_surface
VkResult vkCreateImagePipeSurfaceFUCHSIA(
    VkInstance                                  instance,
    const VkImagePipeSurfaceCreateInfoFUCHSIA*  pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate with the surface.
- `pCreateInfo` is a pointer to a VkImagePipeSurfaceCreateInfoFUCHSIA structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateImagePipeSurfaceFUCHSIA-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkImagePipeSurfaceCreateInfoFUCHSIA structure
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkImagePipeSurfaceCreateInfoFUCHSIA` structure is defined as:

```
// Provided by VK_FUCHSIA_imagepipe_surface
typedef struct VkImagePipeSurfaceCreateInfoFUCHSIA {
    VkStructureType                          sType;
    const void*                              pNext;
    VkImagePipeSurfaceCreateFlagsFUCHSIA     flags;
    zx_handle_t                              imagePipeHandle;
} VkImagePipeSurfaceCreateInfoFUCHSIA;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `imagePipeHandle` is a `zx_handle_t` referring to the ImagePipe to associate with the surface.

Valid Usage

- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-imagePipeHandle-04863
  `imagePipeHandle` **must** be a valid `zx_handle_t`

Valid Usage (Implicit)

- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGEPIPE_SURFACE_CREATE_INFO_FUCHSIA
- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-flags-zerobitmask
  `flags` **must** be `0`

On Fuchsia, the surface `currentExtent` is the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that the surface size will be determined by the extent of a swapchain targeting the surface.

```
// Provided by VK_FUCHSIA_imagepipe_surface
typedef VkFlags VkImagePipeSurfaceCreateFlagsFUCHSIA;
```

`VkImagePipeSurfaceCreateFlagsFUCHSIA` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.8. Google Games Platform

To create a `VkSurfaceKHR` object for a Google Games Platform stream descriptor, call:

```
// Provided by VK_GGP_stream_descriptor_surface
VkResult vkCreateStreamDescriptorSurfaceGGP(
    VkInstance                                  instance,
    const VkStreamDescriptorSurfaceCreateInfoGGP* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate with the surface.
- `pCreateInfo` is a pointer to a `VkStreamDescriptorSurfaceCreateInfoGGP` structure containing parameters that affect the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateStreamDescriptorSurfaceGGP-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateStreamDescriptorSurfaceGGP-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkStreamDescriptorSurfaceCreateInfoGGP structure
- VUID-vkCreateStreamDescriptorSurfaceGGP-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateStreamDescriptorSurfaceGGP-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkStreamDescriptorSurfaceCreateInfoGGP` structure is defined as:

```
// Provided by VK_GGP_stream_descriptor_surface
typedef struct VkStreamDescriptorSurfaceCreateInfoGGP {
    VkStructureType                           sType;
    const void*                               pNext;
    VkStreamDescriptorSurfaceCreateFlagsGGP   flags;
    GgpStreamDescriptor                       streamDescriptor;
} VkStreamDescriptorSurfaceCreateInfoGGP;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `streamDescriptor` is a `GgpStreamDescriptor` referring to the GGP stream descriptor to associate with the surface.

Valid Usage

- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-streamDescriptor-02681
  `streamDescriptor` **must** be a valid `GgpStreamDescriptor`

Valid Usage (Implicit)

- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_STREAM_DESCRIPTOR_SURFACE_CREATE_INFO_GGP`
- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-flags-zerobitmask
  `flags` **must** be `0`

On Google Games Platform, the surface extents are dynamic. The `minImageExtent` will never be greater than 1080p and the `maxImageExtent` will never be less than 1080p. The `currentExtent` will reflect the current optimal resolution.

Applications are expected to choose an appropriate size for the swapchain's `imageExtent`, within the bounds of the surface. Using the surface's `currentExtent` will offer the best performance and quality. When a swapchain's `imageExtent` does not match the surface's `currentExtent`, the presentable images are scaled to the surface's dimensions during presentation if possible and `VK_SUBOPTIMAL_KHR` is returned, otherwise presentation fails with `VK_ERROR_OUT_OF_DATE_KHR`.

```
// Provided by VK_GGP_stream_descriptor_surface
typedef VkFlags VkStreamDescriptorSurfaceCreateFlagsGGP;
```

`VkStreamDescriptorSurfaceCreateFlagsGGP` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.9. iOS Platform

To create a `VkSurfaceKHR` object for an iOS `UIView` or `CAMetalLayer`, call:

```
// Provided by VK_MVK_ios_surface
VkResult vkCreateIOSSurfaceMVK(
    VkInstance                                  instance,
    const VkIOSSurfaceCreateInfoMVK*            pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance with which to associate the surface.

- `pCreateInfo` is a pointer to a VkIOSSurfaceCreateInfoMVK structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

NOTE The `vkCreateIOSSurfaceMVK` function is considered legacy and has been superseded by vkCreateMetalSurfaceEXT from the `VK_EXT_metal_surface` extension.

Valid Usage (Implicit)

- VUID-vkCreateIOSSurfaceMVK-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateIOSSurfaceMVK-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkIOSSurfaceCreateInfoMVK structure
- VUID-vkCreateIOSSurfaceMVK-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateIOSSurfaceMVK-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkIOSSurfaceCreateInfoMVK structure is defined as:

```
// Provided by VK_MVK_ios_surface
typedef struct VkIOSSurfaceCreateInfoMVK {
    VkStructureType                sType;
    const void*                    pNext;
    VkIOSSurfaceCreateFlagsMVK     flags;
    const void*                    pView;
} VkIOSSurfaceCreateInfoMVK;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `pView` is a reference to either a CAMetalLayer object or a `UIView` object.

Valid Usage

- VUID-VkIOSSurfaceCreateInfoMVK-pView-04143
  If `pView` is a CAMetalLayer object, it **must** be a valid CAMetalLayer
- VUID-VkIOSSurfaceCreateInfoMVK-pView-01316
  If `pView` is a `UIView` object, it **must** be a valid `UIView`, **must** be backed by a `CALayer` object of type CAMetalLayer, and vkCreateIOSSurfaceMVK **must** be called on the main thread

Valid Usage (Implicit)

- VUID-VkIOSSurfaceCreateInfoMVK-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IOS_SURFACE_CREATE_INFO_MVK
- VUID-VkIOSSurfaceCreateInfoMVK-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkIOSSurfaceCreateInfoMVK-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_MVK_ios_surface
typedef VkFlags VkIOSSurfaceCreateFlagsMVK;
```

`VkIOSSurfaceCreateFlagsMVK` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.10. macOS Platform

To create a `VkSurfaceKHR` object for a macOS `NSView` or CAMetalLayer, call:

```
// Provided by VK_MVK_macos_surface
VkResult vkCreateMacOSSurfaceMVK(
    VkInstance                                  instance,
    const VkMacOSSurfaceCreateInfoMVK*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance with which to associate the surface.
- `pCreateInfo` is a pointer to a VkMacOSSurfaceCreateInfoMVK structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

NOTE The `vkCreateMacOSSurfaceMVK` function is considered legacy and has been superseded by vkCreateMetalSurfaceEXT from the `VK_EXT_metal_surface` extension.

Valid Usage (Implicit)

- VUID-vkCreateMacOSSurfaceMVK-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateMacOSSurfaceMVK-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkMacOSSurfaceCreateInfoMVK structure
- VUID-vkCreateMacOSSurfaceMVK-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateMacOSSurfaceMVK-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMacOSSurfaceCreateInfoMVK structure is defined as:

```
// Provided by VK_MVK_macos_surface
typedef struct VkMacOSSurfaceCreateInfoMVK {
    VkStructureType                 sType;
    const void*                     pNext;
    VkMacOSSurfaceCreateFlagsMVK    flags;
    const void*                     pView;
} VkMacOSSurfaceCreateInfoMVK;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `pView` is a reference to either a CAMetalLayer object or an `NSView` object.

Valid Usage

- VUID-VkMacOSSurfaceCreateInfoMVK-pView-04144
  If `pView` is a CAMetalLayer object, it **must** be a valid CAMetalLayer
- VUID-VkMacOSSurfaceCreateInfoMVK-pView-01317
  If `pView` is an `NSView` object, it **must** be a valid `NSView`, **must** be backed by a `CALayer` object of type CAMetalLayer, and vkCreateMacOSSurfaceMVK **must** be called on the main thread

Valid Usage (Implicit)

- VUID-VkMacOSSurfaceCreateInfoMVK-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MACOS_SURFACE_CREATE_INFO_MVK
- VUID-VkMacOSSurfaceCreateInfoMVK-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMacOSSurfaceCreateInfoMVK-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_MVK_macos_surface
typedef VkFlags VkMacOSSurfaceCreateFlagsMVK;
```

`VkMacOSSurfaceCreateFlagsMVK` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.11. VI Platform

To create a `VkSurfaceKHR` object for an `nn::vi::Layer`, query the layer's native handle using `nn::vi::GetNativeWindow`, and then call:

```
// Provided by VK_NN_vi_surface
VkResult vkCreateViSurfaceNN(
    VkInstance                                  instance,
    const VkViSurfaceCreateInfoNN*              pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance with which to associate the surface.
- `pCreateInfo` is a pointer to a VkViSurfaceCreateInfoNN structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

During the lifetime of a surface created using a particular `nn::vi::NativeWindowHandle`, applications **must** not attempt to create another surface for the same `nn::vi::Layer` or attempt to connect to the same `nn::vi::Layer` through other platform mechanisms.

If the native window is created with a specified size, `currentExtent` will reflect that size. In this case, applications should use the same size for the swapchain's `imageExtent`. Otherwise, the `currentExtent` will have the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that applications are expected to choose an appropriate size for the swapchain's `imageExtent` (e.g., by matching the result of a call to `nn::vi::GetDisplayResolution`).

Valid Usage (Implicit)

- VUID-vkCreateViSurfaceNN-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateViSurfaceNN-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkViSurfaceCreateInfoNN structure
- VUID-vkCreateViSurfaceNN-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateViSurfaceNN-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkViSurfaceCreateInfoNN structure is defined as:

```
// Provided by VK_NN_vi_surface
typedef struct VkViSurfaceCreateInfoNN {
    VkStructureType             sType;
    const void*                 pNext;
    VkViSurfaceCreateFlagsNN    flags;
    void*                       window;
} VkViSurfaceCreateInfoNN;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- window is the nn::vi::NativeWindowHandle for the nn::vi::Layer with which to associate the surface.

Valid Usage

- VUID-VkViSurfaceCreateInfoNN-window-01318
  window **must** be a valid nn::vi::NativeWindowHandle

Valid Usage (Implicit)

- VUID-VkViSurfaceCreateInfoNN-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VI_SURFACE_CREATE_INFO_NN
- VUID-VkViSurfaceCreateInfoNN-pNext-pNext
  pNext **must** be NULL
- VUID-VkViSurfaceCreateInfoNN-flags-zerobitmask
  flags **must** be 0

```
// Provided by VK_NN_vi_surface
typedef VkFlags VkViSurfaceCreateFlagsNN;
```

VkViSurfaceCreateFlagsNN is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.12. Metal Platform

To create a VkSurfaceKHR object for a CAMetalLayer, call:

```
// Provided by VK_EXT_metal_surface
VkResult vkCreateMetalSurfaceEXT(
    VkInstance                                  instance,
    const VkMetalSurfaceCreateInfoEXT*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance with which to associate the surface.
- pCreateInfo is a pointer to a VkMetalSurfaceCreateInfoEXT structure specifying parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateMetalSurfaceEXT-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateMetalSurfaceEXT-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkMetalSurfaceCreateInfoEXT structure
- VUID-vkCreateMetalSurfaceEXT-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateMetalSurfaceEXT-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMetalSurfaceCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_surface
typedef struct VkMetalSurfaceCreateInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkMetalSurfaceCreateFlagsEXT    flags;
    const CAMetalLayer*             pLayer;
} VkMetalSurfaceCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `pLayer` is a reference to a CAMetalLayer object representing a renderable surface.

Valid Usage (Implicit)

- VUID-VkMetalSurfaceCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_METAL_SURFACE_CREATE_INFO_EXT
- VUID-VkMetalSurfaceCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMetalSurfaceCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

To remove an unnecessary compile time dependency, an incomplete type definition of CAMetalLayer is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_surface
#ifdef __OBJC__
@class CAMetalLayer;
#else
typedef void CAMetalLayer;
#endif
```

The actual CAMetalLayer type is defined in the QuartzCore framework.

```
// Provided by VK_EXT_metal_surface
typedef VkFlags VkMetalSurfaceCreateFlagsEXT;
```

`VkMetalSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.13. QNX Screen Platform

To create a VkSurfaceKHR object for a QNX Screen surface, call:

```
// Provided by VK_QNX_screen_surface
VkResult vkCreateScreenSurfaceQNX(
    VkInstance                                  instance,
    const VkScreenSurfaceCreateInfoQNX*         pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkScreenSurfaceCreateInfoQNX structure containing parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateScreenSurfaceQNX-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateScreenSurfaceQNX-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkScreenSurfaceCreateInfoQNX structure
- VUID-vkCreateScreenSurfaceQNX-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateScreenSurfaceQNX-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkScreenSurfaceCreateInfoQNX structure is defined as:

```
// Provided by VK_QNX_screen_surface
typedef struct VkScreenSurfaceCreateInfoQNX {
    VkStructureType                 sType;
    const void*                     pNext;
    VkScreenSurfaceCreateFlagsQNX   flags;
    struct _screen_context*         context;
    struct _screen_window*          window;
} VkScreenSurfaceCreateInfoQNX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `context` and `window` are QNX Screen `context` and `window` to associate the surface with.

Valid Usage

- VUID-VkScreenSurfaceCreateInfoQNX-context-04741
  `context` **must** point to a valid QNX Screen `struct` _screen_context
- VUID-VkScreenSurfaceCreateInfoQNX-window-04742
  `window` **must** point to a valid QNX Screen `struct` _screen_window

Valid Usage (Implicit)

- VUID-VkScreenSurfaceCreateInfoQNX-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SCREEN_SURFACE_CREATE_INFO_QNX
- VUID-VkScreenSurfaceCreateInfoQNX-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkScreenSurfaceCreateInfoQNX-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_QNX_screen_surface
typedef VkFlags VkScreenSurfaceCreateFlagsQNX;
```

`VkScreenSurfaceCreateFlagsQNX` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.14. Open Harmony OS Platform Surface Creation

To create a `VkSurfaceKHR` object on Open Harmony OS platform, call:

```
// Provided by VK_OHOS_surface
VkResult vkCreateSurfaceOHOS(
    VkInstance                                  instance,
    const VkSurfaceCreateInfoOHOS*              pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkSurfaceCreateInfoOHOS structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateSurfaceOHOS-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateSurfaceOHOS-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSurfaceCreateInfoOHOS structure
- VUID-vkCreateSurfaceOHOS-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSurfaceOHOS-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceCreateInfoOHOS` structure is defined as:

```
// Provided by VK_OHOS_surface
typedef struct VkSurfaceCreateInfoOHOS {
    VkStructureType             sType;
    const void*                 pNext;
    VkSurfaceCreateFlagsOHOS    flags;
    OHNativeWindow*             window;
} VkSurfaceCreateInfoOHOS;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `window` is a pointer to a OHNativeWindow to associate the surface with.

Valid Usage (Implicit)

- VUID-VkSurfaceCreateInfoOHOS-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CREATE_INFO_OHOS
- VUID-VkSurfaceCreateInfoOHOS-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkSurfaceCreateInfoOHOS-flags-zerobitmask
  `flags` **must** be `0`

The OHNativeWindow structure is defined as:

```
// Provided by VK_OHOS_surface
typedef struct NativeWindow OHNativeWindow;
```

It is the native window structure on Open Harmony OS platform. It is exposed by the Open Harmony OS NDK.

```
// Provided by VK_OHOS_surface
typedef VkFlags VkSurfaceCreateFlagsOHOS;
```

`VkSurfaceCreateFlagsOHOS` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.15. UBM Platform

To create a `VkSurfaceKHR` object for a UBM surface, call:

```
// Provided by VK_SEC_ubm_surface
VkResult vkCreateUbmSurfaceSEC(
    VkInstance                                  instance,
    const VkUbmSurfaceCreateInfoSEC*            pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkUbmSurfaceCreateInfoSEC structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateUbmSurfaceSEC-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateUbmSurfaceSEC-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkUbmSurfaceCreateInfoSEC structure
- VUID-vkCreateUbmSurfaceSEC-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateUbmSurfaceSEC-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkUbmSurfaceCreateInfoSEC` structure is defined as:

```
// Provided by VK_SEC_ubm_surface
typedef struct VkUbmSurfaceCreateInfoSEC {
    VkStructureType                sType;
    const void*                    pNext;
    VkUbmSurfaceCreateFlagsSEC     flags;
    struct ubm_device*             device;
    struct ubm_surface*            surface;
} VkUbmSurfaceCreateInfoSEC;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `device` is a pointer to a `ubm_device` to associate the surface with.
- `surface` is a pointer to a `ubm_surface` to associate the surface with.

Valid Usage

- VUID-VkUbmSurfaceCreateInfoSEC-device-12366
  `device` **must** point to a valid UBM `ubm_device`
- VUID-VkUbmSurfaceCreateInfoSEC-surface-12367
  `surface` **must** point to a valid UBM `ubm_surface`

Valid Usage (Implicit)

- VUID-VkUbmSurfaceCreateInfoSEC-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_UBM_SURFACE_CREATE_INFO_SEC
- VUID-VkUbmSurfaceCreateInfoSEC-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkUbmSurfaceCreateInfoSEC-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_SEC_ubm_surface
typedef VkFlags VkUbmSurfaceCreateFlagsSEC;
```

`VkUbmSurfaceCreateFlagsSEC` is a bitmask type for setting a mask, but is currently reserved for future use.

40.2.16. Platform-Independent Information

Once created, `VkSurfaceKHR` objects **can** be used in this and other extensions, in particular the `VK_KHR_swapchain` extension.

Several WSI functions return VK_ERROR_SURFACE_LOST_KHR if the surface becomes no longer available. After such an error, the surface (and any child swapchain, if one exists) **should** be destroyed, as there is no way to restore them to a not-lost state. Applications **may** attempt to create a new VkSurfaceKHR using the same native platform window object, but whether such re-creation will succeed is platform-dependent and **may** depend on the reason the surface became unavailable. A lost surface does not otherwise cause devices to be lost.

To destroy a VkSurfaceKHR object, call:

```
// Provided by VK_KHR_surface
void vkDestroySurfaceKHR(
    VkInstance                                  instance,
    VkSurfaceKHR                                surface,
    const VkAllocationCallbacks*                pAllocator);
```

- instance is the instance used to create the surface.
- surface is the surface to destroy.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).

Destroying a VkSurfaceKHR merely severs the connection between Vulkan and the native surface, and does not imply destroying the native surface, closing a window, or similar behavior.

Valid Usage

- VUID-vkDestroySurfaceKHR-surface-01266
  All VkSwapchainKHR objects created for surface **must** have been destroyed prior to destroying surface
- VUID-vkDestroySurfaceKHR-surface-01267
  If VkAllocationCallbacks were provided when surface was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySurfaceKHR-surface-01268
  If no VkAllocationCallbacks were provided when surface was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroySurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkDestroySurfaceKHR-surface-parameter
  If surface is not VK_NULL_HANDLE, surface **must** be a valid VkSurfaceKHR handle
- VUID-vkDestroySurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroySurfaceKHR-surface-parent
  If `surface` is a valid handle, it **must** have been created, allocated, or retrieved from `instance`

Host Synchronization

- Host access to `surface` **must** be externally synchronized

40.3. Presenting Directly to Display Devices

In some environments applications **can** also present Vulkan rendering directly to display devices without using an intermediate windowing system. This **can** be useful for embedded applications, or implementing the rendering/presentation backend of a windowing system using Vulkan. The `VK_KHR_display` extension provides the functionality necessary to enumerate display devices and create `VkSurfaceKHR` objects that target displays.

40.3.1. Display Enumeration

Displays are represented by `VkDisplayKHR` handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayKHR)
```

Various functions are provided for enumerating the available display devices present on a Vulkan physical device. To query information about the available displays, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPropertiesKHR*                     pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display devices available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display devices available for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display devices for `physicalDevice`, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkDisplayPropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPropertiesKHR {
    VkDisplayKHR                  display;
    const char*                   displayName;
    VkExtent2D                    physicalDimensions;
    VkExtent2D                    physicalResolution;
    VkSurfaceTransformFlagsKHR    supportedTransforms;
    VkBool32                      planeReorderPossible;
    VkBool32                      persistentContent;
} VkDisplayPropertiesKHR;
```

- `display` is a handle that is used to refer to the display described here. This handle will be valid for the lifetime of the Vulkan instance.
- `displayName` is `NULL` or a pointer to a null-terminated UTF-8 string containing the name of the display. Generally, this will be the name provided by the display's EDID. If `NULL`, no suitable name is available. If not `NULL`, the string pointed to **must** remain accessible and unmodified as long as `display` is valid.
- `physicalDimensions` describes the physical width and height of the visible portion of the display,

in millimeters.

- `physicalResolution` describes the physical, native, or preferred resolution of the display.

> **NOTE** For devices which have no natural value to return here, implementations **should** return the maximum resolution supported.

- `supportedTransforms` is a bitmask of VkSurfaceTransformFlagBitsKHR describing which transforms are supported by this display.
- `planeReorderPossible` tells whether the planes on this display **can** have their z order changed. If this is VK_TRUE, the application **can** re-arrange the planes on this display in any order relative to each other.
- `persistentContent` tells whether the display supports self-refresh/internal buffering. If this is true, the application **can** submit persistent present operations on swapchains created against this display.

> **NOTE** Persistent presents **may** have higher latency, and **may** use less power when the screen content is updated infrequently, or when only a portion of the screen needs to be updated in most frames.

To query information about the available displays, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayProperties2KHR*                    pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display devices available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayProperties2KHR` structures.

`vkGetPhysicalDeviceDisplayProperties2KHR` behaves similarly to vkGetPhysicalDeviceDisplayPropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties`

must be a valid pointer to an array of `pPropertyCount` VkDisplayProperties2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayProperties2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayProperties2KHR {
    VkStructureType           sType;
    void*                     pNext;
    VkDisplayPropertiesKHR    displayProperties;
} VkDisplayProperties2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayProperties` is a VkDisplayPropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayProperties2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PROPERTIES_2_KHR
- VUID-VkDisplayProperties2KHR-pNext-pNext
  `pNext` **must** be `NULL`

Acquiring and Releasing Displays

On some platforms, access to displays is limited to a single process or native driver instance. On such platforms, some or all of the displays may not be available to Vulkan if they are already in use by a native windowing system or other application.

To acquire permission to directly access a display in Vulkan from an X11 server, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkAcquireXlibDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    Display*                                    dpy,
    VkDisplayKHR                                display);
```

- `physicalDevice` is the physical device the display is on.
- `dpy` is a connection to the X11 server that currently owns `display`.
- `display` is the display the caller wishes to control in Vulkan.

All permissions necessary to control the display are granted to the Vulkan instance associated with `physicalDevice` until the display is released or the X11 connection specified by `dpy` is terminated. Permission to access the display **may** be temporarily revoked during periods when the X11 server from which control was acquired itself loses access to `display`. During such periods, operations which require access to the display **must** fail with an appropriate error code. If the X11 server associated with `dpy` does not own `display`, or if permission to access it has already been acquired by another entity, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

NOTE One example of when an X11 server loses access to a display is when it loses ownership of its virtual terminal.

Valid Usage (Implicit)

- VUID-vkAcquireXlibDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkAcquireXlibDisplayEXT-dpy-parameter
  `dpy` **must** be a valid pointer to a `Display` value
- VUID-vkAcquireXlibDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkAcquireXlibDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When acquiring displays from an X11 server, an application may also wish to enumerate and identify them using a native handle rather than a VkDisplayKHR handle. To determine the VkDisplayKHR handle corresponding to an X11 RandR Output, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkGetRandROutputDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    Display*                                    dpy,
    RROutput                                    rrOutput,
    VkDisplayKHR*                               pDisplay);
```

- physicalDevice is the physical device to query the display handle on.
- dpy is a connection to the X11 server from which rrOutput was queried.
- rrOutput is an X11 RandR output ID.
- pDisplay is a pointer to a VkDisplayKHR handle where the display is returned.

If there is no VkDisplayKHR corresponding to rrOutput on physicalDevice, VK_NULL_HANDLE will be returned in pDisplay.

Valid Usage (Implicit)

- VUID-vkGetRandROutputDisplayEXT-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetRandROutputDisplayEXT-dpy-parameter
  dpy **must** be a valid pointer to a Display value
- VUID-vkGetRandROutputDisplayEXT-pDisplay-parameter
  pDisplay **must** be a valid pointer to a VkDisplayKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To acquire permission to directly access a display in Vulkan on Windows 10, call:

```
// Provided by VK_NV_acquire_winrt_display
VkResult vkAcquireWinrtDisplayNV(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display);
```

- `physicalDevice` is the physical device the display is on.
- `display` is the display the caller wishes to control in Vulkan.

All permissions necessary to control the display are granted to the Vulkan instance associated with `physicalDevice` until the display is released or the application is terminated. Permission to access the display **may** be revoked by events that cause Windows 10 itself to lose access to `display`. If this has happened, operations which require access to the display **must** fail with an appropriate error code. If permission to access `display` has already been acquired by another entity, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

NOTE	The Vulkan instance acquires control of a "winrt::Windows::Devices::Display::Core::DisplayTarget" by performing an operation equivalent to "winrt::Windows::Devices::Display::Core::DisplayManager.TryAcquireTarget()" on the "DisplayTarget".
NOTE	One example of when Windows 10 loses access to a display is when the display is hot-unplugged.
NOTE	One example of when a display has already been acquired by another entity is when the Windows desktop compositor (DWM) is in control of the display. Beginning with Windows 10 version 2004 it is possible to cause DWM to release a display by using the "Advanced display settings" sub-page of the "Display settings" control panel. vkAcquireWinrtDisplayNV does not itself cause DWM to release a display; this action must be performed outside of Vulkan.

Valid Usage (Implicit)

- VUID-vkAcquireWinrtDisplayNV-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkAcquireWinrtDisplayNV-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkAcquireWinrtDisplayNV-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When acquiring displays on Windows 10, an application may also wish to enumerate and identify them using a native handle rather than a VkDisplayKHR handle.

To determine the VkDisplayKHR handle corresponding to a "winrt::Windows::Devices::Display::Core::DisplayTarget", call:

```
// Provided by VK_NV_acquire_winrt_display
VkResult vkGetWinrtDisplayNV(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    deviceRelativeId,
    VkDisplayKHR*                               pDisplay);
```

- physicalDevice is the physical device on which to query the display handle.
- deviceRelativeId is the value of the "AdapterRelativeId" property of a "DisplayTarget" that is enumerated by a "DisplayAdapter" with an "Id" property matching the deviceLUID property of a VkPhysicalDeviceIDProperties for physicalDevice.
- pDisplay is a pointer to a VkDisplayKHR handle where the display is returned.

If there is no VkDisplayKHR corresponding to deviceRelativeId on physicalDevice, VK_NULL_HANDLE **must** be returned in pDisplay.

Valid Usage (Implicit)

- VUID-vkGetWinrtDisplayNV-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetWinrtDisplayNV-pDisplay-parameter
  pDisplay **must** be a valid pointer to a VkDisplayKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To acquire permission to directly control a display in Vulkan from the Direct Rendering Manager (DRM) interface, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkAcquireDrmDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    int32_t                                     drmFd,
    VkDisplayKHR                                display);
```

- `physicalDevice` is the physical device the display is on.
- `drmFd` is the DRM primary file descriptor.
- `display` is the display the caller wishes Vulkan to control.

All permissions necessary to control the display are granted to the Vulkan instance associated with the provided `physicalDevice` until the display is either released or the connector is unplugged. The provided `drmFd` **must** correspond to the one owned by the `physicalDevice`. If not, the error code VK_ERROR_UNKNOWN **must** be returned. The DRM FD must have DRM master permissions. If any error is encountered during the acquisition of the display, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

The provided DRM fd should not be closed before the display is released, attempting to do it may result in undefined behavior.

Valid Usage (Implicit)

- VUID-vkAcquireDrmDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkAcquireDrmDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkAcquireDrmDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Before acquiring a display from the DRM interface, the caller may want to select a specific VkDisplayKHR handle by identifying it using a connectorId. To do so, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkGetDrmDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    int32_t                                     drmFd,
    uint32_t                                    connectorId,
    VkDisplayKHR*                               display);
```

- physicalDevice is the physical device to query the display from.
- drmFd is the DRM primary file descriptor.
- connectorId is the identifier of the specified DRM connector.
- pDisplay is a pointer to a VkDisplayKHR handle where the display is returned.

If there is no VkDisplayKHR corresponding to the connectorId on the physicalDevice, the returned display will be VK_NULL_HANDLE. The provided drmFd **must** correspond to the one owned by the physicalDevice. If not, the error code VK_ERROR_UNKNOWN will be returned. Master permissions are not required, because the file descriptor is just used for information gathering purposes. The given connectorId **must** be a resource owned by the provided drmFd. If not, the error code VK_ERROR_UNKNOWN will be returned. If any error is encountered during the identification of the display, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

Valid Usage (Implicit)

- VUID-vkGetDrmDisplayEXT-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDrmDisplayEXT-display-parameter
  display **must** be a valid pointer to a VkDisplayKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To release a previously acquired display, call:

```
// Provided by VK_EXT_direct_mode_display
VkResult vkReleaseDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display);
```

- `physicalDevice` is the physical device the display is on.
- `display` is the display to release control of.

Valid Usage (Implicit)

- VUID-vkReleaseDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkReleaseDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkReleaseDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Display Planes

Images are presented to individual planes on a display. Devices **must** support at least one plane on

each display. Planes **can** be stacked and blended to composite multiple images on one display. Devices **may** support only a fixed stacking order and fixed mapping between planes and displays, or they **may** allow arbitrary application-specified stacking orders and mappings between planes and displays. To query the properties of device display planes, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPlanePropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPlanePropertiesKHR*                pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display planes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPlanePropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display planes available for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display planes for `physicalDevice`, at most `pPropertyCount` structures will be written.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkDisplayPlanePropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN

- VK_ERROR_VALIDATION_FAILED

The VkDisplayPlanePropertiesKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlanePropertiesKHR {
    VkDisplayKHR    currentDisplay;
    uint32_t        currentStackIndex;
} VkDisplayPlanePropertiesKHR;
```

- currentDisplay is the handle of the display the plane is currently associated with. If the plane is not currently attached to any displays, this will be VK_NULL_HANDLE.
- currentStackIndex is the current z-order of the plane. This will be between 0 and the value returned by vkGetPhysicalDeviceDisplayPlanePropertiesKHR in pPropertyCount.

To query the properties of a device's display planes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayPlaneProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPlaneProperties2KHR*               pProperties);
```

- physicalDevice is a physical device.
- pPropertyCount is a pointer to an integer related to the number of display planes available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkDisplayPlaneProperties2KHR structures.

vkGetPhysicalDeviceDisplayPlaneProperties2KHR behaves similarly to vkGetPhysicalDeviceDisplayPlanePropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayPlaneProperties2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayPlaneProperties2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneProperties2KHR {
    VkStructureType                 sType;
    void*                           pNext;
    VkDisplayPlanePropertiesKHR     displayPlaneProperties;
} VkDisplayPlaneProperties2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- displayPlaneProperties is a VkDisplayPlanePropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneProperties2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_PROPERTIES_2_KHR
- VUID-VkDisplayPlaneProperties2KHR-pNext-pNext
  pNext **must** be NULL

To determine which displays a plane is usable with, call:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneSupportedDisplaysKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    planeIndex,
    uint32_t*                                   pDisplayCount,
    VkDisplayKHR*                               pDisplays);
```

- physicalDevice is a physical device.

- `planeIndex` is the plane which the application wishes to use, and **must** be in the range [0, physical device plane count - 1].
- `pDisplayCount` is a pointer to an integer related to the number of displays available or queried, as described below.
- `pDisplays` is either `NULL` or a pointer to an array of `VkDisplayKHR` handles.

If `pDisplays` is `NULL`, then the number of displays usable with the specified `planeIndex` for `physicalDevice` is returned in `pDisplayCount`. Otherwise, `pDisplayCount` **must** point to a variable set by the application to the number of elements in the `pDisplays` array, and on return the variable is overwritten with the number of handles actually written to `pDisplays`. If the value of `pDisplayCount` is less than the number of usable display-plane pairs for `physicalDevice`, at most `pDisplayCount` handles will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available pairs were returned.

Valid Usage

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-planeIndex-01249
  `planeIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplayCount-parameter
  `pDisplayCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplays-parameter
  If the value referenced by `pDisplayCount` is not `0`, and `pDisplays` is not `NULL`, `pDisplays` **must** be a valid pointer to an array of `pDisplayCount` VkDisplayKHR handles

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Additional properties of displays are queried using specialized query functions.

Display Modes

Display modes are represented by VkDisplayModeKHR handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayModeKHR)
```

Each display has one or more supported modes associated with it by default. These built-in modes are queried by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayModePropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    uint32_t*                                   pPropertyCount,
    VkDisplayModePropertiesKHR*                 pProperties);
```

- physicalDevice is the physical device associated with display.
- display is the display to query.
- pPropertyCount is a pointer to an integer related to the number of display modes available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkDisplayModePropertiesKHR structures.

If pProperties is NULL, then the number of display modes available on the specified display for physicalDevice is returned in pPropertyCount. Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If the value of pPropertyCount is less than the number of display modes for physicalDevice, at most pPropertyCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available display modes were returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayModePropertiesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayModePropertiesKHR-display-parameter
  display **must** be a valid VkDisplayKHR handle
- VUID-vkGetDisplayModePropertiesKHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetDisplayModePropertiesKHR-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayModePropertiesKHR

structures

- VUID-vkGetDisplayModePropertiesKHR-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayModePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModePropertiesKHR {
    VkDisplayModeKHR              displayMode;
    VkDisplayModeParametersKHR    parameters;
} VkDisplayModePropertiesKHR;
```

- `displayMode` is a handle to the display mode described in this structure. This handle will be valid for the lifetime of the Vulkan instance.
- `parameters` is a VkDisplayModeParametersKHR structure describing the display parameters associated with `displayMode`.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayModeCreateFlagsKHR;
```

`VkDisplayModeCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

To query the properties of a device's built-in display modes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayModeProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    uint32_t*                                   pPropertyCount,
    VkDisplayModeProperties2KHR*                pProperties);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to query.
- `pPropertyCount` is a pointer to an integer related to the number of display modes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayModeProperties2KHR` structures.

`vkGetDisplayModeProperties2KHR` behaves similarly to vkGetDisplayModePropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayModeProperties2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayModeProperties2KHR-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkGetDisplayModeProperties2KHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayModeProperties2KHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkDisplayModeProperties2KHR structures
- VUID-vkGetDisplayModeProperties2KHR-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayModeProperties2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayModeProperties2KHR {
    VkStructureType               sType;
    void*                         pNext;
    VkDisplayModePropertiesKHR    displayModeProperties;
} VkDisplayModeProperties2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- displayModeProperties is a VkDisplayModePropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayModeProperties2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_MODE_PROPERTIES_2_KHR
- VUID-VkDisplayModeProperties2KHR-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkDisplayModeStereoPropertiesNV
- VUID-VkDisplayModeProperties2KHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

The VkDisplayModeParametersKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeParametersKHR {
    VkExtent2D    visibleRegion;
    uint32_t      refreshRate;
} VkDisplayModeParametersKHR;
```

- visibleRegion is the 2D extents of the visible region.
- refreshRate is a uint32_t that is the number of times the display is refreshed each second multiplied by 1000.

NOTE For example, a 60Hz display mode would report a refreshRate of 60,000.

Valid Usage

- VUID-VkDisplayModeParametersKHR-width-01990
  The width member of visibleRegion **must** be greater than 0
- VUID-VkDisplayModeParametersKHR-height-01991
  The height member of visibleRegion **must** be greater than 0

- VUID-VkDisplayModeParametersKHR-refreshRate-01992
  `refreshRate` **must** be greater than `0`

The `VkDisplayModeStereoPropertiesNV` structure is defined as:

```
// Provided by VK_NV_display_stereo
typedef struct VkDisplayModeStereoPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hdmi3DSupported;
} VkDisplayModeStereoPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hdmi3DSupported` indicates whether this display mode can be used for a display surface configured for VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV.

Valid Usage (Implicit)

- VUID-VkDisplayModeStereoPropertiesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_MODE_STEREO_PROPERTIES_NV

Structure Chaining

Extends the structure

- VkDisplayModeProperties2KHR

Additional modes **may** also be created by calling:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayModeKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    const VkDisplayModeCreateInfoKHR*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDisplayModeKHR*                           pMode);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to create an additional mode for.
- `pCreateInfo` is a pointer to a VkDisplayModeCreateInfoKHR structure describing the new mode to create.
- `pAllocator` is the allocator used for host memory allocated for the display mode object when

there is no more specific allocator available (see Memory Allocation).

- `pMode` is a pointer to a VkDisplayModeKHR handle in which the mode created is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayModeKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkCreateDisplayModeKHR-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkCreateDisplayModeKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDisplayModeCreateInfoKHR structure
- VUID-vkCreateDisplayModeKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDisplayModeKHR-pMode-parameter
  `pMode` **must** be a valid pointer to a VkDisplayModeKHR handle
- VUID-vkCreateDisplayModeKHR-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Host Synchronization

- Host access to `display` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayModeCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDisplayModeCreateFlagsKHR     flags;
    VkDisplayModeParametersKHR      parameters;
} VkDisplayModeCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use, and **must** be zero.
- `parameters` is a VkDisplayModeParametersKHR structure describing the display parameters to use in creating the new mode. If the parameters are not compatible with the specified display, the implementation **must** return VK_ERROR_INITIALIZATION_FAILED.

Valid Usage (Implicit)

- VUID-VkDisplayModeCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_MODE_CREATE_INFO_KHR
- VUID-VkDisplayModeCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDisplayModeCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkDisplayModeCreateInfoKHR-parameters-parameter
  `parameters` **must** be a valid VkDisplayModeParametersKHR structure

Applications that wish to present directly to a display **must** select which layer, or “plane” of the display they wish to target, and a mode to use with the display. Each display supports at least one plane. The capabilities of a given mode and plane combination are determined by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneCapabilitiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayModeKHR                            mode,
    uint32_t                                    planeIndex,
    VkDisplayPlaneCapabilitiesKHR*              pCapabilities);
```

- `physicalDevice` is the physical device associated with the display specified by `mode`.
- `mode` is the display mode the application intends to program when using the specified plane. Note this parameter also implicitly specifies a display.
- `planeIndex` is the plane which the application intends to use with the display, and is less than the number of display planes supported by the device.

- `pCapabilities` is a pointer to a VkDisplayPlaneCapabilitiesKHR structure in which the capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilitiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parameter
  `mode` **must** be a valid VkDisplayModeKHR handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-pCapabilities-parameter
  `pCapabilities` **must** be a valid pointer to a VkDisplayPlaneCapabilitiesKHR structure
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parent
  `mode` **must** have been created, allocated, or retrieved from `physicalDevice`

Host Synchronization

- Host access to `mode` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPlaneCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlaneCapabilitiesKHR {
    VkDisplayPlaneAlphaFlagsKHR    supportedAlpha;
    VkOffset2D                     minSrcPosition;
    VkOffset2D                     maxSrcPosition;
    VkExtent2D                     minSrcExtent;
    VkExtent2D                     maxSrcExtent;
    VkOffset2D                     minDstPosition;
    VkOffset2D                     maxDstPosition;
    VkExtent2D                     minDstExtent;
    VkExtent2D                     maxDstExtent;
} VkDisplayPlaneCapabilitiesKHR;
```

- `supportedAlpha` is a bitmask of VkDisplayPlaneAlphaFlagBitsKHR describing the supported alpha blending modes.
- `minSrcPosition` is the minimum source rectangle offset supported by this plane using the specified mode.
- `maxSrcPosition` is the maximum source rectangle offset supported by this plane using the specified mode. The `x` and `y` components of `maxSrcPosition` **must** each be greater than or equal to the `x` and `y` components of `minSrcPosition`, respectively.
- `minSrcExtent` is the minimum source rectangle size supported by this plane using the specified mode.
- `maxSrcExtent` is the maximum source rectangle size supported by this plane using the specified mode.
- `minDstPosition`, `maxDstPosition`, `minDstExtent`, `maxDstExtent` all have similar semantics to their corresponding `*Src*` equivalents, but apply to the output region within the mode rather than the input region within the source image. Unlike the `*Src*` offsets, `minDstPosition` and `maxDstPosition` **may** contain negative values.

The minimum and maximum position and extent fields describe the implementation limits, if any, as they apply to the specified display mode and plane. Vendors **may** support displaying a subset of a swapchain's presentable images on the specified display plane. This is expressed by returning `minSrcPosition`, `maxSrcPosition`, `minSrcExtent`, and `maxSrcExtent` values that indicate a range of possible positions and sizes which **may** be used to specify the region within the presentable images that source pixels will be read from when creating a swapchain on the specified display mode and plane.

Vendors **may** also support mapping the presentable images' content to a subset or superset of the visible region in the specified display mode. This is expressed by returning `minDstPosition`, `maxDstPosition`, `minDstExtent` and `maxDstExtent` values that indicate a range of possible positions and sizes which **may** be used to describe the region within the display mode that the source pixels will be mapped to.

Other vendors **may** support only a 1-1 mapping between pixels in the presentable images and the display mode. This **may** be indicated by returning (0,0) for `minSrcPosition`, `maxSrcPosition`, `minDstPosition`, and `maxDstPosition`, and (display mode width, display mode height) for

`minSrcExtent`, `maxSrcExtent`, `minDstExtent`, and `maxDstExtent`.

The value `supportedAlpha` **must** contain at least one valid VkDisplayPlaneAlphaFlagBitsKHR bit.

These values indicate the limits of the implementation's individual fields. Not all combinations of values within the offset and extent ranges returned in `VkDisplayPlaneCapabilitiesKHR` are guaranteed to be supported. Presentation requests specifying unsupported combinations **may** fail.

To query the capabilities of a given mode and plane combination, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayPlaneCapabilities2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkDisplayPlaneInfo2KHR*               pDisplayPlaneInfo,
    VkDisplayPlaneCapabilities2KHR*             pCapabilities);
```

- `physicalDevice` is the physical device associated with `pDisplayPlaneInfo`.
- `pDisplayPlaneInfo` is a pointer to a VkDisplayPlaneInfo2KHR structure describing the plane and mode.
- `pCapabilities` is a pointer to a VkDisplayPlaneCapabilities2KHR structure in which the capabilities are returned.

`vkGetDisplayPlaneCapabilities2KHR` behaves similarly to vkGetDisplayPlaneCapabilitiesKHR, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilities2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayPlaneCapabilities2KHR-pDisplayPlaneInfo-parameter
  `pDisplayPlaneInfo` **must** be a valid pointer to a valid VkDisplayPlaneInfo2KHR structure
- VUID-vkGetDisplayPlaneCapabilities2KHR-pCapabilities-parameter
  `pCapabilities` **must** be a valid pointer to a VkDisplayPlaneCapabilities2KHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN

- VK_ERROR_VALIDATION_FAILED

The VkDisplayPlaneInfo2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneInfo2KHR {
    VkStructureType     sType;
    const void*         pNext;
    VkDisplayModeKHR    mode;
    uint32_t            planeIndex;
} VkDisplayPlaneInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- mode is the display mode the application intends to program when using the specified plane.

NOTE	This parameter also implicitly specifies a display.

- planeIndex is the plane which the application intends to use with the display.

The members of VkDisplayPlaneInfo2KHR correspond to the arguments to vkGetDisplayPlaneCapabilitiesKHR, with sType and pNext added for extensibility.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneInfo2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_INFO_2_KHR
- VUID-VkDisplayPlaneInfo2KHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkDisplayPlaneInfo2KHR-mode-parameter
  mode **must** be a valid VkDisplayModeKHR handle

Host Synchronization

- Host access to mode **must** be externally synchronized

The VkDisplayPlaneCapabilities2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneCapabilities2KHR {
    VkStructureType                 sType;
    void*                           pNext;
    VkDisplayPlaneCapabilitiesKHR   capabilities;
} VkDisplayPlaneCapabilities2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `capabilities` is a VkDisplayPlaneCapabilitiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneCapabilities2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_CAPABILITIES_2_KHR
- VUID-VkDisplayPlaneCapabilities2KHR-pNext-pNext
  `pNext` **must** be `NULL`

40.3.2. Display Control

To set the power state of a display, call:

```
// Provided by VK_EXT_display_control
VkResult vkDisplayPowerControlEXT(
    VkDevice                                    device,
    VkDisplayKHR                                display,
    const VkDisplayPowerInfoEXT*                pDisplayPowerInfo);
```

- `device` is a logical device associated with `display`.
- `display` is the display whose power state is modified.
- `pDisplayPowerInfo` is a pointer to a VkDisplayPowerInfoEXT structure specifying the new power state of `display`.

Valid Usage (Implicit)

- VUID-vkDisplayPowerControlEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDisplayPowerControlEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkDisplayPowerControlEXT-pDisplayPowerInfo-parameter
  `pDisplayPowerInfo` **must** be a valid pointer to a valid VkDisplayPowerInfoEXT structure
- VUID-vkDisplayPowerControlEXT-commonparent

Both of `device`, and `display` **must** have been created, allocated, or retrieved from the same VkPhysicalDevice

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPowerInfoEXT` structure is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkDisplayPowerInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkDisplayPowerStateEXT    powerState;
} VkDisplayPowerInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `powerState` is a VkDisplayPowerStateEXT value specifying the new power state of the display.

Valid Usage (Implicit)

- VUID-VkDisplayPowerInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_POWER_INFO_EXT
- VUID-VkDisplayPowerInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDisplayPowerInfoEXT-powerState-parameter
  `powerState` **must** be a valid VkDisplayPowerStateEXT value

Possible values of VkDisplayPowerInfoEXT::`powerState`, specifying the new power state of a display, are:

```
// Provided by VK_EXT_display_control
typedef enum VkDisplayPowerStateEXT {
    VK_DISPLAY_POWER_STATE_OFF_EXT = 0,
    VK_DISPLAY_POWER_STATE_SUSPEND_EXT = 1,
    VK_DISPLAY_POWER_STATE_ON_EXT = 2,
} VkDisplayPowerStateEXT;
```

- VK_DISPLAY_POWER_STATE_OFF_EXT specifies that the display is powered down.
- VK_DISPLAY_POWER_STATE_SUSPEND_EXT specifies that the display is put into a low power mode, from which it **may** be able to transition back to VK_DISPLAY_POWER_STATE_ON_EXT more quickly than if it were in VK_DISPLAY_POWER_STATE_OFF_EXT. This state **may** be the same as VK_DISPLAY_POWER_STATE_OFF_EXT.
- VK_DISPLAY_POWER_STATE_ON_EXT specifies that the display is powered on.

40.3.3. Display Surfaces

A complete display configuration includes a mode, one or more display planes and any parameters describing their behavior, and parameters describing some aspects of the images associated with those planes. Display surfaces describe the configuration of a single plane within a complete display configuration. To create a VkSurfaceKHR object for a display plane, call:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayPlaneSurfaceKHR(
    VkInstance                                  instance,
    const VkDisplaySurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance corresponding to the physical device the targeted display is on.
- pCreateInfo is a pointer to a VkDisplaySurfaceCreateInfoKHR structure specifying which mode, plane, and other parameters to use, as described below.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayPlaneSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateDisplayPlaneSurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkDisplaySurfaceCreateInfoKHR structure
- VUID-vkCreateDisplayPlaneSurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid

VkAllocationCallbacks structure

- VUID-vkCreateDisplayPlaneSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplaySurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplaySurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDisplaySurfaceCreateFlagsKHR  flags;
    VkDisplayModeKHR                displayMode;
    uint32_t                        planeIndex;
    uint32_t                        planeStackIndex;
    VkSurfaceTransformFlagBitsKHR   transform;
    float                           globalAlpha;
    VkDisplayPlaneAlphaFlagBitsKHR  alphaMode;
    VkExtent2D                      imageExtent;
} VkDisplaySurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use, and **must** be zero.
- `displayMode` is a VkDisplayModeKHR handle specifying the mode to use when displaying this surface.
- `planeIndex` is the plane on which this surface appears.
- `planeStackIndex` is the z-order of the plane.
- `transform` is a VkSurfaceTransformFlagBitsKHR value specifying the transformation to apply to images as part of the scanout operation.
- `globalAlpha` is the global alpha value. This value is ignored if `alphaMode` is not VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR.

- `alphaMode` is a VkDisplayPlaneAlphaFlagBitsKHR value specifying the type of alpha blending to use.
- `imageExtent` is the size of the presentable images to use with the surface.

NOTE Creating a display surface **must** not modify the state of the displays, planes, or other resources it names. For example, it **must** not apply the specified mode to be set on the associated display. Application of display configuration occurs as a side effect of presenting to a display surface.

Valid Usage

- VUID-VkDisplaySurfaceCreateInfoKHR-planeIndex-01252
  `planeIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`
- VUID-VkDisplaySurfaceCreateInfoKHR-planeReorderPossible-01253
  If the `planeReorderPossible` member of the `VkDisplayPropertiesKHR` structure returned by `vkGetPhysicalDeviceDisplayPropertiesKHR` for the display corresponding to `displayMode` is VK_TRUE then `planeStackIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`; otherwise `planeStackIndex` **must** equal the `currentStackIndex` member of `VkDisplayPlanePropertiesKHR` returned by `vkGetPhysicalDeviceDisplayPlanePropertiesKHR` for the display plane corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01254
  If `alphaMode` is VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR then `globalAlpha` **must** be between `0` and `1`, inclusive
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01255
  `alphaMode` **must** be one of the bits present in the `supportedAlpha` member of `VkDisplayPlaneCapabilitiesKHR` for the display plane corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-06740
  `transform` **must** be one of the bits present in the `supportedTransforms` member of `VkDisplayPropertiesKHR` for the display corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-width-01256
  The `width` and `height` members of `imageExtent` **must** be less than or equal to VkPhysicalDeviceLimits::`maxImageDimension2D`
- VUID-VkDisplaySurfaceCreateInfoKHR-pNext-10284
  If the `pNext` chain includes a VkDisplaySurfaceStereoCreateInfoNV structure whose `stereoType` member is VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV, then the `hdmi3DSupported` member of the VkDisplayModeStereoPropertiesNV structure in the `pNext` chain of the `VkDisplayModeProperties2KHR` structure returned by vkGetDisplayModeProperties2KHR for the display mode corresponding to `displayMode` **must** be VK_TRUE

Valid Usage (Implicit)

- VUID-VkDisplaySurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_SURFACE_CREATE_INFO_KHR
- VUID-VkDisplaySurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkDisplaySurfaceStereoCreateInfoNV
- VUID-VkDisplaySurfaceCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDisplaySurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkDisplaySurfaceCreateInfoKHR-displayMode-parameter
  `displayMode` **must** be a valid VkDisplayModeKHR handle
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-parameter
  `transform` **must** be a valid VkSurfaceTransformFlagBitsKHR value
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-parameter
  `alphaMode` **must** be a valid VkDisplayPlaneAlphaFlagBitsKHR value

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplaySurfaceCreateFlagsKHR;
```

`VkDisplaySurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which **can** be set in VkDisplaySurfaceCreateInfoKHR::`alphaMode`, specifying the type of alpha blending to use on a display, are:

```
// Provided by VK_KHR_display
typedef enum VkDisplayPlaneAlphaFlagBitsKHR {
    VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR = 0x00000002,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR = 0x00000004,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR = 0x00000008,
} VkDisplayPlaneAlphaFlagBitsKHR;
```

- VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR specifies that the source image will be treated as opaque.
- VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR specifies that a global alpha value **must** be specified that will be applied to all pixels in the source image.
- VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR specifies that the alpha value will be determined by the alpha component of the source image's pixels. If the source format contains no alpha values, no blending will be applied. The source alpha values are not premultiplied into

the source image's other color components.

- VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR is equivalent to VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR, except the source alpha values are assumed to be premultiplied into the source image's other color components.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayPlaneAlphaFlagsKHR;
```

VkDisplayPlaneAlphaFlagsKHR is a bitmask type for setting a mask of zero or more VkDisplayPlaneAlphaFlagBitsKHR.

The VkDisplaySurfaceStereoCreateInfoNV structure is defined as:

```
// Provided by VK_NV_display_stereo
typedef struct VkDisplaySurfaceStereoCreateInfoNV {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDisplaySurfaceStereoTypeNV     stereoType;
} VkDisplaySurfaceStereoCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stereoType is a VkDisplaySurfaceStereoTypeNV value specifying the type of 3D stereo presentation the display will be configured for.

Valid Usage (Implicit)

- VUID-VkDisplaySurfaceStereoCreateInfoNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_SURFACE_STEREO_CREATE_INFO_NV
- VUID-VkDisplaySurfaceStereoCreateInfoNV-stereoType-parameter
  stereoType **must** be a valid VkDisplaySurfaceStereoTypeNV value

Structure Chaining

Extends the structure

- VkDisplaySurfaceCreateInfoKHR

Possible values of VkDisplaySurfaceStereoCreateInfoNV::stereoType, specifying the type of 3D stereo presentation the display will be configured for, are:

```
// Provided by VK_NV_display_stereo
typedef enum VkDisplaySurfaceStereoTypeNV {
    VK_DISPLAY_SURFACE_STEREO_TYPE_NONE_NV = 0,
    VK_DISPLAY_SURFACE_STEREO_TYPE_ONBOARD_DIN_NV = 1,
    VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV = 2,
    VK_DISPLAY_SURFACE_STEREO_TYPE_INBAND_DISPLAYPORT_NV = 3,
} VkDisplaySurfaceStereoTypeNV;
```

- VK_DISPLAY_SURFACE_STEREO_TYPE_NONE_NV specifies no configuration for stereo presentation. This is the default behavior if VkDisplaySurfaceStereoCreateInfoNV is not provided.
- VK_DISPLAY_SURFACE_STEREO_TYPE_ONBOARD_DIN_NV specifies configuration for glasses that connect via a DIN connector on the back of the graphics card.
- VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV specifies configuration for HDMI 3D compatible display devices with their own stereo emitters. This is also known as HDMI Frame Packed Stereo, where the left and right eye images are stacked into a single frame with a doubled pixel clock and refresh rate.
- VK_DISPLAY_SURFACE_STEREO_TYPE_INBAND_DISPLAYPORT_NV specifies configuration for DisplayPort display devices with in-band stereo signaling and emitters.

40.3.4. Presenting to Headless Surfaces

Vulkan rendering can be presented to a headless surface, where the presentation operation is a no-op producing no externally-visible result.

NOTE

Because there is no real presentation target, the headless presentation engine may be extended to impose an arbitrary or customizable set of restrictions and features. This makes it a useful portable test target for applications targeting a wide range of presentation engines where the actual target presentation engines might be scarce, unavailable or otherwise undesirable or inconvenient to use for general Vulkan application development.

The usual surface query mechanisms must be used to determine the actual restrictions and features of the implementation.

To create a headless VkSurfaceKHR object, call:

```
// Provided by VK_EXT_headless_surface
VkResult vkCreateHeadlessSurfaceEXT(
    VkInstance                                  instance,
    const VkHeadlessSurfaceCreateInfoEXT*       pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.

- `pCreateInfo` is a pointer to a VkHeadlessSurfaceCreateInfoEXT structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateHeadlessSurfaceEXT-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateHeadlessSurfaceEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkHeadlessSurfaceCreateInfoEXT structure
- VUID-vkCreateHeadlessSurfaceEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateHeadlessSurfaceEXT-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkHeadlessSurfaceCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_headless_surface
typedef struct VkHeadlessSurfaceCreateInfoEXT {
    VkStructureType                    sType;
    const void*                        pNext;
    VkHeadlessSurfaceCreateFlagsEXT    flags;
} VkHeadlessSurfaceCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

Valid Usage (Implicit)

- VUID-VkHeadlessSurfaceCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_HEADLESS_SURFACE_CREATE_INFO_EXT
- VUID-VkHeadlessSurfaceCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkHeadlessSurfaceCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

For headless surfaces, `currentExtent` is the reserved value (0xFFFFFFFF, 0xFFFFFFFF). Whatever the application sets a swapchain's `imageExtent` to will be the size of the surface, after the first image is presented.

```
// Provided by VK_EXT_headless_surface
typedef VkFlags VkHeadlessSurfaceCreateFlagsEXT;
```

`VkHeadlessSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

40.4. Querying for WSI Support

Not all physical devices will include WSI support. Within a physical device, not all queue families will support presentation. WSI support and compatibility **can** be determined in a platform-neutral manner (which determines support for presentation to a particular surface object) and additionally **may** be determined in platform-specific manners (which determine support for presentation on the specified physical device but do not guarantee support for presentation to a particular surface object).

To determine whether a queue family of a physical device supports presentation to a given surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    VkSurfaceKHR                                surface,
    VkBool32*                                   pSupported);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family.
- `surface` is the surface.
- `pSupported` is a pointer to a VkBool32. VK_TRUE indicates support, and VK_FALSE indicates no support.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-queueFamilyIndex-01269
  `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-pSupported-parameter
  `pSupported` **must** be a valid pointer to a VkBool32 value
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

40.4.1. Android Platform

On Android, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Android-specific query for these capabilities.

40.4.2. Wayland Platform

To determine whether a queue family of a physical device supports presentation to a Wayland compositor, call:

```
// Provided by VK_KHR_wayland_surface
VkBool32 vkGetPhysicalDeviceWaylandPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    struct wl_display*                          display);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `display` is a pointer to the `wl_display` associated with a Wayland compositor.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-queueFamilyIndex-01306 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-display-parameter `display` **must** be a valid pointer to a `wl_display` value

40.4.3. Win32 Platform

To determine whether a queue family of a physical device supports presentation to the Microsoft Windows desktop, call:

```
// Provided by VK_KHR_win32_surface
VkBool32 vkGetPhysicalDeviceWin32PresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-queueFamilyIndex-01309

queueFamilyIndex **must** be less than pQueueFamilyPropertyCount returned by vkGetPhysicalDeviceQueueFamilyProperties for the given physicalDevice

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-physicalDevice-parameter physicalDevice **must** be a valid VkPhysicalDevice handle

40.4.4. XCB Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkBool32 vkGetPhysicalDeviceXcbPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    xcb_connection_t*                           connection,
    xcb_visualid_t                              visual_id);
```

- physicalDevice is the physical device.
- queueFamilyIndex is the queue family index.
- connection is a pointer to an xcb_connection_t to the X server.
- visual_id is an X11 visual (xcb_visualid_t).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-queueFamilyIndex-01312 queueFamilyIndex **must** be less than pQueueFamilyPropertyCount returned by vkGetPhysicalDeviceQueueFamilyProperties for the given physicalDevice

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-physicalDevice-parameter physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-connection-parameter connection **must** be a valid pointer to an xcb_connection_t value

40.4.5. Xlib Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkBool32 vkGetPhysicalDeviceXlibPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    Display*                                    dpy,
    VisualID                                    visualID);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dpy` is a pointer to an Xlib `Display` connection to the server.
- `visualID` is an X11 visual (`VisualID`).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-queueFamilyIndex-01315 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-dpy-parameter `dpy` **must** be a valid pointer to a `Display` value

40.4.6. DirectFB Platform

To determine whether a queue family of a physical device supports presentation with DirectFB library, call:

```
// Provided by VK_EXT_directfb_surface
VkBool32 vkGetPhysicalDeviceDirectFBPresentationSupportEXT(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    IDirectFB*                                  dfb);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dfb` is a pointer to the `IDirectFB` main interface of DirectFB.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-queueFamilyIndex-04119 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-dfb-parameter `dfb` **must** be a valid pointer to an `IDirectFB` value

40.4.7. Metal Platform

On Apple platforms with Metal support, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no Apple-specific query for these capabilities.

40.4.8. Fuchsia Platform

On Fuchsia, all physical devices and queue families **must** be capable of presentation with any ImagePipe. As a result there is no Fuchsia-specific query for these capabilities.

40.4.9. Google Games Platform

On Google Games Platform, all physical devices and queue families with the VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT capabilities **must** be capable of presentation with any Google Games Platform stream descriptor. As a result, there is no query specific to Google Games Platform for these capabilities.

40.4.10. iOS Platform

On iOS, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no iOS-specific query for these capabilities.

40.4.11. macOS Platform

On macOS, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no macOS-specific query for these capabilities.

40.4.12. VI Platform

On VI, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no VI-specific query for these capabilities.

40.4.13. QNX Screen Platform

To determine whether a queue family of a physical device supports presentation to a QNX Screen compositor, call:

```
// Provided by VK_QNX_screen_surface
VkBool32 vkGetPhysicalDeviceScreenPresentationSupportQNX(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    struct _screen_window*                      window);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `window` is the QNX Screen `window` object.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-queueFamilyIndex-04743 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-window-parameter `window` **must** be a valid pointer to a `_screen_window` value

40.4.14. Open Harmony OS Platform

On Open Harmony OS, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Open Harmony OS platform-specific query for these capabilities.

40.4.15. UBM Platform

To determine whether a queue family of a physical device supports presentation to a UBM

compositor, call:

```
// Provided by VK_SEC_ubm_surface
VkBool32 vkGetPhysicalDeviceUbmPresentationSupportSEC(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    struct ubm_device*                          device);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `device` is a pointer to the `ubm_device` associated with a UBM compositor.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-device-12368
  `device` **must** point to a valid UBM `ubm_device`
- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-queueFamilyIndex-12369
  `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-device-parameter
  `device` **must** be a valid pointer to a `ubm_device` value

40.5. Surface Queries

The capabilities of a swapchain targeting a surface are the intersection of the capabilities of the WSI platform, the native window or display, and the physical device. The resulting capabilities **can** be obtained with the queries listed below in this section.

NOTE

In addition to the surface capabilities as obtained by surface queries below, swapchain images are also subject to ordinary image creation limits as reported by vkGetPhysicalDeviceImageFormatProperties. As an application is instructed by the appropriate Valid Usage sections, both the surface capabilities and the image creation limits have to be satisfied whenever swapchain images are created.

40.5.1. Surface Capabilities

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

WARNING	This functionality is superseded by vkGetPhysicalDeviceSurfaceCapabilities2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceCapabilitiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    VkSurfaceCapabilitiesKHR*                   pSurfaceCapabilities);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilitiesKHR structure in which the capabilities are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-06211
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-pSurfaceCapabilities-parameter
  `pSurfaceCapabilities` **must** be a valid pointer to a VkSurfaceCapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkSurfaceCapabilitiesKHR structure is defined as:

WARNING This functionality is superseded by VK_KHR_get_surface_capabilities2. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceCapabilitiesKHR {
    uint32_t                         minImageCount;
    uint32_t                         maxImageCount;
    VkExtent2D                       currentExtent;
    VkExtent2D                       minImageExtent;
    VkExtent2D                       maxImageExtent;
    uint32_t                         maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR       supportedTransforms;
    VkSurfaceTransformFlagBitsKHR    currentTransform;
    VkCompositeAlphaFlagsKHR         supportedCompositeAlpha;
    VkImageUsageFlags                supportedUsageFlags;
} VkSurfaceCapabilitiesKHR;
```

- minImageCount is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- maxImageCount is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to minImageCount. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.
- currentExtent is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- minImageExtent contains the smallest valid swapchain extent for the surface on the specified device. The width and height of the extent will each be less than or equal to the corresponding width and height of currentExtent, unless currentExtent has the special value described above.
- maxImageExtent contains the largest valid swapchain extent for the surface on the specified device. The width and height of the extent will each be greater than or equal to the corresponding width and height of minImageExtent. The width and height of the extent will each be greater than or equal to the corresponding width and height of currentExtent, unless currentExtent has the special value described above.

- `maxImageArrayLayers` is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- `supportedTransforms` is a bitmask of VkSurfaceTransformFlagBitsKHR indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- `currentTransform` is a VkSurfaceTransformFlagBitsKHR value indicating the surface's current transform relative to the presentation engine's natural orientation.
- `supportedCompositeAlpha` is a bitmask of VkCompositeAlphaFlagBitsKHR, representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- `supportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the presentable images of a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set. Implementations **may** support additional usages.

NOTE	Supported usage flags of a presentable image when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode are provided by VkSharedPresentSurfaceCapabilities2KHR or VkSharedPresentSurfaceCapabilitiesKHR.

NOTE	Formulas such as min(N, `maxImageCount`) are not correct, since `maxImageCount` **may** be zero.

To query the basic capabilities of a surface defined by the core or extensions, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceCapabilities2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    VkSurfaceCapabilities2KHR*                  pSurfaceCapabilities);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilities2KHR structure in which the capabilities are returned.

`vkGetPhysicalDeviceSurfaceCapabilities2KHR` behaves similarly to

vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06521
  If the VK_GOOGLE_surfaceless_query extension is not enabled, pSurfaceInfo->surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06522
  If pSurfaceInfo->surface is not VK_NULL_HANDLE, pSurfaceInfo->surface **must** be supported by physicalDevice, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-02671
  If a VkSurfaceCapabilitiesFullScreenExclusiveEXT structure is included in the pNext chain of pSurfaceCapabilities, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the pNext chain of pSurfaceInfo
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07776
  If a VkSurfacePresentModeCompatibilityKHR structure is included in the pNext chain of pSurfaceCapabilities, a VkSurfacePresentModeKHR structure **must** be included in the pNext chain of pSurfaceInfo
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07777
  If a VkSurfacePresentScalingCapabilitiesKHR structure is included in the pNext chain of pSurfaceCapabilities, a VkSurfacePresentModeKHR structure **must** be included in the pNext chain of pSurfaceInfo
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07778
  If a VkSurfacePresentModeCompatibilityKHR structure is included in the pNext chain of pSurfaceCapabilities, pSurfaceInfo->surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07779
  If a VkSurfacePresentScalingCapabilitiesKHR structure is included in the pNext chain of pSurfaceCapabilities, pSurfaceInfo->surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-12446
  If a VkSwapchainFlagsSurfaceCapabilitiesEXT structure is included in the pNext chain of pSurfaceCapabilities, pSurfaceInfo->surface **must** be a valid VkSurfaceKHR handle

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-parameter
  pSurfaceInfo **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceCapabilities-parameter

pSurfaceCapabilities **must** be a valid pointer to a VkSurfaceCapabilities2KHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPhysicalDeviceSurfaceInfo2KHR structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkPhysicalDeviceSurfaceInfo2KHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceKHR       surface;
} VkPhysicalDeviceSurfaceInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- surface is the surface that will be associated with the swapchain.

The members of VkPhysicalDeviceSurfaceInfo2KHR correspond to the arguments to vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with sType and pNext added for extensibility.

Additional capabilities of a surface **may** be available to swapchains created with different full-screen exclusive settings - particularly if exclusive full-screen access is application controlled. These additional capabilities **can** be queried by adding a VkSurfaceFullScreenExclusiveInfoEXT structure to the pNext chain of this structure when used to query surface properties. Additionally, for Win32 surfaces with application controlled exclusive full-screen access, chaining a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **may** also report additional surface capabilities. These additional capabilities only apply to swapchains created with the same parameters included in the pNext chain of VkSwapchainCreateInfoKHR.

Valid Usage

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-02672
  If the pNext chain includes a VkSurfaceFullScreenExclusiveInfoEXT structure with its fullScreenExclusive member set to

VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT, and surface was created using vkCreateWin32SurfaceKHR, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the pNext chain

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-surface-07919
  If surface is not VK_NULL_HANDLE, and the VK_GOOGLE_surfaceless_query extension is not enabled, surface **must** be a valid VkSurfaceKHR handle

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SURFACE_INFO_2_KHR
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkSurfaceFullScreenExclusiveInfoEXT, VkSurfaceFullScreenExclusiveWin32InfoEXT, or VkSurfacePresentModeKHR
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

If the pNext chain of VkSwapchainCreateInfoKHR includes a VkSurfaceFullScreenExclusiveInfoEXT structure, then that structure specifies the application's preferred full-screen transition behavior.

The VkSurfaceFullScreenExclusiveInfoEXT structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveInfoEXT {
    VkStructureType             sType;
    void*                       pNext;
    VkFullScreenExclusiveEXT    fullScreenExclusive;
} VkSurfaceFullScreenExclusiveInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fullScreenExclusive is a VkFullScreenExclusiveEXT value specifying the preferred full-screen transition behavior.

If this structure is not present, fullScreenExclusive is considered to be VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT.

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_INFO_EXT
- VUID-VkSurfaceFullScreenExclusiveInfoEXT-fullScreenExclusive-parameter

`fullScreenExclusive` **must** be a valid VkFullScreenExclusiveEXT value

Structure Chaining

Extends the structures

- VkPhysicalDeviceSurfaceInfo2KHR
- VkSwapchainCreateInfoKHR

Possible values of `VkSurfaceFullScreenExclusiveInfoEXT::fullScreenExclusive` are:

```
// Provided by VK_EXT_full_screen_exclusive
typedef enum VkFullScreenExclusiveEXT {
    VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT = 0,
    VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT = 1,
    VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT = 2,
    VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT = 3,
} VkFullScreenExclusiveEXT;
```

- VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT specifies that the implementation **should** determine the appropriate full-screen method by whatever means it deems appropriate.
- VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT specifies that the implementation **may** use full-screen exclusive mechanisms when available. Such mechanisms **may** result in better performance and/or the availability of different presentation capabilities, but **may** require a more disruptive transition during swapchain initialization, first presentation and/or destruction.
- VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT specifies that the implementation **should** avoid using full-screen mechanisms which rely on disruptive transitions.
- VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT specifies that the application will manage full-screen exclusive mode by using the vkAcquireFullScreenExclusiveModeEXT and vkReleaseFullScreenExclusiveModeEXT commands.

The `VkSurfaceFullScreenExclusiveWin32InfoEXT` structure is defined as:

```
// Provided by VK_KHR_win32_surface with VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveWin32InfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    HMONITOR           hmonitor;
} VkSurfaceFullScreenExclusiveWin32InfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hmonitor` is the Win32 `HMONITOR` handle identifying the display to create the surface with.

NOTE	If `hmonitor` is invalidated (e.g. the monitor is unplugged) during the lifetime of a swapchain created with this structure, operations on that swapchain will return VK_ERROR_OUT_OF_DATE_KHR.

NOTE	It is the responsibility of the application to change the display settings of the targeted Win32 display using the appropriate platform APIs. Such changes **may** alter the surface capabilities reported for the created surface.

Valid Usage

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-hmonitor-02673
  `hmonitor` **must** be a valid `HMONITOR`

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_WIN32_INFO_EXT

Structure Chaining

Extends the structures

- VkPhysicalDeviceSurfaceInfo2KHR
- VkSwapchainCreateInfoKHR

The `VkSurfaceCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceCapabilities2KHR {
    VkStructureType             sType;
    void*                       pNext;
    VkSurfaceCapabilitiesKHR    surfaceCapabilities;
} VkSurfaceCapabilities2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCapabilities` is a VkSurfaceCapabilitiesKHR structure describing the capabilities of the specified surface.

If the `VK_GOOGLE_surfaceless_query` extension is enabled and VkPhysicalDeviceSurfaceInfo2KHR ::`surface` in the vkGetPhysicalDeviceSurfaceCapabilities2KHR call is VK_NULL_HANDLE, the values returned in `minImageCount`, `maxImageCount`, `currentExtent`, and `currentTransform` will not reflect that of

any surface and will instead be as such:

- `minImageCount` and `maxImageCount` will be 0xFFFFFFFF
- `currentExtent` will be (0xFFFFFFFF, 0xFFFFFFFF)
- `currentTransform` will be VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR

Only usage flags representable in VkImageUsageFlagBits are returned in `surfaceCapabilities.supportedUsageFlags`. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, all usage flags are returned in VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_KHR
- VUID-VkSurfaceCapabilities2KHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDisplayNativeHdrSurfaceCapabilitiesAMD, VkImageUsageFlags2CreateInfoKHR, VkLatencySurfaceCapabilitiesNV, VkPresentTimingSurfaceCapabilitiesEXT, VkSharedPresentSurfaceCapabilities2KHR, VkSharedPresentSurfaceCapabilitiesKHR, VkSurfaceCapabilitiesFullScreenExclusiveEXT, VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE, VkSurfaceCapabilitiesPresentBarrierNV, VkSurfaceCapabilitiesPresentId2KHR, VkSurfaceCapabilitiesPresentWait2KHR, VkSurfacePresentModeCompatibilityKHR, VkSurfacePresentScalingCapabilitiesKHR, VkSurfaceProtectedCapabilitiesKHR, or VkSwapchainFlagsSurfaceCapabilitiesEXT
- VUID-VkSurfaceCapabilities2KHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

An application queries if a protected VkSurfaceKHR is displayable on a specific windowing system using `VkSurfaceProtectedCapabilitiesKHR`, which **can** be passed in `pNext` parameter of `VkSurfaceCapabilities2KHR`.

The `VkSurfaceProtectedCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface_protected_capabilities
typedef struct VkSurfaceProtectedCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supportsProtected;
} VkSurfaceProtectedCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportsProtected` specifies whether a protected swapchain created from

VkPhysicalDeviceSurfaceInfo2KHR::surface for a particular windowing system **can** be displayed on screen or not. If supportsProtected is VK_TRUE, then creation of swapchains with the VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR flag set **must** be supported for surface.

If the VK_GOOGLE_surfaceless_query extension is enabled, the value returned in supportsProtected will be identical for every valid surface created on this physical device, and so in the vkGetPhysicalDeviceSurfaceCapabilities2KHR call, VkPhysicalDeviceSurfaceInfo2KHR::surface **can** be VK_NULL_HANDLE. In that case, the contents of VkSurfaceCapabilities2KHR::surfaceCapabilities as well as any other structure chained to it will be undefined.

Valid Usage (Implicit)

- VUID-VkSurfaceProtectedCapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_PROTECTED_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfacePresentScalingCapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentScalingCapabilitiesKHR {
    VkStructureType             sType;
    void*                       pNext;
    VkPresentScalingFlagsKHR    supportedPresentScaling;
    VkPresentGravityFlagsKHR    supportedPresentGravityX;
    VkPresentGravityFlagsKHR    supportedPresentGravityY;
    VkExtent2D                  minScaledImageExtent;
    VkExtent2D                  maxScaledImageExtent;
} VkSurfacePresentScalingCapabilitiesKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentScalingCapabilitiesKHR
typedef VkSurfacePresentScalingCapabilitiesKHR VkSurfacePresentScalingCapabilitiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- supportedPresentScaling is a bitmask of VkPresentScalingFlagBitsKHR representing the scaling methods supported by the surface, or 0 if application-defined scaling is not supported.
- supportedPresentGravityX is a bitmask of VkPresentGravityFlagBitsKHR representing the X-axis pixel gravity supported by the surface, or 0 if Vulkan-defined pixel gravity is not supported for

the X axis.

- `supportedPresentGravityY` is a bitmask of VkPresentGravityFlagBitsKHR representing the Y-axis pixel gravity supported by the surface, or `0` if Vulkan-defined pixel gravity is not supported for the Y axis.
- `minScaledImageExtent` contains the smallest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in `supportedPresentScaling` is used, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface. The `width` and `height` of the extent will each be less than or equal to the corresponding `width` and `height` of VkSurfaceCapabilitiesKHR::`minImageExtent`.
- `maxScaledImageExtent` contains the largest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in `supportedPresentScaling` is used, or the special value described above for `minScaledImageExtent`. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of VkSurfaceCapabilitiesKHR::`maxImageExtent`.

To query the set of supported scaling modes for a given present mode, add a VkSurfacePresentModeKHR structure in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR when calling vkGetPhysicalDeviceSurfaceCapabilities2KHR. The implementation **must** return the same values in `VkSurfacePresentScalingCapabilitiesKHR` for any of the compatible present modes as obtained through VkSurfacePresentModeCompatibilityKHR.

The application **can** specify the scaling mode when creating a swapchain through the use of VkSwapchainPresentScalingCreateInfoKHR.

Valid Usage (Implicit)

- VUID-VkSurfacePresentScalingCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_SCALING_CAPABILITIES_KHR
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentScaling-parameter
  If `supportedPresentScaling` is not `0`, `supportedPresentScaling` **must** be a valid combination of VkPresentScalingFlagBitsKHR values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityX-parameter
  If `supportedPresentGravityX` is not `0`, `supportedPresentGravityX` **must** be a valid combination of VkPresentGravityFlagBitsKHR values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityY-parameter
  If `supportedPresentGravityY` is not `0`, `supportedPresentGravityY` **must** be a valid combination of VkPresentGravityFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

Bits which **may** be set in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling, specifying scaling modes supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentScalingFlagBitsKHR {
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR = 0x00000001,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR = 0x00000002,
    VK_PRESENT_SCALING_STRETCH_BIT_KHR = 0x00000004,
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_EXT = VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_EXT =
VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR,
    VK_PRESENT_SCALING_STRETCH_BIT_EXT = VK_PRESENT_SCALING_STRETCH_BIT_KHR,
} VkPresentScalingFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagBitsKHR
typedef VkPresentScalingFlagBitsKHR VkPresentScalingFlagBitsEXT;
```

- VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR specifies that no scaling occurs, and pixels in the swapchain image are mapped to one and only one pixel in the surface. The mapping between pixels is defined by the chosen presentation gravity.
- VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR specifies that the swapchain image will be minified or magnified such that at least one of the resulting width or height is equal to the corresponding surface dimension, and the other resulting dimension is less than or equal to the corresponding surface dimension, with the aspect ratio of the resulting image being identical to that of the original swapchain image.
- VK_PRESENT_SCALING_STRETCH_BIT_KHR specifies that the swapchain image will be minified or magnified such that the resulting image dimensions are equal to those of the surface.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentScalingFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagsKHR
typedef VkPresentScalingFlagsKHR VkPresentScalingFlagsEXT;
```

VkPresentScalingFlagsKHR is a bitmask type for setting a mask of zero or more VkPresentScalingFlagBitsKHR.

Bits which **may** be set in the VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX or supportedPresentGravityY fields, specifying the gravity of presented pixels supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentGravityFlagBitsKHR {
    VK_PRESENT_GRAVITY_MIN_BIT_KHR = 0x00000001,
    VK_PRESENT_GRAVITY_MAX_BIT_KHR = 0x00000002,
    VK_PRESENT_GRAVITY_CENTERED_BIT_KHR = 0x00000004,
    VK_PRESENT_GRAVITY_MIN_BIT_EXT = VK_PRESENT_GRAVITY_MIN_BIT_KHR,
    VK_PRESENT_GRAVITY_MAX_BIT_EXT = VK_PRESENT_GRAVITY_MAX_BIT_KHR,
    VK_PRESENT_GRAVITY_CENTERED_BIT_EXT = VK_PRESENT_GRAVITY_CENTERED_BIT_KHR,
} VkPresentGravityFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagBitsKHR
typedef VkPresentGravityFlagBitsKHR VkPresentGravityFlagBitsEXT;
```

- VK_PRESENT_GRAVITY_MIN_BIT_KHR means that the pixels will gravitate towards the top or left side of the surface.
- VK_PRESENT_GRAVITY_MAX_BIT_KHR means that the pixels will gravitate towards the bottom or right side of the surface.
- VK_PRESENT_GRAVITY_CENTERED_BIT_KHR means that the pixels will be centered in the surface.

If the value in VkSurfaceCapabilitiesKHR::currentTransform is not VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR, it is implementation-defined whether the gravity configuration applies to the presented image before or after transformation.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentGravityFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagsKHR
typedef VkPresentGravityFlagsKHR VkPresentGravityFlagsEXT;
```

VkPresentGravityFlagsKHR is a bitmask type for setting a mask of zero or more VkPresentGravityFlagBitsKHR.

The VkSurfacePresentModeKHR structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeKHR {
    VkStructureType     sType;
    void*               pNext;
    VkPresentModeKHR    presentMode;
} VkSurfacePresentModeKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeKHR
typedef VkSurfacePresentModeKHR VkSurfacePresentModeEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMode` is the presentation mode the swapchain will use.

If the `VkSurfacePresentModeKHR` structure is included in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR, the values returned in VkSurfaceCapabilitiesKHR::`minImageCount`, VkSurfaceCapabilitiesKHR::`maxImageCount`, VkSurfacePresentScalingCapabilitiesKHR::`minScaledImageExtent`, and VkSurfacePresentScalingCapabilitiesKHR::`maxScaledImageExtent` are valid only for the specified `presentMode`. If `presentMode` is VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, the per-present mode image counts **must** both be one. The per-present mode image counts **may** be less-than or greater-than the image counts returned when `VkSurfacePresentModeKHR` is not provided.

NOTE

If VkSwapchainPresentModesCreateInfoKHR is provided to swapchain creation, the requirements for forward progress may be less strict. For example, a FIFO swapchain might only require 2 images to guarantee forward progress, but a MAILBOX one might require 4. Without the per-present image counts, such an implementation would have to return 4 in VkSurfaceCapabilitiesKHR::`minImageCount`, which pessimizes FIFO. Conversely, an implementation may return a low number for minImageCount, but internally bump the image count when the application queries vkGetSwapchainImagesKHR, which can surprise applications, and is not discoverable until swapchain creation. Using `VkSurfacePresentModeKHR` and VkSwapchainPresentModesCreateInfoKHR together effectively removes this problem.

VkSwapchainPresentModesCreateInfoKHR is required for the specification to be backwards compatible with applications that do not know about, or make use of this feature.

Valid Usage

- VUID-VkSurfacePresentModeKHR-presentMode-07780
  `presentMode` **must** be a value reported by vkGetPhysicalDeviceSurfacePresentModesKHR for the specified surface

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_KHR

- VUID-VkSurfacePresentModeKHR-presentMode-parameter
  `presentMode` **must** be a valid VkPresentModeKHR value

Structure Chaining

Extends the structure

- VkPhysicalDeviceSurfaceInfo2KHR

The `VkSurfacePresentModeCompatibilityKHR` structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeCompatibilityKHR {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             presentModeCount;
    VkPresentModeKHR*    pPresentModes;
} VkSurfacePresentModeCompatibilityKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeCompatibilityKHR
typedef VkSurfacePresentModeCompatibilityKHR VkSurfacePresentModeCompatibilityEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is an integer related to the number of present modes available or queried, as described below.
- `pPresentModes` is a pointer to an array of VkPresentModeKHR in which present modes compatible with a given present mode are returned.

If `pPresentModes` is `NULL`, then the number of present modes that are compatible with the one specified in VkSurfacePresentModeKHR is returned in `presentModeCount`. Otherwise, `presentModeCount` **must** be set by the application to the number of elements in the `pPresentModes` array, and on return is overwritten with the number of values actually written to `pPresentModes`. If the value of `presentModeCount` is less than the number of compatible present modes that are supported, at most `presentModeCount` values will be written to `pPresentModes`. The implementation **must** include the present mode passed to VkSurfacePresentModeKHR in `pPresentModes`, unless `presentModeCount` is zero.

To query the set of present modes compatible with a given initial present mode, add a VkSurfacePresentModeKHR structure in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR when calling vkGetPhysicalDeviceSurfaceCapabilities2KHR.

The application **can** create a swapchain whose present mode **can** be modified through the use of VkSwapchainPresentModesCreateInfoKHR.

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeCompatibilityKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_COMPATIBILITY_KHR
- VUID-VkSurfacePresentModeCompatibilityKHR-pPresentModes-parameter
  If `presentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` VkPresentModeKHR values

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSharedPresentSurfaceCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkImageUsageFlags    sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sharedPresentSupportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the shared presentable image from a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the `pNext` chain of VkSurfaceCapabilities2KHR to determine supported usage when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode.

Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSharedPresentSurfaceCapabilities2KHR structure is defined as:

```
// Provided by VK_KHR_extended_flags with VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilities2KHR {
    VkStructureType          sType;
    void*                    pNext;
    VkImageUsageFlags2KHR    sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilities2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- sharedPresentSupportedUsageFlags is a bitmask of VkImageUsageFlagBits2KHR representing the ways the application **can** use the shared presentable image from a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR for the surface on the specified device. VK_IMAGE_USAGE_2_COLOR_ATTACHMENT_BIT_KHR **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine supported usage when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode.

Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilities2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSwapchainFlagsSurfaceCapabilitiesEXT structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_swapchain
typedef struct VkSwapchainFlagsSurfaceCapabilitiesEXT {
    VkStructureType              sType;
    void*                        pNext;
    VkSwapchainCreateFlagsKHR    swapchainSupportedFlags;
} VkSwapchainFlagsSurfaceCapabilitiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainSupportedFlags` is a bitmask of VkSwapchainCreateFlagsKHR representing the supported flags in VkSwapchainCreateInfoKHR when creating a swapchain for the surface on the specified device. If a VkSurfacePresentModeKHR structure is included in the `pNext` chain of `pSurfaceInfo` in vkGetPhysicalDeviceSurfaceCapabilities2KHR, this value represents the supported flags for the specified present mode and those compatible with it as returned in VkSurfacePresentModeCompatibilityKHR.

Valid Usage (Implicit)

- VUID-VkSwapchainFlagsSurfaceCapabilitiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_FLAGS_SURFACE_CAPABILITIES_EXT

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkDisplayNativeHdrSurfaceCapabilitiesAMD` structure is defined as:

```
// Provided by VK_AMD_display_native_hdr
typedef struct VkDisplayNativeHdrSurfaceCapabilitiesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           localDimmingSupport;
} VkDisplayNativeHdrSurfaceCapabilitiesAMD;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `localDimmingSupport` specifies whether the surface supports local dimming. If this is VK_TRUE, VkSwapchainDisplayNativeHdrCreateInfoAMD **can** be used to explicitly enable or disable local dimming for the surface. Local dimming may also be overridden by vkSetLocalDimmingAMD during the lifetime of the swapchain.

Valid Usage (Implicit)

- VUID-VkDisplayNativeHdrSurfaceCapabilitiesAMD-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_NATIVE_HDR_SURFACE_CAPABILITIES_AMD`

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSurfaceCapabilitiesFullScreenExclusiveEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceCapabilitiesFullScreenExclusiveEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fullScreenExclusiveSupported;
} VkSurfaceCapabilitiesFullScreenExclusiveEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fullScreenExclusiveSupported` is a boolean describing whether the surface is able to make use of exclusive full-screen access.

This structure **can** be included in the `pNext` chain of VkSurfaceCapabilities2KHR to determine support for exclusive full-screen access. If `fullScreenExclusiveSupported` is VK_FALSE, it indicates that exclusive full-screen access is not obtainable for this surface.

Applications **must** not attempt to create swapchains with VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT set if `fullScreenExclusiveSupported` is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesFullScreenExclusiveEXT-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_FULL_SCREEN_EXCLUSIVE_EXT`

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfaceCapabilitiesPresentBarrierNV structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkSurfaceCapabilitiesPresentBarrierNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrierSupported;
} VkSurfaceCapabilitiesPresentBarrierNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentBarrierSupported is a boolean describing whether the surface is able to make use of the present barrier feature.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine support for present barrier access. If presentBarrierSupported is VK_FALSE, it indicates that the present barrier feature is not obtainable for this surface.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentBarrierNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_BARRIER_NV

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfaceCapabilitiesPresentId2KHR structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkSurfaceCapabilitiesPresentId2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2Supported;
} VkSurfaceCapabilitiesPresentId2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentId2Supported is a boolean describing whether the surface is able to support the present-ID extension.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine

support for present-wait. If presentId2Supported is VK_FALSE, it indicates that attaching an ID to presentation requests is not possible for this surface.

Applications **must** not attempt to include VkPresentId2KHR in the pNext chain of a VkPresentInfoKHR if presentId2Supported is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentId2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_ID_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfaceCapabilitiesPresentWait2KHR structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkSurfaceCapabilitiesPresentWait2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2Supported;
} VkSurfaceCapabilitiesPresentWait2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentWait2Supported is a boolean describing whether the surface is able to support the present-wait extension.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine support for present-wait. If presentWait2Supported is VK_FALSE, it indicates that waiting for presentation is not possible for this surface.

Applications **must** not attempt to call vkWaitForPresent2KHR on a swapchain if presentWait2Supported is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentWait2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_WAIT_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkPresentTimingSurfaceCapabilitiesEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingSurfaceCapabilitiesEXT {
    VkStructureType           sType;
    void*                     pNext;
    VkBool32                  presentTimingSupported;
    VkBool32                  presentAtAbsoluteTimeSupported;
    VkBool32                  presentAtRelativeTimeSupported;
    VkPresentStageFlagsEXT    presentStageQueries;
} VkPresentTimingSurfaceCapabilitiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentTimingSupported indicates whether querying presentation timestamps is supported for a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::surface.
- presentAtAbsoluteTimeSupported indicates whether a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::surface supports presenting images with absolute times.
- presentAtRelativeTimeSupported indicates whether a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::surface supports presenting images with relative times.
- presentStageQueries is a bitmask of VkPresentStageFlagBitsEXT indicating which present stages a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::surface is able to provide timing information for.

If presentTimingSupported is VK_TRUE, the implementation **must** also advertise support for at least the VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT present stage in presentStageQueries.

Valid Usage (Implicit)

- VUID-VkPresentTimingSurfaceCapabilitiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_TIMING_SURFACE_CAPABILITIES_EXT

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE structure is defined as:

```
// Provided by VK_GOOGLE_hdr_smpte_st_209450_metadata
typedef struct VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hdrSmpteSt209450Supported;
} VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- hdrSmpteSt209450Supported is a boolean describing whether the surface is able to support SMPTE ST 2094-50 dynamic metadata.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine support for SMPTE ST 2094-50 dynamic metadata on a surface. If hdrSmpteSt209450Supported is VK_FALSE, it indicates that attaching SMPTE ST 2094-50 dynamic metadata is not possible for this surface.

Applications **must** not attempt to include VkHdrSmpteSt209450GOOGLE in the pNext chain of a VkHdrMetadataEXT for a swapchain created for a surface if hdrSmpteSt209450Supported is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_HDR_SMPTE_ST_209450_GOOGLE

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

```
// Provided by VK_EXT_display_surface_counter
VkResult vkGetPhysicalDeviceSurfaceCapabilities2EXT(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    VkSurfaceCapabilities2EXT*                  pSurfaceCapabilities);
```

- physicalDevice is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.

- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilities2EXT structure in which the capabilities are returned.

`vkGetPhysicalDeviceSurfaceCapabilities2EXT` behaves similarly to vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with the ability to return extended information by adding extending structures to the `pNext` chain of its `pSurfaceCapabilities` parameter.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-06211
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-pSurfaceCapabilities-parameter
  `pSurfaceCapabilities` **must** be a valid pointer to a VkSurfaceCapabilities2EXT structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceCapabilities2EXT` structure is defined as:

```
// Provided by VK_EXT_display_surface_counter
typedef struct VkSurfaceCapabilities2EXT {
    VkStructureType                  sType;
    void*                            pNext;
    uint32_t                         minImageCount;
    uint32_t                         maxImageCount;
    VkExtent2D                       currentExtent;
    VkExtent2D                       minImageExtent;
    VkExtent2D                       maxImageExtent;
    uint32_t                         maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR       supportedTransforms;
    VkSurfaceTransformFlagBitsKHR    currentTransform;
    VkCompositeAlphaFlagsKHR         supportedCompositeAlpha;
    VkImageUsageFlags                supportedUsageFlags;
    VkSurfaceCounterFlagsEXT         supportedSurfaceCounters;
} VkSurfaceCapabilities2EXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minImageCount` is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- `maxImageCount` is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to `minImageCount`. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.
- `currentExtent` is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- `minImageExtent` contains the smallest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be less than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageExtent` contains the largest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `minImageExtent`. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageArrayLayers` is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- `supportedTransforms` is a bitmask of VkSurfaceTransformFlagBitsKHR indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- `currentTransform` is a VkSurfaceTransformFlagBitsKHR value indicating the surface's current transform relative to the presentation engine's natural orientation.
- `supportedCompositeAlpha` is a bitmask of VkCompositeAlphaFlagBitsKHR, representing the alpha

compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.

- `supportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the presentable images of a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set. Implementations **may** support additional usages.
- `supportedSurfaceCounters` is a bitmask of VkSurfaceCounterFlagBitsEXT indicating the supported surface counter types. It **must** not include VK_SURFACE_COUNTER_VBLANK_BIT_EXT unless the surface queried is a display surface.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2EXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_EXT
- VUID-VkSurfaceCapabilities2EXT-pNext-pNext
  `pNext` **must** be `NULL`

Bits which **can** be set in VkSurfaceCapabilities2EXT::`supportedSurfaceCounters`, indicating supported surface counter types, are:

```
// Provided by VK_EXT_display_surface_counter
typedef enum VkSurfaceCounterFlagBitsEXT {
    VK_SURFACE_COUNTER_VBLANK_BIT_EXT = 0x00000001,
  // VK_SURFACE_COUNTER_VBLANK_EXT is a legacy alias
    VK_SURFACE_COUNTER_VBLANK_EXT = VK_SURFACE_COUNTER_VBLANK_BIT_EXT,
} VkSurfaceCounterFlagBitsEXT;
```

- VK_SURFACE_COUNTER_VBLANK_BIT_EXT specifies a counter incrementing once every time a vertical blanking period occurs on the display associated with the surface.

```
// Provided by VK_EXT_display_surface_counter
typedef VkFlags VkSurfaceCounterFlagsEXT;
```

`VkSurfaceCounterFlagsEXT` is a bitmask type for setting a mask of zero or more VkSurfaceCounterFlagBitsEXT.

Bits which **may** be set in VkSurfaceCapabilitiesKHR::`supportedTransforms` indicating the presentation transforms supported for the surface on the specified device, and possible values of VkSurfaceCapabilitiesKHR::`currentTransform` indicating the surface's current transform relative to the presentation engine's natural orientation, are:

```
// Provided by VK_KHR_surface
typedef enum VkSurfaceTransformFlagBitsKHR {
    VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR = 0x00000001,
    VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR = 0x00000002,
    VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR = 0x00000004,
    VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR = 0x00000008,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR = 0x00000010,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR = 0x00000020,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR = 0x00000040,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR = 0x00000080,
    VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR = 0x00000100,
} VkSurfaceTransformFlagBitsKHR;
```

- VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR specifies that image content is presented without being transformed.
- VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR specifies that image content is rotated 90 degrees clockwise.
- VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR specifies that image content is rotated 180 degrees clockwise.
- VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR specifies that image content is rotated 270 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR specifies that image content is mirrored horizontally.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR specifies that image content is mirrored horizontally, then rotated 90 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR specifies that image content is mirrored horizontally, then rotated 180 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR specifies that image content is mirrored horizontally, then rotated 270 degrees clockwise.
- VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR specifies that the presentation transform is not specified, and is instead determined by platform-specific considerations and mechanisms outside Vulkan.

```
// Provided by VK_KHR_display, VK_KHR_surface
typedef VkFlags VkSurfaceTransformFlagsKHR;
```

VkSurfaceTransformFlagsKHR is a bitmask type for setting a mask of zero or more VkSurfaceTransformFlagBitsKHR.

The supportedCompositeAlpha member is of type VkCompositeAlphaFlagBitsKHR, containing the following values:

```
// Provided by VK_KHR_surface
typedef enum VkCompositeAlphaFlagBitsKHR {
    VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR = 0x00000002,
    VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR = 0x00000004,
    VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR = 0x00000008,
} VkCompositeAlphaFlagBitsKHR;
```

These values are described as follows:

- VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR: The alpha component, if it exists, of the images is ignored in the compositing process. Instead, the image is treated as if it has a constant alpha of 1.0.
- VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are expected to already be multiplied by the alpha component by the application.
- VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are not expected to already be multiplied by the alpha component by the application; instead, the compositor will multiply the non-alpha components of the image by the alpha component during compositing.
- VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR: The way in which the presentation engine treats the alpha component in the images is unknown to the Vulkan API. Instead, the application is responsible for setting the composite alpha blending mode using native window system commands. If the application does not set the blending mode using native window system commands, then a platform-specific default will be used.

```
// Provided by VK_KHR_surface
typedef VkFlags VkCompositeAlphaFlagsKHR;
```

VkCompositeAlphaFlagsKHR is a bitmask type for setting a mask of zero or more VkCompositeAlphaFlagBitsKHR.

40.5.2. Surface Format Support

To query the supported swapchain format-color space pairs for a surface, call:

WARNING	This functionality is superseded by vkGetPhysicalDeviceSurfaceFormats2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceFormatsKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pSurfaceFormatCount,
    VkSurfaceFormatKHR*                         pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format pairs available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of `VkSurfaceFormatKHR` structures.

If `pSurfaceFormats` is `NULL`, then the number of format pairs supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format pairs supported, at most `pSurfaceFormatCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available format pairs were returned.

The number of format pairs supported **must** be greater than or equal to 1. `pSurfaceFormats` **must** not contain an entry whose value for `format` is VK_FORMAT_UNDEFINED.

If `pSurfaceFormats` includes an entry whose value for `colorSpace` is VK_COLOR_SPACE_SRGB_NONLINEAR_KHR and whose value for `format` is a UNORM (or SRGB) format and the corresponding SRGB (or UNORM) format is a color renderable format for VK_IMAGE_TILING_OPTIMAL, then `pSurfaceFormats` **must** also contain an entry with the same value for `colorSpace` and `format` equal to the corresponding SRGB (or UNORM) format.

If the `VK_GOOGLE_surfaceless_query` extension is enabled, the values returned in `pSurfaceFormats` will be identical for every valid surface created on this physical device, and so `surface` **can** be VK_NULL_HANDLE.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06524
  If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06525
  If `surface` is not VK_NULL_HANDLE, `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-parameter
  If `surface` is not VK_NULL_HANDLE, `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormatCount-parameter
  `pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormats-parameter
  If the value referenced by `pSurfaceFormatCount` is not `0`, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` VkSurfaceFormatKHR structures
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-commonparent
  Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceFormatKHR` structure is defined as:

WARNING	This functionality is superseded by VK_KHR_get_surface_capabilities2. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceFormatKHR {
    VkFormat           format;
    VkColorSpaceKHR    colorSpace;
} VkSurfaceFormatKHR;
```

- `format` is a VkFormat that is compatible with the specified surface.

- `colorSpace` is a presentation VkColorSpaceKHR that is compatible with the surface.

To query the supported swapchain format tuples for a surface, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceFormats2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    uint32_t*                                   pSurfaceFormatCount,
    VkSurfaceFormat2KHR*                        pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format tuples available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of VkSurfaceFormat2KHR structures.

vkGetPhysicalDeviceSurfaceFormats2KHR behaves similarly to vkGetPhysicalDeviceSurfaceFormatsKHR, with the ability to be extended via `pNext` chains.

If `pSurfaceFormats` is `NULL`, then the number of format tuples supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format tuples supported, at most `pSurfaceFormatCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06521
  If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `pSurfaceInfo->surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06522
  If `pSurfaceInfo->surface` is not VK_NULL_HANDLE, `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormatCount-parameter
  `pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormats-parameter
  If the value referenced by `pSurfaceFormatCount` is not `0`, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` VkSurfaceFormat2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceFormat2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceFormat2KHR {
    VkStructureType       sType;
    void*                 pNext;
    VkSurfaceFormatKHR    surfaceFormat;
} VkSurfaceFormat2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceFormat` is a VkSurfaceFormatKHR structure describing a format-color space pair that is compatible with the specified surface.

If the `imageCompressionControlSwapchain` feature is supported and a VkImageCompressionPropertiesEXT structure is included in the `pNext` chain of this structure, then it will be filled with the compression properties that are supported for the `surfaceFormat`.

Valid Usage

- VUID-VkSurfaceFormat2KHR-pNext-06750
  If the VK_EXT_image_compression_control_swapchain extension is not supported, the pNext chain **must** not include an VkImageCompressionPropertiesEXT structure

Valid Usage (Implicit)

- VUID-VkSurfaceFormat2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_FORMAT_2_KHR
- VUID-VkSurfaceFormat2KHR-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkImageCompressionPropertiesEXT
- VUID-VkSurfaceFormat2KHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

While the format of a presentable image refers to the encoding of each pixel, the colorSpace determines how the presentation engine interprets the pixel values. A color space in this document refers to a specific color space (defined by the chromaticities of its primaries and a white point in CIE Lab), and transfer functions indicating the mapping between the image data and the colorimetry with respect to the given color space.

Possible values of VkSurfaceFormatKHR::colorSpace, specifying the color spaces that a presentation engine can accept, are:

```
// Provided by VK_KHR_surface
typedef enum VkColorSpaceKHR {
    VK_COLOR_SPACE_SRGB_NONLINEAR_KHR = 0,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT = 1000104001,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT = 1000104002,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT = 1000104003,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT = 1000104004,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_LINEAR_EXT = 1000104005,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_NONLINEAR_EXT = 1000104006,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT2020_LINEAR_EXT = 1000104007,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_ST2084_EXT = 1000104008,
  // Provided by VK_EXT_swapchain_colorspace
  // VK_COLOR_SPACE_DOLBYVISION_EXT is legacy, but no reason was given in the API XML
    VK_COLOR_SPACE_DOLBYVISION_EXT = 1000104009,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_HLG_EXT = 1000104010,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT = 1000104011,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT = 1000104012,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_PASS_THROUGH_EXT = 1000104013,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT = 1000104014,
  // Provided by VK_AMD_display_native_hdr
    VK_COLOR_SPACE_DISPLAY_NATIVE_AMD = 1000213000,
  // VK_COLORSPACE_SRGB_NONLINEAR_KHR is a legacy alias
    VK_COLORSPACE_SRGB_NONLINEAR_KHR = VK_COLOR_SPACE_SRGB_NONLINEAR_KHR,
  // Provided by VK_EXT_swapchain_colorspace
  // VK_COLOR_SPACE_DCI_P3_LINEAR_EXT is a legacy alias
    VK_COLOR_SPACE_DCI_P3_LINEAR_EXT = VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT,
} VkColorSpaceKHR;
```

- VK_COLOR_SPACE_SRGB_NONLINEAR_KHR specifies support for the images in sRGB color space, encoded according to the sRGB specification.
- VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT specifies support for the images in Display-P3 color space, encoded using a Display-P3 transfer function.
- VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT specifies support for the images in extended sRGB color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT specifies support for the images in

extended sRGB color space, encoded according to the scRGB specification.

- VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT specifies support for the images in Display-P3 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT specifies support for the images in DCI-P3 color space, encoded according to the DCI-P3 specification. Note that values in such an image are interpreted as XYZ encoded color data by the presentation engine.
- VK_COLOR_SPACE_BT709_LINEAR_EXT specifies support for the images in BT709 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_BT709_NONLINEAR_EXT specifies support for the images in BT709 color space, encoded according to the BT709 specification.
- VK_COLOR_SPACE_BT2020_LINEAR_EXT specifies support for the images in BT2020 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_HDR10_ST2084_EXT specifies support for the images in HDR10 (BT2020) color space, encoded according to SMPTE ST2084 Perceptual Quantizer (PQ) specification.
- VK_COLOR_SPACE_HDR10_HLG_EXT specifies support for the images in HDR10 (BT2020) color space, encoded according to the Hybrid Log Gamma (HLG) specification.
- VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT specifies support for images in Adobe RGB color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT specifies support for the images in Adobe RGB color space, encoded according to the Adobe RGB specification (approximately Gamma 2.2).
- VK_COLOR_SPACE_PASS_THROUGH_EXT specifies that color components are used “as is”. This is intended to allow applications to supply data for color spaces not described here.
- VK_COLOR_SPACE_DISPLAY_NATIVE_AMD specifies support for the display’s native color space. This matches the color space expectations of AMD’s FreeSync2 standard, for displays supporting it.

NOTE In the initial release of the VK_KHR_surface and VK_KHR_swapchain extensions, the token VK_COLORSPACE_SRGB_NONLINEAR_KHR was used. Starting in the 2016-05-13 updates to the extension branches, matching release 1.0.13 of the core API specification, VK_COLOR_SPACE_SRGB_NONLINEAR_KHR is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

NOTE In older versions of this extension VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT was misnamed VK_COLOR_SPACE_DCI_P3_LINEAR_EXT. This has been updated to indicate that it uses RGB color encoding, not XYZ. The old name is legacy but is maintained for backwards compatibility.

NOTE In older versions of the VK_EXT_swapchain_colorspace extension, VK_COLOR_SPACE_DOLBYVISION_EXT was exposed. The intent was to indicate the presentation engine shall decode an image using the SMPTE ST 2084 Perceptual Quantizer (PQ) EOTF, and then apply a proprietary OOTF to process the image. However, Dolby Vision profile 8.4 describes an encoding using the Hybrid Log

Gamma (HLG) OETF, and there is no swapchain extension for signaling Dolby Vision metadata to be used by a proprietary OOTF. This enum is legacy but is maintained for backwards compatibility.

NOTE For a traditional "Linear" or non-gamma transfer function color space use VK_COLOR_SPACE_PASS_THROUGH_EXT.

NOTE On Wayland, VK_COLOR_SPACE_PASS_THROUGH_EXT can be used to disable color management by the WSI on a surface, which makes it possible for the application to create a `wp_color_management_surface_v1` object without triggering a `surface_exists` protocol error.

See vkCreateWaylandSurfaceKHR.

The presentation engine interprets the pixel values of the R, G, and B components as having been encoded using an appropriate transfer function. Applications **should** ensure that the appropriate transfer function has been applied. Texel encode requires that all implementations implicitly apply the sRGB $EOTF^{-1}$ on R, G, and B components when shaders write to an sRGB pixel format image, which is useful for sRGB color spaces. For sRGB color spaces with other pixel formats, or other non-linear color spaces, applications **can** apply the transfer function explicitly in a shader. The A channel is always interpreted as linearly encoded.

This extension defines enums for VkColorSpaceKHR that correspond to the following color spaces:

Table 56. Color Spaces and Attributes

Name	Red Primary	Green Primary	Blue Primary	White-point	Transfer function
DCI-P3	1.000, 0.000	0.000, 1.000	0.000, 0.000	0.3333, 0.3333	DCI P3
Display-P3	0.680, 0.320	0.265, 0.690	0.150, 0.060	0.3127, 0.3290 (D65)	Display-P3
BT709	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	BT709
sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	sRGB
extended sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	scRGB
HDR10_ST2084	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	ST2084 PQ
HDR10_HLG	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	HLG
Adobe RGB	0.640, 0.330	0.210, 0.710	0.150, 0.060	0.3127, 0.3290 (D65)	Adobe RGB

The transfer functions are described in the "Transfer Functions" chapter of the Khronos Data

Format Specification.

Except Display-P3 OETF, which is:

$$E = \begin{cases} 1.055 \times L^{\frac{1}{2.4}} - 0.055 & \text{for } 0.0030186 \leq L \leq 1 \\ 12.92 \times L & \text{for } 0 \leq L < 0.0030186 \end{cases}$$

where L is the linear value of a color component and E is the encoded value (as stored in the image in memory).

NOTE For most uses, the sRGB OETF is equivalent.

40.5.3. Surface Presentation Mode Support

To query the supported presentation modes for a surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfacePresentModesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pPresentModeCount,
    VkPresentModeKHR*                           pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of VkPresentModeKHR values, indicating the supported presentation modes.

If `pPresentModes` is `NULL`, then the number of presentation modes supported for the given `surface` is returned in `pPresentModeCount`. Otherwise, `pPresentModeCount` **must** point to a variable set by the application to the number of elements in the `pPresentModes` array, and on return the variable is overwritten with the number of values actually written to `pPresentModes`. If the value of `pPresentModeCount` is less than the number of presentation modes supported, at most `pPresentModeCount` values will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available modes were returned.

If the `VK_GOOGLE_surfaceless_query` extension is enabled and `surface` is VK_NULL_HANDLE, the values returned in `pPresentModes` will only indicate support for VK_PRESENT_MODE_FIFO_KHR, VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR, and VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR. To query support for any other present mode, a valid handle **must** be provided in `surface`.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06524
  If the VK_GOOGLE_surfaceless_query extension is not enabled, surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06525
  If surface is not VK_NULL_HANDLE, surface **must** be supported by physicalDevice, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-parameter
  If surface is not VK_NULL_HANDLE, surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModeCount-parameter
  pPresentModeCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModes-parameter
  If the value referenced by pPresentModeCount is not 0, and pPresentModes is not NULL, pPresentModes **must** be a valid pointer to an array of pPresentModeCount VkPresentModeKHR values
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-commonparent
  Both of physicalDevice, and surface that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the supported presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkGetPhysicalDeviceSurfacePresentModes2EXT(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    uint32_t*                                   pPresentModeCount,
    VkPresentModeKHR*                           pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of VkPresentModeKHR values, indicating the supported presentation modes.

`vkGetPhysicalDeviceSurfacePresentModes2EXT` behaves similarly to vkGetPhysicalDeviceSurfacePresentModesKHR, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06521
  If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `pSurfaceInfo->surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06522
  If `pSurfaceInfo->surface` is not VK_NULL_HANDLE, `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModeCount-parameter
  `pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModes-parameter
  If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` VkPresentModeKHR values

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Possible values of elements of the vkGetPhysicalDeviceSurfacePresentModesKHR::pPresentModes array, indicating the supported presentation modes for a surface, are:

```
// Provided by VK_KHR_surface
typedef enum VkPresentModeKHR {
    VK_PRESENT_MODE_IMMEDIATE_KHR = 0,
    VK_PRESENT_MODE_MAILBOX_KHR = 1,
    VK_PRESENT_MODE_FIFO_KHR = 2,
    VK_PRESENT_MODE_FIFO_RELAXED_KHR = 3,
  // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR = 1000111000,
  // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR = 1000111001,
  // Provided by VK_KHR_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_KHR = 1000361000,
  // Provided by VK_EXT_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_EXT = VK_PRESENT_MODE_FIFO_LATEST_READY_KHR,
} VkPresentModeKHR;
```

- VK_PRESENT_MODE_IMMEDIATE_KHR specifies that the presentation engine does not wait for a vertical blanking period to update the current image, meaning this mode **may** result in visible tearing. No internal queuing of presentation requests is needed, as the requests are applied immediately.
- VK_PRESENT_MODE_MAILBOX_KHR specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application. One request is removed from the queue and processed during each vertical blanking period in which the queue is non-empty.
- VK_PRESENT_MODE_FIFO_KHR specifies that the presentation engine waits for the next vertical

blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty. This is the only value of `presentMode` that is **required** to be supported.

- VK_PRESENT_MODE_FIFO_RELAXED_KHR specifies that the presentation engine generally waits for the next vertical blanking period to update the current image. If a vertical blanking period has already passed since the last update of the current image then the presentation engine does not wait for another vertical blanking period for the update, meaning this mode **may** result in visible tearing in this case. This mode is useful for reducing visual stutter with an application that will mostly present a new image before the next vertical blanking period, but may occasionally be late, and present a new image just after the next vertical blanking period. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during or after each vertical blanking period in which the queue is non-empty.
- VK_PRESENT_MODE_FIFO_LATEST_READY_KHR specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue. At each vertical blanking period, the presentation engine dequeues all successive requests that are ready to be presented from the beginning of the queue. If using the `VK_GOOGLE_display_timing` extension or the `presentAtAbsoluteTime` feature to provide a target present time, the presentation engine checks the specified time for each image. If the target present time is less-than or equal-to the current time, the presentation engine dequeues the image and checks the next one. The image of the last dequeued request is presented. The other dequeued requests are dropped.
- VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine is only required to update the current image after a new presentation request is received. Therefore the application **must** make a presentation request whenever an update is required. However, the presentation engine **may** update the current image at any point, meaning this mode **may** result in visible tearing.
- VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine periodically updates the current image on its regular refresh cycle. The application is only required to make one initial presentation request, after which the presentation engine **must** update the current image without any need for further presentation requests. The application **can** indicate the image contents have been updated by making a presentation request, but this does not guarantee the timing of when it will be updated. This mode **may** result in visible tearing if rendering to the image is not timed correctly.

The supported VkImageUsageFlagBits of the presentable images of a swapchain created for a surface **may** differ depending on the presentation mode, and can be determined as per the table below:

Table 57. Presentable Image Usage Queries

Presentation mode	Image usage flags
VK_PRESENT_MODE_IMMEDIATE_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_MAILBOX_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_RELAXED_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_LATEST_READY_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags
VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags

NOTE For reference, the mode indicated by VK_PRESENT_MODE_FIFO_KHR is equivalent to the behavior of {wgl|glX|egl}SwapBuffers with a swap interval of 1, while the mode indicated by VK_PRESENT_MODE_FIFO_RELAXED_KHR is equivalent to the behavior of {wgl|glX}SwapBuffers with a swap interval of -1 (from the {WGL|GLX}_EXT_swap_control_tear extensions).

40.6. Full Screen Exclusive Control

Swapchains created with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT **must** acquire and release exclusive full-screen access explicitly, using the following commands.

To acquire exclusive full-screen access for a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkAcquireFullScreenExclusiveModeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to acquire exclusive full-screen access for.

Valid Usage

- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02674
  `swapchain` **must** not be in the retired state
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02675
  `swapchain` **must** be a swapchain created with a VkSurfaceFullScreenExclusiveInfoEXT structure, with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02676

`swapchain` **must** not currently have exclusive full-screen access

A return value of VK_SUCCESS indicates that the `swapchain` successfully acquired exclusive full-screen access. The swapchain will retain this exclusivity until either the application releases exclusive full-screen access with vkReleaseFullScreenExclusiveModeEXT, destroys the swapchain, or if any of the swapchain commands return VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT indicating that the mode was lost because of platform-specific changes.

If the swapchain was unable to acquire exclusive full-screen access to the display then VK_ERROR_INITIALIZATION_FAILED is returned. An application **can** attempt to acquire exclusive full-screen access again for the same swapchain even if this command fails, or if VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT has been returned by a swapchain command.

Valid Usage (Implicit)

- VUID-vkAcquireFullScreenExclusiveModeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To release exclusive full-screen access from a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkReleaseFullScreenExclusiveModeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to release exclusive full-screen access from.

NOTE Applications will not be able to present to `swapchain` after this call until exclusive full-screen access is reacquired. This is usually useful to handle when an application is minimized or otherwise intends to stop presenting for a time.

Valid Usage

- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02677
  `swapchain` **must** not be in the retired state
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02678
  `swapchain` **must** be a swapchain created with a VkSurfaceFullScreenExclusiveInfoEXT structure, with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT

Valid Usage (Implicit)

- VUID-vkReleaseFullScreenExclusiveModeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

40.7. Device Group Queries

A logical device that represents multiple physical devices **may** support presenting from images on more than one physical device, or combining images from multiple physical devices.

To query these capabilities, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupPresentCapabilitiesKHR(
    VkDevice                                    device,
    VkDeviceGroupPresentCapabilitiesKHR*        pDeviceGroupPresentCapabilities);
```

- `device` is the logical device.
- `pDeviceGroupPresentCapabilities` is a pointer to a VkDeviceGroupPresentCapabilitiesKHR structure in which the device's capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-pDeviceGroupPresentCapabilities-parameter
  `pDeviceGroupPresentCapabilities` **must** be a valid pointer to a VkDeviceGroupPresentCapabilitiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDeviceGroupPresentCapabilitiesKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef struct VkDeviceGroupPresentCapabilitiesKHR {
    VkStructureType                      sType;
    void*                                pNext;
    uint32_t                             presentMask[VK_MAX_DEVICE_GROUP_SIZE];
    VkDeviceGroupPresentModeFlagsKHR     modes;
} VkDeviceGroupPresentCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMask` is an array of VK_MAX_DEVICE_GROUP_SIZE `uint32_t` masks, where the mask at element i is non-zero if physical device i has a presentation engine, and where bit j is set in element i if physical device i **can** present swapchain images from physical device j. If element i is non-zero, then bit i **must** be set.
- `modes` is a bitmask of VkDeviceGroupPresentModeFlagBitsKHR indicating which device group presentation modes are supported.

`modes` always has VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR set.

The present mode flags are also used when presenting an image, in VkDeviceGroupPresentInfoKHR::`mode`.

If a device group only includes a single physical device, then `modes` **must** equal VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR
- VUID-VkDeviceGroupPresentCapabilitiesKHR-pNext-pNext
  `pNext` **must** be `NULL`

Bits which **may** be set in VkDeviceGroupPresentCapabilitiesKHR::`modes`, indicating which device group presentation modes are supported, are:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef enum VkDeviceGroupPresentModeFlagBitsKHR {
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR = 0x00000001,
    VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR = 0x00000002,
    VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR = 0x00000004,
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR = 0x00000008,
} VkDeviceGroupPresentModeFlagBitsKHR;
```

- VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR specifies that any physical device with a presentation engine **can** present its own swapchain images.
- VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR specifies that any physical device with a presentation engine **can** present swapchain images from any physical device in its presentMask.
- VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR specifies that any physical device with a presentation engine **can** present the sum of swapchain images from any physical devices in its presentMask.
- VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR specifies that multiple physical devices with a presentation engine **can** each present their own swapchain images.

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef VkFlags VkDeviceGroupPresentModeFlagsKHR;
```

VkDeviceGroupPresentModeFlagsKHR is a bitmask type for setting a mask of zero or more VkDeviceGroupPresentModeFlagBitsKHR.

Some surfaces **may** not be capable of using all the device group present modes.

To query the supported device group present modes for a particular surface, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupSurfacePresentModesKHR(
    VkDevice                                    device,
    VkSurfaceKHR                                surface,
    VkDeviceGroupPresentModeFlagsKHR*           pModes);
```

- device is the logical device.
- surface is the surface.
- pModes is a pointer to a VkDeviceGroupPresentModeFlagsKHR in which the supported device group present modes for the surface are returned.

The modes returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded. These modes **must** be a subset of the modes returned by vkGetDeviceGroupPresentCapabilitiesKHR.

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-06212
  surface **must** be supported by all physical devices associated with device, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-pModes-parameter
  `pModes` **must** be a valid pointer to a VkDeviceGroupPresentModeFlagsKHR value
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-commonparent
  Both of `device`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Host Synchronization

- Host access to `surface` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the supported device group presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive with VK_KHR_device_group or VK_VERSION_1_1
VkResult vkGetDeviceGroupSurfacePresentModes2EXT(
    VkDevice                                    device,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    VkDeviceGroupPresentModeFlagsKHR*           pModes);
```

- `device` is the logical device.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pModes` is a pointer to a VkDeviceGroupPresentModeFlagsKHR in which the supported device

group present modes for the surface are returned.

vkGetDeviceGroupSurfacePresentModes2EXT behaves similarly to vkGetDeviceGroupSurfacePresentModesKHR, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-06213
  pSurfaceInfo->surface **must** be supported by all physical devices associated with device, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-parameter
  pSurfaceInfo **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pModes-parameter
  pModes **must** be a valid pointer to a VkDeviceGroupPresentModeFlagsKHR value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When using VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, the application **may** need to know which regions of the surface are used when presenting locally on each physical device. Presentation of swapchain images to this surface need only have valid contents in the regions returned by this command.

To query a set of rectangles used in presentation on the physical device, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetPhysicalDevicePresentRectanglesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pRectCount,
    VkRect2D*                                   pRects);
```

- `physicalDevice` is the physical device.
- `surface` is the surface.
- `pRectCount` is a pointer to an integer related to the number of rectangles available or queried, as described below.
- `pRects` is either `NULL` or a pointer to an array of VkRect2D structures.

If `pRects` is `NULL`, then the number of rectangles used when presenting the given `surface` is returned in `pRectCount`. Otherwise, `pRectCount` **must** point to a variable set by the application to the number of elements in the `pRects` array, and on return the variable is overwritten with the number of structures actually written to `pRects`. If the value of `pRectCount` is less than the number of rectangles, at most `pRectCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available rectangles were returned.

The values returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded.

The rectangles returned by this command **must** not overlap.

Valid Usage

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-06211
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRectCount-parameter
  `pRectCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRects-parameter
  If the value referenced by `pRectCount` is not `0`, and `pRects` is not `NULL`, `pRects` **must** be a valid pointer to an array of `pRectCount` VkRect2D structures
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-commonparent

Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Host Synchronization

- Host access to `surface` **must** be externally synchronized

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

40.8. Present Timing Queries

Traditional game and real-time-animation applications frequently use VK_PRESENT_MODE_FIFO_KHR so that presentable images are updated during the vertical blanking period of a given refresh cycle (RC) of the presentation engine's display. On fixed refresh rate displays, this avoids the visual anomaly known as tearing.

However, synchronizing the presentation of images with the RC does not prevent all forms of visual anomalies. Stuttering occurs when the geometry for each presentable image is not accurately positioned for when that image will be displayed. The geometry may appear to move too little some RCs, and too much for others. Sometimes the animation appears to freeze, when the same image is used for more RCs than other images.

In order to minimize stuttering, an application needs to: 1) render and present images at a consistent rate that is, on fixed refresh rate displays, a multiple of the presentation engine's refresh rate; 2) correctly position its geometry for when the presentable image will be displayed to the user. The `VK_EXT_present_timing` or `VK_GOOGLE_display_timing` extension allows an application to satisfy these needs.

The presentation engine's display typically refreshes the pixels that are displayed to the user on a periodic basis. This period **may** be fixed (Fixed Refresh Rate, FRR) or variable (Variable Refresh Rate, VRR).

In order to collect timing information about presentation, a swapchain needs an internal queue to store asynchronously updated results until applications collect them.

To allocate the swapchain's internal timing results queue, call:

```
// Provided by VK_EXT_present_timing
VkResult vkSetSwapchainPresentTimingQueueSizeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint32_t                                    size);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to allocate a results queue for.
- `size` is the requested number of slots in the internal results queue.

If this function is called multiple times, the internal queue is reallocated to fit the new `size`. If the new `size` is less than the current number of outstanding results, VK_NOT_READY is returned and no allocation is performed.

Valid Usage

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-12229
  `swapchain` **must** have been created with `VkSwapchainCreateInfoKHR`::`flags` containing VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

Valid Usage (Implicit)

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's timing properties are modified.

To query the presentation engine's current timing properties for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimingPropertiesEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSwapchainTimingPropertiesEXT*             pSwapchainTimingProperties,
    uint64_t*                                   pSwapchainTimingPropertiesCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain timing properties for.
- `pSwapchainTimingProperties` is a pointer to an instance of the VkSwapchainTimingPropertiesEXT structure.
- `pSwapchainTimingPropertiesCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.

If `vkGetSwapchainTimingPropertiesEXT` returns VK_NOT_READY, the implementation was not able to determine the current refresh cycle duration. Some platforms **may** not provide timing properties until after at least one image has been presented to the `swapchain`. If timing properties change for the `swapchain`, these platforms **may** not provide updated results until after at least one additional image has been presented to the `swapchain`.

Valid Usage (Implicit)

- VUID-vkGetSwapchainTimingPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingProperties-parameter
  `pSwapchainTimingProperties` **must** be a valid pointer to a VkSwapchainTimingPropertiesEXT structure
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingPropertiesCounter-parameter
  If `pSwapchainTimingPropertiesCounter` is not `NULL`, `pSwapchainTimingPropertiesCounter` **must**

be a valid pointer to a `uint64_t` value

- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainTimingPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimingPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           refreshDuration;
    uint64_t           refreshInterval;
} VkSwapchainTimingPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `refreshDuration` is zero or an indication of the duration of a refresh cycle.
- `refreshInterval` is zero or a duration in nanoseconds indicating the interval between refresh cycle durations.

If `refreshDuration` is zero, the presentation engine is not able to determine the duration of the refresh cycle. Similarly, if `refreshInterval` is zero, the presentation engine is not able to determine whether it is operating in VRR mode.

Otherwise, if `refreshInterval` is the same as `refreshDuration`, the presentation engine is operating in

FRR mode. In this case, `refreshDuration` is the number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshInterval` is `UINT64_MAX`, the presentation engine is operating in VRR mode, and `refreshDuration` is the minimum number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshDuration` and `refreshInterval` are not zero, `refreshInterval` is a factor of `refreshDuration`.

Valid Usage (Implicit)

- VUID-VkSwapchainTimingPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_TIMING_PROPERTIES_EXT
- VUID-VkSwapchainTimingPropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

NOTE

Some display technologies allow the vblank interval to be decoupled from the display's effective refresh rate. In other words, presented images are visible for a fixed duration (`refreshDuration`) that is a multiple of the vblank interval (`refreshInterval`) which **may** be much smaller. This allows such displays, for example, to effectively operate at a fixed refresh rate with the ability to quickly change that refresh rate to adapt to the current system's workload.

Note that `VkSwapchainTimingPropertiesEXT` only represents the current swapchain's view of those capabilities, which **may** differ from the actual hardware capabilities, based e.g. on the current surface properties. For example, swapchains that render to a windowed surface requiring complex composition **may** not be able to reach their display hardware's full potential.

NOTE

The rate at which an application renders and presents new images is known as the image present rate (IPR, a.k.a. frame rate). The inverse of IPR, or the duration between each image present, is the image present duration (IPD).

In order to provide a smooth, stutter-free animation on non-VRR displays, an application needs its IPD to be a multiple of `refreshInterval` that is at least equal to `refreshDuration`.

For example, if a FRR display has a set 60Hz refresh rate, where `refreshDuration` is equal to `refreshInterval`, `refreshDuration` will be a value in nanoseconds that is approximately equal to 16.67ms. In such a case, an application will want an IPD of 16.67ms (1X multiplier of `refreshInterval`), or 33.33ms (2X multiplier of `refreshInterval`), or 50.0ms (3X multiplier of `refreshInterval`), etc.

In order to determine a target IPD for a display (i.e. a multiple of `refreshInterval`), an application needs to determine when its images are actually displayed.

Consider an application that has an initial target IPD of 16.67ms (1X multiplier of

> refreshDuration). It will therefore position the geometry of a new image 16.67ms later than the previous image.
>
> If this application is running on slower hardware, so that it actually takes 20ms to render each new image, the images will not be displayed to the user every 16.67ms, nor every 20ms, which will create visual anomalies. In this case, it is better for the application to adjust its target IPD to 33.33ms (i.e. a 2X multiplier of refreshDuration), and tell the presentation engine to not present images any sooner than every 33.33ms. This will allow the geometry to be correctly positioned for each presentable image.
>
> On VRR displays, where refreshInterval is UINT64_MAX, applications **should** target an IPD that is at least equal to refreshDuration.
>
> Adjustments to an application's IPD may be needed because different views of an application's geometry can take different amounts of time to render. For example, looking at the sky may take less time to render than looking at multiple, complex items in a room.
>
> In general, it is good to not frequently change IPD, as that can cause visual anomalies.
>
> Adjustments to a larger IPD because of late images should happen quickly, but adjustments to a smaller IPD should only happen if the periodic feedback of VkPastPresentationTimingEXT values indicates that the target IPD can be durably achieved.

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's list of supported time domains for a swapchain is modified.

To query the time domains supported by the presentation engine for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimeDomainPropertiesEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSwapchainTimeDomainPropertiesEXT*         pSwapchainTimeDomainProperties,
    uint64_t*                                   pTimeDomainsCounter);
```

- device is the device associated with swapchain.
- swapchain is the swapchain to obtain time domain properties for.
- pSwapchainTimeDomainProperties is a pointer to an instance of the VkSwapchainTimeDomainPropertiesEXT structure.
- pTimeDomainsCounter is NULL or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domain properties counter.

If upon return VkSwapchainTimeDomainPropertiesEXT::timeDomainCount is smaller than the number of time domains supported for the given swapchain, VK_INCOMPLETE will be returned

instead of VK_SUCCESS to indicate that not all the available values were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainTimeDomainPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pSwapchainTimeDomainProperties-parameter
  `pSwapchainTimeDomainProperties` **must** be a valid pointer to a VkSwapchainTimeDomainPropertiesEXT structure
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pTimeDomainsCounter-parameter
  If `pTimeDomainsCounter` is not `NULL`, `pTimeDomainsCounter` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainTimeDomainPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimeDomainPropertiesEXT {
    VkStructureType     sType;
    void*               pNext;
    uint32_t            timeDomainCount;
    VkTimeDomainKHR*    pTimeDomains;
    uint64_t*           pTimeDomainIds;
} VkSwapchainTimeDomainPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timeDomainCount` is an integer related to the number of time domains available or queried, as described below.
- `pTimeDomains` is a pointer to an array of VkTimeDomainKHR values representing time domains that are available for the swapchain.
- `pTimeDomainIds` is a pointer to an array of unique identifiers for each time domain.

When calling vkGetSwapchainTimeDomainPropertiesEXT, if `pTimeDomains` is `NULL` and `pTimeDomainIds` is `NULL`, then the number of time domains supported for the given `swapchain` is returned in `timeDomainCount`. Otherwise, `timeDomainCount` **must** specify the number of elements in `pTimeDomains` and `pTimeDomainIds`, and on return is overwritten with the number of values actually written to each array.

Implementations **must** advertise support for at least one time domain of VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT.

NOTE

Due to the dynamic nature of their underlying `VkSurfaceKHR` properties, swapchains may need to expose multiple swapchain-local opaque time domains using the same VkTimeDomainKHR value over time, for example when a surface is moved from one display hardware to another. Arbitrary identifiers, provided in `pTimeDomainIds`, are used by the implementation to differentiate opaque time domains of identical scopes.

Valid Usage

- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12370
  `pTimeDomains` and `pTimeDomainIds` **must** both be `NULL` or both not be `NULL`
- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12371
  If `pTimeDomains` and `pTimeDomainIds` are not `NULL`, then `timeDomainCount` **must** not be zero

Valid Usage (Implicit)

- VUID-VkSwapchainTimeDomainPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_TIME_DOMAIN_PROPERTIES_EXT

- VUID-VkSwapchainTimeDomainPropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

Because of the asynchronous nature of the presentation engine, the timing information for a given vkQueuePresentKHR command **may** only become available some time after the presentation has occurred. These time values **should** be asynchronously queried, and are returned if available. All time values are in nanoseconds, according to the time-domain being used.

To asynchronously query the presentation engine for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetPastPresentationTimingEXT(
    VkDevice                                    device,
    const VkPastPresentationTimingInfoEXT*      pPastPresentationTimingInfo,
    VkPastPresentationTimingPropertiesEXT*      pPastPresentationTimingProperties);
```

- `device` is the device associated with `swapchain`.
- `pPastPresentationTimingInfo` is a pointer to an instance of the VkPastPresentationTimingInfoEXT structure.
- `pPastPresentationTimingProperties` is a pointer to an instance of the VkPastPresentationTimingPropertiesEXT structure.

If upon return the value of `VkPastPresentationTimingPropertiesEXT`::`presentationTimingCount` is less than the number of available timing records for the given `VkPastPresentationTimingInfoEXT`::`swapchain`, VK_INCOMPLETE is returned instead of VK_SUCCESS to indicate that not all the available values were returned.

Upon return, zero or more slots of the `swapchain` internal timing results queue, equal to the number of entries written to `VkPastPresentationTimingPropertiesEXT`::`pPresentationTimings` for which `reportComplete` is VK_TRUE, are made available for future `vkQueuePresentKHR` calls. Elements of `pPresentationTimings` are arranged in ascending order of present ids.

Timing information **may** become available out of order with regards to their associated vkQueuePresentKHR order. VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT **can** be set in `VkPastPresentationTimingInfoEXT`::`flags` to allow `vkGetPastPresentationTimingEXT` to return results in that same order. Otherwise, results are returned in the order of their associated vkQueuePresentKHR calls.

There is no requirement for any precise timing relationship between the completion of a present stage and the availability of any associated timing information. However, results **must** be made available in finite time.

As an exception to the normal rules for objects which are externally synchronized, `swapchain` **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR and vkCreateSwapchainKHR with `swapchain` used as an `oldSwapchain`. Access to the swapchain

timing information **must** be atomic within the implementation.

Valid Usage

- VUID-vkGetPastPresentationTimingEXT-flags-12230
  If VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT is set in VkPastPresentationTimingInfoEXT::flags, the presentStageCount value of each element of VkPastPresentationTimingPropertiesEXT::pPresentationTimings **must** be at least the maximum number of present stages set in VkPresentTimingInfoEXT::presentStageQueries among all vkQueuePresentKHR calls, with a non-zero presentStageQueries, for which complete results have not been returned yet by a previous call
- VUID-vkGetPastPresentationTimingEXT-flags-12231
  If VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT is not set in VkPastPresentationTimingInfoEXT::flags, the presentStageCount value of each element of VkPastPresentationTimingPropertiesEXT::pPresentationTimings **must** be at least the number of present stages set in VkPresentTimingInfoEXT::presentStageQueries for the earliest call to vkQueuePresentKHR, with a non-zero presentStageQueries, that corresponds to that element's index and for which complete results have not been returned yet by a previous call

Valid Usage (Implicit)

- VUID-vkGetPastPresentationTimingEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingInfo-parameter
  pPastPresentationTimingInfo **must** be a valid pointer to a valid VkPastPresentationTimingInfoEXT structure
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingProperties-parameter
  pPastPresentationTimingProperties **must** be a valid pointer to a VkPastPresentationTimingPropertiesEXT structure

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN

- VK_ERROR_VALIDATION_FAILED

The VkPastPresentationTimingInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingInfoEXT {
    VkStructureType                     sType;
    const void*                         pNext;
    VkPastPresentationTimingFlagsEXT    flags;
    VkSwapchainKHR                      swapchain;
} VkPastPresentationTimingInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkPastPresentationTimingFlagBitsEXT specifying options for queries of past presentation timing information.
- swapchain is the swapchain to obtain presentation timing information for.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_INFO_EXT
- VUID-VkPastPresentationTimingInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkPastPresentationTimingInfoEXT-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkPastPresentationTimingFlagBitsEXT values
- VUID-VkPastPresentationTimingInfoEXT-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle

Host Synchronization

- Host access to swapchain **must** be externally synchronized

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPastPresentationTimingFlagsEXT;
```

VkPastPresentationTimingFlagsEXT is a bitmask type for setting a mask of zero or more VkPastPresentationTimingFlagBitsEXT.

Bits which **can** be set in VkPastPresentationTimingInfoEXT::flags, specifying options for queries of past presentation timing information, are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPastPresentationTimingFlagBitsEXT {
    VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT = 0x00000001,
    VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT = 0x00000002,
} VkPastPresentationTimingFlagBitsEXT;
```

- VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT specifies that vkGetPastPresentationTimingEXT **may** return partial results for presentation requests that have not completed all requested present stages.
- VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT specifies that vkGetPastPresentationTimingEXT **may** return results out of order with respect to the presentation order.

The VkPastPresentationTimingPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingPropertiesEXT {
    VkStructureType                sType;
    void*                          pNext;
    uint64_t                       timingPropertiesCounter;
    uint64_t                       timeDomainsCounter;
    uint32_t                       presentationTimingCount;
    VkPastPresentationTimingEXT*   pPresentationTimings;
} VkPastPresentationTimingPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- timingPropertiesCounter is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.
- timeDomainsCounter is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domains list counter.
- presentationTimingCount is an integer related to the number of VkPastPresentationTimingEXT structures available or queried, as described below.
- pPresentationTimings is NULL or a pointer to an array of VkPastPresentationTimingEXT structures.

When calling vkGetPastPresentationTimingEXT, if pPresentationTimings is NULL, then the number of available timing records for the given swapchain is returned in presentationTimingCount. Otherwise, presentationTimingCount **must** specify the number of elements in the pPresentationTimings array, and on return is overwritten with the number of structures actually written to pPresentationTimings.

If VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT is specified in VkPastPresentationTimingInfoEXT::flags, vkGetPastPresentationTimingEXT **may** return incomplete results, containing only information for a subset of the requested present stages. Further calls to

vkGetPastPresentationTimingEXT will keep providing all available results for a previously incomplete entry until it is complete.

The implementation **must** return a VkPastPresentationTimingEXT for every vkQueuePresentKHR referencing swapchain where a non-zero VkPresentTimingInfoEXT::presentStageQueries was specified and at least one present stage has available results.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_PROPERTIES_EXT
- VUID-VkPastPresentationTimingPropertiesEXT-pNext-pNext
  pNext **must** be NULL

NOTE

The presentation engine **may** change the timing properties of the swapchain for a variety of reasons.

This **may** occur, for example, if the window system changes its mode, including the refresh rate of the display. Another example is if an application's surface is being composited with other windows of a window system, and then the surface's window becomes a borderless, full-screen window. While composited, the timing properties **may** be FRR, and while full-screen, the timing properties **may** be VRR.

The available time domains for a swapchain **may** change for similar or identical reasons. Therefore, it is possible that the same event will cause both the swapchain's internal timing properties counter and time domains list counter to update.

The VkPastPresentationTimingEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingEXT {
    VkStructureType           sType;
    void*                     pNext;
    uint64_t                  presentId;
    uint64_t                  targetTime;
    uint32_t                  presentStageCount;
    VkPresentStageTimeEXT*    pPresentStages;
    VkTimeDomainKHR           timeDomain;
    uint64_t                  timeDomainId;
    VkBool32                  reportComplete;
} VkPastPresentationTimingEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentId is zero or a value that was given to a previous vkQueuePresentKHR command via

VkPresentId2KHR::pPresentIds.

- targetTime is the application-provided target absolute time or duration of the associated presentation request in VkPresentTimingInfoEXT::targetTime.
- presentStageCount is a count of items contained in pPresentStages.
- pPresentStages is a pointer to an array of VkPresentStageTimeEXT providing timing information for the presentation request associated with presentId.
- timeDomain is the time domain used by the presentation engine to report times in pPresentStages.
- timeDomainId is the id associated with timeDomain.
- reportComplete is VK_TRUE if the presentation engine has reported all the requested results in pPresentStages.

When calling vkGetPastPresentationTimingEXT, the implementation sets presentStageCount to the number of present stages it has written results for. If VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT was specified in VkPastPresentationTimingInfoEXT::flags, the implementation **may** return an incomplete report containing fewer present stage results than were queried by the associated presentation request. Otherwise, results for all the present stages queried by the presentation request are written by the implementation.

Timing information for some present stages **may** have a time value of 0, indicating that results for that present stage are not available.

For systems with multiple entities operating within the presentation engine, such as multiple displays, pPresentStages will return timing results for one entity which has been affected by the presentation.

timeDomainId **may** be different than the time domain that was specified in VkPresentTimingInfoEXT::timeDomainId if the requirements for using this time domain could not be met at the time the presentation engine processed the presentation request. In such a case, the presentation engine **may** pick a time domain to fall back to, if one is available, and report results in that domain. Applications **can** continue to use this fallback time domain in future vkQueuePresentKHR calls, or they **can** call vkGetSwapchainTimeDomainPropertiesEXT to choose from the currently supported time domains.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_EXT
- VUID-VkPastPresentationTimingEXT-pNext-pNext
  pNext **must** be NULL

The VkPresentStageTimeEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentStageTimeEXT {
    VkPresentStageFlagsEXT    stage;
    uint64_t                  time;
} VkPresentStageTimeEXT;
```

- `stage` is a VkPresentStageFlagsEXT value specifying a present stage.
- `time` is a time in nanoseconds associated with the `stage`.

To query the duration of a refresh cycle (RC) for the presentation engine's display, call:

```
// Provided by VK_GOOGLE_display_timing
VkResult vkGetRefreshCycleDurationGOOGLE(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkRefreshCycleDurationGOOGLE*               pDisplayTimingProperties);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain the refresh duration for.
- `pDisplayTimingProperties` is a pointer to a `VkRefreshCycleDurationGOOGLE` structure.

Valid Usage (Implicit)

- VUID-vkGetRefreshCycleDurationGOOGLE-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetRefreshCycleDurationGOOGLE-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetRefreshCycleDurationGOOGLE-pDisplayTimingProperties-parameter
  `pDisplayTimingProperties` **must** be a valid pointer to a VkRefreshCycleDurationGOOGLE structure
- VUID-vkGetRefreshCycleDurationGOOGLE-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkRefreshCycleDurationGOOGLE structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkRefreshCycleDurationGOOGLE {
    uint64_t    refreshDuration;
} VkRefreshCycleDurationGOOGLE;
```

- refreshDuration is the number of nanoseconds from the start of one refresh cycle to the next.

The implementation will maintain a limited amount of history of timing information about previous presents. Because of the asynchronous nature of the presentation engine, the timing information for a given vkQueuePresentKHR command will become available some time later. These time values can be asynchronously queried, and will be returned if available. All time values are in nanoseconds, relative to a monotonically-increasing clock (e.g. CLOCK_MONOTONIC (see clock_gettime(2)) on Android and Linux).

To asynchronously query the presentation engine, for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_GOOGLE_display_timing
VkResult vkGetPastPresentationTimingGOOGLE(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint32_t*                                   pPresentationTimingCount,
    VkPastPresentationTimingGOOGLE*             pPresentationTimings);
```

- device is the device associated with swapchain.
- swapchain is the swapchain to obtain presentation timing information duration for.
- pPresentationTimingCount is a pointer to an integer related to the number of VkPastPresentationTimingGOOGLE structures to query, as described below.
- pPresentationTimings is either NULL or a pointer to an array of VkPastPresentationTimingGOOGLE structures.

If pPresentationTimings is NULL, then the number of newly-available timing records for the given swapchain is returned in pPresentationTimingCount. Otherwise, pPresentationTimingCount **must** point to a variable set by the user to the number of elements in the pPresentationTimings array, and on return the variable is overwritten with the number of structures actually written to

pPresentationTimings. If the value of pPresentationTimingCount is less than the number of newly-available timing records, at most pPresentationTimingCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available timing records were returned.

Valid Usage (Implicit)

- VUID-vkGetPastPresentationTimingGOOGLE-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPastPresentationTimingGOOGLE-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle
- VUID-vkGetPastPresentationTimingGOOGLE-pPresentationTimingCount-parameter
  pPresentationTimingCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPastPresentationTimingGOOGLE-pPresentationTimings-parameter
  If the value referenced by pPresentationTimingCount is not 0, and pPresentationTimings is not NULL, pPresentationTimings **must** be a valid pointer to an array of pPresentationTimingCount VkPastPresentationTimingGOOGLE structures
- VUID-vkGetPastPresentationTimingGOOGLE-swapchain-parent
  swapchain **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to swapchain **must** be externally synchronized

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPastPresentationTimingGOOGLE structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPastPresentationTimingGOOGLE {
    uint32_t    presentID;
    uint64_t    desiredPresentTime;
    uint64_t    actualPresentTime;
    uint64_t    earliestPresentTime;
    uint64_t    presentMargin;
} VkPastPresentationTimingGOOGLE;
```

- presentID is an application-provided value that was given to a previous vkQueuePresentKHR command via VkPresentTimeGOOGLE::presentID (see below). It **can** be used to uniquely identify a previous present with the vkQueuePresentKHR command.
- desiredPresentTime is an application-provided value that was given to a previous vkQueuePresentKHR command via VkPresentTimeGOOGLE::desiredPresentTime. If non-zero, it was used by the application to indicate that an image not be presented any sooner than desiredPresentTime.
- actualPresentTime is the time when the image of the swapchain was actually displayed.
- earliestPresentTime is the time when the image of the swapchain could have been displayed. This **may** differ from actualPresentTime if the application requested that the image be presented no sooner than VkPresentTimeGOOGLE::desiredPresentTime.
- presentMargin is an indication of how early the vkQueuePresentKHR command was processed compared to how soon it needed to be processed, and still be presented at earliestPresentTime.

The results for a given swapchain and presentID are only returned once from vkGetPastPresentationTimingGOOGLE.

The application **can** use the VkPastPresentationTimingGOOGLE values to occasionally adjust its timing. For example, if actualPresentTime is later than expected (e.g. one refreshDuration late), the application may increase its target IPD to a higher multiple of refreshDuration (e.g. decrease its frame rate from 60Hz to 30Hz). If actualPresentTime and earliestPresentTime are consistently different, and if presentMargin is consistently large enough, the application may decrease its target IPD to a smaller multiple of refreshDuration (e.g. increase its frame rate from 30Hz to 60Hz). If actualPresentTime and earliestPresentTime are the same, and if presentMargin is consistently high, the application may delay the start of its input-render-present loop in order to decrease the latency between user input and the corresponding present (always leaving some margin in case a new image takes longer to render than the previous image). An application that desires its target IPD to always be the same as refreshDuration, can also adjust features until actualPresentTime is never late and presentMargin is satisfactory.

The full VK_GOOGLE_display_timing extension semantics are described for swapchains created with VK_PRESENT_MODE_FIFO_KHR. For example, non-zero values of VkPresentTimeGOOGLE::desiredPresentTime **must** be honored, and vkGetPastPresentationTimingGOOGLE **should** return a VkPastPresentationTimingGOOGLE structure with valid values for all images presented with vkQueuePresentKHR. The semantics for other present modes are as follows:

- VK_PRESENT_MODE_IMMEDIATE_KHR. The presentation engine **may** ignore non-zero values of

VkPresentTimeGOOGLE::desiredPresentTime in favor of presenting immediately. The value of VkPastPresentationTimingGOOGLE::earliestPresentTime **must** be the same as VkPastPresentationTimingGOOGLE::actualPresentTime, which **should** be when the presentation engine displayed the image.

- VK_PRESENT_MODE_MAILBOX_KHR. The intention of using this present mode with this extension is to handle cases where an image is presented late, and the next image is presented soon enough to replace it at the next vertical blanking period. For images that are displayed to the user, the value of VkPastPresentationTimingGOOGLE::actualPresentTime **must** be when the image was displayed. For images that are not displayed to the user, vkGetPastPresentationTimingGOOGLE **may** not return a VkPastPresentationTimingGOOGLE structure, or it **may** return a VkPastPresentationTimingGOOGLE structure with the value of zero for both VkPastPresentationTimingGOOGLE::actualPresentTime and VkPastPresentationTimingGOOGLE::earliestPresentTime. It is possible that an application **can** submit images with VkPresentTimeGOOGLE::desiredPresentTime values such that new images **may** not be displayed. For example, if VkPresentTimeGOOGLE::desiredPresentTime is far enough in the future that an image is not presented before vkQueuePresentKHR is called to present another image, the first image will not be displayed to the user. If the application continues to do that, the presentation engine **may** not display new images.
- VK_PRESENT_MODE_FIFO_RELAXED_KHR. For images that are presented in time to be displayed at the next vertical blanking period, the semantics are identical as for VK_PRESENT_MODE_FIFO_KHR. For images that are presented late, and are displayed after the start of the vertical blanking period (i.e. with tearing), the values of VkPastPresentationTimingGOOGLE **may** be treated as if the image was displayed at the start of the vertical blanking period, or **may** be treated the same as for VK_PRESENT_MODE_IMMEDIATE_KHR.

40.9. Present Wait

Applications wanting to control the pacing of the application by monitoring when presentation processes have completed to limit the number of outstanding images queued for presentation, need to have a method of being signaled during the presentation process.

Using the VK_GOOGLE_display_timing extension, applications can discover when images were presented, but only asynchronously.

Providing a mechanism which allows applications to block, waiting for a specific step of the presentation process to complete allows them to control the amount of outstanding work (and hence the potential lag in responding to user input or changes in the rendering environment).

The VK_KHR_present_wait2 extension allows applications to tell the presentation engine at the vkQueuePresentKHR call that it plans on waiting for presentation by passing a VkPresentId2KHR structure. The presentId passed in that structure may then be passed to a future vkWaitForPresent2KHR call to cause the application to block until that presentation is finished.

This functionality was originally provided by the VK_KHR_present_wait extension, which has been deprecated and replaced by VK_KHR_present_wait2.

The VkPresentWait2InfoKHR structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPresentWait2InfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentId;
    uint64_t           timeout;
} VkPresentWait2InfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` is the presentation presentId to wait for.
- `timeout` is the timeout period in units of nanoseconds. `timeout` is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

Valid Usage (Implicit)

- VUID-VkPresentWait2InfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_WAIT_2_INFO_KHR
- VUID-VkPresentWait2InfoKHR-pNext-pNext
  `pNext` **must** be `NULL`

40.10. WSI Swapchain

A swapchain object (a.k.a. swapchain) provides the ability to present rendering results to a surface. Swapchain objects are represented by `VkSwapchainKHR` handles:

```
// Provided by VK_KHR_swapchain
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSwapchainKHR)
```

A swapchain is an abstraction for an array of presentable images that are associated with a surface. The presentable images are represented by `VkImage` objects created by the platform. One image (which **can** be an array image for multiview/stereoscopic-3D surfaces) is displayed at a time, but multiple images **can** be queued for presentation. An application renders to the image, and then queues the image for presentation to the surface.

A native window **cannot** be associated with more than one non-retired swapchain at a time. Further, swapchains **cannot** be created for native windows that have a non-Vulkan graphics API surface associated with them.

NOTE

The presentation engine is an abstraction for the platform's compositor or display engine.

The presentation engine **may** be synchronous or asynchronous with respect to the

application and/or logical device.

Some implementations **may** use the device's graphics queue or dedicated presentation hardware to perform presentation.

The presentable images of a swapchain are owned by the presentation engine. An application **can** acquire use of a presentable image from the presentation engine. Use of a presentable image **must** occur only after the image is returned by vkAcquireNextImageKHR, and before it is released by vkQueuePresentKHR. This includes transitioning the image layout and rendering commands.

An application **can** acquire use of a presentable image with vkAcquireNextImageKHR. After acquiring a presentable image and before modifying it, the application **must** use a synchronization primitive to ensure that the presentation engine has finished reading from the image. The application **can** then transition the image's layout, queue rendering commands to it, etc. Finally, the application presents the image with vkQueuePresentKHR, which releases the acquisition of the image. The application **can** also release the acquisition of the image through vkReleaseSwapchainImagesKHR, if the image is not in use by the device, and skip the present operation.

The presentation engine controls the order in which presentable images are acquired for use by the application.

NOTE

This allows the platform to handle situations which require out-of-order return of images after presentation. At the same time, it allows the application to generate command buffers referencing all of the images in the swapchain at initialization time, rather than in its main loop.

How this all works is described below.

If a swapchain is created with `presentMode` set to either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, a single presentable image **can** be acquired, referred to as a shared presentable image. A shared presentable image **may** be concurrently accessed by the application and the presentation engine, without transitioning the image's layout after it is initially presented.

- With VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR, the presentation engine is only required to update to the latest contents of a shared presentable image after a present. The application **must** call `vkQueuePresentKHR` to guarantee an update. However, the presentation engine **may** update from it at any time.
- With VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, the presentation engine will automatically present the latest contents of a shared presentable image during every refresh cycle. The application is only required to make one initial call to `vkQueuePresentKHR`, after which the presentation engine will update from it without any need for further present calls. The application **can** indicate the image contents have been updated by calling `vkQueuePresentKHR`, but this does not guarantee the timing of when updates will occur.

The presentation engine **may** access a shared presentable image at any time after it is first presented. To avoid tearing, an application **should** coordinate access with the presentation engine.

This requires presentation engine timing information through platform-specific mechanisms and ensuring that color attachment writes are made available during the portion of the presentation engine's refresh cycle they are intended for.

NOTE The VK_KHR_shared_presentable_image extension does not provide functionality for determining the timing of the presentation engine's refresh cycles.

In order to query a swapchain's status when rendering to a shared presentable image, call:

```
// Provided by VK_KHR_shared_presentable_image
VkResult vkGetSwapchainStatusKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.

Valid Usage (Implicit)

- VUID-vkGetSwapchainStatusKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY

- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The possible return values for vkGetSwapchainStatusKHR **should** be interpreted as follows:

- VK_SUCCESS specifies the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's VkPresentModeKHR.
- VK_SUBOPTIMAL_KHR the swapchain no longer matches the surface properties exactly, but the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's VkPresentModeKHR.
- VK_ERROR_OUT_OF_DATE_KHR the surface has changed in such a way that it is no longer compatible with the swapchain.
- VK_ERROR_SURFACE_LOST_KHR the surface is no longer available.

NOTE The swapchain state **may** be cached by implementations, so applications **should** regularly call vkGetSwapchainStatusKHR when using a swapchain with VkPresentModeKHR equal to VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.

To create a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkCreateSwapchainKHR(
    VkDevice                                    device,
    const VkSwapchainCreateInfoKHR*             pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSwapchainKHR*                             pSwapchain);
```

- device is the device to create the swapchain for.
- pCreateInfo is a pointer to a VkSwapchainCreateInfoKHR structure specifying the parameters of the created swapchain.
- pAllocator is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see Memory Allocation).
- pSwapchain is a pointer to a VkSwapchainKHR handle in which the created swapchain object will be returned.

As mentioned above, if vkCreateSwapchainKHR succeeds, it will return a handle to a swapchain containing an array of at least pCreateInfo->minImageCount presentable images.

While acquired by the application, presentable images **can** be used in any way that equivalent non-presentable images **can** be used. A presentable image is equivalent to a non-presentable image created with the following VkImageCreateInfo parameters:

VkImageCreateInfo **Field**	**Value**
flags	VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT is set if VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR is set VK_IMAGE_CREATE_PROTECTED_BIT is set if VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR is set VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR are both set if VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR is set VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT is set if VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT is set all other bits are unset
imageType	VK_IMAGE_TYPE_2D
format	pCreateInfo->imageFormat
extent	{pCreateInfo->imageExtent.width, pCreateInfo->imageExtent.height, 1}
mipLevels	1
arrayLayers	pCreateInfo->imageArrayLayers
samples	VK_SAMPLE_COUNT_1_BIT
tiling	VK_IMAGE_TILING_OPTIMAL
usage	pCreateInfo->imageUsage
sharingMode	pCreateInfo->imageSharingMode
queueFamilyIndexCount	pCreateInfo->queueFamilyIndexCount
pQueueFamilyIndices	pCreateInfo->pQueueFamilyIndices
initialLayout	VK_IMAGE_LAYOUT_UNDEFINED

The pCreateInfo->surface **must** not be destroyed until after the swapchain is destroyed.

If oldSwapchain is VK_NULL_HANDLE, and the native window referred to by pCreateInfo->surface is already associated with a Vulkan swapchain, VK_ERROR_NATIVE_WINDOW_IN_USE_KHR **must** be returned.

If oldSwapchain is a valid swapchain and there are outstanding calls to vkWaitForPresent2KHR, then

vkCreateSwapchainKHR **may** block until those calls complete.

If the native window referred to by pCreateInfo->surface is already associated with a non-Vulkan graphics API surface, VK_ERROR_NATIVE_WINDOW_IN_USE_KHR **must** be returned.

The native window referred to by pCreateInfo->surface **must** not become associated with a non-Vulkan graphics API surface before all associated Vulkan swapchains have been destroyed.

vkCreateSwapchainKHR will return VK_ERROR_DEVICE_LOST if the logical device was lost. The VkSwapchainKHR is a child of the device, and **must** be destroyed before the device. However, VkSurfaceKHR is not a child of any VkDevice and is not affected by the lost device. After successfully recreating a VkDevice, the same VkSurfaceKHR **can** be used to create a new VkSwapchainKHR, provided the previous one was destroyed.

If the oldSwapchain parameter of pCreateInfo is a valid swapchain, which has exclusive full-screen access, that access is released from pCreateInfo->oldSwapchain. If the command succeeds in this case, the newly created swapchain will automatically acquire exclusive full-screen access from pCreateInfo->oldSwapchain.

NOTE This implicit transfer is intended to avoid exiting and entering full-screen exclusive mode, which may otherwise cause unwanted visual updates to the display.

In some cases, swapchain creation **may** fail if exclusive full-screen mode is requested for application control, but for some implementation-specific reason exclusive full-screen access is unavailable for the particular combination of parameters provided. If this occurs, VK_ERROR_INITIALIZATION_FAILED will be returned.

NOTE In particular, it will fail if the imageExtent member of pCreateInfo does not match the extents of the monitor. Other reasons for failure may include the application not being set as high-dpi aware, or if the physical device and monitor are not compatible in this mode.

If the pNext chain of VkSwapchainCreateInfoKHR includes a VkSwapchainPresentBarrierCreateInfoNV structure, then that structure includes additional swapchain creation parameters specific to the present barrier. Swapchain creation **may** fail if the state of the current system restricts the usage of the present barrier feature VkSurfaceCapabilitiesPresentBarrierNV, or a swapchain itself does not satisfy all the required conditions. In this scenario VK_ERROR_INITIALIZATION_FAILED is returned.

When the VkSurfaceKHR in VkSwapchainCreateInfoKHR is a display surface, then the VkDisplayModeKHR in display surface's VkDisplaySurfaceCreateInfoKHR is associated with a particular VkDisplayKHR. Swapchain creation **may** fail if that VkDisplayKHR is not acquired by the application. In this scenario VK_ERROR_INITIALIZATION_FAILED is returned.

Valid Usage (Implicit)

- VUID-vkCreateSwapchainKHR-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkCreateSwapchainKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSwapchainCreateInfoKHR structure
- VUID-vkCreateSwapchainKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSwapchainKHR-pSwapchain-parameter
  `pSwapchain` **must** be a valid pointer to a VkSwapchainKHR handle
- VUID-vkCreateSwapchainKHR-device-queuecount
  The device **must** have been created with at least `1` queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_COMPRESSION_EXHAUSTED_EXT
- VK_ERROR_DEVICE_LOST
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkSwapchainCreateInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkSwapchainCreateFlagsKHR        flags;
    VkSurfaceKHR                     surface;
    uint32_t                         minImageCount;
    VkFormat                         imageFormat;
    VkColorSpaceKHR                  imageColorSpace;
    VkExtent2D                       imageExtent;
    uint32_t                         imageArrayLayers;
    VkImageUsageFlags                imageUsage;
    VkSharingMode                    imageSharingMode;
    uint32_t                         queueFamilyIndexCount;
    const uint32_t*                  pQueueFamilyIndices;
    VkSurfaceTransformFlagBitsKHR    preTransform;
    VkCompositeAlphaFlagBitsKHR      compositeAlpha;
    VkPresentModeKHR                 presentMode;
    VkBool32                         clipped;
    VkSwapchainKHR                   oldSwapchain;
} VkSwapchainCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkSwapchainCreateFlagBitsKHR indicating parameters of the swapchain creation.
- `surface` is the surface onto which the swapchain will present images. If the creation succeeds, the swapchain becomes associated with `surface`.
- `minImageCount` is the minimum number of presentable images that the application needs. The implementation will either create the swapchain with at least that many images, or it will fail to create the swapchain.
- `imageFormat` is a VkFormat value specifying the format the swapchain image(s) will be created with.
- `imageColorSpace` is a VkColorSpaceKHR value specifying the way the swapchain interprets image data.
- `imageExtent` is the size (in pixels) of the swapchain image(s). The behavior is platform-dependent if the image extent does not match the surface's `currentExtent` as returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`.

> **NOTE**
>
> On some platforms, it is normal that `maxImageExtent` **may** become `(0, 0)`, for example when the window is minimized. In such a case, it is not possible to create a swapchain due to the Valid Usage requirements , unless scaling is selected through VkSwapchainPresentScalingCreateInfoKHR, if supported .

- `imageArrayLayers` is the number of views in a multiview/stereo surface. For non-stereoscopic-3D

applications, this value is 1.

- `imageUsage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the (acquired) swapchain images.
- `imageSharingMode` is the sharing mode used for the image(s) of the swapchain.
- `queueFamilyIndexCount` is the number of queue families having access to the image(s) of the swapchain when `imageSharingMode` is VK_SHARING_MODE_CONCURRENT.
- `pQueueFamilyIndices` is a pointer to an array of queue family indices having access to the image(s) of the swapchain when `imageSharingMode` is VK_SHARING_MODE_CONCURRENT.
- `preTransform` is a VkSurfaceTransformFlagBitsKHR value describing the transform, relative to the presentation engine's natural orientation, applied to the image content prior to presentation. If it does not match the `currentTransform` value returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`, the presentation engine will transform the image content as part of the presentation operation.
- `compositeAlpha` is a VkCompositeAlphaFlagBitsKHR value indicating the alpha compositing mode to use when this surface is composited together with other surfaces on certain window systems.
- `presentMode` is the presentation mode the swapchain will use. A swapchain's present mode determines how incoming present requests will be processed and queued internally.
- `clipped` specifies whether the Vulkan implementation is allowed to discard rendering operations that affect regions of the surface that are not visible.
  - If `clipped` is VK_TRUE, the presentable images associated with the swapchain **may** not own all of their pixels. Pixels in the presentable images that correspond to regions of the target surface obscured by another window on the desktop, or subject to some other clipping mechanism will have undefined content when read back. Fragment shaders **may** not execute for these pixels, and thus any side effects they would have had will not occur. Setting VK_TRUE does not guarantee any clipping will occur, but allows more efficient presentation methods to be used on some platforms.
  - If `clipped` is VK_FALSE, presentable images associated with the swapchain will own all of the pixels they contain.

> **NOTE** Applications **should** set this value to VK_TRUE if they do not expect to read back the content of presentable images before presenting them or after reacquiring them, and if their fragment shaders do not have any side effects that require them to run for all pixels in the presentable image.

- `oldSwapchain` is VK_NULL_HANDLE, or the existing non-retired swapchain currently associated with `surface`. Providing a valid `oldSwapchain` **may** aid in the resource reuse, and also allows the application to still present any images that are already acquired from it.

Upon calling `vkCreateSwapchainKHR` with an `oldSwapchain` that is not VK_NULL_HANDLE, `oldSwapchain` is retired — even if creation of the new swapchain fails. The new swapchain is created in the non-retired state whether or not `oldSwapchain` is VK_NULL_HANDLE.

Upon calling `vkCreateSwapchainKHR` with an `oldSwapchain` that is not VK_NULL_HANDLE, any images from `oldSwapchain` that are not acquired by the application **may** be freed by the implementation,

which **may** occur even if creation of the new swapchain fails. The application **can** destroy `oldSwapchain` to free all memory associated with `oldSwapchain`.

NOTE

Multiple retired swapchains **can** be associated with the same `VkSurfaceKHR` through multiple uses of `oldSwapchain` that outnumber calls to vkDestroySwapchainKHR.

After `oldSwapchain` is retired, the application **can** pass to vkQueuePresentKHR any images it had already acquired from `oldSwapchain`. E.g., an application may present an image from the old swapchain before an image from the new swapchain is ready to be presented. As usual, vkQueuePresentKHR **may** fail if `oldSwapchain` has entered a state that causes VK_ERROR_OUT_OF_DATE_KHR to be returned.

The application **can** continue to use a shared presentable image obtained from `oldSwapchain` until a presentable image is acquired from the new swapchain, as long as it has not entered a state that causes it to return VK_ERROR_OUT_OF_DATE_KHR.

`imageUsage` defines the effective usage flags for the swapchain image(s). If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, `imageUsage` is ignored, and the effective usage flags are defined by VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage

- VUID-VkSwapchainCreateInfoKHR-surface-01270
  `surface` **must** be a surface that is supported by the device as determined using vkGetPhysicalDeviceSurfaceSupportKHR
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01272
  `minImageCount` **must** be less than or equal to the value returned in the `maxImageCount` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface if the returned `maxImageCount` is not zero
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10155
  If the `swapchainMaintenance1` feature is not enabled, then the `pNext` chain **must** not include a VkSwapchainPresentModesCreateInfoKHR structure
- VUID-VkSwapchainCreateInfoKHR-presentMode-02839
  If `presentMode` is not VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR nor VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, then `minImageCount` **must** be greater than or equal to the value returned in the `minImageCount` member of the `VkSurfaceCapabilitiesKHR` structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01383
  `minImageCount` **must** be `1` if `presentMode` is either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01273
  `imageFormat` and `imageColorSpace` **must** match the `format` and `colorSpace` members, respectively, of one of the `VkSurfaceFormatKHR` structures returned by

vkGetPhysicalDeviceSurfaceFormatsKHR for the surface

- VUID-VkSwapchainCreateInfoKHR-pNext-07781
  If a VkSwapchainPresentScalingCreateInfoKHR structure was not included in the pNext chain, or it is included and VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior is zero then imageExtent **must** be between minImageExtent and maxImageExtent, inclusive, where minImageExtent and maxImageExtent are members of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-pNext-07782
  If a VkSwapchainPresentScalingCreateInfoKHR structure was included in the pNext chain and VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior is not zero then imageExtent **must** be between minScaledImageExtent and maxScaledImageExtent, inclusive, where minScaledImageExtent and maxScaledImageExtent are members of the VkSurfacePresentScalingCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for the surface and presentMode
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10157
  If the swapchainMaintenance1 feature is not enabled, then flags **must** not include VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR
- VUID-VkSwapchainCreateInfoKHR-imageExtent-01689
  imageExtent members width and height **must** both be non-zero
- VUID-VkSwapchainCreateInfoKHR-imageArrayLayers-01275
  imageArrayLayers **must** be greater than 0 and less than or equal to the maxImageArrayLayers member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01427
  If presentMode is VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR, imageUsage **must** be a subset of the supported usage flags present in the supportedUsageFlags member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for surface
- VUID-VkSwapchainCreateInfoKHR-imageUsage-01384
  If presentMode is VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, imageUsage **must** be a subset of the supported usage flags present in the sharedPresentSupportedUsageFlags member of the VkSharedPresentSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for surface
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01277
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, pQueueFamilyIndices **must** be a valid pointer to an array of queueFamilyIndexCount uint32_t values
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01278
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, queueFamilyIndexCount **must** be greater than 1
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01428
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, each element of

pQueueFamilyIndices **must** be unique and **must** be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties or vkGetPhysicalDeviceQueueFamilyProperties2 for the physicalDevice that was used to create device

- VUID-VkSwapchainCreateInfoKHR-preTransform-01279
  preTransform **must** be one of the bits present in the supportedTransforms member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-01280
  compositeAlpha **must** be one of the bits present in the supportedCompositeAlpha member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01281
  presentMode **must** be one of the VkPresentModeKHR values returned by vkGetPhysicalDeviceSurfacePresentModesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentModeFifoLatestReady-10161
  If the presentModeFifoLatestReady feature is not enabled, presentMode **must** not be VK_PRESENT_MODE_FIFO_LATEST_READY_KHR
- VUID-VkSwapchainCreateInfoKHR-physicalDeviceCount-01429
  If the logical device was created with VkDeviceGroupDeviceCreateInfo ::physicalDeviceCount equal to 1, flags **must** not contain VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-01933
  If oldSwapchain is not VK_NULL_HANDLE, oldSwapchain **must** be a non-retired swapchain associated with the native window referred to by surface
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01778
  The implied image creation parameters of the swapchain **must** be supported as reported by vkGetPhysicalDeviceImageFormatProperties or vkGetPhysicalDeviceImageFormatProperties2
- VUID-VkSwapchainCreateInfoKHR-flags-03168
  If flags contains VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR then the pNext chain **must** include a VkImageFormatListCreateInfo structure with a viewFormatCount greater than zero and pViewFormats **must** have an element equal to imageFormat
- VUID-VkSwapchainCreateInfoKHR-pNext-04099
  If a VkImageFormatListCreateInfo structure was included in the pNext chain and VkImageFormatListCreateInfo::viewFormatCount is not zero then all of the formats in VkImageFormatListCreateInfo::pViewFormats **must** be compatible with the format as described in the compatibility table
- VUID-VkSwapchainCreateInfoKHR-flags-04100
  If flags does not contain VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR and the pNext chain includes a VkImageFormatListCreateInfo structure then VkImageFormatListCreateInfo::viewFormatCount **must** be 0 or 1
- VUID-VkSwapchainCreateInfoKHR-flags-03187

If `flags` contains VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR, then `VkSurfaceProtectedCapabilitiesKHR::supportsProtected` **must** be VK_TRUE in the VkSurfaceProtectedCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for `surface`

- VUID-VkSwapchainCreateInfoKHR-pNext-02679
  If the `pNext` chain includes a VkSurfaceFullScreenExclusiveInfoEXT structure with its `fullScreenExclusive` member set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT, and `surface` was created using vkCreateWin32SurfaceKHR, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the `pNext` chain
- VUID-VkSwapchainCreateInfoKHR-pNext-06752
  If the `imageCompressionControlSwapchain` feature is not enabled, the `pNext` chain **must** not include an VkImageCompressionControlEXT structure
- VUID-VkSwapchainCreateInfoKHR-multisampledRenderToSwapchain-12447
  If the `multisampledRenderToSwapchain` feature is not enabled, `flags` **must** not contain VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT
- VUID-VkSwapchainCreateInfoKHR-flags-12448
  `flags` **must** be a subset of flags returned in VkSwapchainFlagsSurfaceCapabilitiesEXT `::swapchainSupportedFlags`, given VkSwapchainCreateInfoKHR`::presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainCreateInfoKHR-presentTiming-12232
  If none of the `presentTiming`, `presentAtAbsoluteTime`, or `presentAtRelativeTime` features are enabled, `flags` **must** not contain VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

Valid Usage (Implicit)

- VUID-VkSwapchainCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkSwapchainCreateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDeviceGroupSwapchainCreateInfoKHR, VkImageCompressionControlEXT, VkImageFormatListCreateInfo, VkImageUsageFlags2CreateInfoKHR, VkSurfaceFullScreenExclusiveInfoEXT, VkSurfaceFullScreenExclusiveWin32InfoEXT, VkSwapchainCounterCreateInfoEXT, VkSwapchainDisplayNativeHdrCreateInfoAMD, VkSwapchainLatencyCreateInfoNV, VkSwapchainPresentBarrierCreateInfoNV, VkSwapchainPresentModesCreateInfoKHR, or VkSwapchainPresentScalingCreateInfoKHR
- VUID-VkSwapchainCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkSwapchainCreateInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkSwapchainCreateFlagBitsKHR values
- VUID-VkSwapchainCreateInfoKHR-surface-parameter

`surface` **must** be a valid VkSurfaceKHR handle

- VUID-VkSwapchainCreateInfoKHR-imageFormat-parameter
  `imageFormat` **must** be a valid VkFormat value
- VUID-VkSwapchainCreateInfoKHR-imageColorSpace-parameter
  `imageColorSpace` **must** be a valid VkColorSpaceKHR value
- VUID-VkSwapchainCreateInfoKHR-imageUsage-parameter
  `imageUsage` **must** be a valid combination of VkImageUsageFlagBits values
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-parameter
  `imageSharingMode` **must** be a valid VkSharingMode value
- VUID-VkSwapchainCreateInfoKHR-preTransform-parameter
  `preTransform` **must** be a valid VkSurfaceTransformFlagBitsKHR value
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-parameter
  `compositeAlpha` **must** be a valid VkCompositeAlphaFlagBitsKHR value
- VUID-VkSwapchainCreateInfoKHR-presentMode-parameter
  `presentMode` **must** be a valid VkPresentModeKHR value
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-parameter
  If `oldSwapchain` is not VK_NULL_HANDLE, `oldSwapchain` **must** be a valid VkSwapchainKHR handle
- VUID-VkSwapchainCreateInfoKHR-commonparent
  Both of `oldSwapchain`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Host Synchronization

- Host access to `surface` **must** be externally synchronized
- Host access to `oldSwapchain` **must** be externally synchronized

Bits which **can** be set in VkSwapchainCreateInfoKHR::`flags`, specifying parameters of swapchain creation, are:

```
// Provided by VK_KHR_swapchain
typedef enum VkSwapchainCreateFlagBitsKHR {
  // Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR = 0x00000001,
  // Provided by VK_VERSION_1_1 with VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR = 0x00000002,
  // Provided by VK_KHR_swapchain_mutable_format
    VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR = 0x00000004,
  // Provided by VK_EXT_present_timing
    VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT = 0x00000200,
  // Provided by VK_KHR_present_id2
    VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR = 0x00000040,
  // Provided by VK_KHR_present_wait2
    VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR = 0x00000080,
  // Provided by VK_KHR_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR = 0x00000008,
  // Provided by VK_EXT_multisampled_render_to_swapchain
    VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT = 0x00000100,
  // Provided by VK_EXT_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT =
VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR,
} VkSwapchainCreateFlagBitsKHR;
```

- VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR specifies that images created from the swapchain (i.e. with the `swapchain` member of VkImageSwapchainCreateInfoKHR set to this swapchain's handle) **must** use VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT.
- VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR specifies that images created from the swapchain are protected images.
- VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR specifies that the images of the swapchain **can** be used to create a `VkImageView` with a different format than what the swapchain was created with. The list of allowed image view formats is specified by adding a VkImageFormatListCreateInfo structure to the `pNext` chain of VkSwapchainCreateInfoKHR. In addition, this flag also specifies that the swapchain **can** be created with usage flags that are not supported for the format the swapchain is created with but are supported for at least one of the allowed image view formats.
- VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR specifies that the implementation **may** defer allocation of memory associated with each swapchain image until its index is to be returned from vkAcquireNextImageKHR or vkAcquireNextImage2KHR for the first time.
- VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR specifies that applications **can** include the `VkPresentId2KHR` structure in the `pNext` chain of the VkPresentInfoKHR structure to associate an identifier with each presentation request.
- VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR specifies that applications **can** use `vkWaitForPresent2KHR` to wait for the presentation engine to have begun presentation of the

presentation request associated with VkPresentWait2InfoKHR::presentId on swapchain.

- VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT specifies that an image **can** be used with multisampled rendering as a single-sampled render pass attachment.
- VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT specifies that features supported by the swapchain device in VkPhysicalDevicePresentTimingFeaturesEXT **can** be used to collect timing information or schedule presentation requests at specific times.

```
// Provided by VK_KHR_swapchain
typedef VkFlags VkSwapchainCreateFlagsKHR;
```

VkSwapchainCreateFlagsKHR is a bitmask type for setting a mask of zero or more VkSwapchainCreateFlagBitsKHR.

If the pNext chain of VkSwapchainCreateInfoKHR includes a VkDeviceGroupSwapchainCreateInfoKHR structure, then that structure includes a set of device group present modes that the swapchain **can** be used with.

The VkDeviceGroupSwapchainCreateInfoKHR structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupSwapchainCreateInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDeviceGroupPresentModeFlagsKHR modes;
} VkDeviceGroupSwapchainCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- modes is a bitfield of modes that the swapchain **can** be used with.

If this structure is not present, modes is considered to be VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkDeviceGroupSwapchainCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkDeviceGroupSwapchainCreateInfoKHR-modes-parameter
  modes **must** be a valid combination of VkDeviceGroupPresentModeFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

If the pNext chain of VkSwapchainCreateInfoKHR includes a VkSwapchainDisplayNativeHdrCreateInfoAMD structure, then that structure includes additional swapchain creation parameters specific to display native HDR support.

The VkSwapchainDisplayNativeHdrCreateInfoAMD structure is defined as:

```
// Provided by VK_AMD_display_native_hdr
typedef struct VkSwapchainDisplayNativeHdrCreateInfoAMD {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           localDimmingEnable;
} VkSwapchainDisplayNativeHdrCreateInfoAMD;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- localDimmingEnable specifies whether local dimming is enabled for the swapchain.

If the pNext chain of VkSwapchainCreateInfoKHR does not include this structure, the default value for localDimmingEnable is VK_TRUE, meaning local dimming is initially enabled for the swapchain.

Valid Usage (Implicit)

- VUID-VkSwapchainDisplayNativeHdrCreateInfoAMD-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_DISPLAY_NATIVE_HDR_CREATE_INFO_AMD

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

Valid Usage

- VUID-VkSwapchainDisplayNativeHdrCreateInfoAMD-localDimmingEnable-04449
  It is only valid to set localDimmingEnable to VK_TRUE if VkDisplayNativeHdrSurfaceCapabilitiesAMD::localDimmingSupport is supported

The local dimming HDR setting may also be changed over the life of a swapchain by calling:

```
// Provided by VK_AMD_display_native_hdr
void vkSetLocalDimmingAMD(
    VkDevice                                    device,
    VkSwapchainKHR                              swapChain,
    VkBool32                                    localDimmingEnable);
```

- `device` is the device associated with `swapChain`.
- `swapChain` handle to enable local dimming.
- `localDimmingEnable` specifies whether local dimming is enabled for the swapchain.

Valid Usage (Implicit)

- VUID-vkSetLocalDimmingAMD-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetLocalDimmingAMD-swapChain-parameter
  `swapChain` **must** be a valid VkSwapchainKHR handle
- VUID-vkSetLocalDimmingAMD-swapChain-parent
  `swapChain` **must** have been created, allocated, or retrieved from `device`

Valid Usage

- VUID-vkSetLocalDimmingAMD-localDimmingSupport-04618
  VkDisplayNativeHdrSurfaceCapabilitiesAMD::`localDimmingSupport` **must** be supported

If the `pNext` chain of VkSwapchainCreateInfoKHR includes a VkSurfaceFullScreenExclusiveInfoEXT structure, then that structure specifies the application's preferred full-screen presentation behavior. If this structure is not present, `fullScreenExclusive` is considered to be VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT.

To enable surface counters when creating a swapchain, add a `VkSwapchainCounterCreateInfoEXT` structure to the `pNext` chain of VkSwapchainCreateInfoKHR. `VkSwapchainCounterCreateInfoEXT` is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkSwapchainCounterCreateInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkSurfaceCounterFlagsEXT    surfaceCounters;
} VkSwapchainCounterCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCounters` is a bitmask of VkSurfaceCounterFlagBitsEXT specifying surface counters to enable for the swapchain.

Valid Usage

- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-01244
  The bits in `surfaceCounters` **must** be supported by VkSwapchainCreateInfoKHR::`surface`, as reported by vkGetPhysicalDeviceSurfaceCapabilities2EXT

Valid Usage (Implicit)

- VUID-VkSwapchainCounterCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_COUNTER_CREATE_INFO_EXT
- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-parameter
  If `surfaceCounters` is not `0`, `surfaceCounters` **must** be a valid combination of VkSurfaceCounterFlagBitsEXT values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

The requested counters become active when the first presentation command for the associated swapchain is processed by the presentation engine. To query the value of an active counter, use:

```
// Provided by VK_EXT_display_control
VkResult vkGetSwapchainCounterEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSurfaceCounterFlagBitsEXT                 counter,
    uint64_t*                                   pCounterValue);
```

- `device` is the VkDevice associated with `swapchain`.
- `swapchain` is the swapchain from which to query the counter value.
- `counter` is a VkSurfaceCounterFlagBitsEXT value specifying the counter to query.
- `pCounterValue` will return the current value of the counter.

If a counter is not available because the swapchain is out of date, the implementation **may** return VK_ERROR_OUT_OF_DATE_KHR.

Valid Usage

- VUID-vkGetSwapchainCounterEXT-swapchain-01245
  One or more present commands on `swapchain` **must** have been processed by the presentation engine

Valid Usage (Implicit)

- VUID-vkGetSwapchainCounterEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainCounterEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainCounterEXT-counter-parameter
  `counter` **must** be a valid VkSurfaceCounterFlagBitsEXT value
- VUID-vkGetSwapchainCounterEXT-pCounterValue-parameter
  `pCounterValue` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainCounterEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To specify compression properties for the swapchain images in this swapchain, add a VkImageCompressionControlEXT structure to the `pNext` chain of the VkSwapchainCreateInfoKHR structure.

Applications **can** modify the presentation mode used by the swapchain on a per-presentation basis. However, all presentation modes the application intends to use with the swapchain **must** be specified at swapchain creation time. To specify more than one presentation mode when creating a swapchain, include the `VkSwapchainPresentModesCreateInfoKHR` structure in the `pNext` chain of the VkSwapchainCreateInfoKHR structure.

The `VkSwapchainPresentModesCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModesCreateInfoKHR {
    VkStructureType            sType;
    const void*                pNext;
    uint32_t                   presentModeCount;
    const VkPresentModeKHR*    pPresentModes;
} VkSwapchainPresentModesCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModesCreateInfoKHR
typedef VkSwapchainPresentModesCreateInfoKHR VkSwapchainPresentModesCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is the number of presentation modes provided.
- `pPresentModes` is a list of presentation modes with `presentModeCount` entries.

Valid Usage

- VUID-VkSwapchainPresentModesCreateInfoKHR-None-07762
  Each entry in pPresentModes **must** be one of the VkPresentModeKHR values returned by `vkGetPhysicalDeviceSurfacePresentModesKHR` for the surface
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeFifoLatestReady-10160
  If the `presentModeFifoLatestReady` feature is not enabled, pPresentModes **must** not contain VK_PRESENT_MODE_FIFO_LATEST_READY_KHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-07763
  The entries in pPresentModes **must** be a subset of the present modes returned in VkSurfacePresentModeCompatibilityKHR::`pPresentModes`, given VkSwapchainCreateInfoKHR::`presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentMode-07764
  VkSwapchainCreateInfoKHR::`presentMode` **must** be included in `pPresentModes`

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModesCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODES_CREATE_INFO_KHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-parameter
  `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` valid VkPresentModeKHR values
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeCount-arraylength
  `presentModeCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

When an application presents a swapchain image with dimensions different than those of the target surface, different behavior is possible on different platforms per their respective specifications:

- Presentation fails and VK_ERROR_OUT_OF_DATE_KHR is returned
- Scaling is done and VK_SUCCESS or VK_SUBOPTIMAL_KHR is returned
- Unspecified scaling using an arbitrary combination of stretching, centering and/or clipping.

Applications **can** define specific behavior when creating a swapchain by including the VkSwapchainPresentScalingCreateInfoKHR structure in the pNext chain of the VkSwapchainCreateInfoKHR structure.

The VkSwapchainPresentScalingCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentScalingCreateInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkPresentScalingFlagsKHR    scalingBehavior;
    VkPresentGravityFlagsKHR    presentGravityX;
    VkPresentGravityFlagsKHR    presentGravityY;
} VkSwapchainPresentScalingCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentScalingCreateInfoKHR
typedef VkSwapchainPresentScalingCreateInfoKHR VkSwapchainPresentScalingCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- scalingBehavior is 0 or the scaling method to use when the dimensions of the surface and swapchain images differ.
- presentGravityX is 0 or the x-axis direction in which swapchain image pixels gravitate relative to the surface when scalingBehavior does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.
- presentGravityY is 0 or the y-axis direction in which swapchain image pixels gravitate relative to the surface when scalingBehavior does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.

If scalingBehavior is 0, the result of presenting a swapchain image with dimensions that do not

match the surface dimensions is implementation and platform-dependent. If presentGravityX or presentGravityY are 0, the presentation gravity **must** match that defined by the native platform surface on platforms which define surface gravity.

Valid Usage

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07765
  If presentGravityX is 0, presentGravityY **must** be 0
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07766
  If presentGravityX is not 0, presentGravityY **must** not be 0
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07767
  scalingBehavior **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07768
  presentGravityX **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07769
  presentGravityY **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07770
  scalingBehavior **must** be 0 or a valid scaling method for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling, given VkSwapchainCreateInfoKHR::presentMode in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07771
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, scalingBehavior **must** be 0 or a valid scaling method for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling, given each present mode in VkSwapchainPresentModesCreateInfoKHR::pPresentModes in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07772
  presentGravityX **must** be 0 or a valid x-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX, given VkSwapchainCreateInfoKHR::presentMode in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07773
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, presentGravityX **must** be 0 or a valid x-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX, given each present mode in VkSwapchainPresentModesCreateInfoKHR::pPresentModes in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07774
  presentGravityY **must** be 0 or a valid y-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY, given VkSwapchainCreateInfoKHR::presentMode in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07775
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, presentGravityY **must** be 0 or a valid y-axis present gravity for the surface as returned in

VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY, given each present mode in VkSwapchainPresentModesCreateInfoKHR::pPresentModes in VkSurfacePresentModeKHR

- VUID-VkSwapchainPresentScalingCreateInfoKHR-swapchainMaintenance1-10154
  If the swapchainMaintenance1 feature is not enabled, then scalingBehavior, presentGravityX, and presentGravityY **must** be 0

Valid Usage (Implicit)

- VUID-VkSwapchainPresentScalingCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_SCALING_CREATE_INFO_KHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-parameter
  If scalingBehavior is not 0, scalingBehavior **must** be a valid combination of VkPresentScalingFlagBitsKHR values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-parameter
  If presentGravityX is not 0, presentGravityX **must** be a valid combination of VkPresentGravityFlagBitsKHR values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-parameter
  If presentGravityY is not 0, presentGravityY **must** be a valid combination of VkPresentGravityFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

To destroy a swapchain object call:

```
// Provided by VK_KHR_swapchain
void vkDestroySwapchainKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the VkDevice associated with swapchain.
- swapchain is the swapchain to destroy.
- pAllocator is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see Memory Allocation).

The application **must** not destroy a swapchain until after completion of all outstanding operations on images that were acquired from the swapchain. swapchain and all associated VkImage handles are

destroyed, and **must** not be acquired or used any more by the application. The memory of each VkImage will only be freed after that image is no longer used by the presentation engine. For example, if one image of the swapchain is being displayed in a window, the memory for that image **may** not be freed until the window is destroyed, or another swapchain is created for the window. Destroying the swapchain does not invalidate the parent VkSurfaceKHR, and a new swapchain **can** be created with it.

When a swapchain associated with a display surface is destroyed, if the image most recently presented to the display surface is from the swapchain being destroyed, then either any display resources modified by presenting images from any swapchain associated with the display surface **must** be reverted by the implementation to their state prior to the first present performed on one of these swapchains, or such resources **must** be left in their current state.

If swapchain has exclusive full-screen access, it is released before the swapchain is destroyed.

Valid Usage

- VUID-vkDestroySwapchainKHR-swapchain-01282
  All uses of presentable images acquired from swapchain **must** have completed execution
- VUID-vkDestroySwapchainKHR-swapchain-01283
  If VkAllocationCallbacks were provided when swapchain was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySwapchainKHR-swapchain-01284
  If no VkAllocationCallbacks were provided when swapchain was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroySwapchainKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkDestroySwapchainKHR-swapchain-parameter
  If swapchain is not VK_NULL_HANDLE, swapchain **must** be a valid VkSwapchainKHR handle
- VUID-vkDestroySwapchainKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroySwapchainKHR-swapchain-parent
  If swapchain is a valid handle, it **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to swapchain **must** be externally synchronized

When the VK_KHR_display_swapchain extension is enabled, multiple swapchains that share presentable images are created by calling:

```
// Provided by VK_KHR_display_swapchain
VkResult vkCreateSharedSwapchainsKHR(
    VkDevice                                    device,
    uint32_t                                    swapchainCount,
    const VkSwapchainCreateInfoKHR*             pCreateInfos,
    const VkAllocationCallbacks*                pAllocator,
    VkSwapchainKHR*                             pSwapchains);
```

- device is the device to create the swapchains for.
- swapchainCount is the number of swapchains to create.
- pCreateInfos is a pointer to an array of VkSwapchainCreateInfoKHR structures specifying the parameters of the created swapchains.
- pAllocator is the allocator used for host memory allocated for the swapchain objects when there is no more specific allocator available (see Memory Allocation).
- pSwapchains is a pointer to an array of VkSwapchainKHR handles in which the created swapchain objects will be returned.

vkCreateSharedSwapchainsKHR is similar to vkCreateSwapchainKHR, except that it takes an array of VkSwapchainCreateInfoKHR structures, and returns an array of swapchain objects.

The swapchain creation parameters that affect the properties and number of presentable images **must** match between all the swapchains. If the displays used by any of the swapchains do not use the same presentable image layout or are incompatible in a way that prevents sharing images, swapchain creation will fail with the result code VK_ERROR_INCOMPATIBLE_DISPLAY_KHR. If any error occurs, no swapchains will be created. Images presented to multiple swapchains **must** be re-acquired from all of them before being modified. After destroying one or more of the swapchains, the remaining swapchains and the presentable images **can** continue to be used.

Valid Usage (Implicit)

- VUID-vkCreateSharedSwapchainsKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateSharedSwapchainsKHR-pCreateInfos-parameter
  pCreateInfos **must** be a valid pointer to an array of swapchainCount valid VkSwapchainCreateInfoKHR structures
- VUID-vkCreateSharedSwapchainsKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSharedSwapchainsKHR-pSwapchains-parameter
  pSwapchains **must** be a valid pointer to an array of swapchainCount VkSwapchainKHR handles

- VUID-vkCreateSharedSwapchainsKHR-device-queuecount
  The device **must** have been created with at least 1 queue
- VUID-vkCreateSharedSwapchainsKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_INCOMPATIBLE_DISPLAY_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To obtain the array of presentable images associated with a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkGetSwapchainImagesKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint32_t*                                   pSwapchainImageCount,
    VkImage*                                    pSwapchainImages);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.
- `pSwapchainImageCount` is a pointer to an integer related to the number of presentable images available or queried, as described below.
- `pSwapchainImages` is either `NULL` or a pointer to an array of `VkImage` handles.

If `pSwapchainImages` is `NULL`, then the number of presentable images for `swapchain` is returned in `pSwapchainImageCount`. Otherwise, `pSwapchainImageCount` **must** point to a variable set by the application to the number of elements in the `pSwapchainImages` array, and on return the variable is overwritten with the number of structures actually written to `pSwapchainImages`. If the value of `pSwapchainImageCount` is less than the number of presentable images for `swapchain`, at most `pSwapchainImageCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available presentable images were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainImagesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainImagesKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainImagesKHR-pSwapchainImageCount-parameter
  `pSwapchainImageCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetSwapchainImagesKHR-pSwapchainImages-parameter
  If the value referenced by `pSwapchainImageCount` is not `0`, and `pSwapchainImages` is not `NULL`, `pSwapchainImages` **must** be a valid pointer to an array of `pSwapchainImageCount` VkImage handles
- VUID-vkGetSwapchainImagesKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

NOTE

By knowing all presentable images used in the swapchain, the application can create command buffers that reference these images prior to entering its main rendering loop. However, command buffers are not allowed to reference presentable images created with VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR until their indices have been returned from vkAcquireNextImageKHR at least once.

Images returned by vkGetSwapchainImagesKHR are fully backed by memory before they are passed to the application, as if they are each bound completely and contiguously to a single `VkDeviceMemory` object , unless the swapchain is created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag . All presentable images are initially in the VK_IMAGE_LAYOUT_UNDEFINED layout, thus before using presentable images, the application **must** transition them to a valid layout for the intended use.

Further, the lifetime of presentable images is controlled by the implementation, so applications **must** not destroy a presentable image. See vkDestroySwapchainKHR for further details on the

lifetime of presentable images.

Images **can** also be created by using vkCreateImage with VkImageSwapchainCreateInfoKHR and bound to swapchain memory using vkBindImageMemory2 with VkBindImageMemorySwapchainInfoKHR. These images **can** be used anywhere swapchain images are used, and are useful in logical devices with multiple physical devices to create peer memory bindings of swapchain memory. These images and bindings have no effect on what memory is presented. Unlike images retrieved from vkGetSwapchainImagesKHR, these images **must** be destroyed with vkDestroyImage.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_KHR_swapchain
VkResult vkAcquireNextImageKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint64_t                                    timeout,
    VkSemaphore                                 semaphore,
    VkFence                                     fence,
    uint32_t*                                   pImageIndex);
```

- device is the device associated with swapchain.
- swapchain is the non-retired swapchain from which an image is being acquired.
- timeout specifies how long the function waits, in nanoseconds, if no image is available.
- semaphore is VK_NULL_HANDLE or a semaphore defining a semaphore signal operation.
- fence is VK_NULL_HANDLE or a fence to signal.
- pImageIndex is a pointer to a uint32_t in which the index of the next image to use (i.e. an index into the array of images returned by vkGetSwapchainImagesKHR) is returned.

If the swapchain has been created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag, the image whose index is returned in pImageIndex will be fully backed by memory before this call returns to the application, as if it is bound completely and contiguously to a single VkDeviceMemory object.

If semaphore defines a semaphore signal operation, its first synchronization scope includes acquisition of the image.

Valid Usage

- VUID-vkAcquireNextImageKHR-swapchain-01285
  swapchain **must** not be in the retired state
- VUID-vkAcquireNextImageKHR-semaphore-01286
  If semaphore is not VK_NULL_HANDLE, it **must** be unsignaled
- VUID-vkAcquireNextImageKHR-semaphore-01779
  If semaphore is not VK_NULL_HANDLE, it **must** not have any uncompleted signal or wait

operations pending

- VUID-vkAcquireNextImageKHR-fence-01287
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-vkAcquireNextImageKHR-fence-10066
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkAcquireNextImageKHR-semaphore-01780
  `semaphore` and `fence` **must** not both be equal to VK_NULL_HANDLE
- VUID-vkAcquireNextImageKHR-surface-07783
  If forward progress cannot be guaranteed for the `surface` used to create the `swapchain` member of `pAcquireInfo`, `timeout` **must** not be `UINT64_MAX`
- VUID-vkAcquireNextImageKHR-semaphore-03265
  `semaphore` **must** have a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY

Valid Usage (Implicit)

- VUID-vkAcquireNextImageKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireNextImageKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkAcquireNextImageKHR-semaphore-parameter
  If `semaphore` is not VK_NULL_HANDLE, `semaphore` **must** be a valid VkSemaphore handle
- VUID-vkAcquireNextImageKHR-fence-parameter
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be a valid VkFence handle
- VUID-vkAcquireNextImageKHR-pImageIndex-parameter
  `pImageIndex` **must** be a valid pointer to a `uint32_t` value
- VUID-vkAcquireNextImageKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`
- VUID-vkAcquireNextImageKHR-semaphore-parent
  If `semaphore` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkAcquireNextImageKHR-fence-parent
  If `fence` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized
- Host access to `semaphore` **must** be externally synchronized
- Host access to `fence` **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

If an image is acquired successfully, `vkAcquireNextImageKHR` **must** either return VK_SUCCESS or VK_SUBOPTIMAL_KHR. The implementation **may** return VK_SUBOPTIMAL_KHR if the swapchain no longer matches the surface properties exactly, but **can** still be used for presentation.

When successful, `vkAcquireNextImageKHR` acquires a presentable image from `swapchain` that an application **can** use, and sets `pImageIndex` to the index of that image within the swapchain. The presentation engine **may** not have finished reading from the image at the time it is acquired, so the application **must** use `semaphore` and/or `fence` to ensure that the image layout and contents are not modified until the presentation engine reads have completed. Once `vkAcquireNextImageKHR` successfully acquires an image, the semaphore signal operation referenced by `semaphore`, if not VK_NULL_HANDLE, and the fence signal operation referenced by `fence`, if not VK_NULL_HANDLE, are submitted for execution. If `vkAcquireNextImageKHR` does not successfully acquire an image, `semaphore` and `fence` are unaffected. The order in which images are acquired is implementation-dependent, and **may** be different than the order the images were presented.

If `timeout` is zero, then `vkAcquireNextImageKHR` does not wait, and will either successfully acquire an image, or fail and return VK_NOT_READY if no image is available.

If the specified timeout period expires before an image is acquired, `vkAcquireNextImageKHR` returns VK_TIMEOUT. If `timeout` is `UINT64_MAX`, the timeout period is treated as infinite, and `vkAcquireNextImageKHR` will block until an image is acquired or an error occurs.

Let S be the number of images in `swapchain`. If `swapchain` is created with VkSwapchainPresentModesCreateInfoKHR, let M be the maximum of the values in VkSurfaceCapabilitiesKHR::`minImageCount` when queried with each present mode in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` in VkSurfacePresentModeKHR.

Otherwise, let M be the value of VkSurfaceCapabilitiesKHR::`minImageCount` without a VkSurfacePresentModeKHR as part of the query input.

`vkAcquireNextImageKHR` **should** not be called if the number of images that the application has currently acquired is greater than S-M. If `vkAcquireNextImageKHR` is called when the number of images that the application has currently acquired is less than or equal to S-M, `vkAcquireNextImageKHR` **must** return in finite time with an allowed VkResult code.

> **NOTE** Returning a result in finite time guarantees that the implementation cannot deadlock an application, or suspend its execution indefinitely with correct API usage. Acquiring too many images at once may block indefinitely, which is covered by valid usage when attempting to use `UINT64_MAX`. For example, a scenario here is when a compositor holds on to images which are currently being presented, and there are not any vacant images left to be acquired.

If the swapchain images no longer match native surface properties, either VK_SUBOPTIMAL_KHR or VK_ERROR_OUT_OF_DATE_KHR **must** be returned. If VK_ERROR_OUT_OF_DATE_KHR is returned, no image is acquired and attempts to present previously acquired images to the swapchain will also fail with VK_ERROR_OUT_OF_DATE_KHR. Applications need to create a new swapchain for the surface to continue presenting if VK_ERROR_OUT_OF_DATE_KHR is returned.

> **NOTE** VK_SUBOPTIMAL_KHR **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain in this state, or to re-create the swapchain to better match the platform surface properties.

If device loss occurs (see Lost Device) before the timeout has expired, `vkAcquireNextImageKHR` **must** return in finite time with either one of the allowed success codes, or VK_ERROR_DEVICE_LOST.

If `semaphore` is not VK_NULL_HANDLE, the semaphore **must** be unsignaled, with no signal or wait operations pending. It will become signaled when the application **can** use the image.

> **NOTE** Use of `semaphore` allows rendering operations to be recorded and submitted before the presentation engine has completed its use of the image.

If `fence` is not equal to VK_NULL_HANDLE, the fence **must** be unsignaled, with no signal operations pending. It will become signaled when the application **can** use the image.

> **NOTE** Applications **should** not rely on `vkAcquireNextImageKHR` blocking in order to meter their rendering speed. The implementation **may** return from this function immediately regardless of how many presentation requests are queued, and regardless of when queued presentation requests will complete relative to the call. Instead, applications **can** use `fence` to meter their frame generation work to match the presentation rate.

An application **must** wait until either the `semaphore` or `fence` is signaled before accessing the image's data.

NOTE

When the presentable image will be accessed by some stage S, the recommended idiom for ensuring correct synchronization is:

- The VkSubmitInfo used to submit the image layout transition for execution includes vkAcquireNextImageKHR::semaphore in its pWaitSemaphores member, with the corresponding element of pWaitDstStageMask including S.
- The synchronization command that performs any necessary image layout transition includes S in both the srcStageMask and dstStageMask.

After a successful return, the image indicated by pImageIndex and its data will be unmodified compared to when it was presented.

NOTE

Exclusive ownership of presentable images corresponding to a swapchain created with VK_SHARING_MODE_EXCLUSIVE as defined in Resource Sharing is not altered by a call to vkAcquireNextImageKHR. That means upon the first acquisition from such a swapchain presentable images are not owned by any queue family, while at subsequent acquisitions the presentable images remain owned by the queue family the image was previously presented on.

The possible return values for vkAcquireNextImageKHR depend on the timeout provided:

- VK_SUCCESS is returned if an image became available.
- VK_ERROR_SURFACE_LOST_KHR is returned if the surface becomes no longer available.
- VK_NOT_READY is returned if timeout is zero and no image was available.
- VK_TIMEOUT is returned if timeout is greater than zero and less than UINT64_MAX, and no image became available within the time allowed.
- VK_SUBOPTIMAL_KHR **may** be returned if an image became available, and the swapchain no longer matches the surface properties exactly, but **can** still be used to present to the surface successfully.

NOTE

This **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain indefinitely or temporarily in this state, or to re-create the swapchain to better match the platform surface properties.

- VK_ERROR_OUT_OF_DATE_KHR is returned if the surface has changed in such a way that it is no longer compatible with the swapchain, and further presentation requests using the swapchain will fail. Applications **must** query the new surface properties and recreate their swapchain if they wish to continue presenting to the surface.

If the native surface and presented image sizes no longer match, presentation **may** fail unless the swapchain is created with a non-zero value in VkSwapchainPresentScalingCreateInfoKHR ::scalingBehavior . If presentation does succeed, the mapping from the presented image to the native surface is defined by the VkSwapchainPresentScalingCreateInfoKHR structure if provided. Otherwise it is implementation-defined. It is the application's responsibility to detect surface size

changes and react appropriately. If presentation fails because of a mismatch in the surface and presented image sizes, a VK_ERROR_OUT_OF_DATE_KHR error will be returned.

NOTE

For example, consider a 4x3 window/surface that gets resized to be 3x4 (taller than wider). On some window systems, the portion of the window/surface that was previously and still is visible (the 3x3 part) will contain the same contents as before, while the remaining parts of the window will have undefined contents. Other window systems **may** squash/stretch the image to fill the new window size without any undefined contents, or apply some other mapping.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
VkResult vkAcquireNextImage2KHR(
    VkDevice                                    device,
    const VkAcquireNextImageInfoKHR*            pAcquireInfo,
    uint32_t*                                   pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `pAcquireInfo` is a pointer to a VkAcquireNextImageInfoKHR structure containing parameters of the acquire.
- `pImageIndex` is a pointer to a `uint32_t` value specifying the index of the next image to use.

If the `swapchain` has been created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application.

Valid Usage

- VUID-vkAcquireNextImage2KHR-surface-07784
  If forward progress cannot be guaranteed for the `surface` used to create `swapchain`, the `timeout` member of `pAcquireInfo` **must** not be `UINT64_MAX`

Valid Usage (Implicit)

- VUID-vkAcquireNextImage2KHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireNextImage2KHR-pAcquireInfo-parameter
  `pAcquireInfo` **must** be a valid pointer to a valid VkAcquireNextImageInfoKHR structure
- VUID-vkAcquireNextImage2KHR-pImageIndex-parameter
  `pImageIndex` **must** be a valid pointer to a `uint32_t` value

Return Codes

Success

- VK_NOT_READY
- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkAcquireNextImageInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkAcquireNextImageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint64_t           timeout;
    VkSemaphore        semaphore;
    VkFence            fence;
    uint32_t           deviceMask;
} VkAcquireNextImageInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is a non-retired swapchain from which an image is acquired.
- `timeout` specifies how long the function waits, in nanoseconds, if no image is available.
- `semaphore` is VK_NULL_HANDLE or a semaphore that defines a semaphore signal operation.
- `fence` is VK_NULL_HANDLE or a fence to signal.
- `deviceMask` is a mask of physical devices for which the swapchain image will be ready to use when the semaphore or fence is signaled.

If vkAcquireNextImageKHR is used, the device mask is considered to include all physical devices in the logical device.

NOTE

vkAcquireNextImage2KHR signals at most one semaphore, even if the application requests waiting for multiple physical devices to be ready via the `deviceMask`. However, only a single physical device **can** wait on that semaphore, since the semaphore becomes unsignaled when the wait succeeds. For other physical devices to wait for the image to be ready, it is necessary for the application to submit semaphore signal operation(s) to that first physical device to signal additional semaphore(s) after the wait succeeds, which the other physical device(s) **can** wait upon.

Valid Usage

- VUID-VkAcquireNextImageInfoKHR-swapchain-01675
  `swapchain` **must** not be in the retired state
- VUID-VkAcquireNextImageInfoKHR-semaphore-01288
  If `semaphore` is not VK_NULL_HANDLE, it **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-semaphore-01781
  If `semaphore` is not VK_NULL_HANDLE, it **must** not have any uncompleted signal or wait operations pending
- VUID-VkAcquireNextImageInfoKHR-fence-01289
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-fence-10067
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-VkAcquireNextImageInfoKHR-semaphore-01782
  `semaphore` and `fence` **must** not both be equal to VK_NULL_HANDLE
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01290
  `deviceMask` **must** be a valid device mask
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01291
  `deviceMask` **must** not be zero
- VUID-VkAcquireNextImageInfoKHR-semaphore-03266
  `semaphore` **must** have a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY

Valid Usage (Implicit)

- VUID-VkAcquireNextImageInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR
- VUID-VkAcquireNextImageInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkAcquireNextImageInfoKHR-swapchain-parameter

`swapchain` **must** be a valid VkSwapchainKHR handle

- VUID-VkAcquireNextImageInfoKHR-semaphore-parameter
  If `semaphore` is not VK_NULL_HANDLE, `semaphore` **must** be a valid VkSemaphore handle
- VUID-VkAcquireNextImageInfoKHR-fence-parameter
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be a valid VkFence handle
- VUID-VkAcquireNextImageInfoKHR-commonparent
  Each of `fence`, `semaphore`, and `swapchain` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized
- Host access to `semaphore` **must** be externally synchronized
- Host access to `fence` **must** be externally synchronized

After queueing all rendering commands and transitioning the image to the correct layout, to queue an image for presentation, call:

```
// Provided by VK_KHR_swapchain
VkResult vkQueuePresentKHR(
    VkQueue                                     queue,
    const VkPresentInfoKHR*                     pPresentInfo);
```

- `queue` is a queue that is capable of presentation to the target surface's platform on the same device as the image's swapchain.
- `pPresentInfo` is a pointer to a VkPresentInfoKHR structure specifying parameters of the presentation.

NOTE There is no requirement for an application to present images in the same order that they were acquired - applications can arbitrarily present any image that is currently acquired.

NOTE The origin of the native orientation of the surface coordinate system is not specified in the Vulkan specification; it depends on the platform. For most platforms the origin is by default upper-left, meaning the pixel of the presented VkImage at coordinates (0,0) would appear at the upper left pixel of the platform surface (assuming VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR, and the display standing the right way up).

The result codes VK_ERROR_OUT_OF_DATE_KHR and VK_SUBOPTIMAL_KHR have the same meaning when returned by `vkQueuePresentKHR` as they do when returned by `vkAcquireNextImageKHR`. If any `swapchain` member of `pPresentInfo` was created with VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT,

VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT will be returned if that swapchain does not have exclusive full-screen access, possibly for implementation-specific reasons outside of the application's control. If multiple swapchains are presented, the result code is determined by applying the following rules in order:

- If the device is lost, VK_ERROR_DEVICE_LOST is returned.
- If any of the target surfaces are no longer available the error VK_ERROR_SURFACE_LOST_KHR is returned.
- If any of the presents would have a result of VK_ERROR_OUT_OF_DATE_KHR if issued separately then VK_ERROR_OUT_OF_DATE_KHR is returned.
- If any of the presents would have a result of VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT if issued separately then VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT is returned.
- If any of the presents would have a result of VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT if issued separately then VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT is returned.
- If any of the presents would have a result of VK_SUBOPTIMAL_KHR if issued separately then VK_SUBOPTIMAL_KHR is returned.
- Otherwise VK_SUCCESS is returned.

Any writes to memory backing the images referenced by the `pImageIndices` and `pSwapchains` members of `pPresentInfo`, that are available before vkQueuePresentKHR is executed, are automatically made visible to the read access performed by the presentation engine. This automatic visibility operation for an image happens-after the semaphore wait operation, and happens-before the presentation engine accesses the image.

Presentation is a read-only operation that will not affect the content of the presentable images. Upon reacquiring the image and transitioning it away from the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR layout, the contents will be the same as they were prior to transitioning the image to the present source layout and presenting it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

Calls to `vkQueuePresentKHR` **may** block, but **must** return in finite time. The processing of the presentation happens in issue order with other queue operations, but semaphores **must** be used to ensure that prior rendering and other commands in the specified queue complete before the presentation begins. The presentation command itself does not delay processing of subsequent commands on the queue. However, presentation requests sent to a particular queue are always performed in order. Exact presentation timing is controlled by the semantics of the presentation engine and native platform in use.

If an image is presented to a swapchain created from a display surface, the mode of the associated display will be updated, if necessary, to match the mode specified when creating the display surface. The mode switch and presentation of the specified image will be performed as one atomic operation.

Queueing an image for presentation defines a set of *queue operations*, including waiting on the semaphores and submitting a presentation request to the presentation engine. However, the scope

of this set of queue operations does not include the actual processing of the image by the presentation engine.

If vkQueuePresentKHR fails to enqueue the corresponding set of queue operations, it **may** return VK_ERROR_OUT_OF_HOST_MEMORY or VK_ERROR_OUT_OF_DEVICE_MEMORY. If it does, the implementation **must** ensure that the state and contents of any resources or synchronization primitives referenced are unaffected by the call or its failure.

If vkQueuePresentKHR fails in such a way that the implementation is unable to make that guarantee, the implementation **must** return VK_ERROR_DEVICE_LOST.

However, if the presentation request is rejected by the presentation engine with an error VK_ERROR_OUT_OF_DATE_KHR, VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT, VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT, or VK_ERROR_SURFACE_LOST_KHR, the set of queue operations is still considered to be enqueued and thus any semaphore wait operation specified in VkPresentInfoKHR will execute when the corresponding queue operation is complete.

vkQueuePresentKHR releases the acquisition of the images referenced by pImageIndices. The queue family corresponding to the queue vkQueuePresentKHR is executed on **must** have ownership of the presented images as defined in Resource Sharing. vkQueuePresentKHR does not alter the queue family ownership, but the presented images **must** not be used again before they have been reacquired using vkAcquireNextImageKHR.

NOTE The application **can** continue to present any acquired images from a retired swapchain as long as the swapchain has not entered a state that causes vkQueuePresentKHR to return VK_ERROR_OUT_OF_DATE_KHR.

Valid Usage

- VUID-vkQueuePresentKHR-pSwapchains-01292
  Each element of pSwapchains member of pPresentInfo **must** be a swapchain that is created for a surface for which presentation is supported from queue as determined using a call to vkGetPhysicalDeviceSurfaceSupportKHR
- VUID-vkQueuePresentKHR-pSwapchains-01293
  If more than one member of pSwapchains was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same display mode
- VUID-vkQueuePresentKHR-pSwapchains-10285
  If more than one member of pSwapchains was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same stereoType
- VUID-vkQueuePresentKHR-pWaitSemaphores-01294
  When a semaphore wait operation referring to a binary semaphore defined by the elements of the pWaitSemaphores member of pPresentInfo executes on queue, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueuePresentKHR-pWaitSemaphores-03267
  All elements of the pWaitSemaphores member of pPresentInfo **must** be created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY

- VUID-vkQueuePresentKHR-pWaitSemaphores-03268
  All elements of the `pWaitSemaphores` member of `pPresentInfo` **must** reference a semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueuePresentKHR-queue-parameter
  `queue` **must** be a valid VkQueue handle
- VUID-vkQueuePresentKHR-pPresentInfo-parameter
  `pPresentInfo` **must** be a valid pointer to a valid VkPresentInfoKHR structure

Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPresentInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkPresentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 waitSemaphoreCount;
    const VkSemaphore*       pWaitSemaphores;
    uint32_t                 swapchainCount;
    const VkSwapchainKHR*    pSwapchains;
    const uint32_t*          pImageIndices;
    VkResult*                pResults;
} VkPresentInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- waitSemaphoreCount is the number of semaphores to wait for before issuing the present request. The number **may** be zero.
- pWaitSemaphores is NULL or a pointer to an array of VkSemaphore objects with waitSemaphoreCount entries, and specifies the semaphores to wait for before issuing the present request.
- swapchainCount is the number of swapchains being presented to by this command.
- pSwapchains is a pointer to an array of VkSwapchainKHR objects with swapchainCount entries.
- pImageIndices is a pointer to an array of indices into the array of each swapchain's presentable images, with swapchainCount entries. Each entry in this array identifies the image to present on the corresponding entry in the pSwapchains array.
- pResults is a pointer to an array of VkResult typed elements with swapchainCount entries. Applications that do not need per-swapchain results **can** use NULL for pResults. If non-NULL, each entry in pResults will be set to the VkResult for presenting the swapchain corresponding to the same index in pSwapchains.

Before an application **can** present an image, the image's layout **must** be transitioned to the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR layout, or for a shared presentable image the VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR layout.

NOTE

When transitioning the image to the appropriate layout, there is no need to delay subsequent processing, or perform any visibility operations (as vkQueuePresentKHR performs automatic visibility operations). To achieve this, the dstAccessMask member of the VkImageMemoryBarrier **should** be 0, and the dstStageMask parameter **should** be VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT.

The second synchronization scope of each semaphore wait operation defined by this structure includes presentation of each image indicated by pSwapchains and pImageIndices.

Valid Usage

- VUID-VkPresentInfoKHR-pSwapchain-09231
  Elements of `pSwapchains` **must** be unique
- VUID-VkPresentInfoKHR-pImageIndices-01430
  Each element of `pImageIndices` **must** be the index of a presentable image acquired from the swapchain specified by the corresponding element of the `pSwapchains` array, and the presented image subresource **must** be in the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR or VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR layout at the time the operation is executed on a `VkDevice`
- VUID-VkPresentInfoKHR-pNext-06235
  If a VkPresentIdKHR structure is included in the `pNext` chain, and the `presentId` feature is not enabled, each `presentIds` entry in that structure **must** be NULL
- VUID-VkPresentInfoKHR-swapchainMaintenance1-10158
  If the `swapchainMaintenance1` feature is not enabled, then the `pNext` chain **must** not include a VkSwapchainPresentFenceInfoKHR structure
- VUID-VkPresentInfoKHR-pSwapchains-09199
  If any element of the `pSwapchains` array has been created with VkSwapchainPresentModesCreateInfoKHR, all of the elements of this array **must** be created with VkSwapchainPresentModesCreateInfoKHR
- VUID-VkPresentInfoKHR-pNext-09759
  If the `pNext` chain of this structure includes a VkFrameBoundaryTensorsARM structure then it **must** also include a VkFrameBoundaryEXT structure
- VUID-VkPresentInfoKHR-pNext-10821
  If a VkPresentId2KHR structure is included in the `pNext` chain, and the `presentId2` feature is not enabled, each `presentIds` entry in that structure **must** be zero
- VUID-VkPresentInfoKHR-presentId2Supported-10822
  If a VkPresentId2KHR structure is included and contains non-zero presentIds, `presentId2Supported` **must** be VK_TRUE in the VkSurfaceCapabilitiesPresentId2KHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for the `surface`

Valid Usage (Implicit)

- VUID-VkPresentInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_INFO_KHR
- VUID-VkPresentInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDeviceGroupPresentInfoKHR, VkDisplayPresentInfoKHR, VkFrameBoundaryEXT, VkFrameBoundaryTensorsARM, VkPresentFrameTokenGGP, VkPresentId2KHR, VkPresentIdKHR, VkPresentRegionsKHR, VkPresentTimesInfoGOOGLE, VkPresentTimingsInfoEXT, VkSetPresentConfigNV, VkSwapchainPresentFenceInfoKHR, or VkSwapchainPresentModeInfoKHR

- VUID-VkPresentInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPresentInfoKHR-pWaitSemaphores-parameter
  If `waitSemaphoreCount` is not `0`, `pWaitSemaphores` **must** be a valid pointer to an array of `waitSemaphoreCount` valid VkSemaphore handles
- VUID-VkPresentInfoKHR-pSwapchains-parameter
  `pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid VkSwapchainKHR handles
- VUID-VkPresentInfoKHR-pImageIndices-parameter
  `pImageIndices` **must** be a valid pointer to an array of `swapchainCount` `uint32_t` values
- VUID-VkPresentInfoKHR-pResults-parameter
  If `pResults` is not `NULL`, `pResults` **must** be a valid pointer to an array of `swapchainCount` VkResult values
- VUID-VkPresentInfoKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`
- VUID-VkPresentInfoKHR-commonparent
  Both of the elements of `pSwapchains`, and the elements of `pWaitSemaphores` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to each member of `pWaitSemaphores` **must** be externally synchronized
- Host access to each member of `pSwapchains` **must** be externally synchronized

When the `VK_KHR_incremental_present` extension is enabled, additional fields **can** be specified that allow an application to specify that only certain rectangular regions of the presentable images of a swapchain are changed. This is an optimization hint that a presentation engine **may** use to only update the region of a surface that is actually changing. The application still **must** ensure that all pixels of a presented image contain the desired values, in case the presentation engine ignores this hint. An application **can** provide this hint by adding a `VkPresentRegionsKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentRegionsKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionsKHR {
    VkStructureType              sType;
    const void*                  pNext;
    uint32_t                     swapchainCount;
    const VkPresentRegionKHR*    pRegions;
} VkPresentRegionsKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pRegions` is `NULL` or a pointer to an array of `VkPresentRegionKHR` elements with `swapchainCount` entries. If not `NULL`, each element of `pRegions` contains the region that has changed since the last present to the swapchain in the corresponding entry in the `VkPresentInfoKHR`::`pSwapchains` array.

Valid Usage

- VUID-VkPresentRegionsKHR-swapchainCount-01260
  `swapchainCount` **must** be the same value as `VkPresentInfoKHR`::`swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentRegionsKHR` structure

Valid Usage (Implicit)

- VUID-VkPresentRegionsKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR
- VUID-VkPresentRegionsKHR-pRegions-parameter
  If `pRegions` is not `NULL`, `pRegions` **must** be a valid pointer to an array of `swapchainCount` valid VkPresentRegionKHR structures
- VUID-VkPresentRegionsKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

For a given image and swapchain, the region to present is specified by the `VkPresentRegionKHR` structure, which is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionKHR {
    uint32_t                    rectangleCount;
    const VkRectLayerKHR*       pRectangles;
} VkPresentRegionKHR;
```

- `rectangleCount` is the number of rectangles in `pRectangles`, or zero if the entire image has changed and should be presented.
- `pRectangles` is either `NULL` or a pointer to an array of `VkRectLayerKHR` structures. The `VkRectLayerKHR` structure is the framebuffer coordinates, plus layer, of a portion of a presentable

image that has changed and **must** be presented. If non-NULL, each entry in pRectangles is a rectangle of the given image that has changed since the last image was presented to the given swapchain. The rectangles **must** be specified relative to VkSurfaceCapabilitiesKHR ::currentTransform, regardless of the swapchain's preTransform. The presentation engine will apply the preTransform transformation to the rectangles, along with any further transformation it applies to the image content.

Valid Usage (Implicit)

- VUID-VkPresentRegionKHR-pRectangles-parameter
  If rectangleCount is not 0, and pRectangles is not NULL, pRectangles **must** be a valid pointer to an array of rectangleCount valid VkRectLayerKHR structures

The VkRectLayerKHR structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkRectLayerKHR {
    VkOffset2D    offset;
    VkExtent2D    extent;
    uint32_t      layer;
} VkRectLayerKHR;
```

- offset is the origin of the rectangle, in pixels.
- extent is the size of the rectangle, in pixels.
- layer is the layer of the image. For images with only one layer, the value of layer **must** be 0.

Some platforms allow the size of a surface to change, and then scale the pixels of the image to fit the surface. VkRectLayerKHR specifies pixels of the swapchain's image(s), which will be constant for the life of the swapchain.

Valid Usage

- VUID-VkRectLayerKHR-offset-04864
  The sum of offset and extent, after being transformed according to the preTransform member of the VkSwapchainCreateInfoKHR structure, **must** be no greater than the imageExtent member of the VkSwapchainCreateInfoKHR structure passed to vkCreateSwapchainKHR
- VUID-VkRectLayerKHR-layer-01262
  layer **must** be less than the imageArrayLayers member of the VkSwapchainCreateInfoKHR structure passed to vkCreateSwapchainKHR

When the VK_KHR_display_swapchain extension is enabled, additional fields **can** be specified when presenting an image to a swapchain by setting VkPresentInfoKHR::pNext to point to a VkDisplayPresentInfoKHR structure.

The VkDisplayPresentInfoKHR structure is defined as:

```
// Provided by VK_KHR_display_swapchain
typedef struct VkDisplayPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkRect2D           srcRect;
    VkRect2D           dstRect;
    VkBool32           persistent;
} VkDisplayPresentInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- srcRect is a rectangular region of pixels to present. It **must** be a subset of the image being presented. If VkDisplayPresentInfoKHR is not specified, this region will be assumed to be the entire presentable image.
- dstRect is a rectangular region within the visible region of the swapchain's display mode. If VkDisplayPresentInfoKHR is not specified, this region will be assumed to be the entire visible region of the swapchain's mode. If the specified rectangle is a subset of the display mode's visible region, content from display planes below the swapchain's plane will be visible outside the rectangle. If there are no planes below the swapchain's, the area outside the specified rectangle will be black. If portions of the specified rectangle are outside of the display's visible region, pixels mapping only to those portions of the rectangle will be discarded.
- persistent: If this is VK_TRUE, the display engine will enable buffered mode on displays that support it. This allows the display engine to stop sending content to the display until a new image is presented. The display will instead maintain a copy of the last presented image. This allows less power to be used, but **may** increase presentation latency. If VkDisplayPresentInfoKHR is not specified, persistent mode will not be used.

If the extent of the srcRect and dstRect are not equal, the presented pixels will be scaled accordingly.

Valid Usage

- VUID-VkDisplayPresentInfoKHR-srcRect-01257
  srcRect **must** specify a rectangular region that is a subset of the image being presented
- VUID-VkDisplayPresentInfoKHR-dstRect-01258
  dstRect **must** specify a rectangular region that is a subset of the visibleRegion parameter of the display mode the swapchain being presented uses
- VUID-VkDisplayPresentInfoKHR-persistentContent-01259
  If the persistentContent member of the VkDisplayPropertiesKHR structure returned by vkGetPhysicalDeviceDisplayPropertiesKHR for the display the present operation targets is VK_FALSE, then persistent **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-VkDisplayPresentInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR

Structure Chaining

Extends the structure

- VkPresentInfoKHR

If the `pNext` chain of VkPresentInfoKHR includes a `VkDeviceGroupPresentInfoKHR` structure, then that structure includes an array of device masks and a device group present mode.

The `VkDeviceGroupPresentInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupPresentInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    uint32_t                                 swapchainCount;
    const uint32_t*                          pDeviceMasks;
    VkDeviceGroupPresentModeFlagBitsKHR      mode;
} VkDeviceGroupPresentInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is zero or the number of elements in `pDeviceMasks`.
- `pDeviceMasks` is a pointer to an array of device masks, one for each element of VkPresentInfoKHR::`pSwapchains`.
- `mode` is a VkDeviceGroupPresentModeFlagBitsKHR value specifying the device group present mode that will be used for this present.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding physical device **must** have a presentation engine as reported by VkDeviceGroupPresentCapabilitiesKHR.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its VkDeviceGroupPresentCapabilitiesKHR::`presentMask`.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR, then each element of `pDeviceMasks`

selects which instances of the swapchain image are component-wise summed and the sum of those images is presented. If the sum in any component is outside the representable range, the value of that component is undefined. Each element of pDeviceMasks **must** have a value for which all set bits are set in one of the elements of VkDeviceGroupPresentCapabilitiesKHR::presentMask.

If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, then each element of pDeviceMasks selects which instance(s) of the swapchain images are presented. For each bit set in each element of pDeviceMasks, the corresponding physical device **must** have a presentation engine as reported by VkDeviceGroupPresentCapabilitiesKHR.

If VkDeviceGroupPresentInfoKHR is not provided or swapchainCount is zero then the masks are considered to be 1. If VkDeviceGroupPresentInfoKHR is not provided, mode is considered to be VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage

- VUID-VkDeviceGroupPresentInfoKHR-swapchainCount-01297
  swapchainCount **must** equal 0 or VkPresentInfoKHR::swapchainCount
- VUID-VkDeviceGroupPresentInfoKHR-mode-01298
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR, then each element of pDeviceMasks **must** have exactly one bit set, and the corresponding element of VkDeviceGroupPresentCapabilitiesKHR::presentMask **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-mode-01299
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR, then each element of pDeviceMasks **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its VkDeviceGroupPresentCapabilitiesKHR::presentMask
- VUID-VkDeviceGroupPresentInfoKHR-mode-01300
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR, then each element of pDeviceMasks **must** have a value for which all set bits are set in one of the elements of VkDeviceGroupPresentCapabilitiesKHR::presentMask
- VUID-VkDeviceGroupPresentInfoKHR-mode-01301
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, then for each bit set in each element of pDeviceMasks, the corresponding element of VkDeviceGroupPresentCapabilitiesKHR::presentMask **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-01302
  The value of each element of pDeviceMasks **must** be equal to the device mask passed in VkAcquireNextImageInfoKHR::deviceMask when the image index was last acquired
- VUID-VkDeviceGroupPresentInfoKHR-mode-01303
  mode **must** have exactly one bit set, and that bit **must** have been included in VkDeviceGroupSwapchainCreateInfoKHR::modes

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentInfoKHR-sType-sType

sType must be VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR

- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-parameter
  If swapchainCount is not 0, pDeviceMasks must be a valid pointer to an array of swapchainCount uint32_t values
- VUID-VkDeviceGroupPresentInfoKHR-mode-parameter
  mode must be a valid VkDeviceGroupPresentModeFlagBitsKHR value

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the presentAtAbsoluteTime or presentAtRelativeTime feature is enabled, an application **can** instruct the presentation engine to attempt to display an image at a specified time, or for a minimum duration, by including the VkPresentTimingsInfoEXT structure in the pNext chain of the VkPresentInfoKHR structure.

The VkPresentTimingsInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingsInfoEXT {
    VkStructureType                  sType;
    const void*                      pNext;
    uint32_t                         swapchainCount;
    const VkPresentTimingInfoEXT*    pTimingInfos;
} VkPresentTimingsInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pTimingInfos is NULL or a pointer to an array of VkPresentTimingInfoEXT elements with swapchainCount entries. If not NULL, each element of pTimingInfos contains timing information for the presentation of the image corresponding to the entry in the VkPresentInfoKHR::pImageIndices array.

Valid Usage

- VUID-VkPresentTimingsInfoEXT-swapchainCount-12233
  swapchainCount must be equal to VkPresentInfoKHR::swapchainCount
- VUID-VkPresentTimingsInfoEXT-pSwapchains-12234
  All swapchains in VkPresentInfoKHR::pSwapchains must have been created with the VkSwapchainCreateInfoKHR::flags field containing VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

- VUID-VkPresentTimingsInfoEXT-pSwapchains-12235
  For each member of VkPresentInfoKHR::pSwapchains, if the associated VkPresentTimingInfoEXT::targetTime is not zero, the swapchain's current present mode **must** be VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR

Valid Usage (Implicit)

- VUID-VkPresentTimingsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_TIMINGS_INFO_EXT
- VUID-VkPresentTimingsInfoEXT-pTimingInfos-parameter
  If pTimingInfos is not NULL, pTimingInfos **must** be a valid pointer to an array of swapchainCount valid VkPresentTimingInfoEXT structures
- VUID-VkPresentTimingsInfoEXT-swapchainCount-arraylength
  swapchainCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The VkPresentTimingInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkPresentTimingInfoFlagsEXT    flags;
    uint64_t                       targetTime;
    uint64_t                       timeDomainId;
    VkPresentStageFlagsEXT         presentStageQueries;
    VkPresentStageFlagsEXT         targetTimeDomainPresentStage;
} VkPresentTimingInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkPresentTimingInfoFlagBitsEXT specifying options for how to interpret the timing information.
- targetTime is zero or a value specifying the target present time or duration, in nanoseconds, of the presentation request.
- timeDomainId is the id of the time domain used to specify the absolute target present time and the timing results obtained in a subsequent vkGetPastPresentationTimingEXT call for the

current presentation request.

- `presentStageQueries` is zero or a valid VkPresentStageFlagsEXT value indicating which present stages the presentation engine will collect timing information for.
- `targetTimeDomainPresentStage` is a valid VkPresentStageFlagsEXT specifying a single present stage used to interpret `targetTime`.

If `targetTime` is not zero, the implementation attempts to align the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage of that presentation request with the time specified in `targetTime` according to the time domain used. If VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT is not set in `flags`, it indicates that the application would strictly prefer the image to not be visible before `targetTime` has lapsed.

If `targetTime` is not zero and `timeDomainId` is associated with a VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT time domain, `targetTimeDomainPresentStage` is used to specify which present stage's time domain `targetTime` is specified for. Otherwise, `targetTimeDomainPresentStage` is ignored.

If `presentStageQueries` is not zero, a slot in the swapchain's internal results queue is reserved to hold the requested present timing data until the application retrieves them. If no slots are available, or if vkSetSwapchainPresentTimingQueueSizeEXT was never called, presentation fails and returns VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT.

NOTE

Some platforms, due to hardware or system limitations, **may** not be able to accurately time `targetTime` with the actual physical event of the image becoming visible on the display. However, those timing capabilities **may** still be useful and result in improved animation quality.

As such, the `presentAtAbsoluteTime` and `presentAtRelativeTime` features do not provide a strict guarantee regarding the completion of the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage relative to the `targetTime`, and implementations **must** strive to make it as consistent and accurate as possible.

NOTE

Applications that specify an absolute present time **should** regularly rebase their calculations for their next target time on the feedback from vkGetPastPresentationTimingEXT to compensate for accumulated precision errors or potential clock drift. It is recommended that when targeting the time of a vertical blanking period, applications set VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT to allow the implementation to compensate for small precision errors that may cause an image to be displayed one refresh cycle later than intended.

Some implementations **may** not provide timing data for the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage. Applications **should** use the supported present stage nearest to it to compute a desired target presentation time.

Valid Usage

- VUID-VkPresentTimingInfoEXT-targetTime-12236
  If `targetTime` is not zero and `flags` does not contain VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT, the `presentAtAbsoluteTime` feature **must** be enabled and the `presentAtAbsoluteTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be VK_TRUE
- VUID-VkPresentTimingInfoEXT-targetTime-12237
  If `targetTime` is not zero and `flags` contains VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT, the `presentAtRelativeTime` feature **must** be enabled and the `presentAtRelativeTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be VK_TRUE
- VUID-VkPresentTimingInfoEXT-timeDomainId-12238
  If `timeDomainId` is associated with a VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT time domain, and `targetTime` is not zero, `targetTimeDomainPresentStage` **must** be a single `VkPresentStageFlagsEXT` value
- VUID-VkPresentTimingInfoEXT-timeDomainId-12400
  `timeDomainId` **must** be an id previously returned by vkGetSwapchainTimeDomainPropertiesEXT

Valid Usage (Implicit)

- VUID-VkPresentTimingInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_TIMING_INFO_EXT
- VUID-VkPresentTimingInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPresentTimingInfoEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPresentTimingInfoFlagBitsEXT values
- VUID-VkPresentTimingInfoEXT-presentStageQueries-parameter
  If `presentStageQueries` is not `0`, `presentStageQueries` **must** be a valid combination of VkPresentStageFlagBitsEXT values
- VUID-VkPresentTimingInfoEXT-targetTimeDomainPresentStage-parameter
  If `targetTimeDomainPresentStage` is not `0`, `targetTimeDomainPresentStage` **must** be a valid combination of VkPresentStageFlagBitsEXT values

Bits which **can** be set in VkPresentTimingInfoEXT::`flags`, specifying options for how to interpret timing information:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentTimingInfoFlagBitsEXT {
    VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT = 0x00000001,
    VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT = 0x00000002,
} VkPresentTimingInfoFlagBitsEXT;
```

- VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT specifies that VkPresentTimingInfoEXT::targetTime is to be interpreted as a relative time from the previous presentation's VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT stage. If the swapchain has never been used to present an image, the provided targetTime is ignored.
- VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT specifies that the application would prefer the image to be presented earlier than the time specified in VkPresentTimingInfoEXT::targetTime if that time falls within the first half of a refresh cycle. In that case, the presentation engine **may** choose to display the image at the start of that refresh cycle.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentTimingInfoFlagsEXT;
```

VkPresentTimingInfoFlagsEXT is a bitmask type for setting a mask of zero or more VkPresentTimingInfoFlagBitsEXT.

Presenting an image to the user typically involves multiple stages. Bits which **can** be set to specify present stages are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentStageFlagBitsEXT {
    VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT = 0x00000001,
    VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT = 0x00000002,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT = 0x00000004,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT = 0x00000008,
} VkPresentStageFlagBitsEXT;
```

- VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT marks the end of the set of queue operations enqueued by vkQueuePresentKHR on the provided VkQueue for a presentation request.
- VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT is the stage after which the presentation request has been dequeued from the swapchain's internal presentation request queue, if any, as specified by the present mode associated with that request.
- VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT is the stage after which data for the first pixel of the presentation request associated with the image has left the presentation engine for a display hardware.
- VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT is the stage after which a display hardware has made the first pixel visible for the presentation request associated with the image

to be presented.

NOTE	The set of queue operations delimited by VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT includes the wait for the semaphores specified in VkPresentInfoKHR::pWaitSemaphores, if any, and any work implicitly enqueued by the implementation.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentStageFlagsEXT;
```

VkPresentStageFlagsEXT is a bitmask type for setting a mask of zero or more VkPresentStageFlagBitsEXT.

When the VK_GOOGLE_display_timing extension is enabled, additional fields **can** be specified that allow an application to specify the earliest time that an image should be displayed. This allows an application to avoid stutter that is caused by an image being displayed earlier than planned. Such stuttering can occur with both fixed and variable-refresh-rate displays, because stuttering occurs when the geometry is not correctly positioned for when the image is displayed. An application **can** instruct the presentation engine that an image should not be displayed earlier than a specified time by adding a VkPresentTimesInfoGOOGLE structure to the pNext chain of the VkPresentInfoKHR structure.

The VkPresentTimesInfoGOOGLE structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimesInfoGOOGLE {
    VkStructureType                sType;
    const void*                    pNext;
    uint32_t                       swapchainCount;
    const VkPresentTimeGOOGLE*     pTimes;
} VkPresentTimesInfoGOOGLE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pTimes is NULL or a pointer to an array of VkPresentTimeGOOGLE elements with swapchainCount entries. If not NULL, each element of pTimes contains the earliest time to present the image corresponding to the entry in the VkPresentInfoKHR::pImageIndices array.

Valid Usage

- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-01247
  swapchainCount **must** be the same value as VkPresentInfoKHR::swapchainCount, where VkPresentInfoKHR is included in the pNext chain of this VkPresentTimesInfoGOOGLE structure

Valid Usage (Implicit)

- VUID-VkPresentTimesInfoGOOGLE-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_TIMES_INFO_GOOGLE
- VUID-VkPresentTimesInfoGOOGLE-pTimes-parameter
  If `pTimes` is not `NULL`, `pTimes` **must** be a valid pointer to an array of `swapchainCount` VkPresentTimeGOOGLE structures
- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The `VkPresentTimeGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimeGOOGLE {
    uint32_t    presentID;
    uint64_t    desiredPresentTime;
} VkPresentTimeGOOGLE;
```

- `presentID` is an application-provided identification value, that **can** be used with the results of vkGetPastPresentationTimingGOOGLE, in order to uniquely identify this present. In order to be useful to the application, it **should** be unique within some period of time that is meaningful to the application.
- `desiredPresentTime` specifies that the image given **should** not be displayed to the user any earlier than this time. `desiredPresentTime` is a time in nanoseconds, relative to a monotonically-increasing clock (e.g. `CLOCK_MONOTONIC` (see clock_gettime(2)) on Android and Linux). A value of zero specifies that the presentation engine **may** display the image at any time. This is useful when the application desires to provide `presentID`, but does not need a specific `desiredPresentTime`.

The `VkPresentIdKHR` structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPresentIdKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*    pPresentIds;
} VkPresentIdKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to the vkQueuePresentKHR command.
- `pPresentIds` is `NULL` or a pointer to an array of `uint64_t` with `swapchainCount` entries. If not `NULL`, each non-zero value in `pPresentIds` specifies the present id to be associated with the presentation of the swapchain with the same index in the vkQueuePresentKHR call.

For applications to be able to reference specific presentation events queued by a call to vkQueuePresentKHR, an identifier needs to be associated with them. When the `presentId` feature is enabled, applications **can** include the `VkPresentIdKHR` structure in the `pNext` chain of the VkPresentInfoKHR structure to supply identifiers.

Each VkSwapchainKHR has a presentId associated with it. This value is initially zero when the `VkSwapchainKHR` is created.

When a `VkPresentIdKHR` structure with a non-NULL `pPresentIds` is included in the `pNext` chain of a VkPresentInfoKHR structure, each `pSwapchains` entry has a presentId associated in the `pPresentIds` array at the same index as the swapchain in the `pSwapchains` array. If this presentId is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated presentId. A non-zero presentId **must** be greater than any non-zero presentId passed previously by the application for the same swapchain.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the presentId value, but implementations **should** make this as close as possible to the presentation of the first pixel in the new image to the user.

Valid Usage

- VUID-VkPresentIdKHR-swapchainCount-04998
  `swapchainCount` **must** be the same value as VkPresentInfoKHR::`swapchainCount`, where this `VkPresentIdKHR` is in the `pNext` chain of the VkPresentInfoKHR structure
- VUID-VkPresentIdKHR-presentIds-04999
  Each non-zero entry in `pPresentIds` **must** be greater than all previously submitted present ids for the associated swapchain in VkPresentInfoKHR::`pSwapchains`

Valid Usage (Implicit)

- VUID-VkPresentIdKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_ID_KHR
- VUID-VkPresentIdKHR-pPresentIds-parameter
  If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount` `uint64_t` values
- VUID-VkPresentIdKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the presentWait feature is enabled, an application **can** wait for an image to be presented to the user by first specifying a presentId for the target presentation by adding a VkPresentIdKHR structure to the pNext chain of the VkPresentInfoKHR structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait
VkResult vkWaitForPresentKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint64_t                                    presentId,
    uint64_t                                    timeout);
```

- device is the device associated with swapchain.
- swapchain is the non-retired swapchain on which an image was queued for presentation.
- presentId is the presentation presentId to wait for.
- timeout is the timeout period in units of nanoseconds. timeout is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

The call to vkWaitForPresentKHR will block until either the presentId associated with swapchain is greater than or equal to presentId, or timeout nanoseconds passes. When the swapchain becomes OUT_OF_DATE, the call will either return VK_SUCCESS (if the image was delivered to the presentation engine and may have been presented to the user) or will return early with status VK_ERROR_OUT_OF_DATE_KHR (if the image could not be presented to the user).

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the presentId value, but implementations **should** make this as close as possible to the presentation of the first pixel in the next image being presented to the user.

For VK_PRESENT_MODE_MAILBOX_KHR (or other present mode where images may be replaced in the presentation queue) any wait of this type associated with such an image **must** be signaled no later than a wait associated with the replacing image would be signaled.

As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to vkWaitForPresentKHR **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresentKHR-swapchain-04997
  `swapchain` **must** not be in the retired state
- VUID-vkWaitForPresentKHR-presentWait-06234
  The `presentWait` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkWaitForPresentKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWaitForPresentKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkWaitForPresentKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPresentId2KHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPresentId2KHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*    pPresentIds;
} VkPresentId2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to the vkQueuePresentKHR command.
- `pPresentIds` is `NULL` or a pointer to an array of uint64_t with `swapchainCount` entries. If not `NULL`, each non-zero value in `pPresentIds` specifies the present id to be associated with the presentation of the swapchain with the same index in the vkQueuePresentKHR call.

For applications to be able to reference specific presentation events queued by a call to vkQueuePresentKHR, an identifier needs to be associated with them.

When the VkSurfaceCapabilitiesPresentId2KHR surface capability is present for a surface, applications **can** include the `VkPresentId2KHR` structure in the `pNext` chain of the VkPresentInfoKHR structure to associate an identifier with each presentation request. The `pPresentIds` provides an identifier for the swapchain present at the corresponding index in VkPresentInfoKHR's `pSwapchains` array.

If this presentId is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated presentId. A non-zero presentId **must** be greater than any non-zero presentId passed previously by the application for the same swapchain.

If a non-zero presentId was provided, this may be used with vkWaitForPresent2KHR for the application to synchronize against the presentation engine's processing of the presentation request.

NOTE

The ID namespace used by this extension **must** be shared with other extensions that allow the application to provide a 64-bit monotonically increasing presentation ID, such as the original VK_KHR_present_id.

This is to allow existing extensions that depend on VK_KHR_present_id to use VK_KHR_present_id2 provided IDs without change, as well as to simplify writing future extensions that require application provided presentation IDs.

Valid Usage

- VUID-VkPresentId2KHR-swapchainCount-10818
  `swapchainCount` **must** be the same value as VkPresentInfoKHR::`swapchainCount`, where this `VkPresentId2KHR` is in the `pNext` chain of the VkPresentInfoKHR structure

- VUID-VkPresentId2KHR-presentIds-10819
  Each non-zero entry in pPresentIds **must** be greater than all previously submitted present ids for the associated swapchain in VkPresentInfoKHR::pSwapchains
- VUID-VkPresentId2KHR-None-10820
  The swapchain **must** have been created with VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR bit set in the VkSwapchainCreateFlagBitsKHR field

Valid Usage (Implicit)

- VUID-VkPresentId2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_ID_2_KHR
- VUID-VkPresentId2KHR-pPresentIds-parameter
  If pPresentIds is not NULL, pPresentIds **must** be a valid pointer to an array of swapchainCount uint64_t values
- VUID-VkPresentId2KHR-swapchainCount-arraylength
  swapchainCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the VkSurfaceCapabilitiesPresentWait2KHR surface capability is present for a given surface, an application **can** wait for an image to be presented to the user by first specifying a presentId for the target presentation by adding a VkPresentId2KHR structure to the pNext chain of the VkPresentInfoKHR structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait2
VkResult vkWaitForPresent2KHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkPresentWait2InfoKHR*                pPresentWait2Info);
```

- device is the device associated with swapchain.
- swapchain is the non-retired swapchain on which an image was queued for presentation.
- pPresentWait2Info is a pointer to a VkPresentWait2InfoKHR structure specifying the parameters of the wait.

vkWaitForPresent2KHR waits for the presentation engine to have begun presentation of the presentation request associated with the VkPresentWait2InfoKHR::presentId on swapchain, or for VkPresentWait2InfoKHR::timeout to have expired.

The wait request will complete when the timeout expires, or after the corresponding presentation request has either taken effect within the presentation engine or has been replaced without presentation.

The timing relationship between the presentation of the image to the user and the wait request completing is implementation-dependent due to variations in window system implementations.

If the `swapchain` becomes VK_ERROR_OUT_OF_DATE_KHR either before or during this call, the call **may** either return VK_SUCCESS (if the image was delivered to the presentation engine and **may** have been presented to the user) or return early with status VK_ERROR_OUT_OF_DATE_KHR (if the image could not be presented to the user).

As an exception to the normal rules for objects which are externally synchronized, the `swapchain` passed to `vkWaitForPresent2KHR` **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresent2KHR-presentWait2-10814
  The `presentWait2` feature **must** be enabled
- VUID-vkWaitForPresent2KHR-None-10815
  The VkSurfaceCapabilitiesPresentWait2KHR surface capability **must** be present for the underlying surface
- VUID-vkWaitForPresent2KHR-None-10816
  The swapchain **must** have been created with VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR bit set in the VkSwapchainCreateFlagBitsKHR field
- VUID-vkWaitForPresent2KHR-presentId-10817
  The `presentId` value **must** have been associated with a vkQueuePresentKHR request on the `swapchain` which returned a non-error value

Valid Usage (Implicit)

- VUID-vkWaitForPresent2KHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWaitForPresent2KHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkWaitForPresent2KHR-pPresentWait2Info-parameter
  `pPresentWait2Info` **must** be a valid pointer to a valid VkPresentWait2InfoKHR structure
- VUID-vkWaitForPresent2KHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When the `VK_GGP_frame_token` extension is enabled, a Google Games Platform frame token **can** be specified when presenting an image to a swapchain by adding a `VkPresentFrameTokenGGP` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentFrameTokenGGP` structure is defined as:

```
// Provided by VK_GGP_frame_token
typedef struct VkPresentFrameTokenGGP {
    VkStructureType    sType;
    const void*        pNext;
    GgpFrameToken      frameToken;
} VkPresentFrameTokenGGP;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `frameToken` is the Google Games Platform frame token.

Valid Usage

- VUID-VkPresentFrameTokenGGP-frameToken-02680

frameToken **must** be a valid GgpFrameToken

Valid Usage (Implicit)

- VUID-VkPresentFrameTokenGGP-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_FRAME_TOKEN_GGP

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The VkSwapchainPresentModeInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModeInfoKHR {
    VkStructureType            sType;
    const void*                pNext;
    uint32_t                   swapchainCount;
    const VkPresentModeKHR*    pPresentModes;
} VkSwapchainPresentModeInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModeInfoKHR
typedef VkSwapchainPresentModeInfoKHR VkSwapchainPresentModeInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pPresentModes is a list of presentation modes with swapchainCount entries.

If the pNext chain of VkPresentInfoKHR includes a VkSwapchainPresentModeInfoKHR structure, then that structure defines the presentation modes used for the current and subsequent presentation operations.

When the application changes present modes with VkSwapchainPresentModeInfoKHR, images that have already been queued for presentation will continue to be presented according to the previous present mode. The current image being queued for presentation and subsequent images will be presented according to the new present mode. The behavior during the transition between the two modes is defined as follows.

- Transition from VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR: the presentation engine updates the

shared presentable image according to the behavior of VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR.

- Transition from VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR to VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR: the presentation engine **may** update the shared presentable image or defer that to its regular refresh cycle, according to the behavior of VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.
- Transition between VK_PRESENT_MODE_FIFO_KHR and VK_PRESENT_MODE_FIFO_RELAXED_KHR: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period will follow the new mode for current and subsequent images.
- Transition from VK_PRESENT_MODE_IMMEDIATE_KHR to VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR : As all prior present requests in the VK_PRESENT_MODE_IMMEDIATE_KHR mode are applied immediately, there are no outstanding present operations in this mode, and current and subsequent images are appended to the FIFO queue and presented according to the new mode.
- Transition from VK_PRESENT_MODE_MAILBOX_KHR to VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR : Presentation in FIFO modes requires waiting for the next vertical blanking period, with VK_PRESENT_MODE_MAILBOX_KHR allowing the pending present operation to be replaced by a new one. In this case, the current present operation will replace the pending present operation and is applied according to the new mode.
- Transition from VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR to VK_PRESENT_MODE_IMMEDIATE_KHR or VK_PRESENT_MODE_MAILBOX_KHR: If the FIFO queue is empty, presentation is done according to the behavior of the new mode. If there are present operations in the FIFO queue, once the last present operation is performed based on the respective vertical blanking period, the current and subsequent updates are applied according to the new mode.
- Transition between VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR, and VK_PRESENT_MODE_FIFO_LATEST_READY_KHR: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period and dequeuing requests will follow the new mode for current and subsequent images.
- The behavior during transition between any other present modes, if possible, is implementation-defined.

Valid Usage

- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-07760
  `swapchainCount` **must** be equal to VkPresentInfoKHR::`swapchainCount`
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-07761
  Each entry in `pPresentModes` **must** be a presentation mode specified in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` when creating the entry's corresponding swapchain

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModeInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODE_INFO_KHR
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-parameter
  `pPresentModes` **must** be a valid pointer to an array of `swapchainCount` valid VkPresentModeKHR values
- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The `VkSwapchainPresentFenceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentFenceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkFence*     pFences;
} VkSwapchainPresentFenceInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentFenceInfoKHR
typedef VkSwapchainPresentFenceInfoKHR VkSwapchainPresentFenceInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pFences` is a list of fences with `swapchainCount` entries. Each entry **must** be VK_NULL_HANDLE or the handle of a fence to signal when the relevant operations on the associated swapchain have completed.

The set of *queue operations* defined by queuing an image for presentation, as well as operations performed by the presentation engine, access the payloads of objects associated with the presentation operation. The associated objects include:

- The swapchain image, its implicitly bound memory, and any other resources bound to that memory.

- The wait semaphores specified when queuing the image for presentation.

The application **can** provide a fence that the implementation will signal after all such queue operations have completed, and after the presentation engine has taken a reference to the payloads of all objects provided in `VkPresentInfoKHR` that the presentation engine accesses as part of the present operation. The fence **may** not wait for the present operation to complete. For all binary wait semaphores imported by the presentation engine using the equivalent of reference transference, as described in Importing Semaphore Payloads, this fence **must** not signal until all such semaphore payloads have been reset by the presentation engine.

The application **can** destroy the wait semaphores associated with a given presentation operation when at least one of the associated fences is signaled, and **can** destroy the swapchain when the fences associated with all past presentation requests referring to that swapchain have signaled.

Fences associated with presentations to the same swapchain on the same VkQueue **must** be signaled in the same order as the present operations.

To specify a fence for each swapchain in a present operation, include the `VkSwapchainPresentFenceInfoKHR` structure in the `pNext` chain of the VkPresentInfoKHR structure.

Valid Usage

- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-07757
  `swapchainCount` **must** be equal to VkPresentInfoKHR::`swapchainCount`
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07758
  Each element of `pFences` that is not VK_NULL_HANDLE **must** be unsignaled
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07759
  Each element of `pFences` that is not VK_NULL_HANDLE **must** not be associated with any other queue command that has not yet completed execution on that queue

Valid Usage (Implicit)

- VUID-VkSwapchainPresentFenceInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_FENCE_INFO_KHR
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-parameter
  `pFences` **must** be a valid pointer to an array of `swapchainCount` valid or VK_NULL_HANDLE VkFence handles
- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

To release images previously acquired through vkAcquireNextImage2KHR or vkAcquireNextImageKHR, call:

```
// Provided by VK_KHR_swapchain_maintenance1
VkResult vkReleaseSwapchainImagesKHR(
    VkDevice                                    device,
    const VkReleaseSwapchainImagesInfoKHR*      pReleaseInfo);
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to vkReleaseSwapchainImagesKHR
VkResult vkReleaseSwapchainImagesEXT(
    VkDevice                                    device,
    const VkReleaseSwapchainImagesInfoKHR*      pReleaseInfo);
```

- `device` is the device associated with VkReleaseSwapchainImagesInfoKHR::`swapchain`.
- `pReleaseInfo` is a pointer to a VkReleaseSwapchainImagesInfoKHR structure containing parameters of the release.

Only images that are not in use by the device **can** be released.

Releasing images is a read-only operation that will not affect the content of the released images. Upon reacquiring the image, the image contents and its layout will be the same as they were prior to releasing it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

NOTE This functionality is useful during swapchain recreation, where acquired images from the old swapchain can be released instead of presented.

Valid Usage

- VUID-vkReleaseSwapchainImagesKHR-swapchainMaintenance1-10159
  Feature `swapchainMaintenance1` **must** be enabled

Valid Usage (Implicit)

- VUID-vkReleaseSwapchainImagesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkReleaseSwapchainImagesKHR-pReleaseInfo-parameter
  `pReleaseInfo` **must** be a valid pointer to a valid VkReleaseSwapchainImagesInfoKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkReleaseSwapchainImagesInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkReleaseSwapchainImagesInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndexCount;
    const uint32_t*    pImageIndices;
} VkReleaseSwapchainImagesInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkReleaseSwapchainImagesInfoKHR
typedef VkReleaseSwapchainImagesInfoKHR VkReleaseSwapchainImagesInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchain is a swapchain to which images are being released.
- imageIndexCount is the number of image indices to be released.
- pImageIndices is a pointer to an array of indices into the array of swapchain's presentable images, with imageIndexCount entries.

Valid Usage

- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07785
  Each element of pImageIndices **must** be the index of a presentable image acquired from the swapchain specified by swapchain
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07786
  All uses of presentable images identified by elements of pImageIndices **must** have completed execution

Valid Usage (Implicit)

- VUID-VkReleaseSwapchainImagesInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RELEASE_SWAPCHAIN_IMAGES_INFO_KHR
- VUID-VkReleaseSwapchainImagesInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkReleaseSwapchainImagesInfoKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-parameter
  `pImageIndices` **must** be a valid pointer to an array of `imageIndexCount` `uint32_t` values
- VUID-VkReleaseSwapchainImagesInfoKHR-imageIndexCount-arraylength
  `imageIndexCount` **must** be greater than `0`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

40.11. HDR Metadata

This section describes how to improve color reproduction of content to better reproduce colors as seen on the display used to originally optimize the content.

To provide HDR metadata to an implementation, call:

```
// Provided by VK_EXT_hdr_metadata
void vkSetHdrMetadataEXT(
    VkDevice                                    device,
    uint32_t                                    swapchainCount,
    const VkSwapchainKHR*                       pSwapchains,
    const VkHdrMetadataEXT*                     pMetadata);
```

- `device` is the logical device where the swapchain(s) were created.
- `swapchainCount` is the number of swapchains included in `pSwapchains`.
- `pSwapchains` is a pointer to an array of `swapchainCount` VkSwapchainKHR handles.
- `pMetadata` is a pointer to an array of `swapchainCount` VkHdrMetadataEXT structures.

The metadata will be applied to the specified VkSwapchainKHR objects at the next vkQueuePresentKHR call using that VkSwapchainKHR object. The metadata will persist until a subsequent `vkSetHdrMetadataEXT` changes it.

Valid Usage (Implicit)

- VUID-vkSetHdrMetadataEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetHdrMetadataEXT-pSwapchains-parameter
  `pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid VkSwapchainKHR handles
- VUID-vkSetHdrMetadataEXT-pMetadata-parameter
  `pMetadata` **must** be a valid pointer to an array of `swapchainCount` valid VkHdrMetadataEXT structures
- VUID-vkSetHdrMetadataEXT-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`
- VUID-vkSetHdrMetadataEXT-pSwapchains-parent
  Each element of `pSwapchains` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to each member of `pSwapchains` **must** be externally synchronized

The `VkHdrMetadataEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkHdrMetadataEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkXYColorEXT       displayPrimaryRed;
    VkXYColorEXT       displayPrimaryGreen;
    VkXYColorEXT       displayPrimaryBlue;
    VkXYColorEXT       whitePoint;
    float              maxLuminance;
    float              minLuminance;
    float              maxContentLightLevel;
    float              maxFrameAverageLightLevel;
} VkHdrMetadataEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayPrimaryRed` is a VkXYColorEXT structure specifying the red primary of the display used to optimize the content.
- `displayPrimaryGreen` is a VkXYColorEXT structure specifying the green primary of the display used to optimize the content.
- `displayPrimaryBlue` is a VkXYColorEXT structure specifying the blue primary of the display used

to optimize the content.

- `whitePoint` is a VkXYColorEXT structure specifying the white-point of the display used to optimize the content.
- `maxLuminance` is the maximum luminance of the display used to optimize the content in nits.
- `minLuminance` is the minimum luminance of the display used to optimize the content in nits.
- `maxContentLightLevel` is the value in nits of the desired luminance for the brightest pixels in the displayed image.
- `maxFrameAverageLightLevel` is the value in nits of the average luminance of the frame which has the brightest average luminance anywhere in the content.

If any of the above values are unknown, they **can** be set to 0.

NOTE	The meta-data provided here is intended to be used as defined in the SMPTE 2086, CTA 861.3 and CIE 15:2004 specifications. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrMetadataEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_HDR_METADATA_EXT
- VUID-VkHdrMetadataEXT-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkHdrSmpteSt209450GOOGLE or VkHdrVividDynamicMetadataHUAWEI
- VUID-VkHdrMetadataEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

When the `hdrVivid` feature is enabled, HDR Vivid dynamic metadata **can** be set to control the reproduction of content by including the `VkHdrVividDynamicMetadataHUAWEI` in the `pNext` chain of VkHdrMetadataEXT.

The `VkHdrVividDynamicMetadataHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_hdr_vivid
typedef struct VkHdrVividDynamicMetadataHUAWEI {
    VkStructureType    sType;
    const void*        pNext;
    size_t             dynamicMetadataSize;
    const void*        pDynamicMetadata;
} VkHdrVividDynamicMetadataHUAWEI;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- dynamicMetadataSize is the size in bytes of the dynamic metadata.
- pDynamicMetadata is a pointer to the dynamic metadata.

NOTE	The HDR Vivid metadata is intended to be used as defined in the T/UWA 005.1-2022 specification. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrVividDynamicMetadataHUAWEI-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_HDR_VIVID_DYNAMIC_METADATA_HUAWEI
- VUID-VkHdrVividDynamicMetadataHUAWEI-pDynamicMetadata-parameter
  pDynamicMetadata **must** be a valid pointer to an array of dynamicMetadataSize bytes
- VUID-VkHdrVividDynamicMetadataHUAWEI-dynamicMetadataSize-arraylength
  dynamicMetadataSize **must** be greater than 0

Structure Chaining

Extends the structure

- VkHdrMetadataEXT

When the hdrSmpteSt209450 feature is enabled and VkSurfaceCapabilitiesHdrSmpteSt209450GOOGLE::hdrSmpteSt209450Supported is VK_TRUE for the swapchain's surface, SMPTE ST 2094-50 dynamic metadata **can** be set to control the reproduction of content by including the VkHdrSmpteSt209450GOOGLE structure in the pNext chain of VkHdrMetadataEXT.

The VkHdrSmpteSt209450GOOGLE structure is defined as:

```
// Provided by VK_GOOGLE_hdr_smpte_st_209450_metadata
typedef struct VkHdrSmpteSt209450GOOGLE {
    VkStructureType                          sType;
    const void*                              pNext;
    size_t                                   metadataSize;
    const void*                              pMetadata;
    VkHdrSmpteSt209450PowerPreferenceGOOGLE  powerPreference;
} VkHdrSmpteSt209450GOOGLE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- metadataSize is the size in bytes of the buffer pointed to by pMetadata.
- pMetadata is a pointer to a buffer containing the smpte_st_2094_50_application_info() bitstream, as defined in Annex C.2.1 of SMPTE ST 2094-50. This data is copied during the call to vkSetHdrMetadataEXT, and the buffer may be modified or freed after the call. No validation is

performed on the contents of this buffer.

- `powerPreference` is a VkHdrSmpteSt209450PowerPreferenceGOOGLE value allowing an application to suggest a trade-off between color accuracy and power consumption.

NOTE	The SMPTE ST 2094-50 metadata is intended to be used as defined in the SMPTE ST 2094-50 specification. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrSmpteSt209450GOOGLE-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_HDR_SMPTE_ST_209450_GOOGLE
- VUID-VkHdrSmpteSt209450GOOGLE-pMetadata-parameter
  `pMetadata` **must** be a valid pointer to an array of `metadataSize` bytes
- VUID-VkHdrSmpteSt209450GOOGLE-powerPreference-parameter
  `powerPreference` **must** be a valid VkHdrSmpteSt209450PowerPreferenceGOOGLE value
- VUID-VkHdrSmpteSt209450GOOGLE-metadataSize-arraylength
  `metadataSize` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkHdrMetadataEXT

Possible values of VkHdrSmpteSt209450GOOGLE::`powerPreference`, specifying trade-off between color accuracy and power consumption, are:

```
// Provided by VK_GOOGLE_hdr_smpte_st_209450_metadata
typedef enum VkHdrSmpteSt209450PowerPreferenceGOOGLE {
    VK_HDR_SMPTE_ST_209450_POWER_PREFERENCE_COLOR_ACCURACY_GOOGLE = 0,
    VK_HDR_SMPTE_ST_209450_POWER_PREFERENCE_LOW_POWER_GOOGLE = 1,
} VkHdrSmpteSt209450PowerPreferenceGOOGLE;
```

- VK_HDR_SMPTE_ST_209450_POWER_PREFERENCE_COLOR_ACCURACY_GOOGLE specifies that the implementation must use the tone mapping algorithm specified in Annex A of SMPTE ST 2094-50.
- VK_HDR_SMPTE_ST_209450_POWER_PREFERENCE_LOW_POWER_GOOGLE specifies that the implementation may use simplified tone mapping algorithms to reduce power consumption, while still maintaining accuracy for grayscale content and providing reasonable behavior for color content.

The `VkXYColorEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkXYColorEXT {
    float    x;
    float    y;
} VkXYColorEXT;
```

- `x` is the x chromaticity coordinate.
- `y` is the y chromaticity coordinate.

Chromaticity coordinates are as specified in CIE 15:2004 “Calculation of chromaticity coordinates” (Section 7.3) and are limited to between 0 and 1 for real colors.

40.12. Lag Control

Some implementations support extensions to reduce display latency and control the swapchain present interval, as described in the remainder of this section.

40.12.1. Anti-Lag

The VK_AMD_anti_lag extension lowers latency between receiving input and displaying on the screen. It adds a command to indicate when input is being processed for a frame, and when that frame’s images are presented.

To lower latency, call:

```
// Provided by VK_AMD_anti_lag
void vkAntiLagUpdateAMD(
    VkDevice                                    device,
    const VkAntiLagDataAMD*                     pData);
```

- `device` is the logical device.
- `pData` is a pointer to a VkAntiLagDataAMD structure containing latency reduction parameters.

This command should be executed immediately before the application processes user input. If `pData` is not `NULL` and VkAntiLagDataAMD::`pPresentationInfo` is not `NULL`, this command **should** be executed again before vkQueuePresentKHR, with `pPresentationInfo` set to matching values.

Valid Usage

- VUID-vkAntiLagUpdateAMD-antiLag-10061
  The `antiLag` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkAntiLagUpdateAMD-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAntiLagUpdateAMD-pData-parameter
  `pData` **must** be a valid pointer to a valid VkAntiLagDataAMD structure

The `VkAntiLagDataAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagDataAMD {
    VkStructureType                         sType;
    const void*                             pNext;
    VkAntiLagModeAMD                        mode;
    uint32_t                                maxFPS;
    const VkAntiLagPresentationInfoAMD*     pPresentationInfo;
} VkAntiLagDataAMD;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mode` is a VkAntiLagModeAMD value specifying the anti-lag status.
- `maxFPS` is the framerate limit, in frames per second, used by the application. This limit will be imposed if anti-lag is enabled. If the application tries to render faster, the framerate will be reduced to match this limit. A value of 0 will disable the limit.
- `pPresentationInfo` is a pointer to a VkAntiLagPresentationInfoAMD structure containing information about the application stage.

This structure specifies anti-lag parameters.

Valid Usage (Implicit)

- VUID-VkAntiLagDataAMD-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ANTI_LAG_DATA_AMD
- VUID-VkAntiLagDataAMD-mode-parameter
  `mode` **must** be a valid VkAntiLagModeAMD value
- VUID-VkAntiLagDataAMD-pPresentationInfo-parameter
  If `pPresentationInfo` is not `NULL`, `pPresentationInfo` **must** be a valid pointer to a valid VkAntiLagPresentationInfoAMD structure

Possible values of VkAntiLagDataAMD::`mode`, specifying the anti-lag status, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagModeAMD {
    VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD = 0,
    VK_ANTI_LAG_MODE_ON_AMD = 1,
    VK_ANTI_LAG_MODE_OFF_AMD = 2,
} VkAntiLagModeAMD;
```

- VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD specifies that anti-lag will be enabled or disabled depending on driver settings.
- VK_ANTI_LAG_MODE_ON_AMD specifies that anti-lag will be enabled.
- VK_ANTI_LAG_MODE_OFF_AMD specifies that anti-lag will be disabled.

The VkAntiLagPresentationInfoAMD structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagPresentationInfoAMD {
    VkStructureType      sType;
    void*                pNext;
    VkAntiLagStageAMD    stage;
    uint64_t             frameIndex;
} VkAntiLagPresentationInfoAMD;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stage is a VkAntiLagStageAMD value specifying the current application stage.
- frameIndex is set just before the application processes input data (VK_ANTI_LAG_STAGE_INPUT_AMD). The same frameIndex value **should** be set before the frame with current input data will be presented by vkQueuePresentKHR (VK_ANTI_LAG_STAGE_PRESENT_AMD). This **should** be done for each frame.

This structure specifies information about the presentation stage for which anti-lag parameters are being set.

Valid Usage (Implicit)

- VUID-VkAntiLagPresentationInfoAMD-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ANTI_LAG_PRESENTATION_INFO_AMD
- VUID-VkAntiLagPresentationInfoAMD-stage-parameter
  stage **must** be a valid VkAntiLagStageAMD value

Possible values of VkAntiLagPresentationInfoAMD::stage, specifying the current application stage, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagStageAMD {
    VK_ANTI_LAG_STAGE_INPUT_AMD = 0,
    VK_ANTI_LAG_STAGE_PRESENT_AMD = 1,
} VkAntiLagStageAMD;
```

- VK_ANTI_LAG_STAGE_INPUT_AMD specifies the stage before processing input.
- VK_ANTI_LAG_STAGE_PRESENT_AMD specifies the stage before vkQueuePresentKHR.

40.12.2. Latency Reduction

NOTE This extension relies on grouping work into a series of “application-rendered frames”. This term is used because application-rendered frames do not correspond one-to-one with vkQueuePresentKHR calls. Technologies such as frame generation can present multiple images for a single application-rendered frame.

To enable or disable low latency mode on a swapchain, call:

```
// Provided by VK_NV_low_latency2
VkResult vkSetLatencySleepModeNV(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkLatencySleepModeInfoNV*             pSleepModeInfo);
```

- device is the device associated with swapchain.
- swapchain is the swapchain to enable or disable low latency mode on.
- pSleepModeInfo is NULL or a pointer to a VkLatencySleepModeInfoNV structure specifying the parameters of the latency sleep mode.

If pSleepModeInfo is NULL, vkSetLatencySleepModeNV will disable low latency mode, low latency boost, and set the minimum present interval previously specified by VkLatencySleepModeInfoNV to zero on swapchain. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to vkSetLatencySleepModeNV **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencySleepModeNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkSetLatencySleepModeNV-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle
- VUID-vkSetLatencySleepModeNV-pSleepModeInfo-parameter
  pSleepModeInfo **must** be a valid pointer to a valid VkLatencySleepModeInfoNV structure

- VUID-vkSetLatencySleepModeNV-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkLatencySleepModeInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepModeInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           lowLatencyMode;
    VkBool32           lowLatencyBoost;
    uint32_t           minimumIntervalUs;
} VkLatencySleepModeInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `lowLatencyMode` is the toggle to enable or disable low latency mode.
- `lowLatencyBoost` allows an application to hint to the GPU to increase performance to provide additional latency savings at a cost of increased power consumption.
- `minimumIntervalUs` is the microseconds between vkQueuePresentKHR calls for a given swapchain that vkLatencySleepNV will enforce.

If `lowLatencyMode` is VK_FALSE, `lowLatencyBoost` will still hint to the GPU to increase its power state and `vkLatencySleepNV` will still enforce `minimumIntervalUs` between `vkQueuePresentKHR` calls.

Valid Usage (Implicit)

- VUID-VkLatencySleepModeInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_LATENCY_SLEEP_MODE_INFO_NV

To provide the synchronization primitive used to delay host CPU work for lower latency rendering, call:

```
// Provided by VK_NV_low_latency2
VkResult vkLatencySleepNV(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkLatencySleepInfoNV*                 pSleepInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to delay associated CPU work for, based on the frame attribution rules.
- `pSleepInfo` is a pointer to a VkLatencySleepInfoNV structure specifying the parameters of the latency sleep.

`vkLatencySleepNV` returns immediately. Applications **should** use vkWaitSemaphores with `pSleepInfo->signalSemaphore` to delay host CPU work. CPU work refers to application work done before presenting which includes but is not limited to: input sampling, simulation, command buffer recording, command buffer submission, and present submission. Applications **should** call this function before input sampling, and exactly once between presents.

Valid Usage (Implicit)

- VUID-vkLatencySleepNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkLatencySleepNV-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkLatencySleepNV-pSleepInfo-parameter
  `pSleepInfo` **must** be a valid pointer to a valid VkLatencySleepInfoNV structure
- VUID-vkLatencySleepNV-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkLatencySleepInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkSemaphore        signalSemaphore;
    uint64_t           value;
} VkLatencySleepInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `signalSemaphore` is a semaphore that is signaled to indicate that the application **should** resume input sampling work.
- `value` is the value that `signalSemaphore` is set to for resuming sampling work.

Valid Usage

- VUID-VkLatencySleepInfoNV-signalSemaphore-09361
  `signalSemaphore` **must** be a timeline semaphore

Valid Usage (Implicit)

- VUID-VkLatencySleepInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_LATENCY_SLEEP_INFO_NV
- VUID-VkLatencySleepInfoNV-signalSemaphore-parameter
  `signalSemaphore` **must** be a valid VkSemaphore handle

An application **can** provide timestamps at various stages of its frame generation work by calling:

```
// Provided by VK_NV_low_latency2
void vkSetLatencyMarkerNV(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkSetLatencyMarkerInfoNV*             pLatencyMarkerInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to capture timestamps on.
- `pSetLatencyMarkerInfo` is a pointer to a VkSetLatencyMarkerInfoNV structure specifying the parameters of the marker to set.

At the beginning and end of simulation and render threads and beginning and end of vkQueuePresentKHR calls, `vkSetLatencyMarkerNV` **can** be called to provide timestamps for the application's reference. These timestamps are returned with a call to vkGetLatencyTimingsNV

alongside driver provided timestamps at various points of interest with regards to latency within the application. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to vkSetLatencyMarkerNV **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencyMarkerNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetLatencyMarkerNV-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkSetLatencyMarkerNV-pLatencyMarkerInfo-parameter
  `pLatencyMarkerInfo` **must** be a valid pointer to a valid VkSetLatencyMarkerInfoNV structure
- VUID-vkSetLatencyMarkerNV-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

The VkSetLatencyMarkerInfoNV structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSetLatencyMarkerInfoNV {
    VkStructureType      sType;
    const void*          pNext;
    uint64_t             presentID;
    VkLatencyMarkerNV    marker;
} VkSetLatencyMarkerInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentID` is the application-defined identifier of the application-rendered frame that this marker belongs to. A single application-rendered frame **may** correspond to multiple `vkQueuePresentKHR` calls. It is not related to presentIds passed via VkPresentIdKHR::`pPresentIds` or VkPresentId2KHR::`pPresentIds`.
- `marker` is the type of timestamp to be recorded.

Valid Usage (Implicit)

- VUID-VkSetLatencyMarkerInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SET_LATENCY_MARKER_INFO_NV
- VUID-VkSetLatencyMarkerInfoNV-marker-parameter
  `marker` **must** be a valid VkLatencyMarkerNV value

The VkLatencyMarkerNV enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkLatencyMarkerNV {
    VK_LATENCY_MARKER_SIMULATION_START_NV = 0,
    VK_LATENCY_MARKER_SIMULATION_END_NV = 1,
    VK_LATENCY_MARKER_RENDERSUBMIT_START_NV = 2,
    VK_LATENCY_MARKER_RENDERSUBMIT_END_NV = 3,
    VK_LATENCY_MARKER_PRESENT_START_NV = 4,
    VK_LATENCY_MARKER_PRESENT_END_NV = 5,
    VK_LATENCY_MARKER_INPUT_SAMPLE_NV = 6,
    VK_LATENCY_MARKER_TRIGGER_FLASH_NV = 7,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV = 8,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_END_NV = 9,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV = 10,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV = 11,
} VkLatencyMarkerNV;
```

The members of the VkLatencyMarkerNV are used as arguments for vkSetLatencyMarkerNV in the use cases described below:

- VK_LATENCY_MARKER_SIMULATION_START_NV **should** be called at the start of the simulation execution each frame, but after the call to vkLatencySleepNV.
- VK_LATENCY_MARKER_SIMULATION_END_NV **should** be called at the end of the simulation execution each frame.
- VK_LATENCY_MARKER_RENDERSUBMIT_START_NV **should** be called at the beginning of the render submission execution each frame. This **should** be wherever Vulkan API calls are made and **must** not span into asynchronous rendering.
- VK_LATENCY_MARKER_RENDERSUBMIT_END_NV **should** be called at the end of the render submission execution each frame.
- VK_LATENCY_MARKER_PRESENT_START_NV **should** be called just before the vkQueuePresentKHR call requesting presentation of an application-rendered frame.
- VK_LATENCY_MARKER_PRESENT_END_NV **should** be called when that vkQueuePresentKHR call returns. This may be used to delimit workload submissions between application-rendered frames according to the rules defined in Frame Attribution.
- VK_LATENCY_MARKER_INPUT_SAMPLE_NV **should** be called just before the application gathers input data.
- VK_LATENCY_MARKER_TRIGGER_FLASH_NV **should** be called anywhere between VK_LATENCY_MARKER_SIMULATION_START_NV and VK_LATENCY_MARKER_SIMULATION_END_NV whenever a left mouse click occurs.

NOTE

The VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV, VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_END_NV, VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV, and VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV markers are not

intended for use by typical applications. See Frame Attribution for information on how the implementation interprets these markers.

NOTE Intermediate layers, such as frame-generation implementations, **may** defer or replace `vkQueuePresentKHR` calls. Such layers **should** leave the original VK_LATENCY_MARKER_PRESENT_START_NV and VK_LATENCY_MARKER_PRESENT_END_NV markers in place and emit VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV and VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV markers surrounding each of their `vkQueuePresentKHR` calls.

To get an array containing the newest collected latency data, call:

```
// Provided by VK_NV_low_latency2
void vkGetLatencyTimingsNV(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkGetLatencyMarkerInfoNV*                   pLatencyMarkerInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to return data from.
- `pLatencyMarkerInfo` is a pointer to a VkGetLatencyMarkerInfoNV structure specifying the parameters for returning latency information.

The timings returned by `vkGetLatencyTimingsNV` contain the timestamps requested from vkSetLatencyMarkerNV and additional implementation-specific markers defined in VkLatencyTimingsFrameReportNV.

Valid Usage (Implicit)

- VUID-vkGetLatencyTimingsNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetLatencyTimingsNV-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetLatencyTimingsNV-pLatencyMarkerInfo-parameter
  `pLatencyMarkerInfo` **must** be a valid pointer to a VkGetLatencyMarkerInfoNV structure
- VUID-vkGetLatencyTimingsNV-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

The `VkGetLatencyMarkerInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkGetLatencyMarkerInfoNV {
    VkStructureType                   sType;
    const void*                       pNext;
    uint32_t                          timingCount;
    VkLatencyTimingsFrameReportNV*    pTimings;
} VkGetLatencyMarkerInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is either `NULL` or a pointer to a structure extending this structure.
- `timingCount` is an integer related to the number of previous frames of latency data available or queried, as described below.
- `pTimings` is either `NULL` or a pointer to an array of VkLatencyTimingsFrameReportNV structures.

If `pTimings` is `NULL` then the maximum number of queryable frame data is returned in `timingCount`. Otherwise, `timingCount` **must** be set by the application to the number of elements in the `pTimings` array, and on return is overwritten with the number of values actually written to `pTimings`. The elements of `pTimings` are arranged in the order they were requested in, with the oldest data in the first entry.

Valid Usage (Implicit)

- VUID-VkGetLatencyMarkerInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GET_LATENCY_MARKER_INFO_NV
- VUID-VkGetLatencyMarkerInfoNV-pTimings-parameter
  If `timingCount` is not `0`, and `pTimings` is not `NULL`, `pTimings` **must** be a valid pointer to an array of `timingCount` VkLatencyTimingsFrameReportNV structures

The VkLatencyTimingsFrameReportNV structure describes latency data returned by vkGetLatencyTimingsNV.

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencyTimingsFrameReportNV {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           presentID;
    uint64_t           inputSampleTimeUs;
    uint64_t           simStartTimeUs;
    uint64_t           simEndTimeUs;
    uint64_t           renderSubmitStartTimeUs;
    uint64_t           renderSubmitEndTimeUs;
    uint64_t           presentStartTimeUs;
    uint64_t           presentEndTimeUs;
    uint64_t           driverStartTimeUs;
    uint64_t           driverEndTimeUs;
    uint64_t           osRenderQueueStartTimeUs;
    uint64_t           osRenderQueueEndTimeUs;
    uint64_t           gpuRenderStartTimeUs;
    uint64_t           gpuRenderEndTimeUs;
} VkLatencyTimingsFrameReportNV;
```

The members of the VkLatencyTimingsFrameReportNV structure describe the following:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentID is the application-defined identifier of the application-rendered frame described by this structure. It is the same value that the application passes to vkSetLatencyMarkerNV via VkSetLatencyMarkerInfoNV::presentID. It is not related to presentIds passed via VkPresentIdKHR::pPresentIds or VkPresentId2KHR::pPresentIds.
- simStartTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_SIMULATION_START_NV.
- simEndTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_SIMULATION_END_NV.
- renderStartTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_RENDERSUBMIT_START_NV.
- renderEndTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_RENDERSUBMIT_END_NV.
- presentStartTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_PRESENT_START_NV.
- presentEndTimeUs is the timestamp written when vkSetLatencyMarkerNV is called with the VkLatencyMarkerNV enum VK_LATENCY_MARKER_PRESENT_END_NV.
- driverStartTimeUs is the timestamp written when the first vkQueueSubmit for the frame is called.
- driverEndTimeUs is the timestamp written when the final vkQueueSubmit hands off from the Vulkan Driver.
- osRenderQueueStartTimeUs is the timestamp written when the final vkQueueSubmit hands off from

the Vulkan Driver.

- `osRenderQueueEndTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderStartTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderEndTimeUs` is the timestamp written when the final submission finishes on the GPU for the frame.

Valid Usage (Implicit)

- VUID-VkLatencyTimingsFrameReportNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_LATENCY_TIMINGS_FRAME_REPORT_NV

The VkLatencySubmissionPresentIdNV structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySubmissionPresentIdNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
} VkLatencySubmissionPresentIdNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentID` is the application-defined identifier of the application-rendered frame that this submission belongs to. It is not related to presentIds passed via VkPresentIdKHR::`pPresentIds` or VkPresentId2KHR::`pPresentIds`.

If the implicit submission attribution rules defined in Frame Attribution are not sufficient, an application **can** associate submissions with application-rendered frames by chaining `VkLatencySubmissionPresentIdNV` to its `vkQueueSubmit` or `vkQueueSubmit2` calls. A non-zero `presentID` passed via `VkLatencySubmissionPresentIdNV` **must** be greater than or equal to any non-zero `presentID` previously passed via `VkLatencySubmissionPresentIdNV` on the same queue.

A logical device enters *explicit submission attribution* mode when any queue on that device receives a `VkLatencySubmissionPresentIdNV` with a non-zero `presentID`. While a device is in explicit submission attribution mode, each `vkQueueSubmit` or `vkQueueSubmit2` call will be associated with the `presentID` value of the first of these rules to apply:

- The `presentID` in `VkLatencySubmissionPresentIdNV` chained to the submission, if non-zero.
- The most recent `presentID` passed via `VkLatencySubmissionPresentIdNV` on the same queue, if non-zero.
- The maximum `presentID` previously passed via `VkLatencySubmissionPresentIdNV` on the device.

A `vkQueueSubmit` or `vkQueueSubmit2` call that chains `VkLatencySubmissionPresentIdNV` with a `presentID` of zero clears the tracked `presentID` for that queue. The device will exit explicit submission

attribution mode when all queues' tracked presentID values have been cleared. It will then return to using the implicit attribution rules.

Explicit submission attribution is only respected by implementations advertising support for VK_NV_low_latency2 with a VkExtensionProperties::specVersion greater than or equal to 3. Implementations advertising a lower specVersion ignore VkLatencySubmissionPresentIdNV, so applications **should** verify the advertised specVersion before relying on explicit submission attribution.

NOTE	Most applications do not need to pass VkLatencySubmissionPresentIdNV. The implicit rules described in Frame Attribution are sufficient for the vast majority of applications.

Valid Usage (Implicit)

- VUID-VkLatencySubmissionPresentIdNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_LATENCY_SUBMISSION_PRESENT_ID_NV

Structure Chaining

Extends the structures

- VkSubmitInfo
- VkSubmitInfo2

To mark a queue as *out of band*, so that all vkQueueSubmit calls on the queue are ignored for latency evaluation, call:

```
// Provided by VK_NV_low_latency2
void vkQueueNotifyOutOfBandNV(
    VkQueue                                     queue,
    const VkOutOfBandQueueTypeInfoNV*           pQueueTypeInfo);
```

- queue is the VkQueue to be marked as out of band.
- pQueueTypeInfo is a pointer to a VkOutOfBandQueueTypeInfoNV structure specifying the queue type.

Valid Usage (Implicit)

- VUID-vkQueueNotifyOutOfBandNV-queue-parameter
  queue **must** be a valid VkQueue handle
- VUID-vkQueueNotifyOutOfBandNV-pQueueTypeInfo-parameter
  pQueueTypeInfo **must** be a valid pointer to a valid VkOutOfBandQueueTypeInfoNV structure

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

The VkOutOfBandQueueTypeInfoNV structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkOutOfBandQueueTypeInfoNV {
    VkStructureType           sType;
    const void*               pNext;
    VkOutOfBandQueueTypeNV    queueType;
} VkOutOfBandQueueTypeInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueType` describes the usage of the queue to be marked as out of band.

Valid Usage (Implicit)

- VUID-VkOutOfBandQueueTypeInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OUT_OF_BAND_QUEUE_TYPE_INFO_NV
- VUID-VkOutOfBandQueueTypeInfoNV-queueType-parameter
  `queueType` **must** be a valid VkOutOfBandQueueTypeNV value

The VkOutOfBandQueueTypeNV enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkOutOfBandQueueTypeNV {
    VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV = 0,
    VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV = 1,
} VkOutOfBandQueueTypeNV;
```

The members of the VkOutOfBandQueueTypeNV are used to describe the queue type in VkOutOfBandQueueTypeInfoNV as described below:

- VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV specifies that work will be submitted to this queue.
- VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV specifies that this queue will be presented from.

Frame Attribution

VK_NV_low_latency2 relies on attributing each vkQueuePresentKHR and vkQueueSubmit call to an application-rendered frame, identified by the presentID values from VkSetLatencyMarkerInfoNV. Correct attribution is required for latency reduction. This attribution **can** be used to measure frame timing statistics even when low latency sleep mode is disabled.

A vkQueuePresentKHR call is attributed to an application-rendered frame according to the first of these rules to apply.

- If a VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV marker has been observed without an intervening VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV, the frame's presentID is the presentID from that marker.
- If the most recent VK_LATENCY_MARKER_PRESENT_START_NV marker's presentID has not already been mapped to a vkQueuePresentKHR call, its presentID is used.
- Otherwise the vkQueuePresentKHR call is considered a new application-rendered frame with no presentID.

> **NOTE** The first rule allows frame generation implementations to map multiple vkQueuePresentKHR calls to the same presentID, by emitting multiple pairs of VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV and VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV markers with the same presentID around each vkQueuePresentKHR call.

Each vkQueueSubmit or vkQueueSubmit2 call is attributed to an application-rendered frame according to the first of these rules that applies.

- If the queue has been marked as VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV via vkQueueNotifyOutOfBandNV, the submission is ignored.
- If the device is in explicit submission attribution mode as described under VkLatencySubmissionPresentIdNV, the presentID determined by that structure's rules is used.
- If the queue has been marked as VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV, the submission is attributed to the presentID of the most recent VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV marker that has been observed.
- Otherwise the submission will be added to a list of pending submissions. All submissions in this list will be mapped to the same application-rendered frame once one of the following frame delimiters is reached. If any queue has been marked as out-of-band via vkQueueNotifyOutOfBandNV, application-rendered frames are delimited by VK_LATENCY_MARKER_PRESENT_END_NV markers, and the pending submission list is attributed to that marker's presentID. Otherwise, application-rendered frames are delimited by vkQueuePresentKHR calls, and the group is attributed to that present's application-rendered frame according to the vkQueuePresentKHR mapping rules above.

To allow low latency mode to be used by a swapchain, add a VkSwapchainLatencyCreateInfoNV structure to the pNext chain of VkSwapchainCreateInfoKHR.

The VkSwapchainLatencyCreateInfoNV structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSwapchainLatencyCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           latencyModeEnable;
} VkSwapchainLatencyCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- latencyModeEnable is VK_TRUE if the created swapchain will utilize low latency mode, VK_FALSE otherwise.

Valid Usage (Implicit)

- VUID-VkSwapchainLatencyCreateInfoNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_LATENCY_CREATE_INFO_NV

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

The VkLatencySurfaceCapabilitiesNV structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySurfaceCapabilitiesNV {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             presentModeCount;
    VkPresentModeKHR*    pPresentModes;
} VkLatencySurfaceCapabilitiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentModeCount is the number of presentation modes provided.
- pPresentModes is a list of presentation modes optimized for use with low latency mode with presentModeCount entries.

If pPresentModes is NULL, then the number of present modes that are optimized for use with low latency mode is returned in presentModeCount. Otherwise, presentModeCount **must** be set by the application to the number of elements in the pPresentModes array, and on return is overwritten with

the number of values actually written to pPresentModes. If the value of presentModeCount is less than the number of optimized present modes, at most presentModeCount values will be written to pPresentModes.

Valid Usage (Implicit)

- VUID-VkLatencySurfaceCapabilitiesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_LATENCY_SURFACE_CAPABILITIES_NV
- VUID-VkLatencySurfaceCapabilitiesNV-pPresentModes-parameter
  If presentModeCount is not 0, and pPresentModes is not NULL, pPresentModes **must** be a valid pointer to an array of presentModeCount VkPresentModeKHR values

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

40.13. Present Barrier

The VK_NV_present_barrier extension allows applications to synchronize corresponding presentation requests across multiple swapchains using the *present barrier*. A swapchain is said to be using the *present barrier* if the swapchain is created by adding a VkSwapchainPresentBarrierCreateInfoNV structure to the pNext chain of the VkSwapchainCreateInfoKHR structure, and setting VkSwapchainPresentBarrierCreateInfoNV ::presentBarrierEnable to true.

A set of corresponding presentation requests is defined as exactly one queued presentation request associated with each swapchain using the present barrier, whether or not that queued request has executed. A given presentation request is added, when created by calling vkQueuePresentKHR and specifying a swapchain using the present barrier, either to the oldest existing set of corresponding requests for which there is no existing member associated with the request's swapchain, or to a new set of corresponding requests if no such set exists.

A set of corresponding requests is said to be *full* when it contains one request from each swapchain using the present barrier. Queued presentation of an image to a swapchain using the *present barrier* is *deferred* by the implementation until the set of corresponding requests is full, and the visibility operations associated with all requests in that set, as described by vkQueuePresentKHR, have completed.

Additionally, the set of swapchains using the present barrier can be in the same process, or different processes running under the same operating system. And if the required synchronization hardware is connected and correctly configured, this extension also supports applications to synchronize corresponding presentation requests using the *present barrier* across distributed systems. However, the configuration mechanism of the required hardware is outside the scope of the Vulkan specification and this extension.

The VkSwapchainPresentBarrierCreateInfoNV structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkSwapchainPresentBarrierCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrierEnable;
} VkSwapchainPresentBarrierCreateInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentBarrierEnable` is a boolean value indicating a request for using the *present barrier*.

If the `pNext` chain of VkSwapchainCreateInfoKHR does not include this structure, the default value for `presentBarrierEnable` is VK_FALSE, meaning the swapchain does not request to use the present barrier. Additionally, when recreating a swapchain that was using the present barrier, and the `pNext` chain of VkSwapchainCreateInfoKHR does not include this structure, it means the swapchain will stop using the present barrier.

Valid Usage (Implicit)

- VUID-VkSwapchainPresentBarrierCreateInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_BARRIER_CREATE_INFO_NV

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

40.13.1. Present Metering

Present Metering evenly paces out the next `numFramesPerBatch` vkQueuePresentKHR presents. This gives smoother pacing between presents in applications with frame generation integrations.

The `VkSetPresentConfigNV` structure is defined as:

```
// Provided by VK_NV_present_metering
typedef struct VkSetPresentConfigNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           numFramesPerBatch;
    uint32_t           presentConfigFeedback;
} VkSetPresentConfigNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `numFramesPerBatch` is the number of frames to batch.
- `presentConfigFeedback` will return the success or error status.

The metering configuration applies to all swapchains in the array in VkPresentInfoKHR. The configuration specified by `VkSetPresentConfigNV` applies to the next `numFramesPerBatch` calls to vkQueuePresentKHR and needs to be updated every `numFramesPerBatch` presents.

Valid Usage

- VUID-VkSetPresentConfigNV-numFramesPerBatch-10581
  `numFramesPerBatch` **must** not be larger than 8

Valid Usage (Implicit)

- VUID-VkSetPresentConfigNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SET_PRESENT_CONFIG_NV

Structure Chaining

Extends the structure

- VkPresentInfoKHR

Chapter 41. Deferred Host Operations

Certain Vulkan commands are inherently expensive for the host CPU to execute. It is often desirable to offload such work onto background threads, and to parallelize the work across multiple CPUs. The concept of *deferred operations* allows applications and drivers to coordinate the execution of expensive host commands using an application-managed thread pool.

The `VK_KHR_deferred_host_operations` extension defines the infrastructure and usage patterns for *deferrable commands*, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on `VK_KHR_deferred_host_operations`. This specification will refer to such extensions as *deferral extensions*.

41.1. Requesting Deferral

When an application requests an operation deferral, the implementation **may** defer the operation. When deferral is requested and the implementation defers any operation, the implementation **must** return VK_OPERATION_DEFERRED_KHR as the success code if no errors occurred. When deferral is requested, the implementation **should** defer the operation when the workload is significant, however if the implementation chooses not to defer any of the requested operations and instead executes all of them immediately, the implementation **must** return VK_OPERATION_NOT_DEFERRED_KHR as the success code if no errors occurred.

A deferred operation is created *complete* with an initial result value of VK_SUCCESS. The deferred operation becomes *pending* when an operation has been successfully deferred with that deferred operation object.

A deferred operation is considered pending until the deferred operation completes. A pending deferred operation becomes *complete* when it has been fully executed by one or more threads. Pending deferred operations will never complete until they are *joined* by an application thread, using vkDeferredOperationJoinKHR. Applications **can** join multiple threads to the same deferred operation, enabling concurrent execution of subtasks within that operation.

The application **can** query the status of a VkDeferredOperationKHR using the vkGetDeferredOperationMaxConcurrencyKHR or vkGetDeferredOperationResultKHR commands.

Parameters to the command requesting a deferred operation **may** be accessed by the implementation at any time until the deferred operation enters the complete state. The application **must** obey the following rules while a deferred operation is pending:

- Externally synchronized parameters **must** not be accessed.
- Pointer parameters **must** not be modified (e.g. reallocated/freed).
- The contents of pointer parameters which **may** be read by the command **must** not be modified.
- The contents of pointer parameters which **may** be written by the command **must** not be read.
- Vulkan object parameters **must** not be passed as externally synchronized parameters to any other command.

When the deferred operation is complete, the application **should** call vkGetDeferredOperationResultKHR to obtain the VkResult indicating success or failure of the operation. The VkResult value returned will be one of the values that the command requesting the deferred operation is able to return. Writes to output parameters of the requesting command will happen-before the deferred operation is complete.

When a deferral is requested for a command, the implementation **may** perform memory management operations on the allocator supplied to vkCreateDeferredOperationKHR for the deferred operation object, as described in the Memory Allocation chapter. Such allocations **must** occur on the thread which requests deferral.

If an allocator was supplied for the deferred command at the time of the deferral request, then the implementation **may** perform memory management operations on this allocator during the execution of vkDeferredOperationJoinKHR. These operations **may** occur concurrently and **may** be performed by any joined thread. The application **must** ensure that the supplied allocator is able to operate correctly under these conditions.

41.2. Deferred Host Operations API

The VkDeferredOperationKHR handle is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeferredOperationKHR)
```

This handle refers to a tracking structure which manages the execution state for a deferred command.

To construct the tracking object for a deferred command, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkCreateDeferredOperationKHR(
    VkDevice                                    device,
    const VkAllocationCallbacks*                pAllocator,
    VkDeferredOperationKHR*                     pDeferredOperation);
```

- device is the device which owns operation.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pDeferredOperation is a pointer to a handle in which the created VkDeferredOperationKHR is returned.

Valid Usage (Implicit)

- VUID-vkCreateDeferredOperationKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateDeferredOperationKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateDeferredOperationKHR-pDeferredOperation-parameter
  `pDeferredOperation` **must** be a valid pointer to a VkDeferredOperationKHR handle
- VUID-vkCreateDeferredOperationKHR-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To assign a thread to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkDeferredOperationJoinKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation that the calling thread should work on.

The `vkDeferredOperationJoinKHR` command will execute a portion of the deferred operation on the calling thread.

The return value will be one of the following:

- A return value of VK_SUCCESS indicates that `operation` is complete. The application **should** use vkGetDeferredOperationResultKHR to retrieve the result of `operation`.
- A return value of VK_THREAD_DONE_KHR indicates that the deferred operation is not complete, but there is no work remaining to assign to threads. Future calls to vkDeferredOperationJoinKHR are not necessary and will simply harm performance. This situation **may** occur when other threads executing vkDeferredOperationJoinKHR are about to complete `operation`, and the implementation is unable to partition the workload any further.
- A return value of VK_THREAD_IDLE_KHR indicates that the deferred operation is not complete, and there is no work for the thread to do at the time of the call. This situation **may** occur if the operation encounters a temporary reduction in parallelism. By returning VK_THREAD_IDLE_KHR, the implementation is signaling that it expects that more opportunities for parallelism will emerge as execution progresses, and that future calls to

vkDeferredOperationJoinKHR **can** be beneficial. In the meantime, the application **can** perform other work on the calling thread.

Implementations **must** guarantee forward progress by enforcing the following invariants:

1. If only one thread has invoked vkDeferredOperationJoinKHR on a given operation, that thread **must** execute the operation to completion and return VK_SUCCESS.
2. If multiple threads have concurrently invoked vkDeferredOperationJoinKHR on the same operation, then at least one of them **must** complete the operation and return VK_SUCCESS.

Valid Usage (Implicit)

- VUID-vkDeferredOperationJoinKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDeferredOperationJoinKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkDeferredOperationJoinKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS
- VK_THREAD_DONE_KHR
- VK_THREAD_IDLE_KHR

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When a deferred operation is completed, the application **can** destroy the tracking object by calling:

```
// Provided by VK_KHR_deferred_host_operations
void vkDestroyDeferredOperationKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the device which owns `operation`.
- `operation` is the completed operation to be destroyed.

- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDeferredOperationKHR-operation-03434
  If `VkAllocationCallbacks` were provided when `operation` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDeferredOperationKHR-operation-03435
  If no `VkAllocationCallbacks` were provided when `operation` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyDeferredOperationKHR-operation-03436
  `operation` **must** be completed

Valid Usage (Implicit)

- VUID-vkDestroyDeferredOperationKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyDeferredOperationKHR-operation-parameter
  If `operation` is not VK_NULL_HANDLE, `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkDestroyDeferredOperationKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDeferredOperationKHR-operation-parent
  If `operation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `operation` **must** be externally synchronized

To query the number of additional threads that can usefully be joined to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
uint32_t vkGetDeferredOperationMaxConcurrencyKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation to be queried.

The returned value is the maximum number of threads that can usefully execute a deferred

operation concurrently, reported for the state of the deferred operation at the point this command is called. This value is intended to be used to better schedule work onto available threads. Applications **can** join any number of threads to the deferred operation and expect it to eventually complete, though excessive joins **may** return VK_THREAD_DONE_KHR immediately, performing no useful work.

If `operation` is complete, `vkGetDeferredOperationMaxConcurrencyKHR` returns zero.

If `operation` is currently joined to any threads, the value returned by this command **may** immediately be out of date.

If `operation` is pending, implementations **must** not return zero unless at least one thread is currently executing vkDeferredOperationJoinKHR on `operation`. If there are such threads, the implementation **should** return an estimate of the number of additional threads which it could profitably use.

Implementations **may** return 2^{32}-1 to indicate that the maximum concurrency is unknown and cannot be easily derived. Implementations **may** return values larger than the maximum concurrency available on the host CPU. In these situations, an application **should** clamp the return value rather than oversubscribing the machine.

NOTE	The recommended usage pattern for applications is to query this value once, after deferral, and schedule no more than the specified number of threads to join the operation. Each time a joined thread receives VK_THREAD_IDLE_KHR, the application should schedule an additional join at some point in the future, but is not required to do so.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationMaxConcurrencyKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

The `vkGetDeferredOperationResultKHR` function is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkGetDeferredOperationResultKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the operation whose deferred result is being queried.

If no command has been deferred on `operation`, `vkGetDeferredOperationResultKHR` returns VK_SUCCESS.

If the deferred operation is pending, `vkGetDeferredOperationResultKHR` returns VK_NOT_READY.

If the deferred operation is complete, it returns the appropriate return value from the original command. This value **must** be one of the VkResult values which could have been returned by the original command if the operation had not been deferred.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationResultKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeferredOperationResultKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkGetDeferredOperationResultKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Chapter 42. Private Data

The private data extension provides a way for users to associate arbitrary application-defined data with Vulkan objects. This association is accomplished by storing 64-bit unsigned integers of application-defined data in private data slots. A private data slot represents a storage allocation for one data item for each child object of the device.

An application **can** reserve private data slots at device creation. To reserve private data slots, insert a VkDevicePrivateDataCreateInfo in the pNext chain in VkDeviceCreateInfo before device creation. Multiple VkDevicePrivateDataCreateInfo structures **can** be chained together, and the sum of the requested slots will be reserved. This is an exception to the specified valid usage for structure pointer chains. Reserving slots in this manner is not strictly necessary but it **may** improve performance.

Private data slots are represented by VkPrivateDataSlot handles:

```
// Provided by VK_VERSION_1_3
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPrivateDataSlot)
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlot
typedef VkPrivateDataSlot VkPrivateDataSlotEXT;
```

To create a private data slot, call:

```
// Provided by VK_VERSION_1_3
VkResult vkCreatePrivateDataSlot(
    VkDevice                                    device,
    const VkPrivateDataSlotCreateInfo*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPrivateDataSlot*                          pPrivateDataSlot);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkCreatePrivateDataSlot
VkResult vkCreatePrivateDataSlotEXT(
    VkDevice                                    device,
    const VkPrivateDataSlotCreateInfo*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPrivateDataSlot*                          pPrivateDataSlot);
```

- device is the logical device associated with the creation of the object(s) holding the private data slot.
- pCreateInfo is a pointer to a VkPrivateDataSlotCreateInfo structure.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

- `pPrivateDataSlot` is a pointer to a VkPrivateDataSlot handle in which the resulting private data slot is returned.

Valid Usage

- VUID-vkCreatePrivateDataSlot-privateData-04564
  The `privateData` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreatePrivateDataSlot-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreatePrivateDataSlot-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkPrivateDataSlotCreateInfo structure
- VUID-vkCreatePrivateDataSlot-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreatePrivateDataSlot-pPrivateDataSlot-parameter
  `pPrivateDataSlot` **must** be a valid pointer to a VkPrivateDataSlot handle
- VUID-vkCreatePrivateDataSlot-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPrivateDataSlotCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPrivateDataSlotCreateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkPrivateDataSlotCreateFlags    flags;
} VkPrivateDataSlotCreateInfo;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlotCreateInfo
typedef VkPrivateDataSlotCreateInfo VkPrivateDataSlotCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPrivateDataSlotCreateFlagBits specifying additional parameters of the private data slot.

Valid Usage

- VUID-VkPrivateDataSlotCreateInfo-flags-12501
  If `flags` contains VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV, the `privateDataBaseHandle` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkPrivateDataSlotCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRIVATE_DATA_SLOT_CREATE_INFO
- VUID-VkPrivateDataSlotCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPrivateDataSlotCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPrivateDataSlotCreateFlagBits values

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPrivateDataSlotCreateFlags;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlotCreateFlags
typedef VkPrivateDataSlotCreateFlags VkPrivateDataSlotCreateFlagsEXT;
```

`VkPrivateDataSlotCreateFlags` is a bitmask type for setting a mask of zero or more VkPrivateDataSlotCreateFlagBits.

Bits which **can** be set in VkPrivateDataSlotCreateInfo::`flags`, specifying additional parameters of a private data slot, are:

```
// Provided by VK_VERSION_1_3
typedef enum VkPrivateDataSlotCreateFlagBits {
  // Provided by VK_NV_private_data_base_handle
    VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV = 0x00000001,
} VkPrivateDataSlotCreateFlagBits;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlotCreateFlagBits
typedef VkPrivateDataSlotCreateFlagBits VkPrivateDataSlotCreateFlagBitsEXT;
```

- VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV specifies that calling vkGetPrivateData with this slot will return the implementation's base handle for the object rather than any previously set private data. vkSetPrivateData **must** not be called with a slot created with this flag.

To destroy a private data slot, call:

```
// Provided by VK_VERSION_1_3
void vkDestroyPrivateDataSlot(
    VkDevice                                    device,
    VkPrivateDataSlot                           privateDataSlot,
    const VkAllocationCallbacks*                pAllocator);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkDestroyPrivateDataSlot
void vkDestroyPrivateDataSlotEXT(
    VkDevice                                    device,
    VkPrivateDataSlot                           privateDataSlot,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the logical device associated with the creation of the object(s) holding the private data slot.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- privateDataSlot is the private data slot to destroy.

Valid Usage

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04062
  If VkAllocationCallbacks were provided when privateDataSlot was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04063
  If no VkAllocationCallbacks were provided when privateDataSlot was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyPrivateDataSlot-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parameter
  If `privateDataSlot` is not VK_NULL_HANDLE, `privateDataSlot` **must** be a valid VkPrivateDataSlot handle
- VUID-vkDestroyPrivateDataSlot-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parent
  If `privateDataSlot` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `privateDataSlot` **must** be externally synchronized

To store application-defined data in a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
VkResult vkSetPrivateData(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t                                    data);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkSetPrivateData
VkResult vkSetPrivateDataEXT(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t                                    data);
```

- `device` is the device that created the object.
- `objectType` is a VkObjectType specifying the type of object to associate data with.
- `objectHandle` is a handle to the object to associate data with.
- `privateDataSlot` is a handle to a VkPrivateDataSlot specifying location of private data storage.
- `data` is application-defined data to associate the object with. This data will be stored at

`privateDataSlot`.

Valid Usage

- VUID-vkSetPrivateData-objectHandle-04016
  `objectHandle` **must** be `device` or a child of `device`
- VUID-vkSetPrivateData-objectHandle-04017
  `objectHandle` **must** be a valid handle to an object of type `objectType`
- VUID-vkSetPrivateData-privateDataSlot-12502
  `privateDataSlot` **must** not have been created with VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV

Valid Usage (Implicit)

- VUID-vkSetPrivateData-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetPrivateData-objectType-parameter
  `objectType` **must** be a valid VkObjectType value
- VUID-vkSetPrivateData-privateDataSlot-parameter
  `privateDataSlot` **must** be a valid VkPrivateDataSlot handle
- VUID-vkSetPrivateData-privateDataSlot-parent
  `privateDataSlot` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To retrieve application-defined data from a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
void vkGetPrivateData(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t*                                   pData);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkGetPrivateData
void vkGetPrivateDataEXT(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t*                                   pData);
```

- `device` is the device that created the object.
- `objectType` is a VkObjectType specifying the type of object data is associated with.
- `objectHandle` is a handle to the object data is associated with.
- `privateDataSlot` is a handle to a VkPrivateDataSlot specifying location of private data pointer storage.
- `pData` is a pointer to specify where application-defined data is returned. If `privateDataSlot` was not created with VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV, `0` will be written in the absence of a previous call to `vkSetPrivateData` using the object specified by `objectHandle`. If `privateDataSlot` was created with VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV, the implementation's base handle for the object is written to `pData`. The base handle is the value of `objectHandle` as received by the implementation after traversal of the dispatch chain.

NOTE Due to platform details on Android, implementations might not be able to reliably return `0` from calls to `vkGetPrivateData` for VkSwapchainKHR objects on which `vkSetPrivateData` has not previously been called. This erratum is exclusive to the Android platform and objects of type VkSwapchainKHR.

Valid Usage

- VUID-vkGetPrivateData-objectType-04018
  `objectHandle` **must** be `device` or a child of `device`
- VUID-vkGetPrivateData-objectHandle-09498
  `objectHandle` **must** be a valid handle to an object of type `objectType`

Valid Usage (Implicit)

- VUID-vkGetPrivateData-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPrivateData-objectType-parameter
  `objectType` **must** be a valid VkObjectType value
- VUID-vkGetPrivateData-privateDataSlot-parameter
  `privateDataSlot` **must** be a valid VkPrivateDataSlot handle
- VUID-vkGetPrivateData-pData-parameter
  `pData` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetPrivateData-privateDataSlot-parent
  `privateDataSlot` **must** have been created, allocated, or retrieved from `device`

Chapter 43. Acceleration Structures

43.1. Acceleration Structures

Acceleration structures are data structures used by the implementation to efficiently manage scene geometry as it is traversed during a ray tracing query. The application is responsible for managing acceleration structure objects (see Acceleration Structures), including allocation, destruction, executing builds or updates, and synchronizing resources used during ray tracing queries.

There are two types of acceleration structures, *top level acceleration structures* and *bottom level acceleration structures*.

An acceleration structure is considered to be constructed if an acceleration structure build command or copy command has been executed with the given acceleration structure as the destination.

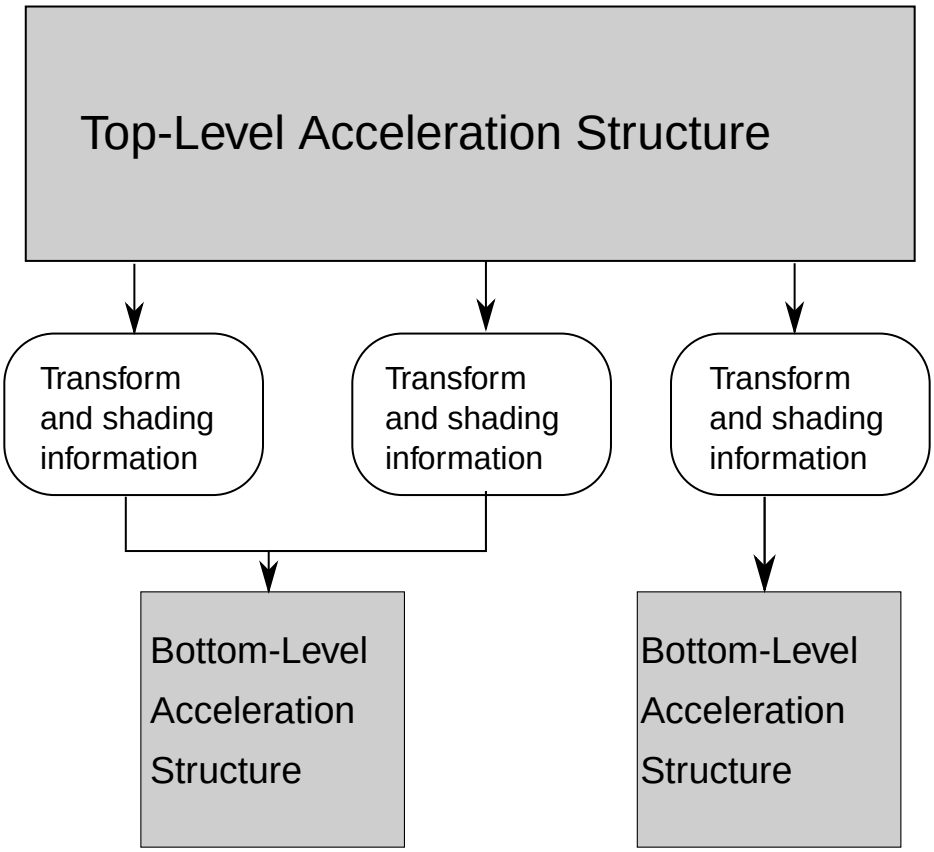

Figure 27. Acceleration Structure

Caption

The diagram shows the relationship between top and bottom level acceleration structures.

43.1.1. Geometry

Geometries refer to a triangle, sphere, linear swept sphere (LSS), or axis-aligned bounding box.

A triangle is a fundamental geometric primitive defined by three vertices in 3D space, forming a flat, planar surface.

An axis-aligned bounding box (AABB) is a rectangular box defined by two points (minimum and maximum corners) that encloses a 3D object or scene. Its faces are aligned with the coordinate axes, making intersection tests efficient for spatial partitioning and acceleration structures.

A sphere primitive is defined by a position and a radius.

The linear swept sphere (LSS) primitive is comprised of two sphere endcaps and a truncated cone midsection. The midsection is constructed so that it tangentially intersects with the endcaps. Two points, P_0 and P_1, and two radii, r_0 and r_1, fully describe the primitive.

The following figure shows an example of the LSS primitive composed of two sphere endcaps connected by a midsection. The solid non-dotted outline indicates the intersectable portion of the primitive.

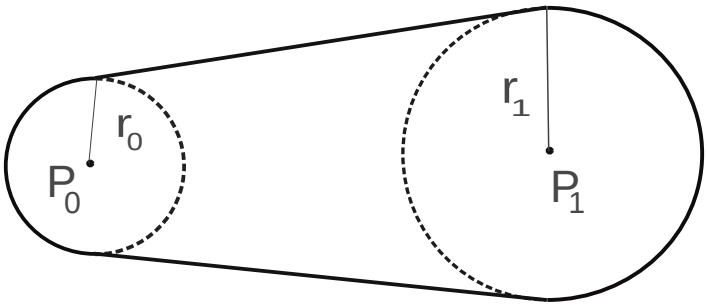

Figure 28. LSS primitive

Endcaps on LSS primitives are optional and are controlled by VkAccelerationStructureGeometryLinearSweptSpheresDataNV::`endCapsMode`. The following figure shows an example of the LSS primitive without the endcaps with only the midsection present.

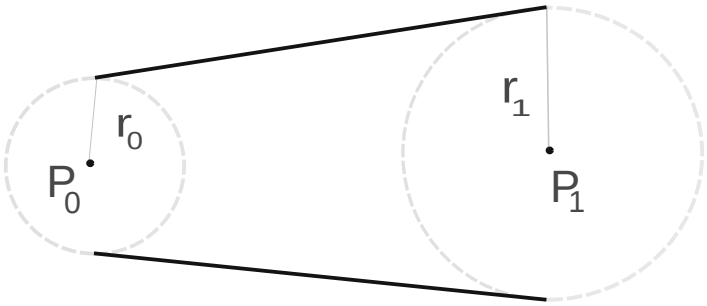

Figure 29. LSS primitive with no endcaps

An LSS geometry can be defined in multiple ways. If only the vertex and radius data are specified in VkAccelerationStructureGeometryLinearSweptSpheresDataNV without specifying the index data, LSS primitives are drawn in pairs of vertices. Each primitive i is defined by entries (i × 2, i × 2 + 1) in the vertex and radius buffers. For example, if a vertex buffer contains vertices A, B, C, D, E, F and G, (assuming each character represents a position vector) with corresponding radii as rA, rB, rC, rD, rE, rF and rG respectively, the LSS primitives drawn will be as shown below with G skipped because it does not have a corresponding vertex pair.

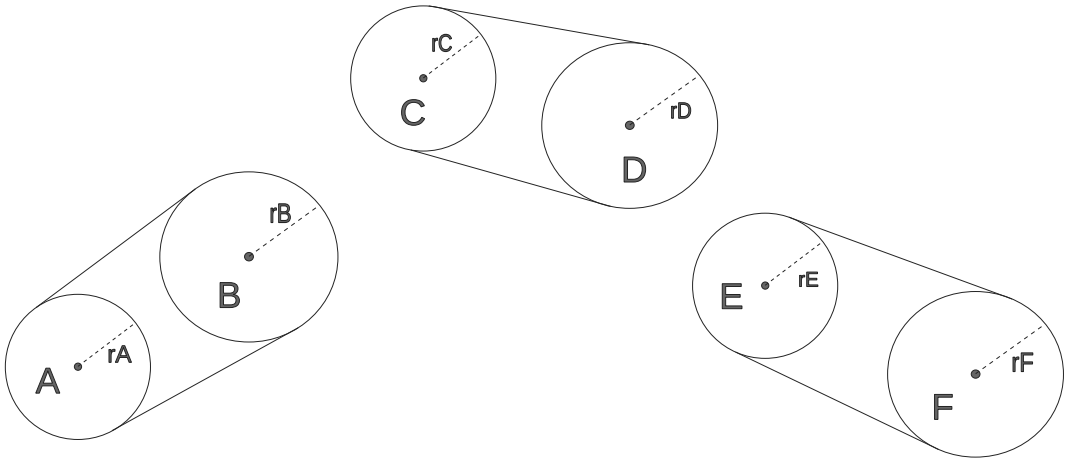

Figure 30. Lss primitives drawn with only vertex data

LSS primitives **can** be chained together by specifying an index buffer and indexing mode in the VkAccelerationStructureGeometryLinearSweptSpheresDataNV structure.

If the VkRayTracingLssIndexingModeNV::`indexingMode` is set to VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV, then the consecutive pair of indices in the index buffer select the vertices that define the LSS chain. For example, assuming the same vertex buffer as before, if the index buffer contains indices [6, 5, 5, 4, 4, 3, 2, 1], the LSS primitives will be

chained as shown:

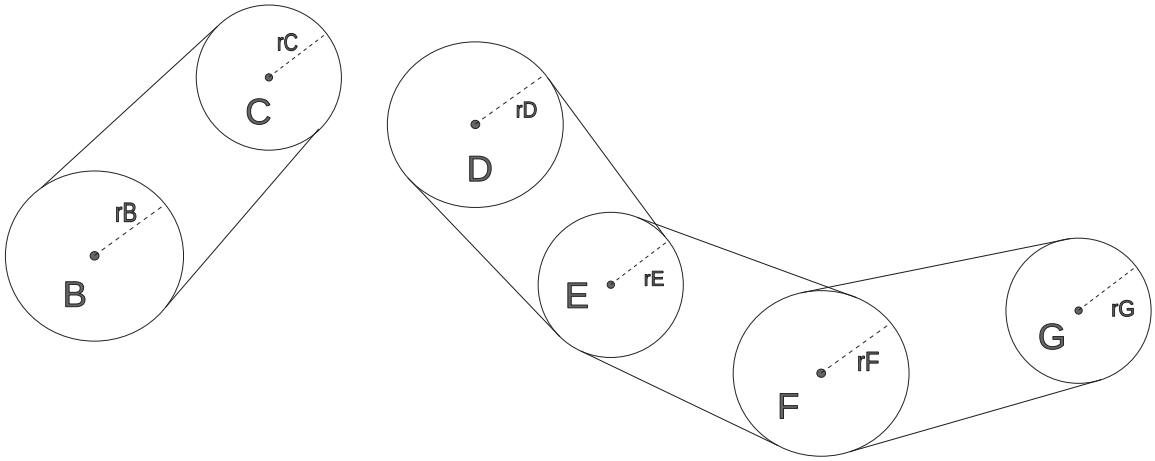

Figure 31. Lss primitives drawn with VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV indexing mode

Note that due to the lack of a [3, 2] pair, there is a break in the chain and D is not connected to C.

If the VkRayTracingLssIndexingModeNV::`indexingMode` is set to VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV, then each LSS primitive is defined by two successive positions and radii, (k, k
1), where k is a single index in the index buffer. For example, if the index buffer contains indices [0, 1, 2, 4], the LSS primitives will be chained as shown below. Note that due to the absence of index 3 in the index buffer, there is a break in the chain and D is not connected to E.

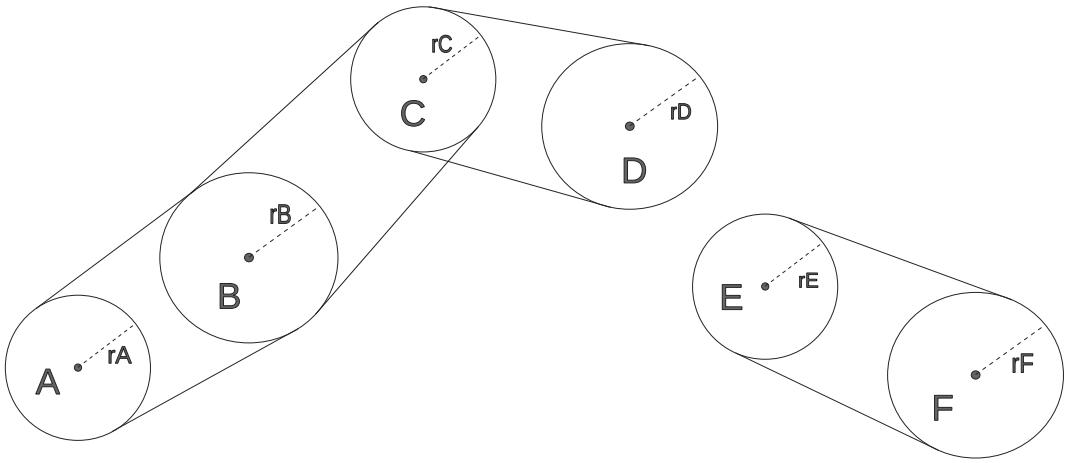

Figure 32. Lss primitives drawn with VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV indexing mode

43.1.2. Top Level Acceleration Structures

Opaque acceleration structure for an array of instances. The descriptor or device address referencing this is the starting point for traversal.

The top level acceleration structure takes a reference to any bottom level acceleration structure referenced by its instances. Those bottom level acceleration structure objects **must** be valid when

the top level acceleration structure is accessed.

43.1.3. Bottom Level Acceleration Structures

Opaque acceleration structure for an array of geometries.

43.1.4. Acceleration Structure Update Rules

The API defines two types of operations to produce acceleration structures from geometry:

- A *build* operation is used to construct an acceleration structure.
- An *update* operation is used to modify an existing acceleration structure.

An update operation imposes certain constraints on the input, in exchange for considerably faster execution. When performing an update, the application is required to provide a full description of the acceleration structure, but is prohibited from changing anything other than instance definitions, transform matrices, and vertex or AABB positions. All other aspects of the description **must** exactly match the one from the original build.

More precisely, the application **must** not use an update operation to do any of the following:

- Change primitives or instances from *active* to *inactive*, or vice versa (as defined in Inactive Primitives and Instances).
- Change the index or vertex formats of triangle geometry.
- Change triangle geometry transform pointers from null to non-null or vice versa.
- Change the number of geometries or instances in the structure.
- Change the geometry flags for any geometry in the structure.
- Change the number of vertices or primitives for any geometry in the structure.

If the original acceleration structure was built using opacity micromaps and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT was set in `flags`, the application **must** provide a micromap matching the original micromap in structure with only opacity values updated. The application is prohibited from changing anything other than the specific opacity values assigned to the triangles.

More precisely, the application **must** not use an update operation to do any of the following:

- Remove micromaps or VkOpacityMicromapSpecialIndexKHR values from a geometry which previously had them, or vice versa.
- Change between use of VkOpacityMicromapSpecialIndexKHR values and explicit micro-map triangles.
- Change the subdivision level or format of the micromap triangle associated with any acceleration-structure triangle.

Acceleration structures constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR and originally built with the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT

flag **must** provide a micromap deserialized using the exact serialized output of the micromap that was originally referenced by the serialized acceleration structure.

NOTE	If applications need to update micromap data referenced by a deserialized acceleration structure, then they must originally build the acceleration structure with the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag and perform a full micromap update.

If the original acceleration structure was built using opacity micromaps and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR was set in `flags`, the application **must** provide a micromap to the update operation.

A VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR operation transfers the reference in the acceleration structure to the new micromap unless VkMicromapBuildSizesInfoEXT::`discardable` is VK_TRUE .

If the original acceleration structure was built using opacity micromaps and neither opacity micromap update flag is set, the application **must** provide the original micromap to the update operation or the deserialized micromap from the original micromap's exact serialized data if the original acceleration structure was deserialized prior.

If the original acceleration structure was built using displacement micromaps and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_BIT_NV was set in `flags`, the application **must** provide a displacement micromap to the update operation.

If the original acceleration structure was built using displacement micromaps and the displacement micromap update flag is not set the application **must** provide the original micromap to the update operation.

43.1.5. Inactive Primitives and Instances

Acceleration structures allow the use of particular input values to signal *inactive* primitives or instances.

An *inactive* triangle is one for which the first (X) component of any vertex is NaN. If any other vertex component is NaN, and the first is not, the behavior is undefined. If the vertex format does not have a NaN representation, then all triangles are considered active.

An *inactive* instance is one whose acceleration structure reference is `0`.

An *inactive* AABB is one for which the minimum X coordinate is NaN. If any other component is NaN, and the first is not, the behavior is undefined.

An *inactive* LSS or sphere is one where any of the radius or position components is NaN.

In the above definitions, "NaN" refers to any type of NaN. Signaling, non-signaling, quiet, loud, or otherwise.

An inactive object is considered invisible to all rays, and **should** not be represented in the acceleration structure. Implementations **should** ensure that the presence of inactive objects does not seriously degrade traversal performance.

Inactive objects are counted in the auto-generated index sequences which are provided to shaders via `InstanceId` and `PrimitiveId` SPIR-V decorations. This allows objects in the scene to change freely between the active and inactive states, without affecting the layout of any arrays which are being indexed using the ID values.

Any transition between the active and inactive states requires a full acceleration structure rebuild. Applications **must** not perform an acceleration structure update where an object is active in the source acceleration structure but would be inactive in the destination, or vice versa.

The active/inactive state of primitives **must** not be changed with acceleration structure updates. For chained LSS, using the VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV mode, entire chains **must** be either active or inactive. If any chain contains both active and inactive primitives, the behavior is undefined.

43.1.6. Degenerate Primitives and Instances

Degenerate primitives and instances behave differently to inactive primitives and instances, and are defined as:

- triangles that have one or more vertices whose respective (X), (Y), (Z) components are identical, or have three vertices that have at least two of the (X), (Y), or (Z) components identical, therefore forming a line or point. Degenerate triangles do not generate any intersections.
- AABBs whose `minX=maxX`, `minY=maxY`, and `minZ=maxZ`. Degenerate AABBs **may** invoke the intersection shader.
- LSS primitives where both the radii are set to `0`.
- sphere primitives whose radius is set to `0`.
- instances that reference bottom level acceleration structures that contain no active primitives. When building an acceleration structure, implementations **should** treat degenerate instances as though they are a point at the instance origin, specified by VkAccelerationStructureInstanceKHR::`transform`.

Unlike *inactive* primitives and instances, *degenerate* primitives and instances **may** transition from the degenerate to the non-degenerate state, or vice versa, when performing an acceleration structure update.

If an acceleration structure is built without VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureInfoNV::`flags` or VkAccelerationStructureBuildGeometryInfoKHR::`flags`, degenerate primitives **may** be discarded. Primitives that are defined with the same index value for more than one vertex **can** always be discarded.

43.1.7. Building Acceleration Structures

To build acceleration structures call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresKHR(
    VkCommandBuffer                                 commandBuffer,
    uint32_t                                        infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` VkAccelerationStructureBuildGeometryInfoKHR structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of VkAccelerationStructureBuildRangeInfoKHR structures. Each `ppBuildRangeInfos`[i] is a pointer to an array of `pInfos`[i].`geometryCount` VkAccelerationStructureBuildRangeInfoKHR structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos`[i].

The `vkCmdBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structure builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE

This means that an application **cannot** build a top-level acceleration structure in the same vkCmdBuildAccelerationStructuresKHR call as the associated bottom-level or instance acceleration structures are being built. Similarly, the application **cannot** build a bottom-level acceleration structure in the same vkCmdBuildAccelerationStructuresKHR call as the associated micromaps are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

The input buffers passed to this command will be referenced by the implementation for the duration of this command's execution on the device.

After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained. Micromaps **must** always be fully-self-contained.

The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of future commands, provided proper synchronization is used as described below.

NOTE

A VkAccelerationStructureBuildRangeInfoKHR structure is not used when building an acceleration structure with any of the following geometry types, and **must** be NULL: **VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX** VK_GEOMETRY_TYPE_MICROMAP_KHR

NOTE The required alignment of the device addresses passed in to parameters below might not be provided by the base address of a VkBuffer created with the correct usage flags and must still be manually aligned by the application code.

Accesses to the acceleration structure scratch buffers as identified by the VkAccelerationStructureBuildGeometryInfoKHR::scratchData buffer device addresses **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of (VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR). Accesses to each VkAccelerationStructureBuildGeometryInfoKHR::srcAccelerationStructure and VkAccelerationStructureBuildGeometryInfoKHR::dstAccelerationStructure **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR, as appropriate.

Accesses to other input buffers as identified by any used values of VkAccelerationStructureGeometryMotionTrianglesDataNV::vertexData, VkAccelerationStructureGeometryMicromapDataKHR::data, VkAccelerationStructureGeometryMicromapDataKHR::triangleArray, VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX::compressedData, VkAccelerationStructureGeometryTrianglesDataKHR::vertexData, VkAccelerationStructureGeometryTrianglesDataKHR::indexData, VkAccelerationStructureGeometryTrianglesDataKHR::transformData, VkAccelerationStructureGeometryAabbsDataKHR::data, and VkAccelerationStructureGeometryInstancesDataKHR::data **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresKHR-accelerationStructure-08923
  The VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11543
  Each element of ppBuildRangeInfos[i] **must** be a valid pointer to an array of pInfos[i].geometryCount VkAccelerationStructureBuildRangeInfoKHR structures if the pInfos[i].type is not one of:
  - VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX
  - VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10906
  For each element of pInfos[i] whose pGeometries or ppGeometries members have a geometryType of VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, ppBuildRangeInfos[i] **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11544
  For each element of pInfos[i] whose pGeometries or ppGeometries members have a

geometryType of VK_GEOMETRY_TYPE_MICROMAP_KHR, ppBuildRangeInfos[i] **must** be NULL

- VUID-vkCmdBuildAccelerationStructuresKHR-mode-11545
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its mode **must** equal VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-11546
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its srcAccelerationStructure **must** be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11547
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11548
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by any VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap member included in the pNext chain of any geometry.triangles member of any element of pGeometries or ppGeometries in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11549
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap member included in the pNext chain of any geometry.triangles member of any element of pGeometries or ppGeometries in any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11550
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, its data and triangleArray members **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11551
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, the buffers from which the buffer device addresses for its data and triangleArray members are queried **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11552
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, its data and triangleArray members **must** be a multiple of 128
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11553
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a

VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its triangleArray member **must** specify an access within the range of the VkBuffer that data was retrieved from, given by [dataOffset, dataOffset
triangleSize] where triangleSize is calculated using its format and subdivisionLevel members rounded up to the nearest byte

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11554
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, the range of [triangleArray, triangleArray + (triangleArrayStride * numTriangles)] **must** be within the range of the VkBuffer from which the triangleArray member was retrieved, where *numTriangles* is the sum of count of all elements of pUsageCounts or ppUsageCounts
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11555
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its geometry.triangleArray member **must** have a format with a valid value from VkOpacityMicromapFormatKHR
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11556
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its triangleArray member with a format equal to VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR, subdivisionLevel **must** be less than or equal to maxOpacity2StateSubdivisionLevel
- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11575
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles member includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its pNext chain, the micromap's indexType member is not VK_INDEX_TYPE_NONE_KHR, and micromap is not VK_NULL_HANDLE, for each *index* in indexBuffer[*j*] that is not one of the VkOpacityMicromapSpecialIndexKHR values, where *j* is within the range [0, numTrianglesInGeometry - 1] where *numTrianglesInGeometry* is equal to ppBuildRangeInfos[i]→primitiveCount, *index* plus baseTriangle **must** be less than *numTriangles*, where *numTriangles* is given by the sum of all count parameters in the pUsageCounts or ppUsageCounts provided to the micromap's build command
- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11577
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles member includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its pNext chain, and the micromap's indexType member is not VK_INDEX_TYPE_NONE_KHR, indexBuffer
  (indexStride * numTrianglesInGeometry) **must** be within the range of the VkBuffer from which the indexBuffer device address was obtained where *numTrianglesInGeometry* is equal to ppBuildRangeInfos[i]→primitiveCount
- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11578
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles member

includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its pNext chain, the micromap's indexType member is not VK_INDEX_TYPE_NONE_KHR, and micromap is VK_NULL_HANDLE, for each *index* in indexBuffer[*j*] where *j* is within the range from [0, numTrianglesInGeometry - 1], *index* **must** be a valid VkOpacityMicromapSpecialIndexKHR value where *numTrianglesInGeometry* is equal to ppBuildRangeInfos[i]→primitiveCount

- VUID-vkCmdBuildAccelerationStructuresKHR-mode-04628
  The mode member of each element of pInfos **must** be a valid VkBuildAccelerationStructureModeKHR value
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
  If the srcAccelerationStructure member of any element of pInfos is not VK_NULL_HANDLE, the srcAccelerationStructure member **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-04630
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** not be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03708
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, srcAccelerationStructure **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03403
  The srcAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
  The dstAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
  The dstAccelerationStructure member of any element of pInfos **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03707
  For each element of pInfos, its dstAccelerationStructure member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03699
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR ::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03700
  For each element of pInfos, if its type member is

VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03663
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, inactive primitives in its srcAccelerationStructure member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03664
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, active primitives in its srcAccelerationStructure member **must** not be made inactive
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03709
  For each element of pInfos, if an acceleration structure is referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, it **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-None-03407
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03701
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any other element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03702
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstAccelerationStructure member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03703
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03704
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03706
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03667
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags in the build
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03668
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure and dstAccelerationStructure members **must** either be the same VkAccelerationStructureKHR, or not have any memory aliasing
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03758
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its geometryCount member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03759
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03760
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its type member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03761
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its geometryType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03762
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each

VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03763
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03764
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03765
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03766
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03767
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10898
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numTriangles member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in

the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10899
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numVertices member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10900
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxPrimitiveIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10901
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxGeometryIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10902
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the format member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10903
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the dataSize

member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03768
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index referenced **must** be the same as the corresponding index value when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-primitiveCount-03769
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, the primitiveCount member of its corresponding VkAccelerationStructureBuildRangeInfoKHR structure **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03801
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, the corresponding ppBuildRangeInfos[i][j].primitiveCount **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12258
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12259
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresKHR-geometry-03673
  The buffers from which the buffer device addresses for all of the geometry.triangles.vertexData, geometry.triangles.indexData, geometry.triangles.transformData, geometry.aabbs.data, and geometry.instances.data members of all pInfos[i].pGeometries and pInfos[i].ppGeometries are queried **must** have been created with the

VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12260
  If `pInfos`[i].`mode` is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and the size reported by the `updateScratchSize` member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, `pInfos`[i].`scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12261
  If `pInfos`[i].`mode` is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and the size reported by the `buildScratchSize` member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, `pInfos`[i].`scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03710
  For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of VkPhysicalDeviceAccelerationStructurePropertiesKHR::`minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03804
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` of VK_GEOMETRY_TYPE_TRIANGLES_KHR, `geometry.triangles.vertexData.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03711
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` of VK_GEOMETRY_TYPE_TRIANGLES_KHR, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to:
  - the size of the format specified in `vertexFormat`, in bytes, if that format is a packed format
  - the component size of the format specified in `vertexFormat`, in bytes, if that format is not a packed format
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03806
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if `geometry.triangles.indexType` is not VK_INDEX_TYPE_NONE_KHR, `geometry.triangles.indexData.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03712
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` of VK_GEOMETRY_TYPE_TRIANGLES_KHR, and with `geometry.triangles.indexType` not equal

to VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be aligned to the size in bytes of the type in indexType

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03808
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03810
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03811
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03714
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03715
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_FALSE, geometry.instances.data.deviceAddress **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03716
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, geometry.instances.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03717
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, each element of geometry.instances.data.deviceAddress in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03813
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, geometry.instances.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12281
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, each VkAccelerationStructureInstanceKHR ::accelerationStructureReference value in geometry.instances.data.deviceAddress **must** be 0 or a value obtained from vkGetAccelerationStructureDeviceAddressKHR for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10607
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of

VK_GEOMETRY_TYPE_INSTANCES_KHR, if VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR is set in VkAccelerationStructureInstanceKHR::flags then geometry.instances.data.deviceAddress **must** refer to an acceleration structure that was built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-09547
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11701
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11624
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been built with a type of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11625
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with a valid micromap member
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11626
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11627
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the

same geometry in the original build of srcAccelerationStructure was not built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** not be included in the geometry.triangles.pNext chain

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11628
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag, and srcAccelerationStructure was constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with a micromap that was deserialized from the serialized data of the micromap in the original build of srcAccelerationStructure

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11629
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without either the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flags, and srcAccelerationStructure was not constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with the same micromap handle as the original build

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11632
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, then its micromap member **must** have been constructed prior to this command's execution on the device

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10904
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext

chain, and its indexType is VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be 0

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10905
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11846
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11847
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11848
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11849
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::radiusData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11850
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11851
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11852
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11853
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV,

VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData.deviceAddress **must** be a valid VkDeviceAddress

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10126
  For each pInfos[i], dstAccelerationStructure **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::size greater than or equal to either:
  - the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and with each element of the pMaxPrimitiveCounts array greater than or equal to the equivalent ppBuildRangeInfos[i][j].primitiveCount values for j in [0,pInfos[i].geometryCount) or,
  - the result of querying the corresponding VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, if updating a compacted acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11845
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureGeometryMotionTrianglesDataNV in the geometry.triangles.pNext chain, then its vertexData.deviceAddress **must** be a valid VkDeviceAddress

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-parameter
  pInfos **must** be a valid pointer to an array of infoCount valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter
  ppBuildRangeInfos **must** be a valid pointer to an array of infoCount VkAccelerationStructureBuildRangeInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildAccelerationStructuresKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresKHR-infoCount-arraylength
  infoCount **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructuresKHR is not affected by conditional rendering

To build acceleration structures with some parameters sourced on the device call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresIndirectKHR(
    VkCommandBuffer                                 commandBuffer,
    uint32_t                                        infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkDeviceAddress*                          pIndirectDeviceAddresses,
    const uint32_t*                                 pIndirectStrides,
    const uint32_t* const*                          ppMaxPrimitiveCounts);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build.
- `pInfos` is a pointer to an array of `infoCount` VkAccelerationStructureBuildGeometryInfoKHR structures defining the geometry used to build each acceleration structure.
- `pIndirectDeviceAddresses` is a pointer to an array of `infoCount` buffer device addresses which point to `pInfos`[i].`geometryCount` VkAccelerationStructureBuildRangeInfoKHR structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos`[i].
- `pIndirectStrides` is a pointer to an array of `infoCount` byte strides between elements of `pIndirectDeviceAddresses`.
- `ppMaxPrimitiveCounts` is a pointer to an array of `infoCount` pointers to arrays of `pInfos`[i].`geometryCount` values indicating the maximum number of primitives that will be built by this command for each geometry.

Accesses to any device memory referenced by this command **must** be synchronized as with vkCmdBuildAccelerationStructuresKHR.

Accesses to any element of `pIndirectDeviceAddresses` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_INDIRECT_COMMAND_READ_BIT.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-accelerationStructureIndirectBuild-03650
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureIndirectBuild` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-mode-04628
  The `mode` member of each element of `pInfos` **must** be a valid VkBuildAccelerationStructureModeKHR value
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-srcAccelerationStructure-04629
  If the `srcAccelerationStructure` member of any element of `pInfos` is not VK_NULL_HANDLE, the `srcAccelerationStructure` member **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-04630
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `srcAccelerationStructure` member **must** not be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03708
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, `srcAccelerationStructure` **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03403
  The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03698
  The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03800
  The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03707
  For each element of `pInfos`, its `dstAccelerationStructure` member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03699
  For each element of `pInfos`, if its `type` member is

VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03700
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03663
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, inactive primitives in its srcAccelerationStructure member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03664
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, active primitives in its srcAccelerationStructure member **must** not be made inactive
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03709
  For each element of pInfos, if an acceleration structure is referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, it **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-None-03407
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03701
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any other element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03702
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstAccelerationStructure member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03703
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03704
  The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03705
  The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03706
  The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03667
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `srcAccelerationStructure` member **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::`flags` in the build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03668
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same VkAccelerationStructureKHR, or not have any memory aliasing
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03758
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03759
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03760
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03761
  For each element of `pInfos`, if its `mode` member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or

ppGeometries members, its geometryType member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03762
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03763
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03764
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03765
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03766
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03767
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10898
  For each element of pInfos, if its mode member is

VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numTriangles member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10899
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numVertices member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10900
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxPrimitiveIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10901
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxGeometryIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10902
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the format member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10903

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the dataSize member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03768
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index referenced **must** be the same as the corresponding index value when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-primitiveCount-03769
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, the primitiveCount member of its corresponding VkAccelerationStructureBuildRangeInfoKHR structure **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03801
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, the corresponding ppMaxPrimitiveCounts[i][j] **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR ::maxInstanceCount
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12258
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12259
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-geometry-03673

The buffers from which the buffer device addresses for all of the geometry.triangles.vertexData, geometry.triangles.indexData, geometry.triangles.transformData, geometry.aabbs.data, and geometry.instances.data members of all pInfos[i].pGeometries and pInfos[i].ppGeometries are queried **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12260
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and the size reported by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12261
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and the size reported by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03710
  For each element of pInfos, its scratchData.deviceAddress member **must** be a multiple of VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03804
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03711
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be aligned to:
  - the size of the format specified in vertexFormat, in bytes, if that format is a packed format
  - the component size of the format specified in vertexFormat, in bytes, if that format is not a packed format
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03806
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be a

valid VkDeviceAddress

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03712
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, and with geometry.triangles.indexType not equal to VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be aligned to the size in bytes of the type in indexType
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03808
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03810
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03811
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03714
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03715
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_FALSE, geometry.instances.data.deviceAddress **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03716
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, geometry.instances.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03717
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, each element of geometry.instances.data.deviceAddress in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03813
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, geometry.instances.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12281
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, each VkAccelerationStructureInstanceKHR ::accelerationStructureReference value in geometry.instances.data.deviceAddress **must** be

0 or a value obtained from vkGetAccelerationStructureDeviceAddressKHR for a valid bottom level acceleration structure

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10607
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR is set in VkAccelerationStructureInstanceKHR::flags then geometry.instances.data.deviceAddress **must** refer to an acceleration structure that was built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-09547
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11701
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11624
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been built with a type of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11625
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with a valid micromap member
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11626
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11627

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was not built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** not be included in the geometry.triangles.pNext chain

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11628
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag, and srcAccelerationStructure was constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with a micromap that was deserialized from the serialized data of the micromap in the original build of srcAccelerationStructure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11629
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without either the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flags, and srcAccelerationStructure was not constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the geometry.triangles.pNext chain with the same micromap handle as the original build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11632
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, then its micromap member **must** have been constructed prior to this command's execution on the device

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10904
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10905
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11846
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11847
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11848
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11849
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::radiusData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11850
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11851
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11852
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.deviceAddress **must** be a valid VkDeviceAddress

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11853
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03646
  For each element of pIndirectDeviceAddresses[i], all device addresses between pIndirectDeviceAddresses[i] and pIndirectDeviceAddresses[i] + (pInfos[i].geometryCount × pIndirectStrides[i]) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03647
  For each element of pIndirectDeviceAddresses, the buffer from which it was queried **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03648
  Each element of pIndirectDeviceAddresses **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-03787
  Each element of pIndirectStrides **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03651
  Each VkAccelerationStructureBuildRangeInfoKHR structure referenced by any element of pIndirectDeviceAddresses **must** be a valid VkAccelerationStructureBuildRangeInfoKHR structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03652
  pInfos[i].dstAccelerationStructure **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::size greater than or equal to the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and pMaxPrimitiveCounts = ppMaxPrimitiveCounts[i]
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-03653
  Each ppMaxPrimitiveCounts[i][j] **must** be greater than or equal to the primitiveCount value specified by the VkAccelerationStructureBuildRangeInfoKHR structure located at pIndirectDeviceAddresses[i] + (j × pIndirectStrides[i])
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-type-11557
  For any element of pInfos, its type member **must** not be VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-parameter
  pInfos **must** be a valid pointer to an array of infoCount valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-parameter

pIndirectDeviceAddresses **must** be a valid pointer to an array of infoCount VkDeviceAddress values

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-parameter pIndirectStrides **must** be a valid pointer to an array of infoCount uint32_t values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-parameter ppMaxPrimitiveCounts **must** be a valid pointer to an array of infoCount uint32_t values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-recording commandBuffer **must** be in the recording state
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-cmdpool The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-renderpass This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-suspended This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-videocoding This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-infoCount-arraylength infoCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructuresIndirectKHR is not affected by conditional rendering

The VkAccelerationStructureBuildGeometryInfoKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildGeometryInfoKHR {
    VkStructureType                                    sType;
    const void*                                        pNext;
    VkAccelerationStructureTypeKHR                     type;
    VkBuildAccelerationStructureFlagsKHR               flags;
    VkBuildAccelerationStructureModeKHR                mode;
    VkAccelerationStructureKHR                         srcAccelerationStructure;
    VkAccelerationStructureKHR                         dstAccelerationStructure;
    uint32_t                                           geometryCount;
    const VkAccelerationStructureGeometryKHR*          pGeometries;
    const VkAccelerationStructureGeometryKHR* const*   ppGeometries;
    VkDeviceOrHostAddressKHR                           scratchData;
} VkAccelerationStructureBuildGeometryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a VkAccelerationStructureTypeKHR value specifying the type of acceleration structure being built.
- `flags` is a bitmask of VkBuildAccelerationStructureFlagBitsKHR specifying additional parameters of the acceleration structure.
- `mode` is a VkBuildAccelerationStructureModeKHR value specifying the type of operation to perform.
- `srcAccelerationStructure` is a pointer to an existing acceleration structure that is to be used to update the `dstAccelerationStructure` acceleration structure when `mode` is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR.
- `dstAccelerationStructure` is a pointer to the target acceleration structure for the build.
- `geometryCount` specifies the number of geometries that will be built into `dstAccelerationStructure`.
- `pGeometries` is a pointer to an array of VkAccelerationStructureGeometryKHR structures.
- `ppGeometries` is a pointer to an array of pointers to VkAccelerationStructureGeometryKHR structures.
- `scratchData` is the device or host address of memory that will be used as scratch memory for the build.

Only one of `pGeometries` or `ppGeometries` **can** be a valid pointer, the other **must** be `NULL`. Each element of the non-`NULL` array describes the data used to build each acceleration structure geometry.

For bottom-level acceleration structures, the index of each element of the `pGeometries` or `ppGeometries` members of VkAccelerationStructureBuildGeometryInfoKHR is used as the *geometry index* during ray traversal. The geometry index is available in ray shaders via the `RayGeometryIndexKHR` built-in, and is used to determine hit and intersection shaders executed during traversal. The geometry index is available to ray queries via the

OpRayQueryGetIntersectionGeometryIndexKHR instruction.

Setting VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV in flags indicates that this build is a motion top level acceleration structure. A motion top level uses instances of format VkAccelerationStructureMotionInstanceNV if VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers is VK_FALSE.

If VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers is VK_TRUE, the pointer for each element of the array of instance pointers consists of 4 bits of VkAccelerationStructureMotionInstanceTypeNV in the low 4 bits of the pointer identifying the type of structure at the pointer. The device address accessed is the value in the array with the low 4 bits set to zero. The structure at the pointer is one of VkAccelerationStructureInstanceKHR, VkAccelerationStructureMatrixMotionInstanceNV or VkAccelerationStructureSRTMotionInstanceNV, depending on the type value encoded in the low 4 bits.

A top level acceleration structure with either motion instances or vertex motion in its instances **must** set VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV in flags.

Members srcAccelerationStructure and dstAccelerationStructure **may** be the same or different for an update operation (when mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR). If they are the same, the update happens in-place. Otherwise, the target acceleration structure is updated and the source is not modified.

Valid Usage

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03654
  type **must** not be VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-03788
  If geometryCount is not 0, exactly one of pGeometries or ppGeometries **must** be a valid pointer, the other **must** be NULL
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03789
  If type is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, the geometryType member of elements of either pGeometries or ppGeometries **must** be VK_GEOMETRY_TYPE_INSTANCES_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03790
  If type is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, geometryCount **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03791
  If type is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR the geometryType member of elements of either pGeometries or ppGeometries **must** not be VK_GEOMETRY_TYPE_INSTANCES_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03792
  If type is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR then the geometryType member of each geometry in either pGeometries or ppGeometries **must** be the same

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03793
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR then `geometryCount` **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxGeometryCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-10884
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR and the `geometryType` member of either `pGeometries` or `ppGeometries` is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, then `geometryCount` **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03794
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR and the `geometryType` member of either `pGeometries` or `ppGeometries` is VK_GEOMETRY_TYPE_AABBS_KHR, the total number of AABBs in all geometries **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03795
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR and the `geometryType` member of either `pGeometries` or `ppGeometries` is VK_GEOMETRY_TYPE_TRIANGLES_KHR, the total number of triangles in all geometries **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-03796
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR bit set, then it **must** not have the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-dstAccelerationStructure-04927
  If `dstAccelerationStructure` was created with VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV set in VkAccelerationStructureCreateInfoKHR::`createFlags`, VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV **must** be set in `flags`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04928
  If VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV is set in `flags`, `dstAccelerationStructure` **must** have been created with VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV set in VkAccelerationStructureCreateInfoKHR::`createFlags`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04929
  If VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV is set in `flags`, `type` **must** not be VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11558
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR bit set then it **must** not have the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT bit set

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11709
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11710
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` or `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11711
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` or `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-micromap-11559
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryCount-11560
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `geometryCount` **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11561
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** be VK_GEOMETRY_TYPE_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11707
  If `type` is not VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** not be VK_GEOMETRY_TYPE_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11562
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `flags` **must** only include the following bits:
  - VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-11563
  If `flags` includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, `type` **must** be VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11712
  If `flags` includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of `pGeometries` or `ppGeometries`, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its `pNext` chain, each

element of its pUsageCounts or ppUsageCounts members **must** have its format member equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11564
  If flags does not include VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its pUsageCounts or ppUsageCounts members, if its format member is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, its subdivisionLevel member **must** be less than or equal to maxOpacity4StateSubdivisionLevel
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11565
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its pUsageCounts or ppUsageCounts members, its subdivisionLevel member **must** be less than or equal to maxOpacityLossy4StateSubdivisionLevel
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11713
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its triangleArray member **must** have its format member equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11566
  If flags does not include VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its triangleArray member, if its format member is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, its subdivisionLevel member **must** be less than or equal to maxOpacity4StateSubdivisionLevel
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11567
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its triangleArray member, its subdivisionLevel member **must** be less than or equal to maxOpacityLossy4StateSubdivisionLevel

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pNext-pNext
  pNext **must** be NULL

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-parameter
  `type` **must** be a valid VkAccelerationStructureTypeKHR value
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkBuildAccelerationStructureFlagBitsKHR values
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-parameter
  If `geometryCount` is not `0`, and `pGeometries` is not `NULL`, `pGeometries` **must** be a valid pointer to an array of `geometryCount` valid VkAccelerationStructureGeometryKHR structures
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-ppGeometries-parameter
  If `geometryCount` is not `0`, and `ppGeometries` is not `NULL`, `ppGeometries` **must** be a valid pointer to an array of `geometryCount` valid pointers to valid VkAccelerationStructureGeometryKHR structures
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-commonparent
  Both of `dstAccelerationStructure`, and `srcAccelerationStructure` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

The VkBuildAccelerationStructureModeKHR enumeration is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureModeKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR = 0,
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR = 1,
} VkBuildAccelerationStructureModeKHR;
```

- VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR specifies that the destination acceleration structure will be built using the specified geometries.
- VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR specifies that the destination acceleration structure will be built using data in a source acceleration structure, updated by the specified geometries.

The `VkDeviceOrHostAddressKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure, VK_NV_cooperative_vector
typedef union VkDeviceOrHostAddressKHR {
    VkDeviceAddress    deviceAddress;
    void*              hostAddress;
} VkDeviceOrHostAddressKHR;
```

- `deviceAddress` is a buffer device address as returned by the vkGetBufferDeviceAddressKHR command.
- `hostAddress` is a host memory address.

The `VkDeviceOrHostAddressConstKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure, VK_NV_cooperative_vector
typedef union VkDeviceOrHostAddressConstKHR {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstKHR;
```

- `deviceAddress` is a buffer device address as returned by the vkGetBufferDeviceAddressKHR command.
- `hostAddress` is a const host memory address.

The `VkAccelerationStructureGeometryKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryKHR {
    VkStructureType                           sType;
    const void*                               pNext;
    VkGeometryTypeKHR                         geometryType;
    VkAccelerationStructureGeometryDataKHR    geometry;
    VkGeometryFlagsKHR                        flags;
} VkAccelerationStructureGeometryKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `geometryType` describes which type of geometry this `VkAccelerationStructureGeometryKHR` refers to.
- `geometry` is a VkAccelerationStructureGeometryDataKHR union describing the geometry data for the relevant geometry type.
- `flags` is a bitmask of VkGeometryFlagBitsKHR values describing additional properties of how the geometry should be built.

Valid Usage

- VUID-VkAccelerationStructureGeometryKHR-micromap-11568
  If `geometryType` is VK_GEOMETRY_TYPE_MICROMAP_KHR, `pNext` chain **must** include a single VkAccelerationStructureGeometryMicromapDataKHR structure
- VUID-VkAccelerationStructureGeometryKHR-flags-11569
  If `geometryType` is VK_GEOMETRY_TYPE_MICROMAP_KHR, `flags` **must** be `0`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_KHR
- VUID-VkAccelerationStructureGeometryKHR-pNext-pNext

Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX, VkAccelerationStructureGeometryLinearSweptSpheresDataNV, VkAccelerationStructureGeometryMicromapDataKHR, or VkAccelerationStructureGeometrySpheresDataNV

- VUID-VkAccelerationStructureGeometryKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkAccelerationStructureGeometryKHR-geometryType-parameter
  geometryType **must** be a valid VkGeometryTypeKHR value
- VUID-VkAccelerationStructureGeometryKHR-triangles-parameter
  If geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, the triangles member of geometry **must** be a valid VkAccelerationStructureGeometryTrianglesDataKHR structure
- VUID-VkAccelerationStructureGeometryKHR-aabbs-parameter
  If geometryType is VK_GEOMETRY_TYPE_AABBS_KHR, the aabbs member of geometry **must** be a valid VkAccelerationStructureGeometryAabbsDataKHR structure
- VUID-VkAccelerationStructureGeometryKHR-instances-parameter
  If geometryType is VK_GEOMETRY_TYPE_INSTANCES_KHR, the instances member of geometry **must** be a valid VkAccelerationStructureGeometryInstancesDataKHR structure
- VUID-VkAccelerationStructureGeometryKHR-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkGeometryFlagBitsKHR values

The VkAccelerationStructureGeometryDataKHR union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkAccelerationStructureGeometryDataKHR {
    VkAccelerationStructureGeometryTrianglesDataKHR    triangles;
    VkAccelerationStructureGeometryAabbsDataKHR        aabbs;
    VkAccelerationStructureGeometryInstancesDataKHR    instances;
} VkAccelerationStructureGeometryDataKHR;
```

- triangles is a VkAccelerationStructureGeometryTrianglesDataKHR structure.
- aabbs is a VkAccelerationStructureGeometryAabbsDataKHR structure.
- instances is a VkAccelerationStructureGeometryInstancesDataKHR structure.

The VkAccelerationStructureGeometryTrianglesDataKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryTrianglesDataKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkFormat                         vertexFormat;
    VkDeviceOrHostAddressConstKHR    vertexData;
    VkDeviceSize                     vertexStride;
    uint32_t                         maxVertex;
    VkIndexType                      indexType;
    VkDeviceOrHostAddressConstKHR    indexData;
    VkDeviceOrHostAddressConstKHR    transformData;
} VkAccelerationStructureGeometryTrianglesDataKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the VkFormat of each vertex element.
- `vertexData` is a device or host address of memory containing vertex data for this geometry.
- `vertexStride` is the stride in bytes between each vertex.
- `maxVertex` is the number of vertices in `vertexData` minus one.
- `indexType` is the VkIndexType of each index element.
- `indexData` is a device or host address of memory containing index data for this geometry. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `transformData` is a device or host address to memory containing an optional reference to a VkTransformMatrixKHR structure describing a transformation from the space in which the vertices in this geometry are described to the space in which the acceleration structure is defined.

NOTE Unlike the stride for vertex buffers in VkVertexInputBindingDescription for graphics pipelines which must not exceed `maxVertexInputBindingStride`, `vertexStride` for acceleration structure geometry is instead restricted to being a 32-bit value.

Valid Usage

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03735
  `vertexStride` **must** be a multiple of the size in bytes of the smallest component of `vertexFormat`
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03819
  `vertexStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-03797
  The format features of `vertexFormat` **must** contain VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-03798
  `indexType` **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_TRIANGLES_DATA_KHR
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkAccelerationStructureGeometryMotionTrianglesDataNV, VkAccelerationStructureTrianglesDisplacementMicromapNV, VkAccelerationStructureTrianglesOpacityMicromapEXT, or VkAccelerationStructureTrianglesOpacityMicromapKHR
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-parameter
  `vertexFormat` **must** be a valid VkFormat value
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-parameter
  `indexType` **must** be a valid VkIndexType value

The `VkAccelerationStructureGeometryMotionTrianglesDataNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureGeometryMotionTrianglesDataNV {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDeviceOrHostAddressConstKHR    vertexData;
} VkAccelerationStructureGeometryMotionTrianglesDataNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexData` is a pointer to vertex data for this geometry at time 1.0.

If `VkAccelerationStructureGeometryMotionTrianglesDataNV` is included in the `pNext` chain of a VkAccelerationStructureGeometryTrianglesDataKHR structure, the basic vertex positions are used for the position of the triangles in the geometry at time 0.0 and the `vertexData` in `VkAccelerationStructureGeometryMotionTrianglesDataNV` is used for the vertex positions at time 1.0, with positions linearly interpolated at intermediate times.

Indexing for `VkAccelerationStructureGeometryMotionTrianglesDataNV` `vertexData` is equivalent to the basic vertex position data.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryMotionTrianglesDataNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MOTION_TRIANGLES_DATA_NV`

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryTrianglesDataKHR

The `VkAccelerationStructureTrianglesOpacityMicromapKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapKHR {
    VkStructureType               sType;
    void*                         pNext;
    VkIndexType                   indexType;
    VkDeviceAddress               indexBuffer;
    VkDeviceSize                  indexStride;
    uint32_t                      baseTriangle;
    VkAccelerationStructureKHR    micromap;
} VkAccelerationStructureTrianglesOpacityMicromapKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is the address containing the triangle indices.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesOpacityMicromapKHR` is included in the `pNext` chain of a VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX or VkAccelerationStructureGeometryTrianglesDataKHR structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride` if present. If `indexType` is VK_INDEX_TYPE_NONE_KHR, then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from VkOpacityMicromapSpecialIndexKHR

then that triangle behaves as described for that special value in Ray Opacity Micromap.

Otherwise that triangle uses the opacity micromap information from `micromap` at that index plus `baseTriangle`.

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-11570
  `indexType` **must** be VK_INDEX_TYPE_UINT8, VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11571
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, `indexBuffer` **must** be 0
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11572
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexBuffer` **must** be a valid VkDeviceAddress
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11573
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11574
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-geometry-11576
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, for each triangle index in the geometry, index plus `baseTriangle` **must** be less than *numTriangles*, where *numTriangles* is given by the sum of all `count` parameters in the `pUsageCounts` or `ppUsageCounts` provided to the micromap's build command
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-11579
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, `micromap` **must** not be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_KHR
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-parameter
  `indexType` **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-parameter
  If `micromap` is not VK_NULL_HANDLE, `micromap` **must** be a valid VkAccelerationStructureKHR handle

Structure Chaining

Extends the structures

- VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX
- VkAccelerationStructureGeometryTrianglesDataKHR

The VkAccelerationStructureTrianglesOpacityMicromapEXT structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapEXT {
    VkStructureType                       sType;
    void*                                 pNext;
    VkIndexType                           indexType;
    VkDeviceOrHostAddressConstKHR         indexBuffer;
    VkDeviceSize                          indexStride;
    uint32_t                              baseTriangle;
    uint32_t                              usageCountsCount;
    const VkMicromapUsageEXT*             pUsageCounts;
    const VkMicromapUsageEXT* const*      ppUsageCounts;
    VkMicromapEXT                         micromap;
} VkAccelerationStructureTrianglesOpacityMicromapEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indexType is the type of triangle indices used when indexing this micromap.
- indexBuffer is a device or host address of memory containing the triangle indices. When indexType is VK_INDEX_TYPE_NONE_KHR it **must** be NULL.
- indexStride is the byte stride between triangle indices.
- baseTriangle is the base value added to the non-negative triangle indices.
- usageCountsCount specifies the number of usage counts structures that will be used to determine the size of this micromap.
- pUsageCounts is a pointer to an array of VkMicromapUsageEXT structures.
- ppUsageCounts is a pointer to an array of pointers to VkMicromapUsageEXT structures.
- micromap is the handle to the micromap object to include in this geometry.

If VkAccelerationStructureTrianglesOpacityMicromapEXT is included in the pNext chain of a VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX or VkAccelerationStructureGeometryTrianglesDataKHR structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from indexBuffer using indexType and indexStride if present. If indexType is VK_INDEX_TYPE_NONE_KHR, then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from VkOpacityMicromapSpecialIndexEXT then that triangle behaves as described for that special value in Ray Opacity Micromap.

Otherwise that triangle uses the opacity micromap information from micromap at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection and special index handling **must** be equal to the sum of matching `count` provided.

If `micromap` is VK_NULL_HANDLE, then every value read from `indexBuffer` **must** be one of the values in VkOpacityMicromapSpecialIndexEXT.

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-07335
  Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10719
  `indexType` **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10722
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, then `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10723
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, then `indexStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-format-11679
  If `micromap` is not VK_NULL_HANDLE, the `type` used to construct `micromap` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, the `format` member of each element of `pUsageCounts` or `ppUsageCounts` **must** be a valid value from VkOpacityMicromapFormatEXT
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11680
  If `micromap` is not VK_NULL_HANDLE, the `type` used to build `micromap` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of `pUsageCounts` or `ppUsageCounts` with `format` equal to VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT, `subdivisionLevel` **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::`maxOpacity2StateSubdivisionLevel`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11681
  If `micromap` is not VK_NULL_HANDLE, the `type` used to build `micromap` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of `pUsageCounts` or `ppUsageCounts` with `format` equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT, `subdivisionLevel` **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::`maxOpacity4StateSubdivisionLevel`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-format-11682
  If `micromap` is not VK_NULL_HANDLE, the `type` used to construct `micromap` is

VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, the format member of each element of pUsageCounts or ppUsageCounts **must** be a valid value from VkDisplacementMicromapFormatNV

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11683
  If micromap is not VK_NULL_HANDLE, the type used to construct micromap is VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, for each member of pUsageCounts or ppUsageCounts subdivisionLevel **must** be less than or equal to VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_EXT
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-parameter
  indexType **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-parameter
  If usageCountsCount is not 0, and pUsageCounts is not NULL, pUsageCounts **must** be a valid pointer to an array of usageCountsCount VkMicromapUsageEXT structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-ppUsageCounts-parameter
  If usageCountsCount is not 0, and ppUsageCounts is not NULL, ppUsageCounts **must** be a valid pointer to an array of usageCountsCount valid pointers to VkMicromapUsageEXT structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-micromap-parameter
  If micromap is not VK_NULL_HANDLE, micromap **must** be a valid VkMicromapEXT handle

Structure Chaining

Extends the structures

- VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX
- VkAccelerationStructureGeometryTrianglesDataKHR

The VkOpacityMicromapSpecialIndexKHR enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkOpacityMicromapSpecialIndexKHR {
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR = -1,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR = -2,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR = -3,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR = -4,
  // Provided by VK_EXT_opacity_micromap with VK_NV_cluster_acceleration_structure
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_CLUSTER_GEOMETRY_DISABLE_OPACITY_MICROMAP_NV = -
5,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR,
} VkOpacityMicromapSpecialIndexKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkOpacityMicromapSpecialIndexKHR
typedef VkOpacityMicromapSpecialIndexKHR VkOpacityMicromapSpecialIndexEXT;
```

- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR specifies that the entire triangle is fully transparent.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR specifies that the entire triangle is fully opaque.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR specifies that the entire triangle is unknown-transparent.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR specifies that the entire triangle is unknown-opaque.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_CLUSTER_GEOMETRY_DISABLE_OPACITY_MICROMAP_NV specifies that Opacity Micromap will be disabled for this triangle and opacity value will be picked from VkClusterAccelerationStructureBuildTriangleClusterInfoNV::baseGeometryIndexAndGeometryFlags instead. Note that this special index is only valid for Cluster Geometry.

The VkAccelerationStructureSerializedBlockTypeKHR enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkAccelerationStructureSerializedBlockTypeKHR {
    VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR = 0,
} VkAccelerationStructureSerializedBlockTypeKHR;
```

- VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR specifies that the block contains opacity micromaps.

The VkAccelerationStructureTrianglesDisplacementMicromapNV structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkAccelerationStructureTrianglesDisplacementMicromapNV {
    VkStructureType                       sType;
    void*                                 pNext;
    VkFormat                              displacementBiasAndScaleFormat;
    VkFormat                              displacementVectorFormat;
    VkDeviceOrHostAddressConstKHR         displacementBiasAndScaleBuffer;
    VkDeviceSize                          displacementBiasAndScaleStride;
    VkDeviceOrHostAddressConstKHR         displacementVectorBuffer;
    VkDeviceSize                          displacementVectorStride;
    VkDeviceOrHostAddressConstKHR         displacedMicromapPrimitiveFlags;
    VkDeviceSize                          displacedMicromapPrimitiveFlagsStride;
    VkIndexType                           indexType;
    VkDeviceOrHostAddressConstKHR         indexBuffer;
    VkDeviceSize                          indexStride;
    uint32_t                              baseTriangle;
    uint32_t                              usageCountsCount;
    const VkMicromapUsageEXT*             pUsageCounts;
    const VkMicromapUsageEXT* const*      ppUsageCounts;
    VkMicromapEXT                         micromap;
} VkAccelerationStructureTrianglesDisplacementMicromapNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- displacementBiasAndScaleFormat is the format of displacement bias and scale used in this displacement micromap reference.
- displacementVectorFormat is the format of displacement vector used in this displacement micromap reference.
- displacementBiasAndScaleBuffer is the address containing the bias and scale.
- displacementBiasAndScaleStride is the byte stride between bias and scale values.
- displacementVectorBuffer is the address containing the displacement vector values.
- displacementVectorStride is the byte stride between displacement vector values.
- displacedMicromapPrimitiveFlags is the address containing the primitive flags.
- displacedMicromapPrimitiveFlagsStride is the byte stride between primitive flag values.

- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is a device or host address of memory containing the triangle indices. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of VkMicromapUsageEXT structures.
- `ppUsageCounts` is a pointer to an array of pointers to VkMicromapUsageEXT structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesDisplacementMicromapNV` is included in the `pNext` chain of a VkAccelerationStructureGeometryTrianglesDataKHR structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride`. That triangle uses the displacement micromap information from `micromap` at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection **must** be equal to the sum of matching `count` provided.

Valid Usage

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-09501
  `displacementBiasAndScaleFormat` **must** not be VK_FORMAT_UNDEFINED
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementVectorFormat-09502
  `displacementVectorFormat` **must** not be VK_FORMAT_UNDEFINED
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-07992
  Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_DISPLACEMENT_MICROMAP_NV
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-parameter

displacementBiasAndScaleFormat **must** be a valid VkFormat value

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementVectorFormat-parameter
  displacementVectorFormat **must** be a valid VkFormat value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-indexType-parameter
  indexType **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-parameter
  If usageCountsCount is not 0, and pUsageCounts is not NULL, pUsageCounts **must** be a valid pointer to an array of usageCountsCount VkMicromapUsageEXT structures
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-ppUsageCounts-parameter
  If usageCountsCount is not 0, and ppUsageCounts is not NULL, ppUsageCounts **must** be a valid pointer to an array of usageCountsCount valid pointers to VkMicromapUsageEXT structures
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-micromap-parameter
  If micromap is not VK_NULL_HANDLE, micromap **must** be a valid VkMicromapEXT handle

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryTrianglesDataKHR

To build an acceleration structure for the VK_NV_ray_tracing extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdBuildAccelerationStructureNV(
    VkCommandBuffer                             commandBuffer,
    const VkAccelerationStructureInfoNV*        pInfo,
    VkBuffer                                    instanceData,
    VkDeviceSize                                instanceOffset,
    VkBool32                                    update,
    VkAccelerationStructureNV                   dst,
    VkAccelerationStructureNV                   src,
    VkBuffer                                    scratch,
    VkDeviceSize                                scratchOffset);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pInfo contains the shared information for the acceleration structure's structure.
- instanceData is the buffer containing an array of VkAccelerationStructureInstanceKHR structures defining acceleration structures. This parameter **must** be NULL for bottom level acceleration structures.
- instanceOffset is the offset in bytes (relative to the start of instanceData) at which the instance data is located.

- `update` specifies whether to update the `dst` acceleration structure with the data in `src`.
- `dst` is a pointer to the target acceleration structure for the build.
- `src` is a pointer to an existing acceleration structure that is to be used to update the `dst` acceleration structure.
- `scratch` is the VkBuffer that will be used as scratch memory for the build.
- `scratchOffset` is the offset in bytes relative to the start of `scratch` that will be used as a scratch memory.

Accesses to `dst`, `src`, and `scratch` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR.

Valid Usage

- VUID-vkCmdBuildAccelerationStructureNV-geometryCount-02241
  `geometryCount` **must** be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::`maxGeometryCount`
- VUID-vkCmdBuildAccelerationStructureNV-dst-02488
  `dst` **must** have been created with compatible VkAccelerationStructureInfoNV where VkAccelerationStructureInfoNV::`type` and VkAccelerationStructureInfoNV::`flags` are identical, VkAccelerationStructureInfoNV::`instanceCount` and VkAccelerationStructureInfoNV::`geometryCount` for `dst` are greater than or equal to the build size and each geometry in VkAccelerationStructureInfoNV::`pGeometries` for `dst` has greater than or equal to the number of vertices, indices, and AABBs
- VUID-vkCmdBuildAccelerationStructureNV-update-02489
  If `update` is VK_TRUE, `src` **must** not be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructureNV-update-02490
  If `update` is VK_TRUE, `src` **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV set in VkAccelerationStructureInfoNV::`flags` in the original build
- VUID-vkCmdBuildAccelerationStructureNV-update-02491
  If `update` is VK_FALSE, the `size` member of the VkMemoryRequirements structure returned from a call to vkGetAccelerationStructureMemoryRequirementsNV with VkAccelerationStructureMemoryRequirementsInfoNV::`accelerationStructure` set to `dst` and VkAccelerationStructureMemoryRequirementsInfoNV::`type` set to VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV **must** be less than or equal to the size of `scratch` minus `scratchOffset`
- VUID-vkCmdBuildAccelerationStructureNV-update-02492
  If `update` is VK_TRUE, the `size` member of the VkMemoryRequirements structure returned from a call to vkGetAccelerationStructureMemoryRequirementsNV with VkAccelerationStructureMemoryRequirementsInfoNV::`accelerationStructure` set to `dst` and VkAccelerationStructureMemoryRequirementsInfoNV::`type` set to VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV

must be less than or equal to the size of `scratch` minus `scratchOffset`

- VUID-vkCmdBuildAccelerationStructureNV-scratch-03522
  `scratch` **must** have been created with the VK_BUFFER_USAGE_RAY_TRACING_BIT_NV usage flag set
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-03523
  If `instanceData` is not VK_NULL_HANDLE, `instanceData` **must** have been created with the VK_BUFFER_USAGE_RAY_TRACING_BIT_NV usage flag set
- VUID-vkCmdBuildAccelerationStructureNV-accelerationStructureReference-12264
  Each VkAccelerationStructureInstanceKHR::`accelerationStructureReference` value in `instanceData` **must** be a value obtained from vkGetAccelerationStructureHandleNV for a bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructureNV-update-03524
  If `update` is VK_TRUE, then objects that were previously active **must** not be made inactive as per Inactive Primitives and Instances
- VUID-vkCmdBuildAccelerationStructureNV-update-03525
  If `update` is VK_TRUE, then objects that were previously inactive **must** not be made active as per Inactive Primitives and Instances
- VUID-vkCmdBuildAccelerationStructureNV-update-03526
  If `update` is VK_TRUE, the `src` and `dst` objects **must** either be the same object or not have any memory aliasing
- VUID-vkCmdBuildAccelerationStructureNV-dst-07787
  `dst` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via vkBindAccelerationStructureMemoryNV

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructureNV-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkAccelerationStructureInfoNV structure
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-parameter
  If `instanceData` is not VK_NULL_HANDLE, `instanceData` **must** be a valid VkBuffer handle
- VUID-vkCmdBuildAccelerationStructureNV-dst-parameter
  `dst` **must** be a valid VkAccelerationStructureNV handle
- VUID-vkCmdBuildAccelerationStructureNV-src-parameter
  If `src` is not VK_NULL_HANDLE, `src` **must** be a valid VkAccelerationStructureNV handle
- VUID-vkCmdBuildAccelerationStructureNV-scratch-parameter
  `scratch` **must** be a valid VkBuffer handle
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-cmdpool

The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations

- VUID-vkCmdBuildAccelerationStructureNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructureNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructureNV-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructureNV-commonparent
  Each of commandBuffer, dst, instanceData, scratch, and src that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructureNV is not affected by conditional rendering

The VkTransformMatrixKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkTransformMatrixKHR {
    float    matrix[3][4];
} VkTransformMatrixKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkTransformMatrixKHR
typedef VkTransformMatrixKHR VkTransformMatrixNV;
```

- `matrix` is a 3x4 row-major affine transformation matrix.

Valid Usage

- VUID-VkTransformMatrixKHR-matrix-03799
  The first three columns of `matrix` **must** define an invertible 3x3 matrix

The `VkAccelerationStructureGeometryAabbsDataKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryAabbsDataKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDeviceOrHostAddressConstKHR    data;
    VkDeviceSize                     stride;
} VkAccelerationStructureGeometryAabbsDataKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `data` is a device or host address of memory containing VkAabbPositionsKHR structures containing position data for each axis-aligned bounding box in the geometry.
- `stride` is the stride in bytes between each entry in `data`. The stride **must** be a multiple of `8`.

Valid Usage

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03545
  `stride` **must** be a multiple of `8`
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03820
  `stride` **must** be less than or equal to 2^{32}-1

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_AABBS_DATA_KHR
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-pNext-pNext
  `pNext` **must** be `NULL`

The VkAabbPositionsKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAabbPositionsKHR {
    float    minX;
    float    minY;
    float    minZ;
    float    maxX;
    float    maxY;
    float    maxZ;
} VkAabbPositionsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkAabbPositionsKHR
typedef VkAabbPositionsKHR VkAabbPositionsNV;
```

- minX is the x position of one opposing corner of a bounding box.
- minY is the y position of one opposing corner of a bounding box.
- minZ is the z position of one opposing corner of a bounding box.
- maxX is the x position of the other opposing corner of a bounding box.
- maxY is the y position of the other opposing corner of a bounding box.
- maxZ is the z position of the other opposing corner of a bounding box.

Valid Usage

- VUID-VkAabbPositionsKHR-minX-03546
  minX **must** be less than or equal to maxX
- VUID-VkAabbPositionsKHR-minY-03547
  minY **must** be less than or equal to maxY
- VUID-VkAabbPositionsKHR-minZ-03548
  minZ **must** be less than or equal to maxZ

The VkAccelerationStructureGeometryInstancesDataKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryInstancesDataKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkBool32                         arrayOfPointers;
    VkDeviceOrHostAddressConstKHR    data;
} VkAccelerationStructureGeometryInstancesDataKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `arrayOfPointers` specifies whether `data` is used as an array of addresses or just an array.
- `data` is either the address of an array of device or host addresses referencing individual VkAccelerationStructureInstanceKHR structures or packed motion instance information as described in motion instances if `arrayOfPointers` is VK_TRUE, or the address of an array of VkAccelerationStructureInstanceKHR or VkAccelerationStructureMotionInstanceNV structures. Addresses and VkAccelerationStructureInstanceKHR structures are tightly packed. VkAccelerationStructureMotionInstanceNV structures have a stride of 160 bytes.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryInstancesDataKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_INSTANCES_DATA_KHR
- VUID-VkAccelerationStructureGeometryInstancesDataKHR-pNext-pNext
  `pNext` **must** be `NULL`

Acceleration structure instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location. Multiple instances **can** point to the same bottom level acceleration structure.

An acceleration structure instance is defined by the structure:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureInstanceKHR {
    VkTransformMatrixKHR          transform;
    uint32_t                      instanceCustomIndex:24;
    uint32_t                      mask:8;
    uint32_t                      instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR    flags:8;
    uint64_t                      accelerationStructureReference;
} VkAccelerationStructureInstanceKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkAccelerationStructureInstanceKHR
typedef VkAccelerationStructureInstanceKHR VkAccelerationStructureInstanceNV;
```

- `transform` is a VkTransformMatrixKHR structure describing a transformation to be applied to the acceleration structure.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.

- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of VkGeometryInstanceFlagBitsKHR values to apply to this instance.
- `accelerationStructureReference` is either :
  - a device address containing the value obtained from vkGetAccelerationStructureDeviceAddressKHR or vkGetAccelerationStructureHandleNV for a bottom level acceleration structure (used by device operations which reference acceleration structures) or,
  - a device address containing a bottom level cluster acceleration structure built using vkCmdBuildClusterAccelerationStructureIndirectNV
  - a VkAccelerationStructureKHR object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceCustomIndex` occupies the 24 least significant bits of that memory
  - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
  - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Valid Usage

- VUID-VkAccelerationStructureInstanceKHR-micromap-11580
  If `flags` includes VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR or VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` or `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureInstanceKHR-flags-11581
  If `flags` includes VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR, the `flags` used to build the acceleration structure referenced by `accelerationStructureReference` **must** have included VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_K

HR

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInstanceKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkGeometryInstanceFlagBitsKHR values

Possible values of `flags` in the instance modifying the behavior of that instance are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryInstanceFlagBitsKHR {
    VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR = 0x00000002,
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR = 0x00000004,
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR = 0x00000008,
  // Provided by VK_KHR_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR = 0x00000010,
  // Provided by VK_KHR_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR = 0x00000020,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR =
VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR,
  // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_CULL_DISABLE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR,
  // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR,
  // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR,
  // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT =
VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR,
  // Provided by VK_EXT_opacity_micromap
  // VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT =
VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT,
  // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT =
VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR,
  // Provided by VK_EXT_opacity_micromap
  // VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT =
VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT,
} VkGeometryInstanceFlagBitsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryInstanceFlagBitsKHR
typedef VkGeometryInstanceFlagBitsKHR VkGeometryInstanceFlagBitsNV;
```

- VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR disables face culling for this instance.
- VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR specifies that the facing determination for geometry in this instance is inverted. Because the facing is determined in

object space, an instance transform does not change the winding, but a geometry transform does.

- VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR causes this instance to act as though VK_GEOMETRY_OPAQUE_BIT_KHR were specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V NoOpaqueKHR ray flag.
- VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR causes this instance to act as though VK_GEOMETRY_OPAQUE_BIT_KHR were not specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V OpaqueKHR ray flag.
- VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR forces the micromap format to 2 state mode as described in traversal.
- VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR disables any opacity micromaps referenced by acceleration structures referenced by this instance as described in traversal.

VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR and VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR **must** not be used in the same flag.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryInstanceFlagsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryInstanceFlagsKHR
typedef VkGeometryInstanceFlagsKHR VkGeometryInstanceFlagsNV;
```

VkGeometryInstanceFlagsKHR is a bitmask type for setting a mask of zero or more VkGeometryInstanceFlagBitsKHR.

Acceleration structure motion instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location including a type of motion and parameters to determine the motion of the instance over time.

An acceleration structure motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMotionInstanceNV {
    VkAccelerationStructureMotionInstanceTypeNV     type;
    VkAccelerationStructureMotionInstanceFlagsNV    flags;
    VkAccelerationStructureMotionInstanceDataNV     data;
} VkAccelerationStructureMotionInstanceNV;
```

- type is a VkAccelerationStructureMotionInstanceTypeNV enumerant identifying which type of motion instance this is and which type of the union is valid.
- flags is currently unused, but is required to keep natural alignment of data.

- `data` is a VkAccelerationStructureMotionInstanceDataNV containing motion instance data for this instance.

NOTE	If writing this other than with a standard C compiler, note that the final structure should be 152 bytes in size.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMotionInstanceNV-type-parameter
  `type` **must** be a valid VkAccelerationStructureMotionInstanceTypeNV value
- VUID-VkAccelerationStructureMotionInstanceNV-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkAccelerationStructureMotionInstanceNV-staticInstance-parameter
  If `type` is VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV, the `staticInstance` member of `data` **must** be a valid VkAccelerationStructureInstanceKHR structure
- VUID-VkAccelerationStructureMotionInstanceNV-matrixMotionInstance-parameter
  If `type` is VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV, the `matrixMotionInstance` member of `data` **must** be a valid VkAccelerationStructureMatrixMotionInstanceNV structure
- VUID-VkAccelerationStructureMotionInstanceNV-srtMotionInstance-parameter
  If `type` is VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV, the `srtMotionInstance` member of `data` **must** be a valid VkAccelerationStructureSRTMotionInstanceNV structure

Acceleration structure motion instance is defined by the union:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef union VkAccelerationStructureMotionInstanceDataNV {
    VkAccelerationStructureInstanceKHR               staticInstance;
    VkAccelerationStructureMatrixMotionInstanceNV    matrixMotionInstance;
    VkAccelerationStructureSRTMotionInstanceNV       srtMotionInstance;
} VkAccelerationStructureMotionInstanceDataNV;
```

- `staticInstance` is a VkAccelerationStructureInstanceKHR structure containing data for a static instance.
- `matrixMotionInstance` is a VkAccelerationStructureMatrixMotionInstanceNV structure containing data for a matrix motion instance.
- `srtMotionInstance` is a VkAccelerationStructureSRTMotionInstanceNV structure containing data for an SRT motion instance.

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef VkFlags VkAccelerationStructureMotionInstanceFlagsNV;
```

VkAccelerationStructureMotionInstanceFlagsNV is a bitmask type for setting a mask, but is currently reserved for future use.

The VkAccelerationStructureMotionInstanceTypeNV enumeration is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef enum VkAccelerationStructureMotionInstanceTypeNV {
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV = 0,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV = 1,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV = 2,
} VkAccelerationStructureMotionInstanceTypeNV;
```

- VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV specifies that the instance is a static instance with no instance motion.
- VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV specifies that the instance is a motion instance with motion specified by interpolation between two matrices.
- VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV specifies that the instance is a motion instance with motion specified by interpolation in the SRT decomposition.

An acceleration structure matrix motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMatrixMotionInstanceNV {
    VkTransformMatrixKHR          transformT0;
    VkTransformMatrixKHR          transformT1;
    uint32_t                      instanceCustomIndex:24;
    uint32_t                      mask:8;
    uint32_t                      instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR    flags:8;
    uint64_t                      accelerationStructureReference;
} VkAccelerationStructureMatrixMotionInstanceNV;
```

- transformT0 is a VkTransformMatrixKHR structure describing a transformation to be applied to the acceleration structure at time 0.
- transformT1 is a VkTransformMatrixKHR structure describing a transformation to be applied to the acceleration structure at time 1.
- instanceCustomIndex is a 24-bit application-specified index value accessible to ray shaders in the InstanceCustomIndexKHR built-in.
- mask is an 8-bit visibility mask for the geometry. The instance **may** only be hit if Cull Mask & instance.mask != 0

- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of VkGeometryInstanceFlagBitsKHR values to apply to this instance.
- `accelerationStructureReference` is either:
  - a device address containing the value obtained from vkGetAccelerationStructureDeviceAddressKHR or vkGetAccelerationStructureHandleNV (used by device operations which reference acceleration structures) or,
  - a VkAccelerationStructureKHR object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceCustomIndex` occupies the 24 least significant bits of that memory
  - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
  - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for a matrix motion instance at a point in time is derived by component-wise linear interpolation of the two transforms. That is, for a `time` in [0,1] the resulting transform is

`transformT0` × (1 - `time`) + `transformT1` × `time`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMatrixMotionInstanceNV-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkGeometryInstanceFlagBitsKHR values

An acceleration structure SRT motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureSRTMotionInstanceNV {
    VkSRTDataNV                   transformT0;
    VkSRTDataNV                   transformT1;
    uint32_t                      instanceCustomIndex:24;
    uint32_t                      mask:8;
    uint32_t                      instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR    flags:8;
    uint64_t                      accelerationStructureReference;
} VkAccelerationStructureSRTMotionInstanceNV;
```

- `transformT0` is a VkSRTDataNV structure describing a transformation to be applied to the acceleration structure at time 0.
- `transformT1` is a VkSRTDataNV structure describing a transformation to be applied to the acceleration structure at time 1.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of VkGeometryInstanceFlagBitsKHR values to apply to this instance.
- `accelerationStructureReference` is either:
  - a device address containing the value obtained from vkGetAccelerationStructureDeviceAddressKHR or vkGetAccelerationStructureHandleNV (used by device operations which reference acceleration structures) or,
  - a VkAccelerationStructureKHR object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceCustomIndex` occupies the 24 least significant bits of that memory
  - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
  - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
  - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for an SRT motion instance at a point in time is derived from component-wise linear interpolation of the two SRT transforms. That is, for a `time` in [0,1] the resulting transform is

`transformT0` × (1 - `time`) + `transformT1` × `time`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureSRTMotionInstanceNV-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkGeometryInstanceFlagBitsKHR values

An acceleration structure SRT transform is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkSRTDataNV {
    float    sx;
    float    a;
    float    b;
    float    pvx;
    float    sy;
    float    c;
    float    pvy;
    float    sz;
    float    pvz;
    float    qx;
    float    qy;
    float    qz;
    float    qw;
    float    tx;
    float    ty;
    float    tz;
} VkSRTDataNV;
```

- `sx` is the x component of the scale of the transform
- `a` is one component of the shear for the transform
- `b` is one component of the shear for the transform
- `pvx` is the x component of the pivot point of the transform
- `sy` is the y component of the scale of the transform
- `c` is one component of the shear for the transform
- `pvy` is the y component of the pivot point of the transform
- `sz` is the z component of the scale of the transform
- `pvz` is the z component of the pivot point of the transform
- `qx` is the x component of the rotation quaternion

- qy is the y component of the rotation quaternion
- qz is the z component of the rotation quaternion
- qw is the w component of the rotation quaternion
- tx is the x component of the post-rotation translation
- ty is the y component of the post-rotation translation
- tz is the z component of the post-rotation translation

This transform decomposition consists of three elements. The first is a matrix S, consisting of a scale, shear, and translation, usually used to define the pivot point of the following rotation. This matrix is constructed from the parameters above by:

$$S = \begin{pmatrix} sx & a & b & pvx \\ 0 & sy & c & pvy \\ 0 & 0 & sz & pvz \end{pmatrix}$$

The rotation quaternion is defined as:

R = [qx, qy, qz, qw]

This is a rotation around a conceptual normalized axis [ax, ay, az] of amount theta such that:

[qx, qy, qz] = sin(theta/2) × [ax, ay, az]

and

qw = cos(theta/2)

Finally, the transform has a translation T constructed from the parameters above by:

$$T = \begin{pmatrix} 1 & 0 & 0 & tx \\ 0 & 1 & 0 & ty \\ 0 & 0 & 1 & tz \end{pmatrix}$$

The effective derived transform is then given by

T × R × S

If a VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure is included in the pNext chain of a VkAccelerationStructureGeometryKHR structure whose geometryType member is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, then that structure defines triangle geometry using compressed data.

The VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure is defined as:

```
// Provided by VK_AMDX_dense_geometry_format
typedef struct VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX {
    VkStructureType                    sType;
    const void*                        pNext;
    VkDeviceOrHostAddressConstKHR      compressedData;
    VkDeviceSize                       dataSize;
    uint32_t                           numTriangles;
    uint32_t                           numVertices;
    uint32_t                           maxPrimitiveIndex;
    uint32_t                           maxGeometryIndex;
    VkCompressedTriangleFormatAMDX     format;
} VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compressedData` specifies the base address of the compressed data.
- `dataSize` specifies the size of the compressed data.
- `numTriangles` specifies the total number of triangles encoded in the compressed data.
- `numVertices` specifies the number of vertices in the compressed data.
- `maxPrimitiveIndex` specifies the maximum primitive index encoded in the compressed data.
- `maxGeometryIndex` specifies the maximum geometry index encoded in the compressed data.
- `format` specifies the VkCompressedTriangleFormatAMDX format of the compressed data.

If `format` is VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMDX, `numVertices` specifies the sum of vertex counts across all blocks.

Valid Usage

- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-compressedData-10885
  The buffer from which `compressedData.deviceAddress` is queried **must** have been created with the VK_BUFFER_USAGE_2_COMPRESSED_DATA_DGF1_BIT_AMDX usage flag set
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-denseGeometryFormat-10886
  The `VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX::denseGeometryFormat` feature **must** be enabled
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-format-10887
  If `format` is VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMDX, then `compressedData` **must** be aligned to VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMDX (128) bytes
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-format-10888
  If `format` is VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMDX, then `dataSize` **must** be a multiple of VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMDX (128) bytes

Valid Usage (Implicit)

- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DENSE_GEOMETRY_FORMAT_TRIANGLES_DATA_AMDX
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-compressedData-parameter
  `compressedData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX-format-parameter
  `format` **must** be a valid VkCompressedTriangleFormatAMDX value

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryKHR

VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMDX is the alignment requirement in bytes for compressed triangle data as specified in VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX::`compressedData`.

```
#define VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMDX 128U
```

VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMDX is the stride requirement in bytes for compressed triangle data as specified in VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX::`dataSize`.

```
#define VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMDX 128U
```

The VkCompressedTriangleFormatAMDX enumeration is defined as:

```
// Provided by VK_AMDX_dense_geometry_format
typedef enum VkCompressedTriangleFormatAMDX {
    VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMDX = 0,
} VkCompressedTriangleFormatAMDX;
```

- VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMDX specifies that the compressed triangle data is in Dense Geometry Format, version 1, consisting of an array of 128B DGF blocks.

`VkAccelerationStructureBuildRangeInfoKHR` is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildRangeInfoKHR {
    uint32_t    primitiveCount;
    uint32_t    primitiveOffset;
    uint32_t    firstVertex;
    uint32_t    transformOffset;
} VkAccelerationStructureBuildRangeInfoKHR;
```

- `primitiveCount` defines the number of primitives for a corresponding acceleration structure geometry.
- `primitiveOffset` defines an offset in bytes into the memory where primitive data is defined.
- `firstVertex` is the index of the first vertex to build from for triangle geometry.
- `transformOffset` defines an offset in bytes into the memory where a transform matrix is defined.

The primitive count and primitive offset are interpreted differently depending on the VkGeometryTypeKHR used:

- For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, `primitiveCount` is the number of triangles to be built, where each triangle is treated as 3 vertices.
  - If the geometry uses indices, `primitiveCount` × 3 indices are consumed from VkAccelerationStructureGeometryTrianglesDataKHR::`indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices.
  - If the geometry does not use indices, `primitiveCount` × 3 vertices are consumed from VkAccelerationStructureGeometryTrianglesDataKHR::`vertexData`, starting at an offset of `primitiveOffset` + VkAccelerationStructureGeometryTrianglesDataKHR::`vertexStride` × `firstVertex`.
  - If VkAccelerationStructureGeometryTrianglesDataKHR::`transformData` is not `NULL`, a single VkTransformMatrixKHR structure is consumed from VkAccelerationStructureGeometryTrianglesDataKHR::`transformData`, at an offset of `transformOffset`. This matrix describes a transformation from the space in which the vertices for all triangles in this geometry are described to the space in which the acceleration structure is defined.
- For geometries of type VK_GEOMETRY_TYPE_AABBS_KHR, `primitiveCount` is the number of axis-aligned bounding boxes. `primitiveCount` VkAabbPositionsKHR structures are consumed from VkAccelerationStructureGeometryAabbsDataKHR::`data`, starting at an offset of `primitiveOffset`.
- For geometries of type VK_GEOMETRY_TYPE_SPHERES_NV, `primitiveCount` is the number of spheres to be built, where each sphere is treated as 1 vertex.
  - If the geometry uses indices, `primitiveCount` indices are consumed from VkAccelerationStructureGeometrySpheresDataNV::`indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices and radii.
  - If the geometry does not use indices, `primitiveCount` vertices and radii are consumed from VkAccelerationStructureGeometrySpheresDataNV::`vertexData`, starting at an offset of

primitiveOffset + VkAccelerationStructureGeometrySpheresDataNV::vertexStride × firstVertex and VkAccelerationStructureGeometrySpheresDataNV::radiusData, starting at an offset of primitiveOffset + VkAccelerationStructureGeometrySpheresDataNV::radiusStride × firstVertex respectively.

- For geometries of type VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, primitiveCount is the number of LSS primitives to be built, where each LSS primitive is treated as 2 vertices.
  - If the geometry uses indices, primitiveCount × 2 indices are consumed from VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexData, starting at an offset of primitiveOffset. The value of firstVertex is added to the index values before fetching vertices and radii.
  - If the geometry does not use indices, primitiveCount × 2 vertices and radii are consumed from VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData, starting at an offset of primitiveOffset + VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexStride × firstVertex and VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData, starting at an offset of primitiveOffset + VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusStride × firstVertex respectively.
- For geometries of type VK_GEOMETRY_TYPE_INSTANCES_KHR, primitiveCount is the number of acceleration structures. primitiveCount VkAccelerationStructureInstanceKHR or VkAccelerationStructureMotionInstanceNV structures are consumed from VkAccelerationStructureGeometryInstancesDataKHR::data, starting at an offset of primitiveOffset.

Valid Usage

- VUID-VkAccelerationStructureBuildRangeInfoKHR-vertexData-10418
  The number of vertices consumed from VkAccelerationStructureGeometryTrianglesDataKHR::vertexData **must** be less than or equal to VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex + 1
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03656
  For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the geometry uses indices, the offset primitiveOffset from VkAccelerationStructureGeometryTrianglesDataKHR::indexData **must** be a multiple of the element size of VkAccelerationStructureGeometryTrianglesDataKHR::indexType
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03657
  For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the geometry does not use indices, the offset primitiveOffset from VkAccelerationStructureGeometryTrianglesDataKHR::vertexData **must** be a multiple of:
  - the size of the format specified in VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat, if that format is a packed format
  - the component size of the VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat, if that format is not a packed format

- VUID-VkAccelerationStructureBuildRangeInfoKHR-maxVertex-10774
  For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the geometry uses indices, then VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex **must** be greater than or equal to firstVertex plus the maximum index value found in the VkAccelerationStructureGeometryTrianglesDataKHR::indexData in the range [primitiveOffset, primitiveOffset
  primitiveCount x 3]
- VUID-VkAccelerationStructureBuildRangeInfoKHR-None-10775
  For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the geometry does not use indices, then VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex **must** be greater than or equal to firstVertex + primitiveCount x 3 - 1
- VUID-VkAccelerationStructureBuildRangeInfoKHR-transformOffset-03658
  For geometries of type VK_GEOMETRY_TYPE_TRIANGLES_KHR, the offset transformOffset from VkAccelerationStructureGeometryTrianglesDataKHR::transformData **must** be a multiple of 16
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03659
  For geometries of type VK_GEOMETRY_TYPE_AABBS_KHR, the offset primitiveOffset from VkAccelerationStructureGeometryAabbsDataKHR::data **must** be a multiple of 8
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03660
  For geometries of type VK_GEOMETRY_TYPE_INSTANCES_KHR, the offset primitiveOffset from VkAccelerationStructureGeometryInstancesDataKHR::data **must** be a multiple of 16

If VkAccelerationStructureGeometryLinearSweptSpheresDataNV is included in the pNext chain of a VkAccelerationStructureGeometryKHR structure, then that structure defines the linear swept sphere's (LSS) geometry data.

The VkAccelerationStructureGeometryLinearSweptSpheresDataNV structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkAccelerationStructureGeometryLinearSweptSpheresDataNV {
    VkStructureType                           sType;
    const void*                               pNext;
    VkFormat                                  vertexFormat;
    VkDeviceOrHostAddressConstKHR             vertexData;
    VkDeviceSize                              vertexStride;
    VkFormat                                  radiusFormat;
    VkDeviceOrHostAddressConstKHR             radiusData;
    VkDeviceSize                              radiusStride;
    VkIndexType                               indexType;
    VkDeviceOrHostAddressConstKHR             indexData;
    VkDeviceSize                              indexStride;
    VkRayTracingLssIndexingModeNV             indexingMode;
    VkRayTracingLssPrimitiveEndCapsModeNV     endCapsMode;
} VkAccelerationStructureGeometryLinearSweptSpheresDataNV;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the VkFormat of each LSS vertex element.
- `vertexData` is a device or host address of memory containing vertex data for this geometry.
- `vertexStride` is the stride in bytes between each vertex element.
- `radiusFormat` is the VkFormat of each LSS radius.
- `radiusData` is a device or host address of memory containing LSS radius data value.
- `radiusStride` is the stride in bytes between each radius value.
- `indexType` is the VkIndexType of each index element.
- `indexData` is a device or host address of memory containing index data for vertex and radius buffers for this geometry. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `indexStride` is the stride in bytes between each index element.
- `indexingMode` is a VkRayTracingLssIndexingModeNV value specifying the mode of indexing.
- `endCapsMode` is a VkRayTracingLssPrimitiveEndCapsModeNV value specifying the endcaps mode for LSS primitives.

If an index buffer is not specified in `indexData`, LSS primitives are rendered individually using subsequent pairs of vertices similar to VK_PRIMITIVE_TOPOLOGY_LINE_LIST.

Valid Usage

- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-None-10419
  The linearSweptSpheres feature **must** be enabled
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexStride-10421
  `vertexStride` **must** be a multiple of:
  - the size of the format specified in `vertexFormat` if that format is a packed format
  - the component size specified in `vertexFormat` if that format is not a packed format
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexStride-10422
  `vertexStride` and `radiusStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexFormat-10423
  The format features of `vertexFormat` **must** contain VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusFormat-10424
  The format features of `radiusFormat` **must** contain VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_RADIUS_BUFFER_BIT_NV
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusData-10426
  All values referenced in `radiusData` **must** be greater than or equal to `0`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexingMode-10427
  If `indexingMode` is VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV, `indexData` **must** not be `NULL`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexData-10428

`indexType` **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_LINEAR_SWEPT_SPHERES_DATA_NV
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexFormat-parameter
  `vertexFormat` **must** be a valid VkFormat value
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexData-parameter
  `vertexData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusFormat-parameter
  `radiusFormat` **must** be a valid VkFormat value
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusData-parameter
  `radiusData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexType-parameter
  `indexType` **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexData-parameter
  `indexData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexingMode-parameter
  `indexingMode` **must** be a valid VkRayTracingLssIndexingModeNV value
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-endCapsMode-parameter
  `endCapsMode` **must** be a valid VkRayTracingLssPrimitiveEndCapsModeNV value

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryKHR

Chaining LSS primitives **can** be achieved by specifying an index buffer in VkAccelerationStructureGeometryLinearSweptSpheresDataNV::`indexData` and setting VkAccelerationStructureGeometryLinearSweptSpheresDataNV::`indexingMode` to one of

VkRayTracingLssIndexingModeNV values:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef enum VkRayTracingLssIndexingModeNV {
    VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV = 0,
    VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV = 1,
} VkRayTracingLssIndexingModeNV;
```

- VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV specifies that a list of indices is provided where each consecutive pair of indices defines an LSS primitive.
- VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV specifies a successive implicit indexing format, in which each LSS primitive is defined by two successive positions and radii, (k, k + 1), where k is a single index provided in the index buffer. In this indexing scheme, there is a 1:1 mapping between the index buffer and primitive index within the geometry.

The default behavior with endcaps in an LSS chain is that both endcaps will be enabled for all beginning and end points. To change the LSS chain's endcaps mode use VkAccelerationStructureGeometryLinearSweptSpheresDataNV::endCapsMode. The possible values for endCapsMode are:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef enum VkRayTracingLssPrimitiveEndCapsModeNV {
    VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_NONE_NV = 0,
    VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV = 1,
} VkRayTracingLssPrimitiveEndCapsModeNV;
```

- VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_NONE_NV disables all endcaps and the chain boundaries have no influence.
- VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV specifies that when VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV is used as indexing mode for the LSS primitive, the first primitive in each chain will have both endcaps enabled, and every following primitive in the chain only has endcaps at the trailing position enabled.

In addition to LSS primitives, simple sphere geometry is also supported. Spheres do not have an endcap mode. If an index buffer is present, each entry represents a single position and radius describing one sphere primitive. If no index buffer is provided, the vertex position and radius values are sequentially read from the corresponding buffers.

If VkAccelerationStructureGeometrySpheresDataNV is included in the pNext chain of a VkAccelerationStructureGeometryKHR structure, then that structure defines the sphere's geometry data.

The VkAccelerationStructureGeometrySpheresDataNV structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkAccelerationStructureGeometrySpheresDataNV {
    VkStructureType                  sType;
    const void*                      pNext;
    VkFormat                         vertexFormat;
    VkDeviceOrHostAddressConstKHR    vertexData;
    VkDeviceSize                     vertexStride;
    VkFormat                         radiusFormat;
    VkDeviceOrHostAddressConstKHR    radiusData;
    VkDeviceSize                     radiusStride;
    VkIndexType                      indexType;
    VkDeviceOrHostAddressConstKHR    indexData;
    VkDeviceSize                     indexStride;
} VkAccelerationStructureGeometrySpheresDataNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the VkFormat of each sphere's vertex element.
- `vertexData` is a device or host address of memory containing vertex data in form of pairs of centers of spheres that define all sphere geometry.
- `vertexStride` is the stride in bytes between each vertex element.
- `radiusFormat` is the VkFormat of each sphere's radius.
- `radiusData` is a device or host address of memory containing sphere's radius data value.
- `radiusStride` is the stride in bytes between each radius value.
- `indexType` is the VkIndexType of each index element.
- `indexData` is a device or host address of memory containing index data for vertex and radius buffers for this geometry. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `indexStride` is the stride in bytes between each index element.

Valid Usage

- VUID-VkAccelerationStructureGeometrySpheresDataNV-None-10429
  The spheres feature **must** be enabled
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexStride-10431
  `vertexStride` **must** be a multiple of:
  - the size of the format specified in `vertexFormat` if that format is a packed format
  - the smallest component size specified in `vertexFormat` if that format is not a packed format
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexStride-10432
  `vertexStride` and `radiusStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexFormat-10434

The format features of `vertexFormat` **must** contain VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR

- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusFormat-10435
  The format features of `radiusFormat` **must** contain VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_RADIUS_BUFFER_BIT_NV
- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusData-10436
  All values referenced in `radiusData` **must** be greater than or equal to `0`
- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexData-10437
  `indexType` **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_SPHERES_DATA_NV
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexFormat-parameter
  `vertexFormat` **must** be a valid VkFormat value
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexData-parameter
  `vertexData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusFormat-parameter
  `radiusFormat` **must** be a valid VkFormat value
- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusData-parameter
  `radiusData` **must** be a valid VkDeviceOrHostAddressConstKHR union
- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexType-parameter
  `indexType` **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexData-parameter
  `indexData` **must** be a valid VkDeviceOrHostAddressConstKHR union

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryKHR

43.1.8. Copying Acceleration Structures

An additional command exists for copying acceleration structures without updating their contents. The acceleration structure object **can** be compacted in order to improve performance. Before copying, an application **must** query the size of the resulting acceleration structure.

To query acceleration structure size parameters call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdWriteAccelerationStructuresPropertiesKHR(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    accelerationStructureCount,
    const VkAccelerationStructureKHR*           pAccelerationStructures,
    VkQueryType                                 queryType,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a VkQueryType value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR.

- If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, then the value written out is the number of bytes required by a compacted acceleration structure.
- If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR, then the value written out is the number of bytes required by a serialized acceleration structure.
- If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR, then the value written out is the number of bytes required by the acceleration structure.
- VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR specifies a serialization acceleration structure pointer count query.

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructure-08924
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02493
  `queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02494
  The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-query-04880

The sum of `firstQuery` plus `accelerationStructureCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11684
  All acceleration structures in `pAccelerationStructures` **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
  All acceleration structures in `pAccelerationStructures` **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR if `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-06742
  `queryType` **must** be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR, VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR, VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-12425
  All acceleration structures in `pAccelerationStructures` **must** have been built with VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR if `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-buffer-03736
  Each element of `pAccelerationStructures` **must** be fully backed by physical memory

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
  `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid VkAccelerationStructureKHR handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-parameter
  `queryType` **must** be a valid VkQueryType value
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
  `accelerationStructureCount` **must** be greater than `0`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commonparent
  Each of `commandBuffer`, `queryPool`, and the elements of `pAccelerationStructures` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdWriteAccelerationStructuresPropertiesKHR is not affected by conditional rendering

To query acceleration structure size parameters for the `VK_NV_ray_tracing` extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdWriteAccelerationStructuresPropertiesNV(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    accelerationStructureCount,
    const VkAccelerationStructureNV*            pAccelerationStructures,
    VkQueryType                                 queryType,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.

- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a VkQueryType value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR.

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03755
  `queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03756
  The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructure-03757
  `accelerationStructure` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via vkBindAccelerationStructureMemoryNV
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-04958
  All acceleration structures in `pAccelerationStructures` **must** have been built prior to the execution of this command
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-06215
  All acceleration structures in `pAccelerationStructures` **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR if `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-06216
  `queryType` **must** be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-11685
  All acceleration structures in `pAccelerationStructures` **must** have been constructed prior to the execution of this command on the device

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-parameter
  `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid VkAccelerationStructureNV handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-parameter

queryType **must** be a valid VkQueryType value

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-parameter
  queryPool **must** be a valid VkQueryPool handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructureCount-arraylength
  accelerationStructureCount **must** be greater than 0
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commonparent
  Each of commandBuffer, queryPool, and the elements of pAccelerationStructures **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdWriteAccelerationStructuresPropertiesNV is not affected by conditional rendering

To copy an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyAccelerationStructureInfoKHR*   pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a VkCopyAccelerationStructureInfoKHR structure defining the copy operation.

This command copies the `pInfo->src` acceleration structure to the `pInfo->dst` acceleration structure in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureKHR-accelerationStructure-08925
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureKHR-src-11633
  The source acceleration structure `pInfo->src` **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdCopyAccelerationStructureKHR-src-11634
  If the source acceleration structure `pInfo->src` was constructed through deserialization, all micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyAccelerationStructureKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyAccelerationStructureInfoKHR structure
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_COMPUTE_BIT operations

- VUID-vkCmdCopyAccelerationStructureKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyAccelerationStructureKHR is not affected by conditional rendering

The `VkCopyAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    VkAccelerationStructureKHR              src;
    VkAccelerationStructureKHR              dst;
    VkCopyAccelerationStructureModeKHR      mode;
} VkCopyAccelerationStructureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source acceleration structure for the copy.
- `dst` is the target acceleration structure for the copy.

- `mode` is a VkCopyAccelerationStructureModeKHR value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureInfoKHR-mode-03410
  `mode` **must** be VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR or VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR
- VUID-VkCopyAccelerationStructureInfoKHR-src-03411
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR, `src` **must** have been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR in the build
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03718
  The range of `src` accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03719
  The range of `dst` accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-dst-07791
  The range of memory backing `dst` that is accessed by this command **must** not overlap the memory backing `src` that is accessed by this command
- VUID-VkCopyAccelerationStructureInfoKHR-mode-12418
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR, the memory pointed to by `dst` **must** be at least as large as the size of `src`, as reported by vkWriteAccelerationStructuresPropertiesKHR or vkCmdWriteAccelerationStructuresPropertiesKHR with a query type of VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR
- VUID-VkCopyAccelerationStructureInfoKHR-mode-12419
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR, the memory pointed to by `dst` **must** be at least as large as the compacted size of `src`, as reported by vkWriteAccelerationStructuresPropertiesKHR or vkCmdWriteAccelerationStructuresPropertiesKHR with a query type of VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_INFO_KHR
- VUID-VkCopyAccelerationStructureInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyAccelerationStructureInfoKHR-src-parameter
  `src` **must** be a valid VkAccelerationStructureKHR handle
- VUID-VkCopyAccelerationStructureInfoKHR-dst-parameter
  `dst` **must** be a valid VkAccelerationStructureKHR handle

- VUID-VkCopyAccelerationStructureInfoKHR-mode-parameter
  `mode` **must** be a valid VkCopyAccelerationStructureModeKHR value
- VUID-VkCopyAccelerationStructureInfoKHR-commonparent
  Both of `dst`, and `src` **must** have been created, allocated, or retrieved from the same VkDevice

To copy an acceleration structure for the `VK_NV_ray_tracing` extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdCopyAccelerationStructureNV(
    VkCommandBuffer                             commandBuffer,
    VkAccelerationStructureNV                   dst,
    VkAccelerationStructureNV                   src,
    VkCopyAccelerationStructureModeKHR          mode);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dst` is the target acceleration structure for the copy.
- `src` is the source acceleration structure for the copy.
- `mode` is a VkCopyAccelerationStructureModeKHR value specifying additional operations to perform during the copy.

Accesses to `src` and `dst` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureNV-mode-03410
  `mode` **must** be VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR or VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR
- VUID-vkCmdCopyAccelerationStructureNV-src-03411
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR, `src` **must** have been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR in the build
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03718
  The range of `src` accessed by this command **must** be fully backed by physical memory
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03719
  The range of `dst` accessed by this command **must** be fully backed by physical memory
- VUID-vkCmdCopyAccelerationStructureNV-dst-07791
  The range of memory backing `dst` that is accessed by this command **must** not overlap the memory backing `src` that is accessed by this command

- VUID-vkCmdCopyAccelerationStructureNV-mode-12418
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR, the memory pointed to by `dst` **must** be at least as large as the size of `src`, as reported by vkWriteAccelerationStructuresPropertiesKHR or vkCmdWriteAccelerationStructuresPropertiesKHR with a query type of VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR
- VUID-vkCmdCopyAccelerationStructureNV-mode-12419
  If `mode` is VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR, the memory pointed to by `dst` **must** be at least as large as the compacted size of `src`, as reported by vkWriteAccelerationStructuresPropertiesKHR or vkCmdWriteAccelerationStructuresPropertiesKHR with a query type of VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyAccelerationStructureNV-dst-parameter
  `dst` **must** be a valid VkAccelerationStructureNV handle
- VUID-vkCmdCopyAccelerationStructureNV-src-parameter
  `src` **must** be a valid VkAccelerationStructureNV handle
- VUID-vkCmdCopyAccelerationStructureNV-mode-parameter
  `mode` **must** be a valid VkCopyAccelerationStructureModeKHR value
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyAccelerationStructureNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureNV-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyAccelerationStructureNV-commonparent
  Each of `commandBuffer`, `dst`, and `src` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyAccelerationStructureNV is not affected by conditional rendering

Possible values of `mode` specifying additional operations to perform during the copy, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkCopyAccelerationStructureModeKHR {
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR = 0,
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR = 1,
  // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR = 2,
  // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR = 3,
  // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR,
  // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR,
} VkCopyAccelerationStructureModeKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkCopyAccelerationStructureModeKHR
typedef VkCopyAccelerationStructureModeKHR VkCopyAccelerationStructureModeNV;
```

- VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR creates a direct copy of the acceleration structure specified in `src` into the one specified by `dst`. The `dst` acceleration structure **must** have been created with the same parameters as `src` with the exception of `size`, which **must** be at least as large as the queried VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR size . If `src` contains references to other acceleration structures, `dst` will reference the same acceleration structures.
- VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR creates a more compact version

of an acceleration structure `src` into `dst`. The acceleration structure `dst` **must** have been created with a size at least as large as that returned by vkCmdWriteAccelerationStructuresPropertiesNV, vkCmdWriteAccelerationStructuresPropertiesKHR, or vkWriteAccelerationStructuresPropertiesKHR after the build of the acceleration structure specified by `src`. If `src` contains references to other acceleration structures, `dst` will reference the same acceleration structures.

- VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR serializes the acceleration structure to a semi-opaque format which can be reloaded on a compatible implementation.
- VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR deserializes the semi-opaque serialization format in the buffer to the acceleration structure. After deserialization, the destination acceleration structure is treated as having the same acceleration structure type as the originally serialized acceleration structure.

To copy an acceleration structure to device memory call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureToMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a VkCopyAccelerationStructureToMemoryInfoKHR structure defining the copy operation.

Accesses to `pInfo->src` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR. Accesses to the buffer indicated by `pInfo->dst.deviceAddress` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_TRANSFER_WRITE_BIT.

This command produces the same results as vkCopyAccelerationStructureToMemoryKHR, but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either vkCmdCopyMemoryToAccelerationStructureKHR or vkCopyMemoryToAccelerationStructureKHR.

The defined header structure for the serialized data consists of:

- VK_UUID_SIZE bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- VK_UUID_SIZE bytes of data identifying the compatibility for comparison using vkGetDeviceAccelerationStructureCompatibilityKHR

For a top-level or bottom-level acceleration structure, this is followed by:

- A 64-bit integer of the total size matching the value queried using

VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR

- A 64-bit integer of the deserialized size to be passed in to VkAccelerationStructureCreateInfoKHR::size

For a top-level acceleration structure, the remainder of the serialized header consists of:

- A 64-bit integer of the count of the number of acceleration structure handles following. This value matches the value queried using VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR. For top-level acceleration structures this number is implementation-dependent; the number of and ordering of the handles may not match the instance descriptions which were used to build the acceleration structure.

The corresponding handles matching the values returned by vkGetAccelerationStructureDeviceAddressKHR or vkGetAccelerationStructureHandleNV are tightly packed in the buffer following the count. The application is expected to store a mapping between those handles and the original application-generated bottom-level acceleration structures to provide when deserializing.

For a bottom-level acceleration structure, the remainder of the serialized header consists of:

- A 64-bit integer consisting of two packed 32 bit values. The high 32 bits are 0xFFFFFFFF to indicate a block-based format, and the low 32 bits contain the number of serialized blocks that follow
- For each block:
  - A 32-bit unsigned integer indicating the block type corresponding to values in the VkAccelerationStructureSerializedBlockTypeKHR enumeration
  - A 32-bit reserved value for alignment
  - A 64-bit unsigned integer indicating the number of block buffer device addresses that follow the block header
  - An array of 64-bit buffer device addresses, with the count matching the previous value

If the block type is VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR, the corresponding buffer device addresses are tightly packed in the buffer and match the values returned by vkGetBufferDeviceAddressKHR for the underlying buffer objects for the opacity micromaps. An implementation **may** either return NULL for a geometry with no opacity micromap or only return valid device address entries in the array. Similar to the above, the application **must** provide a mapping between the valid buffer device addresses and the original application-generated opacity micromaps when deserializing. If the implementation returned NULL addresses for geometry without micromaps, the application **must** provide NULL device addresses mapped to those when deserializing.

The addresses of micromaps provided to deserializing **must** be compatible with the micromaps that were used for building the acceleration structure that was serialized. They **must** be created before deserializing with identical type and createFlags except for the VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR flag set.

Before using the deserialized acceleration structure, the micromaps **must** be deserialized using the exact serialized output of the micromap that was originally referenced by the serialized acceleration structure, or, if the acceleration structure was originally built with the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag, the application **may** replace the micromap with a newly constructed micromap, using the normal update rules.

The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-accelerationStructure-08926
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03739
  `pInfo->dst.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03740
  `pInfo->dst.deviceAddress` **must** be aligned to `256` bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-11699
  If `pInfo->src` was built with a `type` of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `pInfo->dst.deviceAddress` **must** be aligned to `128` bytes

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyAccelerationStructureToMemoryInfoKHR structure
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyAccelerationStructureToMemoryKHR is not affected by conditional rendering

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureToMemoryInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    VkAccelerationStructureKHR              src;
    VkDeviceOrHostAddressKHR                dst;
    VkCopyAccelerationStructureModeKHR      mode;
} VkCopyAccelerationStructureToMemoryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source acceleration structure for the copy.
- `dst` is the device or host address of memory which is the target for the copy.
- `mode` is a VkCopyAccelerationStructureModeKHR value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-04959
  The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-11582
  If the source acceleration structure `src` was constructed through deserialization, all

micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-dst-03561
  The memory pointed to by `dst` **must** be at least as large as the serialization size of `src`, as reported by vkWriteAccelerationStructuresPropertiesKHR or vkCmdWriteAccelerationStructuresPropertiesKHR with a query type of VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-03412
  `mode` **must** be VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-11714
  The range of `src` accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-11715
  The range of `dst` accessed by this command **must** be fully backed by physical memory

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_TO_MEMORY_INFO_KHR
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-parameter
  `src` **must** be a valid VkAccelerationStructureKHR handle
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-parameter
  `mode` **must** be a valid VkCopyAccelerationStructureModeKHR value

To copy device memory to an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyMemoryToAccelerationStructureKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a VkCopyMemoryToAccelerationStructureInfoKHR structure defining the copy operation.

Accesses to `pInfo->dst` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR. Accesses to the buffer indicated

by pInfo->src.deviceAddress **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_TRANSFER_READ_BIT.

This command can accept acceleration structures produced by either vkCmdCopyAccelerationStructureToMemoryKHR or vkCopyAccelerationStructureToMemoryKHR.

The structure provided as input to deserialize is as described in vkCmdCopyAccelerationStructureToMemoryKHR, with any acceleration structure handles filled in with the newly-queried handles to bottom level acceleration structures created before deserialization. These do not need to be built at deserialize time, but **must** be created.

The application **must** also provide any required micromap addresses in the header as described in vkCmdCopyAccelerationStructureToMemoryKHR.

Valid Usage

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-accelerationStructure-08927
  The VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure feature **must** be enabled
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03742
  pInfo->src.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03743
  pInfo->src.deviceAddress **must** be aligned to 256 bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-11700
  If the serialized acceleration structure in pInfo->src was originally built with a type of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, pInfo->src.deviceAddress **must** be aligned to 128 bytes

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkCopyMemoryToAccelerationStructureInfoKHR structure
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-renderpass
  This command **must** only be called outside of a render pass instance

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyMemoryToAccelerationStructureKHR is not affected by conditional rendering

The `VkCopyMemoryToAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyMemoryToAccelerationStructureInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    VkDeviceOrHostAddressConstKHR           src;
    VkAccelerationStructureKHR              dst;
    VkCopyAccelerationStructureModeKHR      mode;
} VkCopyMemoryToAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address of memory containing the source data for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

If the serialized data in `src` represents a top-level acceleration structure, `dst` **must** have been

created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

If the serialized data in src represents a bottom-level acceleration structure, dst **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

Valid Usage

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-04960
  The source memory pointed to by src **must** contain data previously serialized using vkCmdCopyAccelerationStructureToMemoryKHR, potentially modified to relocate acceleration structure references as described in that command
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-03413
  mode **must** be VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pInfo-03414
  The data in src **must** have a format compatible with the destination physical device as returned by vkGetDeviceAccelerationStructureCompatibilityKHR
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-03746
  dst **must** have been created with a size greater than or equal to that used to serialize the data in src
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11716
  The range of src accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11717
  The range of dst accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-11583
  If the serialized acceleration structure in src is bottom-level, each block in the header **must** have a type that corresponds to a valid value in VkAccelerationStructureSerializedBlockTypeKHR
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11584
  If the serialized acceleration structure in src is bottom-level, and any block in the header has a type of VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR the VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap feature **must** be enabled
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11585
  If the serialized acceleration structure in src is bottom-level, every device address in each block in the header with type VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR **must** point to a valid VkDeviceAddress that was retrieved by vkGetBufferDeviceAddressKHR for the underlying buffer objects of compatible micromaps constructed on the VkDevice when the command is executed

Valid Usage (Implicit)

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_COPY_MEMORY_TO_ACCELERATION_STRUCTURE_INFO_KHR`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-parameter
  `dst` **must** be a valid VkAccelerationStructureKHR handle
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-parameter
  `mode` **must** be a valid VkCopyAccelerationStructureModeKHR value

To check if a serialized acceleration structure is compatible with the current device call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetDeviceAccelerationStructureCompatibilityKHR(
    VkDevice                                    device,
    const VkAccelerationStructureVersionInfoKHR* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR*    pCompatibility);
```

- `device` is the device to check the version against.
- `pVersionInfo` is a pointer to a VkAccelerationStructureVersionInfoKHR structure specifying version information to check against the device.
- `pCompatibility` is a pointer to a VkAccelerationStructureCompatibilityKHR value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-accelerationStructure-08928
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pVersionInfo-parameter
  `pVersionInfo` **must** be a valid pointer to a valid VkAccelerationStructureVersionInfoKHR structure
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pCompatibility-parameter
  `pCompatibility` **must** be a valid pointer to a VkAccelerationStructureCompatibilityKHR value

The VkAccelerationStructureVersionInfoKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureVersionInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkAccelerationStructureVersionInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pVersionData is a pointer to the version header of an acceleration structure as defined in vkCmdCopyAccelerationStructureToMemoryKHR.

NOTE

pVersionData is a *pointer* to an array of 2×VK_UUID_SIZE uint8_t values instead of two VK_UUID_SIZE arrays as the expected use case for this member is to be pointed at the header of a previously serialized acceleration structure (via vkCmdCopyAccelerationStructureToMemoryKHR or vkCopyAccelerationStructureToMemoryKHR) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureVersionInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_INFO_KHR
- VUID-VkAccelerationStructureVersionInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkAccelerationStructureVersionInfoKHR-pVersionData-parameter
  pVersionData **must** be a valid pointer to an array of $2 \times VK_UUID_SIZE$ uint8_t values

Possible values of pCompatibility returned by vkGetDeviceAccelerationStructureCompatibilityKHR are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCompatibilityKHR {
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR = 0,
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR = 1,
} VkAccelerationStructureCompatibilityKHR;
```

- VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR if the pVersionData version acceleration structure is compatible with device.
- VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR if the pVersionData version acceleration structure is not compatible with device.

43.2. Cluster Level Acceleration Structures

Acceleration structure build times in ray tracing applications with extensive geometry **can** be reduced by introducing alternative acceleration structure types that facilitate bottom-level acceleration structure construction using pre-generated primitive clusters, improving geometry reuse. This **can** be achieved by incorporating additional acceleration structure types:

1. Cluster Level Acceleration Structure
2. Cluster Template Acceleration Structure
3. Cluster Level Bottom Level Acceleration Structure

Cluster Level Acceleration Structure (CLAS) is an intermediate acceleration structure constructed from triangles, which serves as a building block for Cluster Level Bottom Level Acceleration Structure. A CLAS shares similarities with a traditional bottom level acceleration structure but has several key distinctions. A CLAS **can** only contain a limited number of triangles and vertices. CLAS objects cannot be directly referenced in a top level acceleration structure, instead, they **must** be part of a Cluster Level Bottom Level Acceleration Structure. The geometry indices within a CLAS are local to it, potentially non-consecutive, and customizable per primitive. Each CLAS **can** also have a user-defined 32-bit ClusterID, which is accessible in the hit shaders. The vertex positions within a CLAS **can** be quantized by zeroing specific floating-point mantissa bits to optimize storage.

Cluster Template Acceleration Structure is a partially constructed CLAS designed for efficient instantiation into multiple CLAS objects. During a cluster template build, some pre-computation is performed independent of vertex positions, allowing reuse across multiple CLAS objects with different vertex data. A cluster template itself does not require vertex positions but it retains non-positional properties similar to a CLAS, which are then inherited during instantiation. A cluster template **must** be instantiated into a CLAS object to be usable.

Cluster Level Bottom Level Acceleration Structure is a new alternative to the existing bottom level acceleration structures, which is constructed using references to already built CLAS objects and is the only cluster acceleration structure that **can** be referenced in a top level acceleration structure.

These cluster acceleration structures **can** be built or moved by a single versatile multi-indirect function vkCmdBuildClusterAccelerationStructureIndirectNV. To determine the memory requirements for executing this function, call:

```
// Provided by VK_NV_cluster_acceleration_structure
void vkGetClusterAccelerationStructureBuildSizesNV(
    VkDevice                                        device,
    const VkClusterAccelerationStructureInputInfoNV* pInfo,
    VkAccelerationStructureBuildSizesInfoKHR*       pSizeInfo);
```

- `device` is the logical device that owns the acceleration structure.
- `pInfo` is a pointer to a VkClusterAccelerationStructureInputInfoNV structure containing parameters required for the memory requirements query.
- `pSizeInfo` is a pointer to a VkAccelerationStructureBuildSizesInfoKHR structure which returns

the size required for an acceleration structure and scratch buffer, given the build parameters. The size requirements for a scratch buffer **may** be zero.

If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV, acceleration structure and scratch memory sizes are returned for all VkClusterAccelerationStructureInputInfoNV::maxAccelerationStructureCount acceleration structures. If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, scratch memory size for all VkClusterAccelerationStructureInputInfoNV::maxAccelerationStructureCount acceleration structures and the acceleration structure memory size for a single acceleration structure is returned. If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, only scratch memory size is returned for the requested acceleration structures.

Valid Usage

- VUID-vkGetClusterAccelerationStructureBuildSizesNV-clusterAccelerationStructure-10438
  The VkPhysicalDeviceClusterAccelerationStructureFeaturesNV::clusterAccelerationStructure feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetClusterAccelerationStructureBuildSizesNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetClusterAccelerationStructureBuildSizesNV-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkClusterAccelerationStructureInputInfoNV structure
- VUID-vkGetClusterAccelerationStructureBuildSizesNV-pSizeInfo-parameter
  pSizeInfo **must** be a valid pointer to a VkAccelerationStructureBuildSizesInfoKHR structure

The VkClusterAccelerationStructureInputInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureInputInfoNV {
    VkStructureType                              sType;
    void*                                        pNext;
    uint32_t                                     maxAccelerationStructureCount;
    VkBuildAccelerationStructureFlagsKHR         flags;
    VkClusterAccelerationStructureOpTypeNV       opType;
    VkClusterAccelerationStructureOpModeNV       opMode;
    VkClusterAccelerationStructureOpInputNV      opInput;
} VkClusterAccelerationStructureInputInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxAccelerationStructureCount` is the maximum number of acceleration structures that will be provided to the multi indirect operation.
- `flags` is a bitmask of VkBuildAccelerationStructureFlagsKHR specifying flags for the multi indirect operation.
- `opType` is a VkClusterAccelerationStructureOpTypeNV value specifying the type of operation to perform.
- `opMode` is a VkClusterAccelerationStructureOpModeNV value specifying the mode of operation.
- `opInput` is a VkClusterAccelerationStructureOpInputNV value specifying the descriptions of the operation.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureInputInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_INPUT_INFO_NV
- VUID-VkClusterAccelerationStructureInputInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkClusterAccelerationStructureInputInfoNV-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkBuildAccelerationStructureFlagBitsKHR values
- VUID-VkClusterAccelerationStructureInputInfoNV-opType-parameter
  `opType` **must** be a valid VkClusterAccelerationStructureOpTypeNV value
- VUID-VkClusterAccelerationStructureInputInfoNV-opMode-parameter
  `opMode` **must** be a valid VkClusterAccelerationStructureOpModeNV value
- VUID-VkClusterAccelerationStructureInputInfoNV-pClustersBottomLevel-parameter
  If `opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV, the `pClustersBottomLevel` member of `opInput` **must** be a valid pointer to a VkClusterAccelerationStructureClustersBottomLevelInputNV structure
- VUID-VkClusterAccelerationStructureInputInfoNV-pTriangleClusters-parameter
  If `opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV, VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV, VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV, or VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV, the `pTriangleClusters` member of `opInput` **must** be a valid pointer to a VkClusterAccelerationStructureTriangleClusterInputNV structure
- VUID-VkClusterAccelerationStructureInputInfoNV-pMoveObjects-parameter

If `opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV, the `pMoveObjects` member of `opInput` **must** be a valid pointer to a VkClusterAccelerationStructureMoveObjectsInputNV structure

Values which **can** be set in VkClusterAccelerationStructureOpTypeNV are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureOpTypeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV = 2,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV = 3,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV = 4,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV = 5,
} VkClusterAccelerationStructureOpTypeNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV specifies that a cluster acceleration structure, cluster acceleration structure template or a bottom level acceleration structure built from cluster acceleration structures will be moved. If a cluster acceleration structure is moved, the bottom level cluster acceleration structures containing it will have to be re-built. If used with VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, it returns the size of existing cluster acceleration structures.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV specifies that bottom level cluster acceleration structures will be built.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV specifies that cluster acceleration structures will be built.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV specifies that a template for cluster acceleration structure will be built.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV specifies that a template for a cluster acceleration structure will be instantiated, resulting in a built cluster acceleration structure.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV specifies that the vertex indices of the cluster template acceleration structure will be fetched.

Values which **can** be set in VkClusterAccelerationStructureOpModeNV are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureOpModeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV = 2,
} VkClusterAccelerationStructureOpModeNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV specifies

that the build or move operation will implicitly distribute built or compacted cluster acceleration structures starting at the address provided in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData. If a move operation is being performed, the acceleration structures will be tightly compacted.

- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV specifies that the build or move operation will explicitly write built or compacted cluster acceleration structures in the array of addresses provided in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray.
- VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV specifies that computed cluster acceleration structure sizes will be written to VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray.

The VkClusterAccelerationStructureOpInputNV union is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef union VkClusterAccelerationStructureOpInputNV {
    VkClusterAccelerationStructureClustersBottomLevelInputNV*    pClustersBottomLevel;
    VkClusterAccelerationStructureTriangleClusterInputNV*        pTriangleClusters;
    VkClusterAccelerationStructureMoveObjectsInputNV*            pMoveObjects;
} VkClusterAccelerationStructureOpInputNV;
```

- pClustersBottomLevel is a VkClusterAccelerationStructureClustersBottomLevelInputNV structure specifying an upper threshold on parameters to build multiple bottom level acceleration structures from multiple cluster level acceleration structures.
- pTriangleClusters is a VkClusterAccelerationStructureTriangleClusterInputNV structure specifying an upper threshold on parameters to build a regular or templated cluster acceleration structure.
- pMoveObjects is a VkClusterAccelerationStructureMoveObjectsInputNV structure specifying an upper threshold on the number of bytes moved and the type of acceleration structure being moved.

The VkClusterAccelerationStructureClustersBottomLevelInputNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureClustersBottomLevelInputNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTotalClusterCount;
    uint32_t           maxClusterCountPerAccelerationStructure;
} VkClusterAccelerationStructureClustersBottomLevelInputNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxTotalClusterCount is the total number of cluster acceleration structures that will be built or moved across all input arguments.

- maxClusterCountPerAccelerationStructure is the maximum number of cluster acceleration structures that will be built or moved per input argument.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureClustersBottomLevelInputNV-sType-sType sType **must** be VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_CLUSTERS_BOTTOM_LEVEL_INPUT_NV
- VUID-VkClusterAccelerationStructureClustersBottomLevelInputNV-pNext-pNext pNext **must** be NULL

The VkClusterAccelerationStructureTriangleClusterInputNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureTriangleClusterInputNV {
    VkStructureType    sType;
    void*              pNext;
    VkFormat           vertexFormat;
    uint32_t           maxGeometryIndexValue;
    uint32_t           maxClusterUniqueGeometryCount;
    uint32_t           maxClusterTriangleCount;
    uint32_t           maxClusterVertexCount;
    uint32_t           maxTotalTriangleCount;
    uint32_t           maxTotalVertexCount;
    uint32_t           minPositionTruncateBitCount;
} VkClusterAccelerationStructureTriangleClusterInputNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- vertexFormat is the VkFormat of each vertex element.
- maxGeometryIndexValue is the maximum geometry index value for any constructed geometry.
- maxClusterUniqueGeometryCount is the maximum number of unique values of the geometry index for each cluster or cluster template.
- maxClusterTriangleCount is the maximum number of triangles in a cluster or cluster template.
- maxClusterVertexCount is the maximum number of unique vertices in the cluster's index buffer.
- maxTotalTriangleCount is the sum of all triangles across all clusters or cluster templates.
- maxTotalVertexCount is the maximum number of vertices across all clusters or cluster templates.
- minPositionTruncateBitCount is the least value specified in cluster build in VkClusterAccelerationStructureBuildTriangleClusterInfoNV::positionTruncateBitCount or cluster template build in VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::positionTruncateBitCount.

Valid Usage

- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-vertexFormat-10439
  The format features of `vertexFormat` **must** contain VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-maxClusterTriangleCount-10440
  `maxClusterTriangleCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxTrianglesPerCluster`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-maxClusterVertexCount-10441
  `maxClusterVertexCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxVerticesPerCluster`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-minPositionTruncateBitCount-10442
  `minPositionTruncateBitCount` **must** be less than or equal to `32`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_TRIANGLE_CLUSTER_INPUT_NV
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-vertexFormat-parameter
  `vertexFormat` **must** be a valid VkFormat value

The VkClusterAccelerationStructureMoveObjectsInputNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureMoveObjectsInputNV {
    VkStructureType                         sType;
    void*                                   pNext;
    VkClusterAccelerationStructureTypeNV    type;
    VkBool32                                noMoveOverlap;
    VkDeviceSize                            maxMovedBytes;
} VkClusterAccelerationStructureMoveObjectsInputNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a VkClusterAccelerationStructureTypeNV value identifying the type of cluster

acceleration structure.

- noMoveOverlap specifies if the source and destination cluster acceleration structures overlap in memory for the move operation. If set to VK_TRUE, the source cluster acceleration structure remains valid after the move and move operation acts like a copy.
- maxMovedBytes is the maximum number of bytes that **may** be moved in this operation.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_MOVE_OBJECTS_INPUT_NV
- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-pNext-pNext
  pNext **must** be NULL
- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-type-parameter
  type **must** be a valid VkClusterAccelerationStructureTypeNV value

Values which **can** be set in VkClusterAccelerationStructureTypeNV are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureTypeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_CLUSTERS_BOTTOM_LEVEL_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_TEMPLATE_NV = 2,
} VkClusterAccelerationStructureTypeNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_CLUSTERS_BOTTOM_LEVEL_NV specifies a bottom level cluster acceleration structure.
- VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_NV specifies a cluster acceleration structure.
- VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_TEMPLATE_NV specifies a template cluster acceleration structure.

To build or move a cluster acceleration structure or a cluster acceleration structure template call:

```
// Provided by VK_NV_cluster_acceleration_structure
void vkCmdBuildClusterAccelerationStructureIndirectNV(
    VkCommandBuffer                             commandBuffer,
    const VkClusterAccelerationStructureCommandsInfoNV* pCommandInfos);
```

- commandBuffer is the command buffer into which the command is recorded.
- pCommandInfos is a pointer to a VkClusterAccelerationStructureCommandsInfoNV structure containing parameters required for building or moving the cluster acceleration structure.

Similar to vkCmdBuildAccelerationStructuresKHR, this command **may** initiate multiple acceleration structure builds and there is no ordering or synchronization implied between any of the individual acceleration structure builds. Accesses to the acceleration structure scratch memory as identified by the VkClusterAccelerationStructureCommandsInfoNV::`scratchData` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of (VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR).

Accesses to each VkClusterAccelerationStructureCommandsInfoNV::`dstImplicitData`, VkClusterAccelerationStructureCommandsInfoNV::`dstAddressesArray` and VkClusterAccelerationStructureCommandsInfoNV::`dstSizesArray` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR.

Accesses to memory with input data as identified by any used values of VkClusterAccelerationStructureCommandsInfoNV::`srcInfosArray` and VkClusterAccelerationStructureCommandsInfoNV::`srcInfosCount` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_INDIRECT_COMMAND_READ_BIT.

Valid Usage

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-clusterAccelerationStructure-10443
  The VkPhysicalDeviceClusterAccelerationStructureFeaturesNV::`clusterAccelerationStructure` feature **must** be enabled
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pNext-10444
  The `pNext` chain of the bound ray tracing pipeline **must** include a VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV structure
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10445
  `pCommandInfos->input.maxAccelerationStructureCount` **must** be less than or equal to the value used in `pInfo->maxAccelerationStructureCount` in vkGetClusterAccelerationStructureBuildSizesNV to determine the memory requirements for the build operation
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-scratchData-12300
  The scratch memory of the cluster acceleration structure specified in VkClusterAccelerationStructureCommandsInfoNV::`scratchData`, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`scratchData` when VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags` contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV, **must** be greater than or equal to the scratch size queried with vkGetClusterAccelerationStructureBuildSizesNV
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-scratchData-12301
  The scratch address of the cluster acceleration structure specified in VkClusterAccelerationStructureCommandsInfoNV::`scratchData`, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`scratchData` when

VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV, **must** be aligned based on the cluster acceleration structure type and its alignment properties as queried with VkPhysicalDeviceClusterAccelerationStructurePropertiesNV

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10448
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureMoveObjectsInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10449
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10450
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureBuildTriangleClusterInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10451
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10452
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureInstantiateClusterInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10832
  If pCommandInfos->input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV, pCommandInfos->srcInfosArray **must** be an array of VkClusterAccelerationStructureGetTemplateIndicesInfoNV structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10453
  The value in pCommandInfos->srcInfosCount **must** be less than or equal to pCommandInfos->input.maxAccelerationStructureCount
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10454
  The number of inputs specified in pCommandInfos->srcInfosArray **must** be greater than or equal to pCommandInfos->srcInfosCount
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-dstAddressesArray-12302
  The memory regions specified in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the memory indirectly referenced in

VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** not overlap with each other or with pCommandInfos->scratchData, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::scratchData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-dstImplicitData-12303
  The memory region specified in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, for multiple acceleration structure builds **must** not overlap with pCommandInfos->scratchData, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::scratchData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12304
  pCommandInfos->scratchData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::scratchData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV, **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12305
  pCommandInfos->srcInfosArray, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV, **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12306
  pCommandInfos->srcInfosCount, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV, **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12381
  pCommandInfos->dstAddressesArray, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12382
  All destination addresses contained in pCommandInfos->dstAddressesArray, or in the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be device address ranges allocated to the application from buffers created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12308
  pCommandInfos->dstImplicitData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-parameter
  pCommandInfos **must** be a valid pointer to a valid VkClusterAccelerationStructureCommandsInfoNV structure
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildClusterAccelerationStructureIndirectNV is not affected by conditional rendering

The VkClusterAccelerationStructureCommandsInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureCommandsInfoNV {
    VkStructureType                                          sType;
    void*                                                    pNext;
    VkClusterAccelerationStructureInputInfoNV                input;
    VkDeviceAddress                                          dstImplicitData;
    VkDeviceAddress                                          scratchData;
    VkStridedDeviceAddressRegionKHR                          dstAddressesArray;
    VkStridedDeviceAddressRegionKHR                          dstSizesArray;
    VkStridedDeviceAddressRegionKHR                          srcInfosArray;
    VkDeviceAddress                                          srcInfosCount;
    VkClusterAccelerationStructureAddressResolutionFlagsNV   addressResolutionFlags;
} VkClusterAccelerationStructureCommandsInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `input` is a VkClusterAccelerationStructureInputInfoNV structure describing the build or move parameters for the cluster acceleration structure.
- `dstImplicitData` is the device address for memory where the implicit build of cluster acceleration structure will be saved. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV or VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, this value is ignored.

- `scratchData` is the device address of scratch memory that will be used during cluster acceleration structure move or build.
- `dstAddressesArray` is a VkStridedDeviceAddressRegionKHR that specifies addresses and stride for moved or built cluster acceleration structures, depending on the value of VkClusterAccelerationStructureInputInfoNV::`opMode`. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV and VkStridedDeviceAddressRegionKHR::`deviceAddress` is not `0`, then the implementation writes the cluster addresses to the specified region. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, the implementation reads the cluster addresses from the specified region. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, this member is ignored.
- `dstSizesArray` is a VkStridedDeviceAddressRegionKHR containing sizes of moved or built cluster acceleration structures. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV or VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, then the sizes are saved. If VkClusterAccelerationStructureInputInfoNV::`opMode` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, then the sizes are read from.
- `srcInfosArray` is a VkStridedDeviceAddressRegionKHR where input data for the build or move operation is read from. If the stride is `0`, the structures are assumed to be packed tightly. Its format is dependent on VkClusterAccelerationStructureInputInfoNV::`opType` as per the table below.

`input.opType`	Format of `srcInfosArray`
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV	VkClusterAccelerationStructureMoveObjectsInfoNV
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV	VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV	VkClusterAccelerationStructureBuildTriangleClusterInfoNV
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV	VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV	VkClusterAccelerationStructureInstantiateClusterInfoNV
VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV	VkClusterAccelerationStructureGetTemplateIndicesInfoNV

- `srcInfosCount` is the device address of memory containing the count of number of build or move operations to perform. The actual value is the minimum of this value and the value specified in `input.maxAccelerationStructureCount`. If this value is `0`, the count is determined by

input.maxAccelerationStructureCount alone.

- addressResolutionFlags is a bitmask of VkClusterAccelerationStructureAddressResolutionFlagBitsNV values specifying how an implementation will interpret the device addresses in this structure.

Valid Usage

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12309
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV, VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, **must** be a valid VkDeviceAddress
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12310
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV and input.opType is not VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV, the memory in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV **must** be greater than or equal to the VkAccelerationStructureBuildSizesInfoKHR::accelerationStructureSize value returned from vkGetClusterAccelerationStructureBuildSizesNV with same input parameters
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12311
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV and input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV, the memory in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, **must** be greater than or equal to the sum of all the built acceleration structures that are being moved
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-10469
  If input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV, the total memory moved **must** not be larger than the size provided in VkClusterAccelerationStructureMoveObjectsInputNV::maxMovedBytes

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12312
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV, VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV, **must** be a valid VkDeviceAddress
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12313
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, the address in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be a valid VkDeviceAddress
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12314
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, the addresses in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the memory indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be large enough to accommodate built or moved clusters
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12315
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, the buffers in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the buffers indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** not overlap
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12316
  If VkClusterAccelerationStructureInputInfoNV::opMode is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV, the addresses in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the addresses indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be aligned based on the cluster acceleration structure type and its alignment properties as described in VkPhysicalDeviceClusterAccelerationStructurePropertiesNV

- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstAddressesArray-10474
  The stride in `dstAddressesArray` **must** be greater than or equal to 8
- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstSizesArray-10475
  The stride in `dstSizesArray` **must** be greater than or equal to 4
- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosArray-12530
  If the stride in `srcInfosArray` is not `0`, it **must** be greater than or equal to the size of the structure selected by `input.opType`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12317
  If `input.opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV, then depending on the VkClusterAccelerationStructureInputInfoNV::`opMode`, VkClusterAccelerationStructureCommandsInfoNV::`dstImplicitData`, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`dstImplicitData` when VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags` contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, or addresses specified in VkClusterAccelerationStructureCommandsInfoNV::`dstAddressesArray`, or the addresses indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`dstAddressesArray` when VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags` contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be aligned to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`clusterByteAlignment`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12318
  If `input.opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV, then depending on the VkClusterAccelerationStructureInputInfoNV::`opMode`, VkClusterAccelerationStructureCommandsInfoNV::`dstImplicitData`, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`dstImplicitData` when VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags` contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, or addresses specified in VkClusterAccelerationStructureCommandsInfoNV::`dstAddressesArray`, or the addresses indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::`dstAddressesArray` when VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags` contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be aligned to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`clusterTemplateByteAlignment`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12319
  If `input.opType` is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV, then depending on the VkClusterAccelerationStructureInputInfoNV::`opMode`,

VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV, or addresses specified in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray, or the addresses indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV, **must** be aligned to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterByteAlignment

- VUID-VkClusterAccelerationStructureCommandsInfoNV-scratchData-12320
  VkClusterAccelerationStructureCommandsInfoNV::scratchData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::scratchData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV, **must** be aligned to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterScratchByteAlignment
- VUID-VkClusterAccelerationStructureCommandsInfoNV-buildScratchSize-12321
  If the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetClusterAccelerationStructureBuildSizesNV is not 0, then VkClusterAccelerationStructureCommandsInfoNV::scratchData, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::scratchData when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV, **must** be a valid VkDeviceAddress
- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosCount-12322
  VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount, or the address indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV, **must** be 4-byte aligned
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12323
  If input.opType is VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV, the total and per argument number of cluster acceleration structures referenced in VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray, or the structures indirectly referenced in VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray when VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags contains VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV, **must** be less than or equal to the maximum values with which memory requirements were queried in vkGetClusterAccelerationStructureBuildSizesNV with VkClusterAccelerationStructureOpInputNV::pClustersBottomLevel

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureCommandsInfoNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_COMMANDS_INFO_NV`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-parameter
  `input` **must** be a valid VkClusterAccelerationStructureInputInfoNV structure
- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstImplicitData-parameter
  If `dstImplicitData` is not `0`, `dstImplicitData` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-scratchData-parameter
  `scratchData` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosCount-parameter
  If `srcInfosCount` is not `0`, `srcInfosCount` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-addressResolutionFlags-parameter
  If `addressResolutionFlags` is not `0`, `addressResolutionFlags` **must** be a valid combination of VkClusterAccelerationStructureAddressResolutionFlagBitsNV values

Bits which **can** be set in VkClusterAccelerationStructureCommandsInfoNV::`addressResolutionFlags`, specifying how the device addresses in VkClusterAccelerationStructureCommandsInfoNV are interpreted, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureAddressResolutionFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_NONE_NV = 0,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_
NV = 0x00000001,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV =
0x00000002,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_
NV = 0x00000004,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV
= 0x00000008,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV
= 0x00000010,

VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV
= 0x00000020,
} VkClusterAccelerationStructureAddressResolutionFlagBitsNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_NONE_NV specifies that no address resolution flags are provided.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::scratchData.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray.
- VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV specifies another level of indirection when reading VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureAddressResolutionFlagsNV;
```

VkClusterAccelerationStructureAddressResolutionFlagsNV is a bitmask type for setting a mask of zero or more VkClusterAccelerationStructureAddressResolutionFlagBitsNV.

The VkClusterAccelerationStructureMoveObjectsInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureMoveObjectsInfoNV {
    VkDeviceAddress    srcAccelerationStructure;
} VkClusterAccelerationStructureMoveObjectsInfoNV;
```

- srcAccelerationStructure is the device address of the source cluster acceleration structure that will be moved.

Valid Usage

- VUID-VkClusterAccelerationStructureMoveObjectsInfoNV-srcAccelerationStructure-10483
  srcAccelerationStructure **must** be a type of cluster acceleration structure

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureMoveObjectsInfoNV-srcAccelerationStructure-parameter
  srcAccelerationStructure **must** be a valid VkDeviceAddress value

The VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV {
    uint32_t           clusterReferencesCount;
    uint32_t           clusterReferencesStride;
    VkDeviceAddress    clusterReferences;
} VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV;
```

- clusterReferencesCount is the number of clusters this bottom level acceleration structure will be built from.
- clusterReferencesStride is the stride in clusterReferences.
- clusterReferences is the device memory containing the address of the clusters.

Valid Usage

- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-10484
  All cluster references in `clusterReferences` **must** be unique
- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-10485
  `clusterReferences` **must** have at least `clusterReferencesCount` values
- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferencesStride-10486
  `clusterReferencesStride` **must** be greater than or equal to 8

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-parameter
  `clusterReferences` **must** be a valid VkDeviceAddress value

Bits which **can** be set in VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV::`geometryFlags`, specifying geometry flags for cluster acceleration structure, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureGeometryFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_CULL_DISABLE_BIT_NV = 0x00000001,
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_NO_DUPLICATE_ANYHIT_INVOCATION_BIT_NV =
0x00000002,
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_OPAQUE_BIT_NV = 0x00000004,
} VkClusterAccelerationStructureGeometryFlagBitsNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_CULL_DISABLE_BIT_NV disables face culling for this geometry.
- VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_NO_DUPLICATE_ANYHIT_INVOCATION_BIT_NV specifies that the implementation **must** only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent an implementation **may** invoke the any-hit shader more than once for this geometry.
- VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_OPAQUE_BIT_NV specifies that this geometry does not invoke the any-hit shaders even if present in a hit group.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureGeometryFlagsNV;
```

`VkClusterAccelerationStructureGeometryFlagsNV` is a bitmask type for setting a mask of zero or more VkClusterAccelerationStructureGeometryFlagBitsNV.

The VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV {
    uint32_t    geometryIndex:24;
    uint32_t    reserved:5;
    uint32_t    geometryFlags:3;
} VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV;
```

- `geometryIndex` specifies the geometry index for all triangles in the cluster acceleration structure.
- `reserved` is reserved for future use.
- `geometryFlags` is a bitmask of VkClusterAccelerationStructureGeometryFlagBitsNV values describing geometry flags for the cluster acceleration structure.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- `geometryIndex`, `reserved` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
  - `geometryIndex` occupies the 24 least significant bits of that memory
  - `geometryFlags` occupies the 3 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Valid Usage

- VUID-VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV-reserved-10487
  `reserved` **must** be `0`

Bits which **can** be set in VkClusterAccelerationStructureBuildTriangleClusterInfoNV::`clusterFlags`, specifying flags for clusters in an acceleration structure, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureClusterFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_CLUSTER_ALLOW_DISABLE_OPACITY_MICROMAPS_NV = 
0x00000001,
} VkClusterAccelerationStructureClusterFlagBitsNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_CLUSTER_ALLOW_DISABLE_OPACITY_MICROMAPS_NV specifies that the specified cluster acceleration structure **may** be referenced in an instance with VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT set.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureClusterFlagsNV;
```

VkClusterAccelerationStructureClusterFlagsNV is a bitmask type for setting a mask of zero or more VkClusterAccelerationStructureClusterFlagBitsNV.

The VkClusterAccelerationStructureBuildTriangleClusterInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildTriangleClusterInfoNV {
    uint32_t                                                    clusterID;
    VkClusterAccelerationStructureClusterFlagsNV                clusterFlags;
    uint32_t                                                    triangleCount:9;
    uint32_t                                                    vertexCount:9;
    uint32_t
positionTruncateBitCount:6;
    uint32_t                                                    indexType:4;
    uint32_t
opacityMicromapIndexType:4;
    VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV
baseGeometryIndexAndGeometryFlags;
    uint16_t
indexBufferStride;
    uint16_t
vertexBufferStride;
    uint16_t
geometryIndexAndFlagsBufferStride;
    uint16_t
opacityMicromapIndexBufferStride;
    VkDeviceAddress                                             indexBuffer;
    VkDeviceAddress                                             vertexBuffer;
    VkDeviceAddress
geometryIndexAndFlagsBuffer;
    VkDeviceAddress
opacityMicromapArray;
    VkDeviceAddress
opacityMicromapIndexBuffer;
} VkClusterAccelerationStructureBuildTriangleClusterInfoNV;
```

- clusterID is a user specified identifier assigned to this cluster.
- clusterFlags is a bitmask of VkClusterAccelerationStructureClusterFlagBitsNV values describing flags how the cluster should be built.
- triangleCount is the number of triangles in this cluster.
- vertexCount is the number of unique vertices in this cluster.
- positionTruncateBitCount is the number of bits starting at the lowest bit (i.e. the LSBs of the mantissa), of each vertex position that will be truncated to zero to improve floating-point

compression.

- `indexType` is a single VkClusterAccelerationStructureIndexFormatFlagBitsNV value specifying the index type in `indexBuffer`.
- `opacityMicromapIndexType` is a single VkClusterAccelerationStructureIndexFormatFlagBitsNV value specifying the index type in `opacityMicromapIndexBuffer`.
- `baseGeometryIndexAndGeometryFlags` is a VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV value specifying the base geometry index and flags for all triangles in the cluster.
- `indexBufferStride` is the stride in bytes in `indexBuffer` with `0` meaning the values are tightly-packed.
- `vertexBufferStride` is the stride in bytes in `vertexBuffer` with `0` meaning the values are tightly-packed.
- `geometryIndexAndFlagsBufferStride` is the stride in bytes in `geometryIndexAndFlagsBuffer` with `0` meaning the values are tightly-packed.
- `opacityMicromapIndexBufferStride` is the stride in bytes in `opacityMicromapIndexBuffer` with `0` meaning the values are tightly-packed.
- `indexBuffer` is a device address containing the indices of the vertices in the cluster and are of type `indexType`.
- `vertexBuffer` is a device address containing the vertex data of the triangles in the cluster with format specified in VkClusterAccelerationStructureTriangleClusterInputNV::`vertexFormat`.
- `geometryIndexAndFlagsBuffer` is either `0` or an address containing strided VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV values specifying the geometry index and flag for every triangle in the cluster.
- `opacityMicromapArray` is either `0` or specifies the address of a valid opacity micromap array to reference from the cluster acceleration structure. If it is `0`, then opacity micromaps will be disabled for this cluster acceleration structure.
- `opacityMicromapIndexBuffer` is either `0` or specifies the address of a strided array with size equal to the number of triangles or indices into the opacity micromap array. If `opacityMicromapIndexBuffer` is `0` then the index used is the index of the triangle in the geometry.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- `triangleCount`, `vertexCount`, `positionTruncateBitCount`, `indexType` and `opacityMicromapIndexType` occupy the same memory as if a single `uint32_t` was specified in their place
  - `triangleCount` occupies the 9 least significant bits of that memory
  - `vertexCount` occupies the next 9 least significant bits of that memory
  - `positionTruncateBitCount` occupies the next 6 least significant bits of that memory
  - `indexType` occupies the next 4 least significant bits of that memory
  - `opacityMicromapIndexType` occupies the 4 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another

method to set values according to the correct bit pattern.

Valid Usage

- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-clusterID-10488
  `clusterID` **must** not be 0xFFFFFFFF
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-triangleCount-10489
  `triangleCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxTrianglesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexCount-10490
  `vertexCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxVerticesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexType-10491
  `indexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapIndexType-10492
  `opacityMicromapIndexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-positionTruncateBitCount-10493
  `positionTruncateBitCount` **must** be greater than or equal to VkClusterAccelerationStructureTriangleClusterInputNV::`minPositionTruncateBitCount` and less than or equal to `32`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexBufferStride-10494
  `indexBufferStride` **must** be `0` or a multiple of `indexType`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexBufferStride-10495
  `vertexBufferStride` **must** be `0` or a multiple of value specified in VkClusterAccelerationStructureTriangleClusterInputNV::`vertexFormat`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-baseGeometryIndex-10496
  The maximum geometry index after using the values in `baseGeometryIndex` and `geometryIndexBuffer` **must** be less than VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxClusterGeometryIndex`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapArray-10881
  If `opacityMicromapArray` is not `0`, then the cluster acceleration structure **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV flag set in VkClusterAccelerationStructureInputInfoNV::`flags`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-clusterFlags-parameter
  If `clusterFlags` is not `0`, `clusterFlags` **must** be a valid combination of VkClusterAccelerationStructureClusterFlagBitsNV values
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexBuffer-parameter
  `indexBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexBuffer-parameter
  `vertexBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-geometryIndexAndFlagsBuffer-parameter
  If `geometryIndexAndFlagsBuffer` is not `0`, `geometryIndexAndFlagsBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapArray-parameter
  If `opacityMicromapArray` is not `0`, `opacityMicromapArray` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapIndexBuffer-parameter
  If `opacityMicromapIndexBuffer` is not `0`, `opacityMicromapIndexBuffer` **must** be a valid VkDeviceAddress value

Bits that **can** be set in VkClusterAccelerationStructureBuildTriangleClusterInfoNV::`indexType`, VkClusterAccelerationStructureBuildTriangleClusterInfoNV::`opacityMicromapIndexType`, VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::`indexType` and VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::`opacityMicromapIndexType` specifying the index type is one of:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureIndexFormatFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_8BIT_NV = 0x00000001,
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_16BIT_NV = 0x00000002,
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_32BIT_NV = 0x00000004,
} VkClusterAccelerationStructureIndexFormatFlagBitsNV;
```

- VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_8BIT_NV specifies that 8-bit indices will be used.
- VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_16BIT_NV specifies that 16-bit indices will be used.
- VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_32BIT_NV specifies that 32-bit indices will be used.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureIndexFormatFlagsNV;
```

VkClusterAccelerationStructureIndexFormatFlagsNV is a bitmask type for setting a single VkClusterAccelerationStructureIndexFormatFlagBitsNV.

The VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV {
    uint32_t                                                clusterID;
    VkClusterAccelerationStructureClusterFlagsNV            clusterFlags;
    uint32_t                                                triangleCount:9;
    uint32_t                                                vertexCount:9;
    uint32_t
positionTruncateBitCount:6;
    uint32_t                                                indexType:4;
    uint32_t
opacityMicromapIndexType:4;
    VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV
baseGeometryIndexAndGeometryFlags;
    uint16_t
indexBufferStride;
    uint16_t
vertexBufferStride;
    uint16_t
geometryIndexAndFlagsBufferStride;
    uint16_t
opacityMicromapIndexBufferStride;
    VkDeviceAddress                                         indexBuffer;
    VkDeviceAddress                                         vertexBuffer;
    VkDeviceAddress
geometryIndexAndFlagsBuffer;
    VkDeviceAddress
opacityMicromapArray;
    VkDeviceAddress
opacityMicromapIndexBuffer;
    VkDeviceAddress
instantiationBoundingBoxLimit;
} VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV;
```

- clusterID is a user specified identifier assigned to this cluster template.
- clusterFlags is a bitmask of VkClusterAccelerationStructureClusterFlagBitsNV values describing flags how the cluster template should be built.
- triangleCount is the number of triangles in this cluster.
- vertexCount is the number of unique vertices in this cluster.

- `positionTruncateBitCount` is the number of bits starting at the lowest bit (i.e. the LSBs of the mantissa), of each vertex position that will be truncated to zero to improve floating-point compression.
- `indexType` is a single VkClusterAccelerationStructureIndexFormatFlagBitsNV value specifying the index type in `indexBuffer`.
- `opacityMicromapIndexType` is a single VkClusterAccelerationStructureIndexFormatFlagBitsNV value specifying the index type in `opacityMicromapIndexBuffer`.
- `baseGeometryIndexAndGeometryFlags` is a VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV value specifying the base geometry index and flags for all triangles in the cluster template.
- `indexBufferStride` is the stride in bytes in `indexBuffer`.
- `vertexBufferStride` is the stride in bytes in `vertexBuffer`.
- `geometryIndexAndFlagsBufferStride` is the stride in bytes in `geometryIndexAndFlagsBuffer`.
- `opacityMicromapIndexBufferStride` is the stride in bytes in `opacityMicromapIndexBuffer`.
- `indexBuffer` contains the indices of vertices in the cluster and is of type `indexType`.
- `vertexBuffer` is either `0` or specifies the vertex data of the triangles in the cluster template with format specified in VkClusterAccelerationStructureTriangleClusterInputNV::`vertexFormat`.
- `geometryIndexAndFlagsBuffer` is either `0` or an address containing strided VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV values specifying the geometry index and flag for every triangle in the cluster.
- `opacityMicromapArray` is either `0` or specifies the address of a valid opacity micromap array to reference from the cluster acceleration structure. If it is `0`, then opacity micromaps will be disabled for this cluster acceleration structure.
- `opacityMicromapIndexBuffer` is either `0` or specifies the address of a strided array with size equal to the number of triangles or indices into the opacity micromap array. If `opacityMicromapIndexBuffer` is `0` then the index used is the index of the triangle in the geometry.
- `instantiationBoundingBoxLimit` is either `0` or specifies the address of a bounding box within which all instantiated clusters **must** lie. The bounding box is specified by six 32-bit floating-point values in the order MinX, MinY, MinZ, MaxX, MaxY, MaxZ.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- `triangleCount`, `vertexCount`, `positionTruncateBitCount`, `indexType` and `opacityMicromapIndexType` occupy the same memory as if a single `uint32_t` was specified in their place
  - `triangleCount` occupies the 9 least significant bits of that memory
  - `vertexCount` occupies the next 9 least significant bits of that memory
  - `positionTruncateBitCount` occupies the next 6 least significant bits of that memory
  - `indexType` occupies the next 4 least significant bits of that memory
  - `opacityMicromapIndexType` occupies the 4 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Cluster templates cannot be directly used to build bottom level acceleration structures, instead, they **must** be instantiated into CLAS objects.

Valid Usage

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-clusterID-10497
  `clusterID` **must** not be 0xFFFFFFFF
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-triangleCount-10498
  `triangleCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxTrianglesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexCount-10499
  `vertexCount` **must** be less than or equal to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxVerticesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexType-10500
  `indexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapIndexType-10501
  `opacityMicromapIndexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-positionTruncateBitCount-10502
  `positionTruncateBitCount` **must** be greater than or equal to VkClusterAccelerationStructureTriangleClusterInputNV::`minPositionTruncateBitCount` and less than or equal to `32`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexBufferStride-10503
  `indexBufferStride` **must** be `0` or a multiple of `indexType`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexBufferStride-10504
  `vertexBufferStride` **must** be `0` or a multiple of value specified in VkClusterAccelerationStructureTriangleClusterInputNV::`vertexFormat`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-instantiationBoundingBoxLimit-10505
  `instantiationBoundingBoxLimit` **must** be aligned to VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`clusterTemplateBoundsByteAlignment`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-baseGeometryIndex-10506

The maximum geometry index after using the values in `baseGeometryIndex` and `geometryIndexBuffer` **must** be less than VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxClusterGeometryIndex`

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapArray-10882
  If `opacityMicromapArray` is not `0`, then the template cluster acceleration structure **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV flag set in VkClusterAccelerationStructureInputInfoNV::`flags`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-clusterFlags-parameter
  If `clusterFlags` is not `0`, `clusterFlags` **must** be a valid combination of VkClusterAccelerationStructureClusterFlagBitsNV values
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexBuffer-parameter
  `indexBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexBuffer-parameter
  If `vertexBuffer` is not `0`, `vertexBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-geometryIndexAndFlagsBuffer-parameter
  If `geometryIndexAndFlagsBuffer` is not `0`, `geometryIndexAndFlagsBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapArray-parameter
  If `opacityMicromapArray` is not `0`, `opacityMicromapArray` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapIndexBuffer-parameter
  If `opacityMicromapIndexBuffer` is not `0`, `opacityMicromapIndexBuffer` **must** be a valid VkDeviceAddress value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-instantiationBoundingBoxLimit-parameter
  If `instantiationBoundingBoxLimit` is not `0`, `instantiationBoundingBoxLimit` **must** be a valid VkDeviceAddress value

The VkClusterAccelerationStructureInstantiateClusterInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureInstantiateClusterInfoNV {
    uint32_t                    clusterIdOffset;
    uint32_t                    geometryIndexOffset:24;
    uint32_t                    reserved:8;
    VkDeviceAddress             clusterTemplateAddress;
    VkStridedDeviceAddressNV    vertexBuffer;
} VkClusterAccelerationStructureInstantiateClusterInfoNV;
```

- `clusterIdOffset` is an unsigned offset applied to the `clusterID` value stored in the cluster template.
- `geometryIndexOffset` is a signed offset applied to the geometry index of each triangle.
- `reserved` is reserved for future use.
- `clusterTemplateAddress` is the address of a previously built cluster template.
- `vertexBuffer` is a VkStridedDeviceAddressNV structure containing the vertex data for the indexed triangles stored in the cluster template. If the address in VkStridedDeviceAddressNV is `0` the vertex data is sourced from the cluster template.

Valid Usage

- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-vertexBuffer-10507
  `vertexBuffer` **must** not be `0` if the template was built without vertex data
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-vertexBuffer-10508
  The format in `vertexBuffer` **must** match the original format specified in VkClusterAccelerationStructureTriangleClusterInputNV
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-reserved-10509
  `reserved` **must** be `0`
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-geometryIndexOffset-10510
  The maximum geometry index after using the value in `geometryIndexOffset` **must** be less than VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::`maxClusterGeometryIndex`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-clusterTemplateAddress-parameter
  `clusterTemplateAddress` **must** be a valid VkDeviceAddress value

The VkClusterAccelerationStructureGetTemplateIndicesInfoNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureGetTemplateIndicesInfoNV {
    VkDeviceAddress    clusterTemplateAddress;
} VkClusterAccelerationStructureGetTemplateIndicesInfoNV;
```

- `clusterTemplateAddress` is the device address of the cluster template acceleration structure whose index data is being fetched.

Valid Usage

- VUID-VkClusterAccelerationStructureGetTemplateIndicesInfoNV-clusterTemplateAddress-10833
  `clusterTemplateAddress` **must** be a template cluster acceleration structure

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureGetTemplateIndicesInfoNV-clusterTemplateAddress-parameter
  `clusterTemplateAddress` **must** be a valid VkDeviceAddress value

The VkStridedDeviceAddressNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkStridedDeviceAddressNV {
    VkDeviceAddress    startAddress;
    VkDeviceSize       strideInBytes;
} VkStridedDeviceAddressNV;
```

- `startAddress` is the device address (as returned by the vkGetBufferDeviceAddress command) at which the region starts, or zero if the region is unused.
- `strideInBytes` is the byte stride between consecutive elements. Only the bottom 32 bits are used. The field is 64 bits to ensure consistent alignment across all containing structures.

Valid Usage (Implicit)

- VUID-VkStridedDeviceAddressNV-startAddress-parameter
  `startAddress` **must** be a valid VkDeviceAddress value

43.3. Partitioned Top Level Acceleration Structures

Partitioned Top Level Acceleration Structures (PTLAS) allow efficient reuse of previously constructed sections of the top level acceleration structure by eliminating a full rebuild when only a

few instances are modified. This reduces build times and supports handling a higher number of instances, making it more suitable for large and complex scenes.

PTLAS organizes instances into partitions, enabling a two-stage build process: first, it constructs an acceleration structure for each partition by grouping the instances within it, and second, it combines these partition structures into a single acceleration structure, similar to the current top-level acceleration structure.

To maintain compatibility, PTLAS behaves identically to the current top-level acceleration structure from the perspective of ray tracing shaders and pipelines.

PTLAS includes a unique global partition that operates independently of other partitions. Instances **can** be assigned to this global partition just like they would to regular partitions. The global partition is well-suited for frequently updated instances, such as animated characters. During the build process, instances in the global partition are treated as if they belong to individual partitions, without increasing the maximum partition count. However, instances in the global partition may still impact build performance. Once these instances become stable, they should be moved to a spatially optimized, non-global partition to lower build costs and minimize trace performance issues.

To handle large worlds requiring more precision than 32-bit floating-point numbers offer, PTLAS offers efficient partition translation. Typically, applications maintain precision by placing the world center near the camera. Partition translation allows an additional translation of instances during construction without changing their stored transforms. This method stores instance transforms relative to partitions, applying a translation to achieve accurate world positions. Higher precision is maintained using smaller floating-point numbers until the structure is built. World space coordinates **can** also be updated efficiently without rebuilding the entire PTLAS. Partition translation requires extra memory for untranslated instance transforms and **must** be explicitly enabled with VkPartitionedAccelerationStructureFlagsNV::`enablePartitionTranslation` flag.

To determine the memory requirements for a PTLAS, call:

```
// Provided by VK_NV_partitioned_acceleration_structure
void vkGetPartitionedAccelerationStructuresBuildSizesNV(
    VkDevice                                        device,
    const VkPartitionedAccelerationStructureInstancesInputNV* pInfo,
    VkAccelerationStructureBuildSizesInfoKHR*       pSizeInfo);
```

- `device` is the logical device that owns the acceleration structure.
- `pInfo` is a pointer to a VkPartitionedAccelerationStructureInstancesInputNV structure containing parameters required for the memory requirements query.
- `pSizeInfo` is a pointer to a VkAccelerationStructureBuildSizesInfoKHR structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

Valid Usage

- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-partitionedAccelerationStructure-10534
  The VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV::partitionedAccelerationStructure feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkPartitionedAccelerationStructureInstancesInputNV structure
- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-pSizeInfo-parameter
  pSizeInfo **must** be a valid pointer to a VkAccelerationStructureBuildSizesInfoKHR structure

The VkPartitionedAccelerationStructureInstancesInputNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureInstancesInputNV {
    VkStructureType                          sType;
    void*                                    pNext;
    VkBuildAccelerationStructureFlagsKHR     flags;
    uint32_t                                 instanceCount;
    uint32_t                                 maxInstancePerPartitionCount;
    uint32_t                                 partitionCount;
    uint32_t                                 maxInstanceInGlobalPartitionCount;
} VkPartitionedAccelerationStructureInstancesInputNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkBuildAccelerationStructureFlagsKHR specifying flags for the PTLAS build operation.
- instanceCount is the number of instances in this PTLAS.
- maxInstancePerPartitionCount is the maximum number of instances per partition in the PTLAS.
- partitionCount is the number of partitions in the PTLAS.
- maxInstanceInGlobalPartitionCount is the maximum number of instances in the global partition.

If the pNext chain includes a VkPartitionedAccelerationStructureFlagsNV structure, then that structure specifies additional flags for the PTLAS.

Valid Usage

- VUID-VkPartitionedAccelerationStructureInstancesInputNV-partitionCount-10535
  The sum of `partitionCount` and `maxInstanceInGlobalPartitionCount` **must** be less than or equal to VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV::`maxPartitionCount`

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureInstancesInputNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCES_INPUT_NV
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPartitionedAccelerationStructureFlagsNV
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkBuildAccelerationStructureFlagBitsKHR values

The VkPartitionedAccelerationStructureFlagsNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureFlagsNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           enablePartitionTranslation;
} VkPartitionedAccelerationStructureFlagsNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `enablePartitionTranslation` specifies if a partition translation **may** be applied with VkPartitionedAccelerationStructureWritePartitionTranslationDataNV.

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureFlagsNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_FLAGS_NV

Structure Chaining

Extends the structure

- VkPartitionedAccelerationStructureInstancesInputNV

To build a partitioned top level acceleration structure, call:

```
// Provided by VK_NV_partitioned_acceleration_structure
void vkCmdBuildPartitionedAccelerationStructuresNV(
    VkCommandBuffer                                 commandBuffer,
    const VkBuildPartitionedAccelerationStructureInfoNV* pBuildInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pBuildInfo` is a pointer to a VkBuildPartitionedAccelerationStructureInfoNV structure containing parameters required for building a PTLAS.

Accesses to the acceleration structure scratch memory as identified by the VkBuildPartitionedAccelerationStructureInfoNV::`scratchData` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of (VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR).

Accesses to each VkBuildPartitionedAccelerationStructureInfoNV::`srcAccelerationStructureData` and VkBuildPartitionedAccelerationStructureInfoNV::`dstAccelerationStructureData` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR, as appropriate.

Accesses to memory with input data as identified by any used values of VkBuildPartitionedAccelerationStructureInfoNV::`srcInfos` and VkBuildPartitionedAccelerationStructureInfoNV::`srcInfosCount` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_INDIRECT_COMMAND_READ_BIT.

Valid Usage

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-partitionedAccelerationStructure-10536
  The `VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV::partitionedAccelerationStructure` feature **must** be enabled
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10537
  The count specified in `pBuildInfo->input.instanceCount` for the build operation **must** not exceed the value provided in `pInfo->instanceCount` when calling vkGetPartitionedAccelerationStructuresBuildSizesNV to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10538

The count specified in pBuildInfo->input.maxInstancePerPartitionCount for the build operation **must** not exceed the value provided in pInfo->maxInstancePerPartitionCount when calling vkGetPartitionedAccelerationStructuresBuildSizesNV to determine the memory size

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10539
  The count specified in pBuildInfo->input.partitionCount for the build operation **must** not exceed the value provided in pInfo->partitionCount when calling vkGetPartitionedAccelerationStructuresBuildSizesNV to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10540
  The count specified in pBuildInfo->input.maxInstanceInGlobalPartitionCount for the build operation **must** not exceed the value provided in pInfo->maxInstanceInGlobalPartitionCount when calling vkGetPartitionedAccelerationStructuresBuildSizesNV to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10541
  The scratch memory for the partitioned acceleration structure build specified in pBuildInfo->scratchData **must** be greater than or equal to the scratch size queried with vkGetPartitionedAccelerationStructuresBuildSizesNV
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10542
  pBuildInfo->scratchData **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10543
  The destination memory of the partitioned acceleration structure build specified in pBuildInfo->dstAccelerationStructureData **must** be greater than or equal to the size queried with vkGetPartitionedAccelerationStructuresBuildSizesNV
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10544
  pBuildInfo->srcAccelerationStructureData **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10545
  pBuildInfo->dstAccelerationStructureData **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10546
  The number of inputs specified in pBuildInfo->srcInfos **must** be greater than or equal to pBuildInfo->srcInfosCount
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10547
  The memory region containing the acceleration structure at address pBuildInfo->srcAccelerationStructureData **must** not overlap with scratch memory region at address pBuildInfo->scratchData
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10548
  The memory region containing the acceleration structure at address pBuildInfo->dstAccelerationStructureData **must** not overlap with scratch memory region at address pBuildInfo->scratchData
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10549
  If the source and destination acceleration structures are not the same, the memory regions containing the acceleration structures at addresses pBuildInfo->srcAccelerationStructureData and pBuildInfo->dstAccelerationStructureData **must** not overlap with each other

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10550
  `pBuildInfo->scratchData` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10551
  `pBuildInfo->srcInfos` and `pBuildInfo->srcInfosCount` **must** be device addresses allocated to the application from buffers created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10552
  `pBuildInfo->srcAccelerationStructureData` and `pBuildInfo->dstAccelerationStructureData` **must** be device addresses allocated to the application from buffers created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-parameter
  `pBuildInfo` **must** be a valid pointer to a valid VkBuildPartitionedAccelerationStructureInfoNV structure
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildPartitionedAccelerationStructuresNV is not affected by conditional rendering

The VkBuildPartitionedAccelerationStructureInfoNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkBuildPartitionedAccelerationStructureInfoNV {
    VkStructureType                                           sType;
    void*                                                     pNext;
    VkPartitionedAccelerationStructureInstancesInputNV        input;
    VkDeviceAddress
srcAccelerationStructureData;
    VkDeviceAddress
dstAccelerationStructureData;
    VkDeviceAddress                                           scratchData;
    VkDeviceAddress                                           srcInfos;
    VkDeviceAddress                                           srcInfosCount;
} VkBuildPartitionedAccelerationStructureInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `input` is a VkPartitionedAccelerationStructureInstancesInputNV structure describing the instance and partition count information in the PTLAS.
- `srcAccelerationStructureData` is `NULL` or an address of a previously built PTLAS. If non-`NULL`, the PTLAS stored at this address is used as a basis to create new PTLAS.
- `dstAccelerationStructureData` is the address to store the built PTLAS.
- `scratchData` is the device address of scratch memory that will be used during PTLAS build.
- `srcInfos` is the device address of an array of VkBuildPartitionedAccelerationStructureIndirectCommandNV structures describing the type of operation to perform.
- `srcInfosCount` is a device address containing the size of `srcInfos` array.

Members `srcAccelerationStructureData` and `dstAccelerationStructureData` **may** be the same or different. If they are the same, the update happens in-place. Otherwise, the destination acceleration

structure is updated and the source is not modified.

Valid Usage

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-scratchData-10558
  If the `buildScratchSize` member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetPartitionedAccelerationStructuresBuildSizesNV is not `0`, then `scratchData` **must** be a valid VkDeviceAddress
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-scratchData-10559
  Memory at `scratchData` **must** be greater than or equal to the VkAccelerationStructureBuildSizesInfoKHR::`buildScratchSize` value returned from vkGetPartitionedAccelerationStructuresBuildSizesNV with the same build parameters
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcAccelerationStructureData-10560
  If `srcAccelerationStructureData` is not `NULL`, it **must** have previously been built as a PTLAS
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-dstAccelerationStructureData-10562
  Memory at `dstAccelerationStructureData` **must** be greater than or equal to the VkAccelerationStructureBuildSizesInfoKHR::`accelerationStructureSize` value returned from vkGetPartitionedAccelerationStructuresBuildSizesNV with the same build parameters
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfosCount-10563
  `srcInfosCount` **must** be 4-byte aligned
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfos-10564
  Each element of `srcInfos` array **must** have a unique VkBuildPartitionedAccelerationStructureIndirectCommandNV::`opType`

Valid Usage (Implicit)

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUILD_PARTITIONED_ACCELERATION_STRUCTURE_INFO_NV
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-input-parameter
  `input` **must** be a valid VkPartitionedAccelerationStructureInstancesInputNV structure
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcAccelerationStructureData-parameter
  If `srcAccelerationStructureData` is not `0`, `srcAccelerationStructureData` **must** be a valid VkDeviceAddress value
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-dstAccelerationStructureData-parameter
  `dstAccelerationStructureData` **must** be a valid VkDeviceAddress value

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfos-parameter
  `srcInfos` **must** be a valid VkDeviceAddress value
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfosCount-parameter
  `srcInfosCount` **must** be a valid VkDeviceAddress value

The VkBuildPartitionedAccelerationStructureIndirectCommandNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkBuildPartitionedAccelerationStructureIndirectCommandNV {
    VkPartitionedAccelerationStructureOpTypeNV    opType;
    uint32_t                                      argCount;
    VkStridedDeviceAddressNV                      argData;
} VkBuildPartitionedAccelerationStructureIndirectCommandNV;
```

- `opType` is a VkPartitionedAccelerationStructureOpTypeNV describing the type of operation.
- `argCount` is the number of structures in `argData` array.
- `argData` is an array of VkStridedDeviceAddressNV structures containing the write or update data for instances and partitions in the PTLAS. The structure is dependent on `opType` as shown in the table below.

`opType`	Format of `argData`
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV	VkPartitionedAccelerationStructureWriteInstanceDataNV
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV	VkPartitionedAccelerationStructureUpdateInstanceDataNV
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV	VkPartitionedAccelerationStructureWritePartitionTranslationDataNV

Valid Usage

- VUID-VkBuildPartitionedAccelerationStructureIndirectCommandNV-argData-10565
  An instance index **must** not be referenced by more than one structure in `argData`

Valid Usage (Implicit)

- VUID-VkBuildPartitionedAccelerationStructureIndirectCommandNV-opType-parameter
  `opType` **must** be a valid VkPartitionedAccelerationStructureOpTypeNV value

Values which **can** be set in VkPartitionedAccelerationStructureOpTypeNV are:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef enum VkPartitionedAccelerationStructureOpTypeNV {
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV = 0,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV = 1,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV = 2,
} VkPartitionedAccelerationStructureOpTypeNV;
```

- VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV is used to assign a transformed bottom level acceleration structure to an instance and partition. This is similar to VkAccelerationStructureInstanceKHR that defines the properties and transformations for a single instance in non-partitioned TLAS. Any partition that contains at least one of the affected instances will have their internal acceleration structure rebuilt.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV specifies that an instance will be updated with a new bottom level acceleration structure.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV specifies that a partition will be assigned a translation vector.

The VkPartitionedAccelerationStructureWriteInstanceDataNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureWriteInstanceDataNV {
    VkTransformMatrixKHR                                transform;
    float                                               explicitAABB[6];
    uint32_t                                            instanceID;
    uint32_t                                            instanceMask;
    uint32_t
instanceContributionToHitGroupIndex;
    VkPartitionedAccelerationStructureInstanceFlagsNV   instanceFlags;
    uint32_t                                            instanceIndex;
    uint32_t                                            partitionIndex;
    VkDeviceAddress                                     accelerationStructure;
} VkPartitionedAccelerationStructureWriteInstanceDataNV;
```

- `transform` is a VkTransformMatrixKHR structure describing the transformation to be applied to the instance in PTLAS.
- `explicitAABB` specifies an axis aligned bounding box representing the maximum extent of any vertex within the used acceleration structure after applying the instance-to-world transformation. The partition translation is not applied to the bounding box.
- `instanceID` is a user specified constant assigned to an instance in the PTLAS.
- `instanceMask` is an 8-bit mask assigned to the instance that **may** be used to include or reject group of instances.
- `instanceContributionToHitGroupIndex` is a 24-bit per application specified instance value added in the indexing into the shader binding table to fetch the hit group to use.
- `instanceFlags` is a bitmask of VkPartitionedAccelerationStructureInstanceFlagsNV specifying

flags for an instance in the PTLAS.

- `instanceIndex` is the index of the instance within the PTLAS.
- `partitionIndex` is the index of the partition to which this instance belongs. Global partitions are referred to by VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV.
- `accelerationStructure` is the device address of the bottom level acceleration structure or a clustered bottom level acceleration structure that is being instanced. This instance is disabled if the device address is `0`.

Valid Usage

- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceMask-10566
  The most significant 24 bits of `instanceMask` **must** be `0`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceContributionToHitGroupIndex-10567
  The most significant 8 bits of `instanceContributionToHitGroupIndex` **must** be `0`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceIndex-10568
  `instanceIndex` **must** be less than VkBuildPartitionedAccelerationStructureInfoNV::`input.instanceCount`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-partitionIndex-10569
  `partitionIndex` **must** be less than VkBuildPartitionedAccelerationStructureInfoNV::`input.partitionCount`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-explicitAABB-10570
  `explicitAABB` **must** be a valid bounding box if instance was created with flag VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV set

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceFlags-parameter
  If `instanceFlags` is not `0`, `instanceFlags` **must** be a valid combination of VkPartitionedAccelerationStructureInstanceFlagBitsNV values
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-accelerationStructure-parameter
  `accelerationStructure` **must** be a valid VkDeviceAddress value

VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV is a special constant value used for partitioned acceleration structures to specify global partitions.

```
#define VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV (~0U)
```

The VkPartitionedAccelerationStructureUpdateInstanceDataNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureUpdateInstanceDataNV {
    uint32_t           instanceIndex;
    uint32_t           instanceContributionToHitGroupIndex;
    VkDeviceAddress    accelerationStructure;
} VkPartitionedAccelerationStructureUpdateInstanceDataNV;
```

- `instanceIndex` is the index of the instance being updated.
- `instanceContributionToHitGroupIndex` is a 24-bit per instance value added in the indexing into the shader binding table to fetch the hit group to use.
- `accelerationStructure` is the device address of the bottom level acceleration structure or a clustered bottom level acceleration structure whose instance is being updated. The instance is disabled if the device address is `0`.

If the instance was originally disabled by specifying a `0` in VkPartitionedAccelerationStructureWriteInstanceDataNV::`accelerationStructure`, it can not be updated to a new acceleration structure as the instance **may** have been permanently disabled by the implementation.

To avoid a refit, the new acceleration structure **must** be within the bounding box specified by VkPartitionedAccelerationStructureWriteInstanceDataNV::`explicitAABB` when the instance was first created.

Valid Usage

- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-instanceContributionToHitGroupIndex-10571
  The most significant 8 bits of `instanceContributionToHitGroupIndex` **must** be `0`
- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-None-10572
  The instance **must** have either been created with flag VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV or did not have an acceleration structure assigned with VkPartitionedAccelerationStructureWriteInstanceDataNV
- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-instanceIndex-10573
  `instanceIndex` **must** be less than VkBuildPartitionedAccelerationStructureInfoNV::`input.instanceCount`

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-accelerationStructure-parameter
  `accelerationStructure` **must** be a valid VkDeviceAddress value

Bits which **can** be set in VkPartitionedAccelerationStructureWriteInstanceDataNV::`instanceFlags`,

specifying flags for instances, are:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef enum VkPartitionedAccelerationStructureInstanceFlagBitsNV {

VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FACING_CULL_DISABLE_BIT_N
V = 0x00000001,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FLIP_FACING_BIT_NV =
0x00000002,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_OPAQUE_BIT_NV =
0x00000004,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_NO_OPAQUE_BIT_NV =
0x00000008,

VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV =
0x00000010,
} VkPartitionedAccelerationStructureInstanceFlagBitsNV;
```

- VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FACING_CULL_DISABLE_BIT_NV disables face culling for this instance.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FLIP_FACING_BIT_NV specifies that the facing determination for geometry in this instance is inverted.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_OPAQUE_BIT_NV causes this instance to act as though VK_GEOMETRY_OPAQUE_BIT_KHR were specified on all geometries referenced by this instance.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_NO_OPAQUE_BIT_NV causes this instance to act as though VK_GEOMETRY_OPAQUE_BIT_KHR were not specified on all geometries referenced by this instance.
- VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV enables use of an explicit bounding box for this instance.

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef VkFlags VkPartitionedAccelerationStructureInstanceFlagsNV;
```

VkPartitionedAccelerationStructureInstanceFlagsNV is a bitmask type for setting a mask of zero or more VkPartitionedAccelerationStructureInstanceFlagBitsNV.

The VkPartitionedAccelerationStructureWritePartitionTranslationDataNV structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureWritePartitionTranslationDataNV {
    uint32_t    partitionIndex;
    float       partitionTranslation[3];
} VkPartitionedAccelerationStructureWritePartitionTranslationDataNV;
```

- `partitionIndex` is the index of partition to write. Global partition is referred to by VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV.
- `partitionTranslation` sets the translation vector for this partition. When tracing this partition, the contained instances will behave as if the partition translation was added to the translation component of the instance transform. This translation vector is also added to the instances in the partition that had their bounding box specified.

Valid Usage

- VUID-VkPartitionedAccelerationStructureWritePartitionTranslationDataNV-partitionIndex-10574
  `partitionIndex` **must** be less than VkBuildPartitionedAccelerationStructureInfoNV::`input.partitionCount`
- VUID-VkPartitionedAccelerationStructureWritePartitionTranslationDataNV-enablePartitionTranslation-10575
  The partitioned acceleration structure **must** have the VkPartitionedAccelerationStructureFlagsNV::`enablePartitionTranslation` flag set

43.4. Host Acceleration Structure Operations

Implementations are also required to provide host implementations of the acceleration structure operations if the `accelerationStructureHostCommands` feature is enabled:

- vkBuildAccelerationStructuresKHR corresponding to vkCmdBuildAccelerationStructuresKHR
- vkCopyAccelerationStructureKHR corresponding to vkCmdCopyAccelerationStructureKHR
- vkCopyAccelerationStructureToMemoryKHR corresponding to vkCmdCopyAccelerationStructureToMemoryKHR
- vkCopyMemoryToAccelerationStructureKHR corresponding to vkCmdCopyMemoryToAccelerationStructureKHR
- vkWriteAccelerationStructuresPropertiesKHR corresponding to vkCmdWriteAccelerationStructuresPropertiesKHR

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All acceleration structures used by the host commands **must** be bound to host-visible memory, and all input data for acceleration structure builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map acceleration structure memory when using the host commands.

NOTE

The vkBuildAccelerationStructuresKHR and vkCmdBuildAccelerationStructuresKHR **may** use different algorithms, and thus are not required to produce identical structures. The structures produced by these two commands **may** exhibit different memory footprints or traversal performance, but should strive to be similar where possible.

Apart from these details, the host and device operations are interchangeable. For example, an application **can** use vkBuildAccelerationStructuresKHR to build a structure, compact it on the device using vkCmdCopyAccelerationStructureKHR, and serialize the result using vkCopyAccelerationStructureToMemoryKHR.

The exception to this are acceleration structures that are created with the vkCreateAccelerationStructure2KHR command as they are backed by a VkDeviceAddress and therefore are not valid to be used with host commands.

NOTE For efficient execution, acceleration structures manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build acceleration structures on the host, call:

WARNING This functionality is superseded by vkCmdBuildAccelerationStructuresKHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkBuildAccelerationStructuresKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    uint32_t                                    infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `device` is the `VkDevice` for which the acceleration structures are being built.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` VkAccelerationStructureBuildGeometryInfoKHR structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of VkAccelerationStructureBuildRangeInfoKHR structures. Each `ppBuildRangeInfos`[i] is a pointer to an array of `pInfos`[i].`geometryCount` VkAccelerationStructureBuildRangeInfoKHR structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos`[i].

This command fulfills the same task as vkCmdBuildAccelerationStructuresKHR but is executed by the host.

The `vkBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structure builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE This means that an application **cannot** build a top-level acceleration structure in

> the same vkBuildAccelerationStructuresKHR call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

Valid Usage

- VUID-vkBuildAccelerationStructuresKHR-accelerationStructureHostCommands-03581
  The VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands feature **must** be enabled
- VUID-vkBuildAccelerationStructuresKHR-mode-04628
  The mode member of each element of pInfos **must** be a valid VkBuildAccelerationStructureModeKHR value
- VUID-vkBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
  If the srcAccelerationStructure member of any element of pInfos is not VK_NULL_HANDLE, the srcAccelerationStructure member **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-04630
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** not be VK_NULL_HANDLE
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03708
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, srcAccelerationStructure **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03403
  The srcAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
  The dstAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
  The dstAccelerationStructure member of any element of pInfos **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03707
  For each element of pInfos, its dstAccelerationStructure member **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03699
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR

::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03700
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03663
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, inactive primitives in its srcAccelerationStructure member **must** not be made active
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03664
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, active primitives in its srcAccelerationStructure member **must** not be made inactive
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03709
  For each element of pInfos, if an acceleration structure is referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, it **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-None-03407
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03701
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any other element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03702
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstAccelerationStructure member of any other element of pInfos, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03703
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-scratchData-03704

The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any other element of pInfos, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-scratchData-03705
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR (including the same element), which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03706
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03667
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags in the build
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03668
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure and dstAccelerationStructure members **must** either be the same VkAccelerationStructureKHR, or not have any memory aliasing
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03758
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its geometryCount member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03759
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03760
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its type member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03761
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its geometryType member **must** have the same value which was

specified when srcAccelerationStructure was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03762
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03763
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03764
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03765
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03766
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03767
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10898
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each

VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numTriangles member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10899
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the numVertices member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10900
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxPrimitiveIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10901
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the maxGeometryIndex member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10902
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the format member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10903
  For each element of pInfos, if its mode member is

VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX, the dataSize member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMDX structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03768
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index referenced **must** be the same as the corresponding index value when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-primitiveCount-03769
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, the primitiveCount member of its corresponding VkAccelerationStructureBuildRangeInfoKHR structure **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03801
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, the corresponding ppBuildRangeInfos[i][j].primitiveCount **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10126
  For each pInfos[i], dstAccelerationStructure **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::size greater than or equal to either:
  - the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and with each element of the pMaxPrimitiveCounts array greater than or equal to the equivalent ppBuildRangeInfos[i][j].primitiveCount values for j in [0,pInfos[i].geometryCount) or,
  - the result of querying the corresponding VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, if updating a compacted acceleration structure
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-03678
  Any previous deferred operation that was associated with deferredOperation **must** be complete
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11702
  Each element of ppBuildRangeInfos[i] **must** be a valid pointer to an array of pInfos[i].geometryCount VkAccelerationStructureBuildRangeInfoKHR structures

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11703
  For each element of pInfos, its dstAccelerationStructure member **must** have been created with vkCreateAccelerationStructureKHR
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03722
  For each element of pInfos, its dstAccelerationStructure member **must** be bound to host-visible device memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11706
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** have been created with vkCreateAccelerationStructureKHR
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03723
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR the buffer used to create its srcAccelerationStructure member **must** be bound to host-visible device memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11704
  For each element of pInfos, the acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR **must** have been created with vkCreateAccelerationStructureKHR
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03724
  For each element of pInfos, each acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR **must** be bound to host-visible device memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-12244
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and N is not 0, all addresses between pInfos[i].scratchData.hostAddress and pInfos[i].scratchData.hostAddress + N - 1 **must** be valid host memory, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkBuildAccelerationStructuresKHR-pInfos-12245
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and N is not 0, all addresses between pInfos[i].scratchData.hostAddress and pInfos[i].scratchData.hostAddress + N - 1 **must** be valid host memory, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03771
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.hostAddress **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03772

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.hostAddress **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03773
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.hostAddress is not 0, it **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03774
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.hostAddress **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03775
  For each element of pInfos, its dstAccelerationStructure member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03776
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR the buffer used to create its srcAccelerationStructure member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03777
  For each element of pInfos, each acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03778
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, geometry.instances.data.hostAddress **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03779
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, each VkAccelerationStructureInstanceKHR ::accelerationStructureReference value in geometry.instances.data.hostAddress **must** be a valid VkAccelerationStructureKHR object
- VUID-vkBuildAccelerationStructuresKHR-pInfos-04930
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR with VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV set, each accelerationStructureReference in any structure in VkAccelerationStructureMotionInstanceNV value in geometry.instances.data.hostAddress **must** be a valid VkAccelerationStructureKHR object
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11820
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of

VkAccelerationStructureGeometryMotionTrianglesDataNV in the geometry.triangles.pNext chain, then its vertexData.hostAddress **must** not be 0

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10892
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.hostAddress **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11821
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11705
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain its micromap member **must** be VK_NULL_HANDLE
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11822
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.hostAddress **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11823
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, if VkAccelerationStructureGeometrySpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11824
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::vertexData.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11825
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_SPHERES_NV, VkAccelerationStructureGeometrySpheresDataNV::radiusData.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11826
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is VK_INDEX_TYPE_NONE_KHR, then its indexData.hostAddress **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11827
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if

VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexData.hostAddress **must** not be 0

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11828
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11829
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData.hostAddress **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10893
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, geometryType **must** not be VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX

Valid Usage (Implicit)

- VUID-vkBuildAccelerationStructuresKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parameter
  If deferredOperation is not VK_NULL_HANDLE, deferredOperation **must** be a valid VkDeferredOperationKHR handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-parameter
  pInfos **must** be a valid pointer to an array of infoCount valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter
  ppBuildRangeInfos **must** be a valid pointer to an array of infoCount VkAccelerationStructureBuildRangeInfoKHR structures
- VUID-vkBuildAccelerationStructuresKHR-infoCount-arraylength
  infoCount **must** be greater than 0
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parent
  If deferredOperation is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy or compact an acceleration structure on the host, call:

WARNING This functionality is superseded by vkCmdCopyAccelerationStructureKHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyAccelerationStructureInfoKHR*   pInfo);
```

- `device` is the device which owns the acceleration structures.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `pInfo` is a pointer to a VkCopyAccelerationStructureInfoKHR structure defining the copy operation.

This command fulfills the same task as vkCmdCopyAccelerationStructureKHR but is executed by the host.

Valid Usage

- VUID-vkCopyAccelerationStructureKHR-accelerationStructureHostCommands-03582
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyAccelerationStructureKHR-buffer-03727
  `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03728
  `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03780
  `pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyAccelerationStructureKHR-buffer-03781
  `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

- VUID-vkCopyAccelerationStructureKHR-src-11586
  The source acceleration structure `pInfo->src` **must** have been constructed prior to the execution of this command
- VUID-vkCopyAccelerationStructureKHR-src-11587
  If the source acceleration structure `pInfo->src` was constructed through deserialization, all micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command
- VUID-vkCopyAccelerationStructureKHR-src-11588
  `pInfo->src` **must** have been created with vkCreateAccelerationStructureKHR
- VUID-vkCopyAccelerationStructureKHR-dst-11589
  `pInfo->dst` **must** have been created with vkCreateAccelerationStructureKHR

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCopyAccelerationStructureKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyAccelerationStructureInfoKHR structure
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy host accessible memory to an acceleration structure, call:

WARNING	This functionality is superseded by vkCmdCopyMemoryToAccelerationStructureKHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyMemoryToAccelerationStructureKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- `device` is the device which owns `pInfo->dst`.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `pInfo` is a pointer to a VkCopyMemoryToAccelerationStructureInfoKHR structure defining the copy operation.

This command fulfills the same task as vkCmdCopyMemoryToAccelerationStructureKHR but is executed by the host.

This command can accept acceleration structures produced by either vkCmdCopyAccelerationStructureToMemoryKHR or vkCopyAccelerationStructureToMemoryKHR.

Valid Usage

- VUID-vkCopyMemoryToAccelerationStructureKHR-accelerationStructureHostCommands-03583
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03729
  `pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03750
  `pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03730
  `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03782
  `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMemoryToAccelerationStructureKHR-dst-11677
  `pInfo->dst` **must** have been created with vkCreateAccelerationStructureKHR

Valid Usage (Implicit)

- VUID-vkCopyMemoryToAccelerationStructureKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyMemoryToAccelerationStructureInfoKHR structure
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy an acceleration structure to host accessible memory, call:

WARNING	This functionality is superseded by vkCmdCopyAccelerationStructureToMemoryKHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureToMemoryKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this

command.

- `pInfo` is a pointer to a VkCopyAccelerationStructureToMemoryInfoKHR structure defining the copy operation.

This command fulfills the same task as vkCmdCopyAccelerationStructureToMemoryKHR but is executed by the host.

This command produces the same results as vkCmdCopyAccelerationStructureToMemoryKHR, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either vkCmdCopyMemoryToAccelerationStructureKHR or vkCopyMemoryToAccelerationStructureKHR.

Valid Usage

- VUID-vkCopyAccelerationStructureToMemoryKHR-accelerationStructureHostCommands-03584
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03731
  `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03732
  `pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03751
  `pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyAccelerationStructureToMemoryKHR-buffer-03783
  `pInfo->src` **must** not be bound to memory that was allocated with multiple instances
- VUID-vkCopyAccelerationStructureToMemoryKHR-src-11678
  `pInfo->src` **must** have been created with vkCreateAccelerationStructureKHR

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureToMemoryKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyAccelerationStructureToMemoryInfoKHR structure

- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query acceleration structure size parameters on the host, call:

WARNING	This functionality is superseded by vkCmdWriteAccelerationStructuresPropertiesKHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkWriteAccelerationStructuresPropertiesKHR(
    VkDevice                                    device,
    uint32_t                                    accelerationStructureCount,
    const VkAccelerationStructureKHR*           pAccelerationStructures,
    VkQueryType                                 queryType,
    size_t                                      dataSize,
    void*                                       pData,
    size_t                                      stride);
```

- `device` is the device which owns the acceleration structures in `pAccelerationStructures`.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a VkQueryType value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.

- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as vkCmdWriteAccelerationStructuresPropertiesKHR but is executed by the host.

Valid Usage

- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureHostCommands-03585
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
  All acceleration structures in `pAccelerationStructures` **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR if `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06742
  `queryType` **must** be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR, VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR, VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-12425
  All acceleration structures in `pAccelerationStructures` **must** have been built with VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR if `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03736
  Each element of `pAccelerationStructures` **must** be fully backed by physical memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03448
  If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, then `stride` **must** be a multiple of the size of VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03449
  If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, then `pData` **must** point to a VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03450
  If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR, then `stride` **must** be a multiple of the size of VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03451
  If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR, then `pData` **must** point to a VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06731
  If `queryType` is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR, then `stride` **must** be a multiple of the size of VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06732

If queryType is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR, then pData **must** point to a VkDeviceSize

- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06733
  If queryType is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR, then stride **must** be a multiple of the size of VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06734
  If queryType is VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR, then pData **must** point to a VkDeviceSize
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-03452
  dataSize **must** be greater than or equal to accelerationStructureCount*stride
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03733
  Each element of pAccelerationStructures **must** be bound to host-visible device memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11592
  Each acceleration structure in pAccelerationStructures **must** have been created with vkCreateAccelerationStructureKHR
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03784
  Each element of pAccelerationStructures **must** be bound to memory that was not allocated with multiple instances
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11591
  All acceleration structures in pAccelerationStructures **must** have been constructed prior to the execution of this command

Valid Usage (Implicit)

- VUID-vkWriteAccelerationStructuresPropertiesKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
  pAccelerationStructures **must** be a valid pointer to an array of accelerationStructureCount valid VkAccelerationStructureKHR handles
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-parameter
  queryType **must** be a valid VkQueryType value
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pData-parameter
  pData **must** be a valid pointer to an array of dataSize bytes
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
  accelerationStructureCount **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-arraylength
  dataSize **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parent
  Each element of pAccelerationStructures **must** have been created, allocated, or retrieved

from `device`

Return Codes

Success

Chapter 44. Compressed triangle data

44.1. Dense Geometry Format Version 1 (DGF1)

The provisional `VK_AMDX_dense_geometry_format` extension provides a way for applications to build acceleration structures from pre-compressed Dense Geometry Format (DGF) triangle geometry data, enabling improved build times and reducing both the storage required on disk and the memory footprint of acceleration structures.

The dense geometry format consists of an array of 128B blocks that encode triangle data. Each block holds a maximum of 64 triangles and 64 vertices.

It is expected that applications will construct DGF content by partitioning meshes into small, spatially localized triangle sets, and attempting to pack each set into a minimal number of DGF blocks. An SAH-aware clustering strategy is crucial for good ray tracing performance. Pre-clustering the geometry in this manner greatly accelerates the acceleration structure build since the implementation receives an efficient spatial partitioning, and does not need to construct one from the original, larger triangle set.

DGF compressors rely on the ability to reorder triangles within a mesh, and rotate triangle vertices in a winding-preserving way. The application must post-process any sideband data which depends on these (shader-visible index buffers, per-triangle attributes).

44.1.1. Block Layout

The 128B DGF block is organized into sections as shown below:

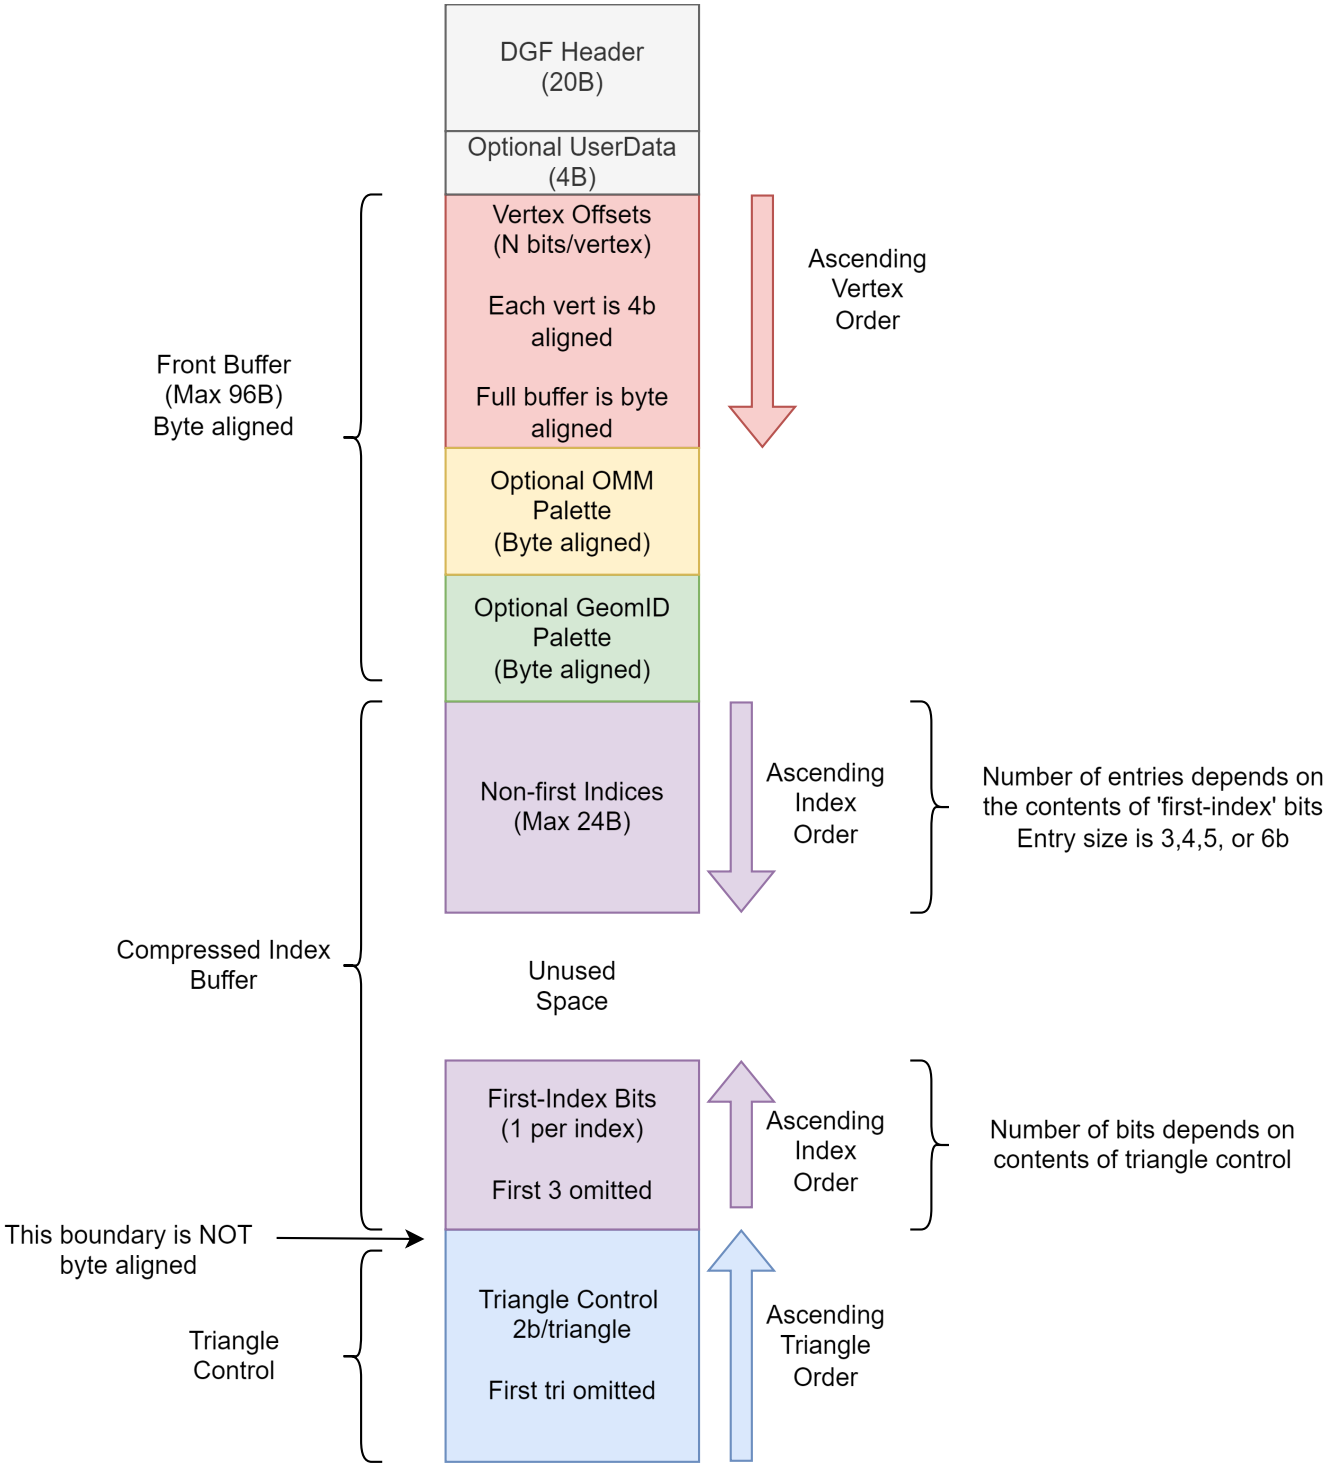

Figure 33. DGF block layout

The first 5 DWORDs of a DGF block consist of a fixed header, whose structure is shown below. All bit fields are ordered from LSB to MSB, bytes are 8 bits, and multi-byte fields are little endian.

```
struct DGFHeader
{
    // DWORD 0
    uint32_t magic               :  8; // must be 0x6
    uint32_t bits_per_index      :  2; // Encodes 3,4,5,6
    uint32_t num_vertices        :  6; // Number of vertices (1-64)
    uint32_t num_triangles       :  6; // Number of triangles (1-64)
    uint32_t geom_id_meta        : 10;
```

```
    // DWORD 1
    uint32_t exponent             :  8; // Float32 scale (exponent-only) with bias
127. Values 1-232 are supported.
    int32_t  x_anchor             : 24; // 24-bit signed two's complement (0x800000
represents -8,388,608)

    // DWORD 2
    uint32_t x_bits               :  4; // 1-16 (add 1 when decoding)
    uint32_t y_bits               :  4; // 1-16 (add 1 when decoding)
    int32_t  y_anchor             : 24; // 24-bit signed two's complement

    // DWORD 3
    uint32_t z_bits               :  4; // 1-16 (add 1 when decoding)
    uint32_t omm_descriptor_count :  3; // 0-7
    uint32_t geom_id_mode         :  1; // 0 = Constant Mode  1= Palette Mode
    int32_t  z_anchor             : 24; // 24-bit signed two's complement

    // DWORD 4
    uint32_t prim_id_base         : 29;
    uint32_t have_user_data       : 1; // if set, a UserData DWORD is present between
the header and the front buffer
    uint32_t unused               : 2; // must be 0

    // 108B of variable-length data segments follow.
};
```

The per-vertex offsets are tightly packed in the DGF node immediately following the header, in ascending order. The size of each vertex must be 4b-aligned. The size of the vertex data section is byte-aligned. Pad bits are inserted as required, and all pad bits must be zero. The optional OMM palette (if present) starts on the next byte boundary. The optional GeomID palette (if present) starts on the next byte boundary following the vertex data and OMM palette.

The region containing the vertex data, geomID palette, and OMM palette is referred to as the “front buffer”. It is byte-aligned, and its total size may not exceed 96B.

The optional UserData DWORD, if present, is little-endian, and located immediately after the header. If UserData is present, the front buffer starts at byte 24. If UserData is not present, the front buffer starts at byte 20.

44.1.2. Vertex Position Encoding

DGF vertices are defined on a signed 24-bit quantization grid. Each block stores the following:

- a 24b-per-coordinate signed anchor position,
- a variable-width (1-16b) unsigned offset for each vertex component (relative to the anchor position),
- a power-of-2 scale factor which is used to map from the quantization grid to floating-point world coordinates (stored as an IEEE biased exponent).

An equivalent fixed-point encoding scheme is used by Epic's "Nanite" system.

The decoded floating-point vertex position is computed as follows:

```
float3 dgf_decode(int24_t Anchor[3], uint16_t Offset[3], uint8_t Exponent)
{
    int x = Anchor[0] + Offset[0]; // 24b + 16b add.. 25b result
    int y = Anchor[1] + Offset[1];
    int z = Anchor[2] + Offset[2];

    float fx = (float)(x); // convert results to floating-point
    float fy = (float)(y);
    float fz = (float)(z);

    // apply a pow2 scale factor
    float scale = ldexp(1.0f, Exponent - 127);
    return float3(fx, fy, fz) * scale;
}
```

With this encoding scheme the maximum representable value is:

```
(0x7fffff + 0xffff) * 2^127 = 8,454,142 * 2^127 (roughly 1.438e+45)
```

The minimum is:

```
 (0x800000 * 2^127) = -8,388,608 * 2^127  (roughly -1.427e+45)
```

This is a larger theoretical dynamic range than IEEE floating-point, and there is no reason for implementations to support all of it.

The minimum and maximum IEEE floats which DGF can encode occur for exponent 232 and integer positions 0x800001 and 0x7fffff (Decimal values -8388607 and 8388607). These values are:

```
-340282326356119256160033759537265639424.000000 and
+340282326356119256160033759537265639424.000000
```

For context, the range of finite IEEE floats is slightly larger than these:

```
-340282346638528859811704183484516925440.000000 to
+340282346638528859811704183484516925440.000000
```

For these reasons, DGF only supports exponent values from 1 through 232. This implies that denormals, NaNs, and infinities cannot be represented. If a block encodes an exponent value outside the supported range, all ray-triangle intersection tests against this block will have undefined results.

For exponent values of 232, it is possible to encode a value which overflows the IEEE single-precision range. Results are undefined in this case.

An application can ensure crack-free results across blocks by selecting matching quantization factors for any two neighboring blocks. A simple way to ensure this is to pick a uniform quantization factor for an entire mesh.

44.1.3. Handling Corner Cases

The anchor+offset encoding scheme can be problematic for meshes containing very large triangles. A poor choice of quantization factor can cause the 16b per-vertex offsets or the 24b per-block anchors to overflow. This problem can be worked around in several ways:

- Choosing a coarser quantization factor (trading off precision),
- Subdividing large, problematic triangles (whether automatically or manually),
- Reverting to uncompressed geometry for problematic assets.

The use of a common quantization factor for X,Y, and Z can be problematic for geometry which has a large extent on one coordinate axis but not the others (for example, a freight train with individually modeled cars). In this situation, a coarse quantization factor must be selected to enclose the large coordinate range on the long axis, resulting in inadequate precision on the other two axes. The solution to this problem is to partition the object into multiple parts, each authored in a local coordinate system, and positioned using instance transforms.

44.1.4. Topology Encoding

Topology Sections

DGF represents mesh topology using a form of generalized triangle strip. The order of the stored vertices is used to minimize the size of the topology encoding. The topology encoding consists of an array of triangle control values, and a compressed index buffer.

- Two control bits per triangle indicating its position relative to the previous two triangles
  - The first triangle always uses RESTART, so this is not stored.
  - Ordered back to front (earlier triangles occupy higher bit positions).
- A compressed index buffer whose length is determined by the contents of the control bits.
  - The index buffer is organized into two sections:
    - An array of “is-first” bits
      - One bit per index indicating whether it is the first reference to a given vertex.
      - The first reference to a given vertex is computed by incrementing a counter.
      - The first three indices are always “first”, so their “is-first” bits are not stored.
      - Ordered back to front (earlier indices occupy higher bit positions).
    - A “reuse buffer” containing the indices of reused vertices
      - There is one index for each zero bit in the “is-first” bit vector.

- The number of bits per index is stored in the header. Valid values are 0,1,2,3, encoding 3,4,5, and 6 bits, respectively.
- Ordered front to back (earlier indices occupy lower bit positions).
- Total size may not exceed 24B.

The reuse buffer is located immediately adjacent to the front buffer. The triangle control bits are located at the end of the block, and the "is-first" bits are immediately in front of them.

There are four possible triangle control values:

Enum	**Value**	**Meaning**
RESTART	0	Start a new strip, specifying 3 vertex indices for the triangle
EDGE1	1	The second edge of the predecessor triangle is reused as the first edge
EDGE2	2	The third edge of the predecessor triangle is reused as the first edge
BACKTRACK	3	The opposite edge of the predecessor's predecessor is reused. "Opposite edge" means EDGE1 if the predecessor used EDGE2, or EDGE2 if the predecessor used EDGE1. BACKTRACK is not allowed unless the predecessor used EDGE1 or EDGE2. A BACKTRACK triangle may not occur after a RESTART or another BACKTRACK

The behavior of the triangle control values is illustrated in the diagram below:

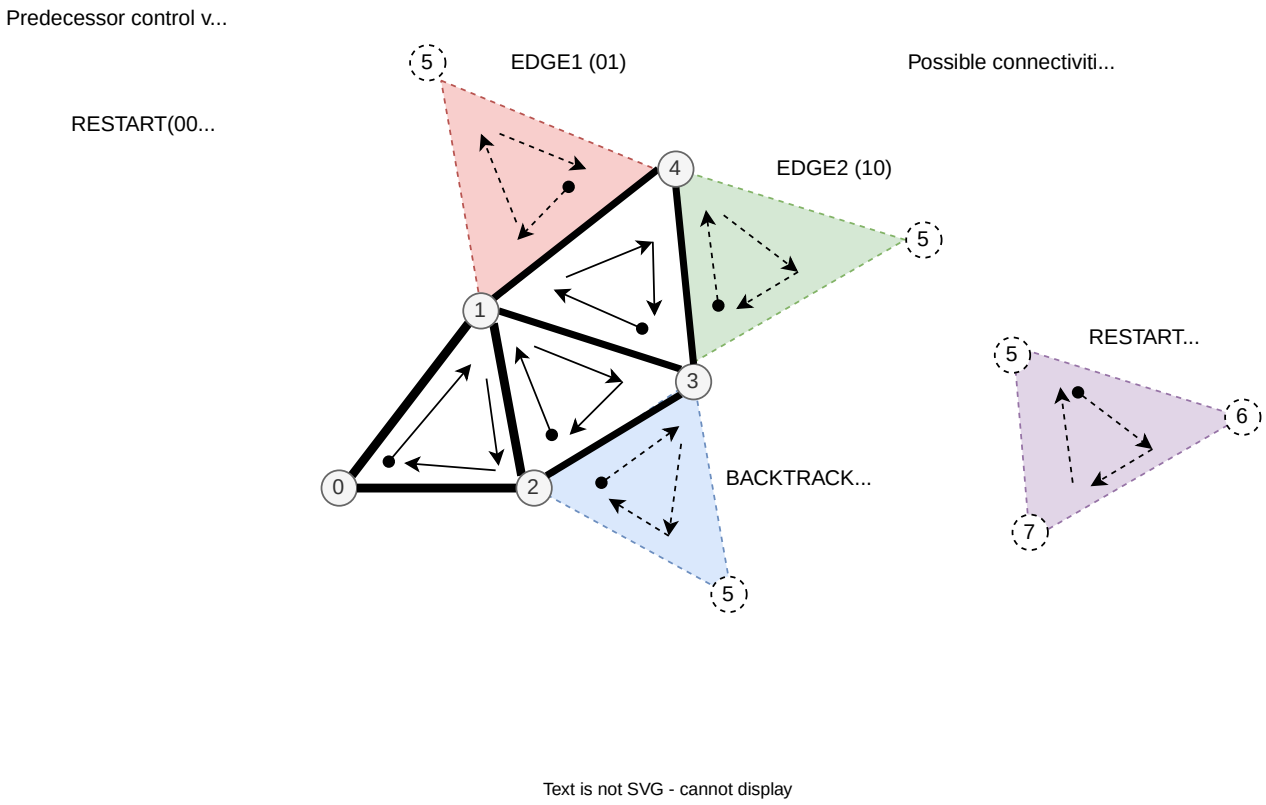

Figure 34. DGF control value behavior

In the diagram above, the vertex orders for the 3 predecessor triangles are:

- RESTART: 0,1,2
- EDGE1: 2,1,3 (reuse the 1→2 edge)
- EDGE1: 3,1,4 (reuse the 1→3 edge)

The four possible vertex orders for the next triangle depend on its control value, and are:

- RESTART: 5,6,7
- EDGE1: 4,1,5 (reuse the 1→4 edge)
- EDGE2: 3,4,5 (reuse the 4→3 edge)
- BACKTRACK: 2,3,5 (reuse the 3→2 edge)

Note that whenever an edge is reused, its vertices are reversed so that triangle winding is correct. Meshes with mixed winding can be encoded by restarting the strip on each winding change.

The control values for the triangles correspond to an index buffer containing three indices for each RESTART triangle, and one index for each non-RESTART triangle. This index buffer is compressed by re-ordering the vertices by first use and omitting the first reference to every vertex (since this index can be computed by incrementing a counter). A single bit per index is used to indicate whether it is the first reference to its corresponding vertex. The reused indices are then directly stored in a tightly-packed buffer (i.e., not interleaved with the single-bit index-is-first flags).

The example below illustrates the index buffer encoding:

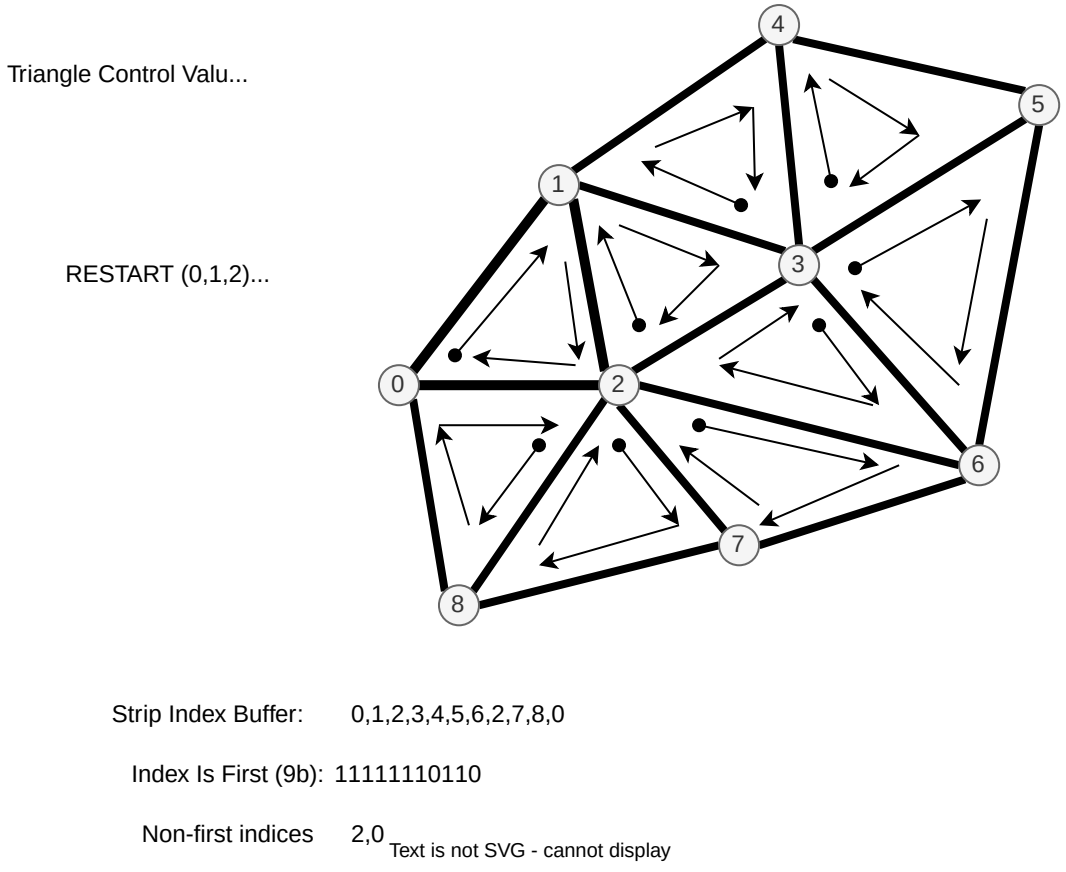

Figure 35. DGF Index buffer example

A triangle's position in the index buffer can be computed by taking the triangle index and adding 2 for each RESTART triangle at the same or earlier positions. This gives the index buffer position for the triangle's third vertex. The remaining two vertices are inferred from the previous two triangles based on the control values.

An index from the compressed index buffer is extracted as follows:

```
uint get_index(uint indexPosition, uint64_t isFirst, uint nonFirstIndices[])
{
    // count number of "first" vertex refs which precede this one
    //   NOTE that an efficient implementation would use a popcount() here
    int numFirst = 0;
    for (int i = 0; i < indexPosition; i++)
    {
        if (isFirst & (1ull << i))
            numFirst++;
    }

    // the first reference to each vertex is implicit
    // reused indices are read
    if (isFirst & (1ull << indexPosition))
        return numFirst;
    else
        return nonFirstIndices[indexPosition - numFirst];        // NOTE: Bounds check
omitted for brevity
```

```
}
```

44.1.5. Primitive Index

The primitive index for a DGF triangle is inferred from its position in the strip, which removes the need to directly store it. A 29b primitive index base is stored in the block and added to the triangle's position in the block to produce a per-triangle primitive index.

```
PrimitiveIndex = header.prim_id_base + triangle_index_in_block;
```

The result must fit in 29b. Any overflow results in undefined behavior.

44.1.6. Geometry Index and Opaque Flag

DGF supports specifying a 24b geometry index and a 1b opaque flag on a per-triangle basis. These are combined into a 25b value with the opaque flag in the least significant bit.

There are two supported modes:

- Constant mode: A 9b geometry index and 1b opaque flag are applied to all triangles,
- Palette mode: An array of up to 32 25b values is stored in the block, in compressed form, and a per-triangle index is used to select a value from the array.

If palette mode is in use, there is no requirement that the "opaque" flags are consistent for triangles with the same geometry index.

The palette mode is useful in the following circumstances:

- When the triangles in the block have different geometry index or opacity values
- When the triangles have the same geometry index, but it is larger than the 9b limit for palette mode.
- When the number of triangles per geo is small, and constant mode would create under-utilized blocks.

GeomID Palette

There are two supported modes for specifying geometry indices and opaque flags. The mode is selected based on the `geom_id_mode` field in the header:

Enum	Value	Encoding System
Constant Mode	0	A 9b geomID and a 1b opaque flag are applied to all triangles
Palette Mode	1	An array of up to 32 25b values is stored in compressed form; each triangle stores an index into the array

In constant mode, bit 0 of `geom_id_meta` contains an opaque flag, and bits 1-9 store a geometry index. These values are used for all triangles. In this mode, no additional data are stored in the block, and more space is available for vertex data.

In palette mode, the `geom_id_meta` field is interpreted as follows:

- LSBs (4:0) encode a GeomID prefix size in bits (5b, 0-25)
- MSBs (9:5) encode a GeomID count (5b, 1-32 (add 1 when decoding)).

In palette mode, a GeomID palette structure is inserted in the block. The position and size of the palette structure are aligned to byte boundaries. Pad bits are appended as required, and all pad bits must be zero.

The GeomID palette consists of the following structures in this order:

- A prefix value whose bit length is given in the 5 LSBs of `geom_id_meta`.
- A per-triangle index buffer identifying the payload to use for each triangle.
  - The size of each index is `ceil(log2(GeomID count))`.
- An array of N-bit payloads, where N is `25 - prefixSize`. The LSB of each payload contains an opaque flag.

The 25b geomID and opaque flag for a given triangle are decoded by selecting a payload from the payload buffer, and concatenating it with the prefix value. The following pseudocode illustrates this process:

```
// Helper function to extract a bit field from the DGF block
uint ReadBits(uint bitPos, uint numBits);

uint get_id_and_opacity(uint geom_id_meta, uint triIndex, uint triCount);
{
    uint prefixSize  = geom_id_meta & 0x1f;
    uint payloadSize = 25 - prefixSize;
    uint geomIDCount = ((geom_id_meta >> 5) & 0x1f) + 1;
    uint indexSize   = 32 - lzcount(geomIDCount - 1);

    uint paletteBitPos = ComputePaletteBitPosition();
    uint prefix        = ReadBits(paletteBitPos, prefixSize);

    uint indexBufferPos = paletteBitPos + prefixSize;
    uint index          = ReadBits(indexBufferPos + triIndex * indexSize, indexSize);

    uint payloadBufferPos = indexBufferPos + triCount * indexSize;
    uint payload          = ReadBits(payloadBufferPos, index, payloadSize);

    return (prefix << payloadSize) | payload;
}
```

44.1.7. OMM Support

DGF provides a degree of OMM support by allowing the triangles within a DGF block to collectively reference a limited number of OMMs. The OMM support in DGF is best suited for scenarios in which a small set of OMMs is repeated many times over a large mesh (e.g. tree leaves). For intricate alpha cutouts applied to high-poly models, it is potentially more efficient to tessellate the geometry and “bake in” the alpha cutout.

Because OMMs are constructed independently of acceleration structure content, the encoder must reserve space for a set of implementation-defined "OMM descriptors" which may be injected into the block at runtime. A DGF block can hold a maximum of 7 descriptors, with each descriptor either encoding an OMM special index or referencing an OMM array entry. The application must know the triangle-to-OMM mapping when the DGF block is encoded, and the encoder must assign triangles to blocks such that the descriptor limit is not exceeded, and ideally such that the number of OMMs per block is minimized.

The mapping of triangles to OMMs is illustrated by the following pseudo-code:

```
//
//   The number of unique return values from "get_omm_index" in a given block must not
//     exceed the number of descriptors allocated in the block
//
uint get_omm_index( uint primIDBase, uint triangleIndexInBlock )
{
    // reconstruct primitive index
    uint primIndex = primIDBase + triangleIndexInBlock;

    // map primitive index to the index of an OMM in the OMM array
    if( indexed_omms )
        return OMMIndexBuffer[primIndex];
    else
        return primIndex;
}
```

If an OMM index buffer is used to select OMMs, then each distinct index value (including “special indices”) counts as one descriptor. If there is no OMM index buffer, then a simple linear mapping is used instead. This implies that the number of OMM descriptors equals the number of triangles, and that neither number may exceed 7.

DGF blocks with OMM still encode a per-triangle opaque flag. This opaque flag is used whenever OMMs are disabled via ray/instance flags.

Opacity Micromap Palette

If `omm_descriptor_count` is non-zero, then an “OMM palette” is present. The OMM palette, if present, is byte-aligned. Pad bits are inserted as required. All pad bits must be zero.

The OMM palette consists of a “hot-patched” section, and a “pre-computed” section. The “hot-patched” section is so named because it is expected to be patched at runtime with OMM

information when an acceleration structure is constructed. The “pre-computed” section is computed by the application at DGF encoding time. The size and position of the hot-patched section are exposed to applications through the API, but its precise contents are not.

When encoding a DGF block that is expected to be used with OMMs, the encoder must reserve space for the hot-patched section, and place the pre-computed section immediately after it.

- The “hot-patched” section contains 8 bytes, plus 4 bytes for each OMM descriptor. The application must initialize this space with zeros.
- The “pre-computed” section contains a per-triangle index indicating which OMM descriptor to use.
  - Triangles are ordered from front to back in ascending order
  - The number of bits per index is derived from the `omm_descriptor_count` field in the header.
  - The pre-computed section is padded out to the next byte boundary, and all pad bits must be zero.

The following table shows the OMM palette configuration for each value of `omm_descriptor_count`:

omm_descriptor_count	Hot-patch Section Size (Bytes)	Precomputed Section (Bits per Triangle)
0	0	0
1	12	0
2	16	1
3	20	2
4	24	2
5	28	3
6	32	3
7	36	3

The following pseudo-code computes the size, in bits, of an OMM palette:

```
int compute_palette_size( uint numDescriptors, uint numTriangles )
{
    if( numDescriptors == 0 )
            return 0;

        uint hotPatchSize    = 64 + 32*numTriangles;
        uint bitsPerIndex    = ceil( log2(numDescriptors) );
        uint precomputedSize = bitsPerIndex*numTriangles;
    precomputedSize = (precomputedSize + 7) & ~7; // byte align

        return hotPatchSize + precomputedSize;
}
```

The following pseudo-code illustrates how an encoder could construct the pre-computed section of the OMM palette:

```
//
// Calculates the descriptor indices in the 'pre-computed' section of an OMM palette.
//   The return value is the number of OMM descriptors used.
//
// A return value of -1 indicates that the triangles contain too many unique OMMs and
must be split into multiple blocks.
//
int build_omm_palette( uint descriptorIndices[], uint numTriangles, const int*
ommIndices, uint spaceAvailable )
{
    int ommDescriptors[MAX_DESCRIPTORS];
    int numDescriptors=0;

    for( uint triangleIndex = 0; triangleIndex < numTriangles; triangleIndex++ )
    {
            // determine the OMM index assigned to this triangle
        int ommIndex = ommIndices[triangleIndex];

                // search for an existing descriptor for this OMM or special-index
value
                uint descriptorIndex=0;

        while(descriptorIndex < numDescriptors )
                {
                        if( ommPalette[descriptorIndex] == ommIndex )
                break;

            descriptorIndex++;
        }

                // if an existing descriptor was not found, attempt to allocate one
                //  if unsuccessful, the encoder must split the triangles into
multiple blocks
                if( descriptorIndex == numDescriptors )
                {
                        if( numDescriptors == MAX_DESCRIPTORS )
                            return -1; // block must be split
                        else
                            ommPalette[numDescriptors++] = ommIndex;
            }

                descriptorIndices[triangleIndex] = descriptorIndex;
    }

        // split the triangles if the resulting palette cannot fit in the block
        if( compute_palette_size(numTriangles,numDescriptors) > spaceAvailable )
            return -1;
```

```
        return numDescriptors;
}
```

44.1.8. Optional UserData

The DGF block can optionally embed one DWORD of user-defined data, which is useful for locating vertex attributes.

Applications which use UserData must set the corresponding field in the DGF header and populate the corresponding bits.

Chapter 45. Micromap

45.1. Micromaps

Acceleration structures store and organize geometry for ray tracing, but in some cases it is beneficial to include some information within the geometry, particularly for triangles. A *micromap* organizes this data around a map of values corresponding to subdivided microtriangles which can be added to a triangle geometry when building a *bottom level acceleration structure*.

An *opacity micromap* is a type of micromap which stores information to control intersection opacity as described in Ray Opacity Micromap.

A *displacement micromap* is a type of micromap which stores information to displace sub-triangle vertices as described in Displacement Micromap.

A micromap is considered to be constructed if a micromap build command or copy command has been executed with the given micromap as the destination.

45.1.1. Building Micromaps

Micromaps created with `VK_KHR_opacity_micromap`, which are represented by VkAccelerationStructureKHR objects, are built with device build commands.

When building micromaps with vkCmdBuildAccelerationStructuresKHR, a `VkAccelerationStructureGeometryMicromapDataKHR` structure can be added to the `pNext` chain of VkAccelerationStructureGeometryKHR to specify the data used to build the micromap.

The `VkAccelerationStructureGeometryMicromapDataKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkAccelerationStructureGeometryMicromapDataKHR {
    VkStructureType                    sType;
    const void*                        pNext;
    uint32_t                           usageCountsCount;
    const VkMicromapUsageKHR*          pUsageCounts;
    const VkMicromapUsageKHR* const*   ppUsageCounts;
    VkDeviceAddress                    data;
    VkDeviceAddress                    triangleArray;
    VkDeviceSize                       triangleArrayStride;
} VkAccelerationStructureGeometryMicromapDataKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of VkMicromapUsageKHR structures.

- `ppUsageCounts` is a pointer to an array of pointers to VkMicromapUsageKHR structures.
- `data` is the device address to memory which contains the data for the micromap.
- `triangleArray` is the device address to memory containing the VkMicromapTriangleKHR data.
- `triangleArrayStride` is the stride in bytes between each element of `triangleArray`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total counts used to build each micromap. Each element contains a `count` which is the number of micromap triangles of that `format` and `subdivisionLevel` contained in the micromap. Multiple elements with the same `format` and `subdivisionLevel` are allowed and the total count for that `format` and `subdivisionLevel` is the sum of the `count` for each element.

Each micromap triangle refers to one element in `triangleArray` which contains the `format` and `subdivisionLevel` for that particular triangle as well as a `dataOffset` in bytes which is the location relative to `data` where that triangle's micromap data begins. The data at `triangleArray` is laid out as a 4 byte unsigned integer for the `dataOffset` followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile VkMicromapTriangleKHR to match this pattern.

For opacity micromaps, the data at `data` is packed as either one bit per element for VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR or two bits per element for VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in Ray Opacity Micromap.

Valid Usage

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-pUsageCounts-11642
  Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-count-11643
  The total sum of `count` from all elements of `pUsageCounts` and `ppUsageCounts` **must** be less than or equal to `maxMicromapTriangles`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-subdivisionLevel-11645
  For each member of `pUsageCounts` or `ppUsageCounts`, if `format` is VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR, `subdivisionLevel` **must** be less than or equal to `maxOpacity2StateSubdivisionLevel`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-triangleArrayStride-11646
  `triangleArrayStride` **must** be greater than or equal to 8 bytes
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-triangleArrayStride-11647
  `triangleArrayStride` **must** be a multiple of 4 bytes

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-sType-sType
  `sType` **must** be

VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MICROMAP_DATA_KHR

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-pUsageCounts-parameter
  If `usageCountsCount` is not `0`, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid VkMicromapUsageKHR structures
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-ppUsageCounts-parameter
  If `usageCountsCount` is not `0`, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to valid VkMicromapUsageKHR structures

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryKHR

The `VkMicromapUsageKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkMicromapUsageKHR {
    uint32_t                      count;
    uint32_t                      subdivisionLevel;
    VkOpacityMicromapFormatKHR    format;
} VkMicromapUsageKHR;
```

- `count` is the number of triangles in the usage format defined by the `subdivisionLevel` and `format` below in the micromap
- `subdivisionLevel` is the subdivision level of this usage format
- `format` is the format of this usage format

The `format` is interpreted based on the `type` of the micromap using it.

Valid Usage (Implicit)

- VUID-VkMicromapUsageKHR-format-parameter
  `format` **must** be a valid VkOpacityMicromapFormatKHR value

The `VkMicromapUsageEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapUsageEXT {
    uint32_t    count;
    uint32_t    subdivisionLevel;
    uint32_t    format;
} VkMicromapUsageEXT;
```

- `count` is the number of triangles in the usage format defined by the `subdivisionLevel` and `format` below in the micromap
- `subdivisionLevel` is the subdivision level of this usage format
- `format` is the format of this usage format

The `format` is interpreted based on the `type` of the micromap using it.

The `VkMicromapTriangleKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkMicromapTriangleKHR {
    uint32_t    dataOffset;
    uint16_t    subdivisionLevel;
    uint16_t    format;
} VkMicromapTriangleKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkMicromapTriangleKHR
typedef VkMicromapTriangleKHR VkMicromapTriangleEXT;
```

- `dataOffset` is the offset in bytes of the start of the data for this triangle. This is a byte aligned value.
- `subdivisionLevel` is the subdivision level of this triangle.
- `format` is the format of this triangle.

The `format` is interpreted based on the `type` of the micromap using it.

Formats which **can** be set in VkMicromapUsageKHR::`format` and VkMicromapTriangleKHR::`format` for micromap builds, are:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkOpacityMicromapFormatKHR {
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR = 1,
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR = 2,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT = VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT = VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR,
} VkOpacityMicromapFormatKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkOpacityMicromapFormatKHR
typedef VkOpacityMicromapFormatKHR VkOpacityMicromapFormatEXT;
```

- VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR specifies that the given micromap format has one bit per subtriangle encoding either fully opaque or fully transparent.
- VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR specifies that the given micromap format has two bits per subtriangle encoding four modes which can be interpreted as described in Ray Opacity Micromap.

NOTE For compactness, these values are stored as 16-bit in some structures.

To build micromaps represented as a VkMicromapEXT object call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdBuildMicromapsEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    infoCount,
    const VkMicromapBuildInfoEXT*               pInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` structures that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` VkMicromapBuildInfoEXT structures defining the data used to build each micromap.

The `vkCmdBuildMicromapsEXT` command provides the ability to initiate multiple micromap builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

The input buffers passed to this command will be referenced by the implementation for the duration of the command's execution on the device. Micromaps **must** be fully self-contained. The

application **can** reuse or free any memory which was used by this command's execution on the device as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure, provided proper synchronization is used as described below.

Accesses to the micromap scratch buffers as identified by the VkMicromapBuildInfoEXT::scratchData buffer device addresses **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of (VK_ACCESS_2_MICROMAP_READ_BIT_EXT | VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT). Accesses to VkMicromapBuildInfoEXT::dstMicromap **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT.

Accesses to other input buffers as identified by any used values of VkMicromapBuildInfoEXT::data or VkMicromapBuildInfoEXT::triangleArray **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildMicromapsEXT-pInfos-07461
  For each pInfos[i], dstMicromap **must** have been created with a value of VkMicromapCreateInfoEXT::size greater than or equal to the memory size required by the build operation, as returned by vkGetMicromapBuildSizesEXT with pBuildInfo = pInfos[i]
- VUID-vkCmdBuildMicromapsEXT-mode-07462
  The mode member of each element of pInfos **must** be a valid VkBuildMicromapModeEXT value
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07463
  The dstMicromap member of any element of pInfos **must** be a valid VkMicromapEXT handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-07464
  For each element of pInfos its type member **must** match the value of VkMicromapCreateInfoEXT::type when its dstMicromap was created
- VUID-vkCmdBuildMicromapsEXT-micromap-11648
  The VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature **must** be enabled
- VUID-vkCmdBuildMicromapsEXT-pInfos-07508
  For each element of pInfos, the buffer used to create its dstMicromap member **must** be bound to device memory
- VUID-vkCmdBuildMicromapsEXT-pInfos-07509
  If pInfos[i].mode is VK_BUILD_MICROMAP_MODE_BUILD_EXT, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the buildScratchSize member of the VkMicromapBuildSizesInfoEXT structure returned from a call to vkGetMicromapBuildSizesEXT with an identical VkMicromapBuildInfoEXT

structure and primitive count

- VUID-vkCmdBuildMicromapsEXT-data-07510
  The buffers from which the buffer device addresses for all of the `data` and `triangleArray` members of all `pInfos`[i] are queried **must** have been created with the VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT usage flag set
- VUID-vkCmdBuildMicromapsEXT-pInfos-07511
  For each element of `pInfos`[i] the buffer from which the buffer device address `pInfos`[i].`scratchData.deviceAddress` is queried **must** have been created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildMicromapsEXT-pInfos-07512
  For each element of `pInfos`, if the value of VkMicromapBuildSizesInfoEXT::`buildScratchSize`, returned from a call to vkGetMicromapBuildSizesEXT with an identical VkMicromapBuildInfoEXT structure, is not `0`, `scratchData.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildMicromapsEXT-pInfos-10896
  For each element of `pInfos`, `data.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildMicromapsEXT-pInfos-10897
  For each element of `pInfos`, `triangleArray.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildMicromapsEXT-pInfos-07514
  For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of VkPhysicalDeviceAccelerationStructurePropertiesKHR::`minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07515
  For each element of `pInfos`, its `triangleArray.deviceAddress` and `data.deviceAddress` members **must** be a multiple of `256`
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-11649
  The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by the execution of this command on the device
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-11650
  The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by the execution of this command on the device
- VUID-vkCmdBuildMicromapsEXT-scratchData-11651
  The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by the execution of this command on the device

Valid Usage (Implicit)

- VUID-vkCmdBuildMicromapsEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-parameter
  `pInfos` **must** be a valid pointer to an array of `infoCount` valid VkMicromapBuildInfoEXT structures
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildMicromapsEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildMicromapsEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildMicromapsEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildMicromapsEXT-infoCount-arraylength
  `infoCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildMicromapsEXT is not affected by conditional rendering

The `VkMicromapBuildInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildInfoEXT {
    VkStructureType                    sType;
    const void*                        pNext;
    VkMicromapTypeEXT                  type;
    VkBuildMicromapFlagsEXT            flags;
    VkBuildMicromapModeEXT             mode;
    VkMicromapEXT                      dstMicromap;
    uint32_t                           usageCountsCount;
    const VkMicromapUsageEXT*          pUsageCounts;
    const VkMicromapUsageEXT* const*   ppUsageCounts;
    VkDeviceOrHostAddressConstKHR      data;
    VkDeviceOrHostAddressKHR           scratchData;
    VkDeviceOrHostAddressConstKHR      triangleArray;
    VkDeviceSize                       triangleArrayStride;
} VkMicromapBuildInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a VkMicromapTypeEXT value specifying the type of micromap being built.
- `flags` is a bitmask of VkBuildMicromapFlagBitsEXT specifying additional parameters of the micromap.
- `mode` is a VkBuildMicromapModeEXT value specifying the type of operation to perform.
- `dstMicromap` is a pointer to the target micromap for the build.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of VkMicromapUsageEXT structures.
- `ppUsageCounts` is a pointer to an array of pointers to VkMicromapUsageEXT structures.
- `data` is the device or host address of memory which contains the data for the micromap.
- `scratchData` is the device or host address of memory that will be used as scratch memory for the build.
- `triangleArray` is the device or host address of memory containing the VkMicromapTriangleEXT data.
- `triangleArrayStride` is the stride in bytes between each element of `triangleArray`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total counts used to build each micromap. Each element contains a `count` which is the number of micromap triangles of that `format` and `subdivisionLevel` contained in the micromap. Multiple elements with the same `format` and `subdivisionLevel` are allowed and the total count for that `format` and `subdivisionLevel` is the sum of the `count` for each element.

Each micromap triangle refers to one element in `triangleArray` which contains the `format` and

`subdivisionLevel` for that particular triangle as well as a `dataOffset` in bytes which is the location relative to `data` where that triangle's micromap data begins. The data at `triangleArray` is laid out as a 4 byte unsigned integer for the `dataOffset` followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile VkMicromapTriangleEXT to match this pattern.

For opacity micromaps, the data at `data` is packed as either one bit per element for VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT or two bits per element for VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in Ray Opacity Micromap.

For displacement micromaps, the data at `data` is interpreted as discussed in Displacement Micromap Encoding.

Valid Usage

- VUID-VkMicromapBuildInfoEXT-pUsageCounts-07516
  Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkMicromapBuildInfoEXT-format-11652
  If `type` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of `pUsageCounts` or `ppUsageCounts`, `format` **must** be a valid value from VkOpacityMicromapFormatEXT
- VUID-VkMicromapBuildInfoEXT-format-11653
  If `type` is VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, for each member of `pUsageCounts` or `ppUsageCounts`, `format` **must** be a valid value from VkDisplacementMicromapFormatNV
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11654
  If `type` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of `pUsageCounts` or `ppUsageCounts`, if `format` is VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT, `subdivisionLevel` **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::`maxOpacity2StateSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11655
  If `type` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of `pUsageCounts` or `ppUsageCounts`, if `format` is VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT, `subdivisionLevel` **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::`maxOpacity4StateSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11656
  If `type` is VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, for each member of `pUsageCounts` or `ppUsageCounts`, `subdivisionLevel` **must** be less than or equal to VkPhysicalDeviceDisplacementMicromapPropertiesNV::`maxDisplacementMicromapSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-format-11657
  If `type` is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of

triangleArray, format **must** be a valid value from VkOpacityMicromapFormatEXT

- VUID-VkMicromapBuildInfoEXT-format-11658
  If type is VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, for each member of triangleArray, format **must** be a valid value from VkDisplacementMicromapFormatNV
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11659
  If type is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of triangleArray, if format is VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT, subdivisionLevel **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11660
  If type is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of triangleArray, if format is VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT, subdivisionLevel **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11661
  If type is VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV, for each member of triangleArray, subdivisionLevel **must** be less than or equal to VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel

Valid Usage (Implicit)

- VUID-VkMicromapBuildInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MICROMAP_BUILD_INFO_EXT
- VUID-VkMicromapBuildInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkMicromapBuildInfoEXT-type-parameter
  type **must** be a valid VkMicromapTypeEXT value
- VUID-VkMicromapBuildInfoEXT-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkBuildMicromapFlagBitsEXT values
- VUID-VkMicromapBuildInfoEXT-pUsageCounts-parameter
  If usageCountsCount is not 0, and pUsageCounts is not NULL, pUsageCounts **must** be a valid pointer to an array of usageCountsCount VkMicromapUsageEXT structures
- VUID-VkMicromapBuildInfoEXT-ppUsageCounts-parameter
  If usageCountsCount is not 0, and ppUsageCounts is not NULL, ppUsageCounts **must** be a valid pointer to an array of usageCountsCount valid pointers to VkMicromapUsageEXT structures

Bits which **can** be set in VkMicromapBuildInfoEXT::flags specifying additional parameters for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapFlagBitsEXT {
    VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT = 0x00000001,
    VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT = 0x00000002,
    VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT = 0x00000004,
} VkBuildMicromapFlagBitsEXT;
```

- VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT specifies that the given micromap build **should** prioritize trace performance over build time.
- VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT specifies that the given micromap build **should** prioritize build time over trace performance.
- VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT specifies that the micromap **can** act as the source for a copy micromap command with `mode` of VK_COPY_MICROMAP_MODE_COMPACT_EXT to produce a compacted micromap.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkBuildMicromapFlagsEXT;
```

`VkBuildMicromapFlagsEXT` is a bitmask type for setting a mask of zero or more VkBuildMicromapFlagBitsEXT.

The VkBuildMicromapModeEXT enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapModeEXT {
    VK_BUILD_MICROMAP_MODE_BUILD_EXT = 0,
} VkBuildMicromapModeEXT;
```

- VK_BUILD_MICROMAP_MODE_BUILD_EXT specifies that the destination micromap will be built using the specified data.

Formats which **can** be set in VkMicromapUsageEXT::`format` and VkMicromapTriangleKHR::`format` for micromap builds, are:

```
// Provided by VK_NV_displacement_micromap
typedef enum VkDisplacementMicromapFormatNV {
    VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV = 1,
    VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV = 2,
    VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV = 3,
} VkDisplacementMicromapFormatNV;
```

- VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV specifies that the given micromap format encodes 64 micro-triangles worth of displacements in 64 bytes as described in Displacement Micromap Encoding.

- VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV specifies that the given micromap format encodes 256 micro-triangles worth of displacements in 128 bytes as described in Displacement Micromap Encoding.
- VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV specifies that the given micromap format encodes 1024 micro-triangles worth of displacements in 128 bytes as described in Displacement Micromap Encoding.

NOTE	For compactness, these values are stored as 16-bit in some structures.

45.1.2. Copying Micromaps

Micromaps created with VK_KHR_opacity_micromap, which are represented by VkAccelerationStructureKHR objects, are copied with device copy commands.

For VkMicromapEXT, an additional command exists for copying micromaps without updating their contents. Before copying, an application **must** query the size of the resulting micromap.

To query VkMicromapEXT size parameters call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdWriteMicromapsPropertiesEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    micromapCount,
    const VkMicromapEXT*                        pMicromaps,
    VkQueryType                                 queryType,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery);
```

- commandBuffer is the command buffer into which the command will be recorded.
- micromapCount is the count of micromaps for which to query the property.
- pMicromaps is a pointer to an array of existing previously built micromaps.
- queryType is a VkQueryType value specifying the type of queries managed by the pool.
- queryPool is the query pool that will manage the results of the query.
- firstQuery is the first query index within the query pool that will contain the micromapCount number of results.

Accesses to any of the micromaps listed in pMicromaps **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_READ_BIT_EXT.

- If queryType is VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT, then the value written out is the number of bytes required by a serialized micromap.
- If queryType is VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT, then the value written out is the number of bytes required by a compacted micromap.

Valid Usage

- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07525
  `queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteMicromapsPropertiesEXT-None-12417
  All queries used by this command **must** be *unavailable*
- VUID-vkCmdWriteMicromapsPropertiesEXT-buffer-07527
  The `buffer` used to create each micromap in `pMicromaps` **must** be bound to device memory
- VUID-vkCmdWriteMicromapsPropertiesEXT-query-07528
  The sum of `firstQuery` plus `micromapCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-11662
  All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07502
  All micromaps in `pMicromaps` **must** have been constructed with VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT if `queryType` is VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-07503
  `queryType` **must** be VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT, or VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT

Valid Usage (Implicit)

- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-parameter
  `pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid VkMicromapEXT handles
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdWriteMicromapsPropertiesEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteMicromapsPropertiesEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteMicromapsPropertiesEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdWriteMicromapsPropertiesEXT-micromapCount-arraylength
  `micromapCount` **must** be greater than `0`
- VUID-vkCmdWriteMicromapsPropertiesEXT-commonparent
  Each of `commandBuffer`, `queryPool`, and the elements of `pMicromaps` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdWriteMicromapsPropertiesEXT is not affected by conditional rendering

To copy a VkMicromapEXT call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapEXT(
    VkCommandBuffer                             commandBuffer,
    const VkCopyMicromapInfoEXT*                pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a VkCopyMicromapInfoEXT structure defining the copy operation.

This command copies the `pInfo->src` micromap to the `pInfo->dst` micromap in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_READ_BIT_EXT or VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT as appropriate.

Valid Usage

- VUID-vkCmdCopyMicromapEXT-buffer-07529
  The `buffer` used to create `pInfo->src` **must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-buffer-07530
  The `buffer` used to create `pInfo->dst` **must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-src-07532
  The source micromap `src` **must** have been constructed prior to the execution of this command on the device

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMicromapEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyMicromapInfoEXT structure
- VUID-vkCmdCopyMicromapEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyMicromapEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyMicromapEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyMicromapEXT is not affected by conditional rendering

The VkCopyMicromapInfoEXT structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkMicromapEXT            src;
    VkMicromapEXT            dst;
    VkCopyMicromapModeEXT    mode;
} VkCopyMicromapInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- src is the source micromap for the copy.
- dst is the target micromap for the copy.
- mode is a VkCopyMicromapModeEXT value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapInfoEXT-mode-07531
  mode **must** be VK_COPY_MICROMAP_MODE_COMPACT_EXT or VK_COPY_MICROMAP_MODE_CLONE_EXT
- VUID-VkCopyMicromapInfoEXT-mode-07533
  If mode is VK_COPY_MICROMAP_MODE_COMPACT_EXT, src **must** have been constructed with VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT in the build

Valid Usage (Implicit)

- VUID-VkCopyMicromapInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_MICROMAP_INFO_EXT
- VUID-VkCopyMicromapInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyMicromapInfoEXT-src-parameter
  src **must** be a valid VkMicromapEXT handle
- VUID-VkCopyMicromapInfoEXT-dst-parameter
  dst **must** be a valid VkMicromapEXT handle

- VUID-VkCopyMicromapInfoEXT-commonparent
  Both of dst, and src **must** have been created, allocated, or retrieved from the same VkDevice

Possible values of mode specifying additional operations to perform during the copy, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkCopyMicromapModeEXT {
    VK_COPY_MICROMAP_MODE_CLONE_EXT = 0,
    VK_COPY_MICROMAP_MODE_SERIALIZE_EXT = 1,
    VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT = 2,
    VK_COPY_MICROMAP_MODE_COMPACT_EXT = 3,
} VkCopyMicromapModeEXT;
```

- VK_COPY_MICROMAP_MODE_CLONE_EXT creates a direct copy of the micromap specified in src into the one specified by dst. The dst micromap **must** have been created with the same parameters as src.
- VK_COPY_MICROMAP_MODE_SERIALIZE_EXT serializes the micromap to a semi-opaque format which can be reloaded on a compatible implementation.
- VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT deserializes the semi-opaque serialization format in the buffer to the micromap.
- VK_COPY_MICROMAP_MODE_COMPACT_EXT creates a more compact version of a micromap src into dst. The micromap dst **must** have been created with a size at least as large as that returned by vkCmdWriteMicromapsPropertiesEXT after the build of the micromap specified by src.

To copy a VkMicromapEXT to device memory call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapToMemoryEXT(
    VkCommandBuffer                             commandBuffer,
    const VkCopyMicromapToMemoryInfoEXT*        pInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pInfo is a pointer to a VkCopyMicromapToMemoryInfoEXT structure defining the copy operation.

Accesses to pInfo->src **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_READ_BIT_EXT. Accesses to the buffer indicated by pInfo->dst **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_TRANSFER_WRITE_BIT.

This command produces the same results as vkCopyMicromapToMemoryEXT, but writes its result to a device address, and is executed on the device rather than the host. The output **may** not

necessarily be bit-for-bit identical, but is equally compatible for use with either vkCmdCopyMemoryToMicromapEXT or vkCopyMemoryToMicromapEXT.

The defined header structure for the serialized data consists of:

- VK_UUID_SIZE bytes of data matching `VkPhysicalDeviceIDProperties`::`driverUUID`
- VK_UUID_SIZE bytes of data identifying the compatibility for comparison using vkGetDeviceMicromapCompatibilityEXT

The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07536
  `pInfo->dst.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07537
  `pInfo->dst.deviceAddress` **must** be aligned to `256` bytes
- VUID-vkCmdCopyMicromapToMemoryEXT-buffer-07539
  The `buffer` used to create `pInfo->src` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyMicromapToMemoryInfoEXT structure
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyMicromapToMemoryEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapToMemoryEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapToMemoryEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyMicromapToMemoryEXT is not affected by conditional rendering

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapToMemoryInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkMicromapEXT               src;
    VkDeviceOrHostAddressKHR    dst;
    VkCopyMicromapModeEXT       mode;
} VkCopyMicromapToMemoryInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- src is the source micromap for the copy.
- dst is the device or host address of memory which is the target for the copy.
- mode is a VkCopyMicromapModeEXT value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapToMemoryInfoEXT-src-07540
  The source micromap src **must** have been constructed prior to the execution of this command
- VUID-VkCopyMicromapToMemoryInfoEXT-dst-07541
  The memory pointed to by dst **must** be at least as large as the serialization size of src, as reported by vkWriteMicromapsPropertiesEXT or vkCmdWriteMicromapsPropertiesEXT with a query type of VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-07542
  mode **must** be VK_COPY_MICROMAP_MODE_SERIALIZE_EXT

Valid Usage (Implicit)

- VUID-VkCopyMicromapToMemoryInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_MICROMAP_TO_MEMORY_INFO_EXT
- VUID-VkCopyMicromapToMemoryInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyMicromapToMemoryInfoEXT-src-parameter
  `src` **must** be a valid VkMicromapEXT handle
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-parameter
  `mode` **must** be a valid VkCopyMicromapModeEXT value

To copy device memory to a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMemoryToMicromapEXT(
    VkCommandBuffer                             commandBuffer,
    const VkCopyMemoryToMicromapInfoEXT*        pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a VkCopyMemoryToMicromapInfoEXT structure defining the copy operation.

Accesses to `pInfo->dst` **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT. Accesses to the buffer indicated by `pInfo->src` **must** be synchronized with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_TRANSFER_READ_BIT.

This command **can** accept micromaps produced by either vkCopyMicromapToMemoryEXT or vkCmdCopyMicromapToMemoryEXT.

Valid Usage

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07543
  `pInfo->src.deviceAddress` **must** be a valid VkDeviceAddress
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07544
  `pInfo->src.deviceAddress` **must** be aligned to `256` bytes
- VUID-vkCmdCopyMemoryToMicromapEXT-buffer-07546
  The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-parameter

commandBuffer **must** be a valid VkCommandBuffer handle

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkCopyMemoryToMicromapInfoEXT structure
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdCopyMemoryToMicromapEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToMicromapEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToMicromapEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyMemoryToMicromapEXT is not affected by conditional rendering

The VkCopyMemoryToMicromapInfoEXT structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMemoryToMicromapInfoEXT {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDeviceOrHostAddressConstKHR    src;
    VkMicromapEXT                    dst;
    VkCopyMicromapModeEXT            mode;
} VkCopyMemoryToMicromapInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address of memory containing the source data for the copy.
- `dst` is the target micromap for the copy.
- `mode` is a VkCopyMicromapModeEXT value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMemoryToMicromapInfoEXT-src-07547
  The source memory pointed to by `src` **must** contain data previously serialized using vkCmdCopyMicromapToMemoryEXT
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-07548
  `mode` **must** be VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT
- VUID-VkCopyMemoryToMicromapInfoEXT-src-07549
  The data in `src` **must** have a format compatible with the destination physical device as returned by vkGetDeviceMicromapCompatibilityEXT
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-07550
  `dst` **must** have been created with a `size` greater than or equal to that used to serialize the data in `src`

Valid Usage (Implicit)

- VUID-VkCopyMemoryToMicromapInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_MEMORY_TO_MICROMAP_INFO_EXT
- VUID-VkCopyMemoryToMicromapInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-parameter
  `dst` **must** be a valid VkMicromapEXT handle
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-parameter
  `mode` **must** be a valid VkCopyMicromapModeEXT value

To check if a serialized VkMicromapEXT is compatible with the current device call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetDeviceMicromapCompatibilityEXT(
    VkDevice                                    device,
    const VkMicromapVersionInfoEXT*             pVersionInfo,
    VkAccelerationStructureCompatibilityKHR*    pCompatibility);
```

- device is the device to check the version against.
- pVersionInfo is a pointer to a VkMicromapVersionInfoEXT structure specifying version information to check against the device.
- pCompatibility is a pointer to a VkAccelerationStructureCompatibilityKHR value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceMicromapCompatibilityEXT-micromap-11666
  The VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMicromapCompatibilityEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetDeviceMicromapCompatibilityEXT-pVersionInfo-parameter
  pVersionInfo **must** be a valid pointer to a valid VkMicromapVersionInfoEXT structure
- VUID-vkGetDeviceMicromapCompatibilityEXT-pCompatibility-parameter
  pCompatibility **must** be a valid pointer to a VkAccelerationStructureCompatibilityKHR value

The VkMicromapVersionInfoEXT structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapVersionInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkMicromapVersionInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pVersionData is a pointer to the version header of a micromap as defined in vkCmdCopyMicromapToMemoryEXT.

NOTE

`pVersionData` is a *pointer* to an array of 2×VK_UUID_SIZE `uint8_t` values instead of two VK_UUID_SIZE arrays as the expected use case for this member is to be pointed at the header of a previously serialized micromap that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- VUID-VkMicromapVersionInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MICROMAP_VERSION_INFO_EXT
- VUID-VkMicromapVersionInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMicromapVersionInfoEXT-pVersionData-parameter
  `pVersionData` **must** be a valid pointer to an array of $2 \times VK_UUID_SIZE$ `uint8_t` values

45.2. Host Micromap Operations

Implementations are also required to provide host implementations of the micromap operations if the `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature is enabled:

- vkBuildMicromapsEXT corresponding to vkCmdBuildMicromapsEXT
- vkCopyMicromapEXT corresponding to vkCmdCopyMicromapEXT
- vkCopyMicromapToMemoryEXT corresponding to vkCmdCopyMicromapToMemoryEXT
- vkCopyMemoryToMicromapEXT corresponding to vkCmdCopyMemoryToMicromapEXT
- vkWriteMicromapsPropertiesEXT corresponding to vkCmdWriteMicromapsPropertiesEXT

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All micromaps used by the host commands **must** be bound to host-visible memory, and all input data for micromap builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map micromap memory when using the host commands.

NOTE

The vkBuildMicromapsEXT and vkCmdBuildMicromapsEXT **may** use different algorithms, and thus are not required to produce identical structures.

Apart from these details, the host and device operations are interchangeable.

NOTE

For efficient execution, micromaps manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build VkMicromapEXT on the host, call:

WARNING

This functionality is superseded by vkCmdBuildMicromapsEXT. See Legacy

Functionality for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkBuildMicromapsEXT(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    uint32_t                                    infoCount,
    const VkMicromapBuildInfoEXT*               pInfos);
```

- `device` is the `VkDevice` for which the micromaps are being built.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` VkMicromapBuildInfoEXT structures defining the geometry used to build each micromap.

This command fulfills the same task as vkCmdBuildMicromapsEXT but is executed by the host.

The `vkBuildMicromapsEXT` command provides the ability to initiate multiple micromap builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

The input buffers passed to this command will be referenced by the implementation for the duration of the command. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure.

Valid Usage

- VUID-vkBuildMicromapsEXT-pInfos-07461
  For each `pInfos`[i], `dstMicromap` **must** have been created with a value of VkMicromapCreateInfoEXT::`size` greater than or equal to the memory size required by the build operation, as returned by vkGetMicromapBuildSizesEXT with `pBuildInfo` = `pInfos`[i]
- VUID-vkBuildMicromapsEXT-mode-07462
  The `mode` member of each element of `pInfos` **must** be a valid VkBuildMicromapModeEXT value
- VUID-vkBuildMicromapsEXT-dstMicromap-07463
  The `dstMicromap` member of any element of `pInfos` **must** be a valid VkMicromapEXT handle

- VUID-vkBuildMicromapsEXT-pInfos-07464
  For each element of pInfos its type member **must** match the value of VkMicromapCreateInfoEXT::type when its dstMicromap was created
- VUID-vkBuildMicromapsEXT-pInfos-07552
  For each element of pInfos, the buffer used to create its dstMicromap member **must** be bound to host-visible device memory
- VUID-vkBuildMicromapsEXT-pInfos-07553
  For each element of pInfos, all referenced addresses of pInfos[i].data.hostAddress **must** be valid host memory
- VUID-vkBuildMicromapsEXT-pInfos-07554
  For each element of pInfos, all referenced addresses of pInfos[i].triangleArray.hostAddress **must** be valid host memory
- VUID-vkBuildMicromapsEXT-micromapHostCommands-07555
  The VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands feature **must** be enabled
- VUID-vkBuildMicromapsEXT-pInfos-07556
  If pInfos[i].mode is VK_BUILD_MICROMAP_MODE_BUILD_EXT, and N is not 0, then all addresses between pInfos[i].scratchData.hostAddress and pInfos[i].scratchData.hostAddress + N - 1 **must** be valid host memory, where N is given by the value of VkMicromapBuildSizesInfoEXT::buildScratchSize returned from a call to vkGetMicromapBuildSizesEXT with an identical VkMicromapBuildInfoEXT structure
- VUID-vkBuildMicromapsEXT-pInfos-07557
  For each element of pInfos, the buffer used to create its dstMicromap member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildMicromapsEXT-dstMicromap-11667
  The range of memory backing the dstMicromap member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstMicromap member of any other element of pInfos, which is accessed by this command
- VUID-vkBuildMicromapsEXT-dstMicromap-11668
  The range of memory backing the dstMicromap member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command
- VUID-vkBuildMicromapsEXT-scratchData-11669
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any other element of pInfos, which is accessed by this command

Valid Usage (Implicit)

- VUID-vkBuildMicromapsEXT-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkBuildMicromapsEXT-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkBuildMicromapsEXT-pInfos-parameter
  `pInfos` **must** be a valid pointer to an array of `infoCount` valid VkMicromapBuildInfoEXT structures
- VUID-vkBuildMicromapsEXT-infoCount-arraylength
  `infoCount` **must** be greater than `0`
- VUID-vkBuildMicromapsEXT-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy or compact a VkMicromapEXT on the host, call:

WARNING This functionality is superseded by vkCmdCopyMicromapEXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapEXT(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyMicromapInfoEXT*                pInfo);
```

- `device` is the device which owns the micromaps.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `pInfo` is a pointer to a VkCopyMicromapInfoEXT structure defining the copy operation.

This command fulfills the same task as vkCmdCopyMicromapEXT but is executed by the host.

Valid Usage

- VUID-vkCopyMicromapEXT-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapEXT-buffer-07558
  The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-buffer-07559
  The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-micromapHostCommands-07560
  The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapEXT-buffer-07561
  The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-buffer-07562
  The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-src-11670
  The source micromap `src` **must** have been constructed prior to the execution of this command

Valid Usage (Implicit)

- VUID-vkCopyMicromapEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyMicromapEXT-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCopyMicromapEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyMicromapInfoEXT structure
- VUID-vkCopyMicromapEXT-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy host accessible VkMicromapEXT to a micromap, call:

WARNING	This functionality is superseded by vkCmdCopyMemoryToMicromapEXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMemoryToMicromapEXT(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyMemoryToMicromapInfoEXT*        pInfo);
```

- `device` is the device which owns `pInfo->dst`.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `pInfo` is a pointer to a VkCopyMemoryToMicromapInfoEXT structure defining the copy operation.

This command fulfills the same task as vkCmdCopyMemoryToMicromapEXT but is executed by the host.

This command **can** accept micromaps produced by either vkCmdCopyMicromapToMemoryEXT or vkCopyMicromapToMemoryEXT.

Valid Usage

- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07563
  `pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07564
  `pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToMicromapEXT-buffer-07565
  The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToMicromapEXT-micromapHostCommands-07566

The VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands feature **must** be enabled

- VUID-vkCopyMemoryToMicromapEXT-buffer-07567
  The buffer used to create pInfo->dst **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMemoryToMicromapEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parameter
  If deferredOperation is not VK_NULL_HANDLE, deferredOperation **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCopyMemoryToMicromapEXT-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkCopyMemoryToMicromapInfoEXT structure
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parent
  If deferredOperation is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To copy a VkMicromapEXT to host accessible memory, call:

WARNING	This functionality is superseded by vkCmdCopyMicromapToMemoryEXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapToMemoryEXT(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    const VkCopyMicromapToMemoryInfoEXT*        pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional VkDeferredOperationKHR to request deferral for this command.
- `pInfo` is a pointer to a VkCopyMicromapToMemoryInfoEXT structure defining the copy operation.

This command fulfills the same task as vkCmdCopyMicromapToMemoryEXT but is executed by the host.

This command produces the same results as vkCmdCopyMicromapToMemoryEXT, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but is compatible for use with either vkCmdCopyMemoryToMicromapEXT or vkCopyMemoryToMicromapEXT.

Valid Usage

- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapToMemoryEXT-buffer-07568
  The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07569
  `pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07570
  `pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMicromapToMemoryEXT-micromapHostCommands-07571
  The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapToMemoryEXT-buffer-07572
  The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMicromapToMemoryEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parameter

If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle

- VUID-vkCopyMicromapToMemoryEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkCopyMicromapToMemoryInfoEXT structure
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query VkMicromapEXT size parameters on the host, call:

WARNING This functionality is superseded by vkCmdWriteMicromapsPropertiesEXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkWriteMicromapsPropertiesEXT(
    VkDevice                                    device,
    uint32_t                                    micromapCount,
    const VkMicromapEXT*                        pMicromaps,
    VkQueryType                                 queryType,
    size_t                                      dataSize,
    void*                                       pData,
    size_t                                      stride);
```

- `device` is the device which owns the micromaps in `pMicromaps`.
- `micromapCount` is the count of micromaps for which to query the property.
- `pMicromaps` is a pointer to an array of existing previously built micromaps.
- `queryType` is a VkQueryType value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.

- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as vkCmdWriteMicromapsPropertiesEXT but is executed by the host.

Valid Usage

- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07502
  All micromaps in `pMicromaps` **must** have been constructed with VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT if `queryType` is VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT
- VUID-vkWriteMicromapsPropertiesEXT-queryType-07503
  `queryType` **must** be VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT, or VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10071
  If `queryType` is VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT or VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT then `stride` **must** be a multiple of the size of VkDeviceSize
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10072
  If `queryType` is VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT or VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT then `pData` **must** point to a VkDeviceSize
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-07576
  `dataSize` **must** be greater than or equal to `micromapCount`*`stride`
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07577
  The `buffer` used to create each micromap in `pMicromaps` **must** be bound to host-visible device memory
- VUID-vkWriteMicromapsPropertiesEXT-micromapHostCommands-07578
  The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07579
  The `buffer` used to create each micromap in `pMicromaps` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-11671
  All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command

Valid Usage (Implicit)

- VUID-vkWriteMicromapsPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parameter

pMicromaps **must** be a valid pointer to an array of micromapCount valid VkMicromapEXT handles

- VUID-vkWriteMicromapsPropertiesEXT-queryType-parameter
  queryType **must** be a valid VkQueryType value
- VUID-vkWriteMicromapsPropertiesEXT-pData-parameter
  pData **must** be a valid pointer to an array of dataSize bytes
- VUID-vkWriteMicromapsPropertiesEXT-micromapCount-arraylength
  micromapCount **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-arraylength
  dataSize **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parent
  Each element of pMicromaps **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

45.2.1. Displacement Micromap

A displacement micromap in an acceleration structure includes information in the VkAccelerationStructureTrianglesDisplacementMicromapNV to define a base triangle and displacement directions then uses displacement information encoded in the micromap to apply to those values to generate the final position.

Displacement Base Triangle

If displacementBiasAndScaleBuffer is provided the bias and scale are fetched from that buffer. If displacementBiasAndScaleBuffer is zero the bias and scale are assumed to be 0.0 and 1.0, respectively.

Given an input position from the geometry, the base position and displacement vector used by the displacement are computed by:

basePosition = inputPosition + displacementVector × bias

baseDisplacementVector = displacementVector × scale

The parameters of each micro-vertex are derived from a combination of the base triangle parameters extracted from the bottom-level acceleration structure, the barycentrics of that micro-vertex, and the displacement value fetched from the displacement micromap corresponding to that micro-vertex.

microVertexBasePosition = lerp(basePositions, microVertexBarycentrics)

microVertexDisplacementVector = lerp(displacementVectors, microVertexBarycentrics)

microVertexDisplacedPosition = microVertexBasePosition + microVertexDisplacementVector × micromapDisplacementValue

Displacement Micromap Encoding

Displacement amounts are stored in displacement blocks, each covering a triangular region of microvertices. Depending on the subdivision level and encoding format, one or more displacement blocks combine to store all displacement values for a given displacement micromap.

Displacement blocks are organized along a space filling curve within a displacement micromap if more than one block is required, then micro-vertices are organized along the same space filling curve within a displacement micromap.

The space-filling curve is purely hierarchical with recursive splitting, similar to that for opacity micromaps but operating on vertices instead of triangles. To maintain that the hierarchical ordering is contiguous while keeping continuous winding, some triangles are flipped and wound differently.

The VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV format is an uncompressed, packed format which covers 64 microtriangles (subdivision level 3) in a block. The block contains 45 displacement values encoded as 11 bit unorm values and stored tightly packed in the vertex order described above, occupying 495 bits. This is followed by 15 unused bits then 2 reserved bits which **must** be 0. If this block is used to store displacement for a subdivision level below 3 the later unused values are ignored.

Section	Field	Entries	Bits per entry	Starting bit offset
Displacement amounts	Vertex 0 - 44	45	11	0
Unused		1	15	495
Reserved	Must be 0	1	2	510

The VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV and VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV formats store displacements in a compressed form to save space. Both formats use the same compression algorithm, differing in the number of bits used in the different fields.

The compression algorithm works by starting with fully specified anchor vertices, then for each level, predicting the value for the displacement and encoding the correction for that value, using fewer bits for each level of subdivision.

When adding a vertex in the recursive subdivision process between two adjacent displacement values, the predicted value is given by the rounded average of the two adjacent values as integers:

prediction = (A + B + 1) / 2

The decoded value after applying the correction is given by:

decoded = prediction + (SignExtend(correction) << shift)

where correction is given by the corrections field for a given level and micro vertex and shift is given by the shifts field indexed from the level then by 4 values, selected from interior or the 3 edges in vertex order in that order.

The bit encoding for VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV

Section	Field	Entries	Bits per entry	Starting bit offset
Anchors	Vertex 0 - 2	3	11	0
Corrections	Level 1	3	11	33
	Level 2	9	11	66
	Level 3	30	10	165
	Level 4	108	5	465
Unused		1	1	1005
Shifts	Level 4	4	3	1006
	Level 3	4	1	1018
Reserved	Must be 0	1	2	1022

The bit encoding for VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV

Section	Field	Entries	Bits per entry	Starting bit offset
Anchors	Vertex 0 - 2	3	11	0
Corrections	Level 1	3	11	33
	Level 2	9	8	66
	Level 3	30	4	138
	Level 4	108	2	258
	Level 5	408	1	474
Unused		1	88	882
Shifts	Level 5	4	4	970
	Level 4	4	4	986
	Level 3	4	3	1002
	Level 2	4	2	1014
Reserved	Must be 0	1	2	1022

Chapter 46. Ray Traversal

The ray traversal process identifies and handles intersections between a ray and geometries in an acceleration structure.

Ray traversal cannot be started by a Vulkan API command directly - a shader **must** execute `OpRayQueryProceedKHR` or a pipeline trace ray instruction . When the `rayTracingPipeline` feature is enabled, `OpTraceRayKHR` **can** be used for ray tracing in a ray tracing pipeline. When the `rayQuery` feature is enabled, `OpRayQueryProceedKHR` **can** be used in any shader stage.

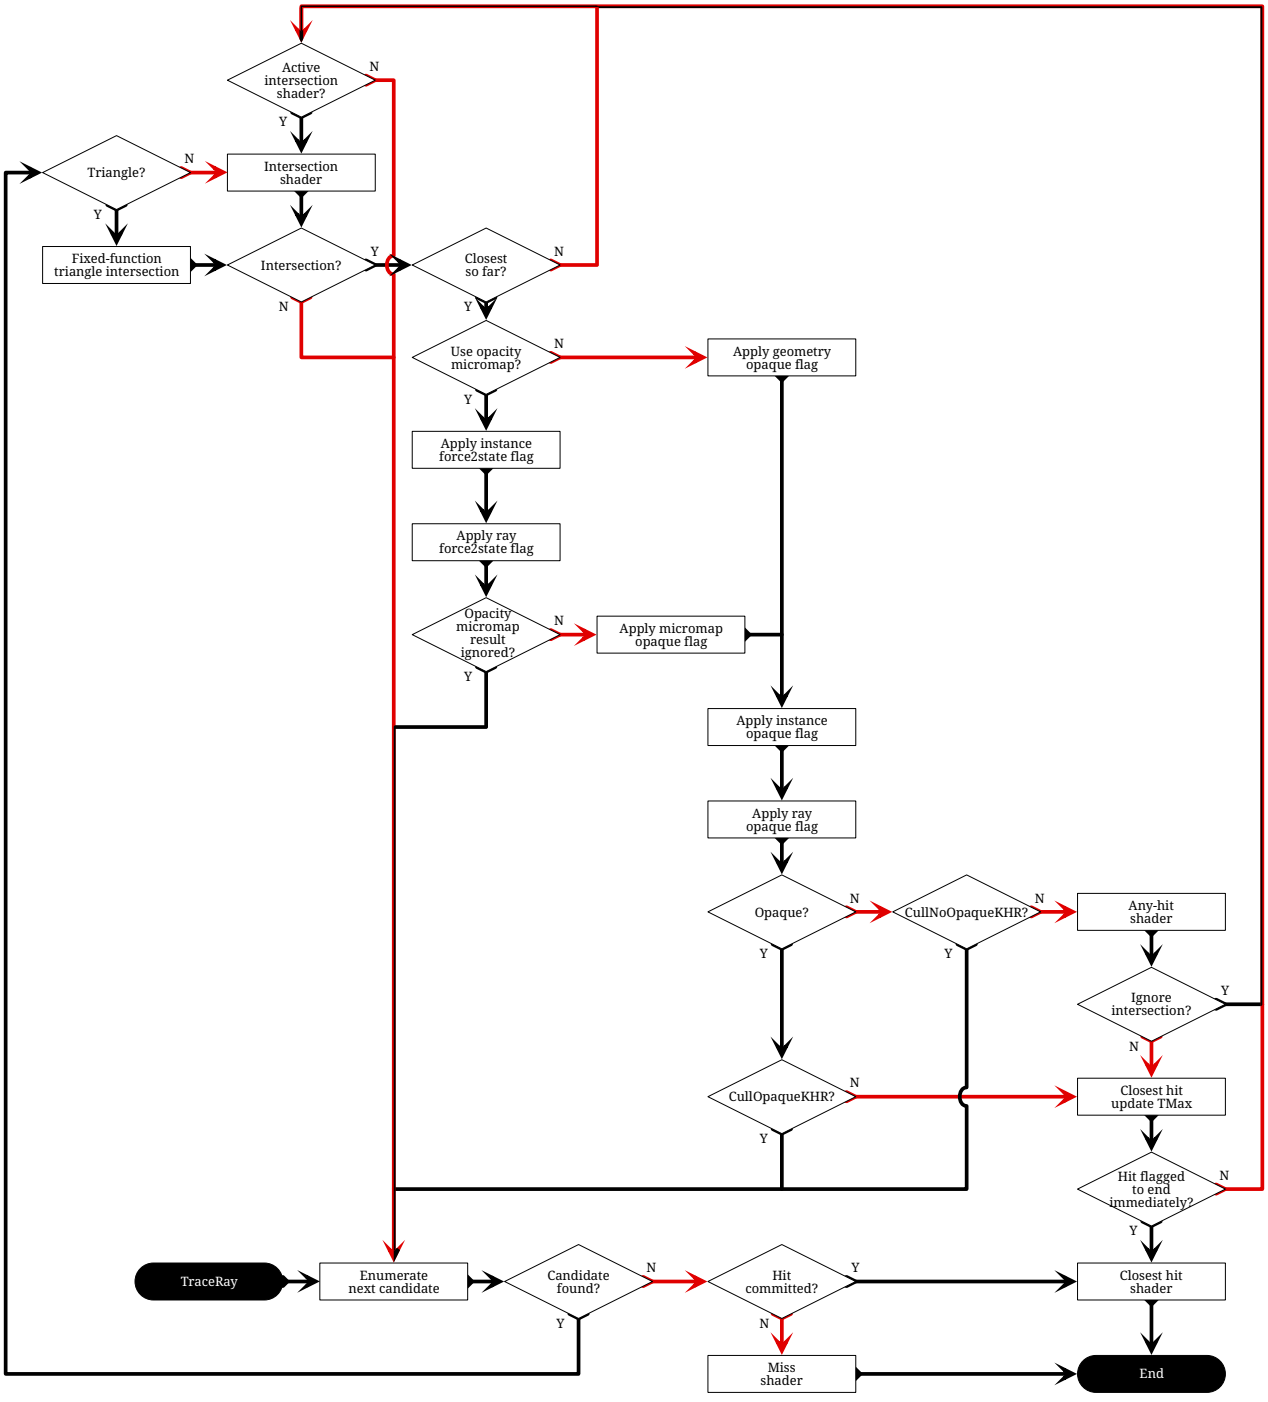

Figure 36. Ray tracing traversal

46.1. Ray Intersection Candidate Determination

Once tracing begins, rays are first tested against instances in a top-level acceleration structure. A ray that intersects an instance will be transformed into the space of the instance to continue traversal within that instance; therefore the transform matrix stored in the instance **must** be invertible.

In case multiple instances are intersected by a ray, the ray transformation into the space of the instance is invariant under the order in which these instances are encountered in the top-level acceleration structure.

NOTE	Applying multiple forward and reverse transforms to a ray to transition from one instance to another could result in accumulated errors. Thus an implementation should behave as if the ray is transformed from the origin for each instance independently.

Next, rays are tested against geometries in a bottom-level acceleration structure to determine if a hit occurred between them, initially based only on their geometric properties (i.e. their vertices). The implementation performs similar operations to that of rasterization, but with the effective viewport determined by the parameters of the ray, and the geometry transformed into a space determined by that viewport.

The vertices of each primitive are transformed from acceleration structure space `as` to ray space `r` according to the ray origin and direction as follows:

$$\begin{pmatrix} x_r \\ y_r \\ z_r \end{pmatrix} = \begin{pmatrix} a_x^2(1-c)+c & a_x a_y(1-c)-sa_z & a_x a_z(1-c)+sa_y \\ a_x a_y(1-c)+sa_z & a_y^2(1-c)+c & a_y a_z(1-c)-sa_x \\ a_x a_z(1-c)-sa_y & a_y a_z(1-c)+sa_x & a_z^2(1-c)+c \end{pmatrix} \begin{pmatrix} x_{as}-o_x \\ y_{as}-o_y \\ z_{as}-o_z \end{pmatrix}$$

$\mathbf{a}$ is the axis of rotation from the unnormalized ray direction vector $\mathbf{d}$ to the axis vector $\mathbf{k}$:

$$\mathbf{a} = \begin{cases} \dfrac{\mathbf{d}\times\mathbf{k}}{\|\mathbf{d}\times\mathbf{k}\|} & \text{if } \|\mathbf{d}\times\mathbf{k}\| \neq 0 \\ \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix} & \text{if } \|\mathbf{d}\times\mathbf{k}\| = 0 \end{cases}$$

s and c are the sine and cosine of the angle of rotation about $\mathbf{a}$ from $\mathbf{d}$ to $\mathbf{k}$:

$$c = \frac{\mathbf{d}\cdot\mathbf{k}}{\|\mathbf{d}\|}$$
$$s = \sqrt{1-c^2}$$

$\mathbf{k}$ is the unit vector:

$$\mathbf{k} = \begin{pmatrix} 0 \\ 0 \\ -1 \end{pmatrix}$$

o and **d** are the ray origin and unnormalized direction, respectively; the vector described by x_{as}, y_{as}, and z_{as} is any position in acceleration structure space; and the vector described by x_r, y_r, and z_r is the same position in ray space.

An *intersection candidate* is a unique point of intersection between a ray and a geometric primitive. For any primitive that has within its bounds a position $\mathbf{xyz_{as}}$ such that

$$\begin{aligned} x_r &= 0 \\ y_r &= 0 \\ t_{min} < -\frac{z_r}{\|\mathbf{d}\|} &< t_{max} \qquad \text{if the primitive is a triangle,} \\ t_{min} \leq -\frac{z_r}{\|\mathbf{d}\|} &\leq t_{max} \qquad \text{otherwise} \end{aligned}$$

(where $t = -\frac{z_r}{\|\mathbf{d}\|}$), an intersection candidate exists.

Triangle primitive bounds consist of all points on the plane formed by the three vertices and within the bounds of the edges between the vertices, subject to the watertightness constraints below. AABB primitive bounds consist of all points within an implementation-defined bound which includes the specified box.

NOTE The bounds of the AABB including all points internal to the bound implies that a ray started within the AABB will hit that AABB.

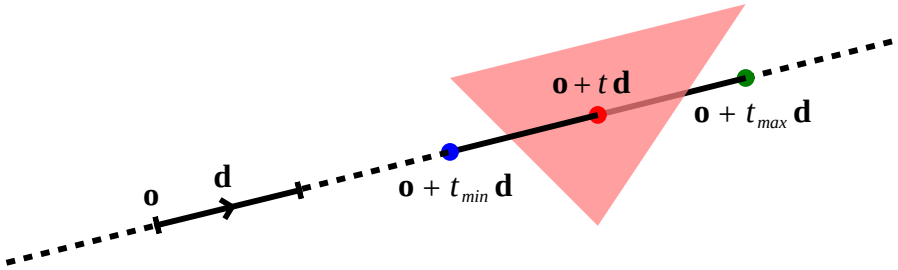

Figure 37. Ray intersection candidate

The determination of this condition is performed in an implementation specific manner, and **may** be performed with floating-point operations. Due to the complexity and number of operations involved, inaccuracies are expected, particularly as the scale of values involved begins to diverge. Implementations **should** take efforts to maintain as much precision as possible.

NOTE One very common case is when geometries are close to each other at some distance from the origin in acceleration structure space, where an effect similar to "z-fighting" is likely to be observed. Applications can mitigate this by ensuring their detailed geometries remain close to the origin.

Another likely case is when the origin of a ray is set to a position on a previously intersected surface, and its t_{min} is zero or near zero; an intersection may be detected

on the emitting surface. This case can usually be mitigated by offsetting t_{min} slightly.

For a motion primitive or a motion instance, the positions for intersection are evaluated at the time specified in the `time` parameter to `OpTraceRayMotionNV` by interpolating between the two endpoints as specified for the given motion type. If a motion acceleration structure is traced with `OpTraceRayKHR`, it behaves as a `OpTraceRayMotionNV` with `time` of 0.0.

In the case of AABB geometries, implementations **may** increase their size in an acceleration structure in order to mitigate precision issues. This **may** result in false positive intersections being reported to the application.

For triangle intersection candidates, the b and c barycentric coordinates on the triangle where the above condition is met are made available to future shading. If the ray was traced with a pipeline trace ray instruction, these values are available as a vector of 2 32-bit floating-point values in the `HitAttributeKHR` storage class. These values are included in the triangle intersection candidate.

For linear swept sphere intersection candidates, the ray t value along with a single u parameter suffice to identify the hit. The u value specifies the position of the hit along the LSS midsection, within the range [0, 1]. If the u value is exactly `0` or `1`, then the intersection occurred on the respective endcap `0`, or endcap `1`. For pure sphere primitives, u is always set to 0. LSS primitives may be self-enclosing if one of the endcap spheres is completely enclosed within the other, and both endcaps are enabled. In these instances, only the outer of the two endcaps is intersection tested, and u will be returned as `0` or `1` accordingly. For rays that originate inside an LSS or sphere primitive, or enter through an absent endcap, no intersections will be reported.

Once an intersection candidate is determined, it proceeds through the following operations, in order:

1. Ray Intersection Culling
2. Ray Intersection Confirmation
3. Ray Closest Hit Determination
4. Ray Result Determination

The sections below describe the exact details of these tests. There is no ordering guarantee between operations performed on different intersection candidates.

46.1.1. Watertightness

For a set of triangles with identical transforms, within a single instance:

- Any set of two or more triangles where all triangles have one vertex with an identical position value, that vertex is a *shared vertex*.
- Any set of two triangles with two shared vertices that were specified in the same winding order in each triangle have a *shared edge* defined by those vertices.

A *closed fan* is a set of three or more triangles where:

- All triangles in the set have the same shared vertex as one of their vertices.

- All edges that include the above vertex are shared edges.
- All above shared edges are shared by exactly two triangles from the set.
- No two triangles in the set intersect, except at shared edges.
- Every triangle in the set is joined to every other triangle in the set by a series of the above shared edges.

Implementations **should** not double-hit or miss when a ray intersects a shared edge, or a shared vertex of a closed fan.

NOTE	Because of the complexity of a definition of watertightness the language above does not list a **must** requirement but it is expected and tested that implementations will perform watertight intersection tests.

For LSS primitives, connected LSS might overlap not only at the shared vertex endcap but also along their midsections. This applies even if an LSS disables the shared endcap. As such, there is no clear equivalent edge or vertex that could deterministically map a hit to just one of the LSS. So, unlike the ray-triangle intersection, the ray-LSS intersection provides no single-hit guarantee for LSS, including those that share a vertex causing the LSS to overlap. However, as with triangles, LSS intersection still returns the closest hit.

46.2. Ray Intersection Culling

Candidate intersections go through several phases of culling before confirmation as an actual hit. There is no particular ordering dependency between the different culling operations.

46.2.1. Ray Primitive Culling

If the `rayTraversalPrimitiveCulling` or `rayQuery` features are enabled, the `SkipTrianglesKHR` and `SkipAABBsKHR` ray flags **can** be specified when tracing a ray. `SkipTrianglesKHR` and `SkipAABBsKHR` are mutually exclusive. `SkipTrianglesKHR` is also mutually exclusive with `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR`.

If `SkipTrianglesKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs. If VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR was included in the pipeline, traversal with pipeline trace ray instructions will all behave as if `SkipTrianglesKHR` was included in their `Ray Flags` operand.

If `SkipAABBsKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with an AABB primitive, the intersection is dropped, and no further processing of this intersection occurs. If VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR was included in the pipeline, traversal with pipeline trace ray instructions will all behave as if `SkipAABBsKHR` was included in their `Ray Flags` operand.

46.2.2. Ray Mask Culling

Instances **can** be made invisible to particular rays based on the value of

VkAccelerationStructureInstanceKHR::`mask` used to add that instance to a top-level acceleration structure, and the `Cull Mask` parameter used to trace the ray.

For the instance which is intersected, if `mask` & `Cull Mask` == 0, the intersection is dropped, and no further processing occurs.

46.2.3. Ray Face Culling

As in polygon rasterization, one of the stages of ray traversal is to determine if a triangle primitive is back- or front-facing, and primitives **can** be culled based on that facing.

If the intersection candidate is with an AABB primitive, this operation is skipped.

Determination

When a ray intersects a triangle primitive, the order that vertices are specified for the polygon affects whether the ray intersects the front or back face. Front or back facing is determined in the same way as they are for rasterization, based on the sign of the polygon's area but using the ray space coordinates instead of framebuffer coordinates. One way to compute this area is:

$$a = -\frac{1}{2}\sum_{i=0}^{n-1} x_r^i y_r^{i \oplus 1} - x_r^{i \oplus 1} y_r^i$$

where x_r^i and y_r^i are the x and y ray space coordinates of the ith vertex of the n-vertex polygon (vertices are numbered starting at zero for the purposes of this computation) and i ⊕ 1 is (i + 1) mod n.

By default, if a is negative then the intersection is with the front face of the triangle, otherwise it is with the back face. If VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR is included in VkAccelerationStructureInstanceKHR::`flags` for the instance containing the intersected triangle, this determination is reversed. Additionally, if a is 0, the intersection candidate is treated as not intersecting with any face, irrespective of the sign.

> **NOTE** In a left-handed coordinate system, an intersection will be with the front face of a triangle if the vertices of the triangle, as defined in index order, appear from the ray's perspective in a clockwise rotation order. VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR was previously annotated as VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR because of this.

If the ray was traced with a pipeline trace ray instruction, the `HitKindKHR` built-in is set to `HitKindFrontFacingTriangleKHR` if the intersection is with front-facing geometry, and `HitKindBackFacingTriangleKHR` if the intersection is with back-facing geometry, for shader stages considering this intersection. For LSS or sphere intersections, the `HitKindKHR` built-in is set to `HitKindLssPrimitiveNV` or `HitKindSpherePrimitiveNV` respectively.

If the ray was traced with `OpRayQueryProceedKHR`, `OpRayQueryGetIntersectionFrontFaceKHR` will return true for intersection candidates with front faces, or false for back faces.

Culling

If CullBackFacingTrianglesKHR was included in the Ray Flags parameter of the ray trace instruction, and the intersection is determined as with the back face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

If CullFrontFacingTrianglesKHR was included in the Ray Flags parameter of the ray trace instruction, and the intersection is determined as with the front face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

This culling is disabled if VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR was included in VkAccelerationStructureInstanceKHR::flags for the instance which the intersected geometry belongs to.

Intersection candidates that have not intersected with any face (a == 0) are unconditionally culled, irrespective of ray flags and geometry instance flags.

The CullBackFacingTrianglesKHR and CullFrontFacingTrianglesKHR Ray Flags are mutually exclusive.

46.2.4. Ray Opacity Culling

Each geometry in the acceleration structure **may** be considered either opaque or non-opaque. Opaque geometries continue through traversal as normal, whereas non-opaque geometries need to be either confirmed or discarded by shader code. Intersection candidates **can** also be culled based on their opacity.

Determination

If the geometry includes an opacity micromap, the intersection candidate is determined as opaque or non-opaque as described in Ray Opacity Micromap. If the result of the opacity micromap operation is *ignored*, the candidate is considered neither opaque nor non-opaque and execution instead proceeds with enumerating the next candidate. Otherwise, the intersection candidate is determined as opaque if VK_GEOMETRY_OPAQUE_BIT_KHR was included in the VkGeometryNV::flags or VkAccelerationStructureGeometryKHR::flags when the geometry it intersected with was built.

Setting VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR in VkAccelerationStructureInstanceKHR::flags will override all non-opaque geometries in the instance to be considered opaque. Similarly, setting VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR will override all opaque geometries in the instance to be considered non-opaque.

Including OpaqueKHR in the Ray Flags parameter when tracing a ray or initializing a ray query object overrides all non-opaque geometries to behave as if they are opaque, ignoring any build instance flag overrides. Similarly, NoOpaqueKHR overrides all opaque geometries to behave as if they are non-opaque.

Culling

If CullOpaqueKHR is included in the Ray Flags parameter when tracing a ray or initializing a ray

query object, an intersection with geometry considered to be opaque is dropped and execution proceeds with enumerating the next candidate. Similarly, `CullNoOpaqueKHR` drops intersections with geometry considered to be non-opaque.

The `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR` `Ray Flags` are mutually exclusive.

Ray Query

The opacity of geometries is determined as described above by `OpRayQueryProceedKHR` when using it to trace rays.

Intersection candidates with AABB geometry cause proceed to return `true`, incomplete traversal, in order for the shader to confirm the hit. To query the opacity that was determined by proceed, `OpRayQueryGetIntersectionCandidateAABBOpaqueKHR` **can** be used.

Intersection candidates with triangle geometry that cause proceed to return `true` have been determined to be non-opaque. Intersection candidates with opaque triangle geometry continue execution without causing proceed to return.

46.2.5. Ray Opacity Micromap

A VK_GEOMETRY_TYPE_TRIANGLES_KHR or VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMDX geometry in the acceleration structure **may** have an opacity micromap associated with it to give finer-grained opacity information.

If the intersection candidate is with a geometry with an associated opacity micromap and VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR is not set in its instance then the micromap is used to determine geometry opacity instead of the VK_GEOMETRY_OPAQUE_BIT_KHR flag in the geometry.

Using an acceleration structure that contains opacity micromap data requires the shader or pipeline to declare that it does so. For traversals performed by pipeline trace ray instructions the pipeline **must** be created with VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR. For traversals performed by `OpRayQueryProceedKHR` where VK_EXT_opacity_micromap is not enabled, the shader **must** declare the `OpacityMicromapIdKHR` execution mode with its specialization-constant operand equal to VK_TRUE. If VK_EXT_opacity_micromap is enabled, `OpRayQueryProceedKHR` traversal always uses opacity micromap data without the `OpacityMicromapIdKHR` execution mode being declared. This applies whenever VK_EXT_opacity_micromap is enabled, including when VK_KHR_opacity_micromap is enabled as well. A shader executed in a ray tracing pipeline that itself performs ray query operations is subject to both requirements independently, each applying only to the traversal it governs.

NOTE

These declarations are requirements, not a means of disabling opacity micromaps. Traversing an acceleration structure that contains opacity micromap data without the applicable declaration has undefined results, and is not equivalent to ignoring the opacity micromap data. To traverse such an acceleration structure without applying its opacity micromaps, set

VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR in the instance instead.

The opacity information in the micromap object is accessed using the candidate intersection u and v coordinates. The integer u and v are computed from □u□ + □v□, clamping □u□ as needed to keep the sum less than or equal to 1 << subdivisionlevel. These values are mapped into a linear index with a space filling curve which is defined recursively by traversing into the sub-triangle nearest vertex 0, then the middle triangle with ordering flipped, then nearest vertex 1, then nearest vertex 2 with ordering flipped.

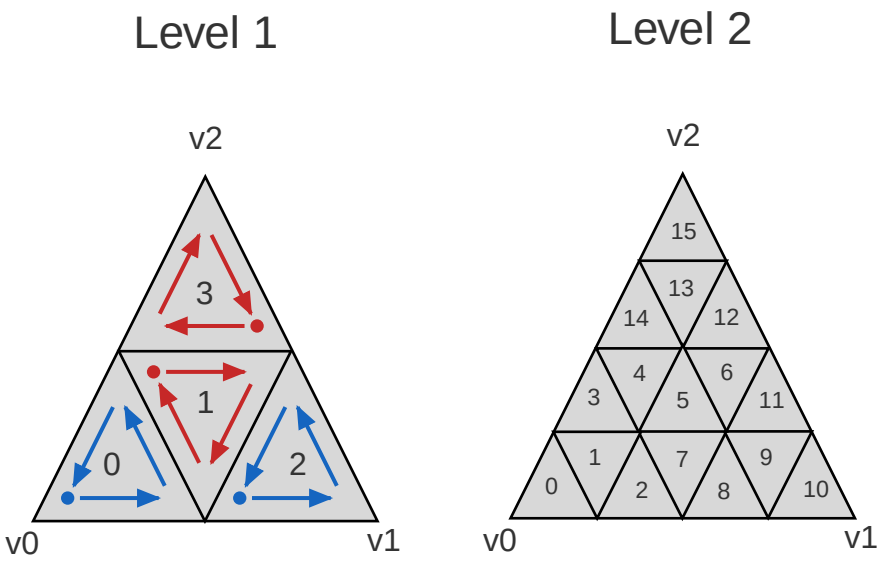

Figure 38. Example ordering for micromap data

Caption

In the ordering for micromap data diagram, the dot in each sub-triangle indicates the entry point of the curve and the arrows show the traversal order through its children at the next subdivision level.

NOTE

This encoding is spatially coherent, purely hierarchical, and allows a bit-parallel conversion between barycentric address and index values.

See the Reference Code implementing this mapping.

The result of the opacity micromap lookup and operations is to treat the intersection as opaque, non-opaque, or ignored.

If the associated opacity micromap has format VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR, each element of the micromap is represented by a single bit at the index derived above.

If the associated opacity micromap has format VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, each element is represented by a two bit value at the index derived above.

If the micromap was built with VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR and has a format of

VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, the implementation **may** substitute any element's state value with VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR or VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR. The application **should** accept the hit if the element was built with VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR and ignore the hit if the element was built with VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR.

The implementation, on an identically created instance and device, **must** perform any lossy substitutions invariantly with respect to acceleration structures and micromaps constructed with an equivalent shape and data.

The final result of the opacity micromap lookup operation is determined as shown in the following table based on the format and retrieved value from the micromap:

4 State value	2 State value	Special index value	Result
0	0	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR	Ignored
1	1	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR	Opaque
2		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR	Non-opaque
3		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR	Non-opaque

Unless the VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR flag is included in the instance flags of the candidate intersection or `ForceOpacityMicromap2StateEXT` is included in the ray flags on the ray, in which case the opacity micromap information is interpreted in 2 state override mode , including if lossy substitutions were made, and the final result of the opacity lookup operation is instead determined as shown in the following table:

4 State value	2 State value	Special index value	Result
0	0	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR	Ignored
1	1	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR	Opaque

4 State value	2 State value	Special index value	Result
2		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR	Ignored
3		VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR	Opaque

NOTE The Force2state override never evaluates to a *non-opaque* result, even when lossy substitutions are made. While lossy substitutions can affect the final result of Force2state, this behavior preserves the invariance guarantees required for lossy substitutions.

If the result of the micromap lookup is to treat the intersection candidate as ignored, no further processing of that candidate is done and execution proceeds with enumerating the next candidate.

46.3. Ray Intersection Confirmation

Depending on the opacity of intersected geometry and whether it is a triangle or an AABB, candidate intersections are further processed to determine the eventual hit result. Candidates generated from AABB intersections run through the same confirmation process as triangle hits.

For ray queries, the candidate intersection and committed intersection are distinct states. A candidate intersection is available only while `OpRayQueryProceedKHR` has returned `true`, and identifies the intersection currently requiring shader evaluation. Calling `OpRayQueryGenerateIntersectionKHR` or `OpRayQueryConfirmIntersectionKHR` confirms a hit for Ray Closest Hit Determination, but does not by itself complete traversal. If that confirmed hit becomes the current closest hit, it becomes the ray query's committed intersection. The committed intersection is the closest recorded hit so far, **can** be queried before traversal is complete, and **may** be replaced by a later confirmed hit that is closer.

46.3.1. AABB Intersection Candidates

For an intersection candidate with an AABB geometry generated by Ray Intersection Candidate Determination, shader code is executed to determine whether any hits should be reported to the traversal infrastructure; no further processing of this intersection candidate occurs. The occurrence of an AABB intersection candidate does not guarantee the ray intersects the application-provided AABB. To avoid propagating false intersections the application **should** verify the intersection candidate before reporting any hits and only report intersections within the bounds of the desired geometry. Reporting an intersection outside the AABB either through the implementation giving a conservative bound or reporting a t out of range is legal but **may** result in unpredictable closest hit results.

If the ray was traced with a pipeline trace ray instruction, an intersection shader is invoked from the Shader Binding Table according to the specified indexing for the intersected geometry. If this

shader calls OpReportIntersectionKHR, a new intersection candidate is generated as described below. If the intersection shader is VK_SHADER_UNUSED_KHR (which is only allowed for a zero shader group) then no further processing of the intersection candidate occurs.

Each new candidate generated as a result of this processing is a generated intersection candidate from the intersection with AABB geometry, with a t value equal to the Hit parameter of the OpReportIntersectionKHR instruction. The generated intersection candidate includes the values stored in variables with the HitAttributeKHR storage class at the time OpReportIntersectionKHR is executed. The new generated candidate is then independently run through Ray Intersection Confirmation as a generated intersection.

If the ray was traced with OpRayQueryProceedKHR, control is returned to the shader which executed OpRayQueryProceedKHR, returning true. The resulting ray query has a candidate intersection type of RayQueryCandidateIntersectionAABBKHR. OpRayQueryGenerateIntersectionKHR **can** be called to report a generated hit for Ray Closest Hit Determination. If that hit becomes the current closest hit, the ray query's committed intersection type is RayQueryCommittedIntersectionGeneratedKHR. Further ray query processing **can** be continued by executing OpRayQueryProceedKHR with the same ray query, or intersection **can** be terminated with OpRayQueryTerminateKHR. Unlike rays traced with a pipeline trace ray instruction, candidates generated in this way skip generated intersection candidate confirmation; applications **should** make this determination before generating the intersection.

This operation **may** be executed multiple times for the same intersection candidate.

46.3.2. Triangle and Generated Intersection Candidates

For triangle and generated intersection candidates, additional shader code **may** be executed based on the intersection's opacity.

If the intersection is opaque, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

For non-opaque intersection candidates, shader code is executed to determine whether a hit occurred or not.

If the ray was traced with a pipeline trace ray instruction, an any-hit shader is invoked from the Shader Binding Table according to the specified indexing. If this shader calls OpIgnoreIntersectionKHR, the candidate is dropped and no further processing of the candidate occurs. If the any-hit shader identified is VK_SHADER_UNUSED_KHR, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

If the ray was traced with OpRayQueryProceedKHR, control is returned to the shader which executed OpRayQueryProceedKHR, returning true. As only triangle candidates participate in this operation with ray queries, the resulting candidate intersection type is always RayQueryCandidateIntersectionTriangleKHR. OpRayQueryConfirmIntersectionKHR **can** be called on the ray query to confirm the candidate as a hit for Ray Closest Hit Determination. If that hit becomes the current closest hit, the ray query's committed intersection type is RayQueryCommittedIntersectionTriangleKHR. Further ray query processing **can** be continued by executing OpRayQueryProceedKHR with the same ray query, or intersection **can** be terminated with OpRayQueryTerminateKHR. If OpRayQueryConfirmIntersectionKHR has not been executed, the candidate is

dropped and no further processing of the candidate occurs.

This operation **may** be executed multiple times for the same intersection candidate unless VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR was specified for the intersected geometry.

46.4. Ray Closest Hit Determination

Unless the ray was traced with the `TerminateOnFirstHitKHR` ray flag, the implementation **must** track the closest confirmed hit until all geometries have been tested and either confirmed or dropped.

After an intersection candidate is confirmed, its t value is compared to t_{max} to determine which intersection is closer, where t is the parametric distance along the ray at which the intersection occurred.

- If $t < t_{max}$, t_{max} is set to t and the candidate is set as the current closest hit.
- If $t > t_{max}$, the candidate is dropped and no further processing of that candidate occurs.
- If $t = t_{max}$, the candidate **may** be set as the current closest hit or dropped.

For ray queries, the current closest hit is the current committed intersection. When a confirmed hit is set as the current closest hit, values returned by `OpRayQueryGetIntersection*KHR` instructions with `Intersection` set to `RayQueryCommittedIntersectionKHR` are updated to describe that hit. If no closest hit has been identified, the committed intersection type is `RayQueryCommittedIntersectionNoneKHR`.

If `TerminateOnFirstHitKHR` was included in the `Ray Flags` used to trace the ray, once the first hit is confirmed, the ray trace is terminated.

46.5. Ray Result Determination

Once all candidates have finished processing the prior stages, or if the ray is forcibly terminated, the final result of the ray trace is determined.

If a closest hit result was identified by Ray Closest Hit Determination, a closest hit has occurred, otherwise the final result is a miss.

For rays traced with pipeline trace ray instructions which **can** invoke a closest hit shader, if a closest hit result was identified, a closest hit shader is invoked from the Shader Binding Table according to the specified indexing for the intersected geometry. Control returns to the shader that executed the pipeline trace ray instruction once this shader returns. This shader is skipped if either the ray flags included `SkipClosestHitShaderKHR`, or if the closest hit shader identified is VK_SHADER_UNUSED_KHR.

For rays traced with a pipeline trace ray instruction where no hit result was identified, the miss shader identified by the `Miss Index` parameter of the instruction is invoked. Control returns to the shader that executed the pipeline trace ray instruction once this shader returns. This shader is skipped if the miss shader identified is VK_SHADER_UNUSED_KHR.

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed

`OpRayQueryProceedKHR`, returning `false`. No candidate intersection is available after this result is returned. If a closest hit was identified by Ray Closest Hit Determination, the ray query's committed intersection is the final result and has a committed intersection type of `RayQueryCommittedIntersectionGeneratedKHR` or `RayQueryCommittedIntersectionTriangleKHR`. If no closest hit was identified, the committed intersection type will be `RayQueryCommittedIntersectionNoneKHR`.

No further processing of a ray query occurs after this result is determined.

Chapter 47. Ray Tracing

Ray tracing uses a separate rendering pipeline from both the graphics and compute pipelines (see Ray Tracing Pipeline).

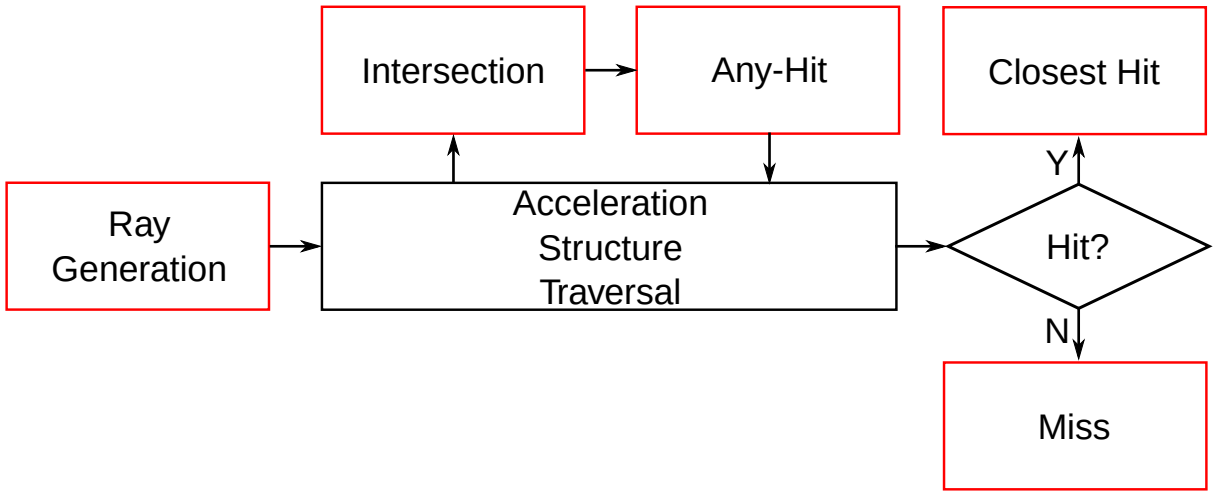

Figure 39. Ray tracing pipeline execution

Caption

Interaction between the different shader stages in the ray tracing pipeline

Within the ray tracing pipeline, a pipeline trace ray instruction **can** be called to perform a ray traversal that invokes the various ray tracing shader stages during its execution. The relationship between the ray tracing pipeline object and the geometries present in the acceleration structure traversed is passed into the ray tracing command in a VkBuffer object known as a *shader binding table*. `OpExecuteCallableKHR` can also be used in ray tracing pipelines to invoke a callable shader.

During execution, control alternates between scheduling and other operations. The scheduling functionality is implementation-specific and is responsible for workload execution. The shader stages are programmable. *Traversal*, which refers to the process of traversing acceleration structures to find potential intersections of rays with geometry, is fixed function.

The programmable portions of the pipeline are exposed in a single-ray programming model, with each invocation handling one ray at a time. Memory operations **can** be synchronized using standard memory barriers. The `Workgroup` scope and variables with a storage class of `Workgroup` **must** not be used in the ray tracing pipeline.

47.1. Shader Call Instructions

A *shader call* is an instruction which **may** cause execution to continue elsewhere by creating one or more invocations that execute a different shader stage.

The following table lists all shader call instructions and which stages each one **can** directly call.

Instruction	Intersection	Any-Hit	Closest Hit	Miss	Callable
OpTraceRayKHR	X	X	X	X	
OpTraceRayMotionNV	X	X	X	X	
OpReportIntersectionKHR		X			
OpExecuteCallableKHR					X
OpHitObjectTraceRayNV	X	X			
OpHitObjectTraceRayMotionNV	X	X			
OpHitObjectExecuteShaderNV			X	X	
OpHitObjectExecuteShaderEXT			X	X	
OpHitObjectTraceRayEXT	X	X			
OpHitObjectReorderExecuteShaderEXT			X	X	
OpHitObjectTraceReorderExecuteEXT	X	X	X	X	
OpHitObjectTraceRayMotionEXT	X	X			
OpHitObjectTraceMotionReorderExecuteEXT	X	X	X	X	

The invocations created by shader call instructions are grouped into subgroups by the implementation. Those subgroups **may** be unrelated to the subgroup of the parent invocation.

Pipeline trace ray instructions **can** be used recursively; invoked shaders **can** themselves execute pipeline trace ray instructions, to a maximum depth defined by the `maxRecursionDepth` or `maxRayRecursionDepth` limit.

Shaders directly invoked from the API always have a recursion depth of 0; each shader executed by a pipeline trace ray instruction has a recursion depth one higher than the recursion depth of the shader which invoked it. Applications **must** not invoke a shader with a recursion depth greater than the value of `maxRecursionDepth` or `maxPipelineRayRecursionDepth` specified in the pipeline.

There is no explicit recursion limit for other shader call instructions which may recurse (e.g. `OpExecuteCallableKHR`) but there is an upper bound determined by the stack size.

An *invocation repack instruction* is a ray tracing instruction where the implementation **may** change the set of invocations that are executing. When a repack instruction is encountered, the invocation is suspended and a new invocation begins and executes the instruction. After executing the repack

instruction (which **may** result in other ray tracing shader stages executing) the new invocation ends and the original invocation is resumed, but it **may** be resumed in a different subgroup or at a different SubgroupLocalInvocationId within the same subgroup.

The OpTraceRayKHR, OpTraceRayMotionNV, OpReorderThreadWithHintNV, OpReorderThreadWithHitObjectNV, OpReorderThreadWithHintEXT, OpReorderThreadWithHitObjectEXT, OpHitObjectTraceRayEXT, OpHitObjectReorderExecuteShaderEXT, OpHitObjectTraceReorderExecuteEXT, OpHitObjectTraceRayMotionEXT, OpHitObjectTraceMotionReorderExecuteEXT, OpReportIntersectionKHR, and OpExecuteCallableKHR instructions are invocation repack instructions.

The invocations that are executing before a shader call instruction, after the instruction, or are created by the instruction, are shader-call-related.

If the implementation changes the composition of subgroups, the values of SubgroupSize, SubgroupLocalInvocationId, SMIDNV, WarpIDNV, and builtin variables that are derived from them (SubgroupEqMask, SubgroupGeMask, SubgroupGtMask, SubgroupLeMask, SubgroupLtMask) **must** be changed accordingly by the invocation repack instruction. The application **must** use Volatile semantics on these BuiltIn variables when used in the ray generation, closest hit, miss, intersection, and callable shaders. Similarly, the application **must** use Volatile semantics on any RayTmaxKHR decorated BuiltIn used in an intersection shader.

Subgroup operations are permitted in the programmable ray tracing shader stages. However, shader call instructions place a bound on where results of subgroup instructions or subgroup-scoped instructions that execute the dynamic instance of that instruction are potentially valid. For example, care **must** be taken when using the result of a ballot operation that was computed before an invocation repack instruction, after that repack instruction. The ballot **may** be incorrect as the set of invocations could have changed.

NOTE

While the SubgroupSize built-in is required to be declared Volatile, its value will never change unless VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT is set on pipeline creation, as without that bit set, its value is required to match that of VkPhysicalDeviceSubgroupProperties::subgroupSize.

For clock operations, the value of a Subgroup scoped OpReadClockKHR read before the dynamic instance of a repack instruction **should** not be compared to the result of that clock instruction after the repack instruction.

When a ray tracing shader executes a dynamic instance of an invocation repack instruction which results in another ray tracing shader being invoked, their instructions are related by shader-call-order.

For ray tracing invocations that are shader-call-related:

- memory operations on StorageBuffer, Image, and ShaderRecordBufferKHR storage classes **can** be synchronized using the ShaderCallKHR scope.
- the CallableDataKHR, IncomingCallableDataKHR, RayPayloadKHR, HitAttributeKHR, and IncomingRayPayloadKHR storage classes are system-synchronized and no application availability

and visibility operations are required.

- memory operations within a single invocation before and after the shader call instruction are ordered by program-order and do not require explicit synchronization.

47.2. Ray Tracing Commands

Ray tracing commands provoke work in the ray tracing pipeline. Ray tracing commands are recorded into a command buffer and when executed by a queue will produce work that executes according to the bound ray tracing pipeline. A ray tracing pipeline **must** be bound to a command buffer before any ray tracing commands are recorded in that command buffer.

To dispatch ray tracing use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysKHR(
    VkCommandBuffer                             commandBuffer,
    const VkStridedDeviceAddressRegionKHR*      pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pCallableShaderBindingTable,
    uint32_t                                    width,
    uint32_t                                    height,
    uint32_t                                    depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the ray generation shader stage.
- `pMissShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the callable shader stage.
- `width` is the width of the ray trace query dimensions.
- `height` is the height of the ray trace query dimensions.
- `depth` is the depth of the ray trace query dimensions.

When the command is executed, a ray generation group of `width` × `height` × `depth` rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysKHR-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysKHR-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdTraceRaysKHR-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdTraceRaysKHR-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysKHR-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysKHR-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysKHR-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysKHR-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysKHR-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysKHR-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdTraceRaysKHR-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysKHR-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysKHR-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdTraceRaysKHR-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdTraceRaysKHR-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdTraceRaysKHR-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdTraceRaysKHR-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdTraceRaysKHR-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdTraceRaysKHR-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdTraceRaysKHR-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT

- VUID-vkCmdTraceRaysKHR-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdTraceRaysKHR-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysKHR-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysKHR-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdTraceRaysKHR-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdTraceRaysKHR-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdTraceRaysKHR-flags-02696
  Any VkImage created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the

OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysKHR-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdTraceRaysKHR-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdTraceRaysKHR-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdTraceRaysKHR-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysKHR-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysKHR-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysKHR-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either

VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08613
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysKHR-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdTraceRaysKHR-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdTraceRaysKHR-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysKHR-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysKHR-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysKHR-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdTraceRaysKHR-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdTraceRaysKHR-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdTraceRaysKHR-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is

accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32

- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-12420
  If OpImageBlockMatchSADQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-06976
  If OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06977
  If OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM

uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM

- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06978
  If any command other than OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09215
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09216
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09217
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysKHR-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysKHR-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdTraceRaysKHR-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysKHR-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdTraceRaysKHR-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdTraceRaysKHR-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdTraceRaysKHR-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdTraceRaysKHR-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdTraceRaysKHR-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdTraceRaysKHR-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdTraceRaysKHR-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this

command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set

- VUID-vkCmdTraceRaysKHR-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdTraceRaysKHR-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdTraceRaysKHR-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdTraceRaysKHR-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the `pNext` chain of VkTensorCreateInfoARM, then the number of elements accessed with one `OpTensorReadARM` or `OpTensorWriteARM` **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as `wraps`[`dimensionCount` - 1] - InnermostCoordinate % `wraps`[`dimensionCount` - 1] where InnermostCoordinate is the last component of the coordinates array provided via the `Coordinates` operand
- VUID-vkCmdTraceRaysKHR-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdTraceRaysKHR-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdTraceRaysKHR-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment

- VUID-vkCmdTraceRaysKHR-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdTraceRaysKHR-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource heap **must** be a multiple of tensorDescriptorAlignment
- VUID-vkCmdTraceRaysKHR-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdTraceRaysKHR-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysKHR-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdTraceRaysKHR-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdTraceRaysKHR-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysKHR-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysKHR-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdTraceRaysKHR-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdTraceRaysKHR-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysKHR-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the

descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdTraceRaysKHR-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysKHR-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdTraceRaysKHR-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdTraceRaysKHR-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdTraceRaysKHR-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysKHR-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysKHR-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdTraceRaysKHR-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysKHR-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdTraceRaysKHR-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdTraceRaysKHR-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdTraceRaysKHR-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdTraceRaysKHR-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysKHR-None-03429
  Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline
- VUID-vkCmdTraceRaysKHR-None-09458
  If the bound ray tracing pipeline state was created with the VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR dynamic state enabled then vkCmdSetRayTracingPipelineStackSizeKHR **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysKHR-None-11319
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the value of the address at the expected location in shader record data **must** be a valid address
- VUID-vkCmdTraceRaysKHR-maxPipelineRayRecursionDepth-03679
  This command **must** not cause a shader call instruction to be executed from a shader invocation with a recursion depth greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysKHR-commandBuffer-03635
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysKHR-micromap-11640
  If a VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR descriptor is accessed as a result of this command, the access is not through an `OpRayQueryProceedKHR` operation, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR or VkAccelerationStructureTrianglesOpacityMicromapEXT structure included in its `pNext` chain, the VkPipeline bound to the pipeline bind point used by this command **must** have been created with `flags` that includes VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR
- VUID-vkCmdTraceRaysKHR-size-04023
  The `size` member of `pRayGenShaderBindingTable` **must** be equal to its `stride` member

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03681
  pRaygenShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03682
  pRaygenShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03684
  pMissShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03685
  pMissShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysKHR-stride-03686
  pMissShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-vkCmdTraceRaysKHR-stride-04029
  pMissShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03688
  pHitShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03689
  pHitShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysKHR-stride-03690
  pHitShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-vkCmdTraceRaysKHR-stride-04035
  pHitShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03692
  pCallableShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03693
  pCallableShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysKHR-stride-03694
  pCallableShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment

- VUID-vkCmdTraceRaysKHR-stride-04041
  pCallableShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysKHR-flags-03511
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR, the entries in the table identified by pMissShaderBindingTable->deviceAddress accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03512
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03513
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03514
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04735
  Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04736
  Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR
- VUID-vkCmdTraceRaysKHR-width-03638
  width **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]
- VUID-vkCmdTraceRaysKHR-height-03639
  height **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]
- VUID-vkCmdTraceRaysKHR-depth-03640
  depth **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]
- VUID-vkCmdTraceRaysKHR-width-03641

`width` × `height` × `depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`maxRayDispatchInvocationCount`

- VUID-vkCmdTraceRaysKHR-allowClusterAccelerationStructure-10578
  If the traced geometry contains a cluster acceleration structure, then VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV::`allowClusterAccelerationStructure` **must** have been set for that pipeline

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdTraceRaysKHR-pRaygenShaderBindingTable-parameter
  `pRaygenShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-parameter
  `pMissShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-parameter
  `pHitShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-parameter
  `pCallableShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdTraceRaysKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdTraceRaysKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysKHR is not affected by conditional rendering

When invocation mask image usage is enabled in the bound ray tracing pipeline, the pipeline uses an invocation mask image specified by the command:

```
// Provided by VK_HUAWEI_invocation_mask
void vkCmdBindInvocationMaskHUAWEI(
    VkCommandBuffer                             commandBuffer,
    VkImageView                                 imageView,
    VkImageLayout                               imageLayout);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `imageView` is an image view handle specifying the invocation mask image. `imageView` **may** be VK_NULL_HANDLE, which is equivalent to specifying a view of an image filled with ones value.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in when the invocation mask image is accessed.

Valid Usage

- VUID-vkCmdBindInvocationMaskHUAWEI-None-04976
  The `invocationMask` feature **must** be enabled
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04977
  If `imageView` is not VK_NULL_HANDLE, it **must** be a valid VkImageView handle of type VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04978
  If `imageView` is not VK_NULL_HANDLE, it **must** have a format of VK_FORMAT_R8_UINT
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04979
  If `imageView` is not VK_NULL_HANDLE, it **must** have been created with the VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI usage flag set
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04980
  If `imageView` is not VK_NULL_HANDLE, `imageLayout` **must** be VK_IMAGE_LAYOUT_GENERAL

- VUID-vkCmdBindInvocationMaskHUAWEI-width-04981
  Thread mask image resolution **must** match the `width` and `height` in vkCmdTraceRaysKHR
- VUID-vkCmdBindInvocationMaskHUAWEI-None-04982
  Each element in the invocation mask image **must** have the value `0` or `1`. The value 1 means the invocation is active
- VUID-vkCmdBindInvocationMaskHUAWEI-depth-04983
  `depth` in vkCmdTraceRaysKHR **must** be 1

Valid Usage (Implicit)

- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-parameter
  If `imageView` is not VK_NULL_HANDLE, `imageView` **must** be a valid VkImageView handle
- VUID-vkCmdBindInvocationMaskHUAWEI-imageLayout-parameter
  `imageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBindInvocationMaskHUAWEI-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBindInvocationMaskHUAWEI-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindInvocationMaskHUAWEI-commonparent
  Both of `commandBuffer`, and `imageView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	State

Conditional Rendering

vkCmdBindInvocationMaskHUAWEI is not affected by conditional rendering

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirectKHR(
    VkCommandBuffer                             commandBuffer,
    const VkStridedDeviceAddressRegionKHR*      pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*      pCallableShaderBindingTable,
    VkDeviceAddress                             indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the ray generation shader stage.
- `pMissShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a VkStridedDeviceAddressRegionKHR that holds the shader binding table data for the callable shader stage.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a VkTraceRaysIndirectCommandKHR structure containing the trace ray parameters.

`vkCmdTraceRaysIndirectKHR` behaves similarly to vkCmdTraceRaysKHR except that the ray trace query dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirectKHR-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysIndirectKHR-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdTraceRaysIndirectKHR-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirectKHR-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirectKHR-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirectKHR-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirectKHR-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirectKHR-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysIndirectKHR-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysIndirectKHR-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdTraceRaysIndirectKHR-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdTraceRaysIndirectKHR-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdTraceRaysIndirectKHR-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdTraceRaysIndirectKHR-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdTraceRaysIndirectKHR-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdTraceRaysIndirectKHR-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdTraceRaysIndirectKHR-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT

- VUID-vkCmdTraceRaysIndirectKHR-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdTraceRaysIndirectKHR-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysIndirectKHR-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysIndirectKHR-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdTraceRaysIndirectKHR-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-flags-02696
  Any VkImage created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the

OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirectKHR-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdTraceRaysIndirectKHR-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdTraceRaysIndirectKHR-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdTraceRaysIndirectKHR-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysIndirectKHR-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirectKHR-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirectKHR-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either

VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08613
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirectKHR-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdTraceRaysIndirectKHR-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is

accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-12420
  If OpImageBlockMatchSADQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-06976
  If OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06977
  If OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM

uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM

- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06978
  If any command other than OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09215
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09216
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09217
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirectKHR-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirectKHR-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdTraceRaysIndirectKHR-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdTraceRaysIndirectKHR-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdTraceRaysIndirectKHR-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdTraceRaysIndirectKHR-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this

command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdTraceRaysIndirectKHR-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdTraceRaysIndirectKHR-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the `pNext` chain of VkTensorCreateInfoARM, then the number of elements accessed with one `OpTensorReadARM` or `OpTensorWriteARM` **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as `wraps`[`dimensionCount` - 1] - InnermostCoordinate % `wraps`[`dimensionCount` - 1] where InnermostCoordinate is the last component of the coordinates array provided via the `Coordinates` operand
- VUID-vkCmdTraceRaysIndirectKHR-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdTraceRaysIndirectKHR-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment

- VUID-vkCmdTraceRaysIndirectKHR-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdTraceRaysIndirectKHR-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource heap **must** be a multiple of tensorDescriptorAlignment
- VUID-vkCmdTraceRaysIndirectKHR-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirectKHR-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysIndirectKHR-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdTraceRaysIndirectKHR-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdTraceRaysIndirectKHR-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysIndirectKHR-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysIndirectKHR-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdTraceRaysIndirectKHR-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdTraceRaysIndirectKHR-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysIndirectKHR-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the

descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysIndirectKHR-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdTraceRaysIndirectKHR-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdTraceRaysIndirectKHR-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdTraceRaysIndirectKHR-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdTraceRaysIndirectKHR-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdTraceRaysIndirectKHR-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysIndirectKHR-None-03429
  Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirectKHR-None-09458
  If the bound ray tracing pipeline state was created with the VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR dynamic state enabled then vkCmdSetRayTracingPipelineStackSizeKHR **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysIndirectKHR-None-11319
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the value of the address at the expected location in shader record data **must** be a valid address
- VUID-vkCmdTraceRaysIndirectKHR-maxPipelineRayRecursionDepth-03679
  This command **must** not cause a shader call instruction to be executed from a shader invocation with a recursion depth greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-03635
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11640
  If a VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR descriptor is accessed as a result of this command, the access is not through an `OpRayQueryProceedKHR` operation, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR or VkAccelerationStructureTrianglesOpacityMicromapEXT structure included in its `pNext` chain, the VkPipeline bound to the pipeline bind point used by this command **must** have been created with `flags` that includes VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR
- VUID-vkCmdTraceRaysIndirectKHR-size-04023
  The `size` member of `pRayGenShaderBindingTable` **must** be equal to its `stride` member

- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03681
  pRaygenShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03682
  pRaygenShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03684
  pMissShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03685
  pMissShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysIndirectKHR-stride-03686
  pMissShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-vkCmdTraceRaysIndirectKHR-stride-04029
  pMissShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03688
  pHitShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03689
  pHitShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysIndirectKHR-stride-03690
  pHitShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-vkCmdTraceRaysIndirectKHR-stride-04035
  pHitShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03692
  pCallableShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03693
  pCallableShaderBindingTable->deviceAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysIndirectKHR-stride-03694
  pCallableShaderBindingTable->stride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment

- VUID-vkCmdTraceRaysIndirectKHR-stride-04041
  pCallableShaderBindingTable->stride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-vkCmdTraceRaysIndirectKHR-flags-03511
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR, the entries in the table identified by pMissShaderBindingTable->deviceAddress accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03512
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03513
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03514
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR, entries in the table identified by pHitShaderBindingTable->deviceAddress accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04735
  Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04736
  Any non-zero hit shader group entries in the table identified by pHitShaderBindingTable->deviceAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03633
  indirectDeviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03634
  indirectDeviceAddress **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03636
  All device addresses between indirectDeviceAddress and indirectDeviceAddress + sizeof (VkTraceRaysIndirectCommandKHR) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdTraceRaysIndirectKHR-rayTracingPipelineTraceRaysIndirect-03637

The `rayTracingPipelineTraceRaysIndirect` feature **must** be enabled

- VUID-vkCmdTraceRaysIndirectKHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951
  If the bound ray tracing pipeline was created with VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV, the `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV`::`rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdTraceRaysIndirectKHR-pRaygenShaderBindingTable-parameter
  `pRaygenShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-parameter
  `pMissShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-parameter
  `pHitShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-parameter
  `pCallableShaderBindingTable` **must** be a valid pointer to a valid VkStridedDeviceAddressRegionKHR structure
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-parameter
  `indirectDeviceAddress` **must** be a valid VkDeviceAddress value
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdTraceRaysIndirectKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirectKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirectKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysIndirectKHR is not affected by conditional rendering

The VkTraceRaysIndirectCommandKHR structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommandKHR {
    uint32_t    width;
    uint32_t    height;
    uint32_t    depth;
} VkTraceRaysIndirectCommandKHR;
```

- width is the width of the ray trace query dimensions.
- height is the height of the ray trace query dimensions.
- depth is the depth of the ray trace query dimensions.

The members of VkTraceRaysIndirectCommandKHR have the same meaning as the similarly named parameters of vkCmdTraceRaysKHR.

Valid Usage

- VUID-VkTraceRaysIndirectCommandKHR-width-03638
  width **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]
- VUID-VkTraceRaysIndirectCommandKHR-height-03639
  height **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]
- VUID-VkTraceRaysIndirectCommandKHR-depth-03640
  depth **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]
- VUID-VkTraceRaysIndirectCommandKHR-width-03641

`width` × `height` × `depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`maxRayDispatchInvocationCount`

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirect2KHR(
    VkCommandBuffer                             commandBuffer,
    VkDeviceAddress                             indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a VkTraceRaysIndirectCommand2KHR structure containing the trace ray parameters.

`vkCmdTraceRaysIndirect2KHR` behaves similarly to vkCmdTraceRaysIndirectKHR except that shader binding table parameters as well as dispatch dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirect2KHR-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdTraceRaysIndirect2KHR-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the

VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdTraceRaysIndirect2KHR-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdTraceRaysIndirect2KHR-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D

- VUID-vkCmdTraceRaysIndirect2KHR-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdTraceRaysIndirect2KHR-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdTraceRaysIndirect2KHR-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysIndirect2KHR-cubicRangeClamp-09212
  If the cubicRangeClamp feature is not enabled, then any VkImageView being sampled as a

result of this command **must** not have a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM

- VUID-vkCmdTraceRaysIndirect2KHR-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-selectableCubicWeights-09214
  If the selectableCubicWeights feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-flags-02696
  Any VkImage created with a VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdTraceRaysIndirect2KHR-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-imageLayout-00344

If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules

- VUID-vkCmdTraceRaysIndirect2KHR-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysIndirect2KHR-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdTraceRaysIndirect2KHR-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that

instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04474
  If the `sparseImageInt64Atomics` feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04475
  If the `sparseImageInt64Atomics` feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06971
  If `OpImageSampleWeightedQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06972
  If `OpImageSampleWeightedQCOM` uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBoxFilterQCOM-06973
  If `OpImageBoxFilterQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSSDQCOM-06974
  If `OpImageBlockMatchSSDQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-12420
  If `OpImageBlockMatchSADQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-06976
  If `OpImageBlockMatchSADQCOM` or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06977
  If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06978
  If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09216
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09217
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV`

equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-12421
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the `blockMatchExtendedClampToEdge` feature is not enabled, the *input* sampler **must** not have been created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirect2KHR-addressModeU-12422
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysIndirect2KHR-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdTraceRaysIndirect2KHR-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11636
  If an acceleration structure is accessed as a result of this command through an `OpRayQueryProceedKHR` operation , the `VK_EXT_opacity_micromap` extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its `pNext` chain, the shader **must** have specified a `OpacityMicromapIdKHR` execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR

- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-10746
  The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in `commandBuffer`
- VUID-vkCmdTraceRaysIndirect2KHR-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdTraceRaysIndirect2KHR-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdTraceRaysIndirect2KHR-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdTraceRaysIndirect2KHR-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdTraceRaysIndirect2KHR-pNext-12463

If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the pNext chain of VkTensorCreateInfoARM, then the number of elements accessed with one OpTensorReadARM or OpTensorWriteARM **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as wraps[dimensionCount - 1] - InnermostCoordinate % wraps[dimensionCount - 1] where InnermostCoordinate is the last component of the coordinates array provided via the Coordinates operand

- VUID-vkCmdTraceRaysIndirect2KHR-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdTraceRaysIndirect2KHR-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdTraceRaysIndirect2KHR-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdTraceRaysIndirect2KHR-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdTraceRaysIndirect2KHR-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource

heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirect2KHR-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysIndirect2KHR-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysIndirect2KHR-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdTraceRaysIndirect2KHR-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysIndirect2KHR-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysIndirect2KHR-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdTraceRaysIndirect2KHR-None-11309

If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands

- VUID-vkCmdTraceRaysIndirect2KHR-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysIndirect2KHR-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysIndirect2KHR-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysIndirect2KHR-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdTraceRaysIndirect2KHR-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdTraceRaysIndirect2KHR-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdTraceRaysIndirect2KHR-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdTraceRaysIndirect2KHR-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdTraceRaysIndirect2KHR-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysIndirect2KHR-None-03429
  Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-None-09458
  If the bound ray tracing pipeline state was created with the VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR dynamic state enabled then vkCmdSetRayTracingPipelineStackSizeKHR **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysIndirect2KHR-None-11319
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysIndirect2KHR-maxPipelineRayRecursionDepth-03679
  This command **must** not cause a shader call instruction to be executed from a shader invocation with a recursion depth greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-03635
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11640
  If a VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR descriptor is accessed as a result of this command, the access is not through an `OpRayQueryProceedKHR` operation, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR or VkAccelerationStructureTrianglesOpacityMicromapEXT structure included in its `pNext` chain, the VkPipeline bound to the pipeline bind point used by this command **must** have been created with `flags` that includes VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03633
  `indirectDeviceAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03634
  `indirectDeviceAddress` **must** be a multiple of `4`
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03636
  All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress` + `sizeof` (`VkTraceRaysIndirectCommand2KHR`) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingPipelineTraceRaysIndirect2-03637
  The `rayTracingPipelineTraceRaysIndirect2` feature **must** be enabled
- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951
  If the bound ray tracing pipeline was created with VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV, the `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV`::`rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-parameter
  `indirectDeviceAddress` **must** be a valid VkDeviceAddress value

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdTraceRaysIndirect2KHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirect2KHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirect2KHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysIndirect2KHR is not affected by conditional rendering

The `VkTraceRaysIndirectCommand2KHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommand2KHR {
    VkDeviceAddress    raygenShaderRecordAddress;
    VkDeviceSize       raygenShaderRecordSize;
    VkDeviceAddress    missShaderBindingTableAddress;
    VkDeviceSize       missShaderBindingTableSize;
    VkDeviceSize       missShaderBindingTableStride;
    VkDeviceAddress    hitShaderBindingTableAddress;
    VkDeviceSize       hitShaderBindingTableSize;
    VkDeviceSize       hitShaderBindingTableStride;
    VkDeviceAddress    callableShaderBindingTableAddress;
    VkDeviceSize       callableShaderBindingTableSize;
    VkDeviceSize       callableShaderBindingTableStride;
    uint32_t           width;
    uint32_t           height;
    uint32_t           depth;
} VkTraceRaysIndirectCommand2KHR;
```

- `raygenShaderRecordAddress` is a VkDeviceAddress of the ray generation shader binding table record used by this command.
- `raygenShaderRecordSize` is a VkDeviceSize number of bytes corresponding to the ray generation shader binding table record at base address `raygenShaderRecordAddress`.
- `missShaderBindingTableAddress` is a VkDeviceAddress of the first record in the miss shader binding table used by this command.
- `missShaderBindingTableSize` is a VkDeviceSize number of bytes corresponding to the total size of the miss shader binding table at `missShaderBindingTableAddress` that may be accessed by this command.
- `missShaderBindingTableStride` is a VkDeviceSize number of bytes between records of the miss shader binding table.
- `hitShaderBindingTableAddress` is a VkDeviceAddress of the first record in the hit shader binding table used by this command.
- `hitShaderBindingTableSize` is a VkDeviceSize number of bytes corresponding to the total size of the hit shader binding table at `hitShaderBindingTableAddress` that may be accessed by this command.
- `hitShaderBindingTableStride` is a VkDeviceSize number of bytes between records of the hit shader binding table.
- `callableShaderBindingTableAddress` is a VkDeviceAddress of the first record in the callable shader binding table used by this command.
- `callableShaderBindingTableSize` is a VkDeviceSize number of bytes corresponding to the total size of the callable shader binding table at `callableShaderBindingTableAddress` that may be accessed by this command.
- `callableShaderBindingTableStride` is a VkDeviceSize number of bytes between records of the callable shader binding table.

- `width` is the width of the ray trace query dimensions.
- `height` is the height of the ray trace query dimensions.
- `depth` is the depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommand2KHR` have the same meaning as the similarly named parameters of vkCmdTraceRaysKHR.

Indirect shader binding table buffer parameters **must** satisfy the same memory alignment and binding requirements as their counterparts in vkCmdTraceRaysIndirectKHR and vkCmdTraceRaysKHR.

Valid Usage

- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03681 `raygenShaderRecordAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03682 `raygenShaderRecordAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03684 `missShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03685 `missShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03686 `missShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04029 `missShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03688 `hitShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03689 `hitShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03690 `hitShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04035

hitShaderBindingTableStride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride

- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03692
  callableShaderBindingTableAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03693
  callableShaderBindingTableAddress **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03694
  callableShaderBindingTableStride **must** be a multiple of VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04041
  callableShaderBindingTableStride **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03511
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR, the entries in the table identified by missShaderBindingTableAddress accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03512
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, entries in the table identified by hitShaderBindingTableAddress accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03513
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, entries in the table identified by hitShaderBindingTableAddress accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03514
  If the bound ray tracing pipeline was created with flags that included VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR, entries in the table identified by hitShaderBindingTableAddress accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04735
  Any non-zero hit shader group entries in the table identified by hitShaderBindingTableAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR **must** have been created with VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04736
  Any non-zero hit shader group entries in the table identified by hitShaderBindingTableAddress accessed by this call from a geometry with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR **must** have been created with

VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR

- VUID-VkTraceRaysIndirectCommand2KHR-width-03638
  `width` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxComputeWorkGroupCount`[0] × `VkPhysicalDeviceLimits`::`maxComputeWorkGroupSize`[0]
- VUID-VkTraceRaysIndirectCommand2KHR-height-03639
  `height` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxComputeWorkGroupCount`[1] × `VkPhysicalDeviceLimits`::`maxComputeWorkGroupSize`[1]
- VUID-VkTraceRaysIndirectCommand2KHR-depth-03640
  `depth` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxComputeWorkGroupCount`[2] × `VkPhysicalDeviceLimits`::`maxComputeWorkGroupSize`[2]
- VUID-VkTraceRaysIndirectCommand2KHR-width-03641
  `width` × `height` × `depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`::`maxRayDispatchInvocationCount`

Valid Usage (Implicit)

- VUID-VkTraceRaysIndirectCommand2KHR-raygenShaderRecordAddress-parameter
  `raygenShaderRecordAddress` **must** be a valid VkDeviceAddress value
- VUID-VkTraceRaysIndirectCommand2KHR-missShaderBindingTableAddress-parameter
  `missShaderBindingTableAddress` **must** be a valid VkDeviceAddress value
- VUID-VkTraceRaysIndirectCommand2KHR-hitShaderBindingTableAddress-parameter
  `hitShaderBindingTableAddress` **must** be a valid VkDeviceAddress value
- VUID-VkTraceRaysIndirectCommand2KHR-callableShaderBindingTableAddress-parameter
  `callableShaderBindingTableAddress` **must** be a valid VkDeviceAddress value

To dispatch ray tracing for the `VK_NV_ray_tracing` extension use:

```
// Provided by VK_NV_ray_tracing
void vkCmdTraceRaysNV(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    raygenShaderBindingTableBuffer,
    VkDeviceSize                                raygenShaderBindingOffset,
    VkBuffer                                    missShaderBindingTableBuffer,
    VkDeviceSize                                missShaderBindingOffset,
    VkDeviceSize                                missShaderBindingStride,
    VkBuffer                                    hitShaderBindingTableBuffer,
    VkDeviceSize                                hitShaderBindingOffset,
    VkDeviceSize                                hitShaderBindingStride,
    VkBuffer                                    callableShaderBindingTableBuffer,
    VkDeviceSize                                callableShaderBindingOffset,
    VkDeviceSize                                callableShaderBindingStride,
    uint32_t                                    width,
    uint32_t                                    height,
    uint32_t                                    depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `raygenShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the ray generation shader stage.
- `raygenShaderBindingOffset` is the offset in bytes (relative to `raygenShaderBindingTableBuffer`) of the ray generation shader being used for the trace.
- `missShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the miss shader stage.
- `missShaderBindingOffset` is the offset in bytes (relative to `missShaderBindingTableBuffer`) of the miss shader being used for the trace.
- `missShaderBindingStride` is the size in bytes of each shader binding table record in `missShaderBindingTableBuffer`.
- `hitShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the hit shader stages.
- `hitShaderBindingOffset` is the offset in bytes (relative to `hitShaderBindingTableBuffer`) of the hit shader group being used for the trace.
- `hitShaderBindingStride` is the size in bytes of each shader binding table record in `hitShaderBindingTableBuffer`.
- `callableShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the callable shader stage.
- `callableShaderBindingOffset` is the offset in bytes (relative to `callableShaderBindingTableBuffer`) of the callable shader being used for the trace.
- `callableShaderBindingStride` is the size in bytes of each shader binding table record in `callableShaderBindingTableBuffer`.
- `width` is the width of the ray trace query dimensions.
- `height` is the height of the ray trace query dimensions.

- `depth` is the depth of the ray trace query dimensions.

When the command is executed, a ray generation group of `width` × `height` × `depth` rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysNV-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysNV-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdTraceRaysNV-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdTraceRaysNV-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysNV-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysNV-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysNV-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdTraceRaysNV-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysNV-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR,

reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdTraceRaysNV-magFilter-09598
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysNV-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdTraceRaysNV-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdTraceRaysNV-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdTraceRaysNV-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdTraceRaysNV-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdTraceRaysNV-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdTraceRaysNV-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdTraceRaysNV-None-02691

If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT

- VUID-vkCmdTraceRaysNV-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdTraceRaysNV-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdTraceRaysNV-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdTraceRaysNV-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysNV-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdTraceRaysNV-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdTraceRaysNV-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdTraceRaysNV-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdTraceRaysNV-flags-02696

Any VkImage created with a VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE

- VUID-vkCmdTraceRaysNV-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysNV-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysNV-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysNV-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdTraceRaysNV-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdTraceRaysNV-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdTraceRaysNV-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdTraceRaysNV-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysNV-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not

access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysNV-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysNV-None-08613
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysNV-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdTraceRaysNV-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdTraceRaysNV-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysNV-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysNV-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysNV-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64

- VUID-vkCmdTraceRaysNV-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdTraceRaysNV-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdTraceRaysNV-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-12420
  If OpImageBlockMatchSADQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-06976
  If `OpImageBlockMatchSADQCOM` or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06977
  If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06978
  If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09216
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09217
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-12421
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the `blockMatchExtendedClampToEdge` feature is not enabled, the *input* sampler **must** not have been created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysNV-addressModeU-12422
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdTraceRaysNV-None-07288

Any shader invocation executed by this command **must** terminate

- VUID-vkCmdTraceRaysNV-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysNV-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdTraceRaysNV-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdTraceRaysNV-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdTraceRaysNV-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdTraceRaysNV-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdTraceRaysNV-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages

corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT

- VUID-vkCmdTraceRaysNV-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdTraceRaysNV-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdTraceRaysNV-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdTraceRaysNV-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdTraceRaysNV-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdTraceRaysNV-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the `pNext` chain of VkTensorCreateInfoARM, then the number of elements accessed with one `OpTensorReadARM` or `OpTensorWriteARM` **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as `wraps`[`dimensionCount` - 1] - InnermostCoordinate % `wraps`[`dimensionCount` - 1] where InnermostCoordinate is the last component of the coordinates array provided via the `Coordinates` operand
- VUID-vkCmdTraceRaysNV-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdTraceRaysNV-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment

- VUID-vkCmdTraceRaysNV-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdTraceRaysNV-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdTraceRaysNV-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource heap **must** be a multiple of tensorDescriptorAlignment
- VUID-vkCmdTraceRaysNV-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdTraceRaysNV-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location

in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysNV-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysNV-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdTraceRaysNV-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdTraceRaysNV-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdTraceRaysNV-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdTraceRaysNV-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdTraceRaysNV-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdTraceRaysNV-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysNV-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdTraceRaysNV-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdTraceRaysNV-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdTraceRaysNV-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdTraceRaysNV-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysNV-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdTraceRaysNV-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdTraceRaysNV-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdTraceRaysNV-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdTraceRaysNV-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdTraceRaysNV-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by

VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::index **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysNV-protectedNoFault-11455
  If protectedNoFault is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysNV-protectedNoFault-11456
  If protectedNoFault is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdTraceRaysNV-None-03429
  Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline
- VUID-vkCmdTraceRaysNV-None-09458
  If the bound ray tracing pipeline state was created with the VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR dynamic state enabled then vkCmdSetRayTracingPipelineStackSizeKHR **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysNV-None-11319
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the value of the address at the expected location in shader record data **must** be a valid address
- VUID-vkCmdTraceRaysNV-commandBuffer-04624
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdTraceRaysNV-maxRecursionDepth-03625
  This command **must** not cause a pipeline trace ray instruction to be executed from a shader invocation with a recursion depth greater than the value of maxRecursionDepth used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-04042
  If raygenShaderBindingTableBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02455

raygenShaderBindingOffset **must** be less than the size of raygenShaderBindingTableBuffer

- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02456
  raygenShaderBindingOffset **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV ::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-04043
  If missShaderBindingTableBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02457
  missShaderBindingOffset **must** be less than the size of missShaderBindingTableBuffer
- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02458
  missShaderBindingOffset **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV ::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-04044
  If hitShaderBindingTableBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02459
  hitShaderBindingOffset **must** be less than the size of hitShaderBindingTableBuffer
- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02460
  hitShaderBindingOffset **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV ::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-04045
  If callableShaderBindingTableBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02461
  callableShaderBindingOffset **must** be less than the size of callableShaderBindingTableBuffer
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02462
  callableShaderBindingOffset **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02463
  missShaderBindingStride **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV ::shaderGroupHandleSize
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02464
  hitShaderBindingStride **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV ::shaderGroupHandleSize
- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02465
  callableShaderBindingStride **must** be a multiple of VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02466
  missShaderBindingStride **must** be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02467

hitShaderBindingStride **must** be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride

- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02468
  callableShaderBindingStride **must** be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride
- VUID-vkCmdTraceRaysNV-width-02469
  width **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0]
- VUID-vkCmdTraceRaysNV-height-02470
  height **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1]
- VUID-vkCmdTraceRaysNV-depth-02471
  depth **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2]
- VUID-vkCmdTraceRaysNV-allowClusterAccelerationStructure-10577
  If the traced geometry contains a cluster acceleration structure, then VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV::allowClusterAccelerationStructure **must** have been set for that pipeline

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysNV-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-parameter
  raygenShaderBindingTableBuffer **must** be a valid VkBuffer handle
- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-parameter
  If missShaderBindingTableBuffer is not VK_NULL_HANDLE, missShaderBindingTableBuffer **must** be a valid VkBuffer handle
- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-parameter
  If hitShaderBindingTableBuffer is not VK_NULL_HANDLE, hitShaderBindingTableBuffer **must** be a valid VkBuffer handle
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-parameter
  If callableShaderBindingTableBuffer is not VK_NULL_HANDLE, callableShaderBindingTableBuffer **must** be a valid VkBuffer handle
- VUID-vkCmdTraceRaysNV-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdTraceRaysNV-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdTraceRaysNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysNV-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdTraceRaysNV-commonparent
  Each of `callableShaderBindingTableBuffer`, `commandBuffer`, `hitShaderBindingTableBuffer`, `missShaderBindingTableBuffer`, and `raygenShaderBindingTableBuffer` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysNV is not affected by conditional rendering

47.3. Shader Binding Table

A *shader binding table* is a resource which establishes the relationship between the ray tracing pipeline and the acceleration structures that were built for the ray tracing pipeline. It indicates the shaders that operate on each geometry in an acceleration structure. In addition, it contains the resources accessed by each shader, including indices of textures, buffer device addresses, and constants. The application allocates and manages *shader binding tables* as VkBuffer objects.

Each entry in the shader binding table consists of `shaderGroupHandleSize` bytes of data, either as queried by vkGetRayTracingShaderGroupHandlesKHR to refer to those specified shaders, or all zeros to refer to a zero shader group. A zero shader group behaves as though it is a shader group consisting entirely of VK_SHADER_UNUSED_KHR. The remainder of the data specified by the stride is application-visible data that can be referenced by a `ShaderRecordBufferKHR` block in the shader.

The shader binding tables to use in a ray tracing pipeline are passed to the vkCmdTraceRaysNV , vkCmdTraceRaysKHR, or vkCmdTraceRaysIndirectKHR commands. Shader binding tables are read-only in shaders that are executing on the ray tracing pipeline.

Shader variables identified with the ShaderRecordBufferKHR storage class are used to access the provided shader binding table. Such variables **must** be:

- typed as OpTypeStruct, or an array of this type,
- identified with a Block decoration, and
- laid out explicitly using the Offset, ArrayStride, and MatrixStride decorations as specified in Offset and Stride Assignment.

The Offset decoration for any member of a Block-decorated variable in the ShaderRecordBufferKHR storage class **must** not cause the space required for that variable to extend outside the range [0, maxStorageBufferRange).

Accesses to the shader binding table from ray tracing pipelines **must** be synchronized with the VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

NOTE

Because different shader record buffers can be associated with the same shader, a shader variable with ShaderRecordBufferKHR storage class will not be dynamically uniform if different invocations of the same shader can reference different data in the shader record buffer, such as if the same shader occurs twice in the shader binding table with a different shader record buffer. In this case, if the DescriptorHeapEXT capability is not declared, when indexing resources based on values in the ShaderRecordBufferKHR storage class, the index should be decorated as NonUniform.

47.3.1. Indexing Rules

In order to execute the correct shaders and access the correct resources during a ray tracing dispatch, the implementation **must** be able to locate shader binding table entries at various stages of execution. This is accomplished by defining a set of indexing rules that compute shader binding table record positions relative to the buffer's base address in memory. The application **must** organize the contents of the shader binding table's memory in a way that application of the indexing rules will lead to correct records.

Ray Generation Shaders

Only one ray generation shader is executed per ray tracing dispatch.

For vkCmdTraceRaysKHR, the location of the ray generation shader is specified by the pRaygenShaderBindingTable->deviceAddress parameter — there is no indexing. All data accessed **must** be less than pRaygenShaderBindingTable->size bytes from deviceAddress. pRaygenShaderBindingTable->stride is unused, and **must** be equal to pRaygenShaderBindingTable->size.

For vkCmdTraceRaysNV, the location of the ray generation shader is specified by the raygenShaderBindingTableBuffer and raygenShaderBindingOffset parameters — there is no indexing.

Hit Shaders

The base for the computation of intersection, any-hit, and closest hit shader locations is the `instanceShaderBindingTableRecordOffset` value stored with each instance of a top-level acceleration structure (VkAccelerationStructureInstanceKHR). This value determines the beginning of the shader binding table records for a given instance.

In the following rule, `geometryIndex` refers to the geometry index of the intersected geometry within the instance.

The `sbtRecordOffset` and `sbtRecordStride` values are passed in as parameters to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, these correspond to the `SBTOffset` and `SBTStride` parameters to the pipeline trace ray instructions.

The result of this computation is then added to `pHitShaderBindingTable->deviceAddress`, a device address passed to vkCmdTraceRaysKHR , or `hitShaderBindingOffset`, a base offset passed to vkCmdTraceRaysNV .

For vkCmdTraceRaysKHR, the complete rule to compute a hit shader binding table record address in the `pHitShaderBindingTable` is:

```
pHitShaderBindingTable->deviceAddress + pHitShaderBindingTable->stride × ( instanceShaderBindingTableRecordOffset + geometryIndex × sbtRecordStride + sbtRecordOffset )
```

All data accessed **must** be less than `pHitShaderBindingTable->size` bytes from the base address.

For vkCmdTraceRaysNV, the offset and stride come from direct parameters, so the full rule to compute a hit shader binding table record address in the `hitShaderBindingTableBuffer` is:

```
hitShaderBindingOffset + hitShaderBindingStride × ( instanceShaderBindingTableRecordOffset + geometryIndex × sbtRecordStride + sbtRecordOffset )
```

Miss Shaders

A miss shader is executed whenever a ray query fails to find an intersection for the given scene geometry. Multiple miss shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of miss shader locations is `pMissShaderBindingTable->deviceAddress`, a device address passed into vkCmdTraceRaysKHR , or `missShaderBindingOffset`, a base offset passed into vkCmdTraceRaysNV .

The `missIndex` value is passed in as a parameter to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `MissIndex` parameter to the pipeline trace ray instructions.

For vkCmdTraceRaysKHR, the complete rule to compute a miss shader binding table record address in the `pMissShaderBindingTable` is:

```
pMissShaderBindingTable->deviceAddress + pMissShaderBindingTable->stride × missIndex
```

All data accessed **must** be less than `pMissShaderBindingTable->size` bytes from the base address.

For vkCmdTraceRaysNV, the offset and stride come from direct parameters, so the full rule to compute a miss shader binding table record address in the `missShaderBindingTableBuffer` is:

```
missShaderBindingOffset + missShaderBindingStride × missIndex
```

Callable Shaders

A callable shader is executed when requested by a ray tracing shader. Multiple callable shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of callable shader locations is `pCallableShaderBindingTable->deviceAddress`, a device address passed into vkCmdTraceRaysKHR , or `callableShaderBindingOffset`, a base offset passed into vkCmdTraceRaysNV .

The `sbtRecordIndex` value is passed in as a parameter to `executeCallableNV`() or `executeCallableEXT`() calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `SBTIndex` parameter to the `OpExecuteCallableNV` or `OpExecuteCallableKHR` instruction.

For vkCmdTraceRaysKHR, the complete rule to compute a callable shader binding table record address in the `pCallableShaderBindingTable` is:

```
pCallableShaderBindingTable->deviceAddress + pCallableShaderBindingTable->stride × sbtRecordIndex
```

All data accessed **must** be less than `pCallableShaderBindingTable->size` bytes from the base address.

For vkCmdTraceRaysNV, the offset and stride come from direct parameters, so the full rule to compute a callable shader binding table record address in the `callableShaderBindingTableBuffer` is:

```
callableShaderBindingOffset + callableShaderBindingStride × sbtRecordIndex
```

47.4. Ray Tracing Pipeline Stack

Ray tracing pipelines have a potentially large set of shaders which **may** be invoked in various call chain combinations to perform ray tracing. To store parameters for a given shader execution, an implementation **may** use a stack of data in memory. This stack **must** be sized to the sum of the stack sizes of all shaders in any call chain executed by the application.

If the stack size is not set explicitly, the stack size for a pipeline is:

rayGenStackMax + min(1, `maxPipelineRayRecursionDepth`) × max(closestHitStackMax, missStackMax, intersectionStackMax + anyHitStackMax) + max(0, `maxPipelineRayRecursionDepth` -1) × max(closestHitStackMax, missStackMax) + 2 × callableStackMax

where rayGenStackMax, closestHitStackMax, missStackMax, anyHitStackMax, intersectionStackMax, and callableStackMax are the maximum stack values queried by the respective shader stages for any shaders in any shader groups defined by the pipeline.

This stack size is potentially significant, so an application **may** want to provide a more accurate stack size after pipeline compilation. The value that the application provides is the maximum value of the sum of all shaders in a call chain across all possible call chains, taking into account any application specific knowledge about the properties of the call chains.

NOTE

For example, if an application has two types of closest hit and miss shaders that it can use but the first level of rays will only use the first kind (possibly reflection) and the second level will only use the second kind (occlusion or shadow ray, for example) then the application can compute the stack size by something similar to:

`rayGenStack` + max(`closestHit1Stack`, `miss1Stack`) + max(`closestHit2Stack`, `miss2Stack`)

This is guaranteed to be no larger than the default stack size computation which assumes that both call levels may be the larger of the two.

47.5. Ray Tracing Capture Replay

In a similar way to bufferDeviceAddressCaptureReplay, the `rayTracingPipelineShaderGroupHandleCaptureReplay` feature allows the querying of opaque data which **can** be used in a future replay.

During the capture phase, capture/replay tools are expected to query opaque data for shader group handle replay using vkGetRayTracingCaptureReplayShaderGroupHandlesKHR.

Providing the opaque data during replay, using VkRayTracingShaderGroupCreateInfoKHR ::`pShaderGroupCaptureReplayHandle` at pipeline creation time, causes the implementation to generate identical shader group handles to those in the capture phase, allowing capture/replay tools to reuse previously recorded shader binding table buffer contents or to obtain the same handles by calling vkGetRayTracingCaptureReplayShaderGroupHandlesKHR again.

47.6. Ray Tracing Validation

Ray tracing validation **can** help root cause application issues and improve performance. Unlike existing validation layers, ray tracing validation performs checks at an implementation level, which helps identify potential problems that **may** not be caught by the layer.

By enabling the ray tracing validation feature, warnings and errors **can** be delivered straight from

a ray tracing implementation to the application through a messenger callback registered with the implementation, where they **can** be processed through existing application-side debugging or logging systems.

Chapter 48. Memory Decompression

Commands that **can** be used to decompress memory between one or more memory regions are vkCmdDecompressMemoryEXT, vkCmdDecompressMemoryNV, vkCmdDecompressMemoryIndirectCountNV, and vkCmdDecompressMemoryIndirectCountEXT.

To decompress memory containing compressed data, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryEXT(
    VkCommandBuffer                             commandBuffer,
    const VkDecompressMemoryInfoEXT*            pDecompressMemoryInfoEXT);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDecompressMemoryInfoEXT` is a pointer to a VkDecompressMemoryInfoEXT structure describing the decompression parameters.

Valid Usage

- VUID-vkCmdDecompressMemoryEXT-memoryDecompression-11761
  The `memoryDecompression` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDecompressMemoryEXT-pDecompressMemoryInfoEXT-parameter
  `pDecompressMemoryInfoEXT` **must** be a valid pointer to a valid VkDecompressMemoryInfoEXT structure
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDecompressMemoryEXT-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDecompressMemoryEXT is not affected by conditional rendering

The `VkDecompressMemoryInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryInfoEXT {
    VkStructureType                          sType;
    const void*                              pNext;
    VkMemoryDecompressionMethodFlagsEXT      decompressionMethod;
    uint32_t                                 regionCount;
    const VkDecompressMemoryRegionEXT*       pRegions;
} VkDecompressMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsEXT` with a single bit set specifying the method used to decompress data.
- `regionCount` is the number of regions to decompress.
- `pRegions` is a pointer to an array of `VkDecompressMemoryRegionEXT` structures specifying the regions to decompress.

Each memory region specified in `pRegions` is decompressed from the source to the destination address based on the decompression method specified in `decompressionMethod`. If any of the specified source and destination regions overlap in memory, then the results of decompression are

undefined.

Valid Usage

- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-07690
  The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11762
  If `decompressionMethod` is VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT, then for each element of `pRegions`, `decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11763
  `decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT`::`decompressionMethods`

Valid Usage (Implicit)

- VUID-VkDecompressMemoryInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DECOMPRESS_MEMORY_INFO_EXT
- VUID-VkDecompressMemoryInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-parameter
  `decompressionMethod` **must** be a valid combination of VkMemoryDecompressionMethodFlagBitsEXT values
- VUID-VkDecompressMemoryInfoEXT-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` VkDecompressMemoryRegionEXT structures
- VUID-VkDecompressMemoryInfoEXT-regionCount-arraylength
  `regionCount` **must** be greater than `0`

The `VkDecompressMemoryRegionEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryRegionEXT {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       compressedSize;
    VkDeviceSize       decompressedSize;
} VkDecompressMemoryRegionEXT;
```

- `srcAddress` is the address where compressed data is stored.
- `dstAddress` is the destination address where decompressed data will be written.
- `compressedSize` is the size of compressed data in bytes.

- `decompressedSize` is the size of decompressed data in bytes.

Accesses to compressed and decompressed data specified in `srcAddress` and `dstAddress` **must** be synchronized with the VK_PIPELINE_STAGE_2_MEMORY_DECOMPRESSION_BIT_EXT pipeline stage with access type of VK_ACCESS_2_MEMORY_DECOMPRESSION_READ_BIT_EXT or VK_ACCESS_2_MEMORY_DECOMPRESSION_WRITE_BIT_EXT.

Valid Usage

- VUID-VkDecompressMemoryRegionEXT-srcAddress-07685
  `srcAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07686
  The memory range defined by `srcAddress` and `compressedSize` **must** be contained within the size of the buffer bound to `srcAddress`, minus the offset of `srcAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07687
  `dstAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07688
  The memory range defined by `dstAddress` and `decompressedSize` **must** be contained within the size of the buffer bound to `dstAddress`, minus the offset of `dstAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-07689
  `decompressedSize` **must** be large enough to hold the decompressed data based on the `decompressionMethod`
- VUID-VkDecompressMemoryRegionEXT-compressedSize-11795
  `compressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-11796
  `decompressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07691
  The memory range defined by `srcAddress` and `compressedSize` **must** not overlap the memory range defined by `dstAddress` and `decompressedSize`
- VUID-VkDecompressMemoryRegionEXT-srcAddress-11764
  `srcAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT usage flag set
- VUID-VkDecompressMemoryRegionEXT-dstAddress-11765
  `dstAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-VkDecompressMemoryRegionEXT-srcAddress-parameter
  `srcAddress` **must** be a valid VkDeviceAddress value

- VUID-VkDecompressMemoryRegionEXT-dstAddress-parameter
  `dstAddress` **must** be a valid VkDeviceAddress value

To decompress memory containing compressed data, call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryNV(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    decompressRegionCount,
    const VkDecompressMemoryRegionNV*           pDecompressMemoryRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `decompressRegionCount` is the number of memory regions to decompress.
- `pDecompressMemoryRegions` is a pointer to an array of `decompressRegionCount` VkDecompressMemoryRegionNV structures specifying decompression parameters.

Each region specified in `pDecompressMemoryRegions` is decompressed from the compressed to decompressed region based on the decompression method specified in VkDecompressMemoryRegionNV::`decompressionMethod`. If the regions containing compressed and decompressed data overlap, the decompression behavior is undefined.

Valid Usage

- VUID-vkCmdDecompressMemoryNV-None-07684
  The `memoryDecompression` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDecompressMemoryNV-pDecompressMemoryRegions-parameter
  `pDecompressMemoryRegions` **must** be a valid pointer to an array of `decompressRegionCount` valid VkDecompressMemoryRegionNV structures
- VUID-vkCmdDecompressMemoryNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDecompressMemoryNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDecompressMemoryNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryNV-suspended
  This command **must** not be called between suspended render pass instances

- VUID-vkCmdDecompressMemoryNV-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDecompressMemoryNV-decompressRegionCount-arraylength
  `decompressRegionCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDecompressMemoryNV is not affected by conditional rendering

The `VkDecompressMemoryRegionNV` structure is defined as:

```
// Provided by VK_NV_memory_decompression
typedef struct VkDecompressMemoryRegionNV {
    VkDeviceAddress                     srcAddress;
    VkDeviceAddress                     dstAddress;
    VkDeviceSize                        compressedSize;
    VkDeviceSize                        decompressedSize;
    VkMemoryDecompressionMethodFlagsEXT    decompressionMethod;
} VkDecompressMemoryRegionNV;
```

- `srcAddress` is the address where compressed data is stored.
- `dstAddress` is the destination address where decompressed data will be written.
- `compressedSize` is the size of compressed data in bytes.
- `decompressedSize` is the size of decompressed data in bytes.
- `decompressionMethod` is a bitmask of VkMemoryDecompressionMethodFlagBitsNV with a single

bit set specifying the method used to decompress data.

Valid Usage

- VUID-VkDecompressMemoryRegionNV-decompressionMethod-07690
  The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryRegionNV-srcAddress-07685
  `srcAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-srcAddress-07686
  The memory range defined by `srcAddress` and `compressedSize` **must** be contained within the size of the buffer bound to `srcAddress`, minus the offset of `srcAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionNV-dstAddress-07687
  `dstAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-dstAddress-07688
  The memory range defined by `dstAddress` and `decompressedSize` **must** be contained within the size of the buffer bound to `dstAddress`, minus the offset of `dstAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionNV-decompressedSize-07689
  `decompressedSize` **must** be large enough to hold the decompressed data based on the `decompressionMethod`
- VUID-VkDecompressMemoryRegionNV-compressedSize-11795
  `compressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionNV-decompressedSize-11796
  `decompressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionNV-srcAddress-07691
  The memory range defined by `srcAddress` and `compressedSize` **must** not overlap the memory range defined by `dstAddress` and `decompressedSize`
- VUID-VkDecompressMemoryRegionNV-decompressionMethod-09395
  If `decompressionMethod` is VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT, then `decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-vkCmdDecompressMemoryNV-memoryDecompression-11766
  The `memoryDecompression` feature **must** be enabled

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryIndirectCountEXT(
    VkCommandBuffer                             commandBuffer,
    VkMemoryDecompressionMethodFlagsEXT         decompressionMethod,
    VkDeviceAddress                             indirectCommandsAddress,
    VkDeviceAddress                             indirectCommandsCountAddress,
    uint32_t                                    maxDecompressionCount,
    uint32_t                                    stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `decompressionMethod` is a bitmask of VkMemoryDecompressionMethodFlagBitsEXT with a single bit set specifying the method used to decompress data.
- `indirectCommandsAddress` is the device address containing decompression parameters laid out as an array of VkDecompressMemoryRegionEXT structures.
- `indirectCommandsCountAddress` is the device address containing a 32-bit integer value specifying the decompression count.
- `maxDecompressionCount` is the maximum number of decompressions that will be executed. The actual number of executed decompressions is the minimum of the count specified in `indirectCommandsCountAddress` and `maxDecompressionCount`.
- `stride` is the byte stride between successive sets of decompression parameters located starting from `indirectCommandsAddress`.

Each region specified in `indirectCommandsAddress` is decompressed from the source to destination region based on the specified `decompressionMethod`.

Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountEXT-None-07692
  The `memoryDecompression` feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07694
  `indirectCommandsAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07695
  `indirectCommandsAddress` **must** be a multiple of `4`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07697
  `indirectCommandsCountAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07698
  `indirectCommandsCountAddress` **must** be a multiple of `4`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07699

The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT`::`maxDecompressionIndirectCount`

- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-11794
  All device addresses between `indirectCommandsAddress` and `indirectCommandsAddress` + (`stride` × (count stored in `indirectCommandsCountAddress`)) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-07690
  The `decompressionMethod` **must** have a single bit set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-stride-11767
  `stride` **must** be a multiple of `4` and **must** be greater than or equal to sizeof(VkDecompressMemoryRegionEXT)
- VUID-vkCmdDecompressMemoryIndirectCountEXT-maxDecompressionCount-11768
  `maxDecompressionCount` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT`::`maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11769
  If `decompressionMethod` is VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT, then all values in VkDecompressMemoryRegionEXT::`decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11810
  `decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT`::`decompressionMethods`

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-parameter
  `decompressionMethod` **must** be a valid combination of VkMemoryDecompressionMethodFlagBitsEXT values
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-parameter
  `indirectCommandsAddress` **must** be a valid VkDeviceAddress value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-parameter
  `indirectCommandsCountAddress` **must** be a valid VkDeviceAddress value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDecompressMemoryIndirectCountEXT-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdDecompressMemoryIndirectCountEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryIndirectCountEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDecompressMemoryIndirectCountEXT is not affected by conditional rendering

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryIndirectCountNV(
    VkCommandBuffer                             commandBuffer,
    VkDeviceAddress                             indirectCommandsAddress,
    VkDeviceAddress                             indirectCommandsCountAddress,
    uint32_t                                    stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectCommandsAddress` is the device address containing decompression parameters laid out as an array of VkDecompressMemoryRegionNV structures.
- `indirectCommandsCountAddress` is the device address containing a 32-bit integer value specifying the decompression count.

- `stride` is the byte stride between successive sets of decompression parameters located starting from `indirectCommandsAddress`.

Each region specified in `indirectCommandsAddress` is decompressed from the source to destination region based on the specified `decompressionMethod`.

Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountNV-None-07692
  The `memoryDecompression` feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07694
  `indirectCommandsAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07695
  `indirectCommandsAddress` **must** be a multiple of `4`
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07697
  `indirectCommandsCountAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07698
  `indirectCommandsCountAddress` **must** be a multiple of `4`
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07699
  The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT`::`maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-11794
  All device addresses between `indirectCommandsAddress` and `indirectCommandsAddress` + (`stride` × (count stored in `indirectCommandsCountAddress`)) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdDecompressMemoryIndirectCountNV-stride-11770
  `stride` **must** be a multiple of `4` and **must** be greater than or equal to sizeof(VkDecompressMemoryRegionNV)

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-parameter
  `indirectCommandsAddress` **must** be a valid VkDeviceAddress value
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-parameter
  `indirectCommandsCountAddress` **must** be a valid VkDeviceAddress value

- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDecompressMemoryIndirectCountNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryIndirectCountNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryIndirectCountNV-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDecompressMemoryIndirectCountNV is not affected by conditional rendering

Bits which **can** be set in `VkDecompressMemoryRegionEXT::decompressionMethod` or `VkDecompressMemoryRegionNV::decompressionMethod` specifying the decompression method to select, or returned in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods` specifying the available decompression methods are:

```
// Provided by VK_EXT_memory_decompression
// Flag bits for VkMemoryDecompressionMethodFlagBitsEXT
typedef VkFlags64 VkMemoryDecompressionMethodFlagBitsEXT;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT = 0x00000001ULL;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV = 0x00000001ULL;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkMemoryDecompressionMethodFlagBitsEXT
typedef VkMemoryDecompressionMethodFlagBitsEXT VkMemoryDecompressionMethodFlagBitsNV;
```

- VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT specifies that the GDeflate 1.0 algorithm is used to decompress data.

```
// Provided by VK_EXT_memory_decompression
typedef VkFlags64 VkMemoryDecompressionMethodFlagsEXT;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkMemoryDecompressionMethodFlagsEXT
typedef VkMemoryDecompressionMethodFlagsEXT VkMemoryDecompressionMethodFlagsNV;
```

VkMemoryDecompressionMethodFlagsEXT is a bitmask type for specifying a mask of one or more VkMemoryDecompressionMethodFlagBitsEXT.

Chapter 49. Video Coding

Vulkan implementations **may** expose one or more queue families supporting video coding operations. These operations are performed by recording them into a command buffer within a video coding scope, and submitting them to queues with compatible video coding capabilities.

The Vulkan video functionalities are designed to be made available through a set of APIs built on top of each other, consisting of:

- A core API providing common video coding functionalities,
- APIs providing codec-independent video decode and video encode related functionalities, respectively,
- Additional codec-specific APIs built on top of those.

This chapter details the fundamental components and operations of these.

49.1. Video Picture Resources

In the context of video coding, multidimensional arrays of image data that **can** be used as the source or target of video coding operations are referred to as *video picture resources*. They **may** store additional metadata that includes implementation-private information used during the execution of video coding operations, as discussed later.

Video picture resources are backed by VkImage objects. Individual subregions of VkImageView objects created from such resources **can** be used as decode output pictures, encode input pictures, reconstructed pictures, and/or reference pictures.

The parameters of a video picture resource are specified using a `VkVideoPictureResourceInfoKHR` structure.

The `VkVideoPictureResourceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoPictureResourceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D         codedOffset;
    VkExtent2D         codedExtent;
    uint32_t           baseArrayLayer;
    VkImageView        imageViewBinding;
} VkVideoPictureResourceInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `codedOffset` is the offset in texels of the image subregion to use.
- `codedExtent` is the size in pixels of the coded image data.

- `baseArrayLayer` is the array layer of the image view specified in `imageViewBinding` to use as the video picture resource.
- `imageViewBinding` is an image view representing the video picture resource.

The image subresource referred to by such a structure is defined as the image array layer index specified in `baseArrayLayer` relative to the image subresource range the image view specified in `imageViewBinding` was created with.

The meaning of the `codedOffset` and `codedExtent` depends on the command and context the video picture resource is used in, as well as on the used video profile and corresponding codec-specific semantics, as described later.

A video picture resource is uniquely defined by the image subresource referred to by an instance of this structure, together with the `codedOffset` and `codedExtent` members that identify the image subregion within the image subresource referenced corresponding to the video picture resource according to the particular codec-specific semantics.

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::`pictureAccessGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. As a result, given an effective image subregion corresponding to a video picture resource, the actual image subregion accessed **may** be larger than that as it **may** include additional padding texels due to the picture access granularity. Any writes performed by video coding operations to such padding texels will result in undefined texel values.

Two video picture resources match if they refer to the same image subresource and they specify identical `codedOffset` and `codedExtent` values.

Valid Usage

- VUID-VkVideoPictureResourceInfoKHR-baseArrayLayer-07175
  `baseArrayLayer` **must** be less than the VkImageViewCreateInfo ::`subresourceRange.layerCount` specified when the image view `imageViewBinding` was created

Valid Usage (Implicit)

- VUID-VkVideoPictureResourceInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR
- VUID-VkVideoPictureResourceInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkVideoPictureResourceInfoKHR-imageViewBinding-parameter
  `imageViewBinding` **must** be a valid VkImageView handle

49.2. Decoded Picture Buffer

An integral part of video coding pipelines is the reconstruction of pictures from a compressed video bitstream. A *reconstructed picture* is a video picture resource resulting from this process.

Such reconstructed pictures **can** be used as *reference pictures* in subsequent video coding operations to provide predictions of the values of samples of subsequently decoded or encoded pictures. The correct use of such reconstructed pictures as reference pictures is driven by the video compression standard, the implementation, and the application-specific use cases.

The list of reference pictures used to provide such predictions within a single video coding operation is referred to as the list of *active reference pictures*.

The *decoded picture buffer (DPB)* is an indexed data structure that maintains the set of reference pictures available to be used in video coding operations. Individual indexed entries of the DPB are referred to as the *decoded picture buffer (DPB) slots*. The range of valid DPB slot indices is between zero and `N-1`, where `N` is the capacity of the DPB. Each DPB slot **can** refer to a reference picture containing a *video frame* or **can** refer to up to two reference pictures containing the top and/or bottom *fields* that, when both present, together represent a full *video frame* .

In Vulkan, the state and the backing store of the DPB is separated as follows:

- The state of individual DPB slots is maintained by video session objects.
- The backing store of DPB slots is provided by subregions of VkImage objects used as video picture resources.

In addition, the implementation **may** also maintain opaque metadata associated with DPB slots, including:

- *Reference picture metadata* corresponding to the video picture resource associated with the DPB slot.

Such metadata **may** be stored by the implementation as part of the DPB slot state maintained by the video session, or as part of the video picture resource backing the DPB slot.

Any metadata stored in the video picture resources backing DPB slots are independent of the video session used to store it, hence such video picture resources **can** be shared with other video sessions. Correspondingly, any metadata that is dependent on the video session will always be stored as part of the DPB slot state maintained by that video session.

The responsibility of managing the DPB is split between the application and the implementation as follows:

- The application maintains the association between DPB slot indices and corresponding video picture resources.
- The implementation maintains global and per-slot opaque reference picture metadata.

In addition, the application is also responsible for managing the mapping between the codec-specific picture IDs and DPB slots, and any other codec-specific states unless otherwise specified.

49.2.1. DPB Slot States

At a given time, each DPB slot is either in *active* or *inactive* state. Initially, all DPB slots managed by a video session are in *inactive* state.

A DPB slot **can** be *activated* by using it as the target of picture reconstruction in a video coding operation with the reconstructed picture requested to be set up as a reference picture, according to the codec-specific semantics, changing its state to *active* and associating it with a *picture reference* to the reconstructed pictures.

Some video coding standards allow multiple picture references to be associated with a single DPB slot. In this case the state of the individual picture references **can** be independently updated.

> **NOTE** As an example, H.264 decoding allows associating a separate top field and bottom field picture with the same DPB slot.

As part of reference picture setup, the implementation **may** also generate reference picture metadata. Such reference picture metadata is specific to each picture reference associated with the DPB slot.

If such a video coding operation completes successfully, the activated DPB slot will have a *valid picture reference* and the reconstructed picture is associated with the DPB slot. This is true even if the DPB slot is used as the target of a picture reconstruction that only sets up a top field or bottom field reference picture and thus does not yet refer to a complete frame. However, if any data provided as input to such a video coding operation is not compliant with the video compression standard used, that video coding operation **may** complete unsuccessfully, in which case the activated DPB slot will have an *invalid picture reference*. This is true even if the DPB slot previously had a valid picture reference to a top field or bottom field reference picture, but the reconstruction of the other field corresponding to the DPB slot failed.

The application **can** use queries to get feedback about the outcome of video coding operations and use the resulting VkQueryResultStatusKHR value to determine whether the video coding operation completed successfully (result status is positive) or unsuccessfully (result status is negative).

Using a reference picture associated with a DPB slot that has an *invalid picture reference* as an active reference picture in subsequent video coding operations is legal, however, the contents of the outputs of such operations are undefined, and any DPB slots activated by such video coding operations will also have an *invalid picture reference*. This is true even if such video coding operations **may** otherwise complete successfully.

A DPB slot **can** also be *deactivated* by the application, changing its state to *inactive* and invalidating any picture references and reference picture metadata associated with the DPB slot.

If an already active DPB slot is used as the target of picture reconstruction in a video coding operation, but the decoded picture is not requested to be set up as a reference picture, according to the codec-specific semantics, no reference picture setup happens and the corresponding picture reference and reference picture metadata is invalidated within the DPB slot. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

If an already active DPB slot is used as the target of picture reconstruction when decoding a field picture that is not marked as reference, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then the DPB slot is deactivated.
- If the DPB slot is not currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the decoded picture is a bottom field picture, then the other field picture association of the DPB slot, if any, is not disturbed.
- If the DPB slot is currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is currently associated with a bottom field picture and the decoded picture is a bottom field picture, then that picture association is invalidated, without disturbing the other field picture association, if any. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

A DPB slot **can** be activated with a new frame even if it is already active. In this case all previous associations of the DPB slots with reference pictures are replaced with an association with the reconstructed picture used to activate it.

If an already active DPB slot is activated with a reconstructed field picture, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then that association is replaced with an association with the reconstructed field picture used to activate it.
- If the DPB slot is not currently associated with a top field picture and the DPB slot is activated with a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the DPB slot is activated with a bottom field picture, then the DPB slot is associated with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.
- If the DPB slot is currently associated with a top field picture and the DPB slot is activated with a new top field picture, or if the DPB slot is currently associated with a bottom field picture and the DPB slot is activated with a new bottom field picture, then that association is replaced with an association with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.

49.3. Video Profiles

The `VkVideoProfileInfoKHR` structure is defined as follows:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileInfoKHR {
    VkStructureType                      sType;
    const void*                          pNext;
    VkVideoCodecOperationFlagBitsKHR     videoCodecOperation;
    VkVideoChromaSubsamplingFlagsKHR     chromaSubsampling;
    VkVideoComponentBitDepthFlagsKHR     lumaBitDepth;
    VkVideoComponentBitDepthFlagsKHR     chromaBitDepth;
} VkVideoProfileInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoCodecOperation` is a VkVideoCodecOperationFlagBitsKHR value specifying a video codec operation.
- `chromaSubsampling` is a bitmask of VkVideoChromaSubsamplingFlagBitsKHR specifying video chroma subsampling information.
- `lumaBitDepth` is a bitmask of VkVideoComponentBitDepthFlagBitsKHR specifying video luma bit depth information.
- `chromaBitDepth` is a bitmask of VkVideoComponentBitDepthFlagBitsKHR specifying video chroma bit depth information.

Video profiles are provided as input to video capability queries such as vkGetPhysicalDeviceVideoCapabilitiesKHR or vkGetPhysicalDeviceVideoFormatPropertiesKHR, as well as when creating resources to be used by video coding operations such as images, buffers, query pools, and video sessions.

The full description of a video profile is specified by an instance of this structure, and the codec-specific and auxiliary structures provided in its `pNext` chain.

When this structure is specified as an input parameter to vkGetPhysicalDeviceVideoCapabilitiesKHR, or through the `pProfiles` member of a VkVideoProfileListInfoKHR structure in the `pNext` chain of the input parameter of a query command such as vkGetPhysicalDeviceVideoFormatPropertiesKHR or vkGetPhysicalDeviceImageFormatProperties2, the following error codes indicate specific causes of the failure of the query operation:

- VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR specifies that the requested video picture layout (e.g. through the `pictureLayout` member of a VkVideoDecodeH264ProfileInfoKHR structure included in the `pNext` chain of `VkVideoProfileInfoKHR`) is not supported.
- VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR specifies that a video profile operation specified by `videoCodecOperation` is not supported.
- VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR specifies that video format parameters specified by `chromaSubsampling`, `lumaBitDepth`, or `chromaBitDepth` are not supported.
- VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR specifies that the codec-specific parameters corresponding to the video codec operation are not supported.

Valid Usage

- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07013
  `chromaSubsampling` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-07014
  `lumaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07015
  If `chromaSubsampling` is not VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR, then `chromaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07179
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the `pNext` chain **must** include a VkVideoDecodeH264ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07180
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the `pNext` chain **must** include a VkVideoDecodeH265ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10791
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the `pNext` chain **must** include a VkVideoDecodeVP9ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-09256
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the `pNext` chain **must** include a VkVideoDecodeAV1ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07181
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeH264ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07182
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeH265ProfileInfoKHR structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10262
  If `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeAV1ProfileInfoKHR structure

Valid Usage (Implicit)

- VUID-VkVideoProfileInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-parameter
  `videoCodecOperation` **must** be a valid VkVideoCodecOperationFlagBitsKHR value
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-parameter
  `chromaSubsampling` **must** be a valid combination of VkVideoChromaSubsamplingFlagBitsKHR values

- VUID-VkVideoProfileInfoKHR-lumaBitDepth-parameter
  `lumaBitDepth` **must** be a valid combination of VkVideoComponentBitDepthFlagBitsKHR values
- VUID-VkVideoProfileInfoKHR-chromaBitDepth-parameter
  If `chromaBitDepth` is not `0`, `chromaBitDepth` **must** be a valid combination of VkVideoComponentBitDepthFlagBitsKHR values

Structure Chaining

Extends the structure

- VkQueryPoolCreateInfo

Possible values of VkVideoProfileInfoKHR::`videoCodecOperation`, specifying the type of video coding operation and video compression standard used by a video profile, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodecOperationFlagBitsKHR {
    VK_VIDEO_CODEC_OPERATION_NONE_KHR = 0,
  // Provided by VK_KHR_video_encode_h264
    VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR = 0x00010000,
  // Provided by VK_KHR_video_encode_h265
    VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR = 0x00020000,
  // Provided by VK_KHR_video_decode_h264
    VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR = 0x00000001,
  // Provided by VK_KHR_video_decode_h265
    VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR = 0x00000002,
  // Provided by VK_KHR_video_decode_av1
    VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR = 0x00000004,
  // Provided by VK_KHR_video_encode_av1
    VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR = 0x00040000,
  // Provided by VK_KHR_video_decode_vp9
    VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR = 0x00000008,
} VkVideoCodecOperationFlagBitsKHR;
```

- VK_VIDEO_CODEC_OPERATION_NONE_KHR specifies that no video codec operations are supported.
- VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR specifies support for H.264 decode operations.
- VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR specifies support for H.265 decode operations.
- VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR specifies support for VP9 decode operations.
- VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR specifies support for AV1 decode operations.

- VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR specifies support for H.264 encode operations.
- VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR specifies support for H.265 encode operations.
- VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR specifies support for AV1 encode operations.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodecOperationFlagsKHR;
```

VkVideoCodecOperationFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoCodecOperationFlagBitsKHR.

The video format chroma subsampling is defined with the following enums:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoChromaSubsamplingFlagBitsKHR {
    VK_VIDEO_CHROMA_SUBSAMPLING_INVALID_KHR = 0,
    VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR = 0x00000001,
    VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR = 0x00000002,
    VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR = 0x00000004,
    VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR = 0x00000008,
} VkVideoChromaSubsamplingFlagBitsKHR;
```

- VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR specifies that the format is monochrome.
- VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR specifies that the format is 4:2:0 chroma subsampled, i.e. the two chroma components are sampled horizontally and vertically at half the sample rate of the luma component.
- VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR - the format is 4:2:2 chroma subsampled, i.e. the two chroma components are sampled horizontally at half the sample rate of the luma component.
- VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR - the format is 4:4:4 chroma sampled, i.e. all three components of the $Y'C_BC_R$ format are sampled at the same rate, thus there is no chroma subsampling.

Chroma subsampling is described in more detail in the Chroma Reconstruction section.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoChromaSubsamplingFlagsKHR;
```

VkVideoChromaSubsamplingFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoChromaSubsamplingFlagBitsKHR.

Possible values for the video format component bit depth are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoComponentBitDepthFlagBitsKHR {
    VK_VIDEO_COMPONENT_BIT_DEPTH_INVALID_KHR = 0,
    VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR = 0x00000001,
    VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR = 0x00000004,
    VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR = 0x00000010,
} VkVideoComponentBitDepthFlagBitsKHR;
```

- VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR specifies a component bit depth of 8 bits.
- VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR specifies a component bit depth of 10 bits.
- VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR specifies a component bit depth of 12 bits.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoComponentBitDepthFlagsKHR;
```

VkVideoComponentBitDepthFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoComponentBitDepthFlagBitsKHR.

Additional information about the video decode use case **can** be provided by adding a VkVideoDecodeUsageInfoKHR structure to the pNext chain of VkVideoProfileInfoKHR.

The VkVideoDecodeUsageInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeUsageInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkVideoDecodeUsageFlagsKHR     videoUsageHints;
} VkVideoDecodeUsageInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- videoUsageHints is a bitmask of VkVideoDecodeUsageFlagBitsKHR specifying hints about the intended use of the video decode profile.

Valid Usage (Implicit)

- VUID-VkVideoDecodeUsageInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_USAGE_INFO_KHR
- VUID-VkVideoDecodeUsageInfoKHR-videoUsageHints-parameter
  If videoUsageHints is not 0, videoUsageHints **must** be a valid combination of VkVideoDecodeUsageFlagBitsKHR values

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

The following bits **can** be specified in VkVideoDecodeUsageInfoKHR::videoUsageHints as a hint about the video decode use case:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeUsageFlagBitsKHR {
    VK_VIDEO_DECODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR = 0x00000002,
    VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR = 0x00000004,
} VkVideoDecodeUsageFlagBitsKHR;
```

- VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR specifies that video decoding is intended to be used in conjunction with video encoding to transcode a video bitstream with the same and/or different codecs.
- VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR specifies that video decoding is intended to be used to consume a local video bitstream.
- VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR specifies that video decoding is intended to be used to consume a video bitstream received as a continuous flow over network.

NOTE There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeUsageFlagsKHR;
```

VkVideoDecodeUsageFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoDecodeUsageFlagBitsKHR.

Additional information about the video encode use case **can** be provided by adding a VkVideoEncodeUsageInfoKHR structure to the pNext chain of VkVideoProfileInfoKHR.

The VkVideoEncodeUsageInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeUsageInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkVideoEncodeUsageFlagsKHR      videoUsageHints;
    VkVideoEncodeContentFlagsKHR    videoContentHints;
    VkVideoEncodeTuningModeKHR      tuningMode;
} VkVideoEncodeUsageInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of VkVideoEncodeUsageFlagBitsKHR specifying hints about the intended use of the video encode profile.
- `videoContentHints` is a bitmask of VkVideoEncodeContentFlagBitsKHR specifying hints about the content to be encoded using the video encode profile.
- `tuningMode` is a VkVideoEncodeTuningModeKHR value specifying the tuning mode to use when encoding with the video profile.

Valid Usage (Implicit)

- VUID-VkVideoEncodeUsageInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_USAGE_INFO_KHR
- VUID-VkVideoEncodeUsageInfoKHR-videoUsageHints-parameter
  If `videoUsageHints` is not `0`, `videoUsageHints` **must** be a valid combination of VkVideoEncodeUsageFlagBitsKHR values
- VUID-VkVideoEncodeUsageInfoKHR-videoContentHints-parameter
  If `videoContentHints` is not `0`, `videoContentHints` **must** be a valid combination of VkVideoEncodeContentFlagBitsKHR values
- VUID-VkVideoEncodeUsageInfoKHR-tuningMode-parameter
  If `tuningMode` is not `0`, `tuningMode` **must** be a valid VkVideoEncodeTuningModeKHR value

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

The following bits **can** be specified in VkVideoEncodeUsageInfoKHR::`videoUsageHints` as a hint about the video encode use case:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeUsageFlagBitsKHR {
    VK_VIDEO_ENCODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR = 0x00000008,
} VkVideoEncodeUsageFlagBitsKHR;
```

- VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR specifies that video encoding is intended to be used in conjunction with video decoding to transcode a video bitstream with the same and/or different codecs.
- VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR specifies that video encoding is intended to be used to produce a video bitstream that is expected to be sent as a continuous flow over network.
- VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR specifies that video encoding is intended to be used for real-time recording for offline consumption.
- VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR specifies that video encoding is intended to be used in a video conferencing scenario.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeUsageFlagsKHR;
```

VkVideoEncodeUsageFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeUsageFlagBitsKHR.

The following bits **can** be specified in VkVideoEncodeUsageInfoKHR::videoContentHints as a hint about the encoded video content:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeContentFlagBitsKHR {
    VK_VIDEO_ENCODE_CONTENT_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR = 0x00000004,
} VkVideoEncodeContentFlagBitsKHR;
```

- VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR specifies that video encoding is intended to be used to encode camera content.

- VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR specifies that video encoding is intended to be used to encode desktop content.
- VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR specifies that video encoding is intended to be used to encode rendered (e.g. game) content.

NOTE	There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular content type.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeContentFlagsKHR;
```

VkVideoEncodeContentFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeContentFlagBitsKHR.

Possible video encode tuning mode values are as follows:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeTuningModeKHR {
    VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR = 1,
    VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR = 2,
    VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR = 3,
    VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR = 4,
} VkVideoEncodeTuningModeKHR;
```

- VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR specifies the default tuning mode.
- VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR specifies that video encoding is tuned for high quality. When using this tuning mode, the implementation **may** compromise the latency of video encoding operations to improve quality.
- VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR specifies that video encoding is tuned for low latency. When using this tuning mode, the implementation **may** compromise quality to increase the performance and lower the latency of video encode operations.
- VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR specifies that video encoding is tuned for ultra-low latency. When using this tuning mode, the implementation **may** compromise quality to maximize the performance and minimize the latency of video encoding operations.
- VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR specifies that video encoding is tuned for lossless encoding. When using this tuning mode, video encode operations produce lossless output.

The VkVideoProfileListInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileListInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        profileCount;
    const VkVideoProfileInfoKHR*    pProfiles;
} VkVideoProfileListInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `profileCount` is the number of elements in the `pProfiles` array.
- `pProfiles` is a pointer to an array of VkVideoProfileInfoKHR structures.

NOTE	Video transcoding is an example of a use case that necessitates the specification of multiple profiles in various contexts.

When the application provides a video decode profile and one or more video encode profiles in the profile list, the implementation ensures that any capabilities returned or resources created are suitable for the video transcoding use cases without the need for manual data transformations.

Valid Usage

- VUID-VkVideoProfileListInfoKHR-pProfiles-06813
  `pProfiles` **must** not contain more than one element whose `videoCodecOperation` member specifies a decode operation

Valid Usage (Implicit)

- VUID-VkVideoProfileListInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_PROFILE_LIST_INFO_KHR
- VUID-VkVideoProfileListInfoKHR-pProfiles-parameter
  If `profileCount` is not `0`, `pProfiles` **must** be a valid pointer to an array of `profileCount` valid VkVideoProfileInfoKHR structures

Structure Chaining

Extends the structures

- VkBufferCreateInfo
- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2
- VkPhysicalDeviceVideoFormatInfoKHR

49.4. Video Capabilities

49.4.1. Video Coding Capabilities

To query video coding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoCapabilitiesKHR(
    VkPhysicalDevice                            physicalDevice,
    const VkVideoProfileInfoKHR*                pVideoProfile,
    VkVideoCapabilitiesKHR*                     pCapabilities);
```

- `physicalDevice` is the physical device from which to query the video decode or encode capabilities.
- `pVideoProfile` is a pointer to a VkVideoProfileInfoKHR structure.
- `pCapabilities` is a pointer to a VkVideoCapabilitiesKHR structure in which the capabilities are returned.

If the video profile described by `pVideoProfile` is supported by the implementation, then this command returns VK_SUCCESS and `pCapabilities` is filled with the capabilities supported with the specified video profile. Otherwise, one of the video-profile-specific error codes is returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07183
  If `pVideoProfile->videoCodecOperation` specifies a decode operation, then the `pNext` chain of `pCapabilities` **must** include a VkVideoDecodeCapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07184
  If `pVideoProfile->videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the `pNext` chain of `pCapabilities` **must** include a VkVideoDecodeH264CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07185
  If `pVideoProfile->videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the `pNext` chain of `pCapabilities` **must** include a VkVideoDecodeH265CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10792
  If `pVideoProfile->videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the `pNext` chain of `pCapabilities` **must** include a VkVideoDecodeVP9CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-09257
  If `pVideoProfile->videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the `pNext` chain of `pCapabilities` **must** include a VkVideoDecodeAV1CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07186

If pVideoProfile->videoCodecOperation specifies an encode operation, then the pNext chain of pCapabilities **must** include a VkVideoEncodeCapabilitiesKHR structure

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07187
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the pNext chain of pCapabilities **must** include a VkVideoEncodeH264CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07188
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the pNext chain of pCapabilities **must** include a VkVideoEncodeH265CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10263
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the pNext chain of pCapabilities **must** include a VkVideoEncodeAV1CapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pNext-10921
  If the pNext chain of pVideoProfile includes a VkVideoEncodeProfileRgbConversionInfoVALVE structure, then the videoEncodeRgbConversion feature **must** be supported

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-parameter
  pVideoProfile **must** be a valid pointer to a valid VkVideoProfileInfoKHR structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pCapabilities-parameter
  pCapabilities **must** be a valid pointer to a VkVideoCapabilitiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED
- VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR

- VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR

The VkVideoCapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCapabilitiesKHR {
    VkStructureType              sType;
    void*                        pNext;
    VkVideoCapabilityFlagsKHR    flags;
    VkDeviceSize                 minBitstreamBufferOffsetAlignment;
    VkDeviceSize                 minBitstreamBufferSizeAlignment;
    VkExtent2D                   pictureAccessGranularity;
    VkExtent2D                   minCodedExtent;
    VkExtent2D                   maxCodedExtent;
    uint32_t                     maxDpbSlots;
    uint32_t                     maxActiveReferencePictures;
    VkExtensionProperties        stdHeaderVersion;
} VkVideoCapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkVideoCapabilityFlagBitsKHR specifying capability flags.
- minBitstreamBufferOffsetAlignment is the minimum alignment for bitstream buffer offsets.
- minBitstreamBufferSizeAlignment is the minimum alignment for bitstream buffer range sizes.
- pictureAccessGranularity is the granularity at which image access to video picture resources happens.
- minCodedExtent is the minimum width and height of the coded frames.
- maxCodedExtent is the maximum width and height of the coded frames.
- maxDpbSlots is the maximum number of DPB slots supported by a single video session.
- maxActiveReferencePictures is the maximum number of active reference pictures a single video coding operation **can** use.
- stdHeaderVersion is a VkExtensionProperties structure reporting the Video Std header name and version supported for the video profile.

NOTE It is common for video compression standards to allow using all reference pictures associated with active DPB slots as active reference pictures, hence for video decode profiles the values returned in maxDpbSlots and maxActiveReferencePictures are often equal. Similarly, in case of video decode profiles supporting field pictures the value of maxActiveReferencePictures often equals maxDpbSlots × 2.

Valid Usage (Implicit)

- VUID-VkVideoCapabilitiesKHR-sType-sType

sType **must** be VK_STRUCTURE_TYPE_VIDEO_CAPABILITIES_KHR

- VUID-VkVideoCapabilitiesKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkVideoDecodeAV1CapabilitiesKHR, VkVideoDecodeCapabilitiesKHR, VkVideoDecodeH264CapabilitiesKHR, VkVideoDecodeH265CapabilitiesKHR, VkVideoDecodeVP9CapabilitiesKHR, VkVideoEncodeAV1CapabilitiesKHR, VkVideoEncodeAV1QuantizationMapCapabilitiesKHR, VkVideoEncodeCapabilitiesKHR, VkVideoEncodeFeedback2CapabilitiesKHR, VkVideoEncodeH264CapabilitiesKHR, VkVideoEncodeH264QuantizationMapCapabilitiesKHR, VkVideoEncodeH265CapabilitiesKHR, VkVideoEncodeH265QuantizationMapCapabilitiesKHR, VkVideoEncodeIntraRefreshCapabilitiesKHR, VkVideoEncodeQuantizationMapCapabilitiesKHR, or VkVideoEncodeRgbConversionCapabilitiesVALVE
- VUID-VkVideoCapabilitiesKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

Bits which **can** be set in VkVideoCapabilitiesKHR::flags are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCapabilityFlagBitsKHR {
    VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR = 0x00000002,
} VkVideoCapabilityFlagBitsKHR;
```

- VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR specifies that video sessions support producing and consuming protected content.
- VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR indicates that the video picture resources associated with the DPB slots of a video session **can** be backed by separate VkImage objects. If this capability flag is not present, then all DPB slots of a video session **must** be associated with video picture resources backed by the same VkImage object (e.g. using different layers of the same image).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCapabilityFlagsKHR;
```

VkVideoCapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoCapabilityFlagBitsKHR.

49.4.2. Video Format Capabilities

To enumerate the supported video formats and corresponding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoFormatPropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceVideoFormatInfoKHR*   pVideoFormatInfo,
    uint32_t*                                   pVideoFormatPropertyCount,
    VkVideoFormatPropertiesKHR*                 pVideoFormatProperties);
```

- `physicalDevice` is the physical device from which to query the video format properties.
- `pVideoFormatInfo` is a pointer to a VkPhysicalDeviceVideoFormatInfoKHR structure specifying the usage and video profiles for which supported image formats and capabilities are returned.
- `pVideoFormatPropertyCount` is a pointer to an integer related to the number of video format properties available or queried, as described below.
- `pVideoFormatProperties` is a pointer to an array of VkVideoFormatPropertiesKHR structures in which supported image formats and capabilities are returned.

If `pVideoFormatProperties` is `NULL`, then the number of video format properties supported for the given `physicalDevice` is returned in `pVideoFormatPropertyCount`. Otherwise, `pVideoFormatPropertyCount` **must** point to a variable set by the application to the number of elements in the `pVideoFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pVideoFormatProperties`. If the value of `pVideoFormatPropertyCount` is less than the number of video format properties supported, at most `pVideoFormatPropertyCount` values will be written to `pVideoFormatProperties`, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned.

Video format properties are always queried with respect to a specific set of video profiles. These are specified by chaining the VkVideoProfileListInfoKHR structure to `pVideoFormatInfo`.

For most use cases, the images are used by a single video session and a single video profile is provided. For a use case such as video transcoding, where a decode session output image **can** be used as encode input in one or more encode sessions, multiple video profiles corresponding to the video sessions that will share the image **must** be provided.

If any of the video profiles specified via VkVideoProfileListInfoKHR::`pProfiles` are not supported, then this command returns one of the video-profile-specific error codes. Furthermore, if VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage` includes any image usage flags not supported by the specified video profiles, then this command returns VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR.

If the decode capability flags include VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR, then querying video format properties that support both decode DPB and output usage **can** be done by including both VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR and VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR in VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage`. However, even in this case, querying video format properties with VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage` including only VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR or VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR will also return formats supporting both.

NOTE

This enables applications to be able to query all formats supporting VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR and/or VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR by just including one of the flags, respectively, regardless of whether the implementation supports VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR, VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR, or both. This makes enumerating decode DPB and output formats simpler and unified.

The `imageUsage` member of the VkPhysicalDeviceVideoFormatInfoKHR structure specifies the expected video usage flags that the returned video formats **must** support. Correspondingly, the `imageUsageFlags` member of each VkVideoFormatPropertiesKHR structure returned will contain at least the same set of image usage flags.

If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, `usage` from that structure specifies the expected video usage flags instead of VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage`.

If the implementation supports using images of a particular format in operations other than video decode/encode then the `imageUsageFlags` member of the corresponding VkVideoFormatPropertiesKHR structure returned will include additional image usage flags indicating that.

NOTE

For most use cases, only decode or encode related usage flags are going to be specified. For a use case such as transcode, if the image were to be shared between decode and encode session(s), then both decode and encode related usage flags **can** be set.

Multiple `VkVideoFormatPropertiesKHR` entries **may** be returned with the same `format` member with different `componentMapping`, `imageType`, or `imageTiling` values, as described later.

If VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage` includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, multiple `VkVideoFormatPropertiesKHR` entries **may** be returned with the same `format`, `componentMapping`, `imageType`, and `imageTiling` member values, but different `quantizationMapTexelSize` returned in the VkVideoFormatQuantizationMapPropertiesKHR structure, if one is included in the VkVideoFormatPropertiesKHR::`pNext` chain, when the queried quantization map type supports multiple distinct quantization map texel sizes.

In addition, a different set of `VkVideoFormatPropertiesKHR` entries **may** be returned depending on the `imageUsage` member of the `VkPhysicalDeviceVideoFormatInfoKHR` structure, even for the same set of video profiles, for example, based on whether encode input, encode DPB, decode output, and/or decode DPB usage is requested.

The application **can** select the parameters returned in the `VkVideoFormatPropertiesKHR` entries and use compatible parameters when creating the input, output, and DPB images. The implementation will report all image creation and usage flags that are valid for images used with the requested video profiles but applications **should** create images only with those that are necessary for the

particular use case.

Before creating an image, the application **can** obtain the complete set of supported image format features by calling vkGetPhysicalDeviceImageFormatProperties2 using parameters derived from the members of one of the reported VkVideoFormatPropertiesKHR entries and adding the same VkVideoProfileListInfoKHR structure to the pNext chain of VkPhysicalDeviceImageFormatInfo2.

The following applies to all VkVideoFormatPropertiesKHR entries returned by vkGetPhysicalDeviceVideoFormatPropertiesKHR:

- vkGetPhysicalDeviceFormatProperties2 **must** succeed when called with VkVideoFormatPropertiesKHR::format
- If VkVideoFormatPropertiesKHR::imageTiling is VK_IMAGE_TILING_OPTIMAL, then the optimalTilingFeatures returned by vkGetPhysicalDeviceFormatProperties2 **must** include all format features required by the image usage flags reported in VkVideoFormatPropertiesKHR ::imageUsageFlags for the format, as indicated in the Format Feature Dependent Usage Flags section.
- If VkVideoFormatPropertiesKHR::imageTiling is VK_IMAGE_TILING_LINEAR, then the linearTilingFeatures returned by vkGetPhysicalDeviceFormatProperties2 **must** include all format features required by the image usage flags reported in VkVideoFormatPropertiesKHR ::imageUsageFlags for the format, as indicated in the Format Feature Dependent Usage Flags section.
- vkGetPhysicalDeviceImageFormatProperties2 **must** succeed when called with a VkPhysicalDeviceImageFormatInfo2 structure containing the following information:
  - The pNext chain including the same VkVideoProfileListInfoKHR structure used to call vkGetPhysicalDeviceVideoFormatPropertiesKHR.
  - format set to the value of VkVideoFormatPropertiesKHR::format.
  - type set to the value of VkVideoFormatPropertiesKHR::imageType.
  - tiling set to the value of VkVideoFormatPropertiesKHR::imageTiling.
  - usage set to the value of VkVideoFormatPropertiesKHR::imageUsageFlags.
  - flags set to the value of VkVideoFormatPropertiesKHR::imageCreateFlags.

The componentMapping member of VkVideoFormatPropertiesKHR defines the ordering of the $Y'C_BC_R$ color channels from the perspective of the video codec operations specified in VkVideoProfileListInfoKHR. For example, if the implementation produces video decode output with the format VK_FORMAT_G8_B8R8_2PLANE_420_UNORM where the blue and red chrominance channels are swapped then the componentMapping member of the corresponding VkVideoFormatPropertiesKHR structure will have the following member values:

```
components.r = VK_COMPONENT_SWIZZLE_B;        // Cb component
components.g = VK_COMPONENT_SWIZZLE_IDENTITY; // Y component
components.b = VK_COMPONENT_SWIZZLE_R;        // Cr component
components.a = VK_COMPONENT_SWIZZLE_IDENTITY; // unused, defaults to 1.0
```

Valid Usage

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-06812
  The `pNext` chain of `pVideoFormatInfo` **must** include a VkVideoProfileListInfoKHR structure with `profileCount` greater than `0`
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-10922
  If the `pNext` chain of `pVideoFormatInfo` includes a VkVideoEncodeProfileRgbConversionInfoVALVE structure, then the `videoEncodeRgbConversion` feature **must** be supported

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatInfo-parameter
  `pVideoFormatInfo` **must** be a valid pointer to a valid VkPhysicalDeviceVideoFormatInfoKHR structure
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatPropertyCount-parameter
  `pVideoFormatPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatProperties-parameter
  If the value referenced by `pVideoFormatPropertyCount` is not `0`, and `pVideoFormatProperties` is not `NULL`, `pVideoFormatProperties` **must** be a valid pointer to an array of `pVideoFormatPropertyCount` VkVideoFormatPropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED
- VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR

- VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR

The VkPhysicalDeviceVideoFormatInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkPhysicalDeviceVideoFormatInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkImageUsageFlags    imageUsage;
} VkPhysicalDeviceVideoFormatInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- imageUsage is a bitmask of VkImageUsageFlagBits specifying the intended usage of the video images.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_FORMAT_INFO_KHR
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkImageUsageFlags2CreateInfoKHR or VkVideoProfileListInfoKHR
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-parameter
  imageUsage **must** be a valid combination of VkImageUsageFlagBits values

The VkVideoFormatPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoFormatPropertiesKHR {
    VkStructureType       sType;
    void*                 pNext;
    VkFormat              format;
    VkComponentMapping    componentMapping;
    VkImageCreateFlags    imageCreateFlags;
    VkImageType           imageType;
    VkImageTiling         imageTiling;
    VkImageUsageFlags     imageUsageFlags;
} VkVideoFormatPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is a VkFormat that specifies the format that **can** be used with the specified video profiles and image usages.
- `componentMapping` defines the color channel order used for the format. `format` along with `componentMapping` describe how the color channels are ordered when producing video decoder output or are expected to be ordered in video encoder input, when applicable. If the `format` reported does not require component swizzling then all members of `componentMapping` will be set to VK_COMPONENT_SWIZZLE_IDENTITY.
- `imageCreateFlags` is a bitmask of VkImageCreateFlagBits specifying the supported image creation flags for the format.
- `imageType` is a VkImageType that specifies the image type the format **can** be used with.
- `imageTiling` is a VkImageTiling that specifies the image tiling the format **can** be used with.
- `imageUsageFlags` is a bitmask of VkImageUsageFlagBits specifying the supported image usage flags for the format.

Only create flags representable in VkImageCreateFlagBits are returned in `imageCreateFlags`. If the `pNext` chain includes a VkImageCreateFlags2CreateInfoKHR structure, all create flags are returned in VkImageCreateFlags2CreateInfoKHR::`flags`.

Only usage flags representable in VkImageUsageFlagBits are returned in `imageUsageFlags`. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, all usage flags are returned in VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage (Implicit)

- VUID-VkVideoFormatPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR
- VUID-VkVideoFormatPropertiesKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkImageCreateFlags2CreateInfoKHR, VkImageUsageFlags2CreateInfoKHR, VkVideoFormatAV1QuantizationMapPropertiesKHR, VkVideoFormatH265QuantizationMapPropertiesKHR, or VkVideoFormatQuantizationMapPropertiesKHR
- VUID-VkVideoFormatPropertiesKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

The *list of supported video format properties* for a set of image usage flags with respect to a video profile is defined as the list of VkVideoFormatPropertiesKHR structures and any structures included in its `pNext` chain, obtained by calling vkGetPhysicalDeviceVideoFormatPropertiesKHR with VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage` equal to the VkImageUsageFlags in question and the VkPhysicalDeviceVideoFormatInfoKHR::`pNext` chain including a VkVideoProfileListInfoKHR structure with its `pProfiles` member containing a single array element specifying the VkVideoProfileInfoKHR structure chain describing the video profile in question.

49.5. Video Sessions

Video sessions are objects that represent and maintain the state needed to perform video decode or encode operations using a specific video profile.

In case of video encode profiles this includes the current rate control configuration and the currently set video encode quality level.

Video sessions are represented by VkVideoSessionKHR handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionKHR)
```

49.5.1. Creating a Video Session

To create a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionKHR(
    VkDevice                                    device,
    const VkVideoSessionCreateInfoKHR*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkVideoSessionKHR*                          pVideoSession);
```

- device is the logical device that creates the video session.
- pCreateInfo is a pointer to a VkVideoSessionCreateInfoKHR structure containing parameters to be used to create the video session.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pVideoSession is a pointer to a VkVideoSessionKHR handle in which the resulting video session object is returned.

The resulting video session object is said to be created with the video codec operation specified in pCreateInfo->pVideoProfile->videoCodecOperation.

The name and version of the codec-specific Video Std header to be used with the video session is specified by the VkExtensionProperties structure pointed to by pCreateInfo->pStdHeaderVersion. If a non-existent or unsupported Video Std header version is specified in pCreateInfo->pStdHeaderVersion->specVersion, then this command returns VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR.

Video session objects are created in *uninitialized* state. In order to transition the video session into *initial* state, the application **must** issue a vkCmdControlVideoCodingKHR command with VkVideoCodingControlInfoKHR::flags including VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR.

Video session objects also maintain the state of the DPB. The number of DPB slots usable with the created video session is specified in pCreateInfo->maxDpbSlots, and each slot is initially in the

inactive state.

Each DPB slot maintained by the created video session **can** refer to a reference picture representing a video frame.

In addition, if the `videoCodecOperation` member of the VkVideoProfileInfoKHR structure pointed to by `pCreateInfo->pVideoProfile` is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and the `pictureLayout` member of the VkVideoDecodeH264ProfileInfoKHR structure provided in the VkVideoProfileInfoKHR::`pNext` chain is not VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR, then the created video session supports *interlaced* frames and each DPB slot maintained by the created video session **can** instead refer to separate top field and bottom field reference pictures that together **can** represent a full video frame. In this case, it is up to the application, driven by the video content, whether it associates any individual DPB slot with separate top and/or bottom field pictures or a single picture representing a full frame.

The created video session **can** be used to perform video coding operations using video frames up to the maximum size specified in `pCreateInfo->maxCodedExtent`. The minimum frame size allowed is implicitly derived from VkVideoCapabilitiesKHR::`minCodedExtent`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pCreateInfo->pVideoProfile`. Accordingly, the created video session is said to be created with a `minCodedExtent` equal to that.

In case of video session objects created with a video encode operation, implementations **may** return the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE Applications **should** not rely on the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage (Implicit)

- VUID-vkCreateVideoSessionKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateVideoSessionKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkVideoSessionCreateInfoKHR structure
- VUID-vkCreateVideoSessionKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateVideoSessionKHR-pVideoSession-parameter
  `pVideoSession` **must** be a valid pointer to a VkVideoSessionKHR handle

- VUID-vkCreateVideoSessionKHR-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED
- VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR

The VkVideoSessionCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        queueFamilyIndex;
    VkVideoSessionCreateFlagsKHR    flags;
    const VkVideoProfileInfoKHR*    pVideoProfile;
    VkFormat                        pictureFormat;
    VkExtent2D                      maxCodedExtent;
    VkFormat                        referencePictureFormat;
    uint32_t                        maxDpbSlots;
    uint32_t                        maxActiveReferencePictures;
    const VkExtensionProperties*    pStdHeaderVersion;
} VkVideoSessionCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- queueFamilyIndex is the index of the queue family the created video session will be used with.
- flags is a bitmask of VkVideoSessionCreateFlagBitsKHR specifying creation flags.
- pVideoProfile is a pointer to a VkVideoProfileInfoKHR structure specifying the video profile the created video session will be used with.
- pictureFormat is the image format the created video session will be used with. If pVideoProfile->videoCodecOperation specifies a decode operation, then pictureFormat is the image format of

decode output pictures usable with the created video session. If pVideoProfile->videoCodecOperation specifies an encode operation, then pictureFormat is the image format of encode input pictures usable with the created video session.

- maxCodedExtent is the maximum width and height of the coded frames the created video session will be used with.
- referencePictureFormat is the image format of reference pictures stored in the DPB the created video session will be used with.
- maxDpbSlots is the maximum number of DPB Slots that **can** be used with the created video session.
- maxActiveReferencePictures is the maximum number of active reference pictures that **can** be used in a single video coding operation using the created video session.
- pStdHeaderVersion is a pointer to a VkExtensionProperties structure requesting the Video Std header version to use for the videoCodecOperation specified in pVideoProfile.

Valid Usage

- VUID-VkVideoSessionCreateInfoKHR-protectedMemory-07189
  If the protectedMemory feature is not enabled or if VkVideoCapabilitiesKHR::flags does not include VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by pVideoProfile, then flags **must** not include VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR
- VUID-VkVideoSessionCreateInfoKHR-flags-08371
  If flags includes VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, then videoMaintenance1 **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10398
  If flags includes VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, then videoMaintenance2 **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10399
  If flags includes VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, then pVideoProfile->videoCodecOperation **must** specify a decode operation
- VUID-VkVideoSessionCreateInfoKHR-flags-10264
  If flags includes VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR, then the videoEncodeQuantizationMap feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10265
  If flags includes VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR, then pVideoProfile->videoCodecOperation **must** specify an encode operation
- VUID-VkVideoSessionCreateInfoKHR-flags-10266
  If flags includes

VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, then it **must** not also include VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR

- VUID-VkVideoSessionCreateInfoKHR-flags-10267
  If VkVideoEncodeCapabilitiesKHR::`flags` does not include VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`, then `flags` **must** not include VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
- VUID-VkVideoSessionCreateInfoKHR-flags-10268
  If VkVideoEncodeCapabilitiesKHR::`flags` does not include VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`, then `flags` **must** not include VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-11759
  `pVideoProfile->videoCodecOperation` **must** be supported by the queue family index specified in `queueFamilyIndex`, as reported in VkQueueFamilyVideoPropertiesKHR::`videoCodecOperations`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-04845
  `pVideoProfile` **must** be a supported video profile
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04847
  `maxDpbSlots` **must** be less than or equal to VkVideoCapabilitiesKHR::`maxDpbSlots`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxActiveReferencePictures-04849
  `maxActiveReferencePictures` **must** be less than or equal to VkVideoCapabilitiesKHR::`maxActiveReferencePictures`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04850
  If either `maxDpbSlots` or `maxActiveReferencePictures` is `0`, then both **must** be `0`
- VUID-VkVideoSessionCreateInfoKHR-maxCodedExtent-04851
  `maxCodedExtent` **must** be between VkVideoCapabilitiesKHR::`minCodedExtent` and VkVideoCapabilitiesKHR::`maxCodedExtent`, inclusive, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-04852
  If `pVideoProfile->videoCodecOperation` specifies a decode operation and `maxActiveReferencePictures` is greater than `0`, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by vkGetPhysicalDeviceVideoFormatPropertiesKHR in VkVideoFormatPropertiesKHR::`format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, and with a VkVideoProfileListInfoKHR structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-06814
  If `pVideoProfile->videoCodecOperation` specifies an encode operation and `maxActiveReferencePictures` is greater than `0`, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by then `referencePictureFormat` **must** be one of the supported encode DPB formats, as returned by vkGetPhysicalDeviceVideoFormatPropertiesKHR in VkVideoFormatPropertiesKHR::`format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR, and with a VkVideoProfileListInfoKHR structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04853
  If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` **must** be one of the supported decode output formats, as returned by vkGetPhysicalDeviceVideoFormatPropertiesKHR in VkVideoFormatPropertiesKHR::`format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR, and with a VkVideoProfileListInfoKHR structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04854
  If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` **must** be one of the supported encode input formats, as returned by vkGetPhysicalDeviceVideoFormatPropertiesKHR in VkVideoFormatPropertiesKHR::`format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR, and with a VkVideoProfileListInfoKHR structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10835
  If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a VkVideoEncodeSessionIntraRefreshCreateInfoKHR structure, and its `intraRefreshMode` member is not VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR, then the `videoEncodeIntraRefresh` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10836
  If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a VkVideoEncodeSessionIntraRefreshCreateInfoKHR structure, and its `intraRefreshMode` member is not VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR, then `intraRefreshMode` **must** specify one of the bits included in VkVideoEncodeIntraRefreshCapabilitiesKHR::`intraRefreshModes`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07190
  `pStdHeaderVersion->extensionName` **must** match VkVideoCapabilitiesKHR::`stdHeaderVersion.extensionName`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07191

pStdHeaderVersion->specVersion **must** be less than or equal to VkVideoCapabilitiesKHR ::stdHeaderVersion.specVersion, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified by pVideoProfile

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10793
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the videoDecodeVP9 feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08251
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the pNext chain of this structure includes a VkVideoEncodeH264SessionCreateInfoKHR structure, then its maxLevelIdc member **must** be less than or equal to VkVideoEncodeH264CapabilitiesKHR ::maxLevelIdc, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in pVideoProfile
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08252
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pNext chain of this structure includes a VkVideoEncodeH265SessionCreateInfoKHR structure, then its maxLevelIdc member **must** be less than or equal to VkVideoEncodeH265CapabilitiesKHR ::maxLevelIdc, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in pVideoProfile
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10269
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the videoEncodeAV1 feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10270
  If pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pNext chain of this structure includes a VkVideoEncodeAV1SessionCreateInfoKHR structure, then its maxLevel member **must** be less than or equal to VkVideoEncodeAV1CapabilitiesKHR::maxLevel, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in pVideoProfile
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10923
  If the pVideoProfile->pNext chain includes a VkVideoEncodeProfileRgbConversionInfoVALVE structure, then the videoEncodeRgbConversion feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pNext-10924
  If a VkVideoEncodeProfileRgbConversionInfoVALVE structure is included in the pNext chain of pVideoProfile and VkVideoEncodeProfileRgbConversionInfoVALVE ::performEncodeRgbConversion is enabled, a VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure **must** be included in the pNext chain of VkVideoSessionCreateInfoKHR

Valid Usage (Implicit)

- VUID-VkVideoSessionCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR
- VUID-VkVideoSessionCreateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeAV1SessionCreateInfoKHR, VkVideoEncodeH264SessionCreateInfoKHR, VkVideoEncodeH265SessionCreateInfoKHR, VkVideoEncodeSessionIntraRefreshCreateInfoKHR, or VkVideoEncodeSessionRgbConversionCreateInfoVALVE
- VUID-VkVideoSessionCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoSessionCreateInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoSessionCreateFlagBitsKHR values
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-parameter
  `pVideoProfile` **must** be a valid pointer to a valid VkVideoProfileInfoKHR structure
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-parameter
  `pictureFormat` **must** be a valid VkFormat value
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-parameter
  `referencePictureFormat` **must** be a valid VkFormat value
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-parameter
  `pStdHeaderVersion` **must** be a valid pointer to a valid VkExtensionProperties structure

Bits which **can** be set in VkVideoSessionCreateInfoKHR::`flags` are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoSessionCreateFlagBitsKHR {
    VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
  // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR = 0x00000002,
  // Provided by VK_KHR_video_maintenance1
    VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR = 0x00000004,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000008,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR = 0x00000010,
  // Provided by VK_KHR_video_decode_queue with VK_KHR_video_maintenance2
    VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR = 0x00000020,
} VkVideoSessionCreateFlagBitsKHR;
```

- VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR specifies that the video session uses protected video content.

- VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR specifies that the implementation is allowed to override video session parameters and other codec-specific encoding parameters to optimize video encode operations based on the use case information specified in the video profile and the used video encode quality level.

> **NOTE** Not specifying VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR does not guarantee that the implementation will not do any codec-specific parameter overrides, as certain overrides are necessary for the correct operation of the video encoder implementation due to limitations to the available encoding tools on that implementation. This flag, however, enables the implementation to apply further optimizing overrides.

- VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR specifies that queries within video coding scopes using the created video session are executed inline with video coding operations.
- VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR specifies that the video session **can** be used to encode pictures with quantization delta maps.
- VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR specifies that the video session **can** be used to encode pictures with emphasis maps.
- VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR specifies that the application **can** specify video session parameters inline with video decode operations instead of sourcing them from the bound video session parameters object.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionCreateFlagsKHR;
```

VkVideoSessionCreateFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoSessionCreateFlagBitsKHR.

49.5.2. Destroying a Video Session

To destroy a video session, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionKHR(
    VkDevice                                    device,
    VkVideoSessionKHR                           videoSession,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the logical device that destroys the video session.
- videoSession is the video session to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyVideoSessionKHR-videoSession-07192
  All submitted commands that refer to `videoSession` **must** have completed execution
- VUID-vkDestroyVideoSessionKHR-videoSession-07193
  If `VkAllocationCallbacks` were provided when `videoSession` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionKHR-videoSession-07194
  If no `VkAllocationCallbacks` were provided when `videoSession` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyVideoSessionKHR-videoSession-parameter
  If `videoSession` is not VK_NULL_HANDLE, `videoSession` **must** be a valid VkVideoSessionKHR handle
- VUID-vkDestroyVideoSessionKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyVideoSessionKHR-videoSession-parent
  If `videoSession` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

49.5.3. Video Session Memory Association

After creating a video session object, and before the object **can** be used to record video coding operations into command buffers using it, the application **must** allocate and bind device memory to the video session. Device memory is allocated separately (see Device Memory) and then associated with the video session.

Video sessions **may** have multiple memory bindings identified by unique unsigned integer values. Appropriate device memory **must** be bound to each such memory binding before using the video session to record command buffer commands with it.

To determine the memory requirements for a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetVideoSessionMemoryRequirementsKHR(
    VkDevice                                    device,
    VkVideoSessionKHR                           videoSession,
    uint32_t*                                   pMemoryRequirementsCount,
    VkVideoSessionMemoryRequirementsKHR*        pMemoryRequirements);
```

- `device` is the logical device that owns the video session.
- `videoSession` is the video session to query.
- `pMemoryRequirementsCount` is a pointer to an integer related to the number of memory binding requirements available or queried, as described below.
- `pMemoryRequirements` is `NULL` or a pointer to an array of VkVideoSessionMemoryRequirementsKHR structures in which the memory binding requirements of the video session are returned.

If `pMemoryRequirements` is `NULL`, then the number of memory bindings required for the video session is returned in `pMemoryRequirementsCount`. Otherwise, `pMemoryRequirementsCount` **must** point to a variable set by the application to the number of elements in the `pMemoryRequirements` array, and on return the variable is overwritten with the number of memory binding requirements actually written to `pMemoryRequirements`. If `pMemoryRequirementsCount` is less than the number of memory bindings required for the video session, then at most `pMemoryRequirementsCount` elements will be written to `pMemoryRequirements`, and VK_INCOMPLETE will be returned, instead of VK_SUCCESS, to indicate that not all required memory binding requirements were returned.

Valid Usage (Implicit)

- VUID-vkGetVideoSessionMemoryRequirementsKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parameter
  `videoSession` **must** be a valid VkVideoSessionKHR handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirementsCount-parameter
  `pMemoryRequirementsCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirements-parameter
  If the value referenced by `pMemoryRequirementsCount` is not `0`, and `pMemoryRequirements` is not `NULL`, `pMemoryRequirements` **must** be a valid pointer to an array of `pMemoryRequirementsCount` VkVideoSessionMemoryRequirementsKHR structures
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parent
  `videoSession` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkVideoSessionMemoryRequirementsKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionMemoryRequirementsKHR {
    VkStructureType         sType;
    void*                   pNext;
    uint32_t                memoryBindIndex;
    VkMemoryRequirements    memoryRequirements;
} VkVideoSessionMemoryRequirementsKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memoryBindIndex is the index of the memory binding.
- memoryRequirements is a VkMemoryRequirements structure in which the requested memory binding requirements for the binding index specified by memoryBindIndex are returned.

Valid Usage (Implicit)

- VUID-VkVideoSessionMemoryRequirementsKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR
- VUID-VkVideoSessionMemoryRequirementsKHR-pNext-pNext
  pNext **must** be NULL

To attach memory to a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkBindVideoSessionMemoryKHR(
    VkDevice                                    device,
    VkVideoSessionKHR                           videoSession,
    uint32_t                                    bindSessionMemoryInfoCount,
    const VkBindVideoSessionMemoryInfoKHR*      pBindSessionMemoryInfos);
```

- device is the logical device that owns the video session.

- `videoSession` is the video session to be bound with device memory.
- `bindSessionMemoryInfoCount` is the number of elements in `pBindSessionMemoryInfos`.
- `pBindSessionMemoryInfos` is a pointer to an array of `bindSessionMemoryInfoCount` VkBindVideoSessionMemoryInfoKHR structures specifying memory regions to be bound to specific memory bindings of the video session.

The valid usage statements below refer to the VkMemoryRequirements structure corresponding to a specific element of `pBindSessionMemoryInfos`, which is defined as follows:

- If the `memoryBindIndex` member of the element of `pBindSessionMemoryInfos` in question matches the `memoryBindIndex` member of one of the elements returned in `pMemoryRequirements` when vkGetVideoSessionMemoryRequirementsKHR is called with the same `videoSession` and with `pMemoryRequirementsCount` equal to `bindSessionMemoryInfoCount`, then the `memoryRequirements` member of that element of `pMemoryRequirements` is the VkMemoryRequirements structure corresponding to the element of `pBindSessionMemoryInfos` in question.
- Otherwise the element of `pBindSessionMemoryInfos` in question is said to not have a corresponding VkMemoryRequirements structure.

Valid Usage

- VUID-vkBindVideoSessionMemoryKHR-videoSession-07195
  The memory binding of `videoSession` identified by the `memoryBindIndex` member of any element of `pBindSessionMemoryInfos` **must** not already be backed by a memory object
- VUID-vkBindVideoSessionMemoryKHR-memoryBindIndex-07196
  The `memoryBindIndex` member of each element of `pBindSessionMemoryInfos` **must** be unique within `pBindSessionMemoryInfos`
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07197
  Each element of `pBindSessionMemoryInfos` **must** have a corresponding VkMemoryRequirements structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07198
  If an element of `pBindSessionMemoryInfos` has a corresponding VkMemoryRequirements structure, then the `memory` member of that element of `pBindSessionMemoryInfos` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the corresponding VkMemoryRequirements structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07199
  If an element of `pBindSessionMemoryInfos` has a corresponding VkMemoryRequirements structure, then the `memoryOffset` member of that element of `pBindSessionMemoryInfos` **must** be an integer multiple of the `alignment` member of the corresponding VkMemoryRequirements structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07200
  If an element of `pBindSessionMemoryInfos` has a corresponding VkMemoryRequirements structure, then the `memorySize` member of that element of `pBindSessionMemoryInfos` **must** equal the `size` member of the corresponding VkMemoryRequirements structure

Valid Usage (Implicit)

- VUID-vkBindVideoSessionMemoryKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parameter
  `videoSession` **must** be a valid VkVideoSessionKHR handle
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-parameter
  `pBindSessionMemoryInfos` **must** be a valid pointer to an array of `bindSessionMemoryInfoCount` valid VkBindVideoSessionMemoryInfoKHR structures
- VUID-vkBindVideoSessionMemoryKHR-bindSessionMemoryInfoCount-arraylength
  `bindSessionMemoryInfoCount` **must** be greater than `0`
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parent
  `videoSession` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkBindVideoSessionMemoryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkBindVideoSessionMemoryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           memoryBindIndex;
    VkDeviceMemory     memory;
    VkDeviceSize       memoryOffset;
    VkDeviceSize       memorySize;
} VkBindVideoSessionMemoryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryBindIndex` is the memory binding index to bind memory to.
- `memory` is the allocated device memory to be bound to the video session's memory binding with index `memoryBindIndex`.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound.
- `memorySize` is the size in bytes of the region of `memory`, starting from `memoryOffset` bytes, to be bound.

Valid Usage

- VUID-VkBindVideoSessionMemoryInfoKHR-memoryOffset-07201
  `memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindVideoSessionMemoryInfoKHR-memorySize-07202
  `memorySize` **must** be less than or equal to the size of `memory` minus `memoryOffset`

Valid Usage (Implicit)

- VUID-VkBindVideoSessionMemoryInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR
- VUID-VkBindVideoSessionMemoryInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBindVideoSessionMemoryInfoKHR-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle

49.6. Video Profile Compatibility

Resources and query pools used with a particular video session **must** be compatible with the video profile the video session was created with.

A VkBuffer is compatible with a video profile if it was created with the VkBufferCreateInfo::`pNext` chain including a VkVideoProfileListInfoKHR structure with its `pProfiles` member containing an element matching the VkVideoProfileInfoKHR structure chain describing the video profile, and VkBufferCreateInfo::`usage` including at least one bit specific to video coding usage.

- VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR
- VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR
- VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR
- VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR

A VkBuffer is also compatible with a video profile if it was created with VkBufferCreateInfo::`flags` including VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR.

A VkImage is compatible with a video profile if it was created with the VkImageCreateInfo::pNext chain including a VkVideoProfileListInfoKHR structure with its pProfiles member containing an element matching the VkVideoProfileInfoKHR structure chain describing the video profile, and VkImageCreateInfo::usage including at least one bit specific to video coding usage.

- VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR

A VkImage is also compatible with a video profile if all of the following conditions are true for the VkImageCreateInfo structure the image was created with:

- VkImageCreateInfo::flags included VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR.
- The list of VkVideoFormatPropertiesKHR structures, obtained by calling vkGetPhysicalDeviceVideoFormatPropertiesKHR with VkPhysicalDeviceVideoFormatInfoKHR::imageUsage equal to the VkImageCreateInfo::usage the image was created with and the VkPhysicalDeviceVideoFormatInfoKHR::pNext chain including a VkVideoProfileListInfoKHR structure with its pProfiles member containing a single array element specifying the VkVideoProfileInfoKHR structure chain describing the video profile in question, contains an element for which all of the following conditions are true with respect to the VkImageCreateInfo structure the image was created with:
  - VkImageCreateInfo::format equals VkVideoFormatPropertiesKHR::format.
  - VkImageCreateInfo::flags only contains VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR and/or bits also set in VkVideoFormatPropertiesKHR::imageCreateFlags.

    NOTE Specifying VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR when creating decode output pictures or encode input pictures is always supported when the videoMaintenance1 feature is enabled, regardless of the supported VkImageCreateFlags reported in VkVideoFormatPropertiesKHR::imageCreateFlags. Accordingly, implementations **should** not report VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR in VkVideoFormatPropertiesKHR::imageCreateFlags for any video format.

  - VkImageCreateInfo::imageType equals VkVideoFormatPropertiesKHR::imageType.
  - VkImageCreateInfo::tiling equals VkVideoFormatPropertiesKHR::imageTiling.
  - VkImageCreateInfo::usage only contains bits also set in VkVideoFormatPropertiesKHR::imageUsageFlags, or VkImageCreateInfo::flags includes

VK_IMAGE_CREATE_EXTENDED_USAGE_BIT.

NOTE

While some of these rules allow creating buffer or image resources that **may** be compatible with any video profile, applications **should** still prefer to include the specific video profiles the buffer or image resource is expected to be used with (through a VkVideoProfileListInfoKHR structure included in the `pNext` chain of the corresponding create info structure) whenever the information about the complete set of video profiles is available at resource creation time, to enable the implementation to optimize the created resource for the specific use case. In the absence of that information, the implementation **may** have to make conservative decisions about the memory requirements or representation of the resource.

A VkImageView is compatible with a video profile if the VkImage it was created from is also compatible with that video profile.

A VkQueryPool is compatible with a video profile if it was created with the VkQueryPoolCreateInfo::`pNext` chain including a VkVideoProfileInfoKHR structure chain describing the same video profile, and VkQueryPoolCreateInfo::`queryType` having one of the following values:

- VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR
- VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR

49.7. Video Session Parameters

Video session parameters objects **can** store preprocessed codec-specific parameters used with a compatible video session, and enable reducing the number of parameters needed to be provided and processed by the implementation while recording video coding operations into command buffers.

Parameters stored in such objects are *immutable* to facilitate the concurrent use of the stored parameters in multiple threads. At the same time, new parameters **can** be added to existing objects using the vkUpdateVideoSessionParametersKHR command.

In order to support concurrent use of the stored immutable parameters while also allowing the video session parameters object to be extended with new parameters, each video session parameters object maintains an *update sequence counter* that is set to `0` at object creation time and **must** be incremented by each subsequent update operation.

Certain video sequences that adhere to particular video compression standards permit updating previously supplied parameters. If a parameter update is necessary, the application has the following options:

- Cache the set of parameters on the application side and create a new video session parameters object adding all the parameters with appropriate changes, as necessary; or
- Create a new video session parameters object providing only the updated parameters and the previously used object as the template, which ensures that parameters not specified at creation time will be copied unmodified from the template object.

The actual types of parameters that **can** be stored and the capacity for individual parameter types, and the methods of initializing, updating, and referring to individual parameters are specific to the video codec operation the video session parameters object was created with.

- For VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR these are defined in the H.264 Decode Parameter Sets section.
- For VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR these are defined in the H.265 Decode Parameter Sets section.
- For VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR there are no defined parameter sets and therefore do not use video session parameters objects.
- For VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR these are defined in the AV1 Decode Parameter Sets section.
- For VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR these are defined in the H.264 Encode Parameter Sets section.
- For VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR these are defined in the H.265 Encode Parameter Sets section.
- For VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR these are defined in the AV1 Encode Parameter Sets section.

Video session parameters objects created with an encode operation are further specialized based on the video encode quality level the video session parameters are used with, as implementations **may** apply different sets of parameter overrides depending on the used quality level. This enables implementations to store the potentially optimized set of parameters in these objects, further limiting the necessary processing required while recording video encode operations into command buffers.

Video session parameters are represented by VkVideoSessionParametersKHR handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionParametersKHR)
```

49.7.1. Creating Video Session Parameters

To create a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionParametersKHR(
    VkDevice                                    device,
    const VkVideoSessionParametersCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkVideoSessionParametersKHR*                pVideoSessionParameters);
```

- device is the logical device that creates the video session parameters object.
- pCreateInfo is a pointer to a VkVideoSessionParametersCreateInfoKHR structure containing

parameters to be used to create the video session parameters object.

- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pVideoSessionParameters` is a pointer to a VkVideoSessionParametersKHR handle in which the resulting video session parameters object is returned.

The resulting video session parameters object is said to be created with the video codec operation `pCreateInfo->videoSession` was created with.

Video session parameters objects created with an encode operation are always created with respect to a video encode quality level. By default, the created video session parameters objects are created with quality level zero, unless otherwise specified by including a VkVideoEncodeQualityLevelInfoKHR structure in the `pCreateInfo->pNext` chain, in which case the video session parameters object is created with the quality level specified in VkVideoEncodeQualityLevelInfoKHR::`qualityLevel`.

If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then it will be used as a template for constructing the new video session parameters object. This happens by first adding any parameters according to the additional creation parameters provided in the `pCreateInfo->pNext` chain, followed by adding any parameters from the template object that have a key that does not match the key of any of the already added parameters.

For video session parameters objects created with an encode operation, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** have been created with the same video encode quality level as the newly created object.

NOTE This means that codec-specific parameters stored in video session parameters objects **can** only be reused across different video encode quality levels by re-specifying them, as previously created video session parameters against other quality levels **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied parameter overrides) **may** no longer be available in them for the purposes of constructing the derived object.

Video session parameters objects are only compatible with quantization maps if they are created with `pCreateInfo->flags` including VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR.

Video session parameters objects created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR against a video session object that was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR are created with a specific compatible quantization map texel size specified in the `quantizationMapTexelSize` member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the `pNext` chain of `pCreateInfo`.

NOTE This means that the quantization map texel size that such a video session parameters object is compatible with is fixed for the lifetime of the object.

> Applications have to create separate video session parameters objects to use different quantization map texel sizes with a single video session object. This is necessary because the used quantization map texel size may affect the parameter overrides the implementation has to perform and thus the final values of the used codec-specific parameters.

For video session parameters objects created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** also have been created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR and the same compatible quantization map texel size specified in VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR::`quantizationMapTexelSize`.

> **NOTE** This means that codec-specific parameters stored in video session parameters objects **can** only be reused with different quantization map texel sizes by re-specifying them, as previously created video session parameters against other quantization map texel sizes **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied parameter overrides) **may** no longer be available in them for the purposes of constructing the derived object.

For video session parameters objects created without VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** also have been created without VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR.

If `pCreateInfo->videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing H.264 SPS entries, as follows:
  - If the `pParametersAddInfo` member of the VkVideoDecodeH264SessionParametersCreateInfoKHR structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing H.264 PPS entries, as follows:
  - If the `pParametersAddInfo` member of the VkVideoDecodeH264SessionParametersCreateInfoKHR structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;

    - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264PictureParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same seq_parameter_set_id and pic_parameter_set_id.

If pCreateInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the created video session parameters object will initially contain the following sets of parameter entries:

- StdVideoH265VideoParameterSet structures representing H.265 VPS entries, as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265VideoParameterSet entries specified in pParametersAddInfo->pStdVPSs are added first;
    - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265VideoParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same vps_video_parameter_set_id.
- StdVideoH265SequenceParameterSet structures representing H.265 SPS entries, as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added first;
    - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265SequenceParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same sps_video_parameter_set_id and sps_seq_parameter_set_id.
- StdVideoH265PictureParameterSet structures representing H.265 PPS entries, as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added first;
    - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265PictureParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id.

If pCreateInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the created video session parameters object will contain a single AV1 sequence header represented by a StdVideoAV1SequenceHeader structure specified through the pStdSequenceHeader member of the VkVideoDecodeAV1SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain. As such video session parameters objects **can** only contain a single AV1 sequence header, it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

If pCreateInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the created video session parameters object will initially contain the following sets of parameter entries:

- StdVideoH264SequenceParameterSet structures representing H.264 SPS entries, as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH264SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH264SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added first;
  - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264SequenceParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same seq_parameter_set_id.
- StdVideoH264PictureParameterSet structures representing H.264 PPS entries, as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH264SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH264PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added first;
  - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264PictureParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same seq_parameter_set_id and pic_parameter_set_id.

If pCreateInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the created video session parameters object will initially contain the following sets of parameter entries:

- StdVideoH265VideoParameterSet structures representing H.265 VPS entries, as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265VideoParameterSet entries specified in pParametersAddInfo->pStdVPSs are added first;
  - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265VideoParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same vps_video_parameter_set_id.
- StdVideoH265SequenceParameterSet structures representing H.265 SPS entries, as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added first;
  - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265SequenceParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same

sps_video_parameter_set_id and sps_seq_parameter_set_id.

- StdVideoH265PictureParameterSet structures representing H.265 PPS entries, as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain is not NULL, then the set of StdVideoH265PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added first;
  - If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265PictureParameterSet entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id.

If pCreateInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the created video session parameters object will contain a single AV1 sequence header specified through the members of the VkVideoEncodeAV1SessionParametersCreateInfoKHR structure provided in the pCreateInfo->pNext chain. As such video session parameters objects **can** only contain a single AV1 sequence header, it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

In case of video session parameters objects created with a video encode operation, implementations **may** return the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE	Applications **should** not rely on the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage (Implicit)

- VUID-vkCreateVideoSessionParametersKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateVideoSessionParametersKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkVideoSessionParametersCreateInfoKHR structure
- VUID-vkCreateVideoSessionParametersKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateVideoSessionParametersKHR-pVideoSessionParameters-parameter
  pVideoSessionParameters **must** be a valid pointer to a VkVideoSessionParametersKHR handle
- VUID-vkCreateVideoSessionParametersKHR-device-queuecount

The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkVideoSessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersCreateInfoKHR {
    VkStructureType                             sType;
    const void*                                 pNext;
    VkVideoSessionParametersCreateFlagsKHR      flags;
    VkVideoSessionParametersKHR                 videoSessionParametersTemplate;
    VkVideoSessionKHR                           videoSession;
} VkVideoSessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkVideoSessionParametersCreateFlagBitsKHR specifying create flags.
- videoSessionParametersTemplate is VK_NULL_HANDLE or a valid handle to a VkVideoSessionParametersKHR object used as a template for constructing the new video session parameters object.
- videoSession is the video session object against which the video session parameters object is going to be created.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then let StdVideoH264SequenceParameterSet spsAddList[] be the list of H.264 SPS entries to add to the created video session parameters object, defined as follows:

    - If the pParametersAddInfo member of the VkVideoDecodeH264SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH264SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added to spsAddList;
    - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264SequenceParameterSet entry stored in it with seq_parameter_set_id not matching any of the entries already in spsAddList is added to spsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then let StdVideoH264PictureParameterSet ppsAddList[] be the list of H.264 PPS entries to add to the created video session parameters object, defined as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH264SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH264PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added to ppsAddList;
    - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264PictureParameterSet entry stored in it with seq_parameter_set_id or pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then let StdVideoH265VideoParameterSet vpsAddList[] be the list of H.265 VPS entries to add to the created video session parameters object, defined as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265VideoParameterSet entries specified in pParametersAddInfo->pStdVPSs are added to vpsAddList;
    - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265VideoParameterSet entry stored in it with vps_video_parameter_set_id not matching any of the entries already in vpsAddList is added to vpsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then let StdVideoH265SequenceParameterSet spsAddList[] be the list of H.265 SPS entries to add to the created video session parameters object, defined as follows:
    - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added to spsAddList;
    - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265SequenceParameterSet entry stored in it with sps_video_parameter_set_id or sps_seq_parameter_set_id not matching any of the entries already in spsAddList is added to spsAddList.
- If videoSession was created with the codec operation

VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then let StdVideoH265PictureParameterSet ppsAddList[] be the list of H.265 PPS entries to add to the created video session parameters object, defined as follows:

  - If the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added to ppsAddList;
  - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265PictureParameterSet entry stored in it with sps_video_parameter_set_id, pps_seq_parameter_set_id, or pps_pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.

- If videoSession was created with an encode operation, then let uint32_t qualityLevel be the video encode quality level of the created video session parameters object, defined as follows:
  - If the pNext chain of this structure includes a VkVideoEncodeQualityLevelInfoKHR structure, then qualityLevel is equal to VkVideoEncodeQualityLevelInfoKHR::qualityLevel.
  - Otherwise qualityLevel is 0.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then let StdVideoH264SequenceParameterSet spsAddList[] be the list of H.264 SPS entries to add to the created video session parameters object, defined as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH264SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH264SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added to spsAddList;
  - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264SequenceParameterSet entry stored in it with seq_parameter_set_id not matching any of the entries already in spsAddList is added to spsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then let StdVideoH264PictureParameterSet ppsAddList[] be the list of H.264 PPS entries to add to the created video session parameters object, defined as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH264SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH264PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added to ppsAddList;
  - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH264PictureParameterSet entry stored in it with seq_parameter_set_id or pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265VideoParameterSet vpsAddList[] be the list of H.265 VPS entries to add to the created video session parameters object, defined as follows:

- If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265VideoParameterSet entries specified in pParametersAddInfo->pStdVPSs are added to vpsAddList;
- If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265VideoParameterSet entry stored in it with vps_video_parameter_set_id not matching any of the entries already in vpsAddList is added to vpsAddList.

- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265SequenceParameterSet spsAddList[] be the list of H.265 SPS entries to add to the created video session parameters object, defined as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265SequenceParameterSet entries specified in pParametersAddInfo->pStdSPSs are added to spsAddList;
  - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265SequenceParameterSet entry stored in it with sps_video_parameter_set_id or sps_seq_parameter_set_id not matching any of the entries already in spsAddList is added to spsAddList.
- If videoSession was created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then let StdVideoH265PictureParameterSet ppsAddList[] be the list of H.265 PPS entries to add to the created video session parameters object, defined as follows:
  - If the pParametersAddInfo member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure provided in the pNext chain is not NULL, then the set of StdVideoH265PictureParameterSet entries specified in pParametersAddInfo->pStdPPSs are added to ppsAddList;
  - If videoSessionParametersTemplate is not VK_NULL_HANDLE, then each StdVideoH265PictureParameterSet entry stored in it with sps_video_parameter_set_id, pps_seq_parameter_set_id, or pps_pic_parameter_set_id not matching any of the entries already in ppsAddList is added to ppsAddList.

Valid Usage

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-04855
  If videoSessionParametersTemplate is not VK_NULL_HANDLE, it **must** have been created against videoSession
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-08310
  If videoSessionParametersTemplate is not VK_NULL_HANDLE and videoSession was created with an encode operation, then qualityLevel **must** equal the video encode quality level videoSessionParametersTemplate was created with
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10271
  If flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KH

R, then videoSession **must** have been created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR

- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10272
  If flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then the pNext chain **must** include a VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10273
  If flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR and videoSession was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, then the list of video format properties supported for the image usage flag VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR **must** have an element for which VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize equals the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10274
  If flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR and videoSession was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR, then the list of video format properties supported for the image usage flag VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR **must** have an element for which VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize equals the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10275
  If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10276
  If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created with the same quantization map texel size as the one specified in the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10277
  If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags does not include

VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created without VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07203
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the pNext chain **must** include a VkVideoDecodeH264SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07204
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the number of elements of spsAddList **must** be less than or equal to the maxStdSPSCount specified in the VkVideoDecodeH264SessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07205
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the number of elements of ppsAddList **must** be less than or equal to the maxStdPPSCount specified in the VkVideoDecodeH264SessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07206
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain **must** include a VkVideoDecodeH265SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07207
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of elements of vpsAddList **must** be less than or equal to the maxStdVPSCount specified in the VkVideoDecodeH265SessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07208
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of elements of spsAddList **must** be less than or equal to the maxStdSPSCount specified in the VkVideoDecodeH265SessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07209
  If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of elements of ppsAddList **must** be less than or equal to the maxStdPPSCount specified in the VkVideoDecodeH265SessionParametersCreateInfoKHR structure included in the pNext chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10794
  videoSession **must** not have been created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09258
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09259
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the `pNext` chain **must** include a VkVideoDecodeAV1SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07210
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeH264SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04839
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the VkVideoEncodeH264SessionParametersCreateInfoKHR structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04840
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the VkVideoEncodeH264SessionParametersCreateInfoKHR structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07211
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeH265SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04841
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the VkVideoEncodeH265SessionParametersCreateInfoKHR structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04842
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the VkVideoEncodeH265SessionParametersCreateInfoKHR structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04843
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the VkVideoEncodeH265SessionParametersCreateInfoKHR structure included in the `pNext`

chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08319
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then `num_tile_columns_minus1` **must** be less than VkVideoEncodeH265CapabilitiesKHR::`maxTiles.width`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile `videoSession` was created with, for each element of `ppsAddList`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08320
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then `num_tile_rows_minus1` **must** be less than VkVideoEncodeH265CapabilitiesKHR::`maxTiles.height`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile `videoSession` was created with, for each element of `ppsAddList`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10278
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10279
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeAV1SessionParametersCreateInfoKHR structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10280
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the `stdOperatingPointCount` member of the VkVideoEncodeAV1SessionParametersCreateInfoKHR structure included in the `pNext` chain **must** be less than or equal to VkVideoEncodeAV1CapabilitiesKHR::`maxOperatingPoints`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile `videoSession` was created with

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR
- VUID-VkVideoSessionParametersCreateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoDecodeAV1SessionParametersCreateInfoKHR, VkVideoDecodeH264SessionParametersCreateInfoKHR, VkVideoDecodeH265SessionParametersCreateInfoKHR, VkVideoEncodeAV1SessionParametersCreateInfoKHR, VkVideoEncodeH264SessionParametersCreateInfoKHR, VkVideoEncodeH265SessionParametersCreateInfoKHR, VkVideoEncodeQualityLevelInfoKHR, or VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoSessionParametersCreateFlagBitsKHR values
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-parameter
  If `videoSessionParametersTemplate` is not VK_NULL_HANDLE, `videoSessionParametersTemplate` **must** be a valid VkVideoSessionParametersKHR handle
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-parameter
  `videoSession` **must** be a valid VkVideoSessionKHR handle
- VUID-VkVideoSessionParametersCreateInfoKHR-commonparent
  Both of `videoSession`, and `videoSessionParametersTemplate` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Bits which **can** be set in VkVideoSessionParametersCreateInfoKHR::`flags` are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoSessionParametersCreateFlagBitsKHR {
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR =
0x00000001,
} VkVideoSessionParametersCreateFlagBitsKHR;
```

- VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR specifies that the created video session parameters object **can** be used with quantization maps.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionParametersCreateFlagsKHR;
```

`VkVideoSessionParametersCreateFlagsKHR` is a bitmask type for setting a mask of zero or more VkVideoSessionParametersCreateFlagBitsKHR.

The `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMapTexelSize` specifies the quantization map texel size a video session parameters object created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR is compatible with.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_SESSION_PARAMETERS_CREATE_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoSessionParametersCreateInfoKHR

49.7.2. Destroying Video Session Parameters

To destroy a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionParametersKHR(
    VkDevice                                    device,
    VkVideoSessionParametersKHR                 videoSessionParameters,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the video session parameters object.
- `videoSessionParameters` is the video session parameters object to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07212
  All submitted commands that refer to `videoSessionParameters` **must** have completed execution
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07213
  If `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07214
  If no `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionParametersKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parameter
  If `videoSessionParameters` is not VK_NULL_HANDLE, `videoSessionParameters` **must** be a valid VkVideoSessionParametersKHR handle
- VUID-vkDestroyVideoSessionParametersKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parent
  If `videoSessionParameters` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSessionParameters` **must** be externally synchronized

49.7.3. Updating Video Session Parameters

To update a video session parameters object with new parameters, call:

```
// Provided by VK_KHR_video_queue
VkResult vkUpdateVideoSessionParametersKHR(
    VkDevice                                    device,
    VkVideoSessionParametersKHR                 videoSessionParameters,
    const VkVideoSessionParametersUpdateInfoKHR* pUpdateInfo);
```

- `device` is the logical device that updates the video session parameters.
- `videoSessionParameters` is the video session parameters object to update.
- `pUpdateInfo` is a pointer to a VkVideoSessionParametersUpdateInfoKHR structure specifying the parameter update information.

After a successful call to this command, the update sequence counter of `videoSessionParameters` is changed to the value specified in `pUpdateInfo->updateSequenceCount`.

NOTE

As each update issued to a video session parameters object needs to specify the next available update sequence count value, concurrent updates of the same video session parameters object are inherently disallowed. However, recording video coding operations to command buffers referring to parameters previously added to the video session parameters object is allowed, even if there is a concurrent update in progress adding some new entries to the object.

If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and the pUpdateInfo->pNext chain includes a VkVideoDecodeH264SessionParametersAddInfoKHR structure, then this command adds the following parameter entries to videoSessionParameters:

- The H.264 SPS entries specified in VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs.
- The H.264 PPS entries specified in VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs.

If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and the pUpdateInfo->pNext chain includes a VkVideoDecodeH265SessionParametersAddInfoKHR structure, then this command adds the following parameter entries to videoSessionParameters:

- The H.265 VPS entries specified in VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs.
