- The H.265 SPS entries specified in VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs.
- The H.265 PPS entries specified in VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs.

If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the pUpdateInfo->pNext chain includes a VkVideoEncodeH264SessionParametersAddInfoKHR structure, then this command adds the following parameter entries to videoSessionParameters:

- The H.264 SPS entries specified in VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs.
- The H.264 PPS entries specified in VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs.

If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pUpdateInfo->pNext chain includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then this command adds the following parameter entries to videoSessionParameters:

- The H.265 VPS entries specified in VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs.
- The H.265 SPS entries specified in VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs.
- The H.265 PPS entries specified in VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs.

In case of video session parameters objects created with a video encode operation, implementations **may** return the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video

compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE	Applications **should** not rely on the VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage

- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-07215
  `pUpdateInfo->updateSequenceCount` **must** equal the current update sequence counter of `videoSessionParameters` plus one
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07216
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and the `pNext` chain of `pUpdateInfo` includes a VkVideoDecodeH264SessionParametersAddInfoKHR structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of VkVideoDecodeH264SessionParametersAddInfoKHR::`pStdSPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07217
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the VkVideoDecodeH264SessionParametersAddInfoKHR structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the VkVideoDecodeH264SessionParametersCreateInfoKHR::`maxStdSPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07218
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and the `pNext` chain of `pUpdateInfo` includes a VkVideoDecodeH264SessionParametersAddInfoKHR structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of VkVideoDecodeH264SessionParametersAddInfoKHR::`pStdPPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07219
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the VkVideoDecodeH264SessionParametersAddInfoKHR structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the VkVideoDecodeH264SessionParametersCreateInfoKHR::`maxStdPPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07220

If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoDecodeH265SessionParametersAddInfoKHR structure, then videoSessionParameters **must** not already contain a StdVideoH265VideoParameterSet entry with vps_video_parameter_set_id matching any of the elements of VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07221
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of StdVideoH265VideoParameterSet entries already stored in it plus the value of the stdVPSCount member of the VkVideoDecodeH265SessionParametersAddInfoKHR structure included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdVPSCount videoSessionParameters was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07222
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoDecodeH265SessionParametersAddInfoKHR structure, then videoSessionParameters **must** not already contain a StdVideoH265SequenceParameterSet entry with both sps_video_parameter_set_id and sps_seq_parameter_set_id matching any of the elements of VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07223
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of StdVideoH265SequenceParameterSet entries already stored in it plus the value of the stdSPSCount member of the VkVideoDecodeH265SessionParametersAddInfoKHR structure included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdSPSCount videoSessionParameters was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07224
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoDecodeH265SessionParametersAddInfoKHR structure, then videoSessionParameters **must** not already contain a StdVideoH265PictureParameterSet entry with sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id all matching any of the elements of VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07225
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the number of StdVideoH265PictureParameterSet entries already stored in it plus the value of the stdPPSCount member of the VkVideoDecodeH265SessionParametersAddInfoKHR structure included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdPPSCount videoSessionParameters was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-09260
  `videoSessionParameters` **must** not have been created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07226
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the `pNext` chain of `pUpdateInfo` includes a VkVideoEncodeH264SessionParametersAddInfoKHR structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of VkVideoEncodeH264SessionParametersAddInfoKHR::`pStdSPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06441
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the VkVideoEncodeH264SessionParametersAddInfoKHR structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the VkVideoEncodeH264SessionParametersCreateInfoKHR::`maxStdSPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07227
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the `pNext` chain of `pUpdateInfo` includes a VkVideoEncodeH264SessionParametersAddInfoKHR structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of VkVideoEncodeH264SessionParametersAddInfoKHR::`pStdPPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06442
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the VkVideoEncodeH264SessionParametersAddInfoKHR structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the VkVideoEncodeH264SessionParametersCreateInfoKHR::`maxStdPPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07228
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the `pNext` chain of `pUpdateInfo` includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of VkVideoEncodeH265SessionParametersAddInfoKHR::`pStdVPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06443
  If `videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the VkVideoEncodeH265SessionParametersAddInfoKHR structure

included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdVPSCount videoSessionParameters was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07229
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then videoSessionParameters **must** not already contain a StdVideoH265SequenceParameterSet entry with both sps_video_parameter_set_id and sps_seq_parameter_set_id matching any of the elements of VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06444
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of StdVideoH265SequenceParameterSet entries already stored in it plus the value of the stdSPSCount member of the VkVideoEncodeH265SessionParametersAddInfoKHR structure included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdSPSCount videoSessionParameters was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07230
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then videoSessionParameters **must** not already contain a StdVideoH265PictureParameterSet entry with sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id all matching any of the elements of VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06445
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the number of StdVideoH265PictureParameterSet entries already stored in it plus the value of the stdPPSCount member of the VkVideoEncodeH265SessionParametersAddInfoKHR structure included in the pUpdateInfo->pNext chain **must** be less than or equal to the VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdPPSCount videoSessionParameters was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08321
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pNext chain of pUpdateInfo includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then num_tile_columns_minus1 **must** be less than VkVideoEncodeH265CapabilitiesKHR::maxTiles.width, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile videoSessionParameters was created with, for each element of VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08322
  If videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and the pNext chain of

pUpdateInfo includes a VkVideoEncodeH265SessionParametersAddInfoKHR structure, then num_tile_rows_minus1 **must** be less than VkVideoEncodeH265CapabilitiesKHR::maxTiles.height, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile videoSessionParameters was created with, for each element of VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-10281
  videoSessionParameters **must** not have been created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR

Valid Usage (Implicit)

- VUID-vkUpdateVideoSessionParametersKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parameter
  videoSessionParameters **must** be a valid VkVideoSessionParametersKHR handle
- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-parameter
  pUpdateInfo **must** be a valid pointer to a valid VkVideoSessionParametersUpdateInfoKHR structure
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parent
  videoSessionParameters **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkVideoSessionParametersUpdateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersUpdateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           updateSequenceCount;
} VkVideoSessionParametersUpdateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `updateSequenceCount` is the new update sequence count to set for the video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR
- VUID-VkVideoSessionParametersUpdateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoDecodeH264SessionParametersAddInfoKHR, VkVideoDecodeH265SessionParametersAddInfoKHR, VkVideoEncodeH264SessionParametersAddInfoKHR, or VkVideoEncodeH265SessionParametersAddInfoKHR
- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

49.8. Video Coding Scope

Applications **can** record video coding commands for a video session only within a video coding scope.

To begin a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdBeginVideoCodingKHR(
    VkCommandBuffer                             commandBuffer,
    const VkVideoBeginCodingInfoKHR*            pBeginInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pBeginInfo` is a pointer to a VkVideoBeginCodingInfoKHR structure specifying the parameters of the video coding scope, including the video session and video session parameters object to use.

After beginning a video coding scope, the video session object specified in `pBeginInfo->videoSession` is *bound* to the command buffer, and the command buffer is ready to record video coding operations. Similarly, if `pBeginInfo->videoSessionParameters` is not `VK_NULL_HANDLE`, it is also *bound* to the command buffer, and video coding operations **can** refer to the codec-specific parameters stored in it.

This command also establishes the set of *bound reference picture resources* that **can** be used as reconstructed pictures or reference pictures within the video coding scope. Each element of this set consists of a video picture resource and the DPB slot index associated with it, if there is one.

The set of bound reference picture resources is immutable within a video coding scope, however, the DPB slot index associated with any of the bound reference picture resources **can** change during the video coding scope in response to video coding operations.

The VkVideoReferenceSlotInfoKHR structures provided as the elements of `pBeginInfo->pReferenceSlots` are interpreted by this command as follows:

- If `slotIndex` is non-negative and `pPictureResource` is not `NULL`, then the video picture resource defined by the VkVideoPictureResourceInfoKHR structure pointed to by `pPictureResource` is added to the set of bound reference picture resources and is associated with the DPB slot index specified in `slotIndex`.
- If `slotIndex` is non-negative and `pPictureResource` is `NULL`, then the DPB slot with index `slotIndex` is deactivated by this command.
- If `slotIndex` is negative and `pPictureResource` is not `NULL`, then the video picture resource defined by the VkVideoPictureResourceInfoKHR structure pointed to by `pPictureResource` is added to the set of bound reference picture resources without an associated DPB slot. Such a picture resource **can** be subsequently used as a reconstructed picture to associate it with a DPB slot.
- If `slotIndex` is negative and `pPictureResource` is `NULL`, then the element is ignored.

NOTE

It is possible for multiple bound reference picture resources to be associated with the same DPB slot index, or for a single bound reference picture to refer to multiple separate reference pictures. For example, in case of an H.264 decode profile with interlaced frame support a single DPB slot can refer to two separate pictures for the top and bottom fields. Depending on the picture layout used by the H.264 decode profile, the following special cases **may** arise:

- If the picture layout is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR, then the top and bottom field pictures are physically co-located in the same video picture resource with even scanlines corresponding to the top field and odd scanlines corresponding to the bottom field, respectively.
- If the picture layout is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR, then the top and bottom field pictures are stored in separate video picture resources (in separate subregions of the same image layer, in separate layers of the same image, or in entirely separate images), hence two elements of VkVideoBeginCodingInfoKHR::`pReferenceSlots` **can** contain the same `slotIndex` but specify different video picture resources in their `pPictureResource` members.

All non-negative `slotIndex` values specified in the elements of `pBeginInfo->pReferenceSlots` **must** identify DPB slots of the video session that are in the active state at the time this command is executed on the device.

NOTE

The application does not have to specify an entry in `pBeginInfo->pReferenceSlots` corresponding to all active DPB slots of the video session, but only for those which are intended to be used in the video coding scope. This way the application can avoid any potential runtime cost associated with binding the corresponding picture

resources to the command buffer.

In case of a video encode session, the application is also responsible for providing information about the current rate control state configured for the video session by including an instance of the VkVideoEncodeRateControlInfoKHR structure in the pNext chain of pBeginInfo. If no VkVideoEncodeRateControlInfoKHR is included, then the presence of an empty VkVideoEncodeRateControlInfoKHR structure is implied which indicates that the current rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR. The specified state **must** match the effective rate control state configured for the video session at the time the recorded command is executed on the device.

NOTE

Including an instance of the VkVideoEncodeRateControlInfoKHR structure in the pNext chain of pBeginInfo does not change the rate control state configured for the video session, but only specifies the expected rate control state configured at the time the recorded command is executed on the device which allows the implementation to have information about the configured rate control state at command buffer recording time. In order to change the current rate control state of a video session, the application has to issue an appropriate vkCmdControlVideoCodingKHR command as described in the Video Coding Control and Rate Control State sections.

Valid Usage

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-11760
  The VkCommandPool that commandBuffer was allocated from **must** have been created with the same queue family index that pBeginInfo->videoSession was created with
- VUID-vkCmdBeginVideoCodingKHR-None-07232
  There **must** be no active queries
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07233
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, then pBeginInfo->videoSession **must** not have been created with VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07234
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, then pBeginInfo->videoSession **must** have been created with VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07235
  If commandBuffer is an unprotected command buffer, protectedNoFault is not supported, and the pPictureResource member of any element of pBeginInfo->pReferenceSlots is not NULL, then pPictureResource->imageViewBinding for that element **must** not specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07236
  If commandBuffer is a protected command buffer, protectedNoFault is not supported, and the pPictureResource member of any element of pBeginInfo->pReferenceSlots is not NULL, then pPictureResource->imageViewBinding for that element **must** specify an image view

created from a protected image

- VUID-vkCmdBeginVideoCodingKHR-slotIndex-07239
  If the slotIndex member of any element of pBeginInfo->pReferenceSlots is not negative, then it **must** specify the index of a DPB slot that is in the active state in pBeginInfo->videoSession at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pPictureResource-07265
  Each video picture resource specified by any non-NULL pPictureResource member specified in the elements of pBeginInfo->pReferenceSlots for which slotIndex is not negative **must** match one of the video picture resources currently associated with the DPB slot index of pBeginInfo->videoSession specified by slotIndex at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08253
  If pBeginInfo->videoSession was created with a video encode operation and the pNext chain of pBeginInfo does not include an instance of the VkVideoEncodeRateControlInfoKHR structure, then the rate control mode configured for pBeginInfo->videoSession at the time the command is executed on the device **must** be VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08254
  If pBeginInfo->videoSession was created with a video encode operation and the pNext chain of pBeginInfo includes an instance of the VkVideoEncodeRateControlInfoKHR structure, then it **must** match the rate control state configured for pBeginInfo->videoSession at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08255
  If pBeginInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the current rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, and VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames is VK_TRUE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the pBeginInfo->videoSession was created with, then the pNext chain of pBeginInfo **must** include an instance of the VkVideoEncodeH264GopRemainingFrameInfoKHR with its useGopRemainingFrames member set to VK_TRUE
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08256
  If pBeginInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, the current rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, and VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames is VK_TRUE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the pBeginInfo->videoSession was created with, then the pNext chain of pBeginInfo **must** include an instance of the VkVideoEncodeH265GopRemainingFrameInfoKHR with its useGopRemainingFrames member set to VK_TRUE
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-10282
  If pBeginInfo->videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, the current rate control mode is

not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, and VkVideoEncodeAV1CapabilitiesKHR::requiresGopRemainingFrames is VK_TRUE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the pBeginInfo->videoSession was created with, then the pNext chain of pBeginInfo **must** include an instance of the VkVideoEncodeAV1GopRemainingFrameInfoKHR with its useGopRemainingFrames member set to VK_TRUE

Valid Usage (Implicit)

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-parameter
  pBeginInfo **must** be a valid pointer to a valid VkVideoBeginCodingInfoKHR structure
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdBeginVideoCodingKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBeginVideoCodingKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginVideoCodingKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginVideoCodingKHR-bufferlevel
  commandBuffer **must** be a primary VkCommandBuffer

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdBeginVideoCodingKHR is not affected by conditional rendering

The VkVideoBeginCodingInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoBeginCodingInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkVideoBeginCodingFlagsKHR            flags;
    VkVideoSessionKHR                     videoSession;
    VkVideoSessionParametersKHR           videoSessionParameters;
    uint32_t                              referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR*    pReferenceSlots;
} VkVideoBeginCodingInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `videoSession` is the video session object to be bound for the processing of the video commands.
- `videoSessionParameters` is `VK_NULL_HANDLE` or a handle of a VkVideoSessionParametersKHR object to be used for the processing of the video commands. If `VK_NULL_HANDLE`, then no video session parameters object is bound for the duration of the video coding scope.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is a pointer to an array of VkVideoReferenceSlotInfoKHR structures specifying the information used to determine the set of bound reference picture resources for the video coding scope and their initial association with DPB slot indices.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- Let VkOffset2D codedOffsetGranularity be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the x and y members of codedOffsetGranularity are 0.
  - If videoSession was created with an H.264 decode profile with a VkVideoDecodeH264ProfileInfoKHR::pictureLayout of VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR, then codedOffsetGranularity is equal to VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for that video profile.

Valid Usage

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07237
  videoSession **must** have memory bound to all of its memory bindings returned by vkGetVideoSessionMemoryRequirementsKHR for videoSession
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-04856
  Each non-negative VkVideoReferenceSlotInfoKHR::slotIndex specified in the elements of pReferenceSlots **must** be less than the VkVideoSessionCreateInfoKHR::maxDpbSlots specified when videoSession was created
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07238
  Each video picture resource corresponding to any non-NULL pPictureResource member specified in the elements of pReferenceSlots **must** be unique within pReferenceSlots
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07240
  If the pPictureResource member of any element of pReferenceSlots is not NULL, then the image view specified in pPictureResource->imageViewBinding for that element **must** be compatible with the video profile videoSession was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07241
  If the pPictureResource member of any element of pReferenceSlots is not NULL, then the format of the image view specified in pPictureResource->imageViewBinding for that element **must** match the VkVideoSessionCreateInfoKHR::referencePictureFormat videoSession was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07242
  If the pPictureResource member of any element of pReferenceSlots is not NULL, then its codedOffset member **must** be an integer multiple of codedOffsetGranularity
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07243
  If the pPictureResource member of any element of pReferenceSlots is not NULL, then its codedExtent member **must** be between minCodedExtent and maxCodedExtent, inclusive, videoSession was created with
- VUID-VkVideoBeginCodingInfoKHR-flags-07244
  If VkVideoCapabilitiesKHR::flags does not include VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile videoSession was created with, then pPictureResource->imageViewBinding of all elements of pReferenceSlots with a non-NULL pPictureResource member **must** specify image views created from the same

image

- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07245
  If `videoSession` was created with a decode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR usage flag set
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07246
  If `videoSession` was created with an encode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR usage flag set
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07247
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE` , unless the `videoMaintenance2` feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07248
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE` , unless the `videoMaintenance2` feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-09261
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE` , unless the `videoMaintenance2` feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07249
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07250
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`
- VUID-VkVideoBeginCodingInfoKHR-videoSession-10283
  If `videoSession` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-04857
  If `videoSessionParameters` is not `VK_NULL_HANDLE`, it **must** have been created with `videoSession` specified in VkVideoSessionParametersCreateInfoKHR::`videoSession`

Valid Usage (Implicit)

- VUID-VkVideoBeginCodingInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR

- VUID-VkVideoBeginCodingInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeAV1GopRemainingFrameInfoKHR, VkVideoEncodeAV1RateControlInfoKHR, VkVideoEncodeH264GopRemainingFrameInfoKHR, VkVideoEncodeH264RateControlInfoKHR, VkVideoEncodeH265GopRemainingFrameInfoKHR, VkVideoEncodeH265RateControlInfoKHR, or VkVideoEncodeRateControlInfoKHR
- VUID-VkVideoBeginCodingInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoBeginCodingInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkVideoBeginCodingInfoKHR-videoSession-parameter
  `videoSession` **must** be a valid VkVideoSessionKHR handle
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-parameter
  If `videoSessionParameters` is not VK_NULL_HANDLE, `videoSessionParameters` **must** be a valid VkVideoSessionParametersKHR handle
- VUID-VkVideoBeginCodingInfoKHR-pReferenceSlots-parameter
  If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid VkVideoReferenceSlotInfoKHR structures
- VUID-VkVideoBeginCodingInfoKHR-commonparent
  Both of `videoSession`, and `videoSessionParameters` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoBeginCodingFlagsKHR;
```

`VkVideoBeginCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkVideoReferenceSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoReferenceSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    int32_t                                  slotIndex;
    const VkVideoPictureResourceInfoKHR*     pPictureResource;
} VkVideoReferenceSlotInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `slotIndex` is the index of the DPB slot or a negative integer value.

- `pPictureResource` is `NULL` or a pointer to a VkVideoPictureResourceInfoKHR structure describing the video picture resource associated with the DPB slot index specified by `slotIndex`.

Valid Usage (Implicit)

- VUID-VkVideoReferenceSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR
- VUID-VkVideoReferenceSlotInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoDecodeAV1DpbSlotInfoKHR, VkVideoDecodeH264DpbSlotInfoKHR, VkVideoDecodeH265DpbSlotInfoKHR, VkVideoEncodeAV1DpbSlotInfoKHR, VkVideoEncodeH264DpbSlotInfoKHR, VkVideoEncodeH265DpbSlotInfoKHR, or VkVideoReferenceIntraRefreshInfoKHR
- VUID-VkVideoReferenceSlotInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoReferenceSlotInfoKHR-pPictureResource-parameter
  If `pPictureResource` is not `NULL`, `pPictureResource` **must** be a valid pointer to a valid VkVideoPictureResourceInfoKHR structure

To end a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdEndVideoCodingKHR(
    VkCommandBuffer                             commandBuffer,
    const VkVideoEndCodingInfoKHR*              pEndCodingInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEndCodingInfo` is a pointer to a VkVideoEndCodingInfoKHR structure specifying the parameters for ending the video coding scope.

After ending a video coding scope, the video session object, the optional video session parameters object, and all reference picture resources previously bound by the corresponding vkCmdBeginVideoCodingKHR command are *unbound*.

Valid Usage

- VUID-vkCmdEndVideoCodingKHR-None-07251
  There **must** be no active queries

Valid Usage (Implicit)

- VUID-vkCmdEndVideoCodingKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle

- VUID-vkCmdEndVideoCodingKHR-pEndCodingInfo-parameter
  `pEndCodingInfo` **must** be a valid pointer to a valid VkVideoEndCodingInfoKHR structure
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdEndVideoCodingKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdEndVideoCodingKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdEndVideoCodingKHR-videocoding
  This command **must** only be called inside of a video coding scope
- VUID-vkCmdEndVideoCodingKHR-bufferlevel
  `commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdEndVideoCodingKHR is not affected by conditional rendering

The `VkVideoEndCodingInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoEndCodingInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkVideoEndCodingFlagsKHR    flags;
} VkVideoEndCodingInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

Valid Usage (Implicit)

- VUID-VkVideoEndCodingInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_END_CODING_INFO_KHR
- VUID-VkVideoEndCodingInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkVideoEndCodingInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoEndCodingFlagsKHR;
```

`VkVideoEndCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

49.9. Video Coding Control

To apply dynamic controls to the bound video session object, call:

```
// Provided by VK_KHR_video_queue
void vkCmdControlVideoCodingKHR(
    VkCommandBuffer                             commandBuffer,
    const VkVideoCodingControlInfoKHR*          pCodingControlInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pCodingControlInfo` is a pointer to a VkVideoCodingControlInfoKHR structure specifying the control parameters.

The control parameters provided in this call are applied to the video session at the time the command executes on the device and are in effect until a subsequent call to this command with the same video session bound changes the corresponding control parameters.

A newly created video session **must** be reset before performing video coding operations using it by including VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR in `pCodingControlInfo->flags`. The reset operation also returns all DPB slots of the video session to the inactive state. Correspondingly, any DPB slot index associated with the bound reference picture resources is removed.

For encode sessions, the reset operation returns rate control configuration to implementation default settings and sets the video encode quality level to zero.

After video coding operations are performed using a video session, the reset operation **can** be used to return the video session to the same *initial* state as after the reset of a newly created video session. This **can** be used, for example, when different video sequences are needed to be processed with the same video session object.

If `pCodingControlInfo->flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, then the command replaces the rate control configuration maintained by the video session with the configuration specified in the VkVideoEncodeRateControlInfoKHR structure included in the `pCodingControlInfo->pNext` chain.

If `pCodingControlInfo->flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR, then the command changes the current video encode quality level to the value specified in the `qualityLevel` member of the VkVideoEncodeQualityLevelInfoKHR structure included in the `pCodingControlInfo->pNext` chain.

Valid Usage

- VUID-vkCmdControlVideoCodingKHR-flags-07017
  If `pCodingControlInfo->flags` does not include VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR, then the bound video session **must** not be in uninitialized state at the time the command is executed on the device
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-08243
  If the bound video session was not created with an encode operation, then `pCodingControlInfo->flags` **must** not include VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR or VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdControlVideoCodingKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-parameter
  `pCodingControlInfo` **must** be a valid pointer to a valid VkVideoCodingControlInfoKHR structure
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations

- VUID-vkCmdControlVideoCodingKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdControlVideoCodingKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdControlVideoCodingKHR-videocoding
  This command **must** only be called inside of a video coding scope
- VUID-vkCmdControlVideoCodingKHR-bufferlevel
  `commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdControlVideoCodingKHR is not affected by conditional rendering

The `VkVideoCodingControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCodingControlInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkVideoCodingControlFlagsKHR    flags;
} VkVideoCodingControlInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoCodingControlFlagsKHR specifying control flags.

Valid Usage

- VUID-VkVideoCodingControlInfoKHR-flags-07018
  If `flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeRateControlInfoKHR structure
- VUID-VkVideoCodingControlInfoKHR-flags-08349
  If `flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR, then the `pNext` chain **must** include a VkVideoEncodeQualityLevelInfoKHR structure

Valid Usage (Implicit)

- VUID-VkVideoCodingControlInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR
- VUID-VkVideoCodingControlInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeAV1RateControlInfoKHR, VkVideoEncodeH264RateControlInfoKHR, VkVideoEncodeH265RateControlInfoKHR, VkVideoEncodeQualityLevelInfoKHR, or VkVideoEncodeRateControlInfoKHR
- VUID-VkVideoCodingControlInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoCodingControlInfoKHR-flags-parameter
  `flags` **must** be a valid combination of VkVideoCodingControlFlagBitsKHR values

Bits which **can** be set in VkVideoCodingControlInfoKHR::`flags`, specifying the video coding control parameters to be modified, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodingControlFlagBitsKHR {
    VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR = 0x00000001,
  // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR = 0x00000002,
  // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR = 0x00000004,
} VkVideoCodingControlFlagBitsKHR;
```

- VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR specifies a request for the bound video session to be reset before other coding control parameters are applied.
- VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR specifies that the coding control parameters include video encode rate control parameters (see

VkVideoEncodeRateControlInfoKHR).

- VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR specifies that the coding control parameters include video encode quality level parameters (see VkVideoEncodeQualityLevelInfoKHR).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodingControlFlagsKHR;
```

VkVideoCodingControlFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoCodingControlFlagBitsKHR.

49.10. Inline Queries

If a video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, beginning queries using commands such as vkCmdBeginQuery within a video coding scope is not allowed. Instead, queries are executed inline by including an instance of the VkVideoInlineQueryInfoKHR structure in the pNext chain of the parameters of one of the video coding commands, with its queryPool member set to a valid VkQueryPool handle.

The VkVideoInlineQueryInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkVideoInlineQueryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkQueryPool        queryPool;
    uint32_t           firstQuery;
    uint32_t           queryCount;
} VkVideoInlineQueryInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- queryPool is VK_NULL_HANDLE or a valid handle to a VkQueryPool object that will manage the results of the queries.
- firstQuery is the query index within the query pool that will contain the query results for the first video coding operation. The query results of subsequent video coding operations will be contained by subsequent query indices.
- queryCount is the number of queries to execute.

NOTE

In practice, if queryPool is not VK_NULL_HANDLE, then queryCount will always have to match the number of video coding operations issued by the video coding command this structure is specified to, meaning that using inline queries in a video coding command will always execute a query for each issued video coding operation.

This structure **can** be included in the pNext chain of the input parameter structure of video coding commands.

- In the pNext chain of the pDecodeInfo parameter of the vkCmdDecodeVideoKHR command to execute a query for each video decode operation issued by the command.
- In the pNext chain of the pEncodeInfo parameter of the vkCmdEncodeVideoKHR command to execute a query for each video encode operation issued by the command.

Valid Usage

- VUID-VkVideoInlineQueryInfoKHR-queryPool-08372
  If queryPool is not VK_NULL_HANDLE, then firstQuery **must** be less than the number of queries in queryPool
- VUID-VkVideoInlineQueryInfoKHR-queryPool-08373
  If queryPool is not VK_NULL_HANDLE, then the sum of firstQuery and queryCount **must** be less than or equal to the number of queries in queryPool

Valid Usage (Implicit)

- VUID-VkVideoInlineQueryInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_INLINE_QUERY_INFO_KHR
- VUID-VkVideoInlineQueryInfoKHR-queryPool-parameter
  If queryPool is not VK_NULL_HANDLE, queryPool **must** be a valid VkQueryPool handle

Structure Chaining

Extends the structures

- VkVideoDecodeInfoKHR
- VkVideoEncodeInfoKHR

49.11. Video Decode Operations

Video decode operations consume compressed video data from a video bitstream buffer and zero or more reference pictures, and produce a *decode output picture* and an optional reconstructed picture.

NOTE Such decode output pictures can be shared with the Decoded Picture Buffer, and can also be used as the input of video encode operations, with graphics or compute operations, or with Window System Integration APIs, depending on the capabilities of the implementation.

Video decode operations **may** access the following resources in the VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR stage:

- The source video bitstream buffer range and the image subregions corresponding to the list of active reference pictures with access VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR.
- The image subregions corresponding to the target decode output picture and reconstructed picture with access VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR.

The image subresource of each video picture resource accessed by the video decode operation is specified using a corresponding VkVideoPictureResourceInfoKHR structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video decode operation only as decode output picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .
- If the image subresource is used in the video decode operation both as decode output picture and reconstructed picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .
- If the image subresource is used in the video decode operation only as reconstructed picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .
- If the image subresource is used in the video decode operation as a reference picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .

A video decode operation **may** complete unsuccessfully. In this case the decode output picture will have undefined contents. Similarly, if reference picture setup is requested, the reconstructed picture will also have undefined contents, and the activated DPB slot will have an invalid picture reference.

49.11.1. Codec-Specific Semantics

The following aspects of video decode operations are codec-specific:

- The interpretation of the contents of the source video bitstream buffer range.
- The construction and interpretation of the list of active reference pictures and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the decode output picture and the generation of picture data to the corresponding image subregion.
- The decision on reference picture setup.
- The construction and interpretation of information related to the optional reconstructed picture and the generation of picture data to the corresponding image subregion.

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the codec-specific aspects of the video decoding process are performed as defined in the H.264 Decode Operations section.
- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the codec-specific aspects of the video decoding process are performed as defined in the H.265 Decode Operations section.
- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the codec-specific aspects of the video decoding process are performed as defined in the VP9 Decode Operations section.
- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the codec-specific aspects of the video decoding process are performed as defined in the AV1 Decode Operations section.

49.11.2. Video Decode Operation Steps

Each video decode operation performs the following steps in the VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR stage:

1. Reads the encoded video data from the source video bitstream buffer range.
2. Performs picture reconstruction of the encoded video data according to the codec-specific semantics, applying any prediction data read from the active reference pictures in the process;
3. Writes the decoded picture data to the decode output picture, and optionally to the reconstructed picture, if one is specified and is different from the decode output picture, according to the codec-specific semantics;
4. If reference picture setup is requested, the DPB slot index specified in the reconstructed picture information is activated with the reconstructed picture.

When reconstructed picture information is provided, the specified DPB slot index is associated with the corresponding bound reference picture resource, regardless of whether reference picture setup is requested.

49.11.3. Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specifying a decode operation, the `VkVideoDecodeCapabilitiesKHR` structure **must** be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve capabilities specific to video decoding.

The `VkVideoDecodeCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeCapabilitiesKHR {
    VkStructureType                     sType;
    void*                               pNext;
    VkVideoDecodeCapabilityFlagsKHR     flags;
} VkVideoDecodeCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoDecodeCapabilityFlagBitsKHR describing the supported video decoding capabilities.

Valid Usage (Implicit)

- VUID-VkVideoDecodeCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

Bits which **may** be set in VkVideoDecodeCapabilitiesKHR::`flags`, indicating the decoding capabilities supported, are:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeCapabilityFlagBitsKHR {
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR = 0x00000002,
} VkVideoDecodeCapabilityFlagBitsKHR;
```

- VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR specifies support for using the same video picture resource as the reconstructed picture and decode output picture in a video decode operation.
- VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR specifies support for using distinct video picture resources as the reconstructed picture and decode output picture in a video decode operation.

NOTE

Some video profiles allow using distinct video picture resources as the reconstructed picture and decode output picture in specific video decode operations even when the video decode profile does not support VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR. Even if the implementation only reports coincide, the decode output picture for film

grain enabled frames must be a different video picture resource from the reconstructed picture because film grain is applied outside of the coding loop.

Implementations are only **required** to support one of VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR and VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR. Accordingly, applications **should** handle both cases to maximize portability.

NOTE

If both VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR and VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR are supported, an application can choose to create separate images for decode DPB and decode output. E.g. in cases when linear tiling is preferred (and supported) for the decode output picture and the DPB requires optimal tiling, this avoids the need for a separate copy at the expense of additional memory bandwidth requirements during decoding.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeCapabilityFlagsKHR;
```

VkVideoDecodeCapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoDecodeCapabilityFlagBitsKHR.

49.11.4. Video Decode Commands

To launch video decode operations, call:

```
// Provided by VK_KHR_video_decode_queue
void vkCmdDecodeVideoKHR(
    VkCommandBuffer                             commandBuffer,
    const VkVideoDecodeInfoKHR*                 pDecodeInfo);
```

- commandBuffer is the command buffer in which to record the command.
- pDecodeInfo is a pointer to a VkVideoDecodeInfoKHR structure specifying the parameters of the video decode operations.

Each call issues one or more video decode operations. The implicit parameter opCount corresponds to the number of video decode operations issued by the command. After calling this command, the active query index of each active query is incremented by opCount.

Currently each call to this command results in the issue of a single video decode operation.

If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoInlineQueryInfoKHR structure with its queryPool member specifying a valid VkQueryPool handle, then this command will execute a query for each video decode operation issued by it.

Active Reference Picture Information

The list of active reference pictures used by a video decode operation is a list of image subregions used as the source of reference picture data and related parameters, and is derived from the VkVideoReferenceSlotInfoKHR structures provided as the elements of the `pDecodeInfo->pReferenceSlots` array. For each element of `pDecodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the codec-specific semantics. Each element of this list contains the following information:

- The image subregion within the image subresource referred to by the video picture resource used as the reference picture.
- The DPB slot index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional reconstructed picture used by a video decode operation is derived from the VkVideoReferenceSlotInfoKHR structure pointed to by `pDecodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the codec-specific semantics, and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource used as the reconstructed picture.
- The DPB slot index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid VkVideoReferenceSlotInfoKHR structure in `pDecodeInfo->pSetupReferenceSlot` is always required, unless the video session was created with VkVideoSessionCreateInfoKHR::`maxDpbSlots` equal to zero. However, the DPB slot identified by `pDecodeInfo->pSetupReferenceSlot->slotIndex` is only activated with the reconstructed picture specified in `pDecodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the codec-specific semantics.

If reconstructed picture information is specified, and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` refers to a video picture resource different than that of the decode output picture, but reference picture setup is not requested, the contents of the video picture resource corresponding to the reconstructed picture will be undefined after the video decode operation.

NOTE	Some implementations may always output the reconstructed picture or use it as temporary storage during the video decode operation even when the reconstructed picture is not marked for future reference.

Decode Output Picture Information

Information related to the decode output picture used by a video decode operation is derived from `pDecodeInfo->dstPictureResource` and any codec-specific parameters provided in the `pDecodeInfo->pNext` chain, as defined by the codec-specific semantics, and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource

used as the decode output picture.

- The codec-specific picture information related to the decode output picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video decode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pDecodeInfo->referenceSlotCount`.
  - If the bound video session was created with an H.264 decode profile, then let `activeReferencePictureCount` be the value of `pDecodeInfo->referenceSlotCount` plus the number of elements of the `pDecodeInfo->pReferenceSlots` array that have a VkVideoDecodeH264DpbSlotInfoKHR structure included in their `pNext` chain with both `pStdReferenceInfo->flags.top_field_flag` and `pStdReferenceInfo->flags.bottom_field_flag` set.

    NOTE

    This means that the elements of `pDecodeInfo->pReferenceSlots` that include both a top and bottom field reference are counted as two separate active reference pictures, as described in the active reference picture list construction rules for H.264 decode operations.

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are `0`.
  - If the bound video session was created with an H.264 decode profile with a VkVideoDecodeH264ProfileInfoKHR::`pictureLayout` of VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR, then `codedOffsetGranularity` is equal to VkVideoDecodeH264CapabilitiesKHR::`fieldOffsetGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for that video profile.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the VkVideoSessionCreateInfoKHR::`maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be `0`.
  - If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If the bound video session object was created with an H.264 decode profile, then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain.
  - For each element of `pDecodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element. If the bound video session object was created with an H.264 decode profile, then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or

pStdReferenceInfo->flags.bottom_field_flag is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the pNext chain of the corresponding element of pDecodeInfo->pReferenceSlots.

- Let uint32_t dpbTopFieldUseCount[] and uint32_t dpbBottomFieldUseCount[] be arrays of size maxDpbSlots, where maxDpbSlots is the VkVideoSessionCreateInfoKHR::maxDpbSlots the bound video session was created with, with each element indicating the number of times the top field or the bottom field, respectively, associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the arrays be 0.
  - If the bound video session object was created with an H.264 decode profile and pDecodeInfo->pSetupReferenceSlot is not NULL, then perform the following:
    - If pStdReferenceInfo->flags.top_field_flag is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the pDecodeInfo->pSetupReferenceSlot->pNext chain, then dpbTopFieldUseCount[i] is incremented by one, where i equals pDecodeInfo->pSetupReferenceSlot->slotIndex.
    - If pStdReferenceInfo->flags.bottom_field_flag is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the pDecodeInfo->pSetupReferenceSlot->pNext chain, then dpbBottomFieldUseCount[i] is incremented by one, where i equals pDecodeInfo->pSetupReferenceSlot->slotIndex.
  - If the bound video session object was created with an H.264 decode profile, then perform the following for each element of pDecodeInfo->pReferenceSlots:
    - If pStdReferenceInfo->flags.top_field_flag is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the pNext chain of the element, then dpbTopFieldUseCount[i] is incremented by one, where i equals the slotIndex member of the element.
    - If pStdReferenceInfo->flags.bottom_field_flag is set in the VkVideoDecodeH264DpbSlotInfoKHR structure in the pNext chain of the element, then dpbBottomFieldUseCount[i] is incremented by one, where i equals the slotIndex member of the element.

Valid Usage

- VUID-vkCmdDecodeVideoKHR-None-08249
  The bound video session **must** have been created with a decode operation
- VUID-vkCmdDecodeVideoKHR-None-07011
  The bound video session **must** not be in uninitialized state at the time the command is executed on the device
- VUID-vkCmdDecodeVideoKHR-opCount-07134
  For each active query, the active query index corresponding to the query type of that query plus opCount **must** be less than or equal to the last activatable query index corresponding to the query type of that query plus one
- VUID-vkCmdDecodeVideoKHR-pNext-08365
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the pNext chain of

pDecodeInfo includes a VkVideoInlineQueryInfoKHR structure with its queryPool member specifying a valid VkQueryPool handle, then VkVideoInlineQueryInfoKHR::queryCount **must** equal opCount

- VUID-vkCmdDecodeVideoKHR-pNext-08366
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoInlineQueryInfoKHR structure with its queryPool member specifying a valid VkQueryPool handle, then all the queries used by the command, as specified by the VkVideoInlineQueryInfoKHR structure, **must** be *unavailable*
- VUID-vkCmdDecodeVideoKHR-queryType-08367
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, then the queryType used to create the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pDecodeInfo **must** be VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR
- VUID-vkCmdDecodeVideoKHR-queryPool-08368
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, then the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pDecodeInfo **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-queryType-08369
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the queryType used to create the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pDecodeInfo is VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then the VkCommandPool that commandBuffer was allocated from **must** have been created with a queue family index that supports result status queries, as indicated by VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07135
  pDecodeInfo->srcBuffer **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07136
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, then pDecodeInfo->srcBuffer **must** not be a protected buffer
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07138
  pDecodeInfo->srcBufferOffset **must** be an integer multiple of VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07139
  pDecodeInfo->srcBufferRange **must** be an integer multiple of VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07140
  If pDecodeInfo->pSetupReferenceSlot is not NULL and VkVideoDecodeCapabilitiesKHR::flags does not include VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the video picture resources specified by pDecodeInfo->dstPictureResource and pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** not match
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07141
  If pDecodeInfo->pSetupReferenceSlot is not NULL and none of the following is true:
  - VkVideoDecodeCapabilitiesKHR::flags includes VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
  - the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport set to VK_TRUE, and film grain is enabled for the decoded picture

  then the video picture resources specified by pDecodeInfo->dstPictureResource and pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** match
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07142
  pDecodeInfo->dstPictureResource.imageViewBinding **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07143
  The format of pDecodeInfo->dstPictureResource.imageViewBinding **must** match the VkVideoSessionCreateInfoKHR::pictureFormat the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07144
  pDecodeInfo->dstPictureResource.codedOffset **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07145
  pDecodeInfo->dstPictureResource.codedExtent **must** be between minCodedExtent and maxCodedExtent, inclusive, the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07146
  pDecodeInfo->dstPictureResource.imageViewBinding **must** have been created with the VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR usage flag set
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07147
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, then pDecodeInfo->dstPictureResource.imageViewBinding **must** not have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07148
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, then pDecodeInfo->dstPictureResource.imageViewBinding **must** have been created from a protected image

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-08376
  pDecodeInfo->pSetupReferenceSlot **must** not be NULL unless the bound video session was created with VkVideoSessionCreateInfoKHR::maxDpbSlots equal to zero
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07170
  If pDecodeInfo->pSetupReferenceSlot is not NULL, then pDecodeInfo->pSetupReferenceSlot->slotIndex **must** be less than the VkVideoSessionCreateInfoKHR::maxDpbSlots specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07173
  If pDecodeInfo->pSetupReferenceSlot is not NULL, then pDecodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07149
  If pDecodeInfo->pSetupReferenceSlot is not NULL, then pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** match one of the bound reference picture resources
- VUID-vkCmdDecodeVideoKHR-activeReferencePictureCount-07150
  activeReferencePictureCount **must** be less than or equal to the VkVideoSessionCreateInfoKHR::maxActiveReferencePictures specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-slotIndex-07256
  The slotIndex member of each element of pDecodeInfo->pReferenceSlots **must** be less than the VkVideoSessionCreateInfoKHR::maxDpbSlots specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-codedOffset-07257
  The codedOffset member of the VkVideoPictureResourceInfoKHR structure pointed to by the pPictureResource member of each element of pDecodeInfo->pReferenceSlots **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07151
  The pPictureResource member of each element of pDecodeInfo->pReferenceSlots **must** match one of the bound reference picture resources associated with the DPB slot index specified in the slotIndex member of that element
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07264
  Each video picture resource corresponding to the pPictureResource member specified in the elements of pDecodeInfo->pReferenceSlots **must** be unique within pDecodeInfo->pReferenceSlots
- VUID-vkCmdDecodeVideoKHR-dpbFrameUseCount-07176
  All elements of dpbFrameUseCount **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-dpbTopFieldUseCount-07177
  All elements of dpbTopFieldUseCount **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-dpbBottomFieldUseCount-07178
  All elements of dpbBottomFieldUseCount **must** be less than or equal to 1
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10801
  If pDecodeInfo->pSetupReferenceSlot is NULL or pDecodeInfo->pSetupReferenceSlot->pPictureResource does not refer to the same image subresource as pDecodeInfo->dstPictureResource, then the image subresource referred to by pDecodeInfo-

>dstPictureResource **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR layout at the time the video decode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10802
  If pDecodeInfo->pSetupReferenceSlot is not NULL and pDecodeInfo->pSetupReferenceSlot->pPictureResource refers to the same image subresource as pDecodeInfo->dstPictureResource, then the image subresource referred to by pDecodeInfo->dstPictureResource **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout at the time the video decode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10803
  If pDecodeInfo->pSetupReferenceSlot is not NULL, then the image subresource referred to by pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout at the time the video decode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdDecodeVideoKHR-pPictureResource-10804
  The image subresource referred to by the pPictureResource member of each element of pDecodeInfo->pReferenceSlots **must** be in the VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR layout at the time the video decode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdDecodeVideoKHR-pNext-07152
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeH264PictureInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-None-07258
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR but was not created with interlaced frame support, then the decode output picture **must** represent a frame
- VUID-vkCmdDecodeVideoKHR-pSliceOffsets-07153
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then all elements of the pSliceOffsets member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-None-10400
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then there **must** be a bound video session parameters object if any of the following conditions are not met:
  - the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR
  - the pNext chain of pDecodeInfo includes a

VkVideoDecodeH264InlineSessionParametersInfoKHR structure

- the pStdSPS member of the VkVideoDecodeH264InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL
- the pStdPPS member of the VkVideoDecodeH264InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL

- VUID-vkCmdDecodeVideoKHR-StdVideoH264SequenceParameterSet-07154
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264SequenceParameterSet entry with seq_parameter_set_id matching StdVideoDecodeH264PictureInfo::seq_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoDecodeH264InlineSessionParametersInfoKHR structure, and its pStdSPS member is not equal to NULL
- VUID-vkCmdDecodeVideoKHR-pNext-10401
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH264InlineSessionParametersInfoKHR structure with a non-NULL pStdSPS member, then pStdSPS->seq_parameter_set_id **must** equal StdVideoDecodeH264PictureInfo::seq_parameter_set_id provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-StdVideoH264PictureParameterSet-07155
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264PictureParameterSet entry with seq_parameter_set_id and pic_parameter_set_id matching StdVideoDecodeH264PictureInfo ::seq_parameter_set_id and StdVideoDecodeH264PictureInfo::pic_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoDecodeH264InlineSessionParametersInfoKHR structure, and its pStdPPS member is not equal to NULL
- VUID-vkCmdDecodeVideoKHR-pNext-10402
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH264InlineSessionParametersInfoKHR structure with a non-NULL pStdPPS member, then pStdPPS->seq_parameter_set_id and pStdPPS->pic_parameter_set_id **must** equal StdVideoDecodeH264PictureInfo ::seq_parameter_set_id and StdVideoDecodeH264PictureInfo::pic_parameter_set_id,

respectively, provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07156
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot **must** include a VkVideoDecodeH264DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07259
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR but was not created with interlaced frame support, and pDecodeInfo->pSetupReferenceSlot is not NULL, then the reconstructed picture **must** represent a frame
- VUID-vkCmdDecodeVideoKHR-pNext-07157
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots **must** include a VkVideoDecodeH264DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07260
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR but was not created with interlaced frame support, then each active reference picture corresponding to the elements of pDecodeInfo->pReferenceSlots **must** represent a frame
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07261
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a frame, then the reconstructed picture **must** also represent a frame
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07262
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a top field, then the reconstructed picture **must** also represent a top field
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07263
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and the decode output picture represents a bottom field, then the reconstructed picture **must** also represent a bottom field
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07266
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a frame, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a frame picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07267
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a top field, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a top field picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07268
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and an active reference picture corresponding to any element of pDecodeInfo->pReferenceSlots represents a bottom field, then the DPB slot index of the bound video session specified by the slotIndex member of that element **must** be currently associated with a bottom field picture matching the video picture resource specified by the pPictureResource member of the same element at the time the command is executed on the device
- VUID-vkCmdDecodeVideoKHR-pNext-07158
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeH265PictureInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pSliceSegmentOffsets-07159
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then all elements of the pSliceSegmentOffsets member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-None-10403
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then there **must** be a bound video session parameters object if any of the following conditions are not met:
  - the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR
  - the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure
  - the pStdVPS member of the VkVideoDecodeH265InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL
  - the pStdSPS member of the VkVideoDecodeH265InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL
  - the pStdPPS member of the VkVideoDecodeH265InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL
- VUID-vkCmdDecodeVideoKHR-StdVideoH265VideoParameterSet-07160
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265VideoParameterSet entry with vps_video_parameter_set_id matching StdVideoDecodeH265PictureInfo

::sps_video_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure, and its pStdVPS member is not equal to NULL

- VUID-vkCmdDecodeVideoKHR-pNext-10404
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure with a non-NULL pStdVPS member, then pStdVPS->vps_video_parameter_set_id **must** equal StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-StdVideoH265SequenceParameterSet-07161
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265SequenceParameterSet entry with sps_video_parameter_set_id and sps_seq_parameter_set_id matching StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id and StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure, and its pStdSPS member is not equal to NULL
- VUID-vkCmdDecodeVideoKHR-pNext-10405
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure with a non-NULL pStdSPS member, then pStdSPS->sps_video_parameter_set_id and pStdSPS->sps_seq_parameter_set_id **must** equal StdVideoDecodeH265PictureInfo ::sps_video_parameter_set_id and StdVideoDecodeH265PictureInfo ::pps_seq_parameter_set_id, respectively, provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-StdVideoH265PictureParameterSet-07162
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265PictureParameterSet entry with sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id matching StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id, StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, and StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id, respectively, that are provided

in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure, and its pStdPPS member is not equal to NULL

- VUID-vkCmdDecodeVideoKHR-pNext-10406
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure with a non-NULL pStdPPS member, then pStdPPS->sps_video_parameter_set_id, pStdPPS->pps_seq_parameter_set_id, and pStdPPS->pps_pic_parameter_set_id **must** equal StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id, StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, and StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id, respectively, provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07163
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot **must** include a VkVideoDecodeH265DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pNext-07164
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots **must** include a VkVideoDecodeH265DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pNext-10805
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeVP9PictureInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-uncompressedHeaderOffset-10806
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the uncompressedHeaderOffset member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-compressedHeaderOffset-10807
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the compressedHeaderOffset member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-tilesOffset-10808
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the tilesOffset member of

the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-10809
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then each element of the referenceNameSlotIndices array member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** either be negative or **must** equal the slotIndex member of one of the elements of pDecodeInfo->pReferenceSlots
- VUID-vkCmdDecodeVideoKHR-slotIndex-10810
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the slotIndex member of each element of pDecodeInfo->pReferenceSlots **must** equal one of the elements of the referenceNameSlotIndices array member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-filmGrainSupport-09248
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport set to VK_FALSE, then film grain **must** not be enabled for the decoded picture
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09249
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, pDecodeInfo->pSetupReferenceSlot is not NULL, and film grain is enabled for the decoded picture, then the video picture resources specified by pDecodeInfo->dstPictureResource and pDecodeInfo->pSetupReferenceSlot->pPictureResource **must** not match
- VUID-vkCmdDecodeVideoKHR-pNext-09250
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the pNext chain of pDecodeInfo **must** include a VkVideoDecodeAV1PictureInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-frameHeaderOffset-09251
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the frameHeaderOffset member of the VkVideoDecodeAV1PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09253
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then all elements of the pTileOffsets member of the VkVideoDecodeAV1PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** be less than pDecodeInfo->srcBufferRange
- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09252
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then for each element i of the pTileOffsets and pTileSizes members of the VkVideoDecodeAV1PictureInfoKHR structure included in the pNext chain of pDecodeInfo, the sum of pTileOffsets[i] and pTileSizes[i] **must** be less than or equal to pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09254
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot **must** include a VkVideoDecodeAV1DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-pNext-09255
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots **must** include a VkVideoDecodeAV1DpbSlotInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-09262
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then each element of the referenceNameSlotIndices array member of the VkVideoDecodeAV1PictureInfoKHR structure included in the pNext chain of pDecodeInfo **must** either be negative or **must** equal the slotIndex member of one of the elements of pDecodeInfo->pReferenceSlots
- VUID-vkCmdDecodeVideoKHR-slotIndex-09263
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then the slotIndex member of each element of pDecodeInfo->pReferenceSlots **must** equal one of the elements of the referenceNameSlotIndices array member of the VkVideoDecodeAV1PictureInfoKHR structure included in the pNext chain of pDecodeInfo
- VUID-vkCmdDecodeVideoKHR-None-10407
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, then there **must** be a bound video session parameters object if any of the following conditions are not met:
  - the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR
  - the pNext chain of pDecodeInfo includes a VkVideoDecodeAV1InlineSessionParametersInfoKHR structure
  - the pStdSequenceHeader member of the VkVideoDecodeAV1InlineSessionParametersInfoKHR structure included in the pNext chain of pDecodeInfo is not NULL

Valid Usage (Implicit)

- VUID-vkCmdDecodeVideoKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-parameter
  pDecodeInfo **must** be a valid pointer to a valid VkVideoDecodeInfoKHR structure
- VUID-vkCmdDecodeVideoKHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDecodeVideoKHR-commandBuffer-cmdpool

The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_VIDEO_DECODE_BIT_KHR operations

- VUID-vkCmdDecodeVideoKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecodeVideoKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecodeVideoKHR-videocoding
  This command **must** only be called inside of a video coding scope
- VUID-vkCmdDecodeVideoKHR-bufferlevel
  commandBuffer **must** be a primary VkCommandBuffer

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR	Action

Conditional Rendering

vkCmdDecodeVideoKHR is not affected by conditional rendering

The VkVideoDecodeInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    VkVideoDecodeFlagsKHR                    flags;
    VkBuffer                                 srcBuffer;
    VkDeviceSize                             srcBufferOffset;
    VkDeviceSize                             srcBufferRange;
    VkVideoPictureResourceInfoKHR            dstPictureResource;
    const VkVideoReferenceSlotInfoKHR*       pSetupReferenceSlot;
    uint32_t                                 referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR*       pReferenceSlots;
} VkVideoDecodeInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `srcBuffer` is the source video bitstream buffer to read the encoded bitstream from.
- `srcBufferOffset` is the starting offset in bytes from the start of `srcBuffer` to read the encoded bitstream from.
- `srcBufferRange` is the size in bytes of the encoded bitstream to decode from `srcBuffer`, starting from `srcBufferOffset`.
- `dstPictureResource` is the video picture resource to use as the decode output picture.
- `pSetupReferenceSlot` is `NULL` or a pointer to a VkVideoReferenceSlotInfoKHR structure specifying the reconstructed picture information.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of VkVideoReferenceSlotInfoKHR structures describing the DPB slots and corresponding reference picture resources to use in this video decode operation (the set of active reference pictures).

Valid Usage

- VUID-VkVideoDecodeInfoKHR-srcBuffer-07165
  `srcBuffer` **must** have been created with the VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR usage flag set
- VUID-VkVideoDecodeInfoKHR-srcBufferOffset-07166
  `srcBufferOffset` **must** be less than the size of `srcBuffer`
- VUID-VkVideoDecodeInfoKHR-srcBufferRange-07167
  `srcBufferRange` **must** be less than or equal to the size of `srcBuffer` minus `srcBufferOffset`
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07168
  If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07169

If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`

- VUID-VkVideoDecodeInfoKHR-slotIndex-07171
  The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pPictureResource-07172
  The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoDecodeInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR
- VUID-VkVideoDecodeInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoDecodeAV1InlineSessionParametersInfoKHR, VkVideoDecodeAV1PictureInfoKHR, VkVideoDecodeH264InlineSessionParametersInfoKHR, VkVideoDecodeH264PictureInfoKHR, VkVideoDecodeH265InlineSessionParametersInfoKHR, VkVideoDecodeH265PictureInfoKHR, VkVideoDecodeVP9PictureInfoKHR, or VkVideoInlineQueryInfoKHR
- VUID-VkVideoDecodeInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoDecodeInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkVideoDecodeInfoKHR-srcBuffer-parameter
  `srcBuffer` **must** be a valid VkBuffer handle
- VUID-VkVideoDecodeInfoKHR-dstPictureResource-parameter
  `dstPictureResource` **must** be a valid VkVideoPictureResourceInfoKHR structure
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-parameter
  If `pSetupReferenceSlot` is not `NULL`, `pSetupReferenceSlot` **must** be a valid pointer to a valid VkVideoReferenceSlotInfoKHR structure
- VUID-VkVideoDecodeInfoKHR-pReferenceSlots-parameter
  If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid VkVideoReferenceSlotInfoKHR structures

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeFlagsKHR;
```

`VkVideoDecodeFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

49.12. H.264 Decode Operations

Video decode operations using an H.264 decode profile **can** be used to decode elementary video stream sequences compliant to the ITU-T H.264 Specification.

NOTE	Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video decode operation steps with the codec-specific semantics defined in section 8 of the ITU-T H.264 Specification as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH264SequenceParameterSet` structure corresponding to the active SPS specifying the H.264 sequence parameter set.
  - The `StdVideoH264PictureParameterSet` structure corresponding to the active PPS specifying the H.264 picture parameter set.
  - The `StdVideoDecodeH264PictureInfo` structure specifying the H.264 picture information.
  - The `StdVideoDecodeH264ReferenceInfo` structures specifying the H.264 reference information corresponding to the optional reconstructed picture and any active reference pictures.
- The contents of the provided video bitstream buffer range are interpreted as defined in the H.264 Decode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the H.264 Decode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the H.264 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.264 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

49.12.1. H.264 Decode Bitstream Data Access

If the target decode output picture is a frame, then the video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice headers and data of a picture representing an entire frame, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

If the target decode output picture is a field, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing a field, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T

H.264 Specification, respectively.

The offsets provided in VkVideoDecodeH264PictureInfoKHR::pSliceOffsets **should** specify the starting offsets corresponding to each slice header within the video bitstream buffer range.

49.12.2. H.264 Decode Picture Data Access

The effective imageOffset and imageExtent corresponding to a decode output picture, reference picture, or reconstructed picture used in video decode operations with an H.264 decode profile are defined as follows:

- imageOffset is (codedOffset.x,codedOffset.y) and imageExtent is (codedExtent.width, codedExtent.height), if the picture represents a frame.
- imageOffset is (codedOffset.x,codedOffset.y) and imageExtent is (codedExtent.width, codedExtent.height), if the picture represents a field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR.
- imageOffset is (codedOffset.x,codedOffset.y) and imageExtent is (codedExtent.width, codedExtent.height / 2), if the picture represents a field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR.

Where codedOffset and codedExtent are the members of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

However, accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::pictureAccessGranularity, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. This means that the complete image subregion accessed by video coding operations using an H.264 decode profile for the video picture resource is defined as the set of texels within the coordinate range:

([startX,endX), [startY,endY))

Where:

- startX equals imageOffset.x rounded down to the nearest integer multiple of pictureAccessGranularity.width;
- endX equals imageOffset.x + imageExtent.width rounded up to the nearest integer multiple of pictureAccessGranularity.width and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;
- startY equals imageOffset.y rounded down to the nearest integer multiple of pictureAccessGranularity.height;
- endY equals imageOffset.y + imageExtent.height rounded up to the nearest integer multiple of pictureAccessGranularity.height and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure.

In case of video decode operations using an H.264 decode profile, any access to a picture at the

coordinates (x,y), as defined by the ITU-T H.264 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates specified below:

- (x,y), if the accessed picture represents a frame.
- (x,y × 2), if the accessed picture represents a top field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR.
- (x,y × 2 + 1), if the accessed picture represents a bottom field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR.
- (x,y), if the accessed picture represents a top field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR.
- (codedOffset.x + x,codedOffset.y + y), if the accessed picture represents a bottom field and the picture layout of the used H.264 decode profile is VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR.

Where codedOffset is the member of the corresponding VkVideoPictureResourceInfoKHR structure.

49.12.3. H.264 Decode Profile

A video profile supporting H.264 video decode operations is specified by setting VkVideoProfileInfoKHR::videoCodecOperation to VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and adding a VkVideoDecodeH264ProfileInfoKHR structure to the VkVideoProfileInfoKHR::pNext chain.

The VkVideoDecodeH264ProfileInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264ProfileInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    StdVideoH264ProfileIdc                          stdProfileIdc;
    VkVideoDecodeH264PictureLayoutFlagBitsKHR       pictureLayout;
} VkVideoDecodeH264ProfileInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stdProfileIdc is a StdVideoH264ProfileIdc value specifying the H.264 codec profile IDC, where enum constant STD_VIDEO_H264_PROFILE_IDC_BASELINE identifies the Constrained Baseline profile as defined in A.2.1.1 of the ITU-T H.264 Specification, and all other values correspond to profiles defined in section A.2 of the ITU-T H.264 Specification.
- pictureLayout is a VkVideoDecodeH264PictureLayoutFlagBitsKHR value specifying the picture layout used by the H.264 video sequence to be decoded.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264ProfileInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PROFILE_INFO_KHR
- VUID-VkVideoDecodeH264ProfileInfoKHR-pictureLayout-parameter
  If `pictureLayout` is not `0`, `pictureLayout` **must** be a valid VkVideoDecodeH264PictureLayoutFlagBitsKHR value

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

The H.264 video decode picture layout flags are defined as follows:

```
// Provided by VK_KHR_video_decode_h264
typedef enum VkVideoDecodeH264PictureLayoutFlagBitsKHR {
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR = 0,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR =
0x00000001,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR =
0x00000002,
} VkVideoDecodeH264PictureLayoutFlagBitsKHR;
```

- VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR specifies support for progressive content. This flag has the value `0`.
- VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR specifies support for or use of a picture layout for interlaced content where all lines belonging to the top field are decoded to the even-numbered lines within the picture resource, and all lines belonging to the bottom field are decoded to the odd-numbered lines within the picture resource.
- VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR specifies support for or use of a picture layout for interlaced content where all lines belonging to a field are grouped together in a single image subregion, and the two fields comprising the frame **can** be stored in separate image subregions of the same image subresource or in separate image subresources.

```
// Provided by VK_KHR_video_decode_h264
typedef VkFlags VkVideoDecodeH264PictureLayoutFlagsKHR;
```

`VkVideoDecodeH264PictureLayoutFlagsKHR` is a bitmask type for setting a mask of zero or more VkVideoDecodeH264PictureLayoutFlagBitsKHR.

49.12.4. H.264 Decode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an H.264 decode profile, the VkVideoCapabilitiesKHR::pNext chain **must** include a VkVideoDecodeH264CapabilitiesKHR structure that will be filled with the profile-specific capabilities.

The VkVideoDecodeH264CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264CapabilitiesKHR {
    VkStructureType         sType;
    void*                   pNext;
    StdVideoH264LevelIdc    maxLevelIdc;
    VkOffset2D              fieldOffsetGranularity;
} VkVideoDecodeH264CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxLevelIdc is a StdVideoH264LevelIdc value indicating the maximum H.264 level supported by the profile, where enum constant STD_VIDEO_H264_LEVEL_IDC_<major>_<minor> identifies H.264 level <major>.<minor> as defined in section A.3 of the ITU-T H.264 Specification.
- fieldOffsetGranularity is the minimum alignment for VkVideoPictureResourceInfoKHR::codedOffset specified for a video picture resource when using the picture layout VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264CapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.12.5. H.264 Decode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR **can** contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the ITU-T H.264 Specification;
- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the ITU-T H.264 Specification;
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index i corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the ITU-T H.264 Specification;
  - `use_default_scaling_matrix_mask` is a bitmask where bit index i corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when i < 6, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the ITU-T H.264 Specification;
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the ITU-T H.264 Specification;
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the ITU-T H.264 Specification;

    > **NOTE** The name of `colour_description_present_flag` was misspelled in the Video Std header.

  - if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `reserved1` is used only for padding purposes and is otherwise ignored;
    - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the ITU-T H.264 Specification;
  - all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the ITU-T H.264 Specification;
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the ITU-T H.264 Specification.

H.264 Picture Parameter Sets (PPS)

Represented by StdVideoH264PictureParameterSet structures and interpreted as follows:

- the pair constructed from seq_parameter_set_id and pic_parameter_set_id is used as the key of the PPS entry;
- if flags.pic_scaling_matrix_present_flag is set, then the StdVideoH264ScalingLists structure pointed to by pScalingLists is interpreted as follows:
  - scaling_list_present_mask is a bitmask where bit index i corresponds to pic_scaling_list_present_flag[i] as defined in section 7.4.2.2 of the ITU-T H.264 Specification;
  - use_default_scaling_matrix_mask is a bitmask where bit index i corresponds to UseDefaultScalingMatrix4x4Flag[i], when i < 6, or corresponds to UseDefaultScalingMatrix8x8Flag[i-6], otherwise, as defined in section 7.3.2.2 of the ITU-T H.264 Specification;
  - ScalingList4x4 and ScalingList8x8 correspond to the identically named syntax elements defined in section 7.3.2.2 of the ITU-T H.264 Specification;
- all other members of StdVideoH264PictureParameterSet are interpreted as defined in section 7.4.2.2 of the ITU-T H.264 Specification.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain **must** include a VkVideoDecodeH264SessionParametersCreateInfoKHR structure specifying the capacity and initial contents of the object.

The VkVideoDecodeH264SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersCreateInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        maxStdSPSCount;
    uint32_t                                        maxStdPPSCount;
    const VkVideoDecodeH264SessionParametersAddInfoKHR*    pParametersAddInfo;
} VkVideoDecodeH264SessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxStdSPSCount is the maximum number of H.264 SPS entries the created VkVideoSessionParametersKHR **can** contain.
- maxStdPPSCount is the maximum number of H.264 PPS entries the created VkVideoSessionParametersKHR **can** contain.
- pParametersAddInfo is NULL or a pointer to a VkVideoDecodeH264SessionParametersAddInfoKHR

structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
  If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoDecodeH264SessionParametersAddInfoKHR` structure

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoDecodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersAddInfoKHR {
    VkStructureType                             sType;
    const void*                                 pNext;
    uint32_t                                    stdSPSCount;
    const StdVideoH264SequenceParameterSet*     pStdSPSs;
    uint32_t                                    stdPPSCount;
    const StdVideoH264PictureParameterSet*      pStdPPSs;
} VkVideoDecodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the H.264 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the H.264 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a video session parameters object. In this case, if the video codec operation the video

session parameters object is created with is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).

- In the pNext chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).

Valid Usage

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04825
  The seq_parameter_set_id member of each StdVideoH264SequenceParameterSet structure specified in the elements of pStdSPSs **must** be unique within pStdSPSs
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04826
  The pair constructed from the seq_parameter_set_id and pic_parameter_set_id members of each StdVideoH264PictureParameterSet structure specified in the elements of pStdPPSs **must** be unique within pStdPPSs

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
  If stdSPSCount is not 0, pStdSPSs **must** be a valid pointer to an array of stdSPSCount StdVideoH264SequenceParameterSet values
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
  If stdPPSCount is not 0, pStdPPSs **must** be a valid pointer to an array of stdPPSCount StdVideoH264PictureParameterSet values

Structure Chaining

Extends the structure

- VkVideoSessionParametersUpdateInfoKHR

Inline Parameter Sets

In case of video sessions created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, the application **can** also specify the active parameter sets *inline* by including an instance of the VkVideoDecodeH264InlineSessionParametersInfoKHR structure in the pNext chain of VkVideoDecodeInfoKHR.

The VkVideoDecodeH264InlineSessionParametersInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH264InlineSessionParametersInfoKHR {
    VkStructureType                             sType;
    const void*                                 pNext;
    const StdVideoH264SequenceParameterSet*     pStdSPS;
    const StdVideoH264PictureParameterSet*      pStdPPS;
} VkVideoDecodeH264InlineSessionParametersInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdSPS is NULL or a pointer to an instance of the StdVideoH264SequenceParameterSet structure describing the active H.264 SPS.
- pStdPPS is NULL or a pointer to an instance of the StdVideoH264PictureParameterSet structure describing the active H.264 PPS.

If pStdSPS or pStdPPS is not NULL, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding parameter sets being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264InlineSessionParametersInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_INLINE_SESSION_PARAMETERS_INFO_KHR
- VUID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdSPS-parameter
  If pStdSPS is not NULL, pStdSPS **must** be a valid pointer to a valid StdVideoH264SequenceParameterSet value
- VUID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdPPS-parameter
  If pStdPPS is not NULL, pStdPPS **must** be a valid pointer to a valid StdVideoH264PictureParameterSet value

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

49.12.6. H.264 Decoding Parameters

The VkVideoDecodeH264PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264PictureInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoDecodeH264PictureInfo*     pStdPictureInfo;
    uint32_t                                 sliceCount;
    const uint32_t*                          pSliceOffsets;
} VkVideoDecodeH264PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH264PictureInfo` structure specifying H.264 picture information.
- `sliceCount` is the number of elements in `pSliceOffsets`.
- `pSliceOffsets` is a pointer to an array of `sliceCount` offsets specifying the start offset of the slices of the picture within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.

This structure is specified in the `pNext` chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR to specify the codec-specific picture information for an H.264 decode operation.

Decode Output Picture Information

When this structure is specified in the `pNext` chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR, the information related to the decode output picture is defined as follows:

- If `pStdPictureInfo->flags.field_pic_flag` is not set, then the picture represents a frame.
- If `pStdPictureInfo->flags.field_pic_flag` is set, then the picture represents a field. Specifically:
  - If `pStdPictureInfo->flags.bottom_field_flag` is not set, then the picture represents the top field of the frame.
  - If `pStdPictureInfo->flags.bottom_field_flag` is set, then the picture represents the bottom field of the frame.
- The image subregion used is determined according to the H.264 Decode Picture Data Access section.
- The decode output picture is associated with the H.264 picture information provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `flags.is_intra` as defined in section 3.73 of the ITU-T H.264 Specification;

- `flags.is_reference` as defined in section 3.136 of the ITU-T H.264 Specification;
- `flags.complementary_field_pair` as defined in section 3.35 of the ITU-T H.264 Specification;
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- all other members are interpreted as defined in section 7.4.3 of the ITU-T H.264 Specification.

Reference picture setup is controlled by the value of `StdVideoDecodeH264PictureInfo::flags.is_reference`. If it is set and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeH264PictureInfo::flags.is_reference` is not set, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Active Parameter Sets

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the specified inline parameter sets or from the bound video session parameters object, as follows:

- The *active SPS* is the SPS identified by the key specified in `StdVideoDecodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the PPS identified by the key specified by the pair constructed from `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`.

If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and any of the active parameter sets are specified inline, then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264PictureInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR
- VUID-VkVideoDecodeH264PictureInfoKHR-pStdPictureInfo-parameter
  `pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264PictureInfo` value
- VUID-VkVideoDecodeH264PictureInfoKHR-pSliceOffsets-parameter
  `pSliceOffsets` **must** be a valid pointer to an array of `sliceCount` `uint32_t` values
- VUID-VkVideoDecodeH264PictureInfoKHR-sliceCount-arraylength
  `sliceCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

The VkVideoDecodeH264DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoDecodeH264ReferenceInfo*   pStdReferenceInfo;
} VkVideoDecodeH264DpbSlotInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoDecodeH264ReferenceInfo structure specifying H.264 reference information.

This structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an H.264 decode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots, one or two elements are added to the list of active reference pictures used by the video decode operation for each element of VkVideoDecodeInfoKHR::pReferenceSlots as follows:

- If neither pStdReferenceInfo->flags.top_field_flag nor pStdReferenceInfo->flags.bottom_field_flag is set, then the picture is added as a frame reference to the list of active reference pictures.
- If pStdReferenceInfo->flags.top_field_flag is set, then the picture is added as a top field reference to the list of active reference pictures.
- If pStdReferenceInfo->flags.bottom_field_flag is set, then the picture is added as a bottom field reference to the list of active reference pictures.
- For each added reference picture, the corresponding image subregion used is determined according to the H.264 Decode Picture Data Access section.
- Each added reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoDecodeInfoKHR::pReferenceSlots.
- Each added reference picture is associated with the H.264 reference information provided in pStdReferenceInfo.

NOTE

When both the top and bottom field of an interlaced frame currently associated with a DPB slot is intended to be used as an active reference picture and both fields are stored in the same image subregion (which is the case when using VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR which stores the two fields at even and odd scanlines of the same image subregion), both references have to be provided through a single VkVideoReferenceSlotInfoKHR structure that has both flags.top_field_flag and

> flags.bottom_field_flag set in the StdVideoDecodeH264ReferenceInfo structure pointed to by the pStdReferenceInfo member of the VkVideoDecodeH264DpbSlotInfoKHR structure included in the corresponding VkVideoReferenceSlotInfoKHR structure's pNext chain. However, this approach can only be used when both fields are stored in the same image subregion. If that is not the case (e.g. when using VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR which requires separate codedOffset values for the two fields and also allows storing the two fields of a frame in separate image layers or entirely separate images), then a separate VkVideoReferenceSlotInfoKHR structure needs to be provided for referencing the two fields, each only setting one of flags.top_field_flag or flags.bottom_field_flag, and providing the appropriate video picture resource information in VkVideoReferenceSlotInfoKHR::pPictureResource.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- If neither pStdReferenceInfo->flags.top_field_flag nor pStdReferenceInfo->flags.bottom_field_flag is set, then the picture represents a frame.
- If pStdReferenceInfo->flags.top_field_flag is set, then the picture represents a field, specifically, the top field of the frame.
- If pStdReferenceInfo->flags.bottom_field_flag is set, then the picture represents a field, specifically, the bottom field of the frame.
- The image subregion used is determined according to the H.264 Decode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the H.264 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoDecodeH264ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- flags.top_field_flag is used to indicate whether the reference is used as top field reference;
- flags.bottom_field_flag is used to indicate whether the reference is used as bottom field reference;
- flags.used_for_long_term_reference is used to indicate whether the picture is marked as "used for long-term reference" as defined in section 8.2.5.1 of the ITU-T H.264 Specification;
- flags.is_non_existing is used to indicate whether the picture is marked as "non-existing" as defined in section 8.2.5.2 of the ITU-T H.264 Specification;

- all other members are interpreted as defined in section 8.2 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR
- VUID-VkVideoDecodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.12.7. H.264 Decode Requirements

This section describes the **required** H.264 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::`videoCodecOperations`.

Table 58. Required Video Std Header Versions

Video Std Header Name	Version
`vulkan_video_codec_h264std_decode`	1.0.0

Table 59. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
`flags`	-	min
`minBitstreamBufferOffsetAlignment`	4096	max
`minBitstreamBufferSizeAlignment`	4096	max
`pictureAccessGranularity`	(64,64)	max
`minCodedExtent`	-	max
`maxCodedExtent`	-	min
`maxDpbSlots`	0	min
`maxActiveReferencePictures`	0	min
VkVideoDecodeCapabilitiesKHR		

Video Capability	Requirement	Requirement Type[1]
`flags`	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH264CapabilitiesKHR		
`maxLevelIdc`	`STD_VIDEO_H264_LEVEL_IDC_1_0`	min
`fieldOffsetGranularity`	(0,0) except for profiles using VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

49.13. H.265 Decode Operations

Video decode operations using an H.265 decode profile **can** be used to decode elementary video stream sequences compliant to the ITU-T H.265 Specification.

NOTE	Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video decode operation steps with the codec-specific semantics defined in section 8 of ITU-T H.265 Specification:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH265VideoParameterSet` structure corresponding to the active VPS specifying the H.265 video parameter set.
  - The `StdVideoH265SequenceParameterSet` structure corresponding to the active SPS specifying the H.265 sequence parameter set.

    - The `StdVideoH265PictureParameterSet` structure corresponding to the active PPS specifying the H.265 picture parameter set.
    - The `StdVideoDecodeH265PictureInfo` structure specifying the H.265 picture information.
    - The `StdVideoDecodeH265ReferenceInfo` structures specifying the H.265 reference information corresponding to the optional reconstructed picture and any active reference pictures.
- The contents of the provided video bitstream buffer range are interpreted as defined in the H.265 Decode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the H.265 Decode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the H.265 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.265 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

49.13.1. H.265 Decode Bitstream Data Access

The video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice segment headers and data of a picture representing a frame, as defined in sections 7.3.6 and 7.3.8, and this data is interpreted as defined in sections 7.4.7 and 7.4.9 of the ITU-T H.265 Specification, respectively.

The offsets provided in VkVideoDecodeH265PictureInfoKHR::`pSliceSegmentOffsets` **should** specify the starting offsets corresponding to each slice segment header within the video bitstream buffer range.

49.13.2. H.265 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::`pictureAccessGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of a decode output picture, reference picture, or reconstructed picture accessed by video coding operations using an H.265 decode profile is defined as the set of texels within the coordinate range:

([0,`endX`), [0,`endY`))

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

- endY equals codedExtent.height rounded up to the nearest integer multiple of pictureAccessGranularity.height and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where codedExtent is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video decode operations using an H.265 decode profile, any access to a picture at the coordinates (x,y), as defined by the ITU-T H.265 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (x,y).

49.13.3. H.265 Decode Profile

A video profile supporting H.265 video decode operations is specified by setting VkVideoProfileInfoKHR::videoCodecOperation to VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and adding a VkVideoDecodeH265ProfileInfoKHR structure to the VkVideoProfileInfoKHR::pNext chain.

The VkVideoDecodeH265ProfileInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265ProfileInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    StdVideoH265ProfileIdc    stdProfileIdc;
} VkVideoDecodeH265ProfileInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stdProfileIdc is a StdVideoH265ProfileIdc value specifying the H.265 codec profile IDC, as defined in section A.3 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265ProfileInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

49.13.4. H.265 Decode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an H.265 decode profile, the VkVideoCapabilitiesKHR::pNext chain **must** include a VkVideoDecodeH265CapabilitiesKHR structure that will be filled with the profile-specific capabilities.

The VkVideoDecodeH265CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265CapabilitiesKHR {
    VkStructureType         sType;
    void*                   pNext;
    StdVideoH265LevelIdc    maxLevelIdc;
} VkVideoDecodeH265CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxLevelIdc is a StdVideoH265LevelIdc value indicating the maximum H.265 level supported by the profile, where enum constant STD_VIDEO_H265_LEVEL_IDC_<major>_<minor> identifies H.265 level <major>.<minor> as defined in section A.4 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265CapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.13.5. H.265 Decode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR **can** contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by StdVideoH265VideoParameterSet structures and interpreted as follows:

- reserved1, reserved2, and reserved3 are used only for padding purposes and are otherwise ignored;
- vps_video_parameter_set_id is used as the key of the VPS entry;

- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the ITU-T H.265 Specification;
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
  - `reserved` is used only for padding purposes and is otherwise ignored;
  - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index i corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
  - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index i corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
  - `flags.low_delay_hrd_flag` is a bitmask where bit index i corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
  - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1` + 1 number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
    - `cbr_flag` is a bitmask where bit index i corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
    - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
  - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1` + 1 number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
    - `cbr_flag` is a bitmask where bit index i corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
    - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` is interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section

7.4.4 of the ITU-T H.265 Specification;

- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` is interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the ITU-T H.265 Specification;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - `used_by_curr_pic_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `use_delta_flag` is a bitmask where bit index i corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `used_by_curr_pic_s0_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;

    - used_by_curr_pic_s1_flag is a bitmask where bit index i corresponds to used_by_curr_pic_s1_flag[i] as defined in section 7.4.8 of the ITU-T H.265 Specification;
    - all other members of StdVideoH265ShortTermRefPicSet are interpreted as defined in section 7.4.8 of the ITU-T H.265 Specification;
- if flags.long_term_ref_pics_present_flag is set then the StdVideoH265LongTermRefPicsSps structure pointed to by pLongTermRefPicsSps is interpreted as follows:
    - used_by_curr_pic_lt_sps_flag is a bitmask where bit index i corresponds to used_by_curr_pic_lt_sps_flag[i] as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
    - all other members of StdVideoH265LongTermRefPicsSps are interpreted as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
- if flags.vui_parameters_present_flag is set, then the StdVideoH265SequenceParameterSetVui structure pointed to by pSequenceParameterSetVui is interpreted as follows:
    - reserved1, reserved2, and reserved3 are used only for padding purposes and are otherwise ignored;
    - the StdVideoH265HrdParameters structure pointed to by pHrdParameters is interpreted as follows:
        - flags.fixed_pic_rate_general_flag is a bitmask where bit index i corresponds to fixed_pic_rate_general_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
        - flags.fixed_pic_rate_within_cvs_flag is a bitmask where bit index i corresponds to fixed_pic_rate_within_cvs_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
        - flags.low_delay_hrd_flag is a bitmask where bit index i corresponds to low_delay_hrd_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
        - if flags.nal_hrd_parameters_present_flag is set, then pSubLayerHrdParametersNal is a pointer to an array of sps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where sps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265SequenceParameterSet structure and each element is interpreted as follows:
            - cbr_flag is a bitmask where bit index i corresponds to cbr_flag[i] as defined in section E.3.3 of the ITU-T H.265 Specification;
            - all other members of the StdVideoH265SubLayerHrdParameters structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
        - if flags.vcl_hrd_parameters_present_flag is set, then pSubLayerHrdParametersVcl is a pointer to an array of sps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where sps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265SequenceParameterSet structure and each element is interpreted as follows:
            - cbr_flag is a bitmask where bit index i corresponds to cbr_flag[i] as defined in section E.3.3 of the ITU-T H.265 Specification;

        - all other members of the StdVideoH265SubLayerHrdParameters structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
      - all other members of StdVideoH265HrdParameters are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;
    - all other members of pSequenceParameterSetVui are interpreted as defined in section E.3.1 of the ITU-T H.265 Specification;
- if flags.sps_palette_predictor_initializer_present_flag is set, then the PredictorPaletteEntries member of the StdVideoH265PredictorPaletteEntries structure pointed to by pPredictorPaletteEntries is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;
- all other members of StdVideoH265SequenceParameterSet are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

H.265 Picture Parameter Sets (PPS)

Represented by StdVideoH265PictureParameterSet structures and interpreted as follows:

- reserved1, reserved2, and reserved3 are used only for padding purposes and are otherwise ignored;
- the triplet constructed from sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id is used as the key of the PPS entry;
- if flags.pps_scaling_list_data_present_flag is set, then the StdVideoH265ScalingLists structure pointed to by pScalingLists is interpreted as follows:
  - ScalingList4x4, ScalingList8x8, ScalingList16x16, and ScalingList32x32 correspond to ScalingList[0], ScalingList[1], ScalingList[2], and ScalingList[3], respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
  - ScalingListDCCoef16x16 and ScalingListDCCoef32x32 correspond to scaling_list_dc_coef_minus8[0] and scaling_list_dc_coef_minus8[1], respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
- if flags.pps_palette_predictor_initializer_present_flag is set, then the PredictorPaletteEntries member of the StdVideoH265PredictorPaletteEntries structure pointed to by pPredictorPaletteEntries is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;
- all other members of StdVideoH265PictureParameterSet are interpreted as defined in section 7.4.3.3 of the ITU-T H.265 Specification.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain **must** include a VkVideoDecodeH265SessionParametersCreateInfoKHR structure specifying the capacity and initial contents of the object.

The VkVideoDecodeH265SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersCreateInfoKHR {
    VkStructureType                                    sType;
    const void*                                        pNext;
    uint32_t                                           maxStdVPSCount;
    uint32_t                                           maxStdSPSCount;
    uint32_t                                           maxStdPPSCount;
    const VkVideoDecodeH265SessionParametersAddInfoKHR*    pParametersAddInfo;
} VkVideoDecodeH265SessionParametersCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdVPSCount` is the maximum number of H.265 VPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdSPSCount` is the maximum number of H.265 SPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of H.265 PPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a VkVideoDecodeH265SessionParametersAddInfoKHR structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR
- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
  If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid VkVideoDecodeH265SessionParametersAddInfoKHR structure

Structure Chaining

Extends the structure

- VkVideoSessionParametersCreateInfoKHR

The `VkVideoDecodeH265SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersAddInfoKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     stdVPSCount;
    const StdVideoH265VideoParameterSet*         pStdVPSs;
    uint32_t                                     stdSPSCount;
    const StdVideoH265SequenceParameterSet*      pStdSPSs;
    uint32_t                                     stdPPSCount;
    const StdVideoH265PictureParameterSet*       pStdPPSs;
} VkVideoDecodeH265SessionParametersAddInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSs` array.
- `pStdVPSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the H.265 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure specified in the `pNext` chain of VkVideoSessionParametersCreateInfoKHR used to create a video session parameters object. In this case, if the video codec operation the video session parameters object is created with is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).
- In the `pNext` chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).

Valid Usage

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04833
  The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSs` **must** be unique within `pStdVPSs`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04834
  The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`

members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04835
  The triplet constructed from the `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` members of each `StdVideoH265PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdVPSs-parameter
  If `stdVPSCount` is not `0`, `pStdVPSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdSPSs-parameter
  If `stdSPSCount` is not `0`, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdPPSs-parameter
  If `stdPPSCount` is not `0`, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

Structure Chaining

Extends the structure

- VkVideoSessionParametersUpdateInfoKHR

Inline Parameter Sets

In case of video sessions created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, the application **can** also specify the active parameter sets *inline* by including an instance of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure in the `pNext` chain of `VkVideoDecodeInfoKHR`.

The `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH265InlineSessionParametersInfoKHR {
    VkStructureType                             sType;
    const void*                                 pNext;
    const StdVideoH265VideoParameterSet*        pStdVPS;
    const StdVideoH265SequenceParameterSet*     pStdSPS;
    const StdVideoH265PictureParameterSet*      pStdPPS;
} VkVideoDecodeH265InlineSessionParametersInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdVPS` is `NULL` or a pointer to an instance of the `StdVideoH265VideoParameterSet` structure describing the active H.265 VPS.
- `pStdSPS` is `NULL` or a pointer to an instance of the `StdVideoH265SequenceParameterSet` structure describing the active H.265 SPS.
- `pStdPPS` is `NULL` or a pointer to an instance of the `StdVideoH265PictureParameterSet` structure describing the active H.265 PPS.

If `pStdVPS`, `pStdSPS`, or `pStdPPS` is not `NULL`, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding active parameter sets being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_INLINE_SESSION_PARAMETERS_INFO_KHR`
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdVPS-parameter
  If `pStdVPS` is not `NULL`, `pStdVPS` **must** be a valid pointer to a valid `StdVideoH265VideoParameterSet` value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdSPS-parameter
  If `pStdSPS` is not `NULL`, `pStdSPS` **must** be a valid pointer to a valid `StdVideoH265SequenceParameterSet` value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdPPS-parameter
  If `pStdPPS` is not `NULL`, `pStdPPS` **must** be a valid pointer to a valid `StdVideoH265PictureParameterSet` value

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

49.13.6. H.265 Decoding Parameters

The VkVideoDecodeH265PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265PictureInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoDecodeH265PictureInfo*     pStdPictureInfo;
    uint32_t                                 sliceSegmentCount;
    const uint32_t*                          pSliceSegmentOffsets;
} VkVideoDecodeH265PictureInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdPictureInfo is a pointer to a StdVideoDecodeH265PictureInfo structure specifying H.265 picture information.
- sliceSegmentCount is the number of elements in pSliceSegmentOffsets.
- pSliceSegmentOffsets is a pointer to an array of sliceSegmentCount offsets specifying the start offset of the slice segments of the picture within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.

This structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR to specify the codec-specific picture information for an H.265 decode operation.

Decode Output Picture Information

When this structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR, the information related to the decode output picture is defined as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- The decode output picture is associated with the H.265 picture information provided in pStdPictureInfo.

Std Picture Information

The members of the StdVideoDecodeH265PictureInfo structure pointed to by pStdPictureInfo are interpreted as follows:

- reserved is used only for padding purposes and is otherwise ignored;
- flags.IrapPicFlag as defined in section 3.73 of the ITU-T H.265 Specification;
- flags.IdrPicFlag as defined in section 3.67 of the ITU-T H.265 Specification;
- flags.IsReference as defined in section 3.132 of the ITU-T H.265 Specification;
- sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id are

used to identify the active parameter sets, as described below;

- `PicOrderCntVal` as defined in section 8.3.1 of the ITU-T H.265 Specification;
- `NumBitsForSTRefPicSetInSlice` is the number of bits used in `st_ref_pic_set` when `short_term_ref_pic_set_sps_flag` is `0`, or `0` otherwise, as defined in sections 7.4.7 and 7.4.8 of the ITU-T H.265 Specification;
- `NumDeltaPocsOfRefRpsIdx` is the value of `NumDeltaPocs[RefRpsIdx]` when `short_term_ref_pic_set_sps_flag` is `1`, or `0` otherwise, as defined in sections 7.4.7 and 7.4.8 of the ITU-T H.265 Specification;
- `RefPicSetStCurrBefore`, `RefPicSetStCurrAfter`, and `RefPicSetLtCurr` are interpreted as defined in section 8.3.2 of the ITU-T H.265 Specification where each element of these arrays either identifies an active reference picture using its DPB slot index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
- all other members are interpreted as defined in section 8.3.2 of the ITU-T H.265 Specification.

Reference picture setup is controlled by the value of `StdVideoDecodeH265PictureInfo::flags.IsReference`. If it is set and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the corresponding DPB slot. If `StdVideoDecodeH265PictureInfo::flags.IsReference` is not set, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Active Parameter Sets

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the specified inline parameter sets or from the bound video session parameters object, as follows:

- The *active VPS* is the VPS identified by the key specified in `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the SPS identified by the key specified by the pair constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the PPS identified by the key specified by the triplet constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`.

If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and any of the active parameter sets are specified inline, then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265PictureInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PICTURE_INFO_KHR
- VUID-VkVideoDecodeH265PictureInfoKHR-pStdPictureInfo-parameter

pStdPictureInfo **must** be a valid pointer to a valid StdVideoDecodeH265PictureInfo value

- VUID-VkVideoDecodeH265PictureInfoKHR-pSliceSegmentOffsets-parameter pSliceSegmentOffsets **must** be a valid pointer to an array of sliceSegmentCount uint32_t values
- VUID-VkVideoDecodeH265PictureInfoKHR-sliceSegmentCount-arraylength sliceSegmentCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

The VkVideoDecodeH265DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoDecodeH265ReferenceInfo*   pStdReferenceInfo;
} VkVideoDecodeH265DpbSlotInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoDecodeH265ReferenceInfo structure specifying reference picture information described in section 8.3 of the ITU-T H.265 Specification.

This structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an H.265 decode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoDecodeInfoKHR ::pReferenceSlots, one element is added to the list of active reference pictures used by the video decode operation for each element of VkVideoDecodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoDecodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the H.265 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of VkVideoDecodeInfoKHR ::`pSetupReferenceSlot`, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoDecodeInfoKHR::`pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the H.265 reference information provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeH265ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as "used for long-term reference" as defined in section 8.3.2 of the ITU-T H.265 Specification;
- `flags.unused_for_reference` is used to indicate whether the picture is marked as "unused for reference" as defined in section 8.3.2 of the ITU-T H.265 Specification;
- all other members are interpreted as defined in section 8.3 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB_SLOT_INFO_KHR
- VUID-VkVideoDecodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.13.7. H.265 Decode Requirements

This section describes the **required** H.265 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::`videoCodecOperations`.

Table 60. Required Video Std Header Versions

Video Std Header Name	Version
vulkan_video_codec_h265std_decode	1.0.0

Table 61. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH265CapabilitiesKHR		
maxLevelIdc	STD_VIDEO_H265_LEVEL_IDC_1_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

49.14. VP9 Decode Operations

Video decode operations using a VP9 decode profile **can** be used to decode elementary video stream sequences compliant with the VP9 Specification.

NOTE Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by

> Khronos.

This process is performed according to the video decode operation steps with the codec-specific semantics defined in section 8 of the VP9 Specification:

- Syntax elements, derived values, and other parameters are applied from the `StdVideoDecodeVP9PictureInfo` structure specifying the VP9 picture information.
- The contents of the provided video bitstream buffer range are interpreted as defined in the VP9 Decode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the VP9 Decode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the VP9 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the VP9 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

49.14.1. VP9 Decode Bitstream Data Access

The video bitstream buffer range **should** contain the bitstream that represents an entire frame, as defined in section 6.1, and this data is interpreted as defined in section 7.1 of the VP9 Specification, respectively.

The offset specified in VkVideoDecodeVP9PictureInfoKHR::`uncompressedHeaderOffset` **should** specify the starting offset of the uncompressed header of the frame, as defined in section 6.2 of the VP9 Specification.

The offset specified in VkVideoDecodeVP9PictureInfoKHR::`compressedHeaderOffset` **should** specify the starting offset of the compressed header of the frame, as defined in section 6.3 of the VP9 Specification.

The offset specified in VkVideoDecodeVP9PictureInfoKHR::`tilesOffset` **should** specify the starting offset of the frame tile data, as defined in section 6.4 of the VP9 Specification.

49.14.2. VP9 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::`pictureAccessGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of a decode output picture, reference picture, or reconstructed picture accessed by video coding operations using a VP9 decode profile is defined as the set of texels within the coordinate range:

([0,endX), [0,endY))

Where:

- endX equals codedExtent.width rounded up to the nearest integer multiple of pictureAccessGranularity.width and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;
- endY equals codedExtent.height rounded up to the nearest integer multiple of pictureAccessGranularity.height and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where codedExtent is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video decode operations using a VP9 decode profile, any access to a picture at the coordinates (x,y), as defined by the VP9 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (x,y).

49.14.3. VP9 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 7.4.12 of the VP9 Specification. The VP9 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type StdVideoVP9ReferenceName:

- STD_VIDEO_VP9_REFERENCE_NAME_INTRA_FRAME identifies the reference used for intra coding (INTRA_FRAME), as defined in sections 2 and 8.5.1 of the VP9 Specification.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 8.5.2 of the VP9 Specification:
  - STD_VIDEO_VP9_REFERENCE_NAME_LAST_FRAME identifies the LAST_FRAME reference
  - STD_VIDEO_VP9_REFERENCE_NAME_GOLDEN_FRAME identifies the GOLDEN_FRAME reference
  - STD_VIDEO_VP9_REFERENCE_NAME_ALTREF_FRAME identifies the ALTREF_FRAME reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

49.14.4. VP9 Decode Profile

A video profile supporting VP9 video decode operations is specified by setting VkVideoProfileInfoKHR::videoCodecOperation to VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR and adding a VkVideoDecodeVP9ProfileInfoKHR structure to the VkVideoProfileInfoKHR::pNext chain.

The VkVideoDecodeVP9ProfileInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9ProfileInfoKHR {
    VkStructureType       sType;
    const void*           pNext;
    StdVideoVP9Profile    stdProfile;
} VkVideoDecodeVP9ProfileInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoVP9Profile` value specifying the VP9 codec profile, as defined in section 7.2 of the VP9 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9ProfileInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_PROFILE_INFO_KHR

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

49.14.5. VP9 Decode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for a VP9 decode profile, the VkVideoCapabilitiesKHR::`pNext` chain **must** include a `VkVideoDecodeVP9CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeVP9CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9CapabilitiesKHR {
    VkStructureType     sType;
    void*               pNext;
    StdVideoVP9Level    maxLevel;
} VkVideoDecodeVP9CapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevel` is a `StdVideoVP9Level` value specifying the maximum VP9 level supported by the profile, as defined in section A.1 of the VP9 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9CapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.14.6. VP9 Decoding Parameters

The `VkVideoDecodeVP9PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9PictureInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    const StdVideoDecodeVP9PictureInfo*     pStdPictureInfo;
    int32_t                                 referenceNameSlotIndices
[VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR];
    uint32_t                                uncompressedHeaderOffset;
    uint32_t                                compressedHeaderOffset;
    uint32_t                                tilesOffset;
} VkVideoDecodeVP9PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeVP9PictureInfo` structure specifying VP9 picture information.
- `referenceNameSlotIndices` is an array of three (VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR, which is equal to the Video Std definition `STD_VIDEO_VP9_REFS_PER_FRAME`) signed integer values specifying the index of the DPB slot or a negative integer value for each VP9 reference name used for inter coding. In particular, the DPB slot index for the VP9 reference name `frame` is specified in `referenceNameSlotIndices` [`frame` - `STD_VIDEO_VP9_REFERENCE_NAME_LAST_FRAME`].
- `uncompressedHeaderOffset` is the byte offset of the uncompressed frame header, as defined in section 6.2 of the VP9 Specification.
- `compressedHeaderOffset` is the byte offset of the compressed frame header, as defined in section 6.3 of the VP9 Specification.
- `tilesOffset` is the byte offset of the frame tile data, as defined in section 6.4 of the VP9 Specification.

This structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR to specify the codec-specific picture information for a VP9 decode operation.

Decode Output Picture Information

When this structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR, the information related to the decode output picture is defined as follows:

- The image subregion used is determined according to the VP9 Decode Picture Data Access section.
- The decode output picture is associated with the VP9 picture information provided in pStdPictureInfo.

Std Picture Information

The members of the StdVideoDecodeVP9PictureInfo structure pointed to by pStdPictureInfo are interpreted as follows:

- flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
- ref_frame_sign_bias_mask is a bitmask where bit index i corresponds to ref_frame_sign_bias[i] as defined in section 7.2 of the VP9 Specification;
- the StdVideoVP9ColorConfig structure pointed to by pColorConfig is interpreted as follows:
  - flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
  - all other members of StdVideoVP9ColorConfig are interpreted as defined in sections 6.2, 6.2.2, and 7.2.2 of the VP9 Specification;
- the StdVideoVP9LoopFilter structure pointed to by pLoopFilter is interpreted as follows:
  - flags.reserved is used only for padding purposes and is otherwise ignored;
  - update_ref_delta is a bitmask where bit index i is interpreted as the value of update_ref_delta corresponding to element i of loop_filter_ref_deltas as defined in section 7.2.8 of the VP9 Specification;
  - update_mode_delta is a bitmask where bit index i is interpreted as the value of update_mode_delta corresponding to element i of loop_filter_mode_deltas as defined in section 7.2.8 of the VP9 Specification;
  - all other members of StdVideoVP9LoopFilter are interpreted as defined in section 7.2.8 of the VP9 Specification;

> **NOTE** If the syntax elements corresponding to loop_filter_ref_deltas and loop_filter_mode_deltas are not present, the application should specify the previous values, as defined in section 7.2.8 of the VP9 Specification.

- if flags.segmentation_enabled is set, then the StdVideoVP9Segmentation structure pointed to by pSegmentation is interpreted as follows:
  - flags.reserved is used only for padding purposes and is otherwise ignored;

    - the elements of `FeatureEnabled` are bitmasks where bit index j of element i corresponds to `FeatureEnabled[i][j]` as defined in section 6.2.11 of the VP9 Specification;
    - `FeatureData` is interpreted as defined in section 6.2.11 of the VP9 Specification;
    - all other members of `StdVideoVP9Segmentation` are interpreted as defined in section 7.2.10 of the VP9 Specification;
- all other members are interpreted as defined in section 7.2 of the VP9 Specification.

Reference picture setup is controlled by the value of `StdVideoDecodeVP9PictureInfo::refresh_frame_flags`. If it is not zero and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeVP9PictureInfo::refresh_frame_flags` is zero, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9PictureInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_PICTURE_INFO_KHR
- VUID-VkVideoDecodeVP9PictureInfoKHR-pStdPictureInfo-parameter
  `pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeVP9PictureInfo` value

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

NOTE VP9 decode operations do not need any std reference information to be specified for the active reference pictures and the optional reconstructed picture. Accordingly, no DPB slot info structure exists in the API that would need to be chained to the corresponding VkVideoReferenceSlotInfoKHR structures and no `StdVideoDecodeVP9ReferenceInfo` structure exists in the VP9 Video Std Headers.

VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR is the length of the array of DPB slot or VP9 reference names passed in VkVideoDecodeVP9PictureInfoKHR::`referenceNameSlotIndices`.

```
#define VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR 3U
```

49.14.7. VP9 Decode Requirements

This section describes the **required** VP9 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR

::videoCodecOperations.

Table 62. Required Video Std Header Versions

Video Std Header Name	Version
vulkan_video_codec_vp9std_decode	1.0.0

Table 63. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR

VkVideoDecodeVP9CapabilitiesKHR		
maxLevel	STD_VIDEO_VP9_LEVEL_2_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

49.15. AV1 Decode Operations

Video decode operations using an AV1 decode profile **can** be used to decode elementary video stream sequences compliant with the AV1 Specification.

NOTE

Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video decode operation steps with the codec-specific semantics defined in section 7 of the AV1 Specification:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoAV1SequenceHeader` structure stored in the bound video session parameters object specifying the active sequence header.
  - The `StdVideoDecodeAV1PictureInfo` structure specifying the AV1 picture information.
  - The `StdVideoDecodeAV1ReferenceInfo` structures specifying the AV1 reference information corresponding to the optional reconstructed picture and any active reference pictures.
- The contents of the provided video bitstream buffer range are interpreted as defined in the AV1 Decode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the AV1 Decode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the AV1 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the AV1 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

49.15.1. AV1 Decode Bitstream Data Access

The video bitstream buffer range **should** contain one or more frame OBUs, comprised of a frame header OBU and tile group OBU, that together represent an entire frame, as defined in sections 5.10, 5.9, and 5.11, and this data is interpreted as defined in sections 6.9, 6.8, and 6.10 of the AV1 Specification, respectively.

The offset specified in VkVideoDecodeAV1PictureInfoKHR::`frameHeaderOffset` **should** specify the starting offset of the frame header OBU of the frame.

NOTE

When the tiles of the frame are encoded into multiple tile groups, each frame OBU has a separate frame header OBU but their content is expected to match per the requirements of the AV1 Specification. Accordingly, the offset specified in `frameHeaderOffset` **can** be the offset of any of the otherwise identical frame header OBUs when multiple tile groups are present.

The offsets and sizes provided in VkVideoDecodeAV1PictureInfoKHR::`pTileOffsets` and VkVideoDecodeAV1PictureInfoKHR::`pTileSizes`, respectively, **should** specify the starting offsets and

sizes corresponding to each tile within the video bitstream buffer range.

49.15.2. AV1 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::`pictureAccessGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of a decode output picture, reference picture, or reconstructed picture accessed by video coding operations using an AV1 decode profile is defined as the set of texels within the coordinate range:

([0,`endX`), [0,`endY`))

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;
- endY equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where `codedExtent` is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video decode operations using an AV1 decode profile, any access to a picture at the coordinates (`x`,`y`), as defined by the AV1 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (`x`,`y`).

49.15.3. AV1 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 6.10.24 of the AV1 Specification. The AV1 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the AV1 Specification.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the AV1 Specification:
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference

- STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME identifies the ALTREF2_FRAME reference
- STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME identifies the ALTREF_FRAME reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

49.15.4. AV1 Decode Profile

A video profile supporting AV1 video decode operations is specified by setting VkVideoProfileInfoKHR::videoCodecOperation to VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and adding a VkVideoDecodeAV1ProfileInfoKHR structure to the VkVideoProfileInfoKHR::pNext chain.

The VkVideoDecodeAV1ProfileInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1ProfileInfoKHR {
    VkStructureType       sType;
    const void*           pNext;
    StdVideoAV1Profile    stdProfile;
    VkBool32              filmGrainSupport;
} VkVideoDecodeAV1ProfileInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stdProfile is a StdVideoAV1Profile value specifying the AV1 codec profile, as defined in section A.2 of the AV1 Specification.
- filmGrainSupport specifies whether AV1 film grain, as defined in section 7.8.3 of the AV1 Specification, **can** be used with the video profile. When this member is VK_TRUE, video session objects created against the video profile will be able to decode pictures that have film grain enabled.

NOTE	Enabling filmGrainSupport **may** increase the memory requirements of video sessions and/or video picture resources on some implementations.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1ProfileInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PROFILE_INFO_KHR

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo

- VkVideoProfileInfoKHR

49.15.5. AV1 Decode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an AV1 decode profile, the VkVideoCapabilitiesKHR::pNext chain **must** include a VkVideoDecodeAV1CapabilitiesKHR structure that will be filled with the profile-specific capabilities.

The VkVideoDecodeAV1CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1CapabilitiesKHR {
    VkStructureType     sType;
    void*               pNext;
    StdVideoAV1Level    maxLevel;
} VkVideoDecodeAV1CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxLevel is a StdVideoAV1Level value specifying the maximum AV1 level supported by the profile, as defined in section A.3 of the AV1 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1CapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.15.6. AV1 Decode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR contain a single instance of the following parameter set:

AV1 Sequence Header

Represented by StdVideoAV1SequenceHeader structures and interpreted as follows:

- flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;

- the StdVideoAV1ColorConfig structure pointed to by pColorConfig is interpreted as follows:
  - flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
  - all other members of StdVideoAV1ColorConfig are interpreted as defined in section 6.4.2 of the AV1 Specification;
- if flags.timing_info_present_flag is set, then the StdVideoAV1TimingInfo structure pointed to by pTimingInfo is interpreted as follows:
  - flags.reserved is used only for padding purposes and is otherwise ignored;
  - all other members of StdVideoAV1TimingInfo are interpreted as defined in section 6.4.3 of the AV1 Specification;
- all other members of StdVideoAV1SequenceHeader are interpreted as defined in section 6.4 of the AV1 Specification.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain **must** include a VkVideoDecodeAV1SessionParametersCreateInfoKHR structure specifying the contents of the object.

The VkVideoDecodeAV1SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1SessionParametersCreateInfoKHR {
    VkStructureType                    sType;
    const void*                        pNext;
    const StdVideoAV1SequenceHeader*   pStdSequenceHeader;
} VkVideoDecodeAV1SessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdSequenceHeader is a pointer to a StdVideoAV1SequenceHeader structure describing the AV1 sequence header entry to store in the created object.

NOTE

As AV1 video session parameters objects will only ever contain a single AV1 sequence header, this has to be specified at object creation time and such video session parameters objects cannot be updated using the vkUpdateVideoSessionParametersKHR command. When a new AV1 sequence header is decoded from the input video bitstream the application needs to create a new video session parameters object to store it.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR

- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter
  `pStdSequenceHeader` **must** be a valid pointer to a valid `StdVideoAV1SequenceHeader` value

Structure Chaining

Extends the structure

- VkVideoSessionParametersCreateInfoKHR

Inline Parameter Sets

In case of video sessions created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, the application **can** also specify the active sequence header *inline* by including an instance of the VkVideoDecodeAV1InlineSessionParametersInfoKHR structure in the `pNext` chain of VkVideoDecodeInfoKHR.

The `VkVideoDecodeAV1InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeAV1InlineSessionParametersInfoKHR {
    VkStructureType                    sType;
    const void*                        pNext;
    const StdVideoAV1SequenceHeader*   pStdSequenceHeader;
} VkVideoDecodeAV1InlineSessionParametersInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is `NULL` or a pointer to an instance of the `StdVideoAV1SequenceHeader` structure describing the active AV1 sequence header.

If `pStdSequenceHeader` is not `NULL`, the issued video decode operations will use the specified sequence header parameters instead of the active sequence header being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_INLINE_SESSION_PARAMETERS_INFO_KHR
- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-pStdSequenceHeader-parameter
  If `pStdSequenceHeader` is not `NULL`, `pStdSequenceHeader` **must** be a valid pointer to a valid

StdVideoAV1SequenceHeader value

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

49.15.7. AV1 Decoding Parameters

The VkVideoDecodeAV1PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1PictureInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    const StdVideoDecodeAV1PictureInfo*     pStdPictureInfo;
    int32_t                                 referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    uint32_t                                frameHeaderOffset;
    uint32_t                                tileCount;
    const uint32_t*                         pTileOffsets;
    const uint32_t*                         pTileSizes;
} VkVideoDecodeAV1PictureInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdPictureInfo is a pointer to a StdVideoDecodeAV1PictureInfo structure specifying AV1 picture information.
- referenceNameSlotIndices is an array of seven (VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR, which is equal to the Video Std definition STD_VIDEO_AV1_REFS_PER_FRAME) signed integer values specifying the index of the DPB slot or a negative integer value for each AV1 reference name used for inter coding. In particular, the DPB slot index for the AV1 reference name frame is specified in referenceNameSlotIndices [frame - STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME].
- frameHeaderOffset is the byte offset of the AV1 frame header OBU, as defined in section 5.9 of the AV1 Specification, within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.
- tileCount is the number of elements in pTileOffsets and pTileSizes.
- pTileOffsets is a pointer to an array of tileCount integers specifying the byte offset of the tiles of the picture within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.
- pTileSizes is a pointer to an array of tileCount integers specifying the byte size of the tiles of the picture within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.

This structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to

vkCmdDecodeVideoKHR to specify the codec-specific picture information for an AV1 decode operation.

Decode Output Picture Information

When this structure is specified in the pNext chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR, the information related to the decode output picture is defined as follows:

- The image subregion used is determined according to the AV1 Decode Picture Data Access section.
- The decode output picture is associated with the AV1 picture information provided in pStdPictureInfo.

Std Picture Information

The members of the StdVideoDecodeAV1PictureInfo structure pointed to by pStdPictureInfo are interpreted as follows:

- flags.reserved, reserved1, and reserved2 are used only for padding purposes and are otherwise ignored;
- flags.apply_grain indicates that film grain is enabled for the decoded picture, as defined in section 6.8.20 of the AV1 Specification;
- OrderHint, OrderHints, and expectedFrameId are interpreted as defined in section 6.8.2 of the AV1 Specification;
- the StdVideoAV1TileInfo structure pointed to by pTileInfo is interpreted as follows:
  - flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
  - pMiColStarts is a pointer to an array of TileCols number of unsigned integers that corresponds to MiColStarts defined in section 6.8.14 of the AV1 Specification;
  - pMiRowStarts is a pointer to an array of TileRows number of unsigned integers that corresponds to MiRowStarts defined in section 6.8.14 of the AV1 Specification;

    NOTE Historically some applications incorrectly specified the values in pMiColStarts and pMiRowStarts in terms of superblocks instead of mode info blocks, therefore it is recommended for implementations to ignore the values specified in pMiColStarts and pMiRowStarts. Instead, the values should be calculated based on flags.uniform_tile_spacing_flag, pWidthInSbsMinus1, pHeightInSbsMinus1, the sequence header parameter flags.use_128x128_superblock, and the coded extent of the decoded picture.

  - pWidthInSbsMinus1 is a pointer to an array of TileCols number of unsigned integers that corresponds to width_in_sbs_minus_1 defined in section 6.8.14 of the AV1 Specification;
  - pHeightInSbsMinus1 is a pointer to an array of TileRows number of unsigned integers that corresponds to height_in_sbs_minus_1 defined in section 6.8.14 of the AV1 Specification;
  - all other members of StdVideoAV1TileInfo are interpreted as defined in section 6.8.14 of

the AV1 Specification;

- the `StdVideoAV1Quantization` structure pointed to by `pQuantization` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the AV1 Specification;
- if `flags.segmentation_enabled` is set, then the `StdVideoAV1Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
  - the elements of `FeatureEnabled` are bitmasks where bit index j of element i corresponds to `FeatureEnabled[i][j]` as defined in section 5.9.14 of the AV1 Specification;
  - `FeatureData` is interpreted as defined in section 5.9.14 of the AV1 Specification;
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `update_ref_delta` is a bitmask where bit index i is interpreted as the value of `update_ref_delta` corresponding to element i of `loop_filter_ref_deltas` as defined in section 6.8.10 of the AV1 Specification;
  - `update_mode_delta` is a bitmask where bit index i is interpreted as the value of `update_mode_delta` corresponding to element i of `loop_filter_mode_deltas` as defined in section 6.8.10 of the AV1 Specification;
  - all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the AV1 Specification;

> **NOTE** If the syntax elements corresponding to `loop_filter_ref_deltas` and `loop_filter_mode_deltas` are not present or otherwise defined according to section 5.9.11 of the AV1 Specification, the application should specify the previous values, as defined in section 6.8.10 of the AV1 Specification.

- if `flags.enable_cdef` is set in the active sequence header, then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
  - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the AV1 Specification;
  - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the AV1 Specification;
- if `flags.UsesLr` is set in the active sequence header, then the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
  - `LoopRestorationSize[plane]` is interpreted as log2(`size`) - 5, where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the AV1 Specification;
  - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the AV1 Specification;
- the members of the `StdVideoAV1GlobalMotion` structure pointed to by `pGlobalMotion` are interpreted as defined in section 7.10 of the AV1 Specification;
- if `flags.film_grain_params_present` is set in the active sequence header, then the

StdVideoAV1FilmGrain structure pointed to by pFilmGrain is interpreted as follows:

  - flags.reserved is used only for padding purposes and is otherwise ignored;
  - all other members of StdVideoAV1FilmGrain are interpreted as defined in section 6.8.20 of the AV1 Specification;

- all other members are interpreted as defined in section 6.8 of the AV1 Specification.

When film grain is enabled for the decoded frame, the flags.update_grain and film_grain_params_ref_idx values specified in StdVideoAV1FilmGrain are ignored by AV1 decode operations and the load_grain_params function, as defined in section 6.8.20 of the AV1 Specification, is not executed. Instead, the application is responsible for specifying the effective film grain parameters for the frame in StdVideoAV1FilmGrain.

When film grain is enabled for the decoded frame, the application is required to specify a different decode output picture resource in VkVideoDecodeInfoKHR::dstPictureResource compared to the reconstructed picture specified in VkVideoDecodeInfoKHR::pSetupReferenceSlot->pPictureResource even if the implementation does not report support for VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR in VkVideoDecodeCapabilitiesKHR::flags for the video decode profile.

Reference picture setup is controlled by the value of StdVideoDecodeAV1PictureInfo::refresh_frame_flags. If it is not zero and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in pDecodeInfo->pSetupReferenceSlot->slotIndex. If StdVideoDecodeAV1PictureInfo::refresh_frame_flags is zero, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Active Parameter Sets

The *active sequence header* is the AV1 sequence header stored in the bound video session parameters object , unless the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR and the active sequence header is specified inline. .

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1PictureInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PICTURE_INFO_KHR
- VUID-VkVideoDecodeAV1PictureInfoKHR-pStdPictureInfo-parameter
  pStdPictureInfo **must** be a valid pointer to a valid StdVideoDecodeAV1PictureInfo value
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileOffsets-parameter
  pTileOffsets **must** be a valid pointer to an array of tileCount uint32_t values
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileSizes-parameter
  pTileSizes **must** be a valid pointer to an array of tileCount uint32_t values
- VUID-VkVideoDecodeAV1PictureInfoKHR-tileCount-arraylength
  tileCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkVideoDecodeInfoKHR

VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR is the length of the array of DPB slot or AV1 reference names passed in VkVideoDecodeAV1PictureInfoKHR::referenceNameSlotIndices.

```
#define VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR 7U
```

The VkVideoDecodeAV1DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoDecodeAV1ReferenceInfo*    pStdReferenceInfo;
} VkVideoDecodeAV1DpbSlotInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoDecodeAV1ReferenceInfo structure specifying AV1 reference information.

This structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an AV1 decode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots, one element is added to the list of active reference pictures used by the video decode operation for each element of VkVideoDecodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the AV1 Decode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoDecodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the AV1 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the AV1 Decode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the AV1 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoDecodeAV1ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
- flags.disable_frame_end_update_cdf is interpreted as defined in section 6.8.2 of the AV1 Specification;
- flags.segmentation_enabled is interpreted as defined in section 6.8.13 of the AV1 Specification;
- frame_type is interpreted as defined in section 6.8.2 of the AV1 Specification;

> **NOTE** The frame_type member is defined with the type uint8_t, but it takes the same values defined in the StdVideoAV1FrameType enumeration type as StdVideoDecodeAV1PictureInfo::frame_type.

- RefFrameSignBias is a bitmask where bit index i corresponds to RefFrameSignBias[i] as defined in section 6.8.2 of the AV1 Specification;
- OrderHint is interpreted as defined in section 6.8.2 of the AV1 Specification;
- SavedOrderHints is interpreted as defined in section 7.20 of the AV1 Specification.

> **NOTE** When the AV1 reference information is provided for the reconstructed picture, certain parameters (e.g. frame_type) are specified both in the AV1 picture information and in the AV1 reference information. This is necessary because unlike the AV1 picture information, which is only used for the purposes of the video decode operation in question, the AV1 reference information specified for the reconstructed picture **may** be associated with the activated DPB slot, meaning that some implementations **may** maintain it as part of the reference picture metadata corresponding to the video picture resource associated with the DPB slot. When the AV1 reference information is provided for an active reference picture, the specified parameters correspond to the parameters specified when the DPB slot was activated (set up) with the reference picture, as usual, in order to communicate these parameters for implementations that do not maintain any subset of these parameters as part of the DPB slot's reference picture metadata.

Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_DPB_SLOT_INFO_KHR
- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.15.8. AV1 Decode Requirements

This section describes the **required** AV1 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::`videoCodecOperations`.

Table 64. Required Video Std Header Versions

Video Std Header Name	Version
`vulkan_video_codec_av1std_decode`	1.0.0

Table 65. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
`flags`	-	min
`minBitstreamBufferOffsetAlignment`	4096	max
`minBitstreamBufferSizeAlignment`	4096	max
`pictureAccessGranularity`	(64,64)	max
`minCodedExtent`	-	max
`maxCodedExtent`	-	min
`maxDpbSlots`	0	min
`maxActiveReferencePictures`	0	min
VkVideoDecodeCapabilitiesKHR		

Video Capability	Requirement	Requirement Type[1]
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeAV1CapabilitiesKHR		
maxLevel	STD_VIDEO_AV1_LEVEL_2_0	min

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

49.16. Video Encode Operations

Video encode operations consume an *encode input picture* and zero or more reference pictures, and produce compressed video data to a video bitstream buffer and an optional reconstructed picture.

NOTE Such encode input pictures can be used as the output of video decode operations, with graphics or compute operations, or with Window System Integration APIs, depending on the capabilities of the implementation.

Video encode operations **may** access the following resources in the VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR stage:

- The image subregions corresponding to the source encode input picture and active reference pictures with access VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR.
- The destination video bitstream buffer range and the optional reconstructed picture with access VK_ACCESS_2_VIDEO_ENCODE_WRITE_BIT_KHR.
- The image subregion corresponding to a quantization map used in the video encode operation with access VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR.

The image subresource of each video picture resource accessed by the video encode operation is specified using a corresponding VkVideoPictureResourceInfoKHR structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video encode operation as an encode input picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR layout , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the

VK_IMAGE_LAYOUT_GENERAL layout .

- If the image subresource is used in the video encode operation as a reconstructed picture or reference picture, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .
- If the image subresource is used in the video encode operation as a quantization map, then it **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout .

A video encode operation **may** complete unsuccessfully. In this case the target video bitstream buffer will have undefined contents. Similarly, if reference picture setup is requested, the reconstructed picture will also have undefined contents, and the activated DPB slot will have an invalid picture reference.

If a video encode operation completes successfully and the codec-specific parameters provided by the application adhere to the syntactic and semantic requirements defined in the corresponding video compression standard, then the target video bitstream buffer will contain compressed video data after the execution of the video encode operation according to the respective codec-specific semantics.

49.16.1. Codec-Specific Semantics

The following aspects of video encode operations are codec-specific:

- The compressed video data written to the target video bitstream buffer range.
- The construction and interpretation of the list of active reference pictures and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the encode input picture and the interpretation of the picture data referred to by the corresponding image subregion.
- The decision on reference picture setup.
- The construction and interpretation of information related to the optional reconstructed picture and the generation of picture data to the corresponding image subregion.
- Certain aspects of rate control.

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the codec-specific aspects of the video encoding process are performed as defined in the H.264 Encode Operations section.
- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the codec-specific aspects of the video encoding process are performed as defined in the H.265 Encode Operations section.
- If the used video codec operation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the codec-specific aspects of the video encoding process are performed as defined in the

AV1 Encode Operations section.

Video Encode Parameter Overrides

Implementations supporting video encode operations for any particular video codec operation often support only a subset of the available encoding tools defined by the corresponding video compression standards. Accordingly, certain implementation-dependent limitations **may** apply to codec-specific parameters provided through the structures defined in the Video Std headers corresponding to the used video codec operation.

Exposing all of these restrictions on particular codec-specific parameter values or combinations thereof in the form of application-queryable capabilities is impractical, hence this specification allows implementations to *override* the value of any of the codec-specific parameters, unless otherwise specified, as long as all of the following conditions are met:

- If the application-provided codec-specific parameters adhere to the syntactic and semantic requirements and rules defined by the used video compression standard, and thus would be usable to produce a video bitstream compliant with that standard, then the codec-specific parameters resulting from the process of implementation overrides **must** also adhere to the same requirements and rules, and any video bitstream produced using the overridden parameters **must** also be compliant.
- The overridden codec-specific parameter values **must** not have an impact on the codec-independent behaviors defined for video encode operations.
- The implementation **must** not override any codec-specific parameters specified to a command that **may** cause application-provided codec-specific parameters specified to subsequent commands to no longer adhere to the semantic requirements and rules defined by the used video compression standard, unless the implementation also overrides those parameters to adhere to any such requirements and rules.
- The overridden codec-specific parameter values **must** not have an impact on the codec-specific picture data access semantics.
- The overridden codec-specific parameter values **may** change the contents of the codec-specific bitstream elements produced by video encode operations or otherwise retrieved by the application (e.g. using the vkGetEncodedVideoSessionParametersKHR command) but **must** still adhere to the codec-specific semantics defined for that video codec operation, including, but not limited to, the number, type, and order of the encoded codec-specific bitstream elements.

Besides codec-specific parameter overrides performed for implementation-dependent reasons, applications **can** enable the implementation to apply additional optimizing overrides that **may** improve the efficiency or performance of video encoding operations. However, implementations **must** meet the conditions listed above even in case of such optimizing overrides.

NOTE	Unless the application opts in for optimizing overrides, implementations are not expected to override any of the codec-specific parameters, except when such overrides are necessary for the correct operation of video encoder implementation due to limitations to the available encoding tools on that implementation.

49.16.2. Video Encode Operation Steps

Each video encode operation performs the following steps in the VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR stage:

1. Reads the input picture data from the encode input picture;
2. Determines derived encoding quality parameters according to the codec-specific semantics and the current rate control state;
3. Compresses the input picture data according to the codec-specific semantics, applying any prediction data read from the active reference pictures and rate control restrictions in the process;
4. Writes the encoded bitstream data to the destination video bitstream buffer range;
5. Performs picture reconstruction of the encoded video data according to the codec-specific semantics, applying any prediction data read from the active reference pictures in the process, if a reconstructed picture is specified and reference picture setup is requested;
6. If reference picture setup is requested, the DPB slot index specified in the reconstructed picture information is activated with the reconstructed picture;
7. Writes the reconstructed picture data to the reconstructed picture, if one is specified, according to the codec-specific semantics.

When reconstructed picture information is provided, the specified DPB slot index is associated with the corresponding bound reference picture resource, regardless of whether reference picture setup is requested.

49.16.3. Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specifying an encode operation, the VkVideoEncodeCapabilitiesKHR structure **must** be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve capabilities specific to video encoding.

The `VkVideoEncodeCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeCapabilitiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeCapabilityFlagsKHR          flags;
    VkVideoEncodeRateControlModeFlagsKHR     rateControlModes;
    uint32_t                                 maxRateControlLayers;
    uint64_t                                 maxBitrate;
    uint32_t                                 maxQualityLevels;
    VkExtent2D                               encodeInputPictureGranularity;
    VkVideoEncodeFeedbackFlagsKHR            supportedEncodeFeedbackFlags;
} VkVideoEncodeCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeCapabilityFlagBitsKHR describing supported encoding features.
- `rateControlModes` is a bitmask of VkVideoEncodeRateControlModeFlagBitsKHR indicating supported rate control modes.
- `maxRateControlLayers` indicates the maximum number of rate control layers supported.
- `maxBitrate` indicates the maximum supported bitrate.
- `maxQualityLevels` indicates the number of discrete video encode quality levels supported. Implementations **must** support at least one quality level.
- `encodeInputPictureGranularity` indicates the granularity at which encode input picture data is encoded and **may** indicate a texel granularity up to the size of the largest supported codec-specific coding block. This capability does not impose any valid usage constraints on the application, however, depending on the contents of the encode input picture, it **may** have effects on the encoded bitstream, as described in more detail below.
- `supportedEncodeFeedbackFlags` is a bitmask of VkVideoEncodeFeedbackFlagBitsKHR values specifying the supported flags for video encode feedback queries.

Implementations **must** include support for at least VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR in `supportedEncodeFeedbackFlags`.

`encodeInputPictureGranularity` provides information about the way encode input picture data is used as input to video encode operations. In particular, some implementations **may** not be able to limit the set of texels used to encode the output video bitstream to the image subregion specified in the VkVideoPictureResourceInfoKHR structure corresponding to the encode input picture (i.e. to the resolution of the image data to encode specified in its `codedExtent` member).

NOTE

For example, the application requests the coded extent to be 1920x1080, but the implementation is only able to source the encode input picture data at the granularity of the codec-specific coding block size which is 16x16 pixels (or as otherwise indicated in `encodeInputPictureGranularity`). In this example, the content is horizontally aligned with the coding block size, but not vertically aligned with it. Thus encoding of the last row of coding blocks will be impacted by the contents of the input image at texel rows 1080 to 1087 (the latter being the next row which is vertically aligned with the coding block size, assuming a zero-based texel row index).

If `codedExtent` rounded up to the next integer multiple of `encodeInputPictureGranularity` is greater than the extent of the image subresource specified for the encode input picture, then the texel values corresponding to texel coordinates outside of the bounds of the image subresource **may** be undefined. However, implementations **should** use well-defined default values for such texels in order to maximize the encoding efficiency for the last coding block row/column, and/or to ensure consistent encoding results across repeated encoding of the same input content. Nonetheless, the

values used for such texels **must** not have an effect on whether the video encode operation produces a compliant bitstream, and **must** not have any other effects on the encoded picture data beyond what **may** otherwise result from using these texel values as input to any compression algorithm, as defined in the used video compression standard.

NOTE While not required, it is generally a good practice for applications to make sure that the image subresource used for the encode input picture has an extent that is an integer multiple of the codec-specific coding block size (or at least `encodeInputPictureGranularity`) and that this padding area is filled with known values in order to improve encoding efficiency, portability, and reproducibility.

Valid Usage (Implicit)

- VUID-VkVideoEncodeCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

Bits which **may** be set in VkVideoEncodeCapabilitiesKHR::`flags`, indicating the encoding tools supported, are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeCapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR =
0x00000002,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000004,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR = 0x00000008,
} VkVideoEncodeCapabilityFlagBitsKHR;
```

- VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR specifies that the implementation supports the use of VkVideoEncodeInfoKHR::`precedingExternallyEncodedBytes`.
- VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR specifies that the implementation is able to detect and report when the destination video bitstream buffer range provided by the application is not sufficiently large to fit the encoded bitstream data produced by a video encode operation by reporting the VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR query result status code.

NOTE

Some implementations **may** not be able to reliably detect insufficient bitstream buffer range conditions in all situations. Such implementations will not report support for the VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR encode capability flag for the video profile, but **may** still report the VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR query result status code in certain cases. Applications **should** always check for the specific query result status code VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR even when this encode capability flag is not supported by the implementation for the video profile in question. However, applications **must** not assume that a different negative query result status code indicating an unsuccessful completion of a video encode operation is not the result of an insufficient bitstream buffer condition unless this encode capability flag is supported.

- VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR specifies support for using quantization delta maps.
- VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR specifies support for using emphasis maps.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeCapabilityFlagsKHR;
```

VkVideoEncodeCapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeCapabilityFlagBitsKHR.

The VkVideoEncodeFeedback2CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_feedback2
typedef struct VkVideoEncodeFeedback2CapabilitiesKHR {
    VkStructureType                                 sType;
    void*                                           pNext;
    uint32_t                                        maxPerPartitionFeedbackEntries;
    VkVideoEncodePerPartitionFeedbackFlagsKHR
supportedPerPartitionEncodeFeedbackFlags;
} VkVideoEncodeFeedback2CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxPerPartitionFeedbackEntries specifies the maximum number of picture partitions for which the implementation supports capturing per picture partition video encode feedback values.
- supportedPerPartitionEncodeFeedbackFlags is a bitmask of VkVideoEncodePerPartitionFeedbackFlagBitsKHR values specifying the set of per picture partition video encode feedback values supported by video encode feedback queries.

Valid Usage (Implicit)

- VUID-VkVideoEncodeFeedback2CapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_FEEDBACK_2_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.16.4. Video Encode Quality Levels

Implementations **can** support more than one video encode quality level for a video encode profile, which control the number and type of implementation-specific encoding tools and algorithms utilized in the encoding process.

NOTE

Generally, using higher video encode quality levels **may** produce higher quality video streams at the cost of additional processing time. However, as the final quality of an encoded picture depends on the contents of the encode input picture, the contents of the active reference pictures, the codec-specific encode parameters, and the particular implementation-specific tools used corresponding to the individual video encode quality levels, there are no guarantees that using a higher video encode quality level will always produce a higher quality encoded picture for any given set of inputs.

To query properties for a specific video encode quality level supported by a video encode profile, call:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR(
    VkPhysicalDevice                                physicalDevice,
    const VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR* pQualityLevelInfo,
    VkVideoEncodeQualityLevelPropertiesKHR*         pQualityLevelProperties);
```

- `physicalDevice` is the physical device to query the video encode quality level properties for.
- `pQualityLevelInfo` is a pointer to a VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR structure specifying the video encode profile and quality level to query properties for.
- `pQualityLevelProperties` is a pointer to a VkVideoEncodeQualityLevelPropertiesKHR structure in which the properties are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-

08257
If pQualityLevelInfo->pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the pNext chain of pQualityLevelProperties **must** include a VkVideoEncodeH264QualityLevelPropertiesKHR structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-08258
If pQualityLevelInfo->pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the pNext chain of pQualityLevelProperties **must** include a VkVideoEncodeH265QualityLevelPropertiesKHR structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-10305
If pQualityLevelInfo->pVideoProfile->videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the pNext chain of pQualityLevelProperties **must** include a VkVideoEncodeAV1QualityLevelPropertiesKHR structure

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-physicalDevice-parameter
physicalDevice **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-parameter
pQualityLevelInfo **must** be a valid pointer to a valid VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelProperties-parameter
pQualityLevelProperties **must** be a valid pointer to a VkVideoEncodeQualityLevelPropertiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED
- VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR

- VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR

The VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    const VkVideoProfileInfoKHR*    pVideoProfile;
    uint32_t                        qualityLevel;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pVideoProfile is a pointer to a VkVideoProfileInfoKHR structure specifying the video profile to query the video encode quality level properties for.
- qualityLevel is the video encode quality level to query properties for.

Valid Usage

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08259
  pVideoProfile **must** be a supported video profile
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08260
  pVideoProfile->videoCodecOperation **must** specify an encode operation
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-qualityLevel-08261
  qualityLevel **must** be less than VkVideoEncodeCapabilitiesKHR::maxQualityLevels, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in pVideoProfile

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-parameter
  pVideoProfile **must** be a valid pointer to a valid VkVideoProfileInfoKHR structure

The VkVideoEncodeQualityLevelPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelPropertiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeRateControlModeFlagBitsKHR  preferredRateControlMode;
    uint32_t                                 preferredRateControlLayerCount;
} VkVideoEncodeQualityLevelPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- preferredRateControlMode is a VkVideoEncodeRateControlModeFlagBitsKHR value indicating the preferred rate control mode to use with the video encode quality level.
- preferredRateControlLayerCount indicates the preferred number of rate control layers to use with the video encode quality level.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkVideoEncodeAV1QualityLevelPropertiesKHR, VkVideoEncodeH264QualityLevelPropertiesKHR, or VkVideoEncodeH265QualityLevelPropertiesKHR
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

The VkVideoEncodeQualityLevelInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           qualityLevel;
} VkVideoEncodeQualityLevelInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- qualityLevel is the used video encode quality level.

This structure **can** be specified in the following places:

- In the `pNext` chain of VkVideoSessionParametersCreateInfoKHR to specify the video encode quality level to use for a video session parameters object created for a video encode session. If no instance of this structure is included in the `pNext` chain of VkVideoSessionParametersCreateInfoKHR, then the video session parameters object is created with a video encode quality level of zero.
- In the `pNext` chain of VkVideoCodingControlInfoKHR to change the video encode quality level state of the bound video session.

Valid Usage

- VUID-VkVideoEncodeQualityLevelInfoKHR-qualityLevel-08311
  `qualityLevel` **must** be less than VkVideoEncodeCapabilitiesKHR::`maxQualityLevels`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile

Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR

Structure Chaining

Extends the structures

- VkVideoCodingControlInfoKHR
- VkVideoSessionParametersCreateInfoKHR

49.16.5. Retrieving Encoded Session Parameters

Any codec-specific parameters stored in video session parameters objects **may** need to be separately encoded and included in the final video bitstream data, depending on the used video compression standard. In such cases the application **must** call the vkGetEncodedVideoSessionParametersKHR command to retrieve the encoded parameter data from the used video session parameters object in order to be able to produce a compliant video bitstream.

NOTE

This is needed because implementations **may** have changed some of the codec-specific parameters stored in the video session parameters object, as defined in the Video Encode Parameter Overrides section. In addition, the vkGetEncodedVideoSessionParametersKHR command enables the application to retrieve the encoded parameter data without having to encode these codec-specific parameters manually.

Encoded parameter data **can** be retrieved from a video session parameters object created with a

video encode operation using the command:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetEncodedVideoSessionParametersKHR(
    VkDevice                                    device,
    const VkVideoEncodeSessionParametersGetInfoKHR* pVideoSessionParametersInfo,
    VkVideoEncodeSessionParametersFeedbackInfoKHR* pFeedbackInfo,
    size_t*                                     pDataSize,
    void*                                       pData);
```

- `device` is the logical device that owns the video session parameters object.
- `pVideoSessionParametersInfo` is a pointer to a VkVideoEncodeSessionParametersGetInfoKHR structure specifying the parameters of the encoded parameter data to retrieve.
- `pFeedbackInfo` is either `NULL` or a pointer to a VkVideoEncodeSessionParametersFeedbackInfoKHR structure in which feedback about the requested parameter data is returned.
- `pDataSize` is a pointer to a `size_t` value related to the amount of encode parameter data returned, as described below.
- `pData` is either `NULL` or a pointer to a buffer to write the encoded parameter data to.

If `pData` is `NULL`, then the size of the encoded parameter data, in bytes, that **can** be retrieved is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the number of bytes actually written to `pData`. If `pDataSize` is less than the size of the encoded parameter data that **can** be retrieved, then no data will be written to `pData`, zero will be written to `pDataSize`, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that no encoded parameter data was returned.

If `pFeedbackInfo` is not `NULL` then the members of the VkVideoEncodeSessionParametersFeedbackInfoKHR structure and any additional structures included in its `pNext` chain that are applicable to the video session parameters object specified in `pVideoSessionParametersInfo->videoSessionParameters` will be filled with feedback about the requested parameter data on all successful calls to this command.

NOTE

This includes the cases when `pData` is `NULL` or when VK_INCOMPLETE is returned by the command, and enables the application to determine whether the implementation overrode any of the requested video session parameters without actually needing to retrieve the encoded parameter data itself.

NOTE

This query does not behave consistently with the behavior described in Opaque Binary Data Results, for historical reasons.

If the amount of data available is larger than the passed `pDataSize`, the query returns a VK_INCOMPLETE success status instead of a VK_ERROR_NOT_ENOUGH_SPACE_KHR error status, and writes zero to `pDataSize`.

Valid Usage

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08359
  `pVideoSessionParametersInfo->videoSessionParameters` **must** have been created with an encode operation
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08262
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a VkVideoEncodeH264SessionParametersGetInfoKHR structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08263
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then for the VkVideoEncodeH264SessionParametersGetInfoKHR structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is VK_TRUE, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching VkVideoEncodeH264SessionParametersGetInfoKHR::`stdSPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08264
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then for the VkVideoEncodeH264SessionParametersGetInfoKHR structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is VK_TRUE, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching VkVideoEncodeH264SessionParametersGetInfoKHR::`stdSPSId` and VkVideoEncodeH264SessionParametersGetInfoKHR::`stdPPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08265
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a VkVideoEncodeH265SessionParametersGetInfoKHR structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08266
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then for the VkVideoEncodeH265SessionParametersGetInfoKHR structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdVPS` member is VK_TRUE, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching VkVideoEncodeH265SessionParametersGetInfoKHR::`stdVPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08267
  If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then for the VkVideoEncodeH265SessionParametersGetInfoKHR structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is VK_TRUE, then

pVideoSessionParametersInfo->videoSessionParameters **must** contain a StdVideoH265SequenceParameterSet entry with sps_video_parameter_set_id and sps_seq_parameter_set_id matching VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId and VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId, respectively

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08268
  If pVideoSessionParametersInfo->videoSessionParameters was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then for the VkVideoEncodeH265SessionParametersGetInfoKHR structure included in the pNext chain of pVideoSessionParametersInfo, if its writeStdPPS member is VK_TRUE, then pVideoSessionParametersInfo->videoSessionParameters **must** contain a StdVideoH265PictureParameterSet entry with sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id matching VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId, VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId, and VkVideoEncodeH265SessionParametersGetInfoKHR::stdPPSId, respectively

Valid Usage (Implicit)

- VUID-vkGetEncodedVideoSessionParametersKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-parameter
  pVideoSessionParametersInfo **must** be a valid pointer to a valid VkVideoEncodeSessionParametersGetInfoKHR structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pFeedbackInfo-parameter
  If pFeedbackInfo is not NULL, pFeedbackInfo **must** be a valid pointer to a VkVideoEncodeSessionParametersFeedbackInfoKHR structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pDataSize-parameter
  pDataSize **must** be a valid pointer to a size_t value
- VUID-vkGetEncodedVideoSessionParametersKHR-pData-parameter
  If the value referenced by pDataSize is not 0, and pData is not NULL, pData **must** be a valid pointer to an array of pDataSize bytes

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN

- VK_ERROR_VALIDATION_FAILED

The VkVideoEncodeSessionParametersGetInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersGetInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkVideoSessionParametersKHR    videoSessionParameters;
} VkVideoEncodeSessionParametersGetInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- videoSessionParameters is the VkVideoSessionParametersKHR object to retrieve encoded parameter data from.

Depending on the used video encode operation, additional codec-specific structures **may** need to be included in the pNext chain of this structure to identify the specific video session parameters to retrieve encoded parameter data for, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_GET_INFO_KHR
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkVideoEncodeH264SessionParametersGetInfoKHR or VkVideoEncodeH265SessionParametersGetInfoKHR
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-videoSessionParameters-parameter
  videoSessionParameters **must** be a valid VkVideoSessionParametersKHR handle

The VkVideoEncodeSessionParametersFeedbackInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasOverrides;
} VkVideoEncodeSessionParametersFeedbackInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasOverrides` indicates whether any of the requested parameter data were overridden by the implementation.

Depending on the used video encode operation, additional codec-specific structures **can** be included in the `pNext` chain of this structure to capture codec-specific feedback information about the requested parameter data, as described in the corresponding sections.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeH264SessionParametersFeedbackInfoKHR or VkVideoEncodeH265SessionParametersFeedbackInfoKHR
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

49.16.6. Video Encode Commands

To launch video encode operations, call:

```
// Provided by VK_KHR_video_encode_queue
void vkCmdEncodeVideoKHR(
    VkCommandBuffer                             commandBuffer,
    const VkVideoEncodeInfoKHR*                 pEncodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEncodeInfo` is a pointer to a VkVideoEncodeInfoKHR structure specifying the parameters of the video encode operations.

Each call issues one or more video encode operations. The implicit parameter `opCount` corresponds to the number of video encode operations issued by the command. After calling this command, the active query index of each active query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video encode operation.

If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR and the `pNext` chain of `pEncodeInfo` includes a VkVideoInlineQueryInfoKHR structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video encode operation

issued by it.

Active Reference Picture Information

The list of active reference pictures used by a video encode operation is a list of image subregions used as the source of reference picture data and related parameters, and is derived from the VkVideoReferenceSlotInfoKHR structures provided as the elements of the `pEncodeInfo->pReferenceSlots` array. For each element of `pEncodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the codec-specific semantics. Each element of this list contains the following information:

- The image subregion within the image subresource referred to by the video picture resource used as the reference picture.
- The DPB slot index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional reconstructed picture used by a video encode operation is derived from the VkVideoReferenceSlotInfoKHR structure pointed to by `pEncodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the codec-specific semantics, and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource used as the reconstructed picture.
- The DPB slot index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid VkVideoReferenceSlotInfoKHR structure in `pEncodeInfo->pSetupReferenceSlot` is always required, unless the video session was created with VkVideoSessionCreateInfoKHR::`maxDpbSlots` equal to zero. However, the DPB slot identified by `pEncodeInfo->pSetupReferenceSlot->slotIndex` is only activated with the reconstructed picture specified in `pEncodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the codec-specific semantics.

If reconstructed picture information is specified, but reference picture setup is not requested, according to the codec-specific semantics, the contents of the video picture resource corresponding to the reconstructed picture will be undefined after the video encode operation.

NOTE	Some implementations may always output the reconstructed picture or use it as temporary storage during the video encode operation even when the reconstructed picture is not marked for future reference.

Encode Input Picture Information

Information related to the encode input picture used by a video encode operation is derived from `pEncodeInfo->srcPictureResource` and any codec-specific parameters provided in the `pEncodeInfo->pNext` chain, as defined by the codec-specific semantics, and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource used as the encode input picture.
- The codec-specific picture information related to the encoded picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video encode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pEncodeInfo->referenceSlotCount`.
- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are `0`.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the VkVideoSessionCreateInfoKHR::`maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be `0`.
  - If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pEncodeInfo->pSetupReferenceSlot->slotIndex`.
  - For each element of `pEncodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element.
- If there is a bound video session parameters object created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then let `VkExtent2D quantizationMapTexelSize` be the quantization map texel size the bound video session parameters object was created with.
- Let `VkExtent2D maxCodingBlockSize` be the maximum codec-specific coding block size that **may** be used by the video encode operation.
  - If the bound video session object was created with an H.264 encode profile, then let `maxCodingBlockSize` be equal to the size of an H.264 macroblock, i.e. `{16,16}`.
  - If the bound video session object was created with an H.265 encode profile, then let `maxCodingBlockSize` be equal to the maximum H.265 coding block size that **may** be used by the video encode operation derived as the maximum of the CTB sizes corresponding to the VkVideoEncodeH265CtbSizeFlagBitsKHR bits set in VkVideoEncodeH265CapabilitiesKHR::`ctbSizes`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with.
  - If the bound video session object was created with an AV1 encode profile, then let `maxCodingBlockSize` be equal to the maximum AV1 superblock size that **may** be used by the video encode operation derived as the maximum of the superblock sizes corresponding to the VkVideoEncodeAV1SuperblockSizeFlagBitsKHR bits set in VkVideoEncodeAV1CapabilitiesKHR::`superblockSizes`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with.
  - Otherwise, `maxCodingBlockSize` is undefined.

- If maxCodingBlockSize is defined, then let VkExtent2D minCodingBlockExtent be the coded extent of the encode input picture expressed in terms of codec-specific coding blocks, assuming the maximum size of such coding blocks, as defined by maxCodingBlockSize, calculated from the value of the codedExtent member of pEncodeInfo->srcPictureResource as follows:
  - minCodingBlockExtent.width = (codedExtent.width maxCodingBlockSize.width - 1) / maxCodingBlockSize.width
  - minCodingBlockExtent.height = (codedExtent.height maxCodingBlockSize.height - 1) / maxCodingBlockSize.height
- If the bound video session object was created with an H.264 encode profile, then:
  - Let StdVideoH264PictureType h264PictureType be the picture type of the encoded picture set to the value of pStdPictureInfo->primary_pic_type specified in the VkVideoEncodeH264PictureInfoKHR structure included in the pEncodeInfo->pNext chain.
  - Let StdVideoH264PictureType h264L0PictureTypes[] and StdVideoH264PictureType h264L1PictureTypes[] be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If pStdPictureInfo->pRefLists specified in the VkVideoEncodeH264PictureInfoKHR structure included in the pEncodeInfo->pNext chain is not NULL, then for each reference index specified in the elements of the pStdPictureInfo->pRefLists->RefPicList0 and pStdPictureInfo->pRefLists->RefPicList1 arrays, if the reference index is not STD_VIDEO_H264_NO_REFERENCE_PICTURE, pStdReferenceInfo->primary_pic_type is added to h264L0PictureTypes or h264L1PictureTypes, respectively, where pStdReferenceInfo is the member of the VkVideoEncodeH264DpbSlotInfoKHR structure included in the pNext chain of the element of pEncodeInfo->pReferenceSlots for which slotIndex equals the reference index in question.
- If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoEncodeIntraRefreshInfoKHR structure, then let uint32_t intraRefreshH264SliceIndex be the intra refresh index specified in VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex. Otherwise intraRefreshH264SliceIndex is not defined.
- If the bound video session object was created with an H.265 encode profile, then:
  - Let StdVideoH265PictureType h265PictureType be the picture type of the encoded picture set to the value of pStdPictureInfo->pic_type specified in the VkVideoEncodeH265PictureInfoKHR structure included in the pEncodeInfo->pNext chain.
  - Let StdVideoH265PictureType h265L0PictureTypes[] and StdVideoH265PictureType h265L1PictureTypes[] be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If pStdPictureInfo->pRefLists specified in the VkVideoEncodeH265PictureInfoKHR structure included in the pEncodeInfo->pNext chain is not NULL, then for each reference index specified in the elements of the pStdPictureInfo->pRefLists->RefPicList0 and pStdPictureInfo->pRefLists->RefPicList1 arrays, if the reference index is not STD_VIDEO_H265_NO_REFERENCE_PICTURE, pStdReferenceInfo->pic_type is added to h265L0PictureTypes or h265L1PictureTypes, respectively, where pStdReferenceInfo is the member of the VkVideoEncodeH265DpbSlotInfoKHR structure included in the pNext

chain of the element of pEncodeInfo->pReferenceSlots for which slotIndex equals the reference index in question.

- If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoEncodeIntraRefreshInfoKHR structure, then let uint32_t intraRefreshH265SliceSegmentIndex be the intra refresh index specified in VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex. Otherwise intraRefreshH265SliceSegmentIndex is not defined.
- If the bound video session object was created with an AV1 encode profile, then:
  - If the primaryReferenceCdfOnly member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pEncodeInfo->pNext chain is set to VK_TRUE, then let int32_t cdfOnlyReferenceIndex be the value of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->primary_ref_frame.
  - Otherwise let int32_t cdfOnlyReferenceIndex be -1.

Valid Usage

- VUID-vkCmdEncodeVideoKHR-None-08250
  The bound video session **must** have been created with an encode operation
- VUID-vkCmdEncodeVideoKHR-None-07012
  The bound video session **must** not be in uninitialized state at the time the command is executed on the device
- VUID-vkCmdEncodeVideoKHR-None-08318
  If there is a bound video session parameters object, then it **must** have been created with the currently set video encode quality level for the bound video session at the time the command is executed on the device
- VUID-vkCmdEncodeVideoKHR-opCount-07174
  For each active query, the active query index corresponding to the query type of that query plus opCount **must** be less than or equal to the last activatable query index corresponding to the query type of that query plus one
- VUID-vkCmdEncodeVideoKHR-pNext-08360
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoInlineQueryInfoKHR structure with its queryPool member specifying a valid VkQueryPool handle, then VkVideoInlineQueryInfoKHR::queryCount **must** equal opCount
- VUID-vkCmdEncodeVideoKHR-pNext-08361
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the pNext chain of pEncodeInfo includes a VkVideoInlineQueryInfoKHR structure with its queryPool member specifying a valid VkQueryPool handle, then all the queries used by the command, as specified by the VkVideoInlineQueryInfoKHR structure, **must** be *unavailable*

- VUID-vkCmdEncodeVideoKHR-queryType-08362
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, then the queryType used to create the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pEncodeInfo **must** be VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR
- VUID-vkCmdEncodeVideoKHR-queryPool-08363
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, then the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pEncodeInfo **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-queryType-08364
  If the bound video session was created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR, and the queryType used to create the queryPool specified in the VkVideoInlineQueryInfoKHR structure included in the pNext chain of pEncodeInfo is VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then the VkCommandPool that commandBuffer was allocated from **must** have been created with a queue family index that supports result status queries, as indicated by VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08201
  pEncodeInfo->dstBuffer **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08202
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, then pEncodeInfo->dstBuffer **must** not be a protected buffer
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08203
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, then pEncodeInfo->dstBuffer **must** be a protected buffer
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08204
  pEncodeInfo->dstBufferOffset **must** be an integer multiple of VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08205
  pEncodeInfo->dstBufferRange **must** be an integer multiple of VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08206
  pEncodeInfo->srcPictureResource.imageViewBinding **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08207

The format of pEncodeInfo->srcPictureResource.imageViewBinding **must** match the VkVideoSessionCreateInfoKHR::pictureFormat the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08208
  pEncodeInfo->srcPictureResource.codedOffset **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08209
  pEncodeInfo->srcPictureResource.codedExtent **must** be between minCodedExtent and maxCodedExtent, inclusive, the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08210
  pEncodeInfo->srcPictureResource.imageViewBinding **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR usage flag set
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08211
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, then pEncodeInfo->srcPictureResource.imageViewBinding **must** not have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08377
  pEncodeInfo->pSetupReferenceSlot **must** not be NULL unless the bound video session was created with VkVideoSessionCreateInfoKHR::maxDpbSlots equal to zero
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08213
  If pEncodeInfo->pSetupReferenceSlot is not NULL, then pEncodeInfo->pSetupReferenceSlot->slotIndex **must** be less than the VkVideoSessionCreateInfoKHR::maxDpbSlots specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08214
  If pEncodeInfo->pSetupReferenceSlot is not NULL, then pEncodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08215
  If pEncodeInfo->pSetupReferenceSlot is not NULL, then pEncodeInfo->pSetupReferenceSlot->pPictureResource **must** match one of the bound reference picture resources
- VUID-vkCmdEncodeVideoKHR-activeReferencePictureCount-08216
  activeReferencePictureCount **must** be less than or equal to the VkVideoSessionCreateInfoKHR::maxActiveReferencePictures specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-slotIndex-08217
  The slotIndex member of each element of pEncodeInfo->pReferenceSlots **must** be less than the VkVideoSessionCreateInfoKHR::maxDpbSlots specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-codedOffset-08218
  The codedOffset member of the VkVideoPictureResourceInfoKHR structure pointed to by the pPictureResource member of each element of pEncodeInfo->pReferenceSlots **must** be an integer multiple of codedOffsetGranularity
- VUID-vkCmdEncodeVideoKHR-pPictureResource-08219
  The pPictureResource member of each element of pEncodeInfo->pReferenceSlots **must** match one of the bound reference picture resources associated with the DPB slot index

specified in the slotIndex member of that element

- VUID-vkCmdEncodeVideoKHR-pPictureResource-08220
  Each video picture resource corresponding to the pPictureResource member specified in the elements of pEncodeInfo->pReferenceSlots **must** be unique within pEncodeInfo->pReferenceSlots
- VUID-vkCmdEncodeVideoKHR-dpbFrameUseCount-08221
  All elements of dpbFrameUseCount **must** be less than or equal to 1
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10811
  The image subresource referred to by pEncodeInfo->srcPictureResource **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR layout at the time the video encode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10812
  If pEncodeInfo->pSetupReferenceSlot is not NULL, then the image subresource referred to by pEncodeInfo->pSetupReferenceSlot->pPictureResource **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR layout at the time the video encode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdEncodeVideoKHR-pPictureResource-10813
  The image subresource referred to by the pPictureResource member of each element of pEncodeInfo->pReferenceSlots **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR layout at the time the video encode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10306
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR, then the bound video session **must** have been created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10307
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the bound video session **must** have been created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10308
  If the current rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then pEncodeInfo->flags **must** not include VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10309
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the pNext chain of pEncodeInfo **must** include a VkVideoEncodeQuantizationMapInfoKHR structure with its quantizationMap member specifying a valid VkImageView handle

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10310
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the VkImageView specified by the quantizationMap member of the VkVideoEncodeQuantizationMapInfoKHR structure included in the pNext chain **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10311
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR, then the VkImageView specified by the quantizationMap member of the VkVideoEncodeQuantizationMapInfoKHR structure included in the pNext chain of pEncodeInfo **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR usage flag set
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10312
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR, then the VkImageView specified by the quantizationMap member of the VkVideoEncodeQuantizationMapInfoKHR structure included in the pNext chain of pEncodeInfo **must** have been created with the VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR usage flag set
- VUID-vkCmdEncodeVideoKHR-pNext-10313
  If an instance of the VkVideoEncodeQuantizationMapInfoKHR structure is included in the pNext chain of pEncodeInfo, its quantizationMap member is not VK_NULL_HANDLE, commandBuffer is an unprotected command buffer, and protectedNoFault is not supported, then VkVideoEncodeQuantizationMapInfoKHR::quantizationMap **must** not have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-pNext-10314
  If an instance of the VkVideoEncodeQuantizationMapInfoKHR structure is included in the pNext chain of pEncodeInfo and its quantizationMap member is not VK_NULL_HANDLE, then the image subresource range referenced by quantizationMap **must** be in the VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR layout at the time the video encode operation is executed on the device , unless the unifiedImageLayoutsVideo feature is enabled, in which case it **may** be in the VK_IMAGE_LAYOUT_GENERAL layout
- VUID-vkCmdEncodeVideoKHR-pNext-10315
  If an instance of the VkVideoEncodeQuantizationMapInfoKHR structure is included in the pNext chain of pEncodeInfo and its quantizationMap member is not VK_NULL_HANDLE, and there is a bound video session parameters object, then the bound video session parameters object **must** have been created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-pNext-10316
  If an instance of the VkVideoEncodeQuantizationMapInfoKHR structure is included in the pNext chain of pEncodeInfo, its quantizationMap member is not VK_NULL_HANDLE, and there is a bound video session parameters object created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then quantizationMapExtent **must** equal □pEncodeInfo->srcPictureResource.codedExtent /

quantizationMapTexelSize

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10837
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the intra refresh mode the bound video session was created with **must** not be VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10838
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then activeReferencePictureCount **must** be less than or equal to VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshActiveReferencePictures, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10839
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the pNext chain of pEncodeInfo **must** include a VkVideoEncodeIntraRefreshInfoKHR structure
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10840
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the intraRefreshCycleDuration member of the VkVideoEncodeIntraRefreshInfoKHR structure included in the pNext chain of pEncodeInfo **must** not be zero
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10841
  If pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the intraRefreshIndex member of the VkVideoEncodeIntraRefreshInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than VkVideoEncodeIntraRefreshInfoKHR::intraRefreshCycleDuration
- VUID-vkCmdEncodeVideoKHR-pNext-10842
  If the pNext chain of any element of pEncodeInfo->pReferenceSlots includes a VkVideoReferenceIntraRefreshInfoKHR structure with a non-zero dirtyIntraRefreshRegions member, then pEncodeInfo->flags **must** include VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-pNext-10843
  If the pNext chain of any element of pEncodeInfo->pReferenceSlots includes a VkVideoReferenceIntraRefreshInfoKHR structure with a non-zero dirtyIntraRefreshRegions member, then for each such element dirtyIntraRefreshRegions **must** equal intraRefreshCycleDuration minus intraRefreshIndex where intraRefreshCycleDuration and intraRefreshIndex are the members of the VkVideoEncodeIntraRefreshInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-pNext-10844
  If the pNext chain of pEncodeInfo includes a VkVideoEncodeIntraRefreshInfoKHR structure, then its intraRefreshCycleDuration member **must** be zero or **must** be between 2 and VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshCycleDuration, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pNext-08225
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the pNext chain of

pEncodeInfo **must** include a VkVideoEncodeH264PictureInfoKHR structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH264SequenceParameterSet-08226
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264SequenceParameterSet entry with seq_parameter_set_id matching StdVideoEncodeH264PictureInfo::seq_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-StdVideoH264PictureParameterSet-08227
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH264PictureParameterSet entry with seq_parameter_set_id and pic_parameter_set_id matching StdVideoEncodeH264PictureInfo::seq_parameter_set_id and StdVideoEncodeH264PictureInfo::pic_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08228
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and pEncodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pEncodeInfo->pSetupReferenceSlot **must** include a VkVideoEncodeH264DpbSlotInfoKHR structure
- VUID-vkCmdEncodeVideoKHR-pNext-08229
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the pNext chain of each element of pEncodeInfo->pReferenceSlots **must** include a VkVideoEncodeH264DpbSlotInfoKHR structure
- VUID-vkCmdEncodeVideoKHR-constantQp-08269
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the current rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** be zero for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-constantQp-08270
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and the current rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** be between VkVideoEncodeH264CapabilitiesKHR::minQp and VkVideoEncodeH264CapabilitiesKHR::maxQp, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-constantQp-08271
  If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then VkVideoEncodeH264NaluSliceInfoKHR::constantQp **must** have the same value for each element of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08302
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.width multiplied by minCodingBlockExtent.height
- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08312
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.height
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10845
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with an intra refresh mode other than VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and VkVideoEncodeIntraRefreshCapabilitiesKHR::partitionIndependentIntraRefreshRegions is VK_FALSE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** equal 1
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10846
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, and pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** equal the intraRefreshCycleDuration member of the VkVideoEncodeIntraRefreshInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-intraRefreshH264SliceIndex-10847
  If intraRefreshH264SliceIndex is defined, then pNaluSliceEntries[intraRefreshH264SliceIndex].pStdSliceHeader->slice_type **must** be STD_VIDEO_H264_SLICE_TYPE_I in the VkVideoEncodeH264PictureInfoKHR structure

included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10848
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, pEncodeInfo->flags includes VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, and VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions is VK_FALSE, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the naluSliceEntryCount member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** be less than or equal to minCodingBlockExtent.height
- VUID-vkCmdEncodeVideoKHR-h264PictureType-10849
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, h264PictureType is STD_VIDEO_H264_PICTURE_TYPE_B, and VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR, then pEncodeInfo->flags **must** not include VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-flags-10850
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR, then pNaluSliceEntries[i].pStdSliceHeader->slice_type **must** be identical for all elements i of the pNaluSliceEntries member of the VkVideoEncodeH264PictureInfoKHR structure included in the pNext chain of pEncodeInfo , except for element index i equal to intraRefreshH264SliceIndex, if intraRefreshH264SliceIndex is defined
- VUID-vkCmdEncodeVideoKHR-pNext-08352
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the pNext chain of pEncodeInfo includes a VkVideoEncodeH264PictureInfoKHR structure, and pEncodeInfo->referenceSlotCount is greater than zero, then VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists **must** not be NULL
- VUID-vkCmdEncodeVideoKHR-pNext-08339
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the pNext chain of pEncodeInfo includes a VkVideoEncodeH264PictureInfoKHR structure, and VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists is not NULL, then each element of the RefPicList0 and RefPicList1 array members of the StdVideoEncodeH264ReferenceListsInfo structure pointed to by VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists **must** either be STD_VIDEO_H264_NO_REFERENCE_PICTURE or **must** equal the slotIndex member of one of the elements of pEncodeInfo->pReferenceSlots

- VUID-vkCmdEncodeVideoKHR-pNext-08353
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the pNext chain of pEncodeInfo includes a VkVideoEncodeH264PictureInfoKHR structure, and pEncodeInfo->referenceSlotCount is greater than zero, then the slotIndex member of each element of pEncodeInfo->pReferenceSlots **must** equal one of the elements of the RefPicList0 or RefPicList1 array members of the StdVideoEncodeH264ReferenceListsInfo structure pointed to by VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists
- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08340
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::maxPPictureL0ReferenceCount is zero, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then h264PictureType and each element of h264L0PictureTypes and h264L1PictureTypes **must** not be STD_VIDEO_H264_PICTURE_TYPE_P
- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08341
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::maxBPictureL0ReferenceCount and VkVideoEncodeH264CapabilitiesKHR::maxL1ReferenceCount are both zero, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then h264PictureType and each element of h264L0PictureTypes and h264L1PictureTypes **must** not be STD_VIDEO_H264_PICTURE_TYPE_B
- VUID-vkCmdEncodeVideoKHR-flags-08342
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then each element of h264L0PictureTypes **must** not be STD_VIDEO_H264_PICTURE_TYPE_B
- VUID-vkCmdEncodeVideoKHR-flags-08343
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and VkVideoEncodeH264CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then each element of h264L1PictureTypes **must** not be STD_VIDEO_H264_PICTURE_TYPE_B
- VUID-vkCmdEncodeVideoKHR-pNext-08230
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the pNext chain of pEncodeInfo **must** include a VkVideoEncodeH265PictureInfoKHR structure
- VUID-vkCmdEncodeVideoKHR-StdVideoH265VideoParameterSet-08231
  If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265VideoParameterSet entry with vps_video_parameter_set_id matching StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoEncodeH265PictureInfoKHR structure included in the pNext chain of pEncodeInfo

- VUID-vkCmdEncodeVideoKHR-StdVideoH265SequenceParameterSet-08232
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then the bound video session parameters object **must** contain a StdVideoH265SequenceParameterSet entry with sps_video_parameter_set_id and sps_seq_parameter_set_id matching StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id and StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id, respectively, that are provided in the pStdPictureInfo member of the VkVideoEncodeH265PictureInfoKHR structure included in the pNext chain of pEncodeInfo

  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR, as returned by

vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then pEncodeInfo->srcPictureResource.codedExtent.width **must** equal StdVideoAV1SequenceHeader::max_frame_width_minus_1 + 1 of the active AV1 sequence header

- VUID-vkCmdEncodeVideoKHR-flags-10324
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then pEncodeInfo->srcPictureResource.codedExtent.height **must** equal StdVideoAV1SequenceHeader::max_frame_height_minus_1 + 1 of the active AV1 sequence header
- VUID-vkCmdEncodeVideoKHR-flags-10325
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::flags does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then for each element i of pEncodeInfo->pReferenceSlots pEncodeInfo->pReferenceSlots[i].pPictureResource->codedExtent **must** match pEncodeInfo->srcPictureResource.codedExtent
- VUID-vkCmdEncodeVideoKHR-predictionMode-10326
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR, then VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->frame_type **must** be STD_VIDEO_AV1_FRAME_TYPE_KEY or STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY
- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10327
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and pStdPictureInfo->frame_type for the pStdPictureInfo member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is STD_VIDEO_AV1_FRAME_TYPE_KEY or STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY, then VkVideoEncodeAV1PictureInfoKHR::predictionMode **must** be VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR
- VUID-vkCmdEncodeVideoKHR-maxSingleReferenceCount-10328
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::maxSingleReferenceCount is zero, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** not be VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR
- VUID-vkCmdEncodeVideoKHR-predictionMode-10329

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR, then there **must** be at least one non-negative element of VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices with element index i that does not equal cdfOnlyReferenceIndex and for which bit index i is set in VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-maxUnidirectionalCompoundReferenceCount-10330
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::maxUnidirectionalCompoundReferenceCount is zero, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** not be VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR
- VUID-vkCmdEncodeVideoKHR-predictionMode-10331
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR, then there **must** be at least two non-negative elements of VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices with element indices i and j where (i,j) □ {(0,1),(0,2),(0,3),(4,6)}, such that neither element equals cdfOnlyReferenceIndex and for which bit indices i and j are set in VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-maxBidirectionalCompoundReferenceCount-10332
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and VkVideoEncodeAV1CapabilitiesKHR::maxBidirectionalCompoundReferenceCount is zero, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, then the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** not be VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR
- VUID-vkCmdEncodeVideoKHR-predictionMode-10333
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR, then

there **must** be at least two non-negative elements of VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices with element indices i ∈ {0,1,2,3} and j ∈ {4,5,6}, respectively, such that neither element equals cdfOnlyReferenceIndex, and for which bit indices i and j are set in VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-predictionMode-10857
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, the predictionMode member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR or VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR, and VkVideoEncodeAV1CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with, does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR, then pEncodeInfo->flags **must** not include VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR
- VUID-vkCmdEncodeVideoKHR-referenceNameSlotIndices-10334
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then each element of the referenceNameSlotIndices array member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** either be negative or **must** equal the slotIndex member of one of the elements of pEncodeInfo->pReferenceSlots
- VUID-vkCmdEncodeVideoKHR-slotIndex-10335
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the slotIndex member of each element of pEncodeInfo->pReferenceSlots **must** equal one of the elements of the referenceNameSlotIndices array member of the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10336
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pExtensionHeader member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pExtensionHeader->temporal_id **must** be less than VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10337
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pExtensionHeader member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pExtensionHeader->spatial_id **must** be less than

VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10338
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and pEncodeInfo->pSetupReferenceSlot is not NULL, then the pExtensionHeader member of VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo for the VkVideoEncodeAV1DpbSlotInfoKHR structure included in the pNext chain of pEncodeInfo->pSetupReferenceSlot and the pExtensionHeader member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo **must** both be NULL or not NULL
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10339
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, pEncodeInfo->pSetupReferenceSlot is not NULL, and the pExtensionHeader member of VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo for the VkVideoEncodeAV1DpbSlotInfoKHR structure included in the pNext chain of pEncodeInfo->pSetupReferenceSlot is not NULL, then pExtensionHeader->temporal_id **must** equal pStdPictureInfo->pExtensionHeader->temporal_id in the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10340
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, pEncodeInfo->pSetupReferenceSlot is not NULL, and the pExtensionHeader member of VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo for the VkVideoEncodeAV1DpbSlotInfoKHR structure included in the pNext chain of pEncodeInfo->pSetupReferenceSlot is not NULL, then pExtensionHeader->spatial_id **must** equal pStdPictureInfo->pExtensionHeader->spatial_id in the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo
- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10341
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pExtensionHeader member of VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo for any of the VkVideoEncodeAV1DpbSlotInfoKHR structures included in the pNext chain of any element of pEncodeInfo->pReferenceSlots is not NULL, then pExtensionHeader->temporal_id **must** be less than VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10342
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pExtensionHeader member of VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo for any of the VkVideoEncodeAV1DpbSlotInfoKHR structures included in the pNext chain of any element of pEncodeInfo->pReferenceSlots is not NULL, then pExtensionHeader->spatial_id **must** be

less than VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10343
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pTileInfo->TileCols **must** be greater than 0
- VUID-vkCmdEncodeVideoKHR-pTileInfo-10344
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pTileInfo->TileRows **must** be greater than 0
- VUID-vkCmdEncodeVideoKHR-pTileInfo-10345
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pTileInfo->TileCols **must** be less than or equal to VkVideoEncodeAV1CapabilitiesKHR::maxTiles.width, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pTileInfo-10346
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pTileInfo->TileRows **must** be less than or equal to VkVideoEncodeAV1CapabilitiesKHR::maxTiles.height, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pTileInfo-10347
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then ⌊pEncodeInfo->srcPictureResource.codedExtent.width / pTileInfo->TileCols⌋ **must** be between VkVideoEncodeAV1CapabilitiesKHR::minTileSize.width and VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.width, inclusive, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pTileInfo-10348
  If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and the pTileInfo member of VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo is not NULL, then pEncodeInfo->srcPictureResource.codedExtent.height / pTileInfo->TileRows must be between VkVideoEncodeAV1CapabilitiesKHR::minTileSize.height and VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.height, inclusive, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10349
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->flags.segmentation_enabled for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo must be zero
- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10350
  If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->pSegmentation for the VkVideoEncodeAV1PictureInfoKHR structure included in the pNext chain of pEncodeInfo must be NULL

Valid Usage (Implicit)

- VUID-vkCmdEncodeVideoKHR-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-parameter
  pEncodeInfo must be a valid pointer to a valid VkVideoEncodeInfoKHR structure
- VUID-vkCmdEncodeVideoKHR-commandBuffer-recording
  commandBuffer must be in the recording state
- VUID-vkCmdEncodeVideoKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdEncodeVideoKHR-renderpass
  This command must only be called outside of a render pass instance
- VUID-vkCmdEncodeVideoKHR-suspended
  This command must not be called between suspended render pass instances
- VUID-vkCmdEncodeVideoKHR-videocoding
  This command must only be called inside of a video coding scope
- VUID-vkCmdEncodeVideoKHR-bufferlevel
  commandBuffer must be a primary VkCommandBuffer

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdEncodeVideoKHR is not affected by conditional rendering

The `VkVideoEncodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkVideoEncodeFlagsKHR                 flags;
    VkBuffer                              dstBuffer;
    VkDeviceSize                          dstBufferOffset;
    VkDeviceSize                          dstBufferRange;
    VkVideoPictureResourceInfoKHR         srcPictureResource;
    const VkVideoReferenceSlotInfoKHR*    pSetupReferenceSlot;
    uint32_t                              referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR*    pReferenceSlots;
    uint32_t                              precedingExternallyEncodedBytes;
} VkVideoEncodeInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeFlagBitsKHR indicating video encode command flags.
- `dstBuffer` is the destination video bitstream buffer to write the encoded bitstream to.
- `dstBufferOffset` is the starting offset in bytes from the start of `dstBuffer` to write the encoded bitstream to.

- `dstBufferRange` is the maximum bitstream size in bytes that **can** be written to `dstBuffer`, starting from `dstBufferOffset`.
- `srcPictureResource` is the video picture resource to use as the encode input picture.
- `pSetupReferenceSlot` is `NULL` or a pointer to a VkVideoReferenceSlotInfoKHR structure specifying the reconstructed picture information.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of VkVideoReferenceSlotInfoKHR structures describing the DPB slots and corresponding reference picture resources to use in this video encode operation (the set of active reference pictures).
- `precedingExternallyEncodedBytes` is the number of bytes externally encoded by the application to the video bitstream and is used to update the internal state of the implementation's rate control algorithm to account for the bitrate budget consumed by these externally encoded bytes.

Valid Usage

- VUID-VkVideoEncodeInfoKHR-dstBuffer-08236
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR usage flag set
- VUID-VkVideoEncodeInfoKHR-dstBufferOffset-08237
  `dstBufferOffset` **must** be less than the size of `dstBuffer`
- VUID-VkVideoEncodeInfoKHR-dstBufferRange-08238
  `dstBufferRange` **must** be less than or equal to the size of `dstBuffer` minus `dstBufferOffset`
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08239
  If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08240
  If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoEncodeInfoKHR-slotIndex-08241
  The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pPictureResource-08242
  The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoEncodeInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR
- VUID-VkVideoEncodeInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeAV1PictureInfoKHR, VkVideoEncodeH264PictureInfoKHR, VkVideoEncodeH265PictureInfoKHR, VkVideoEncodeIntraRefreshInfoKHR, VkVideoEncodeQuantizationMapInfoKHR, or VkVideoInlineQueryInfoKHR

- VUID-VkVideoEncodeInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoEncodeFlagBitsKHR values
- VUID-VkVideoEncodeInfoKHR-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-VkVideoEncodeInfoKHR-srcPictureResource-parameter
  `srcPictureResource` **must** be a valid VkVideoPictureResourceInfoKHR structure
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-parameter
  If `pSetupReferenceSlot` is not `NULL`, `pSetupReferenceSlot` **must** be a valid pointer to a valid VkVideoReferenceSlotInfoKHR structure
- VUID-VkVideoEncodeInfoKHR-pReferenceSlots-parameter
  If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid VkVideoReferenceSlotInfoKHR structures

Bits which **can** be set in VkVideoEncodeInfoKHR::`flags`, specifying video encode flags, are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoEncodeFlagBitsKHR {
  // Provided by VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR = 0x00000004,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000001,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR = 0x00000002,
} VkVideoEncodeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR specifies the use of a quantization delta map in the issued video encode operations.
- VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR specifies the use of an emphasis map in the issued video encode operations.
- VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR enables intra refresh for the encoded picture.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFlagsKHR;
```

VkVideoEncodeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeFlagBitsKHR.

49.17. Video Encode Intra Refresh

Encoding a picture with intra refresh enables encoding a subset of the coding blocks produced for an encode input picture with intra prediction.

NOTE This enables the application to perform a decoder refresh through a series of pictures instead of a single picture. In conjunction with restricting reference picture prediction, this enables avoiding error propagation across refresh cycles without introducing sudden spikes in the bitrate. This is achieved by amortizing the bitstream consumption of the refresh across a series of subsequent pictures.

An *intra refresh cycle* is a series of encode operations using intra refresh that contain at least one encode operation for any subregion of the coded extent that encoded the subregion with intra prediction.

The *intra refresh cycle duration* is the number of encode operations in an intra refresh cycle.

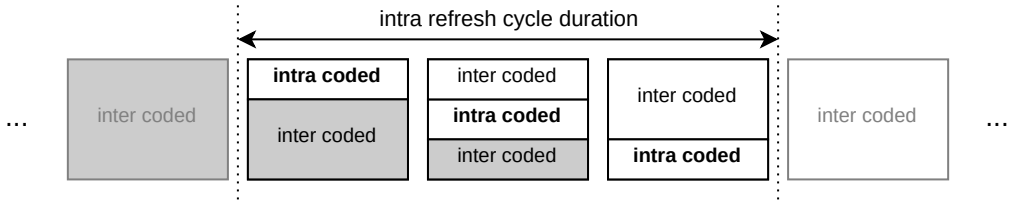

Figure 40. Intra refresh cycle duration

For the purposes of performing an intra refresh cycle, the coded extent is divided into a set of *intra refresh regions*. The number of intra refresh regions for a given intra refresh cycle equals the intra refresh cycle duration.

Implementations **may** partition the coded extent into intra refresh regions in an implementation-specific manner, unless otherwise specified. The following is true for the resulting set of intra refresh regions:

- Each intra refresh region encompasses entire coding blocks.
- Any intra refresh region **may** be non-rectangular.
- Some intra refresh regions **may** be empty.
- The union of intra refresh regions of a given partitioning covers the entire coded extent.

NOTE While intra refresh regions are generally disjoint, there may be overlap between distinct intra refresh regions of a given partitioning in order to accommodate for any filtering that may need to be applied across coding blocks of neighboring intra refresh regions.

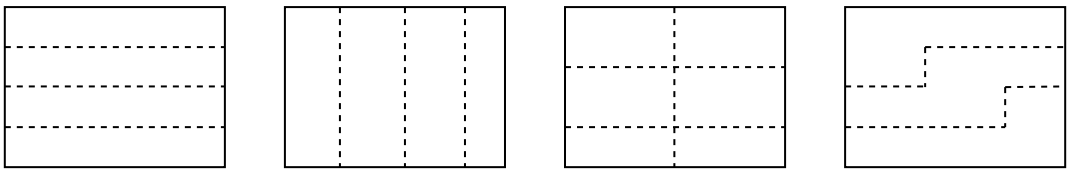

Figure 41. Examples of picture partitioning into intra refresh regions

An intra refresh cycle is performed by encoding subsequent pictures with intra refresh, each encoding subsequent intra refresh regions using intra prediction. This inherently defines an ordering of encode operations within an intra refresh cycle. Therefore each encode operation in an intra refresh cycle has an *intra refresh index* that provides the following information:

- The intra refresh index of an encode operation using intra refresh is the ordinal index of the intra refresh region being encoded using intra prediction.
- The intra refresh index of an encode operation using intra refresh inherently tells the number of intra refresh regions already refreshed by previous encode operations of the intra refresh cycle.

NOTE	For AV1 encoding, applications should consider setting the `error_resilient_mode` flag for the first frame encoded as part of the intra refresh cycle in order to avoid any error propagation of CDF data.

An intra refresh region of a picture encoded using intra refresh is considered *clean* once the encode operation within the intra refresh cycle that encoded that intra refresh region using intra prediction is complete. Otherwise, the intra refresh region is considered *dirty*.

The number of *dirty intra refresh regions* of a picture encoded using intra refresh is always one less than the difference between the intra refresh cycle duration and the intra refresh index used to encode that picture.

NOTE	As the intra refresh cycle progresses, each subsequent picture encoded with intra refresh will have fewer dirty intra refresh regions. Consequently, the final encode operation of the intra refresh cycle will produce an encoded picture with no more dirty intra refresh regions.

49.17.1. Intra Refresh Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specifying an encode operation, the VkVideoEncodeIntraRefreshCapabilitiesKHR structure **can** be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve capabilities specific to video encode intra refresh.

The `VkVideoEncodeIntraRefreshCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshCapabilitiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeIntraRefreshModeFlagsKHR    intraRefreshModes;
    uint32_t                                 maxIntraRefreshCycleDuration;
    uint32_t                                 maxIntraRefreshActiveReferencePictures;
    VkBool32                                 partitionIndependentIntraRefreshRegions;
    VkBool32                                 nonRectangularIntraRefreshRegions;
} VkVideoEncodeIntraRefreshCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `intraRefreshModes` is a bitmask of VkVideoEncodeIntraRefreshModeFlagBitsKHR values indicating the set of supported intra refresh modes.
- `maxIntraRefreshCycleDuration` specifies the maximum supported intra refresh cycle duration.
- `maxIntraRefreshActiveReferencePictures` is the maximum number of active reference pictures when encoding pictures with intra refresh enabled. This capability indicates additional restrictions beyond the maximum number of active reference pictures supported by the video profile, as reported in VkVideoCapabilitiesKHR::`maxActiveReferencePictures` and the maximum requested at video session creation time in VkVideoSessionCreateInfoKHR::`maxActiveReferencePictures`.
- `partitionIndependentIntraRefreshRegions` specifies whether the implementation supports intra refresh regions that are independent of the picture partitioning used during encoding. If it is VK_TRUE, then pictures **can** be encoded with multiple picture partitions, independent of the used intra refresh mode. Otherwise, pictures **cannot** be encoded with multiple picture partitions with any intra refresh mode other than VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR.

  NOTE This capability is only indicative for AV1 encode profiles and does not impose any restrictions on the application as implementations may change the application requested picture partitioning according to implementation-specific restrictions.

- `nonRectangularIntraRefreshRegions` specifies whether the implementation supports non-rectangular intra refresh regions.

  NOTE If this capability is not supported, then using per picture partition intra refresh may impose additional restrictions on the number of picture partitions a picture can be encoded with.

Valid Usage (Implicit)

- VUID-VkVideoEncodeIntraRefreshCapabilitiesKHR-sType-sType
  `sType` **must** be

VK_STRUCTURE_TYPE_VIDEO_ENCODE_INTRA_REFRESH_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.17.2. Intra Refresh Modes

The intra refresh modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef enum VkVideoEncodeIntraRefreshModeFlagBitsKHR {
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR = 0,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR = 0x00000008,
} VkVideoEncodeIntraRefreshModeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR specifies that intra refresh **must** not be used.
- VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR specifies the use of *per picture partition intra refresh*. In this mode each intra refresh region i corresponds to the encoded picture partition i.
- VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR specifies the use of any *block-based intra refresh*. In this mode each intra refresh region encompasses a set of coding blocks, independent of encoded picture partitions but without any additional guarantees on the granularity at which the picture is split into intra refresh regions. When using this mode, the set of coding blocks comprising the intra refresh regions and the direction of intra refresh are implementation-defined.
- VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR specifies the use of *block-row-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block rows.
- VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR specifies the use of *block-column-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block columns.

Implementations reporting support for VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR and/or VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR in VkVideoEncodeIntraRefreshCapabilitiesKHR::`intraRefreshModes` are also **required** to report support for VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR.

NOTE Both block-row-based and block-column-based intra refresh are just specific types of block-based intra refresh that provide additional guarantees about the granularity at which the picture is split into intra refresh regions, therefore implementations supporting either block-row-based or block-column-based intra refresh inherently support block-based intra refresh. Applications can use VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR on such implementations when they do not have any preference for a more specific block-based mode and would rather leave the decision about the division into intra refresh regions to the implementation.

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef VkFlags VkVideoEncodeIntraRefreshModeFlagsKHR;
```

VkVideoEncodeIntraRefreshModeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeIntraRefreshModeFlagBitsKHR.

The used intra refresh mode is selected at video session creation time by including an instance of the VkVideoEncodeSessionIntraRefreshCreateInfoKHR structure in the pNext chain of the VkVideoSessionCreateInfoKHR structure and specifying one of the supported intra refresh modes, as returned in VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes, in its intraRefreshMode member.

The VkVideoEncodeSessionIntraRefreshCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeSessionIntraRefreshCreateInfoKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    VkVideoEncodeIntraRefreshModeFlagBitsKHR     intraRefreshMode;
} VkVideoEncodeSessionIntraRefreshCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- intraRefreshMode is a VkVideoEncodeIntraRefreshModeFlagBitsKHR specifying the used intra refresh mode.

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_INTRA_REFRESH_CREATE_INFO_KHR
- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-intraRefreshMode-parameter
  If intraRefreshMode is not 0, intraRefreshMode **must** be a valid VkVideoEncodeIntraRefreshModeFlagBitsKHR value

Structure Chaining

Extends the structure

- VkVideoSessionCreateInfoKHR

49.17.3. Encoding Pictures with Intra Refresh

If the video encode operation is issued with the VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR flag, the picture will be encoded with intra refresh, resulting in the intra refresh region identified by the specified intra refresh index to be encoded with intra prediction.

Intra refresh parameters are specified to video encode operations by including an instance of the VkVideoEncodeIntraRefreshInfoKHR structure in the `pNext` chain of the VkVideoEncodeInfoKHR structure specified to the video encode command.

The `VkVideoEncodeIntraRefreshInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           intraRefreshCycleDuration;
    uint32_t           intraRefreshIndex;
} VkVideoEncodeIntraRefreshInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `intraRefreshCycleDuration` is the used intra refresh cycle duration.
- `intraRefreshIndex` is the intra refresh index of the encoded picture.

Valid Usage (Implicit)

- VUID-VkVideoEncodeIntraRefreshInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_INTRA_REFRESH_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoEncodeInfoKHR

49.17.4. Referencing Pictures Encoded with Intra Refresh

When using pictures encoded with intra refresh as an active reference picture in a video encode

operation, applications **may** want to limit the set of intra refresh regions of the reference picture that are used to predict samples of the encoded picture to exclude dirty intra refresh regions of the reference picture in question.

NOTE This enables the application to avoid error propagation from previous refresh cycles by only using already refreshed (clean) intra refresh regions for sample prediction.

In order to limit the set of intra refresh regions of an active reference picture used for sample prediction, the application **must** specify an instance of the VkVideoReferenceIntraRefreshInfoKHR structure in the `pNext` chain of the VkVideoReferenceSlotInfoKHR structure specifying the active reference picture in question.

The `VkVideoReferenceIntraRefreshInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoReferenceIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dirtyIntraRefreshRegions;
} VkVideoReferenceIntraRefreshInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dirtyIntraRefreshRegions` is the number of dirty intra refresh regions in the reference picture.

Valid Usage (Implicit)

- VUID-VkVideoReferenceIntraRefreshInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_REFERENCE_INTRA_REFRESH_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

In order to use active reference pictures with a non-zero number of dirty intra refresh regions and therefore limit sample prediction to clean intra refresh regions, the currently encoded picture **must** be encoded with intra refresh enabled.

When limiting sample prediction to clean intra refresh regions of a reference picture with a non-zero number of dirty intra refresh regions, the number of dirty intra refresh regions **must** equal the used intra refresh cycle duration minus the intra refresh index of the encoded picture.

NOTE This has the practical effect that pictures can only reference the previous picture

within the intra refresh cycle or pictures outside of the intra refresh cycle.

Given an active reference picture with `dirtyIntraRefreshRegions` number of dirty intra refresh regions and an intra refresh cycle duration of `intraRefreshCycleDuration`, the samples within intra refresh region index i of the encoded picture are allowed to be predicted by samples within intra refresh region index j of the active reference picture in question if and only if any of the following conditions are true:

- The picture is encoded with VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR and i is greater than the `intraRefreshIndex` of the encoded picture.
- The picture is encoded with VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR, i is less than the `intraRefreshIndex` of the encoded picture, and j is less than the difference of `intraRefreshCycleDuration` and `dirtyIntraRefreshRegions`.

NOTE

Even if a particular intra refresh region is allowed to be used for sample prediction, as defined above, implementations may not always support sample prediction from the given intra refresh region.

Some implementations may only support sample prediction from a single set of intra refresh regions across the entire set of active reference pictures. For example, when encoding a picture with two active reference pictures, one with no dirty intra refresh regions, and one with some dirty intra refresh regions, sample prediction may not happen from those intra refresh regions of the first active reference picture which are marked dirty in the second active reference picture.

Other implementations may have the additional restriction that the set of intra refresh regions to use for sample prediction across the entire set of active reference pictures is implied from the intra refresh index of the currently encoded picture, further restricting the set of intra refresh regions that such implementations can use for sample prediction. For example, when encoding a picture with intra refresh using an active reference picture that has no dirty intra refresh regions, sample prediction may not happen from intra refresh regions of the active reference picture which have an index greater than or equal to the currently encoded picture's intra refresh index, even though those intra refresh regions were not marked as dirty.

None of these implementation limitations will have an effect on application behavior from the perspective of correctness, but they may negatively impact the encoding efficiency.

49.18. Video Encode Rate Control

The size of the encoded bitstream data produced by video encode operations is a function of the following set of constraints:

- The capabilities of the compression algorithms defined and employed by the used video compression standard;

- Restrictions imposed by the selected video profile according to the rules defined by the used video compression standard;
- Further restrictions imposed by the capabilities supported by the implementation for the selected video profile;
- The image data in the encode input picture and the set of active reference pictures (as these affect the effectiveness of the compression algorithms employed by the video encode operations);
- The set of codec-specific and codec-independent encoding parameters provided by the application.

These also inherently define the set of decoder capabilities required for reconstructing and processing the picture data in the encoded bitstream.

Video coding uses *bitrate* as the quantitative metric associated with encoded bitstream data size which expresses the rate at which video bitstream data **can** be transferred or processed, measured in number of bits per second. This bitrate is both a function of the encoded bitstream data size of the encoded pictures as well as the *frame rate* used by the video sequence.

Rate control algorithms are used by video encode operations to enable adjusting encoding parameters to achieve a target bitrate, or otherwise directly or indirectly control the bitrate of the generated video bitstream data. These algorithms are usually not defined by the used video compression standard, although some video compression standards do provide non-normative guidelines for implementations.

Accordingly, this specification does not mandate implementations to produce identical encoded bitstream data outputs in response to video encode operations, however, it does define a set of codec-independent and codec-specific parameters that enable the application to control the behavior of the rate control algorithms supported by the implementation. Some of these parameters guarantee certain implementation behavior while others provide guidance for implementations to apply various rate control heuristics.

NOTE

Applications need to make sure that they configure rate control parameters appropriately and that they follow the promises made to the implementation through parameters providing guidance for the implementation's rate control algorithms and heuristics in order to be able to get the desired rate control behavior and to be able to hit the set bitrate targets. In addition, the behavior of rate control may also differ across implementations even if the capabilities of the used video profile match between those implementations. This may happen due to implementations applying different rate control algorithms or heuristics internally, and thus even the same set of guidance parameter values may have different effects on the rate control behavior across implementations.

49.18.1. Rate Control Modes

After a video session is reset to the initial state, the default behavior and parameters of video encode rate control are entirely implementation-dependent and the application **cannot** affect the bitrate or quality parameters of the encoded bitstream data produced by video encode operations

unless the application changes the rate control configuration of the video session, as described in the Video Coding Control section.

For each supported video profile, the implementation **may** expose a set of *rate control modes* that are available for use by the application when encoding bitstreams targeting that video profile. These modes allow using different rate control algorithms that fall into one of the following two categories:

1. Per-operation rate control
2. Stream-level rate control

In case of *per-operation rate control*, the bitrate of the generated video bitstream data is indirectly controlled by quality, size, or other encoding parameters specified by the application for each individual video encode operation.

In case of *stream-level rate control*, the application **can** directly specify target bitrates besides other encoding parameters to control the behavior of the rate control algorithm used by the implementation across multiple video encode operations.

The rate control modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeRateControlModeFlagBitsKHR {
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR = 0x00000004,
} VkVideoEncodeRateControlModeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR specifies the use of implementation-specific rate control.
- VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR specifies that rate control is disabled and the application will specify per-operation rate control parameters controlling the encoding quality. In this mode implementations will encode pictures independently of the output bitrate of prior video encode operations.
  - When using an H.264 encode profile, implementations will use the QP value specified in VkVideoEncodeH264NaluSliceInfoKHR::`constantQp` to control the quality of the encoded picture.
  - When using an H.265 encode profile, implementations will use the QP value specified in VkVideoEncodeH265NaluSliceSegmentInfoKHR::`constantQp` to control the quality of the encoded picture.
  - When using an AV1 encode profile, implementations will use the quantizer index value specified in VkVideoEncodeAV1PictureInfoKHR::`constantQIndex` to control the quality of the encoded picture.
- VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR specifies the use of constant bitrate (CBR) rate control mode. In this mode the implementation will attempt to produce the encoded

bitstream at a constant bitrate while conforming to the constraints of other rate control parameters.

- VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR specifies the use of variable bitrate (VBR) rate control mode. In this mode the implementation will produce the encoded bitstream at a variable bitrate according to the constraints of other rate control parameters.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlModeFlagsKHR;
```

VkVideoEncodeRateControlModeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeRateControlModeFlagBitsKHR.

49.18.2. Leaky Bucket Model

Video encoding implementations use the *leaky bucket model* for stream-level rate control. The leaky bucket is a concept referring to the interface between the video encoder and the consumer (for example, a network connection), where the video encoder produces encoded bitstream data corresponding to the encoded pictures and adds them in the leaky bucket while its contents are drained by the consumer.

Analogously, a similar leaky bucket is considered to exist at the input interface of a video decoder, into which encoded bitstream data is continuously added and is subsequently consumed by the video decoder. It is desirable to avoid overflowing or underflowing this leaky bucket because:

- In case of an underflow, the video decoder will be unable to consume encoded bitstream data in order to decode pictures (and optionally display them).
- In case of an overflow, the leaky bucket will be unable to accommodate more encoded bitstream data and such data **may** need to be thrown away, leading to the loss of the corresponding encoded pictures.

These requirements **can** be satisfied by imposing various constraints on the encoder-side leaky bucket to avoid its overflow or underflow, depending on the used rate control algorithm and codec parameters. However, enumerating these constraints is outside the scope of this specification.

The term *virtual buffer* is often used as an alternative to refer to the leaky bucket.

This virtual buffer model is defined by the following parameters:

- The bitrate (R) at which the encoded bitstream is expected to be processed.
- The size (B) of the virtual buffer.
- The initial occupancy (F) of the virtual buffer.

In this model the virtual buffer is used to smooth out fluctuations in the bitrate of the encoded bitstream over time without experiencing buffer overflow or underflow, as long as the bitrate of the encoded stream does not diverge from the target bitrate for extended periods of time.

This buffering **may** inherently impose a processing delay, as the goal of the model is to enable

decoders to maintain a consistent processing rate of an encoded bitstream with varying data rate.

The initial or start-up delay (`D`) is computed as:

```
D = F / R
```

NOTE	Applications need to configure the virtual buffer with sufficient size to avoid or minimize buffer overflows and underflows while also keeping it small enough to meet their latency goals.

49.18.3. Rate Control Layers

Some video compression standards and video profiles allow associating encoded pictures with specific *video coding layers*. The name, identification, and semantics associated with such video coding layers are defined by the corresponding video compression standards.

Analogously, stream-level rate control **can** be configured to use one or more *rate control layers*:

- When a single rate control layer is configured, it is applied to all encoded pictures, regardless of the picture's video coding layer. In this case the distribution of the available bitrate budget across video coding layers is implementation-dependent.
- When multiple rate control layers are configured, each rate control layer is applied to the corresponding video coding layer, i.e. only across encoded pictures pertaining to the corresponding video coding layer.

Individual rate control layers are identified using *layer indices* between zero and `N-1`, where `N` is the number of active rate control layers.

Rate control layers are only applicable when using stream-level rate control modes.

49.18.4. Rate Control State

Rate control state is maintained by the implementation in the video session objects and its parameters are specified using an instance of the `VkVideoEncodeRateControlInfoKHR` structure. The complete rate control state of a video session is defined by the following set of parameters:

- The values of the members of the VkVideoEncodeRateControlInfoKHR structure used to configure the rate control state.
- The values of the members of any VkVideoEncodeRateControlLayerInfoKHR structures specified in VkVideoEncodeRateControlInfoKHR::`pLayers` used to configure the state of individual rate control layers.
- If the video session was created with an H.264 encode profile:
  - The values of the members of the VkVideoEncodeH264RateControlInfoKHR structure, if one is specified in the `pNext` chain of the VkVideoEncodeRateControlInfoKHR used to configure the rate control state.
  - The values of the members of any VkVideoEncodeH264RateControlLayerInfoKHR structures

included in the pNext chain of a VkVideoEncodeRateControlLayerInfoKHR structure used to configure the state of a rate control layer.

- If the video session was created with an H.265 encode profile:
  - The values of the members of the VkVideoEncodeH265RateControlInfoKHR structure, if one is specified in the pNext chain of the VkVideoEncodeRateControlInfoKHR used to configure the rate control state.
  - The values of the members of any VkVideoEncodeH265RateControlLayerInfoKHR structures included in the pNext chain of a VkVideoEncodeRateControlLayerInfoKHR structure used to configure the state of a rate control layer.
- If the video session was created with an AV1 encode profile:
  - The values of the members of the VkVideoEncodeAV1RateControlInfoKHR structure, if one is specified in the pNext chain of the VkVideoEncodeRateControlInfoKHR used to configure the rate control state.
  - The values of the members of any VkVideoEncodeAV1RateControlLayerInfoKHR structures included in the pNext chain of a VkVideoEncodeRateControlLayerInfoKHR structure used to configure the state of a rate control layer.

Two rate control states match if all the parameters listed above match between them.

The VkVideoEncodeRateControlInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    VkVideoEncodeRateControlFlagsKHR                flags;
    VkVideoEncodeRateControlModeFlagBitsKHR         rateControlMode;
    uint32_t                                        layerCount;
    const VkVideoEncodeRateControlLayerInfoKHR*     pLayers;
    uint32_t                                        virtualBufferSizeInMs;
    uint32_t                                        initialVirtualBufferSizeInMs;
} VkVideoEncodeRateControlInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- rateControlMode is a VkVideoEncodeRateControlModeFlagBitsKHR value specifying the rate control mode.
- layerCount specifies the number of rate control layers to use.
- pLayers is a pointer to an array of layerCount VkVideoEncodeRateControlLayerInfoKHR structures, each specifying the rate control configuration of the corresponding rate control layer.
- virtualBufferSizeInMs is the size in milliseconds of the virtual buffer used by the

implementation's rate control algorithm for the leaky bucket model, with respect to the average bitrate of the stream calculated by summing the values of the `averageBitrate` members of the elements of the `pLayers` array.

- `initialVirtualBufferSizeInMs` is the initial occupancy in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the leaky bucket model.

If `layerCount` is zero then the values of `virtualBufferSizeInMs` and `initialVirtualBufferSizeInMs` are ignored.

This structure **can** be specified in the following places:

- In the `pNext` chain of VkVideoBeginCodingInfoKHR to specify the current rate control state expected to be configured when beginning a video coding scope.
- In the `pNext` chain of VkVideoCodingControlInfoKHR to change the rate control configuration of the bound video session.

Including this structure in the `pNext` chain of VkVideoCodingControlInfoKHR and including VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR in VkVideoCodingControlInfoKHR::`flags` enables updating the rate control configuration of the bound video session. This replaces the entire rate control configuration of the bound video session and **may** reset the state of all enabled rate control layers to an initial state according to the codec-specific rate control semantics defined in the corresponding sections listed below.

When `layerCount` is greater than one, multiple rate control layers are configured, and each rate control layer is applied to the corresponding video coding layer identified by the index of the corresponding element of `pLayers`.

- If the video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then this index specifies the H.264 temporal layer ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then this index specifies the H.265 temporal ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then this index specifies the AV1 temporal ID of the temporal layer the rate control layer is applied to.

Additional structures providing codec-specific rate control parameters **can** be included in the `pNext` chain of `VkVideoCodingControlInfoKHR` depending on the video profile the bound video session was created with. For further details see:

- Video Coding Control
- H.264 Encode Rate Control
- H.265 Encode Rate Control
- AV1 Encode Rate Control

The new rate control configuration takes effect when the corresponding

vkCmdControlVideoCodingKHR is executed on the device, and only impacts video encode operations that follow in execution order.

Valid Usage

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08248
  If `rateControlMode` is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then `layerCount` **must** be `0`
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08275
  If `rateControlMode` is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR, then `layerCount` **must** be greater than `0`
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08244
  If `rateControlMode` is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR, then it **must** specify one of the bits included in VkVideoEncodeCapabilitiesKHR::`rateControlModes`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08245
  `layerCount` member **must** be less than or equal to VkVideoEncodeCapabilitiesKHR::`maxRateControlLayers`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08276
  For each element of `pLayers`, its `averageBitrate` member **must** be between `1` and VkVideoEncodeCapabilitiesKHR::`maxBitrate`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08277
  For each element of `pLayers`, its `maxBitrate` member **must** be between `1` and VkVideoEncodeCapabilitiesKHR::`maxBitrate`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08356
  If `rateControlMode` is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR, then for each element of `pLayers`, its `averageBitrate` member **must** equal its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08278
  If `rateControlMode` is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR, then for each element of `pLayers`, its `averageBitrate` member **must** be less than or equal to its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08357
  If `layerCount` is not zero, then `virtualBufferSizeInMs` **must** be greater than zero
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08358
  If `layerCount` is not zero, then `initialVirtualBufferSizeInMs` **must** be less than or equal to `virtualBufferSizeInMs`
- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07022

If the videoCodecOperation of the used video profile is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the pNext chain this structure is included in also includes an instance of the VkVideoEncodeH264RateControlInfoKHR structure, and layerCount is greater than 1, then layerCount **must** equal VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07025
  If the videoCodecOperation of the used video profile is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, the pNext chain this structure is included in also includes an instance of the VkVideoEncodeH265RateControlInfoKHR structure, and layerCount is greater than 1, then layerCount **must** equal VkVideoEncodeH265RateControlInfoKHR::subLayerCount
- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-10351
  If the videoCodecOperation of the used video profile is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, the pNext chain this structure is included in also includes an instance of the VkVideoEncodeAV1RateControlInfoKHR structure, and layerCount is greater than 1, then layerCount **must** equal VkVideoEncodeAV1RateControlInfoKHR::temporalLayerCount

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR
- VUID-VkVideoEncodeRateControlInfoKHR-flags-zerobitmask
  flags **must** be 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-parameter
  If rateControlMode is not 0, rateControlMode **must** be a valid VkVideoEncodeRateControlModeFlagBitsKHR value
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-parameter
  If layerCount is not 0, pLayers **must** be a valid pointer to an array of layerCount valid VkVideoEncodeRateControlLayerInfoKHR structures

Structure Chaining

Extends the structures

- VkVideoBeginCodingInfoKHR
- VkVideoCodingControlInfoKHR

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlFlagsKHR;
```

VkVideoEncodeRateControlFlagsKHR is a bitmask type for setting a mask, but is currently reserved for

future use.

Rate Control Layer State

The configuration of individual rate control layers is specified using an instance of the VkVideoEncodeRateControlLayerInfoKHR structure.

The VkVideoEncodeRateControlLayerInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           averageBitrate;
    uint64_t           maxBitrate;
    uint32_t           frameRateNumerator;
    uint32_t           frameRateDenominator;
} VkVideoEncodeRateControlLayerInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is a pointer to a structure extending this structure.
- averageBitrate is the average bitrate to be targeted by the implementation's rate control algorithm.
- maxBitrate is the peak bitrate to be targeted by the implementation's rate control algorithm.
- frameRateNumerator is the numerator of the frame rate assumed by the implementation's rate control algorithm.
- frameRateDenominator is the denominator of the frame rate assumed by the implementation's rate control algorithm.

NOTE	The ability of the implementation's rate control algorithm to be able to match the requested average and/or peak bitrates **may** be limited by the set of other codec-independent and codec-specific rate control parameters specified by the application, the input content, as well as the application conforming to the rate control guidance provided to the implementation, as described earlier.

Additional structures providing codec-specific rate control parameters **can** be included in the pNext chain of VkVideoEncodeRateControlLayerInfoKHR depending on the video profile the bound video session was created with. For further details see:

- Video Coding Control
- H.264 Encode Rate Control
- H.265 Encode Rate Control
- AV1 Encode Rate Control

Valid Usage

- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateNumerator-08350
  `frameRateNumerator` **must** be greater than zero
- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateDenominator-08351
  `frameRateDenominator` **must** be greater than zero

Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR
- VUID-VkVideoEncodeRateControlLayerInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkVideoEncodeAV1RateControlLayerInfoKHR, VkVideoEncodeH264RateControlLayerInfoKHR, or VkVideoEncodeH265RateControlLayerInfoKHR
- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

49.19. Video Encode Quantization Maps

Quantization maps are VkImage objects that are used in video encode operations to control the relative quantization parameter values across the encoded picture. Each texel in the quantization map controls the relative quantization parameter values used to encode the corresponding rectangular block of texels in the encode input picture.

The size of the rectangular block of texels each quantization map texel covers is referred to as the *quantization map texel size*.

The extent of the image subresource used as a quantization map when encoding a picture with a coded extent of (`width`,`height`) thus has to be at least (⌈`width` / `texelSize.width`⌉, ⌈`height` / `texelSize.height`⌉), where `texelSize` is the used quantization map texel size.

In particular, the quantization map texel at location (`x`,`y`) contains relative quantization parameter values used when encoding the `texelSize` sized rectangular block of the encode input picture starting at the texel location (`x` × `texelSize.width`, `y` × `texelSize.height`).

The quantization map texel size does not always match the size of the codec-specific coding blocks used during encoding. Furthermore, some video compression standards allow the size of the codec-specific coding blocks to vary across the encoded picture. In order to accommodate for such mismatches between the granularity at which quantization parameters are stored in quantization maps and the granularity at which they are applied to codec-specific coding blocks during encoding, the following mapping rules are applied to define the quantization map texel value corresponding to a given codec-specific coding block with a size (`width`,`height`) at the texel location (`x`,`y`) in the encode input picture:

- If the size of the codec-specific coding block matches the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location (`x` / `texelSize.width`, `y` / `texelSize.height`).
- If the size of the codec-specific coding block is smaller than the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location (⌊`x` / `texelSize.width`⌋, ⌊`y` / `texelSize.height`⌋).
- If the size of the codec-specific coding block is larger than the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block **may** be any value determined as the linear interpolation of the quantization map texel values in the subregion starting at texel location (`x` / `texelSize.width`,`y` / `texelSize.height`) with a size (⌊`width` / `texelSize.width`⌋, ⌊`height` / `texelSize.height`⌋).

The actual control parameters stored in the quantization map depend on its type. This specification supports the following types of quantization maps:

- Quantization delta maps
- Emphasis maps

49.19.1. Quantization Delta Maps

Quantization delta maps contain values that directly affect the codec-specific quantization parameter values used to encode the corresponding block of the encode input picture.

Quantization delta maps **can** be used in conjunction with any rate control mode, including VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.

Due to their codec-specific nature, they are described in more detail in the corresponding codec-specific section for video encode operations that support them. In particular:

- The behavior of quantization delta maps used with an H.264 encode profile is described in the H.264 Encode Quantization and H.264 QP Delta Maps sections.
- The behavior of quantization delta maps used with an H.265 encode profile is described in the H.265 Encode Quantization and H.265 QP Delta Maps sections.
- The behavior of quantization delta maps used with an AV1 encode profile is described in the AV1 Encode Quantization and AV1 Quantizer Index Delta Maps sections.

This specification does not support quantization delta maps for any other video encode operation.

49.19.2. Emphasis Maps

Emphasis maps contain values that indirectly affect the codec-specific quantization parameter values used to encode the corresponding block of the encode input picture.

The texels of emphasis maps contain values that provide input to the encoder implementation about the relative importance (emphasis) of regions of the encoded pictures in order to enable the implementation's rate control algorithm to allocate more bitrate budget for regions of the encoded picture with higher emphasis values than to those with lower emphasis values.

Emphasis maps **can** only be used when the current rate control mode configured for the video session is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.

As these emphasis values only control the otherwise implementation-specific behavior of the used rate control algorithm, this specification does not impose additional restrictions on implementations beyond the ones outlined in the corresponding codec-specific sections describing quantization behavior:

- The behavior of emphasis maps used with an H.264 encode profile is described in the H.264 Encode Quantization section.
- The behavior of emphasis maps used with an H.265 encode profile is described in the H.265 Encode Quantization section.
- The behavior of emphasis maps used with an AV1 encode profile is described in the AV1 Encode Quantization section.

This specification does not support emphasis maps for any other video encode operation.

Emphasis maps always have single channel unsigned normalized integer formats and implementations are **required** to support the VK_FORMAT_R8_UNORM format for emphasis maps, as reported in VkVideoFormatPropertiesKHR::`format`, when the video encode profile supports VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR.

49.19.3. Quantization Map Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specifying an encode operation, the VkVideoEncodeQuantizationMapCapabilitiesKHR structure **can** be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve capabilities specific to video encode quantization maps.

The `VkVideoEncodeQuantizationMapCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         maxQuantizationMapExtent;
} VkVideoEncodeQuantizationMapCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxQuantizationMapExtent` indicates the maximum supported width and height of quantization maps.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapCapabilitiesKHR-sType-sType

sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities of an H.264 encode profile, the VkVideoEncodeH264QuantizationMapCapabilitiesKHR structure **can** be included in the pNext chain of the VkVideoCapabilitiesKHR structure to retrieve additional video encode quantization map capabilities specific to H.264 encode profiles.

The VkVideoEncodeH264QuantizationMapCapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH264QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t            minQpDelta;
    int32_t            maxQpDelta;
} VkVideoEncodeH264QuantizationMapCapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minQpDelta indicates the minimum QP delta value supported for H.264 QP delta maps.
- maxQpDelta indicates the maximum QP delta value supported for H.264 QP delta maps.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QuantizationMapCapabilitiesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUANTIZATION_MAP_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities of an H.265 encode profile, the VkVideoEncodeH265QuantizationMapCapabilitiesKHR structure **can** be included in the pNext chain of the VkVideoCapabilitiesKHR structure to retrieve additional video encode

quantization map capabilities specific to H.265 encode profiles.

The VkVideoEncodeH265QuantizationMapCapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH265QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t            minQpDelta;
    int32_t            maxQpDelta;
} VkVideoEncodeH265QuantizationMapCapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minQpDelta indicates the minimum QP delta value supported for H.265 QP delta maps.
- maxQpDelta indicates the maximum QP delta value supported for H.265 QP delta maps.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QuantizationMapCapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUANTIZATION_MAP_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities of an AV1 encode profile, the VkVideoEncodeAV1QuantizationMapCapabilitiesKHR structure **can** be included in the pNext chain of the VkVideoCapabilitiesKHR structure to retrieve additional video encode quantization map capabilities specific to AV1 encode profiles.

The VkVideoEncodeAV1QuantizationMapCapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeAV1QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t            minQIndexDelta;
    int32_t            maxQIndexDelta;
} VkVideoEncodeAV1QuantizationMapCapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQIndexDelta` indicates the minimum quantizer index delta value supported for AV1 quantizer index delta maps.
- `maxQIndexDelta` indicates the maximum quantizer index delta value supported for AV1 quantizer index delta maps.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1QuantizationMapCapabilitiesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUANTIZATION_MAP_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

49.19.4. Quantization Map Format Properties

When calling vkGetPhysicalDeviceVideoFormatPropertiesKHR, the VkVideoFormatQuantizationMapPropertiesKHR structure **can** be included in the `pNext` chain of the VkVideoFormatPropertiesKHR structure to retrieve video format properties specific to video encode quantization maps.

The `VkVideoFormatQuantizationMapPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatQuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoFormatQuantizationMapPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMapTexelSize` indicates the quantization map texel size of the video format, i.e. the number of pixels corresponding to each quantization map texel.

The values returned in this structure are only defined if the allowed image usage flags returned in VkVideoFormatPropertiesKHR::`imageUsageFlags` for this video format include VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR.

Implementations **may** support multiple quantization map texel sizes for a particular video format

which is indicated by vkGetPhysicalDeviceVideoFormatPropertiesKHR returning multiple entries with different quantizationMapTexelSize values.

Valid Usage (Implicit)

- VUID-VkVideoFormatQuantizationMapPropertiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_FORMAT_QUANTIZATION_MAP_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkVideoFormatPropertiesKHR

When calling vkGetPhysicalDeviceVideoFormatPropertiesKHR, the VkVideoFormatH265QuantizationMapPropertiesKHR structure **can** be included in the pNext chain of the VkVideoFormatPropertiesKHR structure to retrieve video format properties specific to video encode quantization maps used with an H.265 encode profile.

The VkVideoFormatH265QuantizationMapPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatH265QuantizationMapPropertiesKHR {
    VkStructureType                    sType;
    void*                              pNext;
    VkVideoEncodeH265CtbSizeFlagsKHR   compatibleCtbSizes;
} VkVideoFormatH265QuantizationMapPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- compatibleCtbSizes is a bitmask of VkVideoEncodeH265CtbSizeFlagBitsKHR indicating the CTB sizes that quantization maps using this video format are compatible with.

NOTE

The value of compatibleCtbSizes does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with CTB sizes not included in compatibleCtbSizes but otherwise supported by the used video profile, as indicated by VkVideoEncodeH265CapabilitiesKHR::ctbSizes. In particular, using smaller quantization map texel sizes may prevent implementations from encoding with larger CTB sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in VkVideoFormatPropertiesKHR::imageUsageFlags for this video format include

VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkVideoFormatH265QuantizationMapPropertiesKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_VIDEO_FORMAT_H265_QUANTIZATION_MAP_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkVideoFormatPropertiesKHR

When calling vkGetPhysicalDeviceVideoFormatPropertiesKHR, the VkVideoFormatAV1QuantizationMapPropertiesKHR structure **can** be included in the pNext chain of the VkVideoFormatPropertiesKHR structure to retrieve video format properties specific to video encode quantization maps used with an AV1 encode profile.

The VkVideoFormatAV1QuantizationMapPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatAV1QuantizationMapPropertiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR   compatibleSuperblockSizes;
} VkVideoFormatAV1QuantizationMapPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- compatibleSuperblockSizes is a bitmask of VkVideoEncodeAV1SuperblockSizeFlagBitsKHR indicating the AV1 superblock sizes that quantization maps using this video format are compatible with.

NOTE

The value of compatibleSuperblockSizes does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with superblock sizes not included in compatibleSuperblockSizes but otherwise supported by the used video profile, as indicated by VkVideoEncodeAV1CapabilitiesKHR::superblockSizes. In particular, using smaller quantization map texel sizes may prevent implementations from encoding with larger superblock sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in

VkVideoFormatPropertiesKHR::imageUsageFlags for this video format include VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkVideoFormatAV1QuantizationMapPropertiesKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_VIDEO_FORMAT_AV1_QUANTIZATION_MAP_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkVideoFormatPropertiesKHR

49.19.5. Encoding with Quantization Maps

The VkVideoEncodeQuantizationMapInfoKHR structure **can** be included in the pNext chain of the VkVideoEncodeInfoKHR structure passed to the vkCmdEncodeVideoKHR command to specify the quantization map used by the issued video encode operations.

The VkVideoEncodeQuantizationMapInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView        quantizationMap;
    VkExtent2D         quantizationMapExtent;
} VkVideoEncodeQuantizationMapInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- quantizationMap specifies the image view to use as the quantization map.
- quantizationMapExtent specifies the extent of the image subregion of quantizationMap to use as the quantization map starting at offset (0,0).

Valid Usage

- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10352 quantizationMapExtent.width **must** be less than or equal to the width of quantizationMap
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10353 quantizationMapExtent.height **must** be less than or equal to the height of quantizationMap

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_INFO_KHR
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMap-parameter
  If `quantizationMap` is not VK_NULL_HANDLE, `quantizationMap` **must** be a valid VkImageView handle

Structure Chaining

Extends the structure

- VkVideoEncodeInfoKHR

49.20. Video Encode R'G'B' Conversion

R'G'B' to Y'C_BC_R conversion performs the following operations to the encode input picture before video coding:

- R'G'B' Range Compression
- R'G'B' Model Conversion
- R'G'B' Chroma Subsampling and Quantization

49.20.1. R'G'B' Conversion Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specifying an encode operation, the VkVideoEncodeRgbConversionCapabilitiesVALVE structure **can** be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve capabilities specific to video encode R'G'B' conversion.

The `VkVideoEncodeRgbConversionCapabilitiesVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeRgbConversionCapabilitiesVALVE {
    VkStructureType                                 sType;
    void*                                           pNext;
    VkVideoEncodeRgbModelConversionFlagsVALVE       rgbModels;
    VkVideoEncodeRgbRangeCompressionFlagsVALVE      rgbRanges;
    VkVideoEncodeRgbChromaOffsetFlagsVALVE          xChromaOffsets;
    VkVideoEncodeRgbChromaOffsetFlagsVALVE          yChromaOffsets;
} VkVideoEncodeRgbConversionCapabilitiesVALVE;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `rgbModels` is a bitmask of VkVideoEncodeRgbModelConversionFlagBitsVALVE describing supported model conversions for video encode R'G'B' conversion.
- `rgbRanges` is a bitmask of VkVideoEncodeRgbRangeCompressionFlagBitsVALVE describing supported range compressions for video encode R'G'B' conversion.
- `xChromaOffsets` is a bitmask of VkVideoEncodeRgbChromaOffsetFlagBitsVALVE describing supported offsets of the output location of the downsampled chroma component on the X axis for video encode R'G'B' conversion.
- `yChromaOffsets` is a bitmask of VkVideoEncodeRgbChromaOffsetFlagBitsVALVE describing supported offsets of the output location of the downsampled chroma component on the Y axis for video encode R'G'B' conversion.

Valid Usage (Implicit)

- VUID-VkVideoEncodeRgbConversionCapabilitiesVALVE-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_RGB_CONVERSION_CAPABILITIES_VALVE

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

R'G'B' Range Compression

The video encode R'G'B' range compression to be applied to color component values of the encode input picture before video coding is defined by the `rgbRange` member of the VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure.

The VkVideoEncodeRgbRangeCompressionFlagBitsVALVE enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbRangeCompressionFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_FULL_RANGE_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_NARROW_RANGE_BIT_VALVE = 0x00000002,
} VkVideoEncodeRgbRangeCompressionFlagBitsVALVE;
```

- VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_FULL_RANGE_BIT_VALVE specifies the following transformations are applied:

$$
\begin{aligned}
Y' &= C'_{rgba}[G] \\
C_B &= C'_{rgba}[B] - \frac{2^{(n-1)}}{(2^n)-1} \\
C_R &= C'_{rgba}[R] - \frac{2^{(n-1)}}{(2^n)-1}
\end{aligned}
$$

NOTE

These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.

Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan **may** also be updated to maintain parity.

- VK_VIDEO_ENCODE_RGB_RANGE_COMPRESSION_NARROW_RANGE_BIT_VALVE specifies the following transformations are applied:

$$
\begin{aligned}
Y' &= \frac{C'_{rgba}[G] \times (2^n - 1) - 16 \times 2^{n-8}}{219 \times 2^{n-8}} \\
C_B &= \frac{C'_{rgba}[B] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}} \\
C_R &= \frac{C'_{rgba}[R] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}
\end{aligned}
$$

NOTE

These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.

Unlike sampler $Y'C_BC_R$ range expansion, no precision guarantees are made for video encode R'G'B' range compression.

- *n* is the bit-depth of the components in the bound video session’s `pictureFormat`.

NOTE

Video encode R'G'B' range compression transformations have the inverse definition of the sampler $Y'C_BC_R$ range expansion transformations.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbRangeCompressionFlagsVALVE;
```

VkVideoEncodeRgbRangeCompressionFlagsVALVE is a bitmask type for setting a mask of zero or more VkVideoEncodeRgbRangeCompressionFlagBitsVALVE.

R'G'B' Model Conversion

The range-compressed values are converted between color models, according to the color model conversion specified in the `rgbModel` member of the VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure.

VkVideoEncodeRgbModelConversionFlagBitsVALVE defines the conversion from the encode input picture's color model to the encode color model.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbModelConversionFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_RGB_IDENTITY_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_IDENTITY_BIT_VALVE = 0x00000002,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_709_BIT_VALVE = 0x00000004,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_601_BIT_VALVE = 0x00000008,
    VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_2020_BIT_VALVE = 0x00000010,
} VkVideoEncodeRgbModelConversionFlagBitsVALVE;
```

- VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_RGB_IDENTITY_BIT_VALVE specifies the color components are not modified by the color model conversion since they are assumed to represent the desired color model for video coding; R'G'B' range compression is applied to the components.
- VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_IDENTITY_BIT_VALVE specifies the color components are not modified by the color model conversion and are assumed to be treated as though in $Y'C_BC_R$ form; video encode R'G'B' range compression and video encode R'G'B' chroma subsampling are also ignored.
- VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_709_BIT_VALVE specifies the color components are transformed from an R'G'B' representation to a $Y'C_BC_R$ representation as described in the "BT.709 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.
- VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_601_BIT_VALVE specifies the color components are transformed from an R'G'B' representation to a $Y'C_BC_R$ representation as described in the "BT.601 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.
- VK_VIDEO_ENCODE_RGB_MODEL_CONVERSION_YCBCR_2020_BIT_VALVE specifies the color components are transformed from an R'G'B' representation to a $Y'C_BC_R$ representation as described in the "BT.2020 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.

NOTE	Video encode R'G'B' model conversion transformations have the inverse definition of sampler $Y'C_BC_R$ model conversion transformations.
NOTE	The video encode R'G'B' model conversion step does not apply any transfer function, only converting from R'G'B' to $Y'C_BC_R$ using the primaries of the specified `rgbModel` color model.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbModelConversionFlagsVALVE;
```

VkVideoEncodeRgbModelConversionFlagsVALVE is a bitmask type for setting a mask of zero or more VkVideoEncodeRgbModelConversionFlagBitsVALVE.

R'G'B' Chroma Subsampling and Quantization

The model-converted values are chroma subsampled and quantized, according to the `chromaSubsampling`, `lumaBitDepth` and `chromaBitDepth` values specified by the bound video session.

The VkVideoEncodeRgbChromaOffsetFlagBitsVALVE enum defines the location of downsampled chroma component samples relative to the luma samples for video encode R'G'B' conversion, and is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef enum VkVideoEncodeRgbChromaOffsetFlagBitsVALVE {
    VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_COSITED_EVEN_BIT_VALVE = 0x00000001,
    VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_MIDPOINT_BIT_VALVE = 0x00000002,
} VkVideoEncodeRgbChromaOffsetFlagBitsVALVE;
```

- VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_COSITED_EVEN_BIT_VALVE specifies that downsampled chroma samples are aligned with luma samples with even coordinates.
- VK_VIDEO_ENCODE_RGB_CHROMA_OFFSET_MIDPOINT_BIT_VALVE specifies that downsampled chroma samples are located half way between each even luma sample and the nearest higher odd luma sample.

The output location of downsampled chroma components is specified by the `xChromaOffset` and `yChromaOffset` values of the VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure:

Chroma subsampling is described in more detail in the Chroma Reconstruction section.

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef VkFlags VkVideoEncodeRgbChromaOffsetFlagsVALVE;
```

VkVideoEncodeRgbChromaOffsetFlagsVALVE is a bitmask type for setting a mask of zero or more VkVideoEncodeRgbChromaOffsetFlagBitsVALVE.

49.20.2. Encoding Pictures with R'G'B' Conversion

A video profile supporting video encode R'G'B' conversion is specified by a `pVideoProfile->videoCodecOperation` specifying an encode operation and including a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure in the `pNext` chain of the VkVideoProfileInfoKHR structure and enabling `performEncodeRgbConversion`.

The `VkVideoEncodeProfileRgbConversionInfoVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeProfileRgbConversionInfoVALVE {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           performEncodeRgbConversion;
} VkVideoEncodeProfileRgbConversionInfoVALVE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- performEncodeRgbConversion is a boolean value indicating whether video encode R'G'B' conversion will be used for the encode operation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeProfileRgbConversionInfoVALVE-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_PROFILE_RGB_CONVERSION_INFO_VALVE

Structure Chaining

Extends the structure

- VkVideoProfileInfoKHR

The VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure **can** be included in the pNext chain of the VkVideoSessionCreateInfoKHR to specify the R'G'B' conversion parameters used by the issued video encode operations of the video session.

The VkVideoEncodeSessionRgbConversionCreateInfoVALVE structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkVideoEncodeSessionRgbConversionCreateInfoVALVE {
    VkStructureType                                 sType;
    const void*                                     pNext;
    VkVideoEncodeRgbModelConversionFlagBitsVALVE    rgbModel;
    VkVideoEncodeRgbRangeCompressionFlagBitsVALVE   rgbRange;
    VkVideoEncodeRgbChromaOffsetFlagBitsVALVE       xChromaOffset;
    VkVideoEncodeRgbChromaOffsetFlagBitsVALVE       yChromaOffset;
} VkVideoEncodeSessionRgbConversionCreateInfoVALVE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- rgbModel is the used R'G'B' model conversion for the R'G'B' conversion.
- rgbRange is the used R'G'B' range compression for the R'G'B' conversion.
- xChromaOffset describes the output location of downsampled chroma components in the x dimension for the R'G'B' conversion.
- yChromaOffset describes the output location of downsampled chroma components in the y dimension for the R'G'B' conversion.

Valid Usage

- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbModel-10930
  `rgbModel` **must** only be a bit set in VkVideoEncodeRgbConversionCapabilitiesVALVE ::`rgbModels` as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbRange-10931
  `rgbRange` **must** only be a bit set in VkVideoEncodeRgbConversionCapabilitiesVALVE ::`rgbRanges` as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-xChromaOffset-10932
  `xChromaOffset` **must** only be a bit set in VkVideoEncodeRgbConversionCapabilitiesVALVE ::`xChromaOffsets` as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-yChromaOffset-10933
  `yChromaOffset` **must** only be a bit set in VkVideoEncodeRgbConversionCapabilitiesVALVE ::`yChromaOffsets` as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR with `VkVideoEncodeRgbConversionCapabilitiesVALVE` in the `pNext` chain of `VkVideoCapabilitiesKHR` with the given `pVideoProfile`

Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_RGB_CONVERSION_CREATE_INFO_VALVE
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbModel-parameter
  `rgbModel` **must** be a valid VkVideoEncodeRgbModelConversionFlagBitsVALVE value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-rgbRange-parameter
  `rgbRange` **must** be a valid VkVideoEncodeRgbRangeCompressionFlagBitsVALVE value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-xChromaOffset-parameter
  `xChromaOffset` **must** be a valid VkVideoEncodeRgbChromaOffsetFlagBitsVALVE value
- VUID-VkVideoEncodeSessionRgbConversionCreateInfoVALVE-yChromaOffset-parameter
  `yChromaOffset` **must** be a valid VkVideoEncodeRgbChromaOffsetFlagBitsVALVE value

Structure Chaining

Extends the structure

- VkVideoSessionCreateInfoKHR

49.21. H.264 Encode Operations

Video encode operations using an H.264 encode profile **can** be used to encode elementary video stream sequences compliant to the ITU-T H.264 Specification.

NOTE	Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video encode operation steps with the codec-specific semantics defined in section 8 of the ITU-T H.264 Specification as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH264SequenceParameterSet` structure corresponding to the active SPS specifying the H.264 sequence parameter set.
  - The `StdVideoH264PictureParameterSet` structure corresponding to the active PPS specifying the H.264 picture parameter set.
  - The `StdVideoEncodeH264PictureInfo` structure specifying the H.264 picture information.
  - The `StdVideoEncodeH264SliceHeader` structures specifying the H.264 slice header parameters for each encoded H.264 slice.
  - The `StdVideoEncodeH264ReferenceInfo` structures specifying the H.264 reference information corresponding to the optional reconstructed picture and any active reference pictures.
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the H.264 Encode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used encode input picture, active reference pictures, and optional reconstructed picture is accessed as defined in the H.264 Encode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the H.264 picture information.

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.264 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete unsuccessfully.

49.21.1. H.264 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.264 encode parameters specified in the following Video Std structures:

- `StdVideoH264SequenceParameterSet`
- `StdVideoH264PictureParameterSet`
- `StdVideoEncodeH264PictureInfo`

- StdVideoEncodeH264SliceHeader
- StdVideoEncodeH264ReferenceInfo

All such H.264 encode parameter overrides **must** fulfill the conditions defined in the Video Encode Parameter Overrides section.

In addition, implementations **must** not override any of the following H.264 encode parameters:

- StdVideoEncodeH264PictureInfo::primary_pic_type
- StdVideoEncodeH264SliceHeader::slice_type

If the videoMaintenance2 feature is enabled, implementations **must** not override any of the following H.264 encode parameters:

- the following parameters specified in StdVideoH264SequenceParameterSet:
  - flags.vui_parameters_present_flag
  - profile_idc
  - level_idc
  - chroma_format_idc
- the following parameters specified in the StdVideoH264SequenceParameterSetVui structure pointed to by StdVideoH264SequenceParameterSet::pSequenceParameterSetVui:
  - flags.aspect_ratio_info_present_flag
  - flags.overscan_info_present_flag
  - flags.overscan_appropriate_flag
  - flags.video_signal_type_present_flag
  - flags.video_full_range_flag
  - flags.color_description_present_flag
  - flags.chroma_loc_info_present_flag
  - flags.timing_info_present_flag
  - flags.fixed_frame_rate_flag
  - aspect_ratio_idc
  - sar_width
  - sar_height
  - video_format
  - colour_primaries
  - transfer_characteristics
  - matrix_coefficients
  - num_units_in_tick
  - time_scale

- chroma_sample_loc_type_top_field
- chroma_sample_loc_type_bottom_field

In case of H.264 encode parameters stored in video session parameters objects, applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.264 parameter sets in the bitstream in order to be able to produce a compliant H.264 video bitstream using the H.264 encode parameters stored in the video session parameters object.

In case of any H.264 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.264 encode parameters.

49.21.2. H.264 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice headers and data of the encoded picture, in the format defined in sections 7.3.3 and 7.3.4, according to the semantics defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively. The number of VCL NAL units written is specified by VkVideoEncodeH264PictureInfoKHR::naluSliceEntryCount.

In addition, if VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu is VK_TRUE for the video encode operation, then an additional prefix NAL unit is written before each VCL NAL unit corresponding to individual slices in the format defined in section 7.3.2.12, according to the semantics defined in section 7.4.2.12 of the ITU-T H.264 Specification, respectively.

49.21.3. H.264 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::pictureAccessGranularity, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of an encode input picture, reference picture, or reconstructed picture accessed by video coding operations using an H.264 encode profile is defined as the set of texels within the coordinate range:

([0,endX), [0,endY))

Where:

- endX equals codedExtent.width rounded up to the nearest integer multiple of pictureAccessGranularity.width and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;
- endY equals codedExtent.height rounded up to the nearest integer multiple of pictureAccessGranularity.height and clamped to the height of the image subresource referred

to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where codedExtent is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video encode operations using an H.264 encode profile, any access to a picture at the coordinates (x,y), as defined by the ITU-T H.264 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (x,y).

Implementations **may** choose not to access some or all texels within particular reference pictures available to a video encode operation (e.g. due to video encode parameter overrides restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

49.21.4. H.264 Frame, Picture, and Slice

H.264 pictures are partitioned into slices, as defined in section 6.3 of the ITU-T H.264 Specification.

For the purposes of this specification, the H.264 slices comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an H.264 encode profile **can** encode slices of different types, as defined in section 7.4.3 of the ITU-T H.264 Specification, by specifying the corresponding enumeration constant value in StdVideoEncodeH264SliceHeader::slice_type in the H.264 slice header parameters from the Video Std enumeration type StdVideoH264SliceType:

- STD_VIDEO_H264_SLICE_TYPE_P indicates that the slice is a *P slice* as defined in section 3.109 of the ITU-T H.264 Specification.
- STD_VIDEO_H264_SLICE_TYPE_B indicates that the slice is a *B slice* as defined in section 3.9 of the ITU-T H.264 Specification.
- STD_VIDEO_H264_SLICE_TYPE_I indicates that the slice is an *I slice* as defined in section 3.66 of the ITU-T H.264 Specification.

Pictures constructed from such slices **can** be of different types, as defined in section 7.4.2.4 of the ITU-T H.264 Specification. Video encode operations using an H.264 encode profile **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in StdVideoEncodeH264PictureInfo::primary_pic_type in the H.264 picture information from the Video Std enumeration type StdVideoH264PictureType:

- STD_VIDEO_H264_PICTURE_TYPE_P indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- STD_VIDEO_H264_PICTURE_TYPE_B indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- STD_VIDEO_H264_PICTURE_TYPE_I indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- STD_VIDEO_H264_PICTURE_TYPE_IDR indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.69 of the ITU-T H.264 Specification. A frame consisting of an

IDR picture is also referred to as an *IDR frame*.

49.21.5. H.264 Coding Blocks

H.264 encode supports a single type of coding block called a *macroblock*, as defined in section 3.84 of the ITU-T H.264 Specification.

An H.264 macroblock is considered *skipped* when the value of `mb_type` for the macroblock equals `P_Skip` or `B_Skip`, as defined in section 7.4.5 of the ITU-T H.264 Specification.

49.21.6. H.264 Encode Profile

A video profile supporting H.264 video encode operations is specified by setting VkVideoProfileInfoKHR::`videoCodecOperation` to VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR and adding a `VkVideoEncodeH264ProfileInfoKHR` structure to the VkVideoProfileInfoKHR::`pNext` chain.

The `VkVideoEncodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264ProfileInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    StdVideoH264ProfileIdc    stdProfileIdc;
} VkVideoEncodeH264ProfileInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH264ProfileIdc` value specifying the H.264 codec profile IDC, where enum constant `STD_VIDEO_H264_PROFILE_IDC_BASELINE` identifies the Constrained Baseline profile as defined in A.2.1.1 of the ITU-T H.264 Specification, and all other values correspond to profiles defined in section A.2 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264ProfileInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PROFILE_INFO_KHR

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

49.21.7. H.264 Encode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an H.264 encode profile, the VkVideoCapabilitiesKHR::pNext chain **must** include a VkVideoEncodeH264CapabilitiesKHR structure that will be filled with the profile-specific capabilities.

The VkVideoEncodeH264CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264CapabilitiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeH264CapabilityFlagsKHR      flags;
    StdVideoH264LevelIdc                     maxLevelIdc;
    uint32_t                                 maxSliceCount;
    uint32_t                                 maxPPictureL0ReferenceCount;
    uint32_t                                 maxBPictureL0ReferenceCount;
    uint32_t                                 maxL1ReferenceCount;
    uint32_t                                 maxTemporalLayerCount;
    VkBool32                                 expectDyadicTemporalLayerPattern;
    int32_t                                  minQp;
    int32_t                                  maxQp;
    VkBool32                                 prefersGopRemainingFrames;
    VkBool32                                 requiresGopRemainingFrames;
    VkVideoEncodeH264StdFlagsKHR             stdSyntaxFlags;
} VkVideoEncodeH264CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkVideoEncodeH264CapabilityFlagBitsKHR indicating supported H.264 encoding capabilities.
- maxLevelIdc is a StdVideoH264LevelIdc value indicating the maximum H.264 level supported by the profile, where enum constant STD_VIDEO_H264_LEVEL_IDC_<major>_<minor> identifies H.264 level <major>.<minor> as defined in section A.3 of the ITU-T H.264 Specification.
- maxSliceCount indicates the maximum number of slices that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slices that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- maxPPictureL0ReferenceCount indicates the maximum number of reference pictures the implementation supports in the reference list L0 for P pictures.

> **NOTE** As implementations **may** override the reference lists, maxPPictureL0ReferenceCount does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if maxPPictureL0ReferenceCount is zero, then the use of P pictures is not allowed.

- maxBPictureL0ReferenceCount indicates the maximum number of reference pictures the

implementation supports in the reference list L0 for B pictures.

- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of B pictures is supported.

> **NOTE** As implementations **may** override the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` do not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxTemporalLayerCount` indicates the maximum number of H.264 temporal layers supported by the implementation.
- `expectDyadicTemporalLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a dyadic temporal layer pattern when encoding multiple temporal layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type remaining in the current group of pictures when beginning a video coding scope.
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type remaining in the current group of pictures when beginning a video coding scope.
- `stdSyntaxFlags` is a bitmask of VkVideoEncodeH264StdFlagBitsKHR indicating capabilities related to H.264 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264CapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

Bits which **may** be set in VkVideoEncodeH264CapabilitiesKHR::`flags`, indicating the H.264 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR = 0x00000100,
  // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000400,
  // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000200,
} VkVideoEncodeH264CapabilityFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the nal_hrd_parameters_present_flag or vcl_hrd_parameters_present_flag members of StdVideoH264SpsVuiFlags are set to 1 in the active SPS.
- VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR specifies that if StdVideoH264PpsFlags::weighted_pred_flag is set to 1 or StdVideoH264PictureParameterSet::weighted_bipred_idc is set to STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT in the active PPS when encoding a P picture or B picture, respectively, then the implementation is able to internally decide syntax for pred_weight_table, as defined in section 7.4.3.2 of the ITU-T H.264 Specification, and the application is not **required** to provide a weight table in the H.264 slice header parameters.
- VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR specifies that each slice in a frame with multiple slices may begin or finish at any offset in a macroblock row. If not supported, all slices in the frame **must** begin at the start of a macroblock row (and hence each slice **must** finish at the end of a macroblock row). When a picture is encoded with intra refresh, encoding non-rectangular slices also requires: support for the VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions capability.
- VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR specifies that when a frame is encoded with multiple slices, the implementation allows encoding each slice with a different StdVideoEncodeH264SliceHeader::slice_type specified in the H.264 slice header parameters. If not supported, all slices of the frame **must** be encoded with the same slice_type which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, then the currently refreshed slice **must** specify the slice_type STD_VIDEO_H264_SLICE_TYPE_I and **can** differ from the slice_type of the other slices regardless of whether VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR is supported.
- VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR specifies support for

using a B frame as L0 reference, as specified in StdVideoEncodeH264ReferenceListsInfo::RefPicList0 in the H.264 picture information.

- VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR specifies support for using a B frame as L1 reference, as specified in StdVideoEncodeH264ReferenceListsInfo::RefPicList1 in the H.264 picture information.
- VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR specifies support for specifying different QP values in the members of VkVideoEncodeH264QpKHR.
- VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR specifies support for specifying different constant QP values for each slice.
- VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR specifies support for generating prefix NAL units by setting VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu to VK_TRUE.
- VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR specifies support for wraparound during the calculation of the QP values of subsequently encoded macroblocks, as defined in equation 7-37 of the ITU-T H.264 Specification. If not supported, equation 7-37 of the ITU-T H.264 Specification is effectively reduced to the following:

  $QP_Y = QP_{Y,PREV} + mb_qp_delta$

  NOTE The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range.

- VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR specifies support for encoding B pictures with intra refresh enabled.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264CapabilityFlagsKHR;
```

VkVideoEncodeH264CapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH264CapabilityFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeH264CapabilitiesKHR::stdSyntaxFlags, indicating the capabilities related to the H.264 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR =
0x00000002,

} VkVideoEncodeH264StdFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264SpsFlags::separate_colour_plane_flag in the SPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264SpsFlags::qpprime_y_zero_transform_bypass_flag in the SPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided values for StdVideoH264SpsFlags::seq_scaling_matrix_present_flag in the SPS and StdVideoH264PpsFlags ::pic_scaling_matrix_present_flag in the PPS when any of those values are 1.
- VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PictureParameterSet::chroma_qp_index_offset in the PPS when that value is non-zero.
- VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PictureParameterSet::second_chroma_qp_index_offset in the PPS when that value is non-zero.
- VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PictureParameterSet::pic_init_qp_minus26 in the PPS when that value is non-zero.

- VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PpsFlags::weighted_pred_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PictureParameterSet::weighted_bipred_idc in the PPS when that value is STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT.
- VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PictureParameterSet::weighted_bipred_idc in the PPS when that value is STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_IMPLICIT.
- VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PpsFlags::transform_8x8_mode_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeaderFlags::direct_spatial_mv_pred_flag in the H.264 slice header parameters when that value is 0.
- VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR specifies whether the implementation supports CAVLC entropy coding, as defined in section 9.2 of the ITU-T H.264 Specification, and thus supports using the application-provided value for StdVideoH264PpsFlags::entropy_coding_mode_flag in the PPS when that value is 0.
- VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR specifies whether the implementation supports CABAC entropy coding, as defined in section 9.3 of the ITU-T H.264 Specification, and thus supports using the application-provided value for StdVideoH264PpsFlags::entropy_coding_mode_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264SpsFlags::direct_8x8_inference_flag in the SPS when that value is 0.
- VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH264PpsFlags::constrained_intra_pred_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc in the H.264 slice header parameters when that value is STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_DISABLED.
- VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc in the H.264 slice header parameters when that value is STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_ENABLED.
- VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc in the H.264 slice header

parameters when that value is STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_PARTIAL.

- VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeader::slice_qp_delta in the H.264 slice header parameters when that value is identical across the slices of the encoded frame.
- VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH264SliceHeader::slice_qp_delta in the H.264 slice header parameters when that value is different across the slices of the encoded frame.

These capability flags provide information to the application about specific H.264 syntax element values that the implementation supports without having to override them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.264 syntax elements.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264StdFlagsKHR;
```

VkVideoEncodeH264StdFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH264StdFlagBitsKHR.

49.21.8. H.264 Encode Quality Level Properties

When calling vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR with pVideoProfile->videoCodecOperation specified as VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the VkVideoEncodeH264QualityLevelPropertiesKHR structure **must** be included in the pNext chain of the VkVideoEncodeQualityLevelPropertiesKHR structure to retrieve additional video encode quality level properties specific to H.264 encoding.

The VkVideoEncodeH264QualityLevelPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QualityLevelPropertiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeH264RateControlFlagsKHR     preferredRateControlFlags;
    uint32_t                                 preferredGopFrameCount;
    uint32_t                                 preferredIdrPeriod;
    uint32_t                                 preferredConsecutiveBFrameCount;
    uint32_t                                 preferredTemporalLayerCount;
    VkVideoEncodeH264QpKHR                   preferredConstantQp;
    uint32_t                                 preferredMaxL0ReferenceCount;
    uint32_t                                 preferredMaxL1ReferenceCount;
    VkBool32                                 preferredStdEntropyCodingModeFlag;
} VkVideoEncodeH264QualityLevelPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of VkVideoEncodeH264RateControlFlagBitsKHR values indicating the preferred flags to use for VkVideoEncodeH264RateControlInfoKHR::`flags`.
- `preferredGopFrameCount` indicates the preferred value to use for VkVideoEncodeH264RateControlInfoKHR::`gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for VkVideoEncodeH264RateControlInfoKHR::`idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for VkVideoEncodeH264RateControlInfoKHR::`consecutiveBFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for VkVideoEncodeH264RateControlInfoKHR::`temporalLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for VkVideoEncodeH264NaluSliceInfoKHR::`constantQp` for each picture type when using rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.
- `preferredStdEntropyCodingModeFlag` indicates the preferred value to use for `entropy_coding_mode_flag` in `StdVideoH264PpsFlags`.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QualityLevelPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUALITY_LEVEL_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkVideoEncodeQualityLevelPropertiesKHR

49.21.9. H.264 Encode Session

Additional parameters can be specified when creating a video session with an H.264 encode profile by including an instance of the VkVideoEncodeH264SessionCreateInfoKHR structure in the `pNext` chain of VkVideoSessionCreateInfoKHR.

The `VkVideoEncodeH264SessionCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionCreateInfoKHR {
    VkStructureType         sType;
    const void*             pNext;
    VkBool32                useMaxLevelIdc;
    StdVideoH264LevelIdc    maxLevelIdc;
} VkVideoEncodeH264SessionCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is VK_FALSE, the implementation ignores the value of `maxLevelIdc` and uses the value of VkVideoEncodeH264CapabilitiesKHR::`maxLevelIdc`, as reported by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value specifying the upper bound on the H.264 level for the video bitstreams produced by the created video session, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_CREATE_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoSessionCreateInfoKHR

49.21.10. H.264 Encode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR **can** contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying

the H.264 level `<major>.<minor>` as defined in section A.3 of the ITU-T H.264 Specification;

- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the ITU-T H.264 Specification;
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index i corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the ITU-T H.264 Specification;
  - `use_default_scaling_matrix_mask` is a bitmask where bit index i corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when i < 6, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the ITU-T H.264 Specification;
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the ITU-T H.264 Specification;
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the ITU-T H.264 Specification;

    > **NOTE** The name of `colour_description_present_flag` was misspelled in the Video Std header.

  - if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `reserved1` is used only for padding purposes and is otherwise ignored;
    - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the ITU-T H.264 Specification;
  - all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the ITU-T H.264 Specification;
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the ITU-T H.264 Specification.

H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;

- if flags.pic_scaling_matrix_present_flag is set, then the StdVideoH264ScalingLists structure pointed to by pScalingLists is interpreted as follows:
  - scaling_list_present_mask is a bitmask where bit index i corresponds to pic_scaling_list_present_flag[i] as defined in section 7.4.2.2 of the ITU-T H.264 Specification;
  - use_default_scaling_matrix_mask is a bitmask where bit index i corresponds to UseDefaultScalingMatrix4x4Flag[i], when i < 6, or corresponds to UseDefaultScalingMatrix8x8Flag[i-6], otherwise, as defined in section 7.3.2.2 of the ITU-T H.264 Specification;
  - ScalingList4x4 and ScalingList8x8 correspond to the identically named syntax elements defined in section 7.3.2.2 of the ITU-T H.264 Specification;
- all other members of StdVideoH264PictureParameterSet are interpreted as defined in section 7.4.2.2 of the ITU-T H.264 Specification.

Implementations **may** override any of these parameters according to the semantics defined in the Video Encode Parameter Overrides section before storing the resulting H.264 parameter sets into the video session parameters object. Applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened and to retrieve the encoded H.264 parameter sets in order to be able to produce a compliant H.264 video bitstream.

Such H.264 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain **must** include a VkVideoEncodeH264SessionParametersCreateInfoKHR structure specifying the capacity and initial contents of the object.

The VkVideoEncodeH264SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersCreateInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        maxStdSPSCount;
    uint32_t                                        maxStdPPSCount;
    const VkVideoEncodeH264SessionParametersAddInfoKHR*    pParametersAddInfo;
} VkVideoEncodeH264SessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- maxStdSPSCount is the maximum number of H.264 SPS entries the created VkVideoSessionParametersKHR **can** contain.
- maxStdPPSCount is the maximum number of H.264 PPS entries the created VkVideoSessionParametersKHR **can** contain.
- pParametersAddInfo is NULL or a pointer to a VkVideoEncodeH264SessionParametersAddInfoKHR structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR
- VUID-VkVideoEncodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
  If pParametersAddInfo is not NULL, pParametersAddInfo **must** be a valid pointer to a valid VkVideoEncodeH264SessionParametersAddInfoKHR structure

Structure Chaining

Extends the structure

- VkVideoSessionParametersCreateInfoKHR

The VkVideoEncodeH264SessionParametersAddInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersAddInfoKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     stdSPSCount;
    const StdVideoH264SequenceParameterSet*      pStdSPSs;
    uint32_t                                     stdPPSCount;
    const StdVideoH264PictureParameterSet*       pStdPPSs;
} VkVideoEncodeH264SessionParametersAddInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stdSPSCount is the number of elements in the pStdSPSs array.
- pStdSPSs is a pointer to an array of StdVideoH264SequenceParameterSet structures describing the H.264 SPS entries to add.
- stdPPSCount is the number of elements in the pStdPPSs array.

- pStdPPSs is a pointer to an array of StdVideoH264PictureParameterSet structures describing the H.264 PPS entries to add.

This structure **can** be specified in the following places:

- In the pParametersAddInfo member of the VkVideoEncodeH264SessionParametersCreateInfoKHR structure specified in the pNext chain of VkVideoSessionParametersCreateInfoKHR used to create a video session parameters object. In this case, if the video codec operation the video session parameters object is created with is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).
- In the pNext chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04837
  The seq_parameter_set_id member of each StdVideoH264SequenceParameterSet structure specified in the elements of pStdSPSs **must** be unique within pStdSPSs
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04838
  The pair constructed from the seq_parameter_set_id and pic_parameter_set_id members of each StdVideoH264PictureParameterSet structure specified in the elements of pStdPPSs **must** be unique within pStdPPSs

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
  If stdSPSCount is not 0, and pStdSPSs is not NULL, pStdSPSs **must** be a valid pointer to an array of stdSPSCount StdVideoH264SequenceParameterSet values
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
  If stdPPSCount is not 0, and pStdPPSs is not NULL, pStdPPSs **must** be a valid pointer to an array of stdPPSCount StdVideoH264PictureParameterSet values

Structure Chaining

Extends the structure

- VkVideoSessionParametersUpdateInfoKHR

The VkVideoEncodeH264SessionParametersGetInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH264SessionParametersGetInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- writeStdSPS indicates whether the encoded H.264 sequence parameter set identified by stdSPSId is requested to be retrieved.
- writeStdPPS indicates whether the encoded H.264 picture parameter set identified by the pair constructed from stdSPSId and stdPPSId is requested to be retrieved.
- stdSPSId specifies the H.264 sequence parameter set ID used to identify the retrieved H.264 sequence and/or picture parameter set(s).
- stdPPSId specifies the H.264 picture parameter set ID used to identify the retrieved H.264 picture parameter set when writeStdPPS is VK_TRUE.

When this structure is specified in the pNext chain of the VkVideoEncodeSessionParametersGetInfoKHR structure passed to vkGetEncodedVideoSessionParametersKHR, the command will write encoded parameter data to the output buffer in the following order:

1. The H.264 sequence parameter set identified by stdSPSId, if writeStdSPS is VK_TRUE.
2. The H.264 picture parameter set identified by the pair constructed from stdSPSId and stdPPSId, if writeStdPPS is VK_TRUE.

Valid Usage

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-writeStdSPS-08279
  At least one of writeStdSPS and writeStdPPS **must** be VK_TRUE

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_GET_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoEncodeSessionParametersGetInfoKHR

The VkVideoEncodeH264SessionParametersFeedbackInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH264SessionParametersFeedbackInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- hasStdSPSOverrides indicates whether any of the parameters of the requested H.264 sequence parameter set, if one was requested via VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdSPS, were overridden by the implementation.
- hasStdPPSOverrides indicates whether any of the parameters of the requested H.264 picture parameter set, if one was requested via VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdPPS, were overridden by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersFeedbackInfoKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_FEEDBACK_INFO_KHR

Structure Chaining

49.21.11. H.264 Encoding Parameters

The VkVideoEncodeH264PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264PictureInfoKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     naluSliceEntryCount;
    const VkVideoEncodeH264NaluSliceInfoKHR*     pNaluSliceEntries;
    const StdVideoEncodeH264PictureInfo*         pStdPictureInfo;
    VkBool32                                     generatePrefixNalu;
} VkVideoEncodeH264PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceEntryCount` is the number of elements in `pNaluSliceEntries`.
- `pNaluSliceEntries` is a pointer to an array of `naluSliceEntryCount` VkVideoEncodeH264NaluSliceInfoKHR structures specifying the parameters of the individual H.264 slices to encode for the input picture.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH264PictureInfo` structure specifying H.264 picture information.
- `generatePrefixNalu` controls whether prefix NALUs are generated before slice NALUs into the target bitstream, as defined in sections 7.3.2.12 and 7.4.2.12 of the ITU-T H.264 Specification.

This structure is specified in the `pNext` chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR to specify the codec-specific picture information for an H.264 encode operation.

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR, the information related to the encode input picture is defined as follows:

- The image subregion used is determined according to the H.264 Encode Picture Data Access section.
- The encode input picture is associated with the H.264 picture information provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.IdrPicFlag` as defined in section 7.4.1 of the ITU-T H.264 Specification;
- `flags.is_reference` as defined in section 3.136 of the ITU-T H.264 Specification;
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;

- `primary_pic_type` as defined in section 7.4.2 of the ITU-T H.264 Specification;
- `PicOrderCnt` as defined in section 8.2 of the ITU-T H.264 Specification;
- `temporal_id` as defined in section G.7.4.1.1 of the ITU-T H.264 Specification;
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264ReferenceListsInfo` structure that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.3.1 of the ITU-T H.264 Specification;
  - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.3 of the ITU-T H.264 Specification;
  - `RefPicList0` and `RefPicList1` as defined in section 8.2.4 of the ITU-T H.264 Specification where each element of these arrays either identifies an active reference picture using its DPB slot index or contains the value `STD_VIDEO_H264_NO_REFERENCE_PICTURE` to indicate "no reference picture";
  - if `refList0ModOpCount` is not zero, then `pRefList0ModOperations` is a pointer to an array of `refList0ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L0 as defined in section 7.4.3.1 of the ITU-T H.264 Specification;
  - if `refList1ModOpCount` is not zero, then `pRefList1ModOperations` is a pointer to an array of `refList1ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L1 as defined in section 7.4.3.1 of the ITU-T H.264 Specification;
  - if `refPicMarkingOpCount` is not zero, then `pRefPicMarkingOperations` is a pointer to an array of `refPicMarkingOpCount` number of `StdVideoEncodeH264RefPicMarkingEntry` structures specifying the reference picture marking parameters as defined in section 7.4.3.3 of the ITU-T H.264 Specification;
- all other members are interpreted as defined in section 7.4.3 of the ITU-T H.264 Specification.

Reference picture setup is controlled by the value of `StdVideoEncodeH264PictureInfo::flags.is_reference`. If it is set and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH264PictureInfo::flags.is_reference` is not set, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Active Parameter Sets

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active SPS* is the SPS identified by the key specified in `StdVideoEncodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the PPS identified by the key specified by the pair constructed from `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo`

::pic_parameter_set_id.

H.264 encoding uses *explicit weighted sample prediction* for a slice, as defined in section 8.4.2.3 of the ITU-T H.264 Specification, if any of the following conditions are true for the active PPS and the pStdSliceHeader member of the corresponding element of pNaluSliceEntries:

- pStdSliceHeader->slice_type is STD_VIDEO_H264_SLICE_TYPE_P and weighted_pred_flag is enabled in the active PPS.
- pStdSliceHeader->slice_type is STD_VIDEO_H264_SLICE_TYPE_B and weighted_bipred_idc in the active PPS equals STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT.

Valid Usage

- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-08301
  naluSliceEntryCount **must** be between 1 and VkVideoEncodeH264CapabilitiesKHR ::maxSliceCount, inclusive, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08304
  If VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR, then generatePrefixNalu **must** be VK_FALSE
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08314
  If VkVideoEncodeH264CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR and the slice corresponding to any element of pNaluSliceEntries uses explicit weighted sample prediction, then VkVideoEncodeH264NaluSliceInfoKHR ::pStdSliceHeader->pWeightTable **must** not be NULL for that element of pNaluSliceEntries

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264PictureInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PICTURE_INFO_KHR
- VUID-VkVideoEncodeH264PictureInfoKHR-pNaluSliceEntries-parameter
  pNaluSliceEntries **must** be a valid pointer to an array of naluSliceEntryCount valid VkVideoEncodeH264NaluSliceInfoKHR structures
- VUID-VkVideoEncodeH264PictureInfoKHR-pStdPictureInfo-parameter
  pStdPictureInfo **must** be a valid pointer to a valid StdVideoEncodeH264PictureInfo value
- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-arraylength
  naluSliceEntryCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkVideoEncodeInfoKHR

The VkVideoEncodeH264NaluSliceInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264NaluSliceInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    int32_t                                 constantQp;
    const StdVideoEncodeH264SliceHeader*    pStdSliceHeader;
} VkVideoEncodeH264NaluSliceInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice if the current rate control mode configured for the video session is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `pStdSliceHeader` is a pointer to a `StdVideoEncodeH264SliceHeader` structure specifying H.264 slice header parameters for the slice.

Std Slice Header Parameters

The members of the `StdVideoEncodeH264SliceHeader` structure pointed to by `pStdSliceHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264WeightTable` that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoEncodeH264WeightTable` are interpreted as defined in section 7.4.3.2 of the ITU-T H.264 Specification;
- all other members are interpreted as defined in section 7.4.3 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264NaluSliceInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_NALU_SLICE_INFO_KHR
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkVideoEncodeH264NaluSliceInfoKHR-pStdSliceHeader-parameter
  `pStdSliceHeader` **must** be a valid pointer to a valid `StdVideoEncodeH264SliceHeader` value

The VkVideoEncodeH264DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoEncodeH264ReferenceInfo*   pStdReferenceInfo;
} VkVideoEncodeH264DpbSlotInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoEncodeH264ReferenceInfo structure specifying H.264 reference information.

This structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an H.264 encode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots, one element is added to the list of active reference pictures used by the video encode operation for each element of VkVideoEncodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the H.264 Encode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoEncodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the H.264 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the H.264 Encode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the H.264 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoEncodeH264ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as "used for long-term reference" as defined in section 8.2.5.1 of the ITU-T H.264 Specification;
- `primary_pic_type` as defined in section 7.4.2 of the ITU-T H.264 Specification;
- `long_term_pic_num` and `long_term_frame_idx` as defined in section 7.4.3 of the ITU-T H.264 Specification;
- `temporal_id` as defined in section G.7.4.1.1 of the ITU-T H.264 Specification;
- all other members are interpreted as defined in section 8.2 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_DPB_SLOT_INFO_KHR
- VUID-VkVideoEncodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.21.12. H.264 Encode Rate Control

Group of Pictures

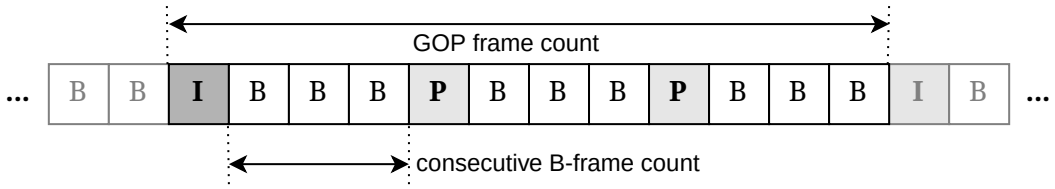
In case of H.264 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.



Text is not SVG - cannot display

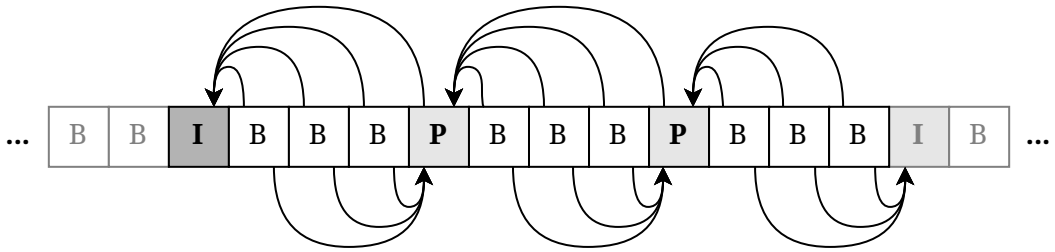
Figure 42. H.264 regular GOP starting with an I frame

When IDR frames are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.264 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

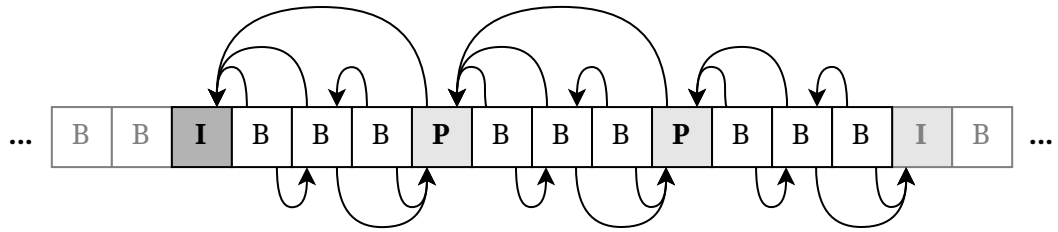


Text is not SVG - cannot display

Figure 43. H.264 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
  1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  2. The algorithm is executed recursively for the following frame sequences:
     - The B frames of the original sequence preceding the frame in the middle, if any.
     - The B frames of the original sequence following the frame in the middle, if any.



Text is not SVG - cannot display

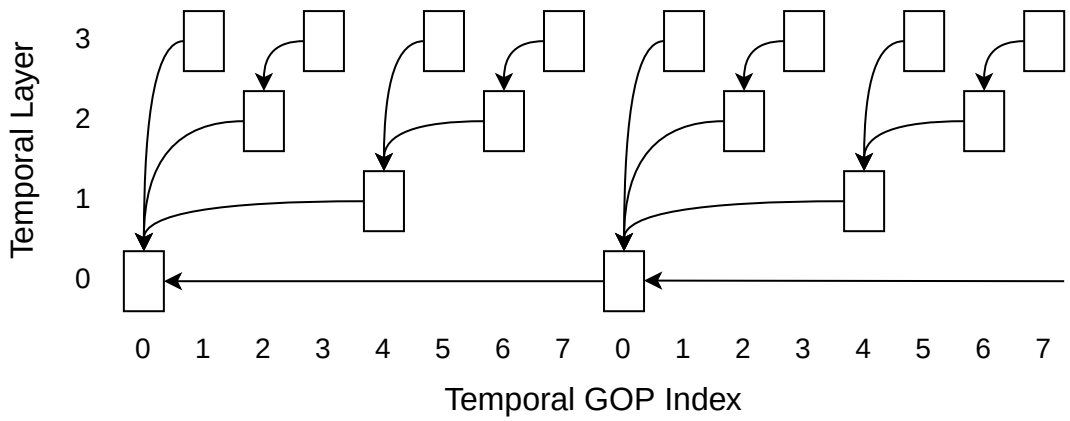
Figure 44. H.264 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled. However, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.264 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the H.264 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1}, where n is the number of temporal layers.
- The i^{th} frame in the temporal GOP uses temporal ID t, if and only if the index of the least significant bit set in i equals n-t-1, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.



Text is not SVG - cannot display

Figure 45. H.264 dyadic temporal layer pattern

NOTE	Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH264RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlInfoKHR {
    VkStructureType                           sType;
    const void*                               pNext;
    VkVideoEncodeH264RateControlFlagsKHR      flags;
    uint32_t                                  gopFrameCount;
    uint32_t                                  idrPeriod;
    uint32_t                                  consecutiveBFrameCount;
    uint32_t                                  temporalLayerCount;
} VkVideoEncodeH264RateControlInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeH264RateControlFlagBitsKHR specifying H.264 rate control flags.
- `gopFrameCount` is the number of frames within a group of pictures (GOP) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two IDR frames (see IDR period). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the GOP.

- `temporalLayerCount` specifies the number of H.264 temporal layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the VkVideoCodingControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, and VkVideoCodingControlInfoKHR::`flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see Video Coding Control).

If `flags` includes VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR, then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08280
  If VkVideoEncodeH264CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR, then `flags` **must** not contain VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08281
  If `flags` contains VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR or VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR, then it **must** also contain VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08282
  If `flags` contains VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR, then it **must** not also contain VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08283
  If `flags` contains VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR, then `gopFrameCount` **must** be greater than `0`
- VUID-VkVideoEncodeH264RateControlInfoKHR-idrPeriod-08284
  If `idrPeriod` is not `0`, then it **must** be greater than or equal to `gopFrameCount`

- VUID-VkVideoEncodeH264RateControlInfoKHR-consecutiveBFrameCount-08285
  If `consecutiveBFrameCount` is not `0`, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_INFO_KHR
- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoEncodeH264RateControlFlagBitsKHR values

Structure Chaining

Extends the structures

- VkVideoBeginCodingInfoKHR
- VkVideoCodingControlInfoKHR

Bits which **can** be set in VkVideoEncodeH264RateControlInfoKHR::`flags`, specifying H.264 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000010,
} VkVideoEncodeH264RateControlFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the ITU-T H.264 Specification.
- VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR specifies that the application intends to use a regular GOP structure according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the VkVideoEncodeH264RateControlInfoKHR structure.
- VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR specifies that the application intends to follow a flat reference pattern in the GOP.
- VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR specifies that the application intends to follow a dyadic reference pattern in the GOP.
- VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR

specifies that the application intends to follow a dyadic temporal layer pattern.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264RateControlFlagsKHR;
```

VkVideoEncodeH264RateControlFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH264RateControlFlagBitsKHR.

Rate Control Layers

The VkVideoEncodeH264RateControlLayerInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlLayerInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkBool32                         useMinQp;
    VkVideoEncodeH264QpKHR           minQp;
    VkBool32                         useMaxQp;
    VkVideoEncodeH264QpKHR           maxQp;
    VkBool32                         useMaxFrameSize;
    VkVideoEncodeH264FrameSizeKHR    maxFrameSize;
} VkVideoEncodeH264RateControlLayerInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useMinQp indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in minQp.
- minQp specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when useMinQp is VK_TRUE.
- useMaxQp indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in maxQp.
- maxQp specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when useMaxQp is VK_TRUE.
- useMaxFrameSize indicates whether the implementation's rate control algorithm **should** use the values specified in maxFrameSize as the upper bounds on the encoded frame size for each picture type.
- maxFrameSize specifies the upper bounds on the encoded frame size, for each picture type, when useMaxFrameSize is VK_TRUE.

When used, the values in minQp and maxQp guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak bitrate values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the VkVideoEncodeRateControlLayerInfoKHR structure.
- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH264RateControlLayerInfoKHR`.

NOTE	In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the Video Encode Rate Control section.

When an instance of this structure is included in the `pNext` chain of a VkVideoEncodeRateControlLayerInfoKHR structure specified in one of the elements of the `pLayers` array member of the VkVideoEncodeRateControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, VkVideoCodingControlInfoKHR::`flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, and the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, it specifies the H.264-specific rate control parameters of the rate control layer corresponding to that element of `pLayers`.

Valid Usage

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08286
  If `useMinQp` is VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between VkVideoEncodeH264CapabilitiesKHR::`minQp` and VkVideoEncodeH264CapabilitiesKHR::`maxQp`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08287
  If `useMaxQp` is VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between VkVideoEncodeH264CapabilitiesKHR::`minQp` and VkVideoEncodeH264CapabilitiesKHR::`maxQp`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08288
  If `useMinQp` is VK_TRUE and VkVideoEncodeH264CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08289
  If `useMaxQp` is VK_TRUE and VkVideoEncodeH264CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08374
  If `useMinQp` and `useMaxQp` are both VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-minQp-parameter
  `minQp` **must** be a valid VkVideoEncodeH264QpKHR structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxQp-parameter
  `maxQp` **must** be a valid VkVideoEncodeH264QpKHR structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxFrameSize-parameter
  `maxFrameSize` **must** be a valid VkVideoEncodeH264FrameSizeKHR structure

Structure Chaining

Extends the structure

- VkVideoEncodeRateControlLayerInfoKHR

The `VkVideoEncodeH264QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH264QpKHR;
```

- `qpI` is the QP to be used for I pictures.
- `qpP` is the QP to be used for P pictures.
- `qpB` is the QP to be used for B pictures.

The `VkVideoEncodeH264FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH264FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for I pictures.
- `framePSize` is the size in bytes to be used for P pictures.
- `frameBSize` is the size in bytes to be used for B pictures.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the group of pictures (GOP).

The VkVideoEncodeH264GopRemainingFrameInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t           gopRemainingI;
    uint32_t           gopRemainingP;
    uint32_t           gopRemainingB;
} VkVideoEncodeH264GopRemainingFrameInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useGopRemainingFrames indicates whether the implementation's rate control algorithm **should** use the values specified in gopRemainingI, gopRemainingP, and gopRemainingB. If useGopRemainingFrames is VK_FALSE, then the values of gopRemainingI, gopRemainingP, and gopRemainingB are ignored.
- gopRemainingI specifies the number of I frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- gopRemainingP specifies the number of P frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- gopRemainingB specifies the number of B frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.

Setting useGopRemainingFrames to VK_TRUE and including this structure in the pNext chain of VkVideoBeginCodingInfoKHR is only mandatory if the VkVideoEncodeH264CapabilitiesKHR ::requiresGopRemainingFrames reported for the used video profile is VK_TRUE. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a regular GOP structure, these values **may** provide additional guidance for the implementation's rate control algorithm.

The VkVideoEncodeH264CapabilitiesKHR::prefersGopRemainingFrames capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264GopRemainingFrameInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_GOP_REMAINING_FRAME_INFO_KHR`

Structure Chaining

Extends the structure

- VkVideoBeginCodingInfoKHR

H.264 QP Delta Maps

Quantization delta maps used with an H.264 encode profile are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the quantization parameters of the encoded picture.

Accordingly, H.264 QP delta maps always have single channel integer formats, as reported in VkVideoFormatPropertiesKHR::`format`.

When the rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, the QP delta values are added to the per slice constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used quantization map texel size.

For all other rate control modes, the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

H.264 Encode Quantization

Performing H.264 encode operations involves the process of assigning QP values to individual H.264 macroblocks. This process depends on the used rate control mode, as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR, then the QP value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the macroblock, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH264QuantizationMapCapabilitiesKHR, then the QP value used for the macroblock becomes undefined.
- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the QP value is initialized from the constant QP value specified for the H.264 slice the macroblock is part of.

- If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the macroblock, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH264QuantizationMapCapabilitiesKHR, then the QP value used for the macroblock becomes undefined.

- If the configured rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the QP value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the macroblock, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH264QuantizationMapCapabilitiesKHR, then the QP value used for the macroblock becomes undefined.
  - If the video encode operation is issued with an emphasis map, the rate control will adjust the QP value based on the emphasis value corresponding to the macroblock, as fetched from the quantization map, according to the following equation:

    $QP_{new} = f(QP_{prev},e)$

    Where QP_{new} is the resulting QP value, QP_{prev} is the previously determined QP value, e is the emphasis value corresponding to the macroblock, and f is an implementation-defined function for which the following implication is true:

    $e_1 < e_2 \Rightarrow f(QP,e_1) \geq f(QP,e_2)$

    > **NOTE** This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

  - If clamping to minimum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding minimum QP value.
  - If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.

- If VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR is not supported, then the determined QP value is clamped in such a way that the `mb_qp_delta` value of the encoded macroblock complies to the modified version of equation 7-37 of the ITU-T H.264 Specification.

  > **NOTE** The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range and only has an observable change in behavior when the video encode operation is issued with a QP delta map.

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the `minQp` and `maxQp` members of VkVideoEncodeH264CapabilitiesKHR.

49.21.13. H.264 Encode Requirements

This section describes the **required** H.264 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::`videoCodecOperations`.

Table 66. Required Video Std Header Versions

Video Std Header Name	Version
`vulkan_video_codec_h264std_encode`	1.0.0

Table 67. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
`flags`	-	min
`minBitstreamBufferOffsetAlignment`	4096	max
`minBitstreamBufferSizeAlignment`	4096	max
`pictureAccessGranularity`	(64,64)	max
`minCodedExtent`	-	max
`maxCodedExtent`	-	min
`maxDpbSlots`	0	min
`maxActiveReferencePictures`	0	min
VkVideoEncodeCapabilitiesKHR		
`flags`	-	min
`rateControlModes`	VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR [4]	min
`maxBitrate`	64000	min
`maxQualityLevels`	1	min
`encodeInputPictureGranularity`	(64,64)	max

Video Capability	Requirement	Requirement Type[1]
supportedEncodeFeedbackFlags	VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR + VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR [6]	min
VkVideoEncodeFeedback2CapabilitiesKHR		
maxPerPartitionFeedbackEntries	-	min
supportedPerPartitionEncodeFeedbackFlags	VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_STATUS_BIT_KHR [7] + VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR [7] + VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR [7]	min
VkVideoEncodeH264CapabilitiesKHR		
flags	-	min
maxLevelIdc	STD_VIDEO_H264_LEVEL_IDC_1_0	min

Video Capability	Requirement	Requirement Type[1]
maxSliceCount	1	min
maxPPictureL0ReferenceCount	0	min
maxBPictureL0ReferenceCount	0	min
maxL1ReferenceCount	0	min
maxTemporalLayerCount	1	min
expectDyadicTemporalLayerPattern	-	implementation-dependent
minQp	-	max
maxQp	-	min
prefersGopRemainingFrames	-	implementation-dependent
requiresGopRemainingFrames	-	implementation-dependent
stdSyntaxFlags	-	min
VkVideoEncodeQuantizationMapCapabilitiesKHR		
maxQuantizationMapExtent	-[2]	min
VkVideoEncodeH264QuantizationMapCapabilitiesKHR		
minQpDelta	-[3]	max
maxQpDelta	-[3]	min
VkVideoEncodeIntraRefreshCapabilitiesKHR		
intraRefreshModes	0	min
maxIntraRefreshCycleDuration	2[5]	min
maxIntraRefreshActiveReferencePictures	1[5]	min
partitionIndependentIntraRefreshRegions	-	implementation-dependent
nonRectangularIntraRefreshRegions	-	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

If VkVideoEncodeCapabilitiesKHR::flags includes

VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

3

If VkVideoEncodeCapabilitiesKHR::`flags` includes VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR, then `maxQpDelta` **must** be greater than `minQpDelta`.

4

If the `videoMaintenance2` feature is supported.

5

If VkVideoEncodeIntraRefreshCapabilitiesKHR::`intraRefreshModes` is not zero.

6

If the `videoEncodeFeedback2` feature is supported.

7

If `maxPerPartitionFeedbackEntries` is greater than zero.

49.22. H.265 Encode Operations

Video encode operations using an H.265 encode profile **can** be used to encode elementary video stream sequences compliant to the ITU-T H.265 Specification.

NOTE	Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video encode operation steps with the codec-specific semantics defined in section 8 of the ITU-T H.265 Specification as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH265VideoParameterSet` structure corresponding to the active VPS specifying the H.265 video parameter set.
  - The `StdVideoH265SequenceParameterSet` structure corresponding to the active SPS specifying the H.265 sequence parameter set.
  - The `StdVideoH265PictureParameterSet` structure corresponding to the active PPS specifying the H.265 picture parameter set.
  - The `StdVideoEncodeH265PictureInfo` structure specifying the H.265 picture information.
  - The `StdVideoEncodeH265SliceSegmentHeader` structures specifying the H.265 slice segment header parameters for each encoded H.265 slice segment.
  - The `StdVideoEncodeH265ReferenceInfo` structures specifying the H.265 reference information

corresponding to the optional reconstructed picture and any active reference pictures.

- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the H.265 Encode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used encode input picture, active reference pictures, and optional reconstructed picture is accessed as defined in the H.265 Encode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the H.265 picture information.

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.265 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete unsuccessfully.

49.22.1. H.265 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.265 encode parameters specified in the following Video Std structures:

- `StdVideoH265VideoParameterSet`
- `StdVideoH265SequenceParameterSet`
- `StdVideoH265PictureParameterSet`
- `StdVideoEncodeH265PictureInfo`
- `StdVideoEncodeH265SliceSegmentHeader`
- `StdVideoEncodeH265ReferenceInfo`

All such H.265 encode parameter overrides **must** fulfill the conditions defined in the Video Encode Parameter Overrides section.

In addition, implementations **must** not override any of the following H.265 encode parameters:

- `StdVideoEncodeH265PictureInfo`::`pic_type`
- `StdVideoEncodeH265SliceSegmentHeader`::`slice_type`

If the `videoMaintenance2` feature is enabled, implementations **must** not override any of the following H.265 encode parameters:

- the following parameters specified in the `StdVideoH265ProfileTierLevel` structure pointed to by `StdVideoH265VideoParameterSet`::`pProfileTierLevel` and `StdVideoH265SequenceParameterSet`::`pProfileTierLevel`:
  - `flags.general_tier_flag`
  - `flags.general_progressive_source_flag`, if set to `1`
  - `flags.general_interlaced_source_flag`, if set to `0`
  - `flags.general_frame_only_constraint_flag`

    - general_profile_idc
    - general_level_idc
- the following parameters specified in StdVideoH265SequenceParameterSet:
    - chroma_format_idc
- the following parameters specified in the StdVideoH265SequenceParameterSetVui structure pointed to by StdVideoH265SequenceParameterSet::pSequenceParameterSetVui:
    - flags.aspect_ratio_info_present_flag
    - flags.overscan_info_present_flag
    - flags.overscan_appropriate_flag
    - flags.video_signal_type_present_flag
    - flags.video_full_range_flag
    - flags.colour_description_present_flag
    - flags.chroma_loc_info_present_flag
    - flags.neutral_chroma_indication_flag
    - flags.field_seq_flag
    - flags.frame_field_info_present_flag
    - flags.default_display_window_flag
    - flags.vui_timing_info_present_flag
    - flags.vui_poc_proportional_to_timing_flag
    - aspect_ratio_idc
    - sar_width
    - sar_height
    - video_format
    - colour_primaries
    - transfer_characteristics
    - matrix_coeffs
    - chroma_sample_loc_type_top_field
    - chroma_sample_loc_type_bottom_field
    - def_disp_win_left_offset
    - def_disp_win_right_offset
    - def_disp_win_top_offset
    - def_disp_win_bottom_offset
    - vui_num_units_in_tick
    - vui_time_scale
    - vui_num_ticks_poc_diff_one_minus1

In case of a video session parameters object created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, the following H.265 SPS and PPS parameters **may** be overridden by the implementation according to the quantization map texel size the video session parameters object was created with:

- StdVideoH265SequenceParameterSet::log2_min_luma_coding_block_size_minus3
- StdVideoH265SequenceParameterSet::log2_diff_max_min_luma_coding_block_size
- StdVideoH265SequenceParameterSet::log2_min_pcm_luma_coding_block_size_minus3
- StdVideoH265SequenceParameterSet::log2_diff_max_min_pcm_luma_coding_block_size
- StdVideoH265PictureParameterSet::diff_cu_qp_delta_depth

This **may** be necessary in order to limit the set of H.265 coding unit and coding tree unit sizes used during picture encoding to those that are supported by the implementation when using the specific quantization map texel size.

In case of H.265 encode parameters stored in video session parameters objects, applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.265 parameter sets in the bitstream in order to be able to produce a compliant H.265 video bitstream using the H.265 encode parameters stored in the video session parameters object.

In case of any H.265 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.265 encode parameters.

49.22.2. H.265 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice segment headers and data of the encoded picture, in the format defined in sections 7.3.6 and 7.3.8, according to the semantics defined in sections 7.4.7 and 7.4.9 of the ITU-T H.265 Specification, respectively. The number of VCL NAL units written is specified by VkVideoEncodeH265PictureInfoKHR::naluSliceSegmentEntryCount.

49.22.3. H.265 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::pictureAccessGranularity, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of an encode input picture, reference picture, or reconstructed picture accessed by video coding operations using an H.265 encode profile is defined as the set of texels within the coordinate range:

([0,endX), [0,endY))

Where:

- endX equals codedExtent.width rounded up to the nearest integer multiple of pictureAccessGranularity.width and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;
- endY equals codedExtent.height rounded up to the nearest integer multiple of pictureAccessGranularity.height and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where codedExtent is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video encode operations using an H.265 encode profile, any access to a picture at the coordinates (x,y), as defined by the ITU-T H.265 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (x,y).

Implementations **may** choose not to access some or all texels within particular reference pictures available to a video encode operation (e.g. due to video encode parameter overrides restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

49.22.4. H.265 Frame, Picture, Slice Segments, and Tiles

H.265 pictures consist of one or more slices, slice segments, and tiles, as defined in section 6.3.1 of the ITU-T H.265 Specification.

For the purposes of this specification, the H.265 slice segments comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an H.265 encode profile **can** encode slice segments of different types, as defined in section 7.4.7.1 of the ITU-T H.265 Specification, by specifying the corresponding enumeration constant value in StdVideoEncodeH265SliceSegmentHeader::slice_type in the H.265 slice segment header parameters from the Video Std enumeration type StdVideoH265SliceType:

- STD_VIDEO_H265_SLICE_TYPE_B indicates that the slice segment is part of a *B slice* as defined in section 3.12 of the ITU-T H.265 Specification.
- STD_VIDEO_H265_SLICE_TYPE_P indicates that the slice segment is part of a *P slice* as defined in section 3.111 of the ITU-T H.265 Specification.
- STD_VIDEO_H265_SLICE_TYPE_I indicates that the slice segment is part of an *I slice* as defined in section 3.74 of the ITU-T H.265 Specification.

Pictures constructed from such slice segments **can** be of different types, as defined in section 7.4.3.5 of the ITU-T H.265 Specification. Video encode operations using an H.265 encode profile **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in StdVideoEncodeH265PictureInfo::pic_type in the H.265 picture information from the Video Std enumeration type StdVideoH265PictureType:

- STD_VIDEO_H265_PICTURE_TYPE_P indicates that the picture is a *P picture*. A frame consisting of a P

picture is also referred to as a *P frame*.

- `STD_VIDEO_H265_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.67 of the ITU-T H.265 Specification. A frame consisting of an IDR picture is also referred to as an *IDR frame*.

49.22.5. H.265 Coding Blocks

H.265 encode supports two types of coding blocks:

- *Coding tree unit*, as defined in section 3.35 of the ITU-T H.265 Specification.
- *Coding unit*, as defined in section 3.36 of the ITU-T H.265 Specification.

An H.265 coding unit is considered *skipped* when the value of `cu_skip_flag` for the coding unit equals 1, as defined in section 7.4.95 of the ITU-T H.265 Specification.

49.22.6. H.265 Encode Profile

A video profile supporting H.265 video encode operations is specified by setting VkVideoProfileInfoKHR::`videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and adding a `VkVideoEncodeH265ProfileInfoKHR` structure to the VkVideoProfileInfoKHR::`pNext` chain.

The `VkVideoEncodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265ProfileInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    StdVideoH265ProfileIdc    stdProfileIdc;
} VkVideoEncodeH265ProfileInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265ProfileInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

49.22.7. H.265 Encode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an H.265 encode profile, the VkVideoCapabilitiesKHR::pNext chain **must** include a VkVideoEncodeH265CapabilitiesKHR structure that will be filled with the profile-specific capabilities.

The VkVideoEncodeH265CapabilitiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265CapabilitiesKHR {
    VkStructureType                                 sType;
    void*                                           pNext;
    VkVideoEncodeH265CapabilityFlagsKHR             flags;
    StdVideoH265LevelIdc                            maxLevelIdc;
    uint32_t                                        maxSliceSegmentCount;
    VkExtent2D                                      maxTiles;
    VkVideoEncodeH265CtbSizeFlagsKHR                ctbSizes;
    VkVideoEncodeH265TransformBlockSizeFlagsKHR     transformBlockSizes;
    uint32_t                                        maxPPictureL0ReferenceCount;
    uint32_t                                        maxBPictureL0ReferenceCount;
    uint32_t                                        maxL1ReferenceCount;
    uint32_t                                        maxSubLayerCount;
    VkBool32
expectDyadicTemporalSubLayerPattern;
    int32_t                                         minQp;
    int32_t                                         maxQp;
    VkBool32                                        prefersGopRemainingFrames;
    VkBool32                                        requiresGopRemainingFrames;
    VkVideoEncodeH265StdFlagsKHR                    stdSyntaxFlags;
} VkVideoEncodeH265CapabilitiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkVideoEncodeH265CapabilityFlagBitsKHR indicating supported H.265 encoding capabilities.
- maxLevelIdc is a StdVideoH265LevelIdc value indicating the maximum H.265 level supported by the profile, where enum constant STD_VIDEO_H265_LEVEL_IDC_<major>_<minor> identifies H.265 level <major>.<minor> as defined in section A.4 of the ITU-T H.265 Specification.
- maxSliceSegmentCount indicates the maximum number of slice segments that **can** be encoded for

a single picture. Further restrictions **may** apply to the number of slice segments that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.

- `maxTiles` indicates the maximum number of H.265 tile columns and rows, as defined in sections 3.175 and 3.176 of the ITU-T H.265 Specification that **can** be encoded for a single picture. Further restrictions **may** apply to the number of H.265 tiles that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `ctbSizes` is a bitmask of VkVideoEncodeH265CtbSizeFlagBitsKHR describing the supported CTB sizes.
- `transformBlockSizes` is a bitmask of VkVideoEncodeH265TransformBlockSizeFlagBitsKHR describing the supported transform block sizes.
- `maxPPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for P pictures.

> **NOTE** As implementations **may** override the reference lists, `maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed. In case of H.265 encoding, pictures **can** be encoded using only forward prediction even if P pictures are not supported, as the ITU-T H.265 Specification supports *generalized P & B frames* (also known as low delay B frames) whereas B frames **can** refer to past frames through both the L0 and L1 reference lists.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for B pictures.
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of B pictures is supported.

> **NOTE** As implementations **may** override the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` do not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxSubLayerCount` indicates the maximum number of H.265 sub-layers supported by the implementation.
- `expectDyadicTemporalSubLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a dyadic temporal sub-layer pattern when encoding multiple temporal sub-layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type remaining in the current group of pictures when beginning a video coding scope.
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires

the application to specify the number of frames of each type remaining in the current group of pictures when beginning a video coding scope.

- `stdSyntaxFlags` is a bitmask of VkVideoEncodeH265StdFlagBitsKHR indicating capabilities related to H.265 syntax elements.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265CapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

Bits which **may** be set in VkVideoEncodeH265CapabilitiesKHR::`flags`, indicating the H.265 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR =
0x00000080,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR =
0x00000100,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR =
0x00000200,
  // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000800,
  // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000400,
} VkVideoEncodeH265CapabilityFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the `nal_hrd_parameters_present_flag`, `vcl_hrd_parameters_present_flag`, or `sub_pic_hrd_params_present_flag` members of `StdVideoH265HrdFlags` are set to `1` in the HRD parameters of the active VPS or active SPS, or if `StdVideoH265SpsVuiFlags` ::`vui_hrd_parameters_present_flag` is set to `1` in the active SPS.

- VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR specifies that if the `weighted_pred_flag` or the `weighted_bipred_flag` member of `StdVideoH265PpsFlags` is set to `1` in the active PPS when encoding a P picture or B picture, respectively, then the implementation is able to internally decide syntax for `pred_weight_table`, as defined in section 7.4.7.3 of the ITU-T H.265 Specification, and the application is not **required** to provide a weight table in the H.265 slice segment header parameters.
- VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR specifies that each slice segment in a frame with a single or multiple tiles per slice may begin or finish at any offset in a CTB row. If not supported, all slice segments in such a frame **must** begin at the start of a CTB row (and hence each slice segment **must** finish at the end of a CTB row). Also indicates that each slice segment in a frame with multiple slices per tile may begin or finish at any offset within the enclosing tile's CTB row. If not supported, slice segments in such a frame **must** begin at the start of the enclosing tile's CTB row (and hence each slice segment **must** finish at the end of the enclosing tile's CTB row). When a picture is encoded with intra refresh, encoding non-rectangular slice segments also requires: support for the VkVideoEncodeIntraRefreshCapabilitiesKHR::`nonRectangularIntraRefreshRegions` capability.
- VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR specifies that when a frame is encoded with multiple slice segments, the implementation allows encoding each slice segment with a different `StdVideoEncodeH265SliceSegmentHeader`::`slice_type` specified in the H.265 slice segment header parameters. If not supported, all slice segments of the frame **must** be encoded with the same `slice_type` which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the intra refresh mode VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR, then the currently refreshed slice segment **must** specify the `slice_type` `STD_VIDEO_H265_SLICE_TYPE_I` and **can** differ from the `slice_type` of the other slice segments regardless of whether VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR is supported.
- VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR specifies support for using a B frame as L0 reference, as specified in `StdVideoEncodeH265ReferenceListsInfo`::`RefPicList0` in the H.265 picture information.
- VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR specifies support for using a B frame as L1 reference, as specified in `StdVideoEncodeH265ReferenceListsInfo`::`RefPicList1` in the H.265 picture information.
- VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR specifies support for specifying different QP values in the members of VkVideoEncodeH265QpKHR.
- VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR specifies support for specifying different constant QP values for each slice segment.
- VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR specifies whether encoding multiple tiles per slice segment, as defined in section 6.3.1 of the ITU-T H.265 Specification, is supported. If this capability flag is not present, then the implementation is only able to encode a single tile for each slice segment.
- VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR specifies whether encoding multiple slice segments per tile, as defined in section 6.3.1 of the ITU-T H.265 Specification, is supported. If this capability flag is not present, then the implementation is only able to encode a single slice segment for each tile.

- VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR indicates support for wraparound during the calculation of the QP values of subsequently encoded coding units, as defined in section 7.4.9.14 of the ITU-T H.265 Specification. If not supported, equation 8-283 of the ITU-T H.265 Specification is effectively reduced to the following:

  $Qp_Y = qP_{Y_PRED} + \texttt{CuQpDeltaVal}$

  > **NOTE** The effect of this is that the maximum QP difference across subsequent coding units is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range.

- VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR specifies support for encoding B pictures with intra refresh enabled.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CapabilityFlagsKHR;
```

VkVideoEncodeH265CapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH265CapabilityFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeH265CapabilitiesKHR::stdSyntaxFlags, indicating the capabilities related to the H.265 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_KHR = 0x00000100,
    VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_KHR = 0x00000200,
    VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_KHR = 0x00000400,
    VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_KHR = 0x00000800,
    VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_KHR =
0x00001000,
    VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_KHR = 0x00002000,
    VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR = 0x00004000,
    VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_KHR =
0x00008000,
    VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_KHR =
0x00010000,
    VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_KHR =
0x00020000,
    VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_KHR = 0x00040000,
    VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR = 0x00080000,
    VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR = 0x00100000,
} VkVideoEncodeH265StdFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265SpsFlags::separate_colour_plane_flag in the SPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265SpsFlags::sample_adaptive_offset_enabled_flag in the SPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for the scaling_list_enabled_flag and sps_scaling_list_data_present_flag members of StdVideoH265SpsFlags in the SPS, and the application-provided value for StdVideoH265PpsFlags ::pps_scaling_list_data_present_flag in the PPS when those values are 1.
- VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265SpsFlags ::pcm_enabled_flag in the SPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265SpsFlags::sps_temporal_mvp_enabled_flag in the SPS when that value is 1.

- VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PictureParameterSet::init_qp_minus26 in the PPS when that value is non-zero.
- VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags ::weighted_pred_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags ::weighted_bipred_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PictureParameterSet::log2_parallel_merge_level_minus2 in the PPS when that value is non-zero.
- VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::sign_data_hiding_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::transform_skip_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::transform_skip_enabled_flag in the PPS when that value is 0.
- VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::pps_slice_chroma_qp_offsets_present_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::transquant_bypass_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::constrained_intra_pred_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::entropy_coding_sync_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::deblocking_filter_override_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoH265PpsFlags::dependent_slice_segments_enabled_flag in the PPS when that value is 1.
- VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH265SliceSegmentHeader::dependent_slice_segment_flag in the H.265 slice segment

header parameters when that value is 1.

- VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta in the H.265 slice segment header parameters when that value is identical across the slice segments of the encoded frame.
- VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta in the H.265 slice segment header parameters when that value is different across the slice segments of the encoded frame.

These capability flags provide information to the application about specific H.265 syntax element values that the implementation supports without having to override them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.265 syntax elements.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265StdFlagsKHR;
```

VkVideoEncodeH265StdFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH265StdFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeH265CapabilitiesKHR::ctbSizes, indicating the CTB sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CtbSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR = 0x00000004,
} VkVideoEncodeH265CtbSizeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR specifies that a CTB size of 16x16 is supported.
- VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR specifies that a CTB size of 32x32 is supported.
- VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR specifies that a CTB size of 64x64 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CtbSizeFlagsKHR;
```

VkVideoEncodeH265CtbSizeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH265CtbSizeFlagBitsKHR.

Implementations **must** support at least one of VkVideoEncodeH265CtbSizeFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeH265CapabilitiesKHR::transformBlockSizes, indicating the transform block sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265TransformBlockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR = 0x00000008,
} VkVideoEncodeH265TransformBlockSizeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR specifies that a transform block size of 4x4 is supported.
- VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR specifies that a transform block size of 8x8 is supported.
- VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR specifies that a transform block size of 16x16 is supported.
- VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR specifies that a transform block size of 32x32 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265TransformBlockSizeFlagsKHR;
```

VkVideoEncodeH265TransformBlockSizeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH265TransformBlockSizeFlagBitsKHR.

Implementations **must** support at least one of VkVideoEncodeH265TransformBlockSizeFlagBitsKHR.

49.22.8. H.265 Encode Quality Level Properties

When calling vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR with pVideoProfile->videoCodecOperation specified as VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, the VkVideoEncodeH265QualityLevelPropertiesKHR structure **must** be included in the pNext chain of the VkVideoEncodeQualityLevelPropertiesKHR structure to retrieve additional video encode quality level properties specific to H.265 encoding.

The VkVideoEncodeH265QualityLevelPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QualityLevelPropertiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeH265RateControlFlagsKHR     preferredRateControlFlags;
    uint32_t                                 preferredGopFrameCount;
    uint32_t                                 preferredIdrPeriod;
    uint32_t                                 preferredConsecutiveBFrameCount;
    uint32_t                                 preferredSubLayerCount;
    VkVideoEncodeH265QpKHR                   preferredConstantQp;
    uint32_t                                 preferredMaxL0ReferenceCount;
    uint32_t                                 preferredMaxL1ReferenceCount;
} VkVideoEncodeH265QualityLevelPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of VkVideoEncodeH265RateControlFlagBitsKHR values indicating the preferred flags to use for VkVideoEncodeH265RateControlInfoKHR::`flags`.
- `preferredGopFrameCount` indicates the preferred value to use for VkVideoEncodeH265RateControlInfoKHR::`gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for VkVideoEncodeH265RateControlInfoKHR::`idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for VkVideoEncodeH265RateControlInfoKHR::`consecutiveBFrameCount`.
- `preferredSubLayerCount` indicates the preferred value to use for VkVideoEncodeH265RateControlInfoKHR::`subLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for VkVideoEncodeH265NaluSliceSegmentInfoKHR::`constantQp` for each picture type when using rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QualityLevelPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUALITY_LEVEL_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkVideoEncodeQualityLevelPropertiesKHR

49.22.9. H.265 Encode Session

Additional parameters can be specified when creating a video session with an H.265 encode profile by including an instance of the VkVideoEncodeH265SessionCreateInfoKHR structure in the pNext chain of VkVideoSessionCreateInfoKHR.

The VkVideoEncodeH265SessionCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionCreateInfoKHR {
    VkStructureType         sType;
    const void*             pNext;
    VkBool32                useMaxLevelIdc;
    StdVideoH265LevelIdc    maxLevelIdc;
} VkVideoEncodeH265SessionCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useMaxLevelIdc indicates whether the value of maxLevelIdc should be used by the implementation. When it is VK_FALSE, the implementation ignores the value of maxLevelIdc and uses the value of VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc, as reported by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile.
- maxLevelIdc is a StdVideoH265LevelIdc value specifying the upper bound on the H.265 level for the video bitstreams produced by the created video session, where enum constant STD_VIDEO_H265_LEVEL_IDC_<major>_<minor> identifies H.265 level <major>.<minor> as defined in section A.4 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoSessionCreateInfoKHR

49.22.10. H.265 Encode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR **can** contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by StdVideoH265VideoParameterSet structures and interpreted as follows:

- reserved1, reserved2, and reserved3 are used only for padding purposes and are otherwise ignored;
- vps_video_parameter_set_id is used as the key of the VPS entry;
- the max_latency_increase_plus1, max_dec_pic_buffering_minus1, and max_num_reorder_pics members of the StdVideoH265DecPicBufMgr structure pointed to by pDecPicBufMgr correspond to vps_max_latency_increase_plus1, vps_max_dec_pic_buffering_minus1, and vps_max_num_reorder_pics, respectively, as defined in section 7.4.3.1 of the ITU-T H.265 Specification;
- the StdVideoH265HrdParameters structure pointed to by pHrdParameters is interpreted as follows:
  - reserved is used only for padding purposes and is otherwise ignored;
  - flags.fixed_pic_rate_general_flag is a bitmask where bit index i corresponds to fixed_pic_rate_general_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
  - flags.fixed_pic_rate_within_cvs_flag is a bitmask where bit index i corresponds to fixed_pic_rate_within_cvs_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
  - flags.low_delay_hrd_flag is a bitmask where bit index i corresponds to low_delay_hrd_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
  - if flags.nal_hrd_parameters_present_flag is set, then pSubLayerHrdParametersNal is a pointer to an array of vps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where vps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265VideoParameterSet structure and each element is interpreted as follows:
    - cbr_flag is a bitmask where bit index i corresponds to cbr_flag[i] as defined in section E.3.3 of the ITU-T H.265 Specification;
    - all other members of the StdVideoH265SubLayerHrdParameters structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
  - if flags.vcl_hrd_parameters_present_flag is set, then pSubLayerHrdParametersVcl is a pointer to an array of vps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where vps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265VideoParameterSet structure and each element is interpreted as follows:

        - `cbr_flag` is a bitmask where bit index i corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
        - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
    - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` is interpreted as follows:
    - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
    - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the ITU-T H.265 Specification;
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` is interpreted as follows:
    - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
    - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the ITU-T H.265 Specification;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
    - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
    - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as

defined in section 7.3.4 of the ITU-T H.265 Specification;

- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - `used_by_curr_pic_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `use_delta_flag` is a bitmask where bit index i corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `used_by_curr_pic_s0_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `used_by_curr_pic_s1_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the ITU-T H.265 Specification;
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
  - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the ITU-T H.265 Specification;
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index i corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
    - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index i corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
    - `flags.low_delay_hrd_flag` is a bitmask where bit index i corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;
    - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1` + 1 number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:

        - `cbr_flag` is a bitmask where bit index i corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
        - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
      - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
        - `cbr_flag` is a bitmask where bit index i corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
        - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
      - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;
    - all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the ITU-T H.265 Specification;
- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure

pointed to by pPredictorPaletteEntries is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;

- all other members of StdVideoH265PictureParameterSet are interpreted as defined in section 7.4.3.3 of the ITU-T H.265 Specification.

Implementations **may** override any of these parameters according to the semantics defined in the Video Encode Parameter Overrides section before storing the resulting H.265 parameter sets into the video session parameters object. Applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened and to retrieve the encoded H.265 parameter sets in order to be able to produce a compliant H.265 video bitstream.

Such H.265 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain **must** include a VkVideoEncodeH265SessionParametersCreateInfoKHR structure specifying the capacity and initial contents of the object.

The VkVideoEncodeH265SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersCreateInfoKHR {
    VkStructureType                                       sType;
    const void*                                           pNext;
    uint32_t                                              maxStdVPSCount;
    uint32_t                                              maxStdSPSCount;
    uint32_t                                              maxStdPPSCount;
    const VkVideoEncodeH265SessionParametersAddInfoKHR*   pParametersAddInfo;
} VkVideoEncodeH265SessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxStdVPSCount is the maximum number of H.265 VPS entries the created VkVideoSessionParametersKHR **can** contain.
- maxStdSPSCount is the maximum number of H.265 SPS entries the created VkVideoSessionParametersKHR **can** contain.
- maxStdPPSCount is the maximum number of H.265 PPS entries the created VkVideoSessionParametersKHR **can** contain.
- pParametersAddInfo is NULL or a pointer to a VkVideoEncodeH265SessionParametersAddInfoKHR

structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
  If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoEncodeH265SessionParametersAddInfoKHR` structure

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoEncodeH265SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersAddInfoKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     stdVPSCount;
    const StdVideoH265VideoParameterSet*        pStdVPSs;
    uint32_t                                     stdSPSCount;
    const StdVideoH265SequenceParameterSet*     pStdSPSs;
    uint32_t                                     stdPPSCount;
    const StdVideoH265PictureParameterSet*      pStdPPSs;
} VkVideoEncodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSs` array.
- `pStdVPSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the

H.265 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the VkVideoEncodeH265SessionParametersCreateInfoKHR structure specified in the `pNext` chain of VkVideoSessionParametersCreateInfoKHR used to create a video session parameters object. In this case, if the video codec operation the video session parameters object is created with is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).
- In the `pNext` chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdVPSs-parameter
  If `stdVPSCount` is not `0`, and `pStdVPSs` is not `NULL`, `pStdVPSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdSPSs-parameter
  If `stdSPSCount` is not `0`, and `pStdSPSs` is not `NULL`, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdPPSs-parameter
  If `stdPPSCount` is not `0`, and `pStdPPSs` is not `NULL`, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

Structure Chaining

Extends the structure

- VkVideoSessionParametersUpdateInfoKHR

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06438
  The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSs` **must** be unique within `pStdVPSs`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06439
  The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of

pStdSPSs **must** be unique within pStdSPSs

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06440
  The triplet constructed from the sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id members of each StdVideoH265PictureParameterSet structure specified in the elements of pStdPPSs **must** be unique within pStdPPSs

The VkVideoEncodeH265SessionParametersGetInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdVPS;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdVPSId;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH265SessionParametersGetInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- writeStdVPS indicates whether the encoded H.265 video parameter set identified by stdVPSId is requested to be retrieved.
- writeStdSPS indicates whether the encoded H.265 sequence parameter set identified by the pair constructed from stdVPSId and stdSPSId is requested to be retrieved.
- writeStdPPS indicates whether the encoded H.265 picture parameter set identified by the triplet constructed from stdVPSId, stdSPSId, and stdPPSId is requested to be retrieved.
- stdVPSId specifies the H.265 video parameter set ID used to identify the retrieved H.265 video, sequence, and/or picture parameter set(s).
- stdSPSId specifies the H.265 sequence parameter set ID used to identify the retrieved H.265 sequence and/or picture parameter set(s) when writeStdSPS and/or writeStdPPS is VK_TRUE.
- stdPPSId specifies the H.265 picture parameter set ID used to identify the retrieved H.265 picture parameter set when writeStdPPS is VK_TRUE.

When this structure is specified in the pNext chain of the VkVideoEncodeSessionParametersGetInfoKHR structure passed to vkGetEncodedVideoSessionParametersKHR, the command will write encoded parameter data to the output buffer in the following order:

1. The H.265 video parameter set identified by stdVPSId, if writeStdVPS is VK_TRUE.
2. The H.265 sequence parameter set identified by the pair constructed from stdVPSId and stdSPSId, if writeStdSPS is VK_TRUE.
3. The H.265 picture parameter set identified by the triplet constructed from stdVPSId, stdSPSId,

and stdPPSId, if writeStdPPS is VK_TRUE.

Valid Usage

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-writeStdVPS-08290
  At least one of writeStdVPS, writeStdSPS, and writeStdPPS **must** be VK_TRUE

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoEncodeSessionParametersGetInfoKHR

The VkVideoEncodeH265SessionParametersFeedbackInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdVPSOverrides;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH265SessionParametersFeedbackInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- hasStdVPSOverrides indicates whether any of the parameters of the requested H.265 video parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdVPS, were overridden by the implementation.
- hasStdSPSOverrides indicates whether any of the parameters of the requested H.265 sequence parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdSPS, were overridden by the implementation.
- hasStdPPSOverrides indicates whether any of the parameters of the requested H.265 picture parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdPPS, were overridden by the implementation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersFeedbackInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_FEEDBACK_INFO_KHR`

49.22.11. H.265 Encoding Parameters

The VkVideoEncodeH265PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265PictureInfoKHR {
    VkStructureType                                   sType;
    const void*                                       pNext;
    uint32_t                                          naluSliceSegmentEntryCount;
    const VkVideoEncodeH265NaluSliceSegmentInfoKHR*   pNaluSliceSegmentEntries;
    const StdVideoEncodeH265PictureInfo*              pStdPictureInfo;
} VkVideoEncodeH265PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceSegmentEntryCount` is the number of elements in `pNaluSliceSegmentEntries`.
- `pNaluSliceSegmentEntries` is a pointer to an array of `naluSliceSegmentEntryCount` VkVideoEncodeH265NaluSliceSegmentInfoKHR structures specifying the parameters of the individual H.265 slice segments to encode for the input picture.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH265PictureInfo` structure specifying H.265 picture information.

This structure is specified in the `pNext` chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR to specify the codec-specific picture information for an H.265 encode operation.

Encode Input Picture Information

When this structure is specified in the `pNext` chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR, the information related to the encode input picture is defined as follows:

- The image subregion used is determined according to the H.265 Encode Picture Data Access

section.

- The encode input picture is associated with the H.265 picture information provided in `pStdPictureInfo`.

Std Picture Information

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.is_reference` as defined in section 3.132 of the ITU-T H.265 Specification;
- `flags.IrapPicFlag` as defined in section 3.73 of the ITU-T H.265 Specification;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as "used for long-term reference" as defined in section 8.3.2 of the ITU-T H.265 Specification;
- `flags.discardable_flag` and `cross_layer_bla_flag` as defined in section F.7.4.7.1 of the ITU-T H.265 Specification;
- `pic_type` as defined in section 7.4.3.5 of the ITU-T H.265 Specification;
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `PicOrderCntVal` as defined in section 8.3.1 of the ITU-T H.265 Specification;
- `TemporalId` as defined in section 7.4.2.2 of the ITU-T H.265 Specification;
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265ReferenceListsInfo` structure that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.7.2 of the ITU-T H.265 Specification;
  - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.7.1 of the ITU-T H.265 Specification;
  - `RefPicList0` and `RefPicList1` as defined in section 8.3.4 of the ITU-T H.265 Specification where each element of these arrays either identifies an active reference picture using its DPB slot index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate "no reference picture";
  - `list_entry_l0` and `list_entry_l1` as defined in section 7.4.7.2 of the ITU-T H.265 Specification;
- if `flags.short_term_ref_pic_set_sps_flag` is set, then the `StdVideoH265ShortTermRefPicSet` structure pointed to by `pShortTermRefPicSet` is interpreted as defined for the elements of the `pShortTermRefPicSet` array specified in H.265 sequence parameter sets.
- if `flags.long_term_ref_pics_present_flag` is set in the active SPS, then the `StdVideoEncodeH265LongTermRefPics` structure pointed to by `pLongTermRefPics` is interpreted as follows:
  - `used_by_curr_pic_lt_flag` is a bitmask where bit index i corresponds to `used_by_curr_pic_lt_flag[i]` as defined in section 7.4.7.1 of the ITU-T H.265 Specification;

    - all other members of StdVideoEncodeH265LongTermRefPics are interpreted as defined in section 7.4.7.1 of the ITU-T H.265 Specification;
- all other members are interpreted as defined in section 7.4.7.1 of the ITU-T H.265 Specification.

Reference picture setup is controlled by the value of StdVideoEncodeH265PictureInfo::flags.is_reference. If it is set and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in pEncodeInfo->pSetupReferenceSlot->slotIndex. If StdVideoEncodeH265PictureInfo::flags.is_reference is not set, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Active Parameter Sets

The members of the StdVideoEncodeH265PictureInfo structure pointed to by pStdPictureInfo are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active VPS* is the VPS identified by the key specified in StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id.
- The *active SPS* is the SPS identified by the key specified by the pair constructed from StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id and StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id.
- The *active PPS* is the PPS identified by the key specified by the triplet constructed from StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id, StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id, and StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id.

H.265 encoding uses *explicit weighted sample prediction* for a slice segment, as defined in section 8.5.3.3.4 of the ITU-T H.265 Specification, if any of the following conditions are true for the active PPS and the pStdSliceSegmentHeader member of the corresponding element of pNaluSliceSegmentEntries:

- pStdSliceSegmentHeader->slice_type is STD_VIDEO_H265_SLICE_TYPE_P and weighted_pred_flag is enabled in the active PPS.
- pStdSliceSegmentHeader->slice_type is STD_VIDEO_H265_SLICE_TYPE_B and weighted_bipred_flag is enabled in the active PPS.

The number of H.265 tiles, as defined in section 3.174 of the ITU-T H.265 Specification, is derived from the num_tile_columns_minus1 and num_tile_rows_minus1 members of the active PPS as follows:

(num_tile_columns_minus1 + 1) × (num_tile_rows_minus1 + 1)

Valid Usage

- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-08306
naluSliceSegmentEntryCount **must** be between 1 and VkVideoEncodeH265CapabilitiesKHR::maxSliceSegmentCount, inclusive, as returned by

vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08323
  If VkVideoEncodeH265CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR, then naluSliceSegmentEntryCount **must** be greater than or equal to the number of H.265 tiles in the picture
- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08324
  If VkVideoEncodeH265CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR, then naluSliceSegmentEntryCount **must** be less than or equal to the number of H.265 tiles in the picture
- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08316
  If VkVideoEncodeH265CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR and the slice segment corresponding to any element of pNaluSliceSegmentEntries uses explicit weighted sample prediction, then VkVideoEncodeH265NaluSliceSegmentInfoKHR::pStdSliceSegmentHeader->pWeightTable **must** not be NULL for that element of pNaluSliceSegmentEntries

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265PictureInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PICTURE_INFO_KHR
- VUID-VkVideoEncodeH265PictureInfoKHR-pNaluSliceSegmentEntries-parameter
  pNaluSliceSegmentEntries **must** be a valid pointer to an array of naluSliceSegmentEntryCount valid VkVideoEncodeH265NaluSliceSegmentInfoKHR structures
- VUID-VkVideoEncodeH265PictureInfoKHR-pStdPictureInfo-parameter
  pStdPictureInfo **must** be a valid pointer to a valid StdVideoEncodeH265PictureInfo value
- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-arraylength
  naluSliceSegmentEntryCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkVideoEncodeInfoKHR

The VkVideoEncodeH265NaluSliceSegmentInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265NaluSliceSegmentInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    int32_t                                         constantQp;
    const StdVideoEncodeH265SliceSegmentHeader*     pStdSliceSegmentHeader;
} VkVideoEncodeH265NaluSliceSegmentInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice segment if the current rate control mode configured for the video session is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `pStdSliceSegmentHeader` is a pointer to a `StdVideoEncodeH265SliceSegmentHeader` structure specifying H.265 slice segment header parameters for the slice segment.

Std Slice Segment Header Parameters

The members of the `StdVideoEncodeH265SliceSegmentHeader` structure pointed to by `pStdSliceSegmentHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265WeightTable` that is interpreted as follows:
  - `flags.luma_weight_l0_flag`, `flags.chroma_weight_l0_flag`, `flags.luma_weight_l1_flag`, and `flags.chroma_weight_l1_flag` are bitmasks where bit index i corresponds to `luma_weight_l0_flag[i]`, `chroma_weight_l0_flag[i]`, `luma_weight_l1_flag[i]`, and `chroma_weight_l1_flag[i]`, respectively, as defined in section 7.4.7.3 of the ITU-T H.265 Specification;
  - all other members of `StdVideoEncodeH265WeightTable` are interpreted as defined in section 7.4.7.3 of the ITU-T H.265 Specification;
- all other members are interpreted as defined in section 7.4.7.1 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_KHR`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pStdSliceSegmentHeader-parameter
  `pStdSliceSegmentHeader` **must** be a valid pointer to a valid `StdVideoEncodeH265SliceSegmentHeader` value

The VkVideoEncodeH265DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoEncodeH265ReferenceInfo*   pStdReferenceInfo;
} VkVideoEncodeH265DpbSlotInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoEncodeH265ReferenceInfo structure specifying H.265 reference information.

This structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an H.265 encode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots, one element is added to the list of active reference pictures used by the video encode operation for each element of VkVideoEncodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the H.265 Encode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoEncodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the H.265 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the H.265 Encode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the H.265 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoEncodeH265ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as "used for long-term reference" as defined in section 8.3.2 of the ITU-T H.265 Specification;
- `flags.unused_for_reference` is used to indicate whether the picture is marked as "unused for reference" as defined in section 8.3.2 of the ITU-T H.265 Specification;
- `pic_type` as defined in section 7.4.3.5 of the ITU-T H.265 Specification;
- `PicOrderCntVal` as defined in section 8.3.1 of the ITU-T H.265 Specification;
- `TemporalId` as defined in section 7.4.2.2 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_KHR
- VUID-VkVideoEncodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH265ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.22.12. H.265 Encode Rate Control

Group of Pictures

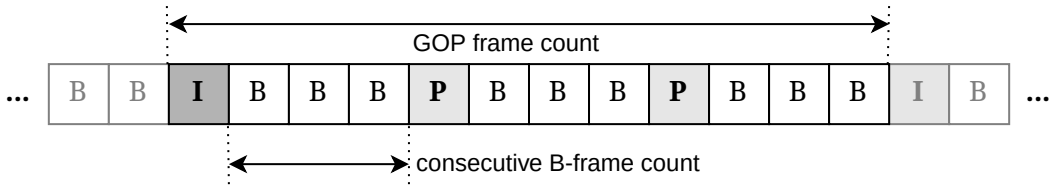
In case of H.265 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.



Text is not SVG - cannot display

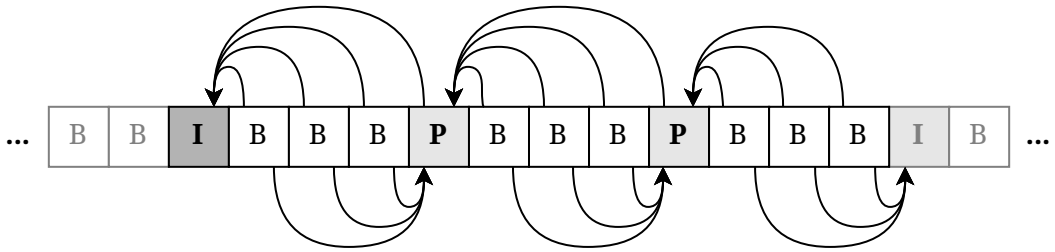
Figure 46. H.265 regular GOP starting with an I frame

When IDR frames are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.265 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

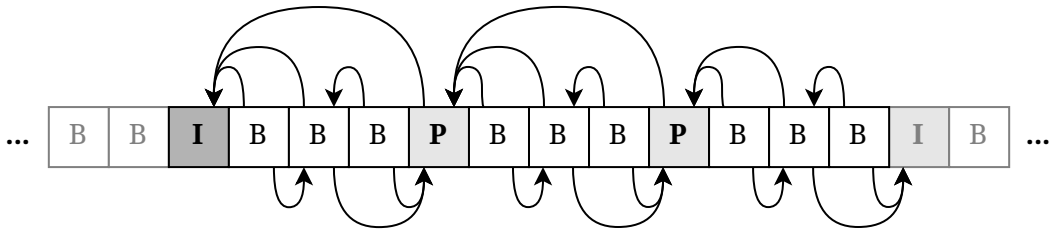


Text is not SVG - cannot display

Figure 47. H.265 flat reference pattern

Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
  1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  2. The algorithm is executed recursively for the following frame sequences:
     - The B frames of the original sequence preceding the frame in the middle, if any.
     - The B frames of the original sequence following the frame in the middle, if any.



Text is not SVG - cannot display

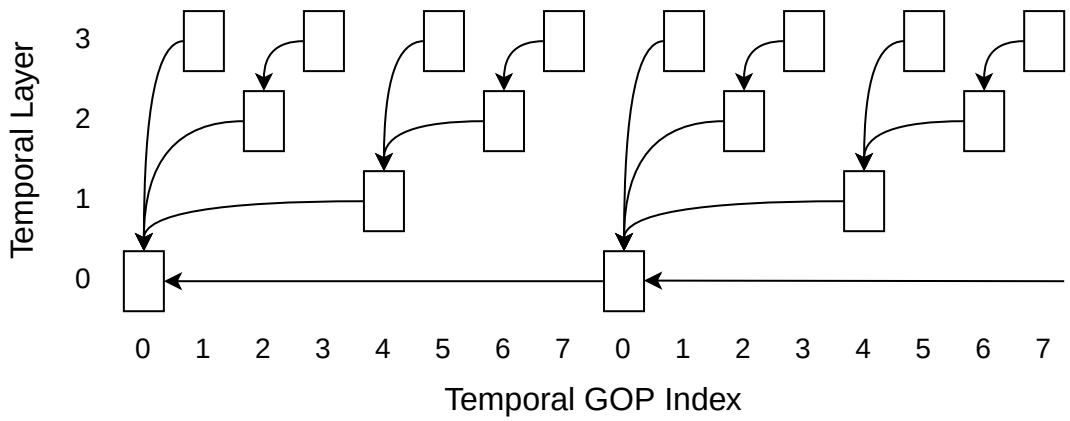
Figure 48. H.265 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled. However, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.265 encode session is used to encode multiple temporal sub-layers, it is also common practice to follow a regular pattern for the H.265 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Sub-Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1}, where n is the number of temporal sub-layers.
- The i^{th} frame in the temporal GOP uses temporal ID t, if and only if the index of the least significant bit set in i equals n-t-1, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.



Text is not SVG - cannot display

Figure 49. H.265 dyadic temporal sub-layer pattern

NOTE	Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH265RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlInfoKHR {
    VkStructureType                           sType;
    const void*                               pNext;
    VkVideoEncodeH265RateControlFlagsKHR      flags;
    uint32_t                                  gopFrameCount;
    uint32_t                                  idrPeriod;
    uint32_t                                  consecutiveBFrameCount;
    uint32_t                                  subLayerCount;
} VkVideoEncodeH265RateControlInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeH265RateControlFlagBitsKHR specifying H.265 rate control flags.
- `gopFrameCount` is the number of frames within a group of pictures (GOP) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two IDR frames (see IDR period). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the GOP.

- `subLayerCount` specifies the number of H.265 sub-layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the VkVideoCodingControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, and VkVideoCodingControlInfoKHR::`flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see Video Coding Control).

If `flags` includes VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR, then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

Valid Usage

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08291
  If VkVideoEncodeH265CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR, then `flags` **must** not contain VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08292
  If `flags` contains VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR or VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR, then it **must** also contain VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08293
  If `flags` contains VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR, then it **must** not also contain VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08294
  If `flags` contains VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR, then `gopFrameCount` **must** be greater than `0`
- VUID-VkVideoEncodeH265RateControlInfoKHR-idrPeriod-08295
  If `idrPeriod` is not `0`, then it **must** be greater than or equal to `gopFrameCount`

- VUID-VkVideoEncodeH265RateControlInfoKHR-consecutiveBFrameCount-08296
  If `consecutiveBFrameCount` is not `0`, then it **must** be less than `gopFrameCount`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_KHR
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoEncodeH265RateControlFlagBitsKHR values

Structure Chaining

Extends the structures

- VkVideoBeginCodingInfoKHR
- VkVideoCodingControlInfoKHR

Bits which **can** be set in VkVideoEncodeH265RateControlInfoKHR::`flags`, specifying H.265 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000010,
} VkVideoEncodeH265RateControlFlagBitsKHR;
```

- VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the ITU-T H.265 Specification.
- VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR specifies that the application intends to use a regular GOP structure according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the VkVideoEncodeH265RateControlInfoKHR structure.
- VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR specifies that the application intends to follow a flat reference pattern in the GOP.
- VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR specifies that the application intends to follow a dyadic reference pattern in the GOP.
- VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_K

HR specifies that the application intends to follow a dyadic temporal sub-layer pattern.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265RateControlFlagsKHR;
```

VkVideoEncodeH265RateControlFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeH265RateControlFlagBitsKHR.

Rate Control Layers

The VkVideoEncodeH265RateControlLayerInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlLayerInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkBool32                         useMinQp;
    VkVideoEncodeH265QpKHR           minQp;
    VkBool32                         useMaxQp;
    VkVideoEncodeH265QpKHR           maxQp;
    VkBool32                         useMaxFrameSize;
    VkVideoEncodeH265FrameSizeKHR    maxFrameSize;
} VkVideoEncodeH265RateControlLayerInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useMinQp indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in minQp.
- minQp specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when useMinQp is VK_TRUE.
- useMaxQp indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in maxQp.
- maxQp specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when useMaxQp is VK_TRUE.
- useMaxFrameSize indicates whether the implementation's rate control algorithm **should** use the values specified in maxFrameSize as the upper bounds on the encoded frame size for each picture type.
- maxFrameSize specifies the upper bounds on the encoded frame size, for each picture type, when useMaxFrameSize is VK_TRUE.

When used, the values in minQp and maxQp guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak bitrate values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the VkVideoEncodeRateControlLayerInfoKHR structure.
- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH265RateControlLayerInfoKHR`.

NOTE	In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the Video Encode Rate Control section.

When an instance of this structure is included in the `pNext` chain of a VkVideoEncodeRateControlLayerInfoKHR structure specified in one of the elements of the `pLayers` array member of the VkVideoEncodeRateControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, VkVideoCodingControlInfoKHR::`flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, and the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, it specifies the H.265-specific rate control parameters of the rate control layer corresponding to that element of `pLayers`.

Valid Usage

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08297
  If `useMinQp` is VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between VkVideoEncodeH265CapabilitiesKHR::`minQp` and VkVideoEncodeH265CapabilitiesKHR::`maxQp`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08298
  If `useMaxQp` is VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between VkVideoEncodeH265CapabilitiesKHR::`minQp` and VkVideoEncodeH265CapabilitiesKHR::`maxQp`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08299
  If `useMinQp` is VK_TRUE and VkVideoEncodeH265CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08300
  If `useMaxQp` is VK_TRUE and VkVideoEncodeH265CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08375
  If `useMinQp` and `useMaxQp` are both VK_TRUE, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-minQp-parameter
  `minQp` **must** be a valid VkVideoEncodeH265QpKHR structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxQp-parameter
  `maxQp` **must** be a valid VkVideoEncodeH265QpKHR structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxFrameSize-parameter
  `maxFrameSize` **must** be a valid VkVideoEncodeH265FrameSizeKHR structure

Structure Chaining

Extends the structure

- VkVideoEncodeRateControlLayerInfoKHR

The `VkVideoEncodeH265QpKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH265QpKHR;
```

- `qpI` is the QP to be used for I pictures.
- `qpP` is the QP to be used for P pictures.
- `qpB` is the QP to be used for B pictures.

The `VkVideoEncodeH265FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH265FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for I frames.
- `framePSize` is the size in bytes to be used for P frames.
- `frameBSize` is the size in bytes to be used for B frames.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the group of pictures (GOP).

The VkVideoEncodeH265GopRemainingFrameInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t           gopRemainingI;
    uint32_t           gopRemainingP;
    uint32_t           gopRemainingB;
} VkVideoEncodeH265GopRemainingFrameInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useGopRemainingFrames indicates whether the implementation's rate control algorithm **should** use the values specified in gopRemainingI, gopRemainingP, and gopRemainingB. If useGopRemainingFrames is VK_FALSE, then the values of gopRemainingI, gopRemainingP, and gopRemainingB are ignored.
- gopRemainingI specifies the number of I frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- gopRemainingP specifies the number of P frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- gopRemainingB specifies the number of B frames the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.

Setting useGopRemainingFrames to VK_TRUE and including this structure in the pNext chain of VkVideoBeginCodingInfoKHR is only mandatory if the VkVideoEncodeH265CapabilitiesKHR ::requiresGopRemainingFrames reported for the used video profile is VK_TRUE. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a regular GOP structure, these values **may** provide additional guidance for the implementation's rate control algorithm.

The VkVideoEncodeH265CapabilitiesKHR::prefersGopRemainingFrames capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265GopRemainingFrameInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_KHR`

Structure Chaining

Extends the structure

- VkVideoBeginCodingInfoKHR

H.265 QP Delta Maps

Quantization delta maps used with an H.265 encode profile are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the quantization parameters of the encoded picture.

Accordingly, H.265 QP delta maps always have single channel integer formats, as reported in VkVideoFormatPropertiesKHR::`format`.

When the rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, the QP delta values are added to the per slice segment constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used quantization map texel size.

For all other rate control modes, the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

H.265 Encode Quantization

Performing H.265 encode operations involves the process of assigning QP values to individual H.265 coding units. This process depends on the used rate control mode, as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR, then the QP value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the coding unit, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH265QuantizationMapCapabilitiesKHR, then the QP value used for the coding unit becomes undefined.
- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the QP value is initialized from the constant QP value specified for the H.265 slice segment the coding unit is

part of.

  - If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the coding unit, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH265QuantizationMapCapabilitiesKHR, then the QP value used for the coding unit becomes undefined.

- If the configured rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the QP value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the QP delta value corresponding to the coding unit, as fetched from the quantization map, is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of VkVideoEncodeH265QuantizationMapCapabilitiesKHR, then the QP value used for the coding unit becomes undefined.
  - If the video encode operation is issued with an emphasis map, the rate control will adjust the QP value based on the emphasis value corresponding to the coding unit, as fetched from the quantization map, according to the following equation:

    $QP_{new} = f(QP_{prev},e)$

    Where QP_{new} is the resulting QP value, QP_{prev} is the previously determined QP value, e is the emphasis value corresponding to the coding unit, and f is an implementation-defined function for which the following implication is true:

    $e_1 < e_2 \Rightarrow f(QP,e_1) \geq f(QP,e_2)$

    > **NOTE** This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

  - If clamping to minimum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding minimum QP value.
  - If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.

- If VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR is not supported, then the determined QP value is clamped in such a way that the `CuQpDeltaVal` value of the encoded coding unit complies to the modified version of equation 8-283 of the ITU-T H.265 Specification.

  > **NOTE** The effect of this is that the maximum QP difference across subsequent coding units is limited to the $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$ range and only has an observable change in behavior when the video encode operation is

issued with a QP delta map.

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the `minQp` and `maxQp` members of VkVideoEncodeH265CapabilitiesKHR.

49.22.13. H.265 Encode Requirements

This section describes the **required** H.265 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::`videoCodecOperations`.

Table 68. Required Video Std Header Versions

Video Std Header Name	Version
`vulkan_video_codec_h265std_encode`	1.0.0

Table 69. Required Video Capabilities

Video Capability	Requirement	Requirement Type[1]
VkVideoCapabilitiesKHR		
`flags`	-	min
`minBitstreamBufferOffsetAlignment`	4096	max
`minBitstreamBufferSizeAlignment`	4096	max
`pictureAccessGranularity`	(64,64)	max
`minCodedExtent`	-	max
`maxCodedExtent`	-	min
`maxDpbSlots`	0	min
`maxActiveReferencePictures`	0	min
VkVideoEncodeCapabilitiesKHR		
`flags`	-	min
`rateControlModes`	VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR [4]	min
`maxBitrate`	128000	min
`maxQualityLevels`	1	min
`encodeInputPictureGranularity`	(64,64)	max

Video Capability	Requirement	Requirement Type[1]
supportedEncodeFeedbackFlags	VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR + VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR [6] + VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR [6]	min
VkVideoEncodeFeedback2CapabilitiesKHR		
maxPerPartitionFeedbackEntries	-	min
supportedPerPartitionEncodeFeedbackFlags	VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_STATUS_BIT_KHR [7] + VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR [7] + VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR [7]	min
VkVideoEncodeH265CapabilitiesKHR		
flags	-	min
maxLevelIdc	STD_VIDEO_H265_LEVEL_IDC_1_0	min

Video Capability	Requirement	Requirement Type[1]
maxSliceSegmentCount	1	min
maxTiles	(1,1)	min
ctbSizes	at least one bit set	implementation-dependent
transformBlockSizes	at least one bit set	implementation-dependent
maxPPictureL0ReferenceCount	0	min
maxBPictureL0ReferenceCount	0	min
maxL1ReferenceCount	0	min
maxSubLayerCount	1	min
expectDyadicTemporalSubLayerPattern	-	implementation-dependent
minQp	-	max
maxQp	-	min
prefersGopRemainingFrames	-	implementation-dependent
requiresGopRemainingFrames	-	implementation-dependent
stdSyntaxFlags	-	min
VkVideoEncodeQuantizationMapCapabilitiesKHR		
maxQuantizationMapExtent	-[2]	min
VkVideoEncodeH265QuantizationMapCapabilitiesKHR		
minQpDelta	-[3]	max
maxQpDelta	-[3]	min
VkVideoEncodeIntraRefreshCapabilitiesKHR		
intraRefreshModes	0	min
maxIntraRefreshCycleDuration	2[5]	min
maxIntraRefreshActiveReferencePictures	1[5]	min
partitionIndependentIntraRefreshRegions	-	implementation-dependent
nonRectangularIntraRefreshRegions	-	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all

implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

If VkVideoEncodeCapabilitiesKHR::`flags` includes VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

3

If VkVideoEncodeCapabilitiesKHR::`flags` includes VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR, then `maxQpDelta` **must** be greater than `minQpDelta`.

4

If the `videoMaintenance2` feature is supported.

5

If VkVideoEncodeIntraRefreshCapabilitiesKHR::`intraRefreshModes` is not zero.

6

If the `videoEncodeFeedback2` feature is supported.

7

If `maxPerPartitionFeedbackEntries` is greater than zero.

49.23. AV1 Encode Operations

Video encode operations using an AV1 encode profile **can** be used to encode elementary video stream sequences compliant with the AV1 Specification.

> **NOTE** Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video encode operation steps with the codec-specific semantics defined in section 7 of the AV1 Specification:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoAV1SequenceHeader` structure, the optional `StdVideoEncodeAV1DecoderModelInfo` structure, and the optional array of `StdVideoEncodeAV1OperatingPointInfo` structures stored in the bound video session parameters object specifying the active sequence header.
  - The `StdVideoEncodeAV1PictureInfo` structure specifying the AV1 picture information.
  - The `StdVideoEncodeAV1ReferenceInfo` structures specifying the AV1 reference information corresponding to the optional reconstructed picture and any active reference pictures.

    - The encoded bitstream data is written to the destination video bitstream buffer range as defined in the AV1 Encode Bitstream Data Access section.
    - Picture data in the video picture resources corresponding to the used encode input picture, active reference pictures, and optional reconstructed picture is accessed as defined in the AV1 Encode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the AV1 picture information.

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the AV1 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete unsuccessfully.

49.23.1. AV1 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the AV1 encode parameters specified in the following Video Std structures:

- `StdVideoAV1SequenceHeader`
- `StdVideoEncodeAV1DecoderModelInfo`
- `StdVideoEncodeAV1OperatingPointInfo`
- `StdVideoEncodeAV1PictureInfo`
- `StdVideoEncodeAV1ReferenceInfo`

All such AV1 encode parameter overrides **must** fulfill the conditions defined in the Video Encode Parameter Overrides section.

In addition, implementations **must** not override any of the following AV1 encode parameters:

- the following parameters specified in `StdVideoAV1SequenceHeader`:
    - `flags.still_picture`
    - `flags.enable_order_hint`
    - `flags.frame_id_numbers_present_flag`
    - `flags.film_grain_params_present`
    - `flags.timing_info_present_flag`
    - `flags.initial_display_delay_present_flag`
    - `delta_frame_id_length_minus_2`
    - `additional_frame_id_length_minus_1`
    - `order_hint_bits_minus_1`
- the following parameters specified in the `StdVideoAV1ColorConfig` structure pointed to by `StdVideoAV1SequenceHeader`::`pColorConfig`:
    - `flags.mono_chrome`

    - flags.color_range
    - BitDepth
    - subsampling_x
    - subsampling_y
    - color_primaries
    - transfer_characteristics
    - matrix_coefficients
    - chroma_sample_position
- the following parameters specified in the StdVideoAV1TimingInfo structure pointed to by StdVideoAV1SequenceHeader::pTimingInfo:
    - flags.equal_picture_interval
    - num_units_in_display_tick
    - time_scale
    - num_ticks_per_picture_minus_1
- the parameters specified in StdVideoEncodeAV1DecoderModelInfo
- the parameters specified in StdVideoEncodeAV1OperatingPointInfo
- the following parameters specified in StdVideoEncodeAV1PictureInfo:
    - flags.show_frame
    - flags.showable_frame
    - frame_type
    - frame_presentation_time
    - current_frame_id
    - order_hint
    - refresh_frame_flags
    - render_width_minus_1
    - render_height_minus_1
    - ref_order_hint
    - ref_frame_idx
    - delta_frame_id_minus_1
- the following parameters specified in the StdVideoEncodeAV1ExtensionHeader structure pointed to by StdVideoEncodeAV1PictureInfo::pExtensionHeader when VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader is set to VK_TRUE:
    - temporal_id
    - spatial_id

If VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly is set to VK_TRUE for a video encode

operation, the implementation will not override StdVideoEncodeAV1PictureInfo::primary_ref_frame.

NOTE

Implementations supporting the VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR AV1 syntax element capability reported in VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags also guarantee the use of the application-specified value for StdVideoEncodeAV1PictureInfo::primary_ref_frame. While support for VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR guarantees that the implementation will not override the application-specified primary_ref_frame, it does not mandate the implementation to use the reference picture indicated by primary_ref_frame for sample prediction as implementations can always decide to use only a subset of the application-specified reference pictures for sample prediction. This means that implementations supporting VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR may end up using the reference picture indicated by primary_ref_frame only for CDF data reference even if the application did not set VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly to VK_TRUE.

If VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment is not equal to {8,8} for the used video profile, implementations will override the coded picture's resolution and parameters related to the width and height in the following manner:

- Let w and h be the codedExtent.width and codedExtent.height of the VkVideoPictureResourceInfoKHR structure corresponding to the encode input picture, rounded up to the nearest integer multiple of 8.
- Let aW and aH be w and h rounded up to the nearest integer multiple of codedPictureAlignment.width and codedPictureAlignment.height respectively.
- If w equals aW, no override will occur. Otherwise the coded width will be aW.
- If h equals aH, no override will occur. Otherwise the coded height will be aH.

NOTE

The AV1 specification codes all resolutions to an 8x8 alignment, but supports unaligned resolutions through implicit cropping. Thus, if the original coded extent, aligned to 8x8, meets the implementation required alignment, no override needs to occur. Otherwise, the implementation cannot code the requested coded extent, so the final resolution in the bitstream is overridden to be aligned to the implementation required alignment.

For example, consider an implementation that is only able to output bitstreams that are 16x16 aligned (as indicated by VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment). If an application requests the coded extent to be 1920x1080, the resulting bitstream will be 1920x1088. On the other hand, a request of 1920x1082 will result in no override, since the 8x8 alignment of this resolution (1920x1088) is 16x16 aligned.

In case of a video session parameters object created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, the following AV1 sequence header parameters **may** be overridden by the implementation according to

the quantization map texel size the video session parameters object was created with:

- `StdVideoAV1SequenceHeader`::`flags.use_128x128_superblock`

This **may** be necessary to change the AV1 superblock size used during encoding to be compatible with the used quantization map texel size.

In case of AV1 encode parameters stored in video session parameters objects, applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded AV1 sequence header in the bitstream in order to be able to produce a compliant AV1 video bitstream using the AV1 encode parameters stored in the video session parameters object.

In case of any AV1 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those AV1 encode parameters.

49.23.2. AV1 Encode Bitstream Data Access

Each video encode operation writes either:

- A single OBU with `obu_type` equal to `OBU_FRAME` comprising of the frame header and tile data of the encoded picture, or
- An OBU with `obu_type` equal to `OBU_FRAME_HEADER` encapsulating the frame header of the encoded picture, followed by one or more OBUs with `obu_type` equal to `OBU_TILE_GROUP` comprising of the tile data of the encoded picture.

In addition, if VkVideoEncodeAV1PictureInfoKHR::`generateObuExtensionHeader` is set to VK_TRUE for the video encode operation, then OBU extension headers are included in the generated bitstream as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the AV1 Specification.

49.23.3. AV1 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by VkVideoCapabilitiesKHR::`pictureAccessGranularity`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile. Accordingly, the complete image subregion of an encode input picture, reference picture, or reconstructed picture accessed by video coding operations using an AV1 encode profile is defined as the set of texels within the coordinate range:

([0,`endX`),[0,`endY`))

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of

`pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

- endY equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure;

Where `codedExtent` is the member of the VkVideoPictureResourceInfoKHR structure corresponding to the picture.

In case of video encode operations using an AV1 encode profile, any access to a picture at the coordinates (x,y), as defined by the AV1 Specification, is an access to the image subresource referred to by the corresponding VkVideoPictureResourceInfoKHR structure at the texel coordinates (x,y).

Implementations **may** choose not to access some or all texels within particular reference pictures available to a video encode operation (e.g. due to video encode parameter overrides restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

49.23.4. AV1 Reference Names and Semantics

Individual reference frames used in the encoding process have different semantics, as defined in section 6.10.24 of the AV1 Specification. The AV1 semantics associated with a reference picture is indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the AV1 Specification.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the AV1 Specification:
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME` identifies the `ALTREF2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

49.23.5. AV1 Prediction Modes

AV1 encoding supports multiple types of prediction modes, as described in section 6.10.24 of the AV1 Specification.

Possible AV1 encode prediction modes are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1PredictionModeKHR {
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR = 0,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR = 2,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR = 3,
} VkVideoEncodeAV1PredictionModeKHR;
```

- VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR specifies the use of *intra-only prediction mode*, used when encoding AV1 frames of type STD_VIDEO_AV1_FRAME_TYPE_KEY or STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY.
- VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR specifies the use of *single reference prediction mode*, used when encoding AV1 frames of type STD_VIDEO_AV1_FRAME_TYPE_INTER or STD_VIDEO_AV1_FRAME_TYPE_SWITCH with reference_select, as defined in section 6.8.23 of the AV1 Specification, equal to 0. When using this prediction mode, the application **must** specify a reference picture for at least one AV1 reference name in VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices that is supported by the implementation, as reported in VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask.
- VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR specifies the use of *unidirectional compound prediction mode*, used when encoding AV1 frames of type STD_VIDEO_AV1_FRAME_TYPE_INTER or STD_VIDEO_AV1_FRAME_TYPE_SWITCH with reference_select, as defined in section 6.8.23 of the AV1 Specification, equal to 1, and both reference names used for prediction are from the same reference frame group, as defined in section 6.10.24 of the AV1 Specification. When using this prediction mode, the application **must** specify a reference picture for at least two AV1 reference names in VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices that is supported by the implementation, as reported in VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask, where those two reference names are one of the allowed pairs of reference names, as defined in section 5.11.25 of the AV1 Specification, listed below:
  - LAST_FRAME and LAST2_FRAME,
  - LAST_FRAME and LAST3_FRAME,
  - LAST_FRAME and GOLDEN_FRAME, or
  - BWDREF_FRAME and ALTREF_FRAME.
- VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR specifies the use of *bidirectional compound prediction mode*, used when encoding AV1 frames of type STD_VIDEO_AV1_FRAME_TYPE_INTER or STD_VIDEO_AV1_FRAME_TYPE_SWITCH with reference_select, as defined in section 6.8.23 of the AV1 Specification, equal to 1, and the two reference names used for prediction are from different reference frame groups, as defined in section 6.10.24 of the AV1 Specification. When using this prediction mode, the application **must** specify a reference picture for at least one AV1 reference name from each reference frame group in VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices that is supported by the implementation, as reported in VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask.

The effective prediction mode used to encode individual AV1 mode info blocks **may** use simpler prediction modes than the one set by the application for the frame, as allowed by the AV1 Specification, in particular:

- Frames encoded with single reference prediction mode **may** contain mode info blocks encoded with intra-only prediction mode.
- Frames encoded with unidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only or single reference prediction mode.
- Frames encoded with bidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only, single reference, or unidirectional compound prediction mode.

49.23.6. AV1 Frame and Tile

AV1 frames are partitioned into tiles, as defined in section 2 of the AV1 Specification.

For the purposes of this specification, the AV1 tiles comprising a frame are referred to as the *picture partitions* of the frame.

49.23.7. AV1 Coding Blocks

AV1 encode supports two types of coding blocks, as defined in section 2 of the AV1 Specification:

- *Superblock*.
- *Mode info block*.

An AV1 mode info block is considered *skipped* when the value of `skip` for the mode info block is set to 1, as defined in section 5.11.11 of the AV1 Specification.

49.23.8. AV1 Encode Profile

A video profile supporting AV1 video encode operations is specified by setting VkVideoProfileInfoKHR::`videoCodecOperation` to VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR and adding a `VkVideoEncodeAV1ProfileInfoKHR` structure to the VkVideoProfileInfoKHR::`pNext` chain.

The `VkVideoEncodeAV1ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1ProfileInfoKHR {
    VkStructureType       sType;
    const void*           pNext;
    StdVideoAV1Profile    stdProfile;
} VkVideoEncodeAV1ProfileInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoAV1Profile` value specifying the AV1 codec profile, as defined in section

A.2 of the AV1 Specification.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1ProfileInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_PROFILE_INFO_KHR

Structure Chaining

Extends the structures

- VkQueryPoolCreateInfo
- VkVideoProfileInfoKHR

49.23.9. AV1 Encode Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR to query the capabilities for an AV1 encode profile, the VkVideoCapabilitiesKHR::`pNext` chain **must** include a `VkVideoEncodeAV1CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeAV1CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1CapabilitiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeAV1CapabilityFlagsKHR       flags;
    StdVideoAV1Level                         maxLevel;
    VkExtent2D                               codedPictureAlignment;
    VkExtent2D                               maxTiles;
    VkExtent2D                               minTileSize;
    VkExtent2D                               maxTileSize;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR   superblockSizes;
    uint32_t                                 maxSingleReferenceCount;
    uint32_t                                 singleReferenceNameMask;
    uint32_t                                 maxUnidirectionalCompoundReferenceCount;
    uint32_t
maxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t                                 unidirectionalCompoundReferenceNameMask;
    uint32_t                                 maxBidirectionalCompoundReferenceCount;
    uint32_t
maxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t
maxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t                                 bidirectionalCompoundReferenceNameMask;
    uint32_t                                 maxTemporalLayerCount;
    uint32_t                                 maxSpatialLayerCount;
    uint32_t                                 maxOperatingPoints;
    uint32_t                                 minQIndex;
    uint32_t                                 maxQIndex;
    VkBool32                                 prefersGopRemainingFrames;
    VkBool32                                 requiresGopRemainingFrames;
    VkVideoEncodeAV1StdFlagsKHR              stdSyntaxFlags;
} VkVideoEncodeAV1CapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeAV1CapabilityFlagBitsKHR indicating supported AV1 encoding capabilities.
- `maxLevel` is a `StdVideoAV1Level` value indicating the maximum AV1 level supported by the profile, as defined in section A.3 of the AV1 Specification.
- `codedPictureAlignment` indicates the alignment at which the implementation will code pictures. This capability does not impose any valid usage constraints on the application. However, depending on the `codedExtent` of the encode input picture resource, this capability **may** result in a change of the resolution of the encoded picture, as described in more detail below.
- `maxTiles` indicates the maximum number of AV1 tile columns and rows the implementation supports.
- `minTileSize` indicates the minimum extent of individual AV1 tiles the implementation supports.

- `maxTileSize` indicates the maximum extent of individual AV1 tiles the implementation supports.
- `superblockSizes` is a bitmask of VkVideoEncodeAV1SuperblockSizeFlagBitsKHR values indicating the supported AV1 superblock sizes.
- `maxSingleReferenceCount` indicates the maximum number of reference pictures the implementation supports when using single reference prediction mode.
- `singleReferenceNameMask` is a bitmask of supported AV1 reference names when using single reference prediction mode.
- `maxUnidirectionalCompoundReferenceCount` indicates the maximum number of reference pictures the implementation supports when using unidirectional compound prediction mode.
- `maxUnidirectionalCompoundGroup1ReferenceCount` indicates the maximum number of reference pictures the implementation supports when using unidirectional compound prediction mode from reference frame group 1, as defined in section 6.10.24 of the AV1 Specification.
- `unidirectionalCompoundReferenceNameMask` is a bitmask of supported AV1 reference names when using unidirectional compound prediction mode.
- `maxBidirectionalCompoundReferenceCount` indicates the maximum number of reference pictures the implementation supports when using bidirectional compound prediction mode.
- `maxBidirectionalCompoundGroup1ReferenceCount` indicates the maximum number of reference pictures the implementation supports when using bidirectional compound prediction mode from reference frame group 1, as defined in section 6.10.24 of the AV1 Specification.
- `maxBidirectionalCompoundGroup2ReferenceCount` indicates the maximum number of reference pictures the implementation supports when using bidirectional compound prediction mode from reference frame group 2, as defined in section 6.10.24 of the AV1 Specification.
- `bidirectionalCompoundReferenceNameMask` is a bitmask of supported AV1 reference names when using bidirectional compound prediction mode.
- `maxTemporalLayerCount` indicates the maximum number of AV1 temporal layers supported by the implementation.
- `maxSpatialLayerCount` indicates the maximum number of AV1 spatial layers supported by the implementation.
- `maxOperatingPoints` indicates the maximum number of AV1 operating points supported by the implementation.
- `minQIndex` indicates the minimum quantizer index value supported.
- `maxQIndex` indicates the maximum quantizer index value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames in each AV1 rate control group remaining in the current group of pictures when beginning a video coding scope.
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames in each AV1 rate control group remaining in the current group of pictures when beginning a video coding scope.
- `stdSyntaxFlags` is a bitmask of VkVideoEncodeAV1StdFlagBitsKHR indicating capabilities related to AV1 syntax elements.

singleReferenceNameMask, unidirectionalCompoundReferenceNameMask, and bidirectionalCompoundReferenceNameMask are encoded such that when bit index i is set, it indicates support for the AV1 reference name STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i.

NOTE These masks indicate which elements of the referenceNameSlotIndices member of VkVideoEncodeAV1PictureInfoKHR are supported to be used by the implementation. It is important to note that both the bits of these masks and the elements of referenceNameSlotIndices are indexed such that the first value specifies the support bit and DPB slot index, respectively, for the AV1 reference name STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME (i.e. there is no bit or element for STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME).

codedPictureAlignment provides information about implementation limitations to encode arbitrary resolutions. In particular, some implementations **may** not be able to generate bitstreams aligned to the requirements of the AV1 Specification (8x8). In such cases, the implementation **may** override the width and height of the bitstream, in order to produce a bitstream compliant to the AV1 Specification. If such an override occurs, the encoded resolution of the coded picture is enlarged, with the texel values used for the texel coordinates outside of the bounds of the codedExtent of the encode input picture resource being first governed by the rules regarding the encode input picture granularity. Any texel values outside of the region described by the encode input picture granularity are implementation-defined. Implementations **should** use well-defined values to minimize impact on the produced encoded content.

NOTE This capability does not impose additional application requirements. However, these overrides change the effective resolution of the bitstream and add padding pixels. Applications sensitive to such overrides **can** use this capability and the corresponding override behavior to compute the cropping needed to reproduce the original input of the encoding and transmit it in a side channel (i.e. by using cropping fields available in a container). Additionally, applications **can** explicitly consider this alignment in their coded extent, to avoid implementation-defined texel values being included in the encoded content.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1CapabilitiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkVideoCapabilitiesKHR

Bits which **may** be set in VkVideoEncodeAV1CapabilitiesKHR::flags, indicating the AV1 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR = 0x00000010,
  // Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR =
0x00000020,
} VkVideoEncodeAV1CapabilityFlagBitsKHR;
```

- VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR specifies support for specifying different quantizer index values in the members of VkVideoEncodeAV1QIndexKHR.
- VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR specifies support for generating OBU extension headers, as defined in section 5.3.3 of the AV1 Specification.
- VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR specifies support for using the primary reference frame indicated by the value of StdVideoEncodeAV1PictureInfo::primary_ref_frame in the AV1 picture information only for CDF data reference, as defined in section 6.8.2 of the AV1 Specification.
- VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR specifies support for encoding a picture with a frame size different from the maximum frame size defined in the active AV1 sequence header. If this capability is not supported, then frame_size_override_flag **must** not be set in the AV1 picture information of the encoded frame and the coded extent of the encode input picture **must** match the maximum coded extent allowed by the active AV1 sequence header, i.e. (max_frame_width_minus_1 + 1, max_frame_height_minus_1 + 1).
- VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR specifies support for motion vector scaling, as defined in section 7.11.3.3 of the AV1 Specification. If this capability is not supported, then the coded extent of all active reference pictures **must** match the coded extent of the encode input picture. This capability **may** only be supported by a video profile when VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR is also supported.
- VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR specifies support for encoding frames using unidirectional or bidirectional compound prediction mode with intra refresh enabled.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1CapabilityFlagsKHR;
```

VkVideoEncodeAV1CapabilityFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeAV1CapabilityFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags, indicating the capabilities related to the AV1 syntax elements, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1StdFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1StdFlagBitsKHR;
```

- VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoAV1TileInfoFlags::uniform_tile_spacing_flag in the AV1 tile parameters when that value is 1, regardless of the coded extent of the encode input picture and the number of tile columns and rows requested in the TileCols and TileRows members of StdVideoAV1TileInfo.
- VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeAV1PictureInfoFlags::skip_mode_present when that value is 0.
- VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR specifies whether the implementation supports using the application-provided value for StdVideoEncodeAV1PictureInfo::primary_ref_frame.
- VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR specifies whether the implementation supports using the application-provided values for the DeltaQYDc, DeltaQUDc, DeltaQUAc, DeltaQVDc, and DeltaQVAc members of StdVideoAV1Quantization.

These capability flags provide information to the application about specific AV1 syntax element values that the implementation supports without having to override them and do not otherwise restrict the values that the application **can** specify for any of the mentioned AV1 syntax elements.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1StdFlagsKHR;
```

VkVideoEncodeAV1StdFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeAV1StdFlagBitsKHR.

Bits which **may** be set in VkVideoEncodeAV1CapabilitiesKHR::superblockSizes, indicating the superblock sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1SuperblockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_64_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_128_BIT_KHR = 0x00000002,
} VkVideoEncodeAV1SuperblockSizeFlagBitsKHR;
```

- VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_64_BIT_KHR specifies that a superblock size of 64x64 is supported.
- VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_128_BIT_KHR specifies that a superblock size of 128x128 is supported.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1SuperblockSizeFlagsKHR;
```

VkVideoEncodeAV1SuperblockSizeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeAV1SuperblockSizeFlagBitsKHR.

Implementations **must** support at least one of VkVideoEncodeAV1SuperblockSizeFlagBitsKHR.

49.23.10. AV1 Encode Quality Level Properties

When calling vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR with pVideoProfile->videoCodecOperation specified as VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, the VkVideoEncodeAV1QualityLevelPropertiesKHR structure **must** be included in the pNext chain of the VkVideoEncodeQualityLevelPropertiesKHR structure to retrieve additional video encode quality level properties specific to AV1 encoding.

The VkVideoEncodeAV1QualityLevelPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QualityLevelPropertiesKHR {
    VkStructureType                          sType;
    void*                                    pNext;
    VkVideoEncodeAV1RateControlFlagsKHR      preferredRateControlFlags;
    uint32_t                                 preferredGopFrameCount;
    uint32_t                                 preferredKeyFramePeriod;
    uint32_t                                 preferredConsecutiveBipredictiveFrameCount;
    uint32_t                                 preferredTemporalLayerCount;
    VkVideoEncodeAV1QIndexKHR                preferredConstantQIndex;
    uint32_t                                 preferredMaxSingleReferenceCount;
    uint32_t                                 preferredSingleReferenceNameMask;
    uint32_t
preferredMaxUnidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredUnidirectionalCompoundReferenceNameMask;
    uint32_t
preferredMaxBidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t
preferredBidirectionalCompoundReferenceNameMask;
} VkVideoEncodeAV1QualityLevelPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of VkVideoEncodeAV1RateControlFlagBitsKHR values indicating the preferred flags to use for VkVideoEncodeAV1RateControlInfoKHR::`flags`.
- `preferredGopFrameCount` indicates the preferred value to use for VkVideoEncodeAV1RateControlInfoKHR::`gopFrameCount`.
- `preferredKeyFramePeriod` indicates the preferred value to use for VkVideoEncodeAV1RateControlInfoKHR::`keyFramePeriod`.
- `preferredConsecutiveBipredictiveFrameCount` indicates the preferred value to use for VkVideoEncodeAV1RateControlInfoKHR::`consecutiveBipredictiveFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for VkVideoEncodeAV1RateControlInfoKHR::`temporalLayerCount`.
- `preferredConstantQIndex` indicates the preferred value to use for VkVideoEncodeAV1PictureInfoKHR::`constantQIndex` when using rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `preferredMaxSingleReferenceCount` indicates the preferred maximum number of reference pictures to use with single reference prediction mode.

- `preferredSingleReferenceNameMask` is a bitmask of preferred AV1 reference names when using single reference prediction mode.
- `preferredMaxUnidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with unidirectional compound prediction mode.
- `preferredMaxUnidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with unidirectional compound prediction mode from reference frame group 1, as defined in section 6.10.24 of the AV1 Specification.
- `preferredUnidirectionalCompoundReferenceNameMask` is a bitmask of preferred AV1 reference names when using unidirectional compound prediction mode.
- `preferredMaxBidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with bidirectional compound prediction mode.
- `preferredMaxBidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with bidirectional compound prediction mode from reference frame group 1, as defined in section 6.10.24 of the AV1 Specification.
- `preferredMaxBidirectionalCompoundGroup2ReferenceCount` indicates the preferred maximum number of reference pictures to use with bidirectional compound prediction mode from reference frame group 2, as defined in section 6.10.24 of the AV1 Specification.
- `preferredBidirectionalCompoundReferenceNameMask` is a bitmask of preferred AV1 reference names when using bidirectional compound prediction mode.

`preferredSingleReferenceNameMask`, `preferredUnidirectionalCompoundReferenceNameMask`, and `preferredBidirectionalCompoundReferenceNameMask` are encoded such that when bit index i is set, it indicates preference for using the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` + i.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1QualityLevelPropertiesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUALITY_LEVEL_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- VkVideoEncodeQualityLevelPropertiesKHR

49.23.11. AV1 Encode Session

Additional parameters can be specified when creating a video session with an AV1 encode profile by including an instance of the VkVideoEncodeAV1SessionCreateInfoKHR structure in the `pNext` chain of VkVideoSessionCreateInfoKHR.

The `VkVideoEncodeAV1SessionCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionCreateInfoKHR {
    VkStructureType     sType;
    const void*         pNext;
    VkBool32            useMaxLevel;
    StdVideoAV1Level    maxLevel;
} VkVideoEncodeAV1SessionCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevel` indicates whether the value of `maxLevel` should be used by the implementation. When it is set to VK_FALSE, the implementation ignores the value of `maxLevel` and uses the value of VkVideoEncodeAV1CapabilitiesKHR::`maxLevel`, as reported by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile.
- `maxLevel` is a `StdVideoAV1Level` value specifying the upper bound on the AV1 level for the video bitstreams produced by the created video session.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_CREATE_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoSessionCreateInfoKHR

49.23.12. AV1 Encode Parameter Sets

Video session parameters objects created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR contain a single instance of the following parameter set:

AV1 Sequence Header

Represented by `StdVideoAV1SequenceHeader` structures and interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
  - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
  - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of

the AV1 Specification;

- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the AV1 Specification;
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the AV1 Specification.

When `StdVideoAV1SequenceHeader`::`flags.timing_info_present_flag` is set, the AV1 sequence header **can** be amended with AV1 decoder model information, represented by a `StdVideoEncodeAV1DecoderModelInfo` structure and interpreted as follows:

- `reserved1` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV1DecoderModelInfo` are interpreted as defined in section 6.4.4 of the AV1 Specification.

When `StdVideoAV1SequenceHeader`::`flags.reduced_still_picture_header` is not set, the AV1 sequence header **can** be amended with AV1 operating point information, represented by an array of `StdVideoEncodeAV1OperatingPointInfo` structures and interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV1OperatingPointInfo` are interpreted as the corresponding element of the respective arrays defined in section 6.4 of the AV1 Specification.

Implementations **may** override any of these parameters according to the semantics defined in the Video Encode Parameter Overrides section before storing the resulting AV1 sequence header into the video session parameters object. Applications need to use the vkGetEncodedVideoSessionParametersKHR command to determine whether any implementation overrides happened and to retrieve the encoded AV1 sequence header in order to be able to produce a compliant AV1 video bitstream.

The encoded AV1 sequence header retrieved using the vkGetEncodedVideoSessionParametersKHR command is encoded as a single OBU with `obu_type` equal to `OBU_SEQUENCE_HEADER`, as defined in section 5.3 of the AV1 Specification.

Such AV1 sequence header overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::`pNext` chain **must** include a `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The VkVideoEncodeAV1SessionParametersCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionParametersCreateInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    const StdVideoAV1SequenceHeader*                pStdSequenceHeader;
    const StdVideoEncodeAV1DecoderModelInfo*        pStdDecoderModelInfo;
    uint32_t                                        stdOperatingPointCount;
    const StdVideoEncodeAV1OperatingPointInfo*      pStdOperatingPoints;
} VkVideoEncodeAV1SessionParametersCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdSequenceHeader is a pointer to a StdVideoAV1SequenceHeader structure describing parameters of the AV1 sequence header entry to store in the created object.
- pStdDecoderModelInfo is NULL or a pointer to a StdVideoEncodeAV1DecoderModelInfo structure specifying the AV1 decoder model information to store in the created object.
- stdOperatingPointCount is the number of elements in the pStdOperatingPoints array.
- pStdOperatingPoints is NULL or a pointer to an array of stdOperatingPointCount number of StdVideoEncodeAV1OperatingPointInfo structures specifying the AV1 operating point information to store in the created object. Each element i specifies the parameter values corresponding to element i of the syntax elements defined in section 6.4 of the AV1 Specification.

Valid Usage

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-10288
  pStdSequenceHeader->flags.film_grain_params_present **must** be zero

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter
  pStdSequenceHeader **must** be a valid pointer to a valid StdVideoAV1SequenceHeader value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdDecoderModelInfo-parameter
  If pStdDecoderModelInfo is not NULL, pStdDecoderModelInfo **must** be a valid pointer to a valid StdVideoEncodeAV1DecoderModelInfo value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdOperatingPoints-parameter

If `stdOperatingPointCount` is not `0`, and `pStdOperatingPoints` is not `NULL`, `pStdOperatingPoints` **must** be a valid pointer to an array of `stdOperatingPointCount` `StdVideoEncodeAV1OperatingPointInfo` values

Structure Chaining

Extends the structure

- VkVideoSessionParametersCreateInfoKHR

49.23.13. AV1 Encoding Parameters

The VkVideoEncodeAV1PictureInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1PictureInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    VkVideoEncodeAV1PredictionModeKHR       predictionMode;
    VkVideoEncodeAV1RateControlGroupKHR     rateControlGroup;
    uint32_t                                constantQIndex;
    const StdVideoEncodeAV1PictureInfo*     pStdPictureInfo;
    int32_t                                 referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    VkBool32                                primaryReferenceCdfOnly;
    VkBool32                                generateObuExtensionHeader;
} VkVideoEncodeAV1PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `predictionMode` specifies the AV1 prediction mode to use for the encoded frame.
- `rateControlGroup` specifies the AV1 rate control group to use for the encoded frame when the current rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR. Otherwise it is ignored.
- `constantQIndex` is the quantizer index to use for the encoded frame if the current rate control mode configured for the video session is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeAV1PictureInfo` structure specifying AV1 picture information.
- `referenceNameSlotIndices` is an array of seven (VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR, which is equal to the Video Std definition `STD_VIDEO_AV1_REFS_PER_FRAME`) signed integer values specifying the index of the DPB slot or a negative integer value for each AV1 reference name used for inter coding. In particular, the DPB slot index for the AV1 reference name `frame` is specified in `referenceNameSlotIndices`

[frame - STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME].

- primaryReferenceCdfOnly controls whether the primary reference frame indicated by the value of pStdPictureInfo->primary_ref_frame is used only for CDF data reference, as defined in section 6.8.2 of the AV1 Specification. If set to VK_TRUE, then the primary reference frame's picture data will not be used for sample prediction.
- generateObuExtensionHeader controls whether OBU extension headers are generated into the target bitstream, as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the AV1 Specification.

This structure is specified in the pNext chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR to specify the codec-specific picture information for an AV1 encode operation.

Encode Input Picture Information

When this structure is specified in the pNext chain of the VkVideoEncodeInfoKHR structure passed to vkCmdEncodeVideoKHR, the information related to the encode input picture is defined as follows:

- The image subregion used is determined according to the AV1 Encode Picture Data Access section.
- The encode input picture is associated with the AV1 picture information provided in pStdPictureInfo.

Std Picture Information

The members of the StdVideoEncodeAV1PictureInfo structure pointed to by pStdPictureInfo are interpreted as follows:

- flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
- pSegmentation **must** be NULL

> **NOTE** AV1 segmentation is currently not supported in video encode operations. Accordingly, the application needs to set flags.segmentation_enabled to 0 and pSegmentation to NULL.

- pTileInfo is NULL or a pointer to a StdVideoAV1TileInfo structure specifying AV1 tile parameters;
- the StdVideoAV1Quantization structure pointed to by pQuantization is interpreted as follows:
  - flags.reserved is used only for padding purposes and is otherwise ignored;
  - all other members of StdVideoAV1Quantization are interpreted as defined in section 6.8.11 of the AV1 Specification;
- the StdVideoAV1LoopFilter structure pointed to by pLoopFilter is interpreted as follows:
  - flags.reserved is used only for padding purposes and is otherwise ignored;
  - update_ref_delta is a bitmask where bit index i is interpreted as the value of update_ref_delta corresponding to element i of loop_filter_ref_deltas as defined in section 6.8.10 of the AV1 Specification;

    - update_mode_delta is a bitmask where bit index i is interpreted as the value of update_mode_delta corresponding to element i of loop_filter_mode_deltas as defined in section 6.8.10 of the AV1 Specification;
    - all other members of StdVideoAV1LoopFilter are interpreted as defined in section 6.8.10 of the AV1 Specification;
- if flags.enable_cdef is set in the active sequence header, then the members of the StdVideoAV1CDEF structure pointed to by pCDEF are interpreted as follows:
    - cdef_y_sec_strength and cdef_uv_sec_strength are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the AV1 Specification;
    - all other members of StdVideoAV1CDEF are interpreted as defined in section 6.10.14 of the AV1 Specification;
- if flags.UsesLr is set in the active sequence header, then the StdVideoAV1LoopRestoration structure pointed to by pLoopRestoration is interpreted as follows:
    - LoopRestorationSize[plane] is interpreted as log2(size) - 5, where size is the value of LoopRestorationSize[plane] as defined in section 6.10.15 of the AV1 Specification;
    - all other members of StdVideoAV1LoopRestoration are defined as in section 6.10.15 of the AV1 Specification;
- the members of the StdVideoAV1GlobalMotion structure pointed to by pGlobalMotion are interpreted as defined in section 7.10 of the AV1 Specification;
- pExtensionHeader is NULL or a pointer to a StdVideoEncodeAV1ExtensionHeader structure whose temporal_id and spatial_id members specify the temporal and spatial layer ID of the reference frame, respectively (these IDs are encoded into the OBU extension header if VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader is set to VK_TRUE for the encode operation);
- if flags.buffer_removal_time_present_flag is set, then pBufferRemovalTimes is a pointer to an array of N number of unsigned integer values specifying the elements of the buffer_removal_time array, as defined in section 6.8.2 of the AV1 Specification, where N is the number of operating points specified for the active sequence header through VkVideoEncodeAV1SessionParametersCreateInfoKHR::stdOperatingPointCount;
- all other members are interpreted as defined in section 6.8 of the AV1 Specification.

Reference picture setup is controlled by the value of StdVideoEncodeAV1PictureInfo::refresh_frame_flags. If it is not zero and a reconstructed picture is specified, then the latter is used as the target of picture reconstruction to activate the DPB slot specified in pEncodeInfo->pSetupReferenceSlot->slotIndex. If StdVideoEncodeAV1PictureInfo::refresh_frame_flags is zero, but a reconstructed picture is specified, then the corresponding picture reference associated with the DPB slot is invalidated, as described in the DPB Slot States section.

Std Tile Parameters

Specifying AV1 tile parameters is optional. If StdVideoEncodeAV1PictureInfo::pTileInfo is NULL, then the implementation determines the values of AV1 tile parameters defined in section 6.8.14 of the AV1 Specification in an implementation-dependent manner. If StdVideoEncodeAV1PictureInfo::pTileInfo is not NULL, then the members of the StdVideoAV1TileInfo structure pointed to by StdVideoEncodeAV1PictureInfo::pTileInfo are

interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `TileCols` and `TileRows` specify the number of tile columns and tile rows as defined in section 6.8.14 of the AV1 Specification;
- `tile_size_bytes_minus_1` is ignored, as its value, as defined in section 6.8.14 of the AV1 Specification, is determined as the result of the encoding process;
- `pMiColStarts` and `pMiRowStarts` are ignored, as the elements of the `MiColStarts` and `MiRowStarts` arrays defined in section 6.8.14 of the AV1 Specification are determined by the implementation based on the tile widths and heights determined by the implementation or specified through the `pWidthInSbsMinus1` and `pHeightInSbsMinus1` arrays, respectively;
- `pWidthInSbsMinus1` is `NULL` or a pointer to an array of `TileCols` number of unsigned integers that corresponds to `width_in_sbs_minus_1` defined in section 6.8.14 of the AV1 Specification;
- `pHeightInSbsMinus1` is `NULL` or is a pointer to an array of `TileRows` number of unsigned integers that corresponds to `height_in_sbs_minus_1` defined in section 6.8.14 of the AV1 Specification;
- all other members of `StdVideoAV1TileInfo` are interpreted as defined in section 6.8.14 of the AV1 Specification.

If `flags.uniform_tile_spacing_flag` is set, then `pWidthInSbsMinus1` and `pHeightInSbsMinus1` are ignored.

If `flags.uniform_tile_spacing_flag` is not set and `pWidthInSbsMinus1` is `NULL`, then the width of individual tile columns is determined in an implementation-dependent manner.

If `flags.uniform_tile_spacing_flag` is not set and `pHeightInSbsMinus1` is `NULL`, then the height of individual tile rows is determined in an implementation-dependent manner.

NOTE

In general, implementations are expected to respect the application-specified AV1 tile parameters. However, as implementations may have restrictions on the combination of tile column and row counts, and tile widths and heights with respect to the extent of the encoded frame beyond the restrictions specified in the AV1 Specification and this specification (through video profile capabilities), certain parameter combinations may require the implementation to override them in order to conform to such implementation-specific limitations.

Active Parameter Sets

The *active sequence header* is the AV1 sequence header stored in the bound video session parameters object.

Valid Usage

- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10289
  If VkVideoEncodeAV1CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR, then `primaryReferenceCdfOnly` **must** be VK_FALSE

- VUID-VkVideoEncodeAV1PictureInfoKHR-primaryReferenceCdfOnly-10290
  If `primaryReferenceCdfOnly` is set to VK_TRUE, then `pStdPictureInfo->primary_ref_frame` **must** be less than VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-10291
  If `pStdPictureInfo->primary_ref_frame` is less than VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR, then `referenceNameSlotIndices`[`pStdPictureInfo->primary_ref_frame`] **must** not be negative
- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10292
  If VkVideoEncodeAV1CapabilitiesKHR::`flags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR, then `generateObuExtensionHeader` **must** be VK_FALSE
- VUID-VkVideoEncodeAV1PictureInfoKHR-generateObuExtensionHeader-10293
  If `generateObuExtensionHeader` is set to VK_TRUE, then `pStdPictureInfo->pExtensionHeader` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1PictureInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_PICTURE_INFO_KHR
- VUID-VkVideoEncodeAV1PictureInfoKHR-predictionMode-parameter
  `predictionMode` **must** be a valid VkVideoEncodeAV1PredictionModeKHR value
- VUID-VkVideoEncodeAV1PictureInfoKHR-rateControlGroup-parameter
  `rateControlGroup` **must** be a valid VkVideoEncodeAV1RateControlGroupKHR value
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-parameter
  `pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1PictureInfo` value

Structure Chaining

Extends the structure

- VkVideoEncodeInfoKHR

The VkVideoEncodeAV1DpbSlotInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1DpbSlotInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const StdVideoEncodeAV1ReferenceInfo*    pStdReferenceInfo;
} VkVideoEncodeAV1DpbSlotInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- pStdReferenceInfo is a pointer to a StdVideoEncodeAV1ReferenceInfo structure specifying AV1 reference information.

This structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an AV1 encode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoEncodeInfoKHR::pReferenceSlots, one element is added to the list of active reference pictures used by the video encode operation for each element of VkVideoEncodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the AV1 Encode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoEncodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the AV1 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoEncodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the AV1 Encode Picture Data Access section.
- If reference picture setup is requested, then the reconstructed picture is used to activate the DPB slot with the index specified in VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the AV1 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoEncodeAV1ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- flags.reserved and reserved1 are used only for padding purposes and are otherwise ignored;
- flags.disable_frame_end_update_cdf is interpreted as defined in section 6.8.2 of the AV1 Specification;
- flags.segmentation_enabled is interpreted as defined in section 6.8.13 of the AV1 Specification;
- RefFrameId is interpreted as the element of the RefFrameId array defined in section 6.8.2 of the AV1 Specification corresponding to the reference frame;
- frame_type is interpreted as defined in section 6.8.2 of the AV1 Specification;
- OrderHint is interpreted as defined in section 6.8.2 of the AV1 Specification;

- `pExtensionHeader` is `NULL` or a pointer to a `StdVideoEncodeAV1ExtensionHeader` structure whose `temporal_id` and `spatial_id` members specify the temporal and spatial layer ID of the reference frame, respectively.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1DpbSlotInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_DPB_SLOT_INFO_KHR
- VUID-VkVideoEncodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter
  `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1ReferenceInfo` value

Structure Chaining

Extends the structure

- VkVideoReferenceSlotInfoKHR

49.23.14. AV1 Encode Rate Control

Group of Pictures

In case of AV1 encoding it is common practice to follow a regular pattern of frame types and prediction directions in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

The AV1 Specification, unlike some other video compression standards, does not restrict the direction in display order of the referenced frames based on the used frame type or AV1 prediction mode. Accordingly, this specification introduces the concept of *rate control groups* for which the application **can** specify separate rate control configuration parameters. When encoding a frame, the application specifies the rate control group the encoded frame belongs to through a VkVideoEncodeAV1RateControlGroupKHR value in VkVideoEncodeAV1PictureInfoKHR ::`rateControlGroup`. This value is then used by the implementation's rate control algorithm to determine which rate control configuration parameters apply to it.

Possible AV1 encode rate control groups are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlGroupKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR = 0,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR = 2,
} VkVideoEncodeAV1RateControlGroupKHR;
```

- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR **should** be specified when encoding AV1 frames that use intra-only prediction (e.g. when encoding AV1 frames of type `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`).

- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR **should** be specified when encoding AV1 frames that only have forward references in display order.
- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR **should** be specified when encoding AV1 frames that have backward references in display order.

NOTE	While the application can specify any rate control group for any frame, regardless of the frame type, prediction mode, or prediction direction, specifying a rate control group that does not reflect the prediction direction used by the encoded frame may result in unexpected behavior of the implementation's rate control algorithm.

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR between frames encoded with other rate control groups in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always a frame encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR.
2. This is followed by a number of consecutive frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR.
3. If the number of frames in the GOP is not reached yet, then the next frame is a frame encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR and the algorithm continues from step 2.

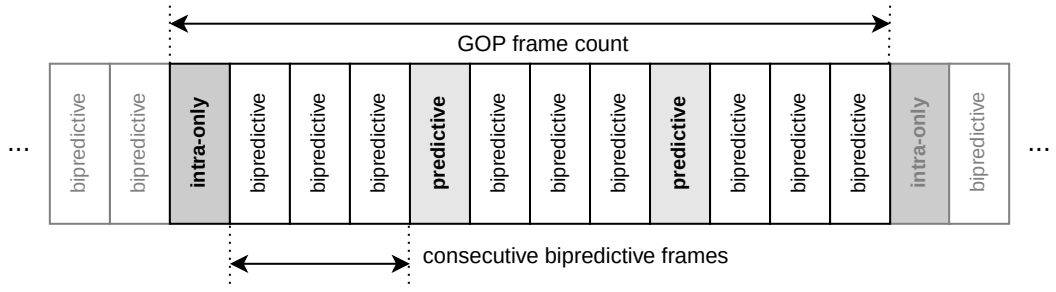


Figure 50. AV1 regular GOP starting with an intra-only frame

When frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` are used in a video sequence, the *key frame period* refers to the distance between subsequent frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY`.

It is also typical for AV1 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

Flat Reference Pattern

- Each frame encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR refers to the last frame that was not encoded using VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR, in display order, as its forward reference.
- Each frame encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR refers to the last frame that was not encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR, in display order, as its forward reference, and refers to the next frame that was not encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR, in display order, as its backward reference.

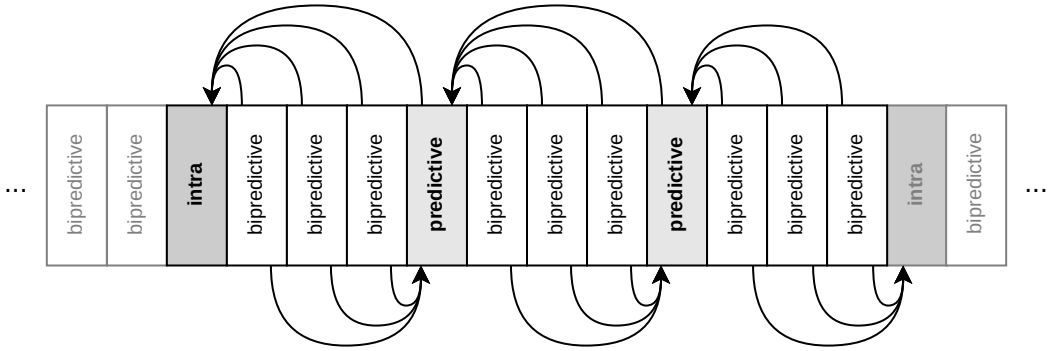

Figure 51. AV1 flat reference pattern

Dyadic Reference Pattern

- Each frame encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR refers to the last frame that was not encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR, in display order, as its forward reference.
- The following algorithm is applied to the sequence of consecutive frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR between frames using other rate control groups in display order:
  1. The frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  2. The algorithm is executed recursively for the following frame sequences:
     - The frames of the original sequence preceding the frame in the middle, if any.
     - The frames of the original sequence following the frame in the middle, if any.

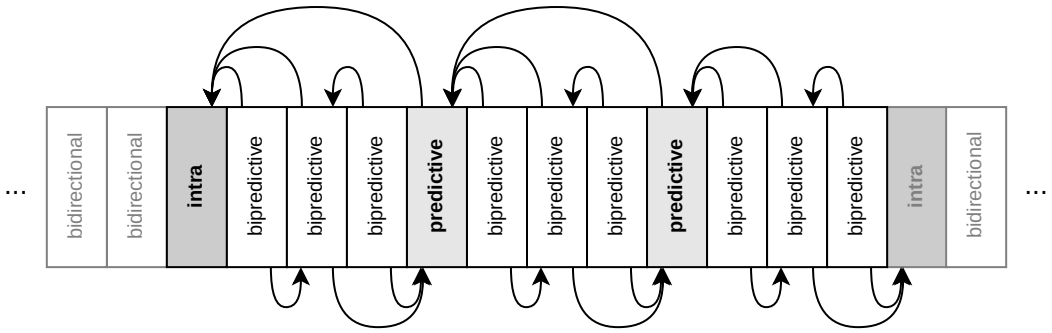

Figure 52. AV1 dyadic reference pattern

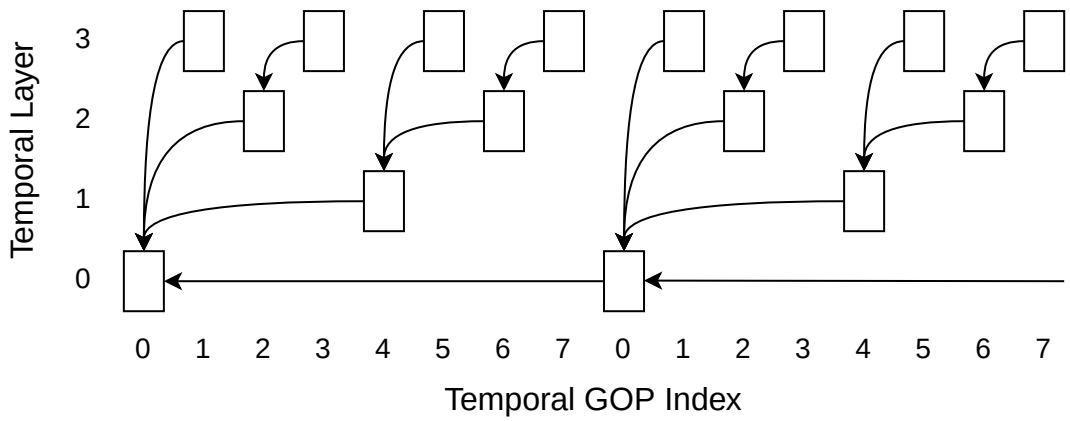
The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the frame type and the selected rate control group is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited to, the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an AV1 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the AV1 temporal ID for the encoded frames in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is 2^{n-1}, where n is the number of temporal layers.
- The i^{th} frame in the temporal GOP uses temporal ID t, if and only if the index of the least significant bit set in i equals n-t-1, except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The i^{th} frame in the temporal GOP uses the r^{th} frame as reference, where r is calculated from i by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.



Text is not SVG - cannot display

Figure 53. AV1 dyadic temporal layer pattern

NOTE Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence frames usually do not use backward references in display order.

The `VkVideoEncodeAV1RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    VkVideoEncodeAV1RateControlFlagsKHR      flags;
    uint32_t                                 gopFrameCount;
    uint32_t                                 keyFramePeriod;
    uint32_t                                 consecutiveBipredictiveFrameCount;
    uint32_t                                 temporalLayerCount;
} VkVideoEncodeAV1RateControlInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkVideoEncodeAV1RateControlFlagBitsKHR specifying AV1 rate control flags.
- `gopFrameCount` is the number of frames within a group of pictures (GOP) intended to be used by the application. If it is set to 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is set to `UINT32_MAX`, the GOP length is treated as infinite.
- `keyFramePeriod` is the interval, in terms of number of frames, between two frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` (see key frame period). If it is set to 0, the rate control algorithm **may** assume an implementation-dependent key frame period. If it is set to `UINT32_MAX`, the key frame period is treated as infinite.

- `consecutiveBipredictiveFrameCount` is the number of consecutive frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR between frames encoded with other rate control groups within the GOP.
- `temporalLayerCount` specifies the number of AV1 temporal layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the VkVideoCodingControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, and VkVideoCodingControlInfoKHR::`flags` includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see Video Coding Control).

Valid Usage

- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10294
  If `flags` contains VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR or VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR, then it **must** also contain VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10295
  If `flags` contains VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR, then it **must** not also contain VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10296
  If `flags` contains VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR, then `gopFrameCount` **must** be greater than `0`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-keyFramePeriod-10297
  If `keyFramePeriod` is not `0`, then it **must** be greater than or equal to `gopFrameCount`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-consecutiveBipredictiveFrameCount-10298
  If `consecutiveBipredictiveFrameCount` is not `0`, then it **must** be less than `gopFrameCount`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-temporalLayerCount-10299
  `temporalLayerCount` **must** be less than or equal to VkVideoEncodeAV1CapabilitiesKHR::`maxTemporalLayerCount`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_INFO_KHR
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkVideoEncodeAV1RateControlFlagBitsKHR values

Structure Chaining

Extends the structures

- VkVideoBeginCodingInfoKHR
- VkVideoCodingControlInfoKHR

Bits which **can** be set in VkVideoEncodeAV1RateControlInfoKHR::`flags`, specifying AV1 rate control flags, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1RateControlFlagBitsKHR;
```

- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR specifies that the application intends to use a regular GOP structure according to the parameters specified in the `gopFrameCount` and `keyFramePeriod` members of the VkVideoEncodeAV1RateControlInfoKHR structure.
- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR specifies that the application intends to follow a dyadic temporal layer pattern.
- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR specifies that the application intends to follow a flat reference pattern in the GOP.
- VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR specifies that the application intends to follow a dyadic reference pattern in the GOP.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1RateControlFlagsKHR;
```

`VkVideoEncodeAV1RateControlFlagsKHR` is a bitmask type for setting a mask of zero or more VkVideoEncodeAV1RateControlFlagBitsKHR.

Rate Control Layers

The `VkVideoEncodeAV1RateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlLayerInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkBool32                        useMinQIndex;
    VkVideoEncodeAV1QIndexKHR       minQIndex;
    VkBool32                        useMaxQIndex;
    VkVideoEncodeAV1QIndexKHR       maxQIndex;
    VkBool32                        useMaxFrameSize;
    VkVideoEncodeAV1FrameSizeKHR    maxFrameSize;
} VkVideoEncodeAV1RateControlLayerInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the lower bounds on the quantizer index values specified in `minQIndex`.
- `minQIndex` specifies the lower bounds on the quantizer index values, for each rate control group, that the implementation's rate control algorithm will use when `useMinQIndex` is set to VK_TRUE.
- `useMaxQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the upper bounds on the quantizer index values specified in `maxQIndex`.
- `maxQIndex` specifies the upper bounds on the quantizer index values, for each rate control group, that the implementation's rate control algorithm will use when `useMaxQIndex` is set to VK_TRUE.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each rate control group.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each rate control group, when `useMaxFrameSize` is set to VK_TRUE.

When used, the values in `minQIndex` and `maxQIndex` guarantee that the effective quantizer index values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of quantizer index values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak bitrate values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the VkVideoEncodeRateControlLayerInfoKHR structure.
- The upper bounds on the encoded frame size, for each rate control group, specified in the `maxFrameSize` member of `VkVideoEncodeAV1RateControlLayerInfoKHR`.

NOTE	In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the Video Encode Rate Control section.

When an instance of this structure is included in the `pNext` chain of a

VkVideoEncodeRateControlLayerInfoKHR structure specified in one of the elements of the pLayers array member of the VkVideoEncodeRateControlInfoKHR structure passed to the vkCmdControlVideoCodingKHR command, VkVideoCodingControlInfoKHR::flags includes VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR, and the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, it specifies the AV1-specific rate control parameters of the rate control layer corresponding to that element of pLayers.

Valid Usage

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10300
  If useMinQIndex is VK_TRUE, then the intraQIndex, predictiveQIndex, and bipredictiveQIndex members of minQIndex **must** all be between VkVideoEncodeAV1CapabilitiesKHR::minQIndex and VkVideoEncodeAV1CapabilitiesKHR::maxQIndex, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10301
  If useMinQIndex is VK_TRUE and VkVideoEncodeAV1CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR, then the intraQIndex, predictiveQIndex, and bipredictiveQIndex members of minQIndex **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10302
  If useMaxQIndex is VK_TRUE, then the intraQIndex, predictiveQIndex, and bipredictiveQIndex members of maxQIndex **must** all be between VkVideoEncodeAV1CapabilitiesKHR::minQIndex and VkVideoEncodeAV1CapabilitiesKHR::maxQIndex, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10303
  If useMaxQIndex is VK_TRUE and VkVideoEncodeAV1CapabilitiesKHR::flags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the used video profile, does not include VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR, then the intraQIndex, predictiveQIndex, and bipredictiveQIndex members of maxQIndex **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10304
  If useMinQIndex and useMaxQIndex are both VK_TRUE, then the intraQIndex, predictiveQIndex, and bipredictiveQIndex members of minQIndex **must** all be less than or equal to the respective members of maxQIndex

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_LAYER_INFO_KHR

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-minQIndex-parameter
  `minQIndex` **must** be a valid VkVideoEncodeAV1QIndexKHR structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxQIndex-parameter
  `maxQIndex` **must** be a valid VkVideoEncodeAV1QIndexKHR structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxFrameSize-parameter
  `maxFrameSize` **must** be a valid VkVideoEncodeAV1FrameSizeKHR structure

Structure Chaining

Extends the structure

- VkVideoEncodeRateControlLayerInfoKHR

The `VkVideoEncodeAV1QIndexKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QIndexKHR {
    uint32_t    intraQIndex;
    uint32_t    predictiveQIndex;
    uint32_t    bipredictiveQIndex;
} VkVideoEncodeAV1QIndexKHR;
```

- `intraQIndex` is the quantizer index to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR.
- `predictiveQIndex` is the quantizer index to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR.
- `bipredictiveQIndex` is the quantizer index to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR.

The `VkVideoEncodeAV1FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1FrameSizeKHR {
    uint32_t    intraFrameSize;
    uint32_t    predictiveFrameSize;
    uint32_t    bipredictiveFrameSize;
} VkVideoEncodeAV1FrameSizeKHR;
```

- `intraFrameSize` is the size in bytes to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR.
- `predictiveFrameSize` is the size in bytes to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR.
- `bipredictiveFrameSize` is the size in bytes to be used for frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR.

GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the group of pictures (GOP).

The VkVideoEncodeAV1GopRemainingFrameInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t           gopRemainingIntra;
    uint32_t           gopRemainingPredictive;
    uint32_t           gopRemainingBipredictive;
} VkVideoEncodeAV1GopRemainingFrameInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- useGopRemainingFrames indicates whether the implementation's rate control algorithm **should** use the values specified in gopRemainingIntra, gopRemainingPredictive, and gopRemainingBipredictive. If useGopRemainingFrames is VK_FALSE, then the values of gopRemainingIntra, gopRemainingPredictive, and gopRemainingBipredictive are ignored.
- gopRemainingIntra specifies the number of frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the next video encode operation.
- gopRemainingPredictive specifies the number of frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the next video encode operation.
- gopRemainingBipredictive specifies the number of frames encoded with VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR the implementation's rate control algorithm **should** assume to be remaining in the GOP prior to executing the next video encode operation.

Setting useGopRemainingFrames to VK_TRUE and including this structure in the pNext chain of VkVideoBeginCodingInfoKHR is only mandatory if the VkVideoEncodeAV1CapabilitiesKHR ::requiresGopRemainingFrames reported for the used video profile is VK_TRUE. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a regular GOP structure, these values **may** provide additional guidance for the implementation's rate control algorithm.

The VkVideoEncodeAV1CapabilitiesKHR::prefersGopRemainingFrames capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1GopRemainingFrameInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_GOP_REMAINING_FRAME_INFO_KHR

Structure Chaining

Extends the structure

- VkVideoBeginCodingInfoKHR

AV1 Quantizer Index Delta Maps

Quantization delta maps used with an AV1 encode profile are referred to as *quantizer index delta maps* and their texels contain integer values representing quantizer index delta values that are applied in the process of determining the quantizer indices of the encoded picture.

Accordingly, AV1 quantizer index delta maps always have single channel integer formats, as reported in VkVideoFormatPropertiesKHR::`format`.

When the rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, the quantizer index delta values are added to the constant quantizer index value that, in effect, enable the application to explicitly control the used quantizer index values at the granularity of the used quantization map texel size.

For all other rate control modes, the quantizer index delta values **can** be used to offset the quantizer index values that the rate control algorithm would otherwise produce.

AV1 Encode Quantization

Performing AV1 encode operations involves the process of assigning quantizer index values to individual AV1 mode info blocks. This process depends on the used rate control mode, as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR, then the quantizer index value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the quantizer index delta value corresponding to the mode info block, as fetched from the quantization map, is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the

`minQIndexDelta` and `maxQIndexDelta` members of VkVideoEncodeAV1QuantizationMapCapabilitiesKHR, then the quantizer index value used for the mode info block becomes undefined.

- If the configured rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the quantizer index value is initialized from the constant quantizer index value specified for the encoded frame.
  - If the video encode operation is issued with a quantization delta map, the quantizer index delta value corresponding to the mode info block, as fetched from the quantization map, is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of VkVideoEncodeAV1QuantizationMapCapabilitiesKHR, then the quantizer index value used for the mode info block becomes undefined.
- If the configured rate control mode is not VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR, then the quantizer index value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a quantization delta map, the quantizer index delta value corresponding to the mode info block, as fetched from the quantization map, is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of VkVideoEncodeAV1QuantizationMapCapabilitiesKHR, then the quantizer index value used for the mode info block becomes undefined.
  - If the video encode operation is issued with an emphasis map, the rate control will adjust the quantizer index value based on the emphasis value corresponding to the mode info block, as fetched from the quantization map, according to the following equation:

    $QIndex_{new} = f(QIndex_{prev}, e)$

    Where $QIndex_{new}$ is the resulting quantizer index value, $QIndex_{prev}$ is the previously determined quantizer index value, e is the emphasis value corresponding to the macroblock, and f is an implementation-defined function for which the following implication is true:

    $e_1 < e_2 \Rightarrow f(QIndex, e_1) \geq f(QIndex, e_2)$

    > **NOTE** This means that lower emphasis values will result in higher quantizer index values, whereas higher emphasis values will result in lower quantizer index values, but the function is not strictly decreasing with respect to the input emphasis value for a given input quantizer index value.

  - If clamping to minimum quantizer index values is enabled in the applied rate control layer, then the quantizer index value is clamped to the corresponding minimum quantizer index value.
  - If clamping to maximum quantizer index values is enabled in the applied rate control layer,

then the quantizer index value is clamped to the corresponding maximum quantizer index value.

- In all cases, the final quantizer index value is clamped to the minimum and maximum quantizer index values supported by the video profile.

49.23.15. AV1 Encode Requirements

This section describes the **required** AV1 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR ::videoCodecOperations.

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

These masks **must** only have bits set in the least significant VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR bits (bit index i indicates support for the AV1 reference name STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i when using the corresponding AV1 prediction mode), and **must** have at least as many bits set in any *ReferenceNameMask capability as the value of the corresponding max*ReferenceCount capability.

3

If greater than zero, it **must** be at least 2.

4

maxUnidirectionalCompoundGroup1ReferenceCount **must** be less than or equal to maxUnidirectionalCompoundReferenceCount

5

The sum of maxBidirectionalCompoundGroup1ReferenceCount and maxBidirectionalCompoundGroup2ReferenceCount **must** be greater than or equal to maxBidirectionalCompoundReferenceCount

6

If VkVideoEncodeCapabilitiesKHR::flags includes VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR, then the width and height members of maxQuantizationMapExtent **must** be greater than zero.

7

If VkVideoEncodeCapabilitiesKHR::flags includes VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR, then maxQIndexDelta **must** be greater than minQIndexDelta.

8

If the videoMaintenance2 feature is supported.

9

If VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes is not zero.

10

If the videoEncodeFeedback2 feature is supported.

11

If maxPerPartitionFeedbackEntries is greater than zero.

Chapter 50. Optical Flow

50.1. Optical Flow Queues

VK_NV_optical_flow adds an optical flow queue type bit VK_QUEUE_OPTICAL_FLOW_BIT_NV to VkQueueFlagBits. Optical flow operations are supported by queues with an advertised queue capability of VK_QUEUE_OPTICAL_FLOW_BIT_NV. As in the case of other queue types, an application **must** use vkGetPhysicalDeviceQueueFamilyProperties to query whether the physical device has support for the Optical Flow Queue. When the implementation reports the VK_QUEUE_OPTICAL_FLOW_BIT_NV bit for a queue family, it advertises general support for Vulkan queue operations described in Devices and Queues.

50.2. Optical Flow Image Formats

To enumerate the supported image formats for a specific optical flow usage, call:

```
// Provided by VK_NV_optical_flow
VkResult vkGetPhysicalDeviceOpticalFlowImageFormatsNV(
    VkPhysicalDevice                            physicalDevice,
    const VkOpticalFlowImageFormatInfoNV*       pOpticalFlowImageFormatInfo,
    uint32_t*                                   pFormatCount,
    VkOpticalFlowImageFormatPropertiesNV*       pImageFormatProperties);
```

- physicalDevice is the physical device being queried.
- pOpticalFlowImageFormatInfo is a pointer to a VkOpticalFlowImageFormatInfoNV structure specifying the optical flow usage for which information is returned.
- pFormatCount is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- pImageFormatProperties is a pointer to an array of VkOpticalFlowImageFormatPropertiesNV structures in which supported formats and image parameters are returned.

If pImageFormatProperties is NULL, then the number of optical flow properties supported for the given physicalDevice is returned in pFormatCount. Otherwise, pFormatCount **must** point to a variable set by the application to the number of elements in the pImageFormatProperties array, and on return the variable is overwritten with the number of values actually written to pImageFormatProperties. If the value of pFormatCount is less than the number of optical flow properties supported, at most pFormatCount values will be written to pImageFormatProperties, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned.

Before creating an image to be used as an optical flow frame, obtain the supported image creation parameters by querying with vkGetPhysicalDeviceFormatProperties2 and vkGetPhysicalDeviceImageFormatProperties2 using one of the reported formats and adding VkOpticalFlowImageFormatInfoNV to the pNext chain of VkPhysicalDeviceImageFormatInfo2.

When querying the parameters with vkGetPhysicalDeviceImageFormatProperties2 for images used

for optical flow operations, the VkOpticalFlowImageFormatInfoNV::usage field **must** contain one or more of the bits defined in VkOpticalFlowUsageFlagBitsNV.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pOpticalFlowImageFormatInfo-parameter
  pOpticalFlowImageFormatInfo **must** be a valid pointer to a valid VkOpticalFlowImageFormatInfoNV structure
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pFormatCount-parameter
  pFormatCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-pImageFormatProperties-parameter
  If the value referenced by pFormatCount is not 0, and pImageFormatProperties is not NULL, pImageFormatProperties **must** be a valid pointer to an array of pFormatCount VkOpticalFlowImageFormatPropertiesNV structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_EXTENSION_NOT_PRESENT
- VK_ERROR_FORMAT_NOT_SUPPORTED
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

NOTE

VK_FORMAT_B8G8R8A8_UNORM, VK_FORMAT_R8_UNORM and VK_FORMAT_G8_B8R8_2PLANE_420_UNORM are initially supported for images with optical flow usage VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV.

VK_FORMAT_R16G16_SFIXED5_NV is initially supported for images with optical flow usage VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV, VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV and VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV.

VK_FORMAT_R8_UINT and VK_FORMAT_R32_UINT are initially supported for images with optical flow usage VK_OPTICAL_FLOW_USAGE_COST_BIT_NV. It is

> recommended to use VK_FORMAT_R8_UINT because of the lower bandwidth.

The VkOpticalFlowImageFormatInfoNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatInfoNV {
    VkStructureType              sType;
    const void*                  pNext;
    VkOpticalFlowUsageFlagsNV    usage;
} VkOpticalFlowImageFormatInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of VkOpticalFlowUsageFlagBitsNV describing the intended optical flow usage of the image.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_INFO_NV
- VUID-VkOpticalFlowImageFormatInfoNV-usage-parameter
  `usage` **must** be a valid combination of VkOpticalFlowUsageFlagBitsNV values

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2

Bits which **can** be set in VkOpticalFlowImageFormatInfoNV::`usage`, controlling optical flow usage, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowUsageFlagBitsNV {
    VK_OPTICAL_FLOW_USAGE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_USAGE_COST_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV = 0x00000010,
} VkOpticalFlowUsageFlagBitsNV;
```

- VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV specifies that the image **can** be used as input or

reference frame for an optical flow operation.

- VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV specifies that the image **can** be used as output flow vector map for an optical flow operation.
- VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV specifies that the image **can** be used as hint flow vector map for an optical flow operation.
- VK_OPTICAL_FLOW_USAGE_COST_BIT_NV specifies that the image **can** be used as output cost map for an optical flow operation.
- VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV specifies that the image **can** be used as global flow vector for an optical flow operation.

```
// Provided by VK_NV_optical_flow
typedef VkFlags   VkOpticalFlowUsageFlagsNV;
```

VkOpticalFlowUsageFlagsNV is a bitmask type for setting a mask of zero or more VkOpticalFlowUsageFlagBitsNV.

The VkOpticalFlowImageFormatPropertiesNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkFormat           format;
} VkOpticalFlowImageFormatPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- format is a VkFormat that specifies the format that can be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatPropertiesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_NV
- VUID-VkOpticalFlowImageFormatPropertiesNV-pNext-pNext
  pNext **must** be NULL

50.3. Optical Flow Session

50.3.1. Optical Flow Session Object

Optical flow session objects are abstracted and represented by VkOpticalFlowSessionNV handles:

```
// Provided by VK_NV_optical_flow
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkOpticalFlowSessionNV)
```

Creating an Optical Flow Session

To create an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkCreateOpticalFlowSessionNV(
    VkDevice                                    device,
    const VkOpticalFlowSessionCreateInfoNV*     pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkOpticalFlowSessionNV*                     pSession);
```

- `device` is the logical device that creates the optical flow session object.
- `pCreateInfo` is a pointer to a VkOpticalFlowSessionCreateInfoNV structure containing parameters specifying the creation of the optical flow session.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pSession` is a pointer to a VkOpticalFlowSessionNV handle specifying the optical flow session object which will be created by this function when it returns VK_SUCCESS.

Valid Usage (Implicit)

- VUID-vkCreateOpticalFlowSessionNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateOpticalFlowSessionNV-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkOpticalFlowSessionCreateInfoNV structure
- VUID-vkCreateOpticalFlowSessionNV-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateOpticalFlowSessionNV-pSession-parameter
  `pSession` **must** be a valid pointer to a VkOpticalFlowSessionNV handle
- VUID-vkCreateOpticalFlowSessionNV-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkOpticalFlowSessionCreateInfoNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreateInfoNV {
    VkStructureType                       sType;
    void*                                 pNext;
    uint32_t                              width;
    uint32_t                              height;
    VkFormat                              imageFormat;
    VkFormat                              flowVectorFormat;
    VkFormat                              costFormat;
    VkOpticalFlowGridSizeFlagsNV          outputGridSize;
    VkOpticalFlowGridSizeFlagsNV          hintGridSize;
    VkOpticalFlowPerformanceLevelNV       performanceLevel;
    VkOpticalFlowSessionCreateFlagsNV     flags;
} VkOpticalFlowSessionCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- width is the width in pixels of the input or reference frame to be bound to this optical flow session.
- height is the height in pixels of the input or reference frame to be bound to this optical flow session.
- imageFormat is the VkFormat of the input and reference frame to be bound to this optical flow session.
- flowVectorFormat is the VkFormat of the flow vector maps (output or hint) to be bound to this optical flow session.
- costFormat is the VkFormat of the cost maps to be bound to this optical flow session.
- outputGridSize is exactly one bit of VkOpticalFlowGridSizeFlagsNV specifying the grid size of the output flow and cost maps to be bound to this optical flow session. The size of the output flow and cost maps is determined by VkOpticalFlowSessionCreateInfoNV::width and VkOpticalFlowSessionCreateInfoNV::height divided by VkOpticalFlowSessionCreateInfoNV::outputGridSize.
- hintGridSize is exactly one bit of VkOpticalFlowGridSizeFlagsNV specifying the grid size of the hint flow vector maps to be bound to this optical flow session. The size of the hint maps is determined by VkOpticalFlowSessionCreateInfoNV::width and VkOpticalFlowSessionCreateInfoNV::height divided by VkOpticalFlowSessionCreateInfoNV::hintGridSize.

- `performanceLevel` is the VkOpticalFlowPerformanceLevelNV used for this optical flow session.
- `flags` are the VkOpticalFlowSessionCreateFlagsNV used for this optical flow session.

Valid Usage

- VUID-VkOpticalFlowSessionCreateInfoNV-width-07581
  `width` **must** be greater than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV`::`minWidth` and less than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV`::`maxWidth`
- VUID-VkOpticalFlowSessionCreateInfoNV-height-07582
  `height` **must** be greater than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV`::`minHeight` and less than or equal to `VkPhysicalDeviceOpticalFlowPropertiesNV`::`maxHeight`
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-07583
  `imageFormat` **must** be one of the formats returned by vkGetPhysicalDeviceOpticalFlowImageFormatsNV for VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-07584
  `flowVectorFormat` **must** be one of the formats returned by vkGetPhysicalDeviceOpticalFlowImageFormatsNV for VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-07585
  `costFormat` **must** be one of the formats returned by vkGetPhysicalDeviceOpticalFlowImageFormatsNV for VK_OPTICAL_FLOW_USAGE_COST_BIT_NV if VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV is set in `flags`
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-07586
  `outputGridSize` **must** be exactly one of the bits reported in `VkPhysicalDeviceOpticalFlowPropertiesNV`::`supportedOutputGridSizes`
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-07587
  `hintGridSize` **must** be exactly one of the bits reported in `VkPhysicalDeviceOpticalFlowPropertiesNV`::`supportedHintGridSizes` if VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV is set in `flags`
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07588
  VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV **must** not be set in `flags` if `VkPhysicalDeviceOpticalFlowPropertiesNV`::`hintSupported` is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07589
  VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV **must** not be set in `flags` if `VkPhysicalDeviceOpticalFlowPropertiesNV`::`costSupported` is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07590
  VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV **must** not be set in `flags` if `VkPhysicalDeviceOpticalFlowPropertiesNV`::`globalFlowSupported` is VK_FALSE
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07591
  VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV **must** not be set in `flags` if `VkPhysicalDeviceOpticalFlowPropertiesNV`::`maxNumRegionsOfInterest` is 0

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07592
  VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV **must** not be set in flags if VkPhysicalDeviceOpticalFlowPropertiesNV::bidirectionalFlowSupported is VK_FALSE

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV
- VUID-VkOpticalFlowSessionCreateInfoNV-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkOpticalFlowSessionCreatePrivateDataInfoNV
- VUID-VkOpticalFlowSessionCreateInfoNV-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-parameter
  imageFormat **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-parameter
  flowVectorFormat **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-parameter
  If costFormat is not 0, costFormat **must** be a valid VkFormat value
- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-parameter
  outputGridSize **must** be a valid combination of VkOpticalFlowGridSizeFlagBitsNV values
- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-parameter
  If hintGridSize is not 0, hintGridSize **must** be a valid combination of VkOpticalFlowGridSizeFlagBitsNV values
- VUID-VkOpticalFlowSessionCreateInfoNV-performanceLevel-parameter
  If performanceLevel is not 0, performanceLevel **must** be a valid VkOpticalFlowPerformanceLevelNV value
- VUID-VkOpticalFlowSessionCreateInfoNV-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkOpticalFlowSessionCreateFlagBitsNV values

The VkOpticalFlowSessionCreatePrivateDataInfoNV structure is for NV internal use only and is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreatePrivateDataInfoNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           id;
    uint32_t           size;
    const void*        pPrivateData;
} VkOpticalFlowSessionCreatePrivateDataInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `id` is an identifier for data which is passed at a memory location specified in `VkOpticalFlowSessionCreatePrivateDataInfoNV`::`pPrivateData`.
- `size` is the size of data in bytes which is passed at a memory location specified in `VkOpticalFlowSessionCreatePrivateDataInfoNV`::`pPrivateData`.
- `pPrivateData` is a pointer to NV internal data.

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_PRIVATE_DATA_INFO_NV
- VUID-VkOpticalFlowSessionCreatePrivateDataInfoNV-pPrivateData-parameter
  `pPrivateData` **must** be a pointer value

Structure Chaining

Extends the structure

- VkOpticalFlowSessionCreateInfoNV

Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid).

Bits which **can** be set in VkOpticalFlowSessionCreateInfoNV::`outputGridSize` and VkOpticalFlowSessionCreateInfoNV::`hintGridSize`, or which are returned in VkPhysicalDeviceOpticalFlowPropertiesNV::`supportedOutputGridSizes` and VkPhysicalDeviceOpticalFlowPropertiesNV::`supportedHintGridSizes` controlling optical flow grid sizes, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowGridSizeFlagBitsNV {
    VK_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV = 0x00000008,
} VkOpticalFlowGridSizeFlagBitsNV;
```

- VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV specifies that grid is 1x1 pixel.
- VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV specifies that grid is 2x2 pixel.
- VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV specifies that grid is 4x4 pixel.

- VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV specifies that grid is 8x8 pixel.

```
// Provided by VK_NV_optical_flow
typedef VkFlags    VkOpticalFlowGridSizeFlagsNV;
```

VkOpticalFlowGridSizeFlagsNV is a bitmask type for setting a mask of zero or more VkOpticalFlowGridSizeFlagBitsNV.

Optical flow exposes performance levels which the application **can** choose based on the desired performance and quality requirement.

The optical flow performance level types are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowPerformanceLevelNV {
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV = 1,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV = 2,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV = 3,
} VkOpticalFlowPerformanceLevelNV;
```

- VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV is a level with slower performance but higher quality.
- VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV is a level with medium performance and medium quality.
- VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV is a preset with higher performance but lower quality.

Bits which **can** be set in VkOpticalFlowSessionCreateInfoNV::flags, controlling optical flow session operations, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionCreateFlagBitsNV {
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV = 0x00000010,
} VkOpticalFlowSessionCreateFlagBitsNV;
```

- VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV specifies that a VkImageView with external flow vectors will be used as hints in performing the motion search and **must** be bound to VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV.
- VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV specifies that the cost for the forward flow is generated in a VkImageView which **must** be bound to VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV. Additionally, if

VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV is also set, the cost for backward flow is generated in a VkImageView which **must** be bound to VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV. The cost is the confidence level of the flow vector for each grid in the frame. The cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.

- VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV specifies that a global flow vector is estimated from forward flow in a single pixel VkImageView which **must** be bound to VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV.
- VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV specifies that regions of interest **can** be specified in VkOpticalFlowExecuteInfoNV.
- VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV specifies that backward flow is generated in addition to forward flow which is always generated.

VkOpticalFlowSessionCreateFlagsNV is a bitmask type for setting a mask of zero or more VkOpticalFlowSessionCreateFlagBitsNV.

```
// Provided by VK_NV_optical_flow
typedef VkFlags   VkOpticalFlowSessionCreateFlagsNV;
```

Destroying an Optical Flow Session

To destroy an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
void vkDestroyOpticalFlowSessionNV(
    VkDevice                                    device,
    VkOpticalFlowSessionNV                      session,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the device that was used for the creation of the optical flow session.
- session is the optical flow session to be destroyed.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage (Implicit)

- VUID-vkDestroyOpticalFlowSessionNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkDestroyOpticalFlowSessionNV-session-parameter
  session **must** be a valid VkOpticalFlowSessionNV handle
- VUID-vkDestroyOpticalFlowSessionNV-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyOpticalFlowSessionNV-session-parent

session **must** have been created, allocated, or retrieved from device

50.3.2. Binding Vulkan Image Views to an Optical Flow Session

To bind a Vulkan image to an optical flow session object, call:

```
// Provided by VK_NV_optical_flow
VkResult vkBindOpticalFlowSessionImageNV(
    VkDevice                                    device,
    VkOpticalFlowSessionNV                      session,
    VkOpticalFlowSessionBindingPointNV          bindingPoint,
    VkImageView                                 view,
    VkImageLayout                               layout);
```

- device is the device which owns the optical flow session object session.
- session is the optical flow session object to which the image view is to be bound.
- bindingPoint specifies the binding point VkOpticalFlowSessionBindingPointNV to which the image view is bound.
- view is a VkImageView to be bound.
- layout **must** specify the layout that the image subresources accessible from view will be in at the time the optical flow vectors are calculated with vkCmdOpticalFlowExecuteNV on a VkDevice.

Valid Usage (Implicit)

- VUID-vkBindOpticalFlowSessionImageNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkBindOpticalFlowSessionImageNV-session-parameter
  session **must** be a valid VkOpticalFlowSessionNV handle
- VUID-vkBindOpticalFlowSessionImageNV-bindingPoint-parameter
  bindingPoint **must** be a valid VkOpticalFlowSessionBindingPointNV value
- VUID-vkBindOpticalFlowSessionImageNV-view-parameter
  If view is not VK_NULL_HANDLE, view **must** be a valid VkImageView handle
- VUID-vkBindOpticalFlowSessionImageNV-layout-parameter
  layout **must** be a valid VkImageLayout value
- VUID-vkBindOpticalFlowSessionImageNV-session-parent
  session **must** have been created, allocated, or retrieved from device
- VUID-vkBindOpticalFlowSessionImageNV-view-parent
  If view is a valid handle, it **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The optical flow session binding points are defined with the following:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionBindingPointNV {
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV = 1,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV = 2,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV = 3,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV = 4,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV = 5,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV = 6,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV = 7,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV = 8,
} VkOpticalFlowSessionBindingPointNV;
```

- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV specifies the binding point for the input frame.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV specifies the binding point for the input reference frame.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV specifies the binding point for the optional external hint flow vectors.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV specifies the binding point for output flow vectors of default forward flow calculation.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV specifies the binding point for the optional output flow vector map of optional backward flow calculation.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV specifies the binding point for the optional output cost map of default forward flow calculation.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV specifies the binding point for the optional output cost map of optional backward flow calculation.
- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV specifies the binding point for the optional global flow value of default forward flow calculation.

50.3.3. Optical Flow Execution

Default direction of flow estimation is forward which calculates the optical flow from input frame to reference frame. Optionally backward flow estimation can be additionally calculated. An output flow vector (Vx, Vy) means that current pixel (x, y) of input frame can be found at location (x+Vx, y+Vy) in reference frame. A backward flow vector (Vx, Vy) means that current pixel (x, y) of reference frame can be found at location (x+Vx, y+Vy) in input frame.

To calculate optical flow vectors from two input frames, call:

```
// Provided by VK_NV_optical_flow
void vkCmdOpticalFlowExecuteNV(
    VkCommandBuffer                             commandBuffer,
    VkOpticalFlowSessionNV                      session,
    const VkOpticalFlowExecuteInfoNV*           pExecuteInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `session` is the optical flow session object on which this command is operating.
- `pExecuteInfo` is a pointer to a VkOpticalFlowExecuteInfoNV structure.

Valid Usage (Implicit)

- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdOpticalFlowExecuteNV-session-parameter
  `session` **must** be a valid VkOpticalFlowSessionNV handle
- VUID-vkCmdOpticalFlowExecuteNV-pExecuteInfo-parameter
  `pExecuteInfo` **must** be a valid pointer to a valid VkOpticalFlowExecuteInfoNV structure
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_OPTICAL_FLOW_BIT_NV operations
- VUID-vkCmdOpticalFlowExecuteNV-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdOpticalFlowExecuteNV-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdOpticalFlowExecuteNV-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdOpticalFlowExecuteNV-commonparent
  Both of `commandBuffer`, and `session` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_OPTICAL_FLOW_BIT_NV	Action

Conditional Rendering

vkCmdOpticalFlowExecuteNV is not affected by conditional rendering

The VkOpticalFlowExecuteInfoNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowExecuteInfoNV {
    VkStructureType                sType;
    void*                          pNext;
    VkOpticalFlowExecuteFlagsNV    flags;
    uint32_t                       regionCount;
    const VkRect2D*                pRegions;
} VkOpticalFlowExecuteInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags are the VkOpticalFlowExecuteFlagsNV used for this command.
- regionCount is the number of regions of interest specified in pRegions.
- pRegions is a pointer to regionCount VkRect2D regions of interest.

Valid Usage

- VUID-VkOpticalFlowExecuteInfoNV-regionCount-07593 regionCount **must** be 0 if VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV was not set for VkOpticalFlowSessionNV on which this command is operating

Valid Usage (Implicit)

- VUID-VkOpticalFlowExecuteInfoNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OPTICAL_FLOW_EXECUTE_INFO_NV
- VUID-VkOpticalFlowExecuteInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkOpticalFlowExecuteInfoNV-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkOpticalFlowExecuteFlagBitsNV values
- VUID-VkOpticalFlowExecuteInfoNV-pRegions-parameter
  If `regionCount` is not `0`, `pRegions` **must** be a valid pointer to an array of `regionCount` VkRect2D structures

Bits which **can** be set in VkOpticalFlowExecuteInfoNV::`flags`, controlling optical flow execution, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowExecuteFlagBitsNV {
    VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV = 0x00000001,
} VkOpticalFlowExecuteFlagBitsNV;
```

- VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV specifies that temporal hints from previously generated flow vectors are not used. If temporal hints are enabled, optical flow vectors from previous vkCmdOpticalFlowExecuteNV call are automatically used as hints for the current vkCmdOpticalFlowExecuteNV call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive frame pairs).

`VkOpticalFlowExecuteFlagsNV` is a bitmask type for setting a mask of zero or more VkOpticalFlowExecuteFlagBitsNV.

```
// Provided by VK_NV_optical_flow
typedef VkFlags   VkOpticalFlowExecuteFlagsNV;
```

Chapter 51. Execution Graphs

Execution graphs provide a way for applications to dispatch multiple operations dynamically from a single initial command on the host. To achieve this, a new execution graph pipeline is provided, that links together multiple shaders or pipelines which each describe one or more operations that can be dispatched within the execution graph. Each linked pipeline or shader describes an *execution node* within the graph, which **can** be dispatched dynamically from another shader within the same graph. This allows applications to describe much richer execution topologies at a finer granularity than would typically be possible with API commands alone.

51.1. Pipeline Creation

To create execution graph pipelines, call:

```
// Provided by VK_AMDX_shader_enqueue
VkResult vkCreateExecutionGraphPipelinesAMDX(
    VkDevice                                    device,
    VkPipelineCache                             pipelineCache,
    uint32_t                                    createInfoCount,
    const VkExecutionGraphPipelineCreateInfoAMDX* pCreateInfos,
    const VkAllocationCallbacks*                pAllocator,
    VkPipeline*                                 pPipelines);
```

- `device` is the logical device that creates the execution graph pipelines.
- `pipelineCache` is either VK_NULL_HANDLE, indicating that pipeline caching is disabled; or the handle of a valid pipeline cache object, in which case use of that cache is enabled for the duration of the command. The implementation **must** not access this object outside of the duration of this command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of VkExecutionGraphPipelineCreateInfoAMDX structures.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pPipelines` is a pointer to an array of VkPipeline handles in which the resulting execution graph pipeline objects are returned.

Pipelines are created and returned as described for Multiple Pipeline Creation.

Valid Usage

- VUID-vkCreateExecutionGraphPipelinesAMDX-shaderEnqueue-09124
  The `shaderEnqueue` feature **must** be enabled
- VUID-vkCreateExecutionGraphPipelinesAMDX-flags-09125
  If the `flags` member of any element of `pCreateInfos` contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and the `basePipelineIndex` member of that same element is not `-1`, `basePipelineIndex` **must** be less than the index into `pCreateInfos`

that corresponds to that element

- VUID-vkCreateExecutionGraphPipelinesAMDX-flags-09126
  If the `flags` member of any element of `pCreateInfos` contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, the base pipeline **must** have been created with the VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT flag set
- VUID-vkCreateExecutionGraphPipelinesAMDX-pipelineCache-09127
  If `pipelineCache` was created with VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT, host access to `pipelineCache` **must** be externally synchronized
- VUID-vkCreateExecutionGraphPipelinesAMDX-pNext-09616
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, `pipelineCache` **must** be VK_NULL_HANDLE
- VUID-vkCreateExecutionGraphPipelinesAMDX-pNext-09617
  If a VkPipelineCreateFlags2CreateInfoKHR structure with the VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR flag set is included in the `pNext` chain of any element of `pCreateInfos`, `pipelineCache` **must** be VK_NULL_HANDLE
- VUID-vkCreateExecutionGraphPipelinesAMDX-binaryCount-09620
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT **must** not be set in the `flags` of that element
- VUID-vkCreateExecutionGraphPipelinesAMDX-binaryCount-09621
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT **must** not be set in the `flags` of that element
- VUID-vkCreateExecutionGraphPipelinesAMDX-binaryCount-09622
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT **must** not be set in the `flags` of that element
- VUID-vkCreateExecutionGraphPipelinesAMDX-pCreateInfos-11414
  If any element of `pCreateInfos` sets VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT and includes embedded sampler mappings, there **must** be less than (`maxSamplerAllocationCount` - (`minSamplerHeapReservedRangeWithEmbedded` / `samplerDescriptorSize`)) VkSampler objects currently created on the device
- VUID-vkCreateExecutionGraphPipelinesAMDX-pCreateInfos-11429
  If any element of `pCreateInfos` sets VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed `maxDescriptorHeapEmbeddedSamplers`

Valid Usage (Implicit)

- VUID-vkCreateExecutionGraphPipelinesAMDX-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkCreateExecutionGraphPipelinesAMDX-pipelineCache-parameter
  If `pipelineCache` is not VK_NULL_HANDLE, `pipelineCache` **must** be a valid VkPipelineCache handle
- VUID-vkCreateExecutionGraphPipelinesAMDX-pCreateInfos-parameter
  `pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid VkExecutionGraphPipelineCreateInfoAMDX structures
- VUID-vkCreateExecutionGraphPipelinesAMDX-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateExecutionGraphPipelinesAMDX-pPipelines-parameter
  `pPipelines` **must** be a valid pointer to an array of `createInfoCount` VkPipeline handles
- VUID-vkCreateExecutionGraphPipelinesAMDX-createInfoCount-arraylength
  `createInfoCount` **must** be greater than `0`
- VUID-vkCreateExecutionGraphPipelinesAMDX-pipelineCache-parent
  If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_PIPELINE_COMPILE_REQUIRED_EXT
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkExecutionGraphPipelineCreateInfoAMDX` structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkExecutionGraphPipelineCreateInfoAMDX {
    VkStructureType                             sType;
    const void*                                 pNext;
    VkPipelineCreateFlags                       flags;
    uint32_t                                    stageCount;
    const VkPipelineShaderStageCreateInfo*      pStages;
    const VkPipelineLibraryCreateInfoKHR*       pLibraryInfo;
    VkPipelineLayout                            layout;
    VkPipeline                                  basePipelineHandle;
    int32_t                                     basePipelineIndex;
} VkExecutionGraphPipelineCreateInfoAMDX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineCreateFlagBits specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `stageCount` VkPipelineShaderStageCreateInfo structures describing the set of the shader stages to be included in the execution graph pipeline.
- `pLibraryInfo` is a pointer to a VkPipelineLibraryCreateInfoKHR structure defining pipeline libraries to include.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in Pipeline Derivatives.

Each shader stage provided when creating an execution graph pipeline (including those in libraries) is associated with a name and an index, determined by the inclusion or omission of a VkPipelineShaderStageNodeCreateInfoAMDX structure in its `pNext` chain. For any graphics pipeline libraries, only the name and index of the vertex or mesh shader stage is linked directly to the graph as a node - other shader stages in the pipeline will be executed after those shader stages as normal. Task shaders cannot be included in a graphics pipeline used for a draw node.

In addition to the shader name and index, an internal “node index” is also generated for each node, which can be queried with vkGetExecutionGraphPipelineNodeIndexAMDX, and is used exclusively for initial dispatch of an execution graph.

Valid Usage

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09497

If the pNext chain does not include a VkPipelineCreateFlags2CreateInfo structure, flags **must** be a valid combination of VkPipelineCreateFlagBits values

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07984
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and basePipelineIndex is -1, basePipelineHandle **must** be a valid execution graph VkPipeline handle
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07985
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and basePipelineHandle is VK_NULL_HANDLE, basePipelineIndex **must** be a valid index into the calling command's pCreateInfos parameter
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07986
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, basePipelineIndex **must** be -1 or basePipelineHandle **must** be VK_NULL_HANDLE
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07987
  If a push constant block is declared in a shader and layout is not VK_NULL_HANDLE, a push constant range in layout **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-10069
  If a push constant block is declared in a shader and layout is not VK_NULL_HANDLE, the block must be contained inside the push constant range in layout that matches the stage
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07988
  If a resource variable is declared in a shader and layout is not VK_NULL_HANDLE, the corresponding descriptor set in layout **must** match the shader stage
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07990
  If a resource variable is declared in a shader, layout is not VK_NULL_HANDLE, and the descriptor type is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the corresponding descriptor set in layout **must** match the descriptor type
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07991
  If a resource variable is declared in a shader as an array and layout is not VK_NULL_HANDLE, the corresponding descriptor binding used to create layout **must** have a descriptorCount that is greater than or equal to the length of the array
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-10391
  If a resource variable is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11798
  If the shader64BitIndexing feature is not enabled, flags **must** not contain VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pipelineCreationCacheControl-02878
  If the pipelineCreationCacheControl feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT nor VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pipelineProtectedAccess-07368
  If the pipelineProtectedAccess feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT nor

VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07369
  `flags` **must** not include both VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT and VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11311
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, `layout` **must** be VK_NULL_HANDLE
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11312
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all shader variables in the shader resource interface with a `DescriptorSet` and `Binding` decoration **must** have a mapping declared in VkShaderDescriptorSetAndBindingMappingInfoEXT::`pMappings`
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03365
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03366
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03367
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03368
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03369
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03370
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03576
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-04945
  `flags` **must** not include VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-09007
  If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines` feature is not enabled, `flags` **must** not include VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-09008
  If `flags` includes VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV, then the `pNext` chain **must** include a pointer to a valid instance of

VkComputePipelineIndirectBufferInfoNV specifying the address where the pipeline's metadata will be saved

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11007
  If `flags` includes VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT, then the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-stage-09128
  The `stage` member of any element of `pStages` **must** be VK_SHADER_STAGE_COMPUTE_BIT
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pStages-09129
  The shader code for the entry point identified by each element of `pStages` and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the Shader Interfaces chapter
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-09130
  If `layout` is not VK_NULL_HANDLE, it **must** be consistent with the layout of the shaders specified in `pStages`
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-09131
  If `pLibraryInfo` is not `NULL` and `layout` is not VK_NULL_HANDLE, each element of `pLibraryInfo->pLibraries` **must** have been created with a `layout` that is compatible with the `layout` in this pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-09132
  If `layout` is not VK_NULL_HANDLE, the number of resources in `layout` accessible to each shader stage that is used by the pipeline **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageResources`
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-09133
  If `pLibraryInfo` is not `NULL`, each element of `pLibraryInfo->pLibraries` **must** be either a compute pipeline, an execution graph pipeline, or a graphics pipeline
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-10181
  If `pLibraryInfo` is not `NULL`, each element of `pLibraryInfo->pLibraries` that is a compute pipeline or a graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_EXECUTION_GRAPH_BIT_AMDX set
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-shaderMeshEnqueue-10182
  If the `shaderMeshEnqueue` feature is not enabled, and `pLibraryInfo->pLibraries` is not `NULL`, `pLibraryInfo->pLibraries` **must** not contain any graphics pipelines
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-10183
  Any element of `pLibraryInfo->pLibraries` identifying a graphics pipeline **must** have been created with all possible state subsets
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09134
  There **must** be no two nodes in the pipeline that share both the same shader name and index, as specified by VkPipelineShaderStageNodeCreateInfoAMDX
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09135
  There **must** be no two nodes in the pipeline that share the same shader name and have input payload declarations with different sizes
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09136

There **must** be no two nodes in the pipeline that share the same name but have different execution models

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-CoalescedInputCountAMDX-09137
  There **must** be no two nodes in the pipeline that share the same name where one includes `CoalescedInputCountAMDX` and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-StaticNumWorkgroupsAMDX-09138
  There **must** be no two nodes in the pipeline that share the same name where one includes `StaticNumWorkgroupsAMDX` and the other does not
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-PayloadNodeNameAMDX-09139
  If an output payload declared in any shader in the pipeline has a `PayloadNodeNameAMDX` decoration with a `Node Name` that matches the shader name of any other node in the graph, the size of the output payload **must** match the size of the input payload in the matching node
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-10184
  If `flags` does not include VK_PIPELINE_CREATE_LIBRARY_BIT_KHR, and an output payload declared in any shader in the pipeline does not have a `PayloadNodeSparseArrayAMDX` decoration, there **must** be a node in the graph corresponding to every index from 0 to its `PayloadNodeArraySizeAMDX` decoration
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-12334
  `flags` **must** not include VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT nor VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11271
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-11272
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` does not include VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all libraries linked to this pipeline **must** also not have that flag set
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-11363
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` does not include VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, `layout` **must** not be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_CREATE_INFO_AMDX
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkPipelineCompilerControlCreateInfoAMD or VkPipelineCreationFeedbackCreateInfo

- VUID-VkExecutionGraphPipelineCreateInfoAMDX-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pStages-parameter
  If `stageCount` is not `0`, and `pStages` is not `NULL`, `pStages` **must** be a valid pointer to an array of `stageCount` valid VkPipelineShaderStageCreateInfo structures
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-parameter
  If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid VkPipelineLibraryCreateInfoKHR structure
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkExecutionGraphPipelineCreateInfoAMDX-commonparent
  Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Structure Chaining

Extends the structure

- VkPipelineCreateInfoKHR

VK_SHADER_INDEX_UNUSED_AMDX is a special shader index used to indicate that the created node does not override the index. In this case, the shader index is determined through other means. It is defined as:

```
#define VK_SHADER_INDEX_UNUSED_AMDX       (~0U)
```

The `VkPipelineShaderStageNodeCreateInfoAMDX` structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkPipelineShaderStageNodeCreateInfoAMDX {
      VkStructureType    sType;
    const void*          pNext;
    const char*          pName;
    uint32_t             index;
} VkPipelineShaderStageNodeCreateInfoAMDX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pName` is the shader name to use when creating a node in an execution graph. If `pName` is `NULL`, the name of the entry point specified in SPIR-V is used as the shader name.
- `index` is the shader index to use when creating a node in an execution graph. If `index` is VK_SHADER_INDEX_UNUSED_AMDX then the original index is used, either as specified by the `ShaderIndexAMDX` execution mode, or `0` if that too is not specified.

When included in the pNext chain of a VkPipelineShaderStageCreateInfo structure, this structure specifies the shader name and shader index of a node when creating an execution graph pipeline. If this structure is omitted, the shader name is set to the name of the entry point in SPIR-V and the shader index is set to 0.

When dispatching a node from another shader, the name is fixed at pipeline creation, but the index **can** be set dynamically. By associating multiple shaders with the same name but different indexes, applications can dynamically select different nodes to execute. Applications **must** ensure each node has a unique name and index.

NOTE	Shaders with the same name **must** be of the same type - e.g. a compute and graphics shader, or even two compute shaders where one is coalescing and the other is not, cannot share the same name.

Valid Usage (Implicit)

- VUID-VkPipelineShaderStageNodeCreateInfoAMDX-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_NODE_CREATE_INFO_AMDX
- VUID-VkPipelineShaderStageNodeCreateInfoAMDX-pName-parameter
  If pName is not NULL, pName **must** be a null-terminated UTF-8 string

Structure Chaining

Extends the structure

- VkPipelineShaderStageCreateInfo

To query the internal node index for a particular node in an execution graph, call:

```
// Provided by VK_AMDX_shader_enqueue
VkResult vkGetExecutionGraphPipelineNodeIndexAMDX(
    VkDevice                                    device,
    VkPipeline                                  executionGraph,
    const VkPipelineShaderStageNodeCreateInfoAMDX* pNodeInfo,
    uint32_t*                                   pNodeIndex);
```

- device is the logical device that executionGraph was created on.
- executionGraph is the execution graph pipeline to query the internal node index for.
- pNodeInfo is a pointer to a VkPipelineShaderStageNodeCreateInfoAMDX structure identifying the name and index of the node to query.
- pNodeIndex is the returned internal node index of the identified node.

Once this function returns, the contents of pNodeIndex contain the internal node index of the identified node.

Valid Usage

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-09140
  `pNodeInfo->pName` **must** not be `NULL`
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-09141
  `pNodeInfo->index` **must** not be VK_SHADER_INDEX_UNUSED_AMDX
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-09142
  There **must** be a node in `executionGraph` with a shader name and index equal to `pNodeInfo->pName` and `pNodeInfo->index`

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-parameter
  `executionGraph` **must** be a valid VkPipeline handle
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-parameter
  `pNodeInfo` **must** be a valid pointer to a valid VkPipelineShaderStageNodeCreateInfoAMDX structure
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeIndex-parameter
  `pNodeIndex` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-parent
  `executionGraph` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

51.2. Initializing Scratch Memory

Implementations **may** need scratch memory to manage dispatch queues or similar when executing a pipeline graph, and this is explicitly managed by the application.

To query the scratch space required to dispatch an execution graph, call:

```
// Provided by VK_AMDX_shader_enqueue
VkResult vkGetExecutionGraphPipelineScratchSizeAMDX(
    VkDevice                                    device,
    VkPipeline                                  executionGraph,
    VkExecutionGraphPipelineScratchSizeAMDX*    pSizeInfo);
```

- `device` is the logical device that `executionGraph` was created on.
- `executionGraph` is the execution graph pipeline to query the scratch space for.
- `pSizeInfo` is a pointer to a VkExecutionGraphPipelineScratchSizeAMDX structure that will contain the required scratch size.

After this function returns, information about the scratch space required will be returned in `pSizeInfo`.

Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-executionGraph-parameter
  `executionGraph` **must** be a valid VkPipeline handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-pSizeInfo-parameter
  `pSizeInfo` **must** be a valid pointer to a VkExecutionGraphPipelineScratchSizeAMDX structure
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-executionGraph-parent
  `executionGraph` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkExecutionGraphPipelineScratchSizeAMDX` structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkExecutionGraphPipelineScratchSizeAMDX {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       minSize;
    VkDeviceSize       maxSize;
    VkDeviceSize       sizeGranularity;
} VkExecutionGraphPipelineScratchSizeAMDX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minSize` indicates the minimum scratch space required for dispatching the queried execution graph.
- `maxSize` indicates the maximum scratch space that can be used for dispatching the queried execution graph.
- `sizeGranularity` indicates the granularity at which the scratch space can be increased from `minSize`.

Applications **can** use any amount of scratch memory greater than `minSize` for dispatching a graph, however only the values equal to `minSize` + an integer multiple of `sizeGranularity` will be used. Greater values **may** result in higher performance, up to `maxSize` which indicates the most memory that an implementation can use effectively.

Valid Usage (Implicit)

- VUID-VkExecutionGraphPipelineScratchSizeAMDX-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_SCRATCH_SIZE_AMDX

To initialize scratch memory for a particular execution graph, call:

```
// Provided by VK_AMDX_shader_enqueue
void vkCmdInitializeGraphScratchMemoryAMDX(
    VkCommandBuffer                             commandBuffer,
    VkPipeline                                  executionGraph,
    VkDeviceAddress                             scratch,
    VkDeviceSize                                scratchSize);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `executionGraph` is the execution graph pipeline to initialize the scratch memory for.
- `scratch` is the address of scratch memory to be initialized.
- `scratchSize` is a range in bytes of scratch memory to be initialized.

This command **must** be called before using `scratch` to dispatch the bound execution graph pipeline.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

If any portion of `scratch` is modified by any command other than vkCmdDispatchGraphAMDX, vkCmdDispatchGraphIndirectAMDX, vkCmdDispatchGraphIndirectCountAMDX, or vkCmdInitializeGraphScratchMemoryAMDX with the same execution graph, it **must** be reinitialized for the execution graph again before dispatching against it.

Valid Usage

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratch-10185
  `scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratchSize-10186
  `scratchSize` **must** be greater than or equal to VkExecutionGraphPipelineScratchSizeAMDX::`minSize` returned by vkGetExecutionGraphPipelineScratchSizeAMDX for the bound execution graph pipeline
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratch-09144
  `scratch` **must** be a multiple of 64

Valid Usage (Implicit)

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-executionGraph-parameter
  `executionGraph` **must** be a valid VkPipeline handle
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratch-parameter
  `scratch` **must** be a valid VkDeviceAddress value
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdInitializeGraphScratchMemoryAMDX-bufferlevel

commandBuffer **must** be a primary VkCommandBuffer

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commonparent
  Both of commandBuffer, and executionGraph **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdInitializeGraphScratchMemoryAMDX is not affected by conditional rendering

51.3. Dispatching a Graph

Initial dispatch of an execution graph is done from the host in the same way as any other command, and **can** be used in a similar way to compute dispatch commands, with indirect variants available.

To record an execution graph dispatch, call:

```
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphAMDX(
    VkCommandBuffer                             commandBuffer,
    VkDeviceAddress                             scratch,
    VkDeviceSize                                scratchSize,
    const VkDispatchGraphCountInfoAMDX*         pCountInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- scratch is the address of scratch memory to be used.
- scratchSize is a range in bytes of scratch memory to be used.

- `pCountInfo` is a host pointer to a VkDispatchGraphCountInfoAMDX structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as host pointers and read only during host execution of this command. Once this command returns, no reference to the original pointers is retained.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

This command captures command buffer state for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphAMDX-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphAMDX-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdDispatchGraphAMDX-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphAMDX-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphAMDX-None-08116

Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDispatchGraphAMDX-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphAMDX-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphAMDX-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphAMDX-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchGraphAMDX-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphAMDX-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchGraphAMDX-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatchGraphAMDX-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be

VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D

- VUID-vkCmdDispatchGraphAMDX-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDispatchGraphAMDX-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that include a LOD bias or any offset values
- VUID-vkCmdDispatchGraphAMDX-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchGraphAMDX-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchGraphAMDX-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDispatchGraphAMDX-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatchGraphAMDX-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchGraphAMDX-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchGraphAMDX-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchGraphAMDX-cubicRangeClamp-09212

If the cubicRangeClamp feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM

- VUID-vkCmdDispatchGraphAMDX-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdDispatchGraphAMDX-selectableCubicWeights-09214
  If the selectableCubicWeights feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdDispatchGraphAMDX-flags-02696
  Any VkImage created with a VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphAMDX-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDispatchGraphAMDX-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdDispatchGraphAMDX-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchGraphAMDX-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphAMDX-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMDX-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMDX-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMDX-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphAMDX-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchGraphAMDX-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatchGraphAMDX-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed

using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDispatchGraphAMDX-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphAMDX-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphAMDX-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchGraphAMDX-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchGraphAMDX-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchGraphAMDX-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchGraphAMDX-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchGraphAMDX-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchGraphAMDX-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM

- VUID-vkCmdDispatchGraphAMDX-OpImageBoxFilterQCOM-06973
  If `OpImageBoxFilterQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchSSDQCOM-06974
  If `OpImageBlockMatchSSDQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchSADQCOM-12420
  If `OpImageBlockMatchSADQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchSADQCOM-06976
  If `OpImageBlockMatchSADQCOM` or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdDispatchGraphAMDX-OpImageSampleWeightedQCOM-06977
  If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageSampleWeightedQCOM-06978
  If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchWindow-09216
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchWindow-09217
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV`

equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation

- VUID-vkCmdDispatchGraphAMDX-OpImageBlockMatchWindow-12421
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the `blockMatchExtendedClampToEdge` feature is not enabled, the *input* sampler **must** not have been created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphAMDX-addressModeU-12422
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either `addressModeU` or `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphAMDX-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchGraphAMDX-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphAMDX-micromap-11636
  If an acceleration structure is accessed as a result of this command through an `OpRayQueryProceedKHR` operation , the `VK_EXT_opacity_micromap` extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its `pNext` chain, the shader **must** have specified a `OpacityMicromapIdKHR` execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDispatchGraphAMDX-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatchGraphAMDX-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR

- VUID-vkCmdDispatchGraphAMDX-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-10746
  The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in `commandBuffer`
- VUID-vkCmdDispatchGraphAMDX-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdDispatchGraphAMDX-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdDispatchGraphAMDX-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdDispatchGraphAMDX-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdDispatchGraphAMDX-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdDispatchGraphAMDX-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdDispatchGraphAMDX-pNext-12463

If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the pNext chain of VkTensorCreateInfoARM, then the number of elements accessed with one OpTensorReadARM or OpTensorWriteARM **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as wraps[dimensionCount - 1] - InnermostCoordinate % wraps[dimensionCount - 1] where InnermostCoordinate is the last component of the coordinates array provided via the Coordinates operand

- VUID-vkCmdDispatchGraphAMDX-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchGraphAMDX-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdDispatchGraphAMDX-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdDispatchGraphAMDX-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdDispatchGraphAMDX-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource

heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdDispatchGraphAMDX-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchGraphAMDX-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphAMDX-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchGraphAMDX-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchGraphAMDX-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphAMDX-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchGraphAMDX-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchGraphAMDX-None-11309

If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands

- VUID-vkCmdDispatchGraphAMDX-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphAMDX-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphAMDX-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphAMDX-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchGraphAMDX-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatchGraphAMDX-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDispatchGraphAMDX-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphAMDX-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphAMDX-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdDispatchGraphAMDX-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphAMDX-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDispatchGraphAMDX-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdDispatchGraphAMDX-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatchGraphAMDX-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchGraphAMDX-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-09181
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-09182
  `commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphAMDX-scratch-10192
  `scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdDispatchGraphAMDX-scratchSize-10193
  `scratchSize` **must** be greater than or equal to VkExecutionGraphPipelineScratchSizeAMDX::`minSize` returned by

vkGetExecutionGraphPipelineScratchSizeAMDX for the bound execution graph pipeline

- VUID-vkCmdDispatchGraphAMDX-scratch-09184
  `scratch` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDX or VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDX usage flags set
- VUID-vkCmdDispatchGraphAMDX-scratch-10194
  The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with vkCmdInitializeGraphScratchMemoryAMDX using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphAMDX-maxComputeWorkGroupCount-09186
  Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMDX` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphAMDX-maxExecutionGraphShaderPayloadCount-09187
  Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphAMDX-NodeMaxPayloadsAMDX-09188
  Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMDX` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMDX` decoration separately
- VUID-vkCmdDispatchGraphAMDX-None-10195
  If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09145
  `pCountInfo->infos` **must** be a host pointer to a memory allocation at least as large as the product of `count` and `stride`
- VUID-vkCmdDispatchGraphAMDX-infos-09146
  Host memory locations at indexes in the range [`infos`, `infos` + (`count`*`stride`)), at a granularity of `stride` **must** contain valid VkDispatchGraphInfoAMDX structures in the first 24 bytes
- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09147
  For each VkDispatchGraphInfoAMDX structure in `pCountInfo->infos`, `payloads` **must** be a host pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride`
- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09148
  For each VkDispatchGraphInfoAMDX structure in `pCountInfo->infos`, `nodeIndex` **must** be a valid node index in the bound execution graph pipeline, as returned by vkGetExecutionGraphPipelineNodeIndexAMDX
- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09149
  For each VkDispatchGraphInfoAMDX structure in `pCountInfo->infos`, host memory locations at indexes in the range [`payloads`, `payloads` + (`payloadCount` * `payloadStride`)), at a

granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphAMDX-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchGraphAMDX-scratch-parameter
  `scratch` **must** be a valid VkDeviceAddress value
- VUID-vkCmdDispatchGraphAMDX-pCountInfo-parameter
  `pCountInfo` **must** be a valid pointer to a valid VkDispatchGraphCountInfoAMDX structure
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDispatchGraphAMDX-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDispatchGraphAMDX-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchGraphAMDX-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphAMDX-bufferlevel
  `commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDispatchGraphAMDX is affected by conditional rendering

To record an execution graph dispatch with node and payload parameters read on device, call:

```
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphIndirectAMDX(
    VkCommandBuffer                             commandBuffer,
    VkDeviceAddress                             scratch,
    VkDeviceSize                                scratchSize,
    const VkDispatchGraphCountInfoAMDX*         pCountInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `pCountInfo` is a host pointer to a VkDispatchGraphCountInfoAMDX structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched. There are no rasterization order guarantees between separately dispatched graphics nodes, though individual primitives within a single dispatch do adhere to rasterization order. Draw calls executed before or after the execution graph also execute relative to each graphics node with respect to rasterization order.

For this command, all device/host pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only need to be valid during device execution. All of these addresses will be read in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

This command captures command buffer state for mesh nodes similarly to draw commands.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectAMDX-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdDispatchGraphIndirectAMDX-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectAMDX-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdDispatchGraphIndirectAMDX-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that include a LOD bias or any offset values
- VUID-vkCmdDispatchGraphIndirectAMDX-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT

- VUID-vkCmdDispatchGraphIndirectAMDX-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchGraphIndirectAMDX-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchGraphIndirectAMDX-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchGraphIndirectAMDX-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-flags-02696
  Any VkImage created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the

OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08601
  If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDispatchGraphIndirectAMDX-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectAMDX-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphIndirectAMDX-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMDX-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMDX-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either

VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchGraphIndirectAMDX-None-08613
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectAMDX-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchGraphIndirectAMDX-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphIndirectAMDX-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchGraphIndirectAMDX-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchGraphIndirectAMDX-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchGraphIndirectAMDX-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is

accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32

- VUID-vkCmdDispatchGraphIndirectAMDX-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchGraphIndirectAMDX-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageSampleWeightedQCOM-06971
  If OpImageSampleWeightedQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageSampleWeightedQCOM-06972
  If OpImageSampleWeightedQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchSADQCOM-12420
  If OpImageBlockMatchSADQCOM is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchSADQCOM-06976
  If OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageSampleWeightedQCOM-06977
  If OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM

uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM

- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageSampleWeightedQCOM-06978
  If any command other than OpImageSampleWeightedQCOM, OpImageBoxFilterQCOM, OpImageBlockMatchWindowSSDQCOM, OpImageBlockMatchWindowSADQCOM, OpImageBlockMatchGatherSSDQCOM, OpImageBlockMatchGatherSADQCOM, OpImageBlockMatchSSDQCOM, or OpImageBlockMatchSADQCOM uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09215
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09216
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09217
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectAMDX-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectAMDX-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchGraphIndirectAMDX-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectAMDX-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDispatchGraphIndirectAMDX-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatchGraphIndirectAMDX-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDispatchGraphIndirectAMDX-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-10746
  The VkDeviceMemory object allocated from a VkMemoryHeap with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in commandBuffer
- VUID-vkCmdDispatchGraphIndirectAMDX-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdDispatchGraphIndirectAMDX-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this

command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set

- VUID-vkCmdDispatchGraphIndirectAMDX-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdDispatchGraphIndirectAMDX-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to `OpTensorReadARM` or `OpTensorWriteARM` via the `Coordinates` operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array
- VUID-vkCmdDispatchGraphIndirectAMDX-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the `pNext` chain of VkTensorCreateInfoARM, then the number of elements accessed with one `OpTensorReadARM` or `OpTensorWriteARM` **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as `wraps`[`dimensionCount` - 1] - InnermostCoordinate % `wraps`[`dimensionCount` - 1] where InnermostCoordinate is the last component of the coordinates array provided via the `Coordinates` operand
- VUID-vkCmdDispatchGraphIndirectAMDX-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment

- VUID-vkCmdDispatchGraphIndirectAMDX-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeTensorARM using that mapping, the calculated offset for the resource heap **must** be a multiple of tensorDescriptorAlignment
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdDispatchGraphIndirectAMDX-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the

descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdDispatchGraphIndirectAMDX-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectAMDX-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdDispatchGraphIndirectAMDX-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDispatchGraphIndirectAMDX-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdDispatchGraphIndirectAMDX-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatchGraphIndirectAMDX-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdDispatchGraphIndirectAMDX-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-09181
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-09182
  `commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphIndirectAMDX-scratch-10192
  `scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdDispatchGraphIndirectAMDX-scratchSize-10193
  `scratchSize` **must** be greater than or equal to VkExecutionGraphPipelineScratchSizeAMDX::`minSize` returned by vkGetExecutionGraphPipelineScratchSizeAMDX for the bound execution graph pipeline
- VUID-vkCmdDispatchGraphIndirectAMDX-scratch-09184
  `scratch` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDX or VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDX usage flags set
- VUID-vkCmdDispatchGraphIndirectAMDX-scratch-10194
  The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with vkCmdInitializeGraphScratchMemoryAMDX using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectAMDX-maxComputeWorkGroupCount-09186
  Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMDX` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphIndirectAMDX-maxExecutionGraphShaderPayloadCount-09187
  Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphIndirectAMDX-NodeMaxPayloadsAMDX-09188
  Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMDX` to initialize more output payloads than specified by the max number of payloads for that

decoration. This requirement applies to each NodeMaxPayloadsAMDX decoration separately

- VUID-vkCmdDispatchGraphIndirectAMDX-None-10195
  If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09150
  pCountInfo->infos **must** be a device pointer to a memory allocation at least as large as the product of count and stride when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09151
  pCountInfo->infos **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09152
  pCountInfo->infos **must** be a multiple of executionGraphDispatchAddressAlignment
- VUID-vkCmdDispatchGraphIndirectAMDX-infos-09153
  Device memory locations at indexes in the range [infos, infos + (count*stride)), at a granularity of stride **must** contain valid VkDispatchGraphInfoAMDX structures in the first 24 bytes when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09154
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads **must** be a device pointer to a memory allocation at least as large as the product of payloadCount and payloadStride when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09155
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09156
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads **must** be a multiple of executionGraphDispatchAddressAlignment
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09157
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, nodeIndex **must** be a valid node index in the bound execution graph pipeline, as returned by vkGetExecutionGraphPipelineNodeIndexAMDX when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09158
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, device memory locations at indexes in the range [payloads, payloads + (payloadCount * payloadStride)), at a granularity of payloadStride **must** contain a payload matching the size of the input payload expected by the node in nodeIndex in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-parameter

commandBuffer **must** be a valid VkCommandBuffer handle

- VUID-vkCmdDispatchGraphIndirectAMDX-scratch-parameter
  scratch **must** be a valid VkDeviceAddress value
- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-parameter
  pCountInfo **must** be a valid pointer to a valid VkDispatchGraphCountInfoAMDX structure
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDispatchGraphIndirectAMDX-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchGraphIndirectAMDX-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectAMDX-bufferlevel
  commandBuffer **must** be a primary VkCommandBuffer

Host Synchronization

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDispatchGraphIndirectAMDX is affected by conditional rendering

To record an execution graph dispatch with all parameters read on device, call:

```
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphIndirectCountAMDX(
    VkCommandBuffer                             commandBuffer,
    VkDeviceAddress                             scratch,
    VkDeviceSize                                scratchSize,
    VkDeviceAddress                             countInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is the address of scratch memory to be used.
- `scratchSize` is a range in bytes of scratch memory to be used.
- `countInfo` is a device address of a VkDispatchGraphCountInfoAMDX structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `countInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only need to be valid during device execution. All of these addresses will be read in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT access flag.

Execution of this command **may** modify any memory locations in the range [`scratch`,`scratch` + `scratchSize`). Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

Valid Usage

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be

valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchGraphIndirectCountAMDX-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdDispatchGraphIndirectCountAMDX-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that include a LOD bias or any offset values
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchGraphIndirectCountAMDX-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDispatchGraphIndirectCountAMDX-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchGraphIndirectCountAMDX-cubicRangeClamp-09212
  If the `cubicRangeClamp` feature is not enabled, then any VkImageView being sampled as a result of this command **must** not have a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::`reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command **must** sample with VK_FILTER_CUBIC_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-selectableCubicWeights-09214
  If the `selectableCubicWeights` feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have VkSamplerCubicWeightsCreateInfoQCOM::`cubicWeights` equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-flags-02696
  Any VkImage created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command **must** only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07030
  For any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08601

If a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchGraphIndirectCountAMDX-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchGraphIndirectCountAMDX-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMDX-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchGraphIndirectCountAMDX-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType`

must match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types

- VUID-vkCmdDispatchGraphIndirectCountAMDX-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchGraphIndirectCountAMDX-sparseImageInt64Atomics-04474
  If the `sparseImageInt64Atomics` feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDispatchGraphIndirectCountAMDX-sparseImageInt64Atomics-04475
  If the `sparseImageInt64Atomics` feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageSampleWeightedQCOM-06971
  If `OpImageSampleWeightedQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageSampleWeightedQCOM-06972
  If `OpImageSampleWeightedQCOM` uses a VkImageView as a sample weight image as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBoxFilterQCOM-06973
  If `OpImageBoxFilterQCOM` is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchSSDQCOM-06974
  If `OpImageBlockMatchSSDQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchSADQCOM-12420
  If `OpImageBlockMatchSADQCOM` is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM or VK_FORMAT_FEATURE_2_BLOCK_MATCHING_SXD_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchSADQCOM-06976
  If `OpImageBlockMatchSADQCOM` or OpImageBlockMatchSSDQCOM is used to read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both `addressModeU` and `addressModeV` equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageSampleWeightedQCOM-06977
  If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageSampleWeightedQCOM-06978
  If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a VkSampler as a result of this command, then the sampler **must** not have been created with VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09216
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction is used to read from a VkImageView as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09217
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM read from a reference image as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled or the *input* sampler was not created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE then the specified reference coordinates **must** not fail integer texel coordinate validation
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-12421
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the blockMatchExtendedClampToEdge feature is not enabled, the *input* sampler **must** not have been created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectCountAMDX-addressModeU-12422
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM instruction uses a VkSampler as a result of this command, and the *input* sampler was created with either addressModeU or addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, then the sampler **must** have been created with both addressModeU and addressModeV equal to VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectCountAMDX-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDispatchGraphIndirectCountAMDX-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device

- VUID-vkCmdDispatchGraphIndirectCountAMDX-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDispatchGraphIndirectCountAMDX-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-10746
  The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM property that is bound to a resource accessed as a result of this command **must** be the active bound tile memory object in `commandBuffer`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-10678
  If this command is recorded inside a tile shading render pass instance, the stages corresponding to the pipeline bind point used by this command **must** only include VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, and/or VK_SHADER_STAGE_COMPUTE_BIT
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-10679
  If this command is recorded where per-tile execution model is enabled, there **must** be no access to any image while the image was being transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout
- VUID-vkCmdDispatchGraphIndirectCountAMDX-pDescription-09900
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with the VK_TENSOR_USAGE_SHADER_BIT_ARM usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-dimensionCount-09905
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via VkTensorCreateInfoARM::`pDescription` when creating the underlying VkTensorARM object
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeTensorARM-09906
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be compatible with the VkFormat of the VkTensorViewARM used for the access
- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTensorReadARM-12462
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, using `OpTensorReadARM` or `OpTensorWriteARM`, and the underlying VkTensorARM

object was created with a VK_TENSOR_TILING_BRICK_16_WIDE_ARM, VK_TENSOR_TILING_BRICK_8_WIDE_ARM, VK_TENSOR_TILING_BRICK_4_WIDE_ARM, VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_ARM, or VK_TENSOR_TILING_BLOCK_U_INTERLEAVED_64K_ARM VkTensorTilingARM, and the object read or written is an array, then the innermost coordinate provided to OpTensorReadARM or OpTensorWriteARM via the Coordinates operand **must** be a multiple of the largest power of 2 that is less than or equal to the number of components of the array

- VUID-vkCmdDispatchGraphIndirectCountAMDX-pNext-12463
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command and the corresponding VkTensorARM object was created with a VkTensorRollingBackingCreateInfoARM structure in the pNext chain of VkTensorCreateInfoARM, then the number of elements accessed with one OpTensorReadARM or OpTensorWriteARM **must** be less than or equal to the number of elements available from the starting coordinate in the rolling backing along the innermost dimension, defined as wraps[dimensionCount - 1] - InnermostCoordinate % wraps[dimensionCount - 1] where InnermostCoordinate is the last component of the coordinates array provided via the Coordinates operand
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11397
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchGraphIndirectCountAMDX-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses

a push constant value, that value **must** have been set by vkCmdPushDataEXT

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR or handle retrieved from a VkAccelerationStructureNV object via vkGetAccelerationStructureHandleNV
- VUID-vkCmdDispatchGraphIndirectCountAMDX-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatchGraphIndirectCountAMDX-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-09181
  `commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-09182
  `commandBuffer` **must** be a primary command buffer
- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-10192
  `scratch` **must** be the device address of an allocated memory range at least as large as `scratchSize`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratchSize-10193
  `scratchSize` **must** be greater than or equal to VkExecutionGraphPipelineScratchSizeAMDX::`minSize` returned by vkGetExecutionGraphPipelineScratchSizeAMDX for the bound execution graph pipeline
- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-09184
  `scratch` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDX or VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDX usage flags set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-10194
  The device memory range [`scratch`,`scratch` `scratchSize`] **must** have been initialized with vkCmdInitializeGraphScratchMemoryAMDX using the bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command
- VUID-vkCmdDispatchGraphIndirectCountAMDX-maxComputeWorkGroupCount-09186
  Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMDX` decoration in the dispatched node or `maxComputeWorkGroupCount`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-maxExecutionGraphShaderPayloadCount-09187
  Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads
- VUID-vkCmdDispatchGraphIndirectCountAMDX-NodeMaxPayloadsAMDX-09188
  Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMDX` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMDX` decoration separately
- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-10195
  If the bound execution graph pipeline includes draw nodes, this command **must** be called within a render pass instance that is compatible with the graphics pipeline used to create each of those nodes
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09159
  `countInfo` **must** be a device pointer to a memory allocation containing a valid VkDispatchGraphCountInfoAMDX structure when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09160
  `countInfo` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09161
  `countInfo` **must** be a multiple of `executionGraphDispatchAddressAlignment`

- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09162
  `countInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09163
  `countInfo->infos` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09164
  `countInfo->infos` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-infos-09165
  Device memory locations at indexes in the range [`infos`, `infos` + (`count`*`stride`)), at a granularity of `stride` **must** contain valid VkDispatchGraphInfoAMDX structures in the first 24 bytes when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09166
  For each VkDispatchGraphInfoAMDX structure in `countInfo->infos`, `payloads` **must** be a device pointer to a memory allocation at least as large as the product of `payloadCount` and `payloadStride` when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09167
  For each VkDispatchGraphInfoAMDX structure in `countInfo->infos`, `payloads` **must** be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09168
  For each VkDispatchGraphInfoAMDX structure in `countInfo->infos`, `payloads` **must** be a multiple of `executionGraphDispatchAddressAlignment`
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09169
  For each VkDispatchGraphInfoAMDX structure in `countInfo->infos`, `nodeIndex` **must** be a valid node index in the bound execution graph pipeline, as returned by vkGetExecutionGraphPipelineNodeIndexAMDX when this command is executed on the device
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-09170
  For each VkDispatchGraphInfoAMDX structure in `countInfo->infos`, device memory locations at indexes in the range [`payloads`, `payloads` + (`payloadCount` * `payloadStride`)), at a granularity of `payloadStride` **must** contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-parameter
  `scratch` **must** be a valid VkDeviceAddress value
- VUID-vkCmdDispatchGraphIndirectCountAMDX-countInfo-parameter
  `countInfo` **must** be a valid VkDeviceAddress value

- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDispatchGraphIndirectCountAMDX-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchGraphIndirectCountAMDX-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectCountAMDX-bufferlevel
  `commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDispatchGraphIndirectCountAMDX is affected by conditional rendering

The `VkDeviceOrHostAddressConstAMDX` union is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef union VkDeviceOrHostAddressConstAMDX {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstAMDX;
```

- `deviceAddress` is a buffer device address as returned by the vkGetBufferDeviceAddressKHR command.
- `hostAddress` is a const host memory address.

The VkDispatchGraphCountInfoAMDX structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkDispatchGraphCountInfoAMDX {
    uint32_t                         count;
    VkDeviceOrHostAddressConstAMDX    infos;
    uint64_t                         stride;
} VkDispatchGraphCountInfoAMDX;
```

- count is the number of dispatches to perform.
- infos is the device or host address of a flat array of VkDispatchGraphInfoAMDX structures.
- stride is the byte stride between successive VkDispatchGraphInfoAMDX structures in infos.

Whether infos is consumed as a device or host pointer is defined by the command this structure is used in.

The VkDispatchGraphInfoAMDX structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkDispatchGraphInfoAMDX {
    uint32_t                         nodeIndex;
    uint32_t                         payloadCount;
    VkDeviceOrHostAddressConstAMDX    payloads;
    uint64_t                         payloadStride;
} VkDispatchGraphInfoAMDX;
```

- nodeIndex is the index of a node in an execution graph to be dispatched.
- payloadCount is the number of payloads to dispatch for the specified node.
- payloads is a device or host address pointer to a flat array of payloads with size equal to the product of payloadCount and payloadStride.
- payloadStride is the byte stride between successive payloads in payloads.

Whether payloads is consumed as a device or host pointer is defined by the command this structure is used in.

Valid Usage

- VUID-VkDispatchGraphInfoAMDX-payloadCount-09171
  payloadCount **must** be no greater than maxExecutionGraphShaderPayloadCount

51.4. Shader Enqueue

Compute shaders in an execution graph **can** use the OpInitializeNodePayloadsAMDX to initialize nodes for dispatch. Any node payload initialized in this way will be enqueued for dispatch once the

shader is done writing to the payload. As compilers **may** be conservative when making this determination, shaders **can** further call `OpFinalizeNodePayloadsAMDX` to guarantee that the payload is no longer being written.

The `Node Name` operand of the `PayloadNodeNameAMDX` decoration on a payload identifies the shader name of the node to be enqueued, and the `Shader Index` operand of `OpInitializeNodePayloadsAMDX` identifies the shader index. A node identified in this way is dispatched as described in the following sections.

51.4.1. Compute Nodes

Compute shaders added as nodes to an execution graph are executed differently based on the presence or absence of the `StaticNumWorkgroupsAMDX` or `CoalescingAMDX` execution modes.

Dispatching a compute shader node that does not declare either the `StaticNumWorkgroupsAMDX` or `CoalescingAMDX` execution mode will execute a number of workgroups in each dimension specified by the first 12 bytes of the payload, interpreted as a VkDispatchIndirectCommand. The same payload will be broadcast to each workgroup in the same dispatch. Additional values in the payload have no effect on execution.

Dispatching a compute shader node with the `StaticNumWorkgroupsAMDX` execution mode will execute workgroups in each dimension according to the `x`, `y`, and `z size` operands to the `StaticNumWorkgroupsAMDX` execution mode. The same payload will be broadcast to each workgroup in the same dispatch. Any values in the payload have no effect on execution.

Dispatching a compute shader node with the `CoalescingAMDX` execution mode will enqueue a single invocation for execution. Implementations **may** combine multiple such dispatches into the same workgroup, up to the size of the workgroup. The number of invocations coalesced into a given workgroup in this way **can** be queried via the `CoalescedInputCountAMDX` built-in. Any values in the payload have no effect on execution.

51.4.2. Mesh Nodes

Graphics pipelines added as nodes to an execution graph are executed in a manner similar to a vkCmdDrawMeshTasksIndirectEXT, using the same payloads as compute shaders, but capturing some state from the command buffer.

When an execution graph dispatch is recorded into a command buffer, it captures the following dynamic state for use with draw nodes:

- VK_DYNAMIC_STATE_VIEWPORT
- VK_DYNAMIC_STATE_SCISSOR
- VK_DYNAMIC_STATE_LINE_WIDTH
- VK_DYNAMIC_STATE_DEPTH_BIAS
- VK_DYNAMIC_STATE_BLEND_CONSTANTS
- VK_DYNAMIC_STATE_DEPTH_BOUNDS
- VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT

- VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT
- VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR

Other state is not captured, and graphics pipelines **must** not be created with other dynamic states when used as a library in an execution graph pipeline.

Chapter 52. External Compute Queues

External compute queues are used to join compatible external APIs to a VkDevice, allowing workloads submitted through these external APIs to be executed simultaneously to workloads submitted through Vulkan.

External compute queues are represented by VkExternalComputeQueueNV handles:

```
// Provided by VK_NV_external_compute_queue
VK_DEFINE_HANDLE(VkExternalComputeQueueNV)
```

To create an external compute queue for use by compatible external APIs, call:

```
// Provided by VK_NV_external_compute_queue
VkResult vkCreateExternalComputeQueueNV(
    VkDevice                                    device,
    const VkExternalComputeQueueCreateInfoNV*   pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkExternalComputeQueueNV*                   pExternalQueue);
```

- device is the VkDevice that the external queue will be a part of.
- pCreateInfo is a pointer to a VkExternalComputeQueueCreateInfoNV structure specifying configuration info for creating the external queue.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pExternalQueue is a pointer to a VkExternalComputeQueueNV object that will be filled with the handle for the created external queue.

Valid Usage (Implicit)

- VUID-vkCreateExternalComputeQueueNV-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateExternalComputeQueueNV-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkExternalComputeQueueCreateInfoNV structure
- VUID-vkCreateExternalComputeQueueNV-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateExternalComputeQueueNV-pExternalQueue-parameter
  pExternalQueue **must** be a valid pointer to a VkExternalComputeQueueNV handle
- VUID-vkCreateExternalComputeQueueNV-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To destroy a previously created external compute queue, call:

```
// Provided by VK_NV_external_compute_queue
void vkDestroyExternalComputeQueueNV(
    VkDevice                                    device,
    VkExternalComputeQueueNV                    externalQueue,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the external queue.
- `externalQueue` is the VkExternalComputeQueueNV to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage (Implicit)

- VUID-vkDestroyExternalComputeQueueNV-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyExternalComputeQueueNV-externalQueue-parameter
  `externalQueue` **must** be a valid VkExternalComputeQueueNV handle
- VUID-vkDestroyExternalComputeQueueNV-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyExternalComputeQueueNV-externalQueue-parent
  `externalQueue` **must** have been created, allocated, or retrieved from `device`

To query the implementation-specific data that must be passed to compatible external APIs during their initialization process, call:

```
// Provided by VK_NV_external_compute_queue
void vkGetExternalComputeQueueDataNV(
    VkExternalComputeQueueNV                    externalQueue,
    VkExternalComputeQueueDataParamsNV*         params,
    void*                                       pData);
```

- `externalQueue` is the VkExternalComputeQueueNV to query the data for.
- `params` is a pointer to a VkExternalComputeQueueDataParamsNV structure specifying parameters required for retrieval of the implementation-specific data.
- `pData` is a pointer to application-allocated memory in which the requested data will be returned.

Valid Usage

- VUID-vkGetExternalComputeQueueDataNV-pData-08134
  `pData` **must** be at least the size specified by the externalDataSize field in the VkPhysicalDeviceExternalComputeQueuePropertiesNV structure

Valid Usage (Implicit)

- VUID-vkGetExternalComputeQueueDataNV-externalQueue-parameter
  `externalQueue` **must** be a valid VkExternalComputeQueueNV handle
- VUID-vkGetExternalComputeQueueDataNV-params-parameter
  `params` **must** be a valid pointer to a VkExternalComputeQueueDataParamsNV structure
- VUID-vkGetExternalComputeQueueDataNV-pData-parameter
  `pData` **must** be a pointer value

The `VkExternalComputeQueueDeviceCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueDeviceCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           reservedExternalQueues;
} VkExternalComputeQueueDeviceCreateInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reservedExternalQueues` is the maximum number of external queues an application **can** create at once. This **must** be less than or equal to the `maxExternalQueues` value reported by VkPhysicalDeviceExternalComputeQueuePropertiesNV.

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueDeviceCreateInfoNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_DEVICE_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- VkDeviceCreateInfo

The `VkExternalComputeQueueCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkQueue            preferredQueue;
} VkExternalComputeQueueCreateInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredQueue` is a `VkQueue` supporting graphics commands.

When creating a `VkExternalComputeQueueNV`, the `preferredQueue` field is a strong scheduling hint as to which `VkQueue` Vulkan graphics workloads will be submitted to with the expectation that execution will overlap with execution of work submitted by the external API.

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueCreateInfoNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_CREATE_INFO_NV`
- VUID-VkExternalComputeQueueCreateInfoNV-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkExternalComputeQueueCreateInfoNV-preferredQueue-parameter
  `preferredQueue` **must** be a valid VkQueue handle

The `VkExternalComputeQueueDataParamsNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkExternalComputeQueueDataParamsNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndex;
} VkExternalComputeQueueDataParamsNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndex` is the index of the device within a device group that the data is being queried for. This is ignored if device groups are not utilized.

Valid Usage (Implicit)

- VUID-VkExternalComputeQueueDataParamsNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXTERNAL_COMPUTE_QUEUE_DATA_PARAMS_NV
- VUID-VkExternalComputeQueueDataParamsNV-pNext-pNext
  `pNext` **must** be `NULL`

The `VkPhysicalDeviceExternalComputeQueuePropertiesNV` structure is defined as:

```
// Provided by VK_NV_external_compute_queue
typedef struct VkPhysicalDeviceExternalComputeQueuePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           externalDataSize;
    uint32_t           maxExternalQueues;
} VkPhysicalDeviceExternalComputeQueuePropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalDataSize` is the minimum size of the memory allocation that applications **can** pass to vkGetExternalComputeQueueDataNV.
- `maxExternalQueues` is the maximum number of external queues that an application can create.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalComputeQueuePropertiesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_COMPUTE_QUEUE_PROPERTIES_NV

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

Chapter 53. Data graphs

Data graph pipelines encapsulate computational graphs that operate on whole resources (e.g. tensors). The graph operations that form these computational graphs are executed by graph processing engines.

53.1. Pipeline Creation

To create data graph pipelines, call:

```
// Provided by VK_ARM_data_graph
VkResult vkCreateDataGraphPipelinesARM(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    VkPipelineCache                             pipelineCache,
    uint32_t                                    createInfoCount,
    const VkDataGraphPipelineCreateInfoARM*     pCreateInfos,
    const VkAllocationCallbacks*                pAllocator,
    VkPipeline*                                 pPipelines);
```

- `device` is the logical device that creates the data graph pipelines.
- `deferredOperation` is VK_NULL_HANDLE or the handle of a valid VkDeferredOperationKHR request deferral object for this command.
- `pipelineCache` is either VK_NULL_HANDLE, indicating that pipeline caching is disabled; or the handle of a valid pipeline cache object, in which case use of that cache is enabled for the duration of the command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of VkDataGraphPipelineCreateInfoARM structures.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pPipelines` is a pointer to an array of VkPipeline handles in which the resulting data graph pipelines objects are returned.

The implementation will create a pipeline in each element of `pPipelines` from the corresponding element of `pCreateInfos`. If the creation of any pipeline fails, that pipeline will be set to VK_NULL_HANDLE.

Valid Usage

- VUID-vkCreateDataGraphPipelinesARM-dataGraph-09760
  The `dataGraph` feature **must** be enabled
- VUID-vkCreateDataGraphPipelinesARM-device-09927
  `device` **must** support at least one queue family with the VK_QUEUE_DATA_GRAPH_BIT_ARM capability

- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-09761
  `deferredOperation` **must** be VK_NULL_HANDLE
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-09916
  If `deferredOperation` is not VK_NULL_HANDLE, the `flags` member of elements of `pCreateInfos` **must** not include VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT
- VUID-vkCreateDataGraphPipelinesARM-pNext-09928
  If at least one of the VkDataGraphPipelineCreateInfoARM includes a VkDataGraphPipelineIdentifierCreateInfoARM structure in its `pNext` chain then `pipelineCache` **must** not be VK_NULL_HANDLE
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-09762
  If `pipelineCache` was created with VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT, host access to `pipelineCache` **must** be externally synchronized

Valid Usage (Implicit)

- VUID-vkCreateDataGraphPipelinesARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-parameter
  If `deferredOperation` is not VK_NULL_HANDLE, `deferredOperation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-parameter
  If `pipelineCache` is not VK_NULL_HANDLE, `pipelineCache` **must** be a valid VkPipelineCache handle
- VUID-vkCreateDataGraphPipelinesARM-pCreateInfos-parameter
  `pCreateInfos` **must** be a valid pointer to an array of `createInfoCount` valid VkDataGraphPipelineCreateInfoARM structures
- VUID-vkCreateDataGraphPipelinesARM-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDataGraphPipelinesARM-pPipelines-parameter
  `pPipelines` **must** be a valid pointer to an array of `createInfoCount` VkPipeline handles
- VUID-vkCreateDataGraphPipelinesARM-device-queuecount
  The device **must** have been created with at least `1` queue
- VUID-vkCreateDataGraphPipelinesARM-createInfoCount-arraylength
  `createInfoCount` **must** be greater than `0`
- VUID-vkCreateDataGraphPipelinesARM-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkCreateDataGraphPipelinesARM-pipelineCache-parent
  If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_PIPELINE_COMPILE_REQUIRED_EXT
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDataGraphPipelineCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineCreateInfoARM {
    VkStructureType                                 sType;
    const void*                                     pNext;
    VkPipelineCreateFlags2                          flags;
    VkPipelineLayout                                layout;
    uint32_t                                        resourceInfoCount;
    const VkDataGraphPipelineResourceInfoARM*       pResourceInfos;
} VkDataGraphPipelineCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkPipelineCreateFlagBits2KHR specifying how the pipeline will be generated.
- layout is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- resourceInfoCount is the length of the pResourceInfos array.
- pResourceInfos is a pointer to an array of VkDataGraphPipelineResourceInfoARM structures.

Applications **can** create a data graph pipeline entirely from data present in a pipeline cache. This is done by including a VkDataGraphPipelineIdentifierCreateInfoARM structure in the pNext chain. If the required data is not found in the pipeline cache, creating the data graph pipeline is not possible and the implementation **must** fail as specified by VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT.

Applications **can** create a data graph pipeline without providing a pipeline cache or shader module by invoking one of the models provided by the implementation. This is done by including VkDataGraphPipelineBuiltinModelCreateInfoQCOM in the pNext chain.

When an identifier or built-in model is used to create a data graph pipeline, implementations **may**

fail pipeline creation with VK_PIPELINE_COMPILE_REQUIRED for any reason.

The data graph engines for this pipeline **can** be selected by including a VkDataGraphProcessingEngineCreateInfoARM to the pNext chain of this structure. Otherwise, VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM will be used as the sole data graph engine.

The data graph operations that this pipeline uses **must** be supported for the data graph engines selected for this pipeline as retrieved by vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM.

Valid Usage

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09977
  One and only one of the following structures **must** be included in the pNext chain:
  - VkDataGraphPipelineShaderModuleCreateInfoARM
  - VkDataGraphPipelineIdentifierCreateInfoARM
  - VkDataGraphPipelineBuiltinModelCreateInfoQCOM
  - VkDataGraphPipelineSingleNodeCreateInfoARM
- VUID-VkDataGraphPipelineCreateInfoARM-flags-09764
  flags **may** only contain VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT, VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT, VK_PIPELINE_CREATE_2_DISABLE_OPTIMIZATION_BIT, VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT, VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR or VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR
- VUID-VkDataGraphPipelineCreateInfoARM-flags-09848
  If flags contains VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT then a VkDataGraphPipelineNeuralStatisticsCreateInfoARM structure **must** not be included in the pNext chain.
- VUID-VkDataGraphPipelineCreateInfoARM-layout-09767
  layout **must** have been created with pushConstantRangeCount equal to 0 and pPushConstantRanges equal to NULL
- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphUpdateAfterBind-09768
  If the dataGraphUpdateAfterBind feature is not enabled, layout **must** not use any VkDescriptorSetLayout object created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set
- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphDescriptorBuffer-09885
  If the dataGraphDescriptorBuffer feature is not enabled, flags **must** not contain VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-VkDataGraphPipelineCreateInfoARM-layout-09769
  If a VkDataGraphPipelineShaderModuleCreateInfoARM structure is included in the pNext chain and a resource variable is declared in the shader module, the corresponding descriptor binding used to create layout **must** have a descriptorType that corresponds to

the type of the resource variable

- VUID-VkDataGraphPipelineCreateInfoARM-None-11840
  If a VkDataGraphPipelineIdentifierCreateInfoARM or a VkDataGraphPipelineBuiltinModelCreateInfoQCOM structure is included in the pNext chain, then flags **must** contain VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT
- VUID-VkDataGraphPipelineCreateInfoARM-None-12363
  If a VkDataGraphPipelineIdentifierCreateInfoARM or a VkDataGraphPipelineBuiltinModelCreateInfoQCOM structure is included in the pNext chain, then resourceInfoCount **must** be 0
- VUID-VkDataGraphPipelineCreateInfoARM-resourceInfoCount-12364
  If resourceInfoCount is equal to 0, then pResourceInfos **must** equal NULL
- VUID-VkDataGraphPipelineCreateInfoARM-None-12365
  If neither a VkDataGraphPipelineIdentifierCreateInfoARM nor a VkDataGraphPipelineBuiltinModelCreateInfoQCOM structure are included in the pNext chain, then resourceInfoCount **must** be greater than 0
- VUID-VkDataGraphPipelineCreateInfoARM-dataGraphShaderModule-09886
  If the dataGraphShaderModule feature is not enabled, a VkDataGraphPipelineShaderModuleCreateInfoARM structure **must** not be included in the pNext chain
- VUID-VkDataGraphPipelineCreateInfoARM-layout-09934
  If a VkDataGraphPipelineShaderModuleCreateInfoARM structure is included in the pNext chain and an array resource variable is declared in the shader module, the corresponding descriptor binding used to create layout **must** have a descriptorCount that is greater than or equal to the length of the array
- VUID-VkDataGraphPipelineCreateInfoARM-pipelineCreationCacheControl-09871
  If the pipelineCreationCacheControl feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR or VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR
- VUID-VkDataGraphPipelineCreateInfoARM-pSetLayouts-09770
  The descriptor set layouts in VkPipelineLayoutCreateInfo::pSetLayouts used to create layout **must** not include any VkDescriptorSetLayoutBinding whose descriptor type is VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkDataGraphPipelineCreateInfoARM-pipelineProtectedAccess-09772
  If the pipelineProtectedAccess feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT or VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT
- VUID-VkDataGraphPipelineCreateInfoARM-flags-09773
  flags **must** not include both VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT and VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT
- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09804
  If the pNext chain includes a VkPipelineCreationFeedbackCreateInfo structure, then its pipelineStageCreationFeedbackCount **must** be 0

- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09948
  If a VkDataGraphProcessingEngineCreateInfoARM structure is included in the pNext chain, each member of pProcessingEngines **must** be identical to a VkQueueFamilyDataGraphPropertiesARM::engine retrieved from vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM with the physicalDevice that was used to create device
- VUID-VkDataGraphPipelineCreateInfoARM-pNext-09949
  If a VkDataGraphProcessingEngineCreateInfoARM structure is not included in the pNext chain, VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM **must** be set in a VkQueueFamilyDataGraphPropertiesARM::engine retrieved from vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM with the physicalDevice that was used to create device

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineCreateInfoARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineCreateInfoARM-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkDataGraphPipelineBuiltinModelCreateInfoQCOM, VkDataGraphPipelineCompilerControlCreateInfoARM, VkDataGraphPipelineIdentifierCreateInfoARM, VkDataGraphPipelineNeuralStatisticsCreateInfoARM, VkDataGraphPipelineOpticalFlowCreateInfoARM, VkDataGraphPipelineShaderModuleCreateInfoARM, VkDataGraphPipelineSingleNodeCreateInfoARM, VkDataGraphProcessingEngineCreateInfoARM, VkPipelineCreationFeedbackCreateInfo, or VkShaderModuleCreateInfo
- VUID-VkDataGraphPipelineCreateInfoARM-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkDataGraphPipelineCreateInfoARM-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkPipelineCreateFlagBits2 values
- VUID-VkDataGraphPipelineCreateInfoARM-layout-parameter
  layout **must** be a valid VkPipelineLayout handle
- VUID-VkDataGraphPipelineCreateInfoARM-pResourceInfos-parameter
  If resourceInfoCount is not 0, pResourceInfos **must** be a valid pointer to an array of resourceInfoCount valid VkDataGraphPipelineResourceInfoARM structures

The VkDataGraphPipelineShaderModuleCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineShaderModuleCreateInfoARM {
    VkStructureType                           sType;
    const void*                               pNext;
    VkShaderModule                            module;
    const char*                               pName;
    const VkSpecializationInfo*               pSpecializationInfo;
    uint32_t                                  constantCount;
    const VkDataGraphPipelineConstantARM*     pConstants;
} VkDataGraphPipelineShaderModuleCreateInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `module` is optionally a VkShaderModule object containing the description of the graph.
- `pName` is a pointer to a null-terminated UTF-8 string specifying the graph entry point name for this pipeline.
- `pSpecializationInfo` is a pointer to a VkSpecializationInfo structure as described in Specialization Constants, or `NULL`.
- `constantCount` is the length of the `pConstants` array.
- `pConstants` is a pointer to an array of VkDataGraphPipelineConstantARM structures.

If `module` is not VK_NULL_HANDLE, the pipeline's graph is defined by `module`. If `module` is VK_NULL_HANDLE, the pipeline's graph is defined by the chained VkShaderModuleCreateInfo.

Valid Usage

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-dataGraphSpecializationConstants-09849
  If the `dataGraphSpecializationConstants` feature is not enabled then `pSpecializationInfo` **must** be `NULL` and `module` **must** not contain any `OpSpec*` instructions
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pName-09872
  `pName` **must** be the name of an `OpGraphEntryPointARM` in `module`
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pNext-09873
  If the `pNext` chain includes a VkShaderModuleCreateInfo structure, then `module` **must** be VK_NULL_HANDLE
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pNext-09874
  If the `pNext` chain does not include a VkShaderModuleCreateInfo structure, then `module` **must** be a valid VkShaderModule

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-sType-sType

sType must be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SHADER_MODULE_CREATE_INFO_ARM

- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-module-parameter
  If module is not VK_NULL_HANDLE, module **must** be a valid VkShaderModule handle
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pName-parameter
  pName **must** be a null-terminated UTF-8 string
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pSpecializationInfo-parameter
  If pSpecializationInfo is not NULL, pSpecializationInfo **must** be a valid pointer to a valid VkSpecializationInfo structure
- VUID-VkDataGraphPipelineShaderModuleCreateInfoARM-pConstants-parameter
  If constantCount is not 0, and pConstants is not NULL, pConstants **must** be a valid pointer to an array of constantCount valid VkDataGraphPipelineConstantARM structures

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

The VkDataGraphPipelineIdentifierCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineIdentifierCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           identifierSize;
    const uint8_t*     pIdentifier;
} VkDataGraphPipelineIdentifierCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- identifierSize is the size in bytes of the identifier data accessible via pIdentifier.
- pIdentifier is a pointer to identifierSize bytes of data that describe the pipeline being created.

The pIdentifier **can** be retrieved from the device by calling vkGetDataGraphPipelinePropertiesARM and searching the results for a VkDataGraphPipelinePropertyQueryResultARM structure with property set to VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-sType-sType
  sType must be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_IDENTIFIER_CREATE_INFO_ARM

- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-pIdentifier-parameter
  `pIdentifier` **must** be a valid pointer to an array of `identifierSize` `uint8_t` values
- VUID-VkDataGraphPipelineIdentifierCreateInfoARM-identifierSize-arraylength
  `identifierSize` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

The `VkDataGraphPipelineBuiltinModelCreateInfoQCOM` structure is defined as:

```
// Provided by VK_QCOM_data_graph_model
typedef struct VkDataGraphPipelineBuiltinModelCreateInfoQCOM {
    VkStructureType                                    sType;
    const void*                                        pNext;
    const VkPhysicalDeviceDataGraphOperationSupportARM*    pOperation;
} VkDataGraphPipelineBuiltinModelCreateInfoQCOM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pOperation` is a VkPhysicalDeviceDataGraphOperationSupportARM specifying the built-in operation.

The `pipelineCache` is ignored for the creation of this pipeline.

Applications **can** specify arguments to the built-in operation named in `pOperation` with VkDataGraphPipelineCompilerControlCreateInfoARM.

Applications **should** verify that the `pVendorOptions`, `layout`, and other state included with this pipeline creation are compatible with the `pOperation`. Implementations **may** fail if any state is not compatible and return VK_PIPELINE_COMPILE_REQUIRED.

NOTE	Built-in models are defined by the provider of the model, therefore Vulkan does not define model compatibility. The application should refer to the provider of the built-in model for guidance on compatibility.

Valid Usage

- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-pOperation-11842
  All members of `pOperation` **must** be identical to a VkQueueFamilyDataGraphPropertiesARM::`operation` retrieved from vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM with the `physicalDevice` that was used to create `device` and paired in the retrieved results with a

VkQueueFamilyDataGraphPropertiesARM::engine identical to an element of VkDataGraphProcessingEngineCreateInfoARM::pProcessingEngines provided in the pNext chain

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-sType-sType sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_BUILTIN_MODEL_CREATE_INFO_QCOM
- VUID-VkDataGraphPipelineBuiltinModelCreateInfoQCOM-pOperation-parameter pOperation **must** be a valid pointer to a valid VkPhysicalDeviceDataGraphOperationSupportARM structure

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

The VkDataGraphPipelineCompilerControlCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineCompilerControlCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    const char*        pVendorOptions;
} VkDataGraphPipelineCompilerControlCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pVendorOptions is a null-terminated UTF-8 string specifying implementation-specific options that affect the creation of a data graph pipeline.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineCompilerControlCreateInfoARM-sType-sType sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_COMPILER_CONTROL_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineCompilerControlCreateInfoARM-pVendorOptions-parameter pVendorOptions **must** be a null-terminated UTF-8 string

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

The VkDataGraphPipelineConstantARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineConstantARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           id;
    const void*        pConstantData;
} VkDataGraphPipelineConstantARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is a pointer to a structure extending this structure.
- id is the unique identifier of the graph constant this structure describes.
- pConstantData is a pointer to the data for this graph constant.

The size and layout of the data pointed to by pConstantData is specified by a specific structure in the pNext chain for each type of graph constant.

For graph constants of tensor type, the layout of the data is specified by a VkTensorDescriptionARM structure. The data **must** be laid out according to the following members of this structure:

- VkTensorDescriptionARM::tiling
- VkTensorDescriptionARM::format
- VkTensorDescriptionARM::dimensionCount
- VkTensorDescriptionARM::pDimensions
- VkTensorDescriptionARM::pStrides

The presence of a VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structure in the pNext chain has no impact on the expected layout of the data pointed to by pConstantData.

Valid Usage

- VUID-VkDataGraphPipelineConstantARM-pNext-09775
  If the pNext chain of this structure includes one or more VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structures then it **must** also include a VkTensorDescriptionARM structure
- VUID-VkDataGraphPipelineConstantARM-pNext-09776
  If the pNext chain of this structure includes one or more

VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structures then, for each structure, VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension **must** be less than VkTensorDescriptionARM::dimensionCount

- VUID-VkDataGraphPipelineConstantARM-pNext-09777
  If the pNext chain of this structure includes a VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structure then, for each structure, VkTensorDescriptionARM::pDimensions[VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension] **must** be a multiple of VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::groupSize
- VUID-VkDataGraphPipelineConstantARM-pNext-09870
  If the pNext chain of this structure includes multiple VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structures then no two structures **may** have their VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM::dimension member set to the same value
- VUID-VkDataGraphPipelineConstantARM-id-09850
  If the pNext chain of this structure includes a VkTensorDescriptionARM structure, then its usage member **must** contain VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM
- VUID-VkDataGraphPipelineConstantARM-pNext-09917
  If the pNext chain of this structure includes a VkTensorDescriptionARM structure, then its tiling member **must** be VK_TENSOR_TILING_LINEAR_ARM

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineConstantARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CONSTANT_ARM
- VUID-VkDataGraphPipelineConstantARM-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM or VkTensorDescriptionARM
- VUID-VkDataGraphPipelineConstantARM-sType-unique
  The sType value of each structure in the pNext chain **must** be unique, with the exception of structures of type VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM
- VUID-VkDataGraphPipelineConstantARM-pConstantData-parameter
  pConstantData **must** be a pointer value

The VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph with VK_ARM_tensors
typedef struct VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dimension;
    uint32_t           zeroCount;
    uint32_t           groupSize;
} VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dimension` is the dimension of the tensor along which its data is sparse.
- `zeroCount` is the number of tensor elements that **must** be zero in every group of `groupSize` elements.
- `groupSize` is the number of tensor elements in a group.

NOTE

This extension does not provide applications with a way of knowing which combinations of `dimension`, `zeroCount`, and `groupSize` an implementation **can** take advantage of. Providing sparsity information for a graph constant is always valid and recommended, regardless of the specific combinations an implementation **can** take advantage of. When they **cannot** take advantage of the sparsity information, implementations will ignore it and treat the data as dense.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineConstantTensorSemiStructuredSparsityInfoARM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_CONSTANT_TENSOR_SEMI_STRUCTURED_SPARSITY_INFO_ARM

Structure Chaining

Extends the structure

- VkDataGraphPipelineConstantARM

The `VkDataGraphPipelineResourceInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineResourceInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSet;
    uint32_t           binding;
    uint32_t           arrayElement;
} VkDataGraphPipelineResourceInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorSet` is the descriptor set number of the resource being described.
- `binding` is the binding number of the resource being described.
- `arrayElement` is the element in the resource array if `descriptorSet` and `binding` identify an array of resources or `0` otherwise.

Valid Usage

- VUID-VkDataGraphPipelineResourceInfoARM-descriptorSet-09851
  If the `pNext` chain of this structure includes a VkTensorDescriptionARM structure, then its `usage` **must** contain VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM
- VUID-VkDataGraphPipelineResourceInfoARM-descriptorSet-09962
  If `descriptorSet` and `binding` identify an image resource or an array of image resources, then a VkDataGraphPipelineResourceInfoImageLayoutARM structure **must** be included in the `pNext` chain , unless the `unifiedImageLayouts` feature is enabled

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineResourceInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_RESOURCE_INFO_ARM
- VUID-VkDataGraphPipelineResourceInfoARM-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDataGraphPipelineResourceInfoImageLayoutARM or VkTensorDescriptionARM
- VUID-VkDataGraphPipelineResourceInfoARM-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

The `VkDataGraphPipelineResourceInfoImageLayoutARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineResourceInfoImageLayoutARM {
    VkStructureType    sType;
    const void*        pNext;
    VkImageLayout      layout;
} VkDataGraphPipelineResourceInfoImageLayoutARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layout` specifies the layout that the image subresource accessible from the view provided as a graph pipeline resource **must** be in at the time where the graph pipeline being created is dispatched.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineResourceInfoImageLayoutARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_RESOURCE_INFO_IMAGE_LAYOUT_ARM
- VUID-VkDataGraphPipelineResourceInfoImageLayoutARM-layout-parameter
  `layout` **must** be a valid VkImageLayout value

Structure Chaining

Extends the structure

- VkDataGraphPipelineResourceInfoARM

The `VkDataGraphPipelineSingleNodeCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineSingleNodeCreateInfoARM {
    VkStructureType                                    sType;
    void*                                              pNext;
    VkDataGraphPipelineNodeTypeARM                     nodeType;
    uint32_t                                           connectionCount;
    const VkDataGraphPipelineSingleNodeConnectionARM*  pConnections;
} VkDataGraphPipelineSingleNodeCreateInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nodeType` is a VkDataGraphPipelineNodeTypeARM describing the type of this node.
- `connectionCount` is the length of the `pConnections` array.
- `pConnections` is a pointer to an array of `connectionCount`

VkDataGraphPipelineSingleNodeConnectionARM structures.

Valid Usage

- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09963
  If `nodeType` is VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM, then a VkDataGraphPipelineOpticalFlowCreateInfoARM structure **must** be included in the `pNext` chain of this structure
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09978
  If `nodeType` is VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM, then one and only one VkDataGraphPipelineSingleNodeConnectionARM structure **must** be present in the `pConnections` array for each of the following values of its `connection` member:
  - VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM
  - VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM
  - VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-09979
  If `nodeType` is VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM and VkDataGraphPipelineOpticalFlowCreateInfoARM::`hintGridSize` is not 0, then one and only one VkDataGraphPipelineSingleNodeConnectionARM structure whose `connection` member is VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM **must** be present in the `pConnections` array

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SINGLE_NODE_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-nodeType-parameter
  `nodeType` **must** be a valid VkDataGraphPipelineNodeTypeARM value
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-pConnections-parameter
  `pConnections` **must** be a valid pointer to an array of `connectionCount` valid VkDataGraphPipelineSingleNodeConnectionARM structures
- VUID-VkDataGraphPipelineSingleNodeCreateInfoARM-connectionCount-arraylength
  `connectionCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

Possible values of VkDataGraphPipelineNodeTypeARM, specifying the type of a data graph pipeline node, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphPipelineNodeTypeARM {
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM = 1000631000,
} VkDataGraphPipelineNodeTypeARM;
```

- VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM corresponds to an optical flow node.

The VkDataGraphPipelineSingleNodeConnectionARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineSingleNodeConnectionARM {
    VkStructureType                                sType;
    void*                                          pNext;
    uint32_t                                       set;
    uint32_t                                       binding;
    VkDataGraphPipelineNodeConnectionTypeARM       connection;
} VkDataGraphPipelineSingleNodeConnectionARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- set is the descriptor set number of the graph pipeline layout resource to be connected to this connection point.
- binding is the binding number of the graph pipeline layout resource to be connected to this connection point.
- connection is a VkDataGraphPipelineNodeConnectionTypeARM specifying the connection point to link to a graph pipeline layout resource.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSingleNodeConnectionARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SINGLE_NODE_CONNECTION_ARM
- VUID-VkDataGraphPipelineSingleNodeConnectionARM-pNext-pNext
  pNext **must** be NULL
- VUID-VkDataGraphPipelineSingleNodeConnectionARM-connection-parameter
  connection **must** be a valid VkDataGraphPipelineNodeConnectionTypeARM value

Possible values of VkDataGraphPipelineNodeConnectionTypeARM, specifying the connection points of a data graph pipeline node, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphPipelineNodeConnectionTypeARM {
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM = 1000631000,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM =
1000631001,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM = 1000631002,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM =
1000631003,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM = 1000631004,
} VkDataGraphPipelineNodeConnectionTypeARM;
```

- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM specifies the connection point for the input image of an optical flow node.
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM specifies the connection point for the input reference image of an optical flow node.
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM specifies the connection point for the optional external hint flow vector map of an optical flow node.
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM specifies the connection point for the output flow vector map of an optical flow node.
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM specifies the connection point for the optional output cost map of an optical flow node.

The VkDataGraphPipelineNeuralStatisticsCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkDataGraphPipelineNeuralStatisticsCreateInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           allowNeuralStatistics;
} VkDataGraphPipelineNeuralStatisticsCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- allowNeuralStatistics specifies whether sessions for the newly created pipeline **may** enable neural statistics reporting.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineNeuralStatisticsCreateInfoARM-sType-sType
  sType **must** be

VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_NEURAL_STATISTICS_CREATE_INFO_ARM

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

53.2. Sessions

Graph pipelines execute within *data graph pipeline sessions* that provide a context for their execution as well as binding points for the memory they need (e.g. transient storage).

Graph pipeline sessions are represented by `VkDataGraphPipelineSessionARM` handles:

```
// Provided by VK_ARM_data_graph
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDataGraphPipelineSessionARM)
```

To create a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
VkResult vkCreateDataGraphPipelineSessionARM(
    VkDevice                                    device,
    const VkDataGraphPipelineSessionCreateInfoARM* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDataGraphPipelineSessionARM*              pSession);
```

- `device` is the logical device that creates the data graph pipeline session.
- `pCreateInfo` is a pointer to a VkDataGraphPipelineSessionCreateInfoARM structure.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pSession` is a pointer to a VkDataGraphPipelineSessionARM handle in which the resulting data graph pipeline session object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDataGraphPipelineSessionARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDataGraphPipelineSessionARM-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDataGraphPipelineSessionCreateInfoARM structure
- VUID-vkCreateDataGraphPipelineSessionARM-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateDataGraphPipelineSessionARM-pSession-parameter
  `pSession` **must** be a valid pointer to a VkDataGraphPipelineSessionARM handle
- VUID-vkCreateDataGraphPipelineSessionARM-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDataGraphPipelineSessionCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionCreateInfoARM {
    VkStructureType                              sType;
    const void*                                  pNext;
    VkDataGraphPipelineSessionCreateFlagsARM     flags;
    VkPipeline                                   dataGraphPipeline;
} VkDataGraphPipelineSessionCreateInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkDataGraphPipelineSessionCreateFlagBitsARM describing additional parameters of the session.
- `dataGraphPipeline` is the VkPipeline handle of the data graph pipeline for which a session is being created.

Valid Usage

- VUID-VkDataGraphPipelineSessionCreateInfoARM-dataGraphPipeline-09781
  `dataGraphPipeline` **must** have been obtained via a call to vkCreateDataGraphPipelinesARM
- VUID-VkDataGraphPipelineSessionCreateInfoARM-protectedMemory-09782
  If the `protectedMemory` feature is not enabled, `flags` **must** not contain VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM
- VUID-VkDataGraphPipelineSessionCreateInfoARM-pNext-09852
  A VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM structure **may** only be

included in the pNext chain if and only if a VkDataGraphPipelineNeuralStatisticsCreateInfoARM structure whose allowNeuralStatistics member was VK_TRUE was included in the pNext chain of the VkDataGraphPipelineCreateInfoARM structure used to create dataGraphPipeline

- VUID-VkDataGraphPipelineSessionCreateInfoARM-flags-09853
  If flags contains VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM then a VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM structure **must** not be included in the pNext chain

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionCreateInfoARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineSessionCreateInfoARM-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM
- VUID-VkDataGraphPipelineSessionCreateInfoARM-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkDataGraphPipelineSessionCreateInfoARM-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkDataGraphPipelineSessionCreateFlagBitsARM values
- VUID-VkDataGraphPipelineSessionCreateInfoARM-dataGraphPipeline-parameter
  dataGraphPipeline **must** be a valid VkPipeline handle

Bits which **can** be set in VkDataGraphPipelineSessionCreateInfoARM::flags, specifying additional parameters of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
// Flag bits for VkDataGraphPipelineSessionCreateFlagBitsARM
typedef VkFlags64 VkDataGraphPipelineSessionCreateFlagBitsARM;
static const VkDataGraphPipelineSessionCreateFlagBitsARM
VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM = 0x00000001ULL;
// Provided by VK_ARM_data_graph_optical_flow
static const VkDataGraphPipelineSessionCreateFlagBitsARM
VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM = 0x00000002ULL;
```

- VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM specifies that the data graph pipeline session is backed by protected memory.
- VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM specifies that the data graph pipeline session has a cache for optical flow operations. Enabling the cache is required for the implementation to use temporal hints.

```
// Provided by VK_ARM_data_graph
typedef VkFlags64 VkDataGraphPipelineSessionCreateFlagsARM;
```

VkDataGraphPipelineSessionCreateFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphPipelineSessionCreateFlagBitsARM.

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM {
    VkStructureType                          sType;
    const void*                              pNext;
    VkNeuralAcceleratorStatisticsModeARM     mode;
} VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- mode is a VkNeuralAcceleratorStatisticsModeARM specifying the neural statistics mode for the session being created.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_NEURAL_STATISTICS_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM-mode-parameter
  mode **must** be a valid VkNeuralAcceleratorStatisticsModeARM value

Structure Chaining

Extends the structure

- VkDataGraphPipelineSessionCreateInfoARM

The available values for VkNeuralAcceleratorStatisticsModeARM are:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef enum VkNeuralAcceleratorStatisticsModeARM {
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_DISABLED_ARM = 0,
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS0_ARM = 1,
    VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS1_ARM = 2,
} VkNeuralAcceleratorStatisticsModeARM;
```

- VK_NEURAL_ACCELERATOR_STATISTICS_MODE_DISABLED_ARM specifies that neural

accelerator statistics are disabled.

- VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS0_ARM specifies the statistics0 mode of operation.
- VK_NEURAL_ACCELERATOR_STATISTICS_MODE_STATISTICS1_ARM specifies the statistics1 mode of operation.

To determine the bind point requirements for a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelineSessionBindPointRequirementsARM(
    VkDevice                                        device,
    const VkDataGraphPipelineSessionBindPointRequirementsInfoARM* pInfo,
    uint32_t*                                       pBindPointRequirementCount,
    VkDataGraphPipelineSessionBindPointRequirementARM* pBindPointRequirements);
```

- device is the logical device that owns the data graph pipeline session.
- pInfo is a pointer to a VkDataGraphPipelineSessionBindPointRequirementsInfoARM structure containing parameters for the bind point requirements query.
- pBindPointRequirementCount is a pointer to an integer related to the number of bind points available or queried, as described below.
- pBindPointRequirements is either NULL or a pointer to an array of VkDataGraphPipelineSessionBindPointRequirementARM structures.

If pBindPointRequirements is NULL, then the number of bind points associated with the data graph pipeline session is returned in pBindPointRequirementCount. Otherwise, pBindPointRequirementCount **must** point to a variable set by the user to the number of elements in the pBindPointRequirements array, and on return the variable is overwritten with the number of structures actually written to pBindPointRequirements. If pBindPointRequirementCount is less than the number of bind points associated with the data graph pipeline session, at most pBindPointRequirementCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the required bind points were returned.

Valid Usage

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-session-09783
  The session member of pInfo **must** have been created with device

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkDataGraphPipelineSessionBindPointRequirementsInfoARM structure

- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pBindPointRequirementCount-parameter
  `pBindPointRequirementCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDataGraphPipelineSessionBindPointRequirementsARM-pBindPointRequirements-parameter
  If the value referenced by `pBindPointRequirementCount` is not `0`, and `pBindPointRequirements` is not `NULL`, `pBindPointRequirements` **must** be a valid pointer to an array of `pBindPointRequirementCount` VkDataGraphPipelineSessionBindPointRequirementARM structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionBindPointRequirementsInfoARM {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDataGraphPipelineSessionARM   session;
} VkDataGraphPipelineSessionBindPointRequirementsInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `session` is a VkDataGraphPipelineSessionARM specifying the data graph pipeline session whose bind point requirements are being queried.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_REQUIREMENTS_INFO_ARM
- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-pNext-pNext
  `pNext` **must** be `NULL`

- VUID-VkDataGraphPipelineSessionBindPointRequirementsInfoARM-session-parameter `session` **must** be a valid VkDataGraphPipelineSessionARM handle

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionBindPointRequirementARM {
    VkStructureType                                 sType;
    void*                                           pNext;
    VkDataGraphPipelineSessionBindPointARM          bindPoint;
    VkDataGraphPipelineSessionBindPointTypeARM      bindPointType;
    uint32_t                                        numObjects;
} VkDataGraphPipelineSessionBindPointRequirementARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bindPoint` is a VkDataGraphPipelineSessionBindPointARM specifying the data graph pipeline session bind point being required.
- `bindPointType` is a VkDataGraphPipelineSessionBindPointTypeARM specifying the type of object required for `bindPoint`.
- `numObjects` is the number of objects required for `bindPoint`.

Implementations **must** always return 1 for `numObjects` if `bindPoint` is one of the following bind points:

- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM
- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionBindPointRequirementARM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_REQUIREMENT_ARM
- VUID-VkDataGraphPipelineSessionBindPointRequirementARM-pNext-pNext `pNext` **must** be `NULL`

Possible values of VkDataGraphPipelineSessionBindPointARM, specifying the bind point of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelineSessionBindPointARM {
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM = 0,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_OPTICAL_FLOW_CACHE_ARM = 1000631001,
  // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM =
1000676000,
} VkDataGraphPipelineSessionBindPointARM;
```

- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TRANSIENT_ARM corresponds to the transient data produced and consumed during one dispatch of a data graph pipeline in a data graph pipeline session. This transient data is never reused by subsequent dispatches and can safely be clobbered once a vkCmdDispatchDataGraphARM command completes execution.
- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_OPTICAL_FLOW_CACHE_ARM corresponds to the cache for optical flow operations.
- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_NEURAL_ACCELERATOR_STATISTICS_ARM corresponds to neural statistics data produced during one dispatch of a data graph pipeline in a data graph pipeline session.

Possible values of VkDataGraphPipelineSessionBindPointTypeARM, specifying the type of a bind point of a data graph pipeline session, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelineSessionBindPointTypeARM {
    VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM = 0,
} VkDataGraphPipelineSessionBindPointTypeARM;
```

- VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM corresponds to a memory allocation.

To determine the memory requirements for a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
void vkGetDataGraphPipelineSessionMemoryRequirementsARM(
    VkDevice                                    device,
    const VkDataGraphPipelineSessionMemoryRequirementsInfoARM* pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- device is the logical device that owns the data graph pipeline session.
- pInfo is a pointer to a VkDataGraphPipelineSessionMemoryRequirementsInfoARM structure containing parameters for the memory requirements query.
- pMemoryRequirements is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the data graph pipeline session object are returned.

Valid Usage

- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-session-09950
  The `session` member of `pInfo` **must** have been created with `device`
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-bindPoint-09784
  The `bindPoint` member of `pInfo` **must** have been returned as part of a VkDataGraphPipelineSessionBindPointRequirementARM whose `bindPointType` member is VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM by a prior call to vkGetDataGraphPipelineSessionBindPointRequirementsARM for the `session` member of `pInfo`

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDataGraphPipelineSessionMemoryRequirementsInfoARM structure
- VUID-vkGetDataGraphPipelineSessionMemoryRequirementsARM-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

The `VkDataGraphPipelineSessionMemoryRequirementsInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineSessionMemoryRequirementsInfoARM {
    VkStructureType                          sType;
    const void*                              pNext;
    VkDataGraphPipelineSessionARM            session;
    VkDataGraphPipelineSessionBindPointARM   bindPoint;
    uint32_t                                 objectIndex;
} VkDataGraphPipelineSessionMemoryRequirementsInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `session` is the data graph pipeline session to query.
- `bindPoint` is the bind point of a data graph pipeline session for which memory requirements are being queried.
- `objectIndex` is the index of the object whose memory requirements are being queried.

Valid Usage

- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-objectIndex-09855 `objectIndex` **must** be less than the number of objects returned by vkGetDataGraphPipelineSessionBindPointRequirementsARM via VkDataGraphPipelineSessionBindPointRequirementARM::`numObjects` with VkDataGraphPipelineSessionMemoryRequirementsInfoARM::`bindPoint` equal to `bindPoint`

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_SESSION_MEMORY_REQUIREMENTS_INFO_ARM
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-pNext-pNext `pNext` **must** be `NULL`
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-session-parameter `session` **must** be a valid VkDataGraphPipelineSessionARM handle
- VUID-VkDataGraphPipelineSessionMemoryRequirementsInfoARM-bindPoint-parameter `bindPoint` **must** be a valid VkDataGraphPipelineSessionBindPointARM value

To attach memory to a data graph pipeline session object, call:

```
// Provided by VK_ARM_data_graph
VkResult vkBindDataGraphPipelineSessionMemoryARM(
    VkDevice                                    device,
    uint32_t                                    bindInfoCount,
    const VkBindDataGraphPipelineSessionMemoryInfoARM* pBindInfos);
```

- `device` is the logical device that owns the data graph pipeline session and memory.
- `bindInfoCount` is the length of the `pBindInfos` array.
- `pBindInfos` is a pointer to an array of VkBindDataGraphPipelineSessionMemoryInfoARM structures describing graph pipeline sessions and memory to bind.

Valid Usage (Implicit)

- VUID-vkBindDataGraphPipelineSessionMemoryARM-device-parameter `device` **must** be a valid VkDevice handle
- VUID-vkBindDataGraphPipelineSessionMemoryARM-pBindInfos-parameter `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid VkBindDataGraphPipelineSessionMemoryInfoARM structures
- VUID-vkBindDataGraphPipelineSessionMemoryARM-bindInfoCount-arraylength

`bindInfoCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkBindDataGraphPipelineSessionMemoryInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkBindDataGraphPipelineSessionMemoryInfoARM {
    VkStructureType                             sType;
    const void*                                 pNext;
    VkDataGraphPipelineSessionARM               session;
    VkDataGraphPipelineSessionBindPointARM      bindPoint;
    uint32_t                                    objectIndex;
    VkDeviceMemory                              memory;
    VkDeviceSize                                memoryOffset;
} VkBindDataGraphPipelineSessionMemoryInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `session` is the data graph pipeline session to be attached to memory.
- `bindPoint` is the data graph pipeline session bind point to which `memory` is to be attached.
- `objectIndex` is the index of the object for `bindPoint` at which `memory` is to be attached.
- `memory` is a VkDeviceMemory object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the data graph pipeline session.

Valid Usage

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09785
  `session` **must** not have been bound to a memory object for `bindPoint`
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-bindPoint-09786
  `bindPoint` **must** have been returned as part of a VkDataGraphPipelineSessionBindPointRequirementARM whose `bindPointType` member is

VK_DATA_GRAPH_PIPELINE_SESSION_BIND_POINT_TYPE_MEMORY_ARM by a prior call to vkGetDataGraphPipelineSessionMemoryRequirementsARM for session

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memoryOffset-09787
  memoryOffset **must** be less than the size of memory
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memory-09788
  memory **must** have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetDataGraphPipelineSessionMemoryRequirementsARM with session
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memoryOffset-09789
  memoryOffset **must** be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetDataGraphPipelineSessionMemoryRequirementsARM with session
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-size-09790
  The size member of the VkMemoryRequirements structure returned from a call to vkGetDataGraphPipelineSessionMemoryRequirementsARM with session **must** be less than or equal to the size of memory minus memoryOffset
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09791
  If session was created with the VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM bit set, the session **must** be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-09792
  If session was created with the VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_PROTECTED_BIT_ARM bit not set, the session **must** not be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-objectIndex-09805
  objectIndex **must** be less than the value of numObjects returned by vkGetDataGraphPipelineSessionBindPointRequirementsARM for bindPoint

Valid Usage (Implicit)

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_DATA_GRAPH_PIPELINE_SESSION_MEMORY_INFO_ARM
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-pNext-pNext
  pNext **must** be NULL
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-session-parameter
  session **must** be a valid VkDataGraphPipelineSessionARM handle
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-bindPoint-parameter
  bindPoint **must** be a valid VkDataGraphPipelineSessionBindPointARM value
- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-memory-parameter

`memory` **must** be a valid VkDeviceMemory handle

- VUID-VkBindDataGraphPipelineSessionMemoryInfoARM-commonparent
  Both of `memory`, and `session` **must** have been created, allocated, or retrieved from the same VkDevice

To destroy a data graph pipeline session, call:

```
// Provided by VK_ARM_data_graph
void vkDestroyDataGraphPipelineSessionARM(
    VkDevice                                    device,
    VkDataGraphPipelineSessionARM               session,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the data graph pipeline session.
- `session` is the handle of the data graph pipeline session to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDataGraphPipelineSessionARM-session-09793
  All submitted commands that refer to `session` **must** have completed execution
- VUID-vkDestroyDataGraphPipelineSessionARM-session-09794
  If `VkAllocationCallbacks` were provided when `session` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDataGraphPipelineSessionARM-session-09795
  If no `VkAllocationCallbacks` were provided when `session` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyDataGraphPipelineSessionARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyDataGraphPipelineSessionARM-session-parameter
  `session` **must** be a valid VkDataGraphPipelineSessionARM handle
- VUID-vkDestroyDataGraphPipelineSessionARM-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDataGraphPipelineSessionARM-session-parent
  `session` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `session` **must** be externally synchronized

53.3. Dispatch

To record a data graph pipeline dispatch, call:

```
// Provided by VK_ARM_data_graph
void vkCmdDispatchDataGraphARM(
    VkCommandBuffer                             commandBuffer,
    VkDataGraphPipelineSessionARM               session,
    const VkDataGraphPipelineDispatchInfoARM*   pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `session` is the VkDataGraphPipelineSessionARM that the data graph pipeline being dispatched will use.
- `pInfo` is `NULL` or a pointer to a VkDataGraphPipelineDispatchInfoARM structure.

Valid Usage

- VUID-vkCmdDispatchDataGraphARM-session-09796
  For each of the session bind point requirements returned by vkGetDataGraphPipelineSessionBindPointRequirementsARM for `session`, VkDataGraphPipelineSessionBindPointRequirementARM::`numObjects` objects **must** have been bound to `session`
- VUID-vkCmdDispatchDataGraphARM-dataGraphPipeline-09951
  The VkPipeline bound to the pipeline bind point used by this command **must** be identical to the `dataGraphPipeline` used to create `session`
- VUID-vkCmdDispatchDataGraphARM-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchDataGraphARM-None-08600
  If a bound shader , or data graph pipeline, was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders , or a bound data graph pipeline, **must** not be a protected resource
- VUID-vkCmdDispatchDataGraphARM-None-08114

Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDispatchDataGraphARM-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchDataGraphARM-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchDataGraphARM-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchDataGraphARM-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchDataGraphARM-pDescription-09930
  If a VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptor is accessed as a result of this command, then the underlying VkTensorARM object **must** have been created with a VkTensorCreateInfoARM::`pDescription` whose `usage` member contained VK_TENSOR_USAGE_DATA_GRAPH_BIT_ARM
- VUID-vkCmdDispatchDataGraphARM-pipeline-09940
  If the VkPipeline bound to the pipeline bind point used by this command was created with a VkDataGraphProcessingEngineCreateInfoARM structure in the `pNext` chain of VkDataGraphPipelineCreateInfoARM that included a foreign data graph processing engine in its `pProcessingEngines` member, then all VK_DESCRIPTOR_TYPE_TENSOR_ARM descriptors accessed as a result of this command **must** be VkTensorARM objects that have been bound to memory allocated with VkExportMemoryAllocateInfo::`handleTypes` with set bits that are a subset of the bits in VkQueueFamilyDataGraphProcessingEnginePropertiesARM::`foreignMemoryHandleTypes` structure queried via vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM with a `queueFamilyIndex` matching the one the command pool used to create `commandBuffer` was created for and an identical `engineType`, for all the foreign data graph processing engines that were part of the VkDataGraphProcessingEngineCreateInfoARM used to create the VkPipeline
- VUID-vkCmdDispatchDataGraphARM-pNext-09952
  If the VkPipeline bound to the pipeline bind point used by this command was created with

a VkDataGraphProcessingEngineCreateInfoARM structure in the pNext chain of VkDataGraphPipelineCreateInfoARM that included a foreign data graph processing engine in its pProcessingEngines member, then all session bound memory **must** have been allocated with VkExportMemoryAllocateInfo::handleTypes with set bits that are a subset of the bits in VkQueueFamilyDataGraphProcessingEnginePropertiesARM::foreignMemoryHandleTypes structure queried via vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM with a queueFamilyIndex matching the one the command pool used to create commandBuffer was created for and an identical engineType, for all the foreign data graph processing engines that were part of the VkDataGraphProcessingEngineCreateInfoARM used to create the VkPipeline

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-09801
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, any resource written to by the VkPipeline object bound to the bind point used by this command **must** not be an unprotected resource
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-09941
  All the operations used by the bound data graph pipeline **must** be supported on the queue family for which the command pool out of which commandBuffer was allocated, as reported by vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM
- VUID-vkCmdDispatchDataGraphARM-pInfo-09964
  If pInfo is not NULL and its pNext chain includes a VkDataGraphPipelineOpticalFlowDispatchInfoARM structure, then the flags member of that latter structure **must** not contain VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM, VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM, VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM, or VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM if session was not created with VK_DATA_GRAPH_PIPELINE_SESSION_CREATE_OPTICAL_FLOW_CACHE_BIT_ARM
- VUID-vkCmdDispatchDataGraphARM-nodeType-09980
  If the VkPipeline bound to the VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM pipeline bind point was not created with a VkDataGraphPipelineSingleNodeCreateInfoARM structure whose nodeType member is VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM included in the pNext chain of VkDataGraphPipelineCreateInfoARM, then a VkDataGraphPipelineOpticalFlowDispatchInfoARM structure **must** not be included in the pNext chain of pInfo
- VUID-vkCmdDispatchDataGraphARM-nodeType-09981
  If the VkPipeline bound to the VK_PIPELINE_BIND_POINT_DATA_GRAPH_ARM pipeline bind point was created with a VkDataGraphPipelineSingleNodeCreateInfoARM structure whose nodeType member is VK_DATA_GRAPH_PIPELINE_NODE_TYPE_OPTICAL_FLOW_ARM included in the pNext chain of VkDataGraphPipelineCreateInfoARM, then all image subresources that are accessed via a connection point in VkDataGraphPipelineSingleNodeCreateInfoARM::pConnections **must** be in the layout specified by the layout member of the

VkDataGraphPipelineResourceInfoImageLayoutARM that extends the VkDataGraphPipelineResourceInfoARM structure whose `descriptorSet` and `binding` members match the `set` and `binding` members of the VkDataGraphPipelineSingleNodeConnectionARM structure for the connection point , unless the `unifiedImageLayouts` feature is enabled, in which case they **may** be in the VK_IMAGE_LAYOUT_GENERAL layout

Valid Usage (Implicit)

- VUID-vkCmdDispatchDataGraphARM-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchDataGraphARM-session-parameter
  `session` **must** be a valid VkDataGraphPipelineSessionARM handle
- VUID-vkCmdDispatchDataGraphARM-pInfo-parameter
  If `pInfo` is not `NULL`, `pInfo` **must** be a valid pointer to a valid VkDataGraphPipelineDispatchInfoARM structure
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDispatchDataGraphARM-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_DATA_GRAPH_BIT_ARM operations
- VUID-vkCmdDispatchDataGraphARM-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDispatchDataGraphARM-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchDataGraphARM-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchDataGraphARM-commonparent
  Both of `commandBuffer`, and `session` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_DATA_GRAPH_BIT_ARM	Action

Conditional Rendering

vkCmdDispatchDataGraphARM is affected by conditional rendering

The VkDataGraphPipelineDispatchInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineDispatchInfoARM {
    VkStructureType                          sType;
    void*                                    pNext;
    VkDataGraphPipelineDispatchFlagsARM      flags;
} VkDataGraphPipelineDispatchInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkDataGraphPipelineDispatchFlagBitsARM describing additional parameters of the dispatch.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineDispatchInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_DISPATCH_INFO_ARM
- VUID-VkDataGraphPipelineDispatchInfoARM-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkDataGraphPipelineOpticalFlowDispatchInfoARM
- VUID-VkDataGraphPipelineDispatchInfoARM-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDataGraphPipelineDispatchInfoARM-flags-zerobitmask
  `flags` **must** be `0`

Bits which **can** be set in VkDataGraphPipelineDispatchInfoARM::`flags`, specifying additional parameters of a data graph pipeline dispatch, are:

```
// Provided by VK_ARM_data_graph
// Flag bits for VkDataGraphPipelineDispatchFlagBitsARM
typedef VkFlags64 VkDataGraphPipelineDispatchFlagBitsARM;
```

```
// Provided by VK_ARM_data_graph
typedef VkFlags64 VkDataGraphPipelineDispatchFlagsARM;
```

VkDataGraphPipelineDispatchFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphPipelineDispatchFlagBitsARM.

53.4. Properties

To query the properties of a data graph pipeline that can be obtained, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelineAvailablePropertiesARM(
    VkDevice                                    device,
    const VkDataGraphPipelineInfoARM*           pPipelineInfo,
    uint32_t*                                   pPropertiesCount,
    VkDataGraphPipelinePropertyARM*             pProperties);
```

- device is the logical device that created the data graph pipeline.
- pPipelineInfo is a VkDataGraphPipelineInfoARM that describes the VkPipeline being queried.
- pPropertiesCount is a pointer to an integer related to the number of properties available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkDataGraphPipelinePropertyARM enums.

If pProperties is NULL, then the number of properties associated with the data graph pipeline is returned in pPropertiesCount. Otherwise, pPropertiesCount **must** point to a variable set by the user to the number of elements in the pProperties array, and on return the variable is overwritten with the number of enums actually written to pProperties. If pPropertiesCount is less than the number of properties associated with the data graph pipeline, at most pPropertiesCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

Valid Usage

- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-dataGraphPipeline-09888
  The dataGraphPipeline member of pPipelineInfo **must** have been created with device

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pPipelineInfo-parameter
  `pPipelineInfo` **must** be a valid pointer to a valid VkDataGraphPipelineInfoARM structure
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pPropertiesCount-parameter
  `pPropertiesCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDataGraphPipelineAvailablePropertiesARM-pProperties-parameter
  If the value referenced by `pPropertiesCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertiesCount` VkDataGraphPipelinePropertyARM values

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query properties of a data graph pipeline, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetDataGraphPipelinePropertiesARM(
    VkDevice                                    device,
    const VkDataGraphPipelineInfoARM*           pPipelineInfo,
    uint32_t                                    propertiesCount,
    VkDataGraphPipelinePropertyQueryResultARM*  pProperties);
```

- `device` is the logical device that created the data graph pipeline.
- `pPipelineInfo` is a VkDataGraphPipelineInfoARM that describes the VkPipeline being queried.
- `propertiesCount` is the length of the `pProperties` array.
- `pProperties` is a pointer to an array of VkDataGraphPipelinePropertyQueryResultARM structures.

Valid Usage

- VUID-vkGetDataGraphPipelinePropertiesARM-dataGraphPipeline-09802
  The `dataGraphPipeline` member of `pPipelineInfo` **must** have been created with `device`
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-09889
  There **must** not be two or more structures in the `pProperties` array with the same VkDataGraphPipelinePropertyQueryResultARM::`property`
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-09856
  If `pProperties` includes a VkDataGraphPipelinePropertyQueryResultARM whose `property` member is VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM then `dataGraphPipeline` **must** have been created with a VkDataGraphPipelineNeuralStatisticsCreateInfoARM whose `allowNeuralStatistics` member was VK_TRUE included in the `pNext` chain of VkDataGraphPipelineCreateInfoARM.

Valid Usage (Implicit)

- VUID-vkGetDataGraphPipelinePropertiesARM-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDataGraphPipelinePropertiesARM-pPipelineInfo-parameter
  `pPipelineInfo` **must** be a valid pointer to a valid VkDataGraphPipelineInfoARM structure
- VUID-vkGetDataGraphPipelinePropertiesARM-pProperties-parameter
  `pProperties` **must** be a valid pointer to an array of `propertiesCount` VkDataGraphPipelinePropertyQueryResultARM structures
- VUID-vkGetDataGraphPipelinePropertiesARM-propertiesCount-arraylength
  `propertiesCount` **must** be greater than `0`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDataGraphPipelineInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelineInfoARM {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         dataGraphPipeline;
} VkDataGraphPipelineInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphPipeline` is a VkPipeline handle.

Valid Usage

- VUID-VkDataGraphPipelineInfoARM-dataGraphPipeline-09803
  `dataGraphPipeline` **must** have been created with vkCreateDataGraphPipelinesARM

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_INFO_ARM
- VUID-VkDataGraphPipelineInfoARM-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDataGraphPipelineInfoARM-dataGraphPipeline-parameter
  `dataGraphPipeline` **must** be a valid VkPipeline handle

The `VkDataGraphPipelinePropertyQueryResultARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphPipelinePropertyQueryResultARM {
    VkStructureType                    sType;
    void*                              pNext;
    VkDataGraphPipelinePropertyARM     property;
    VkBool32                           isText;
    size_t                             dataSize;
    void*                              pData;
} VkDataGraphPipelinePropertyQueryResultARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `property` is a VkDataGraphPipelinePropertyARM specifying the property of the data graph pipeline being queried.
- `isText` specifies whether the returned data is text or opaque data. If `isText` is VK_TRUE then the

data returned in pData is text and guaranteed to be a null-terminated UTF-8 string.

- dataSize is an integer related to the size, in bytes, of the data, as described below.
- pData is either NULL or a pointer to a block of memory into which the implementation will return the property data.

If pData is NULL, then the size, in bytes, of the property data is returned in dataSize. Otherwise, dataSize **must** be the size of the buffer, in bytes, pointed to by pData and on return dataSize is overwritten with the number of bytes of data actually written to pData including any trailing NUL character. If dataSize is less than the size, in bytes, of the property data, at most dataSize bytes of data will be written to pData, and VK_INCOMPLETE will be returned by vkGetDataGraphPipelinePropertiesARM instead of VK_SUCCESS, to indicate that not all the available property data was returned. If isText is VK_TRUE and pData is not NULL and dataSize is not zero, the last byte written to pData will be a NUL character.

Valid Usage (Implicit)

- VUID-VkDataGraphPipelinePropertyQueryResultARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_PROPERTY_QUERY_RESULT_ARM
- VUID-VkDataGraphPipelinePropertyQueryResultARM-pNext-pNext
  pNext **must** be NULL
- VUID-VkDataGraphPipelinePropertyQueryResultARM-property-parameter
  property **must** be a valid VkDataGraphPipelinePropertyARM value
- VUID-VkDataGraphPipelinePropertyQueryResultARM-pData-parameter
  If dataSize is not 0, and pData is not NULL, pData **must** be a valid pointer to an array of dataSize bytes

Possible values of VkDataGraphPipelinePropertyQueryResultARM::property, specifying the property of the data graph pipeline being queried, are:

```
// Provided by VK_ARM_data_graph
typedef enum VkDataGraphPipelinePropertyARM {
    VK_DATA_GRAPH_PIPELINE_PROPERTY_CREATION_LOG_ARM = 0,
    VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM = 1,
  // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_DEBUG_DATABASE_ARM =
1000676000,
  // Provided by VK_ARM_data_graph_neural_accelerator_statistics
    VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM =
1000676001,
} VkDataGraphPipelinePropertyARM;
```

- VK_DATA_GRAPH_PIPELINE_PROPERTY_CREATION_LOG_ARM corresponds to a human-readable log produced during the creation of a data graph pipeline. It **may** contain information about errors encountered during the creation or other information generally useful for

debugging. This property **can** be queried for any data graph pipeline.

- VK_DATA_GRAPH_PIPELINE_PROPERTY_IDENTIFIER_ARM corresponds to an opaque identifier for the data graph pipeline. It **can** be used to create a graph pipeline from a pipeline cache without the need to provide any creation data beyond the identifier, using a VkDataGraphPipelineIdentifierCreateInfoARM structure.
- VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_DEBUG_DATABASE_ARM corresponds to opaque debug information that **can** be queried for any data graph pipeline.
- VK_DATA_GRAPH_PIPELINE_PROPERTY_NEURAL_ACCELERATOR_STATISTICS_INFO_ARM corresponds to opaque information about neural statistics that **can** be queried for any data graph pipeline that was created with a VkDataGraphPipelineSessionNeuralStatisticsCreateInfoARM structure whose `allowNeuralStatistics` was VK_TRUE included in the `pNext` chain of VkDataGraphPipelineCreateInfoARM.

53.5. Processing Engines

Data graph pipelines execute on one or more *data graph processing engines*. Each queue family of a VkPhysicalDevice that supports VK_QUEUE_DATA_GRAPH_BIT_ARM **may** provide access to processing engines. Processing engines **may** be *foreign*. Foreign processing engines require the use of external memory and semaphores to exchange data and synchronize with data graph pipelines that target them. Each processing engine **may** support a selection of graph operations. There exists a *default processing engine* that enables implementations to support some operations without tying support to specific processing engines. This allows implementations to avoid being specific about the processing engines that they use internally or to remove the necessity for applications to choose the specific processing engine used to execute a given set of operations.

To query the properties of a data graph processing engine for a specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph
void vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM(
    VkPhysicalDevice                                physicalDevice,
    const VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM*
pQueueFamilyDataGraphProcessingEngineInfo,
    VkQueueFamilyDataGraphProcessingEnginePropertiesARM*
pQueueFamilyDataGraphProcessingEngineProperties);
```

- `physicalDevice` is the physical device to query.
- `pQueueFamilyDataGraphProcessingEngineInfo` is a pointer to a VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM structure that specifies the data graph processing engine and queue family to query.
- `pQueueFamilyDataGraphProcessingEngineProperties` is a pointer to a VkQueueFamilyDataGraphProcessingEnginePropertiesARM structure in which the queried properties are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-pQueueFamilyDataGraphProcessingEngineInfo-parameter
  `pQueueFamilyDataGraphProcessingEngineInfo` **must** be a valid pointer to a valid VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphProcessingEnginePropertiesARM-pQueueFamilyDataGraphProcessingEngineProperties-parameter
  `pQueueFamilyDataGraphProcessingEngineProperties` **must** be a valid pointer to a VkQueueFamilyDataGraphProcessingEnginePropertiesARM structure

The `VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        queueFamilyIndex;
    VkPhysicalDeviceDataGraphProcessingEngineTypeARM    engineType;
} VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` specifies the queue family being queried.
- `engineType` is a VkPhysicalDeviceDataGraphProcessingEngineTypeARM specifying the engine type whose properties are being queried.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_QUEUE_FAMILY_DATA_GRAPH_PROCESSING_ENGINE_INFO_ARM
- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPhysicalDeviceQueueFamilyDataGraphProcessingEngineInfoARM-engineType-parameter
  `engineType` **must** be a valid VkPhysicalDeviceDataGraphProcessingEngineTypeARM value

The `VkQueueFamilyDataGraphProcessingEnginePropertiesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkQueueFamilyDataGraphProcessingEnginePropertiesARM {
    VkStructureType                       sType;
    void*                                 pNext;
    VkExternalSemaphoreHandleTypeFlags    foreignSemaphoreHandleTypes;
    VkExternalMemoryHandleTypeFlags       foreignMemoryHandleTypes;
} VkQueueFamilyDataGraphProcessingEnginePropertiesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `foreignSemaphoreHandleTypes` is a VkExternalSemaphoreHandleTypeFlags that describes the external semaphore handle types supported by a foreign data graph processing engine.
- `foreignMemoryHandleTypes` is a VkExternalMemoryHandleTypeFlags that describes the external memory handle types supported by a foreign data graph processing engine.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphProcessingEnginePropertiesARM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_PROCESSING_ENGINE_PROPERTIES_ARM
- VUID-VkQueueFamilyDataGraphProcessingEnginePropertiesARM-pNext-pNext `pNext` **must** be `NULL`

The `VkPhysicalDeviceDataGraphProcessingEngineARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphProcessingEngineARM {
    VkPhysicalDeviceDataGraphProcessingEngineTypeARM    type;
    VkBool32                                            isForeign;
} VkPhysicalDeviceDataGraphProcessingEngineARM;
```

- `type` is a VkPhysicalDeviceDataGraphProcessingEngineTypeARM that specifies the type of the processing engine.
- `isForeign` specifies whether the processing engine is foreign.

The defined data graph processing engines are:

```
// Provided by VK_ARM_data_graph
typedef enum VkPhysicalDeviceDataGraphProcessingEngineTypeARM {
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM = 0,
  // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM = 1000629000,
  // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM = 1000629001,
} VkPhysicalDeviceDataGraphProcessingEngineTypeARM;
```

- VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_DEFAULT_ARM corresponds to the default data graph processing engine.
- VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM specifies an engine that specializes in neural processing.
- VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM specifies an engine that uses compute processing to execute data graphs.

The VkDataGraphProcessingEngineCreateInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkDataGraphProcessingEngineCreateInfoARM {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        processingEngineCount;
    VkPhysicalDeviceDataGraphProcessingEngineARM*   pProcessingEngines;
} VkDataGraphProcessingEngineCreateInfoARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- processingEngineCount is the number of elements in pProcessingEngines.
- pProcessingEngines is a pointer to an array of processingEngineCount VkPhysicalDeviceDataGraphProcessingEngineARM structures.

Valid Usage

- VUID-VkDataGraphProcessingEngineCreateInfoARM-dataGraph-09953
  The dataGraph feature **must** be enabled
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-09918
  pProcessingEngines **must** not contain identical VkPhysicalDeviceDataGraphProcessingEngineARM structures
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-09956
  For each element of pProcessingEngines, its type member **must** be a valid VkPhysicalDeviceDataGraphProcessingEngineTypeARM value
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-11843

If any element of pProcessingEngines has a type of VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM or VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM and isForeign set to VK_TRUE, processingEngineCount **must** equal 1

- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-11844
  If any element of pProcessingEngines has a type of VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM or VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM, the dataGraphModel feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkDataGraphProcessingEngineCreateInfoARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PROCESSING_ENGINE_CREATE_INFO_ARM
- VUID-VkDataGraphProcessingEngineCreateInfoARM-pProcessingEngines-parameter
  pProcessingEngines **must** be a valid pointer to an array of processingEngineCount VkPhysicalDeviceDataGraphProcessingEngineARM structures
- VUID-VkDataGraphProcessingEngineCreateInfoARM-processingEngineCount-arraylength
  processingEngineCount **must** be greater than 0

Structure Chaining

Extends the structures

- VkCommandPoolCreateInfo
- VkDataGraphPipelineCreateInfoARM
- VkDescriptorPoolCreateInfo

53.6. Operations

Data graph processing engines execute *data graph operations*. Operations **may** be of a fixed-function nature, configurable or not, or **may** , for example, be provided as part of a SPIR-V extended instruction set.

To query the data graph processing engines and operations they support for a specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    uint32_t*                                   pQueueFamilyDataGraphPropertyCount,
    VkQueueFamilyDataGraphPropertiesARM*        pQueueFamilyDataGraphProperties);
```

- `physicalDevice` is the physical device to query.
- `queueFamilyIndex` is the index of the queue family being queried.
- `pQueueFamilyDataGraphPropertyCount` is a pointer to an integer related to the number of properties available or queried.
- `pQueueFamilyDataGraphProperties` is either `NULL` or a pointer to an array of VkQueueFamilyDataGraphPropertiesARM structures.

If `pQueueFamilyDataGraphProperties` is `NULL`, then the number of properties available is returned in `pQueueFamilyDataGraphPropertyCount`. Otherwise, `pQueueFamilyDataGraphPropertyCount` **must** point to a variable set by the application to the number of elements in the `pQueueFamilyDataGraphProperties` array, and on return the variable is overwritten with the number of structures actually written to `pQueueFamilyDataGraphProperties`. If `pQueueFamilyDataGraphPropertyCount` is less than the number of properties available, at most `pQueueFamilyDataGraphPropertyCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

If the dataGraphModel feature is supported, the implementation **must** return at least one property with engine type VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM or VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-pQueueFamilyDataGraphPropertyCount-parameter
  `pQueueFamilyDataGraphPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM-pQueueFamilyDataGraphProperties-parameter
  If the value referenced by `pQueueFamilyDataGraphPropertyCount` is not `0`, and `pQueueFamilyDataGraphProperties` is not `NULL`, `pQueueFamilyDataGraphProperties` **must** be a valid pointer to an array of `pQueueFamilyDataGraphPropertyCount` VkQueueFamilyDataGraphPropertiesARM structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkQueueFamilyDataGraphPropertiesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkQueueFamilyDataGraphPropertiesARM {
    VkStructureType                                 sType;
    void*                                           pNext;
    VkPhysicalDeviceDataGraphProcessingEngineARM    engine;
    VkPhysicalDeviceDataGraphOperationSupportARM    operation;
} VkQueueFamilyDataGraphPropertiesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `engine` is a VkPhysicalDeviceDataGraphProcessingEngineARM structure describing a data graph processing engine.
- `operation` is a VkPhysicalDeviceDataGraphOperationSupportARM structure describing one or more operations supported by a data graph processing engine.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphPropertiesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_PROPERTIES_ARM
- VUID-VkQueueFamilyDataGraphPropertiesARM-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkQueueFamilyDataGraphPropertiesARM-engine-parameter
  `engine` **must** be a valid VkPhysicalDeviceDataGraphProcessingEngineARM structure
- VUID-VkQueueFamilyDataGraphPropertiesARM-operation-parameter
  `operation` **must** be a valid VkPhysicalDeviceDataGraphOperationSupportARM structure

The `VkPhysicalDeviceDataGraphOperationSupportARM` structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphOperationSupportARM {
    VkPhysicalDeviceDataGraphOperationTypeARM    operationType;
    char                                         name
[VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM];
    uint32_t                                     version;
} VkPhysicalDeviceDataGraphOperationSupportARM;
```

- `operationType` is a VkPhysicalDeviceDataGraphOperationTypeARM enum specifying the type of the operation whose support is being described.
- `name` is a pointer to a null-terminated UTF-8 string specifying the name of the operation whose support is being described.
- `version` is an integer specifying the version of the operation whose support is being described.

VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM is the length in `char` values of an array containing the name of a data graph operation, as returned in VkPhysicalDeviceDataGraphOperationSupportARM::`name`.

```
#define VK_MAX_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_SET_NAME_SIZE_ARM 128U
```

The defined data graph operations are:

```
// Provided by VK_ARM_data_graph
typedef enum VkPhysicalDeviceDataGraphOperationTypeARM {
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM =
0,
  // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_NEURAL_MODEL_QCOM = 1000629000,
  // Provided by VK_QCOM_data_graph_model
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_BUILTIN_MODEL_QCOM = 1000629001,
  // Provided by VK_ARM_data_graph_optical_flow
    VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM = 1000631000,
} VkPhysicalDeviceDataGraphOperationTypeARM;
```

- VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM corresponds to operations provided by a SPIR-V extended instruction set.
- VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_NEURAL_MODEL_QCOM specifies an operation that executes neural models provided by the application.
- VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_BUILTIN_MODEL_QCOM specifies an operation that executes specialized built-in models provided by the implementation.
- VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM corresponds to fixed-function optical flow as defined by `VK_ARM_data_graph_optical_flow`.

To query the properties of a data graph processing engine and operation set combination for a

specific queue family of a physical device, call:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa, VK_ARM_data_graph_optical_flow
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM(
    VkPhysicalDevice                                physicalDevice,
    uint32_t                                        queueFamilyIndex,
    const VkQueueFamilyDataGraphPropertiesARM*      pQueueFamilyDataGraphProperties,
    VkBaseOutStructure*                             pProperties);
```

- `physicalDevice` is the physical device to query.
- `queueFamilyIndex` is the index of the queue family being queried.
- `pQueueFamilyDataGraphProperties` is a pointer to a VkQueueFamilyDataGraphPropertiesARM structure that selects the processing engine and operation set for which the properties are queried.
- `pProperties` is a pointer to a structure in which the properties are returned.

Valid property queries for specific engines and operations

Engine	Operation Type	Operation Name	Operation Version	Property structure
Any	Any	`TOSA.XXXXXX.X` where `X` is a digit between 0 and 9	Any	VkQueueFamilyDataGraphTOSAPropertiesARM
Any	Any	`OpticalFlow`	Any	VkQueueFamilyDataGraphOpticalFlowPropertiesARM

Valid Usage

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pQueueFamilyDataGraphProperties-09957
  The VkQueueFamilyDataGraphPropertiesARM structure pointed to by `pQueueFamilyDataGraphProperties` **must** have been obtained by a prior call to vkGetPhysicalDeviceQueueFamilyDataGraphPropertiesARM with the same `physicalDevice` and `queueFamilyIndex`
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pProperties-09958
  `pProperties` **must** be a valid structure of the appropriate type as defined in Valid property queries for specific engines and operations

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphEngineOperationPropertiesARM-pQueueFamilyDataGraphProperties-parameter
  `pQueueFamilyDataGraphProperties` **must** be a valid pointer to a valid VkQueueFamilyDataGraphPropertiesARM structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

53.6.1. Data Graph Operations Requirements

Physical devices that support the `dataGraphShaderModule` feature **must** support an operation whose VkPhysicalDeviceDataGraphOperationSupportARM::`operationType` is VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_SPIRV_EXTENDED_INSTRUCTION_SET_ARM and `name` and `version` are as described in the following table for at least one processing engine in at least one queue family when specific extensions are supported at a specific version:

Extension	Extension specification version	Operation name	Operation version
VK_ARM_data_graph_instruction_set_tosa	1	`TOSA.001000.1`	0

Physical devices that support VK_ARM_data_graph_optical_flow **must** support the following VkPhysicalDeviceDataGraphOperationSupportARM for at least one processing engine in at least one queue family:

- `operationType`: VK_PHYSICAL_DEVICE_DATA_GRAPH_OPERATION_TYPE_OPTICAL_FLOW_ARM
- `name`: `OpticalFlow`
- `version`: `1`

53.6.2. TOSA

The VkQueueFamilyDataGraphTOSAPropertiesARM structure is defined as:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef struct VkQueueFamilyDataGraphTOSAPropertiesARM {
    VkStructureType                          sType;
    void*                                    pNext;
    uint32_t                                 profileCount;
    const VkDataGraphTOSANameQualityARM*     pProfiles;
    uint32_t                                 extensionCount;
    const VkDataGraphTOSANameQualityARM*     pExtensions;
    VkDataGraphTOSALevelARM                  level;
} VkQueueFamilyDataGraphTOSAPropertiesARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- profileCount is the length of the pProfiles array.
- pProfiles is a pointer to an array of VkDataGraphTOSANameQualityARM structures describing the TOSA profiles supported.
- extensionCount is the length of the pExtensions array.
- pExtensions is a pointer to an array of VkDataGraphTOSANameQualityARM structures describing the TOSA extensions supported.
- level is a VkDataGraphTOSALevelARM describing the TOSA level supported.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphTOSAPropertiesARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_TOSA_PROPERTIES_ARM
- VUID-VkQueueFamilyDataGraphTOSAPropertiesARM-pNext-pNext
  pNext **must** be NULL

The VkDataGraphTOSANameQualityARM structure is defined as:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef struct VkDataGraphTOSANameQualityARM {
    char                                name[VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM];
    VkDataGraphTOSAQualityFlagsARM      qualityFlags;
} VkDataGraphTOSANameQualityARM;
```

- name is a pointer to a null-terminated UTF-8 string specifying the name of the TOSA profile or extension.

- `qualityLevel` is a VkDataGraphTOSAQualityFlagsARM describing the quality of the support for the TOSA profile or extension.

VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM is the length in `char` values of an array containing the name of a data graph TOSA profile or extension, as returned in VkDataGraphTOSANameQualityARM::`name`.

```
#define VK_MAX_DATA_GRAPH_TOSA_NAME_SIZE_ARM 128U
```

Bits which **can** be set in VkDataGraphTOSANameQualityARM::`qualityLevel`, describing the quality of a TOSA profile or extension, are:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef enum VkDataGraphTOSAQualityFlagBitsARM {
    VK_DATA_GRAPH_TOSA_QUALITY_ACCELERATED_ARM = 0x00000001,
    VK_DATA_GRAPH_TOSA_QUALITY_CONFORMANT_ARM = 0x00000002,
    VK_DATA_GRAPH_TOSA_QUALITY_EXPERIMENTAL_ARM = 0x00000004,
    VK_DATA_GRAPH_TOSA_QUALITY_DEPRECATED_ARM = 0x00000008,
} VkDataGraphTOSAQualityFlagBitsARM;
```

- VK_DATA_GRAPH_TOSA_QUALITY_ACCELERATED_ARM specifies that the implementation of the TOSA profile or extension is accelerated.
- VK_DATA_GRAPH_TOSA_QUALITY_CONFORMANT_ARM specifies that the implementation of the TOSA profile or extension is conformant.
- VK_DATA_GRAPH_TOSA_QUALITY_EXPERIMENTAL_ARM specifies that the TOSA profile or extension is experimental.
- VK_DATA_GRAPH_TOSA_QUALITY_DEPRECATED_ARM specifies that the TOSA profile or extension is deprecated.

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef VkFlags   VkDataGraphTOSAQualityFlagsARM;
```

VkDataGraphTOSAQualityFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphTOSAQualityFlagBitsARM.

The defined data graph TOSA levels are:

```
// Provided by VK_ARM_data_graph_instruction_set_tosa
typedef enum VkDataGraphTOSALevelARM {
    VK_DATA_GRAPH_TOSA_LEVEL_NONE_ARM = 0,
    VK_DATA_GRAPH_TOSA_LEVEL_8K_ARM = 1,
} VkDataGraphTOSALevelARM;
```

- VK_DATA_GRAPH_TOSA_LEVEL_NONE_ARM corresponds to the none TOSA level, as described

in the TOSA specification.

- VK_DATA_GRAPH_TOSA_LEVEL_8K_ARM corresponds to the 8K TOSA level, as described in the TOSA specification.

53.6.3. Optical flow

An optical flow fixed-function node in a graph calculates the forward optical flow between an input image and a reference image. An output flow vector (Vx, Vy) means that current pixel (x, y) of the input image can be found at location (x+Vx, y+Vy) in the reference image.

An optical flow fixed function node has the following graph node connection points:

- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_INPUT_ARM
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_REFERENCE_ARM
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_FLOW_VECTOR_ARM
- VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM

The VkQueueFamilyDataGraphOpticalFlowPropertiesARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkQueueFamilyDataGraphOpticalFlowPropertiesARM {
    VkStructureType                           sType;
    void*                                     pNext;
    VkDataGraphOpticalFlowGridSizeFlagsARM    supportedOutputGridSizes;
    VkDataGraphOpticalFlowGridSizeFlagsARM    supportedHintGridSizes;
    VkBool32                                  hintSupported;
    VkBool32                                  costSupported;
    uint32_t                                  minWidth;
    uint32_t                                  minHeight;
    uint32_t                                  maxWidth;
    uint32_t                                  maxHeight;
} VkQueueFamilyDataGraphOpticalFlowPropertiesARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- supportedOutputGridSizes are the supported VkDataGraphOpticalFlowGridSizeFlagsARM which **can** be specified in VkDataGraphPipelineOpticalFlowCreateInfoARM::outputGridSize.
- supportedHintGridSizes are the supported VkDataGraphOpticalFlowGridSizeFlagsARM which **can** be specified in VkDataGraphPipelineOpticalFlowCreateInfoARM::hintGridSize.
- hintSupported is a boolean describing whether using hint flow vector map is supported in an optical flow graph pipeline.
- costSupported is a boolean describing whether cost map generation is supported in an optical flow graph pipeline.

- `minWidth` is the minimum width in pixels for images used in an optical flow graph pipeline.
- `minHeight` is the minimum height in pixels for images used in an optical flow graph pipeline.
- `maxWidth` is the maximum width in pixels for images used in an optical flow graph pipeline.
- `maxHeight` is the maximum height in pixels for images used in an optical flow graph pipeline.

Valid Usage (Implicit)

- VUID-VkQueueFamilyDataGraphOpticalFlowPropertiesARM-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_QUEUE_FAMILY_DATA_GRAPH_OPTICAL_FLOW_PROPERTIES_ARM`
- VUID-VkQueueFamilyDataGraphOpticalFlowPropertiesARM-pNext-pNext
  `pNext` **must** be `NULL`

Image formats

To enumerate the supported image formats for a specific data graph optical flow usage, call:

```
// Provided by VK_ARM_data_graph_optical_flow
VkResult vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM(
    VkPhysicalDevice                                physicalDevice,
    uint32_t                                        queueFamilyIndex,
    const VkQueueFamilyDataGraphPropertiesARM*      pQueueFamilyDataGraphProperties,
    const VkDataGraphOpticalFlowImageFormatInfoARM* pOpticalFlowImageFormatInfo,
    uint32_t*                                       pFormatCount,
    VkDataGraphOpticalFlowImageFormatPropertiesARM* pImageFormatProperties);
```

- `physicalDevice` is the physical device being queried.
- `queueFamilyIndex` is the index of the queue family being queried.
- `pQueueFamilyDataGraphProperties` is a pointer to a VkQueueFamilyDataGraphPropertiesARM structure that selects the processing engine and operation set for which the properties are queried.
- `pOpticalFlowImageFormatInfo` is a pointer to a VkDataGraphOpticalFlowImageFormatInfoARM structure specifying the optical flow usage for which information is returned.
- `pFormatCount` is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- `pImageFormatProperties` is a pointer to an array of VkDataGraphOpticalFlowImageFormatPropertiesARM structures in which supported formats and image parameters are returned.

If `pImageFormatProperties` is `NULL`, then the number of optical flow properties supported for the given `physicalDevice` is returned in `pFormatCount`. Otherwise, `pFormatCount` **must** point to a variable set by the user to the number of elements in the `pImageFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pImageFormatProperties`. If the

value of pFormatCount is less than the number of optical flow properties supported, at most pFormatCount values will be written to pImageFormatProperties, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned. Before creating an image to be used as an optical flow image, obtain the supported image creation parameters by querying with vkGetPhysicalDeviceFormatProperties2 and vkGetPhysicalDeviceImageFormatProperties2 using one of the reported formats and adding VkDataGraphOpticalFlowImageFormatInfoARM to the pNext chain of VkPhysicalDeviceImageFormatInfo2. When querying the parameters with vkGetPhysicalDeviceImageFormatProperties2 for images used for optical flow operations, the VkDataGraphOpticalFlowImageFormatInfoARM::usage field should contain one or more of the bits defined in VkDataGraphOpticalFlowImageUsageFlagBitsARM.

Valid Usage

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pQueueFamilyDataGraphProperties-09965
  pQueueFamilyDataGraphProperties **must** point to a structure whose operation member has its name member equal to OpticalFlow

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pQueueFamilyDataGraphProperties-parameter
  pQueueFamilyDataGraphProperties **must** be a valid pointer to a valid VkQueueFamilyDataGraphPropertiesARM structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pOpticalFlowImageFormatInfo-parameter
  pOpticalFlowImageFormatInfo **must** be a valid pointer to a valid VkDataGraphOpticalFlowImageFormatInfoARM structure
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pFormatCount-parameter
  pFormatCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM-pImageFormatProperties-parameter
  If the value referenced by pFormatCount is not 0, and pImageFormatProperties is not NULL, pImageFormatProperties **must** be a valid pointer to an array of pFormatCount VkDataGraphOpticalFlowImageFormatPropertiesARM structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_EXTENSION_NOT_PRESENT
- VK_ERROR_FORMAT_NOT_SUPPORTED
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

NOTE

VK_FORMAT_B8G8R8A8_UNORM, VK_FORMAT_R8G8B8A8_UNORM, VK_FORMAT_R8G8B8_UNORM, VK_FORMAT_B8G8R8_UNORM, VK_FORMAT_R8_UNORM, and VK_FORMAT_B10G11R11_UFLOAT_PACK32 are initially supported for images with optical flow usage VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM.

VK_FORMAT_R16G16_SFLOAT is initially supported for images with optical flow usage VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM and VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM.

VK_FORMAT_R16_UINT is initially supported for images with optical flow usage VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM.

The VkDataGraphOpticalFlowImageFormatInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphOpticalFlowImageFormatInfoARM {
    VkStructureType                              sType;
    const void*                                  pNext;
    VkDataGraphOpticalFlowImageUsageFlagsARM     usage;
} VkDataGraphOpticalFlowImageFormatInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of VkDataGraphOpticalFlowImageUsageFlagBitsARM describing the intended optical flow usage of the image.

Valid Usage (Implicit)

- VUID-VkDataGraphOpticalFlowImageFormatInfoARM-sType-sType

sType must be VK_STRUCTURE_TYPE_DATA_GRAPH_OPTICAL_FLOW_IMAGE_FORMAT_INFO_ARM

- VUID-VkDataGraphOpticalFlowImageFormatInfoARM-usage-parameter
  usage **must** be a valid combination of VkDataGraphOpticalFlowImageUsageFlagBitsARM values

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2

Bits which **can** be set in VkDataGraphOpticalFlowImageFormatInfoARM::usage, controlling optical flow usage, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowImageUsageFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM = 0x00000008,
} VkDataGraphOpticalFlowImageUsageFlagBitsARM;
```

- VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM specifies that the image **can** be used as input or reference image for an optical flow operation.
- VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM specifies that the image **can** be used as output flow vector map for an optical flow operation.
- VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_HINT_BIT_ARM specifies that the image **can** be used as hint flow vector map for an optical flow operation.
- VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM specifies that the image **can** be used as output cost map for an optical flow operation.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags   VkDataGraphOpticalFlowImageUsageFlagsARM;
```

VkDataGraphOpticalFlowImageUsageFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphOpticalFlowImageUsageFlagBitsARM.

The VkDataGraphOpticalFlowImageFormatPropertiesARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphOpticalFlowImageFormatPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    VkFormat           format;
} VkDataGraphOpticalFlowImageFormatPropertiesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is a VkFormat that specifies the format that **can** be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkDataGraphOpticalFlowImageFormatPropertiesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_ARM
- VUID-VkDataGraphOpticalFlowImageFormatPropertiesARM-pNext-pNext
  `pNext` **must** be `NULL`

Pipeline creation

The `VkDataGraphPipelineOpticalFlowCreateInfoARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineOpticalFlowCreateInfoARM {
    VkStructureType                              sType;
    void*                                        pNext;
    uint32_t                                     width;
    uint32_t                                     height;
    VkFormat                                     imageFormat;
    VkFormat                                     flowVectorFormat;
    VkFormat                                     costFormat;
    VkDataGraphOpticalFlowGridSizeFlagsARM       outputGridSize;
    VkDataGraphOpticalFlowGridSizeFlagsARM       hintGridSize;
    VkDataGraphOpticalFlowPerformanceLevelARM    performanceLevel;
    VkDataGraphOpticalFlowCreateFlagsARM         flags;
} VkDataGraphPipelineOpticalFlowCreateInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `width` is the width in pixels of the input or reference image to be bound to this optical flow pipeline.

- `height` is the height in pixels of the input or reference image to be bound to this optical flow pipeline.
- `imageFormat` is the VkFormat of the input and reference image to be bound to this optical flow pipeline.
- `flowVectorFormat` is the VkFormat of the flow vector maps (output or hint) to be bound to this optical flow pipeline.
- `costFormat` is the VkFormat of the cost maps to be bound to this optical flow pipeline.
- `outputGridSize` is exactly one bit of VkDataGraphOpticalFlowGridSizeFlagsARM specifying the grid size of the output flow and cost maps to be bound to this optical flow pipeline. The size of the output flow and cost maps is a function of the input image dimensions and `outputGridSize` and is calculated as follows:
  OutputWidth = ⌈ `width` / OutputGridWidth ⌉
  OutputHeight = ⌈ `height` / OutputGridHeight ⌉
  where OutputGridWidth and OutputGridHeight are determined by `outputGridSize`.
- `hintGridSize` is exactly one bit of VkDataGraphOpticalFlowGridSizeFlagsARM specifying the grid size of the hint flow vector map to be bound to this optical flow pipeline. The size of the hint maps is a function of the input image dimensions and `hintGridSize` and is calculated as follows:
  HintWidth = ⌈ `width` / HintGridWidth ⌉
  HintHeight = ⌈ `height` / HintGridHeight ⌉
  where HintGridWidth and HintGridHeight are determined by `hintGridSize`.
- `performanceLevel` is the VkDataGraphOpticalFlowPerformanceLevelARM used for this optical flow pipeline.
- `flags` are the VkDataGraphOpticalFlowCreateFlagsARM used for this optical flow pipeline.

Valid Usage

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-width-09966
  `width` **must** be greater than or equal to `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::minWidth` and less than or equal to `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::maxWidth`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-height-09967
  `height` **must** be greater than or equal to `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::minHeight` and less than or equal to `VkQueueFamilyDataGraphOpticalFlowPropertiesARM::maxHeight`
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-imageFormat-09968
  `imageFormat` **must** be one of the formats returned by vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM for VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_INPUT_BIT_ARM
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flowVectorFormat-09969
  `flowVectorFormat` **must** be one of the formats returned by vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM for VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_OUTPUT_BIT_ARM
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-costFormat-09970

costFormat **must** be one of the formats returned by vkGetPhysicalDeviceQueueFamilyDataGraphOpticalFlowImageFormatsARM for VK_DATA_GRAPH_OPTICAL_FLOW_IMAGE_USAGE_COST_BIT_ARM if VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM is set in flags

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-outputGridSize-09971 outputGridSize **must** be exactly one of the bits reported in VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedOutputGridSizes
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-hintGridSize-09972 hintGridSize **must** be 0 or exactly one of the bits reported in VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedHintGridSizes if VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM is set in flags
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-hintGridSize-09973 hintGridSize **must** be the same as outputGridSize if hintGridSize is not 0
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-09974 VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM **must** not be set in flags if VkQueueFamilyDataGraphOpticalFlowPropertiesARM::hintSupported is VK_FALSE
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-09975 VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM **must** not be set in flags if VkQueueFamilyDataGraphOpticalFlowPropertiesARM::costSupported is VK_FALSE

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-sType-sType sType **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_OPTICAL_FLOW_CREATE_INFO_ARM
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-imageFormat-parameter imageFormat **must** be a valid VkFormat value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flowVectorFormat-parameter flowVectorFormat **must** be a valid VkFormat value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-costFormat-parameter If costFormat is not 0, costFormat **must** be a valid VkFormat value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-performanceLevel-parameter If performanceLevel is not 0, performanceLevel **must** be a valid VkDataGraphOpticalFlowPerformanceLevelARM value
- VUID-VkDataGraphPipelineOpticalFlowCreateInfoARM-flags-parameter If flags is not 0, flags **must** be a valid combination of VkDataGraphOpticalFlowCreateFlagBitsARM values

Structure Chaining

Extends the structure

- VkDataGraphPipelineCreateInfoARM

Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid). Bits which **can** be set in VkDataGraphPipelineOpticalFlowCreateInfoARM::outputGridSize and VkDataGraphPipelineOpticalFlowCreateInfoARM::hintGridSize, or which are returned in VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedOutputGridSizes and VkQueueFamilyDataGraphOpticalFlowPropertiesARM::supportedHintGridSizes controlling optical flow grid sizes, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowGridSizeFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_ARM = 0x00000008,
} VkDataGraphOpticalFlowGridSizeFlagBitsARM;
```

- VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_ARM specifies that grid is 1x1 pixel.
- VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_ARM specifies that grid is 2x2 pixel.
- VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_ARM specifies that grid is 4x4 pixel.
- VK_DATA_GRAPH_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_ARM specifies that grid is 8x8 pixel.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags   VkDataGraphOpticalFlowGridSizeFlagsARM;
```

VkDataGraphOpticalFlowGridSizeFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphOpticalFlowGridSizeFlagBitsARM.

Optical flow exposes performance levels which the user can choose based on the desired performance and quality requirement. The optical flow performance level types are defined with the following:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowPerformanceLevelARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_ARM = 0,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_ARM = 1,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_ARM = 2,
    VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_ARM = 3,
} VkDataGraphOpticalFlowPerformanceLevelARM;
```

- VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_ARM is a level with slower performance but higher quality.
- VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_ARM is a level with medium performance and medium quality.
- VK_DATA_GRAPH_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_ARM is a preset with higher performance but lower quality.

Bits which **can** be set in VkDataGraphPipelineOpticalFlowCreateInfoARM::`flags`, controlling optical flow pipeline operations, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowCreateFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_RESERVED_30_BIT_ARM = 0x40000000,
} VkDataGraphOpticalFlowCreateFlagBitsARM;
```

- VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_HINT_BIT_ARM specifies that a VkImageView with external flow vector map will be used as hints in performing the motion search and **must** be connected to VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_HINT_ARM.
- VK_DATA_GRAPH_OPTICAL_FLOW_CREATE_ENABLE_COST_BIT_ARM specifies that the cost for the forward flow is generated in a VkImageView which **must** be connected to VK_DATA_GRAPH_PIPELINE_NODE_CONNECTION_TYPE_OPTICAL_FLOW_COST_ARM. The cost is the confidence level of the flow vector for each grid in the image. The cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.

`VkDataGraphOpticalFlowCreateFlagsARM` is a bitmask type for setting a mask of zero or more VkDataGraphOpticalFlowCreateFlagBitsARM.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags   VkDataGraphOpticalFlowCreateFlagsARM;
```

Pipeline dispatch

The VkDataGraphPipelineOpticalFlowDispatchInfoARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkDataGraphPipelineOpticalFlowDispatchInfoARM {
    VkStructureType                          sType;
    void*                                    pNext;
    VkDataGraphOpticalFlowExecuteFlagsARM    flags;
    uint32_t                                 meanFlowL1NormHint;
} VkDataGraphPipelineOpticalFlowDispatchInfoARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` are the VkDataGraphOpticalFlowExecuteFlagsARM used for this command.
- `meanFlowL1NormHint` is an integer used to hint to the implementation that the mean L1 norm of flow vectors is expected to be centered around this value (in number of pixels of the input image). The implementation may use this value to influence how flow vectors are computed. Different values may result in different flow vectors and will affect the cost of computing the flow vectors. A value of 0 means that the application does not wish to provide a hint.

Valid Usage

- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-meanFlowL1NormHint-09976
  `meanFlowL1NormHint`, when different from 0, **must** be less than or equal to the maximum of the width or height of the input image provided at pipeline creation time via VkDataGraphPipelineOpticalFlowCreateInfoARM::`width` or VkDataGraphPipelineOpticalFlowCreateInfoARM::`height`, respectively

Valid Usage (Implicit)

- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DATA_GRAPH_PIPELINE_OPTICAL_FLOW_DISPATCH_INFO_ARM
- VUID-VkDataGraphPipelineOpticalFlowDispatchInfoARM-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkDataGraphOpticalFlowExecuteFlagBitsARM values

Structure Chaining

Extends the structure

- VkDataGraphPipelineDispatchInfoARM

Bits which **can** be set in VkDataGraphPipelineOpticalFlowDispatchInfoARM::`flags`, controlling optical flow execution, are:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef enum VkDataGraphOpticalFlowExecuteFlagBitsARM {
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_ARM = 0x00000001,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM = 0x00000002,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM = 0x00000004,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM =
0x00000008,
    VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM =
0x00000010,
} VkDataGraphOpticalFlowExecuteFlagBitsARM;
```

- VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_ARM specifies that temporal hints from previously generated flow vector map are not used. If temporal hints are enabled, the optical flow vector map from previous vkCmdDispatchDataGraphARM calls in the same graph pipeline session **may** be automatically used as hints for the current vkCmdDispatchDataGraphARM call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive image pairs).
- VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_UNCHANGED_BIT_ARM specifies that the contents of the input image are the same as in the previously executed vkCmdDispatchDataGraphARM call in the same graph pipeline session.
- VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_UNCHANGED_BIT_ARM specifies that the contents of the reference image are the same as in the previously executed vkCmdDispatchDataGraphARM call in the same graph pipeline session.
- VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_INPUT_IS_PREVIOUS_REFERENCE_BIT_ARM specifies that the contents of the input image are the same as the contents of the reference image in the previously executed vkCmdDispatchDataGraphARM call in the same graph pipeline session.
- VK_DATA_GRAPH_OPTICAL_FLOW_EXECUTE_REFERENCE_IS_PREVIOUS_INPUT_BIT_ARM specifies that the contents of the reference image are the same as the contents of the input image in the previously executed vkCmdDispatchDataGraphARM call in the same graph pipeline session.

VkDataGraphOpticalFlowExecuteFlagsARM is a bitmask type for setting a mask of zero or more VkDataGraphOpticalFlowExecuteFlagBitsARM.

```
// Provided by VK_ARM_data_graph_optical_flow
typedef VkFlags    VkDataGraphOpticalFlowExecuteFlagsARM;
```

Chapter 54. Extending Vulkan

New functionality **may** be added to Vulkan via either new extensions or new versions of the core, or new versions of an extension in some cases.

This chapter describes how Vulkan is versioned, how compatibility is affected between different versions, and compatibility rules that are followed by the Vulkan Working Group.

54.1. Functionality Levels

Functionality in Vulkan is divided into several different levels; global, instance-level, physical-device-level, and device-level.

- VkInstance and any objects created from a VkInstance other than VkPhysicalDevice are instance-level.
- VkPhysicalDevice is the only physical-device-level object.
- VkDevice and any objects created from a VkDevice are device-level.

The level of a command is the same as the level of its first parameter - if the first parameter is not a dispatchable handle, it is a global command. Different levels of functionality **may** be advertised in different ways.

54.2. Instance and Device Versions

Starting with Vulkan 1.1, there are separate versions advertised for the Vulkan instance, and for each device supported on the system. This allows a system with multiple devices to advertise all devices at their full capabilities, even if those devices do not support the same version of Vulkan.

The instance version indicates which global and instance-level functionality is supported, while each device version indicates the physical-device-level and device-level functionality supported.

The instance version **can** be queried by calling vkEnumerateInstanceVersion. Querying for this function via vkGetInstanceProcAddr will return `NULL` on implementations that only support Vulkan 1.0 functionality.

The device version **can** be queried by calling vkGetPhysicalDeviceProperties or vkGetPhysicalDeviceProperties2, and is returned in VkPhysicalDeviceProperties::`apiVersion`, encoded as described in Version Numbers.

54.3. Core Versions

The Vulkan Specification is regularly updated with bug fixes and clarifications. Occasionally new functionality is added to the core and at some point it is expected that there will be a desire to perform a large, breaking change to the API. In order to indicate to developers how and when these changes are made to the specification, and to provide a way to identify each set of changes, the Vulkan API maintains a version number.

54.3.1. Version Numbers

The Vulkan version number comprises four parts indicating the variant, major, minor and patch version of the Vulkan API Specification.

The *variant* indicates the variant of the Vulkan API supported by the implementation. This is always 0 for the Vulkan API.

NOTE A non-zero variant indicates the API is a variant of the Vulkan API and applications will typically need to be modified to run against it. The variant field was a later addition to the version number, added in version 1.2.175 of the Specification. As Vulkan uses variant 0, this change is fully backwards compatible with the previous version number format for Vulkan implementations. New version number macros have been added for this change and the old macros marked as legacy. For existing applications using the older format and macros, an implementation with non-zero variant will decode as a very high Vulkan version. The high version number should be detectable by applications performing suitable version checking.

The *major version* indicates a significant change in the API, which will encompass a wholly new version of the specification.

The *minor version* indicates the incorporation of new functionality into the core specification.

The *patch version* indicates bug fixes, clarifications, and language improvements have been incorporated into the specification.

Compatibility guarantees made about versions of the API sharing any of the same version numbers are documented in Core Versions.

The version number is used in several places in the API. In each such use, the version numbers are packed into a 32-bit integer as follows:

- The variant is a 3-bit integer packed into bits 31-29.
- The major version is a 7-bit integer packed into bits 28-22.
- The minor version number is a 10-bit integer packed into bits 21-12.
- The patch version number is a 12-bit integer packed into bits 11-0.

`VK_API_VERSION_VARIANT` extracts the API variant number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_VARIANT(version) ((uint32_t)(version) >> 29U)
```

`VK_API_VERSION_MAJOR` extracts the API major version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MAJOR(version) (((uint32_t)(version) >> 22U) & 0x7FU)
```

VK_VERSION_MAJOR extracts the API major version number from a packed version number:

WARNING	This functionality is superseded by Vulkan Version 1.0. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MAJOR(version) ((uint32_t)(version) >> 22U)
```

VK_API_VERSION_MINOR extracts the API minor version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_VERSION_MINOR extracts the API minor version number from a packed version number:

WARNING	This functionality is superseded by Vulkan Version 1.0. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

VK_API_VERSION_PATCH extracts the API patch version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_VERSION_PATCH extracts the API patch version number from a packed version number:

WARNING	This functionality is superseded by Vulkan Version 1.0. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

VK_MAKE_API_VERSION constructs an API version number.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_API_VERSION(variant, major, minor, patch) \
    ((((uint32_t)(variant)) << 29U) | (((uint32_t)(major)) << 22U) |
(((uint32_t)(minor)) << 12U) | ((uint32_t)(patch)))
```

- variant is the variant number.

- `major` is the major version number.
- `minor` is the minor version number.
- `patch` is the patch version number.

`VK_MAKE_VERSION` constructs an API version number.

WARNING	This functionality is superseded by Vulkan Version 1.0. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_VERSION(major, minor, patch) \
    ((((uint32_t)(major)) << 22U) | (((uint32_t)(minor)) << 12U) |
((uint32_t)(patch)))
```

- `major` is the major version number.
- `minor` is the minor version number.
- `patch` is the patch version number.

`VK_API_VERSION_1_0` returns the API version number for Vulkan 1.0.0.

```
// Provided by VK_VERSION_1_0
// Vulkan 1.0 version number
#define VK_API_VERSION_1_0 VK_MAKE_API_VERSION(0, 1, 0, 0)// Patch version should
always be set to 0
```

`VK_API_VERSION_1_1` returns the API version number for Vulkan 1.1.0.

```
// Provided by VK_VERSION_1_1
// Vulkan 1.1 version number
#define VK_API_VERSION_1_1 VK_MAKE_API_VERSION(0, 1, 1, 0)// Patch version should
always be set to 0
```

`VK_API_VERSION_1_2` returns the API version number for Vulkan 1.2.0.

```
// Provided by VK_VERSION_1_2
// Vulkan 1.2 version number
#define VK_API_VERSION_1_2 VK_MAKE_API_VERSION(0, 1, 2, 0)// Patch version should
always be set to 0
```

`VK_API_VERSION_1_3` returns the API version number for Vulkan 1.3.0.

```
// Provided by VK_VERSION_1_3
// Vulkan 1.3 version number
#define VK_API_VERSION_1_3 VK_MAKE_API_VERSION(0, 1, 3, 0)// Patch version should
always be set to 0
```

`VK_API_VERSION_1_4` returns the API version number for Vulkan 1.4.0.

```
// Provided by VK_VERSION_1_4
// Vulkan 1.4 version number
#define VK_API_VERSION_1_4 VK_MAKE_API_VERSION(0, 1, 4, 0)// Patch version should
always be set to 0
```

54.4. Layers

When a layer is enabled, it inserts itself into the call chain for Vulkan commands the layer is interested in. Layers **can** be used for a variety of tasks that extend the base behavior of Vulkan beyond what is required by the specification - such as call logging, tracing, validation, or providing additional extensions.

NOTE For example, an implementation is not expected to check that the values of enums used by the application fall within allowed ranges. Instead, a validation layer would do those checks and flag issues. This avoids a performance penalty during production use of the application because those layers would not be enabled in production.

NOTE Vulkan layers **may** wrap object handles (i.e. return a different handle value to the application than that generated by the implementation). This is generally discouraged, as it increases the probability of incompatibilities with new extensions. The validation layers wrap handles in order to track the proper use and destruction of each object. See the "Architecture of the Vulkan Loader Interfaces" document for additional information.

To query the available layers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceLayerProperties(
    uint32_t*                                   pPropertyCount,
    VkLayerProperties*                          pProperties);
```

- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of VkLayerProperties structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`.

Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If pPropertyCount is less than the number of layer properties available, at most pPropertyCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

The list of available layers may change at any time due to actions outside of the Vulkan implementation, so two calls to vkEnumerateInstanceLayerProperties with the same parameters **may** return different results, or retrieve different pPropertyCount values or pProperties contents. Once an instance has been created, the layers enabled for that instance will continue to be enabled and valid for the lifetime of that instance, even if some of them become unavailable for future instances.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceLayerProperties-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkEnumerateInstanceLayerProperties-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkLayerProperties structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkLayerProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkLayerProperties {
    char        layerName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
    uint32_t    implementationVersion;
    char        description[VK_MAX_DESCRIPTION_SIZE];
} VkLayerProperties;
```

- layerName is an array of VK_MAX_EXTENSION_NAME_SIZE char containing a null-terminated

UTF-8 string which is the name of the layer. Use this name in the ppEnabledLayerNames array passed in the VkInstanceCreateInfo structure to enable this layer for an instance.

- specVersion is the Vulkan version the layer was written to, encoded as described in Version Numbers.
- implementationVersion is the version of this layer. It is an integer, increasing with backward compatible changes.
- description is an array of VK_MAX_DESCRIPTION_SIZE char containing a null-terminated UTF-8 string which provides additional details that **can** be used by the application to identify the layer.

VK_MAX_EXTENSION_NAME_SIZE is the length in char values of an array containing a layer or extension name string, as returned in VkLayerProperties::layerName, VkExtensionProperties::extensionName, and other queries.

```
#define VK_MAX_EXTENSION_NAME_SIZE        256U
```

VK_MAX_DESCRIPTION_SIZE is the length in char values of an array containing a string with additional descriptive information about a query, as returned in VkLayerProperties::description and other queries.

```
#define VK_MAX_DESCRIPTION_SIZE           256U
```

To enable a layer, the name of the layer **should** be added to the ppEnabledLayerNames member of VkInstanceCreateInfo when creating a VkInstance.

Loader implementations **may** provide mechanisms outside the Vulkan API for enabling specific layers. Layers enabled through such a mechanism are *implicitly enabled*, while layers enabled by including the layer name in the ppEnabledLayerNames member of VkInstanceCreateInfo are *explicitly enabled*. Implicitly enabled layers are loaded before explicitly enabled layers, such that implicitly enabled layers are closer to the application, and explicitly enabled layers are closer to the driver. Except where otherwise specified, implicitly enabled and explicitly enabled layers differ only in the way they are enabled, and the order in which they are loaded. Explicitly enabling a layer that is implicitly enabled results in this layer being loaded as an implicitly enabled layer; it has no additional effect.

To enumerate device layers, call:

WARNING	This functionality is superseded by Vulkan Version 1.0. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceLayerProperties(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkLayerProperties*                          pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of VkLayerProperties structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

The list of layers enumerated by `vkEnumerateDeviceLayerProperties` **must** be exactly the sequence of layers enabled for the instance. The members of `VkLayerProperties` for each enumerated layer **must** be the same as the properties when the layer was enumerated by `vkEnumerateInstanceLayerProperties`.

NOTE	Due to platform details on Android, `vkEnumerateDeviceLayerProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceLayerProperties-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkEnumerateDeviceLayerProperties-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceLayerProperties-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkLayerProperties structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The ppEnabledLayerNames and enabledLayerCount members of VkDeviceCreateInfo are legacy and their values **must** be ignored by implementations. However, for compatibility, only an empty list of layers or a list that exactly matches the sequence enabled at instance creation time are valid, and validation layers **should** issue diagnostics for other cases.

Regardless of the enabled layer list provided in VkDeviceCreateInfo, the sequence of layers active for a device will be exactly the sequence of layers enabled when the parent instance was created.

54.5. Extensions

Extensions **may** define new Vulkan commands, structures, and enumerants. For compilation purposes, the interfaces defined by registered extensions, including new structures and enumerants as well as function pointer types for new commands, are defined in the Khronos-supplied vulkan_core.h together with the core API. However, commands defined by extensions **may** not be available for static linking - in which case function pointers to these commands **should** be queried at runtime as described in Command Function Pointers. Extensions **may** be provided by layers as well as by a Vulkan implementation.

Because extensions **may** extend or change the behavior of the Vulkan API, extension authors **should** add support for their extensions to the Khronos validation layers. This is especially important for new commands whose parameters have been wrapped by the validation layers. See the "Architecture of the Vulkan Loader Interfaces" document for additional information.

NOTE

To enable an instance extension, the name of the extension **can** be added to the ppEnabledExtensionNames member of VkInstanceCreateInfo when creating a VkInstance.

To enable a device extension, the name of the extension **can** be added to the ppEnabledExtensionNames member of VkDeviceCreateInfo when creating a VkDevice.

Physical-Device-Level functionality does not have any enabling mechanism and **can** be used as long as the VkPhysicalDevice supports the device extension as determined by vkEnumerateDeviceExtensionProperties.

Enabling an extension (with no further use of that extension) does not change the behavior of functionality exposed by the core Vulkan API or any other extension, other than making valid the use of the commands, enums and structures defined by that extension.

Valid Usage sections for individual commands and structures do not currently contain which extensions have to be enabled in order to make their use valid, although they might do so in the future. It is defined only in the Valid Usage for Extensions section.

54.5.1. Instance Extensions

Instance extensions add new global or instance-level functionality to the API, outside of the core specification. Instance extensions **may** also add physical-device-level functionality.

To query the available instance extensions, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceExtensionProperties(
    const char*                                 pLayerName,
    uint32_t*                                   pPropertyCount,
    VkExtensionProperties*                      pProperties);
```

- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of VkExtensionProperties structures.

When the `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the instance extensions provided by that layer are returned.

If `pProperties` is `NULL`, then the number of extension properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of extension properties available, at most `pPropertyCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

Because the list of available layers may change externally between calls to vkEnumerateInstanceExtensionProperties, two calls may retrieve different results if a `pLayerName` is available in one call but not in another. The extensions supported by a layer may also change between two calls, e.g. if the layer implementation is replaced by a different version between those calls.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

Valid Usage (Implicit)

- VUID-vkEnumerateInstanceExtensionProperties-pLayerName-parameter
  If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateInstanceExtensionProperties-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceExtensionProperties-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkExtensionProperties structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_LAYER_NOT_PRESENT
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

54.5.2. Device Extensions

Device extensions add new device-level functionality to the API, outside of the core specification. If Vulkan 1.1 or VK_KHR_get_physical_device_properties2 is required by the extension, it **may** also add new physical-device-level functionality.

To query the extensions available to a given physical device, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceExtensionProperties(
    VkPhysicalDevice                            physicalDevice,
    const char*                                 pLayerName,
    uint32_t*                                   pPropertyCount,
    VkExtensionProperties*                      pProperties);
```

- physicalDevice is the physical device that will be queried.
- pLayerName is either NULL or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- pPropertyCount is a pointer to an integer related to the number of extension properties available or queried, and is treated in the same fashion as the vkEnumerateInstanceExtensionProperties ::pPropertyCount parameter.
- pProperties is either NULL or a pointer to an array of VkExtensionProperties structures.

When the pLayerName parameter is NULL, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When pLayerName is the name of a layer, the device extensions provided by that layer are returned.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

If the VK_KHR_ray_tracing_pipeline extension is advertised as supported by this query, the

VK_KHR_pipeline_library extension **must** also be supported.

If the VK_EXT_descriptor_heap extension is advertised as supported by this query, the VK_KHR_shader_untyped_pointers extension **must** also be supported.

NOTE	Due to platform details on Android, vkEnumerateDeviceExtensionProperties may be called with physicalDevice equal to NULL during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

Valid Usage (Implicit)

- VUID-vkEnumerateDeviceExtensionProperties-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkEnumerateDeviceExtensionProperties-pLayerName-parameter
  If pLayerName is not NULL, pLayerName **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateDeviceExtensionProperties-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkEnumerateDeviceExtensionProperties-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkExtensionProperties structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_LAYER_NOT_PRESENT
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkExtensionProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkExtensionProperties {
    char        extensionName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
} VkExtensionProperties;
```

- `extensionName` is an array of VK_MAX_EXTENSION_NAME_SIZE `char` containing a null-terminated UTF-8 string which is the name of the extension.
- `specVersion` is the version of this extension. It is an integer, incremented with backward compatible changes.

54.6. Extension Dependencies

Some extensions are dependent on other extensions, or on specific core API versions, to function. To enable extensions with dependencies, any *required extensions* **must** also be enabled through the same API mechanisms when creating an instance with vkCreateInstance or a device with vkCreateDevice. Each extension which has such dependencies documents them in the appendix summarizing that extension.

If an extension is supported (as queried by vkEnumerateInstanceExtensionProperties or vkEnumerateDeviceExtensionProperties), then *required extensions* of that extension **must** also be supported for the same instance or physical device.

Any device extension that has an instance extension dependency that is not enabled by vkCreateInstance is considered to be unsupported, hence it **must** not be returned by vkEnumerateDeviceExtensionProperties for any VkPhysicalDevice child of the instance. Instance extensions do not have dependencies on device extensions.

If a required extension has been promoted to another extension or to a core API version, then as a *general* rule, the dependency is also satisfied by the promoted extension or core version. This will be true so long as any features required by the original extension are also required or enabled by the promoted extension or core version. However, in some cases an extension is promoted while making some of its features optional in the promoted extension or core version. In this case, the dependency **may** not be satisfied. The only way to be certain is to look at the descriptions of the original dependency and the promoted version in the Layers & Extensions and Core Revisions appendices.

NOTE

There is metadata in `vk.xml` describing some aspects of promotion, especially `requires`, `promotedto` and `deprecatedby` attributes of `<extension>` tags. However, the metadata does not yet fully describe this scenario. In the future, we may extend the XML schema to describe the full set of extensions and versions satisfying a dependency. As discussed in more detail for Promotion below, when an extension is promoted it does not mean that a mechanical substitution of an extension API by the corresponding promoted API will work in exactly the same fashion; be supported at runtime; or even exist.

54.7. Compatibility Guarantees (Informative)

This section is marked as informal as there is no binding responsibility on implementations of the Vulkan API - these guarantees are however a contract between the Vulkan Working Group and developers using this Specification.

54.7.1. Core Versions

Each of the major, minor, and patch versions of the Vulkan specification provides different compatibility guarantees.

Patch Versions

A difference in the patch version indicates that a set of bug fixes or clarifications have been made to the Specification. Informative enums returned by Vulkan commands that will not affect the runtime behavior of a valid application may be added in a patch version (e.g. VkVendorId).

The specification's patch version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the patch version being increased by 1. Patch versions are applied to all minor versions, even if a given minor version is not affected by the provoking change.

Specifications with different patch versions but the same major and minor version are *fully compatible* with each other - such that a valid application written against one will work with an implementation of another.

NOTE	If a patch version includes a bug fix or clarification that could have a significant impact on developer expectations, these will be highlighted in the change log. Generally the Vulkan Working Group tries to avoid these kinds of changes, instead fixing them in either an extension or core version.

Minor Versions

Changes in the minor version of the specification indicate that new functionality has been added to the core specification. This will usually include new interfaces in the header, and **may** also include behavior changes and bug fixes. Core functionality **may** be marked as legacy in a minor version, but will not be obsoleted or removed.

The specification's minor version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the minor version being increased by 1. Changes that can be accommodated in a patch version will not increase the minor version.

Specifications with a lower minor version are *backwards compatible* with an implementation of a specification with a higher minor version for core functionality and extensions issued with the KHR vendor tag. Vendor and multi-vendor extensions are not guaranteed to remain functional across minor versions, though in general they are with few exceptions - see Obsoletion for more information.

Major Versions

A difference in the major version of specifications indicates a large set of changes which will likely include interface changes, behavioral changes, removal of legacy functionality, and the modification, addition, or replacement of other functionality.

The specification's major version is monotonically increasing; any change to the specification as

described above will result in the major version being increased. Changes that can be accommodated in a patch or minor version will not increase the major version.

The Vulkan Working Group intends to only issue a new major version of the Specification in order to realize significant improvements to the Vulkan API that will necessarily require breaking compatibility.

A new major version will likely include a wholly new version of the specification to be issued - which could include an overhaul of the versioning semantics for the minor and patch versions. The patch and minor versions of a specification are therefore not meaningful across major versions. If a major version of the specification includes similar versioning semantics, it is expected that the patch and the minor version will be reset to 0 for that major version.

54.7.2. Extensions

A KHR extension **must** be able to be enabled alongside any other KHR extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A multi-vendor extension **should** be able to be enabled alongside any KHR extension or other multi-vendor extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **should** be able to be enabled alongside any KHR extension, multi-vendor extension, or other vendor extension from the same vendor, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **may** be able to be enabled alongside vendor extensions from another vendor.

The one other exception to this is if a vendor or multi-vendor extension is made obsolete by either a core version or another extension, which will be highlighted in the extension appendix.

Promotion

Extensions, or features of an extension, **may** be promoted to a new core version of the API, or a newer extension which an equal or greater number of implementors are in favor of.

NOTE	Structure and enumerated types defined in extensions that were promoted to core in a later version of Vulkan are defined in terms of the equivalent Vulkan core interfaces in that version and its successors. This affects the Vulkan Specification, the Vulkan header files, and the corresponding XML Registry.

When extension functionality is promoted, minor changes **may** be introduced, limited to the following:

- Naming
- Non-intrusive parameter changes
- Feature advertisement/enablement
- Combining structure parameters into larger structures
- Author ID suffixes changed or removed

NOTE	If extension functionality is promoted, there is no guarantee of direct compatibility,

however it should require little effort to port code from the original feature to the promoted one.

The Vulkan Working Group endeavors to ensure that larger changes are marked as either deprecated or obsoleted as appropriate, and can do so retroactively if necessary.

Extensions that are promoted are listed as being promoted in their extension appendices, with reference to where they were promoted to.

When an extension is promoted, any backwards compatibility aliases which exist in the extension will **not** be promoted.

NOTE As a hypothetical example, if the `VK_KHR_surface` extension were promoted to part of a future core version, the `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR` token defined by that extension would be promoted to `VK_COLOR_SPACE_SRGB_NONLINEAR`. However, the `VK_COLORSPACE_SRGB_NONLINEAR_KHR` token aliases `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR`. The `VK_COLORSPACE_SRGB_NONLINEAR_KHR` would not be promoted, because it is a backwards compatibility alias that exists only due to a naming mistake when the extension was initially published.

Deprecation

Extensions **may** be marked as deprecated when they are no longer intended to be used by applications under certain conditions. Generally, a new feature will become available to solve the use case in another extension or core version of the API, but it is not guaranteed.

NOTE Features that are intended to replace deprecated functionality have no guarantees of compatibility, and applications may require drastic modification in order to make use of the new features.

Extensions that are deprecated are listed as being deprecated in their extension appendices, with an explanation of the deprecation and any related features that are relevant.

Obsoletion

Occasionally, an extension will be marked as obsolete if a new version of the core API or a new extension is fundamentally incompatible with it. An obsoleted extension **must** not be used with the extension or core version that obsoleted it.

Extensions that are obsoleted are listed as being obsoleted in their extension appendices, with reference to what they were obsoleted by.

Aliases

When an extension is promoted or deprecated by a newer feature, some or all of its functionality **may** be replicated into the newer feature. Rather than duplication of all the documentation and definitions, the specification instead identifies the identical commands and types as *aliases* of one another. Each alias is mentioned together with the definition it aliases, with the older aliases

marked as “equivalents”. Each alias of the same command has identical behavior, and each alias of the same type has identical meaning - they can be used interchangeably in an application with no compatibility issues.

NOTE

For promoted types, the aliased extension type is semantically identical to the new core type. The C99 headers simply `typedef` the older aliases to the promoted types.

For promoted command aliases, however, there are two separate command definitions, due to the fact that the C99 ABI has no way to alias command definitions without resorting to macros. Calling either command will produce identical behavior within the bounds of the specification, and should still invoke the same path in the implementation. Debug tools may use separate commands with different debug behavior; to write the appropriate command name to an output log, for instance.

Special Use Extensions

Some extensions exist only to support a specific purpose or specific class of application. These are referred to as “special use extensions”. Use of these extensions in applications not meeting the special use criteria is not recommended.

Special use cases are restricted, and only those defined below are used to describe extensions:

Table 72. Extension Special Use Cases

Special Use	XML Tag	Full Description
CAD support	cadsupport	Extension is intended to support specialized functionality used by CAD/CAM applications.
D3D support	d3demulation	Extension is intended to support D3D emulation layers, and applications ported from D3D, by adding functionality specific to D3D.
Developer tools	devtools	Extension is intended to support developer tools such as capture-replay libraries.
Debugging tools	debugging	Extension is intended for use by applications when debugging.
OpenGL / ES support	glemulation	Extension is intended to support OpenGL and/or OpenGL ES emulation layers, and applications ported from those APIs, by adding functionality specific to those APIs.

Special use extensions are identified in the metadata for each such extension in the Layers & Extensions appendix, using the name in the “Special Use” column above.

Special use extensions are also identified in `vk.xml` with the short name in the “XML Tag” column above, as described in the “API Extensions (`extension` tag)” section of the registry schema documentation.

Chapter 55. Features

Features advertise additional functionality which **can** be enabled in the API. If a feature is *supported* by a physical device, it **must** be *enabled* when creating a VkDevice in order to use its associated functionality with that VkDevice. If a feature is *unsupported*, that functionality **cannot** be used with that VkDevice.

NOTE

Features are reported via the extensible structure `VkPhysicalDeviceFeatures2`, which was added in the `VK_KHR_get_physical_device_properties2` extension and included in Vulkan 1.1. When new features are added in future Vulkan versions or extensions, each extension **should** introduce one new feature structure, if needed. This structure **can** be added to the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure.

For convenience, new core versions of Vulkan **may** introduce new unified feature structures for features promoted from extensions. At the same time, the extension's original feature structure (if any) is also promoted to the core API, and is an alias of the extension's structure. This results in multiple names for the same feature: in the original extension's feature structure and the promoted structure alias, in the unified feature structure. When a feature was implicitly supported and enabled in the extension, but an explicit name was added during promotion, then the extension itself acts as an alias for the feature as listed in the table below.

All aliases of the same feature in the core API **must** be reported consistently: either all **must** be reported as supported, or none of them. When a promoted extension is available, any corresponding feature aliases **must** be supported.

Table 73. Extension Feature Aliases

Extension	Feature(s)
`VK_KHR_shader_draw_parameters`	`shaderDrawParameters`
`VK_KHR_draw_indirect_count`	`drawIndirectCount`
`VK_KHR_sampler_mirror_clamp_to_edge`	`samplerMirrorClampToEdge`
`VK_EXT_descriptor_indexing`	`descriptorIndexing`
`VK_EXT_sampler_filter_minmax`	`samplerFilterMinmax`
`VK_EXT_shader_viewport_index_layer`	`shaderOutputViewportIndex`, `shaderOutputLayer`
`VK_KHR_push_descriptor`	`pushDescriptor`

To query supported features, call:

WARNING

This functionality is superseded by vkGetPhysicalDeviceFeatures2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFeatures(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceFeatures*                   pFeatures);
```

- `physicalDevice` is the physical device from which to query the supported features.
- `pFeatures` is a pointer to a VkPhysicalDeviceFeatures structure in which the physical device features are returned. For each feature, a value of VK_TRUE specifies that the feature is supported on this physical device, and VK_FALSE specifies that the feature is not supported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceFeatures-pFeatures-parameter
  `pFeatures` **must** be a valid pointer to a VkPhysicalDeviceFeatures structure

Fine-grained features used by a logical device **must** be enabled at `VkDevice` creation time. If a feature is enabled that the physical device does not support, `VkDevice` creation will fail and return VK_ERROR_FEATURE_NOT_PRESENT.

The fine-grained features are enabled by passing a pointer to the `VkPhysicalDeviceFeatures` structure via the `pEnabledFeatures` member of the VkDeviceCreateInfo structure that is passed into the `vkCreateDevice` call. If a member of `pEnabledFeatures` is VK_TRUE or VK_FALSE, then the device will be created with the indicated feature enabled or disabled, respectively. Features **can** also be enabled by using the VkPhysicalDeviceFeatures2 structure.

If an application wishes to enable all features supported by a device, it **can** simply pass in the `VkPhysicalDeviceFeatures` structure that was previously returned by `vkGetPhysicalDeviceFeatures`. To disable an individual feature, the application **can** set the desired member to VK_FALSE in the same structure. Setting `pEnabledFeatures` to `NULL` and not including a VkPhysicalDeviceFeatures2 in the `pNext` chain of VkDeviceCreateInfo is equivalent to setting all members of the structure to VK_FALSE.

NOTE Some features, such as `robustBufferAccess`, **may** incur a runtime performance cost. Application writers **should** carefully consider the implications of enabling all supported features.

To query supported features defined by the core or extensions, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFeatures2(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceFeatures2*                  pFeatures);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceFeatures2
void vkGetPhysicalDeviceFeatures2KHR(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceFeatures2*                  pFeatures);
```

- `physicalDevice` is the physical device from which to query the supported features.
- `pFeatures` is a pointer to a VkPhysicalDeviceFeatures2 structure in which the physical device features are returned.

Each structure in `pFeatures` and its `pNext` chain contains members corresponding to fine-grained features. Each structure in `pFeatures` and its `pNext` chain contains VkBool32 members corresponding to fine-grained features. Each such member is returned with a VK_TRUE value indicating that feature is supported on this physical device, or a VK_FALSE value indicating it is unsupported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures2-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceFeatures2-pFeatures-parameter
  `pFeatures` **must** be a valid pointer to a VkPhysicalDeviceFeatures2 structure

The `VkPhysicalDeviceFeatures2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceFeatures2 {
    VkStructureType             sType;
    void*                       pNext;
    VkPhysicalDeviceFeatures    features;
} VkPhysicalDeviceFeatures2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceFeatures2
typedef VkPhysicalDeviceFeatures2 VkPhysicalDeviceFeatures2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `features` is a VkPhysicalDeviceFeatures structure describing the fine-grained features of the Vulkan 1.0 API.

The `pNext` chain of this structure is used to extend the structure with features defined by extensions. This structure **can** be used in vkGetPhysicalDeviceFeatures2 or **can** be included in the `pNext` chain of a VkDeviceCreateInfo structure, in which case it controls which features are enabled in lieu of

pEnabledFeatures.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFeatures2-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2

Structure Chaining

Extends the structure

- VkDeviceCreateInfo

The VkPhysicalDeviceFeatures structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceFeatures {
    VkBool32    robustBufferAccess;
    VkBool32    fullDrawIndexUint32;
    VkBool32    imageCubeArray;

    VkBool32    shaderInt64;
    VkBool32    shaderInt16;
    VkBool32    shaderResourceResidency;
    VkBool32    shaderResourceMinLod;
    VkBool32    sparseBinding;
    VkBool32    sparseResidencyBuffer;
    VkBool32    sparseResidencyImage2D;
    VkBool32    sparseResidencyImage3D;
    VkBool32    sparseResidency2Samples;
    VkBool32    sparseResidency4Samples;
    VkBool32    sparseResidency8Samples;
    VkBool32    sparseResidency16Samples;
    VkBool32    sparseResidencyAliased;
    VkBool32    variableMultisampleRate;
    VkBool32    inheritedQueries;
} VkPhysicalDeviceFeatures;
```

This structure describes the following features:

- `robustBufferAccess` enables Robust Buffer Access guarantees for shader buffer accesses.
- `fullDrawIndexUint32` specifies the full 32-bit range of indices is supported for indexed draw calls when using a VkIndexType of VK_INDEX_TYPE_UINT32. `maxDrawIndexedIndexValue` is the maximum index value that **may** be used (aside from the primitive restart index, which is always 2^{32}-1 when the VkIndexType is VK_INDEX_TYPE_UINT32). If this feature is supported, `maxDrawIndexedIndexValue` **must** be 2^{32}-1; otherwise it **must** be no smaller than 2^{24}-1. See `maxDrawIndexedIndexValue`.
- `imageCubeArray` specifies whether image views with a VkImageViewType of VK_IMAGE_VIEW_TYPE_CUBE_ARRAY **can** be created, and that the corresponding `SampledCubeArray` and `ImageCubeArray` SPIR-V capabilities **can** be used in shader code.
- `independentBlend` specifies whether the `VkPipelineColorBlendAttachmentState` settings are controlled independently per-attachment. If this feature is not enabled, the `VkPipelineColorBlendAttachmentState` settings for all color attachments **must** be identical. Otherwise, a different `VkPipelineColorBlendAttachmentState` **can** be provided for each bound color attachment.
- `geometryShader` specifies whether geometry shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_GEOMETRY_BIT and VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT enum values **must** not be used. This also specifies whether shader modules **can** declare the `Geometry` capability.

- `tessellationShader` specifies whether tessellation control and evaluation shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT, VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT, VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT, and VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_STATE_CREATE_INFO enum values **must** not be used. This also specifies whether shader modules **can** declare the `Tessellation` capability.
- `sampleRateShading` specifies whether Sample Shading and multisample interpolation are supported. If this feature is not enabled, the `sampleShadingEnable` member of the VkPipelineMultisampleStateCreateInfo structure **must** be VK_FALSE and the `minSampleShading` member is ignored. This also specifies whether shader modules **can** declare the `SampleRateShading` capability.
- `dualSrcBlend` specifies whether blend operations which take two sources are supported. If this feature is not enabled, the VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, and VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA enum values **must** not be used as source or destination blending factors. See Dual-Source Blending.
- `logicOp` specifies whether logic operations are supported. If this feature is not enabled, the `logicOpEnable` member of the VkPipelineColorBlendStateCreateInfo structure **must** be VK_FALSE, and the `logicOp` member is ignored.
- `multiDrawIndirect` specifies whether multiple draw indirect is supported. If this feature is not enabled, the `drawCount` parameter to the vkCmdDrawIndirect and vkCmdDrawIndexedIndirect commands **must** be 0 or 1. The `maxDrawIndirectCount` member of the `VkPhysicalDeviceLimits` structure **must** also be 1 if this feature is not supported. See `maxDrawIndirectCount`.
- `drawIndirectFirstInstance` specifies whether indirect drawing calls support the `firstInstance` parameter. If this feature is not enabled, the `firstInstance` member of all `VkDrawIndirectCommand` and `VkDrawIndexedIndirectCommand` structures that are provided to the vkCmdDrawIndirect and vkCmdDrawIndexedIndirect commands **must** be 0.
- `depthClamp` specifies whether depth clamping is supported. If this feature is not enabled, the `depthClampEnable` member of the VkPipelineRasterizationStateCreateInfo structure **must** be VK_FALSE. Otherwise, setting `depthClampEnable` to VK_TRUE will enable depth clamping.
- `depthBiasClamp` specifies whether depth bias clamping is supported. If this feature is not enabled, the `depthBiasClamp` member of the VkPipelineRasterizationStateCreateInfo structure **must** be 0.0 unless the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state is enabled, in which case the `depthBiasClamp` parameter to vkCmdSetDepthBias **must** be 0.0.
- `fillModeNonSolid` specifies whether point and wireframe fill modes are supported. If this feature is not enabled, the VK_POLYGON_MODE_POINT and VK_POLYGON_MODE_LINE enum values **must** not be used.
- `depthBounds` specifies whether depth bounds tests are supported. If this feature is not enabled, the `depthBoundsTestEnable` member of the VkPipelineDepthStencilStateCreateInfo structure **must** be VK_FALSE unless the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state is enabled, in which case the `depthBoundsTestEnable` parameter to vkCmdSetDepthBoundsTestEnable **must** be VK_FALSE. When `depthBoundsTestEnable` is VK_FALSE, the `minDepthBounds` and `maxDepthBounds` members of the

VkPipelineDepthStencilStateCreateInfo structure are ignored.

- `wideLines` specifies whether lines with width other than 1.0 are supported. If this feature is not enabled, the `lineWidth` member of the VkPipelineRasterizationStateCreateInfo structure **must** be 1.0 unless the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state is enabled, in which case the `lineWidth` parameter to vkCmdSetLineWidth **must** be 1.0. When this feature is supported, the range and granularity of supported line widths are indicated by the `lineWidthRange` and `lineWidthGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `largePoints` specifies whether points with size greater than 1.0 are supported. If this feature is not enabled, only a point size of 1.0 written by a shader is supported. The range and granularity of supported point sizes are indicated by the `pointSizeRange` and `pointSizeGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `alphaToOne` specifies whether the implementation is able to replace the alpha value of the fragment shader color output in the Multisample Coverage fragment operation. If this feature is not enabled, then the `alphaToOneEnable` member of the VkPipelineMultisampleStateCreateInfo structure **must** be VK_FALSE. Otherwise setting `alphaToOneEnable` to VK_TRUE will enable alpha-to-one behavior.
- `multiViewport` specifies whether more than one viewport is supported. If this feature is not enabled:
  - The `viewportCount` and `scissorCount` members of the VkPipelineViewportStateCreateInfo structure **must** be 1.
  - The `firstViewport` and `viewportCount` parameters to the vkCmdSetViewport command **must** be 0 and 1, respectively.
  - The `firstScissor` and `scissorCount` parameters to the vkCmdSetScissor command **must** be 0 and 1, respectively.
  - The `exclusiveScissorCount` member of the VkPipelineViewportExclusiveScissorStateCreateInfoNV structure **must** be 0 or 1.
  - The `firstExclusiveScissor` and `exclusiveScissorCount` parameters to the vkCmdSetExclusiveScissorNV command **must** be 0 and 1, respectively.
- `samplerAnisotropy` specifies whether anisotropic filtering is supported. If this feature is not enabled, the `anisotropyEnable` member of the VkSamplerCreateInfo structure **must** be VK_FALSE.
- `textureCompressionETC2` specifies whether all of the ETC2 and EAC compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in `optimalTilingFeatures` for the following formats:
  - VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK
  - VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK
  - VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK
  - VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK
  - VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK

    - VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK
    - VK_FORMAT_EAC_R11_UNORM_BLOCK
    - VK_FORMAT_EAC_R11_SNORM_BLOCK
    - VK_FORMAT_EAC_R11G11_UNORM_BLOCK
    - VK_FORMAT_EAC_R11G11_SNORM_BLOCK

    To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionASTC_LDR` specifies whether all of the ASTC LDR compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in `optimalTilingFeatures` for the following formats:
    - VK_FORMAT_ASTC_4x4_UNORM_BLOCK
    - VK_FORMAT_ASTC_4x4_SRGB_BLOCK
    - VK_FORMAT_ASTC_5x4_UNORM_BLOCK
    - VK_FORMAT_ASTC_5x4_SRGB_BLOCK
    - VK_FORMAT_ASTC_5x5_UNORM_BLOCK
    - VK_FORMAT_ASTC_5x5_SRGB_BLOCK
    - VK_FORMAT_ASTC_6x5_UNORM_BLOCK
    - VK_FORMAT_ASTC_6x5_SRGB_BLOCK
    - VK_FORMAT_ASTC_6x6_UNORM_BLOCK
    - VK_FORMAT_ASTC_6x6_SRGB_BLOCK
    - VK_FORMAT_ASTC_8x5_UNORM_BLOCK
    - VK_FORMAT_ASTC_8x5_SRGB_BLOCK
    - VK_FORMAT_ASTC_8x6_UNORM_BLOCK
    - VK_FORMAT_ASTC_8x6_SRGB_BLOCK
    - VK_FORMAT_ASTC_8x8_UNORM_BLOCK
    - VK_FORMAT_ASTC_8x8_SRGB_BLOCK
    - VK_FORMAT_ASTC_10x5_UNORM_BLOCK
    - VK_FORMAT_ASTC_10x5_SRGB_BLOCK
    - VK_FORMAT_ASTC_10x6_UNORM_BLOCK
    - VK_FORMAT_ASTC_10x6_SRGB_BLOCK
    - VK_FORMAT_ASTC_10x8_UNORM_BLOCK
    - VK_FORMAT_ASTC_10x8_SRGB_BLOCK
    - VK_FORMAT_ASTC_10x10_UNORM_BLOCK

    - VK_FORMAT_ASTC_10x10_SRGB_BLOCK
    - VK_FORMAT_ASTC_12x10_UNORM_BLOCK
    - VK_FORMAT_ASTC_12x10_SRGB_BLOCK
    - VK_FORMAT_ASTC_12x12_UNORM_BLOCK
    - VK_FORMAT_ASTC_12x12_SRGB_BLOCK

    To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionBC` specifies whether all of the BC compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in `optimalTilingFeatures` for the following formats:
    - VK_FORMAT_BC1_RGB_UNORM_BLOCK
    - VK_FORMAT_BC1_RGB_SRGB_BLOCK
    - VK_FORMAT_BC1_RGBA_UNORM_BLOCK
    - VK_FORMAT_BC1_RGBA_SRGB_BLOCK
    - VK_FORMAT_BC2_UNORM_BLOCK
    - VK_FORMAT_BC2_SRGB_BLOCK
    - VK_FORMAT_BC3_UNORM_BLOCK
    - VK_FORMAT_BC3_SRGB_BLOCK
    - VK_FORMAT_BC4_UNORM_BLOCK
    - VK_FORMAT_BC4_SNORM_BLOCK
    - VK_FORMAT_BC5_UNORM_BLOCK
    - VK_FORMAT_BC5_SNORM_BLOCK
    - VK_FORMAT_BC6H_UFLOAT_BLOCK
    - VK_FORMAT_BC6H_SFLOAT_BLOCK
    - VK_FORMAT_BC7_UNORM_BLOCK
    - VK_FORMAT_BC7_SRGB_BLOCK

    To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats as normal.

- `occlusionQueryPrecise` specifies whether occlusion queries returning actual sample counts are supported. Occlusion queries are created in a `VkQueryPool` by specifying the `queryType` of VK_QUERY_TYPE_OCCLUSION in the VkQueryPoolCreateInfo structure which is passed to vkCreateQueryPool. If this feature is enabled, queries of this type **can** enable VK_QUERY_CONTROL_PRECISE_BIT in the `flags` parameter to vkCmdBeginQuery. If this feature

is not supported, the implementation supports only boolean occlusion queries. When any samples are passed, boolean queries will return a non-zero result value, otherwise a result value of zero is returned. When this feature is enabled and VK_QUERY_CONTROL_PRECISE_BIT is set, occlusion queries will report the actual number of samples passed.

- `pipelineStatisticsQuery` specifies whether the pipeline statistics queries are supported. If this feature is not enabled, queries of type VK_QUERY_TYPE_PIPELINE_STATISTICS **cannot** be created, and none of the VkQueryPipelineStatisticFlagBits bits **can** be set in the `pipelineStatistics` member of the VkQueryPoolCreateInfo structure.
- `vertexPipelineStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the vertex, tessellation, and geometry shader stages. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by these stages in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `fragmentStoresAndAtomics` specifies whether storage buffers and images support stores and atomic operations in the fragment shader stage. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by the fragment stage in shader modules **must** be decorated with the `NonWritable` decoration (or the `readonly` memory qualifier in GLSL).
- `shaderTessellationAndGeometryPointSize` specifies whether the `PointSize` built-in decoration is available in the tessellation control, tessellation evaluation, and geometry shader stages. If this feature is not enabled, members decorated with the `PointSize` built-in decoration **must** not be read from or written to and all points written from a tessellation or geometry shader will have a size of 1.0. This also specifies whether shader modules **can** declare the `TessellationPointSize` capability for tessellation control and evaluation shaders, or if the shader modules **can** declare the `GeometryPointSize` capability for geometry shaders. An implementation supporting this feature **must** also support one or both of the `tessellationShader` or `geometryShader` features.
- `shaderImageGatherExtended` specifies whether the extended set of image gather instructions are available in shader code. If this feature is not enabled, the `OpImage*Gather` and `OpImageGatherQCOM` instructions do not support the `Offset` and `ConstOffsets` operands. The `OpImageGatherQCOM` instruction does not support the `ConstOffsets` operand regardless of the value of this feature. This also specifies whether shader modules **can** declare the `ImageGatherExtended` capability.
- `shaderStorageImageExtendedFormats` specifies whether all the “storage image extended formats” below are supported; if this feature is supported, then the VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT **must** be supported in `optimalTilingFeatures` for the following formats:
  - VK_FORMAT_R16G16_SFLOAT
  - VK_FORMAT_B10G11R11_UFLOAT_PACK32
  - VK_FORMAT_R16_SFLOAT
  - VK_FORMAT_R16G16B16A16_UNORM
  - VK_FORMAT_A2B10G10R10_UNORM_PACK32
  - VK_FORMAT_R16G16_UNORM
  - VK_FORMAT_R8G8_UNORM
  - VK_FORMAT_R16_UNORM

- VK_FORMAT_R8_UNORM
- VK_FORMAT_R16G16B16A16_SNORM
- VK_FORMAT_R16G16_SNORM
- VK_FORMAT_R8G8_SNORM
- VK_FORMAT_R16_SNORM
- VK_FORMAT_R8_SNORM
- VK_FORMAT_R16G16_SINT
- VK_FORMAT_R8G8_SINT
- VK_FORMAT_R16_SINT
- VK_FORMAT_R8_SINT
- VK_FORMAT_A2B10G10R10_UINT_PACK32
- VK_FORMAT_R16G16_UINT
- VK_FORMAT_R8G8_UINT
- VK_FORMAT_R16_UINT
- VK_FORMAT_R8_UINT

NOTE

`shaderStorageImageExtendedFormats` feature only adds a guarantee of format support, which is specified for the whole physical device. Therefore enabling or disabling the feature via vkCreateDevice has no practical effect.

To query for additional properties, or if the feature is not supported, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats, as usual rules allow.

VK_FORMAT_R32G32_UINT, VK_FORMAT_R32G32_SINT, and VK_FORMAT_R32G32_SFLOAT from `StorageImageExtendedFormats` SPIR-V capability, are already covered by core Vulkan mandatory format support.

- `shaderStorageImageMultisample` specifies whether multisampled storage images are supported. If this feature is not enabled, images that are created with the VK_IMAGE_USAGE_STORAGE_BIT usage flag set **must** be created with `samples` equal to VK_SAMPLE_COUNT_1_BIT. This also specifies whether shader modules **can** declare the `StorageImageMultisample` and `ImageMSArray` capabilities.
- `shaderStorageImageReadWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when reading. `shaderStorageImageReadWithoutFormat` applies only to formats listed in the storage without format list.
- `shaderStorageImageWriteWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when writing. `shaderStorageImageWriteWithoutFormat` applies only to formats listed in the storage without format list.
- `shaderUniformBufferArrayDynamicIndexing` specifies whether arrays of uniform buffers **can** be

indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `UniformBufferArrayDynamicIndexing` capability.

- `shaderSampledImageArrayDynamicIndexing` specifies whether arrays of samplers or sampled images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `SampledImageArrayDynamicIndexing` capability.
- `shaderStorageBufferArrayDynamicIndexing` specifies whether arrays of storage buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageBufferArrayDynamicIndexing` capability.
- `shaderStorageImageArrayDynamicIndexing` specifies whether arrays of storage images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageImageArrayDynamicIndexing` capability.
- `shaderClipDistance` specifies whether clip distances are supported in shader code. If this feature is not enabled, any members decorated with the `ClipDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `ClipDistance` capability.
- `shaderCullDistance` specifies whether cull distances are supported in shader code. If this feature is not enabled, any members decorated with the `CullDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `CullDistance` capability.
- `shaderFloat64` specifies whether 64-bit floats (doubles) are supported in shader code. If this feature is not enabled, 64-bit floating-point types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Float64` capability. Declaring and using 64-bit floats is enabled for all storage classes that SPIR-V allows with the `Float64` capability.
- `shaderInt64` specifies whether 64-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 64-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Int64` capability. Declaring and using 64-bit integers is enabled for all storage classes that SPIR-V allows with the `Int64` capability.
- `shaderInt16` specifies whether 16-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 16-bit integer types **must** not be used in shader code. This

also specifies whether shader modules **can** declare the `Int16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int16` SPIR-V capability: Declaring and using 16-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

- `shaderResourceResidency` specifies whether image operations that return resource residency information are supported in shader code. If this feature is not enabled, the `OpImageSparse*` instructions **must** not be used in shader code. This also specifies whether shader modules **can** declare the `SparseResidency` capability. The feature requires at least one of the `sparseResidency*` features to be supported.
- `shaderResourceMinLod` specifies whether image operations specifying the minimum resource LOD are supported in shader code. If this feature is not enabled, the `MinLod` image operand **must** not be used in shader code. This also specifies whether shader modules **can** declare the `MinLod` capability.
- `sparseBinding` specifies whether resource memory **can** be managed at opaque sparse block level instead of at the object level. If this feature is not enabled, resource memory **must** be bound only on a per-object basis using the vkBindBufferMemory and vkBindImageMemory commands. In this case, buffers and images **must** not be created with VK_BUFFER_CREATE_SPARSE_BINDING_BIT and VK_IMAGE_CREATE_SPARSE_BINDING_BIT set in the `flags` member of the VkBufferCreateInfo and VkImageCreateInfo structures, respectively. Otherwise resource memory **can** be managed as described in Sparse Resource Features.
- `sparseResidencyBuffer` specifies whether the device **can** access partially resident buffers. If this feature is not enabled, buffers **must** not be created with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT set in the `flags` member of the VkBufferCreateInfo structure.
- `sparseResidencyImage2D` specifies whether the device **can** access partially resident 2D images with 1 sample per pixel. If this feature is not enabled, images with an `imageType` of VK_IMAGE_TYPE_2D and `samples` set to VK_SAMPLE_COUNT_1_BIT **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the `flags` member of the VkImageCreateInfo structure.
- `sparseResidencyImage3D` specifies whether the device **can** access partially resident 3D images. If this feature is not enabled, images with an `imageType` of VK_IMAGE_TYPE_3D **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the `flags` member of the VkImageCreateInfo structure.
- `sparseResidency2Samples` specifies whether the physical device **can** access partially resident 2D images with 2 samples per pixel. If this feature is not enabled, images with an `imageType` of VK_IMAGE_TYPE_2D and `samples` set to VK_SAMPLE_COUNT_2_BIT **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the `flags` member of the VkImageCreateInfo structure.
- `sparseResidency4Samples` specifies whether the physical device **can** access partially resident 2D images with 4 samples per pixel. If this feature is not enabled, images with an `imageType` of VK_IMAGE_TYPE_2D and `samples` set to VK_SAMPLE_COUNT_4_BIT **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the `flags` member of the VkImageCreateInfo structure.

- sparseResidency8Samples specifies whether the physical device **can** access partially resident 2D images with 8 samples per pixel. If this feature is not enabled, images with an imageType of VK_IMAGE_TYPE_2D and samples set to VK_SAMPLE_COUNT_8_BIT **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the flags member of the VkImageCreateInfo structure.
- sparseResidency16Samples specifies whether the physical device **can** access partially resident 2D images with 16 samples per pixel. If this feature is not enabled, images with an imageType of VK_IMAGE_TYPE_2D and samples set to VK_SAMPLE_COUNT_16_BIT **must** not be created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set in the flags member of the VkImageCreateInfo structure.
- sparseResidencyAliased specifies whether the physical device **can** correctly access data aliased into multiple locations. If this feature is not enabled, the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT and VK_IMAGE_CREATE_SPARSE_ALIASED_BIT enum values **must** not be used in flags members of the VkBufferCreateInfo and VkImageCreateInfo structures, respectively.
- variableMultisampleRate specifies whether all pipelines that will be bound to a command buffer during a subpass which uses no attachments **must** have the same value for VkPipelineMultisampleStateCreateInfo::rasterizationSamples. If set to VK_TRUE, the implementation supports variable multisample rates in a subpass which uses no attachments. If set to VK_FALSE, then all pipelines bound in such a subpass **must** have the same multisample rate. This has no effect in situations where a subpass uses any attachments.
- inheritedQueries specifies whether a secondary command buffer **may** be executed while a query is active.

The VkPhysicalDeviceVulkan11Features structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan11Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
    VkBool32           protectedMemory;
    VkBool32           samplerYcbcrConversion;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceVulkan11Features;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the `storageBuffer8BitAccess` or `uniformAndStorageBuffer8BitAccess` features are enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.

- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the `uniformAndStorageBuffer8BitAccess` are enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.

- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless the `storagePushConstant8` feature is enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.

- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.

- `multiview` specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.

- `multiviewGeometryShader` specifies whether the implementation supports multiview rendering within a render pass, with geometry shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.

- `multiviewTessellationShader` specifies whether the implementation supports multiview rendering within a render pass, with tessellation shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.

- `variablePointersStorageBuffer` specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.

- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.

- `protectedMemory` specifies whether protected memory is supported.

- `samplerYcbcrConversion` specifies whether the implementation supports sampler $Y'C_BC_R$ conversion. If `samplerYcbcrConversion` is VK_FALSE, sampler $Y'C_BC_R$ conversion is not supported,

and samplers using sampler $Y'C_BC_R$ conversion **must** not be used.

- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_shader_draw_parameters` extension or the `DrawParameters` capability.

If the `VkPhysicalDeviceVulkan11Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVulkan11Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan11Features-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_1_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceVulkan12Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan12Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerMirrorClampToEdge;

    VkBool32           shaderOutputViewportIndex;
    VkBool32           shaderOutputLayer;
    VkBool32           subgroupBroadcastDynamicId;
} VkPhysicalDeviceVulkan12Features;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `samplerMirrorClampToEdge` indicates whether the implementation supports the VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE sampler address mode. If this feature is not enabled, the VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE sampler address mode **must** not be used.
- `drawIndirectCount` indicates whether the implementation supports the vkCmdDrawIndirectCount and vkCmdDrawIndexedIndirectCount functions. If this feature is not enabled, these functions **must** not be used.
- `storageBuffer8BitAccess` indicates whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the `shaderUntypedPointers` feature is enabled and they are accessed in 32-bit multiples or

16-bit multiples if the storageBuffer16BitAccess feature is enabled. This also indicates whether shader modules **can** declare the StorageBuffer8BitAccess capability.

- uniformAndStorageBuffer8BitAccess indicates whether objects in the Uniform storage class with the Block decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the shaderUntypedPointers feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the uniformAndStorageBuffer16BitAccess feature is enabled. This also indicates whether shader modules **can** declare the UniformAndStorageBuffer8BitAccess capability.
- storagePushConstant8 indicates whether objects in the PushConstant storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the shaderUntypedPointers feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the storagePushConstant16 feature is enabled. This also indicates whether shader modules **can** declare the StoragePushConstant8 capability.
- shaderBufferInt64Atomics indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- shaderSharedInt64Atomics indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.
- shaderFloat16 indicates whether 16-bit floats (halfs) are supported in shader code. This also indicates whether shader modules **can** declare the Float16 capability. However, this only enables a subset of the storage classes that SPIR-V allows for the Float16 SPIR-V capability: Declaring and using 16-bit floats in the Private, Workgroup (for non-Block variables), and Function storage classes is enabled, while declaring them in the interface storage classes (e.g., UniformConstant, Uniform, StorageBuffer, Input, Output, and PushConstant) is not enabled.
- shaderInt8 indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the Int8 capability. However, this only enables a subset of the storage classes that SPIR-V allows for the Int8 SPIR-V capability: Declaring and using 8-bit integers in the Private, Workgroup (for non-Block variables), and Function storage classes is enabled, while declaring them in the interface storage classes (e.g., UniformConstant, Uniform, StorageBuffer, Input, Output, and PushConstant) is not enabled.
- descriptorIndexing indicates whether the implementation supports the minimum set of descriptor indexing features as described in the Feature Requirements section. Enabling this feature when vkCreateDevice is called does not imply the other minimum descriptor indexing features are also enabled. Those other descriptor indexing features **must** be enabled individually as needed by the application.
- shaderInputAttachmentArrayDynamicIndexing indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the InputAttachmentArrayDynamicIndexing capability.
- shaderUniformTexelBufferArrayDynamicIndexing indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER **must** be indexed only by

constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.

- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.

- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.
- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_BUFFER.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.

- samplerFilterMinmax indicates whether the implementation supports a minimum set of required formats supporting min/max filtering as defined by the filterMinmaxSingleComponentFormats property minimum requirements. If this feature is not enabled, then VkSamplerReductionModeCreateInfo **must** only use VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE.
- scalarBlockLayout indicates that the implementation supports the layout of resource blocks in shaders using scalar alignment.
- imagelessFramebuffer indicates that the implementation supports specifying the image view for attachments at render pass begin time via VkRenderPassAttachmentBeginInfo.
- uniformBufferStandardLayout indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See Standard Buffer Layout.
- shaderSubgroupExtendedTypes is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in group operations with subgroup scope, if the implementation supports the types.
- separateDepthStencilLayouts indicates whether the implementation supports a VkImageMemoryBarrier for a depth/stencil image with only one of VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT set, and whether VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL, or VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL can be used.
- hostQueryReset indicates that the implementation supports resetting queries from the host with vkResetQueryPool.
- timelineSemaphore indicates whether semaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE are supported.
- bufferDeviceAddress indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from vkGetBufferDeviceAddress.
- bufferDeviceAddressCaptureReplay indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- bufferDeviceAddressMultiDevice indicates that the implementation supports the bufferDeviceAddress , rayTracingPipeline and rayQuery features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.
- vulkanMemoryModel indicates whether shader modules **can** declare the VulkanMemoryModel capability.
- vulkanMemoryModelDeviceScope indicates whether the Vulkan Memory Model can use Device scope synchronization. This also indicates whether shader modules **can** declare the VulkanMemoryModelDeviceScope capability.
- vulkanMemoryModelAvailabilityVisibilityChains indicates whether the Vulkan Memory Model can use availability and visibility chains with more than one element.
- shaderOutputViewportIndex indicates whether the implementation supports the ShaderViewportIndex SPIR-V capability enabling variables decorated with the ViewportIndex built-

in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the `ViewportIndex` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.

- `shaderOutputLayer` indicates whether the implementation supports the `ShaderLayer` SPIR-V capability enabling variables decorated with the `Layer` built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the `Layer` built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- If `subgroupBroadcastDynamicId` is VK_TRUE, the "Id" operand of `OpGroupNonUniformBroadcast` **can** be dynamically uniform within a subgroup, and the "Index" operand of `OpGroupNonUniformQuadBroadcast` **can** be dynamically uniform within the derivative group. If it is VK_FALSE, these operands **must** be constants.

If the `VkPhysicalDeviceVulkan12Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVulkan12Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan12Features-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_2_FEATURES

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceVulkan13Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceVulkan13Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
    VkBool32           pipelineCreationCacheControl;
    VkBool32           privateData;
    VkBool32           shaderDemoteToHelperInvocation;
    VkBool32           shaderTerminateInvocation;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
    VkBool32           synchronization2;
    VkBool32           textureCompressionASTC_HDR;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
    VkBool32           dynamicRendering;
    VkBool32           shaderIntegerDotProduct;
    VkBool32           maintenance4;
} VkPhysicalDeviceVulkan13Features;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustImageAccess` enables Robust Image Access guarantees for shader image accesses.
- `inlineUniformBlock` indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK **must** not be used.
- `descriptorBindingInlineUniformBlockUpdateAfterBind` indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK.
- `pipelineCreationCacheControl` indicates that the implementation supports:
  - The following **can** be used in `Vk*PipelineCreateInfo`::`flags`:
    - VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT
    - VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT
  - The following **can** be used in VkPipelineCacheCreateInfo::`flags`:
    - VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT
- `privateData` indicates whether the implementation supports private data. See Private Data.
- `shaderDemoteToHelperInvocation` indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.
- `shaderTerminateInvocation` specifies whether the implementation supports SPIR-V modules that

use the SPV_KHR_terminate_invocation extension.

- subgroupSizeControl indicates whether the implementation supports controlling shader subgroup sizes via the VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT flag and the VkPipelineShaderStageRequiredSubgroupSizeCreateInfo structure.
- computeFullSubgroups indicates whether the implementation supports requiring full subgroups in compute , mesh, or task shaders via the VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT flag.
- synchronization2 indicates whether the implementation supports the new set of synchronization commands introduced in VK_KHR_synchronization2.
- textureCompressionASTC_HDR indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in optimalTilingFeatures for the following formats:
  - VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK

  To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats as normal.
- shaderZeroInitializeWorkgroupMemory specifies whether the implementation supports initializing a variable in Workgroup storage class.
- dynamicRendering specifies that the implementation supports dynamic render pass instances using the vkCmdBeginRendering command.
- shaderIntegerDotProduct specifies whether shader modules **can** declare the DotProductInputAllKHR, DotProductInput4x8BitKHR, DotProductInput4x8BitPackedKHR and

DotProductKHR capabilities.

- maintenance4 indicates that the implementation supports the following:
  - The application **may** destroy a VkPipelineLayout object immediately after using it to create another object.
  - LocalSizeId **can** be used as an alternative to LocalSize to specify the local workgroup size with specialization constants.
  - Images created with identical creation parameters will always have the same alignment requirements.
  - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
  - Push constants do not have to be initialized before they are dynamically accessed.
  - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the VkPhysicalDeviceVulkan13Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceVulkan13Features, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceVulkan14Features structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVulkan14Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
    VkBool32           shaderFloatControls2;
    VkBool32           shaderExpectAssume;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
    VkBool32           indexTypeUint8;
    VkBool32           dynamicRenderingLocalRead;
    VkBool32           maintenance5;
    VkBool32           maintenance6;
    VkBool32           pipelineProtectedAccess;
    VkBool32           pipelineRobustness;
    VkBool32           hostImageCopy;
    VkBool32           pushDescriptor;
} VkPhysicalDeviceVulkan14Features;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `globalPriorityQuery` indicates whether the implementation supports the ability to query global queue priorities.
- `shaderSubgroupRotate` specifies whether shader modules **can** declare the `GroupNonUniformRotateKHR` capability.
- `shaderSubgroupRotateClustered` specifies whether shader modules **can** use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.
- `shaderExpectAssume` specifies whether shader modules **can** declare the `ExpectAssumeKHR` capability.
- `rectangularLines` indicates whether the implementation supports rectangular line rasterization.
- `bresenhamLines` indicates whether the implementation supports Bresenham-style line rasterization.
- `smoothLines` indicates whether the implementation supports smooth line rasterization.

- `stippledRectangularLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_RECTANGULAR lines.
- `stippledBresenhamLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_BRESENHAM lines.
- `stippledSmoothLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH lines.
- `vertexAttributeInstanceRateDivisor` specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- `vertexAttributeInstanceRateZeroDivisor` specifies whether a zero value for VkVertexInputBindingDivisorDescription::`divisor` is supported.
- `indexTypeUint8` indicates that VK_INDEX_TYPE_UINT8 can be used with vkCmdBindIndexBuffer2 and vkCmdBindIndexBuffer.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the vkCmdBeginRendering command.
- `maintenance5` indicates that the implementation supports the following:
  - The ability to expose support for the optional format VK_FORMAT_A1B5G5R5_UNORM_PACK16.
  - The ability to expose support for the optional format VK_FORMAT_A8_UNORM.
  - A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode.
  - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using VkBufferUsageFlags2CreateInfo.
  - A new function vkCmdBindIndexBuffer2, allowing a range of memory to be bound as an index buffer.
  - vkGetDeviceProcAddr will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
  - vkCmdBindVertexBuffers2 supports using VK_WHOLE_SIZE in the `pSizes` parameter.
  - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
  - VkShaderModuleCreateInfo **can** be added as a chained structure to pipeline creation via VkPipelineShaderStageCreateInfo, rather than having to create a shader module.
  - A function vkGetRenderingAreaGranularity to query the optimal render area for a dynamic rendering instance.
  - A property to indicate that depth/stencil texturing operations with VK_COMPONENT_SWIZZLE_ONE have defined behavior.
  - vkGetDeviceImageSubresourceLayout allows an application to perform a vkGetImageSubresourceLayout query without having to create an image.
  - VK_REMAINING_ARRAY_LAYERS as the `layerCount` member of VkImageSubresourceLayers.
  - A property to indicate whether `PointSize` controls the final rasterization of polygons if polygon mode is VK_POLYGON_MODE_POINT.

    - Two properties to indicate the non-strict line rasterization algorithm used.
    - Two new flags words VkPipelineCreateFlagBits2 and VkBufferUsageFlagBits2.
    - Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
    - Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.
- `maintenance6` indicates that the implementation supports the following:
    - VK_NULL_HANDLE **can** be used when binding an index buffer.
    - VkBindMemoryStatus **can** be included in the `pNext` chain of the VkBindBufferMemoryInfo and VkBindImageMemoryInfo structures, enabling applications to retrieve VkResult values for individual memory binding operations.
    - VkPhysicalDeviceMaintenance6Properties::`blockTexelViewCompatibleMultipleLayers` property to indicate that the implementation supports creating image views with VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT where the `layerCount` member of `subresourceRange` is greater than 1.
    - VkPhysicalDeviceMaintenance6Properties::`maxCombinedImageSamplerDescriptorCount` property which indicates the maximum number of descriptors required for sampled images with $Y'C_BC_R$ conversion.
    - A VkPhysicalDeviceMaintenance6Properties::`fragmentShadingRateClampCombinerInputs` property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.
- `pipelineProtectedAccess` indicates whether the implementation supports specifying protected access on individual pipelines.
- `pipelineRobustness` indicates that robustness **can** be requested on a per-pipeline-stage granularity.
- `hostImageCopy` indicates that the implementation supports copying from host memory to images using the vkCopyMemoryToImage command, copying from images to host memory using the vkCopyImageToMemory command, and copying between images using the vkCopyImageToImage command.
- `pushDescriptor` indicates that the implementation supports push descriptors.

If the `VkPhysicalDeviceVulkan14Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVulkan14Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceVariablePointersFeatures structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceVariablePointersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
} VkPhysicalDeviceVariablePointersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeatures;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointersFeaturesKHR;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- variablePointersStorageBuffer specifies whether the implementation supports the SPIR-V VariablePointersStorageBuffer capability. When this feature is not enabled, shader modules **must** not declare the SPV_KHR_variable_pointers extension or the VariablePointersStorageBuffer capability.

- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.

If the `VkPhysicalDeviceVariablePointersFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVariablePointersFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage

- VUID-VkPhysicalDeviceVariablePointersFeatures-variablePointers-01431
  If `variablePointers` is enabled then `variablePointersStorageBuffer` **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVariablePointersFeatures-sType-sType

The `VkPhysicalDeviceMultiviewFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
} VkPhysicalDeviceMultiviewFeatures;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewFeatures
typedef VkPhysicalDeviceMultiviewFeatures VkPhysicalDeviceMultiviewFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multiview` specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- `multiviewGeometryShader` specifies whether the implementation supports multiview rendering within a render pass, with geometry shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- `multiviewTessellationShader` specifies whether the implementation supports multiview rendering within a render pass, with tessellation shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.

If the `VkPhysicalDeviceMultiviewFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMultiviewFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewGeometryShader-00580
  If `multiviewGeometryShader` is enabled then `multiview` **must** also be enabled
- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewTessellationShader-00581
  If `multiviewTessellationShader` is enabled then `multiview` **must** also be enabled

Valid Usage (Implicit)

The VkPhysicalDeviceShaderAtomicFloatFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float
typedef struct VkPhysicalDeviceShaderAtomicFloatFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat32Atomics;
    VkBool32           shaderBufferFloat32AtomicAdd;
    VkBool32           shaderBufferFloat64Atomics;
    VkBool32           shaderBufferFloat64AtomicAdd;
    VkBool32           shaderSharedFloat32Atomics;
    VkBool32           shaderSharedFloat32AtomicAdd;
    VkBool32           shaderSharedFloat64Atomics;
    VkBool32           shaderSharedFloat64AtomicAdd;
    VkBool32           shaderImageFloat32Atomics;
    VkBool32           shaderImageFloat32AtomicAdd;
    VkBool32           sparseImageFloat32Atomics;
    VkBool32           sparseImageFloat32AtomicAdd;
} VkPhysicalDeviceShaderAtomicFloatFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on storage buffers.
- `shaderBufferFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic operations on storage buffers.
- `shaderBufferFloat64Atomics` indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on storage buffers.
- `shaderBufferFloat64AtomicAdd` indicates whether shaders **can** perform 64-bit floating-point add atomic operations on storage buffers.
- `shaderSharedFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat64Atomics` indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicAdd` indicates whether shaders **can** perform 64-bit floating-point add atomic operations on shared and payload memory.
- `shaderImageFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic image operations.
- `shaderImageFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic image operations.
- `sparseImageFloat32Atomics` indicates whether 32-bit floating-point load, store, and exchange

atomic operations **can** be used on sparse images.

- `sparseImageFloat32AtomicAdd` indicates whether 32-bit floating-point add atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

    VkBool32           sparseImageFloat32AtomicMinMax;
} VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on storage buffers.
- `shaderBufferFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on storage buffers.
- `shaderBufferFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on storage buffers.
- `shaderBufferFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on storage buffers.
- `shaderSharedFloat16Atomics` indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicAdd` indicates whether shaders **can** perform 16-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat16AtomicMinMax` indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicMinMax` indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on shared and payload memory.
- `shaderImageFloat32AtomicMinMax` indicates whether shaders **can** perform 32-bit floating-point min and max atomic image operations.
- `sparseImageFloat32AtomicMinMax` indicates whether 32-bit floating-point min and max atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. The VkPhysicalDeviceShaderAtomicInt64Features structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderAtomicInt64Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferInt64Atomics;
    VkBool32           shaderSharedInt64Atomics;
} VkPhysicalDeviceShaderAtomicInt64Features;
```

```
// Provided by VK_KHR_shader_atomic_int64
// Equivalent to VkPhysicalDeviceShaderAtomicInt64Features
typedef VkPhysicalDeviceShaderAtomicInt64Features
VkPhysicalDeviceShaderAtomicInt64FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- `shaderSharedInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.

If the `VkPhysicalDeviceShaderAtomicInt64Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderAtomicInt64Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_image_atomic_int64
typedef struct VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderImageInt64Atomics;
    VkBool32           sparseImageInt64Atomics;
} VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderImageInt64Atomics` indicates whether shaders **can** support 64-bit unsigned and signed integer atomic operations on images.
- `sparseImageInt64Atomics` indicates whether 64-bit integer atomics **can** be used on sparse images.

If the `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevice8BitStorageFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDevice8BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
} VkPhysicalDevice8BitStorageFeatures;
```

```
// Provided by VK_KHR_8bit_storage
// Equivalent to VkPhysicalDevice8BitStorageFeatures
typedef VkPhysicalDevice8BitStorageFeatures VkPhysicalDevice8BitStorageFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- storageBuffer8BitAccess indicates whether objects in the StorageBuffer, ShaderRecordBufferKHR, or PhysicalStorageBuffer storage class with the Block decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the shaderUntypedPointers feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the storageBuffer16BitAccess feature is enabled. This also indicates whether shader modules **can** declare the StorageBuffer8BitAccess capability.
- uniformAndStorageBuffer8BitAccess indicates whether objects in the Uniform storage class with the Block decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the shaderUntypedPointers feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the uniformAndStorageBuffer16BitAccess feature is enabled. This also indicates whether shader modules **can** declare the UniformAndStorageBuffer8BitAccess capability.
- storagePushConstant8 indicates whether objects in the PushConstant storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the shaderUntypedPointers feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the storagePushConstant16 feature is enabled. This also indicates whether shader modules **can** declare the StoragePushConstant8 capability.

If the VkPhysicalDevice8BitStorageFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevice8BitStorageFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDevice16BitStorageFeatures structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevice16BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
} VkPhysicalDevice16BitStorageFeatures;
```

```
// Provided by VK_KHR_16bit_storage
// Equivalent to VkPhysicalDevice16BitStorageFeatures
typedef VkPhysicalDevice16BitStorageFeatures VkPhysicalDevice16BitStorageFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the `storageBuffer8BitAccess` or `uniformAndStorageBuffer8BitAccess` features are enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.
- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the `uniformAndStorageBuffer8BitAccess` are enabled or they are accessed in 32-bit

multiples if the shaderUntypedPointers feature is enabled. This also specifies whether shader modules **can** declare the UniformAndStorageBuffer16BitAccess capability.

- storagePushConstant16 specifies whether objects in the PushConstant storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless the storagePushConstant8 feature is enabled or they are accessed in 32-bit multiples if the shaderUntypedPointers feature is enabled. This also specifies whether shader modules **can** declare the StoragePushConstant16 capability.
- storageInputOutput16 specifies whether objects in the Input and Output storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the StorageInputOutput16 capability.

If the VkPhysicalDevice16BitStorageFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevice16BitStorageFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceShaderFloat16Int8Features structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderFloat16Int8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16;
    VkBool32           shaderInt8;
} VkPhysicalDeviceShaderFloat16Int8Features;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceShaderFloat16Int8FeaturesKHR;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceFloat16Int8FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat16` indicates whether 16-bit floats (halfs) are supported in shader code. This also indicates whether shader modules **can** declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `shaderInt8` indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

If the `VkPhysicalDeviceShaderFloat16Int8Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderFloat16Int8Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceShaderClockFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_shader_clock
typedef struct VkPhysicalDeviceShaderClockFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupClock;
    VkBool32           shaderDeviceClock;
} VkPhysicalDeviceShaderClockFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupClock` indicates whether shaders **can** perform `Subgroup` scoped clock reads.
- `shaderDeviceClock` indicates whether shaders **can** perform `Device` scoped clock reads.

If the `VkPhysicalDeviceShaderClockFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderClockFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceSamplerYcbcrConversionFeatures structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSamplerYcbcrConversionFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerYcbcrConversion;
} VkPhysicalDeviceSamplerYcbcrConversionFeatures;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkPhysicalDeviceSamplerYcbcrConversionFeatures
typedef VkPhysicalDeviceSamplerYcbcrConversionFeatures
VkPhysicalDeviceSamplerYcbcrConversionFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- samplerYcbcrConversion specifies whether the implementation supports sampler $Y'C_BC_R$ conversion. If samplerYcbcrConversion is VK_FALSE, sampler $Y'C_BC_R$ conversion is not supported, and samplers using sampler $Y'C_BC_R$ conversion **must** not be used.

If the VkPhysicalDeviceSamplerYcbcrConversionFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceSamplerYcbcrConversionFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceProtectedMemoryFeatures structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedMemory;
} VkPhysicalDeviceProtectedMemoryFeatures;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedMemory` specifies whether protected memory is supported.

If the `VkPhysicalDeviceProtectedMemoryFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceProtectedMemoryFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           advancedBlendCoherentOperations;
} VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `advancedBlendCoherentOperations` specifies whether blending using advanced blend operations is guaranteed to execute atomically and in primitive order. If this is VK_TRUE, VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT is treated the same as VK_ACCESS_COLOR_ATTACHMENT_READ_BIT, and advanced blending needs no additional synchronization over basic blending. If this is VK_FALSE, then memory dependencies are required to guarantee order between two advanced blending operations that occur on the same sample.

If the `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_conditional_rendering
typedef struct VkPhysicalDeviceConditionalRenderingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           conditionalRendering;
    VkBool32           inheritedConditionalRendering;
} VkPhysicalDeviceConditionalRenderingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `conditionalRendering` specifies whether conditional rendering is supported.
- `inheritedConditionalRendering` specifies whether a secondary command buffer **can** be executed while conditional rendering is active in the primary command buffer.

If the `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceConditionalRenderingFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceShaderDrawParametersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceShaderDrawParametersFeatures
typedef VkPhysicalDeviceShaderDrawParametersFeatures
VkPhysicalDeviceShaderDrawParameterFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the

SPV_KHR_shader_draw_parameters extension or the DrawParameters capability.

If the VkPhysicalDeviceShaderDrawParametersFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderDrawParametersFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceMeshShaderFeaturesNV structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
} VkPhysicalDeviceMeshShaderFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- taskShader specifies whether task shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_TASK_BIT_NV and VK_PIPELINE_STAGE_TASK_SHADER_BIT_NV enum values **must** not be used.
- meshShader specifies whether mesh shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_MESH_BIT_NV and VK_PIPELINE_STAGE_MESH_SHADER_BIT_NV enum values **must** not be used.

If the VkPhysicalDeviceMeshShaderFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMeshShaderFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceMeshShaderFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
    VkBool32           multiviewMeshShader;
    VkBool32           primitiveFragmentShadingRateMeshShader;
    VkBool32           meshShaderQueries;
} VkPhysicalDeviceMeshShaderFeaturesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- taskShader specifies whether task shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_TASK_BIT_EXT and VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT enum values **must** not be used.
- meshShader specifies whether mesh shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_MESH_BIT_EXT and VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT enum values **must** not be used.
- multiviewMeshShader specifies whether the implementation supports multiview rendering within a render pass, with mesh shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a mesh shader.
- primitiveFragmentShadingRateMeshShader indicates that the implementation supports the primitive fragment shading rate in mesh shaders.
- meshShaderQueries indicates that the implementation supports creating query pools using the

VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT query type and statistic queries containing the VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT and VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT flags.

If the VkPhysicalDeviceMeshShaderFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMeshShaderFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The corresponding features of the VkPhysicalDeviceMeshShaderFeaturesNV structure **must** match those in VkPhysicalDeviceMeshShaderFeaturesEXT.

Valid Usage

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-multiviewMeshShader-07032
  If multiviewMeshShader is enabled then VkPhysicalDeviceMultiviewFeaturesKHR::multiview **must** also be enabled
- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-primitiveFragmentShadingRateMeshShader-07033
  If primitiveFragmentShadingRateMeshShader is enabled then VkPhysicalDeviceFragmentShadingRateFeaturesKHR::primitiveFragmentShadingRate **must** also be enabled

    VkBool32           descriptorBindingUniformBufferUpdateAfterBind;
    VkBool32           descriptorBindingSampledImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageBufferUpdateAfterBind;
    VkBool32           descriptorBindingUniformTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingStorageTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingUpdateUnusedWhilePending;
    VkBool32           descriptorBindingPartiallyBound;
    VkBool32           descriptorBindingVariableDescriptorCount;
    VkBool32           runtimeDescriptorArray;
} VkPhysicalDeviceDescriptorIndexingFeatures;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingFeatures
typedef VkPhysicalDeviceDescriptorIndexingFeatures
VkPhysicalDeviceDescriptorIndexingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderInputAttachmentArrayDynamicIndexing` indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.
- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates

whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.

- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel

buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the StorageTexelBufferArrayNonUniformIndexing capability.

- descriptorBindingUniformBufferUpdateAfterBind indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER.
- descriptorBindingSampledImageUpdateAfterBind indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE.
- descriptorBindingStorageImageUpdateAfterBind indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.
- descriptorBindingStorageBufferUpdateAfterBind indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_BUFFER.
- descriptorBindingUniformTexelBufferUpdateAfterBind indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.
- descriptorBindingStorageTexelBufferUpdateAfterBind indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.
- descriptorBindingUpdateUnusedWhilePending indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT **must** not be used.
- descriptorBindingPartiallyBound indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT **must** not be used.
- descriptorBindingVariableDescriptorCount indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT **must** not be used.
- runtimeDescriptorArray indicates whether the implementation supports the SPIR-V RuntimeDescriptorArray capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.

If the VkPhysicalDeviceDescriptorIndexingFeatures structure is included in the pNext chain of the

VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDescriptorIndexingFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceCopyMemoryIndirectFeaturesNV structure is defined as:

```
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indirectCopy indicates whether indirect memory to memory or memory to image copies are supported.

If the VkPhysicalDeviceCopyMemoryIndirectFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCopyMemoryIndirectFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesNV-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectMemoryCopy;
    VkBool32           indirectMemoryToImageCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indirectMemoryCopy indicates whether indirect memory to memory copies are supported.
- indirectMemoryToImageCopy indicates whether indirect memory to image copies are supported.

If the VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceVertexAttributeDivisorFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
} VkPhysicalDeviceVertexAttributeDivisorFeatures;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorFeatures
typedef VkPhysicalDeviceVertexAttributeDivisorFeatures
VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR;
```

```
// Provided by VK_EXT_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorFeatures
typedef VkPhysicalDeviceVertexAttributeDivisorFeatures
VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- vertexAttributeInstanceRateDivisor specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- vertexAttributeInstanceRateZeroDivisor specifies whether a zero value for VkVertexInputBindingDivisorDescription::divisor is supported.

If the VkPhysicalDeviceVertexAttributeDivisorFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceVertexAttributeDivisorFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceASTCDecodeFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkPhysicalDeviceASTCDecodeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           decodeModeSharedExponent;
} VkPhysicalDeviceASTCDecodeFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- decodeModeSharedExponent indicates whether the implementation supports decoding ASTC compressed formats to VK_FORMAT_E5B9G9R9_UFLOAT_PACK32 internal precision.

If the VkPhysicalDeviceASTCDecodeFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceASTCDecodeFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceASTCDecodeFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceTransformFeedbackFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           transformFeedback;
    VkBool32           geometryStreams;
} VkPhysicalDeviceTransformFeedbackFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `transformFeedback` indicates whether the implementation supports transform feedback and shader modules **can** declare the `TransformFeedback` capability.
- `geometryStreams` indicates whether the implementation supports the `GeometryStreams` SPIR-V capability.

If the `VkPhysicalDeviceTransformFeedbackFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceTransformFeedbackFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackFeaturesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceVulkanMemoryModelFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkanMemoryModelFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vulkanMemoryModel;
    VkBool32           vulkanMemoryModelDeviceScope;
    VkBool32           vulkanMemoryModelAvailabilityVisibilityChains;
} VkPhysicalDeviceVulkanMemoryModelFeatures;
```

```
// Provided by VK_KHR_vulkan_memory_model
// Equivalent to VkPhysicalDeviceVulkanMemoryModelFeatures
typedef VkPhysicalDeviceVulkanMemoryModelFeatures
VkPhysicalDeviceVulkanMemoryModelFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vulkanMemoryModel` indicates whether shader modules **can** declare the `VulkanMemoryModel` capability.
- `vulkanMemoryModelDeviceScope` indicates whether the Vulkan Memory Model can use `Device` scope synchronization. This also indicates whether shader modules **can** declare the `VulkanMemoryModelDeviceScope` capability.
- `vulkanMemoryModelAvailabilityVisibilityChains` indicates whether the Vulkan Memory Model can use availability and visibility chains with more than one element.

If the `VkPhysicalDeviceVulkanMemoryModelFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVulkanMemoryModelFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkanMemoryModelFeatures-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES

Structure Chaining

The VkPhysicalDeviceInlineUniformBlockFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
} VkPhysicalDeviceInlineUniformBlockFeatures;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkPhysicalDeviceInlineUniformBlockFeatures
typedef VkPhysicalDeviceInlineUniformBlockFeatures
VkPhysicalDeviceInlineUniformBlockFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- inlineUniformBlock indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK **must** not be used.
- descriptorBindingInlineUniformBlockUpdateAfterBind indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK.

If the VkPhysicalDeviceInlineUniformBlockFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceInlineUniformBlockFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_FEATURES

The VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV structure is defined as:

```
// Provided by VK_NV_representative_fragment_test
typedef struct VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           representativeFragmentTest;
} VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- representativeFragmentTest indicates whether the implementation supports the representative fragment test. See Representative Fragment Test.

If the VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceExclusiveScissorFeaturesNV structure is defined as:

```
// Provided by VK_NV_scissor_exclusive
typedef struct VkPhysicalDeviceExclusiveScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           exclusiveScissor;
} VkPhysicalDeviceExclusiveScissorFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- exclusiveScissor indicates that the implementation supports the exclusive scissor test.

See Exclusive Scissor Test for more information.

If the VkPhysicalDeviceExclusiveScissorFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceExclusiveScissorFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExclusiveScissorFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXCLUSIVE_SCISSOR_FEATURES_NV

The VkPhysicalDeviceCornerSampledImageFeaturesNV structure is defined as:

```
// Provided by VK_NV_corner_sampled_image
typedef struct VkPhysicalDeviceCornerSampledImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cornerSampledImage;
} VkPhysicalDeviceCornerSampledImageFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cornerSampledImage` specifies whether images can be created with a VkImageCreateInfo::`flags` containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV. See Corner-Sampled Images.

If the `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCornerSampledImageFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCornerSampledImageFeaturesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CORNER_SAMPLED_IMAGE_FEATURES_NV

The `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_compute_shader_derivatives
typedef struct VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeDerivativeGroupQuads;
    VkBool32           computeDerivativeGroupLinear;
} VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR;
```

```
// Provided by VK_NV_compute_shader_derivatives
// Equivalent to VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR
typedef VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR
VkPhysicalDeviceComputeShaderDerivativesFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeDerivativeGroupQuads` indicates that the implementation supports the `ComputeDerivativeGroupQuadsKHR` SPIR-V capability.
- `computeDerivativeGroupLinear` indicates that the implementation supports the `ComputeDerivativeGroupLinearKHR` SPIR-V capability.

See Quad shader scope for more information.

If the `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_SHADER_DERIVATIVES_FEATURES_KHR

The `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderBarycentric;
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;
```

```
// Provided by VK_NV_fragment_shader_barycentric
// Equivalent to VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
typedef VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
VkPhysicalDeviceFragmentShaderBarycentricFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderBarycentric` indicates that the implementation supports the `BaryCoordKHR` and `BaryCoordNoPerspKHR` SPIR-V fragment shader built-ins and supports the `PerVertexKHR` SPIR-V decoration on fragment shader input variables.

See Barycentric Interpolation for more information.

If the `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is defined as:

```
// Provided by VK_NV_shader_image_footprint
typedef struct VkPhysicalDeviceShaderImageFootprintFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageFootprint;
} VkPhysicalDeviceShaderImageFootprintFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageFootprint` specifies whether the implementation supports the `ImageFootprintNV` SPIR-V capability.

See Texel Footprint Evaluation for more information.

If the VkPhysicalDeviceShaderImageFootprintFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderImageFootprintFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceShadingRateImageFeaturesNV structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImageFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shadingRateImage;
    VkBool32           shadingRateCoarseSampleOrder;
} VkPhysicalDeviceShadingRateImageFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shadingRateImage indicates that the implementation supports the use of a shading rate image to derive an effective shading rate for fragment processing. It also indicates that the implementation supports the ShadingRateNV SPIR-V execution mode.
- shadingRateCoarseSampleOrder indicates that the implementation supports an application-configurable ordering of coverage samples in fragments larger than one pixel.

See Shading Rate Image for more information.

If the VkPhysicalDeviceShadingRateImageFeaturesNV structure is included in the pNext chain of the

VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShadingRateImageFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShadingRateImageFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_FEATURES_NV

Structure Chaining

Extends the structures

The VkPhysicalDeviceFragmentDensityMapFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMap;
    VkBool32           fragmentDensityMapDynamic;
    VkBool32           fragmentDensityMapNonSubsampledImages;
} VkPhysicalDeviceFragmentDensityMapFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentDensityMap specifies whether the implementation supports render passes with a fragment density map attachment. If this feature is not enabled and the pNext chain of VkRenderPassCreateInfo includes a VkRenderPassFragmentDensityMapCreateInfoEXT structure, fragmentDensityMapAttachment **must** be VK_ATTACHMENT_UNUSED.
- fragmentDensityMapDynamic specifies whether the implementation supports dynamic fragment density map image views. If this feature is not enabled, VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT **must** not be included in VkImageViewCreateInfo::flags.
- fragmentDensityMapNonSubsampledImages specifies whether the implementation supports regular non-subsampled image attachments with fragment density map render passes. If this feature is

not enabled, render passes with a fragment density map attachment **must** only have subsampled attachments bound.

If the VkPhysicalDeviceFragmentDensityMapFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFragmentDensityMapFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceFragmentDensityMap2FeaturesEXT structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapDeferred;
} VkPhysicalDeviceFragmentDensityMap2FeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentDensityMapDeferred specifies whether the implementation supports deferred reads of fragment density map image views. If this feature is not enabled, VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT **must** not be included in VkImageViewCreateInfo::flags.

If the VkPhysicalDeviceFragmentDensityMap2FeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFragmentDensityMap2FeaturesEXT, it **must**

add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2FeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_FEATURES_EXT

The VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapOffset;
} VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT;
```

```
// Provided by VK_QCOM_fragment_density_map_offset
// Equivalent to VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT
typedef VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT
VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentDensityMapOffset specifies whether the implementation supports fragment density map offsets.

If the VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapOffsetFeaturesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_FEATURES_EXT

The `VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE` structure is defined as:

```
// Provided by VK_VALVE_fragment_density_map_layered
typedef struct VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapLayered;
} VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapLayered` specifies whether the implementation supports layered fragment density maps.

If the `VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapLayeredFeaturesVALVE-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_LAYERED_FEATURES_VALVE

Structure Chaining

Extends the structures

The VkPhysicalDeviceInvocationMaskFeaturesHUAWEI structure is defined as:

```
// Provided by VK_HUAWEI_invocation_mask
typedef struct VkPhysicalDeviceInvocationMaskFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           invocationMask;
} VkPhysicalDeviceInvocationMaskFeaturesHUAWEI;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- invocationMask indicates that the implementation supports the use of an invocation mask image to optimize the ray dispatch.

If the VkPhysicalDeviceInvocationMaskFeaturesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceInvocationMaskFeaturesHUAWEI, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInvocationMaskFeaturesHUAWEI-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI

Structure Chaining

The VkPhysicalDeviceScalarBlockLayoutFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceScalarBlockLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           scalarBlockLayout;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```

```
// Provided by VK_EXT_scalar_block_layout
// Equivalent to VkPhysicalDeviceScalarBlockLayoutFeatures
typedef VkPhysicalDeviceScalarBlockLayoutFeatures
VkPhysicalDeviceScalarBlockLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using scalar alignment.

If the `VkPhysicalDeviceScalarBlockLayoutFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceScalarBlockLayoutFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceScalarBlockLayoutFeatures-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCALAR_BLOCK_LAYOUT_FEATURES

The `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceUniformBufferStandardLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           uniformBufferStandardLayout;
} VkPhysicalDeviceUniformBufferStandardLayoutFeatures;
```

```
// Provided by VK_KHR_uniform_buffer_standard_layout
// Equivalent to VkPhysicalDeviceUniformBufferStandardLayoutFeatures
typedef VkPhysicalDeviceUniformBufferStandardLayoutFeatures
VkPhysicalDeviceUniformBufferStandardLayoutFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See Standard Buffer Layout.

If the `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceUniformBufferStandardLayoutFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceUniformBufferStandardLayoutFeatures-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFORM_BUFFER_STANDARD_LAYOUT_FEATURES

Structure Chaining

The `VkPhysicalDeviceDepthClipEnableFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPhysicalDeviceDepthClipEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipEnable;
} VkPhysicalDeviceDepthClipEnableFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClipEnable` indicates that the implementation supports setting the depth clipping operation explicitly via the VkPipelineRasterizationDepthClipStateCreateInfoEXT pipeline state. Otherwise depth clipping is only enabled when VkPipelineRasterizationStateCreateInfo::`depthClampEnable` is VK_FALSE.

If the `VkPhysicalDeviceDepthClipEnableFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDepthClipEnableFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClipEnableFeaturesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_ENABLE_FEATURES_EXT

The `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkPhysicalDeviceMemoryPriorityFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryPriority;
} VkPhysicalDeviceMemoryPriorityFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryPriority` indicates that the implementation supports memory priorities specified at memory allocation time via VkMemoryPriorityAllocateInfoEXT.

If the `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMemoryPriorityFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryPriorityFeaturesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PRIORITY_FEATURES_EXT

The `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceBufferDeviceAddressFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeatures;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkPhysicalDeviceBufferDeviceAddressFeatures
typedef VkPhysicalDeviceBufferDeviceAddressFeatures
VkPhysicalDeviceBufferDeviceAddressFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from vkGetBufferDeviceAddress.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress` , `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.

NOTE	`bufferDeviceAddressMultiDevice` exists to allow certain legacy platforms to be able to support `bufferDeviceAddress` without needing to support shared GPU virtual addresses for multi-device configurations.

See vkGetBufferDeviceAddress for more information.

If the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceBufferDeviceAddressFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeatures-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_buffer_device_address
typedef struct VkPhysicalDeviceBufferDeviceAddressFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeaturesEXT;
```

```
// Provided by VK_EXT_buffer_device_address
// Equivalent to VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
typedef VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
VkPhysicalDeviceBufferAddressFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from vkGetBufferDeviceAddressEXT.
- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer addresses, e.g. for trace capture and replay.
- `bufferDeviceAddressMultiDevice` indicates that the implementation supports the `bufferDeviceAddress` feature for logical devices created with multiple physical devices. If this feature is not supported, buffer addresses **must** not be queried on a logical device created with more than one physical device.

If the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

NOTE

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure has the same members as the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure, but the functionality indicated by the members is expressed differently. The features indicated by the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure require additional flags to be passed at memory allocation time, and the capture and replay mechanism is built around opaque capture addresses for buffer and memory objects.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressFeaturesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES_EXT

The `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` structure is defined as:

```
// Provided by VK_NV_dedicated_allocation_image_aliasing
typedef struct VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dedicatedAllocationImageAliasing;
} VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dedicatedAllocationImageAliasing` indicates that the implementation supports aliasing of compatible image objects on a dedicated allocation.

If the `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

// Provided by VK_QCOM_elapsed_timer_query
typedef struct VkPhysicalDeviceElapsedTimerQueryFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           elapsedTimerQuery;
} VkPhysicalDeviceElapsedTimerQueryFeaturesQCOM;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- elapsedTimerQuery indicates that the implementation supports VK_QUERY_TYPE_TIME_ELAPSED_QCOM queries.

If the VkPhysicalDeviceElapsedTimerQueryFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceElapsedTimerQueryFeaturesQCOM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceImagelessFramebufferFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceImagelessFramebufferFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imagelessFramebuffer;
} VkPhysicalDeviceImagelessFramebufferFeatures;
```

```
// Provided by VK_KHR_imageless_framebuffer
// Equivalent to VkPhysicalDeviceImagelessFramebufferFeatures
typedef VkPhysicalDeviceImagelessFramebufferFeatures
VkPhysicalDeviceImagelessFramebufferFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via VkRenderPassAttachmentBeginInfo.

If the `VkPhysicalDeviceImagelessFramebufferFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceImagelessFramebufferFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_shader_interlock
typedef struct VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderSampleInterlock;
    VkBool32           fragmentShaderPixelInterlock;
    VkBool32           fragmentShaderShadingRateInterlock;
} VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderSampleInterlock` indicates that the implementation supports the `FragmentShaderSampleInterlockEXT` SPIR-V capability.
- `fragmentShaderPixelInterlock` indicates that the implementation supports the `FragmentShaderPixelInterlockEXT` SPIR-V capability.
- `fragmentShaderShadingRateInterlock` indicates that the implementation supports the `FragmentShaderShadingRateInterlockEXT` SPIR-V capability.

If the `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceCooperativeMatrixFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixNV` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadNV` and `OpCooperativeMatrixStoreNV` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrixFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixKHR` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrixFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_KHR

The `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_cooperative_matrix_conversion
typedef struct VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixConversion;
} VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixConversion` indicates that the implementation supports the `CooperativeMatrixConversionQCOM` SPIR-V capability.

If the `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixConversionFeaturesQCOM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_CONVERSION_FEATURES_QCOM

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2FeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixWorkgroupScope;
    VkBool32           cooperativeMatrixFlexibleDimensions;
    VkBool32           cooperativeMatrixReductions;
    VkBool32           cooperativeMatrixConversions;
    VkBool32           cooperativeMatrixPerElementOperations;
    VkBool32           cooperativeMatrixTensorAddressing;
    VkBool32           cooperativeMatrixBlockLoads;
} VkPhysicalDeviceCooperativeMatrix2FeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixWorkgroupScope` indicates that the implementation supports workgroup scope cooperative matrices.
- `cooperativeMatrixFlexibleDimensions` indicates that the implementation supports cooperative matrix sizes that are a multiple of the granularity advertised in VkCooperativeMatrixFlexibleDimensionsPropertiesNV.
- `cooperativeMatrixReductions` indicates that the implementation supports the `CooperativeMatrixReductionsNV` SPIR-V capability. This allows performing (row, column, 2x2, or all element) reductions on matrices.
- `cooperativeMatrixConversions` indicates that the implementation supports the `CooperativeMatrixConversionsNV` SPIR-V capability. This allows converting accumulator matrices to A or B matrices.
- `cooperativeMatrixPerElementOperations` indicates that the implementation supports the `CooperativeMatrixPerElementOperationsNV` SPIR-V capability. This allows performing element-wise operations on matrix elements using a callback function.
- `cooperativeMatrixTensorAddressing` indicates that the implementation supports the `TensorAddressingNV` and `CooperativeMatrixTensorAddressingNV` SPIR-V capabilities. This allows using tensor layout and tensor view types for matrix loads and stores.
- `cooperativeMatrixBlockLoads` indicates that the implementation supports the `CooperativeMatrixBlockLoadsNV` SPIR-V capability. This allows setting block size for loads and using a callback function to decode block elements.

If the `VkPhysicalDeviceCooperativeMatrix2FeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrix2FeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrix2FeaturesNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_2_FEATURES_NV`

The `VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix_decode_vector
typedef struct VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixDecodeVector;
} VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixDecodeVector` indicates that the implementation supports the `CooperativeMatrixDecodeVectorNV` SPIR-V capability. This allows `OpCooperativeMatrixLoadTensorNV` to use an optional **DecodeVectorFunc** operand to decode multiple block-adjacent elements per callback, as defined in `SPV_NV_cooperative_matrix_decode_vector`.

If the `VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixDecodeVectorFeaturesNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_DECODE_VECTOR_FEATURES_NV`

The VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT structure is defined as:

```
// Provided by VK_EXT_cooperative_matrix_maintenance1
typedef struct VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixProperties2;
    VkBool32           cooperativeMatrixReductions;
    VkBool32           cooperativeMatrixConversions;
    VkBool32           cooperativeMatrixPerElementOperations;
    VkBool32           cooperativeMatrixGetCoordinate;
} VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- cooperativeMatrixProperties2 indicates that the implementation supports the vkGetPhysicalDeviceCooperativeMatrixProperties2EXT command.
- cooperativeMatrixReductions indicates that the implementation supports the CooperativeMatrixReductionsEXT SPIR-V capability. This allows performing (row, column, 2x2, or all element) reductions on matrices.
- cooperativeMatrixConversions indicates that the implementation supports the CooperativeMatrixConversionsEXT SPIR-V capability. This allows converting accumulator matrices to A or B matrices.
- cooperativeMatrixPerElementOperations indicates that the implementation supports the CooperativeMatrixPerElementOperationsEXT SPIR-V capability. This allows performing element-wise operations on matrix elements using a callback function.
- cooperativeMatrixGetCoordinate indicates that the implementation supports the CooperativeMatrixGetCoordinateEXT SPIR-V capability. This allows querying locations for a matrix element.

If the VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of

VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_MAINTENANCE_1_FEATURES_EXT

The VkPhysicalDeviceCooperativeVectorFeaturesNV structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkPhysicalDeviceCooperativeVectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeVector;
    VkBool32           cooperativeVectorTraining;
} VkPhysicalDeviceCooperativeVectorFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- cooperativeVector indicates that the implementation supports the CooperativeVectorNV SPIR-V capability.
- cooperativeVectorTraining indicates that the implementation supports the CooperativeVectorTrainingNV SPIR-V capability.

If the VkPhysicalDeviceCooperativeVectorFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCooperativeVectorFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceShaderLongVectorFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_long_vector
typedef struct VkPhysicalDeviceShaderLongVectorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           longVector;
} VkPhysicalDeviceShaderLongVectorFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- longVector indicates that the implementation supports the LongVectorEXT SPIR-V capability.

If the VkPhysicalDeviceShaderLongVectorFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderLongVectorFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceYcbcrImageArraysFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_ycbcr_image_arrays
typedef struct VkPhysicalDeviceYcbcrImageArraysFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrImageArrays;
} VkPhysicalDeviceYcbcrImageArraysFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ycbcrImageArrays indicates that the implementation supports creating images with a format that requires $Y'C_BC_R$ conversion and has multiple array layers.

If the VkPhysicalDeviceYcbcrImageArraysFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceYcbcrImageArraysFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupExtendedTypes;
} VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_extended_types
// Equivalent to VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
typedef VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
VkPhysicalDeviceShaderSubgroupExtendedTypesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupExtendedTypes` is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in group operations with subgroup scope, if the implementation supports the types.

If the `VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceHostQueryResetFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceHostQueryResetFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostQueryReset;
} VkPhysicalDeviceHostQueryResetFeatures;
```

```
// Provided by VK_EXT_host_query_reset
// Equivalent to VkPhysicalDeviceHostQueryResetFeatures
typedef VkPhysicalDeviceHostQueryResetFeatures
VkPhysicalDeviceHostQueryResetFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hostQueryReset` indicates that the implementation supports resetting queries from the host with vkResetQueryPool.

If the `VkPhysicalDeviceHostQueryResetFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceHostQueryResetFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` structure is defined as:

```
// Provided by VK_INTEL_shader_integer_functions2
typedef struct VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerFunctions2;
} VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- shaderIntegerFunctions2 indicates that the implementation supports the IntegerFunctions2INTEL SPIR-V capability.

If the VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceCoverageReductionModeFeaturesNV structure is defined as:

```
// Provided by VK_NV_coverage_reduction_mode
typedef struct VkPhysicalDeviceCoverageReductionModeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           coverageReductionMode;
} VkPhysicalDeviceCoverageReductionModeFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- coverageReductionMode indicates whether the implementation supports coverage reduction modes. See Coverage Reduction.

If the VkPhysicalDeviceCoverageReductionModeFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCoverageReductionModeFeaturesNV, it **must**

add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCoverageReductionModeFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COVERAGE_REDUCTION_MODE_FEATURES_NV

Structure Chaining

The VkPhysicalDeviceTimelineSemaphoreFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           timelineSemaphore;
} VkPhysicalDeviceTimelineSemaphoreFeatures;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreFeatures
typedef VkPhysicalDeviceTimelineSemaphoreFeatures
VkPhysicalDeviceTimelineSemaphoreFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- timelineSemaphore indicates whether semaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE are supported.

If the VkPhysicalDeviceTimelineSemaphoreFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceTimelineSemaphoreFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTimelineSemaphoreFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_FEATURES

The VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_internally_synchronized_queues
typedef struct VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           internallySynchronizedQueues;
} VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- internallySynchronizedQueues indicates that VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR can be used to make queues internally synchronized.

If the VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INTERNALLY_SYNCHRONIZED_QUEUES_FEATURES_KHR

Structure Chaining

The VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX structure is defined as:

```
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           screenBufferImport;
} VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX;
```

The members of the VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX structure describe the following features:

- screenBufferImport indicates whether QNX Screen buffer import functionality is supported. If screenBufferImport is VK_TRUE, VkDeviceMemory supports importing _screen_buffer from applications. In this case, the application is responsible for the resource management of the _screen_buffer.

Table 74. Functionality Supported for QNX Screen Buffer Features

Features	Functionality
screenBufferImport	VkImportScreenBufferInfoQNX
Always supported[1]	vkGetScreenBufferPropertiesQNX, VkScreenBufferPropertiesQNX, VkScreenBufferFormatPropertiesQNX, VkExternalFormatQNX

1

Functionality in this row is always available.

The Functionality supported for QNX Screen buffer features table summarizes the functionality enabled by the VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX structure. Each entry in the body of the table summarizes the functionality that **can** be used when the given features are supported and enabled. This summarizes Valid Usage statements that are added elsewhere in this specification.

If the VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX, it **must** add an instance of the structure,

with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceIndexTypeUint8Features structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceIndexTypeUint8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indexTypeUint8;
} VkPhysicalDeviceIndexTypeUint8Features;
```

```
// Provided by VK_KHR_index_type_uint8
// Equivalent to VkPhysicalDeviceIndexTypeUint8Features
typedef VkPhysicalDeviceIndexTypeUint8Features
VkPhysicalDeviceIndexTypeUint8FeaturesKHR;
```

```
// Provided by VK_EXT_index_type_uint8
// Equivalent to VkPhysicalDeviceIndexTypeUint8Features
typedef VkPhysicalDeviceIndexTypeUint8Features
VkPhysicalDeviceIndexTypeUint8FeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indexTypeUint8 indicates that VK_INDEX_TYPE_UINT8 can be used with vkCmdBindIndexBuffer2 and vkCmdBindIndexBuffer.

If the VkPhysicalDeviceIndexTypeUint8Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceIndexTypeUint8Features, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceIndexTypeUint8Features-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INDEX_TYPE_UINT8_FEATURES

The VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_primitive_topology_list_restart
typedef struct VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveTopologyListRestart;
    VkBool32           primitiveTopologyPatchListRestart;
} VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- primitiveTopologyListRestart indicates that list type primitives, VK_PRIMITIVE_TOPOLOGY_POINT_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST, VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY and VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY, **can** use the primitive restart index value in index buffers.
- primitiveTopologyPatchListRestart indicates that the VK_PRIMITIVE_TOPOLOGY_PATCH_LIST topology **can** use the primitive restart index value in index buffers.

If the VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to

use a VkDevice with any features described by VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVE_TOPOLOGY_LIST_RESTART_FEATURES_EXT

The VkPhysicalDeviceShaderSMBuiltinsFeaturesNV structure is defined as:

```
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSMBuiltins;
} VkPhysicalDeviceShaderSMBuiltinsFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSMBuiltins indicates whether the implementation supports the SPIR-V ShaderSMBuiltinsNV capability.

If the VkPhysicalDeviceShaderSMBuiltinsFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderSMBuiltinsFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSMBuiltinsFeaturesNV-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_FEATURES_NV

Structure Chaining

Extends the structures

The VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           separateDepthStencilLayouts;
} VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures;
```

```
// Provided by VK_KHR_separate_depth_stencil_layouts
// Equivalent to VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
typedef VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
VkPhysicalDeviceSeparateDepthStencilLayoutsFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- separateDepthStencilLayouts indicates whether the implementation supports a VkImageMemoryBarrier for a depth/stencil image with only one of VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT set, and whether VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL, or VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL can be used.

If the VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SEPARATE_DEPTH_STENCIL_LAYOUTS_FEATURES

Structure Chaining

The `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineExecutableInfo;
} VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineExecutableInfo` indicates that the implementation supports reporting properties and statistics about the pipeline executables associated with a compiled pipeline.

If the `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_EXECUTABLE_PROPERTIES_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDemoteToHelperInvocation;
} VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures;
```

```
// Provided by VK_EXT_shader_demote_to_helper_invocation
// Equivalent to VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
typedef VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderDemoteToHelperInvocation indicates whether the implementation supports the SPIR-V DemoteToHelperInvocationEXT capability.

If the VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_texel_buffer_alignment
typedef struct VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           texelBufferAlignment;
} VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- texelBufferAlignment indicates whether the implementation uses more specific alignment requirements advertised in VkPhysicalDeviceTexelBufferAlignmentProperties rather than VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment.

If the VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_dynamic_state
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopDynamicState;
} VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopDynamicState` specifies whether dynamic feedback loops are supported.

If the `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyVertexAttributes;
} VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `legacyVertexAttributes` specifies whether compatibility features for vertex attributes are supported when using dynamic vertex input state.

If the `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_FEATURES_EXT

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTextureCompressionASTCHDRFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_HDR;
} VkPhysicalDeviceTextureCompressionASTCHDRFeatures;
```

```
// Provided by VK_EXT_texture_compression_astc_hdr
// Equivalent to VkPhysicalDeviceTextureCompressionASTCHDRFeatures
typedef VkPhysicalDeviceTextureCompressionASTCHDRFeatures
VkPhysicalDeviceTextureCompressionASTCHDRFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in `optimalTilingFeatures` for the following formats:
  - VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK
  - VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK

  To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can** be used to check for supported properties of individual formats as normal.

If the `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceTextureCompressionASTCHDRFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_texture_compression_astc_3d
typedef struct VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_3D;
} VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- textureCompressionASTC_3D indicates whether all of the ASTC 3D compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features **must** be supported in optimalTilingFeatures for the following formats:
  - VK_FORMAT_ASTC_3x3x3_UNORM_BLOCK_EXT
  - VK_FORMAT_ASTC_3x3x3_SRGB_BLOCK_EXT
  - VK_FORMAT_ASTC_3x3x3_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_4x3x3_UNORM_BLOCK_EXT
  - VK_FORMAT_ASTC_4x3x3_SRGB_BLOCK_EXT
  - VK_FORMAT_ASTC_4x3x3_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_4x4x3_UNORM_BLOCK_EXT
  - VK_FORMAT_ASTC_4x4x3_SRGB_BLOCK_EXT

The VkPhysicalDeviceLineRasterizationFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceLineRasterizationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
} VkPhysicalDeviceLineRasterizationFeatures;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationFeatures
typedef VkPhysicalDeviceLineRasterizationFeatures
VkPhysicalDeviceLineRasterizationFeaturesKHR;
```

```
// Provided by VK_EXT_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationFeatures
typedef VkPhysicalDeviceLineRasterizationFeatures
VkPhysicalDeviceLineRasterizationFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rectangularLines` indicates whether the implementation supports rectangular line rasterization.
- `bresenhamLines` indicates whether the implementation supports Bresenham-style line rasterization.
- `smoothLines` indicates whether the implementation supports smooth line rasterization.
- `stippledRectangularLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_RECTANGULAR lines.
- `stippledBresenhamLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_BRESENHAM lines.
- `stippledSmoothLines` indicates whether the implementation supports stippled line rasterization with VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH lines.

If the `VkPhysicalDeviceLineRasterizationFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceLineRasterizationFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLineRasterizationFeatures-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES`

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
} VkPhysicalDeviceSubgroupSizeControlFeatures;
```

```
// Provided by VK_EXT_subgroup_size_control
// Equivalent to VkPhysicalDeviceSubgroupSizeControlFeatures
typedef VkPhysicalDeviceSubgroupSizeControlFeatures
VkPhysicalDeviceSubgroupSizeControlFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the VkPipelineShaderStageRequiredSubgroupSizeCreateInfo structure.
- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in compute , mesh, or task shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.

If the `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

VkDevice with any features described by VkPhysicalDeviceSubgroupSizeControlFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

NOTE

The VkPhysicalDeviceSubgroupSizeControlFeaturesEXT structure was added in version 2 of the VK_EXT_subgroup_size_control extension. Version 1 implementations of this extension will not fill out the features structure but applications may assume that both subgroupSizeControl and computeFullSubgroups are supported if the extension is supported. (See also the Feature Requirements section.) Applications are advised to add a VkPhysicalDeviceSubgroupSizeControlFeaturesEXT structure to the pNext chain of VkDeviceCreateInfo to enable the features regardless of the version of the extension supported by the implementation. If the implementation only supports version 1, it will safely ignore the VkPhysicalDeviceSubgroupSizeControlFeaturesEXT structure.

Vulkan 1.3 implementations always support the features structure.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_FEATURES

The VkPhysicalDeviceCoherentMemoryFeaturesAMD structure is defined as:

```
// Provided by VK_AMD_device_coherent_memory
typedef struct VkPhysicalDeviceCoherentMemoryFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceCoherentMemory;
} VkPhysicalDeviceCoherentMemoryFeaturesAMD;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceCoherentMemory indicates that the implementation supports device coherent memory.

If the VkPhysicalDeviceCoherentMemoryFeaturesAMD structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCoherentMemoryFeaturesAMD, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCoherentMemoryFeaturesAMD-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COHERENT_MEMORY_FEATURES_AMD

The VkPhysicalDeviceAccelerationStructureFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructureFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           accelerationStructure;
    VkBool32           accelerationStructureCaptureReplay;
    VkBool32           accelerationStructureIndirectBuild;
    // accelerationStructureHostCommands is legacy, but no reason was given in the API
XML
    VkBool32           accelerationStructureHostCommands;
    VkBool32           descriptorBindingAccelerationStructureUpdateAfterBind;
} VkPhysicalDeviceAccelerationStructureFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- accelerationStructure indicates whether the implementation supports the acceleration structure functionality. See Acceleration Structures.
- accelerationStructureCaptureReplay indicates whether the implementation supports saving and reusing acceleration structure device addresses, e.g. for trace capture and replay.
- accelerationStructureIndirectBuild indicates whether the implementation supports indirect acceleration structure build commands, e.g. vkCmdBuildAccelerationStructuresIndirectKHR.

- `accelerationStructureHostCommands` indicates whether the implementation supports host side acceleration structure commands, e.g. vkBuildAccelerationStructuresKHR, vkCopyAccelerationStructureKHR, vkCopyAccelerationStructureToMemoryKHR, vkCopyMemoryToAccelerationStructureKHR, vkWriteAccelerationStructuresPropertiesKHR.
- `descriptorBindingAccelerationStructureUpdateAfterBind` indicates whether the implementation supports updating acceleration structure descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR.

If the `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceAccelerationStructureFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelineFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPipeline;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplay;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplayMixed;
    VkBool32           rayTracingPipelineTraceRaysIndirect;
    VkBool32           rayTraversalPrimitiveCulling;
} VkPhysicalDeviceRayTracingPipelineFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `rayTracingPipeline` indicates whether the implementation supports the ray tracing pipeline functionality. See Ray Tracing.
- `rayTracingPipelineShaderGroupHandleCaptureReplay` indicates whether the implementation supports saving and reusing shader group handles, e.g. for trace capture and replay.
- `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` indicates whether the implementation supports reuse of shader group handles being arbitrarily mixed with creation of non-reused shader group handles. If this is VK_FALSE, all reused shader group handles **must** be specified before any non-reused handles **may** be created.
- `rayTracingPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands, e.g. vkCmdTraceRaysIndirectKHR.
- `rayTraversalPrimitiveCulling` indicates whether the implementation supports primitive culling during ray traversal.

If the `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRayTracingPipelineFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03575
  If `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is VK_TRUE, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** also be VK_TRUE

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR

Structure Chaining

The `VkPhysicalDeviceRayQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_query
typedef struct VkPhysicalDeviceRayQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayQuery;
} VkPhysicalDeviceRayQueryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayQuery` indicates whether the implementation supports ray query (`OpRayQueryProceedKHR`) functionality.

If the `VkPhysicalDeviceRayQueryFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRayQueryFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayQueryFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR

The `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1
typedef struct VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMaintenance1;
    VkBool32           rayTracingPipelineTraceRaysIndirect2;
} VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMaintenance1` indicates that the implementation supports the following:
  - The `CullMaskKHR` SPIR-V builtin using the `SPV_KHR_ray_cull_mask` SPIR-V extension.
  - Additional acceleration structure property queries: VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR and VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR.
  - A new access flag VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR.
  - A new pipeline stage flag bit VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR.
- `rayTracingPipelineTraceRaysIndirect2` indicates whether the implementation supports the extended indirect ray tracing command vkCmdTraceRaysIndirect2KHR.

If the `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MAINTENANCE_1_FEATURES_KHR

The `VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_feedback2
typedef struct VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeFeedback2;
} VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeFeedback2` specifies that the implementation supports per picture partition feedback and the following additional video encode feedback flags, as reported in VkVideoEncodeFeedback2CapabilitiesKHR and/or VkVideoEncodeCapabilitiesKHR ::`supportedEncodeFeedbackFlags`, respectively:
  - VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR.
  - VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR.

> **NOTE** Support for `videoEncodeFeedback2` does not indicate that all video encode profiles support per picture partition feedback and the new video encode feedback flags. Support for individual video encode profiles is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_FEEDBACK_2_FEATURES_KHR

The `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeQuantizationMap;
} VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeQuantizationMap` indicates that the implementation supports video encode quantization maps.

> **NOTE** Support for `videoEncodeQuantizationMap` does not indicate that all video encode profiles support quantization maps. Support for quantization maps for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeIntraRefresh;
} VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeIntraRefresh` specifies that the implementation supports video encode intra refresh.

NOTE	Support for `videoEncodeIntraRefresh` does not indicate that all video encode profiles support intra refresh. Support for intra refresh for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE` structure is defined as:

```
// Provided by VK_VALVE_video_encode_rgb_conversion
typedef struct VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeRgbConversion;
} VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeRgbConversion` specifies that the implementation supports video encode RGB conversion.

  If the `VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoEncodeRgbConversionFeaturesVALVE`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkPhysicalDeviceVideoMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance1;
} VkPhysicalDeviceVideoMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoMaintenance1` indicates that the implementation supports the following:
  - The new buffer creation flag VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR.
  - The new image creation flag VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR.
  - The new video session creation flag VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR.

If the `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoMaintenance1FeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_MAINTENANCE_1_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceVideoMaintenance2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance2
typedef struct VkPhysicalDeviceVideoMaintenance2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance2;
} VkPhysicalDeviceVideoMaintenance2FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `videoMaintenance2` specifies that the implementation supports the following:
  - Support for issuing video coding control commands against video decode sessions without a bound video session parameters object.
  - The new video session creation flag VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR for video decode sessions.
  - Required support for the rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR for the following video encode profiles:
    - H.264 encode profiles;
    - H.265 encode profiles;
    - AV1 encode profiles.
  - Additional guarantees on Video Std parameters used with video encode profiles that the implementations support without the need to override them.

If the `VkPhysicalDeviceVideoMaintenance2FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoMaintenance2FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkPhysicalDeviceVideoEncodeAV1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeAV1;
} VkPhysicalDeviceVideoEncodeAV1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeAV1` indicates that the implementation supports AV1 encode operations.

If the `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoEncodeAV1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkPhysicalDeviceVideoDecodeVP9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoDecodeVP9;
} VkPhysicalDeviceVideoDecodeVP9FeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoDecodeVP9` specifies that the implementation supports VP9 decode operations.

If the `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR`, it **must** add

an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceExtendedDynamicStateFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state
typedef struct VkPhysicalDeviceExtendedDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState;
} VkPhysicalDeviceExtendedDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- extendedDynamicState indicates that the implementation supports the following dynamic states:
  - VK_DYNAMIC_STATE_CULL_MODE
  - VK_DYNAMIC_STATE_FRONT_FACE
  - VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY
  - VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT
  - VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT
  - VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE
  - VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE
  - VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE
  - VK_DYNAMIC_STATE_DEPTH_COMPARE_OP
  - VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE
  - VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE

- VK_DYNAMIC_STATE_STENCIL_OP

If the VkPhysicalDeviceExtendedDynamicStateFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceExtendedDynamicStateFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

    VkBool32           extendedDynamicState2LogicOp;
    VkBool32           extendedDynamicState2PatchControlPoints;
} VkPhysicalDeviceExtendedDynamicState2FeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- extendedDynamicState2 indicates that the implementation supports the following dynamic states:
  - VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE
  - VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE
  - VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE
- extendedDynamicState2LogicOp indicates that the implementation supports the following dynamic state:

    - VK_DYNAMIC_STATE_LOGIC_OP_EXT
- `extendedDynamicState2PatchControlPoints` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT

If the `VkPhysicalDeviceExtendedDynamicState2FeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported.     VkBool32           extendedDynamicState3LineStippleEnable;
    VkBool32           extendedDynamicState3DepthClipNegativeOneToOne;
    VkBool32           extendedDynamicState3ViewportWScalingEnable;
    VkBool32           extendedDynamicState3ViewportSwizzle;
    VkBool32           extendedDynamicState3CoverageToColorEnable;
    VkBool32           extendedDynamicState3CoverageToColorLocation;
    VkBool32           extendedDynamicState3CoverageModulationMode;
    VkBool32           extendedDynamicState3CoverageModulationTableEnable;
    VkBool32           extendedDynamicState3CoverageModulationTable;
    VkBool32           extendedDynamicState3CoverageReductionMode;
    VkBool32           extendedDynamicState3RepresentativeFragmentTestEnable;
    VkBool32           extendedDynamicState3ShadingRateImageEnable;
} VkPhysicalDeviceExtendedDynamicState3FeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedDynamicState3TessellationDomainOrigin` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT
- `extendedDynamicState3DepthClampEnable` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT

- `extendedDynamicState3PolygonMode` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_POLYGON_MODE_EXT
- `extendedDynamicState3RasterizationSamples` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT
- `extendedDynamicState3SampleMask` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_SAMPLE_MASK_EXT
- `extendedDynamicState3AlphaToCoverageEnable` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT
- `extendedDynamicState3AlphaToOneEnable` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT
- `extendedDynamicState3LogicOpEnable` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT
- `extendedDynamicState3ColorBlendEnable` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT
- `extendedDynamicState3ColorBlendEquation` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT
- `extendedDynamicState3ColorWriteMask` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT
- `extendedDynamicState3RasterizationStream` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT
- `extendedDynamicState3ConservativeRasterizationMode` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT
- `extendedDynamicState3ExtraPrimitiveOverestimationSize` indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT
- `extendedDynamicState3DepthClipEnable` indicates that the implementation supports the following dynamic state:

    - VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT
- `extendedDynamicState3SampleLocationsEnable` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT
- `extendedDynamicState3ColorBlendAdvanced` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT
- `extendedDynamicState3ProvokingVertexMode` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT
- `extendedDynamicState3LineRasterizationMode` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT
- `extendedDynamicState3LineStippleEnable` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT
- `extendedDynamicState3DepthClipNegativeOneToOne` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT
- `extendedDynamicState3ViewportWScalingEnable` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV
- `extendedDynamicState3ViewportSwizzle` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV
- `extendedDynamicState3CoverageToColorEnable` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV
- `extendedDynamicState3CoverageToColorLocation` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV
- `extendedDynamicState3CoverageModulationMode` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV
- `extendedDynamicState3CoverageModulationTableEnable` indicates that the implementation supports the following dynamic state:
    - VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV
- `extendedDynamicState3CoverageModulationTable` indicates that the implementation supports the

following dynamic state:

  - VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV

- extendedDynamicState3CoverageReductionMode indicates that the implementation supports the following dynamic state:

  - VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV

- extendedDynamicState3RepresentativeFragmentTestEnable indicates that the implementation supports the following dynamic state:

  - VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV

- extendedDynamicState3ShadingRateImageEnable indicates that the implementation supports the following dynamic state:

  - VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV

If the VkPhysicalDeviceExtendedDynamicState3FeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceExtendedDynamicState3FeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceExtendedFlagsFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkPhysicalDeviceExtendedFlagsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedFlags;
} VkPhysicalDeviceExtendedFlagsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedFlags` indicates that the implementation supports the following:
- VkFormatProperties4KHR, extending VkFormatProperties2, and corresponding VkFormatFeatureFlagBits4KHR and VkFormatFeatureFlags4KHR types providing up to 64 new format feature flags.
- VkImageCreateFlags2CreateInfoKHR, extending structures passed to image create and query functions, and corresponding VkImageCreateFlagBits2KHR and VkImageCreateFlags2KHR types providing up to 32 new image create flags.
- VkImageUsageFlags2CreateInfoKHR, extending structures passed to image create and query functions, and corresponding VkImageUsageFlagBits2KHR and VkImageUsageFlags2KHR types providing up to 32 new image usage flags.
- The VkPipelineCreateFlags2CreateInfoKHR, VkPipelineCreateFlags2KHR, VkPipelineCreateFlagBits2KHR, VkBufferUsageFlags2CreateInfoKHR, VkBufferUsageFlags2KHR, and VkBufferUsageFlagBits2KHR types originally introduced by VK_KHR_maintenance5.

If the `VkPhysicalDeviceExtendedFlagsFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceExtendedFlagsFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedFlagsFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_FLAGS_FEATURES_KHR

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device. See Device-Generated Commands.

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCompute;
    VkBool32           deviceGeneratedComputePipelines;
    VkBool32           deviceGeneratedComputeCaptureReplay;
} VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCompute` indicates whether the implementation supports functionality to generate dispatch commands and push constants for the compute pipeline on the device. See Device-Generated Commands.
- `deviceGeneratedComputePipelines` indicates whether the implementation supports functionality to generate commands to bind compute pipelines on the device. See Device-Generated Commands.
- `deviceGeneratedComputeCaptureReplay` indicates whether the implementation supports functionality to capture compute pipeline address and reuse later for replay in Device-Generated Commands.

If the `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_COMPUTE_FEATURES_NV

Structure Chaining

Extends the structures

The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
    VkBool32           dynamicGeneratedPipelineLayout;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceGeneratedCommands indicates whether the implementation supports functionality to generate commands on the device.
- dynamicGeneratedPipelineLayout indicates the implementation allows the pipelineLayout member of VkIndirectCommandsLayoutCreateInfoEXT to be VK_NULL_HANDLE and VkPipelineLayoutCreateInfo **can** be chained off those structures' pNext instead.

If the VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_EXT

Structure Chaining

The VkPhysicalDeviceDiagnosticsConfigFeaturesNV structure is defined as:

```
// Provided by VK_NV_device_diagnostics_config
typedef struct VkPhysicalDeviceDiagnosticsConfigFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           diagnosticsConfig;
} VkPhysicalDeviceDiagnosticsConfigFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `diagnosticsConfig` indicates whether the implementation supports the ability to configure diagnostic tools.

If the `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDiagnosticsConfigFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiagnosticsConfigFeaturesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DIAGNOSTICS_CONFIG_FEATURES_NV

Structure Chaining

Extends the structures

The `VkPhysicalDeviceClusterAccelerationStructureFeaturesNV` structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkPhysicalDeviceClusterAccelerationStructureFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           clusterAccelerationStructure;
} VkPhysicalDeviceClusterAccelerationStructureFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterAccelerationStructure` indicates whether the implementation supports the ability to generate and trace cluster acceleration structures.

If the `VkPhysicalDeviceClusterAccelerationStructureFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceClusterAccelerationStructureFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterAccelerationStructureFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_ACCELERATION_STRUCTURE_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           partitionedAccelerationStructure;
} VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `partitionedAccelerationStructure` indicates whether the implementation supports the ability to generate top level partitioned acceleration structures.

If the `VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it

is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PARTITIONED_ACCELERATION_STRUCTURE_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The VkPhysicalDeviceDeviceMemoryReportFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_device_memory_report
typedef struct VkPhysicalDeviceDeviceMemoryReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceMemoryReport;
} VkPhysicalDeviceDeviceMemoryReportFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceMemoryReport indicates whether the implementation supports the ability to register device memory report callbacks.

If the VkPhysicalDeviceDeviceMemoryReportFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDeviceMemoryReportFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceMemoryReportFeaturesEXT-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_MEMORY_REPORT_FEATURES_EXT`

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceGlobalPriorityQueryFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceGlobalPriorityQueryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
} VkPhysicalDeviceGlobalPriorityQueryFeatures;
```

```
// Provided by VK_KHR_global_priority
// Equivalent to VkPhysicalDeviceGlobalPriorityQueryFeatures
typedef VkPhysicalDeviceGlobalPriorityQueryFeatures
VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR;
```

```
// Provided by VK_EXT_global_priority_query
// Equivalent to VkPhysicalDeviceGlobalPriorityQueryFeatures
typedef VkPhysicalDeviceGlobalPriorityQueryFeatures
VkPhysicalDeviceGlobalPriorityQueryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `globalPriorityQuery` indicates whether the implementation supports the ability to query global queue priorities.

If the `VkPhysicalDeviceGlobalPriorityQueryFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceGlobalPriorityQueryFeatures`, it **must** add

an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGlobalPriorityQueryFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The VkPhysicalDevicePipelineCreationCacheControlFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePipelineCreationCacheControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineCreationCacheControl;
} VkPhysicalDevicePipelineCreationCacheControlFeatures;
```

```
// Provided by VK_EXT_pipeline_creation_cache_control
// Equivalent to VkPhysicalDevicePipelineCreationCacheControlFeatures
typedef VkPhysicalDevicePipelineCreationCacheControlFeatures
VkPhysicalDevicePipelineCreationCacheControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipelineCreationCacheControl indicates that the implementation supports:
  - The following **can** be used in Vk*PipelineCreateInfo::flags:
    - VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT
    - VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT
  - The following **can** be used in VkPipelineCacheCreateInfo::flags:
    - VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT

If the VkPhysicalDevicePipelineCreationCacheControlFeatures structure is included in the pNext

chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelineCreationCacheControlFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineCreationCacheControlFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_CREATION_CACHE_CONTROL_FEATURES

The VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
} VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;
```

```
// Provided by VK_KHR_zero_initialize_workgroup_memory
// Equivalent to VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
typedef VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderZeroInitializeWorkgroupMemory specifies whether the implementation supports initializing a variable in Workgroup storage class.

If the VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is

filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ZERO_INITIALIZE_WORKGROUP_MEMORY_FEATURES

The VkPhysicalDevicePrivateDataFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePrivateDataFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           privateData;
} VkPhysicalDevicePrivateDataFeatures;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPhysicalDevicePrivateDataFeatures
typedef VkPhysicalDevicePrivateDataFeatures VkPhysicalDevicePrivateDataFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- privateData indicates whether the implementation supports private data. See Private Data.

If the VkPhysicalDevicePrivateDataFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePrivateDataFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of

VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrivateDataFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_FEATURES

Structure Chaining

The VkPhysicalDevicePrivateDataBaseHandleFeaturesNV structure is defined as:

```
// Provided by VK_NV_private_data_base_handle
typedef struct VkPhysicalDevicePrivateDataBaseHandleFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           privateDataBaseHandle;
} VkPhysicalDevicePrivateDataBaseHandleFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- privateDataBaseHandle indicates that the implementation supports querying its base handle for any device-level object by creating a VkPrivateDataSlot with VK_PRIVATE_DATA_SLOT_CREATE_BASE_OBJECT_HANDLE_BIT_NV and calling vkGetPrivateData.

If the VkPhysicalDevicePrivateDataBaseHandleFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePrivateDataBaseHandleFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrivateDataBaseHandleFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_BASE_HANDLE_FEATURES_NV

The VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_shader_subgroup_uniform_control_flow
typedef struct VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupUniformControlFlow;
} VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSubgroupUniformControlFlow specifies whether the implementation supports the shader execution mode SubgroupUniformControlFlowKHR.

If the VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceRobustness2FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_robustness2
typedef struct VkPhysicalDeviceRobustness2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustBufferAccess2;
    VkBool32           robustImageAccess2;
    VkBool32           nullDescriptor;
} VkPhysicalDeviceRobustness2FeaturesKHR;
```

```
// Provided by VK_EXT_robustness2
// Equivalent to VkPhysicalDeviceRobustness2FeaturesKHR
typedef VkPhysicalDeviceRobustness2FeaturesKHR VkPhysicalDeviceRobustness2FeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- robustBufferAccess2 enables Robust Buffer Access 2 guarantees for shader buffer accesses.
- robustImageAccess2 enables Robust Image Access 2 guarantees for shader image accesses.
- nullDescriptor indicates whether descriptors **can** be written with a VK_NULL_HANDLE resource or view, which are considered valid to access and act as if the descriptor were bound to nothing.

If the VkPhysicalDeviceRobustness2FeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRobustness2FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-robustBufferAccess2-04000
  If robustBufferAccess2 is enabled then robustBufferAccess **must** also be enabled

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_KHR

Structure Chaining

Extends the structures

The VkPhysicalDeviceImageRobustnessFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceImageRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
} VkPhysicalDeviceImageRobustnessFeatures;
```

```
// Provided by VK_EXT_image_robustness
// Equivalent to VkPhysicalDeviceImageRobustnessFeatures
typedef VkPhysicalDeviceImageRobustnessFeatures
VkPhysicalDeviceImageRobustnessFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- robustImageAccess enables Robust Image Access guarantees for shader image accesses.

If the VkPhysicalDeviceImageRobustnessFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageRobustnessFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageRobustnessFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ROBUSTNESS_FEATURES

The VkPhysicalDeviceShaderTerminateInvocationFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderTerminateInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTerminateInvocation;
} VkPhysicalDeviceShaderTerminateInvocationFeatures;
```

```
// Provided by VK_KHR_shader_terminate_invocation
// Equivalent to VkPhysicalDeviceShaderTerminateInvocationFeatures
typedef VkPhysicalDeviceShaderTerminateInvocationFeatures
VkPhysicalDeviceShaderTerminateInvocationFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderTerminateInvocation specifies whether the implementation supports SPIR-V modules that use the SPV_KHR_terminate_invocation extension.

If the VkPhysicalDeviceShaderTerminateInvocationFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderTerminateInvocationFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceCustomBorderColorFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customBorderColors;
    VkBool32           customBorderColorWithoutFormat;
} VkPhysicalDeviceCustomBorderColorFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- customBorderColors indicates that the implementation supports providing a borderColor value with one of the following values at sampler creation time:
  - VK_BORDER_COLOR_FLOAT_CUSTOM_EXT
  - VK_BORDER_COLOR_INT_CUSTOM_EXT
- customBorderColorWithoutFormat indicates that explicit formats are not required for custom border colors and the value of the format member of the VkSamplerCustomBorderColorCreateInfoEXT structure **may** be VK_FORMAT_UNDEFINED. If this feature bit is not set, applications **must** provide the VkFormat of the image view(s) being sampled by this sampler in the format member of the VkSamplerCustomBorderColorCreateInfoEXT structure.

If the VkPhysicalDeviceCustomBorderColorFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCustomBorderColorFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

// Provided by VK_EXT_border_color_swizzle
typedef struct VkPhysicalDeviceBorderColorSwizzleFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           borderColorSwizzle;
    VkBool32           borderColorSwizzleFromImage;
} VkPhysicalDeviceBorderColorSwizzleFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- borderColorSwizzle indicates that defined values are returned by sampled image operations when used with a sampler that uses a VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK, VK_BORDER_COLOR_INT_OPAQUE_BLACK, VK_BORDER_COLOR_FLOAT_CUSTOM_EXT, or VK_BORDER_COLOR_INT_CUSTOM_EXT borderColor and an image view that uses a non-identity component mapping, when either borderColorSwizzleFromImage is enabled or the VkSamplerBorderColorComponentMappingCreateInfoEXT is specified.
- borderColorSwizzleFromImage indicates that the implementation will return the correct border color values from sampled image operations under the conditions expressed above, without the application having to specify the border color component mapping when creating the sampler object. If this feature bit is not set, applications **can** chain a VkSamplerBorderColorComponentMappingCreateInfoEXT structure when creating samplers for use with image views that do not have an identity swizzle and, when those samplers are combined with image views using the same component mapping, sampled image operations that use opaque black or custom border colors will return the correct border color values.

If the VkPhysicalDeviceBorderColorSwizzleFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceBorderColorSwizzleFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBorderColorSwizzleFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BORDER_COLOR_SWIZZLE_FEATURES_EXT

The VkPhysicalDevicePortabilitySubsetFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           constantAlphaColorBlendFactors;
    VkBool32           events;
    VkBool32           imageViewFormatReinterpretation;
    VkBool32           imageViewFormatSwizzle;
    VkBool32           imageView2DOn3DImage;
    VkBool32           multisampleArrayImage;
    VkBool32           mutableComparisonSamplers;
    VkBool32           pointPolygons;
    VkBool32           samplerMipLodBias;
    VkBool32           separateStencilMaskRef;
    VkBool32           shaderSampleRateInterpolationFunctions;
    VkBool32           tessellationIsolines;
    VkBool32           tessellationPointMode;
    VkBool32           triangleFans;
    VkBool32           vertexAttributeAccessBeyondStride;
} VkPhysicalDevicePortabilitySubsetFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- constantAlphaColorBlendFactors indicates whether this implementation supports constant *alpha* Blend Factors used as source or destination *color* Blending.
- events indicates whether this implementation supports synchronization using Events.
- imageViewFormatReinterpretation indicates whether this implementation supports a VkImageView being created with a texel format containing a different number of components, or a different number of bits in each component, than the texel format of the underlying VkImage.
- imageViewFormatSwizzle indicates whether this implementation supports remapping format components using VkImageViewCreateInfo::components.
- imageView2DOn3DImage indicates whether this implementation supports a VkImage being created with the VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT flag set, permitting a 2D or 2D array image view to be created on a 3D VkImage.

- `multisampleArrayImage` indicates whether this implementation supports a `VkImage` being created as a 2D array with multiple samples per texel.
- `mutableComparisonSamplers` indicates whether this implementation allows descriptors with comparison samplers to be updated.
- `pointPolygons` indicates whether this implementation supports Rasterization using a *point* Polygon Mode.
- `samplerMipLodBias` indicates whether this implementation supports setting a mipmap LOD bias value when creating a sampler.
- `separateStencilMaskRef` indicates whether this implementation supports separate front and back Stencil Test reference values.
- `shaderSampleRateInterpolationFunctions` indicates whether this implementation supports fragment shaders which use the `InterpolationFunction` capability and the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the `GLSL.std.450` extended instruction set. This member is only meaningful if the `sampleRateShading` feature is supported.
- `tessellationIsolines` indicates whether this implementation supports isoline output from the Tessellation stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `tessellationPointMode` indicates whether this implementation supports point output from the Tessellation stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `triangleFans` indicates whether this implementation supports Triangle Fans primitive topology.
- `vertexAttributeAccessBeyondStride` indicates whether this implementation supports accessing a vertex input attribute beyond the stride of the corresponding vertex input binding.

If the `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevicePortabilitySubsetFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevicePerformanceQueryFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           performanceCounterQueryPools;
    VkBool32           performanceCounterMultipleQueryPools;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- performanceCounterQueryPools indicates whether the implementation supports performance counter query pools.
- performanceCounterMultipleQueryPools indicates whether the implementation supports using multiple performance query pools in a primary command buffer and secondary command buffers executed within it.

If the VkPhysicalDevicePerformanceQueryFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePerformanceQueryFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDevice4444FormatsFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_4444_formats
typedef struct VkPhysicalDevice4444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatA4R4G4B4;
    VkBool32           formatA4B4G4R4;
} VkPhysicalDevice4444FormatsFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatA4R4G4B4` indicates that the implementation **must** support using a VkFormat of VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT with at least the following VkFormatFeatureFlagBits:
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
  - VK_FORMAT_FEATURE_BLIT_SRC_BIT
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- `formatA4B4G4R4` indicates that the implementation **must** support using a VkFormat of VK_FORMAT_A4B4G4R4_UNORM_PACK16_EXT with at least the following VkFormatFeatureFlagBits:
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
  - VK_FORMAT_FEATURE_BLIT_SRC_BIT
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

If the `VkPhysicalDevice4444FormatsFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevice4444FormatsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

NOTE	Although the formats defined by the VK_EXT_4444_formats extension were promoted to Vulkan 1.3 as optional formats, the VkPhysicalDevice4444FormatsFeaturesEXT structure was not promoted to Vulkan 1.3.

The VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT structure is defined as:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           mutableDescriptorType;
} VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT;
```

```
// Provided by VK_VALVE_mutable_descriptor_type
// Equivalent to VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
typedef VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
VkPhysicalDeviceMutableDescriptorTypeFeaturesVALVE;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- mutableDescriptorType indicates that the implementation **must** support using the VkDescriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT with at least the following descriptor types, where any combination of the types **must** be supported:
  - VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE
  - VK_DESCRIPTOR_TYPE_STORAGE_IMAGE
  - VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER
  - VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER
  - VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER
  - VK_DESCRIPTOR_TYPE_STORAGE_BUFFER
- Additionally, mutableDescriptorType indicates that:
  - Non-uniform descriptor indexing **must** be supported if all descriptor types in a VkMutableDescriptorTypeListEXT for VK_DESCRIPTOR_TYPE_MUTABLE_EXT have the corresponding non-uniform indexing features enabled in VkPhysicalDeviceDescriptorIndexingFeatures.
  - VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT with descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT relaxes the list of required descriptor types to the descriptor types which have the corresponding update-after-bind feature enabled in

VkPhysicalDeviceDescriptorIndexingFeatures.

- Dynamically uniform descriptor indexing **must** be supported if all descriptor types in a VkMutableDescriptorTypeListEXT for VK_DESCRIPTOR_TYPE_MUTABLE_EXT have the corresponding dynamic indexing features enabled.
- VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT **must** be supported.
- VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT **must** be supported.

If the VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceDepthClipControlFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_depth_clip_control
typedef struct VkPhysicalDeviceDepthClipControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipControl;
} VkPhysicalDeviceDepthClipControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- depthClipControl indicates that the implementation supports setting VkPipelineViewportDepthClipControlCreateInfoEXT::negativeOneToOne to VK_TRUE.

If the VkPhysicalDeviceDepthClipControlFeaturesEXT structure is included in the pNext chain of the

VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDepthClipControlFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceDepthClampControlFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkPhysicalDeviceDepthClampControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampControl;
} VkPhysicalDeviceDepthClampControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- depthClampControl indicates that the implementation supports setting VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode to VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT.

If the VkPhysicalDeviceDepthClampControlFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDepthClampControlFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_workgroup_memory_explicit_layout
typedef struct VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           workgroupMemoryExplicitLayout;
    VkBool32           workgroupMemoryExplicitLayoutScalarBlockLayout;
    VkBool32           workgroupMemoryExplicitLayout8BitAccess;
    VkBool32           workgroupMemoryExplicitLayout16BitAccess;
} VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `workgroupMemoryExplicitLayout` indicates whether the implementation supports the SPIR-V `WorkgroupMemoryExplicitLayoutKHR` capability.
- `workgroupMemoryExplicitLayoutScalarBlockLayout` indicates whether the implementation supports scalar alignment for laying out Workgroup Blocks.
- `workgroupMemoryExplicitLayout8BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout8BitAccessKHR` capability.
- `workgroupMemoryExplicitLayout16BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout16BitAccessKHR` capability.

If the `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is included in the `pNext`

chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceSynchronization2Features structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSynchronization2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           synchronization2;
} VkPhysicalDeviceSynchronization2Features;
```

```
// Provided by VK_KHR_synchronization2
// Equivalent to VkPhysicalDeviceSynchronization2Features
typedef VkPhysicalDeviceSynchronization2Features
VkPhysicalDeviceSynchronization2FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- synchronization2 indicates whether the implementation supports the new set of synchronization commands introduced in VK_KHR_synchronization2.

If the VkPhysicalDeviceSynchronization2Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceSynchronization2Features, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

// Provided by VK_EXT_vertex_input_dynamic_state
typedef struct VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexInputDynamicState;
} VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- vertexInputDynamicState indicates that the implementation supports the following dynamic states:
  - VK_DYNAMIC_STATE_VERTEX_INPUT_EXT

If the VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

    VkBool32           primitivesGeneratedQueryWithRasterizerDiscard;
    VkBool32           primitivesGeneratedQueryWithNonZeroStreams;
} VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- primitivesGeneratedQuery indicates whether the implementation supports the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query type.
- primitivesGeneratedQueryWithRasterizerDiscard indicates whether the implementation supports this query when rasterization discard is enabled.
- primitivesGeneratedQueryWithNonZeroStreams indicates whether the implementation supports this query with a non-zero index in vkCmdBeginQueryIndexedEXT.

If the VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineFragmentShadingRate;
    VkBool32           primitiveFragmentShadingRate;
    VkBool32           attachmentFragmentShadingRate;
} VkPhysicalDeviceFragmentShadingRateFeaturesKHR;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipelineFragmentShadingRate indicates that the implementation supports the pipeline fragment shading rate.
- primitiveFragmentShadingRate indicates that the implementation supports the primitive fragment shading rate.
- attachmentFragmentShadingRate indicates that the implementation supports the attachment fragment shading rate.

If the VkPhysicalDeviceFragmentShadingRateFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFragmentShadingRateFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

// Provided by VK_EXT_legacy_dithering
typedef struct VkPhysicalDeviceLegacyDitheringFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyDithering;
} VkPhysicalDeviceLegacyDitheringFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- legacyDithering indicates whether the implementation supports Legacy Dithering.

If the VkPhysicalDeviceLegacyDitheringFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceLegacyDitheringFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV structure is defined as:

```
// Provided by VK_NV_fragment_shading_rate_enums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShadingRateEnums;
    VkBool32           supersampleFragmentShadingRates;
    VkBool32           noInvocationFragmentShadingRates;
} VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShadingRateEnums` indicates that the implementation supports specifying fragment shading rates using the VkFragmentShadingRateNV enumerated type.
- `supersampleFragmentShadingRates` indicates that the implementation supports fragment shading rate enum values indicating more than one invocation per fragment.
- `noInvocationFragmentShadingRates` indicates that the implementation supports a fragment shading rate enum value indicating that no fragment shaders should be invoked when that shading rate is used.

If the `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderUntypedPointersFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_untyped_pointers
typedef struct VkPhysicalDeviceShaderUntypedPointersFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderUntypedPointers;
} VkPhysicalDeviceShaderUntypedPointersFeaturesKHR;
```

The members of VkPhysicalDeviceShaderUntypedPointersFeaturesKHR describe the following features:

- shaderUntypedPointers specifies whether shader modules **can** declare the UntypedPointersKHR capability and untyped pointers in any explicitly laid out storage class.

If the VkPhysicalDeviceShaderUntypedPointersFeaturesKHR structure is included in the pNext chain of VkPhysicalDeviceFeatures2, it is filled with values indicating whether the features are supported. VkPhysicalDeviceShaderUntypedPointersFeaturesKHR **can** also be included in the pNext chain of VkDeviceCreateInfo to enable the features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderUntypedPointersFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_UNTYPED_POINTERS_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceInheritedViewportScissorFeaturesNV structure is defined as:

```
// Provided by VK_NV_inherited_viewport_scissor
typedef struct VkPhysicalDeviceInheritedViewportScissorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inheritedViewportScissor2D;
} VkPhysicalDeviceInheritedViewportScissorFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- inheritedViewportScissor2D indicates whether secondary command buffers can inherit most of the dynamic state affected by VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT,

VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT, VK_DYNAMIC_STATE_VIEWPORT or VK_DYNAMIC_STATE_SCISSOR, from a primary command buffer.

If the VkPhysicalDeviceInheritedViewportScissorFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceInheritedViewportScissorFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInheritedViewportScissorFeaturesNV-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INHERITED_VIEWPORT_SCISSOR_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePipelineProtectedAccessFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineProtectedAccessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineProtectedAccess;
} VkPhysicalDevicePipelineProtectedAccessFeatures;
```

```
// Provided by VK_EXT_pipeline_protected_access
// Equivalent to VkPhysicalDevicePipelineProtectedAccessFeatures
typedef VkPhysicalDevicePipelineProtectedAccessFeatures
VkPhysicalDevicePipelineProtectedAccessFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- pipelineProtectedAccess indicates whether the implementation supports specifying protected access on individual pipelines.

If the VkPhysicalDevicePipelineProtectedAccessFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelineProtectedAccessFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineProtectedAccessFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROTECTED_ACCESS_FEATURES

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_ycbcr_2plane_444_formats
typedef struct VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcr2plane444Formats;
} VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ycbcr2plane444Formats indicates that the implementation supports querying format features for, and using, the following 2-plane 444 $Y'C_BC_R$ formats:
  - VK_FORMAT_G8_B8R8_2PLANE_444_UNORM
  - VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16
  - VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16
  - VK_FORMAT_G16_B16R16_2PLANE_444_UNORM

If the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure is included in the pNext chain of

the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_2_PLANE_444_FORMATS_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

NOTE Although the formats defined by the VK_EXT_ycbcr_2plane_444_formats extension were promoted to Vulkan 1.3 as optional formats, the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure was not promoted to Vulkan 1.3.

The VkPhysicalDeviceColorWriteEnableFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_color_write_enable
typedef struct VkPhysicalDeviceColorWriteEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           colorWriteEnable;
} VkPhysicalDeviceColorWriteEnableFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- colorWriteEnable indicates that the implementation supports the dynamic state VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT.

If the VkPhysicalDeviceColorWriteEnableFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceColorWriteEnableFeaturesEXT, it **must** add

an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceColorWriteEnableFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COLOR_WRITE_ENABLE_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePipelinePropertiesFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPhysicalDevicePipelinePropertiesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelinePropertiesIdentifier;
} VkPhysicalDevicePipelinePropertiesFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipelinePropertiesIdentifier indicates that the implementation supports querying a unique pipeline identifier.

If the VkPhysicalDevicePipelinePropertiesFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelinePropertiesFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelinePropertiesFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceProvokingVertexFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexLast;
    VkBool32           transformFeedbackPreservesProvokingVertex;
} VkPhysicalDeviceProvokingVertexFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- provokingVertexLast indicates whether the implementation supports the VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT provoking vertex mode for flat shading.
- transformFeedbackPreservesProvokingVertex indicates that the order of vertices within each primitive written by transform feedback will preserve the provoking vertex. This does not apply to triangle fan primitives when transformFeedbackPreservesTriangleFanProvokingVertex is VK_FALSE. transformFeedbackPreservesProvokingVertex **must** be VK_FALSE when the VK_EXT_transform_feedback extension is not supported.

If the VkPhysicalDeviceProvokingVertexFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceProvokingVertexFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

When VkPhysicalDeviceProvokingVertexFeaturesEXT is in the pNext chain of VkDeviceCreateInfo but the transformFeedback feature is not enabled, the value of transformFeedbackPreservesProvokingVertex is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProvokingVertexFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The VkPhysicalDeviceDescriptorBufferFeaturesEXT structure is defined as:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorBuffer;
    VkBool32           descriptorBufferCaptureReplay;
    VkBool32           descriptorBufferImageLayoutIgnored;
    VkBool32           descriptorBufferPushDescriptors;
} VkPhysicalDeviceDescriptorBufferFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- descriptorBuffer indicates that the implementation supports putting shader-accessible descriptors directly in memory.
- descriptorBufferCaptureReplay indicates that the implementation supports capture and replay when using descriptor buffers. If this is VK_TRUE, all resources created with VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, VK_TENSOR_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM, VK_TENSOR_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_ARM, VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, or VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT **must** be created before resources of the same types without those flags.
- descriptorBufferImageLayoutIgnored indicates that the implementation will ignore imageLayout in VkDescriptorImageInfo when calling vkGetDescriptorEXT.
- descriptorBufferPushDescriptors indicates that the implementation supports using push descriptors with descriptor buffers.

If the VkPhysicalDeviceDescriptorBufferFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDescriptorBufferFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT

The VkPhysicalDeviceDescriptorBufferTensorFeaturesARM structure is defined as:

```
// Provided by VK_EXT_descriptor_buffer with VK_ARM_tensors
typedef struct VkPhysicalDeviceDescriptorBufferTensorFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorBufferTensorDescriptors;
} VkPhysicalDeviceDescriptorBufferTensorFeaturesARM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- descriptorBufferTensorDescriptors indicates that the implementation supports putting shader-accessible tensor descriptors directly in memory.

If the VkPhysicalDeviceDescriptorBufferTensorFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDescriptorBufferTensorFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferTensorFeaturesARM-sType-sType
  sType **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_TENSOR_FEATURES_ARM

The VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_pageable_device_local_memory
typedef struct VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pageableDeviceLocalMemory;
} VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pageableDeviceLocalMemory indicates that the implementation supports pageable device-local memory and **may** transparently move device-local memory allocations to host-local memory to better share device-local memory with other applications.

If the VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PAGEABLE_DEVICE_LOCAL_MEMORY_FEATURES_EXT

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceMultiDrawFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiDraw;
} VkPhysicalDeviceMultiDrawFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- multiDraw indicates that the implementation supports vkCmdDrawMultiEXT and vkCmdDrawMultiIndexedEXT.

If the VkPhysicalDeviceMultiDrawFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMultiDrawFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_FEATURES_EXT

Structure Chaining

Extends the structures

The VkPhysicalDeviceRayTracingMotionBlurFeaturesNV structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkPhysicalDeviceRayTracingMotionBlurFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMotionBlur;
    VkBool32           rayTracingMotionBlurPipelineTraceRaysIndirect;
} VkPhysicalDeviceRayTracingMotionBlurFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMotionBlur` indicates whether the implementation supports the motion blur feature.
- `rayTracingMotionBlurPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands with the motion blur feature enabled.

If the `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMotionBlurFeaturesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MOTION_BLUR_FEATURES_NV

Structure Chaining

The `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           spheres;
    VkBool32           linearSweptSpheres;
} VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `spheres` indicates whether the implementation supports sphere primitives in ray tracing.
- `linearSweptSpheres` indicates whether the implementation supports linear swept sphere primitives in ray tracing.

If the `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingLinearSweptSpheresFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_LINEAR_SWEPT_SPHERES_FEATURES_NV

The `VkPhysicalDeviceOpacityMicromapFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           micromap;
} VkPhysicalDeviceOpacityMicromapFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromap` indicates whether the implementation supports the micromap array feature.

If the `VkPhysicalDeviceOpacityMicromapFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceOpacityMicromapFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           micromap;
    VkBool32           micromapCaptureReplay;
    // micromapHostCommands is legacy, but no reason was given in the API XML
    VkBool32           micromapHostCommands;
} VkPhysicalDeviceOpacityMicromapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromap` indicates whether the implementation supports the micromap array feature.
- `micromapCaptureReplay` indicates whether the implementation supports capture and replay of addresses for micromap arrays.
- `micromapHostCommands` indicates whether the implementation supports host side micromap array commands.

If the `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceOpacityMicromapFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceDisplacementMicromapFeaturesNV` structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           displacementMicromap;
} VkPhysicalDeviceDisplacementMicromapFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displacementMicromap` indicates whether the implementation supports the displacement

micromap feature.

If the VkPhysicalDeviceDisplacementMicromapFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDisplacementMicromapFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDisplacementMicromapFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISPLACEMENT_MICROMAP_FEATURES_NV

The VkPhysicalDeviceRayTracingValidationFeaturesNV structure is defined as:

```
// Provided by VK_NV_ray_tracing_validation
typedef struct VkPhysicalDeviceRayTracingValidationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingValidation;
} VkPhysicalDeviceRayTracingValidationFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- rayTracingValidation indicates whether the implementation supports the ray tracing validation feature.

If the VkPhysicalDeviceRayTracingValidationFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRayTracingValidationFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_zero_initialize_device_memory
typedef struct VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           zeroInitializeDeviceMemory;
} VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `zeroInitializeDeviceMemory` indicates that the implementation supports zeroing memory allocations using a user-specified flag.

If the `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

// Provided by VK_HUAWEI_subpass_shading
typedef struct VkPhysicalDeviceSubpassShadingFeaturesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassShading;
} VkPhysicalDeviceSubpassShadingFeaturesHUAWEI;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- subpassShading specifies whether subpass shading is supported.

If the VkPhysicalDeviceSubpassShadingFeaturesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceSubpassShadingFeaturesHUAWEI, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceExternalMemoryRDMAFeaturesNV structure is defined as:

```
// Provided by VK_NV_external_memory_rdma
typedef struct VkPhysicalDeviceExternalMemoryRDMAFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalMemoryRDMA;
} VkPhysicalDeviceExternalMemoryRDMAFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalMemoryRDMA` indicates whether the implementation has support for the VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV memory property and the VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV external memory handle type.

If the `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryRDMAFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_RDMA_FEATURES_NV

Structure Chaining

- VkPhysicalDeviceFeatures2

The `VkPhysicalDevicePresentIdFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPhysicalDevicePresentIdFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId;
} VkPhysicalDevicePresentIdFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` indicates that the implementation supports specifying present ID values in the `VkPresentIdKHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentIdFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevicePresentIdFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentIdFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDevicePresentId2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPhysicalDevicePresentId2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2;
} VkPhysicalDevicePresentId2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2` indicates that the implementation supports specifying present ID values in the `VkPresentId2KHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentId2FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

VkDevice with any features described by VkPhysicalDevicePresentId2FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentId2FeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_2_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePresentWaitFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_present_wait
typedef struct VkPhysicalDevicePresentWaitFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait;
} VkPhysicalDevicePresentWaitFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentWait indicates that the implementation supports vkWaitForPresentKHR.

If the VkPhysicalDevicePresentWaitFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePresentWaitFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWaitFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePresentWait2FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPhysicalDevicePresentWait2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2;
} VkPhysicalDevicePresentWait2FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentWait2 indicates that the implementation supports vkWaitForPresent2KHR.

If the VkPhysicalDevicePresentWait2FeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePresentWait2FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWait2FeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_2_FEATURES_KHR

Structure Chaining

Extends the structures

The VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_unified_image_layouts
typedef struct VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           unifiedImageLayouts;
    VkBool32           unifiedImageLayoutsVideo;
} VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `unifiedImageLayouts` specifies whether usage of VK_IMAGE_LAYOUT_GENERAL, where valid, incurs no loss in efficiency. Additionally, it indicates whether it **can** be used in place of VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT.
- `unifiedImageLayoutsVideo` specifies whether VK_IMAGE_LAYOUT_GENERAL can be used in place of any of the following image layouts with no loss in efficiency:
  - VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR
  - VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR
  - VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR
  - VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR
  - VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR
  - VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR
  - VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR

If the `VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFIED_IMAGE_LAYOUTS_FEATURES_KHR

The VkPhysicalDeviceHostImageCopyFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceHostImageCopyFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostImageCopy;
} VkPhysicalDeviceHostImageCopyFeatures;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyFeatures
typedef VkPhysicalDeviceHostImageCopyFeatures
VkPhysicalDeviceHostImageCopyFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- hostImageCopy indicates that the implementation supports copying from host memory to images using the vkCopyMemoryToImage command, copying from images to host memory using the vkCopyImageToMemory command, and copying between images using the vkCopyImageToImage command.

If the VkPhysicalDeviceHostImageCopyFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceHostImageCopyFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevicePresentTimingFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPhysicalDevicePresentTimingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentTiming;
    VkBool32           presentAtAbsoluteTime;
    VkBool32           presentAtRelativeTime;
} VkPhysicalDevicePresentTimingFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentTiming indicates that the implementation supports vkGetPastPresentationTimingEXT.
- presentAtAbsoluteTime indicates that the implementation supports specifying absolute target present times.
- presentAtRelativeTime indicates that the implementation supports specifying relative target present times.

If the VkPhysicalDevicePresentTimingFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePresentTimingFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevicePresentBarrierFeaturesNV structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkPhysicalDevicePresentBarrierFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrier;
} VkPhysicalDevicePresentBarrierFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentBarrier` indicates that the implementation supports the present barrier feature.

If the `VkPhysicalDevicePresentBarrierFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevicePresentBarrierFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentBarrierFeaturesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_BARRIER_FEATURES_NV

The `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_fma
typedef struct VkPhysicalDeviceShaderFmaFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFmaFloat16;
    VkBool32           shaderFmaFloat32;
    VkBool32           shaderFmaFloat64;
} VkPhysicalDeviceShaderFmaFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFmaFloat16` indicates whether the implementation supports `OpFmaKHR` for Float16 types in shaders.
- `shaderFmaFloat32` indicates whether the implementation supports `OpFmaKHR` for Float32 types in shaders.
- `shaderFmaFloat64` indicates whether the implementation supports `OpFmaKHR` for Float64 types in shaders.

If the `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderFmaFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderIntegerDotProductFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerDotProduct;
} VkPhysicalDeviceShaderIntegerDotProductFeatures;
```

```
// Provided by VK_KHR_shader_integer_dot_product
// Equivalent to VkPhysicalDeviceShaderIntegerDotProductFeatures
typedef VkPhysicalDeviceShaderIntegerDotProductFeatures
VkPhysicalDeviceShaderIntegerDotProductFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderIntegerDotProduct specifies whether shader modules **can** declare the DotProductInputAllKHR, DotProductInput4x8BitKHR, DotProductInput4x8BitPackedKHR and DotProductKHR capabilities.

If the VkPhysicalDeviceShaderIntegerDotProductFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderIntegerDotProductFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerDotProductFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_DOT_PRODUCT_FEATURES

The VkPhysicalDeviceMaintenance4Features structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance4;
} VkPhysicalDeviceMaintenance4Features;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkPhysicalDeviceMaintenance4Features
typedef VkPhysicalDeviceMaintenance4Features VkPhysicalDeviceMaintenance4FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `maintenance4` indicates that the implementation supports the following:
  - The application **may** destroy a VkPipelineLayout object immediately after using it to create another object.
  - `LocalSizeId` **can** be used as an alternative to `LocalSize` to specify the local workgroup size with specialization constants.
  - Images created with identical creation parameters will always have the same alignment requirements.
  - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
  - Push constants do not have to be initialized before they are dynamically accessed.
  - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the `VkPhysicalDeviceMaintenance4Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMaintenance4Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Features-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES

The `VkPhysicalDeviceMaintenance5Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance5Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance5;
} VkPhysicalDeviceMaintenance5Features;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Features
typedef VkPhysicalDeviceMaintenance5Features VkPhysicalDeviceMaintenance5FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance5` indicates that the implementation supports the following:
  - The ability to expose support for the optional format VK_FORMAT_A1B5G5R5_UNORM_PACK16.
  - The ability to expose support for the optional format VK_FORMAT_A8_UNORM.
  - A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode.
  - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using VkBufferUsageFlags2CreateInfo.
  - A new function vkCmdBindIndexBuffer2, allowing a range of memory to be bound as an index buffer.
  - vkGetDeviceProcAddr will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
  - vkCmdBindVertexBuffers2 supports using VK_WHOLE_SIZE in the `pSizes` parameter.
  - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
  - VkShaderModuleCreateInfo **can** be added as a chained structure to pipeline creation via VkPipelineShaderStageCreateInfo, rather than having to create a shader module.
  - A function vkGetRenderingAreaGranularity to query the optimal render area for a dynamic rendering instance.
  - A property to indicate that depth/stencil texturing operations with VK_COMPONENT_SWIZZLE_ONE have defined behavior.
  - vkGetDeviceImageSubresourceLayout allows an application to perform a vkGetImageSubresourceLayout query without having to create an image.
  - VK_REMAINING_ARRAY_LAYERS as the `layerCount` member of VkImageSubresourceLayers.
  - A property to indicate whether `PointSize` controls the final rasterization of polygons if polygon mode is VK_POLYGON_MODE_POINT.
  - Two properties to indicate the non-strict line rasterization algorithm used.
  - Two new flags words VkPipelineCreateFlagBits2 and VkBufferUsageFlagBits2.
  - Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.

- Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.

If the VkPhysicalDeviceMaintenance5Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMaintenance5Features, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceMaintenance6Features structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance6;
} VkPhysicalDeviceMaintenance6Features;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Features
typedef VkPhysicalDeviceMaintenance6Features VkPhysicalDeviceMaintenance6FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maintenance6 indicates that the implementation supports the following:
  - VK_NULL_HANDLE **can** be used when binding an index buffer.
  - VkBindMemoryStatus **can** be included in the pNext chain of the VkBindBufferMemoryInfo and VkBindImageMemoryInfo structures, enabling applications to retrieve VkResult values

for individual memory binding operations.

- VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers property to indicate that the implementation supports creating image views with VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT where the layerCount member of subresourceRange is greater than 1.
- VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount property which indicates the maximum number of descriptors required for sampled images with $Y'C_BC_R$ conversion.
- A VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.

If the VkPhysicalDeviceMaintenance6Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMaintenance6Features, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceMaintenance7FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance7;
} VkPhysicalDeviceMaintenance7FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `maintenance7` indicates that the implementation supports the following:
  - The VK_RENDERING_CONTENTS_INLINE_BIT_KHR and VK_SUBPASS_CONTENTS_INLINE_AND_SECONDARY_COMMAND_BUFFERS_KHR flags **can** be used to record commands in render pass instances both inline and in secondary command buffers executed with vkCmdExecuteCommands for dynamic rendering and legacy render passes respectively.
  - Querying information regarding the underlying devices in environments where the Vulkan implementation is provided through layered implementations. This is done by chaining VkPhysicalDeviceLayeredApiPropertiesListKHR to VkPhysicalDeviceProperties2.
  - New limits which indicate the maximum total count of dynamic uniform buffers and dynamic storage buffers that **can** be included in a pipeline layout.
  - 32-bit timestamp queries **must** wrap on overflow.
  - A property that indicates whether a fragment shading rate attachment can have a size that is too small to cover a specified render area.
  - A property that indicates support for writing to one aspect of a depth/stencil attachment without performing a read-modify-write operation on the other aspect.

If the `VkPhysicalDeviceMaintenance7FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMaintenance7FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceMaintenance8FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance8
typedef struct VkPhysicalDeviceMaintenance8FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance8;
} VkPhysicalDeviceMaintenance8FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance8` indicates that the implementation supports the following:
  - Allow copies between depth/stencil and “matching” color attachments
  - Allow `dstCache` in vkMergePipelineCaches to be implicitly synchronized.
  - Require src/dst sync scopes to work when doing queue family ownership transfers
  - Support `Offset` (as an alternative to `ConstOffset`) image operand in texture sampling and fetch operations
  - Use the SPIR-V definition of `OpSRem` and `OpSMod`, making these operations produce well-defined results for negative operands
  - Loosen layer restrictions when blitting from 3D images to other image types
  - Add space for an additional 64 access flags for use with VkMemoryBarrier2, VkBufferMemoryBarrier2, and VkImageMemoryBarrier2

If the `VkPhysicalDeviceMaintenance8FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMaintenance8FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance8FeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_8_FEATURES_KHR

Structure Chaining

Extends the structures

The VkPhysicalDeviceMaintenance9FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance9;
} VkPhysicalDeviceMaintenance9FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maintenance9 indicates that the implementation supports the following:
  - The restriction that certain bitfield SPIR-V instructions only operate on 32-bit integers is relaxed.
  - The value returned when a vertex shader reads an unbound vertex attribute is defined by way of the defaultVertexAttributeValue property.
  - A new VkQueryPoolCreateFlagBits::VK_QUERY_POOL_CREATE_RESET_BIT_KHR flag **can** be used to initialize all queries in the query pool to the reset state on creation.
  - vkCmdSetEvent2 **may** not provide a dependency other than the event src stage mask.
  - The effects of image memory barriers and image layout transitions on 3D images created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT are limited to only those slices specified in VkImageSubresourceRange.
  - A device **can** be created with no queues. This can be used for compiling pipelines or shaders for the purpose of filling pipeline caches.
  - Queue family ownership transfers are no longer required for buffers and linear images. For optimally tiled images, a new physical device query is added to check if resources created with VK_SHARING_MODE_EXCLUSIVE **can** automatically transfer ownership between two queue families.
  - image2DViewOf3DSparse enables 2D views of 3D sparse images.

If the VkPhysicalDeviceMaintenance9FeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMaintenance9FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance9FeaturesKHR-sType-sType
  sType **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_FEATURES_KHR

The VkPhysicalDeviceMaintenance10FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance10;
} VkPhysicalDeviceMaintenance10FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maintenance10 indicates that the implementation supports the following:
  - New image format feature bits that indicate support for copying depth or stencil aspects using non-graphics queue families
  - If vkCmdSetSampleMaskEXT is called with pSampleMask set to NULL, it is treated as if the mask has all bits set to 1.
  - Add vkCmdEndRendering2KHR as an extensible version of vkCmdEndRendering
  - Add input attachment information to dynamic rendering
  - Require that vertex inputs follow sRGB encoding when those formats are used, instead of being underspecified.
  - Add a query to determine if sRGB images are resolved in nonlinear or linear space by default
  - Add an optional feature to allow applications to override the default sRGB resolve behavior
  - Add resolve mode and depth-stencil resolve support to vkCmdResolveImage2 to bring it in-line with render pass attachment resolves

If the VkPhysicalDeviceMaintenance10FeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMaintenance10FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance10FeaturesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_10_FEATURES_KHR`

Structure Chaining

Extends the structures

The `VkPhysicalDeviceMaintenance11FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance11
typedef struct VkPhysicalDeviceMaintenance11FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance11;
} VkPhysicalDeviceMaintenance11FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance11` indicates that the implementation supports the following:
  - VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR
  - The depth clipping state of the pipeline is well defined when the pipeline is created without VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT being set and the VkPipelineRasterizationDepthClipStateCreateInfoEXT structure is not present
  - VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR
  - Allow `queueFamilyIndexCount` of 1 in VkBufferCreateInfo, VkImageCreateInfo, VkPhysicalDeviceImageDrmFormatModifierInfoEXT, VkTensorCreateInfoARM when `sharingMode` is VK_SHARING_MODE_CONCURRENT
  - Require `minImageTransferGranularity` to be (1,1,1) even on transfer-only queues and add `optimalImageTransferGranularity` queue family property to communicate the performance bump for copies not aligned to the optimal granularity
  - When copying between a buffer and an image on a transfer-only queue, do not require `bufferOffset` to be a multiple of 4

If the `VkPhysicalDeviceMaintenance11FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMaintenance11FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceDynamicRenderingFeatures structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceDynamicRenderingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRendering;
} VkPhysicalDeviceDynamicRenderingFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering
// Equivalent to VkPhysicalDeviceDynamicRenderingFeatures
typedef VkPhysicalDeviceDynamicRenderingFeatures
VkPhysicalDeviceDynamicRenderingFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- dynamicRendering specifies that the implementation supports dynamic render pass instances using the vkCmdBeginRendering command.

If the VkPhysicalDeviceDynamicRenderingFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDynamicRenderingFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of

VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceCustomResolveFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_custom_resolve
typedef struct VkPhysicalDeviceCustomResolveFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customResolve;
} VkPhysicalDeviceCustomResolveFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- customResolve specifies that the implementation supports render pass resolves using shaders.

If the VkPhysicalDeviceCustomResolveFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCustomResolveFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomResolveFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_RESOLVE_FEATURES_EXT

The VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_rgba10x6_formats
typedef struct VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatRgba10x6WithoutYCbCrSampler;
} VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- formatRgba10x6WithoutYCbCrSampler indicates that VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16 **can** be used with a VkImageView with subresourceRange.aspectMask equal to VK_IMAGE_ASPECT_COLOR_BIT without a sampler $Y'C_BC_R$ conversion enabled.

If the VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevicePipelineRobustnessFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineRobustness;
} VkPhysicalDevicePipelineRobustnessFeatures;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessFeatures
typedef VkPhysicalDevicePipelineRobustnessFeatures
VkPhysicalDevicePipelineRobustnessFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipelineRobustness indicates that robustness **can** be requested on a per-pipeline-stage granularity.

NOTE Enabling the pipelineRobustness feature may, on some platforms, incur a minor performance cost when the robustBufferAccess feature is not enabled, even for pipelines which do not make use of any robustness features. If robustness is not needed, the pipelineRobustness feature should not be enabled by an application.

If the VkPhysicalDevicePipelineRobustnessFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelineRobustnessFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineRobustnessFeatures-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_FEATURES

The VkPhysicalDeviceImageViewMinLodFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkPhysicalDeviceImageViewMinLodFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           minLod;
} VkPhysicalDeviceImageViewMinLodFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minLod indicates whether the implementation supports clamping the minimum LOD value during Image Level(s) Selection, Texel Gathering and Integer Texel Coordinate Operations with a given VkImageView by VkImageViewMinLodCreateInfoEXT::minLod.

If the VkPhysicalDeviceImageViewMinLodFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageViewMinLodFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageViewMinLodFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_MIN_LOD_FEATURES_EXT

The VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_rasterization_order_attachment_access
typedef struct VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rasterizationOrderColorAttachmentAccess;
    VkBool32           rasterizationOrderDepthAttachmentAccess;
    VkBool32           rasterizationOrderStencilAttachmentAccess;
} VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT;
```

```
// Provided by VK_ARM_rasterization_order_attachment_access
// Equivalent to VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
typedef VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesARM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rasterizationOrderColorAttachmentAccess` indicates that rasterization order access to color and input attachments is supported by the implementation.
- `rasterizationOrderDepthAttachmentAccess` indicates that rasterization order access to the depth aspect of depth/stencil and input attachments is supported by the implementation.
- `rasterizationOrderStencilAttachmentAccess` indicates that rasterization order access to the stencil aspect of depth/stencil and input attachments is supported by the implementation.

If the `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_FEATURES_EXT

The VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_subpass_merge_feedback
typedef struct VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subpassMergeFeedback;
} VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- subpassMergeFeedback indicates whether the implementation supports feedback of subpass merging.

If the VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceLinearColorAttachmentFeaturesNV structure is defined as:

```
// Provided by VK_NV_linear_color_attachment
typedef struct VkPhysicalDeviceLinearColorAttachmentFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           linearColorAttachment;
} VkPhysicalDeviceLinearColorAttachmentFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `linearColorAttachment` indicates whether the implementation supports renderable Linear Color Attachment.

If the `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceLinearColorAttachmentFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_layout
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopLayout;
} VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopLayout` indicates whether the implementation supports using VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT image layout for images created with the VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT usage flag set.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_LAYOUT_FEATURES_EXT

Structure Chaining

The `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nestedCommandBuffer;
    VkBool32           nestedCommandBufferRendering;
    VkBool32           nestedCommandBufferSimultaneousUse;
} VkPhysicalDeviceNestedCommandBufferFeaturesEXT;
```

This structure describes the following features:

- `nestedCommandBuffer` indicates the implementation supports nested command buffers, which allows Secondary Command Buffers to execute other Secondary Command Buffers.
- `nestedCommandBufferRendering` indicates that it is valid to call vkCmdExecuteCommands inside a Secondary Command Buffer recorded with VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT.
- `nestedCommandBufferSimultaneousUse` indicates that the implementation supports nested command buffers with command buffers that are recorded with VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT.

If the `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

VkDevice with any features described by VkPhysicalDeviceNestedCommandBufferFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibrary;
} VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- graphicsPipelineLibrary indicates that the implementation supports graphics pipeline libraries.

If the VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

    void*              pNext;
    VkBool32           pipelineBinaries;
} VkPhysicalDevicePipelineBinaryFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipelineBinaries indicates that the implementation supports Pipeline Binaries.

If the VkPhysicalDevicePipelineBinaryFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelineBinaryFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

```
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multisampledRenderToSingleSampled;
} VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multisampledRenderToSingleSampled` indicates that the implementation supports multisampled rendering to single-sampled render pass attachments.

If the `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

    VkBool32           multisampledRenderToSwapchain;
} VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multisampledRenderToSwapchain` indicates that the implementation supports multisampled rendering to single-sampled render pass attachments referencing swapchain images.

If the `VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_2d_view_of_3d
typedef struct VkPhysicalDeviceImage2DViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3D;
    VkBool32           sampler2DViewOf3D;
} VkPhysicalDeviceImage2DViewOf3DFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE if the image is created using

VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT.

- sampler2DViewOf3D indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER if the image is created using VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT.

If the VkPhysicalDeviceImage2DViewOf3DFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImage2DViewOf3DFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageSlicedViewOf3D;
} VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT;
```

The members of the VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT structure describe the following features:

- imageSlicedViewOf3D indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE by using a VkImageViewSlicedCreateInfoEXT structure when creating the view.

If the VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT, it **must**

add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_SLICED_VIEW_OF_3D_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceImageCompressionControlFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkPhysicalDeviceImageCompressionControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControl;
} VkPhysicalDeviceImageCompressionControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- imageCompressionControl indicates that the implementation supports providing controls for image compression at image creation time.

If the VkPhysicalDeviceImageCompressionControlFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageCompressionControlFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_image_compression_control_swapchain
typedef struct VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControlSwapchain;
} VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- imageCompressionControlSwapchain indicates that the implementation supports controlling image controls per swapchain and querying image compression properties per surface.

If the VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_FEATURES_EXT

Structure Chaining

The VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_ray_tracing_position_fetch
typedef struct VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPositionFetch;
} VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- rayTracingPositionFetch indicates that the implementation supports fetching the object space vertex positions of a hit triangle.

If the VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderFloatControls2Features structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderFloatControls2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloatControls2;
} VkPhysicalDeviceShaderFloatControls2Features;
```

```
// Provided by VK_KHR_shader_float_controls2
// Equivalent to VkPhysicalDeviceShaderFloatControls2Features
typedef VkPhysicalDeviceShaderFloatControls2Features
VkPhysicalDeviceShaderFloatControls2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.

If the `VkPhysicalDeviceShaderFloatControls2Features` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderFloatControls2Features`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_early_and_late_fragment_tests
typedef struct VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderEarlyAndLateFragmentTests;
} VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderEarlyAndLateFragmentTests` indicates whether the implementation supports the `EarlyAndLateFragmentTestsAMD` `Execution Mode`.

If the `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_EARLY_AND_LATE_FRAGMENT_TESTS_FEATURES_AMD

Structure Chaining

Extends the structures

The `VkPhysicalDeviceAntiLagFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkPhysicalDeviceAntiLagFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           antiLag;
} VkPhysicalDeviceAntiLagFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `antiLag` indicates whether the implementation supports AMD Radeon™ Anti-Lag functionality. The `antiLag` feature only supports a single GPU and **must** not be enabled if VkDeviceGroupDeviceCreateInfo::`physicalDeviceCount` is greater than 1.

If the `VkPhysicalDeviceAntiLagFeaturesAMD` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceAntiLagFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAntiLagFeaturesAMD-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ANTI_LAG_FEATURES_AMD

Structure Chaining

The `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_non_seamless_cube_map
typedef struct VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nonSeamlessCubeMap;
} VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nonSeamlessCubeMap` indicates that the implementation supports VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT.

If the `VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NON_SEAMLESS_CUBE_MAP_FEATURES_EXT

The VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderModuleIdentifier;
} VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderModuleIdentifier indicates whether the implementation supports querying an identifier of a VkShaderModule or VkShaderModuleCreateInfo structure, and creating pipelines from identifiers only.

If the VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_FEATURES_EXT

The VkPhysicalDeviceTilePropertiesFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_tile_properties
typedef struct VkPhysicalDeviceTilePropertiesFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileProperties;
} VkPhysicalDeviceTilePropertiesFeaturesQCOM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- tileProperties indicates that the implementation supports queries for returning tile properties.

If the VkPhysicalDeviceTilePropertiesFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceTilePropertiesFeaturesQCOM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceImageProcessingFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_image_processing
typedef struct VkPhysicalDeviceImageProcessingFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureSampleWeighted;
    VkBool32           textureBoxFilter;
    VkBool32           textureBlockMatch;
} VkPhysicalDeviceImageProcessingFeaturesQCOM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- textureSampleWeighted indicates that the implementation supports shader modules that declare the TextureSampleWeightedQCOM capability.
- textureBoxFilter indicates that the implementation supports shader modules that declare the TextureBoxFilterQCOM capability.
- textureBlockMatch indicates that the implementation supports shader modules that declare the TextureBlockMatchQCOM capability.

If the VkPhysicalDeviceImageProcessingFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageProcessingFeaturesQCOM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageProcessingFeaturesQCOM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_FEATURES_QCOM

The VkPhysicalDeviceImageProcessing2FeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_image_processing2
typedef struct VkPhysicalDeviceImageProcessing2FeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureBlockMatch2;
} VkPhysicalDeviceImageProcessing2FeaturesQCOM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `textureBlockMatch2` indicates that the implementation supports shader modules that declare the `TextureBlockMatch2QCOM` capability.

If the `VkPhysicalDeviceImageProcessing2FeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceImageProcessing2FeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceImageProcessing3FeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_image_processing3
typedef struct VkPhysicalDeviceImageProcessing3FeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageGatherLinear;
    VkBool32           imageGatherExtendedModes;
    VkBool32           blockMatchExtendedClampToEdge;
} VkPhysicalDeviceImageProcessing3FeaturesQCOM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageGatherLinear` indicates that the implementation supports shader modules that declare the `ImageGatherLinearQCOM` capability.
- `imageGatherExtendedModes` indicates that the implementation supports shader modules that declare the `ImageGatherExtendedModesQCOM` capability.
- `blockMatchExtendedClampToEdge` indicates that the implementation extends support for VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE to both input images of all block matching operations.

If the `VkPhysicalDeviceImageProcessing3FeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceImageProcessing3FeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_depth_clamp_zero_one
typedef struct VkPhysicalDeviceDepthClampZeroOneFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampZeroOne;
} VkPhysicalDeviceDepthClampZeroOneFeaturesKHR;
```

```
// Provided by VK_EXT_depth_clamp_zero_one
// Equivalent to VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
typedef VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampZeroOne` indicates that the implementation supports clamping the depth to a range of `0` to `1`.

If the `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_tile_image
typedef struct VkPhysicalDeviceShaderTileImageFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTileImageColorReadAccess;
    VkBool32           shaderTileImageDepthReadAccess;
    VkBool32           shaderTileImageStencilReadAccess;
} VkPhysicalDeviceShaderTileImageFeaturesEXT;
```

The members of the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure describe the following

features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderTileImageColorReadAccess` indicates that the implementation supports the `TileImageColorReadAccessEXT` SPIR-V capability.
- `shaderTileImageDepthReadAccess` indicates that the implementation supports the `TileImageDepthReadAccessEXT` SPIR-V capability.
- `shaderTileImageStencilReadAccess` indicates that the implementation supports the `TileImageStencilReadAccessEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderTileImageFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceDepthBiasControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkPhysicalDeviceDepthBiasControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthBiasControl;
    VkBool32           leastRepresentableValueForceUnormRepresentation;
    VkBool32           floatRepresentation;
    VkBool32           depthBiasExact;
} VkPhysicalDeviceDepthBiasControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- depthBiasControl indicates whether the implementation supports the vkCmdSetDepthBias2EXT command and the VkDepthBiasRepresentationInfoEXT structure.
- leastRepresentableValueForceUnormRepresentation indicates whether the implementation supports using the VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT depth bias representation.
- floatRepresentation indicates whether the implementation supports using the VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT depth bias representation.
- depthBiasExact indicates whether the implementation supports forcing depth bias to not be scaled to ensure a minimum resolvable difference using VkDepthBiasRepresentationInfoEXT ::depthBiasExact.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthBiasControlFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_BIAS_CONTROL_FEATURES_EXT

The VkPhysicalDeviceAddressBindingReportFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkPhysicalDeviceAddressBindingReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           reportAddressBinding;
} VkPhysicalDeviceAddressBindingReportFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- reportAddressBinding indicates whether this implementation supports reporting the binding of GPU virtual address ranges to Vulkan objects.

If the VkPhysicalDeviceAddressBindingReportFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceAddressBindingReportFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceOpticalFlowFeaturesNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           opticalFlow;
} VkPhysicalDeviceOpticalFlowFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- opticalFlow indicates whether the implementation supports optical flow.

If the VkPhysicalDeviceOpticalFlowFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceOpticalFlowFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpticalFlowFeaturesNV-sType-sType

sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_FEATURES_NV

The VkPhysicalDeviceFaultFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
} VkPhysicalDeviceFaultFeaturesEXT;
```

This structure describes the following features:

- deviceFault indicates that the implementation supports the reporting of device fault information.
- deviceFaultVendorBinary indicates that the implementation supports the generation of vendor-specific binary crash dumps. These may provide additional information when imported into vendor-specific external tools.

If the VkPhysicalDeviceFaultFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFaultFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_EXT

    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
    VkBool32           deviceFaultReportMasked;
    VkBool32           deviceFaultDeviceLostOnMasked;
} VkPhysicalDeviceFaultFeaturesKHR;
```

This structure describes the following features:

- deviceFault indicates that the implementation supports the reporting of device fault information.
- deviceFaultVendorBinary indicates that the implementation supports the generation of vendor-specific binary crash dumps. These **may** provide additional information when imported into vendor-specific external tools.
- deviceFaultReportMasked indicates that the implementation supports masked faults in normal operation (i.e. automatically recovered by the driver internally without the application receiving a VK_ERROR_DEVICE_LOST error) which **may** be reported via this extension even if they did not result in a VK_ERROR_DEVICE_LOST condition being returned to the application.
- deviceFaultDeviceLostOnMasked indicates that the implementation supports returning VK_ERROR_DEVICE_LOST for faults that would normally be masked.

In exceptional circumstances, some implementations **may** mask faults and attempt to recover from an error. In such circumstances, the device is not lost and further work can be submitted to the device. When such faults occur, the contents of all resources being written to at the time of the fault are undefined.

If the VkPhysicalDeviceFaultFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFaultFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_KHR

The VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_library_group_handles
typedef struct VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineLibraryGroupHandles;
} VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR;
```

```
// Provided by VK_EXT_pipeline_library_group_handles
// Equivalent to VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR
typedef VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR
VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT;
```

This structure describes the following features:

- pipelineLibraryGroupHandles indicates whether the implementation supports querying group handles directly from a ray tracing pipeline library, and guarantees bitwise identical group handles for such libraries when linked into other pipelines.

If the VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_LIBRARY_GROUP_HANDLES_FEATURES_KHR

Structure Chaining

Extends the structures

The VkPhysicalDeviceShaderObjectFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderObject;
} VkPhysicalDeviceShaderObjectFeaturesEXT;
```

This structure describes the following feature:

- shaderObject indicates whether the implementation supports shader objects.

If the VkPhysicalDeviceShaderObjectFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderObjectFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT

Structure Chaining

Extends the structures

The VkPhysicalDeviceTensorFeaturesARM structure is defined as:

```
// Provided by VK_ARM_tensors
typedef struct VkPhysicalDeviceTensorFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tensorNonPacked;
    VkBool32           shaderTensorAccess;
    VkBool32           shaderStorageTensorArrayDynamicIndexing;
    VkBool32           shaderStorageTensorArrayNonUniformIndexing;
    VkBool32           descriptorBindingStorageTensorUpdateAfterBind;
    VkBool32           tensors;
} VkPhysicalDeviceTensorFeaturesARM;
```

The members of the VkPhysicalDeviceTensorFeaturesARM structure describe the following features:

- tensorNonPacked indicates whether the implementation supports the creation of tensors that are not packed tensors.
- shaderTensorAccess indicates whether shader modules **can** declare the TensorsARM capability.
- shaderStorageTensorArrayDynamicIndexing indicates whether arrays of storage tensors **can** be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_TENSOR_ARM **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the StorageTensorArrayDynamicIndexingARM capability.
- shaderStorageTensorArrayNonUniformIndexing indicates whether arrays of storage tensors **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_TENSOR_ARM **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the StorageTensorArrayNonUniformIndexingARM capability.
- descriptorBindingStorageTensorUpdateAfterBind indicates whether the implementation supports updating storage tensor descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT **must** not be used with VK_DESCRIPTOR_TYPE_TENSOR_ARM.
- tensors indicates whether the implementation supports tensor resources.

If the VkPhysicalDeviceTensorFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceTensorFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTensorFeaturesARM-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TENSOR_FEATURES_ARM

The VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM structure is defined as:

```
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderCoreBuiltins;
} VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderCoreBuiltins indicates whether the implementation supports the SPIR-V CoreBuiltinsARM capability.

If the VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_FEATURES_ARM

The VkPhysicalDeviceFrameBoundaryFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_frame_boundary
typedef struct VkPhysicalDeviceFrameBoundaryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           frameBoundary;
} VkPhysicalDeviceFrameBoundaryFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- frameBoundary indicates whether the implementation supports frame boundary information.

If the VkPhysicalDeviceFrameBoundaryFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFrameBoundaryFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFrameBoundaryFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAME_BOUNDARY_FEATURES_EXT

Structure Chaining

The VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           swapchainMaintenance1;
} VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
typedef VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainMaintenance1` indicates that the implementation supports the following:
  - VkSwapchainPresentFenceInfoKHR, specifying a fence that is signaled when the resources associated with a present operation **can** be safely destroyed.
  - VkSwapchainPresentModesCreateInfoKHR and VkSwapchainPresentModeInfoKHR, allowing the swapchain to switch present modes without a need for recreation.
  - VkSwapchainPresentScalingCreateInfoKHR, specifying the scaling behavior of the swapchain in presence of window resizing.
  - The VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag, allowing the implementation to defer the allocation of swapchain image memory until first acquisition.
  - vkReleaseSwapchainImagesKHR, allowing acquired swapchain images to be released without presenting them.

If the `VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SWAPCHAIN_MAINTENANCE_1_FEATURES_KHR

The VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_present_mode_fifo_latest_ready
typedef struct VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentModeFifoLatestReady;
} VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR;
```

```
// Provided by VK_EXT_present_mode_fifo_latest_ready
// Equivalent to VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
typedef VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentModeFifoLatestReady specifies whether the implementation supports the VK_PRESENT_MODE_FIFO_LATEST_READY_KHR present mode.

If the VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_MODE_FIFO_LATEST_READY_FEATURES_KHR

The VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_dynamic_rendering_unused_attachments
typedef struct VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingUnusedAttachments;
} VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingUnusedAttachments` indicates that the implementation supports binding graphics pipelines within a render pass instance where any pipeline VkPipelineRenderingCreateInfo::`pColorAttachmentFormats` element with a format other than VK_FORMAT_UNDEFINED is allowed with a corresponding VkRenderingInfo::`pColorAttachments` element with an `imageView` equal to VK_NULL_HANDLE, or any pipeline VkPipelineRenderingCreateInfo::`pColorAttachmentFormats` element with a VK_FORMAT_UNDEFINED format is allowed with a corresponding VkRenderingInfo::`pColorAttachments` element with a non-VK_NULL_HANDLE `imageView`. Also a VkPipelineRenderingCreateInfo::`depthAttachmentFormat` other than VK_FORMAT_UNDEFINED is allowed with a VK_NULL_HANDLE VkRenderingInfo::`pDepthAttachment`, or a VkPipelineRenderingCreateInfo::`depthAttachmentFormat` of VK_FORMAT_UNDEFINED is allowed with a non-VK_NULL_HANDLE VkRenderingInfo::`pDepthAttachment`. Also a VkPipelineRenderingCreateInfo::`stencilAttachmentFormat` other than VK_FORMAT_UNDEFINED is allowed with a VK_NULL_HANDLE VkRenderingInfo::`pStencilAttachment`, or a VkPipelineRenderingCreateInfo::`stencilAttachmentFormat` of VK_FORMAT_UNDEFINED is allowed with a non-VK_NULL_HANDLE VkRenderingInfo::`pStencilAttachment`. Any writes to a VkRenderingInfo::`pColorAttachments`, VkRenderingInfo::`pDepthAttachment`, or VkRenderingInfo::`pStencilAttachment` with VK_NULL_HANDLE are discarded.

If the `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- rayTracingInvocationReorder indicates that the implementation supports SPV_EXT_shader_invocation_reorder.

If the VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

```
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedSparseAddressSpace;
} VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `extendedSparseAddressSpace` indicates that the implementation supports allowing certain usages of sparse memory resources to exceed `VkPhysicalDeviceLimits`::`sparseAddressSpaceSize`. See VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV.

If the `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

    VkBool32           multiviewClusterCullingShader;
} VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- clustercullingShader specifies whether cluster culling shader is supported.
- multiviewClusterCullingShader specifies whether multiview is supported.

If the VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the

    void*              pNext;
    VkBool32           shaderEnqueue;
    VkBool32           shaderMeshEnqueue;
} VkPhysicalDeviceShaderEnqueueFeaturesAMDX;
```

This structure describes the following feature:

- shaderEnqueue indicates whether the implementation supports execution graphs.
- shaderMeshEnqueue indicates whether the implementation supports mesh nodes in execution graphs.

If the VkPhysicalDeviceShaderEnqueueFeaturesAMDX structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderEnqueueFeaturesAMDX, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEnqueueFeaturesAMDX-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ENQUEUE_FEATURES_AMDX`

The `VkPhysicalDeviceCubicClampFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_clamp
typedef struct VkPhysicalDeviceCubicClampFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cubicRangeClamp;
} VkPhysicalDeviceCubicClampFeaturesQCOM;
```

This structure describes the following features:

- `cubicRangeClamp` indicates that the implementation supports cubic filtering in combination with a texel range clamp.

If the `VkPhysicalDeviceCubicClampFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCubicClampFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicClampFeaturesQCOM-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_CLAMP_FEATURES_QCOM`

Structure Chaining

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceYcbcrDegammaFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_ycbcr_degamma
typedef struct VkPhysicalDeviceYcbcrDegammaFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           ycbcrDegamma;
} VkPhysicalDeviceYcbcrDegammaFeaturesQCOM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ycbcrDegamma indicates whether the implementation supports $Y'C_BC_R$ degamma.

If the VkPhysicalDeviceYcbcrDegammaFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceYcbcrDegammaFeaturesQCOM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrDegammaFeaturesQCOM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_DEGAMMA_FEATURES_QCOM

Structure Chaining

The VkPhysicalDeviceCubicWeightsFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkPhysicalDeviceCubicWeightsFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           selectableCubicWeights;
} VkPhysicalDeviceCubicWeightsFeaturesQCOM;
```

This structure describes the following feature:

- `selectableCubicWeights` indicates that the implementation supports the selection of filter cubic weights.

If the `VkPhysicalDeviceCubicWeightsFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCubicWeightsFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicWeightsFeaturesQCOM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_WEIGHTS_FEATURES_QCOM

The `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is defined as:

```
// Provided by VK_NV_descriptor_pool_overallocation
typedef struct VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorPoolOverallocation;
} VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- descriptorPoolOverallocation indicates that the implementation allows the application to opt into descriptor pool overallocation by creating the descriptor pool with VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV and/or VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV flags.

If the VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDevicePerStageDescriptorSetFeaturesNV structure is defined as:

```
// Provided by VK_NV_per_stage_descriptor_set
typedef struct VkPhysicalDevicePerStageDescriptorSetFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perStageDescriptorSet;
    VkBool32           dynamicPipelineLayout;
} VkPhysicalDevicePerStageDescriptorSetFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- perStageDescriptorSet indicates that the implementation allows the VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV descriptor set layout creation flag to be used so the bindings are specified per-stage rather than across all stages.
- dynamicPipelineLayout indicates the implementation allows the layout member of

VkBindDescriptorSetsInfo, VkPushConstantsInfo, VkPushDescriptorSetInfo, VkPushDescriptorSetWithTemplateInfo, VkSetDescriptorBufferOffsetsInfoEXT and VkBindDescriptorBufferEmbeddedSamplersInfoEXT to be VK_NULL_HANDLE and VkPipelineLayoutCreateInfo **can** be chained off those structures' pNext instead.

If the VkPhysicalDevicePerStageDescriptorSetFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePerStageDescriptorSetFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceCudaKernelLaunchFeaturesNV structure is defined as:

```
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cudaKernelLaunchFeatures;
} VkPhysicalDeviceCudaKernelLaunchFeaturesNV;
```

This structure describes the following features:

- cudaKernelLaunchFeatures is non-zero if cuda kernel launch is supported.

If the VkPhysicalDeviceCudaKernelLaunchFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceCudaKernelLaunchFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCudaKernelLaunchFeaturesNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_FEATURES_NV`

The `VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_maximal_reconvergence
typedef struct VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMaximalReconvergence;
} VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderMaximalReconvergence` specifies whether the implementation supports the shader execution mode `MaximallyReconvergesKHR`.

If the `VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceExternalFormatResolveFeaturesANDROID structure is defined as:

```
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolveFeaturesANDROID {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           externalFormatResolve;
} VkPhysicalDeviceExternalFormatResolveFeaturesANDROID;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- externalFormatResolve specifies whether external format resolves are supported.

If the VkPhysicalDeviceExternalFormatResolveFeaturesANDROID structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceExternalFormatResolveFeaturesANDROID, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceTileShadingFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_tile_shading
typedef struct VkPhysicalDeviceTileShadingFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileShading;
    VkBool32           tileShadingFragmentStage;
    VkBool32           tileShadingColorAttachments;
    VkBool32           tileShadingDepthAttachments;
    VkBool32           tileShadingStencilAttachments;
    VkBool32           tileShadingInputAttachments;
    VkBool32           tileShadingSampledAttachments;
    VkBool32           tileShadingPerTileDraw;
    VkBool32           tileShadingPerTileDispatch;
    VkBool32           tileShadingDispatchTile;
    VkBool32           tileShadingApron;
    VkBool32           tileShadingAnisotropicApron;
    VkBool32           tileShadingAtomicOps;
    VkBool32           tileShadingImageProcessing;
} VkPhysicalDeviceTileShadingFeaturesQCOM;
```

This structure describes the following features:

- `tileShading` indicates that the implementation supports tile shading render pass instances.
- `tileShadingFragmentStage` indicates that the implementation supports tile shading in the fragment stage.
- `tileShadingColorAttachments` indicates that the implementation supports access to color attachments in a tile shader.
- `tileShadingDepthAttachments` indicates that the implementation supports access to depth aspect of depth stencil attachments.
- `tileShadingStencilAttachments` indicates that the implementation supports access to stencil aspect of depth stencil attachments.
- `tileShadingInputAttachments` indicates that the implementation supports access to input attachments.
- `tileShadingSampledAttachments` indicates that the implementation supports access to sampling of tile attachments.
- `tileShadingPerTileDraw` indicates that the implementation supports the recording of vkCmdDraw* commands when per-tile execution model is enabled.
- `tileShadingPerTileDispatch` indicates that the implementation supports the recording of `vkCmdDispatch`* commands within those regions of a command buffer where the per-tile execution model is enabled.
- `tileShadingDispatchTile` indicates that the implementation supports the recording of vkCmdDispatchTileQCOM commands.
- `tileShadingApron` indicates that the implementation supports VkRenderPassTileShadingCreateInfoQCOM::`apronSize` value other than (0,0). See Tiling Aprons

for more information.

- `tileShadingAnisotropicApron` indicates that the implementation supports VkRenderPassTileShadingCreateInfoQCOM::`apronSize` set to a value where `apronSize.width` differs from `apronSize.height`.
- `tileShadingAtomicOps` indicates that the implementation supports atomic operations on tile attachment variables.
- `tileShadingImageProcessing` indicates that the implementation supports image processing operations with tile attachments.

If the `VkPhysicalDeviceTileShadingFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceTileShadingFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

    void*              pNext;
    VkBool32           schedulingControls;
} VkPhysicalDeviceSchedulingControlsFeaturesARM;
```

This structure describes the following features:

- `schedulingControls` indicates that the implementation supports scheduling controls.

If the `VkPhysicalDeviceSchedulingControlsFeaturesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

VkDevice with any features described by VkPhysicalDeviceSchedulingControlsFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG structure is defined as:

```
// Provided by VK_IMG_relaxed_line_rasterization
typedef struct VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           relaxedLineRasterization;
} VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- relaxedLineRasterization indicates that the implementation supports relaxed line rasterization control.

If the VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceRenderPassStripedFeaturesARM structure is defined as:

```
// Provided by VK_ARM_render_pass_striped
typedef struct VkPhysicalDeviceRenderPassStripedFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           renderPassStriped;
} VkPhysicalDeviceRenderPassStripedFeaturesARM;
```

The members of the VkPhysicalDeviceRenderPassStripedFeaturesARM structure describe the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- renderPassStriped indicates that striped rendering is supported by the implementation.

If the VkPhysicalDeviceRenderPassStripedFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRenderPassStripedFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceShaderSubgroupRotateFeatures structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderSubgroupRotateFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
} VkPhysicalDeviceShaderSubgroupRotateFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_rotate
// Equivalent to VkPhysicalDeviceShaderSubgroupRotateFeatures
typedef VkPhysicalDeviceShaderSubgroupRotateFeatures
VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSubgroupRotate specifies whether shader modules **can** declare the GroupNonUniformRotateKHR capability.
- shaderSubgroupRotateClustered specifies whether shader modules **can** use the ClusterSize operand to OpGroupNonUniformRotateKHR.

If the VkPhysicalDeviceShaderSubgroupRotateFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderSubgroupRotateFeatures, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

    void*              pNext;
    VkBool32           shaderExpectAssume;
} VkPhysicalDeviceShaderExpectAssumeFeatures;
```

```
// Provided by VK_KHR_shader_expect_assume
// Equivalent to VkPhysicalDeviceShaderExpectAssumeFeatures
typedef VkPhysicalDeviceShaderExpectAssumeFeatures
VkPhysicalDeviceShaderExpectAssumeFeaturesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderExpectAssume` specifies whether shader modules **can** declare the `ExpectAssumeKHR` capability.

If the `VkPhysicalDeviceShaderExpectAssumeFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderExpectAssumeFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceDynamicRenderingLocalReadFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceDynamicRenderingLocalReadFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingLocalRead;
} VkPhysicalDeviceDynamicRenderingLocalReadFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkPhysicalDeviceDynamicRenderingLocalReadFeatures
typedef VkPhysicalDeviceDynamicRenderingLocalReadFeatures
VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the vkCmdBeginRendering command.

If the `VkPhysicalDeviceDynamicRenderingLocalReadFeatures` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDynamicRenderingLocalReadFeatures`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

The `VkPhysicalDeviceShaderBfloat16FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_bfloat16
typedef struct VkPhysicalDeviceShaderBfloat16FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBFloat16Type;
    VkBool32           shaderBFloat16DotProduct;
    VkBool32           shaderBFloat16CooperativeMatrix;
} VkPhysicalDeviceShaderBfloat16FeaturesKHR;
```

This structure describes the following features:

- `shaderBFloat16Type` indicates whether the implementation supports shaders with the

BFloat16TypeKHR capability.

- shaderBFloat16DotProduct indicates whether the implementation supports shaders with the BFloat16DotProductKHR capability.
- shaderBFloat16CooperativeMatrix indicates whether the implementation supports shaders with the BFloat16CooperativeMatrixKHR capability.

If the VkPhysicalDeviceShaderBfloat16FeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderBfloat16FeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceMapMemoryPlacedFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkPhysicalDeviceMapMemoryPlacedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryMapPlaced;
    VkBool32           memoryMapRangePlaced;
    VkBool32           memoryUnmapReserve;
} VkPhysicalDeviceMapMemoryPlacedFeaturesEXT;
```

This structure describes the following features:

- memoryMapPlaced indicates that the implementation supports placing memory maps at application-specified virtual addresses.
- memoryMapRangePlaced indicates that the implementation supports placing memory maps of a subrange of a memory object at application-specified virtual addresses.
- memoryUnmapReserve indicates that the implementation supports leaving the memory range reserved when unmapping a memory object.

If the VkPhysicalDeviceMapMemoryPlacedFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceMapMemoryPlacedFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMapMemoryPlacedFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAP_MEMORY_PLACED_FEATURES_EXT

The VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV structure is defined as:

```
// Provided by VK_NV_shader_atomic_float16_vector
typedef struct VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16VectorAtomics;
} VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderFloat16VectorAtomics indicates whether shaders **can** perform 16-bit floating-point, 2- and 4-component vector atomic operations.

If the VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat16VectorFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT16_VECTOR_FEATURES_NV

Structure Chaining

Extends the structures

The VkPhysicalDevicePipelineOpacityMicromapFeaturesARM structure is defined as:

```
// Provided by VK_ARM_pipeline_opacity_micromap
typedef struct VkPhysicalDevicePipelineOpacityMicromapFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineOpacityMicromap;
} VkPhysicalDevicePipelineOpacityMicromapFeaturesARM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineOpacityMicromap` indicates if a pipeline **can** declare if it can be used with an acceleration structure referencing an opacity micromap, or not.

If the `VkPhysicalDevicePipelineOpacityMicromapFeaturesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDevicePipelineOpacityMicromapFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineOpacityMicromapFeaturesARM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_OPACITY_MICROMAP_FEATURES_ARM

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceRawAccessChainsFeaturesNV structure is defined as:

```
// Provided by VK_NV_raw_access_chains
typedef struct VkPhysicalDeviceRawAccessChainsFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRawAccessChains;
} VkPhysicalDeviceRawAccessChainsFeaturesNV;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderRawAccessChains specifies whether shader modules **can** declare the RawAccessChainsNV capability.

If the VkPhysicalDeviceRawAccessChainsFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceRawAccessChainsFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRawAccessChainsFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAW_ACCESS_CHAINS_FEATURES_NV

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The VkPhysicalDeviceCommandBufferInheritanceFeaturesNV structure is defined as:

```
// Provided by VK_NV_command_buffer_inheritance
typedef struct VkPhysicalDeviceCommandBufferInheritanceFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           commandBufferInheritance;
} VkPhysicalDeviceCommandBufferInheritanceFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `commandBufferInheritance` indicates that command buffers executed in a queue inherit graphics and compute state from the previously executed command buffer in that queue.

If the `VkPhysicalDeviceCommandBufferInheritanceFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCommandBufferInheritanceFeaturesNV`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCommandBufferInheritanceFeaturesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMMAND_BUFFER_INHERITANCE_FEATURES_NV

Structure Chaining

- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is defined as:

```
// Provided by VK_MESA_image_alignment_control
typedef struct VkPhysicalDeviceImageAlignmentControlFeaturesMESA {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageAlignmentControl;
} VkPhysicalDeviceImageAlignmentControlFeaturesMESA;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageAlignmentControl` specifies that VkImageAlignmentControlCreateInfoMESA **can** be chained in VkImageCreateInfo.

If the `VkPhysicalDeviceImageAlignmentControlFeaturesMESA` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceImageAlignmentControlFeaturesMESA`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageAlignmentControlFeaturesMESA-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ALIGNMENT_CONTROL_FEATURES_MESA

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_replicated_composites
typedef struct VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderReplicatedComposites;
} VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderReplicatedComposites` specifies whether shader modules **can** declare the `ReplicatedCompositesEXT` capability.

If the `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to

use a VkDevice with any features described by VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_REPLICATED_COMPOSITES_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_shader_relaxed_extended_instruction
typedef struct VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRelaxedExtendedInstruction;
} VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderRelaxedExtendedInstruction specifies whether the implementation supports SPIR-V modules that use the SPV_KHR_relaxed_extended_instruction extension.

If the VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_RELAXED_EXTENDED_INSTRUCTION_FEATURES_KHR`

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX` structure is defined as:

```
// Provided by VK_AMDX_dense_geometry_format
typedef struct VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           denseGeometryFormat;
} VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `denseGeometryFormat` specifies whether the implementation supports DGF1 compressed geometry data.

If the `VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDenseGeometryFormatFeaturesAMDX-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DENSE_GEOMETRY_FORMAT_FEATURES_AMDX`

The VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_vertex_attribute_robustness
typedef struct VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeRobustness;
} VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- vertexAttributeRobustness indicates that vertex shaders **can** read vertex attribute locations that have no vertex attribute description and the value returned is (0,0,0,0) or (0,0,0,1).

If the VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeRobustnessFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_ROBUSTNESS_FEATURES_EXT

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceTileMemoryHeapFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkPhysicalDeviceTileMemoryHeapFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           tileMemoryHeap;
} VkPhysicalDeviceTileMemoryHeapFeaturesQCOM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- tileMemoryHeap indicates whether the implementation supports tile memory heap functionality.

If the VkPhysicalDeviceTileMemoryHeapFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceTileMemoryHeapFeaturesQCOM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTileMemoryHeapFeaturesQCOM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_MEMORY_HEAP_FEATURES_QCOM

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM structure is defined as:

```
// Provided by VK_QCOM_shader_multiple_wait_queues
typedef struct VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMultipleWaitQueues;
} VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderMultipleWaitQueues` indicates that the implementation supports SPIR-V modules declaring the `MultipleWaitQueuesQCOM` capability.

If the `VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderMultipleWaitQueuesFeaturesQCOM-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MULTIPLE_WAIT_QUEUES_FEATURES_QCOM

The `VkPhysicalDevicePresentMeteringFeaturesNV` structure is defined as:

```
// Provided by VK_NV_present_metering
typedef struct VkPhysicalDevicePresentMeteringFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentMetering;
} VkPhysicalDevicePresentMeteringFeaturesNV;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMetering` indicates whether the implementation supports present metering capability.

If the `VkPhysicalDevicePresentMeteringFeaturesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

VkDevice with any features described by VkPhysicalDevicePresentMeteringFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentMeteringFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_METERING_FEATURES_NV

The VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_uniform_buffer_unsized_array
typedef struct VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderUniformBufferUnsizedArray;
} VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderUniformBufferUnsizedArray indicates that the implementation supports declaring the last member of a uniform buffer block as an unsized array.

If the VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderUniformBufferUnsizedArrayFeaturesEXT-sType-sType
  sType **must** be

The VkPhysicalDeviceFormatPackFeaturesARM structure is defined as:

```
// Provided by VK_ARM_format_pack
typedef struct VkPhysicalDeviceFormatPackFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatPack;
} VkPhysicalDeviceFormatPackFeaturesARM;
```

This structure describes the following feature:

- formatPack indicates that the implementation **must** support using a VkFormat of VK_FORMAT_R10X6_UINT_PACK16_ARM, VK_FORMAT_R10X6G10X6_UINT_2PACK16_ARM, VK_FORMAT_R10X6G10X6B10X6A10X6_UINT_4PACK16_ARM, VK_FORMAT_R12X4_UINT_PACK16_ARM, VK_FORMAT_R12X4G12X4_UINT_2PACK16_ARM, VK_FORMAT_R12X4G12X4B12X4A12X4_UINT_4PACK16_ARM, VK_FORMAT_R14X2_UINT_PACK16_ARM, VK_FORMAT_R14X2G14X2_UINT_2PACK16_ARM, and VK_FORMAT_R14X2G14X2B14X2A14X2_UINT_4PACK16_ARM, with at least the following VkFormatFeatureFlagBits:
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
  - VK_FORMAT_FEATURE_TRANSFER_SRC_BIT
  - VK_FORMAT_FEATURE_TRANSFER_DST_BIT

If the VkPhysicalDeviceFormatPackFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceFormatPackFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFormatPackFeaturesARM-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FORMAT_PACK_FEATURES_ARM

The VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_primitive_restart_index
typedef struct VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveRestartIndex;
} VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- primitiveRestartIndex specifies whether the index for primitive restart can be set.

If the VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The VkPhysicalDeviceDataGraphFeaturesARM structure is defined as:

```
// Provided by VK_ARM_data_graph
typedef struct VkPhysicalDeviceDataGraphFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraph;
    VkBool32           dataGraphUpdateAfterBind;
    VkBool32           dataGraphSpecializationConstants;
    VkBool32           dataGraphDescriptorBuffer;
    VkBool32           dataGraphShaderModule;
} VkPhysicalDeviceDataGraphFeaturesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraph` specifies whether data graph pipelines **can** be used.
- `dataGraphUpdateAfterBind` specifies whether data graph pipelines **can** be created with a VkPipelineLayout that uses one or more VkDescriptorSetLayout objects created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `dataGraphSpecializationConstants` specifies whether data graph pipelines **can** be created from shader modules that use specialization constants.
- `dataGraphDescriptorBuffer` specifies whether data graph pipelines **can** use descriptor buffers.
- `dataGraphShaderModule` specifies whether data graph pipelines **can** be created from a shader module.

If the `VkPhysicalDeviceDataGraphFeaturesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDataGraphFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphFeaturesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_FEATURES_ARM

The `VkPhysicalDeviceDataGraphModelFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_data_graph_model
typedef struct VkPhysicalDeviceDataGraphModelFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphModel;
} VkPhysicalDeviceDataGraphModelFeaturesQCOM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphModel` specifies whether the functionality defined by this extension is available, and guarantees that the implementation supports a data graph queue family with at least one of the following engine types:
  - VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_NEURAL_QCOM
  - VK_PHYSICAL_DEVICE_DATA_GRAPH_PROCESSING_ENGINE_TYPE_COMPUTE_QCOM

If the `VkPhysicalDeviceDataGraphModelFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDataGraphModelFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_float8
typedef struct VkPhysicalDeviceShaderFloat8FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat8;
    VkBool32           shaderFloat8CooperativeMatrix;
} VkPhysicalDeviceShaderFloat8FeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat8` indicates whether the implementation supports shaders with the `Float8EXT` capability.
- `shaderFloat8CooperativeMatrix` indicates whether the implementation supports shaders with the `Float8CooperativeMatrixEXT` capability.

If the `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderFloat8FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

The `VkPhysicalDeviceQueuePerfHintFeaturesQCOM` structure is defined as:

```
// Provided by VK_QCOM_queue_perf_hint
typedef struct VkPhysicalDeviceQueuePerfHintFeaturesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           queuePerfHint;
} VkPhysicalDeviceQueuePerfHintFeaturesQCOM;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queuePerfHint` specifies whether the implementation supports setting queue perf hints.

If the `VkPhysicalDeviceQueuePerfHintFeaturesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceQueuePerfHintFeaturesQCOM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceQueuePerfHintFeaturesQCOM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_QUEUE_PERF_HINT_FEATURES_QCOM

Structure Chaining

Extends the structures

- VkDeviceCreateInfo

The `VkPhysicalDeviceShader64BitIndexingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_64bit_indexing
typedef struct VkPhysicalDeviceShader64BitIndexingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shader64BitIndexing;
} VkPhysicalDeviceShader64BitIndexingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- shader64BitIndexing indicates that the implementation supports using 64-bit address calculations for indexing cooperative matrices, cooperative vectors, storage buffers, and physical storage buffers.

If the VkPhysicalDeviceShader64BitIndexingFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShader64BitIndexingFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShader64BitIndexingFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_64_BIT_INDEXING_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_subgroup_partitioned
typedef struct VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupPartitioned;
} VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSubgroupPartitioned indicates that the implementation supports VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT.

If the VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by

VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_PARTITIONED_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderSplitBarrierFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_split_barrier
typedef struct VkPhysicalDeviceShaderSplitBarrierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSplitBarrier;
} VkPhysicalDeviceShaderSplitBarrierFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSplitBarrier indicates that the implementation supports the SplitBarrierEXT SPIR-V capability.

If the VkPhysicalDeviceShaderSplitBarrierFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderSplitBarrierFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSplitBarrierFeaturesEXT-sType-sType sType **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SPLIT_BARRIER_FEATURES_EXT

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePerformanceCountersByRegionFeaturesARM structure is defined as:

```
// Provided by VK_ARM_performance_counters_by_region
typedef struct VkPhysicalDevicePerformanceCountersByRegionFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           performanceCountersByRegion;
} VkPhysicalDevicePerformanceCountersByRegionFeaturesARM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- performanceCountersByRegion specifies whether the implementation supports capture of per region performance counters.

See security model for additional guarantees made by implementations that expose this feature.

If the VkPhysicalDevicePerformanceCountersByRegionFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePerformanceCountersByRegionFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceCountersByRegionFeaturesARM-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_COUNTERS_BY_REGION_FEATURES_ARM

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV structure is defined as:

```
// Provided by VK_NV_compute_occupancy_priority
typedef struct VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeOccupancyPriority;
} VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- computeOccupancyPriority is true if compute occupancy priority is supported.

If the VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeOccupancyPriorityFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_OCCUPANCY_PRIORITY_FEATURES_NV

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The VkPhysicalDevicePushConstantBankFeaturesNV structure is defined as:

```
// Provided by VK_NV_push_constant_bank
typedef struct VkPhysicalDevicePushConstantBankFeaturesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pushConstantBank;
} VkPhysicalDevicePushConstantBankFeaturesNV;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pushConstantBank indicates whether push constant bank functionality is supported.

If the VkPhysicalDevicePushConstantBankFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDevicePushConstantBankFeaturesNV, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushConstantBankFeaturesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_CONSTANT_BANK_FEATURES_NV

Structure Chaining

Extends the structures

- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceDescriptorHeapFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPhysicalDeviceDescriptorHeapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorHeap;
    VkBool32           descriptorHeapCaptureReplay;
} VkPhysicalDeviceDescriptorHeapFeaturesEXT;
```

- sType is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- descriptorHeap specifies whether descriptor heaps **can** be used.
- descriptorHeapCaptureReplay specifies whether heap descriptors **can** be captured and replayed.

If the VkPhysicalDeviceDescriptorHeapFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDescriptorHeapFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorHeapFeaturesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_FEATURES_EXT

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE structure is defined as:

```
// Provided by VK_VALVE_shader_mixed_float_dot_product
typedef struct VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMixedFloatDotProductFloat16AccFloat32;
    VkBool32           shaderMixedFloatDotProductFloat16AccFloat16;
    VkBool32           shaderMixedFloatDotProductBFloat16Acc;
    VkBool32           shaderMixedFloatDotProductFloat8AccFloat32;
} VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderMixedFloatDotProductFloat16AccFloat32 indicates whether the implementation supports shaders with the DotProductFloat16AccFloat32VALVE capability.
- shaderMixedFloatDotProductFloat16AccFloat16 indicates whether the implementation supports shaders with the DotProductFloat16AccFloat16VALVE capability.
- shaderMixedFloatDotProductBFloat16Acc indicates whether the implementation supports shaders with the DotProductBFloat16AccVALVE capability.

- shaderMixedFloatDotProductFloat8AccFloat32 indicates whether the implementation supports shaders with the DotProductFloat8AccFloat32VALVE capability.

If the VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderMixedFloatDotProductFeaturesVALVE-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MIXED_FLOAT_DOT_PRODUCT_FEATURES_VALVE

The VkPhysicalDeviceShaderInstrumentationFeaturesARM structure is defined as:

```
// Provided by VK_ARM_shader_instrumentation
typedef struct VkPhysicalDeviceShaderInstrumentationFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderInstrumentation;
} VkPhysicalDeviceShaderInstrumentationFeaturesARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderInstrumentation specifies whether shader instrumentation is supported.

If the VkPhysicalDeviceShaderInstrumentationFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderInstrumentationFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderInstrumentationFeaturesARM-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INSTRUMENTATION_FEATURES_ARM`

Structure Chaining

Extends the structures

- VkDeviceCreateInfo
- VkPhysicalDeviceFeatures2

The `VkPhysicalDeviceGpaFeaturesAMD` structure is defined as:

```
// Provided by VK_AMD_gpa_interface
typedef struct VkPhysicalDeviceGpaFeaturesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perfCounters;
    VkBool32           streamingPerfCounters;
    VkBool32           sqThreadTracing;
    VkBool32           clockModes;
} VkPhysicalDeviceGpaFeaturesAMD;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perfCounters` specifies whether performance counters are supported.
- `streamingPerfCounters` specifies whether streaming performance counters are supported.
- `sqThreadTracing` specifies whether thread tracing is supported.
- `clockModes` specifies whether setting clock modes is supported.

If the `VkPhysicalDeviceGpaFeaturesAMD` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceGpaFeaturesAMD`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGpaFeaturesAMD-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GPA_FEATURES_AMD`

Structure Chaining

The VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceAddressCommands;
} VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceAddressCommands specifies whether the implementation supports commands taking a VkDeviceAddress that would otherwise take a VkBuffer object.

If the VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_ADDRESS_COMMANDS_FEATURES_KHR

The VkPhysicalDeviceShaderConstantDataFeaturesKHR structure is defined as:

```
// Provided by VK_KHR_shader_constant_data
typedef struct VkPhysicalDeviceShaderConstantDataFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderConstantData;
} VkPhysicalDeviceShaderConstantDataFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderConstantData` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_constant_data` extension.

If the `VkPhysicalDeviceShaderConstantDataFeaturesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderConstantDataFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderConstantDataFeaturesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CONSTANT_DATA_FEATURES_KHR

Structure Chaining

The `VkPhysicalDeviceShaderAbortFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkPhysicalDeviceShaderAbortFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderAbort;
} VkPhysicalDeviceShaderAbortFeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderAbort specifies whether shaders **can** declare the AbortKHR capability.

If the VkPhysicalDeviceShaderAbortFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceShaderAbortFeaturesKHR, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAbortFeaturesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ABORT_FEATURES_KHR

The VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM structure is defined as:

```
// Provided by VK_ARM_data_graph_optical_flow
typedef struct VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphOpticalFlow;
} VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM;
```

This structure describes the following feature: * sType is a VkStructureType value identifying this structure. * pNext is NULL or a pointer to a structure extending this structure. * dataGraphOpticalFlow indicates whether the implementation supports optical flow graph pipelines.

If the VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphOpticalFlowFeaturesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_OPTICAL_FLOW_FEATURES_ARM

The `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM` structure is defined as:

```
// Provided by VK_ARM_data_graph_neural_accelerator_statistics
typedef struct VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dataGraphNeuralAcceleratorStatistics;
} VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataGraphNeuralAcceleratorStatistics` indicates that the implementation supports gathering neural accelerator statistics for data graphs.

If the `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDataGraphNeuralAcceleratorStatisticsFeaturesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DATA_GRAPH_NEURAL_ACCELERATOR_STATISTICS_FEATURES_ARM

The VkPhysicalDeviceImageTilingControlFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_image_tiling_control
typedef struct VkPhysicalDeviceImageTilingControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageTilingControl;
} VkPhysicalDeviceImageTilingControlFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- imageTilingControl indicates that the implementation supports control of optimal tiling arrangements at image creation time.

If the VkPhysicalDeviceImageTilingControlFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceImageTilingControlFeaturesEXT, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

The VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT structure is defined as:

```
// Provided by VK_EXT_shader_ocp_microscaling_types
typedef struct VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat4;
    VkBool32           shaderFloat6;
    VkBool32           shaderFloat8UnsignedE8M0;
    VkBool32           shaderMXInt8;
} VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat4` indicates whether the implementation supports shaders with the `Float4EXT` or `BitcastExtractEXT` capabilities.
- `shaderFloat6` indicates whether the implementation supports shaders with the `Float6EXT` or `BitcastExtractEXT` capabilities.
- `shaderFloat8UnsignedE8M0` indicates whether the implementation supports shaders with the `Float8UnsignedE8M0EXT` capability.
- `shaderMXInt8` indicates whether the implementation supports shaders with the `MXInt8EXT` capability.

If the `VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OCP_MICROSCALING_TYPES_FEATURES_EXT

The VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE structure is defined as:

```
// Provided by VK_VALVE_buffer_device_address_allocation_alignment
typedef struct VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddressAllocationAlignment;
} VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- bufferDeviceAddressAllocationAlignment indicates whether the implementation supports requesting a minimum alignment for buffer device addresses when allocating memory or creating sparse buffers.

If the VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the pNext chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE-sType-sType

    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixArmLayouts;
} VkPhysicalDeviceCooperativeMatrixLayoutsFeaturesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixArmLayouts` specifies whether shader modules **can** declare the `CooperativeMatrixLayoutsARM` capability.

If the `VkPhysicalDeviceCooperativeMatrixLayoutsFeaturesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceCooperativeMatrixLayoutsFeaturesARM`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

55.1. Feature Requirements

All Vulkan graphics implementations **must** support the following features:

- If Vulkan 1.0 is supported, `robustBufferAccess` **must** be supported if `VK_KHR_portability_subset` is not advertised
- If Vulkan 1.1 is supported, the following features **must** be supported:
  - `multiview`
  - `storageBuffer16BitAccess` if `uniformAndStorageBuffer16BitAccess` is supported
  - `shaderDrawParameters` if `VK_KHR_shader_draw_parameters` is supported

- If Vulkan 1.2 is supported, the following features **must** be supported:
  - `subgroupBroadcastDynamicId`
  - `imagelessFramebuffer`
  - `uniformBufferStandardLayout`
  - `shaderSubgroupExtendedTypes`
  - `separateDepthStencilLayouts`
  - `hostQueryReset`
  - `timelineSemaphore`
  - `samplerMirrorClampToEdge` if `VK_KHR_sampler_mirror_clamp_to_edge` is supported
  - `drawIndirectCount` if `VK_KHR_draw_indirect_count` is supported
  - `storageBuffer8BitAccess` if `uniformAndStorageBuffer8BitAccess` is supported
  - `shaderInt64` if `shaderSharedInt64Atomics` or `shaderBufferInt64Atomics` are supported
  - `descriptorIndexing` if `VK_EXT_descriptor_indexing` is supported
  - `shaderSampledImageArrayDynamicIndexing` if `descriptorIndexing` is supported
  - `shaderStorageBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
  - `shaderUniformTexelBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
  - `shaderStorageTexelBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
  - `shaderSampledImageArrayNonUniformIndexing` if `descriptorIndexing` is supported
  - `shaderStorageBufferArrayNonUniformIndexing` if `descriptorIndexing` is supported
  - `shaderUniformTexelBufferArrayNonUniformIndexing` if `descriptorIndexing` is supported
  - `descriptorBindingSampledImageUpdateAfterBind` if `descriptorIndexing` is supported
  - `descriptorBindingStorageImageUpdateAfterBind` if `descriptorIndexing` is supported
  - `descriptorBindingStorageBufferUpdateAfterBind` if `descriptorIndexing` is supported
  - `descriptorBindingUniformTexelBufferUpdateAfterBind` if `descriptorIndexing` is supported
  - `descriptorBindingStorageTexelBufferUpdateAfterBind` if `descriptorIndexing` is supported
  - `descriptorBindingUpdateUnusedWhilePending` if `descriptorIndexing` is supported
  - `descriptorBindingPartiallyBound` if `descriptorIndexing` is supported
  - `runtimeDescriptorArray` if `descriptorIndexing` is supported
  - `shaderOutputViewportIndex` if `VK_EXT_shader_viewport_index_layer` is supported
  - `shaderOutputLayer` if `VK_EXT_shader_viewport_index_layer` is supported
  - `samplerFilterMinmax` if `VK_EXT_sampler_filter_minmax` is supported
- If Vulkan 1.3 is supported, the following features **must** be supported:
  - `shaderTerminateInvocation`
  - `shaderDemoteToHelperInvocation`
  - `privateData`

    - pipelineCreationCacheControl
    - synchronization2
    - shaderZeroInitializeWorkgroupMemory
    - robustImageAccess
    - subgroupSizeControl
    - computeFullSubgroups
    - dynamicRendering
    - shaderIntegerDotProduct
    - maintenance4
    - vulkanMemoryModel
    - vulkanMemoryModelDeviceScope
    - inlineUniformBlock
    - bufferDeviceAddress
    - descriptorBindingInlineUniformBlockUpdateAfterBind if VK_EXT_descriptor_indexing or descriptorIndexing are supported
- If Vulkan 1.4 is supported, the following features **must** be supported:
    - fullDrawIndexUint32
    - imageCubeArray
    - independentBlend
    - sampleRateShading
    - drawIndirectFirstInstance
    - depthClamp
    - depthBiasClamp
    - samplerAnisotropy
    - fragmentStoresAndAtomics
    - shaderStorageImageExtendedFormats
    - shaderUniformBufferArrayDynamicIndexing
    - shaderSampledImageArrayDynamicIndexing
    - shaderStorageBufferArrayDynamicIndexing
    - shaderStorageImageArrayDynamicIndexing
    - shaderImageGatherExtended
    - shaderInt16
    - largePoints
    - samplerYcbcrConversion
    - storageBuffer16BitAccess

    - variablePointers
    - variablePointersStorageBuffer
    - samplerMirrorClampToEdge
    - scalarBlockLayout
    - shaderUniformTexelBufferArrayDynamicIndexing
    - shaderStorageTexelBufferArrayDynamicIndexing
    - shaderInt8
    - storageBuffer8BitAccess
    - globalPriorityQuery
    - shaderSubgroupRotate
    - shaderSubgroupRotateClustered
    - shaderFloatControls2
    - shaderExpectAssume
    - bresenhamLines
    - vertexAttributeInstanceRateDivisor
    - indexTypeUint8
    - maintenance5
    - pushDescriptor
    - dynamicRenderingLocalRead
    - maintenance6
    - pipelineRobustness
    - pipelineProtectedAccess if protectedMemory is supported
- If VK_KHR_dynamic_rendering is supported, dynamicRendering **must** be supported
- If VK_KHR_multiview is supported, multiview **must** be supported
- If VK_KHR_shader_float16_int8 is supported, at least one of shaderFloat16 or shaderInt8 **must** be supported
- If VK_KHR_16bit_storage is supported, storageBuffer16BitAccess **must** be supported
- If VK_KHR_imageless_framebuffer is supported, imagelessFramebuffer **must** be supported
- If VK_KHR_performance_query is supported, performanceCounterQueryPools **must** be supported
- If VK_KHR_variable_pointers is supported, variablePointersStorageBuffer **must** be supported
- If VK_KHR_shader_bfloat16 is supported, the following features **must** be supported:
    - shaderBFloat16Type
    - at least one of shaderBFloat16CooperativeMatrix or shaderBFloat16DotProduct
- If VK_KHR_sampler_ycbcr_conversion is supported, samplerYcbcrConversion **must** be supported
- If VK_KHR_shader_subgroup_extended_types is supported, shaderSubgroupExtendedTypes **must** be

supported

- If VK_KHR_8bit_storage is supported, storageBuffer8BitAccess **must** be supported
- If VK_KHR_shader_atomic_int64 is supported, shaderBufferInt64Atomics **must** be supported
- If VK_KHR_shader_clock is supported, shaderSubgroupClock **must** be supported
- If VK_KHR_global_priority is supported, globalPriorityQuery **must** be supported
- If VK_KHR_timeline_semaphore is supported, timelineSemaphore **must** be supported
- If VK_KHR_vulkan_memory_model is supported, vulkanMemoryModel **must** be supported
- If VK_KHR_shader_terminate_invocation is supported, shaderTerminateInvocation **must** be supported
- If VK_KHR_fragment_shading_rate is supported, pipelineFragmentShadingRate **must** be supported
- If VK_KHR_shader_constant_data is supported, shaderConstantData **must** be supported
- If VK_KHR_dynamic_rendering_local_read is supported, dynamicRenderingLocalRead **must** be supported
- If VK_KHR_shader_abort is supported, shaderAbort **must** be supported
- If VK_KHR_shader_quad_control is supported, shaderQuadControl **must** be supported
- If VK_KHR_separate_depth_stencil_layouts is supported, separateDepthStencilLayouts **must** be supported
- If VK_KHR_present_wait is supported, presentWait **must** be supported
- If VK_KHR_uniform_buffer_standard_layout is supported, uniformBufferStandardLayout **must** be supported
- If VK_KHR_buffer_device_address is supported, bufferDeviceAddress **must** be supported
- If VK_KHR_pipeline_executable_properties is supported, pipelineExecutableInfo **must** be supported
- If VK_KHR_shader_integer_dot_product is supported, shaderIntegerDotProduct **must** be supported
- If VK_KHR_present_id is supported, presentId **must** be supported
- If VK_KHR_synchronization2 is supported, synchronization2 **must** be supported
- If VK_KHR_device_address_commands is supported, deviceAddressCommands **must** be supported
- If VK_KHR_fragment_shader_barycentric is supported, fragmentShaderBarycentric **must** be supported
- If VK_KHR_shader_subgroup_uniform_control_flow is supported, shaderSubgroupUniformControlFlow **must** be supported
- If VK_KHR_zero_initialize_workgroup_memory is supported, shaderZeroInitializeWorkgroupMemory **must** be supported
- If VK_KHR_workgroup_memory_explicit_layout is supported, workgroupMemoryExplicitLayout **must** be supported
- If VK_KHR_ray_tracing_maintenance1 is supported, rayTracingMaintenance1 **must** be supported
- If VK_KHR_shader_untyped_pointers is supported, shaderUntypedPointers **must** be supported

- If VK_KHR_maintenance4 is supported, maintenance4 **must** be supported
- If VK_KHR_shader_subgroup_rotate is supported, shaderSubgroupRotate **must** be supported
- If VK_KHR_shader_maximal_reconvergence is supported, shaderMaximalReconvergence **must** be supported
- If VK_KHR_maintenance5 is supported, maintenance5 **must** be supported
- If VK_KHR_present_id2 is supported, presentId2 **must** be supported
- If VK_KHR_present_wait2 is supported, presentWait2 **must** be supported
- If VK_KHR_ray_tracing_position_fetch is supported, rayTracingPositionFetch **must** be supported
- If VK_KHR_pipeline_binary is supported, pipelineBinaries **must** be supported
- If VK_KHR_swapchain_maintenance1 is supported, swapchainMaintenance1 **must** be supported
- If VK_KHR_internally_synchronized_queues is supported, internallySynchronizedQueues **must** be supported
- If VK_KHR_cooperative_matrix is supported, cooperativeMatrix **must** be supported
- If VK_KHR_compute_shader_derivatives is supported, computeDerivativeGroupLinear **must** be supported
- If VK_KHR_video_encode_av1 is supported, videoEncodeAV1 **must** be supported
- If VK_KHR_video_decode_vp9 is supported, videoDecodeVP9 **must** be supported
- If VK_KHR_video_maintenance1 is supported, videoMaintenance1 **must** be supported
- If VK_KHR_vertex_attribute_divisor is supported, vertexAttributeInstanceRateDivisor **must** be supported
- If VK_KHR_unified_image_layouts is supported, unifiedImageLayouts **must** be supported
- If VK_KHR_shader_float_controls2 is supported, shaderFloatControls2 **must** be supported
- If VK_KHR_index_type_uint8 is supported, indexTypeUint8 **must** be supported
- If VK_KHR_line_rasterization is supported, at least one of rectangularLines, bresenhamLines, smoothLines, stippledRectangularLines, stippledBresenhamLines, or stippledSmoothLines **must** be supported
- If VK_KHR_shader_expect_assume is supported, shaderExpectAssume **must** be supported
- If VK_KHR_maintenance6 is supported, maintenance6 **must** be supported
- If VK_KHR_copy_memory_indirect is supported, indirectMemoryCopy **must** be supported
- If VK_KHR_video_encode_intra_refresh is supported, videoEncodeIntraRefresh **must** be supported
- If VK_KHR_video_encode_quantization_map is supported, videoEncodeQuantizationMap **must** be supported
- If VK_KHR_shader_relaxed_extended_instruction is supported, shaderRelaxedExtendedInstruction **must** be supported
- If VK_KHR_maintenance7 is supported, maintenance7 **must** be supported
- If VK_KHR_device_fault is supported, deviceFault **must** be supported
- If VK_KHR_maintenance8 is supported, maintenance8 **must** be supported

- If VK_KHR_shader_fma is supported, shaderFmaFloat32 **must** be supported
- If VK_KHR_maintenance9 is supported, maintenance9 **must** be supported
- If VK_KHR_video_maintenance2 is supported, videoMaintenance2 **must** be supported
- If VK_KHR_video_encode_feedback2 is supported, videoEncodeFeedback2 **must** be supported
- If VK_KHR_depth_clamp_zero_one is supported, depthClampZeroOne **must** be supported
- If VK_KHR_robustness2 is supported, at least one of robustBufferAccess2, robustImageAccess2, or nullDescriptor **must** be supported
- If VK_KHR_present_mode_fifo_latest_ready is supported, presentModeFifoLatestReady **must** be supported
- If VK_KHR_opacity_micromap is supported, micromap **must** be supported
- If VK_KHR_maintenance10 is supported, maintenance10 **must** be supported
- If VK_KHR_pipeline_library_group_handles is supported, pipelineLibraryGroupHandles **must** be supported
- If VK_KHR_maintenance11 is supported, maintenance11 **must** be supported
- If VK_KHR_extended_flags is supported, extendedFlags **must** be supported
- If VK_EXT_transform_feedback is supported, transformFeedback **must** be supported
- If VK_NV_corner_sampled_image is supported, cornerSampledImage **must** be supported
- If VK_EXT_texture_compression_astc_hdr is supported, textureCompressionASTC_HDR **must** be supported
- If VK_EXT_pipeline_robustness is supported, pipelineRobustness **must** be supported
- If VK_EXT_conditional_rendering is supported, conditionalRendering **must** be supported
- If VK_EXT_depth_clip_enable is supported, depthClipEnable **must** be supported
- If VK_IMG_relaxed_line_rasterization is supported, relaxedLineRasterization **must** be supported
- If VK_AMD_gpa_interface is supported, at least one of perfCounters, streamingPerfCounters, sqThreadTracing, or clockModes **must** be supported
- If VK_AMDX_shader_enqueue is supported, the following features **must** be supported:
  - shaderEnqueue
  - shaderMeshEnqueue if VK_EXT_mesh_shader is supported
- If VK_EXT_descriptor_heap is supported, descriptorHeap **must** be supported
- If VK_EXT_inline_uniform_block is supported, the following features **must** be supported:
  - inlineUniformBlock
  - descriptorBindingInlineUniformBlockUpdateAfterBind if VK_EXT_descriptor_indexing is supported, or if Vulkan 1.2 and descriptorIndexing are supported
- If VK_NV_shader_sm_builtins is supported, shaderSMBuiltins **must** be supported
- If VK_EXT_descriptor_indexing is supported, the following features **must** be supported:
  - shaderSampledImageArrayDynamicIndexing

    - shaderStorageBufferArrayDynamicIndexing
    - shaderUniformTexelBufferArrayDynamicIndexing
    - shaderStorageTexelBufferArrayDynamicIndexing
    - shaderSampledImageArrayNonUniformIndexing
    - shaderStorageBufferArrayNonUniformIndexing
    - shaderUniformTexelBufferArrayNonUniformIndexing
    - descriptorBindingSampledImageUpdateAfterBind
    - descriptorBindingStorageImageUpdateAfterBind
    - descriptorBindingStorageBufferUpdateAfterBind
    - descriptorBindingUniformTexelBufferUpdateAfterBind
    - descriptorBindingStorageTexelBufferUpdateAfterBind
    - descriptorBindingUpdateUnusedWhilePending
    - descriptorBindingPartiallyBound
    - runtimeDescriptorArray
- If VK_NV_shading_rate_image is supported, shadingRateImage **must** be supported
- If VK_NV_representative_fragment_test is supported, representativeFragmentTest **must** be supported
- If VK_QCOM_cooperative_matrix_conversion is supported, cooperativeMatrixConversion **must** be supported
- If VK_QCOM_elapsed_timer_query is supported, elapsedTimerQuery **must** be supported
- If VK_EXT_vertex_attribute_divisor is supported, vertexAttributeInstanceRateDivisor **must** be supported
- If VK_NV_compute_shader_derivatives is supported, at least one of computeDerivativeGroupQuads or computeDerivativeGroupLinear **must** be supported
- If VK_NV_mesh_shader is supported, VkPhysicalDeviceMeshShaderFeaturesNV::meshShader **must** be supported
- If VK_NV_shader_image_footprint is supported, imageFootprint **must** be supported
- If VK_NV_scissor_exclusive is supported, exclusiveScissor **must** be supported
- If VK_EXT_present_timing is supported, presentTiming **must** be supported
- If VK_INTEL_shader_integer_functions2 is supported, shaderIntegerFunctions2 **must** be supported
- If VK_EXT_fragment_density_map is supported, fragmentDensityMap **must** be supported
- If VK_EXT_scalar_block_layout is supported, scalarBlockLayout **must** be supported
- If VK_EXT_subgroup_size_control is supported, the following features **must** be supported:
    - subgroupSizeControl
    - computeFullSubgroups
- If VK_AMD_device_coherent_memory is supported, deviceCoherentMemory **must** be supported

- If VK_EXT_shader_image_atomic_int64 is supported, the following features **must** be supported:
  - shaderInt64
  - shaderImageInt64Atomics
- If VK_EXT_memory_priority is supported, memoryPriority **must** be supported
- If VK_NV_dedicated_allocation_image_aliasing is supported, dedicatedAllocationImageAliasing **must** be supported
- If VK_EXT_buffer_device_address is supported, VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress **must** be supported
- If VK_NV_cooperative_matrix is supported, VkPhysicalDeviceCooperativeMatrixFeaturesNV::cooperativeMatrix **must** be supported
- If VK_NV_coverage_reduction_mode is supported, coverageReductionMode **must** be supported
- If VK_EXT_fragment_shader_interlock is supported, at least one of fragmentShaderSampleInterlock, fragmentShaderPixelInterlock, or fragmentShaderShadingRateInterlock **must** be supported
- If VK_EXT_ycbcr_image_arrays is supported, ycbcrImageArrays **must** be supported
- If VK_EXT_provoking_vertex is supported, provokingVertexLast **must** be supported
- If VK_EXT_line_rasterization is supported, at least one of rectangularLines, bresenhamLines, smoothLines, stippledRectangularLines, stippledBresenhamLines, or stippledSmoothLines **must** be supported
- If VK_EXT_shader_atomic_float is supported, the following features **must** be supported:
  - at least one of shaderBufferFloat32Atomics, shaderBufferFloat32AtomicAdd, shaderBufferFloat64Atomics, shaderBufferFloat64AtomicAdd, shaderSharedFloat32Atomics, shaderSharedFloat32AtomicAdd, shaderSharedFloat64Atomics, shaderSharedFloat64AtomicAdd, shaderImageFloat32Atomics, or shaderImageFloat32AtomicAdd
  - shaderImageFloat32Atomics if sparseImageFloat32Atomics is supported
  - shaderImageFloat32AtomicAdd if sparseImageFloat32AtomicAdd is supported
- If VK_EXT_host_query_reset is supported, hostQueryReset **must** be supported
- If VK_EXT_index_type_uint8 is supported, indexTypeUint8 **must** be supported
- If VK_EXT_extended_dynamic_state is supported, extendedDynamicState **must** be supported
- If VK_EXT_host_image_copy is supported, hostImageCopy **must** be supported
- If VK_EXT_map_memory_placed is supported, memoryMapPlaced **must** be supported
- If VK_EXT_shader_atomic_float2 is supported, the following features **must** be supported:
  - at least one of shaderBufferFloat16Atomics, shaderBufferFloat16AtomicAdd, shaderBufferFloat16AtomicMinMax, shaderBufferFloat32AtomicMinMax, shaderBufferFloat64AtomicMinMax, shaderSharedFloat16Atomics, shaderSharedFloat16AtomicAdd, shaderSharedFloat16AtomicMinMax, shaderSharedFloat32AtomicMinMax, shaderSharedFloat64AtomicMinMax, or shaderImageFloat32AtomicMinMax
  - shaderImageFloat32AtomicMinMax if sparseImageFloat32AtomicMinMax is supported
- If VK_EXT_swapchain_maintenance1 is supported, swapchainMaintenance1 **must** be supported

- If VK_EXT_shader_demote_to_helper_invocation is supported, shaderDemoteToHelperInvocation **must** be supported
- If VK_NV_device_generated_commands is supported, VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands **must** be supported
- If VK_NV_inherited_viewport_scissor is supported, inheritedViewportScissor2D **must** be supported
- If VK_EXT_texel_buffer_alignment is supported, texelBufferAlignment **must** be supported
- If VK_EXT_depth_bias_control is supported, depthBiasControl **must** be supported
- If VK_EXT_device_memory_report is supported, deviceMemoryReport **must** be supported
- If VK_EXT_robustness2 is supported, at least one of robustBufferAccess2, robustImageAccess2, or nullDescriptor **must** be supported
- If VK_EXT_custom_border_color is supported, customBorderColors **must** be supported
- If VK_EXT_texture_compression_astc_3d is supported, textureCompressionASTC_3D **must** be supported
- If VK_NV_present_barrier is supported, presentBarrier **must** be supported
- If VK_EXT_private_data is supported, privateData **must** be supported
- If VK_EXT_pipeline_creation_cache_control is supported, pipelineCreationCacheControl **must** be supported
- If VK_NV_device_diagnostics_config is supported, diagnosticsConfig **must** be supported
- If VK_QCOM_queue_perf_hint is supported, queuePerfHint **must** be supported
- If VK_QCOM_image_processing3 is supported, imageGatherLinear **must** be supported
- If VK_QCOM_shader_multiple_wait_queues is supported, shaderMultipleWaitQueues **must** be supported
- If VK_EXT_shader_split_barrier is supported, shaderSplitBarrier **must** be supported
- If VK_NV_cuda_kernel_launch is supported, cudaKernelLaunchFeatures **must** be supported
- If VK_QCOM_tile_shading is supported, the following features **must** be supported:
  - tileShading
  - tileShadingFragmentStage
  - tileShadingPerTileDispatch
  - tileShadingAtomicOps
  - tileShadingColorAttachments
  - tileShadingPerTileDraw
  - tileShadingDepthAttachments
  - tileShadingStencilAttachments
  - tileShadingInputAttachments
  - tileShadingSampledAttachments

- If VK_EXT_descriptor_buffer is supported, descriptorBuffer **must** be supported
- If VK_EXT_graphics_pipeline_library is supported, graphicsPipelineLibrary **must** be supported
- If VK_AMD_shader_early_and_late_fragment_tests is supported, shaderEarlyAndLateFragmentTests **must** be supported
- If VK_NV_fragment_shading_rate_enums is supported, fragmentShadingRateEnums **must** be supported
- If VK_NV_ray_tracing_motion_blur is supported, rayTracingMotionBlur **must** be supported
- If VK_EXT_ycbcr_2plane_444_formats is supported, ycbcr2plane444Formats **must** be supported
- If VK_EXT_fragment_density_map2 is supported, fragmentDensityMapDeferred **must** be supported
- If VK_EXT_image_robustness is supported, robustImageAccess **must** be supported
- If VK_EXT_image_compression_control is supported, imageCompressionControl **must** be supported
- If VK_EXT_attachment_feedback_loop_layout is supported, attachmentFeedbackLoopLayout **must** be supported
- If VK_EXT_4444_formats is supported, formatA4R4G4B4 **must** be supported
- If VK_EXT_device_fault is supported, deviceFault **must** be supported
- If VK_EXT_rgba10x6_formats is supported, formatRgba10x6WithoutYCbCrSampler **must** be supported
- If VK_VALVE_mutable_descriptor_type is supported, mutableDescriptorType **must** be supported
- If VK_EXT_vertex_input_dynamic_state is supported, vertexInputDynamicState **must** be supported
- If VK_EXT_device_address_binding_report is supported, reportAddressBinding **must** be supported
- If VK_EXT_depth_clip_control is supported, depthClipControl **must** be supported
- If VK_EXT_primitive_topology_list_restart is supported, primitiveTopologyListRestart **must** be supported
- If VK_EXT_present_mode_fifo_latest_ready is supported, presentModeFifoLatestReady **must** be supported
- If VK_HUAWEI_subpass_shading is supported, subpassShading **must** be supported
- If VK_HUAWEI_invocation_mask is supported, invocationMask **must** be supported
- If VK_NV_external_memory_rdma is supported, externalMemoryRDMA **must** be supported
- If VK_EXT_pipeline_properties is supported, pipelinePropertiesIdentifier **must** be supported
- If VK_EXT_frame_boundary is supported, frameBoundary **must** be supported
- If VK_EXT_multisampled_render_to_single_sampled is supported, multisampledRenderToSingleSampled **must** be supported
- If VK_EXT_extended_dynamic_state2 is supported, extendedDynamicState2 **must** be supported
- If VK_EXT_color_write_enable is supported, colorWriteEnable **must** be supported
- If VK_EXT_primitives_generated_query is supported, primitivesGeneratedQuery **must** be supported
- If VK_EXT_global_priority_query is supported, globalPriorityQuery **must** be supported
- If VK_VALVE_video_encode_rgb_conversion is supported, videoEncodeRgbConversion **must** be supported

- If VK_EXT_image_view_min_lod is supported, minLod **must** be supported
- If VK_EXT_multi_draw is supported, multiDraw **must** be supported
- If VK_EXT_image_2d_view_of_3d is supported, image2DViewOf3D **must** be supported
- If VK_EXT_shader_tile_image is supported, shaderTileImageColorReadAccess **must** be supported
- If VK_EXT_opacity_micromap is supported, micromap **must** be supported
- If VK_NV_displacement_micromap is supported, displacementMicromap **must** be supported
- If VK_HUAWEI_cluster_culling_shader is supported, clustercullingShader **must** be supported
- If VK_EXT_border_color_swizzle is supported, borderColorSwizzle **must** be supported
- If VK_EXT_pageable_device_local_memory is supported, pageableDeviceLocalMemory **must** be supported
- If VK_ARM_scheduling_controls is supported, schedulingControls **must** be supported
- If VK_EXT_image_sliced_view_of_3d is supported, imageSlicedViewOf3D **must** be supported
- If VK_VALVE_descriptor_set_host_mapping is supported, descriptorSetHostMapping **must** be supported
- If VK_EXT_depth_clamp_zero_one is supported, depthClampZeroOne **must** be supported
- If VK_EXT_non_seamless_cube_map is supported, nonSeamlessCubeMap **must** be supported
- If VK_ARM_render_pass_striped is supported, renderPassStriped **must** be supported
- If VK_QCOM_fragment_density_map_offset is supported, fragmentDensityMapOffset **must** be supported
- If VK_NV_copy_memory_indirect is supported, indirectCopy **must** be supported
- If VK_NV_memory_decompression is supported, memoryDecompression **must** be supported
- If VK_NV_device_generated_commands_compute is supported, deviceGeneratedCompute **must** be supported
- If VK_NV_ray_tracing_linear_swept_spheres is supported, at least one of spheres or linearSweptSpheres **must** be supported
- If VK_NV_linear_color_attachment is supported, linearColorAttachment **must** be supported
- If VK_EXT_image_compression_control_swapchain is supported, imageCompressionControlSwapchain **must** be supported
- If VK_QCOM_image_processing is supported, the following features **must** be supported:
  - textureSampleWeighted
  - textureBlockMatch
  - textureBoxFilter
- If VK_EXT_nested_command_buffer is supported, nestedCommandBuffer **must** be supported
- If VK_EXT_extended_dynamic_state3 is supported, the following features **must** be supported:
  - tessellationShader if extendedDynamicState3TessellationDomainOrigin is supported
  - depthClamp if extendedDynamicState3DepthClampEnable is supported

    - `fillModeNonSolid` if `extendedDynamicState3PolygonMode` is supported
    - `alphaToOne` if `extendedDynamicState3AlphaToOneEnable` is supported
    - `logicOp` if `extendedDynamicState3LogicOpEnable` is supported
    - `geometryStreams` if `VK_EXT_transform_feedback` and `extendedDynamicState3RasterizationStream` are supported
- If `VK_EXT_subpass_merge_feedback` is supported, `subpassMergeFeedback` **must** be supported
- If `VK_ARM_tensors` is supported, `tensors` **must** be supported
- If `VK_EXT_shader_module_identifier` is supported, `shaderModuleIdentifier` **must** be supported
- If `VK_NV_optical_flow` is supported, `opticalFlow` **must** be supported
- If `VK_EXT_legacy_dithering` is supported, `legacyDithering` **must** be supported
- If `VK_EXT_pipeline_protected_access` is supported, `pipelineProtectedAccess` **must** be supported
- If `VK_ANDROID_external_format_resolve` is supported, `externalFormatResolve` **must** be supported
- If `VK_AMD_anti_lag` is supported, `antiLag` **must** be supported
- If `VK_AMDX_dense_geometry_format` is supported, `denseGeometryFormat` **must** be supported
- If `VK_EXT_shader_object` is supported, `shaderObject` **must** be supported
- If `VK_QCOM_tile_properties` is supported, `tileProperties` **must** be supported
- If `VK_SEC_amigo_profiling` is supported, `amigoProfiling` **must** be supported
- If `VK_QCOM_multiview_per_view_viewports` is supported, `multiviewPerViewViewports` **must** be supported
- If `VK_NV_ray_tracing_invocation_reorder` is supported, `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV::rayTracingInvocationReorder` **must** be supported
- If `VK_NV_cooperative_vector` is supported, `cooperativeVector` **must** be supported
- If `VK_NV_extended_sparse_address_space` is supported, `extendedSparseAddressSpace` **must** be supported
- If `VK_EXT_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_legacy_vertex_attributes` is supported, `legacyVertexAttributes` **must** be supported
- If `VK_ARM_shader_core_builtins` is supported, `shaderCoreBuiltins` **must** be supported
- If `VK_EXT_pipeline_library_group_handles` is supported, `pipelineLibraryGroupHandles` **must** be supported
- If `VK_EXT_dynamic_rendering_unused_attachments` is supported, `dynamicRenderingUnusedAttachments` **must** be supported
- If `VK_ARM_data_graph` is supported, `dataGraph` **must** be supported
- If `VK_QCOM_multiview_per_view_render_areas` is supported, `multiviewPerViewRenderAreas` **must** be supported
- If `VK_NV_per_stage_descriptor_set` is supported, `perStageDescriptorSet` **must** be supported
- If `VK_QCOM_image_processing2` is supported, `textureBlockMatch2` **must** be supported

- If VK_QCOM_filter_cubic_weights is supported, selectableCubicWeights **must** be supported
- If VK_QCOM_ycbcr_degamma is supported, ycbcrDegamma **must** be supported
- If VK_QCOM_filter_cubic_clamp is supported, cubicRangeClamp **must** be supported
- If VK_EXT_attachment_feedback_loop_dynamic_state is supported, attachmentFeedbackLoopDynamicState **must** be supported
- If VK_QNX_external_memory_screen_buffer is supported, screenBufferImport **must** be supported
- If VK_NV_descriptor_pool_overallocation is supported, descriptorPoolOverallocation **must** be supported
- If VK_QCOM_tile_memory_heap is supported, tileMemoryHeap **must** be supported
- If VK_EXT_memory_decompression is supported, memoryDecompression **must** be supported
- If VK_NV_raw_access_chains is supported, shaderRawAccessChains **must** be supported
- If VK_NV_command_buffer_inheritance is supported, commandBufferInheritance **must** be supported
- If VK_NV_shader_atomic_float16_vector is supported, shaderFloat16VectorAtomics **must** be supported
- If VK_EXT_shader_replicated_composites is supported, shaderReplicatedComposites **must** be supported
- If VK_EXT_shader_float8 is supported, shaderFloat8 **must** be supported
- If VK_NV_ray_tracing_validation is supported, rayTracingValidation **must** be supported
- If VK_NV_cluster_acceleration_structure is supported, clusterAccelerationStructure **must** be supported
- If VK_NV_partitioned_acceleration_structure is supported, partitionedAccelerationStructure **must** be supported
- If VK_EXT_device_generated_commands is supported, deviceGeneratedCommands **must** be supported
- If VK_MESA_image_alignment_control is supported, imageAlignmentControl **must** be supported
- If VK_NV_push_constant_bank is supported, pushConstantBank **must** be supported
- If VK_EXT_ray_tracing_invocation_reorder is supported, rayTracingInvocationReorder **must** be supported
- If VK_EXT_depth_clamp_control is supported, depthClampControl **must** be supported
- If VK_HUAWEI_hdr_vivid is supported, hdrVivid **must** be supported
- If VK_NV_cooperative_matrix2 is supported, at least one of cooperativeMatrixWorkgroupScope, cooperativeMatrixFlexibleDimensions, cooperativeMatrixReductions, cooperativeMatrixConversions, cooperativeMatrixPerElementOperations, cooperativeMatrixTensorAddressing, or cooperativeMatrixBlockLoads **must** be supported
- If VK_ARM_pipeline_opacity_micromap is supported, pipelineOpacityMicromap **must** be supported
- If VK_ARM_performance_counters_by_region is supported, performanceCountersByRegion **must** be supported
- If VK_ARM_shader_instrumentation is supported, shaderInstrumentation **must** be supported
- If VK_EXT_vertex_attribute_robustness is supported, vertexAttributeRobustness **must** be

supported

- If VK_ARM_format_pack is supported, formatPack **must** be supported
- If VK_VALVE_fragment_density_map_layered is supported, fragmentDensityMapLayered **must** be supported
- If VK_NV_present_metering is supported, presentMetering **must** be supported
- If VK_EXT_multisampled_render_to_swapchain is supported, multisampledRenderToSwapchain **must** be supported
- If VK_EXT_fragment_density_map_offset is supported, fragmentDensityMapOffset **must** be supported
- If VK_EXT_zero_initialize_device_memory is supported, zeroInitializeDeviceMemory **must** be supported
- If VK_EXT_shader_64bit_indexing is supported, shader64BitIndexing **must** be supported
- If VK_EXT_custom_resolve is supported, customResolve **must** be supported
- If VK_QCOM_data_graph_model is supported, VkPhysicalDeviceDataGraphModelFeaturesQCOM::dataGraphModel **must** be supported
- If VK_ARM_data_graph_optical_flow is supported, dataGraphOpticalFlow **must** be supported
- If VK_EXT_shader_long_vector is supported, the following features **must** be supported:
  - longVector
  - scalarBlockLayout
  - workgroupMemoryExplicitLayoutScalarBlockLayout if VK_KHR_workgroup_memory_explicit_layout is supported
- If VK_SEC_pipeline_cache_incremental_mode is supported, pipelineCacheIncrementalMode **must** be supported
- If VK_EXT_shader_uniform_buffer_unsized_array is supported, shaderUniformBufferUnsizedArray **must** be supported
- If VK_NV_compute_occupancy_priority is supported, computeOccupancyPriority **must** be supported
- If VK_EXT_cooperative_matrix_maintenance1 is supported, VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2 **must** be supported
- If VK_EXT_shader_subgroup_partitioned is supported, shaderSubgroupPartitioned **must** be supported
- If VK_ARM_cooperative_matrix_layouts is supported, cooperativeMatrixArmLayouts **must** be supported
- If VK_EXT_shader_ocp_microscaling_types is supported, at least one of shaderFloat4, shaderFloat6, shaderFloat8UnsignedE8M0, or shaderMXInt8 **must** be supported
- If VK_VALVE_shader_mixed_float_dot_product is supported, shaderMixedFloatDotProductFloat16AccFloat32 **must** be supported
- If VK_SEC_throttle_hint is supported, throttleHint **must** be supported

- If VK_ARM_data_graph_neural_accelerator_statistics is supported, dataGraphNeuralAcceleratorStatistics **must** be supported
- If VK_EXT_primitive_restart_index is supported, primitiveRestartIndex **must** be supported
- If VK_EXT_image_tiling_control is supported, imageTilingControl **must** be supported
- If VK_NV_cooperative_matrix_decode_vector is supported, the following features **must** be supported:
  - cooperativeMatrixDecodeVector
  - cooperativeMatrixBlockLoads
- If VK_NV_private_data_base_handle is supported, privateDataBaseHandle **must** be supported
- If VK_VALVE_buffer_device_address_allocation_alignment is supported, VkPhysicalDeviceBufferDeviceAddressAllocationAlignmentFeaturesVALVE::bufferDeviceAddressAllocationAlignment **must** be supported
- If VK_GOOGLE_hdr_smpte_st_209450_metadata is supported, hdrSmpteSt209450 **must** be supported
- If VK_KHR_acceleration_structure is supported, the following features **must** be supported:
  - accelerationStructure
  - bufferDeviceAddress
  - descriptorBindingAccelerationStructureUpdateAfterBind
  - descriptorIndexing if Vulkan 1.2 is supported
- If VK_KHR_ray_tracing_pipeline is supported, the following features **must** be supported:
  - rayTracingPipeline
  - rayTracingPipelineTraceRaysIndirect
  - rayTraversalPrimitiveCulling if VK_KHR_ray_query is supported
- If VK_KHR_ray_query is supported, rayQuery **must** be supported
- If VK_EXT_mesh_shader is supported, the following features **must** be supported:
  - taskShader
  - meshShader
  - primitiveFragmentShadingRate if VK_KHR_fragment_shading_rate and primitiveFragmentShadingRateMeshShader are supported
- VK_KHR_fragment_shading_rate if the primitiveFragmentShadingRateMeshShader feature is supported.
- VK_EXT_transform_feedback, if the extendedDynamicState3RasterizationStream feature is supported.
- VK_EXT_conservative_rasterization extension, if the extendedDynamicState3ConservativeRasterizationMode feature is supported.
- VK_EXT_conservative_rasterization extension, if the extendedDynamicState3ExtraPrimitiveOverestimationSize feature is supported.
- VK_EXT_sample_locations extension, if the extendedDynamicState3SampleLocationsEnable feature is

supported.

- VK_EXT_blend_operation_advanced extension, if the extendedDynamicState3ColorBlendAdvanced feature is supported.
- VK_EXT_provoking_vertex, if the extendedDynamicState3ProvokingVertexMode feature is supported.
- Vulkan 1.4 or the VK_KHR_line_rasterization extension or the VK_EXT_line_rasterization extension, if the extendedDynamicState3LineRasterizationMode feature is supported.
- VK_KHR_line_rasterization or VK_EXT_line_rasterization extension, if the extendedDynamicState3LineStippleEnable feature is supported.
- VK_EXT_depth_clip_control, if the extendedDynamicState3DepthClipNegativeOneToOne feature is supported.
- VK_NV_clip_space_w_scaling extension, if the extendedDynamicState3ViewportWScalingEnable feature is supported.
- VK_NV_viewport_swizzle extension, if the extendedDynamicState3ViewportSwizzle feature is supported.
- VK_NV_fragment_coverage_to_color extension, if the extendedDynamicState3CoverageToColorEnable feature is supported.
- VK_NV_fragment_coverage_to_color extension, if the extendedDynamicState3CoverageToColorLocation feature is supported.
- VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationMode feature is supported.
- VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationTableEnable feature is supported.
- VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationTable feature is supported.
- VK_NV_coverage_reduction_mode, if the extendedDynamicState3CoverageReductionMode feature is supported.
- VK_NV_representative_fragment_test, if the extendedDynamicState3RepresentativeFragmentTestEnable feature is supported.
- VK_NV_shading_rate_image, if the extendedDynamicState3ShadingRateImageEnable feature is supported.
- If Vulkan 1.4 is supported, at least one queue family is reported by vkGetPhysicalDeviceQueueFamilyProperties that includes the VK_QUEUE_GRAPHICS_BIT flag, and no additional queue families are reported that support the VK_QUEUE_TRANSFER_BIT flag, the hostImageCopy feature **must** be supported.

All other features defined in the Specification are **optional**.

NOTE Applications running on Vulkan implementations advertising a VkPhysicalDeviceDriverProperties::conformanceVersion less than 1.4.4.0 should be aware that the formatRgba10x6WithoutYCbCrSampler feature may not be supported despite VK_EXT_rgba10x6_formats being advertised.

Chapter 56. Limits

Limits are implementation-dependent minimums, maximums, and other device characteristics that an application **may** need to be aware of.

NOTE

Limits are reported via the basic VkPhysicalDeviceLimits structure as well as the extensible structure VkPhysicalDeviceProperties2, which was added in VK_KHR_get_physical_device_properties2 and included in Vulkan 1.1. When limits are added in future Vulkan versions or extensions, each extension **should** introduce one new limit structure, if needed. This structure **can** be added to the pNext chain of the VkPhysicalDeviceProperties2 structure.

The VkPhysicalDeviceLimits structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceLimits {
    uint32_t              maxImageDimension1D;
    uint32_t              maxImageDimension2D;
    uint32_t              maxImageDimension3D;
    uint32_t              maxImageDimensionCube;
    uint32_t              maxImageArrayLayers;
    uint32_t              maxTexelBufferElements;
    uint32_t              maxUniformBufferRange;
    uint32_t              maxStorageBufferRange;
    uint32_t              maxPushConstantsSize;
    uint32_t              maxMemoryAllocationCount;
    uint32_t              maxSamplerAllocationCount;
    VkDeviceSize          bufferImageGranularity;
    VkDeviceSize          sparseAddressSpaceSize;
    uint32_t              maxBoundDescriptorSets;
    uint32_t              maxPerStageDescriptorSamplers;
    uint32_t              maxPerStageDescriptorUniformBuffers;
    uint32_t              maxPerStageDescriptorStorageBuffers;
    uint32_t              maxPerStageDescriptorSampledImages;
    uint32_t              maxPerStageDescriptorStorageImages;
    uint32_t              maxPerStageDescriptorInputAttachments;
    uint32_t              maxPerStageResources;
    uint32_t              maxDescriptorSetSamplers;
    uint32_t              maxDescriptorSetUniformBuffers;
    uint32_t              maxDescriptorSetUniformBuffersDynamic;
    uint32_t              maxDescriptorSetStorageBuffers;
    uint32_t              maxDescriptorSetStorageBuffersDynamic;
    uint32_t              maxDescriptorSetSampledImages;
    uint32_t              maxDescriptorSetStorageImages;
    uint32_t              maxDescriptorSetInputAttachments;
    uint32_t              maxVertexInputAttributes;
    uint32_t              maxVertexInputBindings;
    uint32_t              maxVertexInputAttributeOffset;
    uint32_t              maxVertexInputBindingStride;
```

```
    uint32_t              maxVertexOutputComponents;
    uint32_t              maxTessellationGenerationLevel;
    uint32_t              maxTessellationPatchSize;
    uint32_t              maxTessellationControlPerVertexInputComponents;
    uint32_t              maxTessellationControlPerVertexOutputComponents;
    uint32_t              maxTessellationControlPerPatchOutputComponents;
    uint32_t              maxTessellationControlTotalOutputComponents;
    uint32_t              maxTessellationEvaluationInputComponents;
    uint32_t              maxTessellationEvaluationOutputComponents;
    uint32_t              maxGeometryShaderInvocations;
    uint32_t              maxGeometryInputComponents;
    uint32_t              maxGeometryOutputComponents;
    uint32_t              maxGeometryOutputVertices;
    uint32_t              maxGeometryTotalOutputComponents;
    uint32_t              maxFragmentInputComponents;
    uint32_t              maxFragmentOutputAttachments;
    uint32_t              maxFragmentDualSrcAttachments;
    uint32_t              maxFragmentCombinedOutputResources;
    uint32_t              maxComputeSharedMemorySize;
    uint32_t              maxComputeWorkGroupCount[3];
    uint32_t              maxComputeWorkGroupInvocations;
    uint32_t              maxComputeWorkGroupSize[3];
    uint32_t              subPixelPrecisionBits;
    uint32_t              subTexelPrecisionBits;
    uint32_t              mipmapPrecisionBits;
    uint32_t              maxDrawIndexedIndexValue;
    uint32_t              maxDrawIndirectCount;
    float                 maxSamplerLodBias;
    float                 maxSamplerAnisotropy;
    uint32_t              maxViewports;
    uint32_t              maxViewportDimensions[2];
    float                 viewportBoundsRange[2];
    uint32_t              viewportSubPixelBits;
    size_t                minMemoryMapAlignment;
    VkDeviceSize          minTexelBufferOffsetAlignment;
    VkDeviceSize          minUniformBufferOffsetAlignment;
    VkDeviceSize          minStorageBufferOffsetAlignment;
    int32_t               minTexelOffset;
    uint32_t              maxTexelOffset;
    int32_t               minTexelGatherOffset;
    uint32_t              maxTexelGatherOffset;
    float                 minInterpolationOffset;
    float                 maxInterpolationOffset;
    uint32_t              subPixelInterpolationOffsetBits;
    uint32_t              maxFramebufferWidth;
    uint32_t              maxFramebufferHeight;
    uint32_t              maxFramebufferLayers;
    VkSampleCountFlags    framebufferColorSampleCounts;
    VkSampleCountFlags    framebufferDepthSampleCounts;
    VkSampleCountFlags    framebufferStencilSampleCounts;
    VkSampleCountFlags    framebufferNoAttachmentsSampleCounts;
```

```
    uint32_t              maxColorAttachments;
    VkSampleCountFlags    sampledImageColorSampleCounts;
    VkSampleCountFlags    sampledImageIntegerSampleCounts;
    VkSampleCountFlags    sampledImageDepthSampleCounts;
    VkSampleCountFlags    sampledImageStencilSampleCounts;
    VkSampleCountFlags    storageImageSampleCounts;
    uint32_t              maxSampleMaskWords;
    VkBool32              timestampComputeAndGraphics;
    float                 timestampPeriod;
    uint32_t              maxClipDistances;
    uint32_t              maxCullDistances;
    uint32_t              maxCombinedClipAndCullDistances;
    uint32_t              discreteQueuePriorities;
    float                 pointSizeRange[2];
    float                 lineWidthRange[2];

    VkBool32              standardSampleLocations;
    VkDeviceSize          optimalBufferCopyOffsetAlignment;
    VkDeviceSize          optimalBufferCopyRowPitchAlignment;
    VkDeviceSize          nonCoherentAtomSize;
} VkPhysicalDeviceLimits;
```

The VkPhysicalDeviceLimits are properties of the physical device. These are available in the limits member of the VkPhysicalDeviceProperties structure which is returned from vkGetPhysicalDeviceProperties.

- maxImageDimension1D is the largest dimension (width) that is guaranteed to be supported for all images created with an imageType of VK_IMAGE_TYPE_1D. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using vkGetPhysicalDeviceImageFormatProperties.
- maxImageDimension2D is the largest dimension (width or height) that is guaranteed to be supported for all images created with an imageType of VK_IMAGE_TYPE_2D and without VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT set in flags. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using vkGetPhysicalDeviceImageFormatProperties.
- maxImageDimension3D is the largest dimension (width, height, or depth) that is guaranteed to be supported for all images created with an imageType of VK_IMAGE_TYPE_3D. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using vkGetPhysicalDeviceImageFormatProperties.
- maxImageDimensionCube is the largest dimension (width or height) that is guaranteed to be supported for all images created with an imageType of VK_IMAGE_TYPE_2D and with VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT set in flags. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using vkGetPhysicalDeviceImageFormatProperties.
- maxImageArrayLayers is the maximum number of layers (arrayLayers) for an image.

- `maxTexelBufferElements` is the maximum number of addressable texels for a buffer view created on a buffer which was created with the VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT usage flag set.
- `maxUniformBufferRange` is the maximum value that **can** be specified in the `range` member of a VkDescriptorBufferInfo structure passed to vkUpdateDescriptorSets for descriptors of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC.
- `maxStorageBufferRange` is the maximum value that **can** be specified in the `range` member of a VkDescriptorBufferInfo structure passed to vkUpdateDescriptorSets for descriptors of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC. If the `shader64BitIndexing` feature is enabled, this limit does not apply.
- `maxPushConstantsSize` is the maximum size, in bytes, of the pool of push constant memory. For each of the push constant ranges indicated by the `pPushConstantRanges` member of the VkPipelineLayoutCreateInfo structure, (`offset` + `size`) **must** be less than or equal to this limit.
- `maxMemoryAllocationCount` is the maximum number of device memory allocations, as created by vkAllocateMemory, which **can** simultaneously exist.
- `maxSamplerAllocationCount` is the maximum number of sampler objects, as created by vkCreateSampler, which **can** simultaneously exist on a device. If the `descriptorHeap` feature is enabled and the application intends to use embedded samplers, the number advertised here is effectively reduced by the quotient of `minSamplerHeapReservedRangeWithEmbedded` divided by `samplerDescriptorSize`, to provide storage for embedded samplers when switching to heaps. If embedded samplers are not used, this can be ignored.
- `bufferImageGranularity` is the granularity, in bytes, at which buffer or linear image resources, linear or optimal tensor resources, and optimal image resources **can** be bound to adjacent offsets in the same `VkDeviceMemory` object without aliasing. See Buffer-Image Granularity for more details.
- `sparseAddressSpaceSize` is the total amount of address space available, in bytes, for sparse memory resources. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them. If the `extendedSparseAddressSpace` feature is enabled, then the difference between `extendedSparseAddressSpaceSize` and `sparseAddressSpaceSize` can also be used, by `VkImage` created with the `usage` member of VkImageCreateInfo only containing bits in `extendedSparseImageUsageFlags` and `VkBuffer` created with the `usage` member of VkBufferCreateInfo only containing bits in `extendedSparseBufferUsageFlags`.
- `maxBoundDescriptorSets` is the maximum number of descriptor sets that **can** be simultaneously used by a pipeline. See Descriptor Sets.
- `maxPerStageDescriptorSamplers` is the maximum number of samplers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Sampler and

Combined Image Sampler.

- `maxPerStageDescriptorUniformBuffers` is the maximum number of uniform buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Uniform Buffer and Dynamic Uniform Buffer.
- `maxPerStageDescriptorStorageBuffers` is the maximum number of storage buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Storage Buffer and Dynamic Storage Buffer.
- `maxPerStageDescriptorSampledImages` is the maximum number of sampled images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.
- `maxPerStageDescriptorStorageImages` is the maximum number of storage images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Storage Image, and Storage Texel Buffer.
- `maxPerStageDescriptorInputAttachments` is the maximum number of input attachments that **can** be accessible to a single shader stage in a pipeline layout, as well as the maximum usable input attachment index. Descriptors with a type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. These are only supported for the fragment stage. See Input Attachment.

NOTE	`maxPerStageDescriptorInputAttachments` was originally only intended to limit the

> number of attachments per stage, not the number of available input indices across all shaders in a render pass. The input indices were allowed to be semi arbitrary for render pass objects, or fully arbitrary for dynamic rendering, however some implementations have fixed limits for them. Applications already exist that exceed this limit, and they will continue to work where they already did, but will fail to render on some platforms. For forward looking applications, this can be worked around by either making careful use of index remapping with VkRenderingInputAttachmentIndexInfo for dynamic rendering, or splitting a subpass with too many input attachments into multiple subpasses.

- `maxPerStageResources` is the maximum number of resources that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. For the fragment shader stage the framebuffer color attachments also count against this limit.
- `maxDescriptorSetSamplers` is the maximum number of samplers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Sampler and Combined Image Sampler.
- `maxDescriptorSetUniformBuffers` is the maximum number of uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Uniform Buffer and Dynamic Uniform Buffer.
- `maxDescriptorSetUniformBuffersDynamic` is the maximum number of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Uniform Buffer.
- `maxDescriptorSetStorageBuffers` is the maximum number of storage buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors

in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Storage Buffer and Dynamic Storage Buffer.

- `maxDescriptorSetStorageBuffersDynamic` is the maximum number of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Storage Buffer.
- `maxDescriptorSetSampledImages` is the maximum number of sampled images that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.
- `maxDescriptorSetStorageImages` is the maximum number of storage images that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Storage Image, and Storage Texel Buffer.
- `maxDescriptorSetInputAttachments` is the maximum number of input attachments that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Input Attachment.
- `maxVertexInputAttributes` is the maximum number of vertex input attributes that **can** be specified for a graphics pipeline. These are described in the array of `VkVertexInputAttributeDescription` structures that are provided at graphics pipeline creation time via the `pVertexAttributeDescriptions` member of the VkPipelineVertexInputStateCreateInfo structure. See Vertex Attributes and Vertex Input Description.
- `maxVertexInputBindings` is the maximum number of vertex buffers that **can** be specified for providing vertex attributes to a graphics pipeline. These are described in the array of `VkVertexInputBindingDescription` structures that are provided at graphics pipeline creation time via the `pVertexBindingDescriptions` member of the VkPipelineVertexInputStateCreateInfo structure. The `binding` member of `VkVertexInputBindingDescription` **must** be less than this limit. See Vertex Input Description.
- `maxVertexInputAttributeOffset` is the maximum vertex input attribute offset that **can** be added to the vertex input binding stride. The `offset` member of the `VkVertexInputAttributeDescription` structure **must** be less than or equal to this limit. See Vertex Input Description.
- `maxVertexInputBindingStride` is the maximum vertex input binding stride that **can** be specified in a vertex input binding. The `stride` member of the `VkVertexInputBindingDescription` structure **must** be less than or equal to this limit. See Vertex Input Description.

- `maxVertexOutputComponents` is the maximum number of components of output variables which **can** be output by a vertex shader. See Vertex Shaders.
- `maxTessellationGenerationLevel` is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See Tessellation.
- `maxTessellationPatchSize` is the maximum patch size, in vertices, of patches that **can** be processed by the tessellation control shader and tessellation primitive generator. The `patchControlPoints` member of the VkPipelineTessellationStateCreateInfo structure specified at pipeline creation time and the value provided in the `OutputVertices` execution mode of shader modules **must** be less than or equal to this limit. See Tessellation.
- `maxTessellationControlPerVertexInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation control shader stage.
- `maxTessellationControlPerVertexOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlPerPatchOutputComponents` is the maximum number of components of per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlTotalOutputComponents` is the maximum total number of components of per-vertex and per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationEvaluationInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation evaluation shader stage.
- `maxTessellationEvaluationOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation evaluation shader stage.
- `maxGeometryShaderInvocations` is the maximum invocation count supported for instanced geometry shaders. The value provided in the `Invocations` execution mode of shader modules **must** be less than or equal to this limit. See Geometry Shading.
- `maxGeometryInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the geometry shader stage.
- `maxGeometryOutputComponents` is the maximum number of components of output variables which **can** be output from the geometry shader stage.
- `maxGeometryOutputVertices` is the maximum number of vertices which **can** be emitted by any geometry shader.
- `maxGeometryTotalOutputComponents` is the maximum total number of components of output variables, across all emitted vertices, which **can** be output from the geometry shader stage.
- `maxFragmentInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the fragment shader stage.
- `maxFragmentOutputAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage.
- `maxFragmentDualSrcAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage when blending is enabled and one of the dual source

blend modes is in use. See Dual-Source Blending and dualSrcBlend.

- maxFragmentCombinedOutputResources is the total number of storage buffers, storage images, and output Location decorated color attachments (described in Fragment Output Interface) which **can** be used in the fragment shader stage.
- maxComputeSharedMemorySize is the maximum total storage size, in bytes, available for variables declared with the Workgroup storage class in shader modules (or with the shared storage qualifier in GLSL) in the compute shader stage.
- maxComputeWorkGroupCount[3] is the maximum number of local workgroups that **can** be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands **must** be less than or equal to the corresponding limit. See Dispatching Commands.
- maxComputeWorkGroupInvocations is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, **must** be less than or equal to this limit.
- maxComputeWorkGroupSize[3] is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, **must** be less than or equal to the corresponding limit.
- subPixelPrecisionBits is the number of bits of subpixel precision in framebuffer coordinates x_f and y_f. See Rasterization.
- subTexelPrecisionBits is the number of bits of precision in the division along an axis of an image used for minification and magnification filters. $2^{subTexelPrecisionBits}$ is the actual number of divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.
- mipmapPrecisionBits is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results. $2^{mipmapPrecisionBits}$ is the actual number of divisions.
- maxDrawIndexedIndexValue is the maximum index value that **can** be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See fullDrawIndexUint32.
- maxDrawIndirectCount is the maximum draw count that is supported for indirect drawing calls. See multiDrawIndirect.
- maxSamplerLodBias is the maximum absolute sampler LOD bias. The sum of the mipLodBias member of the VkSamplerCreateInfo structure and the Bias operand of image sampling operations in shader modules (or 0 if no Bias operand is provided to an image sampling operation) is clamped to the range [-maxSamplerLodBias,+maxSamplerLodBias]. See [samplers-mipLodBias].
- maxSamplerAnisotropy is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the maxAnisotropy member of the VkSamplerCreateInfo structure and this limit. See [samplers-maxAnisotropy].

- `maxViewports` is the maximum number of active viewports. The `viewportCount` member of the VkPipelineViewportStateCreateInfo structure that is provided at pipeline creation **must** be less than or equal to this limit.
- `maxViewportDimensions`[2] are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions **must** be greater than or equal to the largest image which **can** be created and used as a framebuffer attachment. See Controlling the Viewport.
- `viewportBoundsRange`[2] is the [minimum, maximum] range that the corners of a viewport **must** be contained in. This range **must** be at least [-2 × `size`, 2 × `size` - 1], where `size` = max(`maxViewportDimensions`[0], `maxViewportDimensions`[1]). See Controlling the Viewport.

> **NOTE** The wide range of values required for `viewportBoundsRange` allows the viewport to be arbitrarily shifted relative to the output render target while still partially overlapping. However, the minimum range required to achieve this would actually be [-`size` + 1, 2 × `size` - 1]. As these limits in implementations are typically simple power-of-two values, the specification reflects this convention, rounding the lower bound accordingly.

- `viewportSubPixelBits` is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.
- `minMemoryMapAlignment` is the minimum **required** alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with vkMapMemory, subtracting `offset` bytes from the returned pointer will always produce an integer multiple of this limit. See Host Access to Device Memory Objects. The value **must** be a power of two.
- `minTexelBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the VkBufferViewCreateInfo structure for texel buffers. The value **must** be a power of two. This limit is equivalent to the maximum of the `uniformTexelBufferOffsetAlignmentBytes` and `storageTexelBufferOffsetAlignmentBytes` members of VkPhysicalDeviceTexelBufferAlignmentProperties, but smaller alignment is **optionally** allowed by `storageTexelBufferOffsetSingleTexelAlignment` and `uniformTexelBufferOffsetSingleTexelAlignment`. For single texel alignment, a format has an alignment requirement which is the size of a single component if the size of the format is a multiple of three bytes, otherwise, it is the size of the format itself. The effective alignment requirement is the minimum of the per-format alignment and `uniformTexelBufferOffsetAlignmentBytes` or `storageTexelBufferOffsetAlignmentBytes` depending on the descriptor type. If the `texelBufferAlignment` feature is not enabled, the effective alignment requirement for any format is `minTexelBufferOffsetAlignment`. VkBufferViewCreateInfo::`offset` **must** be a multiple of this value.
- `minUniformBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for uniform buffers. When a descriptor of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers **must** be multiples of this limit. The value **must** be a power of two.

- `minStorageBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for storage buffers. When a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers **must** be multiples of this limit. The value **must** be a power of two.
- `minTexelOffset` is the minimum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `maxTexelOffset` is the maximum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `minTexelGatherOffset` is the minimum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` and `OpImageGatherQCOM` image instructions.
- `maxTexelGatherOffset` is the maximum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` and `OpImageGatherQCOM` image instructions.
- `minInterpolationOffset` is the base minimum (inclusive) negative offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `maxInterpolationOffset` is the base maximum (inclusive) positive offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `subPixelInterpolationOffsetBits` is the number of fractional bits that the `x` and `y` offsets to the `InterpolateAtOffset` extended instruction **may** be rounded to as fixed-point values.
- `maxFramebufferWidth` is the maximum width for a framebuffer. The `width` member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.
- `maxFramebufferHeight` is the maximum height for a framebuffer. The `height` member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.
- `maxFramebufferLayers` is the maximum layer count for a layered framebuffer. The `layers` member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.
- `framebufferColorSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see `framebufferIntegerColorSampleCounts`.
- `framebufferDepthSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a depth component.
- `framebufferStencilSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.
- `framebufferNoAttachmentsSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the supported sample counts for a subpass which uses no attachments.
- `maxColorAttachments` is the maximum number of color attachments that **can** be used by a subpass in a render pass. The `colorAttachmentCount` member of the `VkSubpassDescription` or `VkSubpassDescription2` structure **must** be less than or equal to this limit.

- `sampledImageColorSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set, and a non-integer color format.
- `sampledImageIntegerSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set, and an integer color format.
- `sampledImageDepthSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set, and a depth format.
- `sampledImageStencilSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set, and a stencil format.
- `storageImageSampleCounts` is a bitmask[1] of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, and the VK_IMAGE_USAGE_STORAGE_BIT usage flag set.
- `maxSampleMaskWords` is the maximum number of array elements of a variable decorated with the `SampleMask` built-in decoration.
- `timestampComputeAndGraphics` specifies support for timestamps on all graphics and compute queues. If this limit is VK_TRUE, all queues that advertise the VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT in the `VkQueueFamilyProperties`::`queueFlags` support `VkQueueFamilyProperties`::`timestampValidBits` of at least 36. See Timestamp Queries.
- `timestampPeriod` is the number of nanoseconds **required** for a timestamp query to be incremented by 1. See Timestamp Queries.
- `maxClipDistances` is the maximum number of clip distances that **can** be used in a single shader stage. The size of any array declared with the `ClipDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCullDistances` is the maximum number of cull distances that **can** be used in a single shader stage. The size of any array declared with the `CullDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCombinedClipAndCullDistances` is the maximum combined number of clip and cull distances that **can** be used in a single shader stage. The sum of the sizes of all arrays declared with the `ClipDistance` and `CullDistance` built-in decoration used by a single shader stage in a shader module **must** be less than or equal to this limit.
- `discreteQueuePriorities` is the number of discrete priorities that **can** be assigned to a queue based on the value of each member of VkDeviceQueueCreateInfo::`pQueuePriorities`. This **must** be at least 2, and levels **must** be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See Queue Priority.
- `pointSizeRange`[2] is the range [`minimum`,`maximum`] of supported sizes for points. Values written to variables decorated with the `PointSize` built-in decoration are clamped to this range.
- `lineWidthRange`[2] is the range [`minimum`,`maximum`] of supported widths for lines. Values specified by the `lineWidth` member of the VkPipelineRasterizationStateCreateInfo or the `lineWidth` parameter to `vkCmdSetLineWidth` are clamped to this range.

- `pointSizeGranularity` is the granularity of supported point sizes. Not all point sizes in the range defined by `pointSizeRange` are supported. This limit specifies the granularity (or increment) between successive supported point sizes.
- `lineWidthGranularity` is the granularity of supported line widths. Not all line widths in the range defined by `lineWidthRange` are supported. This limit specifies the granularity (or increment) between successive supported line widths.
- `strictLines` specifies whether lines are rasterized according to the preferred method of rasterization. If set to VK_FALSE, lines **may** be rasterized under a relaxed set of rules. If set to VK_TRUE, lines are rasterized as per the strict definition. See Basic Line Segment Rasterization.
- `standardSampleLocations` specifies whether rasterization uses the standard sample locations as documented in Multisampling. If set to VK_TRUE, the implementation uses the documented sample locations. If set to VK_FALSE, the implementation **may** use different sample locations.
- `optimalBufferCopyOffsetAlignment` is the optimal buffer offset alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. This value is also the optimal host memory offset alignment in bytes for vkCopyMemoryToImage and vkCopyImageToMemory. The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- `optimalBufferCopyRowPitchAlignment` is the optimal buffer row pitch alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. This value is also the optimal host memory row pitch alignment in bytes for vkCopyMemoryToImage and vkCopyImageToMemory. Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- `nonCoherentAtomSize` is the size and alignment in bytes that bounds concurrent access to host-mapped device memory. The value **must** be a power of two.

1

For all bitmasks of VkSampleCountFlagBits, the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images **may** support additional sample counts, which are queried using vkGetPhysicalDeviceImageFormatProperties as described in Supported Sample Counts.

Bits which **may** be set in the sample count limits returned by VkPhysicalDeviceLimits, as well as in other queries and structures representing image sample counts, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
    VK_SAMPLE_COUNT_1_BIT = 0x00000001,
    VK_SAMPLE_COUNT_2_BIT = 0x00000002,
    VK_SAMPLE_COUNT_4_BIT = 0x00000004,
    VK_SAMPLE_COUNT_8_BIT = 0x00000008,
    VK_SAMPLE_COUNT_16_BIT = 0x00000010,
    VK_SAMPLE_COUNT_32_BIT = 0x00000020,
    VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;
```

- VK_SAMPLE_COUNT_1_BIT specifies an image with one sample per pixel.
- VK_SAMPLE_COUNT_2_BIT specifies an image with 2 samples per pixel.
- VK_SAMPLE_COUNT_4_BIT specifies an image with 4 samples per pixel.
- VK_SAMPLE_COUNT_8_BIT specifies an image with 8 samples per pixel.
- VK_SAMPLE_COUNT_16_BIT specifies an image with 16 samples per pixel.
- VK_SAMPLE_COUNT_32_BIT specifies an image with 32 samples per pixel.
- VK_SAMPLE_COUNT_64_BIT specifies an image with 64 samples per pixel.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

VkSampleCountFlags is a bitmask type for setting a mask of zero or more VkSampleCountFlagBits.

The VkPhysicalDevicePushDescriptorProperties structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePushDescriptorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPushDescriptors;
} VkPhysicalDevicePushDescriptorProperties;
```

```
// Provided by VK_KHR_push_descriptor
// Equivalent to VkPhysicalDevicePushDescriptorProperties
typedef VkPhysicalDevicePushDescriptorProperties
VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxPushDescriptors is the maximum number of descriptors that **can** be used in a descriptor set layout created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT set.

If the VkPhysicalDevicePushDescriptorProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushDescriptorProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceMultiviewProperties structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiviewViewCount;
    uint32_t           maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewProperties
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxMultiviewViewCount is one greater than the maximum view index that **can** be used in a subpass.
- maxMultiviewInstanceIndex is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the VkPhysicalDeviceMultiviewProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceFloatControlsProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType                      sType;
    void*                                pNext;
    VkShaderFloatControlsIndependence    denormBehaviorIndependence;
    VkShaderFloatControlsIndependence    roundingModeIndependence;
    VkBool32                             shaderSignedZeroInfNanPreserveFloat16;
    VkBool32                             shaderSignedZeroInfNanPreserveFloat32;
    VkBool32                             shaderSignedZeroInfNanPreserveFloat64;
    VkBool32                             shaderDenormPreserveFloat16;
    VkBool32                             shaderDenormPreserveFloat32;
    VkBool32                             shaderDenormPreserveFloat64;
    VkBool32                             shaderDenormFlushToZeroFloat16;
    VkBool32                             shaderDenormFlushToZeroFloat32;
    VkBool32                             shaderDenormFlushToZeroFloat64;
    VkBool32                             shaderRoundingModeRTEFloat16;
    VkBool32                             shaderRoundingModeRTEFloat32;
    VkBool32                             shaderRoundingModeRTEFloat64;
    VkBool32                             shaderRoundingModeRTZFloat16;
    VkBool32                             shaderRoundingModeRTZFloat32;
    VkBool32                             shaderRoundingModeRTZFloat64;
} VkPhysicalDeviceFloatControlsProperties;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkPhysicalDeviceFloatControlsProperties
typedef VkPhysicalDeviceFloatControlsProperties
VkPhysicalDeviceFloatControlsPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `denormBehaviorIndependence` is a VkShaderFloatControlsIndependence value indicating whether, and how, denorm behavior can be set independently for different bit widths.

- `roundingModeIndependence` is a VkShaderFloatControlsIndependence value indicating whether, and how, rounding modes can be set independently for different bit widths.
- `shaderSignedZeroInfNanPreserveFloat16` is a boolean value indicating whether sign of a zero, Nans and ±∞ **can** be preserved in 16-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat32` is a boolean value indicating whether sign of a zero, Nans and ±∞ **can** be preserved in 32-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat64` is a boolean value indicating whether sign of a zero, Nans and ±∞ **can** be preserved in 64-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormPreserveFloat16` is a boolean value indicating whether denormals **can** be preserved in 16-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormPreserveFloat32` is a boolean value indicating whether denormals **can** be preserved in 32-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormPreserveFloat64` is a boolean value indicating whether denormals **can** be preserved in 64-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormFlushToZeroFloat16` is a boolean value indicating whether denormals **can** be flushed to zero in 16-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormFlushToZeroFloat32` is a boolean value indicating whether denormals **can** be flushed to zero in 32-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormFlushToZeroFloat64` is a boolean value indicating whether denormals **can** be flushed to zero in 64-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTEFloat16` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTEFloat32` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTEFloat64` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTZFloat16` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and

conversion instructions. It also indicates whether the RoundingModeRTZ execution mode **can** be used for 16-bit floating-point types.

- shaderRoundingModeRTZFloat32 is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTZ execution mode **can** be used for 32-bit floating-point types.
- shaderRoundingModeRTZFloat64 is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTZ execution mode **can** be used for 64-bit floating-point types.

If the VkPhysicalDeviceFloatControlsProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

Values which **may** be returned in the denormBehaviorIndependence and roundingModeIndependence fields of VkPhysicalDeviceFloatControlsProperties are:

```
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
  // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY,
  // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL,
  // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE,
} VkShaderFloatControlsIndependence;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkShaderFloatControlsIndependence
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

- VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY specifies that shader float controls for 32-bit floating-point **can** be set independently; other bit widths **must** be set identically to each other.
- VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL specifies that shader float controls for all bit widths **can** be set independently.
- VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE specifies that shader float controls for all bit widths **must** be set identically.

The VkPhysicalDeviceDiscardRectanglePropertiesEXT structure is defined as:

```
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDiscardRectangles;
} VkPhysicalDeviceDiscardRectanglePropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxDiscardRectangles is the maximum number of active discard rectangles that **can** be specified.

If the VkPhysicalDeviceDiscardRectanglePropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceSampleLocationsPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkPhysicalDeviceSampleLocationsPropertiesEXT {
    VkStructureType       sType;
    void*                 pNext;
    VkSampleCountFlags    sampleLocationSampleCounts;
    VkExtent2D            maxSampleLocationGridSize;
    float                 sampleLocationCoordinateRange[2];
    uint32_t              sampleLocationSubPixelBits;
    VkBool32              variableSampleLocations;
} VkPhysicalDeviceSampleLocationsPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampleLocationSampleCounts` is a bitmask of VkSampleCountFlagBits indicating the sample counts supporting custom sample locations.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary that is supported for all sample counts in `sampleLocationSampleCounts`.
- `sampleLocationCoordinateRange`[2] is the range of supported sample location coordinates.
- `sampleLocationSubPixelBits` is the number of bits of subpixel precision for sample locations.
- `variableSampleLocations` specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass **must** match. If set to VK_TRUE, the implementation supports variable sample locations in a subpass. If set to VK_FALSE, then the sample locations **must** stay constant in each subpass.

If the `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nativeUnalignedPerformance;
} VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT;
```

This structure describes the following features:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nativeUnalignedPerformance` specifies whether unaligned vertex fetches do not incur significant performance penalties as compared to aligned fetches.

If the `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a VkDevice with any features described by `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT`, it **must** add an instance of the structure, with the desired feature members set to VK_TRUE, to the `pNext` chain of VkDeviceCreateInfo when creating the VkDevice.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_VERTEX_ATTRIBUTES_PROPERTIES_EXT

Structure Chaining

Extends the structure

The `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minImportedHostPointerAlignment` is the minimum **required** alignment, in bytes, for the base address and size of host pointers that **can** be imported to a Vulkan memory object. The value **must** be a power of two.

If the `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is defined as:

```
// Provided by VK_NVX_multiview_per_view_attributes
typedef struct VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           perViewPositionAllComponents;
} VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `perViewPositionAllComponents` is VK_TRUE if the implementation supports per-view position values that differ in components other than the X component.

If the `VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_ATTRIBUTES_PROPERTIES_NVX

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDevicePointClippingProperties structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType            sType;
    void*                      pNext;
    VkPointClippingBehavior    pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkPhysicalDevicePointClippingProperties
typedef VkPhysicalDevicePointClippingProperties
VkPhysicalDevicePointClippingPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pointClippingBehavior is a VkPointClippingBehavior value specifying the point clipping behavior supported by the implementation.

If the VkPhysicalDevicePointClippingProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePointClippingProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceSubgroupProperties structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType           sType;
    void*                     pNext;
    uint32_t                  subgroupSize;
    VkShaderStageFlags        supportedStages;
    VkSubgroupFeatureFlags    supportedOperations;
    VkBool32                  quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSize` is the default number of invocations in each subgroup. `subgroupSize` is at least 1 if any of the physical device's queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT. `subgroupSize` is a power-of-two.
- `supportedStages` is a bitfield of VkShaderStageFlagBits describing the shader stages that group operations with subgroup scope are supported in. `supportedStages` will have the VK_SHADER_STAGE_COMPUTE_BIT bit set if any of the physical device's queues support VK_QUEUE_COMPUTE_BIT.
- `supportedOperations` is a bitmask of VkSubgroupFeatureFlagBits specifying the sets of group operations with subgroup scope supported on this device. `supportedOperations` will have the VK_SUBGROUP_FEATURE_BASIC_BIT bit set if any of the physical device's queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT.
- `quadOperationsInAllStages` is a boolean specifying whether quad group operations are available in all stages, or are restricted to fragment and compute stages.

If the `VkPhysicalDeviceSubgroupProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If `supportedOperations` includes VK_SUBGROUP_FEATURE_QUAD_BIT, or the `shaderSubgroupUniformControlFlow` feature is enabled, `subgroupSize` **must** be greater than or equal to 4.

If the `shaderQuadControl` feature is supported, `supportedOperations` **must** include VK_SUBGROUP_FEATURE_QUAD_BIT.

If VK_KHR_shader_subgroup_rotate is supported, and the implementation advertises support with a VkExtensionProperties::`specVersion` greater than or equal to 2, and the `shaderSubgroupRotate` feature is supported, VK_SUBGROUP_FEATURE_ROTATE_BIT **must** be returned in VkPhysicalDeviceVulkan11Properties::`subgroupSupportedOperations` and VkPhysicalDeviceSubgroupProperties::`supportedOperations`. If VK_KHR_shader_subgroup_rotate is supported, and the implementation advertises support with a VkExtensionProperties::`specVersion` greater than or equal to 2, and the `shaderSubgroupRotateClustered` feature is supported, VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT **must** be returned in VkPhysicalDeviceVulkan11Properties::`subgroupSupportedOperations` and

VkPhysicalDeviceSubgroupProperties::supportedOperations.

If Vulkan 1.4 is supported, VK_SUBGROUP_FEATURE_ROTATE_BIT and VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT **must** be returned in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations.

NOTE VK_SUBGROUP_FEATURE_ROTATE_BIT and VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT were added in version 2 of the VK_KHR_shader_subgroup_rotate extension, after the initial release, so there are implementations that do not advertise these bits. Applications should use the shaderSubgroupRotate and shaderSubgroupRotateClustered features to determine and enable support. These bits are advertised here for consistency and for future dependencies.

If the shaderSubgroupPartitioned feature is supported, supportedOperations **must** include VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

Bits which **can** be set in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations to specify supported group operations with subgroup scope are:

```
// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
    VK_SUBGROUP_FEATURE_SHUFFLE_BIT = 0x00000010,
    VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT = 0x00000020,
    VK_SUBGROUP_FEATURE_CLUSTERED_BIT = 0x00000040,
    VK_SUBGROUP_FEATURE_QUAD_BIT = 0x00000080,
  // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_BIT = 0x00000200,
  // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT = 0x00000400,
  // Provided by VK_EXT_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT = 0x00000100,
  // Provided by VK_NV_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV = VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT,
  // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR = VK_SUBGROUP_FEATURE_ROTATE_BIT,
  // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR =
VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT,
} VkSubgroupFeatureFlagBits;
```

- VK_SUBGROUP_FEATURE_BASIC_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniform capability.
- VK_SUBGROUP_FEATURE_VOTE_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformVote capability.
- VK_SUBGROUP_FEATURE_ARITHMETIC_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformArithmetic capability.
- VK_SUBGROUP_FEATURE_BALLOT_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformBallot capability.
- VK_SUBGROUP_FEATURE_SHUFFLE_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformShuffle capability.
- VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformShuffleRelative capability.
- VK_SUBGROUP_FEATURE_CLUSTERED_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformClustered capability.
- VK_SUBGROUP_FEATURE_QUAD_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformQuad capability.
- VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformPartitionedEXT capability.
- VK_SUBGROUP_FEATURE_ROTATE_BIT specifies the device will accept SPIR-V shader modules containing the GroupNonUniformRotateKHR capability.

- VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT specifies the device will accept SPIR-V shader modules that use the ClusterSize operand to OpGroupNonUniformRotateKHR.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkSubgroupFeatureFlags;
```

VkSubgroupFeatureFlags is a bitmask type for setting a mask of zero or more VkSubgroupFeatureFlagBits.

The VkPhysicalDeviceSubgroupSizeControlProperties structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType       sType;
    void*                 pNext;
    uint32_t              minSubgroupSize;
    uint32_t              maxSubgroupSize;
    uint32_t              maxComputeWorkgroupSubgroups;
    VkShaderStageFlags    requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```

```
// Provided by VK_EXT_subgroup_size_control
// Equivalent to VkPhysicalDeviceSubgroupSizeControlProperties
typedef VkPhysicalDeviceSubgroupSizeControlProperties
VkPhysicalDeviceSubgroupSizeControlPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minSubgroupSize is the minimum subgroup size supported by this device. minSubgroupSize is at least one if any of the physical device's queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT. minSubgroupSize is a power-of-two. minSubgroupSize is less than or equal to maxSubgroupSize. minSubgroupSize is less than or equal to subgroupSize.
- maxSubgroupSize is the maximum subgroup size supported by this device. maxSubgroupSize is at least one if any of the physical device's queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT. maxSubgroupSize is a power-of-two. maxSubgroupSize is greater than or equal to minSubgroupSize. maxSubgroupSize is greater than or equal to subgroupSize.
- maxComputeWorkgroupSubgroups is the maximum number of subgroups supported by the implementation within a workgroup.
- requiredSubgroupSizeStages is a bitfield of what shader stages support having a required subgroup size specified.

If the VkPhysicalDeviceSubgroupSizeControlProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If VkPhysicalDeviceSubgroupProperties::supportedOperations includes VK_SUBGROUP_FEATURE_QUAD_BIT, minSubgroupSize **must** be greater than or equal to 4.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES

The VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           advancedBlendMaxColorAttachments;
    VkBool32           advancedBlendIndependentBlend;
    VkBool32           advancedBlendNonPremultipliedSrcColor;
    VkBool32           advancedBlendNonPremultipliedDstColor;
    VkBool32           advancedBlendCorrelatedOverlap;
    VkBool32           advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- advancedBlendMaxColorAttachments is one greater than the highest color attachment index that **can** be used in a render pass instance, for a pipeline that uses an advanced blend operation.
- advancedBlendIndependentBlend specifies whether advanced blend operations **can** vary per-attachment.
- advancedBlendNonPremultipliedSrcColor specifies whether the source color **can** be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied **must** be VK_TRUE.
- advancedBlendNonPremultipliedDstColor specifies whether the destination color **can** be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied **must** be VK_TRUE.
- advancedBlendCorrelatedOverlap specifies whether the overlap mode **can** be treated as correlated. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT ::blendOverlap **must** be VK_BLEND_OVERLAP_UNCORRELATED_EXT.

- advancedBlendAllOperations specifies whether all advanced blend operation enums are supported. See the valid usage of VkPipelineColorBlendAttachmentState.

If the VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_PROPERTIES_EXT

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceVertexAttributeDivisorProperties structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVertexAttribDivisor;
    VkBool32           supportsNonZeroFirstInstance;
} VkPhysicalDeviceVertexAttributeDivisorProperties;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorProperties
typedef VkPhysicalDeviceVertexAttributeDivisorProperties
VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxVertexAttribDivisor is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.
- supportsNonZeroFirstInstance specifies whether a non-zero value for the firstInstance parameter of drawing commands is supported when VkVertexInputBindingDivisorDescription ::divisor is not 1.

If the VkPhysicalDeviceVertexAttributeDivisorProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceSamplerFilterMinmaxProperties structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           filterMinmaxSingleComponentFormats;
    VkBool32           filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

```
// Provided by VK_EXT_sampler_filter_minmax
// Equivalent to VkPhysicalDeviceSamplerFilterMinmaxProperties
typedef VkPhysicalDeviceSamplerFilterMinmaxProperties
VkPhysicalDeviceSamplerFilterMinmaxPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- filterMinmaxSingleComponentFormats is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- filterMinmaxImageComponentMapping is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the VkPhysicalDeviceSamplerFilterMinmaxProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If filterMinmaxSingleComponentFormats is VK_TRUE, the following formats **must** support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT feature with VK_IMAGE_TILING_OPTIMAL, if they support VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT:

- VK_FORMAT_R8_UNORM
- VK_FORMAT_R8_SNORM
- VK_FORMAT_R16_UNORM
- VK_FORMAT_R16_SNORM
- VK_FORMAT_R16_SFLOAT
- VK_FORMAT_R32_SFLOAT
- VK_FORMAT_D16_UNORM
- VK_FORMAT_X8_D24_UNORM_PACK32
- VK_FORMAT_D32_SFLOAT
- VK_FORMAT_D16_UNORM_S8_UINT
- VK_FORMAT_D24_UNORM_S8_UINT

- VK_FORMAT_D32_SFLOAT_S8_UINT

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If `filterMinmaxImageComponentMapping` is VK_FALSE the component mapping of the image view used with min/max filtering **must** have been created with the `r` component set to the identity swizzle. Only the `r` component of the sampled image value is defined; reading other component values results in poison. If `filterMinmaxImageComponentMapping` is VK_TRUE this restriction does not apply and image component mapping works as normal.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_FILTER_MINMAX_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceProtectedMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedNoFault;
} VkPhysicalDeviceProtectedMemoryProperties;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedNoFault` specifies how an implementation behaves when an application attempts to write to unprotected memory in a protected queue operation, read from protected memory in an unprotected queue operation, or perform a query in a protected queue operation. If this limit is VK_TRUE, such writes will be discarded or have undefined values written; reads and queries will return poison. If this limit is VK_FALSE, applications **must** not perform these operations. See Protected Memory Access Rules for more information.

If the `VkPhysicalDeviceProtectedMemoryProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES`

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceMaintenance3Properties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPerSetDescriptors;
    VkDeviceSize       maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to VkPhysicalDeviceMaintenance3Properties
typedef VkPhysicalDeviceMaintenance3Properties
VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPerSetDescriptors` is a maximum number of descriptors (summed over all descriptor types) in a single descriptor set that is guaranteed to satisfy any implementation-dependent constraints on the size of a descriptor set itself. Applications **can** query whether a descriptor set that goes beyond this limit is supported using vkGetDescriptorSetLayoutSupport.
- `maxMemoryAllocationSize` is the maximum size of a memory allocation that **can** be created, even if there is more space available in the heap. If VkMemoryAllocateInfo::`allocationSize` is larger the error VK_ERROR_OUT_OF_DEVICE_MEMORY **may** be returned.

If the `VkPhysicalDeviceMaintenance3Properties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance3Properties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_3_PROPERTIES

The `VkPhysicalDeviceMaintenance4Properties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Properties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       maxBufferSize;
} VkPhysicalDeviceMaintenance4Properties;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkPhysicalDeviceMaintenance4Properties
typedef VkPhysicalDeviceMaintenance4Properties
VkPhysicalDeviceMaintenance4PropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxBufferSize` is the maximum size of a `VkBuffer` that **can** be created.

If the `VkPhysicalDeviceMaintenance4Properties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Properties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceMaintenance5Properties structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance5Properties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           earlyFragmentMultisampleCoverageAfterSampleCounting;
    VkBool32           earlyFragmentSampleMaskTestBeforeSampleCounting;
    VkBool32           depthStencilSwizzleOneSupport;
    VkBool32           polygonModePointSize;
    VkBool32           nonStrictSinglePixelWideLinesUseParallelogram;
    VkBool32           nonStrictWideLinesUseParallelogram;
} VkPhysicalDeviceMaintenance5Properties;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Properties
typedef VkPhysicalDeviceMaintenance5Properties
VkPhysicalDeviceMaintenance5PropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- earlyFragmentMultisampleCoverageAfterSampleCounting is a boolean value indicating whether the fragment shading and multisample coverage operations are performed after sample counting for fragment shaders with EarlyFragmentTests execution mode.
- earlyFragmentSampleMaskTestBeforeSampleCounting is a boolean value indicating whether the sample mask test operation is performed before sample counting for fragment shaders using the EarlyFragmentTests execution mode.
- depthStencilSwizzleOneSupport is a boolean indicating that depth/stencil texturing operations with VK_COMPONENT_SWIZZLE_ONE have defined behavior.
- polygonModePointSize is a boolean value indicating whether the point size of the final rasterization of polygons with VK_POLYGON_MODE_POINT is controlled by PointSize.
- nonStrictSinglePixelWideLinesUseParallelogram is a boolean value indicating whether non-strict lines with a width of 1.0 are rasterized as parallelograms or using Bresenham's algorithm.
- nonStrictWideLinesUseParallelogram is a boolean value indicating whether non-strict lines with a width greater than 1.0 are rasterized as parallelograms or using Bresenham's algorithm.

If the VkPhysicalDeviceMaintenance5Properties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5Properties-sType-sType

sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES

The VkPhysicalDeviceMaintenance6Properties structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Properties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           blockTexelViewCompatibleMultipleLayers;
    uint32_t           maxCombinedImageSamplerDescriptorCount;
    VkBool32           fragmentShadingRateClampCombinerInputs;
} VkPhysicalDeviceMaintenance6Properties;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Properties
typedef VkPhysicalDeviceMaintenance6Properties
VkPhysicalDeviceMaintenance6PropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- blockTexelViewCompatibleMultipleLayers is a boolean value indicating that an implementation supports creating image views with VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT where the layerCount member of subresourceRange is greater than 1.
- maxCombinedImageSamplerDescriptorCount is the maximum number of descriptors that the implementation uses for sampled images with $Y'C_BC_R$ conversion.
- fragmentShadingRateClampCombinerInputs is a boolean value indicating that an implementation clamps the inputs to combiner operations.

If the VkPhysicalDeviceMaintenance6Properties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6Properties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_6_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceMaintenance7PropertiesKHR structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustFragmentShadingRateAttachmentAccess;
    VkBool32           separateDepthStencilAttachmentAccess;
    uint32_t           maxDescriptorSetTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetTotalBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalBuffersDynamic;
} VkPhysicalDeviceMaintenance7PropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- robustFragmentShadingRateAttachmentAccess indicates whether the scaled size of a fragment shading rate attachment **can** be less than the size of the render area. If robustFragmentShadingRateAttachmentAccess is VK_FALSE, the size of the attachment multiplied by the texel size **must** be greater than or equal to the size of the render area. If it is VK_TRUE and the fragment shading rate attachment was created with VkImageSubresourceRange ::baseMipLevel equal to 0, the scaled size **can** be smaller than the render area, with missing shading rates defined by out of bounds behavior.
- separateDepthStencilAttachmentAccess indicates support for writing to one aspect of a depth/stencil attachment without performing read-modify-write operations on the other aspect. If this property is VK_TRUE, writes to one aspect **must** not result in read-modify-write operations on the other aspect. If VK_FALSE, writes to one aspect **may** result in writes to the other aspect as defined by render pass load operations, render pass store operations and render pass resolve operations.
- maxDescriptorSetTotalUniformBuffersDynamic is the maximum total count of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Uniform Buffer.
- maxDescriptorSetTotalStorageBuffersDynamic is the maximum total count of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of

VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Storage Buffer.

- maxDescriptorSetTotalBuffersDynamic is the maximum total count of dynamic uniform buffers and storage buffers that **can** be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic is similar to maxDescriptorSetTotalUniformBuffersDynamic but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include dynamic uniform buffer descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit has no practical effect and **may** be zero.
- maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic is similar to maxDescriptorSetTotalStorageBuffersDynamic but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include dynamic storage buffer descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit has no practical effect and **may** be zero.
- maxDescriptorSetUpdateAfterBindTotalBuffersDynamic is similar to maxDescriptorSetTotalBuffersDynamic but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate dynamic uniform/storage buffer descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include dynamic uniform/storage buffer descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit has no practical effect and **may** be zero.

If the VkPhysicalDeviceMaintenance7PropertiesKHR structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance7PropertiesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_7_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesListKHR {
    VkStructureType                               sType;
    void*                                         pNext;
    uint32_t                                      layeredApiCount;
    VkPhysicalDeviceLayeredApiPropertiesKHR*      pLayeredApis;
} VkPhysicalDeviceLayeredApiPropertiesListKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `layeredApiCount` is an integer related to the number of layered implementations underneath the Vulkan physical device, as described below.
- `pLayeredApis` is a pointer to an array of VkPhysicalDeviceLayeredApiPropertiesKHR in which information regarding the layered implementations underneath the Vulkan physical device is returned.

If `pLayeredApis` is `NULL`, then the number of layered implementations that are underneath the top-most Vulkan physical device (i.e. the one returned by vkGetPhysicalDeviceProperties2) is returned in `layeredApiCount`. Otherwise, `layeredApiCount` **must** be set by the application to the number of elements in the `pLayeredApis` array, and on return is overwritten with the number of values actually written to `pLayeredApis`. If the value of `layeredApiCount` is less than the number of layered implementations underneath the Vulkan physical device, at most `layeredApiCount` values will be written to `pLayeredApis`. An implementation that is not a layer will return 0 in `layeredApiCount`.

In the presence of multiple layered implementations, each element of `pLayeredApis` corresponds to an API implementation that is implemented on top of the API at the previous index. If there are layered implementations underneath a non-Vulkan implementation, they may not be visible in this query as the corresponding APIs may lack such a query.

If the `VkPhysicalDeviceLayeredApiPropertiesListKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with

each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_LIST_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-pLayeredApis-parameter
  If `layeredApiCount` is not `0`, and `pLayeredApis` is not `NULL`, `pLayeredApis` **must** be a valid pointer to an array of `layeredApiCount` VkPhysicalDeviceLayeredApiPropertiesKHR structures

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceLayeredApiPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesKHR {
    VkStructureType                 sType;
    void*                           pNext;
    uint32_t                        vendorID;
    uint32_t                        deviceID;
    VkPhysicalDeviceLayeredApiKHR   layeredAPI;
    char                            deviceName[VK_MAX_PHYSICAL_DEVICE_NAME_SIZE];
} VkPhysicalDeviceLayeredApiPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vendorID` is a unique identifier for the vendor of the layered implementation.
- `deviceID` is a unique identifier for the layered implementation among devices available from the vendor.
- `layeredAPI` is a VkPhysicalDeviceLayeredApiKHR specifying the API implemented by the layered implementation.
- `deviceName` is an array of `VK_MAX_PHYSICAL_DEVICE_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the device.

If `layeredAPI` is `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR`, additional Vulkan-specific information can be queried by including the VkPhysicalDeviceLayeredApiVulkanPropertiesKHR structure in the `pNext` chain. Otherwise if such a structure is included in the `pNext` chain, it is ignored.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

The list of possible API implementations of a layered implementation underneath the Vulkan physical device, as returned in `VkPhysicalDeviceLayeredApiPropertiesKHR`::`layeredAPI`, are:

```
// Provided by VK_KHR_maintenance7
typedef enum VkPhysicalDeviceLayeredApiKHR {
    VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR = 0,
    VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR = 1,
    VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR = 2,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR = 3,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGLES_KHR = 4,
} VkPhysicalDeviceLayeredApiKHR;
```

- `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR` - the device implements the Vulkan API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR` - the device implements the D3D12 API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR` - the device implements the Metal API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR` - the device implements the OpenGL API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGLES_KHR` - the device implements the OpenGL ES API.

The `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiVulkanPropertiesKHR {
    VkStructureType                sType;
    void*                          pNext;
    VkPhysicalDeviceProperties2    properties;
} VkPhysicalDeviceLayeredApiVulkanPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `properties` is a `VkPhysicalDeviceProperties2` in which properties of the underlying layered Vulkan implementation are returned.

The implementation **must** zero-fill the contents of `properties.properties.limits` and `properties.properties.sparseProperties`.

Valid Usage

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-pNext-10011
  Only VkPhysicalDeviceDriverProperties and VkPhysicalDeviceIDProperties are allowed in the `pNext` chain of `properties`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_VULKAN_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceLayeredApiPropertiesKHR

The `VkPhysicalDeviceMaintenance9PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9PropertiesKHR {
    VkStructureType                    sType;
    void*                              pNext;
    VkBool32                           image2DViewOf3DSparse;
    VkDefaultVertexAttributeValueKHR   defaultVertexAttributeValue;
} VkPhysicalDeviceMaintenance9PropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- If the `image2DViewOf3D` feature is enabled, `image2DViewOf3DSparse` indicates whether the implementation supports binding a slice of a sparse 3D image to a 2D image view.
- `defaultVertexAttributeValue` is a VkDefaultVertexAttributeValueKHR that indicates what value the implementation will return when the vertex shader reads unbound vertex attributes. Unbound attributes are those that have no corresponding VkVertexInputAttributeDescription ::`location` defined in the bound graphics pipeline or no corresponding VkVertexInputAttributeDescription2EXT::`location` set by the most recent call to vkCmdSetVertexInputEXT when the state is dynamic .

If the `VkPhysicalDeviceMaintenance9PropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with

each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance9PropertiesKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_PROPERTIES_KHR`

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The possible values returned by the implementation when the vertex shader reads an unbound vertex attribute are:

```
// Provided by VK_KHR_maintenance9
typedef enum VkDefaultVertexAttributeValueKHR {
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR = 0,
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR = 1,
} VkDefaultVertexAttributeValueKHR;
```

- VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR - the value read for an unbound vertex attribute is (0,0,0,0).
- VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR - the value read for an unbound vertex attribute is (0,0,0,1).

The `VkPhysicalDeviceMaintenance10PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rgba4OpaqueBlackSwizzled;
    VkBool32           resolveSrgbFormatAppliesTransferFunction;
    VkBool32           resolveSrgbFormatSupportsTransferFunctionControl;
} VkPhysicalDeviceMaintenance10PropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rgba4OpaqueBlackSwizzled` indicates whether correct swizzling is applied to the opaque black border color when using either the VK_FORMAT_B4G4R4A4_UNORM_PACK16 or VK_FORMAT_R4G4B4A4_UNORM_PACK16 format. If it is VK_TRUE, the implementation will correctly produce an opaque black border color with these formats. If it is VK_FALSE, the

implementation **may** swap the first channel with the alpha channel for the border color when sampling.

- `resolveSrgbFormatAppliesTransferFunction` indicates whether resolving a multi-sampled sRGB format to single-sampled sRGB by a weighted average converts the samples to linear before averaging. This applies to both attachment resolves in a render pass and standalone resolve commands. If VK_TRUE, implementation always converts to linear before averaging unless overridden. If VK_FALSE, implementation never converts to linear before averaging unless overridden.
- `resolveSrgbFormatSupportsTransferFunctionControl` indicates whether the implementation supports overriding the default behavior in `resolveSrgbFormatAppliesTransferFunction` in render passes and vkCmdResolveImage2.

Implementations supporting `maintenance10` **should** set `resolveSrgbFormatAppliesTransferFunction` to VK_TRUE.

If the `VkPhysicalDeviceMaintenance10PropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance10PropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_10_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceMeshShaderPropertiesNV` structure is defined as:

```
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDrawMeshTasksCount;
    uint32_t           maxTaskWorkGroupInvocations;
    uint32_t           maxTaskWorkGroupSize[3];
    uint32_t           maxTaskTotalMemorySize;
    uint32_t           maxTaskOutputCount;
    uint32_t           maxMeshWorkGroupInvocations;
    uint32_t           maxMeshWorkGroupSize[3];
    uint32_t           maxMeshTotalMemorySize;
    uint32_t           maxMeshOutputVertices;
    uint32_t           maxMeshOutputPrimitives;
    uint32_t           maxMeshMultiviewViewCount;
    uint32_t           meshOutputPerVertexGranularity;
    uint32_t           meshOutputPerPrimitiveGranularity;
} VkPhysicalDeviceMeshShaderPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxDrawMeshTasksCount` is the maximum number of local workgroups that **can** be launched by a single draw mesh tasks command. See Programmable Mesh Shading.
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxTaskWorkGroupSize`[3] is the maximum size of a local task workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskTotalMemorySize` is the maximum number of bytes that the task shader can use in total for shared and output memory combined.
- `maxTaskOutputCount` is the maximum number of output tasks a single task shader workgroup can emit.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxMeshWorkGroupSize`[3] is the maximum size of a local mesh workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.

- `maxMeshTotalMemorySize` is the maximum number of bytes that the mesh shader can use in total for shared and output memory combined.
- `maxMeshOutputVertices` is the maximum number of vertices a mesh shader output can store.
- `maxMeshOutputPrimitives` is the maximum number of primitives a mesh shader output can store.
- `maxMeshMultiviewViewCount` is the maximum number of multiview views a mesh shader can use.
- `meshOutputPerVertexGranularity` is the granularity with which mesh vertex outputs are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity with which mesh outputs qualified as per-primitive are allocated. The value can be used to compute the memory size used by the mesh shader, which **must** be less than or equal to `maxMeshTotalMemorySize`.

If the `VkPhysicalDeviceMeshShaderPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

    uint32_t           maxPreferredTaskWorkGroupInvocations;
    uint32_t           maxPreferredMeshWorkGroupInvocations;
    VkBool32           prefersLocalInvocationVertexOutput;
    VkBool32           prefersLocalInvocationPrimitiveOutput;
    VkBool32           prefersCompactVertexOutput;
    VkBool32           prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure describe the following implementation-dependent limits:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTaskWorkGroupTotalCount` is the maximum number of local workgroups that **can** be launched for a task shader by a mesh tasks drawing command.
- `maxTaskWorkGroupCount`[3] is the maximum number of local workgroups that **can** be launched for a task shader in each dimension by a mesh tasks drawing command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the drawing commands **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxTaskWorkGroupTotalCount`.

- maxTaskWorkGroupInvocations is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, **must** be less than or equal to this limit.
- maxTaskWorkGroupSize[3] is the maximum size of a local workgroup for a task shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, **must** be less than or equal to the corresponding limit.
- maxTaskPayloadSize is the maximum total storage size, in bytes, available for variables declared with the TaskPayloadWorkgroupEXT storage class in shader modules in the task shader stage.
- maxTaskSharedMemorySize is the maximum total storage size, in bytes, available for variables declared with the Workgroup storage class in shader modules in the task shader stage.
- maxTaskPayloadAndSharedMemorySize is the maximum total storage size, in bytes, available for variables that are declared with the TaskPayloadWorkgroupEXT or Workgroup storage class, in shader modules in the task shader stage.
- maxMeshWorkGroupTotalCount is the maximum number of local workgroups that **can** be launched for a mesh shader, either directly by a mesh tasks drawing command, or emitted by a single task shader workgroup.
- maxMeshWorkGroupCount[3] is the maximum number of local workgroups that **can** be launched for a mesh shader in each dimension, either directly by a mesh tasks drawing command, or emitted by a single task shader workgroup. These three values represent the maximum number of local output tasks for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the OpEmitMeshTasksEXT **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to maxMeshWorkGroupTotalCount.
- maxMeshWorkGroupInvocations is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, **must** be less than or equal to this limit.
- maxMeshWorkGroupSize[3] is the maximum size of a local workgroup for a mesh shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, **must** be less than or equal to the corresponding limit.
- maxMeshSharedMemorySize is the maximum total storage size, in bytes, available for variables declared with the Workgroup storage class in shader modules in the mesh shader stage.
- maxMeshPayloadAndSharedMemorySize is the maximum total storage size, in bytes, available for variables that are declared with the TaskPayloadWorkgroupEXT or Workgroup storage class in shader modules in the mesh shader stage.
- maxMeshOutputMemorySize is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.
- maxMeshPayloadAndOutputMemorySize is the maximum total storage size, in bytes, available for

variables that are declared with the TaskPayloadWorkgroupEXT storage class, or output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.

- maxMeshOutputComponents is the maximum number of components of output variables which **can** be output from the mesh shader stage.
- maxMeshOutputVertices is the maximum number of vertices which **can** be emitted by a single mesh shader workgroup.
- maxMeshOutputPrimitives is the maximum number of primitives which **can** be emitted by a single mesh shader workgroup.
- maxMeshOutputLayers is one greater than the maximum layer index that **can** be output from the mesh shader stage.
- maxMeshMultiviewViewCount is one greater than the maximum view index that **can** be used by any mesh shader.
- meshOutputPerVertexGranularity is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to maxMeshOutputMemorySize.
- meshOutputPerPrimitiveGranularity is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to maxMeshOutputMemorySize.
- maxPreferredTaskWorkGroupInvocations is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.
- maxPreferredMeshWorkGroupInvocations is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.
- prefersLocalInvocationVertexOutput specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches LocalInvocationIndex.
- prefersLocalInvocationPrimitiveOutput specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches LocalInvocationIndex.
- prefersCompactVertexOutput specifies whether output vertices should be compacted after custom culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.
- prefersCompactPrimitiveOutput specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of CullPrimitiveEXT may be better.

If the VkPhysicalDeviceMeshShaderPropertiesEXT structure is included in the pNext chain of VkPhysicalDeviceProperties2, it is filled with the implementation-dependent limits.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceDescriptorIndexingProperties structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxUpdateAfterBindDescriptorsInAllPools;
    VkBool32           shaderUniformBufferArrayNonUniformIndexingNative;
    VkBool32           shaderSampledImageArrayNonUniformIndexingNative;
    VkBool32           shaderStorageBufferArrayNonUniformIndexingNative;
    VkBool32           shaderStorageImageArrayNonUniformIndexingNative;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexingNative;
    VkBool32           robustBufferAccessUpdateAfterBind;
    VkBool32           quadDivergentImplicitLod;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSamplers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindUniformBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageBuffers;
    uint32_t           maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t           maxPerStageUpdateAfterBindResources;
    uint32_t           maxDescriptorSetUpdateAfterBindSamplers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindSampledImages;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageImages;
    uint32_t           maxDescriptorSetUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingProperties
typedef VkPhysicalDeviceDescriptorIndexingProperties
VkPhysicalDeviceDescriptorIndexingPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxUpdateAfterBindDescriptorsInAllPools` is the maximum number of descriptors (summed over all descriptor types) that **can** be created across all pools that are created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit set. Pool creation **may** fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.
- `shaderUniformBufferArrayNonUniformIndexingNative` is a boolean value indicating whether uniform buffer descriptors natively support non-uniform indexing. If this is VK_FALSE, then a single dynamic instance of an instruction that non-uniformly indexes an array of uniform buffers **may** execute multiple times in order to access all the descriptors.
- `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support non-uniform indexing. If this is VK_FALSE, then a single dynamic instance of an instruction that non-uniformly indexes an array of samplers or images **may** execute multiple times in order to access all the descriptors.
- `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support non-uniform indexing. If this is VK_FALSE, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage buffers **may** execute multiple times in order to access all the descriptors.
- `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support non-uniform indexing. If this is VK_FALSE, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage images **may** execute multiple times in order to access all the descriptors.
- `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support non-uniform indexing. If this is VK_FALSE, then a single dynamic instance of an instruction that non-uniformly indexes an array of input attachments **may** execute multiple times in order to access all the descriptors.
- `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether `robustBufferAccess` **can** be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is VK_FALSE, then either `robustBufferAccess` **must** be disabled or all of these update-after-bind features **must** be disabled. Similarly, if this property is VK_FALSE, robustness **must** not be enabled through the VkPipelineRobustnessCreateInfo mechanism.
- `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See Derivative Image Operations.
- `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- `maxPerStageDescriptorUpdateAfterBindStorageBuffers` is similar to `maxPerStageDescriptorStorageBuffers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxPerStageDescriptorUpdateAfterBindSampledImages` is similar to `maxPerStageDescriptorSampledImages` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageImages` is similar to `maxPerStageDescriptorStorageImages` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxPerStageDescriptorUpdateAfterBindInputAttachments` is similar to `maxPerStageDescriptorInputAttachments` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxPerStageUpdateAfterBindResources` is similar to `maxPerStageResources` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindSamplers` is similar to `maxDescriptorSetSamplers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffers` is similar to `maxDescriptorSetUniformBuffers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` is similar to `maxDescriptorSetUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include dynamic uniform buffer descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit has no practical effect and **may** be zero.
- `maxDescriptorSetUpdateAfterBindStorageBuffers` is similar to `maxDescriptorSetStorageBuffers` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindStorageBuffersDynamic` is similar to `maxDescriptorSetStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include dynamic storage buffer descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit has no practical effect and **may** be zero.

- `maxDescriptorSetUpdateAfterBindSampledImages` is similar to `maxDescriptorSetSampledImages` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindStorageImages` is similar to `maxDescriptorSetStorageImages` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application **can** allocate input attachment descriptors from a pool created with VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT, and **can** include input attachment descriptors in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors **must** not be created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. Therefore this limit only exists to allow implementations exposing a higher limit for input attachment descriptors in a pipeline layout including any descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT than in a pipeline layout not including any descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT and **may** be zero to indicate that only the `maxDescriptorSetInputAttachments` applies.

If the `VkPhysicalDeviceDescriptorIndexingProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceInlineUniformBlockProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxInlineUniformBlockSize;
    uint32_t           maxPerStageDescriptorInlineUniformBlocks;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t           maxDescriptorSetInlineUniformBlocks;
    uint32_t           maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

```
// Provided by VK_EXT_inline_uniform_block
// Equivalent to VkPhysicalDeviceInlineUniformBlockProperties
typedef VkPhysicalDeviceInlineUniformBlockProperties
VkPhysicalDeviceInlineUniformBlockPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockSize` is the maximum size in bytes of an inline uniform block binding.
- `maxPerStageDescriptorInlineUniformBlocks` is the maximum number of inline uniform block bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks` is similar to `maxPerStageDescriptorInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `maxDescriptorSetInlineUniformBlocks` is the maximum number of inline uniform block bindings that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindInlineUniformBlocks` is similar to `maxDescriptorSetInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

If the `VkPhysicalDeviceInlineUniformBlockProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_PROPERTIES`

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    float              primitiveOverestimationSize;
    float              maxExtraPrimitiveOverestimationSize;
    float              extraPrimitiveOverestimationSizeGranularity;
    VkBool32           primitiveUnderestimation;
    VkBool32           conservativePointAndLineRasterization;
    VkBool32           degenerateTrianglesRasterized;
    VkBool32           degenerateLinesRasterized;
    VkBool32           fullyCoveredFragmentShaderInputVariable;
    VkBool32           conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveOverestimationSize` is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations **may** make the pixel coverage area even more conservative by increasing the size of the generating primitive.
- `maxExtraPrimitiveOverestimationSize` is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the generating primitive during conservative rasterization overestimation.
- `extraPrimitiveOverestimationSizeGranularity` is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and `maxExtraPrimitiveOverestimationSize` inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero

value in the screen space pixel fixed-point grid.

- `primitiveUnderestimation` is VK_TRUE if the implementation supports the VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT conservative rasterization mode in addition to VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT. Otherwise the implementation only supports VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT.
- `conservativePointAndLineRasterization` is VK_TRUE if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.
- `degenerateTrianglesRasterized` is VK_FALSE if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. `degenerateTrianglesRasterized` is VK_TRUE if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application **can** enable backface culling if desired.
- `degenerateLinesRasterized` is VK_FALSE if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. `degenerateLinesRasterized` is VK_TRUE if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.
- `fullyCoveredFragmentShaderInputVariable` is VK_TRUE if the implementation supports the SPIR-V builtin fragment shader input variable `FullyCoveredEXT` specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.
- `conservativeRasterizationPostDepthCoverage` is VK_TRUE if the implementation supports conservative rasterization with the `PostDepthCoverage` execution mode enabled. Otherwise the `PostDepthCoverage` execution mode **must** not be used when conservative rasterization is enabled.

If the `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceConservativeRasterizationPropertiesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONSERVATIVE_RASTERIZATION_PROPERTIES_EXT

Structure Chaining

The VkPhysicalDeviceShaderSplitBarrierPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_shader_split_barrier
typedef struct VkPhysicalDeviceShaderSplitBarrierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           splitBarrierReservedSharedMemory;
} VkPhysicalDeviceShaderSplitBarrierPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- splitBarrierReservedSharedMemory is the number of bytes of shared memory reserved for the implementation when the module executes OpControlBarrierArriveEXT or OpControlBarrierWaitEXT instructions.

If the VkPhysicalDeviceShaderSplitBarrierPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSplitBarrierPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SPLIT_BARRIER_PROPERTIES_EXT

Structure Chaining

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceFragmentDensityMapPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         minFragmentDensityTexelSize;
    VkExtent2D         maxFragmentDensityTexelSize;
    VkBool32           fragmentDensityInvocations;
} VkPhysicalDeviceFragmentDensityMapPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `minFragmentDensityTexelSize` is the minimum fragment density texel size.
- `maxFragmentDensityTexelSize` is the maximum fragment density texel size.
- `fragmentDensityInvocations` specifies whether the implementation **may** invoke additional fragment shader invocations for each covered sample.

If the `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2PropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subsampledLoads;
    VkBool32           subsampledCoarseReconstructionEarlyAccess;
    uint32_t           maxSubsampledArrayLayers;
    uint32_t           maxDescriptorSetSubsampledSamplers;
} VkPhysicalDeviceFragmentDensityMap2PropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subsampledLoads` specifies if performing image data read with load operations on subsampled attachments will be resampled to the fragment density of the render pass.
- `subsampledCoarseReconstructionEarlyAccess` specifies if performing image data read with samplers created with `flags` containing VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT in fragment shader will trigger additional reads during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT.
- `maxSubsampledArrayLayers` is the maximum number of VkImageView array layers for usages supporting subsampled samplers.
- `maxDescriptorSetSubsampledSamplers` is the maximum number of subsampled samplers that **can**

be included in a VkPipelineLayout.

If the VkPhysicalDeviceFragmentDensityMap2PropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2PropertiesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         fragmentDensityOffsetGranularity;
} VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT;
```

```
// Provided by VK_QCOM_fragment_density_map_offset
// Equivalent to VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT
typedef VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT
VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentDensityOffsetGranularity is the granularity for fragment density offsets.

If the VkPhysicalDeviceFragmentDensityMapOffsetPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The VkPhysicalDeviceFragmentDensityMapLayeredPropertiesVALVE structure is defined as:

```
// Provided by VK_VALVE_fragment_density_map_layered
typedef struct VkPhysicalDeviceFragmentDensityMapLayeredPropertiesVALVE {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxFragmentDensityMapLayers;
} VkPhysicalDeviceFragmentDensityMapLayeredPropertiesVALVE;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxFragmentDensityMapLayers is the maximum number of layers to use with a layered fragment density map.

If the VkPhysicalDeviceFragmentDensityMapLayeredPropertiesVALVE structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapLayeredPropertiesVALVE-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_LAYERED_PROPERTIES_VALVE

The VkPhysicalDeviceTileMemoryHeapPropertiesQCOM structure is defined as:

```
// Provided by VK_QCOM_tile_memory_heap
typedef struct VkPhysicalDeviceTileMemoryHeapPropertiesQCOM {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           queueSubmitBoundary;
    VkBool32           tileBufferTransfers;
} VkPhysicalDeviceTileMemoryHeapPropertiesQCOM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueSubmitBoundary` is a boolean describing if tile memory becomes undefined at a queue submit boundary instead of the default command buffer submission batch boundary.
- `tileBufferTransfers` is a boolean describing if buffers bound to tile memory support transfer operations.

If the `VkPhysicalDeviceTileMemoryHeapPropertiesQCOM` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTileMemoryHeapPropertiesQCOM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_MEMORY_HEAP_PROPERTIES_QCOM

Structure Chaining

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShaderCorePropertiesAMD` structure is defined as:

```
// Provided by VK_AMD_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesAMD {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderEngineCount;
    uint32_t           shaderArraysPerEngineCount;
    uint32_t           computeUnitsPerShaderArray;
    uint32_t           simdPerComputeUnit;
    uint32_t           wavefrontsPerSimd;
    uint32_t           wavefrontSize;
    uint32_t           sgprsPerSimd;
    uint32_t           minSgprAllocation;
    uint32_t           maxSgprAllocation;
    uint32_t           sgprAllocationGranularity;
    uint32_t           vgprsPerSimd;
    uint32_t           minVgprAllocation;
    uint32_t           maxVgprAllocation;
    uint32_t           vgprAllocationGranularity;
} VkPhysicalDeviceShaderCorePropertiesAMD;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderEngineCount` is an unsigned integer value indicating the number of shader engines found inside the shader core of the physical device.
- `shaderArraysPerEngineCount` is an unsigned integer value indicating the number of shader arrays inside a shader engine. Each shader array has its own scan converter, set of compute units, and a render back end (color and depth attachments). Shader arrays within a shader engine share shader processor input (wave launcher) and shader export (export buffer) units. Currently, a shader engine can have one or two shader arrays.
- `computeUnitsPerShaderArray` is an unsigned integer value indicating the physical number of compute units within a shader array. The active number of compute units in a shader array **may** be lower. A compute unit houses a set of SIMDs along with a sequencer module and a local data store.
- `simdPerComputeUnit` is an unsigned integer value indicating the number of SIMDs inside a compute unit. Each SIMD processes a single instruction at a time.
- `wavefrontSize` is an unsigned integer value indicating the maximum size of a subgroup.
- `sgprsPerSimd` is an unsigned integer value indicating the number of physical Scalar General-Purpose Registers (SGPRs) per SIMD.
- `minSgprAllocation` is an unsigned integer value indicating the minimum number of SGPRs allocated for a wave.
- `maxSgprAllocation` is an unsigned integer value indicating the maximum number of SGPRs allocated for a wave.
- `sgprAllocationGranularity` is an unsigned integer value indicating the granularity of SGPR allocation for a wave.

- vgprsPerSimd is an unsigned integer value indicating the number of physical Vector General-Purpose Registers (VGPRs) per SIMD.
- minVgprAllocation is an unsigned integer value indicating the minimum number of VGPRs allocated for a wave.
- maxVgprAllocation is an unsigned integer value indicating the maximum number of VGPRs allocated for a wave.
- vgprAllocationGranularity is an unsigned integer value indicating the granularity of VGPR allocation for a wave.

If the VkPhysicalDeviceShaderCorePropertiesAMD structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesAMD-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_AMD

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceShaderCoreProperties2AMD structure is defined as:

```
// Provided by VK_AMD_shader_core_properties2
typedef struct VkPhysicalDeviceShaderCoreProperties2AMD {
    VkStructureType                   sType;
    void*                             pNext;
    VkShaderCorePropertiesFlagsAMD    shaderCoreFeatures;
    uint32_t                          activeComputeUnitCount;
} VkPhysicalDeviceShaderCoreProperties2AMD;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderCoreFeatures is a bitmask of VkShaderCorePropertiesFlagBitsAMD indicating the set of features supported by the shader core.
- activeComputeUnitCount is an unsigned integer value indicating the number of compute units that have been enabled.

If the VkPhysicalDeviceShaderCoreProperties2AMD structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with

each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreProperties2AMD-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_2_AMD`

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

Bits for this type **may** be defined by future extensions, or new versions of the `VK_AMD_shader_core_properties2` extension. Possible values of the `flags` member of VkShaderCorePropertiesFlagsAMD are:

```
// Provided by VK_AMD_shader_core_properties2
typedef enum VkShaderCorePropertiesFlagBitsAMD {
} VkShaderCorePropertiesFlagBitsAMD;
```

```
// Provided by VK_AMD_shader_core_properties2
typedef VkFlags VkShaderCorePropertiesFlagsAMD;
```

`VkShaderCorePropertiesFlagsAMD` is a bitmask type for providing zero or more VkShaderCorePropertiesFlagBitsAMD.

The `VkPhysicalDeviceDepthStencilResolveProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType       sType;
    void*                 pNext;
    VkResolveModeFlags    supportedDepthResolveModes;
    VkResolveModeFlags    supportedStencilResolveModes;
    VkBool32              independentResolveNone;
    VkBool32              independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

```
// Provided by VK_KHR_depth_stencil_resolve
// Equivalent to VkPhysicalDeviceDepthStencilResolveProperties
typedef VkPhysicalDeviceDepthStencilResolveProperties
VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedDepthResolveModes` is a bitmask of VkResolveModeFlagBits indicating the set of supported depth resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT **must** be included in the set but implementations **may** support additional modes.
- `supportedStencilResolveModes` is a bitmask of VkResolveModeFlagBits indicating the set of supported stencil resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT **must** be included in the set but implementations **may** support additional modes. VK_RESOLVE_MODE_AVERAGE_BIT **must** not be included in the set.
- `independentResolveNone` is VK_TRUE if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is VK_RESOLVE_MODE_NONE. Otherwise the implementation only supports setting both modes to the same value.
- `independentResolve` is VK_TRUE if the implementation supports all combinations of the supported depth and stencil resolve modes, including setting either depth or stencil resolve mode to VK_RESOLVE_MODE_NONE. An implementation that supports `independentResolve` **must** also support `independentResolveNone`.

If the `VkPhysicalDeviceDepthStencilResolveProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthStencilResolveProperties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_STENCIL_RESOLVE_PROPERTIES

Structure Chaining

Extends the structure

The `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           allowCommandBufferQueryCopies;
} VkPhysicalDevicePerformanceQueryPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allowCommandBufferQueryCopies` is VK_TRUE if the performance query pools are allowed to be used with vkCmdCopyQueryPoolResults.

If the `VkPhysicalDevicePerformanceQueryPropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceQueryPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is defined as:

```
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImagePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         shadingRateTexelSize;
    uint32_t           shadingRatePaletteSize;
    uint32_t           shadingRateMaxCoarseSamples;
} VkPhysicalDeviceShadingRateImagePropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shadingRateTexelSize` indicates the width and height of the portion of the framebuffer corresponding to each texel in the shading rate image.
- `shadingRatePaletteSize` indicates the maximum number of palette entries supported for the

shading rate image.

- `shadingRateMaxCoarseSamples` specifies the maximum number of coverage samples supported in a single fragment. If the product of the fragment size derived from the base shading rate and the number of coverage samples per pixel exceeds this limit, the final shading rate will be adjusted so that its product does not exceed the limit.

If the `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

These properties are related to the shading rate image feature.

Valid Usage (Implicit)

The `VkPhysicalDeviceMemoryDecompressionPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionPropertiesEXT {
    VkStructureType                       sType;
    void*                                 pNext;
    VkMemoryDecompressionMethodFlagsEXT   decompressionMethods;
    uint64_t                              maxDecompressionIndirectCount;
} VkPhysicalDeviceMemoryDecompressionPropertiesEXT;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkPhysicalDeviceMemoryDecompressionPropertiesEXT
typedef VkPhysicalDeviceMemoryDecompressionPropertiesEXT
VkPhysicalDeviceMemoryDecompressionPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decompressionMethods` is a bitmask of VkMemoryDecompressionMethodFlagBitsEXT specifying memory decompression methods supported by the implementation.
- `maxDecompressionIndirectCount` specifies the maximum supported count value identified by

either vkCmdDecompressMemoryIndirectCountEXT::maxDecompressionCount or the value specified in vkCmdDecompressMemoryIndirectCountEXT::indirectCommandsCountAddress.

If the memoryDecompression feature is supported, decompressionMethods **must** have at least one bit set.

If the VkPhysicalDeviceMemoryDecompressionPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionPropertiesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_PROPERTIES_EXT

Structure Chaining

The VkPhysicalDeviceTransformFeedbackPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTransformFeedbackStreams;
    uint32_t           maxTransformFeedbackBuffers;
    VkDeviceSize       maxTransformFeedbackBufferSize;
    uint32_t           maxTransformFeedbackStreamDataSize;
    uint32_t           maxTransformFeedbackBufferDataSize;
    uint32_t           maxTransformFeedbackBufferDataStride;
    VkBool32           transformFeedbackQueries;
    VkBool32           transformFeedbackStreamsLinesTriangles;
    VkBool32           transformFeedbackRasterizationStreamSelect;
    VkBool32           transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxTransformFeedbackStreams is the maximum number of vertex streams that can be output from geometry shaders declared with the GeometryStreams capability. If the implementation does not support VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams then maxTransformFeedbackStreams **must** be 1.
- maxTransformFeedbackBuffers is the maximum number of transform feedback buffers that can be

bound for capturing shader outputs from the last pre-rasterization shader stage.

- `maxTransformFeedbackBufferSize` is the maximum size that can be specified when binding a buffer for transform feedback in vkCmdBindTransformFeedbackBuffersEXT.
- `maxTransformFeedbackStreamDataSize` is the maximum amount of data in bytes for each vertex that is captured to one or more transform feedback buffers associated with a specific vertex stream.
- `maxTransformFeedbackBufferDataSize` is the maximum amount of data in bytes for each vertex that can be captured to a specific transform feedback buffer.
- `maxTransformFeedbackBufferDataStride` is the maximum stride between each capture of vertex data to the buffer.
- `transformFeedbackQueries` is VK_TRUE if the implementation supports the VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT query type. `transformFeedbackQueries` is VK_FALSE if queries of this type **cannot** be created.
- `transformFeedbackStreamsLinesTriangles` is VK_TRUE if the implementation supports the geometry shader `OpExecutionMode` of `OutputLineStrip` and `OutputTriangleStrip` in addition to `OutputPoints` when more than one vertex stream is output. If `transformFeedbackStreamsLinesTriangles` is VK_FALSE the implementation only supports an `OpExecutionMode` of `OutputPoints` when more than one vertex stream is output from the geometry shader.
- `transformFeedbackRasterizationStreamSelect` is VK_TRUE if the implementation supports the `GeometryStreams` SPIR-V capability and the application can use VkPipelineRasterizationStateStreamCreateInfoEXT to modify which vertex stream output is used for rasterization. Otherwise vertex stream `0` **must** always be used for rasterization.
- `transformFeedbackDraw` is VK_TRUE if the implementation supports the vkCmdDrawIndirectByteCountEXT function otherwise the function **must** not be called.

If the `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT

Structure Chaining

Extends the structure

The `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkQueueFlags       supportedQueues;
} VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR;
```

```
// Provided by VK_NV_copy_memory_indirect
// Equivalent to VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR
typedef VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR
VkPhysicalDeviceCopyMemoryIndirectPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedQueues` is a bitmask of VkQueueFlagBits indicating the types of queues on which indirect copy commands are supported. If a queue family supports any of the bits set in `supportedQueues`, then it **must** support at least one indirect copy command.

If the `indirectMemoryCopy` or `indirectMemoryToImageCopy` feature is supported, `supportedQueues` **must** return at least one supported queue type.

If the `VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceRayTracingPropertiesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing
typedef struct VkPhysicalDeviceRayTracingPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxTriangleCount;
    uint32_t           maxDescriptorSetAccelerationStructures;
} VkPhysicalDeviceRayTracingPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRecursionDepth` is the maximum number of levels of recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxTriangleCount` is the maximum number of triangles in all geometries in the bottom level acceleration structure.
- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that are allowed in a descriptor set.

Due to the fact that the geometry, instance, and triangle counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxTriangleCount` **must** not exceed 2^{32}-1.

If the `VkPhysicalDeviceRayTracingPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in VkPhysicalDeviceAccelerationStructurePropertiesKHR and VkPhysicalDeviceRayTracingPipelinePropertiesKHR.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPropertiesNV-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PROPERTIES_NV

Structure Chaining

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructurePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxGeometryCount;
    uint64_t           maxInstanceCount;
    uint64_t           maxPrimitiveCount;
    uint32_t           maxPerStageDescriptorAccelerationStructures;
    uint32_t           maxPerStageDescriptorUpdateAfterBindAccelerationStructures;
    uint32_t           maxDescriptorSetAccelerationStructures;
    uint32_t           maxDescriptorSetUpdateAfterBindAccelerationStructures;
    uint32_t           minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxPrimitiveCount` is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- `maxPerStageDescriptorAccelerationStructures` is the maximum number of acceleration structure bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindAccelerationStructures` is similar to `maxPerStageDescriptorAccelerationStructures` but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindAccelerationStructures` is similar to `maxDescriptorSetAccelerationStructures` but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- `minAccelerationStructureScratchOffsetAlignment` is the minimum **required** alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value **must** be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxPrimitiveCount` **must** not exceed 2^{32}-1.

If the `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in VkPhysicalDeviceRayTracingPropertiesNV.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRayRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint32_t           shaderGroupHandleCaptureReplaySize;
    uint32_t           maxRayDispatchInvocationCount;
    uint32_t           shaderGroupHandleAlignment;
    uint32_t           maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRayRecursionDepth` is the maximum number of levels of ray recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `shaderGroupHandleCaptureReplaySize` is the number of bytes for the information required to do capture and replay for shader group handles.
- `maxRayDispatchInvocationCount` is the maximum number of ray generation shader invocations which **may** be produced by a single vkCmdTraceRaysIndirectKHR or vkCmdTraceRaysKHR command.
- `shaderGroupHandleAlignment` is the **required** alignment in bytes for each entry in a shader binding table. The value **must** be a power of two.
- `maxRayHitAttributeSize` is the maximum size in bytes for a ray attribute structure.

If the `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in VkPhysicalDeviceRayTracingPropertiesNV.

Valid Usage (Implicit)

The VkPhysicalDeviceCooperativeMatrixPropertiesNV structure is defined as:

```
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesNV {
    VkStructureType       sType;
    void*                 pNext;
    VkShaderStageFlags    cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- cooperativeMatrixSupportedStages is a bitfield of VkShaderStageFlagBits describing the shader stages that cooperative matrix instructions are supported in. cooperativeMatrixSupportedStages will have the VK_SHADER_STAGE_COMPUTE_BIT bit set if any of the physical device's queues support VK_QUEUE_COMPUTE_BIT.

If the VkPhysicalDeviceCooperativeMatrixPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceCooperativeMatrix2PropertiesNV` structure is defined as:

```
// Provided by VK_NV_cooperative_matrix2
typedef struct VkPhysicalDeviceCooperativeMatrix2PropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           cooperativeMatrixWorkgroupScopeMaxWorkgroupSize;
    uint32_t           cooperativeMatrixFlexibleDimensionsMaxDimension;
    uint32_t           cooperativeMatrixWorkgroupScopeReservedSharedMemory;
} VkPhysicalDeviceCooperativeMatrix2PropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- cooperativeMatrixWorkgroupScopeMaxWorkgroupSize is the maximum number of invocations in a workgroup when the module uses OpTypeCooperativeMatrixKHR with Scope equal to Workgroup.
- cooperativeMatrixFlexibleDimensionsMaxDimension is the maximum supported dimension for cooperative matrix types when the cooperativeMatrixFlexibleDimensions feature is enabled.
- cooperativeMatrixWorkgroupScopeReservedSharedMemory is the number of bytes of shared memory reserved for the implementation when the module uses OpTypeCooperativeMatrixKHR with Scope equal to Workgroup.

If the VkPhysicalDeviceCooperativeMatrix2PropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The VkPhysicalDeviceCooperativeVectorPropertiesNV structure is defined as:

```
// Provided by VK_NV_cooperative_vector
typedef struct VkPhysicalDeviceCooperativeVectorPropertiesNV {
    VkStructureType       sType;
    void*                 pNext;
    VkShaderStageFlags    cooperativeVectorSupportedStages;
    VkBool32              cooperativeVectorTrainingFloat16Accumulation;
    VkBool32              cooperativeVectorTrainingFloat32Accumulation;
    uint32_t              maxCooperativeVectorComponents;
} VkPhysicalDeviceCooperativeVectorPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- cooperativeVectorSupportedStages is a bitfield of VkShaderStageFlagBits describing the shader stages that cooperative vector instructions are supported in. cooperativeVectorSupportedStages will have the VK_SHADER_STAGE_COMPUTE_BIT bit set if any of the physical device's queues support VK_QUEUE_COMPUTE_BIT.
- cooperativeVectorTrainingFloat16Accumulation is VK_TRUE if the implementation supports

cooperative vector training functions accumulating 16-bit floating-point results.

- `cooperativeVectorTrainingFloat32Accumulation` is VK_TRUE if the implementation supports cooperative vector training functions accumulating 32-bit floating-point results.
- `maxCooperativeVectorComponents` indicates the maximum number of components that **can** be in a cooperative vector.

If the `VkPhysicalDeviceCooperativeVectorPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeVectorPropertiesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_VECTOR_PROPERTIES_NV

The VkPhysicalDeviceShaderSMBuiltinsPropertiesNV structure is defined as:

```
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderSMCount;
    uint32_t           shaderWarpsPerSM;
} VkPhysicalDeviceShaderSMBuiltinsPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderSMCount is the number of SMs on the device.
- shaderWarpsPerSM is the maximum number of simultaneously executing warps on an SM.

If the VkPhysicalDeviceShaderSMBuiltinsPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSMBuiltinsPropertiesNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_PROPERTIES_NV

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceTexelBufferAlignmentProperties structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       storageTexelBufferOffsetAlignmentBytes;
    VkBool32           storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize       uniformTexelBufferOffsetAlignmentBytes;
    VkBool32           uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

```
// Provided by VK_EXT_texel_buffer_alignment
// Equivalent to VkPhysicalDeviceTexelBufferAlignmentProperties
typedef VkPhysicalDeviceTexelBufferAlignmentProperties
VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a storage texel buffer of any format. The value **must** be a power of two.
- `storageTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a storage texel buffer of any format.
- `uniformTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a uniform texel buffer of any format. The value **must** be a power of two.
- `uniformTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If the single texel alignment property is VK_FALSE, then the buffer view's offset **must** be aligned to the corresponding byte alignment value. If the single texel alignment property is VK_TRUE, then the buffer view's offset **must** be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on VkBufferViewCreateInfo::`format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits **must** not advertise a larger alignment than the required maximum minimum value of VkPhysicalDeviceLimits::`minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType
  `sType` **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES

The VkPhysicalDeviceTimelineSemaphoreProperties structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreProperties
typedef VkPhysicalDeviceTimelineSemaphoreProperties
VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxTimelineSemaphoreValueDifference indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or wait operations.

If the VkPhysicalDeviceTimelineSemaphoreProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV` structure is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxGraphicsShaderGroupCount;
    uint32_t           maxIndirectSequenceCount;
    uint32_t           maxIndirectCommandsTokenCount;
    uint32_t           maxIndirectCommandsStreamCount;
    uint32_t           maxIndirectCommandsTokenOffset;
    uint32_t           maxIndirectCommandsStreamStride;
    uint32_t           minSequencesCountBufferOffsetAlignment;
    uint32_t           minSequencesIndexBufferOffsetAlignment;
    uint32_t           minIndirectCommandsBufferOffsetAlignment;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGraphicsShaderGroupCount` is the maximum number of shader groups in VkGraphicsPipelineShaderGroupsCreateInfoNV.
- `maxIndirectSequenceCount` is the maximum number of sequences in VkGeneratedCommandsInfoNV and in VkGeneratedCommandsMemoryRequirementsInfoNV.
- `maxIndirectCommandsTokenCount` is the maximum number of tokens in VkIndirectCommandsLayoutCreateInfoNV.
- `maxIndirectCommandsStreamCount` is the maximum number of streams in VkIndirectCommandsLayoutCreateInfoNV.
- `maxIndirectCommandsTokenOffset` is the maximum offset in VkIndirectCommandsLayoutTokenNV.
- `maxIndirectCommandsStreamStride` is the maximum stream stride in VkIndirectCommandsLayoutCreateInfoNV.
- `minSequencesCountBufferOffsetAlignment` is the minimum alignment for memory addresses which **can** be used in VkGeneratedCommandsInfoNV.
- `minSequencesIndexBufferOffsetAlignment` is the minimum alignment for memory addresses which **can** be used in VkGeneratedCommandsInfoNV.
- `minIndirectCommandsBufferOffsetAlignment` is the minimum alignment for memory addresses used in VkIndirectCommandsStreamNV, and as preprocess buffer in VkGeneratedCommandsInfoNV.

If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

    VkBool32                                deviceGeneratedCommandsTransformFeedback;
    VkBool32
deviceGeneratedCommandsMultiDrawIndirectCount;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxIndirectPipelineCount is the maximum number of pipelines passed to vkCreateIndirectExecutionSetEXT.
- maxIndirectShaderObjectCount is the maximum number of shader objects passed to vkCreateIndirectExecutionSetEXT. If this value is zero, binding shader objects indirectly is not supported.
- maxIndirectSequenceCount is the maximum number of sequences in VkGeneratedCommandsInfoEXT and in VkGeneratedCommandsMemoryRequirementsInfoEXT.
- maxIndirectCommandsTokenCount is the maximum number of tokens in VkIndirectCommandsLayoutCreateInfoEXT.
- maxIndirectCommandsTokenOffset is the maximum offset in

VkIndirectCommandsLayoutTokenEXT.

- maxIndirectCommandsIndirectStride is the maximum stream stride in VkIndirectCommandsLayoutCreateInfoEXT.
- supportedIndirectCommandsInputModes indicates the supported input modes.
- supportedIndirectCommandsShaderStages indicates the stages which **can** be used to generate indirect commands. Implementations are required to support, at minimum: VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_FRAGMENT_BIT, VK_SHADER_STAGE_COMPUTE_BIT.
- supportedIndirectCommandsShaderStagesPipelineBinding indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using pipelines.
- supportedIndirectCommandsShaderStagesShaderBinding indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using shader objects.
- deviceGeneratedCommandsTransformFeedback indicates whether the implementation supports interactions with VK_EXT_transform_feedback for pipelines not created with VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT.
- deviceGeneratedCommandsMultiDrawIndirectCount indicates whether the implementation supports COUNT variants of multi-draw indirect tokens.

If the VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

The VkPhysicalDevicePortabilitySubsetPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           minVertexInputBindingStrideAlignment;
} VkPhysicalDevicePortabilitySubsetPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minVertexInputBindingStrideAlignment` indicates the minimum alignment for vertex input strides. VkVertexInputBindingDescription::`stride` **must** be a multiple of, and at least as large as, this value. The value **must** be a power of two.

If the `VkPhysicalDevicePortabilitySubsetPropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePortabilitySubsetPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_PROPERTIES_KHR

Structure Chaining

Extends the structure

The `VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPartitionCount;
} VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPartitionCount` indicates the maximum number of partitions allowed in a partitioned acceleration structure.

If the `VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV-sType-sType
  `sType` **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PARTITIONED_ACCELERATION_STRUCTURE_PROPERTIES_NV

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceClusterAccelerationStructurePropertiesNV structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkPhysicalDeviceClusterAccelerationStructurePropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVerticesPerCluster;
    uint32_t           maxTrianglesPerCluster;
    uint32_t           clusterScratchByteAlignment;
    uint32_t           clusterByteAlignment;
    uint32_t           clusterTemplateByteAlignment;
    uint32_t           clusterBottomLevelByteAlignment;
    uint32_t           clusterTemplateBoundsByteAlignment;
    uint32_t           maxClusterGeometryIndex;
} VkPhysicalDeviceClusterAccelerationStructurePropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxVerticesPerCluster indicates the maximum number of unique vertices that **can** be specified in the index buffer for a cluster.
- maxTrianglesPerCluster indicates the maximum number of triangles in a cluster.
- clusterScratchByteAlignment indicates the alignment required for scratch memory used in building or moving cluster acceleration structures.
- clusterByteAlignment indicates the alignment of buffers when building cluster acceleration structures.
- clusterTemplateByteAlignment indicates the alignment of buffers when building cluster templates.
- clusterBottomLevelByteAlignment indicates the alignment of buffers when building bottom level acceleration structures.
- clusterTemplateBoundsByteAlignment indicates the alignment of VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::instantiationBoundingBoxLimit.
- maxClusterGeometryIndex indicates the maximum geometry index possible for a triangle in a cluster acceleration structure.

If the VkPhysicalDeviceClusterAccelerationStructurePropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterAccelerationStructurePropertiesNV-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_ACCELERATION_STRUCTURE_PROPERTIES_NV

Structure Chaining

Extends the structure

The VkPhysicalDeviceFragmentShadingRatePropertiesKHR structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRatePropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkExtent2D               minFragmentShadingRateAttachmentTexelSize;
    VkExtent2D               maxFragmentShadingRateAttachmentTexelSize;
    uint32_t                 maxFragmentShadingRateAttachmentTexelSizeAspectRatio;
    VkBool32                 primitiveFragmentShadingRateWithMultipleViewports;
    VkBool32                 layeredShadingRateAttachments;
    VkBool32                 fragmentShadingRateNonTrivialCombinerOps;
    VkExtent2D               maxFragmentSize;
    uint32_t                 maxFragmentSizeAspectRatio;
    uint32_t                 maxFragmentShadingRateCoverageSamples;
    VkSampleCountFlagBits    maxFragmentShadingRateRasterizationSamples;
    VkBool32                 fragmentShadingRateWithShaderDepthStencilWrites;
    VkBool32                 fragmentShadingRateWithSampleMask;
    VkBool32                 fragmentShadingRateWithShaderSampleMask;
    VkBool32                 fragmentShadingRateWithConservativeRasterization;
    VkBool32                 fragmentShadingRateWithFragmentShaderInterlock;
    VkBool32                 fragmentShadingRateWithCustomSampleLocations;
    VkBool32                 fragmentShadingRateStrictMultiplyCombiner;
} VkPhysicalDeviceFragmentShadingRatePropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minFragmentShadingRateAttachmentTexelSize indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate

attachment. Each value **must** be less than or equal to the values in maxFragmentShadingRateAttachmentTexelSize. Each value **must** be a power-of-two. It **must** be (0,0) if the attachmentFragmentShadingRate feature is not supported.

- maxFragmentShadingRateAttachmentTexelSize indicates maximum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be greater than or equal to the values in minFragmentShadingRateAttachmentTexelSize. Each value **must** be a power-of-two. It **must** be (0,0) if the attachmentFragmentShadingRate feature is not supported.
- maxFragmentShadingRateAttachmentTexelSizeAspectRatio indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. maxFragmentShadingRateAttachmentTexelSizeAspectRatio **must** be a power-of-two value, and **must** be less than or equal to max(maxFragmentShadingRateAttachmentTexelSize.width / minFragmentShadingRateAttachmentTexelSize.height, maxFragmentShadingRateAttachmentTexelSize.height / minFragmentShadingRateAttachmentTexelSize.width). It **must** be 0 if the attachmentFragmentShadingRate feature is not supported.
- primitiveFragmentShadingRateWithMultipleViewports specifies whether the primitive fragment shading rate **can** be used when multiple viewports are used. If this value is VK_FALSE, only a single viewport **must** be used, and applications **must** not write to the ViewportMaskNV or ViewportIndex built-in when setting PrimitiveShadingRateKHR. It **must** be VK_FALSE if the shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the primitiveFragmentShadingRate feature is not supported.
- layeredShadingRateAttachments specifies whether a shading rate attachment image view **can** be created with multiple layers. If this value is VK_FALSE, when creating an image view with a usage that includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, layerCount **must** be 1. It **must** be VK_FALSE if the multiview feature, the shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the attachmentFragmentShadingRate feature is not supported.
- fragmentShadingRateNonTrivialCombinerOps specifies whether VkFragmentShadingRateCombinerOpKHR enums other than VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR or VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR **can** be used. It **must** be VK_FALSE unless either the primitiveFragmentShadingRate or attachmentFragmentShadingRate feature is supported.
- maxFragmentSize indicates the maximum supported width and height of a fragment. Its width and height members **must** both be power-of-two values. This limit is purely informational, and is not validated.
- maxFragmentSizeAspectRatio indicates the maximum ratio between the width and height of a fragment. maxFragmentSizeAspectRatio **must** be a power-of-two value, and **must** be less than or equal to the maximum of the width and height members of maxFragmentSize. This limit is purely informational, and is not validated.
- maxFragmentShadingRateCoverageSamples specifies the maximum number of coverage samples

supported in a single fragment. maxFragmentShadingRateCoverageSamples **must** be less than or equal to the product of the width and height members of maxFragmentSize, and the sample count reported by maxFragmentShadingRateRasterizationSamples. maxFragmentShadingRateCoverageSamples **must** be less than or equal to maxSampleMaskWords × 32 if fragmentShadingRateWithShaderSampleMask is supported. This limit is purely informational, and is not validated.

- maxFragmentShadingRateRasterizationSamples is a VkSampleCountFlagBits value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.
- fragmentShadingRateWithShaderDepthStencilWrites specifies whether the implementation supports writing FragDepth or FragStencilRefEXT from a fragment shader for multi-pixel fragments. If this value is VK_FALSE, writing to those built-ins will clamp the fragment shading rate to (1,1).
- fragmentShadingRateWithSampleMask specifies whether the implementation supports setting valid bits of VkPipelineMultisampleStateCreateInfo::pSampleMask to 0 for multi-pixel fragments. If this value is VK_FALSE, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).
- fragmentShadingRateWithShaderSampleMask specifies whether the implementation supports reading or writing SampleMask for multi-pixel fragments. If this value is VK_FALSE, using that built-in will clamp the fragment shading rate to (1,1).
- fragmentShadingRateWithConservativeRasterization specifies whether conservative rasterization is supported for multi-pixel fragments. It **must** be VK_FALSE if VK_EXT_conservative_rasterization is not supported. If this value is VK_FALSE, using conservative rasterization will clamp the fragment shading rate to (1,1).
- fragmentShadingRateWithFragmentShaderInterlock specifies whether fragment shader interlock is supported for multi-pixel fragments. It **must** be VK_FALSE if VK_EXT_fragment_shader_interlock is not supported. If this value is VK_FALSE, using fragment shader interlock will clamp the fragment shading rate to (1,1).
- fragmentShadingRateWithCustomSampleLocations specifies whether custom sample locations are supported for multi-pixel fragments. It **must** be VK_FALSE if VK_EXT_sample_locations is not supported. If this value is VK_FALSE, using custom sample locations will clamp the fragment shading rate to (1,1).
- fragmentShadingRateStrictMultiplyCombiner specifies whether VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR accurately performs a multiplication or not. Implementations where this value is VK_FALSE will instead combine rates with an addition. If fragmentShadingRateNonTrivialCombinerOps is VK_FALSE, implementations **must** report this as VK_FALSE. If fragmentShadingRateNonTrivialCombinerOps is VK_TRUE, implementations **should** report this as VK_TRUE.

NOTE

Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in fragmentShadingRateStrictMultiplyCombiner being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another

> rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the VkPhysicalDeviceFragmentShadingRatePropertiesKHR structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

Valid Usage (Implicit)

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV structure is defined as:

```
// Provided by VK_NV_fragment_shading_rate_enums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV {
    VkStructureType          sType;
    void*                    pNext;
    VkSampleCountFlagBits    maxFragmentShadingRateInvocationCount;
} VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxFragmentShadingRateInvocationCount is a VkSampleCountFlagBits value indicating the maximum number of fragment shader invocations per fragment supported in pipeline, primitive, and attachment fragment shading rates.

If the VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_PROPERTIES_NV`

The `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexModePerPipeline;
    VkBool32           transformFeedbackPreservesTriangleFanProvokingVertex;
} VkPhysicalDeviceProvokingVertexPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `provokingVertexModePerPipeline` indicates whether the implementation supports graphics pipelines with different provoking vertex modes within the same render pass instance.
- `transformFeedbackPreservesTriangleFanProvokingVertex` indicates whether the implementation can preserve the provoking vertex order when writing triangle fan vertices to transform feedback.

If the `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

    uint32_t           maxEmbeddedImmutableSamplers;
    size_t             bufferCaptureReplayDescriptorDataSize;
    size_t             imageCaptureReplayDescriptorDataSize;
    size_t             imageViewCaptureReplayDescriptorDataSize;
    size_t             samplerCaptureReplayDescriptorDataSize;
    size_t             accelerationStructureCaptureReplayDescriptorDataSize;
    size_t             samplerDescriptorSize;
    size_t             combinedImageSamplerDescriptorSize;
    size_t             sampledImageDescriptorSize;
    size_t             storageImageDescriptorSize;
    size_t             uniformTexelBufferDescriptorSize;
    size_t             robustUniformTexelBufferDescriptorSize;
    size_t             storageTexelBufferDescriptorSize;
    size_t             robustStorageTexelBufferDescriptorSize;
    size_t             uniformBufferDescriptorSize;
    size_t             robustUniformBufferDescriptorSize;
    size_t             storageBufferDescriptorSize;
    size_t             robustStorageBufferDescriptorSize;
    size_t             inputAttachmentDescriptorSize;
    size_t             accelerationStructureDescriptorSize;
    VkDeviceSize       maxSamplerDescriptorBufferRange;
    VkDeviceSize       maxResourceDescriptorBufferRange;
    VkDeviceSize       samplerDescriptorBufferAddressSpaceSize;
    VkDeviceSize       resourceDescriptorBufferAddressSpaceSize;
    VkDeviceSize       descriptorBufferAddressSpaceSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `combinedImageSamplerDescriptorSingleArray` indicates that the implementation does not require an array of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors.
- `bufferlessPushDescriptors` indicates that the implementation does not require a buffer created with the VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT usage flag set to be bound when using push descriptors.

- `allowSamplerImageViewPostSubmitCreation` indicates that the implementation does not restrict when the VkSampler or VkImageView objects used to retrieve descriptor data **can** be created in relation to command buffer submission. If this value is VK_FALSE, then the application **must** create any VkSampler or VkImageView objects whose descriptor data is accessed during the execution of a command buffer, before the vkQueueSubmit , or vkQueueSubmit2, call that submits that command buffer.
- `descriptorBufferOffsetAlignment` indicates the **required** alignment in bytes when setting offsets into the descriptor buffer.
- `maxDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings.
- `maxResourceDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT that **can** be used.
- `maxSamplerDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT that **can** be used.
- `maxEmbeddedImmutableSamplerBindings` indicates the maximum number of embedded immutable sampler sets that **can** be bound.
- `maxEmbeddedImmutableSamplers` indicates the maximum number of unique immutable samplers in descriptor set layouts created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, and pipeline layouts created from them, which **can** simultaneously exist on a device.
- `bufferCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with buffers.
- `imageCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with images.
- `imageViewCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with image views.
- `samplerCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with samplers.
- `accelerationStructureCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with acceleration structures.
- `samplerDescriptorSize` indicates the size in bytes of a VK_DESCRIPTOR_TYPE_SAMPLER descriptor.
- `combinedImageSamplerDescriptorSize` indicates the size in bytes of a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptor.
- `sampledImageDescriptorSize` indicates the size in bytes of a VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE descriptor.
- `storageImageDescriptorSize` indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_IMAGE descriptor.
- `uniformTexelBufferDescriptorSize` indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER descriptor if the `robustBufferAccess` feature is not enabled.
- `robustUniformTexelBufferDescriptorSize` indicates the size in bytes of a

VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER descriptor if the robustBufferAccess feature is enabled.

- storageTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor if the robustBufferAccess feature is not enabled.
- robustStorageTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor if the robustBufferAccess feature is enabled.
- uniformBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER descriptor.
- robustUniformBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER descriptor if the robustBufferAccess feature is enabled.
- storageBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_BUFFER descriptor.
- robustStorageBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_BUFFER descriptor if the robustBufferAccess feature is enabled.
- inputAttachmentDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT descriptor.
- accelerationStructureDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV descriptor.
- maxSamplerDescriptorBufferRange indicates the maximum range in bytes from the address of a sampler descriptor buffer binding that is accessible to a shader.
- maxResourceDescriptorBufferRange indicates the maximum range in bytes from the address of a resource descriptor buffer binding that is accessible to a shader.
- samplerDescriptorBufferAddressSpaceSize indicates the total size in bytes of the address space available for descriptor buffers created with the VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT usage flag set.
- resourceDescriptorBufferAddressSpaceSize indicates the total size in bytes of the address space available for descriptor buffers created with the VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT usage flag set.
- descriptorBufferAddressSpaceSize indicates the total size in bytes of the address space available for descriptor buffers created with both the VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT and VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT usage flags set.

A descriptor binding with type VK_DESCRIPTOR_TYPE_MUTABLE_EXT has a descriptor size which is implied by the descriptor types included in the VkMutableDescriptorTypeCreateInfoEXT ::pDescriptorTypes list. The descriptor size is equal to the maximum size of any descriptor type included in the pDescriptorTypes list.

As there is no way to request robust and non-robust descriptors separately, or specify robust/non-robust descriptors in the set layout, if the `robustBufferAccess` feature is enabled then robust descriptors are always used.

If the `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    uint32_t           copySrcLayoutCount;
    VkImageLayout*     pCopySrcLayouts;
    uint32_t           copyDstLayoutCount;
    VkImageLayout*     pCopyDstLayouts;
    uint8_t            optimalTilingLayoutUUID[VK_UUID_SIZE];
    VkBool32           identicalMemoryTypeRequirements;
} VkPhysicalDeviceHostImageCopyProperties;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyProperties
typedef VkPhysicalDeviceHostImageCopyProperties
VkPhysicalDeviceHostImageCopyPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- copySrcLayoutCount is an integer related to the number of image layouts for host copies from images available or queried, as described below.
- pCopySrcLayouts is a pointer to an array of VkImageLayout in which supported image layouts for use with host copy operations from images are returned.
- copyDstLayoutCount is an integer related to the number of image layouts for host copies to images available or queried, as described below.
- pCopyDstLayouts is a pointer to an array of VkImageLayout in which supported image layouts for use with host copy operations to images are returned.
- optimalTilingLayoutUUID is an array of VK_UUID_SIZE uint8_t values representing a universally unique identifier for the implementation's swizzling layout of images created with VK_IMAGE_TILING_OPTIMAL.
- identicalMemoryTypeRequirements indicates that specifying the VK_IMAGE_USAGE_HOST_TRANSFER_BIT flag in VkImageCreateInfo::usage does not affect the memory type requirements of the image.

If the VkPhysicalDeviceHostImageCopyProperties structure is included in the pNext chain of the

VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If pCopyDstLayouts is NULL, then the number of image layouts that are supported in VkCopyMemoryToImageInfo::dstImageLayout and VkCopyImageToImageInfo::dstImageLayout is returned in copyDstLayoutCount. Otherwise, copyDstLayoutCount **must** be set by the application to the number of elements in the pCopyDstLayouts array, and on return is overwritten with the number of values actually written to pCopyDstLayouts. If the value of copyDstLayoutCount is less than the number of image layouts that are supported, at most copyDstLayoutCount values will be written to pCopyDstLayouts. The implementation **must** include the VK_IMAGE_LAYOUT_GENERAL image layout in pCopyDstLayouts. If the unifiedImageLayouts feature is supported, the implementation **must** include all the image layouts that are interchangeable with VK_IMAGE_LAYOUT_GENERAL in pCopyDstLayouts.

If pCopySrcLayouts is NULL, then the number of image layouts that are supported in VkCopyImageToMemoryInfo::srcImageLayout and VkCopyImageToImageInfo::srcImageLayout is returned in copySrcLayoutCount. Otherwise, copySrcLayoutCount **must** be set by the application to the number of elements in the pCopySrcLayouts array, and on return is overwritten with the number of values actually written to pCopySrcLayouts. If the value of copySrcLayoutCount is less than the number of image layouts that are supported, at most copySrcLayoutCount values will be written to pCopySrcLayouts. The implementation **must** include the VK_IMAGE_LAYOUT_GENERAL image layout in pCopySrcLayouts. If the unifiedImageLayouts feature is supported, the implementation **must** include all the image layouts that are interchangeable with VK_IMAGE_LAYOUT_GENERAL in pCopySrcLayouts.

The optimalTilingLayoutUUID value can be used to ensure compatible data layouts when using the VK_HOST_IMAGE_COPY_MEMCPY_BIT flag in vkCopyMemoryToImage and vkCopyImageToMemory.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyProperties-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_PROPERTIES
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopySrcLayouts-parameter
  If copySrcLayoutCount is not 0, and pCopySrcLayouts is not NULL, pCopySrcLayouts **must** be a valid pointer to an array of copySrcLayoutCount VkImageLayout values
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopyDstLayouts-parameter
  If copyDstLayoutCount is not 0, and pCopyDstLayouts is not NULL, pCopyDstLayouts **must** be a valid pointer to an array of copyDstLayoutCount VkImageLayout values

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceSubpassShadingPropertiesHUAWEI structure is defined as:

```
// Provided by VK_HUAWEI_subpass_shading
typedef struct VkPhysicalDeviceSubpassShadingPropertiesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxSubpassShadingWorkgroupSizeAspectRatio;
} VkPhysicalDeviceSubpassShadingPropertiesHUAWEI;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxSubpassShadingWorkgroupSizeAspectRatio indicates the maximum ratio between the width and height of the portion of the subpass shading shader workgroup size. maxSubpassShadingWorkgroupSizeAspectRatio **must** be a power-of-two value, and **must** be less than or equal to max(WorkgroupSize.x / WorkgroupSize.y, WorkgroupSize.y / WorkgroupSize.x).

If the VkPhysicalDeviceSubpassShadingPropertiesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassShadingPropertiesHUAWEI-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_PROPERTIES_HUAWEI

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceMultiDrawPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiDrawCount;
} VkPhysicalDeviceMultiDrawPropertiesEXT;
```

The members of the VkPhysicalDeviceMultiDrawPropertiesEXT structure describe the following features:

- maxMultiDrawCount indicates the maximum number of draw calls which **can** be batched into a

single multidraw.

If the VkPhysicalDeviceMultiDrawPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceNestedCommandBufferPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxCommandBufferNestingLevel;
} VkPhysicalDeviceNestedCommandBufferPropertiesEXT;
```

The members of the VkPhysicalDeviceNestedCommandBufferPropertiesEXT structure describe the following features:

- maxCommandBufferNestingLevel indicates the maximum nesting level of calls to vkCmdExecuteCommands from Secondary Command Buffers. A maxCommandBufferNestingLevel of UINT32_MAX means there is no limit to the nesting level.

If the VkPhysicalDeviceNestedCommandBufferPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibraryFastLinking;
    VkBool32           graphicsPipelineLibraryIndependentInterpolationDecoration;
} VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT;
```

- graphicsPipelineLibraryFastLinking indicates whether fast linking of graphics pipelines is supported. If it is VK_TRUE, creating a graphics pipeline entirely from pipeline libraries without VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT is comparable in cost to recording a command in a command buffer.
- graphicsPipelineLibraryIndependentInterpolationDecoration indicates whether NoPerspective and Flat interpolation decorations in the last vertex processing stage and the fragment shader are required to match when using graphics pipeline libraries. If it is VK_TRUE, the interpolation decorations do not need to match. If it is VK_FALSE, these decorations **must** either be present in both stages or neither stage in order for a given interface variable to match.

If the VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric with VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           triStripVertexOrderIndependentOfProvokingVertex;
} VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR;
```

- When the provoking vertex mode is VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT, and the primitive order is odd in a triangle strip, the ordering of vertices is defined in last vertex table. `triStripVertexOrderIndependentOfProvokingVertex` equal to VK_TRUE indicates that the implementation ignores this and uses the vertex order defined by VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT instead.

If the `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            shaderModuleIdentifierAlgorithmUUID[VK_UUID_SIZE];
} VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT;
```

The members of the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure describe the following:

- `shaderModuleIdentifierAlgorithmUUID` is an array of VK_UUID_SIZE `uint8_t` values which uniquely represents the algorithm used to compute an identifier in vkGetShaderModuleIdentifierEXT and vkGetShaderModuleCreateInfoIdentifierEXT. Implementations **should** not change this value in different driver versions if the algorithm used

to compute an identifier is the same.

The algorithm UUID may be the same in different ICDs if the algorithms are guaranteed to produce the same results. This may happen in driver stacks which support different kinds of hardware with shared code.

NOTE

Khronos' conformance testing can not guarantee that `shaderModuleIdentifierAlgorithmUUID` values are actually unique, so implementors should make their own best efforts to ensure that their UUID is unlikely to conflict with other implementations which may use a different algorithm. In particular, hard-coded values which easily conflict, such as all-`0` bits, **should** never be used. Hard-coded values are acceptable if best effort is ensured that the value will not accidentally conflict.

If the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDevicePipelineRobustnessProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessProperties {
    VkStructureType                       sType;
    void*                                 pNext;
    VkPipelineRobustnessBufferBehavior    defaultRobustnessStorageBuffers;
    VkPipelineRobustnessBufferBehavior    defaultRobustnessUniformBuffers;
    VkPipelineRobustnessBufferBehavior    defaultRobustnessVertexInputs;
    VkPipelineRobustnessImageBehavior     defaultRobustnessImages;
} VkPhysicalDevicePipelineRobustnessProperties;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessProperties
typedef VkPhysicalDevicePipelineRobustnessProperties
VkPhysicalDevicePipelineRobustnessPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `defaultRobustnessStorageBuffers` describes the behavior of out of bounds accesses made to storage buffers when no robustness features are enabled.
- `defaultRobustnessUniformBuffers` describes the behavior of out of bounds accesses made to uniform buffers when no robustness features are enabled.
- `defaultRobustnessVertexInputs` describes the behavior of out of bounds accesses made to vertex input attributes when no robustness features are enabled.
- `defaultRobustnessImages` describes the behavior of out of bounds accesses made to images when no robustness features are enabled.

Some implementations of Vulkan may be able to guarantee that certain types of accesses are always performed with robustness even when the Vulkan API's robustness features are not explicitly enabled.

Even when an implementation reports that accesses to a given resource type are robust by default, it remains invalid to make an out of bounds access without requesting the appropriate robustness feature.

If the `VkPhysicalDevicePipelineRobustnessProperties` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineRobustnessProperties-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_PROPERTIES

Structure Chaining

Extends the structure

The `VkPhysicalDeviceExtendedDynamicState3PropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3PropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicPrimitiveTopologyUnrestricted;
} VkPhysicalDeviceExtendedDynamicState3PropertiesEXT;
```

- dynamicPrimitiveTopologyUnrestricted indicates that the implementation allows vkCmdSetPrimitiveTopology to use a different primitive topology class to the one specified in the active graphics pipeline.

If the VkPhysicalDeviceExtendedDynamicState3PropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState3PropertiesEXT-sType-sType sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceOpticalFlowPropertiesNV structure is defined as:

```
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowPropertiesNV {
    VkStructureType                sType;
    void*                          pNext;
    VkOpticalFlowGridSizeFlagsNV   supportedOutputGridSizes;
    VkOpticalFlowGridSizeFlagsNV   supportedHintGridSizes;
    VkBool32                       hintSupported;
    VkBool32                       costSupported;
    VkBool32                       bidirectionalFlowSupported;
    VkBool32                       globalFlowSupported;
    uint32_t                       minWidth;
    uint32_t                       minHeight;
    uint32_t                       maxWidth;
    uint32_t                       maxHeight;
    uint32_t                       maxNumRegionsOfInterest;
} VkPhysicalDeviceOpticalFlowPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedOutputGridSizes` are the supported VkOpticalFlowGridSizeFlagsNV which can be specified in `VkOpticalFlowSessionCreateInfoNV`::`outputGridSize`.
- `supportedHintGridSizes` are the supported VkOpticalFlowGridSizeFlagsNV which can be specified in `VkOpticalFlowSessionCreateInfoNV`::`hintGridSize`.
- `hintSupported` is a boolean describing whether using hint flow vector map is supported in an optical flow session.
- `costSupported` is a boolean describing whether cost map generation is supported in an optical flow session.
- `bidirectionalFlowSupported` is a boolean describing whether bi-directional flow generation is supported in an optical flow session.
- `globalFlowSupported` is a boolean describing whether global flow vector map generation is supported in an optical flow session.
- `minWidth` is the minimum width in pixels for images used in an optical flow session.
- `minHeight` is the minimum height in pixels for images used in an optical flow session.
- `maxWidth` is the maximum width in pixels for images used in an optical flow session.
- `maxHeight` is the maximum height in pixels for images used in an optical flow session.
- `maxNumRegionsOfInterest` is the maximum number of regions of interest which can be used in an optical flow session. If `maxNumRegionsOfInterest` is 0, regions of interest are not supported in an optical flow session.

If the `VkPhysicalDeviceOpticalFlowPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The `VkPhysicalDeviceOpacityMicromapPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxOpacity2StateSubdivisionLevel;
    uint32_t           maxOpacity4StateSubdivisionLevel;
    uint32_t           maxOpacityLossy4StateSubdivisionLevel;
    uint64_t           maxMicromapTriangles;
} VkPhysicalDeviceOpacityMicromapPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxOpacity2StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR.
- `maxOpacity4StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR and the micromap is not built with VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR.
- `maxOpacityLossy4StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR and the micromap is built with VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR.
- `maxMicromapTriangles` limits the number of triangles allowed to be specified when building a micromap.

If the `VkPhysicalDeviceOpacityMicromapPropertiesKHR` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM structure is defined as:

```
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           shaderCoreMask;
    uint32_t           shaderCoreCount;
    uint32_t           shaderWarpsPerCore;
} VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderCoreMask is a bitfield where each bit set represents the presence of a shader core whose ID is the bit position. The highest ID for any shader core on the device is the position of the most significant bit set.
- shaderCoreCount is the number of shader cores on the device.
- shaderWarpsPerCore is the maximum number of simultaneously executing warps on a shader core.

If the VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM-sType-sType
  sType **must** be

VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_PROPERTIES_ARM

Extends the structure

- VkPhysicalDeviceProperties2

Values which **may** be returned in the rayTracingInvocationReorderReorderingHint field of VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT or VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV are:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef enum VkRayTracingInvocationReorderModeEXT {
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT = 0,
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT = 1,
  // Provided by VK_NV_ray_tracing_invocation_reorder
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV =
VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT,
  // Provided by VK_NV_ray_tracing_invocation_reorder
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV =
VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT,
} VkRayTracingInvocationReorderModeEXT;
```

```
// Provided by VK_NV_ray_tracing_invocation_reorder
// Equivalent to VkRayTracingInvocationReorderModeEXT
typedef VkRayTracingInvocationReorderModeEXT VkRayTracingInvocationReorderModeNV;
```

- VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT specifies that the implementation does not reorder at reorder calls.
- VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT specifies that the implementation **may** reorder at reorder calls.

The VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT {
    VkStructureType                         sType;
    void*                                   pNext;
    VkRayTracingInvocationReorderModeEXT    rayTracingInvocationReorderReorderingHint;
    uint32_t                                maxShaderBindingTableRecordIndex;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation **may** reorder at the reorder calls.
- `maxShaderBindingTableRecordIndex` is the maximum shader binding table record index allowed to be passed in to `OpHitObjectSetShaderBindingTableRecordIndexEXT`.

If `rayTracingInvocationReorderReorderingHint` is VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT there **must** exist conditions under which the ordered set of invocations before a reorder instruction is different than the ordered set of invocations after the reorder instruction. The ordering of a set of invocations is determined by the `SubgroupId` of an invocation's subgroup and the `SubgroupLocalInvocationId` of an invocation within that subgroup.

The reorder instructions are:

- `OpReorderThreadWithHintEXT`
- `OpReorderThreadWithHitObjectEXT`
- `OpHitObjectReorderExecuteShaderEXT`
- `OpHitObjectTraceReorderExecuteEXT`
- `OpHitObjectTraceMotionReorderExecuteEXT`

NOTE	Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

The `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV {
    VkStructureType                          sType;
    void*                                    pNext;
    VkRayTracingInvocationReorderModeEXT     rayTracingInvocationReorderReorderingHint;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation will actually reorder at the reorder calls.

NOTE	Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_PROPERTIES_NV

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxWorkGroupCount[3];
    uint32_t           maxWorkGroupSize[3];
    uint32_t           maxOutputClusterCount;
    VkDeviceSize       indirectBufferOffsetAlignment;
} VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxWorkGroupCount`[3] is the maximum number of local workgroups that can be launched by a single command. These three values represent the maximum local workgroup count in the X, Y, and Z dimensions, respectively. In the current implementation, the values of Y and Z are both implicitly set as one. groupCountX of DrawCluster command **must** be less than or equal to maxWorkGroupCount[0].
- `maxWorkGroupSize`[3] is the maximum size of a local workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, **must** be less than or equal to the corresponding limit. In the current implementation, the maximum workgroup size of the X dimension is 32, the others are 1.
- `maxOutputClusterCount` is the maximum number of output clusters a single cluster culling shader workgroup can emit.
- `indirectBufferOffsetAlignment` indicates the alignment for cluster drawing command buffer stride. vkCmdDrawClusterIndirectHUAWEI::`offset` **must** be a multiple of this value.

If the `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_PROPERTIES_HUAWEI

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShaderCorePropertiesARM` structure is defined as:

```
// Provided by VK_ARM_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesARM {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           pixelRate;
    uint32_t           texelRate;
    uint32_t           fmaRate;
} VkPhysicalDeviceShaderCorePropertiesARM;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pixelRate` is an unsigned integer value indicating the maximum number of pixels output per clock per shader core.
- `texelRate` is an unsigned integer value indicating the maximum number of texels per clock per shader core.
- `fmaRate` is an unsigned integer value indicating the maximum number of single-precision fused multiply-add operations per clock per shader core.

If a throughput rate cannot be determined on the physical device, the value `0` will be returned for that rate.

If the `VkPhysicalDeviceShaderCorePropertiesARM` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesARM-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_ARM

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            shaderBinaryUUID[VK_UUID_SIZE];
    uint32_t           shaderBinaryVersion;
} VkPhysicalDeviceShaderObjectPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBinaryUUID` is an array of VK_UUID_SIZE `uint8_t` values representing a universally unique identifier for one or more implementations whose shader binaries are guaranteed to be compatible with each other.
- `shaderBinaryVersion` is an unsigned integer incremented to represent backwards compatible differences between implementations with the same `shaderBinaryUUID`.

The purpose and usage of the values of this structure are described in greater detail in Binary Shader Compatibility.

If the `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The `VkPhysicalDeviceShaderEnqueuePropertiesAMDX` structure is defined as:

```
// Provided by VK_AMDX_shader_enqueue
typedef struct VkPhysicalDeviceShaderEnqueuePropertiesAMDX {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxExecutionGraphDepth;
    uint32_t           maxExecutionGraphShaderOutputNodes;
    uint32_t           maxExecutionGraphShaderPayloadSize;
    uint32_t           maxExecutionGraphShaderPayloadCount;
    uint32_t           executionGraphDispatchAddressAlignment;
    uint32_t           maxExecutionGraphWorkgroupCount[3];
    uint32_t           maxExecutionGraphWorkgroups;
} VkPhysicalDeviceShaderEnqueuePropertiesAMDX;
```

The members of the VkPhysicalDeviceShaderEnqueuePropertiesAMDX structure describe the following limits:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxExecutionGraphDepth defines the maximum node chain depth in the graph. The dispatched node is at depth 1 and the node enqueued by it is at depth 2, and so on. If a node enqueues itself, each recursive enqueue increases the depth by 1 as well.
- maxExecutionGraphShaderOutputNodes specifies the maximum number of unique nodes that can be dispatched from a single shader, and **must** be at least 256.
- maxExecutionGraphShaderPayloadSize specifies the maximum total size of payload declarations in a shader. For any payload declarations that share resources, indicated by NodeSharesPayloadLimitsWithAMDX decorations, the maximum size of each set of shared payload declarations is taken. The sum of each shared set's maximum size and the size of each unshared payload is counted against this limit.
- maxExecutionGraphShaderPayloadCount specifies the maximum number of output payloads that can be initialized in a single workgroup.
- executionGraphDispatchAddressAlignment specifies the alignment of non-scratch VkDeviceAddress arguments consumed by graph dispatch commands.
- maxExecutionGraphWorkgroupCount[3] is the maximum number of local workgroups that a shader **can** be dispatched with in X, Y, and Z dimensions, respectively.
- maxExecutionGraphWorkgroups is the total number of local workgroups that a shader **can** be dispatched with.

If the VkPhysicalDeviceShaderEnqueuePropertiesAMDX structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEnqueuePropertiesAMDX-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ENQUEUE_PROPERTIES_AMDX

Structure Chaining

Extends the structure

- VkPhysicalDeviceProperties2

The VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV structure is defined as:

```
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV {
    VkStructureType       sType;
    void*                 pNext;
    VkDeviceSize          extendedSparseAddressSpaceSize;
    VkImageUsageFlags     extendedSparseImageUsageFlags;
    VkBufferUsageFlags    extendedSparseBufferUsageFlags;
} VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
