  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdDrawMeshTasksEXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksEXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-pDepthAttachment-08964

If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksEXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdDrawMeshTasksEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdDrawMeshTasksEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdDrawMeshTasksEXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the

current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksEXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and alphaToCoverageEnable was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0
- VUID-vkCmdDrawMeshTasksEXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set alphaToCoverageEnable to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0
- VUID-vkCmdDrawMeshTasksEXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07625
  If the alphaToOne feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksEXT-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07632
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `conservativeRasterizationMode` is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-conservativePointAndLineRasterization-07499

If the VK_EXT_conservative_rasterization extension is enabled, conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT

- VUID-vkCmdDrawMeshTasksEXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-08669
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksEXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be VK_FALSE
- VUID-vkCmdDrawMeshTasksEXT-None-07639
  If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-None-09650
  If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of `depthClampEnable` is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdDrawMeshTasksEXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` parameter used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksEXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the `rasterizationSamples` parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksEXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with

multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure

- VUID-vkCmdDrawMeshTasksEXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMeshTasksEXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMeshTasksEXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE, then the number of active color attachments **must** not exceed advancedBlendMaxColorAttachments

- VUID-vkCmdDrawMeshTasksEXT-None-10862
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksEXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksEXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either

vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the `rasterizationStream` to zero
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::`maxSampleLocationGridSize.width` as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksEXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksEXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled

- VUID-vkCmdDrawMeshTasksEXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksEXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksEXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdDrawMeshTasksEXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdDrawMeshTasksEXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksEXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdDrawMeshTasksEXT-None-08684

If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT

- VUID-vkCmdDrawMeshTasksEXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdDrawMeshTasksEXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdDrawMeshTasksEXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksEXT-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdDrawMeshTasksEXT-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdDrawMeshTasksEXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksEXT-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdDrawMeshTasksEXT-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksEXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdDrawMeshTasksEXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose

shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any VkShaderEXT bound

- VUID-vkCmdDrawMeshTasksEXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdDrawMeshTasksEXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdDrawMeshTasksEXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksEXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdDrawMeshTasksEXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdDrawMeshTasksEXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdDrawMeshTasksEXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdDrawMeshTasksEXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of

VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much

- VUID-vkCmdDrawMeshTasksEXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksEXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksEXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdDrawMeshTasksEXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdDrawMeshTasksEXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMeshTasksEXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::flags which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMeshTasksEXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksEXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT

- VUID-vkCmdDrawMeshTasksEXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksEXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksEXT-None-11861
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdDrawMeshTasksEXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksEXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value

of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksEXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksEXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksEXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksEXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksEXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksEXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksEXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksEXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksEXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdDrawMeshTasksEXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksEXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksEXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT,

VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdDrawMeshTasksEXT-stage-06480
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksEXT-pStages-10680
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** not have last bound the pStages element of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT with a valid shader object other than VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksEXT-None-07074
  Transform Feedback Queries **must** not be active
- VUID-vkCmdDrawMeshTasksEXT-None-07075
  Primitives Generated Queries **must** not be active
- VUID-vkCmdDrawMeshTasksEXT-pipelineStatistics-07076
  The pipelineStatistics member used to create any active Pipeline Statistics Query **must** not contain VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT, VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT, or VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
- VUID-vkCmdDrawMeshTasksEXT-None-08694
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created without the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, a valid VkShaderEXT **must** be bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksEXT-None-08695
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created with the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, there **must** be no VkShaderEXT bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage

- VUID-vkCmdDrawMeshTasksEXT-flags-13364
  If there are any shader objects bound that were created with `flags` that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set
- VUID-vkCmdDrawMeshTasksEXT-flags-13365
  If there are any shader objects bound that were created with `flags` that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07322
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT Execution Model`, `groupCountX` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[0]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07323
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT Execution Model`, `groupCountY` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[1]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07324
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT Execution Model`, `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[2]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07325
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT Execution Model`, The product of `groupCountX`, `groupCountY` and `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupTotalCount`
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07326
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT Execution Model`, `groupCountX` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[0]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07327
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT Execution Model`, `groupCountY` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[1]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07328
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT Execution Model`, `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[2]
- VUID-vkCmdDrawMeshTasksEXT-TaskEXT-07329
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT Execution Model`, The product of `groupCountX`, `groupCountY` and `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`

::maxMeshWorkGroupTotalCount

- VUID-vkCmdDrawMeshTasksEXT-MeshEXT-07087
  The current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS **must** contain a shader stage using the MeshEXT Execution Model

Valid Usage (Implicit)

- VUID-vkCmdDrawMeshTasksEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDrawMeshTasksEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDrawMeshTasksEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDrawMeshTasksEXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMeshTasksEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawMeshTasksEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDrawMeshTasksEXT is affected by conditional rendering

To record an indirect mesh tasks drawing command, call:

```
// Provided by VK_KHR_device_address_commands with VK_EXT_mesh_shader
void vkCmdDrawMeshTasksIndirect2EXT(
    VkCommandBuffer                             commandBuffer,
    const VkDrawIndirect2InfoKHR*               pInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a VkDrawIndirect2InfoKHR structure defining parameters of this command.

`vkCmdDrawMeshTasksIndirect2EXT` behaves similarly to vkCmdDrawMeshTasksEXT except that the parameters are read by the device from an address range during execution. `pInfo->drawCount` draws are executed by the command, with parameters taken from `pInfo->addressRange` starting at `addressRange.address` and increasing by `addressRange.stride` bytes for each successive draw. The parameters of each draw are encoded in an array of VkDrawMeshTasksIndirectCommandEXT structures.

Valid Usage

- VUID-vkCmdDrawMeshTasksIndirect2EXT-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and

`layerCount` **must** be 1

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDrawMeshTasksIndirect2EXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirect2EXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports

cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified

via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDrawMeshTasksIndirect2EXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirect2EXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirect2EXT-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDrawMeshTasksIndirect2EXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDrawMeshTasksIndirect2EXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDrawMeshTasksIndirect2EXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDrawMeshTasksIndirect2EXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDrawMeshTasksIndirect2EXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDrawMeshTasksIndirect2EXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdDrawMeshTasksIndirect2EXT-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirect2EXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDrawMeshTasksIndirect2EXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirect2EXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with

`flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset

specified by each mapping

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11373

If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdDrawMeshTasksIndirect2EXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation,

with an identically defined color

- VUID-vkCmdDrawMeshTasksIndirect2EXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirect2EXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirect2EXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by VkRenderingInputAttachmentIndexInfo, or no `InputAttachmentIndex` if VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` or VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are `NULL`, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have

an InputAttachmentIndex if both VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex and VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are non-NULL

- VUID-vkCmdDrawMeshTasksIndirect2EXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an InputAttachmentIndex, the InputAttachmentIndex **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE with a blend equations where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of

depthBoundsTestEnable is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of and rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07634
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-06666
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is

VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07846
  If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then

vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing
- VUID-vkCmdDrawMeshTasksIndirect2EXT-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the

bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1

- VUID-vkCmdDrawMeshTasksIndirect2EXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the primitiveFragmentShadingRateWithMultipleViewports limit is not supported, and any shader object bound to a graphics stage writes to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1
- VUID-vkCmdDrawMeshTasksIndirect2EXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of blendEnable **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and none of the following is enabled:
  - the multisampledRenderToSingleSampled feature

  then the current value of rasterizationSamples **must** be the same as the current color and/or depth/stencil attachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdDrawMeshTasksIndirect2EXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdDrawMeshTasksIndirect2EXT-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo

::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07749
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-attachmentCount-07750
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the attachmentCount parameter of most recent call to vkCmdSetColorWriteEnableEXT in the current command buffer **must** be greater than or equal to the number of active color attachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::discardRectangleCount

- VUID-vkCmdDrawMeshTasksIndirect2EXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::maxDiscardRectangles
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo ::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08914
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo ::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo ::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08917
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirect2EXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-multisampledRenderToSingleSampled-07285
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of

the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksIndirect2EXT-multisampledRenderToSingleSampled-07286
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-multisampledRenderToSingleSampled-07287
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pNext-07935
  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirect2EXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDepthAttachment-08964

If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdDrawMeshTasksIndirect2EXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a

graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and `alphaToCoverageEnable` was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdDrawMeshTasksIndirect2EXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set `alphaToCoverageEnable` to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07625
  If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then

vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07632
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `conservativeRasterizationMode` is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not

subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-conservativePointAndLineRasterization-07499
  If the VK_EXT_conservative_rasterization extension is enabled, conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08669
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been

called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07639
  If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09650
  If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of `depthClampEnable` is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdDrawMeshTasksIndirect2EXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` parameter used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirect2EXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the `rasterizationSamples` parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is

bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure

- VUID-vkCmdDrawMeshTasksIndirect2EXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE, then the number of active color attachments **must** not exceed advancedBlendMaxColorAttachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10862
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT

and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirect2EXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the rasterizationStream to zero
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.width in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::maxSampleLocationGridSize.width as returned by

vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples

- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdDrawMeshTasksIndirect2EXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirect2EXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirect2EXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirect2EXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirect2EXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage

in the logical pipeline

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08684
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any VkShaderEXT bound
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdDrawMeshTasksIndirect2EXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::flags which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not

contain a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT

- VUID-vkCmdDrawMeshTasksIndirect2EXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11861
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11865

If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirect2EXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for

each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksIndirect2EXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirect2EXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set

layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirect2EXT-stage-06480
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pStages-10680
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** not have last bound the pStages element of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT with a valid shader object other than VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07074
  Transform Feedback Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-07075
  Primitives Generated Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pipelineStatistics-07076
  The pipelineStatistics member used to create any active Pipeline Statistics Query **must** not contain VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT, VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT, or VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08694
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created without the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, a valid VkShaderEXT **must** be bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirect2EXT-None-08695
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that

VkShaderEXT was created with the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, there **must** be no VkShaderEXT bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage

- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-13364
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set
- VUID-vkCmdDrawMeshTasksIndirect2EXT-flags-13365
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirect2EXT-commandBuffer-13067
  commandBuffer **must** not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdDrawMeshTasksIndirect2EXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDrawMeshTasksIndirect2EXT-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkDrawIndirect2InfoKHR structure
- VUID-vkCmdDrawMeshTasksIndirect2EXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDrawMeshTasksIndirect2EXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDrawMeshTasksIndirect2EXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMeshTasksIndirect2EXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawMeshTasksIndirect2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDrawMeshTasksIndirect2EXT is affected by conditional rendering

To record an indirect mesh tasks drawing command, call:

WARNING This functionality is superseded by vkCmdDrawMeshTasksIndirect2EXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_mesh_shader
void vkCmdDrawMeshTasksIndirectEXT(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    buffer,
    VkDeviceSize                                offset,
    uint32_t                                    drawCount,
    uint32_t                                    stride);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `buffer` is the buffer containing draw parameters.
- `offset` is the byte offset into `buffer` where parameters begin.
- `drawCount` is the number of draws to execute, and **can** be zero.
- `stride` is the byte stride between successive sets of draw parameters.

`vkCmdDrawMeshTasksIndirectEXT` behaves similarly to vkCmdDrawMeshTasksEXT except that the parameters are read by the device from a buffer during execution. `drawCount` draws are executed by the command, with parameters taken from `buffer` starting at `offset` and increasing by `stride` bytes for each successive draw. The parameters of each draw are encoded in an array of VkDrawMeshTasksIndirectCommandEXT structures. If `drawCount` is less than or equal to one, `stride` is ignored.

Valid Usage

- VUID-vkCmdDrawMeshTasksIndirectEXT-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and

compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdDrawMeshTasksIndirectEXT-magFilter-09598
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then

the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDrawMeshTasksIndirectEXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirectEXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08600

If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not

have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDrawMeshTasksIndirectEXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectEXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectEXT-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDrawMeshTasksIndirectEXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDrawMeshTasksIndirectEXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdDrawMeshTasksIndirectEXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDrawMeshTasksIndirectEXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDrawMeshTasksIndirectEXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDrawMeshTasksIndirectEXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDrawMeshTasksIndirectEXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDrawMeshTasksIndirectEXT-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectEXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an

OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectEXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDrawMeshTasksIndirectEXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectEXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader

accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectEXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11376
  If a bound shader was created as a VkShaderEXT with the

VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must**

have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdDrawMeshTasksIndirectEXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDrawMeshTasksIndirectEXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectEXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectEXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the

VkGraphicsPipelineCreateInfo structure specified when creating the VkPipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS

- VUID-vkCmdDrawMeshTasksIndirectEXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the subpass member of the VkGraphicsPipelineCreateInfo structure specified when creating the VkPipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirectEXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an OpTypeImage variable with a Dim operand of SubpassData, it **must** be decorated with an InputAttachmentIndex that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' pInputAttachments [InputAttachmentIndex] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a InputAttachmentIndex referenced by VkRenderingInputAttachmentIndexInfo, or no InputAttachmentIndex if VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex or VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are NULL, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have an InputAttachmentIndex if both VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex and VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are non-NULL
- VUID-vkCmdDrawMeshTasksIndirectEXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an InputAttachmentIndex, the InputAttachmentIndex **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way

other than as an attachment by this command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the

current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthBiasEnable is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE with a blend equations where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthBoundsTestEnable is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which

was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of and rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties ::maxMultiviewInstanceIndex
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07634
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-06666
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer

prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07846
  If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing
- VUID-vkCmdDrawMeshTasksIndirectEXT-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, then the viewportCount parameter of vkCmdSetViewportWithCount **must** match the scissorCount parameter of vkCmdSetScissorWithCount

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of logicOpEnable is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the primitiveFragmentShadingRateWithMultipleViewports limit is not supported, the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1
- VUID-vkCmdDrawMeshTasksIndirectEXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the primitiveFragmentShadingRateWithMultipleViewports limit is not supported, and any shader object bound to a graphics stage writes to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1
- VUID-vkCmdDrawMeshTasksIndirectEXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain

VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of `blendEnable` **must** be VK_FALSE

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is VK_FALSE, and none of the following is enabled:

  - the `multisampledRenderToSingleSampled` feature

  then the current value of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdDrawMeshTasksIndirectEXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::`viewMask` equal to VkRenderingInfo::`viewMask`
- VUID-vkCmdDrawMeshTasksIndirectEXT-colorAttachmentCount-06179
  If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::`colorAttachmentCount` equal to VkRenderingInfo::`colorAttachmentCount`
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08910
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `imageView` not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::`pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08912
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `imageView` equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::`pColorAttachmentFormats` used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08911
  If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `imageView` not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::`pColorAttachmentFormats` used to create the bound

graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07749
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-attachmentCount-07750
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the attachmentCount parameter of most recent call to vkCmdSetColorWriteEnableEXT in the current command buffer **must** be greater than or equal to the number of active color attachments
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::discardRectangleCount
- VUID-vkCmdDrawMeshTasksIndirectEXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::maxDiscardRectangles
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08914
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08917
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of

VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectEXT-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectEXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-multisampledRenderToSingleSampled-07285
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-multisampledRenderToSingleSampled-07286
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-multisampledRenderToSingleSampled-07287
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-pNext-07935
  If this command is called inside a render pass instance started with

vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples

- VUID-vkCmdDrawMeshTasksIndirectEXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirectEXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo

::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectEXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdDrawMeshTasksIndirectEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdDrawMeshTasksIndirectEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and `alphaToCoverageEnable` was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdDrawMeshTasksIndirectEXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set `alphaToCoverageEnable` to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07625
  If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07629

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07632
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `conservativeRasterizationMode` is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-conservativePointAndLineRasterization-07499
  If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of `conservativeRasterizationMode` **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07633
  If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07636
  If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created

with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08666
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08669
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07849
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stippledLineEnable` is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07639
  If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09650

If the depthClampControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of depthClampEnable is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectEXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdDrawMeshTasksIndirectEXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::rasterizationSamples parameter used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the rasterizationSamples parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure
- VUID-vkCmdDrawMeshTasksIndirectEXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirectEXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to

this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdDrawMeshTasksIndirectEXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10862
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectEXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current

value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.width in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample

- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectEXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectEXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled

- VUID-vkCmdDrawMeshTasksIndirectEXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectEXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectEXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08684
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages

with an element of VK_SHADER_STAGE_GEOMETRY_BIT

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any VkShaderEXT bound
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment

shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE

- VUID-vkCmdDrawMeshTasksIndirectEXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdDrawMeshTasksIndirectEXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of

VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::flags which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectEXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11861
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the

bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and

the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectEXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectEXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectEXT-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectEXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectEXT-stage-06480
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-pStages-10680
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** not have last bound the

pStages element of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT with a valid shader object other than VK_NULL_HANDLE

- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07074
  Transform Feedback Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-07075
  Primitives Generated Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectEXT-pipelineStatistics-07076
  The pipelineStatistics member used to create any active Pipeline Statistics Query **must** not contain VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT, VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT, or VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08694
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created without the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, a valid VkShaderEXT **must** be bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectEXT-None-08695
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created with the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, there **must** be no VkShaderEXT bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-13364
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set
- VUID-vkCmdDrawMeshTasksIndirectEXT-flags-13365
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectEXT-buffer-02708
  If buffer is non-sparse then it **must** be bound completely and contiguously to a single

VkDeviceMemory object

- VUID-vkCmdDrawMeshTasksIndirectEXT-buffer-02709
  buffer **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectEXT-offset-02710
  offset **must** be a multiple of 4
- VUID-vkCmdDrawMeshTasksIndirectEXT-commandBuffer-02711
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdDrawMeshTasksIndirectEXT-drawCount-02718
  If the multiDrawIndirect feature is not enabled, drawCount **must** be 0 or 1
- VUID-vkCmdDrawMeshTasksIndirectEXT-drawCount-02719
  drawCount **must** be less than or equal to VkPhysicalDeviceLimits::maxDrawIndirectCount
- VUID-vkCmdDrawMeshTasksIndirectEXT-drawCount-07088
  If drawCount is greater than 1, stride **must** be a multiple of 4 and **must** be greater than or equal to sizeof(VkDrawMeshTasksIndirectCommandEXT)
- VUID-vkCmdDrawMeshTasksIndirectEXT-drawCount-07089
  If drawCount is equal to 1, (offset + sizeof(VkDrawMeshTasksIndirectCommandEXT)) **must** be less than or equal to the size of buffer
- VUID-vkCmdDrawMeshTasksIndirectEXT-drawCount-07090
  If drawCount is greater than 1, (stride × (drawCount - 1) + offset + sizeof (VkDrawMeshTasksIndirectCommandEXT)) **must** be less than or equal to the size of buffer
- VUID-vkCmdDrawMeshTasksIndirectEXT-MeshEXT-07091
  The current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS **must** contain a shader stage using the MeshEXT Execution Model

Valid Usage (Implicit)

- VUID-vkCmdDrawMeshTasksIndirectEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDrawMeshTasksIndirectEXT-buffer-parameter
  buffer **must** be a valid VkBuffer handle
- VUID-vkCmdDrawMeshTasksIndirectEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDrawMeshTasksIndirectEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDrawMeshTasksIndirectEXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMeshTasksIndirectEXT-suspended
  This command **must** not be called between suspended render pass instances

- VUID-vkCmdDrawMeshTasksIndirectEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDrawMeshTasksIndirectEXT-commonparent
  Both of `buffer`, and `commandBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDrawMeshTasksIndirectEXT is affected by conditional rendering

The `VkDrawMeshTasksIndirectCommandEXT` structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkDrawMeshTasksIndirectCommandEXT {
    uint32_t    groupCountX;
    uint32_t    groupCountY;
    uint32_t    groupCountZ;
} VkDrawMeshTasksIndirectCommandEXT;
```

- `groupCountX` is the number of local workgroups to dispatch in the X dimension.
- `groupCountY` is the number of local workgroups to dispatch in the Y dimension.
- `groupCountZ` is the number of local workgroups to dispatch in the Z dimension.

The members of `VkDrawMeshTasksIndirectCommandEXT` have the same meaning as the similarly named parameters of vkCmdDrawMeshTasksEXT.

Valid Usage

- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07322
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT` `Execution Model`, `groupCountX` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[0]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07323
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT` `Execution Model`, `groupCountY` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[1]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07324
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT` `Execution Model`, `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupCount`[2]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07325
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS contains a shader using the `TaskEXT` `Execution Model`, The product of `groupCountX`, `groupCountY` and `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxTaskWorkGroupTotalCount`
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07326
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT` `Execution Model`, `groupCountX` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[0]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07327
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT` `Execution Model`, `groupCountY` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[1]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07328
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT` `Execution Model`, `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`[2]
- VUID-VkDrawMeshTasksIndirectCommandEXT-TaskEXT-07329
  If the current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS does not contain a shader using the `TaskEXT` `Execution Model`, The product of `groupCountX`, `groupCountY` and `groupCountZ` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupTotalCount`

To record an indirect mesh tasks drawing command with the draw count sourced from an address range, call:

```
// Provided by VK_KHR_device_address_commands with (VK_KHR_draw_indirect_count or
VK_VERSION_1_2) and VK_EXT_mesh_shader
void vkCmdDrawMeshTasksIndirectCount2EXT(
    VkCommandBuffer                             commandBuffer,
    const VkDrawIndirectCount2InfoKHR*          pInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a VkDrawIndirectCount2InfoKHR structure defining parameters of this command.

`vkCmdDrawMeshTasksIndirectCount2EXT` behaves similarly to vkCmdDrawMeshTasksIndirect2EXT except that the draw count is read by the device from an address range during execution. The command will read an unsigned 32-bit integer from `pInfo->countAddressRange` and use this as the draw count.

Valid Usage

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by

VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without

VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08613

If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-commandBuffer-02707
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with

`flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset

specified by each mapping

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11373

If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation,

with an identically defined color

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by VkRenderingInputAttachmentIndexInfo, or no `InputAttachmentIndex` if VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` or VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are `NULL`, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have

an InputAttachmentIndex if both VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex and VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are non-NULL

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an InputAttachmentIndex, the InputAttachmentIndex **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE with a blend equations where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of

depthBoundsTestEnable is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of and rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07634
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-06666
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is

VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthTestEnable` is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07846
  If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then

vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the

bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the primitiveFragmentShadingRateWithMultipleViewports limit is not supported, and any shader object bound to a graphics stage writes to the PrimitiveShadingRateKHR built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the viewportCount parameter of vkCmdSetViewportWithCount **must** be 1
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of blendEnable **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and none of the following is enabled:
  - the multisampledRenderToSingleSampled feature

  then the current value of rasterizationSamples **must** be the same as the current color and/or depth/stencil attachments
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render

pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07749
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-attachmentCount-07750
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the attachmentCount parameter of most recent call to vkCmdSetColorWriteEnableEXT in the current command buffer **must** be greater than or equal to the number of active color attachments
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not

subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08914
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-

08915
If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08916
If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08917
If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-08918
If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-imageView-06183
If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingLocalRead-11797
If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-multisampledRenderToSingleSampled-07285
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-multisampledRenderToSingleSampled-07286
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-multisampledRenderToSingleSampled-07287
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pNext-07935
  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not

VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT`::`rasterizationStream`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07620
  If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and `alphaToCoverageEnable` was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set

alphaToCoverageEnable to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07625
  If the alphaToOne feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07626
  If the logicOp feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07630
  If the geometryStreams feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07631
  If the VK_EXT_conservative_rasterization extension is enabled, a shader object is bound to

any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07632
  If the VK_EXT_conservative_rasterization extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of conservativeRasterizationMode is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-conservativePointAndLineRasterization-07499
  If the VK_EXT_conservative_rasterization extension is enabled, conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08669

If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current lineRasterizationMode is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current alphaToCoverageEnable, alphaToOneEnable and sampleShadingEnable states **must** all be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07639
  If the depthClipControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09650
  If the depthClampControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of depthClampEnable is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-samples-07472
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the `samples` parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the `rasterizationSamples` parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with `multisampledRenderToSingleSampledEnable` equal to VK_TRUE, then the `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the `rasterizationSamples` member of that structure
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10862
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the

current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the rasterizationStream to zero
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound

graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.width in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide VkMultisamplePropertiesEXT::`maxSampleLocationGridSize.height` as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current `stippledLineEnable` state is VK_TRUE and the current `lineRasterizationMode` state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the `stippledRectangularLines` feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current `stippledLineEnable` state is VK_TRUE and the current `lineRasterizationMode` state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the `stippledBresenhamLines` feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current `stippledLineEnable` state is VK_TRUE and the current `lineRasterizationMode` state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the `stippledSmoothLines` feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current `stippledLineEnable` state is VK_TRUE and the current `lineRasterizationMode` state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the `stippledRectangularLines` feature **must** be enabled and VkPhysicalDeviceLimits::`strictLines` **must** be VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stage-07073

If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08684
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages

with an element of VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08693
  If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08696
  If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no `VkShaderEXT` bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any `VkShaderEXT` bound
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to vkCmdSetStencilWriteMask **must** be `0`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was

created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass

must have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::`flags` which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::`customResolve` as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::`customResolve` as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11861
  If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::`colorAttachmentCount` equal to VkRenderingInfo::`colorAttachmentCount`
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11862
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::`colorAttachmentCount` greater than `0`, then each element of the VkRenderingInfo::`pColorAttachments` array with an `resolveImageView` not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::`pColorAttachmentFormats` used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11863
  If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render

pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with

VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-stage-06480
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pStages-10680
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** not have last bound the pStages element of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT with a valid shader object other than VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07074
  Transform Feedback Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-07075

Primitives Generated Queries **must** not be active

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pipelineStatistics-07076
  The `pipelineStatistics` member used to create any active Pipeline Statistics Query **must** not contain VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT, VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT, or VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08694
  If there is no bound graphics pipeline, and the `meshShader` features is enabled, and a valid `VkShaderEXT` is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that `VkShaderEXT` was created without the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, a valid `VkShaderEXT` **must** be bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-None-08695
  If there is no bound graphics pipeline, and the `meshShader` features is enabled, and a valid `VkShaderEXT` is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that `VkShaderEXT` was created with the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, there **must** be no `VkShaderEXT` bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-13364
  If there are any shader objects bound that were created with `flags` that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-flags-13365
  If there are any shader objects bound that were created with `flags` that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-commandBuffer-13068
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-drawIndirectCount-13069
  If the `drawIndirectCount` feature is not enabled this function **must** not be used

Valid Usage (Implicit)

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle

- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDrawIndirectCount2InfoKHR structure
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawMeshTasksIndirectCount2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDrawMeshTasksIndirectCount2EXT is affected by conditional rendering

To record an indirect mesh tasks drawing command with the draw count sourced from a buffer, call:

WARNING This functionality is superseded by vkCmdDrawMeshTasksIndirectCount2EXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_mesh_shader with VK_VERSION_1_2 or VK_KHR_draw_indirect_count or
VK_AMD_draw_indirect_count
void vkCmdDrawMeshTasksIndirectCountEXT(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    buffer,
    VkDeviceSize                                offset,
    VkBuffer                                    countBuffer,
    VkDeviceSize                                countBufferOffset,
    uint32_t                                    maxDrawCount,
    uint32_t                                    stride);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `buffer` is the buffer containing draw parameters.
- `offset` is the byte offset into `buffer` where parameters begin.
- `countBuffer` is the buffer containing the draw count.
- `countBufferOffset` is the byte offset into `countBuffer` where the draw count begins.
- `maxDrawCount` specifies the maximum number of draws that will be executed. The actual number of executed draw calls is the minimum of the count specified in `countBuffer` and `maxDrawCount`.
- `stride` is the byte stride between successive sets of draw parameters.

`vkCmdDrawMeshTasksIndirectCountEXT` behaves similarly to vkCmdDrawMeshTasksIndirectEXT except that the draw count is read by the device from a buffer during execution. The command will read an unsigned 32-bit integer from `countBuffer` located at `countBufferOffset` and use this as the draw count.

Valid Usage

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain

VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or

VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08114

Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform

buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is

accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration

structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the

respective heap bound by vkCmdBind*HeapEXT commands

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, the robustBufferAccess2 feature is not enabled, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, the robustBufferAccess2 feature is not enabled, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11374
  If the robustBufferAccess2 feature is not enabled, the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of pBindInfo->reservedRangeSize set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to minSamplerHeapReservedRangeWithEmbedded
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' `pInputAttachments`

[InputAttachmentIndex] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a InputAttachmentIndex referenced by VkRenderingInputAttachmentIndexInfo, or no InputAttachmentIndex if VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex or VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are NULL, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have an InputAttachmentIndex if both VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex and VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex are non-NULL
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an InputAttachmentIndex, the InputAttachmentIndex **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback

loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08617
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS

dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE with a blend equations where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthBoundsTestEnable is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of and rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07634
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-06666
  If the VK_EXT_sample_locations extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of sampleLocationsEnable is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing

command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07846
  If the depthBounds feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, then vkCmdSetScissorWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, then the viewportCount parameter of vkCmdSetViewportWithCount **must** match the scissorCount parameter of vkCmdSetScissorWithCount
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then

vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be `1`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be `1`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of `blendEnable` **must** be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is VK_FALSE, and none of the following is enabled:
  - the `multisampledRenderToSingleSampled` feature

  then the current value of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo ::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07749
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-attachmentCount-07750
  If the colorWriteEnable feature is enabled, a shader object is bound to the

VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the attachmentCount parameter of most recent call to vkCmdSetColorWriteEnableEXT in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::discardRectangleCount
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::maxDiscardRectangles
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo

::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08914
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08917
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and

VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-multisampledRenderToSingleSampled-07285
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-multisampledRenderToSingleSampled-07286
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-multisampledRenderToSingleSampled-07287
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pNext-07935
  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of

rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo ::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled,

and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and alphaToCoverageEnable was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set alphaToCoverageEnable to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha Component word in Location 0 at Index 0
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07625
  If the alphaToOne feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07626
  If the logicOp feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current

value of rasterizerDiscardEnable is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07630
  If the geometryStreams feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07631
  If the VK_EXT_conservative_rasterization extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07632
  If the VK_EXT_conservative_rasterization extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of conservativeRasterizationMode is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-conservativePointAndLineRasterization-07499
  If the VK_EXT_conservative_rasterization extension is enabled, conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then

vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08666
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08669
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07849
  If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stippledLineEnable` is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10608
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07639
  If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09650
  If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of depthClampEnable is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::rasterizationSamples parameter used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the rasterizationSamples parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-advancedBlendMaxColorAttachments-

07480
If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10862
If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-rasterizerDiscardEnable-10863
If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10864
If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the `rasterizationStream` to zero

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsPerPixel-07482
If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the

rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.width in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT ::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to

vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if

the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08684
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08688
  If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08689
  If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08690
  If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08693
  If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08696
  If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no `VkShaderEXT` bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any `VkShaderEXT` bound
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses

OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound

pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an `InputAttachmentIndex` decoration, the two values **must** match

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::`flags` which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::`customResolve` as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::`customResolve` as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11861
  If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT

::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled,

VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the

sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stage-06480
  The bound graphics pipeline **must** not have been created with the VkPipelineShaderStageCreateInfo::stage member of any element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pStages-10680
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** not have last bound the pStages element of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT with a valid shader object other than VK_NULL_HANDLE
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07074
  Transform Feedback Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-07075
  Primitives Generated Queries **must** not be active
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-pipelineStatistics-07076
  The pipelineStatistics member used to create any active Pipeline Statistics Query **must** not contain VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT, VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT, VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT, or VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08694
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created without the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, a valid VkShaderEXT **must** be bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-08695
  If there is no bound graphics pipeline, and the meshShader features is enabled, and a valid VkShaderEXT is bound the to the VK_SHADER_STAGE_MESH_BIT_EXT stage, and that VkShaderEXT was created with the VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT flag, there **must** be no VkShaderEXT bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-13364
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-flags-13365
  If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-buffer-02708
  If `buffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-buffer-02709
  `buffer` **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-offset-02710
  `offset` **must** be a multiple of `4`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commandBuffer-02711
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBuffer-02714
  If `countBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBuffer-02715
  `countBuffer` **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBufferOffset-02716
  `countBufferOffset` **must** be a multiple of `4`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBuffer-02717
  The count stored in `countBuffer` **must** be less than or equal to `VkPhysicalDeviceLimits::maxDrawIndirectCount`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBufferOffset-04129
  (`countBufferOffset` + `sizeof`(uint32_t)) **must** be less than or equal to the size of `countBuffer`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-None-04445
  If the `drawIndirectCount` feature is not enabled this function **must** not be used
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-stride-07096
  `stride` **must** be a multiple of `4` and **must** be greater than or equal to `sizeof`(`VkDrawMeshTasksIndirectCommandEXT`)
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-maxDrawCount-07097
  If `maxDrawCount` is greater than or equal to `1`, (`stride` × (`maxDrawCount` - 1) + `offset` + `sizeof`(`VkDrawMeshTasksIndirectCommandEXT`)) **must** be less than or equal to the size of `buffer`
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-MeshEXT-07100
  The current pipeline bound to VK_PIPELINE_BIND_POINT_GRAPHICS **must** contain a shader stage using the `MeshEXT` `Execution` `Model`

Valid Usage (Implicit)

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle

- VUID-vkCmdDrawMeshTasksIndirectCountEXT-countBuffer-parameter
  `countBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDrawMeshTasksIndirectCountEXT-commonparent
  Each of `buffer`, `commandBuffer`, and `countBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdDrawMeshTasksIndirectCountEXT is affected by conditional rendering

Chapter 26. Fixed-Function Vertex Processing

Vertex fetching is controlled via configurable state, as a logically distinct graphics pipeline stage.

26.1. Vertex Attributes

Vertex shaders **can** define input variables, which receive *vertex attribute* data transferred from one or more VkBuffer(s) by drawing commands. Vertex shader input variables are bound to buffers via an indirect binding where the vertex shader associates a *vertex input attribute* number with each variable, vertex input attributes are associated to *vertex input bindings* on a per-pipeline basis, and vertex input bindings are associated with specific buffers on a per-draw basis via the vkCmdBindVertexBuffers command. Vertex input attribute and vertex input binding descriptions also contain format information controlling how data is extracted from buffer memory and converted to the format expected by the vertex shader.

There are VkPhysicalDeviceLimits::maxVertexInputAttributes number of vertex input attributes and VkPhysicalDeviceLimits::maxVertexInputBindings number of vertex input bindings (each referred to by zero-based indices), where there are at least as many vertex input attributes as there are vertex input bindings. Applications **can** store multiple vertex input attributes interleaved in a single buffer, and use a single vertex input binding to access those attributes.

In GLSL, vertex shaders associate input variables with a vertex input attribute number using the location layout qualifier. The Component layout qualifier associates components of a vertex shader input variable with components of a vertex input attribute.

GLSL Example

```
// Assign location M to variableName
layout (location=M, component=2) in vec2 variableName;

// Assign locations [N,N+L) to the array elements of variableNameArray
layout (location=N) in vec4 variableNameArray[L];
```

In SPIR-V, vertex shaders associate input variables with a vertex input attribute number using the Location decoration. The Component decoration associates components of a vertex shader input variable with components of a vertex input attribute. The Location and Component decorations are specified via the OpDecorate instruction.

SPIR-V Example

```
          ...
     %1 = OpExtInstImport "GLSL.std.450"
          ...
          OpName %9 "variableName"
          OpName %15 "variableNameArray"
          OpDecorate %18 BuiltIn VertexIndex
```

```
               OpDecorate %19 BuiltIn InstanceIndex
               OpDecorate %9 Location M
               OpDecorate %9 Component 2
               OpDecorate %15 Location N
               ...
        %2 = OpTypeVoid
        %3 = OpTypeFunction %2
        %6 = OpTypeFloat 32
        %7 = OpTypeVector %6 2
        %8 = OpTypePointer Input %7
        %9 = OpVariable %8 Input
       %10 = OpTypeVector %6 4
       %11 = OpTypeInt 32 0
       %12 = OpConstant %11 L
       %13 = OpTypeArray %10 %12
       %14 = OpTypePointer Input %13
       %15 = OpVariable %14 Input
               ...
```

26.1.1. Attribute Location and Component Assignment

The `Location` decoration specifies which vertex input attribute is used to read and interpret the data that a variable will consume.

When a vertex shader input variable declared using a 16- or 32-bit scalar or vector data type is assigned a `Location`, its value(s) are taken from the components of the input attribute specified with the corresponding `VkVertexInputAttributeDescription`::`location`. The components used depend on the type of variable and the `Component` decoration specified in the variable declaration, as identified in Input Attribute Components Accessed By 16-Bit and 32-Bit Input Variables. Any 16-bit or 32-bit scalar or vector input will consume a single `Location`. For 16-bit and 32-bit data types, missing components are filled in with default values as described below.

If an implementation supports `storageInputOutput16`, vertex shader input variables **can** have a width of 16 bits.

In all the following component assignment specifications, if or the `maintenance9` feature is enabled, and there is no `VkVertexInputAttributeDescription`::`location` specified for the shader vertex attribute `Location` being read, the value (0,0,0,0) or (0,0,0,1) is used for each of the equivalent (x,y,z,w) components consumed entries as specified below.

Table 31. Input Attribute Components Accessed By 16-Bit and 32-Bit Input Variables

16-bit or 32-bit data type	`Component` **decoration**	**Components consumed**
scalar	0 or unspecified	(x, o, o, o)
scalar	1	(o, y, o, o)
scalar	2	(o, o, z, o)

16-bit or 32-bit data type	`Component` decoration	Components consumed
scalar	3	(o, o, o, w)
two-component vector	0 or unspecified	(x, y, o, o)
two-component vector	1	(o, y, z, o)
two-component vector	2	(o, o, z, w)
three-component vector	0 or unspecified	(x, y, z, o)
three-component vector	1	(o, y, z, w)
four-component vector	0 or unspecified	(x, y, z, w)

Components indicated by “o” are available for use by other input variables which are sourced from the same attribute, and if used, are either filled with the corresponding component from the input format (if present), or the default value.

When a vertex shader input variable declared using a 32-bit floating-point matrix type is assigned a `Location` *i*, its values are taken from consecutive input attributes starting with the corresponding `VkVertexInputAttributeDescription`::`location`. Such matrices are treated as an array of column vectors with values taken from the input attributes identified in Input Attributes Accessed by 32-Bit Input Matrix Variables. The `VkVertexInputAttributeDescription`::`format` **must** be specified with a VkFormat that corresponds to the appropriate type of column vector. The `Component` decoration **must** not be used with matrix types.

Table 32. Input Attributes Accessed by 32-Bit Input Matrix Variables

Data type	Column vector type	Locations consumed	Components consumed
mat2	two-component vector	i, i+1	(x, y, o, o), (x, y, o, o)
mat2x3	three-component vector	i, i+1	(x, y, z, o), (x, y, z, o)
mat2x4	four-component vector	i, i+1	(x, y, z, w), (x, y, z, w)
mat3x2	two-component vector	i, i+1, i+2	(x, y, o, o), (x, y, o, o), (x, y, o, o)
mat3	three-component vector	i, i+1, i+2	(x, y, z, o), (x, y, z, o), (x, y, z, o)
mat3x4	four-component vector	i, i+1, i+2	(x, y, z, w), (x, y, z, w), (x, y, z, w)
mat4x2	two-component vector	i, i+1, i+2, i+3	(x, y, o, o), (x, y, o, o), (x, y, o, o), (x, y, o, o)
mat4x3	three-component vector	i, i+1, i+2, i+3	(x, y, z, o), (x, y, z, o), (x, y, z, o), (x, y, z, o)
mat4	four-component vector	i, i+1, i+2, i+3	(x, y, z, w), (x, y, z, w), (x, y, z, w), (x, y, z, w)

Components indicated by “o” are available for use by other input variables which are sourced from the same attribute, and if used, are either filled with the corresponding component from the input (if present), or the default value.

When a vertex shader input variable declared using a scalar or vector 64-bit data type is assigned a `Location` *i*, its values are taken from consecutive input attributes starting with the corresponding `VkVertexInputAttributeDescription`::`location`. The `Location` slots and `Component` words used depend on the type of variable and the `Component` decoration specified in the variable declaration, as identified in Input Attribute Locations and Components Accessed by 64-Bit Input Variables. For 64-bit data types, no default attribute values are provided. Input variables **must** not use more components than provided by the attribute.

Table 33. Input Attribute Locations and Components Accessed by 64-Bit Input Variables

Input format	Locations consumed	64-bit data type	`Location` decoration	`Component` decoration	32-bit components consumed
R64	i	scalar	i	0 or unspecified	(x, y, -, -)
R64G64	i	scalar	i	0 or unspecified	(x, y, o, o)
		scalar	i	2	(o, o, z, w)
		two-component vector	i	0 or unspecified	(x, y, z, w)
R64G64B64	i, i+1	scalar	i	0 or unspecified	(x, y, o, o), (o, o, -, -)
		scalar	i	2	(o, o, z, w), (o, o, -, -)
		scalar	i+1	0 or unspecified	(o, o, o, o), (x, y, -, -)
		two-component vector	i	0 or unspecified	(x, y, z, w), (o, o, -, -)
		three-component vector	i	unspecified	(x, y, z, w), (x, y, -, -)

Input format	Locations consumed	64-bit data type	`Location` decoration	`Component` decoration	32-bit components consumed
R64G64B64A64	i, i+1	scalar	i	0 or unspecified	(x, y, o, o), (o, o, o, o)
		scalar	i	2	(o, o, z, w), (o, o, o, o)
		scalar	i+1	0 or unspecified	(o, o, o, o), (x, y, o, o)
		scalar	i+1	2	(o, o, o, o), (o, o, z, w)
		two-component vector	i	0 or unspecified	(x, y, z, w), (o, o, o, o)
		two-component vector	i+1	0 or unspecified	(o, o, o, o), (x, y, z, w)
		three-component vector	i	unspecified	(x, y, z, w), (x, y, o, o)
		four-component vector	i	unspecified	(x, y, z, w), (x, y, z, w)

Components indicated by “o” are available for use by other input variables which are sourced from the same attribute. Components indicated by “-” are not available for input variables as there are no default values provided for 64-bit data types, and there is no data provided by the input format.

When a vertex shader input variable declared using a 64-bit floating-point matrix type is assigned a `Location` *i*, its values are taken from consecutive input attribute locations. Such matrices are treated as an array of column vectors with values taken from the input attributes as shown in Input Attribute Locations and Components Accessed by 64-Bit Input Variables. Each column vector starts at the `Location` immediately following the last `Location` of the previous column vector. The number of attributes and components assigned to each matrix is determined by the matrix dimensions and ranges from two to eight locations.

When a vertex shader input variable declared using an array type is assigned a location, its values are taken from consecutive input attributes starting with the corresponding `VkVertexInputAttributeDescription`::`location`. The number of attributes and components assigned to each element are determined according to the data type of the array elements and `Component` decoration (if any) specified in the declaration of the array, as described above. Each element of the array, in order, is assigned to consecutive locations, but all at the same specified component within each location.

Only input variables declared with the data types and component decorations as specified above are supported. Two variables are allowed to share the same `Location` slot only if their `Component` words do not overlap. If multiple variables share the same `Location` slot, they **must** all have the same SPIR-V floating-point component type or all have the same width scalar type components.

26.2. Vertex Input Description

Applications specify vertex input attribute and vertex input binding descriptions as part of graphics pipeline creation by setting the VkGraphicsPipelineCreateInfo::pVertexInputState pointer to a VkPipelineVertexInputStateCreateInfo structure. Alternatively, if the graphics pipeline is created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled, then the vertex input attribute and vertex input binding descriptions are specified dynamically with vkCmdSetVertexInputEXT, and the VkGraphicsPipelineCreateInfo::pVertexInputState pointer is ignored.

The VkPipelineVertexInputStateCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineVertexInputStateCreateInfo {
    VkStructureType                             sType;
    const void*                                 pNext;
    VkPipelineVertexInputStateCreateFlags       flags;
    uint32_t                                    vertexBindingDescriptionCount;
    const VkVertexInputBindingDescription*      pVertexBindingDescriptions;
    uint32_t                                    vertexAttributeDescriptionCount;
    const VkVertexInputAttributeDescription*    pVertexAttributeDescriptions;
} VkPipelineVertexInputStateCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- vertexBindingDescriptionCount is the number of vertex binding descriptions provided in pVertexBindingDescriptions.
- pVertexBindingDescriptions is a pointer to an array of VkVertexInputBindingDescription structures.
- vertexAttributeDescriptionCount is the number of vertex attribute descriptions provided in pVertexAttributeDescriptions.
- pVertexAttributeDescriptions is a pointer to an array of VkVertexInputAttributeDescription structures.

Valid Usage

- VUID-VkPipelineVertexInputStateCreateInfo-vertexBindingDescriptionCount-00613 vertexBindingDescriptionCount **must** be less than or equal to VkPhysicalDeviceLimits::maxVertexInputBindings
- VUID-VkPipelineVertexInputStateCreateInfo-vertexAttributeDescriptionCount-00614 vertexAttributeDescriptionCount **must** be less than or equal to VkPhysicalDeviceLimits::maxVertexInputAttributes
- VUID-VkPipelineVertexInputStateCreateInfo-binding-00615

For every `binding` specified by each element of `pVertexAttributeDescriptions`, a VkVertexInputBindingDescription **must** exist in `pVertexBindingDescriptions` with the same value of `binding`

- VUID-VkPipelineVertexInputStateCreateInfo-pVertexBindingDescriptions-00616
  All elements of `pVertexBindingDescriptions` **must** describe distinct binding numbers
- VUID-VkPipelineVertexInputStateCreateInfo-pVertexAttributeDescriptions-00617
  All elements of `pVertexAttributeDescriptions` **must** describe distinct attribute locations

Valid Usage (Implicit)

- VUID-VkPipelineVertexInputStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_VERTEX_INPUT_STATE_CREATE_INFO
- VUID-VkPipelineVertexInputStateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineVertexInputDivisorStateCreateInfo
- VUID-VkPipelineVertexInputStateCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPipelineVertexInputStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkPipelineVertexInputStateCreateInfo-pVertexBindingDescriptions-parameter
  If `vertexBindingDescriptionCount` is not `0`, `pVertexBindingDescriptions` **must** be a valid pointer to an array of `vertexBindingDescriptionCount` valid VkVertexInputBindingDescription structures
- VUID-VkPipelineVertexInputStateCreateInfo-pVertexAttributeDescriptions-parameter
  If `vertexAttributeDescriptionCount` is not `0`, `pVertexAttributeDescriptions` **must** be a valid pointer to an array of `vertexAttributeDescriptionCount` valid VkVertexInputAttributeDescription structures

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineVertexInputStateCreateFlags;
```

`VkPipelineVertexInputStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

Each vertex input binding is specified by the `VkVertexInputBindingDescription` structure, defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkVertexInputBindingDescription {
    uint32_t             binding;
    uint32_t             stride;
    VkVertexInputRate    inputRate;
} VkVertexInputBindingDescription;
```

- `binding` is the binding number that this structure describes.
- `stride` is the byte stride between consecutive elements within the buffer.
- `inputRate` is a VkVertexInputRate value specifying whether vertex attribute addressing is a function of the vertex index or of the instance index.

Valid Usage

- VUID-VkVertexInputBindingDescription-binding-00618
  `binding` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputBindings`
- VUID-VkVertexInputBindingDescription-stride-00619
  `stride` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputBindingStride`
- VUID-VkVertexInputBindingDescription-stride-04456
  If the `VK_KHR_portability_subset` extension is enabled, `stride` **must** be a multiple of, and at least as large as, VkPhysicalDevicePortabilitySubsetPropertiesKHR::`minVertexInputBindingStrideAlignment`

Valid Usage (Implicit)

- VUID-VkVertexInputBindingDescription-inputRate-parameter
  `inputRate` **must** be a valid VkVertexInputRate value

Possible values of VkVertexInputBindingDescription::`inputRate`, specifying the rate at which vertex attributes are pulled from buffers, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkVertexInputRate {
    VK_VERTEX_INPUT_RATE_VERTEX = 0,
    VK_VERTEX_INPUT_RATE_INSTANCE = 1,
} VkVertexInputRate;
```

- VK_VERTEX_INPUT_RATE_VERTEX specifies that vertex attribute addressing is a function of the vertex index.
- VK_VERTEX_INPUT_RATE_INSTANCE specifies that vertex attribute addressing is a function of the instance index.

Each vertex input attribute is specified by the `VkVertexInputAttributeDescription` structure, defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkVertexInputAttributeDescription {
    uint32_t    location;
    uint32_t    binding;
    VkFormat    format;
    uint32_t    offset;
} VkVertexInputAttributeDescription;
```

- `location` is the shader input location number for this attribute.
- `binding` is the binding number which this attribute takes its data from.
- `format` is the size and type of the vertex attribute data.
- `offset` is a byte offset of this attribute relative to the start of an element in the vertex input binding.

Valid Usage

- VUID-VkVertexInputAttributeDescription-location-00620
  `location` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputAttributes`
- VUID-VkVertexInputAttributeDescription-binding-00621
  `binding` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputBindings`
- VUID-VkVertexInputAttributeDescription-offset-00622
  `offset` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputAttributeOffset`
- VUID-VkVertexInputAttributeDescription-format-00623
  The format features of `format` **must** contain VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT
- VUID-VkVertexInputAttributeDescription-vertexAttributeAccessBeyondStride-04457
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`vertexAttributeAccessBeyondStride` is VK_FALSE, the sum of `offset` plus the size of the vertex attribute data described by `format` **must** not be greater than `stride` in the VkVertexInputBindingDescription referenced in `binding`

Valid Usage (Implicit)

- VUID-VkVertexInputAttributeDescription-format-parameter
  `format` **must** be a valid VkFormat value

To dynamically set the vertex input attribute and vertex input binding descriptions, call:

```
// Provided by VK_EXT_shader_object, VK_EXT_vertex_input_dynamic_state
void vkCmdSetVertexInputEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    vertexBindingDescriptionCount,
    const VkVertexInputBindingDescription2EXT*  pVertexBindingDescriptions,
    uint32_t                                    vertexAttributeDescriptionCount,
    const VkVertexInputAttributeDescription2EXT* pVertexAttributeDescriptions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `vertexBindingDescriptionCount` is the number of vertex binding descriptions provided in `pVertexBindingDescriptions`.
- `pVertexBindingDescriptions` is a pointer to an array of VkVertexInputBindingDescription2EXT structures.
- `vertexAttributeDescriptionCount` is the number of vertex attribute descriptions provided in `pVertexAttributeDescriptions`.
- `pVertexAttributeDescriptions` is a pointer to an array of VkVertexInputAttributeDescription2EXT structures.

This command sets the vertex input attribute and vertex input binding descriptions state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_VERTEX_INPUT_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkGraphicsPipelineCreateInfo::`pVertexInputState` values used to create the currently active pipeline.

If drawing using shader objects, or if the bound pipeline state object was also created with the VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE dynamic state enabled, then vkCmdBindVertexBuffers2 can be used instead of `vkCmdSetVertexInputEXT` to dynamically set the stride.

The vertex attribute description for any location in the range [0,`VkPhysicalDeviceLimits`::`maxVertexInputAttributes`) not specified in the `pVertexAttributeDescriptions` array becomes undefined.

Valid Usage

- VUID-vkCmdSetVertexInputEXT-None-08546
  Either the `vertexInputDynamicState` feature or the `shaderObject` feature or both **must** be enabled
- VUID-vkCmdSetVertexInputEXT-vertexBindingDescriptionCount-04791
  `vertexBindingDescriptionCount` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputBindings`
- VUID-vkCmdSetVertexInputEXT-vertexAttributeDescriptionCount-04792
  `vertexAttributeDescriptionCount` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputAttributes`

- VUID-vkCmdSetVertexInputEXT-binding-04793
  For every `binding` specified by each element of `pVertexAttributeDescriptions`, a VkVertexInputBindingDescription2EXT **must** exist in `pVertexBindingDescriptions` with the same value of `binding`
- VUID-vkCmdSetVertexInputEXT-pVertexBindingDescriptions-04794
  All elements of `pVertexBindingDescriptions` **must** describe distinct binding numbers
- VUID-vkCmdSetVertexInputEXT-pVertexAttributeDescriptions-04795
  All elements of `pVertexAttributeDescriptions` **must** describe distinct attribute locations

Valid Usage (Implicit)

- VUID-vkCmdSetVertexInputEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetVertexInputEXT-pVertexBindingDescriptions-parameter
  If `vertexBindingDescriptionCount` is not `0`, `pVertexBindingDescriptions` **must** be a valid pointer to an array of `vertexBindingDescriptionCount` valid VkVertexInputBindingDescription2EXT structures
- VUID-vkCmdSetVertexInputEXT-pVertexAttributeDescriptions-parameter
  If `vertexAttributeDescriptionCount` is not `0`, `pVertexAttributeDescriptions` **must** be a valid pointer to an array of `vertexAttributeDescriptionCount` valid VkVertexInputAttributeDescription2EXT structures
- VUID-vkCmdSetVertexInputEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetVertexInputEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetVertexInputEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetVertexInputEXT is not affected by conditional rendering

The VkVertexInputBindingDescription2EXT structure is defined as:

```
// Provided by VK_EXT_shader_object, VK_EXT_vertex_input_dynamic_state
typedef struct VkVertexInputBindingDescription2EXT {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             binding;
    uint32_t             stride;
    VkVertexInputRate    inputRate;
    uint32_t             divisor;
} VkVertexInputBindingDescription2EXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- binding is the binding number that this structure describes.
- stride is the byte stride between consecutive elements within the buffer.
- inputRate is a VkVertexInputRate value specifying whether vertex attribute addressing is a function of the vertex index or of the instance index.
- divisor is the number of successive instances that will use the same value of the vertex attribute when instanced rendering is enabled. This member **can** be a value other than 1 if the vertexAttributeInstanceRateDivisor feature is enabled. For example, if the divisor is N, the same vertex attribute will be applied to N successive instances before moving on to the next vertex attribute. The maximum value of divisor is implementation-dependent and can be queried using VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT::maxVertexAttribDivisor. A value of 0 **can** be used for the divisor if the vertexAttributeInstanceRateZeroDivisor feature is enabled. In this case, the same vertex attribute will be applied to all instances.

Valid Usage

- VUID-VkVertexInputBindingDescription2EXT-binding-04796
  binding **must** be less than VkPhysicalDeviceLimits::maxVertexInputBindings

- VUID-VkVertexInputBindingDescription2EXT-stride-04797
  `stride` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputBindingStride`
- VUID-VkVertexInputBindingDescription2EXT-divisor-04798
  If the `vertexAttributeInstanceRateZeroDivisor` feature is not enabled, `divisor` **must** not be `0`
- VUID-VkVertexInputBindingDescription2EXT-divisor-04799
  If the `vertexAttributeInstanceRateDivisor` feature is not enabled, `divisor` **must** be `1`
- VUID-VkVertexInputBindingDescription2EXT-divisor-06226
  `divisor` **must** be a value between `0` and `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT`::`maxVertexAttribDivisor`, inclusive
- VUID-VkVertexInputBindingDescription2EXT-divisor-06227
  If `divisor` is not `1` then `inputRate` **must** be of type VK_VERTEX_INPUT_RATE_INSTANCE

Valid Usage (Implicit)

- VUID-VkVertexInputBindingDescription2EXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VERTEX_INPUT_BINDING_DESCRIPTION_2_EXT
- VUID-VkVertexInputBindingDescription2EXT-inputRate-parameter
  `inputRate` **must** be a valid VkVertexInputRate value

The `VkVertexInputAttributeDescription2EXT` structure is defined as:

```
// Provided by VK_EXT_shader_object, VK_EXT_vertex_input_dynamic_state
typedef struct VkVertexInputAttributeDescription2EXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           location;
    uint32_t           binding;
    VkFormat           format;
    uint32_t           offset;
} VkVertexInputAttributeDescription2EXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `location` is the shader input location number for this attribute.
- `binding` is the binding number which this attribute takes its data from.
- `format` is the size and type of the vertex attribute data.
- `offset` is a byte offset of this attribute relative to the start of an element in the vertex input binding.

Valid Usage

- VUID-VkVertexInputAttributeDescription2EXT-location-06228
  `location` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputAttributes`
- VUID-VkVertexInputAttributeDescription2EXT-binding-06229
  `binding` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputBindings`
- VUID-VkVertexInputAttributeDescription2EXT-offset-06230
  `offset` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputAttributeOffset`
- VUID-VkVertexInputAttributeDescription2EXT-format-04805
  The format features of `format` **must** contain VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT
- VUID-VkVertexInputAttributeDescription2EXT-vertexAttributeAccessBeyondStride-04806
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`vertexAttributeAccessBeyondStride` is VK_FALSE, the sum of `offset` plus the size of the vertex attribute data described by `format` **must** not be greater than `stride` in the VkVertexInputBindingDescription2EXT referenced in `binding`

Valid Usage (Implicit)

- VUID-VkVertexInputAttributeDescription2EXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_VERTEX_INPUT_ATTRIBUTE_DESCRIPTION_2_EXT
- VUID-VkVertexInputAttributeDescription2EXT-format-parameter
  `format` **must** be a valid VkFormat value

To bind strided address ranges as vertex buffers to a command buffer for use in subsequent drawing commands, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdBindVertexBuffers3KHR(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBindVertexBuffer3InfoKHR*           pBindingInfos);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstBinding` is the index of the first vertex input binding whose state is updated by the command.
- `bindingCount` is the number of vertex input bindings whose state is updated by the command.
- `pInfos` is a pointer to an array of VkBindVertexBuffer3InfoKHR structures defining address ranges to bind as vertex buffers.

The values taken from the address ranges defined by elements i of pInfos replace the current state for the vertex input binding firstBinding + i, for i in [0, bindingCount). The vertex input binding is updated to the range of memory indicated by pInfos[i]. All vertex input attributes that use each of these bindings will use these updated addresses in their address calculations for subsequent drawing commands. If the nullDescriptor feature is enabled, elements of pInfos **can** have a addressRange.size and addressRange.address of 0. If a vertex input attribute is bound to a vertex input binding with a size and address of 0, the values taken from memory are considered to be zero, and missing G, B, or A components are filled with (0,0,1).

This command also dynamically sets the byte strides between consecutive elements within the strided range defined by pInfos[i] to the value of pInfos[i].addressRange.stride when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE set in VkPipelineDynamicStateCreateInfo ::pDynamicStates. Otherwise, strides are specified by the VkVertexInputBindingDescription::stride values used to create the currently active pipeline.

If drawing using shader objects or if the bound pipeline state object was also created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled then vkCmdSetVertexInputEXT **can** be used instead of vkCmdBindVertexBuffers2 to set the stride.

NOTE Unlike the static state to set the same, stride for each address range must be between 0 and the maximum extent of the attributes in the binding. vkCmdSetVertexInputEXT does not have this restriction so can be used if other stride values are desired.

Valid Usage

- VUID-vkCmdBindVertexBuffers3KHR-firstBinding-13070
  firstBinding **must** be less than VkPhysicalDeviceLimits::maxVertexInputBindings
- VUID-vkCmdBindVertexBuffers3KHR-firstBinding-13071
  The sum of firstBinding and bindingCount **must** be less than or equal to VkPhysicalDeviceLimits::maxVertexInputBindings
- VUID-vkCmdBindVertexBuffers3KHR-addressRange-13073
  The addressRange.stride of all elements of pInfos **must** be either 0 or greater than or equal to the maximum extent of all vertex input attributes fetched from the corresponding binding, where the extent is calculated as the VkVertexInputAttributeDescription::offset plus VkVertexInputAttributeDescription ::format size

Valid Usage (Implicit)

- VUID-vkCmdBindVertexBuffers3KHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindVertexBuffers3KHR-pBindingInfos-parameter
  pBindingInfos **must** be a valid pointer to an array of bindingCount valid

VkBindVertexBuffer3InfoKHR structures

- VUID-vkCmdBindVertexBuffers3KHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBindVertexBuffers3KHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindVertexBuffers3KHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindVertexBuffers3KHR-bindingCount-arraylength
  bindingCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindVertexBuffers3KHR is not affected by conditional rendering

VkBindVertexBuffer3InfoKHR is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkBindVertexBuffer3InfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkBool32                         setStride;
    VkStridedDeviceAddressRangeKHR   addressRange;
    VkAddressCommandFlagsKHR         addressFlags;
} VkBindVertexBuffer3InfoKHR;
```

- sType is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- setStride is a VkBool32 value indicating whether addressRange.stride sets the stride for the buffer. If setStride is VK_TRUE, the dynamic stride is set for all attributes from this buffer. If setStride is VK_FALSE, the stride value is not set.
- addressRange is the VkStridedDeviceAddressRangeKHR of the address range to bind.
- addressFlags is a VkAddressCommandFlagsKHR value defining the flags for the address range.

Valid Usage

- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13097
  If the range specified by addressRange is not bound completely to memory when accessed, addressFlags **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13098
  If the buffer from which the range specified by addressRange was created with VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, addressFlags **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13099
  If the buffer from which the range specified by addressRange was created without VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, addressFlags **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressFlags-13100
  addressFlags **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, addressFlags **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, addressFlags **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressFlags-13101
  addressFlags **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, addressFlags **must**

include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR

- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, addressFlags **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13074
  If addressRange.address is not 0, the buffer from which addressRange was queried **must** have been created with the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT usage flag set
- VUID-VkBindVertexBuffer3InfoKHR-addressRange-13075
  If addressRange.size is 0, addressRange.address **must** be 0
- VUID-VkBindVertexBuffer3InfoKHR-size-13072
  If the nullDescriptor feature is not enabled, addressRange.size **must** not be 0
- VUID-VkBindVertexBuffer3InfoKHR-setStride-13126
  If setStride is VK_TRUE, addressRange.stride **must** be less than or equal to VkPhysicalDeviceLimits::maxVertexInputBindingStride
- VUID-VkBindVertexBuffer3InfoKHR-setStride-13127
  If setStride is VK_FALSE, addressRange.stride **must** be 0

Valid Usage (Implicit)

- VUID-VkBindVertexBuffer3InfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_VERTEX_BUFFER_3_INFO_KHR
- VUID-VkBindVertexBuffer3InfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkBindVertexBuffer3InfoKHR-addressFlags-parameter
  If addressFlags is not 0, addressFlags **must** be a valid combination of VkAddressCommandFlagBitsKHR values

To bind vertex buffers, along with their sizes and strides, to a command buffer for use in subsequent drawing commands, call:

```
// Provided by VK_VERSION_1_3
void vkCmdBindVertexBuffers2(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBuffer*                             pBuffers,
    const VkDeviceSize*                         pOffsets,
    const VkDeviceSize*                         pSizes,
    const VkDeviceSize*                         pStrides);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdBindVertexBuffers2
void vkCmdBindVertexBuffers2EXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBuffer*                             pBuffers,
    const VkDeviceSize*                         pOffsets,
    const VkDeviceSize*                         pSizes,
    const VkDeviceSize*                         pStrides);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstBinding` is the index of the first vertex input binding whose state is updated by the command.
- `bindingCount` is the number of vertex input bindings whose state is updated by the command.
- `pBuffers` is a pointer to an array of buffer handles.
- `pOffsets` is a pointer to an array of buffer offsets.
- `pSizes` is `NULL` or a pointer to an array of the size in bytes of vertex data bound from `pBuffers`.
- `pStrides` is `NULL` or a pointer to an array of buffer strides.

The values taken from elements i of `pBuffers` and `pOffsets` replace the current state for the vertex input binding `firstBinding` + i, for i in [0, `bindingCount`). The vertex input binding is updated to start at the offset indicated by `pOffsets`[i] from the start of the buffer `pBuffers`[i]. If `pSizes` is not `NULL` then `pSizes`[i] specifies the bound size of the vertex buffer starting from the corresponding elements of `pBuffers`[i] plus `pOffsets`[i]. If `pSizes`[i] is VK_WHOLE_SIZE then the bound size is from `pBuffers`[i] plus `pOffsets`[i] to the end of the buffer `pBuffers`[i]. All vertex input attributes that use each of these bindings will use these updated addresses in their address calculations for subsequent drawing commands. If the `nullDescriptor` feature is enabled, elements of `pBuffers` **can** be VK_NULL_HANDLE, and **can** be used by the vertex shader. If a vertex input attribute is bound to a vertex input binding that is VK_NULL_HANDLE, the values taken from memory are considered to be zero, and missing G, B, or A components are filled with (0,0,1).

This command also dynamically sets the byte strides between consecutive elements within buffer `pBuffers`[i] to the corresponding `pStrides`[i] value when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE set in

VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, strides are specified by the VkVertexInputBindingDescription::stride values used to create the currently active pipeline.

If drawing using shader objects or if the bound pipeline state object was also created with the VK_DYNAMIC_STATE_VERTEX_INPUT_EXT dynamic state enabled then vkCmdSetVertexInputEXT **can** be used instead of vkCmdBindVertexBuffers2 to set the stride.

NOTE	Unlike the static state to set the same, pStrides must be between 0 and the maximum extent of the attributes in the binding. vkCmdSetVertexInputEXT does not have this restriction so can be used if other stride values are desired.

Valid Usage

- VUID-vkCmdBindVertexBuffers2-None-08971
  At least one of the following **must** be true:
  - the extendedDynamicState feature is enabled
  - the shaderObject feature is enabled
  - the value of VkApplicationInfo::apiVersion used to create the VkInstance parent of commandBuffer is greater than or equal to Version 1.3
- VUID-vkCmdBindVertexBuffers2-firstBinding-03355
  firstBinding **must** be less than VkPhysicalDeviceLimits::maxVertexInputBindings
- VUID-vkCmdBindVertexBuffers2-firstBinding-03356
  The sum of firstBinding and bindingCount **must** be less than or equal to VkPhysicalDeviceLimits::maxVertexInputBindings
- VUID-vkCmdBindVertexBuffers2-pOffsets-03357
  If pSizes is not NULL, all elements of pOffsets **must** be less than the size of the corresponding element in pBuffers
- VUID-vkCmdBindVertexBuffers2-pSizes-03358
  If pSizes is not NULL, all elements of pOffsets plus pSizes , where pSizes is not VK_WHOLE_SIZE, **must** be less than or equal to the size of the corresponding element in pBuffers
- VUID-vkCmdBindVertexBuffers2-pBuffers-03359
  All elements of pBuffers **must** have been created with the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT usage flag set
- VUID-vkCmdBindVertexBuffers2-pBuffers-03360
  Each element of pBuffers that is non-sparse **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdBindVertexBuffers2-pBuffers-04111
  If the nullDescriptor feature is not enabled, all elements of pBuffers **must** not be VK_NULL_HANDLE
- VUID-vkCmdBindVertexBuffers2-pBuffers-04112
  If an element of pBuffers is VK_NULL_HANDLE, then the corresponding element of pOffsets **must** be zero

- VUID-vkCmdBindVertexBuffers2-pStrides-03362
  If `pStrides` is not `NULL` each element of `pStrides` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputBindingStride`
- VUID-vkCmdBindVertexBuffers2-pStrides-06209
  If `pStrides` is not `NULL` each element of `pStrides` **must** be either 0 or greater than or equal to the maximum extent of all vertex input attributes fetched from the corresponding binding, where the extent is calculated as the VkVertexInputAttributeDescription::`offset` plus VkVertexInputAttributeDescription::`format` size

Valid Usage (Implicit)

- VUID-vkCmdBindVertexBuffers2-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindVertexBuffers2-pBuffers-parameter
  `pBuffers` **must** be a valid pointer to an array of `bindingCount` valid or VK_NULL_HANDLE VkBuffer handles
- VUID-vkCmdBindVertexBuffers2-pOffsets-parameter
  `pOffsets` **must** be a valid pointer to an array of `bindingCount` VkDeviceSize values
- VUID-vkCmdBindVertexBuffers2-pSizes-parameter
  If `pSizes` is not `NULL`, `pSizes` **must** be a valid pointer to an array of `bindingCount` VkDeviceSize values
- VUID-vkCmdBindVertexBuffers2-pStrides-parameter
  If `pStrides` is not `NULL`, `pStrides` **must** be a valid pointer to an array of `bindingCount` VkDeviceSize values
- VUID-vkCmdBindVertexBuffers2-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindVertexBuffers2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindVertexBuffers2-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindVertexBuffers2-bindingCount-arraylength
  If any of `pSizes`, or `pStrides` are not `NULL`, `bindingCount` **must** be greater than `0`
- VUID-vkCmdBindVertexBuffers2-commonparent
  Both of `commandBuffer`, and the elements of `pBuffers` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally

synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindVertexBuffers2 is not affected by conditional rendering

To bind vertex buffers to a command buffer for use in subsequent drawing commands, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBindVertexBuffers(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBuffer*                             pBuffers,
    const VkDeviceSize*                         pOffsets);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstBinding` is the index of the first vertex input binding whose state is updated by the command.
- `bindingCount` is the number of vertex input bindings whose state is updated by the command.
- `pBuffers` is a pointer to an array of buffer handles.
- `pOffsets` is a pointer to an array of buffer offsets.

The values taken from elements i of `pBuffers` and `pOffsets` replace the current state for the vertex input binding `firstBinding` + i, for i in [0, `bindingCount`). The vertex input binding is updated to start at the offset indicated by `pOffsets`[i] from the start of the buffer `pBuffers`[i]. All vertex input attributes that use each of these bindings will use these updated addresses in their address calculations for subsequent drawing commands. If the `nullDescriptor` feature is enabled, elements of `pBuffers` **can** be VK_NULL_HANDLE, and **can** be used by the vertex shader. If a vertex input attribute is bound to a vertex input binding that is VK_NULL_HANDLE, the values taken from memory are considered to be zero, and missing G, B, or A components are filled with (0,0,1).

Valid Usage

- VUID-vkCmdBindVertexBuffers-firstBinding-00624

`firstBinding` **must** be less than `VkPhysicalDeviceLimits`::`maxVertexInputBindings`

- VUID-vkCmdBindVertexBuffers-firstBinding-00625
  The sum of `firstBinding` and `bindingCount` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxVertexInputBindings`
- VUID-vkCmdBindVertexBuffers-pOffsets-00626
  All elements of `pOffsets` **must** be less than the size of the corresponding element in `pBuffers`
- VUID-vkCmdBindVertexBuffers-pBuffers-00627
  All elements of `pBuffers` **must** have been created with the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT flag
- VUID-vkCmdBindVertexBuffers-pBuffers-00628
  Each element of `pBuffers` that is non-sparse **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdBindVertexBuffers-pBuffers-04001
  If the `nullDescriptor` feature is not enabled, all elements of `pBuffers` **must** not be VK_NULL_HANDLE
- VUID-vkCmdBindVertexBuffers-pBuffers-04002
  If an element of `pBuffers` is VK_NULL_HANDLE, then the corresponding element of `pOffsets` **must** be zero

Valid Usage (Implicit)

- VUID-vkCmdBindVertexBuffers-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindVertexBuffers-pBuffers-parameter
  `pBuffers` **must** be a valid pointer to an array of `bindingCount` valid or VK_NULL_HANDLE VkBuffer handles
- VUID-vkCmdBindVertexBuffers-pOffsets-parameter
  `pOffsets` **must** be a valid pointer to an array of `bindingCount` VkDeviceSize values
- VUID-vkCmdBindVertexBuffers-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindVertexBuffers-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindVertexBuffers-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindVertexBuffers-bindingCount-arraylength
  `bindingCount` **must** be greater than `0`
- VUID-vkCmdBindVertexBuffers-commonparent
  Both of `commandBuffer`, and the elements of `pBuffers` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindVertexBuffers is not affected by conditional rendering

26.3. Vertex Attribute Divisor in Instanced Rendering

If the `vertexAttributeInstanceRateDivisor` feature is enabled and the `pNext` chain of VkPipelineVertexInputStateCreateInfo includes a `VkPipelineVertexInputDivisorStateCreateInfo` structure, then that structure controls how vertex attributes are assigned to an instance when instanced rendering is enabled.

The `VkPipelineVertexInputDivisorStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPipelineVertexInputDivisorStateCreateInfo {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        vertexBindingDivisorCount;
    const VkVertexInputBindingDivisorDescription*   pVertexBindingDivisors;
} VkPipelineVertexInputDivisorStateCreateInfo;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPipelineVertexInputDivisorStateCreateInfo
typedef VkPipelineVertexInputDivisorStateCreateInfo
VkPipelineVertexInputDivisorStateCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `vertexBindingDivisorCount` is the number of elements in the `pVertexBindingDivisors` array.
- `pVertexBindingDivisors` is a pointer to an array of VkVertexInputBindingDivisorDescription structures specifying the divisor value for each binding.

Valid Usage (Implicit)

- VUID-VkPipelineVertexInputDivisorStateCreateInfo-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_VERTEX_INPUT_DIVISOR_STATE_CREATE_INFO`
- VUID-VkPipelineVertexInputDivisorStateCreateInfo-pVertexBindingDivisors-parameter
  `pVertexBindingDivisors` **must** be a valid pointer to an array of `vertexBindingDivisorCount` VkVertexInputBindingDivisorDescription structures
- VUID-VkPipelineVertexInputDivisorStateCreateInfo-vertexBindingDivisorCount-arraylength
  `vertexBindingDivisorCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPipelineVertexInputStateCreateInfo

The individual divisor values per binding are specified using the `VkVertexInputBindingDivisorDescription` structure which is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkVertexInputBindingDivisorDescription {
    uint32_t    binding;
    uint32_t    divisor;
} VkVertexInputBindingDivisorDescription;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkVertexInputBindingDivisorDescription
typedef VkVertexInputBindingDivisorDescription
VkVertexInputBindingDivisorDescriptionKHR;
```

- `binding` is the binding number for which the divisor is specified.
- `divisor` is the number of successive instances that will use the same value of the vertex attribute when instanced rendering is enabled. For example, if the divisor is N, the same vertex attribute will be applied to N successive instances before moving on to the next vertex attribute. The maximum value of `divisor` is implementation-dependent and can be queried using VkPhysicalDeviceVertexAttributeDivisorProperties::`maxVertexAttribDivisor`. A value of `0` **can** be used for the divisor if the `vertexAttributeInstanceRateZeroDivisor` feature is enabled. In this

case, the same vertex attribute will be applied to all instances.

If this structure is not used to define a divisor value for an attribute, then the divisor has a logical default value of 1.

Valid Usage

- VUID-VkVertexInputBindingDivisorDescription-binding-01869
  `binding` **must** be less than VkPhysicalDeviceLimits::`maxVertexInputBindings`
- VUID-VkVertexInputBindingDivisorDescription-vertexAttributeInstanceRateZeroDivisor-02228
  If the `vertexAttributeInstanceRateZeroDivisor` feature is not enabled, `divisor` **must** not be `0`
- VUID-VkVertexInputBindingDivisorDescription-vertexAttributeInstanceRateDivisor-02229
  If the `vertexAttributeInstanceRateDivisor` feature is not enabled, `divisor` **must** be `1`
- VUID-VkVertexInputBindingDivisorDescription-divisor-01870
  `divisor` **must** be a value between `0` and VkPhysicalDeviceVertexAttributeDivisorProperties::`maxVertexAttribDivisor`, inclusive
- VUID-VkVertexInputBindingDivisorDescription-inputRate-01871
  VkVertexInputBindingDescription::`inputRate` **must** be of type VK_VERTEX_INPUT_RATE_INSTANCE for this `binding`

26.4. Vertex Input Address Calculation

The address of each attribute for each `vertexIndex` and `instanceIndex` is calculated as follows:

- Let `attribDesc` be the member of VkPipelineVertexInputStateCreateInfo::`pVertexAttributeDescriptions` with VkVertexInputAttributeDescription::`location` equal to the vertex input attribute number.
- Let `bindingDesc` be the member of VkPipelineVertexInputStateCreateInfo::`pVertexBindingDescriptions` with VkVertexInputAttributeDescription::`binding` equal to `attribDesc.binding`.
- Let `vertexIndex` be the index of the vertex within the draw (a value between `firstVertex` and `firstVertex`+`vertexCount` for `vkCmdDraw`, or a value taken from the index buffer plus `vertexOffset` for `vkCmdDrawIndexed`), and let `instanceIndex` be the instance number of the draw (a value between `firstInstance` and `firstInstance`+`instanceCount`).
- Let `offset` be an array of offsets into the bound vertex buffers specified during `vkCmdBindVertexBuffers` or `vkCmdBindVertexBuffers2` with `pOffsets`.
- Let `divisor` be the member of VkPipelineVertexInputDivisorStateCreateInfo::`pVertexBindingDivisors` with VkVertexInputBindingDivisorDescription::`binding` equal to `attribDesc.binding`. If the vertex binding state is dynamically set, instead let `divisor` be the member of the `pVertexBindingDescriptions` parameter to the vkCmdSetVertexInputEXT call with VkVertexInputBindingDescription2EXT::`binding` equal to `attribDesc.binding`.

- Let `stride` be the member of VkPipelineVertexInputStateCreateInfo ::`pVertexBindingDescriptions->stride` unless there is dynamic state causing the value to be ignored. In this case the value is set from the last value from one of the following
  - vkCmdSetVertexInputEXT::`pVertexBindingDescriptions->stride`
  - vkCmdBindVertexBuffers2::`pStrides`, if not `NULL`

```
bufferBindingAddress = buffer[binding].baseAddress + offset[binding];

if (bindingDesc.inputRate == VK_VERTEX_INPUT_RATE_VERTEX)
    effectiveVertexOffset = vertexIndex * stride;
else
    if (divisor == 0)
        effectiveVertexOffset = firstInstance * stride;
    else
        effectiveVertexOffset = (firstInstance + ((instanceIndex - firstInstance) /
divisor)) * stride;

attribAddress = bufferBindingAddress + effectiveVertexOffset + attribDesc.offset;
```

26.4.1. Vertex Input Extraction

For each attribute, raw data is extracted starting at `attribAddress` and is converted from the VkVertexInputAttributeDescription's `format` in the same manner as described for image reads as if a texel were read from that address. The numeric type of the attribute's `format` **must** match the numeric type of the input variable in the shader. The input variable in the shader **must** be declared as a 64-bit data type if and only if `format` is a 64-bit data type. If the sum of `attribAddress` and the data extracted is outside of the bound vertex buffer, behavior is as described by Shader Out-of-Bounds Memory Access.

If either `format` is a 64-bit format or the `legacyVertexAttributes` feature is not enabled, and `format` is a packed format, `attribAddress` **must** be a multiple of the size in bytes of the size of the format as described in Packed Formats. Otherwise, if either `format` is a 64-bit format or the `legacyVertexAttributes` feature is not enabled, `attribAddress` **must** be a multiple of the size in bytes of the component type indicated by `format` (see Formats).

The number of components in the vertex shader input variable need not exactly match the number of components in the format. If the vertex shader has fewer components, the extra components are discarded. If the numeric format of `format` uses sRGB encoding, and the `maintenance10` feature is enabled, the implementation **must** convert values from nonlinear to linear as described in the "sRGB EOTF" section of the Khronos Data Format Specification. If the `maintenance10` feature is not enabled, the implementation **should** convert values from nonlinear to linear. Implementations which do not support `maintenance10`, and which do not convert nonlinear to linear for sRGB formats **should** not expose VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT for such formats.

Chapter 27. Tessellation

Tessellation involves three pipeline stages. First, a tessellation control shader transforms control points of a patch and **can** produce per-patch data. Second, a fixed-function tessellator generates multiple primitives corresponding to a tessellation of the patch in (u,v) or (u,v,w) parameter space. Third, a tessellation evaluation shader transforms the vertices of the tessellated patch, for example to compute their positions and attributes as part of the tessellated surface. The tessellator is enabled when the pipeline contains both a tessellation control shader and a tessellation evaluation shader.

27.1. Tessellator

If a pipeline includes both tessellation shaders (control and evaluation), the tessellator consumes each input patch (after vertex shading) and produces a new set of independent primitives (points, lines, or triangles). These primitives are logically produced by subdividing a geometric primitive (rectangle or triangle) according to the per-patch outer and inner tessellation levels written by the tessellation control shader. These levels are specified using the built-in variables `TessLevelOuter` and `TessLevelInner`, respectively. This subdivision is performed in an implementation-dependent manner. If no tessellation shaders are present in the pipeline, the tessellator is disabled and incoming primitives are passed through without modification.

The type of subdivision performed by the tessellator is specified by an `OpExecutionMode` instruction using one of the `Triangles`, `Quads`, or `IsoLines` execution modes. When using shader objects, this instruction **must** be specified in the tessellation evaluation shader, and **may** also be specified in the tessellation control shader. When using pipelines, this instruction **may** be specified in either the tessellation evaluation or tessellation control shader. When using shader objects, `OutputVertices` **must** be specified in the tessellation control shader, and **may** also be specified in the tessellation evaluation shader. Other tessellation-related execution modes **can** also be specified in either the tessellation control or tessellation evaluation shaders.

Any tessellation-related modes specified in both the tessellation control and tessellation evaluation shaders **must** be the same.

Tessellation execution modes include:

- `Triangles`, `Quads`, and `IsoLines`. These control the type of subdivision and topology of the output primitives. When using shader objects, one mode **must** be set in at least the tessellation evaluation stage. When using pipelines, one mode **must** be set in at least one of the tessellation shader stages. If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`tessellationIsolines` is VK_FALSE, then isoline tessellation is not supported by the implementation, and `IsoLines` **must** not be used in either tessellation shader stage.
- `VertexOrderCw` and `VertexOrderCcw`. These control the orientation of triangles generated by the tessellator. When using shader objects, one mode **must** be set in at least the tessellation evaluation stage. When using pipelines, one mode **must** be set in at least one of the tessellation shader stages.
- `PointMode`. Controls generation of points rather than triangles or lines. This functionality

defaults to disabled, and is enabled if either shader stage includes the execution mode. If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationPointMode is VK_FALSE, then point mode tessellation is not supported by the implementation, and PointMode **must** not be used in either tessellation shader stage.

- SpacingEqual, SpacingFractionalEven, and SpacingFractionalOdd. Controls the spacing of segments on the edges of tessellated primitives. One mode **must** be set in at least one of the tessellation shader stages.
- OutputVertices. Controls the size of the output patch of the tessellation control shader. When using shader objects, one value **must** be set in at least the tessellation control stage. When using pipelines, one value **must** be set in at least one of the tessellation shader stages.

For triangles, the tessellator subdivides a triangle primitive into smaller triangles. For quads, the tessellator subdivides a rectangle primitive into smaller triangles. For isolines, the tessellator subdivides a rectangle primitive into a collection of line segments arranged in strips stretching across the rectangle in the u dimension (i.e. the coordinates in TessCoord are of the form (0,x) through (1,x) for all tessellation evaluation shader invocations that share a line).

Each vertex produced by the tessellator has an associated (u,v,w) or (u,v) position in a normalized parameter space, with parameter values in the range [0,1], as illustrated in figures Domain parameterization for tessellation primitive modes (upper-left origin) and Domain parameterization for tessellation primitive modes (lower-left origin). The domain space **can** have either an upper-left or lower-left origin, selected by the domainOrigin member of VkPipelineTessellationDomainOriginStateCreateInfo.

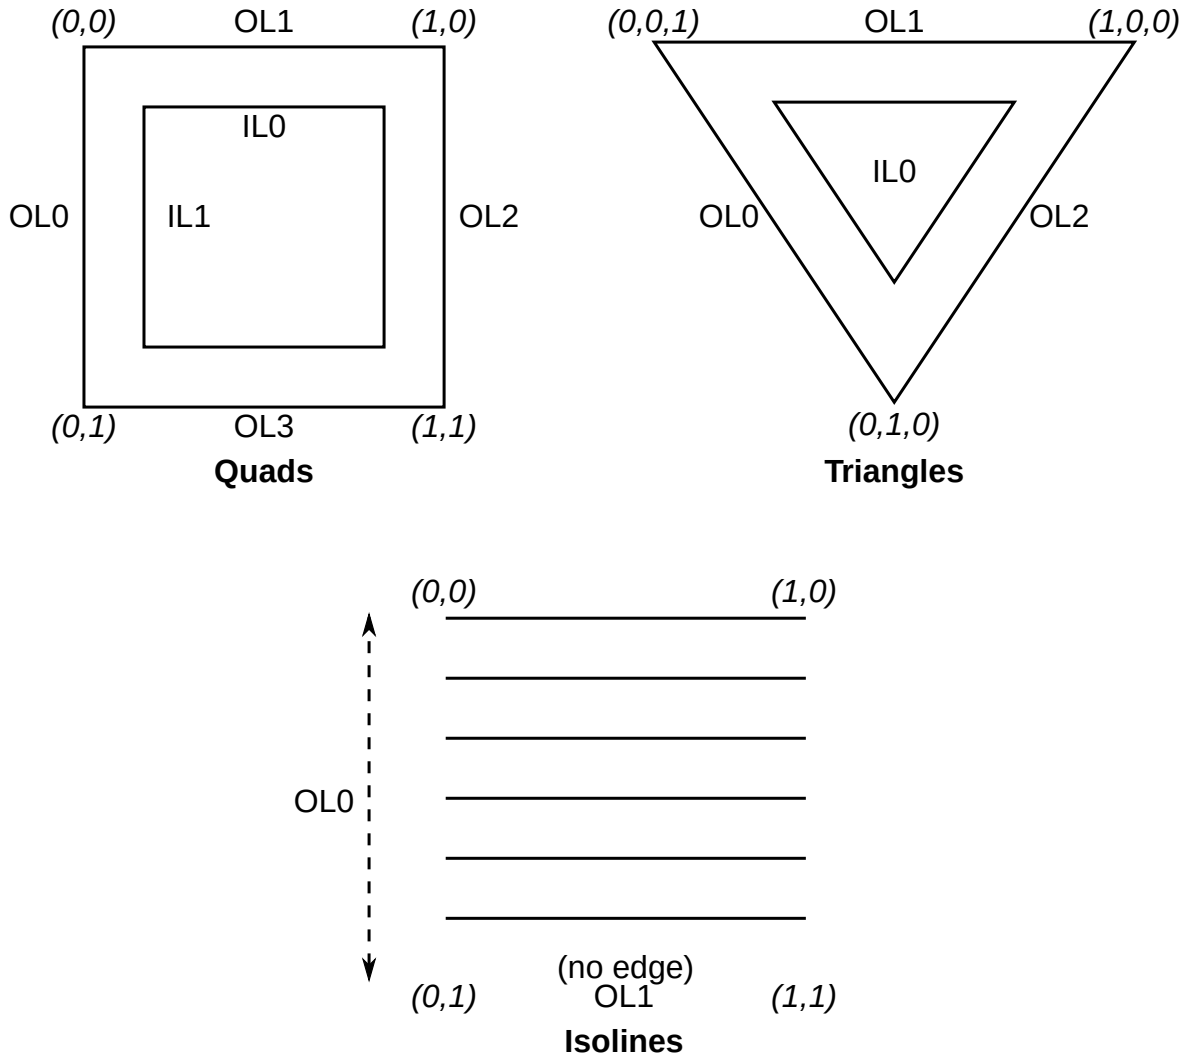

Figure 11. Domain parameterization for tessellation primitive modes (upper-left origin)

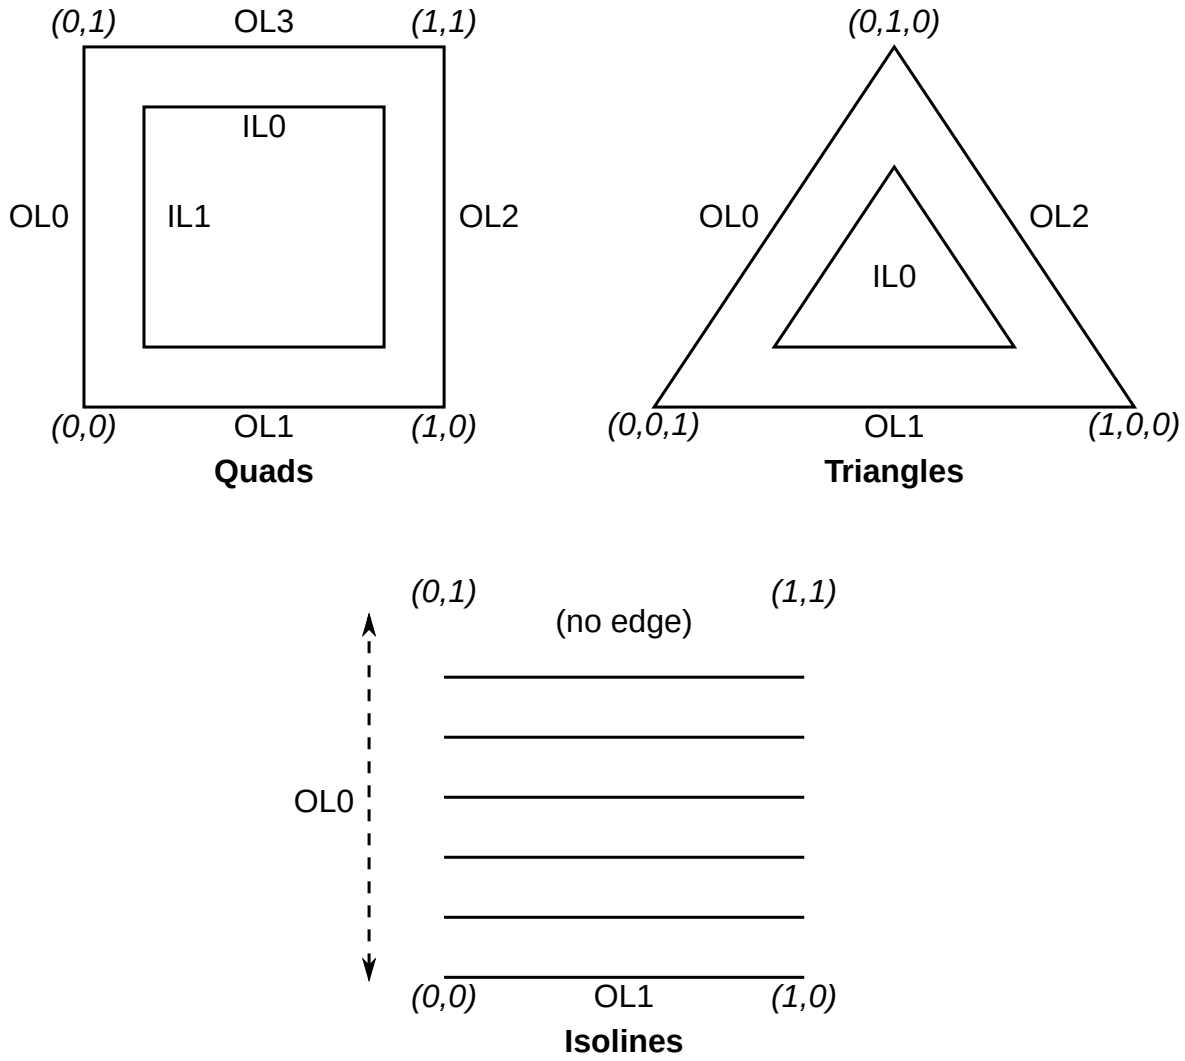

Figure 12. Domain parameterization for tessellation primitive modes (lower-left origin)

Caption

In the domain parameterization diagrams, the coordinates illustrate the value of `TessCoord` at the corners of the domain. The labels on the edges indicate the inner (IL0 and IL1) and outer (OL0 through OL3) tessellation level values used to control the number of subdivisions along each edge of the domain.

For triangles, the vertex's position is a barycentric coordinate (u,v,w), where u + v + w = 1.0, and indicates the relative influence of the three vertices of the triangle on the position of the vertex. For quads and isolines, the position is a (u,v) coordinate indicating the relative horizontal and vertical position of the vertex relative to the subdivided rectangle. The subdivision process is explained in more detail in subsequent sections.

27.2. Tessellator Patch Discard

A patch is discarded by the tessellator if any relevant outer tessellation level is less than or equal to zero.

Patches will also be discarded if any relevant outer tessellation level corresponds to a floating-point

NaN (not a number) in implementations supporting NaN.

No new primitives are generated and the tessellation evaluation shader is not executed for patches that are discarded. For `Quads`, all four outer levels are relevant. For `Triangles` and `IsoLines`, only the first three or two outer levels, respectively, are relevant. Negative inner levels will not cause a patch to be discarded; they will be clamped as described below.

27.3. Tessellator Spacing

Each of the tessellation levels is used to determine the number and spacing of segments used to subdivide a corresponding edge. The method used to derive the number and spacing of segments is specified by an `OpExecutionMode` in the tessellation control or tessellation evaluation shader using one of the identifiers `SpacingEqual`, `SpacingFractionalEven`, or `SpacingFractionalOdd`.

If `SpacingEqual` is used, the floating-point tessellation level is first clamped to [1, `maxLevel`], where `maxLevel` is the implementation-dependent maximum tessellation level (`VkPhysicalDeviceLimits ::maxTessellationGenerationLevel`). The result is rounded up to the nearest integer n, and the corresponding edge is divided into n segments of equal length in (u,v) space.

If `SpacingFractionalEven` is used, the tessellation level is first clamped to [2, `maxLevel`] and then rounded up to the nearest even integer n. If `SpacingFractionalOdd` is used, the tessellation level is clamped to [1, `maxLevel` - 1] and then rounded up to the nearest odd integer n. If n is one, the edge will not be subdivided. Otherwise, the corresponding edge will be divided into n - 2 segments of equal length, and two additional segments of equal length that are typically shorter than the other segments. The length of the two additional segments relative to the others will decrease monotonically with n - f, where f is the clamped floating-point tessellation level. When n - f is zero, the additional segments will have equal length to the other segments. As n - f approaches 2.0, the relative length of the additional segments approaches zero. The two additional segments **must** be placed symmetrically on opposite sides of the subdivided edge. The relative location of these two segments is implementation-dependent, but **must** be identical for any pair of subdivided edges with identical values of f.

When tessellating triangles or quads using point mode with fractional odd spacing, the tessellator **may** produce *interior vertices* that are positioned on the edge of the patch if an inner tessellation level is less than or equal to one. Such vertices are considered distinct from vertices produced by subdividing the outer edge of the patch, even if there are pairs of vertices with identical coordinates.

27.4. Tessellation Primitive Ordering

Few guarantees are provided for the relative ordering of primitives produced by tessellation, as they pertain to primitive order.

- The output primitives generated from each input primitive are passed to subsequent pipeline stages in an implementation-dependent order.
- All output primitives generated from a given input primitive are passed to subsequent pipeline stages before any output primitives generated from subsequent input primitives.

27.5. Tessellator Vertex Winding Order

When the tessellator produces triangles (in the `Triangles` or `Quads` modes), the orientation of all triangles is specified with an `OpExecutionMode` of `VertexOrderCw` or `VertexOrderCcw` in the tessellation control or tessellation evaluation shaders. If the order is `VertexOrderCw`, the vertices of all generated triangles will have clockwise ordering in (u,v) or (u,v,w) space. If the order is `VertexOrderCcw`, the vertices will have counter-clockwise ordering in that space.

If the tessellation domain has an upper-left origin, the vertices of a triangle have counter-clockwise ordering if

$$a = u_0 v_1 - u_1 v_0 + u_1 v_2 - u_2 v_1 + u_2 v_0 - u_0 v_2$$

is negative, and clockwise ordering if a is positive. u_i and v_i are the u and v coordinates in normalized parameter space of the ith vertex of the triangle. If the tessellation domain has a lower-left origin, the vertices of a triangle have counter-clockwise ordering if a is positive, and clockwise ordering if a is negative.

NOTE

The value a is proportional (with a positive factor) to the signed area of the triangle.

In `Triangles` mode, even though the vertex coordinates have a w value, it does not participate directly in the computation of a, being an affine combination of u and v.

27.6. Triangle Tessellation

If the tessellation primitive mode is `Triangles`, an equilateral triangle is subdivided into a collection of triangles covering the area of the original triangle. First, the original triangle is subdivided into a collection of concentric equilateral triangles. The edges of each of these triangles are subdivided, and the area between each triangle pair is filled by triangles produced by joining the vertices on the subdivided edges. The number of concentric triangles and the number of subdivisions along each triangle except the outermost is derived from the first inner tessellation level. The edges of the outermost triangle are subdivided independently, using the first, second, and third outer tessellation levels to control the number of subdivisions of the u = 0 (left), v = 0 (bottom), and w = 0 (right) edges, respectively. The second inner tessellation level and the fourth outer tessellation level have no effect in this mode.

If the first inner tessellation level and all three outer tessellation levels are exactly one after clamping and rounding, only a single triangle with (u,v,w) coordinates of (0,0,1), (1,0,0), and (0,1,0) is generated. If the inner tessellation level is one and any of the outer tessellation levels is greater than one, the inner tessellation level is treated as though it were originally specified as 1 + ε and will result in a two- or three-segment subdivision depending on the tessellation spacing. When used with fractional odd spacing, the three-segment subdivision **may** produce *inner vertices* positioned on the edge of the triangle.

If any tessellation level is greater than one, tessellation begins by producing a set of concentric inner triangles and subdividing their edges. First, the three outer edges are temporarily subdivided using the clamped and rounded first inner tessellation level and the specified tessellation spacing,

generating n segments. For the outermost inner triangle, the inner triangle is degenerate — a single point at the center of the triangle — if n is two. Otherwise, for each corner of the outer triangle, an inner triangle corner is produced at the intersection of two lines extended perpendicular to the corner's two adjacent edges running through the vertex of the subdivided outer edge nearest that corner. If n is three, the edges of the inner triangle are not subdivided and it is the final triangle in the set of concentric triangles. Otherwise, each edge of the inner triangle is divided into n - 2 segments, with the n - 1 vertices of this subdivision produced by intersecting the inner edge with lines perpendicular to the edge running through the n - 1 innermost vertices of the subdivision of the outer edge. Once the outermost inner triangle is subdivided, the previous subdivision process repeats itself, using the generated triangle as an outer triangle. This subdivision process is illustrated in Inner Triangle Tessellation.

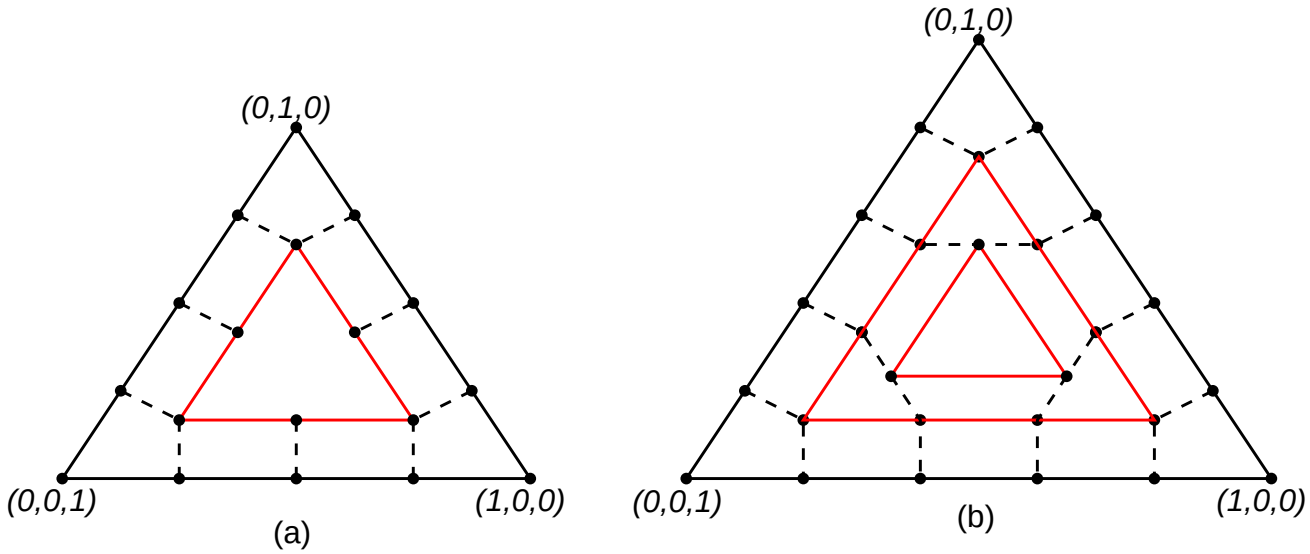

Figure 13. Inner Triangle Tessellation

Caption

In the Inner Triangle Tessellation diagram, inner tessellation levels of (a) four and (b) five are shown (not to scale). Solid black circles depict vertices along the edges of the concentric triangles. The edges of inner triangles are subdivided by intersecting the edge with segments perpendicular to the edge passing through each inner vertex of the subdivided outer edge. Dotted lines depict edges connecting corresponding vertices on the inner and outer triangle edges.

Once all the concentric triangles are produced and their edges are subdivided, the area between each pair of adjacent inner triangles is filled completely with a set of non-overlapping triangles. In this subdivision, two of the three vertices of each triangle are taken from adjacent vertices on a subdivided edge of one triangle; the third is one of the vertices on the corresponding edge of the other triangle. If the innermost triangle is degenerate (i.e., a point), the triangle containing it is subdivided into six triangles by connecting each of the six vertices on that triangle with the center point. If the innermost triangle is not degenerate, that triangle is added to the set of generated triangles as-is.

After the area corresponding to any inner triangles is filled, the tessellator generates triangles to cover the area between the outermost triangle and the outermost inner triangle. To do this, the

temporary subdivision of the outer triangle edge above is discarded. Instead, the u = 0, v = 0, and w = 0 edges are subdivided according to the first, second, and third outer tessellation levels, respectively, and the tessellation spacing. The original subdivision of the first inner triangle is retained. The area between the outer and first inner triangles is completely filled by non-overlapping triangles as described above. If the first (and only) inner triangle is degenerate, a set of triangles is produced by connecting each vertex on the outer triangle edges with the center point.

After all triangles are generated, each vertex in the subdivided triangle is assigned a barycentric (u,v,w) coordinate based on its location relative to the three vertices of the outer triangle.

The algorithm used to subdivide the triangular domain in (u,v,w) space into individual triangles is implementation-dependent. However, the set of triangles produced will completely cover the domain, and no portion of the domain will be covered by multiple triangles.

Output triangles are generated with a topology similar to triangle lists, except that the order in which each triangle is generated, and the order in which the vertices are generated for each triangle, are implementation-dependent. However, the order of vertices in each triangle is consistent across the domain as described in Tessellator Vertex Winding Order.

27.7. Quad Tessellation

If the tessellation primitive mode is `Quads`, a rectangle is subdivided into a collection of triangles covering the area of the original rectangle. First, the original rectangle is subdivided into a regular mesh of rectangles, where the number of rectangles along the u = 0 and u = 1 (vertical) and v = 0 and v = 1 (horizontal) edges are derived from the first and second inner tessellation levels, respectively. All rectangles, except those adjacent to one of the outer rectangle edges, are decomposed into triangle pairs. The outermost rectangle edges are subdivided independently, using the first, second, third, and fourth outer tessellation levels to control the number of subdivisions of the u = 0 (left), v = 0 (bottom), u = 1 (right), and v = 1 (top) edges, respectively. The area between the inner rectangles of the mesh and the outer rectangle edges are filled by triangles produced by joining the vertices on the subdivided outer edges to the vertices on the edge of the inner rectangle mesh.

If both clamped inner tessellation levels and all four clamped outer tessellation levels are exactly one, only a single triangle pair covering the outer rectangle is generated. Otherwise, if either clamped inner tessellation level is one, that tessellation level is treated as though it was originally specified as 1 + ε and will result in a two- or three-segment subdivision depending on the tessellation spacing. When used with fractional odd spacing, the three-segment subdivision **may** produce *inner vertices* positioned on the edge of the rectangle.

If any tessellation level is greater than one, tessellation begins by subdividing the u = 0 and u = 1 edges of the outer rectangle into m segments using the clamped and rounded first inner tessellation level and the tessellation spacing. The v = 0 and v = 1 edges are subdivided into n segments using the second inner tessellation level. Each vertex on the u = 0 and v = 0 edges are joined with the corresponding vertex on the u = 1 and v = 1 edges to produce a set of vertical and horizontal lines that divide the rectangle into a grid of smaller rectangles. The primitive generator emits a pair of non-overlapping triangles covering each such rectangle not adjacent to an edge of the outer rectangle. The boundary of the region covered by these triangles forms an inner rectangle, the

edges of which are subdivided by the grid vertices that lie on the edge. If either m or n is two, the inner rectangle is degenerate, and one or both of the rectangle's *edges* consist of a single point. This subdivision is illustrated in Figure Inner Quad Tessellation.

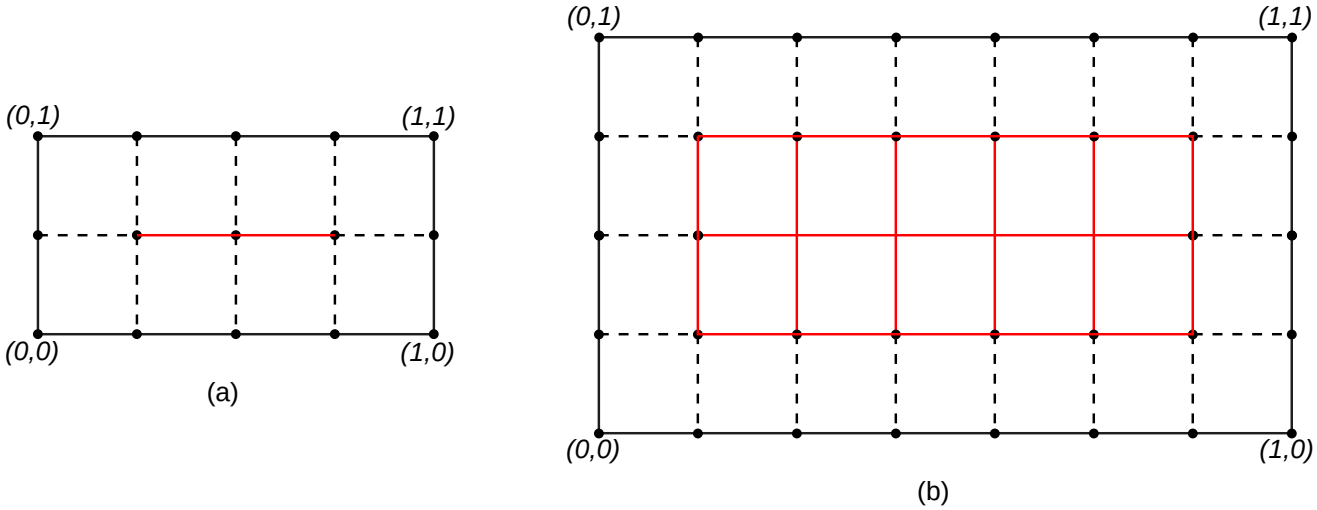

Figure 14. Inner Quad Tessellation

Caption

In the Inner Quad Tessellation diagram, inner quad tessellation levels of (a) (4,2) and (b) (7,4) are shown. The regions highlighted in red in figure (b) depict the 10 inner rectangles, each of which will be subdivided into two triangles. Solid black circles depict vertices on the boundary of the outer and inner rectangles, where the inner rectangle of figure (a) is degenerate (a single line segment). Dotted lines depict the horizontal and vertical edges connecting corresponding vertices on the inner and outer rectangle edges.

After the area corresponding to the inner rectangle is filled, the tessellator **must** produce triangles to cover the area between the inner and outer rectangles. To do this, the subdivision of the outer rectangle edge above is discarded. Instead, the u = 0, v = 0, u = 1, and v = 1 edges are subdivided according to the first, second, third, and fourth outer tessellation levels, respectively, and the tessellation spacing. The original subdivision of the inner rectangle is retained. The area between the outer and inner rectangles is completely filled by non-overlapping triangles. Two of the three vertices of each triangle are adjacent vertices on a subdivided edge of one rectangle; the third is one of the vertices on the corresponding edge of the other rectangle. If either edge of the innermost rectangle is degenerate, the area near the corresponding outer edges is filled by connecting each vertex on the outer edge with the single vertex making up the *inner edge*.

The algorithm used to subdivide the rectangular domain in (u,v) space into individual triangles is implementation-dependent. However, the set of triangles produced will completely cover the domain, and no portion of the domain will be covered by multiple triangles.

Output triangles are generated with a topology similar to triangle lists, except that the order in which each triangle is generated, and the order in which the vertices are generated for each triangle, are implementation-dependent. However, the order of vertices in each triangle is consistent across the domain as described in Tessellator Vertex Winding Order.

27.8. Isoline Tessellation

If the tessellation primitive mode is `IsoLines`, a set of independent horizontal line segments is drawn. The segments are arranged into connected strips called *isolines*, where the vertices of each isoline have a constant v coordinate and u coordinates covering the full range [0,1]. The number of isolines generated is derived from the first outer tessellation level; the number of segments in each isoline is derived from the second outer tessellation level. Both inner tessellation levels and the third and fourth outer tessellation levels have no effect in this mode.

As with quad tessellation above, isoline tessellation begins with a rectangle. The u = 0 and u = 1 edges of the rectangle are subdivided according to the first outer tessellation level. For the purposes of this subdivision, the tessellation spacing mode is ignored and treated as equal_spacing. An isoline is drawn connecting each vertex on the u = 0 rectangle edge to the corresponding vertex on the u = 1 rectangle edge, except that no line is drawn between (0,1) and (1,1). If the number of isolines on the subdivided u = 0 and u = 1 edges is n, this process will result in n equally spaced lines with constant v coordinates of 0, $\frac{1}{n}$, $\frac{2}{n}$, ..., $\frac{n-1}{n}$.

Each of the n isolines is then subdivided according to the second outer tessellation level and the tessellation spacing, resulting in m line segments. Each segment of each line is emitted by the tessellator. These line segments are generated with a topology similar to line lists, except that the order in which each line is generated, and the order in which the vertices are generated for each line segment, are implementation-dependent.

NOTE If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`tessellationIsolines` is VK_FALSE, then isoline tessellation is not supported by the implementation.

27.9. Tessellation Point Mode

For all primitive modes, the tessellator is capable of generating points instead of lines or triangles. If the tessellation control or tessellation evaluation shader specifies the `OpExecutionMode PointMode`, the primitive generator will generate one point for each distinct vertex produced by tessellation, rather than emitting triangles or lines. Otherwise, the tessellator will produce a collection of line segments or triangles according to the primitive mode. These points are generated with a topology similar to point lists, except the order in which the points are generated for each input primitive is undefined.

NOTE If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`tessellationPointMode` is VK_FALSE, then tessellation point mode is not supported by the implementation.

27.10. Tessellation Pipeline State

The `pTessellationState` member of VkGraphicsPipelineCreateInfo is a pointer to a `VkPipelineTessellationStateCreateInfo` structure.

The `VkPipelineTessellationStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineTessellationStateCreateInfo {
    VkStructureType                            sType;
    const void*                                pNext;
    VkPipelineTessellationStateCreateFlags     flags;
    uint32_t                                   patchControlPoints;
} VkPipelineTessellationStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `patchControlPoints` is the number of control points per patch.

Valid Usage

- VUID-VkPipelineTessellationStateCreateInfo-patchControlPoints-01214
  `patchControlPoints` **must** be greater than zero and less than or equal to `VkPhysicalDeviceLimits`::`maxTessellationPatchSize`

Valid Usage (Implicit)

- VUID-VkPipelineTessellationStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_STATE_CREATE_INFO
- VUID-VkPipelineTessellationStateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineTessellationDomainOriginStateCreateInfo
- VUID-VkPipelineTessellationStateCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPipelineTessellationStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineTessellationStateCreateFlags;
```

`VkPipelineTessellationStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkPipelineTessellationDomainOriginStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPipelineTessellationDomainOriginStateCreateInfo {
    VkStructureType               sType;
    const void*                   pNext;
    VkTessellationDomainOrigin    domainOrigin;
} VkPipelineTessellationDomainOriginStateCreateInfo;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkPipelineTessellationDomainOriginStateCreateInfo
typedef VkPipelineTessellationDomainOriginStateCreateInfo
VkPipelineTessellationDomainOriginStateCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `domainOrigin` is a VkTessellationDomainOrigin value controlling the origin of the tessellation domain space.

If the `VkPipelineTessellationDomainOriginStateCreateInfo` structure is included in the `pNext` chain of VkPipelineTessellationStateCreateInfo, it controls the origin of the tessellation domain. If this structure is not present, it is as if `domainOrigin` was VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT.

Valid Usage (Implicit)

- VUID-VkPipelineTessellationDomainOriginStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_DOMAIN_ORIGIN_STATE_CREATE_INFO
- VUID-VkPipelineTessellationDomainOriginStateCreateInfo-domainOrigin-parameter
  `domainOrigin` **must** be a valid VkTessellationDomainOrigin value

Structure Chaining

Extends the structure

- VkPipelineTessellationStateCreateInfo

The possible tessellation domain origins are specified by the VkTessellationDomainOrigin enumeration:

```
// Provided by VK_VERSION_1_1
typedef enum VkTessellationDomainOrigin {
    VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT = 0,
    VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT = 1,
  // Provided by VK_KHR_maintenance2
    VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT_KHR =
VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT,
  // Provided by VK_KHR_maintenance2
    VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT_KHR =
VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT,
} VkTessellationDomainOrigin;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkTessellationDomainOrigin
typedef VkTessellationDomainOrigin VkTessellationDomainOriginKHR;
```

- VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT specifies that the origin of the domain space is in the upper left corner, as shown in figure Domain parameterization for tessellation primitive modes (upper-left origin).
- VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT specifies that the origin of the domain space is in the lower left corner, as shown in figure Domain parameterization for tessellation primitive modes (lower-left origin).

This enum affects how the VertexOrderCw and VertexOrderCcw tessellation execution modes are interpreted, since the winding is defined relative to the orientation of the domain.

To dynamically set the origin of the tessellation domain space, call:

```
// Provided by VK_EXT_extended_dynamic_state3 with VK_KHR_maintenance2 or
VK_VERSION_1_1, VK_EXT_shader_object
void vkCmdSetTessellationDomainOriginEXT(
    VkCommandBuffer                             commandBuffer,
    VkTessellationDomainOrigin                  domainOrigin);
```

- commandBuffer is the command buffer into which the command will be recorded.
- domainOrigin specifies the origin of the tessellation domain space.

This command sets the origin of the tessellation domain space for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineTessellationDomainOriginStateCreateInfo::domainOrigin value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetTessellationDomainOriginEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3TessellationDomainOrigin` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetTessellationDomainOriginEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetTessellationDomainOriginEXT-domainOrigin-parameter
  `domainOrigin` **must** be a valid VkTessellationDomainOrigin value
- VUID-vkCmdSetTessellationDomainOriginEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetTessellationDomainOriginEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetTessellationDomainOriginEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetTessellationDomainOriginEXT is not affected by conditional rendering

Chapter 28. Geometry Shading

The geometry shader operates on a group of vertices and their associated data assembled from a single input primitive, and emits zero or more output primitives and the group of vertices and their associated data required for each output primitive. Geometry shading is enabled when a geometry shader is included in the pipeline.

28.1. Geometry Shader Input Primitives

Each geometry shader invocation has access to all vertices in the primitive (and their associated data), which are presented to the shader as an array of inputs.

The input primitive type expected by the geometry shader is specified with an `OpExecutionMode` instruction in the geometry shader, and **must** match the incoming primitive type specified by either the pipeline's primitive topology if tessellation is inactive, or the tessellation mode if tessellation is active, as follows:

- An input primitive type of `InputPoints` **must** only be used with a pipeline topology of VK_PRIMITIVE_TOPOLOGY_POINT_LIST, or with a tessellation shader specifying `PointMode`. The input arrays always contain one element, as described by the point list topology or tessellation in point mode.
- An input primitive type of `InputLines` **must** only be used with a pipeline topology of VK_PRIMITIVE_TOPOLOGY_LINE_LIST or VK_PRIMITIVE_TOPOLOGY_LINE_STRIP, or with a tessellation shader specifying `IsoLines` that does not specify `PointMode`. The input arrays always contain two elements, as described by the line list topology or line strip topology, or by isoline tessellation.
- An input primitive type of `InputLinesAdjacency` **must** only be used when tessellation is inactive, with a pipeline topology of VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY or VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY. The input arrays always contain four elements, as described by the line list with adjacency topology or line strip with adjacency topology.
- An input primitive type of `Triangles` **must** only be used with a pipeline topology of VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST, VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP, or VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN; or with a tessellation shader specifying `Quads` or `Triangles` that does not specify `PointMode`. The input arrays always contain three elements, as described by the triangle list topology, triangle strip topology, or triangle fan topology, or by triangle or quad tessellation. Vertices **may** be in a different absolute order than specified by the topology, but **must** adhere to the specified winding order.
- An input primitive type of `InputTrianglesAdjacency` **must** only be used when tessellation is inactive, with a pipeline topology of VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY or VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY. The input arrays always contain six elements, as described by the triangle list with adjacency topology or triangle strip with adjacency topology. Vertices **may** be in a different absolute order than specified by the topology, but **must** adhere to the specified winding order, and the vertices making up the main primitive **must** still occur at the first, third, and fifth index.

28.2. Geometry Shader Output Primitives

A geometry shader generates primitives in one of three output modes: points, line strips, or triangle strips. The primitive mode is specified in the shader using an `OpExecutionMode` instruction with the `OutputPoints`, `OutputLineStrip` or `OutputTriangleStrip` modes, respectively. Each geometry shader **must** include exactly one output primitive mode.

The vertices output by the geometry shader are assembled into points, lines, or triangles based on the output primitive type and the resulting primitives are then further processed as described in Rasterization. If the number of vertices emitted by the geometry shader is not sufficient to produce a single primitive, vertices corresponding to incomplete primitives are not processed by subsequent pipeline stages. The number of vertices output by the geometry shader is limited to a maximum count specified in the shader.

The maximum output vertex count is specified in the shader using an `OpExecutionMode` instruction with the mode set to `OutputVertices` and the maximum number of vertices that will be produced by the geometry shader specified as a literal. Each geometry shader **must** specify a maximum output vertex count.

28.3. Multiple Invocations of Geometry Shaders

Geometry shaders **can** be invoked more than one time for each input primitive. This is known as *geometry shader instancing* and is requested by including an `OpExecutionMode` instruction with `mode` specified as `Invocations` and the number of invocations specified as an integer literal.

In this mode, the geometry shader will execute at least n times for each input primitive, where n is the number of invocations specified in the `OpExecutionMode` instruction. The instance number is available to each invocation as a built-in input using `InvocationId`.

28.4. Geometry Shader Primitive Ordering

Limited guarantees are provided for the relative ordering of primitives produced by a geometry shader, as they pertain to primitive order.

- For instanced geometry shaders, the output primitives generated from each input primitive are passed to subsequent pipeline stages using the invocation number to order the primitives, from least to greatest.
- All output primitives generated from a given input primitive are passed to subsequent pipeline stages before any output primitives generated from subsequent input primitives.

Chapter 29. Mesh Shading

Task and mesh shaders operate in workgroups to produce a collection of primitives that will be processed by subsequent stages of the graphics pipeline.

Work on the mesh pipeline is initiated by the application drawing a set of mesh tasks organized in global workgroups. If the optional task shader is active, each workgroup triggers the execution of task shader invocations that will create a new set of mesh workgroups upon completion. Each of these created workgroups, or each of the original workgroups if no task shader is present, triggers the execution of mesh shader invocations.

Each mesh shader workgroup emits zero or more output primitives along with the group of vertices and their associated data required for each output primitive.

29.1. Task Shader Input

For every workgroup issued via the drawing commands a group of task shader invocations is executed. There are no inputs other than the builtin workgroup identifiers.

29.2. Task Shader Output

The task shader can emit zero or more mesh workgroups to be generated. Shaders using the `TaskEXT` `Execution Model` can do so using the `OpEmitMeshTasksEXT` instruction. The `groupCountX`, `groupCountY` and `groupCountZ` arguments passed to this instruction **must** be less than or equal to the respective dimension within `VkPhysicalDeviceMeshShaderPropertiesEXT`::`maxMeshWorkGroupCount`. The product of these arguments **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT` ::`maxMeshWorkGroupTotalCount`.

The task shader can also pass user-defined data to all mesh shader invocations that it creates. Shaders using the `TaskEXT Execution Model` can do so by writing to a payload variable with `TaskPayloadWorkgroupEXT` storage class that is passed to the `OpEmitMeshTasksEXT` instruction.

29.3. Mesh Generation

If a task shader exists, the mesh assembler creates a variable amount of mesh workgroups depending on each task's output. If there is no task shader, the drawing commands emit the mesh shader invocations directly.

29.4. Mesh Shader Input

The only inputs available to the mesh shader are variables identifying the specific workgroup and invocation and, if applicable, the payload variable passed to the `OpEmitMeshTasksEXT` instruction by the task shader that spawned the mesh shader's workgroup. The mesh shader can operate without a task shader as well.

29.5. Mesh Shader Output

A mesh shader generates primitives in one of three output modes: points, lines, or triangles. For shaders using the `MeshEXT Execution Model` the primitive mode is specified in the shader using an `OpExecutionMode` instruction with the `OutputPoints`, `OutputLinesEXT`, or `OutputTrianglesEXT` modes, respectively. Each mesh shader **must** include exactly one output primitive mode.

For shaders using the `MeshEXT Execution Model` the maximum output vertex count is specified as a literal in the shader using an `OpExecutionMode` instruction with the mode set to `OutputVertices` and **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputVertices`.

For shaders using the `MeshEXT Execution Model` the maximum output primitive count is specified as a literal in the shader using an `OpExecutionMode` instruction with the mode set to `OutputPrimitivesEXT`, and **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputPrimitives`.

For shaders using the `MeshEXT Execution Model` the number of vertices and primitives output by the mesh shader is provided via calling the `OpSetMeshOutputsEXT` instruction. The `vertexCount` argument **must** be less than or equal to the maximum output vertex count specified in the shader. The `primitiveCount` argument **must** be less than or equal to the maximum output primitive count specified in the shader.

Depending on the output primitive mode an appropriately-decorated variable is the output array of local index values into the vertex output arrays from which primitives are assembled according to the output primitive type:

- `OutputPoints` uses the `PrimitivePointIndicesEXT` decoration.
- `OutputLinesEXT` uses the `PrimitiveLineIndicesEXT` decoration.
- `OutputTrianglesEXT` uses the `PrimitiveTriangleIndicesEXT` decoration.

These resulting primitives are then further processed as described in Rasterization.

With the exception of primitive indices, all output built-ins and custom attributes count towards the total storage size occupied by output variables in mesh shaders. This size can be calculated as follows, taking into account the fact that the number of effective scalar attributes is 4 times the number of effective locations used according to the location assignment rules. Let v be the number of views, n_v be the number of effective scalar per-vertex attributes not dependent on `ViewIndex`, n_{vpv} be the number of effective scalar per-vertex attributes dependent on `ViewIndex`, m_v be the maximum number of vertices specified by the `OutputVertices Execution Mode`, g_v be `meshOutputPerVertexGranularity`, n_p be the number of effective scalar per-primitive attributes not dependent on `ViewIndex`, n_{ppv} be the number of effective scalar per-primitive attributes dependent on `ViewIndex`, m_p be the maximum number of primitives specified by the `OutputPrimitivesEXT Execution Mode` and g_p be `meshOutputPerPrimitiveGranularity`:

$$(n_v + (n_{vpv} \times v)) \times 4 \times \text{align}(m_v, g_v) + (n_p + (n_{ppv} \times v)) \times 4 \times \text{align}(m_p, g_p)$$

29.6. Mesh Shader Primitive Ordering

Following guarantees are provided for the relative ordering of primitives produced by a mesh shader, as they pertain to primitive order.

- When a task shader is used, mesh workgroups spawned from lower tasks will be ordered prior those workgroups from subsequent tasks.
- All output primitives generated from a given mesh workgroup are passed to subsequent pipeline stages before any output primitives generated from subsequent input workgroups.
- All output primitives within a mesh workgroup, will be generated in the ordering provided by the builtin primitive indexbuffer (from low address to high address).

Chapter 30. Fixed-Function Vertex Post-Processing

After pre-rasterization shader stages, the following fixed-function operations are applied to vertices of the resulting primitives:

- Transform feedback (see Transform Feedback)
- Flat shading (see Flat Shading).
- Primitive clipping, including application-defined half-spaces (see Primitive Clipping).
- Shader output attribute clipping (see Clipping Shader Outputs).
- Perspective division on clip coordinates (see Coordinate Transformations).
- Viewport mapping, including depth range scaling (see Controlling the Viewport).
- Front face determination for polygon primitives (see Basic Polygon Rasterization).

Next, rasterization is performed on primitives as described in chapter Rasterization.

30.1. Transform Feedback

Before any other fixed-function vertex post-processing, vertex outputs from the last shader in the pre-rasterization shader stage **can** be written out to one or more transform feedback buffers bound to the command buffer. To capture vertex outputs the last pre-rasterization shader stage shader **must** be declared with the `Xfb` execution mode. Outputs decorated with `XfbBuffer` will be written out to the corresponding transform feedback buffers bound to the command buffer when transform feedback is active. Transform feedback buffers are bound to the command buffer by using vkCmdBindTransformFeedbackBuffersEXT. Transform feedback is made active by calling vkCmdBeginTransformFeedbackEXT and made inactive by calling vkCmdEndTransformFeedbackEXT. After vertex data is written it is possible to use vkCmdDrawIndirectByteCountEXT to start a new draw where the `vertexCount` is derived from the number of bytes written by a previous transform feedback.

When an individual point, line, or triangle primitive reaches the transform feedback stage while transform feedback is active, the values of the specified output variables are assembled into primitives and appended to the bound transform feedback buffers. Any primitive for which any pair of vertices have the same position **should** be assembled for transform feedback normally but it **may** be discarded prior to primitive assembly instead. After activating transform feedback, the values of the first assembled primitive are written at the starting offsets of the bound transform feedback buffers, and subsequent primitives are appended to the buffer. If the optional `pCounterBuffers` and `pCounterBufferOffsets` parameters are specified, the starting points within the transform feedback buffers are adjusted so data is appended to the previously written values indicated by the value stored by the implementation in the counter buffer.

For multi-vertex primitives, all values for a given vertex are written before writing values for any other vertex. When the `transformFeedbackPreservesProvokingVertex` feature is not enabled, implementations **may** write out any vertex within the primitive first, but all subsequent vertices for

that primitive **must** be written out in a consistent winding order defined as follows:

- If neither geometry or tessellation shading is active, vertices within a primitive are appended according to the winding order described by the primitive topology defined by the VkPipelineInputAssemblyStateCreateInfo::`topology` used to execute the drawing command.
- If geometry shading is active, vertices within a primitive are appended according to the winding order described by the primitive topology defined by the `OutputPoints`, `OutputLineStrip`, or `OutputTriangleStrip` execution mode.
- If tessellation shading is active but geometry shading is not, vertices within a primitive are appended according to the winding order defined by triangle tessellation, quad tessellation, and isoline tessellation.

When the `transformFeedbackPreservesProvokingVertex` feature is enabled, then in addition to writing vertices with a consistent winding order, the vertex order **must** preserve the provoking vertex of each primitive:

- When the pipeline's provoking vertex mode is VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT, the primitive's provoking vertex **must** be the first vertex written.
- When the pipeline's provoking vertex mode is VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT, the primitive's provoking vertex **must** be the last vertex written.

If `transformFeedbackPreservesTriangleFanProvokingVertex` is VK_FALSE, neither geometry nor tessellation shading is active, and the primitive topology is VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN, then the first vertex written from each primitive is implementation-defined even when the `transformFeedbackPreservesProvokingVertex` feature is enabled.

When capturing vertices, the stride associated with each transform feedback buffer, as indicated by the `XfbStride` decoration, indicates the number of bytes of storage reserved for each vertex in the transform feedback buffer. For every vertex captured, each output attribute with a `Offset` decoration will be written to the storage reserved for the vertex at the associated transform feedback buffer. When writing output variables that are arrays or structures, individual array elements or structure members are written tightly packed in order. For vector types, individual components are written in order. For matrix types, outputs are written as an array of column vectors.

If any component of an output with an assigned transform feedback offset was not written to by its shader, the value recorded for that component is undefined, and the primitives needed and primitives written counts in the corresponding VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT query will increment as normal. All components of an output variable **must** be written at an offset aligned to the size of the component. The size of each component of an output variable **must** be at least 32-bits. When capturing a vertex, any portion of the reserved storage not associated with an output variable with an assigned transform feedback offset will be unmodified.

When transform feedback is inactive, no vertices are recorded. If there is a valid counter buffer

handle and counter buffer offset in the pCounterBuffers and pCounterBufferOffsets arrays, writes to the corresponding transform feedback buffer will start at the byte offset represented by the value stored in the counter buffer location.

Individual lines or triangles of a strip or fan primitive will be extracted and recorded separately. Incomplete primitives are not recorded.

When using a geometry shader that emits vertices to multiple vertex streams, a primitive will be assembled and output for each stream when there are enough vertices emitted for the output primitive type. All outputs assigned to a given transform feedback buffer are required to come from a single vertex stream.

The sizes of the transform feedback buffers are defined by the vkCmdBindTransformFeedbackBuffersEXT pSizes parameter for each of the bound buffers, or the size of the bound buffer, whichever is the lesser. If there is less space remaining in any of the transform feedback buffers than the size of all of the vertex data for that primitive based on the XfbStride for that XfbBuffer then no vertex data of that primitive is recorded in any transform feedback buffer, and the value for the number of primitives written in the corresponding VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT query for all transform feedback buffers is no longer incremented.

Any outputs made to a XfbBuffer that is not bound to a transform feedback buffer is ignored.

To bind transform feedback memory ranges to a command buffer for use in subsequent drawing commands, call:

```
// Provided by VK_KHR_device_address_commands with VK_EXT_transform_feedback
void vkCmdBindTransformFeedbackBuffers2EXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBindTransformFeedbackBuffer2InfoEXT* pBindingInfos);
```

- commandBuffer is the command buffer into which the command is recorded.
- firstBinding is the index of the first transform feedback binding whose state is updated by the command.
- bindingCount is the number of transform feedback bindings whose state is updated by the command.
- pBindingInfos is a pointer to an array of VkBindTransformFeedbackBuffer2InfoEXT structures specifying the ranges of memory to be used to capture transform feedback data.

Element i of pBindingInfos replaces the current state for the transform feedback binding firstBinding + i, for i in [0,bindingCount).

Valid Usage

- VUID-vkCmdBindTransformFeedbackBuffers2EXT-transformFeedback-02355

VkPhysicalDeviceTransformFeedbackFeaturesEXT::transformFeedback **must** be enabled

- VUID-vkCmdBindTransformFeedbackBuffers2EXT-firstBinding-02356
  firstBinding **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBuffers
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-firstBinding-02357
  The sum of firstBinding and bindingCount **must** be less than or equal to VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBuffers
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-None-02365
  Transform feedback **must** not be active when the vkCmdBindTransformFeedbackBuffers2EXT command is recorded
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-addressRange-13090
  The addressRange.address member of all elements of pBindingInfos **must** be a multiple of 4
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-addressRange-13091
  The buffer that the addressRange of each element of pBindingInfos was queried from **must** have been created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-addressRange-13092
  The addressRange.size member of all elements of pBindingInfos **must** be less than or equal to VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferSize

Valid Usage (Implicit)

- VUID-vkCmdBindTransformFeedbackBuffers2EXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-pBindingInfos-parameter
  If pBindingInfos is not NULL, pBindingInfos **must** be a valid pointer to an array of bindingCount valid VkBindTransformFeedbackBuffer2InfoEXT structures
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindTransformFeedbackBuffers2EXT-bindingCount-arraylength
  If pBindingInfos is not NULL, bindingCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally

synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindTransformFeedbackBuffers2EXT is not affected by conditional rendering

`VkBindTransformFeedbackBuffer2InfoEXT` is defined as:

```
// Provided by VK_KHR_device_address_commands with VK_EXT_transform_feedback
typedef struct VkBindTransformFeedbackBuffer2InfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkDeviceAddressRangeKHR     addressRange;
    VkAddressCommandFlagsKHR    addressFlags;
} VkBindTransformFeedbackBuffer2InfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `addressRange` is the VkDeviceAddressRangeKHR of the address range to use.
- `addressFlags` is a VkAddressCommandFlagsKHR value defining the flags for the address range.

Valid Usage

- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13097
  If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13098
  If the buffer from which the range specified by `addressRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13099
  If the buffer from which the range specified by `addressRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressFlags-13100
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressFlags-13101
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR

Valid Usage (Implicit)

- VUID-VkBindTransformFeedbackBuffer2InfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_TRANSFORM_FEEDBACK_BUFFER_2_INFO_EXT
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBindTransformFeedbackBuffer2InfoEXT-addressFlags-parameter
  If `addressFlags` is not `0`, `addressFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values

To bind transform feedback buffers to a command buffer for use in subsequent drawing commands, call:

WARNING	This functionality is superseded by vkCmdBindTransformFeedbackBuffers2EXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_transform_feedback
void vkCmdBindTransformFeedbackBuffersEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstBinding,
    uint32_t                                    bindingCount,
    const VkBuffer*                             pBuffers,
    const VkDeviceSize*                         pOffsets,
    const VkDeviceSize*                         pSizes);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstBinding` is the index of the first transform feedback binding whose state is updated by the command.
- `bindingCount` is the number of transform feedback bindings whose state is updated by the command.
- `pBuffers` is a pointer to an array of buffer handles.
- `pOffsets` is a pointer to an array of buffer offsets.
- `pSizes` is `NULL` or a pointer to an array of VkDeviceSize buffer sizes, specifying the maximum number of bytes to capture to the corresponding transform feedback buffer. If `pSizes` is `NULL`, it is equivalent to setting a `pSizes` array where every element is VK_WHOLE_SIZE.

The values taken from elements i of `pBuffers`, `pOffsets` and `pSizes` replace the current state for the transform feedback binding `firstBinding` + i, for i in [0, `bindingCount`). The transform feedback binding is updated to start at the offset indicated by `pOffsets`[i] from the start of the buffer `pBuffers`[i].

When an element of `pSizes`[i] is VK_WHOLE_SIZE, or `pSizes` is `NULL`, the effective range is calculated by taking the size of `pBuffers`[i] minus `pOffsets`[i]. Otherwise, the effective range is equal to the element in `pSizes`[i].

Valid Usage

- VUID-vkCmdBindTransformFeedbackBuffersEXT-transformFeedback-02355
  `VkPhysicalDeviceTransformFeedbackFeaturesEXT`::`transformFeedback` **must** be enabled
- VUID-vkCmdBindTransformFeedbackBuffersEXT-firstBinding-02356
  `firstBinding` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdBindTransformFeedbackBuffersEXT-firstBinding-02357

The sum of `firstBinding` and `bindingCount` **must** be less than or equal to `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`

- VUID-vkCmdBindTransformFeedbackBuffersEXT-None-02365
  Transform feedback **must** not be active when the `vkCmdBindTransformFeedbackBuffersEXT` command is recorded
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pOffsets-02358
  All elements of `pOffsets` **must** be less than the size of the corresponding element in `pBuffers`
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pOffsets-02359
  All elements of `pOffsets` **must** be a multiple of 4
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pBuffers-02360
  All elements of `pBuffers` **must** have been created with the VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT usage flag set
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pOffsets-02363
  All elements of `pOffsets` plus the effective size of the element, **must** be less than or equal to the size of the corresponding buffer in `pBuffers`
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pBuffers-02364
  Each element of `pBuffers` that is non-sparse **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-vkCmdBindTransformFeedbackBuffersEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pBuffers-parameter
  `pBuffers` **must** be a valid pointer to an array of `bindingCount` valid VkBuffer handles
- VUID-vkCmdBindTransformFeedbackBuffersEXT-pOffsets-parameter
  `pOffsets` **must** be a valid pointer to an array of `bindingCount` VkDeviceSize values
- VUID-vkCmdBindTransformFeedbackBuffersEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindTransformFeedbackBuffersEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindTransformFeedbackBuffersEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindTransformFeedbackBuffersEXT-bindingCount-arraylength
  `bindingCount` **must** be greater than `0`
- VUID-vkCmdBindTransformFeedbackBuffersEXT-commonparent
  Both of `commandBuffer`, and the elements of `pBuffers` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindTransformFeedbackBuffersEXT is not affected by conditional rendering

Transform feedback for specific transform feedback buffers is made active by calling:

```
// Provided by VK_KHR_device_address_commands with VK_EXT_transform_feedback
void vkCmdBeginTransformFeedback2EXT(
    VkCommandBuffer                                 commandBuffer,
    uint32_t                                        firstCounterRange,
    uint32_t                                        counterRangeCount,
    const VkBindTransformFeedbackBuffer2InfoEXT* pCounterInfos);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstCounterRange` is the index of the first transform feedback buffer corresponding to `pCounterInfos`[0].
- `counterRangeCount` is the size of the `pCounterRanges` array.
- `pCounterInfos` is `NULL` or a pointer to an array of VkBindTransformFeedbackBuffer2InfoEXT structures defining memory ranges containing counters used to resume transform feedback from a previous location.

If `pCounterInfos` is `NULL`, it is equivalent to an array of VkBindTransformFeedbackBuffer2InfoEXT structures with each element having a `addressRange.size` of 0.

If the `addressRange.size` of an element of `pCounterInfos` at index i is 0, transform feedback data written to `XfbBuffer` with a `XFB Buffer Number` equal to the sum of i and `firstCounterRange` will be written starting at an offset of 0 in the bound transform feedback buffer. If the `addressRange.size` of an element of `pCounterInfos` at index i is not 0, it will instead be written starting at an offset equal to the 32-bit value found at `pCounterInfos`[i].addressRange.address.

The active transform feedback buffers will capture primitives emitted from the corresponding `XfbBuffer` in the bound graphics pipeline. Any `XfbBuffer` emitted that does not output to an active transform feedback buffer will not be captured.

Valid Usage

- VUID-vkCmdBeginTransformFeedback2EXT-transformFeedback-02366
  `VkPhysicalDeviceTransformFeedbackFeaturesEXT`::`transformFeedback` **must** be enabled
- VUID-vkCmdBeginTransformFeedback2EXT-None-02367
  Transform feedback **must** not be active
- VUID-vkCmdBeginTransformFeedback2EXT-firstCounter-02368
  `firstCounterRange` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdBeginTransformFeedback2EXT-firstCounter-02369
  The sum of `firstCounterRange` and `counterRangeCount` **must** be less than or equal to `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdBeginTransformFeedback2EXT-firstCounter-09630
  The sum of `firstCounterRange` and `counterRangeCount` **must** be less than or equal to the number of transform feedback buffers bound by vkCmdBindTransformFeedbackBuffers2EXT
- VUID-vkCmdBeginTransformFeedback2EXT-None-06233
  If the `shaderObject` feature is not enabled, a valid graphics pipeline **must** be bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdBeginTransformFeedback2EXT-None-04128
  The last pre-rasterization shader stage of the bound graphics pipeline **must** have been declared with the `Xfb` execution mode
- VUID-vkCmdBeginTransformFeedback2EXT-None-02373
  Transform feedback **must** not be made active in a render pass instance with multiview enabled
- VUID-vkCmdBeginTransformFeedback2EXT-pCounterInfos-13093
  Each element of `pCounterInfos` **must** have a `addressRange.size` that is either 0 or greater than or equal to 4
- VUID-vkCmdBeginTransformFeedback2EXT-pCounterInfos-13094
  For each element of `pCounterInfos` with a non-zero address, the buffer the address was queried from **must** have been created with the VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBeginTransformFeedback2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBeginTransformFeedback2EXT-pCounterInfos-parameter

If `counterRangeCount` is not `0`, and `pCounterInfos` is not `NULL`, `pCounterInfos` **must** be a valid pointer to an array of `counterRangeCount` valid VkBindTransformFeedbackBuffer2InfoEXT structures

- VUID-vkCmdBeginTransformFeedback2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBeginTransformFeedback2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBeginTransformFeedback2EXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdBeginTransformFeedback2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBeginTransformFeedback2EXT is not affected by conditional rendering

Transform feedback for specific transform feedback buffers is made inactive by calling:

```
// Provided by VK_KHR_device_address_commands with VK_EXT_transform_feedback
void vkCmdEndTransformFeedback2EXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstCounterRange,
    uint32_t                                    counterRangeCount,
    const VkBindTransformFeedbackBuffer2InfoEXT* pCounterInfos);
```

- `commandBuffer` is the command buffer into which the command is recorded.

- `firstCounterBuffer` is the index of the first transform feedback buffer corresponding to `pCounterInfos`[0].
- `counterRangeCount` is the size of the `pCounterInfos` array.
- `pCounterInfos` is `NULL` or a pointer to an array of VkBindTransformFeedbackBuffer2InfoEXT structures defining memory ranges used to write counters used to later resume transform feedback.

If `pCounterInfos` is `NULL`, it is equivalent to an array of VkBindTransformFeedbackBuffer2InfoEXT structures with each element having a `addressRange.size` of 0.

If the `addressRange.size` of an element of `pCounterInfos` at index i is 0, no data is written to the address range. If the `addressRange.size` of an element of `pCounterInfos` at index i is not 0, the byte offset, where the next vertex data would be written to in the transform feedback buffer at a binding equal to the sum of i and `firstCounterBuffer`, is written to that range's `address`.

Valid Usage

- VUID-vkCmdEndTransformFeedback2EXT-transformFeedback-02374
  `VkPhysicalDeviceTransformFeedbackFeaturesEXT`::`transformFeedback` **must** be enabled
- VUID-vkCmdEndTransformFeedback2EXT-None-02375
  Transform feedback **must** be active
- VUID-vkCmdEndTransformFeedback2EXT-firstCounterBuffer-02376
  `firstCounterBuffer` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdEndTransformFeedback2EXT-firstCounterBuffer-02377
  The sum of `firstCounterBuffer` and `counterRangeCount` **must** be less than or equal to `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdEndTransformFeedback2EXT-pCounterInfos-13095
  Each element of `pCounterInfos` **must** have a `addressRange.size` that is either 0 or greater than or equal to 4
- VUID-vkCmdEndTransformFeedback2EXT-pCounterInfos-13096
  For each element of `pCounterInfos` with a non-zero address, the buffer the address was queried from **must** have been created with the VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-vkCmdEndTransformFeedback2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdEndTransformFeedback2EXT-pCounterInfos-parameter
  If `counterRangeCount` is not `0`, and `pCounterInfos` is not `NULL`, `pCounterInfos` **must** be a valid pointer to an array of `counterRangeCount` valid VkBindTransformFeedbackBuffer2InfoEXT structures

- VUID-vkCmdEndTransformFeedback2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdEndTransformFeedback2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdEndTransformFeedback2EXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdEndTransformFeedback2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdEndTransformFeedback2EXT is not affected by conditional rendering

Transform feedback for specific transform feedback buffers is made active by calling:

WARNING This functionality is superseded by vkCmdBeginTransformFeedback2EXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_transform_feedback
void vkCmdBeginTransformFeedbackEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstCounterBuffer,
    uint32_t                                    counterBufferCount,
    const VkBuffer*                             pCounterBuffers,
    const VkDeviceSize*                         pCounterBufferOffsets);
```

- `commandBuffer` is the command buffer into which the command is recorded.

- `firstCounterBuffer` is the index of the first transform feedback buffer corresponding to `pCounterBuffers`[0] and `pCounterBufferOffsets`[0].
- `counterBufferCount` is the size of the `pCounterBuffers` and `pCounterBufferOffsets` arrays.
- `pCounterBuffers` is `NULL` or a pointer to an array of VkBuffer handles to counter buffers. Each buffer contains a 4 byte integer value representing the byte offset from the start of the corresponding transform feedback buffer from where to start capturing vertex data. If the byte offset stored to the counter buffer location was done using vkCmdEndTransformFeedbackEXT it can be used to resume transform feedback from the previous location. In that case, a pipeline barrier is required between the calls to `vkCmdEndTransformFeedbackEXT` and `vkCmdBeginTransformFeedbackEXT`, with VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT as the source and destination stages, VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT as the source access and VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT as the destination access. If `pCounterBuffers` is `NULL`, then transform feedback will start capturing vertex data to byte offset zero in all bound transform feedback buffers. For each element of `pCounterBuffers` that is VK_NULL_HANDLE, transform feedback will start capturing vertex data to byte zero in the corresponding bound transform feedback buffer.
- `pCounterBufferOffsets` is `NULL` or a pointer to an array of VkDeviceSize values specifying offsets within each of the `pCounterBuffers` where the counter values were previously written. The location in each counter buffer at these offsets **must** be large enough to contain 4 bytes of data. This data is the number of bytes captured by the previous transform feedback to this buffer. If `pCounterBufferOffsets` is `NULL`, then it is assumed the offsets are zero.

The active transform feedback buffers will capture primitives emitted from the corresponding `XfbBuffer` in the bound graphics pipeline. Any `XfbBuffer` emitted that does not output to an active transform feedback buffer will not be captured.

Valid Usage

- VUID-vkCmdBeginTransformFeedbackEXT-transformFeedback-02366
  `VkPhysicalDeviceTransformFeedbackFeaturesEXT`::`transformFeedback` **must** be enabled
- VUID-vkCmdBeginTransformFeedbackEXT-None-02367
  Transform feedback **must** not be active
- VUID-vkCmdBeginTransformFeedbackEXT-firstCounter-02368
  `firstCounterBuffer` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdBeginTransformFeedbackEXT-firstCounter-02369
  The sum of `firstCounterBuffer` and `counterBufferCount` **must** be less than or equal to `VkPhysicalDeviceTransformFeedbackPropertiesEXT`::`maxTransformFeedbackBuffers`
- VUID-vkCmdBeginTransformFeedbackEXT-firstCounter-09630
  The sum of `firstCounterBuffer` and `counterBufferCount` **must** be less than or equal to the number of transform feedback buffers bound by vkCmdBindTransformFeedbackBuffersEXT
- VUID-vkCmdBeginTransformFeedbackEXT-None-06233

If the shaderObject feature is not enabled, a valid graphics pipeline **must** be bound to VK_PIPELINE_BIND_POINT_GRAPHICS

- VUID-vkCmdBeginTransformFeedbackEXT-None-04128
  The last pre-rasterization shader stage of the bound graphics pipeline **must** have been declared with the Xfb execution mode
- VUID-vkCmdBeginTransformFeedbackEXT-None-02373
  Transform feedback **must** not be made active in a render pass instance with multiview enabled
- VUID-vkCmdBeginTransformFeedbackEXT-counterBufferCount-02607
  If counterBufferCount is not 0, and pCounterBuffers is not NULL, pCounterBuffers **must** be a valid pointer to an array of counterBufferCount VkBuffer handles that are either valid or VK_NULL_HANDLE
- VUID-vkCmdBeginTransformFeedbackEXT-pCounterBufferOffsets-02370
  For each buffer handle in the array, if it is not VK_NULL_HANDLE it **must** reference a buffer large enough to hold 4 bytes at the corresponding offset from the pCounterBufferOffsets array
- VUID-vkCmdBeginTransformFeedbackEXT-pCounterBuffer-02371
  If pCounterBuffer is NULL, then pCounterBufferOffsets **must** also be NULL
- VUID-vkCmdBeginTransformFeedbackEXT-pCounterBuffers-02372
  For each buffer handle in the pCounterBuffers array that is not VK_NULL_HANDLE it **must** have been with the VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBeginTransformFeedbackEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBeginTransformFeedbackEXT-pCounterBufferOffsets-parameter
  If counterBufferCount is not 0, and pCounterBufferOffsets is not NULL, pCounterBufferOffsets **must** be a valid pointer to an array of counterBufferCount VkDeviceSize values
- VUID-vkCmdBeginTransformFeedbackEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBeginTransformFeedbackEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBeginTransformFeedbackEXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdBeginTransformFeedbackEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginTransformFeedbackEXT-commonparent
  Both of commandBuffer, and the elements of pCounterBuffers that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same

VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBeginTransformFeedbackEXT is not affected by conditional rendering

Transform feedback for specific transform feedback buffers is made inactive by calling:

WARNING This functionality is superseded by vkCmdEndTransformFeedback2EXT. See Legacy Functionality for more information.

```
// Provided by VK_EXT_transform_feedback
void vkCmdEndTransformFeedbackEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstCounterBuffer,
    uint32_t                                    counterBufferCount,
    const VkBuffer*                             pCounterBuffers,
    const VkDeviceSize*                         pCounterBufferOffsets);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `firstCounterBuffer` is the index of the first transform feedback buffer corresponding to `pCounterBuffers`[0] and `pCounterBufferOffsets`[0].
- `counterBufferCount` is the size of the `pCounterBuffers` and `pCounterBufferOffsets` arrays.
- `pCounterBuffers` is `NULL` or a pointer to an array of VkBuffer handles to counter buffers. The counter buffers are used to record the current byte positions of each transform feedback buffer where the next vertex output data would be captured. This **can** be used by a subsequent vkCmdBeginTransformFeedbackEXT call to resume transform feedback capture from this position. It can also be used by vkCmdDrawIndirectByteCountEXT to determine the vertex count

of the draw call.

- pCounterBufferOffsets is NULL or a pointer to an array of VkDeviceSize values specifying offsets within each of the pCounterBuffers where the counter values can be written. The location in each counter buffer at these offsets **must** be large enough to contain 4 bytes of data. The data stored at this location is the byte offset from the start of the transform feedback buffer binding where the next vertex data would be written. If pCounterBufferOffsets is NULL, then it is assumed the offsets are zero.

Valid Usage

- VUID-vkCmdEndTransformFeedbackEXT-transformFeedback-02374
  VkPhysicalDeviceTransformFeedbackFeaturesEXT::transformFeedback **must** be enabled
- VUID-vkCmdEndTransformFeedbackEXT-None-02375
  Transform feedback **must** be active
- VUID-vkCmdEndTransformFeedbackEXT-firstCounterBuffer-02376
  firstCounterBuffer **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBuffers
- VUID-vkCmdEndTransformFeedbackEXT-firstCounterBuffer-02377
  The sum of firstCounterBuffer and counterBufferCount **must** be less than or equal to VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBuffers
- VUID-vkCmdEndTransformFeedbackEXT-counterBufferCount-02608
  If counterBufferCount is not 0, and pCounterBuffers is not NULL, pCounterBuffers **must** be a valid pointer to an array of counterBufferCount VkBuffer handles that are either valid or VK_NULL_HANDLE
- VUID-vkCmdEndTransformFeedbackEXT-pCounterBufferOffsets-02378
  For each buffer handle in the array, if it is not VK_NULL_HANDLE it **must** reference a buffer large enough to hold 4 bytes at the corresponding offset from the pCounterBufferOffsets array
- VUID-vkCmdEndTransformFeedbackEXT-pCounterBuffer-02379
  If pCounterBuffer is NULL, then pCounterBufferOffsets **must** also be NULL
- VUID-vkCmdEndTransformFeedbackEXT-pCounterBuffers-02380
  For each buffer handle in the pCounterBuffers array that is not VK_NULL_HANDLE it **must** have been created with the VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-vkCmdEndTransformFeedbackEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdEndTransformFeedbackEXT-pCounterBufferOffsets-parameter
  If counterBufferCount is not 0, and pCounterBufferOffsets is not NULL, pCounterBufferOffsets **must** be a valid pointer to an array of counterBufferCount VkDeviceSize values

- VUID-vkCmdEndTransformFeedbackEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdEndTransformFeedbackEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdEndTransformFeedbackEXT-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdEndTransformFeedbackEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdEndTransformFeedbackEXT-commonparent
  Both of `commandBuffer`, and the elements of `pCounterBuffers` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdEndTransformFeedbackEXT is not affected by conditional rendering

30.2. Flat Shading

Flat shading a vertex output attribute means to assign all vertices of the primitive the same value for that output. The output values assigned are those of the *provoking vertex* of the primitive. Flat shading is applied to those vertex attributes that match fragment input attributes which are decorated as `Flat`.

If neither mesh, geometry nor tessellation shading is active, the provoking vertex is determined by the primitive topology defined by VkPipelineInputAssemblyStateCreateInfo::`topology` used to execute the drawing command.

If a shader using MeshEXT Execution Model is active, the provoking vertex is determined by the primitive topology defined by the OutputPoints, OutputLinesEXT, or OutputTrianglesEXT execution mode.

If geometry shading is active, the provoking vertex is determined by the primitive topology defined by the OutputPoints, OutputLineStrip, or OutputTriangleStrip execution mode.

If tessellation shading is active but geometry shading is not, the provoking vertex **may** be any of the vertices in each primitive.

For a given primitive topology, the pipeline's provoking vertex mode determines which vertex is the provoking vertex. To specify the provoking vertex mode, include a VkPipelineRasterizationProvokingVertexStateCreateInfoEXT structure in the VkPipelineRasterizationStateCreateInfo::pNext chain when creating the pipeline.

The VkPipelineRasterizationProvokingVertexStateCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPipelineRasterizationProvokingVertexStateCreateInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkProvokingVertexModeEXT    provokingVertexMode;
} VkPipelineRasterizationProvokingVertexStateCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- provokingVertexMode is a VkProvokingVertexModeEXT value selecting the provoking vertex mode.

If this structure is not provided when creating the pipeline, the pipeline will use the VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT mode.

If the provokingVertexModePerPipeline limit is VK_FALSE, then all pipelines bound within a render pass instance **must** have the same provokingVertexMode.

Valid Usage

- VUID-VkPipelineRasterizationProvokingVertexStateCreateInfoEXT-provokingVertexMode-04883
  If provokingVertexMode is VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT, then the provokingVertexLast feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationProvokingVertexStateCreateInfoEXT-sType-sType
  sType **must** be

VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_PROVOKING_VERTEX_STATE_CREATE_INFO_EXT

- VUID-VkPipelineRasterizationProvokingVertexStateCreateInfoEXT-provokingVertexMode-parameter
  `provokingVertexMode` **must** be a valid VkProvokingVertexModeEXT value

Structure Chaining

Extends the structure

- VkPipelineRasterizationStateCreateInfo

Possible values of VkPipelineRasterizationProvokingVertexStateCreateInfoEXT::`provokingVertexMode` are:

```
// Provided by VK_EXT_provoking_vertex
typedef enum VkProvokingVertexModeEXT {
    VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT = 0,
    VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT = 1,
} VkProvokingVertexModeEXT;
```

- VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT specifies that the provoking vertex is the first non-adjacency vertex in the list of vertices used by a primitive.
- VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT specifies that the provoking vertex is the last non-adjacency vertex in the list of vertices used by a primitive.

These modes are described more precisely in Primitive Topologies.

To dynamically set the `provokingVertexMode` state, call:

```
// Provided by VK_EXT_extended_dynamic_state3 with VK_EXT_provoking_vertex,
VK_EXT_provoking_vertex with VK_EXT_shader_object
void vkCmdSetProvokingVertexModeEXT(
    VkCommandBuffer                             commandBuffer,
    VkProvokingVertexModeEXT                    provokingVertexMode);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `provokingVertexMode` specifies the `provokingVertexMode` state.

This command sets the `provokingVertexMode` state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationProvokingVertexStateCreateInfoEXT::`provokingVertexMode` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetProvokingVertexModeEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3ProvokingVertexMode` feature is enabled
  - The `shaderObject` feature is enabled
- VUID-vkCmdSetProvokingVertexModeEXT-provokingVertexMode-07447
  If `provokingVertexMode` is VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT, then the `provokingVertexLast` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdSetProvokingVertexModeEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetProvokingVertexModeEXT-provokingVertexMode-parameter
  `provokingVertexMode` **must** be a valid VkProvokingVertexModeEXT value
- VUID-vkCmdSetProvokingVertexModeEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetProvokingVertexModeEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetProvokingVertexModeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetProvokingVertexModeEXT is not affected by conditional rendering

30.3. Primitive Clipping

Primitives are culled against the *cull volume* and then clipped to the *clip volume*. In clip coordinates, the *view volume* is defined by:

$$-w_c \leq x_c \leq w_c$$
$$-w_c \leq y_c \leq w_c$$
$$z_m \leq z_c \leq w_c$$

where if VkPipelineViewportDepthClipControlCreateInfoEXT::`negativeOneToOne` is VK_TRUE z_m is equal to $-w_c$ otherwise z_m is equal to zero.

This view volume **can** be further restricted by as many as `VkPhysicalDeviceLimits`::`maxClipDistances` application-defined half-spaces.

The cull volume is the intersection of up to `VkPhysicalDeviceLimits`::`maxCullDistances` application-defined half-spaces (if no application-defined cull half-spaces are enabled, culling against the cull volume is skipped).

A shader **must** write a single cull distance for each enabled cull half-space to elements of the `CullDistance` array. If the cull distance for any enabled cull half-space is negative for all of the vertices of the primitive under consideration, the primitive is discarded. Otherwise the primitive is clipped against the clip volume as defined below.

The clip volume is the intersection of up to `VkPhysicalDeviceLimits`::`maxClipDistances` application-defined half-spaces with the view volume (if no application-defined clip half-spaces are enabled, the clip volume is the view volume).

A shader **must** write a single clip distance for each enabled clip half-space to elements of the `ClipDistance` array. Clip half-space i is then given by the set of points satisfying the inequality

$$c_i(\mathbf{P}) \geq 0$$

where $c_i(\mathbf{P})$ is the clip distance i at point **P**. For point primitives, $c_i(\mathbf{P})$ is simply the clip distance for the vertex in question. For line and triangle primitives, per-vertex clip distances are interpolated using a weighted mean, with weights derived according to the algorithms described in sections Basic Line Segment Rasterization and Basic Polygon Rasterization, using the perspective interpolation equations.

The number of application-defined clip and cull half-spaces that are enabled is determined by the explicit size of the built-in arrays `ClipDistance` and `CullDistance`, respectively, declared as an output in the interface of the entry point of the final shader stage before clipping.

If VkPipelineRasterizationDepthClipStateCreateInfoEXT is present in the graphics pipeline state

then depth clipping is disabled if VkPipelineRasterizationDepthClipStateCreateInfoEXT ::depthClipEnable is VK_FALSE. Otherwise, if VkPipelineRasterizationDepthClipStateCreateInfoEXT is not present, depth clipping is disabled when VkPipelineRasterizationStateCreateInfo ::depthClampEnable is VK_TRUE.

To dynamically set enable or disable depth clamping, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetDepthClampEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthClampEnable);
```

- commandBuffer is the command buffer into which the command will be recorded.
- depthClampEnable specifies whether depth clamping is enabled.

This command sets whether depth clamping is enabled or disabled for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo ::depthClampEnable value used to create the currently active pipeline.

If the depth clamping state is changed dynamically, and the pipeline was not created with VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT enabled, then depth clipping is enabled when depth clamping is disabled and vice versa.

If the maintenance11 feature is enabled, the above statement is further clarified to state that the depth clipping state is only affected by the current value of depthClampEnable if the pipeline was not created with the VkPipelineRasterizationDepthClipStateCreateInfoEXT structure. If VkPipelineRasterizationDepthClipStateCreateInfoEXT was included in the pipeline creation then the depth clipping state is set explicitly by VkPipelineRasterizationDepthClipStateCreateInfoEXT ::depthClipEnable and not changed when the depth clamping state is modified.

Valid Usage

- VUID-vkCmdSetDepthClampEnableEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3DepthClampEnable feature is enabled
  - The shaderObject feature is enabled
- VUID-vkCmdSetDepthClampEnableEXT-depthClamp-07449
  If the depthClamp feature is not enabled, depthClampEnable **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-vkCmdSetDepthClampEnableEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle

- VUID-vkCmdSetDepthClampEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthClampEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthClampEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthClampEnableEXT is not affected by conditional rendering

To dynamically set enable or disable depth clipping, call:

```
// Provided by VK_EXT_depth_clip_enable with VK_EXT_extended_dynamic_state3,
VK_EXT_depth_clip_enable with VK_EXT_shader_object
void vkCmdSetDepthClipEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthClipEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthClipEnable` specifies whether depth clipping is enabled.

This command sets whether depth clipping is enabled or disabled for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationDepthClipStateCreateInfoEXT::`depthClipEnable` value used to create the

currently active pipeline. If VkPipelineRasterizationDepthClipStateCreateInfoEXT was not specified, depth clipping is set to the inverse of the current value of `depthClampEnable`.

Valid Usage

- VUID-vkCmdSetDepthClipEnableEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3DepthClipEnable` feature is enabled
  - The `shaderObject` feature is enabled
- VUID-vkCmdSetDepthClipEnableEXT-depthClipEnable-07451
  The `depthClipEnable` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdSetDepthClipEnableEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthClipEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthClipEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthClipEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthClipEnableEXT is not affected by conditional rendering

When depth clipping is disabled, the plane equation

$$z_m \leq z_c \leq w_c$$

(see the clip volume definition above) is ignored by view volume clipping (effectively, there is no near or far plane clipping).

If the primitive under consideration is a point or line segment, then clipping passes it unchanged if its vertices lie entirely within the clip volume.

Possible values of VkPhysicalDevicePointClippingProperties::pointClippingBehavior, specifying clipping behavior of a point primitive whose vertex lies outside the clip volume, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkPointClippingBehavior {
    VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES = 0,
    VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY = 1,
  // Provided by VK_KHR_maintenance2
    VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES_KHR =
VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES,
  // Provided by VK_KHR_maintenance2
    VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY_KHR =
VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY,
} VkPointClippingBehavior;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkPointClippingBehavior
typedef VkPointClippingBehavior VkPointClippingBehaviorKHR;
```

- VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES specifies that the primitive is discarded if the vertex lies outside any clip plane, including the planes bounding the view volume.
- VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY specifies that the primitive is discarded only if the vertex lies outside any user clip plane.

If either of a line segment's vertices lie outside of the clip volume, the line segment **may** be clipped, with new vertex coordinates computed for each vertex that lies outside the clip volume. A clipped line segment endpoint lies on both the original line segment and the boundary of the clip volume.

This clipping produces a value, $0 \leq t \leq 1$, for each clipped vertex. If the coordinates of a clipped vertex are $\mathbf{P}$ and the unclipped line segment's vertex coordinates are $\mathbf{P}_1$ and $\mathbf{P}_2$, then t satisfies the following equation

$\mathbf{P} = t\,\mathbf{P}_1 + (1-t)\,\mathbf{P}_2$.

t is used to clip vertex output attributes as described in Clipping Shader Outputs.

If the primitive is a polygon, it passes unchanged if every one of its edges lies entirely inside the clip volume, and is either clipped or discarded otherwise. If the edges of the polygon intersect the boundary of the clip volume, the intersecting edges are reconnected by new edges that lie along the boundary of the clip volume - in some cases requiring the introduction of new vertices into a polygon.

If a polygon intersects an edge of the clip volume's boundary, the clipped polygon **must** include a point on this boundary edge.

Primitives rendered with application-defined half-spaces **must** satisfy a complementarity criterion. Suppose a series of primitives is drawn where each vertex i has a single specified clip distance d_i (or a number of similarly specified clip distances, if multiple half-spaces are enabled). Next, suppose that the same series of primitives are drawn again with each such clip distance replaced by $-d_i$ (and the graphics pipeline is otherwise the same). In this case, primitives **must** not be missing any pixels, and pixels **must** not be drawn twice in regions where those primitives are cut by the clip planes.

The `VkPipelineViewportDepthClipControlCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clip_control
typedef struct VkPipelineViewportDepthClipControlCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           negativeOneToOne;
} VkPipelineViewportDepthClipControlCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `negativeOneToOne` sets the z_m in the *view volume* to $-w_c$

Valid Usage

- VUID-VkPipelineViewportDepthClipControlCreateInfoEXT-negativeOneToOne-06470
  If the `depthClipControl` feature is not enabled, `negativeOneToOne` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-VkPipelineViewportDepthClipControlCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_DEPTH_CLIP_CONTROL_CREATE_INFO_EXT

Structure Chaining

Extends the structure

- VkPipelineViewportStateCreateInfo

To dynamically set `negativeOneToOne`, call:

```
// Provided by VK_EXT_depth_clip_control with VK_EXT_extended_dynamic_state3,
VK_EXT_depth_clip_control with VK_EXT_shader_object
void vkCmdSetDepthClipNegativeOneToOneEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    negativeOneToOne);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `negativeOneToOne` specifies the `negativeOneToOne` state.

This command sets the `negativeOneToOne` state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineViewportDepthClipControlCreateInfoEXT::`negativeOneToOne` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3DepthClipNegativeOneToOne` feature is enabled
  - The `shaderObject` feature is enabled
- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-depthClipControl-07453
  The `depthClipControl` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthClipNegativeOneToOneEXT-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthClipNegativeOneToOneEXT is not affected by conditional rendering

30.4. Clipping Shader Outputs

Next, vertex output attributes are clipped. The output values associated with a vertex that lies within the clip volume are unaffected by clipping. If a primitive is clipped, however, the output values assigned to vertices produced by clipping are clipped.

Let the output values assigned to the two vertices $\mathbf{P}_1$ and $\mathbf{P}_2$ of an unclipped edge be $\mathbf{c}_1$ and $\mathbf{c}_2$. The value of t (see Primitive Clipping) for a clipped point $\mathbf{P}$ is used to obtain the output value associated with $\mathbf{P}$ as

$$\mathbf{c} = t\,\mathbf{c}_1 + (1-t)\,\mathbf{c}_2.$$

(Multiplying an output value by a scalar means multiplying each of *x*, *y*, *z*, and *w* by the scalar.)

Since this computation is performed in clip space before division by w_c, clipped output values are perspective-correct.

Polygon clipping creates a clipped vertex along an edge of the clip volume's boundary. This situation is handled by noting that polygon clipping proceeds by clipping against one half-space at a time. Output value clipping is done in the same way, so that clipped points always occur at the intersection of polygon edges (possibly already clipped) with the clip volume's boundary.

For vertex output attributes whose matching fragment input attributes are decorated with

`NoPerspective`, the value of t used to obtain the output value associated with **P** will be adjusted to produce results that vary linearly in framebuffer space.

Output attributes of integer or unsigned integer type **must** always be flat shaded. Flat shaded attributes are constant over the primitive being rasterized (see Basic Line Segment Rasterization and Basic Polygon Rasterization), and no interpolation is performed. The output value **c** is taken from either $\mathbf{c}_1$ or $\mathbf{c}_2$, since flat shading has already occurred and the two values are identical.

30.5. Coordinate Transformations

Clip coordinates for a vertex result from shader execution, which yields a vertex coordinate `Position`.

Perspective division on clip coordinates yields *normalized device coordinates*, followed by a *viewport* transformation (see Controlling the Viewport) to convert these coordinates into *framebuffer coordinates*.

If a vertex in clip coordinates has a position given by

$$\begin{pmatrix} x_c \\ y_c \\ z_c \\ w_c \end{pmatrix}$$

then the vertex's normalized device coordinates are

$$\begin{pmatrix} x_d \\ y_d \\ z_d \end{pmatrix} = \begin{pmatrix} \frac{x_c}{w_c} \\ \frac{y_c}{w_c} \\ \frac{z_c}{w_c} \end{pmatrix}$$

30.6. Controlling the Viewport

The viewport transformation is determined by the selected viewport's width and height in pixels, p_x and p_y, respectively, and its center (o_x, o_y) (also in pixels), as well as its depth range min and max determining a depth range scale value p_z and a depth range bias value o_z (defined below). The vertex's framebuffer coordinates (x_f, y_f) and depth z_f are given by

$$x_f = (p_x / 2)\, x_d + o_x$$

$$y_f = (p_y / 2)\, y_d + o_y$$

$$z_f = p_z \times z_d + o_z$$

Multiple viewports are available, numbered zero up to VkPhysicalDeviceLimits::maxViewports minus one. The number of viewports used by a pipeline is controlled by the viewportCount member of the VkPipelineViewportStateCreateInfo structure used in pipeline creation.

x_f and y_f have limited precision, where the number of fractional bits retained is specified by VkPhysicalDeviceLimits::subPixelPrecisionBits. When rasterizing line segments, the number of fractional bits is specified by VkPhysicalDeviceLineRasterizationProperties::lineSubPixelPrecisionBits.

The VkPipelineViewportStateCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineViewportStateCreateInfo {
    VkStructureType                       sType;
    const void*                           pNext;
    VkPipelineViewportStateCreateFlags    flags;
    uint32_t                              viewportCount;
    const VkViewport*                     pViewports;
    uint32_t                              scissorCount;
    const VkRect2D*                       pScissors;
} VkPipelineViewportStateCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- viewportCount is the number of viewports used by the pipeline.
- pViewports is a pointer to an array of VkViewport structures, defining the viewport transforms. If the viewport state is dynamic, this member is ignored.
- scissorCount is the number of scissors and **must** match the number of viewports.
- pScissors is a pointer to an array of VkRect2D structures defining the rectangular bounds of the scissor for the corresponding viewport. If the scissor state is dynamic, this member is ignored.

Valid Usage

- VUID-VkPipelineViewportStateCreateInfo-viewportCount-01216
  If the multiViewport feature is not enabled, viewportCount **must** not be greater than 1
- VUID-VkPipelineViewportStateCreateInfo-scissorCount-01217
  If the multiViewport feature is not enabled, scissorCount **must** not be greater than 1
- VUID-VkPipelineViewportStateCreateInfo-viewportCount-01218
  viewportCount **must** be less than or equal to VkPhysicalDeviceLimits::maxViewports
- VUID-VkPipelineViewportStateCreateInfo-scissorCount-01219
  scissorCount **must** be less than or equal to VkPhysicalDeviceLimits::maxViewports
- VUID-VkPipelineViewportStateCreateInfo-x-02821
  The x and y members of offset member of any element of pScissors **must** be greater than

or equal to `0`

- VUID-VkPipelineViewportStateCreateInfo-offset-02822
  Evaluation of (`offset.x` + `extent.width`) **must** not cause a signed integer addition overflow for any element of `pScissors`
- VUID-VkPipelineViewportStateCreateInfo-offset-02823
  Evaluation of (`offset.y` + `extent.height`) **must** not cause a signed integer addition overflow for any element of `pScissors`
- VUID-VkPipelineViewportStateCreateInfo-scissorCount-04134
  If `scissorCount` and `viewportCount` are both not dynamic, then `scissorCount` and `viewportCount` **must** be identical
- VUID-VkPipelineViewportStateCreateInfo-viewportCount-04135
  If the graphics pipeline is being created with VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT set then `viewportCount` **must** be `0`, otherwise `viewportCount` **must** be greater than `0`
- VUID-VkPipelineViewportStateCreateInfo-scissorCount-04136
  If the graphics pipeline is being created with VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT set then `scissorCount` **must** be `0`, otherwise `scissorCount` **must** be greater than `0`

Valid Usage (Implicit)

- VUID-VkPipelineViewportStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_STATE_CREATE_INFO
- VUID-VkPipelineViewportStateCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkPipelineViewportDepthClampControlCreateInfoEXT or VkPipelineViewportDepthClipControlCreateInfoEXT
- VUID-VkPipelineViewportStateCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPipelineViewportStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`

To dynamically set the viewport count and viewports, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetViewportWithCount(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    viewportCount,
    const VkViewport*                           pViewports);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetViewportWithCount
void vkCmdSetViewportWithCountEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    viewportCount,
    const VkViewport*                           pViewports);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `viewportCount` specifies the viewport count.
- `pViewports` specifies the viewports to use for drawing.

This command sets the viewport count and viewports state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the corresponding VkPipelineViewportStateCreateInfo::`viewportCount` and `pViewports` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetViewportWithCount-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3
- VUID-vkCmdSetViewportWithCount-viewportCount-03394
  `viewportCount` **must** be between 1 and `VkPhysicalDeviceLimits`::`maxViewports`, inclusive
- VUID-vkCmdSetViewportWithCount-viewportCount-03395
  If the `multiViewport` feature is not enabled, `viewportCount` **must** be 1

Valid Usage (Implicit)

- VUID-vkCmdSetViewportWithCount-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetViewportWithCount-pViewports-parameter
  `pViewports` **must** be a valid pointer to an array of `viewportCount` valid VkViewport structures
- VUID-vkCmdSetViewportWithCount-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetViewportWithCount-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetViewportWithCount-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetViewportWithCount-viewportCount-arraylength
  `viewportCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetViewportWithCount is not affected by conditional rendering

To dynamically set the scissor count and scissor rectangular bounds, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetScissorWithCount(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    scissorCount,
    const VkRect2D*                             pScissors);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetScissorWithCount
void vkCmdSetScissorWithCountEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    scissorCount,
    const VkRect2D*                             pScissors);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scissorCount` specifies the scissor count.

- `pScissors` specifies the scissors to use for drawing.

This command sets the scissor count and scissor rectangular bounds state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the corresponding VkPipelineViewportStateCreateInfo::`scissorCount` and `pScissors` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetScissorWithCount-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3
- VUID-vkCmdSetScissorWithCount-scissorCount-03397
  `scissorCount` **must** be between `1` and `VkPhysicalDeviceLimits`::`maxViewports`, inclusive
- VUID-vkCmdSetScissorWithCount-scissorCount-03398
  If the `multiViewport` feature is not enabled, `scissorCount` **must** be `1`
- VUID-vkCmdSetScissorWithCount-x-03399
  The `x` and `y` members of `offset` member of any element of `pScissors` **must** be greater than or equal to `0`
- VUID-vkCmdSetScissorWithCount-offset-03400
  Evaluation of (`offset.x` + `extent.width`) **must** not cause a signed integer addition overflow for any element of `pScissors`
- VUID-vkCmdSetScissorWithCount-offset-03401
  Evaluation of (`offset.y` + `extent.height`) **must** not cause a signed integer addition overflow for any element of `pScissors`

Valid Usage (Implicit)

- VUID-vkCmdSetScissorWithCount-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetScissorWithCount-pScissors-parameter
  `pScissors` **must** be a valid pointer to an array of `scissorCount` VkRect2D structures
- VUID-vkCmdSetScissorWithCount-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetScissorWithCount-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetScissorWithCount-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetScissorWithCount-scissorCount-arraylength
  `scissorCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetScissorWithCount is not affected by conditional rendering

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineViewportStateCreateFlags;
```

`VkPipelineViewportStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

A *pre-rasterization shader stage* **can** direct each primitive to one of several viewports. The destination viewport for a primitive is selected by the last active pre-rasterization shader stage that has an output variable decorated with `ViewportIndex`. The viewport transform uses the viewport corresponding to the value assigned to `ViewportIndex`, and taken from an implementation-dependent vertex of each primitive. If `ViewportIndex` is outside the range zero to `viewportCount` minus one for a primitive, or if the last active pre-rasterization shader stage did not assign a value to `ViewportIndex` for all vertices of a primitive due to flow control, the values resulting from the viewport transformation of the vertices of such primitives are undefined. If the last pre-rasterization shader stage does not have an output decorated with `ViewportIndex`, the viewport numbered zero is used by the viewport transformation.

A single vertex **can** be used in more than one individual primitive, in primitives such as VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP. In this case, the viewport transformation is applied separately for each primitive.

To dynamically set the viewport transformation parameters, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetViewport(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstViewport,
    uint32_t                                    viewportCount,
    const VkViewport*                           pViewports);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstViewport` is the index of the first viewport whose parameters are updated by the command.
- `viewportCount` is the number of viewports whose parameters are updated by the command.
- `pViewports` is a pointer to an array of VkViewport structures specifying viewport parameters.

This command sets the viewport transformation parameters state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_VIEWPORT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the `VkPipelineViewportStateCreateInfo`::`pViewports` values used to create the currently active pipeline.

The viewport parameters taken from element i of `pViewports` replace the current state for the viewport index `firstViewport` + i, for i in [0, `viewportCount`).

Valid Usage

- VUID-vkCmdSetViewport-firstViewport-01223
  The sum of `firstViewport` and `viewportCount` **must** be between `1` and `VkPhysicalDeviceLimits`::`maxViewports`, inclusive
- VUID-vkCmdSetViewport-firstViewport-01224
  If the `multiViewport` feature is not enabled, `firstViewport` **must** be `0`
- VUID-vkCmdSetViewport-viewportCount-01225
  If the `multiViewport` feature is not enabled, `viewportCount` **must** be `1`

Valid Usage (Implicit)

- VUID-vkCmdSetViewport-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetViewport-pViewports-parameter
  `pViewports` **must** be a valid pointer to an array of `viewportCount` valid VkViewport structures
- VUID-vkCmdSetViewport-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetViewport-commandBuffer-cmdpool

The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetViewport-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetViewport-viewportCount-arraylength
  viewportCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetViewport is not affected by conditional rendering

Both VkPipelineViewportStateCreateInfo and vkCmdSetViewport use VkViewport to set the viewport transformation parameters.

The VkViewport structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkViewport {
    float    x;
    float    y;
    float    width;
    float    height;
    float    minDepth;
    float    maxDepth;
} VkViewport;
```

- x and y are the viewport's upper left corner (x,y).
- width and height are the viewport's width and height, respectively.

- `minDepth` and `maxDepth` are the depth range for the viewport.

NOTE	Despite their names, `minDepth` **can** be less than, equal to, or greater than `maxDepth`.

The framebuffer depth coordinate z_f **may** be represented using either a fixed-point or floating-point representation. However, a floating-point representation **must** be used if the depth/stencil attachment has a floating-point depth component. If an m-bit fixed-point representation is used, we assume that it represents each value $\frac{k}{2^m - 1}$, where k ∈ { 0, 1, ..., 2^m-1 }, as k (e.g. 1.0 is represented in binary as a string of all ones).

The viewport parameters shown in the above equations are found from these values as

o_x = `x` + `width` / 2

o_y = `y` + `height` / 2

o_z = `minDepth` (or (`maxDepth` + `minDepth`) / 2 if VkPipelineViewportDepthClipControlCreateInfoEXT::`negativeOneToOne` is VK_TRUE)

p_x = `width`

p_y = `height`

p_z = `maxDepth` - `minDepth` (or (`maxDepth` - `minDepth`) / 2 if VkPipelineViewportDepthClipControlCreateInfoEXT::`negativeOneToOne` is VK_TRUE)

The application **can** specify a negative term for `height`, which has the effect of negating the y coordinate in clip space before performing the transform. When using a negative `height`, the application **should** also adjust the `y` value to point to the lower left corner of the viewport instead of the upper left corner. Using the negative `height` allows the application to avoid having to negate the y component of the `Position` output from the last pre-rasterization shader stage.

The width and height of the implementation-dependent maximum viewport dimensions **must** be greater than or equal to the width and height of the largest image which **can** be created and attached to a framebuffer.

The floating-point viewport bounds are represented with an implementation-dependent precision.

Valid Usage

- VUID-VkViewport-width-01770
  `width` **must** be greater than `0.0`

- VUID-VkViewport-width-01771
  `width` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxViewportDimensions`[0]
- VUID-VkViewport-apiVersion-07917
  If the VK_KHR_maintenance1 extension is not enabled, the `VK_AMD_negative_viewport_height` extension is not enabled, and VkPhysicalDeviceProperties::`apiVersion` is less than Vulkan 1.1, `height` **must** be greater than `0.0`
- VUID-VkViewport-height-01773
  The absolute value of `height` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxViewportDimensions`[1]
- VUID-VkViewport-x-01774
  `x` **must** be greater than or equal to `viewportBoundsRange`[0]
- VUID-VkViewport-x-01232
  (`x` + `width`) **must** be less than or equal to `viewportBoundsRange`[1]
- VUID-VkViewport-y-01775
  `y` **must** be greater than or equal to `viewportBoundsRange`[0]
- VUID-VkViewport-y-01776
  `y` **must** be less than or equal to `viewportBoundsRange`[1]
- VUID-VkViewport-y-01777
  (`y` + `height`) **must** be greater than or equal to `viewportBoundsRange`[0]
- VUID-VkViewport-y-01233
  (`y` + `height`) **must** be less than or equal to `viewportBoundsRange`[1]
- VUID-VkViewport-minDepth-01234
  If the `VK_EXT_depth_range_unrestricted` extension is not enabled, `minDepth` **must** be between `0.0` and `1.0`, inclusive
- VUID-VkViewport-maxDepth-01235
  If the `VK_EXT_depth_range_unrestricted` extension is not enabled, `maxDepth` **must** be between `0.0` and `1.0`, inclusive

Chapter 31. Rasterization

Rasterization is the process by which a primitive is converted to a two-dimensional image. Each discrete location of this image contains associated data such as depth, color, or other attributes.

Rasterizing a primitive begins by determining which squares of an integer grid in framebuffer coordinates are occupied by the primitive, and assigning one or more depth values to each such square. This process is described below for points, lines, and polygons.

A grid square, including its (x,y) framebuffer coordinates, z (depth), and associated data added by fragment shaders, is called a fragment. A fragment is located by its upper left corner, which lies on integer grid coordinates.

Rasterization operations also refer to a fragment's sample locations, which are offset by fractional values from its upper left corner. The rasterization rules for points, lines, and triangles involve testing whether each sample location is inside the primitive. Fragments need not actually be square, and rasterization rules are not affected by the aspect ratio of fragments. Display of non-square grids, however, will cause rasterized points and line segments to appear fatter in one direction than the other.

We assume that fragments are square, since it simplifies antialiasing and texturing. After rasterization, fragments are processed by fragment operations.

Several factors affect rasterization, including the members of VkPipelineRasterizationStateCreateInfo and VkPipelineMultisampleStateCreateInfo.

The `VkPipelineRasterizationStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineRasterizationStateCreateInfo {
    VkStructureType                            sType;
    const void*                                pNext;
    VkPipelineRasterizationStateCreateFlags    flags;
    VkBool32                                   depthClampEnable;
    VkBool32                                   rasterizerDiscardEnable;
    VkPolygonMode                              polygonMode;
    VkCullModeFlags                            cullMode;
    VkFrontFace                                frontFace;
    VkBool32                                   depthBiasEnable;
    float                                      depthBiasConstantFactor;
    float                                      depthBiasClamp;
    float                                      depthBiasSlopeFactor;
    float                                      lineWidth;
} VkPipelineRasterizationStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

- `depthClampEnable` controls whether to clamp the fragment's depth values as described in Depth Test. If the pipeline is not created with VkPipelineRasterizationDepthClipStateCreateInfoEXT present then enabling depth clamp will also disable clipping primitives to the z planes of the frustum as described in Primitive Clipping. Otherwise depth clipping is controlled by the state set in VkPipelineRasterizationDepthClipStateCreateInfoEXT.
- `rasterizerDiscardEnable` controls whether primitives are discarded immediately before the rasterization stage.
- `polygonMode` is the triangle rendering mode. See VkPolygonMode.
- `cullMode` is the triangle facing direction used for primitive culling. See VkCullModeFlagBits.
- `frontFace` is a VkFrontFace value specifying the front-facing triangle orientation to be used for culling.
- `depthBiasEnable` controls whether to bias fragment depth values.
- `depthBiasConstantFactor` is a scalar factor controlling the constant depth value added to each fragment.
- `depthBiasClamp` is the maximum (or minimum) depth bias of a fragment.
- `depthBiasSlopeFactor` is a scalar factor applied to a fragment's slope in depth bias calculations.
- `lineWidth` is the width of rasterized line segments.

Valid Usage

- VUID-VkPipelineRasterizationStateCreateInfo-depthClampEnable-00782
  If the `depthClamp` feature is not enabled, `depthClampEnable` **must** be VK_FALSE
- VUID-VkPipelineRasterizationStateCreateInfo-polygonMode-01507
  If the `fillModeNonSolid` feature is not enabled, `polygonMode` **must** be VK_POLYGON_MODE_FILL
- VUID-VkPipelineRasterizationStateCreateInfo-pointPolygons-04458
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`pointPolygons` is VK_FALSE, and `rasterizerDiscardEnable` is VK_FALSE, `polygonMode` **must** not be VK_POLYGON_MODE_POINT

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_STATE_CREATE_INFO
- VUID-VkPipelineRasterizationStateCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDepthBiasRepresentationInfoEXT, VkPipelineRasterizationConservativeStateCreateInfoEXT, VkPipelineRasterizationDepthClipStateCreateInfoEXT, VkPipelineRasterizationLineStateCreateInfo, VkPipelineRasterizationProvokingVertexStateCreateInfoEXT, or

VkPipelineRasterizationStateStreamCreateInfoEXT

- VUID-VkPipelineRasterizationStateCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPipelineRasterizationStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkPipelineRasterizationStateCreateInfo-polygonMode-parameter
  `polygonMode` **must** be a valid VkPolygonMode value
- VUID-VkPipelineRasterizationStateCreateInfo-cullMode-parameter
  If `cullMode` is not `0`, `cullMode` **must** be a valid combination of VkCullModeFlagBits values
- VUID-VkPipelineRasterizationStateCreateInfo-frontFace-parameter
  `frontFace` **must** be a valid VkFrontFace value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineRasterizationStateCreateFlags;
```

`VkPipelineRasterizationStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

If the `pNext` chain of VkPipelineRasterizationStateCreateInfo includes a `VkPipelineRasterizationDepthClipStateCreateInfoEXT` structure, then that structure controls whether depth clipping is enabled or disabled.

The `VkPipelineRasterizationDepthClipStateCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPipelineRasterizationDepthClipStateCreateInfoEXT {
    VkStructureType                                    sType;
    const void*                                        pNext;
    VkPipelineRasterizationDepthClipStateCreateFlagsEXT    flags;
    VkBool32                                           depthClipEnable;
} VkPipelineRasterizationDepthClipStateCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `depthClipEnable` controls whether depth clipping is enabled as described in Primitive Clipping.

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationDepthClipStateCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_DEPTH_CLIP_STATE_CREATE_INFO_EXT

- VUID-VkPipelineRasterizationDepthClipStateCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

Structure Chaining

Extends the structure

- VkPipelineRasterizationStateCreateInfo

```
// Provided by VK_EXT_depth_clip_enable
typedef VkFlags VkPipelineRasterizationDepthClipStateCreateFlagsEXT;
```

`VkPipelineRasterizationDepthClipStateCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkPipelineMultisampleStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineMultisampleStateCreateInfo {
    VkStructureType                         sType;
    const void*                             pNext;
    VkPipelineMultisampleStateCreateFlags   flags;
    VkSampleCountFlagBits                   rasterizationSamples;
    VkBool32                                sampleShadingEnable;
    float                                   minSampleShading;
    const VkSampleMask*                     pSampleMask;
    VkBool32                                alphaToCoverageEnable;
    VkBool32                                alphaToOneEnable;
} VkPipelineMultisampleStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `rasterizationSamples` is a VkSampleCountFlagBits value specifying the number of samples used in rasterization. This value is ignored for the purposes of setting the number of samples used in rasterization if the pipeline is created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state set, but if VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state is not set, it is still used to define the size of the `pSampleMask` array as described below.
- `sampleShadingEnable` **can** be used to enable Sample Shading.
- `minSampleShading` specifies a minimum fraction of sample shading if `sampleShadingEnable` is VK_TRUE.
- `pSampleMask` is a pointer to an array of VkSampleMask values used in the sample mask test.

- `alphaToCoverageEnable` controls whether a temporary coverage value is generated based on the alpha component of the fragment's first color output as specified in the Multisample Coverage section.
- `alphaToOneEnable` controls whether the alpha component of the fragment's first color output is replaced with one as described in Multisample Coverage.

Each bit in the sample mask is associated with a unique sample index as defined for the coverage mask. Each bit b for mask word w in the sample mask corresponds to sample index i, where i = 32 × w + b. `pSampleMask` has a length equal to ⌈ `rasterizationSamples` / 32 ⌉ words.

If `pSampleMask` is `NULL`, it is treated as if the mask has all bits set to `1`.

Valid Usage

- VUID-VkPipelineMultisampleStateCreateInfo-sampleShadingEnable-00784
  If the `sampleRateShading` feature is not enabled, `sampleShadingEnable` **must** be VK_FALSE
- VUID-VkPipelineMultisampleStateCreateInfo-alphaToOneEnable-00785
  If the `alphaToOne` feature is not enabled, `alphaToOneEnable` **must** be VK_FALSE
- VUID-VkPipelineMultisampleStateCreateInfo-minSampleShading-00786
  `minSampleShading` **must** be in the range [0,1]

Valid Usage (Implicit)

- VUID-VkPipelineMultisampleStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_MULTISAMPLE_STATE_CREATE_INFO
- VUID-VkPipelineMultisampleStateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineSampleLocationsStateCreateInfoEXT
- VUID-VkPipelineMultisampleStateCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPipelineMultisampleStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkPipelineMultisampleStateCreateInfo-rasterizationSamples-parameter
  `rasterizationSamples` **must** be a valid VkSampleCountFlagBits value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineMultisampleStateCreateFlags;
```

`VkPipelineMultisampleStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The elements of the sample mask array are of type VkSampleMask, each representing 32 bits of coverage information:

```
// Provided by VK_VERSION_1_0
typedef uint32_t VkSampleMask;
```

Rasterization only generates fragments which cover one or more pixels inside the framebuffer. Pixels outside the framebuffer are never considered covered in the fragment. Fragments which would be produced by application of any of the primitive rasterization rules described below but which lie outside the framebuffer are not produced, nor are they processed by any later stage of the pipeline, including any of the fragment operations.

Surviving fragments are processed by fragment shaders. Fragment shaders determine associated data for fragments, and **can** also modify or replace their assigned depth values.

31.1. Discarding Primitives Before Rasterization

Primitives are discarded before rasterization if the `rasterizerDiscardEnable` member of VkPipelineRasterizationStateCreateInfo is enabled. When enabled, primitives are discarded after they are processed by the last active shader stage in the pipeline before rasterization.

To dynamically enable whether primitives are discarded before the rasterization stage, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetRasterizerDiscardEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    rasterizerDiscardEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state2, VK_EXT_shader_object
// Equivalent to vkCmdSetRasterizerDiscardEnable
void vkCmdSetRasterizerDiscardEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    rasterizerDiscardEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `rasterizerDiscardEnable` controls whether primitives are discarded immediately before the rasterization stage.

This command sets the discard enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo ::`rasterizerDiscardEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetRasterizerDiscardEnable-None-08970
  At least one of the following **must** be true:

- the `extendedDynamicState2` feature is enabled
- the `shaderObject` feature is enabled
- the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetRasterizerDiscardEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRasterizerDiscardEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetRasterizerDiscardEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetRasterizerDiscardEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetRasterizerDiscardEnable is not affected by conditional rendering

31.2. Controlling the Vertex Stream Used for Rasterization

By default vertex data output from the last pre-rasterization shader stage are directed to vertex stream zero. Geometry shaders **can** emit primitives to multiple independent vertex streams. Each

vertex emitted by the geometry shader is directed at one of the vertex streams. As vertices are received on each vertex stream, they are arranged into primitives of the type specified by the geometry shader output primitive type. The shading language instructions `OpEndPrimitive` and `OpEndStreamPrimitive` **can** be used to end the primitive being assembled on a given vertex stream and start a new empty primitive of the same type. An implementation supports up to `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams` streams, which is at least 1. The individual streams are numbered 0 through `maxTransformFeedbackStreams` minus 1. There is no requirement on the order of the streams to which vertices are emitted, and the number of vertices emitted to each vertex stream **can** be completely independent, subject only to the `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreamDataSize` and `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataSize` limits. The primitives output from all vertex streams are passed to the transform feedback stage to be captured to transform feedback buffers in the manner specified by the last pre-rasterization shader stage shader's `XfbBuffer`, `XfbStride`, and `Offsets` decorations on the output interface variables in the graphics pipeline. To use a vertex stream other than zero, or to use multiple streams, the `GeometryStreams` capability **must** be specified.

By default, the primitives output from vertex stream zero are rasterized. If the implementation supports the VkPhysicalDeviceTransformFeedbackPropertiesEXT::`transformFeedbackRasterizationStreamSelect` property it is possible to rasterize a vertex stream other than zero.

By default, geometry shaders that emit vertices to multiple vertex streams are limited to using only the `OutputPoints` output primitive type. If the implementation supports the VkPhysicalDeviceTransformFeedbackPropertiesEXT::`transformFeedbackStreamsLinesTriangles` property it is possible to emit `OutputLineStrip` or `OutputTriangleStrip` in addition to `OutputPoints`.

The vertex stream used for rasterization is specified by adding a `VkPipelineRasterizationStateStreamCreateInfoEXT` structure to the `pNext` chain of a VkPipelineRasterizationStateCreateInfo structure.

The `VkPipelineRasterizationStateStreamCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPipelineRasterizationStateStreamCreateInfoEXT {
    VkStructureType                                    sType;
    const void*                                        pNext;
    VkPipelineRasterizationStateStreamCreateFlagsEXT   flags;
    uint32_t                                           rasterizationStream;
} VkPipelineRasterizationStateStreamCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `rasterizationStream` is the vertex stream selected for rasterization.

If this structure is not present, `rasterizationStream` is assumed to be zero.

Valid Usage

- VUID-VkPipelineRasterizationStateStreamCreateInfoEXT-geometryStreams-02324 `VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams` **must** be enabled
- VUID-VkPipelineRasterizationStateStreamCreateInfoEXT-rasterizationStream-02325 `rasterizationStream` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`
- VUID-VkPipelineRasterizationStateStreamCreateInfoEXT-rasterizationStream-02326 `rasterizationStream` **must** be zero if `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackRasterizationStreamSelect` is `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationStateStreamCreateInfoEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_STATE_STREAM_CREATE_INFO_EXT`
- VUID-VkPipelineRasterizationStateStreamCreateInfoEXT-flags-zerobitmask `flags` **must** be `0`

Structure Chaining

Extends the structure

- `VkPipelineRasterizationStateCreateInfo`

```
// Provided by VK_EXT_transform_feedback
typedef VkFlags VkPipelineRasterizationStateStreamCreateFlagsEXT;
```

`VkPipelineRasterizationStateStreamCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

To dynamically set the `rasterizationStream` state, call:

```
// Provided by VK_EXT_extended_dynamic_state3 with VK_EXT_transform_feedback,
VK_EXT_shader_object with VK_EXT_transform_feedback
void vkCmdSetRasterizationStreamEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    rasterizationStream);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `rasterizationStream` specifies the `rasterizationStream` state.

This command sets the rasterizationStream state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetRasterizationStreamEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3RasterizationStream feature is enabled
  - The shaderObject feature is enabled
- VUID-vkCmdSetRasterizationStreamEXT-transformFeedback-07411
  The transformFeedback feature **must** be enabled
- VUID-vkCmdSetRasterizationStreamEXT-rasterizationStream-07412
  rasterizationStream **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams
- VUID-vkCmdSetRasterizationStreamEXT-rasterizationStream-07413
  rasterizationStream **must** be zero if VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackRasterizationStreamSelect is VK_FALSE

Valid Usage (Implicit)

- VUID-vkCmdSetRasterizationStreamEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRasterizationStreamEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetRasterizationStreamEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetRasterizationStreamEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetRasterizationStreamEXT is not affected by conditional rendering

31.3. Rasterization Order

Within a subpass of a render pass instance, for a given (x,y,layer,sample) sample location, the following operations are guaranteed to execute in *rasterization order*, for each separate primitive that includes that sample location:

1. Fragment operations, in the order defined
2. Blending, logic operations, and color writes

Execution of these operations for each primitive in a subpass occurs in primitive order.

31.4. Multisampling

Multisampling is a mechanism to antialias all Vulkan primitives: points, lines, and polygons. The technique is to sample all primitives multiple times at each pixel. Each sample in each framebuffer attachment has storage for a color, depth, and/or stencil value, such that per-fragment operations apply to each sample independently. The color sample values **can** be later *resolved* to a single color (see Resolving Multisample Images and the Render Pass chapter for more details on how to resolve multisample images to non-multisample images).

Vulkan defines rasterization rules for single-sample modes in a way that is equivalent to a multisample mode with a single sample in the center of each fragment.

Each fragment includes a coverage mask with a single bit for each sample in the fragment, and a number of depth values and associated data for each sample.

It is understood that each pixel has `rasterizationSamples` locations associated with it. These locations are exact positions, rather than regions or areas, and each is referred to as a sample point. The sample points associated with a pixel **must** be located inside or on the boundary of the unit square that is considered to bound the pixel. Furthermore, the relative locations of sample points **may** be identical for each pixel in the framebuffer, or they **may** differ.

If the render pass has a fragment density map attachment, each fragment only has `rasterizationSamples` locations associated with it regardless of how many pixels are covered in the

fragment area. Fragment sample locations are defined as if the fragment had an area of (1,1) and its sample points **must** be located within these bounds. Their actual location in the framebuffer is calculated by scaling the sample location by the fragment area. Attachments with storage for multiple samples per pixel are located at the pixel sample locations. Otherwise, the fragment's sample locations are generally used for evaluation of associated data and fragment operations.

If the current pipeline includes a fragment shader with one or more variables in its interface decorated with `Sample` and `Input`, the data associated with those variables will be assigned independently for each sample. The values for each sample **must** be evaluated at the location of the sample. The data associated with any other variables not decorated with `Sample` and `Input` need not be evaluated independently for each sample.

A *coverage mask* is generated for each fragment, based on which samples within that fragment are determined to be within the area of the primitive that generated the fragment.

Single pixel fragments and multi-pixel fragments defined by a fragment density map have one set of samples. Multi-pixel fragments defined by setting the fragment shading rate have one set of samples per pixel. Each set of samples has a number of samples determined by VkPipelineMultisampleStateCreateInfo::`rasterizationSamples`. Each sample in a set is assigned a unique *sample index* i in the range [0, `rasterizationSamples`).

To dynamically set the `rasterizationSamples`, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetRasterizationSamplesEXT(
    VkCommandBuffer                             commandBuffer,
    VkSampleCountFlagBits                       rasterizationSamples);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `rasterizationSamples` specifies `rasterizationSamples`.

This command sets the `rasterizationSamples` for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetRasterizationSamplesEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3RasterizationSamples` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetRasterizationSamplesEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRasterizationSamplesEXT-rasterizationSamples-parameter
  `rasterizationSamples` **must** be a valid VkSampleCountFlagBits value
- VUID-vkCmdSetRasterizationSamplesEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetRasterizationSamplesEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetRasterizationSamplesEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetRasterizationSamplesEXT is not affected by conditional rendering

Each sample in a fragment is also assigned a unique *coverage index* j in the range [0, n × `rasterizationSamples`), where n is the number of sets in the fragment. If the fragment contains a single set of samples, the *coverage index* is always equal to the *sample index*.

If the fragment shading rate is set, the coverage index j is determined as a function of the *pixel index* p, the *sample index* i, and the number of rasterization samples r as:

$$j = i + r \times ((f_w \times f_h) - 1 - p)$$

where the pixel index p is determined as a function of the pixel's framebuffer location (x,y) and the fragment size (f_w,f_h):

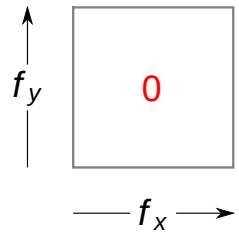
$$p_x = x \% f_w$$

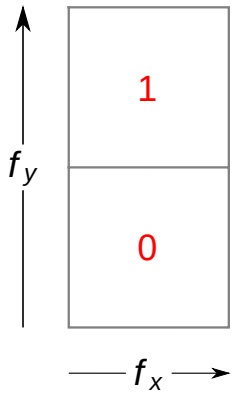
$$p_y = y \% f_h$$

$$p = p_x + (p_y \times f_w)$$

The tables below illustrate the pixel index for multi-pixel fragments:

Table 34. Pixel Indices - 1 Wide

1x1	1x2	1x4
		




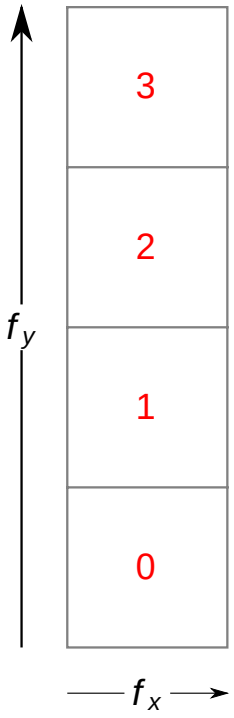


Table 35. Pixel Indices - 2 Wide

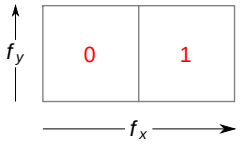
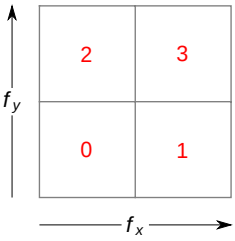
2x1	2x2	2x4
		




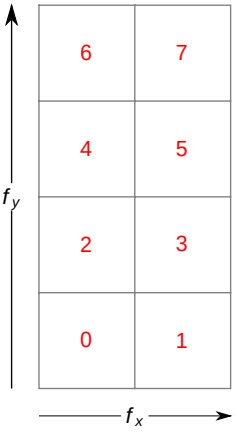


Table 36. Pixel Indices - 4 Wide

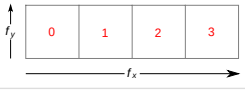
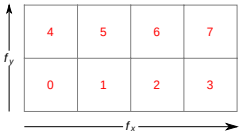
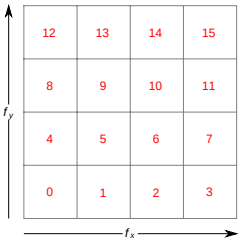
4x1	4x2	4x4
		






The coverage mask includes B bits packed into W words, defined as:

$$B = n \times \texttt{rasterizationSamples}$$

$$W = \lceil B/32 \rceil$$

Bit b in coverage mask word w is `1` if the sample with coverage index j = 32×w + b is covered, and `0` otherwise.

If the `standardSampleLocations` member of VkPhysicalDeviceLimits is VK_TRUE, then the sample counts VK_SAMPLE_COUNT_1_BIT, VK_SAMPLE_COUNT_2_BIT, VK_SAMPLE_COUNT_4_BIT, VK_SAMPLE_COUNT_8_BIT, and VK_SAMPLE_COUNT_16_BIT have sample locations as listed in the following table, with the ith entry in the table corresponding to sample index i. VK_SAMPLE_COUNT_32_BIT and VK_SAMPLE_COUNT_64_BIT do not have standard sample locations. Locations are defined relative to an origin in the upper left corner of the fragment.

Table 37. Standard Sample Locations

Sample count	Sample Locations	
VK_SAMPLE_COUNT_1_BIT	(0.5,0.5)	VK_SAMPLE_COUNT_2_BIT	(0.75,0.75) (0.25,0.25)	VK_SAMPLE_COUNT_4_BIT	(0.375, 0.125) (0.875, 0.375) (0.125, 0.625) (0.625, 0.875)	VK_SAMPLE_COUNT_8_BIT	(0.5625, 0.3125) (0.4375, 0.6875) (0.8125, 0.5625) (0.3125, 0.1875) (0.1875, 0.8125) (0.0625, 0.4375) (0.6875, 0.9375) (0.9375, 0.0625)	VK_SAMPLE_COUNT_16_BIT	(0.5625, 0.5625) (0.4375, 0.3125) (0.3125, 0.625) (0.75, 0.4375) (0.1875, 0.375) (0.625, 0.8125) (0.8125, 0.6875) (0.6875, 0.1875) (0.375, 0.875) (0.5, 0.0625) (0.25, 0.125) (0.125, 0.75) (0.0, 0.5) (0.9375, 0.25) (0.875, 0.9375) (0.0625, 0.0)	
31.5. Custom Sample Locations

Applications **can** also control the sample locations used for rasterization.

If the pNext chain of the VkPipelineMultisampleStateCreateInfo structure specified at pipeline creation time includes a VkPipelineSampleLocationsStateCreateInfoEXT structure, then that structure controls the sample locations used when rasterizing primitives with the pipeline.

The VkPipelineSampleLocationsStateCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkPipelineSampleLocationsStateCreateInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkBool32                    sampleLocationsEnable;
    VkSampleLocationsInfoEXT    sampleLocationsInfo;
} VkPipelineSampleLocationsStateCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- sampleLocationsEnable controls whether custom sample locations are used. If sampleLocationsEnable is VK_FALSE, the default sample locations are used and the values specified in sampleLocationsInfo are ignored.
- sampleLocationsInfo is the sample locations to use during rasterization if sampleLocationsEnable is VK_TRUE and the graphics pipeline is not created with VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT.

Valid Usage (Implicit)

- VUID-VkPipelineSampleLocationsStateCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_SAMPLE_LOCATIONS_STATE_CREATE_INFO_EXT
- VUID-VkPipelineSampleLocationsStateCreateInfoEXT-sampleLocationsInfo-parameter
  sampleLocationsInfo **must** be a valid VkSampleLocationsInfoEXT structure

Structure Chaining

Extends the structure

- VkPipelineMultisampleStateCreateInfo

The VkSampleLocationsInfoEXT structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkSampleLocationsInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkSampleCountFlagBits          sampleLocationsPerPixel;
    VkExtent2D                     sampleLocationGridSize;
    uint32_t                       sampleLocationsCount;
    const VkSampleLocationEXT*     pSampleLocations;
} VkSampleLocationsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampleLocationsPerPixel` is a VkSampleCountFlagBits value specifying the number of sample locations per pixel.
- `sampleLocationGridSize` is the size of the sample location grid to select custom sample locations for.
- `sampleLocationsCount` is the number of sample locations in `pSampleLocations`.
- `pSampleLocations` is a pointer to an array of `sampleLocationsCount` VkSampleLocationEXT structures.

This structure **can** be used either to specify the sample locations to be used for rendering or to specify the set of sample locations an image subresource has been last rendered with for the purposes of layout transitions of depth/stencil images created with VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT.

The sample locations in `pSampleLocations` specify `sampleLocationsPerPixel` number of sample locations for each pixel in the grid of the size specified in `sampleLocationGridSize`. The sample location for sample i at the pixel grid location (x,y) is taken from `pSampleLocations`[(x + y × `sampleLocationGridSize.width`) × `sampleLocationsPerPixel` + i].

If the render pass has a fragment density map, the implementation will choose the sample locations for the fragment and the contents of `pSampleLocations` **may** be ignored.

Valid Usage

- VUID-VkSampleLocationsInfoEXT-sampleLocationsPerPixel-01526
  `sampleLocationsPerPixel` **must** be a valid VkSampleCountFlagBits value that is set in VkPhysicalDeviceSampleLocationsPropertiesEXT::`sampleLocationSampleCounts`
- VUID-VkSampleLocationsInfoEXT-sampleLocationsCount-01527
  `sampleLocationsCount` **must** equal `sampleLocationsPerPixel` × `sampleLocationGridSize.width` × `sampleLocationGridSize.height`

Valid Usage (Implicit)

- VUID-VkSampleLocationsInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLE_LOCATIONS_INFO_EXT
- VUID-VkSampleLocationsInfoEXT-pSampleLocations-parameter
  If `sampleLocationsCount` is not `0`, `pSampleLocations` **must** be a valid pointer to an array of `sampleLocationsCount` VkSampleLocationEXT structures

Structure Chaining

Extends the structures

- VkImageMemoryBarrier
- VkImageMemoryBarrier2

The `VkSampleLocationEXT` structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkSampleLocationEXT {
    float    x;
    float    y;
} VkSampleLocationEXT;
```

- `x` is the horizontal coordinate of the sample's location.
- `y` is the vertical coordinate of the sample's location.

The domain space of the sample location coordinates has an upper-left origin within the pixel in framebuffer space.

The values specified in a `VkSampleLocationEXT` structure are always clamped to the implementation-dependent sample location coordinate range [`sampleLocationCoordinateRange`[0],`sampleLocationCoordinateRange`[1]] that **can** be queried using VkPhysicalDeviceSampleLocationsPropertiesEXT.

To dynamically set the `sampleLocationsEnable` state, call:

```
// Provided by VK_EXT_extended_dynamic_state3 with VK_EXT_sample_locations,
VK_EXT_sample_locations with VK_EXT_shader_object
void vkCmdSetSampleLocationsEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    sampleLocationsEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `sampleLocationsEnable` specifies the `sampleLocationsEnable` state.

This command sets the sampleLocationsEnable state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetSampleLocationsEnableEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3SampleLocationsEnable feature is enabled
  - The shaderObject feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetSampleLocationsEnableEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetSampleLocationsEnableEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetSampleLocationsEnableEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetSampleLocationsEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetSampleLocationsEnableEXT is not affected by conditional rendering

To dynamically set the sample locations used for rasterization, call:

```
// Provided by VK_EXT_sample_locations
void vkCmdSetSampleLocationsEXT(
    VkCommandBuffer                             commandBuffer,
    const VkSampleLocationsInfoEXT*             pSampleLocationsInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pSampleLocationsInfo` is the sample locations state to set.

This command sets the custom sample locations for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`, and when the VkPipelineSampleLocationsStateCreateInfoEXT ::`sampleLocationsEnable` property of the bound graphics pipeline is VK_TRUE. Otherwise, this state is specified by the VkPipelineSampleLocationsStateCreateInfoEXT::`sampleLocationsInfo` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetSampleLocationsEXT-variableSampleLocations-01530
  If VkPhysicalDeviceSampleLocationsPropertiesEXT::`variableSampleLocations` is VK_FALSE then the current render pass **must** have been begun by specifying a VkRenderPassSampleLocationsBeginInfoEXT structure whose `pPostSubpassSampleLocations` member contains an element with a `subpassIndex` matching the current subpass index and the `sampleLocationsInfo` member of that element **must** match the sample locations state pointed to by `pSampleLocationsInfo`

Valid Usage (Implicit)

- VUID-vkCmdSetSampleLocationsEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetSampleLocationsEXT-pSampleLocationsInfo-parameter
  `pSampleLocationsInfo` **must** be a valid pointer to a valid VkSampleLocationsInfoEXT structure
- VUID-vkCmdSetSampleLocationsEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetSampleLocationsEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetSampleLocationsEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetSampleLocationsEXT is not affected by conditional rendering

31.6. Fragment Shading Rates

The features advertised by VkPhysicalDeviceFragmentShadingRateFeaturesKHR allow an application to control the shading rate of a given fragment shader invocation.

The fragment shading rate strongly interacts with Multisampling, and the set of available rates for an implementation **may** be restricted by sample rate.

To query available shading rates, call:

```
// Provided by VK_KHR_fragment_shading_rate
VkResult vkGetPhysicalDeviceFragmentShadingRatesKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pFragmentShadingRateCount,
    VkPhysicalDeviceFragmentShadingRateKHR*     pFragmentShadingRates);
```

- `physicalDevice` is the handle to the physical device whose properties will be queried.
- `pFragmentShadingRateCount` is a pointer to an integer related to the number of fragment shading rates available or queried, as described below.
- `pFragmentShadingRates` is either `NULL` or a pointer to an array of

VkPhysicalDeviceFragmentShadingRateKHR structures.

If pFragmentShadingRates is NULL, then the number of fragment shading rates available is returned in pFragmentShadingRateCount. Otherwise, pFragmentShadingRateCount **must** point to a variable set by the application to the number of elements in the pFragmentShadingRates array, and on return the variable is overwritten with the number of structures actually written to pFragmentShadingRates. If pFragmentShadingRateCount is less than the number of fragment shading rates available, at most pFragmentShadingRateCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available fragment shading rates were returned.

The returned array of fragment shading rates **must** be ordered from largest fragmentSize.width value to smallest, and each set of fragment shading rates with the same fragmentSize.width value **must** be ordered from largest fragmentSize.height to smallest. Any two entries in the array **must** not have the same fragmentSize values.

For any entry in the array, the following rules also apply:

- The value of fragmentSize.width **must** be less than or equal to maxFragmentSize.width.
- The value of fragmentSize.width **must** be greater than or equal to 1.
- The value of fragmentSize.width **must** be a power-of-two.
- The value of fragmentSize.height **must** be less than or equal to maxFragmentSize.height.
- The value of fragmentSize.height **must** be greater than or equal to 1.
- The value of fragmentSize.height **must** be a power-of-two.
- The highest sample count in sampleCounts **must** be less than or equal to maxFragmentShadingRateRasterizationSamples.
- The product of fragmentSize.width, fragmentSize.height, and the highest sample count in sampleCounts **must** be less than or equal to maxFragmentShadingRateCoverageSamples.

Implementations **must** support at least the following shading rates:

sampleCounts	fragmentSize
VK_SAMPLE_COUNT_1_BIT | VK_SAMPLE_COUNT_4_BIT	{2,2}
VK_SAMPLE_COUNT_1_BIT | VK_SAMPLE_COUNT_4_BIT	{2,1}
~0	{1,1}

If framebufferColorSampleCounts, includes VK_SAMPLE_COUNT_2_BIT, the required rates **must** also include VK_SAMPLE_COUNT_2_BIT.

NOTE Including the {1,1} fragment size is done for completeness; it has no actual effect on the support of rendering without setting the fragment size. All sample counts are supported for this rate.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFragmentShadingRatesKHR-physicalDevice-parameter

physicalDevice **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceFragmentShadingRatesKHR-pFragmentShadingRateCount-parameter
  pFragmentShadingRateCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceFragmentShadingRatesKHR-pFragmentShadingRates-parameter
  If the value referenced by pFragmentShadingRateCount is not 0, and pFragmentShadingRates is not NULL, pFragmentShadingRates **must** be a valid pointer to an array of pFragmentShadingRateCount VkPhysicalDeviceFragmentShadingRateKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPhysicalDeviceFragmentShadingRateKHR structure is defined as

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRateKHR {
    VkStructureType       sType;
    void*                 pNext;
    VkSampleCountFlags    sampleCounts;
    VkExtent2D            fragmentSize;
} VkPhysicalDeviceFragmentShadingRateKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- sampleCounts is a bitmask of sample counts for which the shading rate described by fragmentSize is supported.
- fragmentSize is a VkExtent2D describing the width and height of a supported shading rate.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_KHR

- VUID-VkPhysicalDeviceFragmentShadingRateKHR-pNext-pNext
  `pNext` **must** be `NULL`

Fragment shading rates **can** be set at three points, with the three rates combined to determine the final shading rate.

31.6.1. Pipeline Fragment Shading Rate

The *pipeline fragment shading rate* **can** be set on a per-draw basis by either setting the rate in a graphics pipeline, or dynamically via vkCmdSetFragmentShadingRateKHR.

The `VkPipelineFragmentShadingRateStateCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPipelineFragmentShadingRateStateCreateInfoKHR {
    VkStructureType                         sType;
    const void*                             pNext;
    VkExtent2D                              fragmentSize;
    VkFragmentShadingRateCombinerOpKHR      combinerOps[2];
} VkPipelineFragmentShadingRateStateCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentSize` specifies a VkExtent2D structure containing the fragment size used to define the pipeline fragment shading rate for drawing commands using this pipeline.
- `combinerOps` specifies a VkFragmentShadingRateCombinerOpKHR value determining how the pipeline, primitive, and attachment shading rates are combined for fragments generated by drawing commands using the created pipeline.

If the `pNext` chain of VkGraphicsPipelineCreateInfo includes a `VkPipelineFragmentShadingRateStateCreateInfoKHR` structure, then that structure includes parameters controlling the pipeline fragment shading rate.

If this structure is not present, `fragmentSize` is considered to be equal to (1,1), and both elements of `combinerOps` are considered to be equal to VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR.

Valid Usage (Implicit)

- VUID-VkPipelineFragmentShadingRateStateCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_FRAGMENT_SHADING_RATE_STATE_CREATE_INFO_KHR

Structure Chaining

Extends the structure

- VkGraphicsPipelineCreateInfo

To dynamically set the pipeline fragment shading rate and combiner operation, call:

```
// Provided by VK_KHR_fragment_shading_rate
void vkCmdSetFragmentShadingRateKHR(
    VkCommandBuffer                             commandBuffer,
    const VkExtent2D*                           pFragmentSize,
    const VkFragmentShadingRateCombinerOpKHR    combinerOps[2]);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pFragmentSize` specifies the pipeline fragment shading rate for subsequent drawing commands.
- `combinerOps` specifies a VkFragmentShadingRateCombinerOpKHR determining how the pipeline, primitive, and attachment shading rates are combined for fragments generated by subsequent drawing commands.

This command sets the pipeline fragment shading rate and combiner operation for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineFragmentShadingRateStateCreateInfoKHR values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetFragmentShadingRateKHR-pipelineFragmentShadingRate-04507
  If the `pipelineFragmentShadingRate` feature is not enabled, `pFragmentSize->width` **must** be `1`
- VUID-vkCmdSetFragmentShadingRateKHR-pipelineFragmentShadingRate-04508
  If the `pipelineFragmentShadingRate` feature is not enabled, `pFragmentSize->height` **must** be `1`
- VUID-vkCmdSetFragmentShadingRateKHR-pipelineFragmentShadingRate-04509
  One of the `pipelineFragmentShadingRate`, `primitiveFragmentShadingRate`, or `attachmentFragmentShadingRate` features **must** be enabled
- VUID-vkCmdSetFragmentShadingRateKHR-primitiveFragmentShadingRate-04510
  If the `primitiveFragmentShadingRate` feature is not enabled, `combinerOps`[0] **must** be VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR
- VUID-vkCmdSetFragmentShadingRateKHR-attachmentFragmentShadingRate-04511
  If the `attachmentFragmentShadingRate` feature is not enabled, `combinerOps`[1] **must** be VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR
- VUID-vkCmdSetFragmentShadingRateKHR-fragmentSizeNonTrivialCombinerOps-04512
  If the `fragmentSizeNonTrivialCombinerOps` limit is not supported, elements of `combinerOps`

must be either VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR or VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR

- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04513
  `pFragmentSize->width` **must** be greater than or equal to `1`
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04514
  `pFragmentSize->height` **must** be greater than or equal to `1`
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04515
  `pFragmentSize->width` **must** be a power-of-two value
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04516
  `pFragmentSize->height` **must** be a power-of-two value
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04517
  `pFragmentSize->width` **must** be less than or equal to `4`
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-04518
  `pFragmentSize->height` **must** be less than or equal to `4`

Valid Usage (Implicit)

- VUID-vkCmdSetFragmentShadingRateKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetFragmentShadingRateKHR-pFragmentSize-parameter
  `pFragmentSize` **must** be a valid pointer to a valid VkExtent2D structure
- VUID-vkCmdSetFragmentShadingRateKHR-combinerOps-parameter
  Each element of `combinerOps` **must** be a valid VkFragmentShadingRateCombinerOpKHR value
- VUID-vkCmdSetFragmentShadingRateKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetFragmentShadingRateKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetFragmentShadingRateKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetFragmentShadingRateKHR is not affected by conditional rendering

31.6.2. Primitive Fragment Shading Rate

The *primitive fragment shading rate* **can** be set via the `PrimitiveShadingRateKHR` built-in in the last active pre-rasterization shader stage. If the last pre-rasterization shader stage is using the `MeshEXT Execution Model`, the rate associated with a given primitive is sourced from the value written to the per-primitive `PrimitiveShadingRateKHR`. Otherwise the rate associated with a given primitive is sourced from the value written to `PrimitiveShadingRateKHR` by that primitive's provoking vertex.

31.6.3. Attachment Fragment Shading Rate

The *attachment shading rate* **can** be set by including VkFragmentShadingRateAttachmentInfoKHR in a subpass to define a *fragment shading rate attachment*. Each pixel in the framebuffer is assigned an attachment fragment shading rate by the corresponding texel in the fragment shading rate attachment, according to:

$$x' = \text{floor}(x / \text{region}_x)$$

$$y' = \text{floor}(y / \text{region}_y)$$

where x' and y' are the coordinates of a texel in the fragment shading rate attachment, x and y are the coordinates of the pixel in the framebuffer, and region_x and region_y are the size of the region each texel corresponds to, as defined by the `shadingRateAttachmentTexelSize` member of VkFragmentShadingRateAttachmentInfoKHR.

If multiview is enabled and the shading rate attachment has multiple layers, the shading rate attachment texel is selected using layer = `ViewIndex`. If multiview is disabled, and both the shading rate attachment and the framebuffer have multiple layers, the shading rate attachment texel is selected using layer = `Layer`. Otherwise, layer = 0.

The texel is read from the fragment shading rate attachment image using image coordinates equal to (x',y',0,layer,0,0). The fragment size is encoded into the first component of the result of that operation as follows:

$$size_w = 2^{((texel/4)\&3)}$$

$$size_h = 2^{(texel\&3)}$$

where texel is the value in the first component of the returned value, and $size_w$ and $size_h$ are the width and height of the fragment size, decoded from the texel.

If no fragment shading rate attachment is specified, this size is calculated as $size_w = size_h = 1$. Applications **must** not specify a width or height greater than 4 by this method.

The *Fragment Shading Rate* enumeration in SPIR-V adheres to the above encoding.

31.6.4. Combining the Fragment Shading Rates

The final rate (C_{xy}') used for fragment shading **must** be one of the rates returned by vkGetPhysicalDeviceFragmentShadingRatesKHR for the sample count used by rasterization.

If any of the following conditions are met, C_{xy}' is set to {1,1} by the implementation:

- If Sample Shading is enabled.
- The `fragmentShadingRateWithSampleMask` limit is not supported, and VkPipelineMultisampleStateCreateInfo::`pSampleMask` contains a zero value in any bit used by fragment operations.
- The `fragmentShadingRateWithShaderSampleMask` is not supported, and the fragment shader has `SampleMask` in the input or output interface.
- The `fragmentShadingRateWithShaderDepthStencilWrites` limit is not supported, and the fragment shader declares the `FragDepth` or `FragStencilRefEXT` built-in.
- The `fragmentShadingRateWithConservativeRasterization` limit is not supported, and VkPipelineRasterizationConservativeStateCreateInfoEXT::`conservativeRasterizationMode` is not VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT.
- The `fragmentShadingRateWithFragmentShaderInterlock` limit is not supported, and the fragment shader declares any of the fragment shader interlock execution modes.
- The `fragmentShadingRateWithCustomSampleLocations` limit is not supported, and VkPipelineSampleLocationsStateCreateInfoEXT::`sampleLocationsEnable` is VK_TRUE.
- The fragment shader declares any of the `TileImageColorReadAccessEXT`, `TileImageDepthReadAccessEXT`, or `TileImageStencilReadAccessEXT` capabilities.

Otherwise, each of the specified shading rates are combined and then used to derive the value of C_{xy}'. As there are three ways to specify shading rates, two combiner operations are specified - between the pipeline and primitive shading rates, and between the result of that and the attachment shading rate.

The equation used for each combiner operation is defined by VkFragmentShadingRateCombinerOpKHR:

```
// Provided by VK_KHR_fragment_shading_rate
typedef enum VkFragmentShadingRateCombinerOpKHR {
    VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR = 0,
    VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR = 1,
    VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MIN_KHR = 2,
    VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MAX_KHR = 3,
    VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR = 4,
} VkFragmentShadingRateCombinerOpKHR;
```

- VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR specifies a combiner operation of combine(A_{xy},B_{xy}) = A_{xy}.
- VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR specifies a combiner operation of combine(A_{xy},B_{xy}) = B_{xy}.
- VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MIN_KHR specifies a combiner operation of combine(A_{xy},B_{xy}) = min(A_{xy},B_{xy}).
- VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MAX_KHR specifies a combiner operation of combine(A_{xy},B_{xy}) = max(A_{xy},B_{xy}).
- VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR specifies a combiner operation of combine(A_{xy},B_{xy}) = A_{xy}*B_{xy}.

where combine(A_{xy},B_{xy}) is the combine operation, and A_{xy} and B_{xy} are the inputs to the operation.

If fragmentShadingRateStrictMultiplyCombiner is VK_FALSE, using VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR with values of 1 for both A and B in the same dimension results in the value 2 being produced for that dimension. See the definition of fragmentShadingRateStrictMultiplyCombiner for more information.

These operations are performed in a component-wise fashion.

This is used to generate a combined fragment area using the equation:

$$C_{xy} = \text{combine}(A_{xy},B_{xy})$$

where C_{xy} is the combined fragment area result, and A_{xy} and B_{xy} are the fragment areas of the fragment shading rates being combined.

Two combine operations are performed, first with A_{xy} equal to the pipeline fragment shading rate and B_{xy} equal to the primitive fragment shading rate, with the combine() operation selected by combinerOps[0]. A second combination is then performed, with A_{xy} equal to the result of the first combination and B_{xy} equal to the attachment fragment shading rate, with the combine() operation selected by combinerOps[1]. The result of the second combination is used as the final fragment shading rate, reported via the ShadingRateKHR built-in.

Implementations **should** clamp the inputs to the combiner operations A_{xy} and B_{xy}, and **must** do so if VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs is VK_TRUE. All implementations **must** clamp the result of the second combiner operation.

A fragment shading rate R_{xy} representing any of A_{xy}, B_{xy} or C_{xy} is clamped as follows. If R_{xy} is one of the rates returned by vkGetPhysicalDeviceFragmentShadingRatesKHR for the sample count used by rasterization, the clamped shading rate R_{xy}' is R_{xy}. Otherwise, the clamped shading rate is selected from the rates returned by vkGetPhysicalDeviceFragmentShadingRatesKHR for the sample count used by rasterization. From this list of supported rates, the following steps are applied in order, to select a single value:

1. Keep only rates where $R_x' \leq R_x$ and $R_y' \leq R_y$.
   - Implementations **may** also keep rates where $R_x' \leq R_y$ and $R_y' \leq R_x$.
2. Keep only rates with the highest area ($R_x' \times R_y'$).
3. Keep only rates with the lowest aspect ratio ($R_x' + R_y'$).
4. In cases where a wide (e.g. 4x1) and tall (e.g. 1x4) rate remain, the implementation **may** choose either rate. However, it **must** choose this rate consistently for the same shading rates, and combiner operations for the lifetime of the VkDevice.

31.7. Sample Shading

Sample shading **can** be used to specify a minimum number of unique samples to process for each fragment. If sample shading is enabled, an implementation **must** invoke the fragment shader at least max(⌈ VkPipelineMultisampleStateCreateInfo::`minSampleShading` × VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` ⌉, 1) times per fragment. If VkPipelineMultisampleStateCreateInfo::`sampleShadingEnable` is VK_TRUE, sample shading is enabled.

If a fragment shader entry point statically uses an input variable decorated with a `BuiltIn` of `SampleId` or `SamplePosition`, sample shading is enabled and a value of `1.0` is used instead of `minSampleShading`. If a fragment shader entry point statically uses an input variable decorated with `Sample`, sample shading **may** be enabled and a value of `1.0` will be used instead of `minSampleShading` if it is.

NOTE

If a shader decorates an input variable with `Sample` and that value meaningfully impacts the output of a shader, sample shading will be enabled to ensure that the input is in fact interpolated per-sample. This is inherent to the specification and not spelled out here - if an application simply declares such a variable it is implementation-defined whether sample shading is enabled or not. It is possible to see the effects of this by using atomics in the shader or using a pipeline statistics query to query the number of fragment invocations, even if the shader itself does not use any per-sample variables.

If there are fewer fragment invocations than covered samples, implementations **may** include those samples in fragment shader invocations in any manner as long as covered samples are all shaded at least once, and each invocation that is not a helper invocation covers at least one sample.

31.8. Barycentric Interpolation

When the `fragmentShaderBarycentric` feature is enabled, the `PerVertexKHR` interpolation decoration

can be used with fragment shader inputs to indicate that the decorated inputs do not have associated data in the fragment. Such inputs **can** only be accessed in a fragment shader using an array index whose value (0, 1, or 2) identifies one of the vertices of the primitive that produced the fragment. Reads of per-vertex values for missing vertices, such as the third vertex of a line primitive, will return values from the valid vertex with the highest index. This means that the per-vertex values of indices 1 and 2 for point primitives will be equal to those of index 0, and the per-vertex values of index 2 for line primitives will be equal to those of index 1.

When tessellation, geometry shading, and mesh shading are not active, fragment shader inputs decorated with `PerVertexKHR` will take values from one of the vertices of the primitive that produced the fragment, identified by the extra index provided in SPIR-V code accessing the input. If the *n* vertices passed to a draw call are numbered 0 through *n*-1, and the point, line, and triangle primitives produced by the draw call are numbered with consecutive integers beginning with zero, the following table indicates the original vertex numbers used when the provoking vertex mode is VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT for index values of 0, 1, and 2. If an input decorated with `PerVertexKHR` is accessed with any other vertex index value, or is accessed while rasterizing a polygon when the VkPipelineRasterizationStateCreateInfo::`polygonMode` property of the currently active pipeline is not VK_POLYGON_MODE_FILL, an undefined value is returned.

Primitive Topology	Vertex 0	Vertex 1	Vertex 2
VK_PRIMITIVE_TOPOLOGY_POINT_LIST	i	i	i
VK_PRIMITIVE_TOPOLOGY_LINE_LIST	2i	2i+1	2i+1
VK_PRIMITIVE_TOPOLOGY_LINE_STRIP	i	i+1	i+1
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST	3i	3i+1	3i+2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP (even)	i	i+1	i+2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP (odd)	i	i+2	i+1
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN	i+1	i+2	0
VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY	4i+1	4i+2	4i+2
VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY	i+1	i+2	i+2

Primitive Topology	Vertex 0	Vertex 1	Vertex 2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY	6i	6i+2	6i+4
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY (even)	2i	2i+2	2i+4
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY (odd)	2i	2i+4	2i+2

When the provoking vertex mode is VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT, the original vertex numbers used are the same as above except as indicated in the table below.

Primitive Topology	Vertex 0	Vertex 1	Vertex 2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP (odd, and triStripVertexOrderIndependentOfProvokingVertex of VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR is VK_FALSE)	i+1	i	i+2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN	0	i+1	i+2
VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY (odd)	2i+2	2i	2i+4

When geometry or mesh shading is active, primitives processed by fragment shaders are assembled from the vertices emitted by the geometry or mesh shader. In this case, the vertices used for fragment shader inputs decorated with PerVertexKHR are derived by treating the primitives produced by the shader as though they were specified by a draw call and consulting the table above.

When using tessellation without geometry shading, the tessellator produces primitives in an implementation-dependent manner. While there is no defined vertex ordering for inputs decorated with PerVertexKHR, the vertex ordering used in this case will be consistent with the ordering used to derive the values of inputs decorated with BaryCoordKHR or BaryCoordNoPerspKHR.

Fragment shader inputs decorated with BaryCoordKHR or BaryCoordNoPerspKHR hold three-component

vectors with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive. For point primitives, such variables are always assigned the value (1,0,0). For line primitives, the built-ins are obtained by interpolating an attribute whose values for the vertices numbered 0 and 1 are (1,0,0) and (0,1,0), respectively. For polygon primitives, the built-ins are obtained by interpolating an attribute whose values for the vertices numbered 0, 1, and 2 are (1,0,0), (0,1,0), and (0,0,1), respectively. For `BaryCoordKHR`, the values are obtained using perspective interpolation. For `BaryCoordNoPerspKHR`, the values are obtained using linear interpolation. The values of `BaryCoordKHR` and `BaryCoordNoPerspKHR` are undefined while rasterizing a polygon when the VkPipelineRasterizationStateCreateInfo::`polygonMode` property of the currently active pipeline is not VK_POLYGON_MODE_FILL.

31.9. Points

A point is drawn by generating a set of fragments in the shape of a square centered around the vertex of the point. Each vertex has an associated point size controlling the width/height of that square. The point size is taken from the (potentially clipped) shader built-in `PointSize` written by:

- the geometry shader, if active;
- the tessellation evaluation shader, if active and no geometry shader is active;
- the vertex shader, otherwise

and clamped to the implementation-dependent point size range [`pointSizeRange`[0], `pointSizeRange`[1]]. The value written to `PointSize` **must** be greater than zero. If the `maintenance5` feature is enabled, and a value is not written to `PointSize`, the point size takes a default value of 1.0.

The range of supported sizes and the size of evenly-spaced gradations within that range are implementation-dependent. A size of 1.0 will always be supported - support for additional sizes is advertised by the `largePoints` feature and the `pointSizeRange` and `pointSizeGranularity` limits indicate the available size range and gradations. If, for instance, the size range is from 0.1 to 2.0 and the gradation size is 0.1, then the sizes 0.1, 0.2, ..., 1.9, 2.0 are supported. Additional point sizes **may** also be supported. There is no requirement that these sizes be equally spaced. If an unsupported size is requested, the nearest supported size is used instead.

Further, if the render pass has a fragment density map attachment, point size **may** be rounded by the implementation to a multiple of the fragment's width or height.

31.9.1. Basic Point Rasterization

Point rasterization produces a fragment for each fragment area group of framebuffer pixels with one or more sample points that intersect a region centered at the point's (x_f,y_f). This region is a square with side equal to the current point size. Coverage bits that correspond to sample points that intersect the region are 1, other coverage bits are 0. All fragments produced in rasterizing a point are assigned the same associated data, which are those of the vertex corresponding to the point. However, the fragment shader built-in `PointCoord` contains point sprite texture coordinates. The s and t point sprite texture coordinates vary from zero to one across the point horizontally left-to-right and vertically top-to-bottom, respectively. The following formulas are used to evaluate s and t:

$$s = \frac{1}{2} + \frac{(x_p - x_f)}{\text{size}}$$

$$t = \frac{1}{2} + \frac{(y_p - y_f)}{\text{size}}$$

where size is the point's size; (x_p,y_p) is the location at which the point sprite coordinates are evaluated - this **may** be the framebuffer coordinates of the fragment center, or the location of a sample; and (x_f,y_f) is the exact, unrounded framebuffer coordinate of the vertex for the point.

31.10. Line Segments

Line segment rasterization options are controlled by the VkPipelineRasterizationLineStateCreateInfo structure.

The VkPipelineRasterizationLineStateCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPipelineRasterizationLineStateCreateInfo {
    VkStructureType            sType;
    const void*                pNext;
    VkLineRasterizationMode    lineRasterizationMode;
    VkBool32                   stippledLineEnable;
    uint32_t                   lineStippleFactor;
    uint16_t                   lineStipplePattern;
} VkPipelineRasterizationLineStateCreateInfo;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkPipelineRasterizationLineStateCreateInfo
typedef VkPipelineRasterizationLineStateCreateInfo
VkPipelineRasterizationLineStateCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- lineRasterizationMode is a VkLineRasterizationMode value selecting the style of line rasterization.
- stippledLineEnable enables stippled line rasterization.
- lineStippleFactor is the repeat factor used in stippled line rasterization.
- lineStipplePattern is the bit pattern used in stippled line rasterization.

If stippledLineEnable is VK_FALSE, the values of lineStippleFactor and lineStipplePattern are ignored.

Valid Usage

- VUID-VkPipelineRasterizationLineStateCreateInfo-lineRasterizationMode-02768
  If `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the `rectangularLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-lineRasterizationMode-02769
  If `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the `bresenhamLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-lineRasterizationMode-02770
  If `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the `smoothLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-stippledLineEnable-02771
  If `stippledLineEnable` is VK_TRUE and `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the `stippledRectangularLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-stippledLineEnable-02772
  If `stippledLineEnable` is VK_TRUE and `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the `stippledBresenhamLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-stippledLineEnable-02773
  If `stippledLineEnable` is VK_TRUE and `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the `stippledSmoothLines` feature **must** be enabled
- VUID-VkPipelineRasterizationLineStateCreateInfo-stippledLineEnable-02774
  If `stippledLineEnable` is VK_TRUE and `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the `stippledRectangularLines` feature **must** be enabled and VkPhysicalDeviceLimits::`strictLines` **must** be VK_TRUE

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationLineStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_LINE_STATE_CREATE_INFO
- VUID-VkPipelineRasterizationLineStateCreateInfo-lineRasterizationMode-parameter
  `lineRasterizationMode` **must** be a valid VkLineRasterizationMode value

Structure Chaining

Extends the structure

- VkPipelineRasterizationStateCreateInfo

Possible values of VkPipelineRasterizationLineStateCreateInfo::lineRasterizationMode, specifying the line rasterization mode, are:

```
// Provided by VK_VERSION_1_4
typedef enum VkLineRasterizationMode {
    VK_LINE_RASTERIZATION_MODE_DEFAULT = 0,
    VK_LINE_RASTERIZATION_MODE_RECTANGULAR = 1,
    VK_LINE_RASTERIZATION_MODE_BRESENHAM = 2,
    VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH = 3,
  // Provided by VK_KHR_line_rasterization
    VK_LINE_RASTERIZATION_MODE_DEFAULT_KHR = VK_LINE_RASTERIZATION_MODE_DEFAULT,
  // Provided by VK_KHR_line_rasterization
    VK_LINE_RASTERIZATION_MODE_RECTANGULAR_KHR =
VK_LINE_RASTERIZATION_MODE_RECTANGULAR,
  // Provided by VK_KHR_line_rasterization
    VK_LINE_RASTERIZATION_MODE_BRESENHAM_KHR = VK_LINE_RASTERIZATION_MODE_BRESENHAM,
  // Provided by VK_KHR_line_rasterization
    VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH_KHR =
VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH,
} VkLineRasterizationMode;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkLineRasterizationMode
typedef VkLineRasterizationMode VkLineRasterizationModeKHR;
```

- VK_LINE_RASTERIZATION_MODE_DEFAULT is equivalent to VK_LINE_RASTERIZATION_MODE_RECTANGULAR if VkPhysicalDeviceLimits::strictLines is VK_TRUE, otherwise lines are drawn as non-strictLines parallelograms. Both of these modes are defined in Basic Line Segment Rasterization.
- VK_LINE_RASTERIZATION_MODE_RECTANGULAR specifies lines drawn as if they were rectangles extruded from the line
- VK_LINE_RASTERIZATION_MODE_BRESENHAM specifies lines drawn by determining which pixel diamonds the line intersects and exits, as defined in Bresenham Line Segment Rasterization.
- VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH specifies lines drawn if they were rectangles extruded from the line, with alpha falloff, as defined in Smooth Lines.

To dynamically set the line width, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetLineWidth(
    VkCommandBuffer                             commandBuffer,
    float                                       lineWidth);
```

- commandBuffer is the command buffer into which the command will be recorded.

- `lineWidth` is the width of rasterized line segments.

This command sets the line width for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_LINE_WIDTH set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo::`lineWidth` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetLineWidth-lineWidth-00788
  If the `wideLines` feature is not enabled, `lineWidth` **must** be `1.0`

Valid Usage (Implicit)

- VUID-vkCmdSetLineWidth-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetLineWidth-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetLineWidth-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetLineWidth-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetLineWidth is not affected by conditional rendering

Not all line widths need be supported for line segment rasterization, but width 1.0 antialiased segments **must** be provided. The range and gradations are obtained from the `lineWidthRange` and `lineWidthGranularity` members of VkPhysicalDeviceLimits. If, for instance, the size range is from 0.1 to 2.0 and the gradation size is 0.1, then the sizes 0.1, 0.2, ..., 1.9, 2.0 are supported. Additional line widths **may** also be supported. There is no requirement that these widths be equally spaced. If an unsupported width is requested, the nearest supported width is used instead.

Further, if the render pass has a fragment density map attachment, line width **may** be rounded by the implementation to a multiple of the fragment's width or height.

31.10.1. Basic Line Segment Rasterization

If the `lineRasterizationMode` member of VkPipelineRasterizationLineStateCreateInfo is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, rasterized line segments produce fragments which intersect a rectangle centered on the line segment. Two of the edges are parallel to the specified line segment; each is at a distance of one-half the current width from that segment in directions perpendicular to the direction of the line. The other two edges pass through the line endpoints and are perpendicular to the direction of the specified line segment. Coverage bits that correspond to sample points that intersect the rectangle are 1, other coverage bits are 0.

Next we specify how the data associated with each rasterized fragment are obtained. Let $\mathbf{p}_r = (x_d, y_d)$ be the framebuffer coordinates at which associated data are evaluated. This **may** be the center of a fragment or the location of a sample within the fragment. When `rasterizationSamples` is VK_SAMPLE_COUNT_1_BIT, the fragment center **must** be used. Let $\mathbf{p}_a = (x_a, y_a)$ and $\mathbf{p}_b = (x_b, y_b)$ be initial and final endpoints of the line segment, respectively. Set

$$t = \frac{(\mathbf{p}_r - \mathbf{p}_a) \cdot (\mathbf{p}_b - \mathbf{p}_a)}{\| \mathbf{p}_b - \mathbf{p}_a \|^2}$$

(Note that t = 0 at $\mathbf{p}_a$ and t = 1 at $\mathbf{p}_b$. Also note that this calculation projects the vector from $\mathbf{p}_a$ to $\mathbf{p}_r$ onto the line, and thus computes the normalized distance of the fragment along the line.)

If `strictLines` is VK_TRUE, line segments are rasterized using perspective or linear interpolation.

Perspective interpolation for a line segment interpolates two values in a manner that is correct when taking the perspective of the viewport into consideration, by way of the line segment's clip coordinates. An interpolated value f can be determined by

$$f = \frac{(1-t) f_a / w_a + t f_b / w_b}{(1-t) / w_a + t / w_b}$$

where f_a and f_b are the data associated with the starting and ending endpoints of the segment, respectively; w_a and w_b are the clip w coordinates of the starting and ending endpoints of the segment, respectively.

Linear interpolation for a line segment directly interpolates two values, and an interpolated value f can be determined by

$$f = (1 - t) f_a + t f_b$$

where f_a and f_b are the data associated with the starting and ending endpoints of the segment, respectively.

The clip coordinate w for a sample is determined using perspective interpolation. The depth value z for a sample is determined using linear interpolation. Interpolation of fragment shader input values are determined by Interpolation decorations.

The above description documents the preferred method of line rasterization, and **must** be used when `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_RECTANGULAR.

By default, when `strictLines` is VK_FALSE, and when the `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_DEFAULT, the edges of the lines are generated as a parallelogram surrounding the original line. The major axis is chosen by noting the axis in which there is the greatest distance between the line start and end points. If the difference is equal in both directions then the X axis is chosen as the major axis. Edges 2 and 3 are aligned to the minor axis and are centered on the endpoints of the line as in Non strict lines, and each is `lineWidth` long. Edges 0 and 1 are parallel to the line and connect the endpoints of edges 2 and 3. Coverage bits that correspond to sample points that intersect the parallelogram are 1, other coverage bits are 0.

Samples that fall exactly on the edge of the parallelogram follow the polygon rasterization rules.

Interpolation occurs as if the parallelogram was decomposed into two triangles where each pair of vertices at each end of the line has identical attributes.

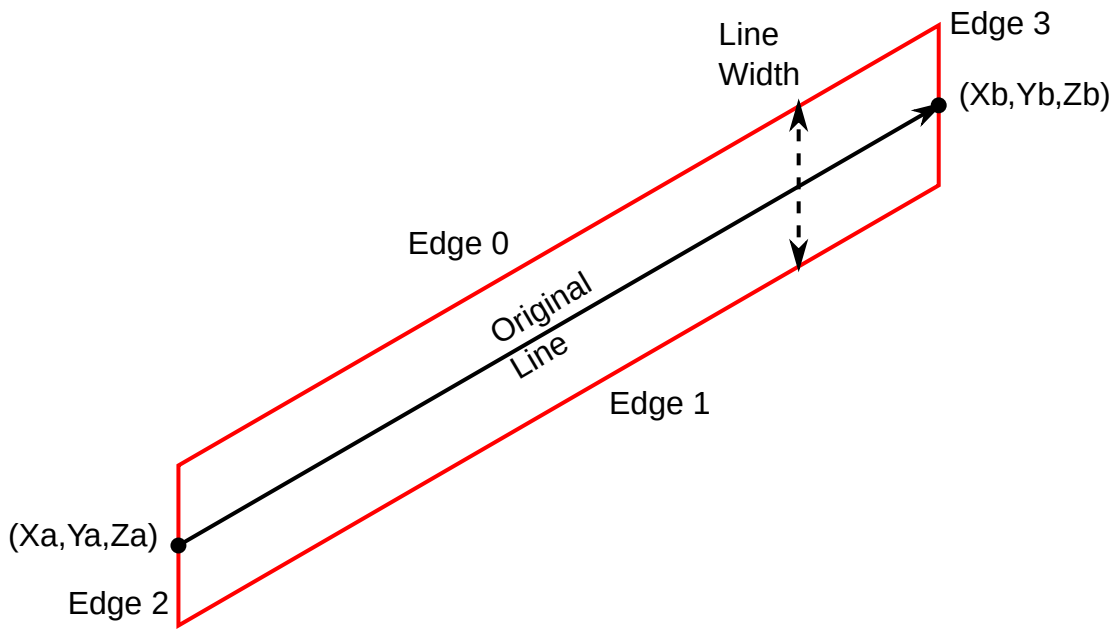

Figure 15. Non strict lines

Only when `strictLines` is VK_FALSE implementations **may** deviate from the non-strict line algorithm described above in the following ways:

- Implementations **may** instead interpolate each fragment according to the formula in Basic Line Segment Rasterization using the original line segment endpoints.
- Rasterization of non-antialiased non-strict line segments **may** be performed using the rules defined in Bresenham Line Segment Rasterization.

If `VkPhysicalDeviceMaintenance5Properties`::`nonStrictSinglePixelWideLinesUseParallelogram` is VK_TRUE, and `strictLines` is VK_FALSE, non-strict lines of width 1.0 are rasterized as parallelograms, otherwise they are rasterized using Bresenham's algorithm.

If `VkPhysicalDeviceMaintenance5Properties`::`nonStrictWideLinesUseParallelogram` is VK_TRUE, and `strictLines` is VK_FALSE, non-strict lines of width greater than 1.0 are rasterized as parallelograms, otherwise they are rasterized using Bresenham's algorithm.

31.10.2. Bresenham Line Segment Rasterization

If `lineRasterizationMode` is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the following rules replace the line rasterization rules defined in Basic Line Segment Rasterization.

Non-strict lines **may** also follow these rasterization rules for non-antialiased lines.

Line segment rasterization begins by characterizing the segment as either *x-major* or *y-major*. x-major line segments have slope in the closed interval [-1,1]; all other line segments are y-major (slope is determined by the segment's endpoints). We specify rasterization only for x-major segments except in cases where the modifications for y-major segments are not self-evident.

Ideally, Vulkan uses a *diamond-exit* rule to determine those fragments that are produced by rasterizing a line segment. For each fragment f with center at framebuffer coordinates x_f and y_f, define a diamond-shaped region that is the intersection of four half planes:

$$R_f = \{(x, y) \mid |x - x_f| + |y - y_f| < \frac{1}{2}\}$$

Essentially, a line segment starting at p_a and ending at p_b produces those fragments f for which the segment intersects R_f, except if p_b is contained in R_f.

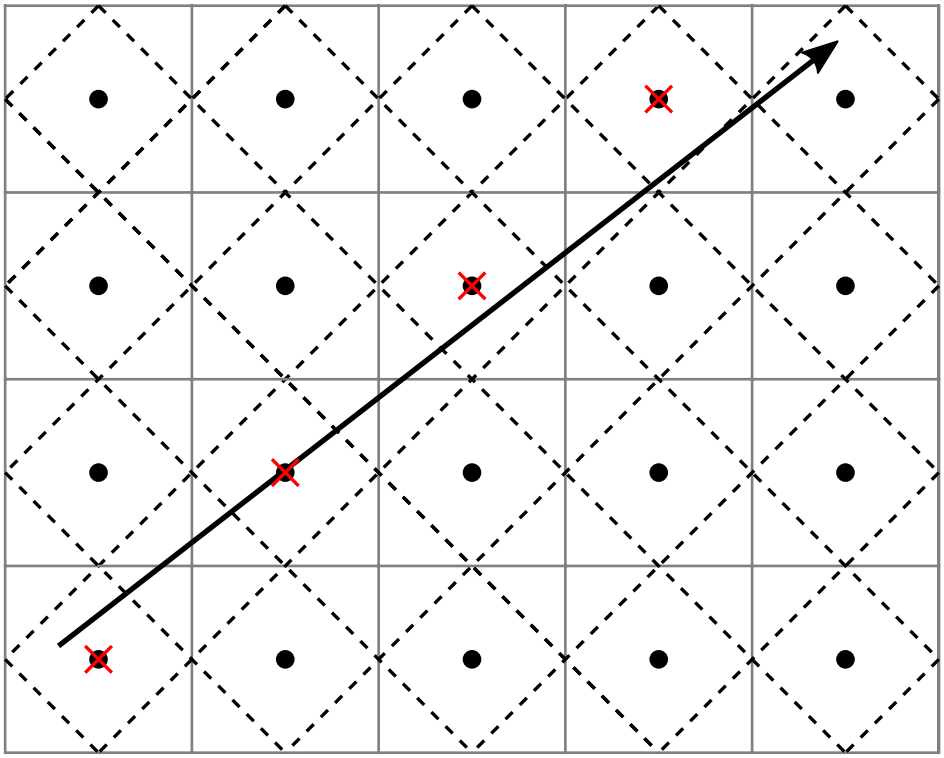

Figure 16. Visualization of Bresenham's algorithm

To avoid difficulties when an endpoint lies on a boundary of R_f we (in principle) perturb the supplied endpoints by a tiny amount. Let p_a and p_b have framebuffer coordinates (x_a, y_a) and (x_b, y_b), respectively. Obtain the perturbed endpoints p_a' given by $(x_a, y_a) - (\varepsilon, \varepsilon^2)$ and p_b' given by $(x_b, y_b) - (\varepsilon, \varepsilon^2)$. Rasterizing the line segment starting at p_a and ending at p_b produces those fragments f for which the segment starting at p_a' and ending on p_b' intersects R_f, except if p_b' is contained in R_f. ε is chosen to be so small that rasterizing the line segment produces the same fragments when δ is substituted for ε for any $0 < \delta \leq \varepsilon$.

When p_a and p_b lie on fragment centers, this characterization of fragments reduces to Bresenham's algorithm with one modification: lines produced in this description are "half-open", meaning that the final fragment (corresponding to p_b) is not drawn. This means that when rasterizing a series of connected line segments, shared endpoints will be produced only once rather than twice (as would occur with Bresenham's algorithm).

Implementations **may** use other line segment rasterization algorithms, subject to the following rules:

- The coordinates of a fragment produced by the algorithm **must** not deviate by more than one unit in either x or y framebuffer coordinates from a corresponding fragment produced by the diamond-exit rule.
- The total number of fragments produced by the algorithm **must** not differ from that produced by the diamond-exit rule by more than one.
- For an x-major line, two fragments that lie in the same framebuffer-coordinate column **must** not be produced (for a y-major line, two fragments that lie in the same framebuffer-coordinate row **must** not be produced).

- If two line segments share a common endpoint, and both segments are either x-major (both left-to-right or both right-to-left) or y-major (both bottom-to-top or both top-to-bottom), then rasterizing both segments **must** not produce duplicate fragments. Fragments also **must** not be omitted so as to interrupt continuity of the connected segments.

The actual width w of Bresenham lines is determined by rounding the line width to the nearest integer, clamping it to the implementation-dependent `lineWidthRange` (with both values rounded to the nearest integer), then clamping it to be no less than 1.

Bresenham line segments of width other than one are rasterized by offsetting them in the minor direction (for an x-major line, the minor direction is y, and for a y-major line, the minor direction is x) and producing a row or column of fragments in the minor direction. If the line segment has endpoints given by (x_0, y_0) and (x_1, y_1) in framebuffer coordinates, the segment with endpoints $(x_0, y_0 - \frac{w-1}{2})$ and $(x_1, y_1 - \frac{w-1}{2})$ is rasterized, but instead of a single fragment, a column of fragments of height w (a row of fragments of length w for a y-major segment) is produced at each x (y for y-major) location. The lowest fragment of this column is the fragment that would be produced by rasterizing the segment of width 1 with the modified coordinates.

The preferred method of attribute interpolation for a wide line is to generate the same attribute values for all fragments in the row or column described above, as if the adjusted line was used for interpolation and those values replicated to the other fragments, except for `FragCoord` which is interpolated as usual. Implementations **may** instead interpolate each fragment according to the formula in Basic Line Segment Rasterization, using the original line segment endpoints.

When Bresenham lines are being rasterized, sample locations **may** all be treated as being at the pixel center (this **may** affect attribute and depth interpolation).

NOTE

The sample locations described above are **not** used for determining coverage, they are only used for things like attribute interpolation. The rasterization rules that determine coverage are defined in terms of whether the line intersects **pixels**, as opposed to the point sampling rules used for other primitive types. So these rules are independent of the sample locations. One consequence of this is that Bresenham lines cover the same pixels regardless of the number of rasterization samples, and cover all samples in those pixels (unless masked out or killed).

31.10.3. Line Stipple

If the `stippledLineEnable` member of VkPipelineRasterizationLineStateCreateInfo is VK_TRUE, then lines are rasterized with a *line stipple* determined by `lineStippleFactor` and `lineStipplePattern`. `lineStipplePattern` is an unsigned 16-bit integer that determines which fragments are to be drawn or discarded when the line is rasterized. `lineStippleFactor` is a count that is used to modify the effective line stipple by causing each bit in `lineStipplePattern` to be used `lineStippleFactor` times.

Line stippling discards certain fragments that are produced by rasterization. The masking is achieved using three parameters: the 16-bit line stipple pattern *p*, the line stipple factor *r*, and an integer stipple counter *s*. Let

$$b = \lfloor \frac{s}{r} \rfloor \bmod 16$$

Then a fragment is produced if the *b*'th bit of *p* is 1, and discarded otherwise. The bits of *p* are numbered with 0 being the least significant and 15 being the most significant.

The initial value of *s* is zero. For VK_LINE_RASTERIZATION_MODE_BRESENHAM lines, *s* is incremented after production of each fragment of a line segment (fragments are produced in order, beginning at the starting point and working towards the ending point). For VK_LINE_RASTERIZATION_MODE_RECTANGULAR and VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH lines, the rectangular region is subdivided into adjacent unit-length rectangles, and s is incremented once for each rectangle. Rectangles with a value of *s* such that the *b*'th bit of *p* is zero are discarded. If the last rectangle in a line segment is shorter than unit-length, then the remainder **may** carry over to the next line segment in the line strip using the same value of *s* (this is the preferred behavior, for the stipple pattern to appear more consistent through the strip).

s is reset to 0 at the start of each strip (for line strips), and before every line segment in a group of independent segments.

If the line segment has been clipped, then the value of *s* at the beginning of the line segment is implementation-dependent.

To dynamically set the line stipple state, call:

```
// Provided by VK_VERSION_1_4
void vkCmdSetLineStipple(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    lineStippleFactor,
    uint16_t                                    lineStipplePattern);
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to vkCmdSetLineStipple
void vkCmdSetLineStippleKHR(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    lineStippleFactor,
    uint16_t                                    lineStipplePattern);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `lineStippleFactor` is the repeat factor used in stippled line rasterization.
- `lineStipplePattern` is the bit pattern used in stippled line rasterization.

This command sets the line stipple state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_LINE_STIPPLE set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationLineStateCreateInfo::`lineStippleFactor` and VkPipelineRasterizationLineStateCreateInfo::`lineStipplePattern` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetLineStipple-lineStippleFactor-02776
  `lineStippleFactor` **must** be in the range [1,256]

Valid Usage (Implicit)

- VUID-vkCmdSetLineStipple-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetLineStipple-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetLineStipple-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetLineStipple-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetLineStipple is not affected by conditional rendering

31.10.4. Smooth Lines

If the `lineRasterizationMode` member of VkPipelineRasterizationLineStateCreateInfo is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then lines are considered to be rectangles using the same geometry as for VK_LINE_RASTERIZATION_MODE_RECTANGULAR lines. The rules for determining which pixels are covered are implementation-dependent, and **may**

include nearby pixels where no sample locations are covered or where the rectangle does not intersect the pixel at all. For each pixel that is considered covered, the fragment computes a coverage value that approximates the area of the intersection of the rectangle with the pixel square, and this coverage value is multiplied into the color location 0's alpha value after fragment shading, as described in Multisample Coverage.

NOTE	The details of the rasterization rules and area calculation are left intentionally vague, to allow implementations to generate coverage and values that are aesthetically pleasing.

31.11. Polygons

A polygon results from the decomposition of a triangle strip, triangle fan or a series of independent triangles. Like points and line segments, polygon rasterization is controlled by several variables in the VkPipelineRasterizationStateCreateInfo structure.

31.11.1. Basic Polygon Rasterization

The first step of polygon rasterization is to determine whether the triangle is *back-facing* or *front-facing*. This determination is made based on the sign of the (clipped or unclipped) polygon's area computed in framebuffer coordinates. One way to compute this area is:

$$a = -\frac{1}{2}\sum_{i=0}^{n-1} x_f^i y_f^{i \oplus 1} - x_f^{i \oplus 1} y_f^i$$

where x_f^i and y_f^i are the x and y framebuffer coordinates of the ith vertex of the n-vertex polygon (vertices are numbered starting at zero for the purposes of this computation) and i □ 1 is (i + 1) mod n.

The interpretation of the sign of a is determined by the VkPipelineRasterizationStateCreateInfo ::`frontFace` property of the currently active pipeline. Possible values are:

```
// Provided by VK_VERSION_1_0
typedef enum VkFrontFace {
    VK_FRONT_FACE_COUNTER_CLOCKWISE = 0,
    VK_FRONT_FACE_CLOCKWISE = 1,
} VkFrontFace;
```

- VK_FRONT_FACE_COUNTER_CLOCKWISE specifies that a triangle with positive area is considered front-facing.
- VK_FRONT_FACE_CLOCKWISE specifies that a triangle with negative area is considered front-facing.

Any triangle which is not front-facing is back-facing, including zero-area triangles.

To dynamically set the front face orientation, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetFrontFace(
    VkCommandBuffer                             commandBuffer,
    VkFrontFace                                 frontFace);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetFrontFace
void vkCmdSetFrontFaceEXT(
    VkCommandBuffer                             commandBuffer,
    VkFrontFace                                 frontFace);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `frontFace` is a VkFrontFace value specifying the front-facing triangle orientation to be used for culling.

This command sets the front face orientation for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_FRONT_FACE set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo::`frontFace` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetFrontFace-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetFrontFace-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetFrontFace-frontFace-parameter
  `frontFace` **must** be a valid VkFrontFace value
- VUID-vkCmdSetFrontFace-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetFrontFace-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetFrontFace-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetFrontFace is not affected by conditional rendering

Once the orientation of triangles is determined, they are culled according to the VkPipelineRasterizationStateCreateInfo::`cullMode` property of the currently active pipeline. Possible values are:

```
// Provided by VK_VERSION_1_0
typedef enum VkCullModeFlagBits {
    VK_CULL_MODE_NONE = 0,
    VK_CULL_MODE_FRONT_BIT = 0x00000001,
    VK_CULL_MODE_BACK_BIT = 0x00000002,
    VK_CULL_MODE_FRONT_AND_BACK = 0x00000003,
} VkCullModeFlagBits;
```

- VK_CULL_MODE_NONE specifies that no triangles are discarded
- VK_CULL_MODE_FRONT_BIT specifies that front-facing triangles are discarded
- VK_CULL_MODE_BACK_BIT specifies that back-facing triangles are discarded
- VK_CULL_MODE_FRONT_AND_BACK specifies that all triangles are discarded.

Following culling, fragments are produced for any triangles which have not been discarded.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkCullModeFlags;
```

VkCullModeFlags is a bitmask type for setting a mask of zero or more VkCullModeFlagBits.

To dynamically set the cull mode, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetCullMode(
    VkCommandBuffer                             commandBuffer,
    VkCullModeFlags                             cullMode);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetCullMode
void vkCmdSetCullModeEXT(
    VkCommandBuffer                             commandBuffer,
    VkCullModeFlags                             cullMode);
```

- commandBuffer is the command buffer into which the command will be recorded.
- cullMode specifies the cull mode property to use for drawing.

This command sets the cull mode for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_CULL_MODE set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo::cullMode value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetCullMode-None-08971
  At least one of the following **must** be true:
  - the extendedDynamicState feature is enabled
  - the shaderObject feature is enabled
  - the value of VkApplicationInfo::apiVersion used to create the VkInstance parent of commandBuffer is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetCullMode-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetCullMode-cullMode-parameter
  If cullMode is not 0, cullMode **must** be a valid combination of VkCullModeFlagBits values
- VUID-vkCmdSetCullMode-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetCullMode-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support

VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetCullMode-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetCullMode is not affected by conditional rendering

The rule for determining which fragments are produced by polygon rasterization is called *point sampling*. The two-dimensional projection obtained by taking the x and y framebuffer coordinates of the polygon's vertices is formed. Fragments are produced for any fragment area groups of pixels for which any sample points lie inside of this polygon. Coverage bits that correspond to sample points that satisfy the point sampling criteria are 1, other coverage bits are 0. Special treatment is given to a sample whose sample location lies on a polygon edge. In such a case, if two polygons lie on either side of a common edge (with identical endpoints) on which a sample point lies, then exactly one of the polygons **must** result in a covered sample for that fragment during rasterization. As for the data associated with each fragment produced by rasterizing a polygon, we begin by specifying how these values are produced for fragments in a triangle.

Barycentric coordinates are a set of three numbers, a, b, and c, each in the range [0,1], with a + b + c = 1. These coordinates uniquely specify any point p within the triangle or on the triangle's boundary as

$$p = a\,p_a + b\,p_b + c\,p_c$$

where p_a, p_b, and p_c are the vertices of the triangle. a, b, and c are determined by:

$$a = \frac{\mathrm{A}(pp_bp_c)}{\mathrm{A}(p_ap_bp_c)}, \quad b = \frac{\mathrm{A}(pp_ap_c)}{\mathrm{A}(p_ap_bp_c)}, \quad c = \frac{\mathrm{A}(pp_ap_b)}{\mathrm{A}(p_ap_bp_c)},$$

where A(lmn) denotes the area in framebuffer coordinates of the triangle with vertices l, m, and n.

Denote an associated datum at p_a, p_b, or p_c as f_a, f_b, or f_c, respectively.

Perspective interpolation for a triangle interpolates three values in a manner that is correct when taking the perspective of the viewport into consideration, by way of the triangle's clip coordinates. An interpolated value f can be determined by

$$f = \frac{af_a / w_a + bf_b / w_b + cf_c / w_c}{a / w_a + b / w_b + c / w_c}$$

where w_a, w_b, and w_c are the clip w coordinates of p_a, p_b, and p_c, respectively. a, b, and c are the barycentric coordinates of the location at which the data are produced.

Linear interpolation for a triangle directly interpolates three values, and an interpolated value f can be determined by

$$f = a f_a + b f_b + c f_c$$

where f_a, f_b, and f_c are the data associated with p_a, p_b, and p_c, respectively.

The clip coordinate w for a sample is determined using perspective interpolation. The depth value z for a sample is determined using linear interpolation. Interpolation of fragment shader input values are determined by Interpolation decorations.

For a polygon with more than three edges, such as are produced by clipping a triangle, a convex combination of the values of the datum at the polygon's vertices **must** be used to obtain the value assigned to each fragment produced by the rasterization algorithm. That is, it **must** be the case that at every fragment

$$f = \sum_{i=1}^{n} a_i f_i$$

where n is the number of vertices in the polygon and f_i is the value of f at vertex i. For each i, $0 \leq a_i \leq 1$ and $\sum_{i=1}^{n} a_i = 1$. The values of a_i **may** differ from fragment to fragment, but at vertex i, $a_i = 1$ and $a_j = 0$ for $j \neq i$.

NOTE

One algorithm that achieves the required behavior is to triangulate a polygon (without adding any vertices) and then treat each triangle individually as already discussed. A scan-line rasterizer that linearly interpolates data along each edge and then linearly interpolates data across each horizontal span from edge to edge also satisfies the restrictions (in this case the numerator and denominator of perspective interpolation are iterated independently, and a division is performed for each fragment).

31.11.2. Polygon Mode

Possible values of the VkPipelineRasterizationStateCreateInfo::`polygonMode` property of the currently active pipeline, specifying the method of rasterization for polygons, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPolygonMode {
    VK_POLYGON_MODE_FILL = 0,
    VK_POLYGON_MODE_LINE = 1,
    VK_POLYGON_MODE_POINT = 2,
} VkPolygonMode;
```

- VK_POLYGON_MODE_POINT specifies that polygon vertices are drawn as points.
- VK_POLYGON_MODE_LINE specifies that polygon edges are drawn as line segments.
- VK_POLYGON_MODE_FILL specifies that polygons are rendered using the polygon rasterization rules in this section.

These modes affect only the final rasterization of polygons: in particular, a polygon's vertices are shaded and the polygon is clipped and possibly culled before these modes are applied.

If VkPhysicalDeviceMaintenance5Properties::polygonModePointSize is VK_TRUE, the point size of the final rasterization of polygons is taken from PointSize when polygon mode is VK_POLYGON_MODE_POINT.

Otherwise, if VkPhysicalDeviceMaintenance5Properties::polygonModePointSize is VK_FALSE, the point size of the final rasterization of polygons is 1.0 when polygon mode is VK_POLYGON_MODE_POINT.

To dynamically set the polygon mode, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetPolygonModeEXT(
    VkCommandBuffer                             commandBuffer,
    VkPolygonMode                               polygonMode);
```

- commandBuffer is the command buffer into which the command will be recorded.
- polygonMode specifies polygon mode.

This command sets the polygon mode for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_POLYGON_MODE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo::polygonMode value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetPolygonModeEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3PolygonMode feature is enabled
  - The shaderObject feature is enabled
- VUID-vkCmdSetPolygonModeEXT-fillModeNonSolid-07424

If the `fillModeNonSolid` feature is not enabled, `polygonMode` **must** be VK_POLYGON_MODE_FILL

Valid Usage (Implicit)

- VUID-vkCmdSetPolygonModeEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetPolygonModeEXT-polygonMode-parameter
  `polygonMode` **must** be a valid VkPolygonMode value
- VUID-vkCmdSetPolygonModeEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetPolygonModeEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetPolygonModeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetPolygonModeEXT is not affected by conditional rendering

31.11.3. Depth Bias

The depth values of all fragments generated by the rasterization of a polygon **can** be biased (offset) by a single depth bias value o that is computed for that polygon.

Depth Bias Enable

The depth bias computation is enabled by the `depthBiasEnable` set with vkCmdSetDepthBiasEnable and `vkCmdSetDepthBiasEnableEXT`, or the corresponding VkPipelineRasterizationStateCreateInfo ::`depthBiasEnable` value used to create the currently active pipeline. If the depth bias enable is VK_FALSE, no bias is applied and the fragment's depth values are unchanged.

To dynamically enable whether to bias fragment depth values, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetDepthBiasEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthBiasEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state2, VK_EXT_shader_object
// Equivalent to vkCmdSetDepthBiasEnable
void vkCmdSetDepthBiasEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthBiasEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthBiasEnable` controls whether to bias fragment depth values.

This command sets the depth bias enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineRasterizationStateCreateInfo ::`depthBiasEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthBiasEnable-None-08970
  At least one of the following **must** be true:
  - the `extendedDynamicState2` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetDepthBiasEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthBiasEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state

- VUID-vkCmdSetDepthBiasEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthBiasEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthBiasEnable is not affected by conditional rendering

Depth Bias Computation

The depth bias depends on three parameters:

- `depthBiasSlopeFactor` scales the maximum depth slope m of the polygon
- `depthBiasConstantFactor` scales the parameter r of the depth attachment
- the scaled terms are summed to produce a value which is then clamped to a minimum or maximum value specified by `depthBiasClamp`

`depthBiasSlopeFactor`, `depthBiasConstantFactor`, and `depthBiasClamp` **can** each be positive, negative, or zero. These parameters are set as described for vkCmdSetDepthBias and vkCmdSetDepthBias2EXT below.

The maximum depth slope m of a triangle is

$$m = \sqrt{\left(\frac{\partial z_f}{\partial x_f}\right)^2 + \left(\frac{\partial z_f}{\partial y_f}\right)^2}$$

where (x_f, y_f, z_f) is a point on the triangle. m **may** be approximated as

$$m = \max\left(\left|\frac{\partial z_f}{\partial x_f}\right|, \left|\frac{\partial z_f}{\partial y_f}\right|\right).$$

In a pipeline with a depth bias representation of VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT, r, for the given primitive is defined as

r = 1

Otherwise r is the minimum resolvable difference that depends on the depth attachment representation. If VkDepthBiasRepresentationInfoEXT::depthBiasExact is VK_FALSE it is the smallest difference in a sample's depth z_f values that is guaranteed to remain distinct throughout polygon rasterization and in the depth attachment. All pairs of fragments generated by the rasterization of two polygons with otherwise identical vertices, but z_f values that differ by r, will have distinct depth values.

For fixed-point depth attachment representations, or in a pipeline with a depth bias representation of VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT, r is constant throughout the range of the entire depth attachment. If VkDepthBiasRepresentationInfoEXT::depthBiasExact is VK_TRUE, then its value **must** be

$r = 2^{-n}$

Otherwise its value is implementation-dependent but **must** be at most

$r = 2 \times 2^{-n}$

where n is the number of bits used for the depth aspect when using a fixed-point attachment, or the number of mantissa bits plus one when using a floating-point attachment.

Otherwise for floating-point depth attachment, there is no single minimum resolvable difference. In this case, the minimum resolvable difference for a given polygon is dependent on the maximum exponent, e, in the range of z values spanned by the primitive. If n is the number of bits in the floating-point mantissa, the minimum resolvable difference, r, for the given primitive is defined as

$r = 2^{e-n}$

If no depth attachment is present, r is undefined.

The bias value o for a polygon is

$$o = \text{dbclamp}(m \times depthBiasSlopeFactor + r \times depthBiasConstantFactor)$$

$$\text{where} \quad \text{dbclamp}(x) = \begin{cases} x & depthBiasClamp = 0 \text{ or } NaN \\ \min(x, depthBiasClamp) & depthBiasClamp > 0 \\ \max(x, depthBiasClamp) & depthBiasClamp < 0 \end{cases}$$

m is computed as described above. If the depth attachment uses a fixed-point representation, m is a function of depth values in the range [0,1], and o is applied to depth values in the same range.

Depth bias is applied to triangle topology primitives received by the rasterizer regardless of polygon mode. Depth bias **may** also be applied to line and point topology primitives received by the rasterizer.

To dynamically set the depth bias parameters, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetDepthBias(
    VkCommandBuffer                             commandBuffer,
    float                                       depthBiasConstantFactor,
    float                                       depthBiasClamp,
    float                                       depthBiasSlopeFactor);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthBiasConstantFactor` is a scalar factor controlling the constant depth value added to each fragment.
- `depthBiasClamp` is the maximum (or minimum) depth bias of a fragment.
- `depthBiasSlopeFactor` is a scalar factor applied to a fragment's slope in depth bias calculations.

This command sets the depth bias parameters for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_BIAS set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the corresponding VkPipelineRasterizationStateCreateInfo ::`depthBiasConstantFactor`, `depthBiasClamp`, and `depthBiasSlopeFactor` values used to create the currently active pipeline.

Calling this function is equivalent to calling `vkCmdSetDepthBias2EXT` without a `VkDepthBiasRepresentationInfoEXT` in the pNext chain of `VkDepthBiasInfoEXT`.

Valid Usage

- VUID-vkCmdSetDepthBias-depthBiasClamp-00790
  If the `depthBiasClamp` feature is not enabled, `depthBiasClamp` **must** be `0.0`

Valid Usage (Implicit)

- VUID-vkCmdSetDepthBias-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthBias-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthBias-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetDepthBias-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthBias is not affected by conditional rendering

The `VkDepthBiasRepresentationInfoEXT` structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkDepthBiasRepresentationInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDepthBiasRepresentationEXT    depthBiasRepresentation;
    VkBool32                        depthBiasExact;
} VkDepthBiasRepresentationInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthBiasRepresentation` is a VkDepthBiasRepresentationEXT value specifying the depth bias representation.
- `depthBiasExact` specifies that the implementation is not allowed to scale the depth bias value to ensure a minimum resolvable distance.

Valid Usage

- VUID-VkDepthBiasRepresentationInfoEXT-leastRepresentableValueForceUnormRepresentation-08947
  If the `leastRepresentableValueForceUnormRepresentation` feature is not enabled, `depthBiasRepresentation` **must** not be VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT
- VUID-VkDepthBiasRepresentationInfoEXT-floatRepresentation-08948
  If the `floatRepresentation` feature is not enabled, `depthBiasRepresentation` **must** not be VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT
- VUID-VkDepthBiasRepresentationInfoEXT-depthBiasExact-08949
  If the `depthBiasExact` feature is not enabled, `depthBiasExact` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-VkDepthBiasRepresentationInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEPTH_BIAS_REPRESENTATION_INFO_EXT
- VUID-VkDepthBiasRepresentationInfoEXT-depthBiasRepresentation-parameter
  `depthBiasRepresentation` **must** be a valid VkDepthBiasRepresentationEXT value

Structure Chaining

Extends the structures

- VkDepthBiasInfoEXT
- VkPipelineRasterizationStateCreateInfo

Possible values of VkDepthBiasRepresentationInfoEXT::`depthBiasRepresentation`, specifying the depth bias representation are:

```
// Provided by VK_EXT_depth_bias_control
typedef enum VkDepthBiasRepresentationEXT {
    VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORMAT_EXT = 0,
    VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT = 1,
    VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT = 2,
} VkDepthBiasRepresentationEXT;
```

- VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORMAT_EXT specifies that the depth bias representation is a factor of the format's r as described in Depth Bias Computation.
- VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT specifies that the depth bias representation is a factor of a constant r defined by the bit-size or

mantissa of the format as described in Depth Bias Computation.

- VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT specifies that the depth bias representation is a factor of constant r equal to 1.

The VkDepthBiasInfoEXT structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkDepthBiasInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float              depthBiasConstantFactor;
    float              depthBiasClamp;
    float              depthBiasSlopeFactor;
} VkDepthBiasInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- depthBiasConstantFactor is a scalar factor controlling the constant depth value added to each fragment.
- depthBiasClamp is the maximum (or minimum) depth bias of a fragment.
- depthBiasSlopeFactor is a scalar factor applied to a fragment's slope in depth bias calculations.

If pNext does not contain a VkDepthBiasRepresentationInfoEXT structure, then this command is equivalent to including a VkDepthBiasRepresentationInfoEXT with depthBiasExact set to VK_FALSE and depthBiasRepresentation set to VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORMAT_EXT.

Valid Usage

- VUID-VkDepthBiasInfoEXT-depthBiasClamp-08950
  If the depthBiasClamp feature is not enabled, depthBiasClamp **must** be 0.0

Valid Usage (Implicit)

- VUID-VkDepthBiasInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEPTH_BIAS_INFO_EXT
- VUID-VkDepthBiasInfoEXT-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkDepthBiasRepresentationInfoEXT
- VUID-VkDepthBiasInfoEXT-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

To dynamically set the depth bias parameters, call:

```
// Provided by VK_EXT_depth_bias_control
void vkCmdSetDepthBias2EXT(
    VkCommandBuffer                             commandBuffer,
    const VkDepthBiasInfoEXT*                   pDepthBiasInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDepthBiasInfo` is a pointer to a VkDepthBiasInfoEXT structure specifying depth bias parameters.

This command is functionally identical to vkCmdSetDepthBias, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage (Implicit)

- VUID-vkCmdSetDepthBias2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthBias2EXT-pDepthBiasInfo-parameter
  `pDepthBiasInfo` **must** be a valid pointer to a valid VkDepthBiasInfoEXT structure
- VUID-vkCmdSetDepthBias2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthBias2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthBias2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthBias2EXT is not affected by conditional rendering

31.11.4. Conservative Rasterization

If the pNext chain of VkPipelineRasterizationStateCreateInfo includes a VkPipelineRasterizationConservativeStateCreateInfoEXT structure, then that structure includes parameters controlling conservative rasterization.

VkPipelineRasterizationConservativeStateCreateInfoEXT is defined as:

```
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPipelineRasterizationConservativeStateCreateInfoEXT {
    VkStructureType                                         sType;
    const void*                                             pNext;
    VkPipelineRasterizationConservativeStateCreateFlagsEXT    flags;
    VkConservativeRasterizationModeEXT
conservativeRasterizationMode;
    float
extraPrimitiveOverestimationSize;
} VkPipelineRasterizationConservativeStateCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- conservativeRasterizationMode is the conservative rasterization mode to use.
- extraPrimitiveOverestimationSize is the extra size in pixels to increase the generating primitive during conservative rasterization at each of its edges in X and Y equally in screen space beyond the base overestimation specified in VkPhysicalDeviceConservativeRasterizationPropertiesEXT ::primitiveOverestimationSize. If conservativeRasterizationMode is not VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, this value is ignored.

If this structure is not included in the pNext chain, conservativeRasterizationMode is considered to be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT, and conservative rasterization is disabled.

Polygon rasterization **can** be made conservative by setting conservativeRasterizationMode to VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT or VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT in VkPipelineRasterizationConservativeStateCreateInfoEXT.

NOTE If conservativePointAndLineRasterization is supported, conservative rasterization can be applied to line and point primitives, otherwise it must be disabled.

Valid Usage

- VUID-VkPipelineRasterizationConservativeStateCreateInfoEXT-extraPrimitiveOverestimationSize-01769
  `extraPrimitiveOverestimationSize` **must** be in the range of `0.0` to `VkPhysicalDeviceConservativeRasterizationPropertiesEXT`::`maxExtraPrimitiveOverestimationSize` inclusive

Valid Usage (Implicit)

- VUID-VkPipelineRasterizationConservativeStateCreateInfoEXT-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_CONSERVATIVE_STATE_CREATE_INFO_EXT`
- VUID-VkPipelineRasterizationConservativeStateCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkPipelineRasterizationConservativeStateCreateInfoEXT-conservativeRasterizationMode-parameter
  `conservativeRasterizationMode` **must** be a valid `VkConservativeRasterizationModeEXT` value

Structure Chaining

Extends the structure

- `VkPipelineRasterizationStateCreateInfo`

```
// Provided by VK_EXT_conservative_rasterization
typedef VkFlags VkPipelineRasterizationConservativeStateCreateFlagsEXT;
```

`VkPipelineRasterizationConservativeStateCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

Possible values of `VkPipelineRasterizationConservativeStateCreateInfoEXT`::`conservativeRasterizationMode`, specifying the conservative rasterization mode are:

```
// Provided by VK_EXT_conservative_rasterization
typedef enum VkConservativeRasterizationModeEXT {
    VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT = 0,
    VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT = 1,
    VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT = 2,
} VkConservativeRasterizationModeEXT;
```

- VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT specifies that conservative rasterization is disabled and rasterization proceeds as normal.
- VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT specifies that conservative rasterization is enabled in overestimation mode.
- VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT specifies that conservative rasterization is enabled in underestimation mode.

To dynamically set the conservativeRasterizationMode, call:

```
// Provided by VK_EXT_conservative_rasterization with VK_EXT_extended_dynamic_state3,
VK_EXT_conservative_rasterization with VK_EXT_shader_object
void vkCmdSetConservativeRasterizationModeEXT(
    VkCommandBuffer                             commandBuffer,
    VkConservativeRasterizationModeEXT          conservativeRasterizationMode);
```

- commandBuffer is the command buffer into which the command will be recorded.
- conservativeRasterizationMode specifies the conservativeRasterizationMode state.

This command sets the conservativeRasterizationMode state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationConservativeStateCreateInfoEXT::conservativeRasterizationMode value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetConservativeRasterizationModeEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3ConservativeRasterizationMode feature is enabled
  - The shaderObject feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetConservativeRasterizationModeEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetConservativeRasterizationModeEXT-conservativeRasterizationMode-parameter
  conservativeRasterizationMode **must** be a valid VkConservativeRasterizationModeEXT value
- VUID-vkCmdSetConservativeRasterizationModeEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetConservativeRasterizationModeEXT-commandBuffer-cmdpool

The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetConservativeRasterizationModeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetConservativeRasterizationModeEXT is not affected by conditional rendering

To dynamically set the extraPrimitiveOverestimationSize, call:

```
// Provided by VK_EXT_conservative_rasterization with VK_EXT_extended_dynamic_state3,
VK_EXT_conservative_rasterization with VK_EXT_shader_object
void vkCmdSetExtraPrimitiveOverestimationSizeEXT(
    VkCommandBuffer                             commandBuffer,
    float                                       extraPrimitiveOverestimationSize);
```

- commandBuffer is the command buffer into which the command will be recorded.
- extraPrimitiveOverestimationSize specifies the extraPrimitiveOverestimationSize.

This command sets the extraPrimitiveOverestimationSize for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineRasterizationConservativeStateCreateInfoEXT::extraPrimitiveOverestimationSize value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3ExtraPrimitiveOverestimationSize` feature is enabled
  - The `shaderObject` feature is enabled
- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-extraPrimitiveOverestimationSize-07428
  `extraPrimitiveOverestimationSize` **must** be in the range of `0.0` to `VkPhysicalDeviceConservativeRasterizationPropertiesEXT`::`maxExtraPrimitiveOverestimationSize` inclusive

Valid Usage (Implicit)

- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetExtraPrimitiveOverestimationSizeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetExtraPrimitiveOverestimationSizeEXT is not affected by conditional rendering

When overestimate conservative rasterization is enabled, rather than evaluating coverage at individual sample locations, a determination is made whether any portion of the pixel (including its edges and corners) is covered by the primitive. If any portion of the pixel is covered, then all bits of the coverage mask for the fragment corresponding to that pixel are enabled. If the render pass has a fragment density map attachment and any bit of the coverage mask for the fragment is enabled, then all bits of the coverage mask for the fragment are enabled.

For the purposes of evaluating which pixels are covered by the primitive, implementations **can** increase the size of the primitive by up to VkPhysicalDeviceConservativeRasterizationPropertiesEXT::primitiveOverestimationSize pixels at each of the primitive edges. This **may** increase the number of fragments generated by this primitive and represents an overestimation of the pixel coverage.

This overestimation size can be increased further by setting the extraPrimitiveOverestimationSize value above 0.0 in steps of VkPhysicalDeviceConservativeRasterizationPropertiesEXT::extraPrimitiveOverestimationSizeGranularity up to and including VkPhysicalDeviceConservativeRasterizationPropertiesEXT::extraPrimitiveOverestimationSize. This **may** further increase the number of fragments generated by this primitive.

The actual precision of the overestimation size used for conservative rasterization **may** vary between implementations and produce results that only approximate the primitiveOverestimationSize and extraPrimitiveOverestimationSizeGranularity properties. Implementations **may** especially vary these approximations when the render pass has a fragment density map and the fragment area covers multiple pixels.

For triangles if VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT is enabled, fragments will be generated if the primitive area covers any portion of any pixel inside the fragment area, including their edges or corners. The tie-breaking rule described in Basic Polygon Rasterization does not apply during conservative rasterization and coverage is set for all fragments generated from shared edges of polygons. Degenerate triangles that evaluate to zero area after rasterization, even for pixels containing a vertex or edge of the zero-area polygon, will be culled if VkPhysicalDeviceConservativeRasterizationPropertiesEXT::degenerateTrianglesRasterized is VK_FALSE or will generate fragments if degenerateTrianglesRasterized is VK_TRUE. The fragment input values for these degenerate triangles take their attribute and depth values from the provoking vertex. Degenerate triangles are considered backfacing and the application **can** enable backface culling if desired. Triangles that are zero area before rasterization **may** be culled regardless.

For lines if VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT is enabled, and the implementation sets VkPhysicalDeviceConservativeRasterizationPropertiesEXT::conservativePointAndLineRasterization to VK_TRUE, fragments will be generated if the line covers any portion of any pixel inside the fragment area, including their edges or corners. Degenerate lines that evaluate to zero length after rasterization will be culled if VkPhysicalDeviceConservativeRasterizationPropertiesEXT::degenerateLinesRasterized is VK_FALSE or will generate fragments if degenerateLinesRasterized is VK_TRUE. The fragments input values for

these degenerate lines take their attribute and depth values from the provoking vertex. Lines that are zero length before rasterization **may** be culled regardless.

For points if VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT is enabled, and the implementation sets VkPhysicalDeviceConservativeRasterizationPropertiesEXT ::conservativePointAndLineRasterization to VK_TRUE, fragments will be generated if the point square covers any portion of any pixel inside the fragment area, including their edges or corners.

When underestimate conservative rasterization is enabled, rather than evaluating coverage at individual sample locations, a determination is made whether all of the pixel (including its edges and corners) is covered by the primitive. If the entire pixel is covered, then a fragment is generated with all bits of its coverage mask corresponding to the pixel enabled, otherwise the pixel is not considered covered even if some portion of the pixel is covered. The fragment is discarded if no pixels inside the fragment area are considered covered. If the render pass has a fragment density map attachment and any pixel inside the fragment area is not considered covered, then the fragment is discarded even if some pixels are considered covered.

For triangles, if VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT is enabled, fragments will only be generated if any pixel inside the fragment area is fully covered by the generating primitive, including its edges and corners.

For lines, if VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT is enabled, fragments will be generated if any pixel inside the fragment area, including its edges and corners, are entirely covered by the line.

For points, if VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT is enabled, fragments will only be generated if the point square covers the entirety of any pixel square inside the fragment area, including its edges or corners.

If the render pass has a fragment density map and VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT is enabled, fragments will only be generated if the entirety of all pixels inside the fragment area are covered by the generating primitive, line, or point.

For both overestimate and underestimate conservative rasterization modes a fragment has all of its pixel squares fully covered by the generating primitive **must** set FullyCoveredEXT to VK_TRUE if the implementation enables the VkPhysicalDeviceConservativeRasterizationPropertiesEXT ::fullyCoveredFragmentShaderInputVariable feature.

When setting the fragment shading rate results in fragments covering multiple pixels, coverage for conservative rasterization is still evaluated on a per-pixel basis and may result in fragments with partial coverage. For fragment shader inputs decorated with FullyCoveredEXT, a fragment is considered fully covered if and only if all pixels in the fragment are fully covered by the generating primitive.

Chapter 32. Fragment Operations

Fragments produced by rasterization go through a number of operations to determine whether or how values produced by fragment shading are written to the framebuffer.

The following fragment operations adhere to rasterization order, and are typically performed in this order:

1. Discard rectangles test
2. Scissor test
3. Sample mask test
4. Certain Fragment shading operations:
    - Sample Mask Accesses
    - Tile Image Reads
    - Depth Replacement
    - Stencil Reference Replacement
    - Interlocked Operations
5. Multisample coverage
6. Depth bounds test
7. Stencil test
8. Depth test
9. Sample counting
10. Coverage reduction

The coverage mask generated by rasterization describes the initial coverage of each sample covered by the fragment. Fragment operations will update the coverage mask to add or subtract coverage where appropriate. If a fragment operation results in all bits of the coverage mask being `0`, the fragment is discarded, and no further operations are performed.

When one of the fragment operations in this chapter is described as “replacing” a fragment shader output, that output is replaced unconditionally, even if no fragment shader previously wrote to that output.

If there is a fragment shader and it declares the `PostDepthCoverage` execution mode, the sample mask test is instead performed after the depth test.

If `VkPhysicalDeviceMaintenance5Properties`::`earlyFragmentMultisampleCoverageAfterSampleCounting` is VK_TRUE and there is a fragment shader which declares the `EarlyFragmentTests` execution mode, fragment shading and multisample coverage operations **must** be performed after sample counting.

Otherwise, if `VkPhysicalDeviceMaintenance5Properties`::`earlyFragmentMultisampleCoverageAfterSampleCounting` is VK_FALSE and there is a fragment shader which declares the `EarlyFragmentTests` execution mode, fragment shading and multisample

coverage operations **should** instead be performed after sample counting, but **may** be performed before sample counting.

If VkPhysicalDeviceMaintenance5Properties::earlyFragmentSampleMaskTestBeforeSampleCounting is VK_TRUE and there is a fragment shader which declares the EarlyFragmentTests execution mode sample mask test operations **must** follow the order of fragment operations from above.

Otherwise, if VkPhysicalDeviceMaintenance5Properties::earlyFragmentSampleMaskTestBeforeSampleCounting is VK_FALSE and there is a fragment shader which declares the EarlyFragmentTests execution mode, sample mask test operations **should** follow the order of fragment operations from above but **may** instead be performed after sample counting.

For a pipeline with the following properties:

- a fragment shader is specified
- the fragment shader does not write to storage resources;
- the fragment shader specifies the DepthReplacing execution mode; and
- either
  - the fragment shader specifies the DepthUnchanged execution mode;
  - the fragment shader specifies the DepthLess execution mode and the pipeline uses a VkPipelineDepthStencilStateCreateInfo::depthCompareOp of VK_COMPARE_OP_GREATER or VK_COMPARE_OP_GREATER_OR_EQUAL; or
  - the fragment shader specifies the DepthGreater execution mode and the pipeline uses a VkPipelineDepthStencilStateCreateInfo::depthCompareOp of VK_COMPARE_OP_LESS or VK_COMPARE_OP_LESS_OR_EQUAL

the implementation **may** perform depth bounds test before fragment shading and perform an additional depth test immediately after that using the interpolated depth value generated by rasterization.

Once all fragment operations have completed, fragment shader outputs for covered color attachment samples pass through framebuffer operations.

32.1. Discard Rectangles Test

The discard rectangle test compares the framebuffer coordinates (x_f,y_f) of each sample covered by a fragment against a set of *discard rectangles*.

Each discard rectangle is defined by a VkRect2D. These values are either set by the VkPipelineDiscardRectangleStateCreateInfoEXT structure during pipeline creation, or dynamically by the vkCmdSetDiscardRectangleEXT command.

A given sample is considered inside a discard rectangle if the x_f is in the range [VkRect2D::offset.x, VkRect2D::offset.x + VkRect2D::extent.x), and y_f is in the range [VkRect2D::offset.y, VkRect2D::offset.y + VkRect2D::extent.y). If the test is set to be inclusive, samples that are not inside any of the discard rectangles will have their coverage set to 0. If the test is set to be exclusive, samples that are inside any of the discard rectangles will have their coverage set to 0.

If no discard rectangles are specified, the coverage mask is unmodified by this operation.

The VkPipelineDiscardRectangleStateCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_discard_rectangles
typedef struct VkPipelineDiscardRectangleStateCreateInfoEXT {
    VkStructureType                                    sType;
    const void*                                        pNext;
    VkPipelineDiscardRectangleStateCreateFlagsEXT      flags;
    VkDiscardRectangleModeEXT                          discardRectangleMode;
    uint32_t                                           discardRectangleCount;
    const VkRect2D*                                    pDiscardRectangles;
} VkPipelineDiscardRectangleStateCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- discardRectangleMode is a VkDiscardRectangleModeEXT value determining whether the discard rectangle test is inclusive or exclusive.
- discardRectangleCount is the number of discard rectangles to use.
- pDiscardRectangles is a pointer to an array of VkRect2D structures defining discard rectangles.

If the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state is enabled for a pipeline, the pDiscardRectangles member is ignored. If the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state is not enabled for the pipeline the presence of this structure in the VkGraphicsPipelineCreateInfo chain, and a discardRectangleCount greater than zero, implicitly enables discard rectangles in the pipeline, otherwise discard rectangles **must** enabled or disabled by vkCmdSetDiscardRectangleEnableEXT. If the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state is enabled for the pipeline, the discardRectangleMode member is ignored, and the discard rectangle mode **must** be set by vkCmdSetDiscardRectangleModeEXT.

When this structure is included in the pNext chain of VkGraphicsPipelineCreateInfo, it defines parameters of the discard rectangle test. If the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state is not enabled, and this structure is not included in the pNext chain, it is equivalent to specifying this structure with a discardRectangleCount of 0. If all VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT, VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT, and VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic states are enabled, the application **can** omit this structure from the pNext chain of VkGraphicsPipelineCreateInfo and still use discard rectangles by setting all state dynamically. In this case vkCmdSetDiscardRectangleEXT **must** be called to set the discard rectangle for all indices [0, maxDiscardRectangles) before drawing with discard rectangles enabled. Individual discard rectangles **can** be made ineffective by setting their VkRect2D::extent.width and VkRect2D::extent.height to zero.

Valid Usage

- VUID-VkPipelineDiscardRectangleStateCreateInfoEXT-discardRectangleCount-00582 `discardRectangleCount` **must** be less than or equal to `VkPhysicalDeviceDiscardRectanglePropertiesEXT`::`maxDiscardRectangles`

Valid Usage (Implicit)

- VUID-VkPipelineDiscardRectangleStateCreateInfoEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_DISCARD_RECTANGLE_STATE_CREATE_INFO_EXT
- VUID-VkPipelineDiscardRectangleStateCreateInfoEXT-flags-zerobitmask `flags` **must** be `0`
- VUID-VkPipelineDiscardRectangleStateCreateInfoEXT-discardRectangleMode-parameter `discardRectangleMode` **must** be a valid VkDiscardRectangleModeEXT value

Structure Chaining

Extends the structure

- VkGraphicsPipelineCreateInfo

```
// Provided by VK_EXT_discard_rectangles
typedef VkFlags VkPipelineDiscardRectangleStateCreateFlagsEXT;
```

`VkPipelineDiscardRectangleStateCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

VkDiscardRectangleModeEXT values are:

```
// Provided by VK_EXT_discard_rectangles
typedef enum VkDiscardRectangleModeEXT {
    VK_DISCARD_RECTANGLE_MODE_INCLUSIVE_EXT = 0,
    VK_DISCARD_RECTANGLE_MODE_EXCLUSIVE_EXT = 1,
} VkDiscardRectangleModeEXT;
```

- VK_DISCARD_RECTANGLE_MODE_INCLUSIVE_EXT specifies that the discard rectangle test is inclusive.
- VK_DISCARD_RECTANGLE_MODE_EXCLUSIVE_EXT specifies that the discard rectangle test is exclusive.

To dynamically set the discard rectangles, call:

```
// Provided by VK_EXT_discard_rectangles
void vkCmdSetDiscardRectangleEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstDiscardRectangle,
    uint32_t                                    discardRectangleCount,
    const VkRect2D*                             pDiscardRectangles);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstDiscardRectangle` is the index of the first discard rectangle whose state is updated by the command.
- `discardRectangleCount` is the number of discard rectangles whose state are updated by the command.
- `pDiscardRectangles` is a pointer to an array of VkRect2D structures specifying discard rectangles.

The discard rectangle taken from element i of `pDiscardRectangles` replace the current state for the discard rectangle at index `firstDiscardRectangle` + i, for i in [0, `discardRectangleCount`).

This command sets the discard rectangles for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDiscardRectangleStateCreateInfoEXT::`pDiscardRectangles` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDiscardRectangleEXT-firstDiscardRectangle-00585
  The sum of `firstDiscardRectangle` and `discardRectangleCount` **must** be less than or equal to VkPhysicalDeviceDiscardRectanglePropertiesEXT::`maxDiscardRectangles`
- VUID-vkCmdSetDiscardRectangleEXT-x-00587
  The `x` and `y` member of `offset` in each VkRect2D element of `pDiscardRectangles` **must** be greater than or equal to `0`
- VUID-vkCmdSetDiscardRectangleEXT-offset-00588
  Evaluation of (`offset.x` + `extent.width`) in each VkRect2D element of `pDiscardRectangles` **must** not cause a signed integer addition overflow
- VUID-vkCmdSetDiscardRectangleEXT-offset-00589
  Evaluation of (`offset.y` + `extent.height`) in each VkRect2D element of `pDiscardRectangles` **must** not cause a signed integer addition overflow

Valid Usage (Implicit)

- VUID-vkCmdSetDiscardRectangleEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle

- VUID-vkCmdSetDiscardRectangleEXT-pDiscardRectangles-parameter
  `pDiscardRectangles` **must** be a valid pointer to an array of `discardRectangleCount` VkRect2D structures
- VUID-vkCmdSetDiscardRectangleEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDiscardRectangleEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDiscardRectangleEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetDiscardRectangleEXT-discardRectangleCount-arraylength
  `discardRectangleCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDiscardRectangleEXT is not affected by conditional rendering

To dynamically set whether discard rectangles are enabled, call:

```
// Provided by VK_EXT_discard_rectangles
void vkCmdSetDiscardRectangleEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    discardRectangleEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `discardRectangleEnable` specifies whether discard rectangles are enabled or not.

This command sets the discard rectangle enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is implied by the VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount value used to create the currently active pipeline, where a non-zero discardRectangleCount implicitly enables discard rectangles, otherwise they are disabled.

Valid Usage

- VUID-vkCmdSetDiscardRectangleEnableEXT-specVersion-07851
  The VK_EXT_discard_rectangles extension **must** be enabled, and the implementation **must** support at least specVersion 2 of this extension

Valid Usage (Implicit)

- VUID-vkCmdSetDiscardRectangleEnableEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDiscardRectangleEnableEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetDiscardRectangleEnableEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDiscardRectangleEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDiscardRectangleEnableEXT is not affected by conditional rendering

To dynamically set the discard rectangle mode, call:

```
// Provided by VK_EXT_discard_rectangles
void vkCmdSetDiscardRectangleModeEXT(
    VkCommandBuffer                             commandBuffer,
    VkDiscardRectangleModeEXT                   discardRectangleMode);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `discardRectangleMode` specifies the discard rectangle mode for all discard rectangles, either inclusive or exclusive.

This command sets the discard rectangle mode for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDiscardRectangleStateCreateInfoEXT::`discardRectangleMode` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDiscardRectangleModeEXT-specVersion-07852
  The `VK_EXT_discard_rectangles` extension **must** be enabled, and the implementation **must** support at least `specVersion` `2` of this extension

Valid Usage (Implicit)

- VUID-vkCmdSetDiscardRectangleModeEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDiscardRectangleModeEXT-discardRectangleMode-parameter
  `discardRectangleMode` **must** be a valid VkDiscardRectangleModeEXT value
- VUID-vkCmdSetDiscardRectangleModeEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDiscardRectangleModeEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDiscardRectangleModeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDiscardRectangleModeEXT is not affected by conditional rendering

32.2. Scissor Test

The scissor test compares the framebuffer coordinates (x_f, y_f) of each sample covered by a fragment against a *scissor rectangle* at the index equal to the fragment's `ViewportIndex`.

Each scissor rectangle is defined by a VkRect2D. These values are either set by the VkPipelineViewportStateCreateInfo structure during pipeline creation, or dynamically by the vkCmdSetScissor command.

A given sample is considered inside a scissor rectangle if x_f is in the range [VkRect2D::`offset.x`, VkRect2D::`offset.x` + VkRect2D::`extent.x`), and y_f is in the range [VkRect2D::`offset.y`, VkRect2D::`offset.y` + VkRect2D::`extent.y`). Samples with coordinates outside the scissor rectangle at the corresponding `ViewportIndex` will have their coverage set to `0`.

To dynamically set the scissor rectangles, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetScissor(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstScissor,
    uint32_t                                    scissorCount,
    const VkRect2D*                             pScissors);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstScissor` is the index of the first scissor whose state is updated by the command.

- `scissorCount` is the number of scissors whose rectangles are updated by the command.
- `pScissors` is a pointer to an array of VkRect2D structures defining scissor rectangles.

The scissor rectangles taken from element i of `pScissors` replace the current state for the scissor index `firstScissor` + i, for i in [0, `scissorCount`).

This command sets the scissor rectangles for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_SCISSOR set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineViewportStateCreateInfo::`pScissors` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetScissor-firstScissor-00592
  The sum of `firstScissor` and `scissorCount` **must** be between `1` and `VkPhysicalDeviceLimits`::`maxViewports`, inclusive
- VUID-vkCmdSetScissor-firstScissor-00593
  If the `multiViewport` feature is not enabled, `firstScissor` **must** be `0`
- VUID-vkCmdSetScissor-scissorCount-00594
  If the `multiViewport` feature is not enabled, `scissorCount` **must** be `1`
- VUID-vkCmdSetScissor-x-00595
  The `x` and `y` members of `offset` member of any element of `pScissors` **must** be greater than or equal to `0`
- VUID-vkCmdSetScissor-offset-00596
  Evaluation of (`offset.x` + `extent.width`) **must** not cause a signed integer addition overflow for any element of `pScissors`
- VUID-vkCmdSetScissor-offset-00597
  Evaluation of (`offset.y` + `extent.height`) **must** not cause a signed integer addition overflow for any element of `pScissors`

Valid Usage (Implicit)

- VUID-vkCmdSetScissor-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetScissor-pScissors-parameter
  `pScissors` **must** be a valid pointer to an array of `scissorCount` VkRect2D structures
- VUID-vkCmdSetScissor-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetScissor-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetScissor-videocoding
  This command **must** only be called outside of a video coding scope

- VUID-vkCmdSetScissor-scissorCount-arraylength
  `scissorCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetScissor is not affected by conditional rendering

32.3. Sample Mask Test

The sample mask test compares the coverage mask for a fragment with the *sample mask* defined by VkPipelineMultisampleStateCreateInfo::`pSampleMask`.

To dynamically set the sample mask, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetSampleMaskEXT(
    VkCommandBuffer                             commandBuffer,
    VkSampleCountFlagBits                       samples,
    const VkSampleMask*                         pSampleMask);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `samples` specifies the number of sample bits in the `pSampleMask`.
- `pSampleMask` is a pointer to an array of VkSampleMask values, where the array size is based on the `samples` parameter. If the `maintenance10` feature is enabled, and this parameter is set to `NULL`, it is treated as if the mask has all bits set to `1`.

This command sets the sample mask for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with

VK_DYNAMIC_STATE_SAMPLE_MASK_EXT set in VkPipelineDynamicStateCreateInfo ::pDynamicStates. Otherwise, this state is specified by the VkPipelineMultisampleStateCreateInfo ::pSampleMask value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetSampleMaskEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3SampleMask feature is enabled
  - The shaderObject feature is enabled
- VUID-vkCmdSetSampleMaskEXT-pSampleMask-10999
  pSampleMask **must** not be NULL if the maintenance10 feature is not enabled

Valid Usage (Implicit)

- VUID-vkCmdSetSampleMaskEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetSampleMaskEXT-samples-parameter
  samples **must** be a valid VkSampleCountFlagBits value
- VUID-vkCmdSetSampleMaskEXT-pSampleMask-parameter
  If pSampleMask is not NULL, pSampleMask **must** be a valid pointer to an array of $\lceil \frac{samples}{32} \rceil$ VkSampleMask values
- VUID-vkCmdSetSampleMaskEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetSampleMaskEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetSampleMaskEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetSampleMaskEXT is not affected by conditional rendering

Each bit of the coverage mask is associated with a sample index as described in the rasterization chapter. If the bit in VkPipelineMultisampleStateCreateInfo::`pSampleMask` which is associated with that same sample index is set to `0`, the coverage mask bit is set to `0`.

32.4. Fragment Shading

Fragment shaders are invoked for each fragment, or as helper invocations.

Most operations in the fragment shader are not performed in rasterization order, with exceptions called out in the following sections.

For fragment shaders invoked by fragments, the following rules apply:

- A fragment shader **must** not be executed if a fragment operation that executes before fragment shading discards the fragment.
- A fragment shader **may** not be executed if:
  - An implementation determines that another fragment shader, invoked by a subsequent primitive in primitive order, overwrites all results computed by the shader (including writes to storage resources).
  - Any other fragment operation discards the fragment, and the shader does not write to any storage resources.
  - If a fragment shader statically computes the same values for different framebuffer locations, and does not write to any storage resources, multiple fragments **may** be shaded by one fragment shader invocation. This **may** affect VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT results, but **must** otherwise not be visible behavior to applications.
- Otherwise, at least one fragment shader **must** be executed.
  - If sample shading is enabled and multiple invocations per fragment are **required**, additional invocations **must** be executed as specified.
  - Each covered sample **must** be included in at least one fragment shader invocation.

If no fragment shader is included in the pipeline, no fragment shader is executed, and undefined

values **may** be written to all color attachment outputs during this fragment operation.

NOTE

Multiple fragment shader invocations may be executed for the same fragment for any number of implementation-dependent reasons. When there is more than one fragment shader invocation per fragment, the association of samples to invocations is implementation-dependent. Stores and atomics performed by these additional invocations have the normal effect.

For example, if the subpass includes multiple views in its view mask, a fragment shader may be invoked separately for each view.

Similarly, if the render pass has a fragment density map attachment, more than one fragment shader invocation may be invoked for each covered sample. Such additional invocations are only produced if `VkPhysicalDeviceFragmentDensityMapPropertiesEXT::fragmentDensityInvocations` is `VK_TRUE`. Implementations may generate these additional fragment shader invocations in order to make transitions between fragment areas with different fragment densities more smooth.

32.4.1. Sample Mask

Reading from the `SampleMask` built-in in the `Input` storage class will return the coverage mask for the current fragment as calculated by fragment operations that executed prior to fragment shading.

If sample shading is enabled, fragment shaders will only see values of `1` for samples being shaded - other bits will be `0`.

Each bit of the coverage mask is associated with a sample index as described in the rasterization chapter. If the bit in `SampleMask` which is associated with that same sample index is set to `0`, that coverage mask bit is set to `0`.

Values written to the `SampleMask` built-in in the `Output` storage class will be used by the multisample coverage operation, with the same encoding as the input built-in.

32.4.2. Shader Termination and Demotion

If a fragment shader is terminated early or demoted to a helper invocation by using `OpKill`, `OpTerminateInvocation`, or `OpDemoteToHelperInvocation`, samples covered by that shader invocation have their coverage mask bits set to `0`.

32.4.3. Fragment Shader Tile Image Reads

If the `VK_EXT_shader_tile_image` extension is enabled, implementations divide the framebuffer into a grid of tiles. A tile image is a view of a framebuffer attachment tile for fragments with locations within the tile.

Within a render pass instance initiated by vkCmdBeginRenderingKHR, fragment shader invocations **can** read the framebuffer color, depth, and stencil values at the fragment location via tile images.

NOTE

Even though fragment shader invocation can only read from the corresponding fragment location, the abstraction of a tile image is introduced for the following reasons:

- Tile dimensions will be exposed in a future extension
- Future functionality such as executing compute dispatches within render passes via tile shaders can leverage tile images.

Enabling shaderTileImageColorReadAccess, shaderTileImageDepthReadAccess, shaderTileImageStencilReadAccess enables fragment shader invocations to read from color, depth, and stencil, respectively.

Color values are read from tile image variables with `OpColorAttachmentReadEXT`. Tile image variables are linked to specific color attachments using `Location` decoration. See Fragment Tile Image Interface for more details.

Depth values are read with `OpDepthAttachmentReadEXT`.

Stencil values are read with `OpStencilAttachmentReadEXT`.

The sample to read is specified by a sample index value specified as the `Sample` operand to `OpColorAttachmentReadEXT`, `OpDepthAttachmentReadEXT`, or `OpStencilAttachmentReadEXT`.

If sample shading is disabled, a fragment invocation **can** read from all sample locations associated with the fragment regardless of the fragment's coverage. This functionality is supported for VkPipelineMultisampleStateCreateInfo::`rasterizationSamples` > 1 when VkPhysicalDeviceShaderTileImagePropertiesEXT::`shaderTileImageReadSampleFromPixelRateInvocation` is VK_TRUE.

If sample shading is enabled, and `minSampleShading` is 1.0, a fragment invocation **must** only read from the coverage index sample. Tile image access **must** not be used if the value of `minSampleShading` is not 1.0.

If the fragment shader declares the `EarlyFragmentTests` execution mode, depth reads are allowed only if depth writes are disabled and stencil reads are allowed only if stencil writes are disabled.

If VkPhysicalDeviceShaderTileImagePropertiesEXT::`shaderTileImageReadFromHelperInvocation` is VK_FALSE, values read from helper invocations are poison, otherwise the values read are subject to the coherency guarantees described below.

`OpDepthAttachmentReadEXT` returns a poison value if no depth attachment is present. `OpStencilAttachmentReadEXT` returns a poison value if no stencil attachment is present.

Tile image reads from color, depth, and stencil attachments are said to be coherent when the accesses happen in raster order and without data race with respect to accesses to the attachments from framebuffer-space pipeline stages. The samples which qualify for coherent access and the enabling conditions are described below.

- Let Rc be the set of components being read from an attachment A in a draw call

- Let Wc be the set of components being written to A by the draw call

The samples which qualify for coherent tile image reads from an attachment A are:

- All samples in a pixel when Rc is disjoint with Wc.
- The samples with coverage in a fragment when Rc is not disjoint with Wc. The samples with coverage are determined by the coverage mask for the fragment as calculated by fragment operations that executed prior to fragment shading, including early fragment tests if enabled for the draw call.

A fragment shader **can** declare `NonCoherentColorAttachmentReadEXT`, `NonCoherentDepthAttachmentReadEXT`, or `NonCoherentStencilAttachmentReadEXT` execution modes to enable non-coherent tile image reads which require an explicit vkCmdPipelineBarrier2 call for the writes to an attachment to be made visible via tile image reads.

When VkPhysicalDeviceShaderTileImagePropertiesEXT::`shaderTileImageCoherentReadAccelerated` is VK_TRUE, the implementation prefers that coherent tile image reads are used, otherwise the implementation prefers that non-coherent tile image reads are used.

NOTE

In practice, the most common tile image reads usage patterns fall under one of the following:

- Programmable blending - each fragment reads from a single sample (SampleID) at its location. Per-sample shading is typically enabled when multisampled rendertargets are used.
- G-buffer generation and shading in one render pass - in the shading phase a fragment reads from a single sample at its location.
- Programmable resolve - a fragment reads from all samples at its location (per-sample shading is disabled). This requires the use of a "full-screen triangle" instead of a rectangle composed of two triangles in order to avoid data races along the shared edge of the triangles.
- 1:1 texturing with LOD - in use cases such a deferred screen space decals a fragment reads a single sample (SampleID) from depth buffer, but requires being able to read from helper threads to derive the texture LOD. This use case is supported as long as the attachment components being read are not overwritten by color, depth, or stencil attachment writes.

All of the above use cases are supported by coherent tile image reads, but only the latter three are supported when non-coherent reads are used as there is no mechanism to synchronize non-coherent reads with writes within a draw call.

32.4.4. Depth Replacement

Writing to the `FragDepth` built-in will replace the fragment's calculated depth values for each sample in the input `SampleMask`. Depth testing performed after the fragment shader for this fragment will use this new value as z_f.

32.4.5. Stencil Reference Replacement

Writing to the `FragStencilRefEXT` built-in will replace the fragment's stencil reference value for each sample in the input `SampleMask`. Stencil testing performed after the fragment shader for this fragment will use this new value as s_r.

32.4.6. Interlocked Operations

`OpBeginInvocationInterlockEXT` and `OpEndInvocationInterlockEXT` define a section of a fragment shader which imposes additional ordering constraints on operations performed within them. These operations are defined as *interlocked operations*. How interlocked operations are ordered against other fragment shader invocations depends on the specified execution modes.

If the `ShadingRateInterlockOrderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before interlocked operations in fragment shader invocations that execute later in rasterization order and cover at least one sample in the same fragment area, and **must** happen after interlocked operations in a fragment shader that executes earlier in rasterization order and cover at least one sample in the same fragment area.

If the `ShadingRateInterlockUnorderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before or after interlocked operations in fragment shader invocations that execute earlier or later in rasterization order and cover at least one sample in the same fragment area.

If the `PixelInterlockOrderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before interlocked operations in fragment shader invocations that execute later in rasterization order and cover at least one sample in the same pixel, and **must** happen after interlocked operations in a fragment shader that executes earlier in rasterization order and cover at least one sample in the same pixel.

If the `PixelInterlockUnorderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before or after interlocked operations in fragment shader invocations that execute earlier or later in rasterization order and cover at least one sample in the same pixel.

If the `SampleInterlockOrderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before interlocked operations in fragment shader invocations that execute later in rasterization order and cover at least one of the same samples, and **must** happen after interlocked operations in a fragment shader that executes earlier in rasterization order and cover at least one of the same samples.

If the `SampleInterlockUnorderedEXT` execution mode is specified, any interlocked operations in a fragment shader **must** happen before or after interlocked operations in fragment shader invocations that execute earlier or later in rasterization order and cover at least one of the same samples.

32.5. Multisample Coverage

If a fragment shader is active and its entry point's interface includes a built-in output variable

decorated with SampleMask, the coverage mask is ANDed with the bits of the SampleMask built-in to generate a new coverage mask. If sample shading is enabled, bits written to SampleMask corresponding to samples that are not being shaded by the fragment shader invocation are ignored. If no fragment shader is active, or if the active fragment shader does not include SampleMask in its interface, the coverage mask is not modified.

Next, the fragment alpha value and coverage mask are modified based on the line coverage factor if the lineRasterizationMode member of the VkPipelineRasterizationStateCreateInfo structure is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, and the alphaToCoverageEnable and alphaToOneEnable members of the VkPipelineMultisampleStateCreateInfo structure.

To dynamically set the alphaToCoverageEnable state, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetAlphaToCoverageEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    alphaToCoverageEnable);
```

- commandBuffer is the command buffer into which the command will be recorded.
- alphaToCoverageEnable specifies the alphaToCoverageEnable state.

This command sets the alphaToCoverageEnable state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineMultisampleStateCreateInfo::alphaToCoverageEnable value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetAlphaToCoverageEnableEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3AlphaToCoverageEnable feature is enabled
  - The shaderObject feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetAlphaToCoverageEnableEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetAlphaToCoverageEnableEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetAlphaToCoverageEnableEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdSetAlphaToCoverageEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetAlphaToCoverageEnableEXT is not affected by conditional rendering

To dynamically set the `alphaToOneEnable` state, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetAlphaToOneEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    alphaToOneEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `alphaToOneEnable` specifies the `alphaToOneEnable` state.

This command sets the `alphaToOneEnable` state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineMultisampleStateCreateInfo ::`alphaToOneEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetAlphaToOneEnableEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3AlphaToOneEnable` feature is enabled

- The `shaderObject` feature is enabled

- VUID-vkCmdSetAlphaToOneEnableEXT-alphaToOne-07607
  If the `alphaToOne` feature is not enabled, `alphaToOneEnable` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-vkCmdSetAlphaToOneEnableEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetAlphaToOneEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetAlphaToOneEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetAlphaToOneEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetAlphaToOneEnableEXT is not affected by conditional rendering

All alpha values in this section refer only to the alpha component of the fragment shader output that has a `Location` and `Index` decoration of zero (see the Fragment Output Interface section). If that shader output has an integer or unsigned integer type, then these operations are skipped.

If the `lineRasterizationMode` member of the VkPipelineRasterizationStateCreateInfo structure is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH and the fragment came from a line segment, then the alpha value is replaced by multiplying it by the coverage factor for the fragment

computed during smooth line rasterization.

If `alphaToCoverageEnable` is enabled, a temporary coverage mask is generated where each bit is determined by the fragment's alpha value, which is ANDed with the fragment coverage mask.

No specific algorithm is specified for converting the alpha value to a temporary coverage mask. It is intended that the number of 1's in this value be proportional to the alpha value (clamped to [0,1]), with all 1's corresponding to a value of 1.0 and all 0's corresponding to 0.0. The algorithm **may** be different at different framebuffer coordinates.

NOTE	Using different algorithms at different framebuffer coordinates **may** help to avoid artifacts caused by regular coverage sample locations.

Finally, if `alphaToOneEnable` is enabled, each alpha value is replaced by the maximum representable alpha value for fixed-point color attachments, or by 1.0 for floating-point attachments. Otherwise, the alpha values are not changed.

32.6. Depth and Stencil Operations

Pipeline state controlling the depth bounds tests, stencil test, and depth test is specified through the members of the `VkPipelineDepthStencilStateCreateInfo` structure.

The `VkPipelineDepthStencilStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineDepthStencilStateCreateInfo {
    VkStructureType                           sType;
    const void*                               pNext;
    VkPipelineDepthStencilStateCreateFlags    flags;
    VkBool32                                  depthTestEnable;
    VkBool32                                  depthWriteEnable;
    VkCompareOp                               depthCompareOp;
    VkBool32                                  depthBoundsTestEnable;
    VkBool32                                  stencilTestEnable;
    VkStencilOpState                          front;
    VkStencilOpState                          back;
    float                                     minDepthBounds;
    float                                     maxDepthBounds;
} VkPipelineDepthStencilStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineDepthStencilStateCreateFlagBits specifying additional depth/stencil state information.
- `depthTestEnable` controls whether depth testing is enabled.
- `depthWriteEnable` controls whether depth writes are enabled when `depthTestEnable` is VK_TRUE. Depth writes are always disabled when `depthTestEnable` is VK_FALSE.

- `depthCompareOp` is a VkCompareOp value specifying the comparison operator to use in the Depth Comparison step of the depth test.
- `depthBoundsTestEnable` controls whether depth bounds testing is enabled.
- `stencilTestEnable` controls whether stencil testing is enabled.
- `front` and `back` are VkStencilOpState values controlling the corresponding parameters of the stencil test.
- `minDepthBounds` is the minimum depth bound used in the depth bounds test.
- `maxDepthBounds` is the maximum depth bound used in the depth bounds test.

Valid Usage

- VUID-VkPipelineDepthStencilStateCreateInfo-depthBoundsTestEnable-00598
  If the `depthBounds` feature is not enabled, `depthBoundsTestEnable` **must** be VK_FALSE
- VUID-VkPipelineDepthStencilStateCreateInfo-separateStencilMaskRef-04453
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`separateStencilMaskRef` is VK_FALSE, and the value of VkPipelineDepthStencilStateCreateInfo::`stencilTestEnable` is VK_TRUE, and the value of VkPipelineRasterizationStateCreateInfo::`cullMode` is VK_CULL_MODE_NONE, the value of `reference` in each of the VkStencilOpState structs in `front` and `back` **must** be the same
- VUID-VkPipelineDepthStencilStateCreateInfo-rasterizationOrderDepthAttachmentAccess-06463
  If the `rasterizationOrderDepthAttachmentAccess` feature is not enabled, `flags` **must** not include VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT
- VUID-VkPipelineDepthStencilStateCreateInfo-rasterizationOrderStencilAttachmentAccess-06464
  If the `rasterizationOrderStencilAttachmentAccess` feature is not enabled, `flags` **must** not include VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT

Valid Usage (Implicit)

- VUID-VkPipelineDepthStencilStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_DEPTH_STENCIL_STATE_CREATE_INFO
- VUID-VkPipelineDepthStencilStateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineDepthStencilStateCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPipelineDepthStencilStateCreateFlagBits values

- VUID-VkPipelineDepthStencilStateCreateInfo-depthCompareOp-parameter
  `depthCompareOp` **must** be a valid VkCompareOp value
- VUID-VkPipelineDepthStencilStateCreateInfo-front-parameter
  `front` **must** be a valid VkStencilOpState structure
- VUID-VkPipelineDepthStencilStateCreateInfo-back-parameter
  `back` **must** be a valid VkStencilOpState structure

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineDepthStencilStateCreateFlags;
```

`VkPipelineDepthStencilStateCreateFlags` is a bitmask type for setting a mask of zero or more VkPipelineDepthStencilStateCreateFlagBits.

Bits which **can** be set in the VkPipelineDepthStencilStateCreateInfo::`flags` parameter are:

```
// Provided by VK_VERSION_1_0, VK_EXT_rasterization_order_attachment_access
typedef enum VkPipelineDepthStencilStateCreateFlagBits {
  // Provided by VK_EXT_rasterization_order_attachment_access

VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT
_EXT = 0x00000001,
  // Provided by VK_EXT_rasterization_order_attachment_access

VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_B
IT_EXT = 0x00000002,
} VkPipelineDepthStencilStateCreateFlagBits;
```

- VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT specifies that access to the depth aspects of depth/stencil and input attachments will have implicit framebuffer-local memory dependencies.
- VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT specifies that access to the stencil aspects of depth/stencil and input attachments will have implicit framebuffer-local memory dependencies.

When VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_EXT is included in a pipeline, it forms a framebuffer-local memory dependency for each fragment generated by draw commands for that pipeline with the following scopes:

- The first synchronization scope includes VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT and VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT pipeline stages executed by all previous fragments (as defined by primitive order) in the corresponding framebuffer regions including those generated by the same draw command.
- The second synchronization scope includes VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT stage executed by the generated fragment.

- The first access scope includes all writes to the depth aspect of depth/stencil attachments.
- The second access scope includes all reads from the depth aspect of input attachments.

When VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_EXT is included in a pipeline, it forms a framebuffer-local memory dependency for each fragment generated by draw commands for that pipeline with the following scopes:

- The first synchronization scope includes VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT pipeline stages executed by all previous fragments (as defined by primitive order) in the corresponding framebuffer regions including those generated by the same draw command.
- The second synchronization scope includes VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT and VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT pipeline stages executed by the generated fragment.
- The first access scope includes all writes to the stencil aspect of depth/stencil attachments.
- The second access scope includes all reads from the stencil aspect of input attachments.

32.7. Depth Bounds Test

The depth bounds test compares the depth value z_a in the depth/stencil attachment at each sample's framebuffer coordinates (x_f,y_f) and sample index i against a set of *depth bounds*.

The depth bounds are determined by two floating-point values defining a minimum (`minDepthBounds`) and maximum (`maxDepthBounds`) depth value. These values are either set by the VkPipelineDepthStencilStateCreateInfo structure during pipeline creation, or dynamically by vkCmdSetDepthBoundsTestEnable and vkCmdSetDepthBounds.

A given sample is considered within the depth bounds if z_a is in the range [`minDepthBounds`,`maxDepthBounds`]. Samples with depth attachment values outside of the depth bounds will have their coverage set to `0`.

If the depth bounds test is disabled, or if there is no depth attachment, the coverage mask is unmodified by this operation.

To dynamically enable or disable the depth bounds test, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetDepthBoundsTestEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthBoundsTestEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetDepthBoundsTestEnable
void vkCmdSetDepthBoundsTestEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthBoundsTestEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthBoundsTestEnable` specifies if the depth bounds test is enabled.

This command sets the depth bounds enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo::`depthBoundsTestEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthBoundsTestEnable-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3
- VUID-vkCmdSetDepthBoundsTestEnable-depthBounds-10010
  If the `depthBounds` feature is not enabled, `depthBoundsTestEnable` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-vkCmdSetDepthBoundsTestEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthBoundsTestEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthBoundsTestEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthBoundsTestEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthBoundsTestEnable is not affected by conditional rendering

To dynamically set the depth bounds range, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetDepthBounds(
    VkCommandBuffer                             commandBuffer,
    float                                       minDepthBounds,
    float                                       maxDepthBounds);
```

- commandBuffer is the command buffer into which the command will be recorded.
- minDepthBounds is the minimum depth bound.
- maxDepthBounds is the maximum depth bound.

This command sets the depth bounds range for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_BOUNDS set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo::minDepthBounds and VkPipelineDepthStencilStateCreateInfo::maxDepthBounds values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthBounds-minDepthBounds-00600
  If the VK_EXT_depth_range_unrestricted extension is not enabled minDepthBounds **must** be between 0.0 and 1.0, inclusive
- VUID-vkCmdSetDepthBounds-maxDepthBounds-00601
  If the VK_EXT_depth_range_unrestricted extension is not enabled maxDepthBounds **must** be between 0.0 and 1.0, inclusive
- VUID-vkCmdSetDepthBounds-minDepthBounds-10912

`minDepthBounds` **must** be less than or equal to `maxDepthBounds`

Valid Usage (Implicit)

- VUID-vkCmdSetDepthBounds-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthBounds-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthBounds-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthBounds-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthBounds is not affected by conditional rendering

32.8. Stencil Test

The stencil test compares the stencil attachment value s_a in the depth/stencil attachment at each sample's framebuffer coordinates (x_f,y_f) and sample index i against a *stencil reference value*.

If the render pass has a fragment density map attachment and the fragment covers multiple pixels, there is an implementation-dependent association of coverage samples to stencil attachment samples within the fragment. However, if all samples in the fragment are covered, and the stencil attachment value is updated as a result of this test, all stencil attachment samples will be updated.

If the stencil test is not enabled, as specified by vkCmdSetStencilTestEnable or VkPipelineDepthStencilStateCreateInfo::`stencilTestEnable`, or if there is no stencil attachment, the coverage mask is unmodified by this operation.

The stencil test is controlled by one of two sets of stencil-related state, the front stencil state and the back stencil state. Stencil tests and writes use the back stencil state when processing fragments generated by back-facing polygons, and the front stencil state when processing fragments generated by front-facing polygons or any other primitives.

The comparison operation performed is determined by the VkCompareOp value set by vkCmdSetStencilOp::`compareOp`, or by VkStencilOpState::`compareOp` during pipeline creation.

The compare mask s_c and stencil reference value s_r of the front or the back stencil state set determine arguments of the comparison operation. s_c is set by the VkPipelineDepthStencilStateCreateInfo structure during pipeline creation, or by the vkCmdSetStencilCompareMask command. s_r is set by VkPipelineDepthStencilStateCreateInfo or by vkCmdSetStencilReference.

s_r and s_a are each independently combined with s_c using a bitwise `AND` operation to create masked reference and attachment values s'_r and s'_a. s'_r and s'_a are used as the *reference* and *test* values, respectively, in the operation specified by the VkCompareOp.

If the comparison evaluates to false, the coverage for the sample is set to `0`.

A new stencil value s_g is generated according to a stencil operation defined by VkStencilOp parameters set by vkCmdSetStencilOp or VkPipelineDepthStencilStateCreateInfo. If the stencil test fails, `failOp` defines the stencil operation used. If the stencil test passes however, the stencil op used is based on the depth test - if it passes, VkPipelineDepthStencilStateCreateInfo::`passOp` is used, otherwise VkPipelineDepthStencilStateCreateInfo::`depthFailOp` is used.

The stencil attachment value s_a is then updated with the generated stencil value s_g according to the write mask s_w defined by `writeMask` in VkPipelineDepthStencilStateCreateInfo::`front` and VkPipelineDepthStencilStateCreateInfo::`back` as:

$$s_a = (s_a \mathbin{\square} \neg s_w) \mathbin{\square} (s_g \mathbin{\square} s_w)$$

To dynamically enable or disable the stencil test, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetStencilTestEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    stencilTestEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetStencilTestEnable
void vkCmdSetStencilTestEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    stencilTestEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stencilTestEnable` specifies if the stencil test is enabled.

This command sets the stencil test enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo ::`stencilTestEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetStencilTestEnable-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetStencilTestEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetStencilTestEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetStencilTestEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetStencilTestEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetStencilTestEnable is not affected by conditional rendering

To dynamically set the stencil operation, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetStencilOp(
    VkCommandBuffer                             commandBuffer,
    VkStencilFaceFlags                          faceMask,
    VkStencilOp                                 failOp,
    VkStencilOp                                 passOp,
    VkStencilOp                                 depthFailOp,
    VkCompareOp                                 compareOp);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetStencilOp
void vkCmdSetStencilOpEXT(
    VkCommandBuffer                             commandBuffer,
    VkStencilFaceFlags                          faceMask,
    VkStencilOp                                 failOp,
    VkStencilOp                                 passOp,
    VkStencilOp                                 depthFailOp,
    VkCompareOp                                 compareOp);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `faceMask` is a bitmask of VkStencilFaceFlagBits specifying the set of stencil state for which to update the stencil operation.
- `failOp` is a VkStencilOp value specifying the action performed on samples that fail the stencil test.
- `passOp` is a VkStencilOp value specifying the action performed on samples that pass both the depth and stencil tests.
- `depthFailOp` is a VkStencilOp value specifying the action performed on samples that pass the stencil test and fail the depth test.
- `compareOp` is a VkCompareOp value specifying the comparison operator used in the stencil test.

This command sets the stencil operation for subsequent drawing commands when when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_STENCIL_OP set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the corresponding VkPipelineDepthStencilStateCreateInfo ::failOp, passOp, depthFailOp, and compareOp values used to create the currently active pipeline, for both front and back faces.

Valid Usage

- VUID-vkCmdSetStencilOp-None-08971
  At least one of the following **must** be true:
  - the extendedDynamicState feature is enabled
  - the shaderObject feature is enabled
  - the value of VkApplicationInfo::apiVersion used to create the VkInstance parent of commandBuffer is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetStencilOp-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetStencilOp-faceMask-parameter
  faceMask **must** be a valid combination of VkStencilFaceFlagBits values
- VUID-vkCmdSetStencilOp-failOp-parameter
  failOp **must** be a valid VkStencilOp value
- VUID-vkCmdSetStencilOp-passOp-parameter
  passOp **must** be a valid VkStencilOp value
- VUID-vkCmdSetStencilOp-depthFailOp-parameter
  depthFailOp **must** be a valid VkStencilOp value
- VUID-vkCmdSetStencilOp-compareOp-parameter
  compareOp **must** be a valid VkCompareOp value
- VUID-vkCmdSetStencilOp-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetStencilOp-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetStencilOp-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetStencilOp is not affected by conditional rendering

The VkStencilOpState structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkStencilOpState {
    VkStencilOp    failOp;
    VkStencilOp    passOp;
    VkStencilOp    depthFailOp;
    VkCompareOp    compareOp;
    uint32_t       compareMask;
    uint32_t       writeMask;
    uint32_t       reference;
} VkStencilOpState;
```

- failOp is a VkStencilOp value specifying the action performed on samples that fail the stencil test.
- passOp is a VkStencilOp value specifying the action performed on samples that pass both the depth and stencil tests.
- depthFailOp is a VkStencilOp value specifying the action performed on samples that pass the stencil test and fail the depth test.
- compareOp is a VkCompareOp value specifying the comparison operator used in the stencil test.
- compareMask selects the bits of the unsigned integer stencil values participating in the stencil test.
- writeMask selects the bits of the unsigned integer stencil values updated by the stencil test in the stencil framebuffer attachment.
- reference is an integer stencil reference value that is used in the unsigned stencil comparison.

Valid Usage (Implicit)

- VUID-VkStencilOpState-failOp-parameter
  `failOp` **must** be a valid VkStencilOp value
- VUID-VkStencilOpState-passOp-parameter
  `passOp` **must** be a valid VkStencilOp value
- VUID-VkStencilOpState-depthFailOp-parameter
  `depthFailOp` **must** be a valid VkStencilOp value
- VUID-VkStencilOpState-compareOp-parameter
  `compareOp` **must** be a valid VkCompareOp value

To dynamically set the stencil compare mask, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetStencilCompareMask(
    VkCommandBuffer                             commandBuffer,
    VkStencilFaceFlags                          faceMask,
    uint32_t                                    compareMask);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `faceMask` is a bitmask of VkStencilFaceFlagBits specifying the set of stencil state for which to update the compare mask.
- `compareMask` is the new value to use as the stencil compare mask.

This command sets the stencil compare mask for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkStencilOpState::`compareMask` value used to create the currently active pipeline, for both front and back faces.

Valid Usage (Implicit)

- VUID-vkCmdSetStencilCompareMask-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetStencilCompareMask-faceMask-parameter
  `faceMask` **must** be a valid combination of VkStencilFaceFlagBits values
- VUID-vkCmdSetStencilCompareMask-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetStencilCompareMask-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetStencilCompareMask-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetStencilCompareMask is not affected by conditional rendering

VkStencilFaceFlagBits values are:

```
// Provided by VK_VERSION_1_0
typedef enum VkStencilFaceFlagBits {
    VK_STENCIL_FACE_FRONT_BIT = 0x00000001,
    VK_STENCIL_FACE_BACK_BIT = 0x00000002,
    VK_STENCIL_FACE_FRONT_AND_BACK = 0x00000003,
  // VK_STENCIL_FRONT_AND_BACK is a legacy alias
    VK_STENCIL_FRONT_AND_BACK = VK_STENCIL_FACE_FRONT_AND_BACK,
} VkStencilFaceFlagBits;
```

- VK_STENCIL_FACE_FRONT_BIT specifies that only the front set of stencil state is updated.
- VK_STENCIL_FACE_BACK_BIT specifies that only the back set of stencil state is updated.
- VK_STENCIL_FACE_FRONT_AND_BACK is the combination of VK_STENCIL_FACE_FRONT_BIT and VK_STENCIL_FACE_BACK_BIT, and specifies that both sets of stencil state are updated.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkStencilFaceFlags;
```

`VkStencilFaceFlags` is a bitmask type for setting a mask of zero or more VkStencilFaceFlagBits.

To dynamically set the stencil write mask, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetStencilWriteMask(
    VkCommandBuffer                             commandBuffer,
    VkStencilFaceFlags                          faceMask,
    uint32_t                                    writeMask);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `faceMask` is a bitmask of VkStencilFaceFlagBits specifying the set of stencil state for which to update the write mask, as described above for vkCmdSetStencilCompareMask.
- `writeMask` is the new value to use as the stencil write mask.

This command sets the stencil write mask for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_STENCIL_WRITE_MASK set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the `writeMask` value used to create the currently active pipeline, for both VkPipelineDepthStencilStateCreateInfo::`front` and VkPipelineDepthStencilStateCreateInfo::`back` faces.

Valid Usage (Implicit)

- VUID-vkCmdSetStencilWriteMask-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetStencilWriteMask-faceMask-parameter
  `faceMask` **must** be a valid combination of VkStencilFaceFlagBits values
- VUID-vkCmdSetStencilWriteMask-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetStencilWriteMask-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetStencilWriteMask-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetStencilWriteMask is not affected by conditional rendering

To dynamically set the stencil reference value, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetStencilReference(
    VkCommandBuffer                             commandBuffer,
    VkStencilFaceFlags                          faceMask,
    uint32_t                                    reference);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `faceMask` is a bitmask of VkStencilFaceFlagBits specifying the set of stencil state for which to update the reference value, as described above for vkCmdSetStencilCompareMask.
- `reference` is the new value to use as the stencil reference value.

This command sets the stencil reference value for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_STENCIL_REFERENCE set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo ::`reference` value used to create the currently active pipeline, for both front and back faces.

Valid Usage (Implicit)

- VUID-vkCmdSetStencilReference-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetStencilReference-faceMask-parameter
  `faceMask` **must** be a valid combination of VkStencilFaceFlagBits values
- VUID-vkCmdSetStencilReference-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetStencilReference-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetStencilReference-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetStencilReference is not affected by conditional rendering

Possible values of the `failOp`, `passOp`, and `depthFailOp` members of VkStencilOpState, specifying what happens to the stored stencil value if this or certain subsequent tests fail or pass, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkStencilOp {
    VK_STENCIL_OP_KEEP = 0,
    VK_STENCIL_OP_ZERO = 1,
    VK_STENCIL_OP_REPLACE = 2,
    VK_STENCIL_OP_INCREMENT_AND_CLAMP = 3,
    VK_STENCIL_OP_DECREMENT_AND_CLAMP = 4,
    VK_STENCIL_OP_INVERT = 5,
    VK_STENCIL_OP_INCREMENT_AND_WRAP = 6,
    VK_STENCIL_OP_DECREMENT_AND_WRAP = 7,
} VkStencilOp;
```

- VK_STENCIL_OP_KEEP keeps the current value.
- VK_STENCIL_OP_ZERO sets the value to 0.
- VK_STENCIL_OP_REPLACE sets the value to `reference`.
- VK_STENCIL_OP_INCREMENT_AND_CLAMP increments the current value and clamps to the maximum representable unsigned value.
- VK_STENCIL_OP_DECREMENT_AND_CLAMP decrements the current value and clamps to 0.
- VK_STENCIL_OP_INVERT bitwise-inverts the current value.

- VK_STENCIL_OP_INCREMENT_AND_WRAP increments the current value and wraps to 0 when the maximum value would have been exceeded.
- VK_STENCIL_OP_DECREMENT_AND_WRAP decrements the current value and wraps to the maximum possible value when the value would go below 0.

For purposes of increment and decrement, the stencil bits are considered as an unsigned integer.

32.9. Depth Test

The depth test compares the depth value z_a in the depth/stencil attachment at each sample's framebuffer coordinates (x_f,y_f) and sample index i against the sample's depth value z_f. If there is no depth attachment then the depth test is skipped.

If the render pass has a fragment density map attachment and the fragment covers multiple pixels, there is an implementation-dependent association of rasterization samples to depth attachment samples within the fragment. However, if all samples in the fragment are covered, and the depth attachment value is updated as a result of this test, all depth attachment samples will be updated.

The depth test occurs in three stages, as detailed in the following sections.

32.9.1. Depth Clamping and Range Adjustment

If VkPipelineRasterizationStateCreateInfo::`depthClampEnable` is enabled, z_f is clamped to [z_{min}, z_{max}], where z_{min} = min(n,f), z_{max} = max(n,f), and n and f are the `minDepth` and `maxDepth` depth range values of the viewport used by this fragment, respectively. If the `depthClampControl` feature is enabled and VkPipelineViewportDepthClampControlCreateInfoEXT::`depthClampMode` is VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT, then z_{min} and z_{max} are equal to the `minDepthClamp` and `maxDepthClamp` values of the VkDepthClampRangeEXT structure pointed to by `pDepthClampRange`.

If VkPhysicalDeviceDepthClampZeroOneFeaturesKHR::`depthClampZeroOne` is enabled:

- If the depth attachment has a floating-point format and VK_EXT_depth_range_unrestricted is enabled then z_f is unchanged.
- Otherwise, z_f is clamped to the range [0, 1].

Otherwise:

- If z_f is not in the range [z_{min}, z_{max}], then z_f is undefined following this step.
- If the depth attachment has a fixed-point format and z_f is not in the range [0, 1], then z_f is undefined following this step.

The `VkPipelineViewportDepthClampControlCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkPipelineViewportDepthClampControlCreateInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkDepthClampModeEXT            depthClampMode;
    const VkDepthClampRangeEXT*    pDepthClampRange;
} VkPipelineViewportDepthClampControlCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampMode` determines how the clamp range is determined for each viewport.
- `pDepthClampRange` sets the depth clamp range for all viewports if `depthClampMode` is VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT.

This structure extends `VkPipelineViewportStateCreateInfo` and specifies the depth clamp range used in the pipeline. If this structure is not provided in the next chain then `depthClampMode` defaults to VK_DEPTH_CLAMP_MODE_VIEWPORT_RANGE_EXT.

Valid Usage

- VUID-VkPipelineViewportDepthClampControlCreateInfoEXT-pDepthClampRange-09646
  If `depthClampMode` is VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT, and the pipeline is not created with VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT, then `pDepthClampRange` **must** be a valid pointer to a valid `VkDepthClampRangeEXT` structure

Valid Usage (Implicit)

- VUID-VkPipelineViewportDepthClampControlCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_DEPTH_CLAMP_CONTROL_CREATE_INFO_EXT
- VUID-VkPipelineViewportDepthClampControlCreateInfoEXT-depthClampMode-parameter
  `depthClampMode` **must** be a valid VkDepthClampModeEXT value
- VUID-VkPipelineViewportDepthClampControlCreateInfoEXT-pDepthClampRange-parameter
  If `pDepthClampRange` is not `NULL`, `pDepthClampRange` **must** be a valid pointer to a valid VkDepthClampRangeEXT structure

Structure Chaining

Extends the structure

- VkPipelineViewportStateCreateInfo

Possible values of VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode, specifying which range should be used for depth clamping, are:

```
// Provided by VK_EXT_depth_clamp_control
typedef enum VkDepthClampModeEXT {
    VK_DEPTH_CLAMP_MODE_VIEWPORT_RANGE_EXT = 0,
    VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT = 1,
} VkDepthClampModeEXT;
```

- VK_DEPTH_CLAMP_MODE_VIEWPORT_RANGE_EXT specifies that the depth clamp range follows the viewport depth range. The depth clamp range of each viewport will implicitly be set to z_{min} = min(n,f) and z_{max} = max(n,f), where n and f are the minDepth and maxDepth depth range values of the viewport.
- VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT specifies that a single user-defined depth clamp range will be used for all viewports. The user-defined depth clamp range is defined by the minDepthClamp and maxDepthClamp members of VkDepthClampRangeEXT.

To dynamically set the viewport depth clamp range parameters, call:

```
// Provided by VK_EXT_depth_clamp_control, VK_EXT_depth_clamp_control with
VK_EXT_shader_object
void vkCmdSetDepthClampRangeEXT(
    VkCommandBuffer                             commandBuffer,
    VkDepthClampModeEXT                         depthClampMode,
    const VkDepthClampRangeEXT*                 pDepthClampRange);
```

- commandBuffer is the command buffer into which the command will be recorded.
- depthClampMode determines how the clamp range is determined for each viewport.
- pDepthClampRange sets the depth clamp range for all viewports if depthClampMode is VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT.

This command sets the viewport depth clamp range for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthClampRangeEXT-pDepthClampRange-09647
  If depthClampMode is VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT, then pDepthClampRange must be a valid pointer to a valid VkDepthClampRangeEXT structure

Valid Usage (Implicit)

- VUID-vkCmdSetDepthClampRangeEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthClampRangeEXT-depthClampMode-parameter
  `depthClampMode` **must** be a valid VkDepthClampModeEXT value
- VUID-vkCmdSetDepthClampRangeEXT-pDepthClampRange-parameter
  If `pDepthClampRange` is not `NULL`, `pDepthClampRange` **must** be a valid pointer to a valid VkDepthClampRangeEXT structure
- VUID-vkCmdSetDepthClampRangeEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthClampRangeEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthClampRangeEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthClampRangeEXT is not affected by conditional rendering

Both VkPipelineViewportDepthClampControlCreateInfoEXT and vkCmdSetDepthClampRangeEXT use `VkDepthClampRangeEXT` to set the viewport depth clamp range parameters.

The `VkDepthClampRangeEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkDepthClampRangeEXT {
    float    minDepthClamp;
    float    maxDepthClamp;
} VkDepthClampRangeEXT;
```

- `minDepthClamp` sets z_{min} in the depth clamp range of the viewport.
- `maxDepthClamp` sets z_{max} in the depth clamp range of the viewport.

Valid Usage

- VUID-VkDepthClampRangeEXT-pDepthClampRange-00999
  `minDepthClamp` **must** be less than or equal to `maxDepthClamp`
- VUID-VkDepthClampRangeEXT-pDepthClampRange-09648
  If the `VK_EXT_depth_range_unrestricted` extension is not enabled, `minDepthClamp` **must** be greater than or equal to `0.0`
- VUID-VkDepthClampRangeEXT-pDepthClampRange-09649
  If the `VK_EXT_depth_range_unrestricted` extension is not enabled, `maxDepthClamp` **must** be less than or equal to `1.0`

32.9.2. Depth Comparison

If the depth test is not enabled, as specified by vkCmdSetDepthTestEnable or VkPipelineDepthStencilStateCreateInfo::`depthTestEnable`, then this step is skipped.

The comparison operation performed is determined by the VkCompareOp value set by vkCmdSetDepthCompareOp, or by VkPipelineDepthStencilStateCreateInfo::`depthCompareOp` during pipeline creation. z_f and z_a are used as the *reference* and *test* values, respectively, in the operation specified by the VkCompareOp.

If the comparison evaluates to false, the coverage for the sample is set to `0`.

32.9.3. Depth Attachment Writes

If depth writes are enabled, as specified by vkCmdSetDepthWriteEnable or VkPipelineDepthStencilStateCreateInfo::`depthWriteEnable`, and the comparison evaluated to true, the depth attachment value z_a is set to the sample's depth value z_f. If there is no depth attachment, no value is written.

To dynamically enable or disable the depth test, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetDepthTestEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthTestEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetDepthTestEnable
void vkCmdSetDepthTestEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthTestEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthTestEnable` specifies if the depth test is enabled.

This command sets the depth test enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo ::`depthTestEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthTestEnable-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetDepthTestEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthTestEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthTestEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthTestEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthTestEnable is not affected by conditional rendering

To dynamically set the depth compare operator, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetDepthCompareOp(
    VkCommandBuffer                             commandBuffer,
    VkCompareOp                                 depthCompareOp);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetDepthCompareOp
void vkCmdSetDepthCompareOpEXT(
    VkCommandBuffer                             commandBuffer,
    VkCompareOp                                 depthCompareOp);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthCompareOp` is a VkCompareOp value specifying the comparison operator used for the Depth Comparison step of the depth test.

This command sets the depth comparison operator for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_COMPARE_OP set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo::`depthCompareOp` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthCompareOp-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetDepthCompareOp-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthCompareOp-depthCompareOp-parameter
  `depthCompareOp` **must** be a valid VkCompareOp value
- VUID-vkCmdSetDepthCompareOp-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthCompareOp-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthCompareOp-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthCompareOp is not affected by conditional rendering

To dynamically set the depth write enable, call:

```
// Provided by VK_VERSION_1_3
void vkCmdSetDepthWriteEnable(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthWriteEnable);
```

```
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
// Equivalent to vkCmdSetDepthWriteEnable
void vkCmdSetDepthWriteEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    depthWriteEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `depthWriteEnable` specifies if depth writes are enabled.

This command sets the depth write enable for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineDepthStencilStateCreateInfo::`depthWriteEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetDepthWriteEnable-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of VkApplicationInfo::`apiVersion` used to create the VkInstance parent of `commandBuffer` is greater than or equal to Version 1.3

Valid Usage (Implicit)

- VUID-vkCmdSetDepthWriteEnable-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDepthWriteEnable-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDepthWriteEnable-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDepthWriteEnable-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDepthWriteEnable is not affected by conditional rendering

32.10. Sample Counting

Occlusion queries use query pool entries to track the number of samples that pass all the per-fragment tests. The mechanism of collecting an occlusion query value is described in Occlusion Queries.

The occlusion query sample counter increments by one for each sample with a coverage value of 1 in each fragment that survives all the per-fragment tests, including scissor, sample mask, alpha to coverage, stencil, and depth tests.

32.11. Coverage Reduction

Coverage reduction takes the coverage information for a fragment and converts that to a boolean coverage value for each color sample in each pixel covered by the fragment.

32.11.1. Pixel Coverage

Coverage for each pixel is first extracted from the total fragment coverage mask. This consists of `rasterizationSamples` unique coverage samples for each pixel in the fragment area, each with a unique sample index. If the fragment only contains a single pixel, coverage for the pixel is equivalent to the fragment coverage.

If the render pass has a fragment density map attachment and the fragment covers multiple pixels, pixel coverage is generated in an implementation-dependent manner. If all samples in the fragment are covered, all samples will be covered in each pixel coverage.

If the fragment shading rate is set, and the fragment covers multiple pixels, each pixel's coverage consists of the coverage samples with a pixel index matching that pixel, and each sample retains its unique sample index i.

32.11.2. Color Sample Coverage

Once pixel coverage is determined, coverage for each individual color sample corresponding to that pixel is determined.

The number of rasterizationSamples is identical to the number of samples in the color attachments. A color sample is covered if the pixel coverage sample with the same sample index i is covered.

If the pNext chain of VkSubpassDescription2 or VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with the multisampledRenderToSingleSampledEnable field equal to VK_TRUE, sample coverage is calculated as if the attachment has VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples samples.

Chapter 33. The Framebuffer

33.1. Blending

Blending combines the incoming *source* fragment's R, G, B, and A values with the *destination* R, G, B, and A values of each sample stored in the framebuffer at the fragment's (x_f,y_f) location. If any components are missing in the framebuffer attachment, they are replaced as described in Component Substitution. Blending is performed for each color sample covered by the fragment, rather than just once for each fragment.

Source and destination values are combined according to the blend operation, quadruplets of source and destination weighting factors determined by the blend factors, and a blend constant, to obtain a new set of R, G, B, and A values, as described below.

Blending is computed and applied separately to each color attachment used by the subpass, with separate controls for each attachment.

Prior to performing the blend operation, signed and unsigned normalized fixed-point color components undergo an implied conversion to floating-point as specified by Conversion from Normalized Fixed-Point to Floating-Point. Blending computations are treated as if carried out in floating-point, and basic blend operations are performed with a precision and dynamic range no lower than that used to represent destination components. Advanced blending operations are performed with a precision and dynamic range no lower than the smaller of that used to represent destination components or that used to represent 16-bit floating-point values.

NOTE	Blending is only defined for floating-point, UNORM, SNORM, and sRGB formats. Within those formats, the implementation may only support blending on some subset of them. Which formats support blending is indicated by VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT.

The pipeline blend state is included in the `VkPipelineColorBlendStateCreateInfo` structure during graphics pipeline creation:

The `VkPipelineColorBlendStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineColorBlendStateCreateInfo {
    VkStructureType                               sType;
    const void*                                   pNext;
    VkPipelineColorBlendStateCreateFlags          flags;
    VkBool32                                      logicOpEnable;
    VkLogicOp                                     logicOp;
    uint32_t                                      attachmentCount;
    const VkPipelineColorBlendAttachmentState*    pAttachments;
    float                                         blendConstants[4];
} VkPipelineColorBlendStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineColorBlendStateCreateFlagBits specifying additional color blending information.
- `logicOpEnable` controls whether to apply Logical Operations.
- `logicOp` selects which logical operation to apply.
- `attachmentCount` is the number of VkPipelineColorBlendAttachmentState elements in `pAttachments`. It is ignored if the pipeline is created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT, and VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states set, and either VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT set or the advancedBlendCoherentOperations feature is not enabled.
- `pAttachments` is a pointer to an array of VkPipelineColorBlendAttachmentState structures defining blend state for each color attachment. It is ignored if the pipeline is created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT, and VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states set, and either VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT set or the advancedBlendCoherentOperations feature is not enabled.
- `blendConstants` is a pointer to an array of four values used as the R, G, B, and A components of the blend constant that are used in blending, depending on the blend factor.

Valid Usage

- VUID-VkPipelineColorBlendStateCreateInfo-pAttachments-00605
  If the `independentBlend` feature is not enabled, all elements of `pAttachments` **must** be identical
- VUID-VkPipelineColorBlendStateCreateInfo-logicOpEnable-00606
  If the `logicOp` feature is not enabled, `logicOpEnable` **must** be VK_FALSE
- VUID-VkPipelineColorBlendStateCreateInfo-logicOpEnable-00607
  If `logicOpEnable` is VK_TRUE, `logicOp` **must** be a valid VkLogicOp value
- VUID-VkPipelineColorBlendStateCreateInfo-rasterizationOrderColorAttachmentAccess-06465
  If the `rasterizationOrderColorAttachmentAccess` feature is not enabled, `flags` **must** not include VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT
- VUID-VkPipelineColorBlendStateCreateInfo-pAttachments-07353
  If `attachmentCount` is not `0`, and any of VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT, or

VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT are not set, pAttachments **must** be a valid pointer to an array of attachmentCount valid VkPipelineColorBlendAttachmentState structures

Valid Usage (Implicit)

- VUID-VkPipelineColorBlendStateCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_COLOR_BLEND_STATE_CREATE_INFO
- VUID-VkPipelineColorBlendStateCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkPipelineColorBlendAdvancedStateCreateInfoEXT or VkPipelineColorWriteCreateInfoEXT
- VUID-VkPipelineColorBlendStateCreateInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkPipelineColorBlendStateCreateInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkPipelineColorBlendStateCreateFlagBits values
- VUID-VkPipelineColorBlendStateCreateInfo-pAttachments-parameter
  If attachmentCount is not 0, and pAttachments is not NULL, pAttachments **must** be a valid pointer to an array of attachmentCount valid VkPipelineColorBlendAttachmentState structures

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineColorBlendStateCreateFlags;
```

VkPipelineColorBlendStateCreateFlags is a bitmask type for setting a mask of zero or more VkPipelineColorBlendStateCreateFlagBits.

Bits which **can** be set in the VkPipelineColorBlendStateCreateInfo::flags parameter are:

```
// Provided by VK_VERSION_1_0, VK_EXT_rasterization_order_attachment_access
typedef enum VkPipelineColorBlendStateCreateFlagBits {
  // Provided by VK_EXT_rasterization_order_attachment_access
    VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT
= 0x00000001,
} VkPipelineColorBlendStateCreateFlagBits;
```

- VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT specifies that access to color and input attachments will have implicit framebuffer-local memory dependencies, allowing applications to express custom blending operations in a fragment shader.

When

VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_EXT is included in a pipeline, it forms a framebuffer-local memory dependency for each fragment generated by draw commands for that pipeline with the following scopes:

- The first synchronization scope includes the VK_PIPELINE_STAGE_COLOR_ATTACHMENT_OUTPUT_BIT pipeline stage executed by all previous fragments (as defined by primitive order) in the corresponding framebuffer regions including those generated by the same draw command.
- The second synchronization scope includes the VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT pipeline stage executed by the generated fragment.
- The first access scope includes all writes to color attachments.
- The second access scope includes all reads from input attachments.

The VkPipelineColorBlendAttachmentState structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineColorBlendAttachmentState {
    VkBool32                 blendEnable;
    VkBlendFactor            srcColorBlendFactor;
    VkBlendFactor            dstColorBlendFactor;
    VkBlendOp                colorBlendOp;
    VkBlendFactor            srcAlphaBlendFactor;
    VkBlendFactor            dstAlphaBlendFactor;
    VkBlendOp                alphaBlendOp;
    VkColorComponentFlags    colorWriteMask;
} VkPipelineColorBlendAttachmentState;
```

- blendEnable controls whether blending is enabled for the corresponding color attachment. If blending is not enabled, the source fragment's color for that attachment is passed through unmodified.
- srcColorBlendFactor selects which blend factor is used to determine the source factors (S_r,S_g,S_b).
- dstColorBlendFactor selects which blend factor is used to determine the destination factors (D_r,D_g,D_b).
- colorBlendOp selects which blend operation is used to calculate the RGB values to write to the color attachment.
- srcAlphaBlendFactor selects which blend factor is used to determine the source factor S_a.
- dstAlphaBlendFactor selects which blend factor is used to determine the destination factor D_a.
- alphaBlendOp selects which blend operation is used to calculate the alpha values to write to the color attachment.
- colorWriteMask is a bitmask of VkColorComponentFlagBits specifying which of the R, G, B, and/or A components are enabled for writing, as described for the Color Write Mask.

Valid Usage

- VUID-VkPipelineColorBlendAttachmentState-srcColorBlendFactor-00608
  If the dualSrcBlend feature is not enabled, srcColorBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkPipelineColorBlendAttachmentState-dstColorBlendFactor-00609
  If the dualSrcBlend feature is not enabled, dstColorBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkPipelineColorBlendAttachmentState-srcAlphaBlendFactor-00610
  If the dualSrcBlend feature is not enabled, srcAlphaBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkPipelineColorBlendAttachmentState-dstAlphaBlendFactor-00611
  If the dualSrcBlend feature is not enabled, dstAlphaBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkPipelineColorBlendAttachmentState-colorBlendOp-01406
  If either of colorBlendOp or alphaBlendOp is an advanced blend operation, then colorBlendOp **must** equal alphaBlendOp
- VUID-VkPipelineColorBlendAttachmentState-advancedBlendIndependentBlend-01407
  If VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendIndependentBlend is VK_FALSE and colorBlendOp is an advanced blend operation, then colorBlendOp **must** be the same for all attachments
- VUID-VkPipelineColorBlendAttachmentState-advancedBlendIndependentBlend-01408
  If VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendIndependentBlend is VK_FALSE and alphaBlendOp is an advanced blend operation, then alphaBlendOp **must** be the same for all attachments
- VUID-VkPipelineColorBlendAttachmentState-advancedBlendAllOperations-01409
  If VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendAllOperations is VK_FALSE, then colorBlendOp **must** not be VK_BLEND_OP_ZERO_EXT, VK_BLEND_OP_SRC_EXT, VK_BLEND_OP_DST_EXT, VK_BLEND_OP_SRC_OVER_EXT, VK_BLEND_OP_DST_OVER_EXT, VK_BLEND_OP_SRC_IN_EXT, VK_BLEND_OP_DST_IN_EXT, VK_BLEND_OP_SRC_OUT_EXT, VK_BLEND_OP_DST_OUT_EXT, VK_BLEND_OP_SRC_ATOP_EXT, VK_BLEND_OP_DST_ATOP_EXT, VK_BLEND_OP_XOR_EXT, VK_BLEND_OP_INVERT_EXT, VK_BLEND_OP_INVERT_RGB_EXT, VK_BLEND_OP_LINEARDODGE_EXT, VK_BLEND_OP_LINEARBURN_EXT, VK_BLEND_OP_VIVIDLIGHT_EXT, VK_BLEND_OP_LINEARLIGHT_EXT, VK_BLEND_OP_PINLIGHT_EXT, VK_BLEND_OP_HARDMIX_EXT, VK_BLEND_OP_PLUS_EXT, VK_BLEND_OP_PLUS_CLAMPED_EXT, VK_BLEND_OP_PLUS_CLAMPED_ALPHA_EXT, VK_BLEND_OP_PLUS_DARKER_EXT, VK_BLEND_OP_MINUS_EXT, VK_BLEND_OP_MINUS_CLAMPED_EXT, VK_BLEND_OP_CONTRAST_EXT, VK_BLEND_OP_INVERT_OVG_EXT,

VK_BLEND_OP_RED_EXT, VK_BLEND_OP_GREEN_EXT, or VK_BLEND_OP_BLUE_EXT

- VUID-VkPipelineColorBlendAttachmentState-colorBlendOp-01410
  If `colorBlendOp` or `alphaBlendOp` is an advanced blend operation, then `colorAttachmentCount` of the subpass this pipeline is compiled against **must** be less than or equal to VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::`advancedBlendMaxColorAttachments`
- VUID-VkPipelineColorBlendAttachmentState-constantAlphaColorBlendFactors-04454
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`constantAlphaColorBlendFactors` is VK_FALSE, `srcColorBlendFactor` **must** not be VK_BLEND_FACTOR_CONSTANT_ALPHA or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA
- VUID-VkPipelineColorBlendAttachmentState-constantAlphaColorBlendFactors-04455
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`constantAlphaColorBlendFactors` is VK_FALSE, `dstColorBlendFactor` **must** not be VK_BLEND_FACTOR_CONSTANT_ALPHA or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA

Valid Usage (Implicit)

- VUID-VkPipelineColorBlendAttachmentState-srcColorBlendFactor-parameter
  `srcColorBlendFactor` **must** be a valid VkBlendFactor value
- VUID-VkPipelineColorBlendAttachmentState-dstColorBlendFactor-parameter
  `dstColorBlendFactor` **must** be a valid VkBlendFactor value
- VUID-VkPipelineColorBlendAttachmentState-colorBlendOp-parameter
  `colorBlendOp` **must** be a valid VkBlendOp value
- VUID-VkPipelineColorBlendAttachmentState-srcAlphaBlendFactor-parameter
  `srcAlphaBlendFactor` **must** be a valid VkBlendFactor value
- VUID-VkPipelineColorBlendAttachmentState-dstAlphaBlendFactor-parameter
  `dstAlphaBlendFactor` **must** be a valid VkBlendFactor value
- VUID-VkPipelineColorBlendAttachmentState-alphaBlendOp-parameter
  `alphaBlendOp` **must** be a valid VkBlendOp value
- VUID-VkPipelineColorBlendAttachmentState-colorWriteMask-parameter
  If `colorWriteMask` is not `0`, `colorWriteMask` **must** be a valid combination of VkColorComponentFlagBits values

To dynamically set `blendEnable`, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetColorBlendEnableEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstAttachment,
    uint32_t                                    attachmentCount,
    const VkBool32*                             pColorBlendEnables);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstAttachment` the first color attachment the color blending enable applies.
- `attachmentCount` the number of color blending enables in the `pColorBlendEnables` array.
- `pColorBlendEnables` an array of booleans to indicate whether color blending is enabled for the corresponding attachment.

This command sets the color blending enable of the specified color attachments for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendAttachmentState ::`blendEnable` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetColorBlendEnableEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3ColorBlendEnable` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetColorBlendEnableEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetColorBlendEnableEXT-pColorBlendEnables-parameter
  `pColorBlendEnables` **must** be a valid pointer to an array of `attachmentCount` VkBool32 values
- VUID-vkCmdSetColorBlendEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetColorBlendEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetColorBlendEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetColorBlendEnableEXT-attachmentCount-arraylength
  `attachmentCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetColorBlendEnableEXT is not affected by conditional rendering

To dynamically set color blend factors and operations, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetColorBlendEquationEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstAttachment,
    uint32_t                                    attachmentCount,
    const VkColorBlendEquationEXT*              pColorBlendEquations);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstAttachment` the first color attachment the color blend factors and operations apply to.
- `attachmentCount` the number of VkColorBlendEquationEXT elements in the `pColorBlendEquations` array.
- `pColorBlendEquations` an array of VkColorBlendEquationEXT structs that specify the color blend factors and operations for the corresponding attachments.

This command sets the color blending factors and operations of the specified attachments for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendAttachmentState::`srcColorBlendFactor`, VkPipelineColorBlendAttachmentState::`dstColorBlendFactor`, VkPipelineColorBlendAttachmentState::`colorBlendOp`, VkPipelineColorBlendAttachmentState::`srcAlphaBlendFactor`, VkPipelineColorBlendAttachmentState::`dstAlphaBlendFactor`, and VkPipelineColorBlendAttachmentState::`alphaBlendOp` values used to create the currently active

pipeline.

Valid Usage

- VUID-vkCmdSetColorBlendEquationEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3ColorBlendEquation` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetColorBlendEquationEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetColorBlendEquationEXT-pColorBlendEquations-parameter
  `pColorBlendEquations` **must** be a valid pointer to an array of `attachmentCount` valid VkColorBlendEquationEXT structures
- VUID-vkCmdSetColorBlendEquationEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetColorBlendEquationEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetColorBlendEquationEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetColorBlendEquationEXT-attachmentCount-arraylength
  `attachmentCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetColorBlendEquationEXT is not affected by conditional rendering

The VkColorBlendEquationEXT structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
typedef struct VkColorBlendEquationEXT {
    VkBlendFactor    srcColorBlendFactor;
    VkBlendFactor    dstColorBlendFactor;
    VkBlendOp        colorBlendOp;
    VkBlendFactor    srcAlphaBlendFactor;
    VkBlendFactor    dstAlphaBlendFactor;
    VkBlendOp        alphaBlendOp;
} VkColorBlendEquationEXT;
```

- srcColorBlendFactor selects which blend factor is used to determine the source factors (S_r,S_g,S_b).
- dstColorBlendFactor selects which blend factor is used to determine the destination factors (D_r,D_g,D_b).
- colorBlendOp selects which blend operation is used to calculate the RGB values to write to the color attachment.
- srcAlphaBlendFactor selects which blend factor is used to determine the source factor S_a.
- dstAlphaBlendFactor selects which blend factor is used to determine the destination factor D_a.
- alphaBlendOp selects which blend operation is use to calculate the alpha values to write to the color attachment.

Valid Usage

- VUID-VkColorBlendEquationEXT-dualSrcBlend-07357
  If the dualSrcBlend feature is not enabled, srcColorBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkColorBlendEquationEXT-dualSrcBlend-07358
  If the dualSrcBlend feature is not enabled, dstColorBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkColorBlendEquationEXT-dualSrcBlend-07359
  If the dualSrcBlend feature is not enabled, srcAlphaBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA
- VUID-VkColorBlendEquationEXT-dualSrcBlend-07360
  If the dualSrcBlend feature is not enabled, dstAlphaBlendFactor **must** not be VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR,

VK_BLEND_FACTOR_SRC1_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA

- VUID-VkColorBlendEquationEXT-colorBlendOp-07361
  colorBlendOp and alphaBlendOp **must** not be VK_BLEND_OP_ZERO_EXT, VK_BLEND_OP_SRC_EXT, VK_BLEND_OP_DST_EXT, VK_BLEND_OP_SRC_OVER_EXT, VK_BLEND_OP_DST_OVER_EXT, VK_BLEND_OP_SRC_IN_EXT, VK_BLEND_OP_DST_IN_EXT, VK_BLEND_OP_SRC_OUT_EXT, VK_BLEND_OP_DST_OUT_EXT, VK_BLEND_OP_SRC_ATOP_EXT, VK_BLEND_OP_DST_ATOP_EXT, VK_BLEND_OP_XOR_EXT, VK_BLEND_OP_MULTIPLY_EXT, VK_BLEND_OP_SCREEN_EXT, VK_BLEND_OP_OVERLAY_EXT, VK_BLEND_OP_DARKEN_EXT, VK_BLEND_OP_LIGHTEN_EXT, VK_BLEND_OP_COLORDODGE_EXT, VK_BLEND_OP_COLORBURN_EXT, VK_BLEND_OP_HARDLIGHT_EXT, VK_BLEND_OP_SOFTLIGHT_EXT, VK_BLEND_OP_DIFFERENCE_EXT, VK_BLEND_OP_EXCLUSION_EXT, VK_BLEND_OP_INVERT_EXT, VK_BLEND_OP_INVERT_RGB_EXT, VK_BLEND_OP_LINEARDODGE_EXT, VK_BLEND_OP_LINEARBURN_EXT, VK_BLEND_OP_VIVIDLIGHT_EXT, VK_BLEND_OP_LINEARLIGHT_EXT, VK_BLEND_OP_PINLIGHT_EXT, VK_BLEND_OP_HARDMIX_EXT, VK_BLEND_OP_HSL_HUE_EXT, VK_BLEND_OP_HSL_SATURATION_EXT, VK_BLEND_OP_HSL_COLOR_EXT, VK_BLEND_OP_HSL_LUMINOSITY_EXT, VK_BLEND_OP_PLUS_EXT, VK_BLEND_OP_PLUS_CLAMPED_EXT, VK_BLEND_OP_PLUS_CLAMPED_ALPHA_EXT, VK_BLEND_OP_PLUS_DARKER_EXT, VK_BLEND_OP_MINUS_EXT, VK_BLEND_OP_MINUS_CLAMPED_EXT, VK_BLEND_OP_CONTRAST_EXT, VK_BLEND_OP_INVERT_OVG_EXT, VK_BLEND_OP_RED_EXT, VK_BLEND_OP_GREEN_EXT, or VK_BLEND_OP_BLUE_EXT
- VUID-VkColorBlendEquationEXT-constantAlphaColorBlendFactors-07362
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::constantAlphaColorBlendFactors is VK_FALSE, srcColorBlendFactor **must** not be VK_BLEND_FACTOR_CONSTANT_ALPHA or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA
- VUID-VkColorBlendEquationEXT-constantAlphaColorBlendFactors-07363
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::constantAlphaColorBlendFactors is VK_FALSE, dstColorBlendFactor **must** not be VK_BLEND_FACTOR_CONSTANT_ALPHA or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA

Valid Usage (Implicit)

- VUID-VkColorBlendEquationEXT-srcColorBlendFactor-parameter
  srcColorBlendFactor **must** be a valid VkBlendFactor value
- VUID-VkColorBlendEquationEXT-dstColorBlendFactor-parameter
  dstColorBlendFactor **must** be a valid VkBlendFactor value
- VUID-VkColorBlendEquationEXT-colorBlendOp-parameter
  colorBlendOp **must** be a valid VkBlendOp value
- VUID-VkColorBlendEquationEXT-srcAlphaBlendFactor-parameter

`srcAlphaBlendFactor` **must** be a valid VkBlendFactor value

- VUID-VkColorBlendEquationEXT-dstAlphaBlendFactor-parameter
  `dstAlphaBlendFactor` **must** be a valid VkBlendFactor value
- VUID-VkColorBlendEquationEXT-alphaBlendOp-parameter
  `alphaBlendOp` **must** be a valid VkBlendOp value

To dynamically set the color write masks, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetColorWriteMaskEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstAttachment,
    uint32_t                                    attachmentCount,
    const VkColorComponentFlags*                pColorWriteMasks);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstAttachment` the first color attachment the color write masks apply to.
- `attachmentCount` the number of VkColorComponentFlags values in the `pColorWriteMasks` array.
- `pColorWriteMasks` an array of VkColorComponentFlags values that specify the color write masks of the corresponding attachments.

This command sets the color write masks of the specified attachments for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendAttachmentState ::`colorWriteMask` values used to create the currently active pipeline.

NOTE

Formats with bits that are shared between components specified by VkColorComponentFlagBits, such as VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, cannot have their channels individually masked by this functionality; either all components that share bits have to be enabled, or none of them.

Valid Usage

- VUID-vkCmdSetColorWriteMaskEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3ColorWriteMask` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetColorWriteMaskEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid VkCommandBuffer handle

- VUID-vkCmdSetColorWriteMaskEXT-pColorWriteMasks-parameter
  `pColorWriteMasks` **must** be a valid pointer to an array of `attachmentCount` valid combinations of VkColorComponentFlagBits values
- VUID-vkCmdSetColorWriteMaskEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetColorWriteMaskEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetColorWriteMaskEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetColorWriteMaskEXT-attachmentCount-arraylength
  `attachmentCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetColorWriteMaskEXT is not affected by conditional rendering

33.1.1. Blend Factors

The source and destination color and alpha blending factors are selected from the enum:

```
// Provided by VK_VERSION_1_0
typedef enum VkBlendFactor {
    VK_BLEND_FACTOR_ZERO = 0,
    VK_BLEND_FACTOR_ONE = 1,
    VK_BLEND_FACTOR_SRC_COLOR = 2,
    VK_BLEND_FACTOR_ONE_MINUS_SRC_COLOR = 3,
    VK_BLEND_FACTOR_DST_COLOR = 4,
    VK_BLEND_FACTOR_ONE_MINUS_DST_COLOR = 5,
    VK_BLEND_FACTOR_SRC_ALPHA = 6,
    VK_BLEND_FACTOR_ONE_MINUS_SRC_ALPHA = 7,
    VK_BLEND_FACTOR_DST_ALPHA = 8,
    VK_BLEND_FACTOR_ONE_MINUS_DST_ALPHA = 9,
    VK_BLEND_FACTOR_CONSTANT_COLOR = 10,
    VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR = 11,
    VK_BLEND_FACTOR_CONSTANT_ALPHA = 12,
    VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA = 13,
    VK_BLEND_FACTOR_SRC_ALPHA_SATURATE = 14,
    VK_BLEND_FACTOR_SRC1_COLOR = 15,
    VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR = 16,
    VK_BLEND_FACTOR_SRC1_ALPHA = 17,
    VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA = 18,
} VkBlendFactor;
```

The semantics of the enum values are described in the table below:

Table 38. Blend Factors

VkBlendFactor	**RGB Blend Factors (S_r,S_g,S_b) or (D_r,D_g,D_b)**	**Alpha Blend Factor (S_a or D_a)**
VK_BLEND_FACTOR_ZERO	(0,0,0)	0
VK_BLEND_FACTOR_ONE	(1,1,1)	1
VK_BLEND_FACTOR_SRC_COLOR	(R_{s0},G_{s0},B_{s0})	A_{s0}
VK_BLEND_FACTOR_ONE_MINUS_SRC_COLOR	(1-R_{s0},1-G_{s0},1-B_{s0})	1-A_{s0}
VK_BLEND_FACTOR_DST_COLOR	(R_d,G_d,B_d)	A_d
VK_BLEND_FACTOR_ONE_MINUS_DST_COLOR	(1-R_d,1-G_d,1-B_d)	1-A_d
VK_BLEND_FACTOR_SRC_ALPHA	(A_{s0},A_{s0},A_{s0})	A_{s0}
VK_BLEND_FACTOR_ONE_MINUS_SRC_ALPHA	(1-A_{s0},1-A_{s0},1-A_{s0})	1-A_{s0}
VK_BLEND_FACTOR_DST_ALPHA	(A_d,A_d,A_d)	A_d
VK_BLEND_FACTOR_ONE_MINUS_DST_ALPHA	(1-A_d,1-A_d,1-A_d)	1-A_d
VK_BLEND_FACTOR_CONSTANT_COLOR	(R_c,G_c,B_c)	A_c
VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR	(1-R_c,1-G_c,1-B_c)	1-A_c
VK_BLEND_FACTOR_CONSTANT_ALPHA	(A_c,A_c,A_c)	A_c

VkBlendFactor	RGB Blend Factors (S_r,S_g,S_b) or (D_r,D_g,D_b)	Alpha Blend Factor (S_a or D_a)
VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA	($1-A_c$,$1-A_c$,$1-A_c$)	$1-A_c$
VK_BLEND_FACTOR_SRC_ALPHA_SATURATE	(f,f,f); f = $\min(A_{s0},1-A_d)$	1
VK_BLEND_FACTOR_SRC1_COLOR	(R_{s1},G_{s1},B_{s1})	A_{s1}
VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR	($1-R_{s1}$,$1-G_{s1}$,$1-B_{s1}$)	$1-A_{s1}$
VK_BLEND_FACTOR_SRC1_ALPHA	(A_{s1},A_{s1},A_{s1})	A_{s1}
VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA	($1-A_{s1}$,$1-A_{s1}$,$1-A_{s1}$)	$1-A_{s1}$

In this table, the following conventions are used:

- R_{s0},G_{s0},B_{s0} and A_{s0} represent the first source color R, G, B, and A components, respectively, for the fragment output location corresponding to the color attachment being blended.
- R_{s1},G_{s1},B_{s1} and A_{s1} represent the second source color R, G, B, and A components, respectively, used in dual source blending modes, for the fragment output location corresponding to the color attachment being blended.
- R_d,G_d,B_d and A_d represent the R, G, B, and A components of the destination color. That is, the color currently in the corresponding color attachment for this fragment/sample.
- R_c,G_c,B_c and A_c represent the blend constant R, G, B, and A components, respectively.

To dynamically set and change the blend constants, call:

```
// Provided by VK_VERSION_1_0
void vkCmdSetBlendConstants(
    VkCommandBuffer                             commandBuffer,
    const float                                 blendConstants[4]);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `blendConstants` is a pointer to an array of four values specifying the R_c, G_c, B_c, and A_c components of the blend constant color used in blending, depending on the blend factor.

This command sets blend constants for subsequent drawing commands when when drawing using shader objects, or the graphics pipeline is created with VK_DYNAMIC_STATE_BLEND_CONSTANTS set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendStateCreateInfo::`blendConstants` values used to create the currently active pipeline.

Valid Usage (Implicit)

- VUID-vkCmdSetBlendConstants-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle

- VUID-vkCmdSetBlendConstants-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetBlendConstants-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetBlendConstants-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetBlendConstants is not affected by conditional rendering

33.1.2. Dual-Source Blending

Blend factors that use the secondary color input (R_{s1},G_{s1},B_{s1},A_{s1}) (VK_BLEND_FACTOR_SRC1_COLOR, VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR, VK_BLEND_FACTOR_SRC1_ALPHA, and VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA) **may** consume implementation resources that could otherwise be used for rendering to multiple color attachments. Therefore, the number of color attachments that **can** be used in a framebuffer **may** be lower when using dual-source blending.

Dual-source blending is only supported if the `dualSrcBlend` feature is enabled.

The maximum number of color attachments that **can** be used in a subpass when using dual-source blending functions is implementation-dependent and is reported as the `maxFragmentDualSrcAttachments` member of `VkPhysicalDeviceLimits`.

Color outputs **can** be bound to the first and second inputs of the blender using the `Index` decoration, as described in Fragment Output Interface. If the second color input to the blender is not written in

the shader, or if no output is bound to the second input of a blender, the value of the second input is undefined.

33.1.3. Blend Operations

Once the source and destination blend factors have been selected, they along with the source and destination components are passed to the blending operations. RGB and alpha components **can** use different operations. Possible values of VkBlendOp, specifying the operations, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBlendOp {
    VK_BLEND_OP_ADD = 0,
    VK_BLEND_OP_SUBTRACT = 1,
    VK_BLEND_OP_REVERSE_SUBTRACT = 2,
    VK_BLEND_OP_MIN = 3,
    VK_BLEND_OP_MAX = 4,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_ZERO_EXT = 1000148000,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SRC_EXT = 1000148001,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DST_EXT = 1000148002,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SRC_OVER_EXT = 1000148003,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DST_OVER_EXT = 1000148004,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SRC_IN_EXT = 1000148005,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DST_IN_EXT = 1000148006,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SRC_OUT_EXT = 1000148007,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DST_OUT_EXT = 1000148008,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SRC_ATOP_EXT = 1000148009,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DST_ATOP_EXT = 1000148010,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_XOR_EXT = 1000148011,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_MULTIPLY_EXT = 1000148012,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SCREEN_EXT = 1000148013,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_OVERLAY_EXT = 1000148014,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DARKEN_EXT = 1000148015,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_LIGHTEN_EXT = 1000148016,
```

```
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_COLORDODGE_EXT = 1000148017,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_COLORBURN_EXT = 1000148018,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HARDLIGHT_EXT = 1000148019,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_SOFTLIGHT_EXT = 1000148020,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_DIFFERENCE_EXT = 1000148021,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_EXCLUSION_EXT = 1000148022,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_INVERT_EXT = 1000148023,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_INVERT_RGB_EXT = 1000148024,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_LINEARDODGE_EXT = 1000148025,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_LINEARBURN_EXT = 1000148026,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_VIVIDLIGHT_EXT = 1000148027,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_LINEARLIGHT_EXT = 1000148028,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_PINLIGHT_EXT = 1000148029,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HARDMIX_EXT = 1000148030,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HSL_HUE_EXT = 1000148031,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HSL_SATURATION_EXT = 1000148032,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HSL_COLOR_EXT = 1000148033,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_HSL_LUMINOSITY_EXT = 1000148034,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_PLUS_EXT = 1000148035,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_PLUS_CLAMPED_EXT = 1000148036,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_PLUS_CLAMPED_ALPHA_EXT = 1000148037,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_PLUS_DARKER_EXT = 1000148038,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_MINUS_EXT = 1000148039,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_MINUS_CLAMPED_EXT = 1000148040,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_CONTRAST_EXT = 1000148041,
  // Provided by VK_EXT_blend_operation_advanced
```

```
    VK_BLEND_OP_INVERT_OVG_EXT = 1000148042,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_RED_EXT = 1000148043,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_GREEN_EXT = 1000148044,
  // Provided by VK_EXT_blend_operation_advanced
    VK_BLEND_OP_BLUE_EXT = 1000148045,
} VkBlendOp;
```

The semantics of the basic blend operations are described in the table below:

Table 39. Basic Blend Operations

VkBlendOp	RGB Components	Alpha Component
VK_BLEND_OP_ADD	$R = R_{s0} \times S_r + R_d \times D_r$ $G = G_{s0} \times S_g + G_d \times D_g$ $B = B_{s0} \times S_b + B_d \times D_b$	$A = A_{s0} \times S_a + A_d \times D_a$
VK_BLEND_OP_SUBTRACT	$R = R_{s0} \times S_r - R_d \times D_r$ $G = G_{s0} \times S_g - G_d \times D_g$ $B = B_{s0} \times S_b - B_d \times D_b$	$A = A_{s0} \times S_a - A_d \times D_a$
VK_BLEND_OP_REVERSE_SUBTRACT	$R = R_d \times D_r - R_{s0} \times S_r$ $G = G_d \times D_g - G_{s0} \times S_g$ $B = B_d \times D_b - B_{s0} \times S_b$	$A = A_d \times D_a - A_{s0} \times S_a$
VK_BLEND_OP_MIN	$R = \min(R_{s0},R_d)$ $G = \min(G_{s0},G_d)$ $B = \min(B_{s0},B_d)$	$A = \min(A_{s0},A_d)$
VK_BLEND_OP_MAX	$R = \max(R_{s0},R_d)$ $G = \max(G_{s0},G_d)$ $B = \max(B_{s0},B_d)$	$A = \max(A_{s0},A_d)$

In this table, the following conventions are used:

- R_{s0}, G_{s0}, B_{s0} and A_{s0} represent the first source color R, G, B, and A components, respectively.
- R_d, G_d, B_d and A_d represent the R, G, B, and A components of the destination color. That is, the color currently in the corresponding color attachment for this fragment/sample.
- S_r, S_g, S_b and S_a represent the source blend factor R, G, B, and A components, respectively.
- D_r, D_g, D_b and D_a represent the destination blend factor R, G, B, and A components, respectively.

The blending operation produces a new set of values R, G, B and A, which are written to the framebuffer attachment. If blending is not enabled for this attachment, then R, G, B and A are assigned R_{s0}, G_{s0}, B_{s0} and A_{s0}, respectively.

If the color attachment is fixed-point, the components of the source and destination values and blend factors are each clamped to [0,1] or [-1,1] respectively for an unsigned normalized or signed normalized color attachment prior to evaluating the blend operations. If the color attachment is floating-point, no clamping occurs.

If the numeric format of a framebuffer attachment uses sRGB encoding, the R, G, and B destination color values (after conversion from fixed-point to floating-point) are considered to be encoded for the sRGB color space and hence are linearized prior to their use in blending. Each R, G, and B component is converted from nonlinear to linear as described in the “sRGB EOTF” section of the Khronos Data Format Specification. If the format is not sRGB, no linearization is performed.

If the numeric format of a framebuffer attachment uses sRGB encoding, then the final R, G, and B values are converted into the nonlinear sRGB representation before being written to the framebuffer attachment as described in the “sRGB $EOTF^{-1}$” section of the Khronos Data Format

Specification.

If the numeric format of a framebuffer color attachment is not sRGB encoded, then the resulting c_s values for R, G, and B are unmodified.

The value of A is never sRGB encoded. That is, the alpha component is always stored in memory as linear.

If the framebuffer color attachment is VK_ATTACHMENT_UNUSED, no writes are performed through that attachment. Writes are not performed to framebuffer color attachments greater than or equal to the VkSubpassDescription::colorAttachmentCount or VkSubpassDescription2::colorAttachmentCount value.

33.1.4. Advanced Blend Operations

The *advanced blend operations* are those listed in tables f/X/Y/Z Advanced Blend Operations, Hue-Saturation-Luminosity Advanced Blend Operations, and Additional RGB Blend Operations.

If the pNext chain of VkPipelineColorBlendStateCreateInfo includes a VkPipelineColorBlendAdvancedStateCreateInfoEXT structure, then that structure includes parameters that affect advanced blend operations.

The VkPipelineColorBlendAdvancedStateCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPipelineColorBlendAdvancedStateCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkBool32             srcPremultiplied;
    VkBool32             dstPremultiplied;
    VkBlendOverlapEXT    blendOverlap;
} VkPipelineColorBlendAdvancedStateCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- srcPremultiplied specifies whether the source color of the blend operation is treated as premultiplied.
- dstPremultiplied specifies whether the destination color of the blend operation is treated as premultiplied.
- blendOverlap is a VkBlendOverlapEXT value specifying how the source and destination sample's coverage is correlated.

If this structure is not present, srcPremultiplied and dstPremultiplied are both considered to be VK_TRUE, and blendOverlap is considered to be VK_BLEND_OVERLAP_UNCORRELATED_EXT.

Valid Usage

- VUID-VkPipelineColorBlendAdvancedStateCreateInfoEXT-srcPremultiplied-01424
  If the non-premultiplied source color property is not supported, `srcPremultiplied` **must** be VK_TRUE
- VUID-VkPipelineColorBlendAdvancedStateCreateInfoEXT-dstPremultiplied-01425
  If the non-premultiplied destination color property is not supported, `dstPremultiplied` **must** be VK_TRUE
- VUID-VkPipelineColorBlendAdvancedStateCreateInfoEXT-blendOverlap-01426
  If the correlated overlap property is not supported, `blendOverlap` **must** be VK_BLEND_OVERLAP_UNCORRELATED_EXT

Valid Usage (Implicit)

- VUID-VkPipelineColorBlendAdvancedStateCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_COLOR_BLEND_ADVANCED_STATE_CREATE_INFO_EXT
- VUID-VkPipelineColorBlendAdvancedStateCreateInfoEXT-blendOverlap-parameter
  `blendOverlap` **must** be a valid VkBlendOverlapEXT value

Structure Chaining

Extends the structure

- VkPipelineColorBlendStateCreateInfo

To dynamically set the advanced blend state, call:

```
// Provided by VK_EXT_blend_operation_advanced with VK_EXT_extended_dynamic_state3,
VK_EXT_blend_operation_advanced with VK_EXT_shader_object
void vkCmdSetColorBlendAdvancedEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    firstAttachment,
    uint32_t                                    attachmentCount,
    const VkColorBlendAdvancedEXT*              pColorBlendAdvanced);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `firstAttachment` the first color attachment the advanced blend parameters apply to.
- `attachmentCount` the number of VkColorBlendAdvancedEXT elements in the `pColorBlendAdvanced` array.
- `pColorBlendAdvanced` an array of VkColorBlendAdvancedEXT structs that specify the advanced color blend parameters for the corresponding attachments.

This command sets the advanced blend operation parameters of the specified attachments for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, this state is specified by the VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied, VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied, and VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetColorBlendAdvancedEXT-None-09423
  At least one of the following **must** be true:
  - The extendedDynamicState3ColorBlendAdvanced feature is enabled
  - The shaderObject feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetColorBlendAdvancedEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetColorBlendAdvancedEXT-pColorBlendAdvanced-parameter
  pColorBlendAdvanced **must** be a valid pointer to an array of attachmentCount valid VkColorBlendAdvancedEXT structures
- VUID-vkCmdSetColorBlendAdvancedEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdSetColorBlendAdvancedEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetColorBlendAdvancedEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetColorBlendAdvancedEXT-attachmentCount-arraylength
  attachmentCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetColorBlendAdvancedEXT is not affected by conditional rendering

The VkColorBlendAdvancedEXT structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
typedef struct VkColorBlendAdvancedEXT {
    VkBlendOp            advancedBlendOp;
    VkBool32             srcPremultiplied;
    VkBool32             dstPremultiplied;
    VkBlendOverlapEXT    blendOverlap;
    VkBool32             clampResults;
} VkColorBlendAdvancedEXT;
```

- advancedBlendOp selects which blend operation is used to calculate the RGB values to write to the color attachment.
- srcPremultiplied specifies whether the source color of the blend operation is treated as premultiplied.
- dstPremultiplied specifies whether the destination color of the blend operation is treated as premultiplied.
- blendOverlap is a VkBlendOverlapEXT value specifying how the source and destination sample's coverage is correlated.
- clampResults specifies that results **must** be clamped to the [0,1] range before writing to the attachment, which is useful when the attachment format is not normalized fixed-point.

Valid Usage

- VUID-VkColorBlendAdvancedEXT-srcPremultiplied-07505
  If the non-premultiplied source color property is not supported, srcPremultiplied **must** be VK_TRUE
- VUID-VkColorBlendAdvancedEXT-dstPremultiplied-07506
  If the non-premultiplied destination color property is not supported, dstPremultiplied **must** be VK_TRUE
- VUID-VkColorBlendAdvancedEXT-blendOverlap-07507

If the correlated overlap property is not supported, `blendOverlap` **must** be VK_BLEND_OVERLAP_UNCORRELATED_EXT

Valid Usage (Implicit)

- VUID-VkColorBlendAdvancedEXT-advancedBlendOp-parameter `advancedBlendOp` **must** be a valid VkBlendOp value
- VUID-VkColorBlendAdvancedEXT-blendOverlap-parameter `blendOverlap` **must** be a valid VkBlendOverlapEXT value

When using one of the operations in table f/X/Y/Z Advanced Blend Operations or Hue-Saturation-Luminosity Advanced Blend Operations, blending is performed according to the following equations:

$$\begin{aligned} R = & \quad f(R_s', R_d') * p_0(A_s, A_d) + & Y * R_s' * p_1(A_s, A_d) + & \quad Z * R_d' * p_2(A_s, A_d) \\ G = & \quad f(G_s', G_d') * p_0(A_s, A_d) + & Y * G_s' * p_1(A_s, A_d) + & \quad Z * G_d' * p_2(A_s, A_d) \\ B = & \quad f(B_s', B_d') * p_0(A_s, A_d) + & Y * B_s' * p_1(A_s, A_d) + & \quad Z * B_d' * p_2(A_s, A_d) \\ A = & \quad X * p_0(A_s, A_d) + & Y * p_1(A_s, A_d) + & \quad Z * p_2(A_s, A_d) \end{aligned}$$

where the function f and terms X, Y, and Z are specified in the table. The R, G, and B components of the source color used for blending are derived according to `srcPremultiplied`. If `srcPremultiplied` is VK_TRUE, the fragment color components are considered to have been premultiplied by the A component prior to blending. The base source color (R_s',G_s',B_s') is obtained by dividing through by the A component:

$$(R_s', G_s', B_s') = \begin{cases} (0, 0, 0) & A_s = 0 \\ (\frac{R_s}{A_s}, \frac{G_s}{A_s}, \frac{B_s}{A_s}) & \text{otherwise} \end{cases}$$

If `srcPremultiplied` is VK_FALSE, the fragment color components are used as the base color:

$$(R_s', G_s', B_s') = (R_s, G_s, B_s)$$

The R, G, and B components of the destination color used for blending are derived according to `dstPremultiplied`. If `dstPremultiplied` is VK_TRUE, the destination components are considered to have been premultiplied by the A component prior to blending. The base destination color (R_d',G_d',B_d') is obtained by dividing through by the A component:

$$(R_d', G_d', B_d') = \begin{cases} (0, 0, 0) & A_d = 0 \\ (\frac{R_d}{A_d}, \frac{G_d}{A_d}, \frac{B_d}{A_d}) & \text{otherwise} \end{cases}$$

If `dstPremultiplied` is VK_FALSE, the destination color components are used as the base color:

$$(R_d', G_d', B_d') = (R_d, G_d, B_d)$$

When blending using advanced blend operations, we expect that the R, G, and B components of premultiplied source and destination color inputs be stored as the product of non-premultiplied R, G, and B component values and the A component of the color. If any R, G, or B component of a premultiplied input color is non-zero and the A component is zero, the color is considered ill-formed, and the corresponding component of the blend result is undefined.

All of the advanced blend operation formulas in this chapter compute the result as a premultiplied color. If `dstPremultiplied` is VK_FALSE, that result color's R, G, and B components are divided by the A component before being written to the framebuffer. If any R, G, or B component of the color is non-zero and the A component is zero, the result is considered ill-formed, and the corresponding component of the blend result is undefined. If all components are zero, that value is unchanged.

If the A component of any input or result color is less than zero, the color is considered ill-formed, and all components of the blend result are undefined.

The weighting functions p_0, p_1, and p_2 are defined in table Advanced Blend Overlap Modes. In these functions, the A components of the source and destination colors are taken to indicate the portion of the pixel covered by the fragment (source) and the fragments previously accumulated in the pixel (destination). The functions p_0, p_1, and p_2 approximate the relative portion of the pixel covered by the intersection of the source and destination, covered only by the source, and covered only by the destination, respectively.

Possible values of VkPipelineColorBlendAdvancedStateCreateInfoEXT::`blendOverlap`, specifying the blend overlap functions, are:

```
// Provided by VK_EXT_blend_operation_advanced
typedef enum VkBlendOverlapEXT {
    VK_BLEND_OVERLAP_UNCORRELATED_EXT = 0,
    VK_BLEND_OVERLAP_DISJOINT_EXT = 1,
    VK_BLEND_OVERLAP_CONJOINT_EXT = 2,
} VkBlendOverlapEXT;
```

- VK_BLEND_OVERLAP_UNCORRELATED_EXT specifies that there is no correlation between the source and destination coverage.
- VK_BLEND_OVERLAP_CONJOINT_EXT specifies that the source and destination coverage are considered to have maximal overlap.
- VK_BLEND_OVERLAP_DISJOINT_EXT specifies that the source and destination coverage are considered to have minimal overlap.

Table 40. Advanced Blend Overlap Modes

Overlap Mode	Weighting Equations
VK_BLEND_OVERLAP_UNCORRELATED_EXT	$p_0(A_s, A_d) = A_s A_d$ $p_1(A_s, A_d) = A_s(1 - A_d)$ $p_2(A_s, A_d) = A_d(1 - A_s)$

Overlap Mode	Weighting Equations
VK_BLEND_OVERLAP_CONJOINT_EXT	$p_0(A_s, A_d) = min(A_s, A_d)$ $p_1(A_s, A_d) = max(A_s - A_d, 0)$ $p_2(A_s, A_d) = max(A_d - A_s, 0)$
VK_BLEND_OVERLAP_DISJOINT_EXT	$p_0(A_s, A_d) = max(A_s + A_d - 1, 0)$ $p_1(A_s, A_d) = min(A_s, 1 - A_d)$ $p_2(A_s, A_d) = min(A_d, 1 - A_s)$

Table 41. f/X/Y/Z Advanced Blend Operations

Mode	Blend Coefficients

When using one of the HSL blend operations in table Hue-Saturation-Luminosity Advanced Blend Operations as the blend operation, the RGB color components produced by the function f are effectively obtained by converting both the non-premultiplied source and destination colors to the HSL (hue, saturation, luminosity) color space, generating a new HSL color by selecting H, S, and L components from the source or destination according to the blend operation, and then converting the result back to RGB. In the equations below, a blended RGB color is produced according to the following pseudocode:

```
float minv3(vec3 c) {
  return min(min(c.r, c.g), c.b);
}
float maxv3(vec3 c) {
  return max(max(c.r, c.g), c.b);
}
float lumv3(vec3 c) {
  return dot(c, vec3(0.30, 0.59, 0.11));
}
float satv3(vec3 c) {
  return maxv3(c) - minv3(c);
}

// If any color components are outside [0,1], adjust the color to
// get the components in range.
vec3 ClipColor(vec3 color) {
  float lum = lumv3(color);
  float mincol = minv3(color);
  float maxcol = maxv3(color);
  if (mincol < 0.0) {
    color = lum + ((color-lum)*lum) / (lum-mincol);
```

```
    }
    if (maxcol > 1.0) {
      color = lum + ((color-lum)*(1-lum)) / (maxcol-lum);
    }
    return color;
  }

  // Take the base RGB color <cbase> and override its luminosity
  // with that of the RGB color <clum>.
  vec3 SetLum(vec3 cbase, vec3 clum) {
    float lbase = lumv3(cbase);
    float llum = lumv3(clum);
    float ldiff = llum - lbase;
    vec3 color = cbase + vec3(ldiff);
    return ClipColor(color);
  }

  // Take the base RGB color <cbase> and override its saturation with
  // that of the RGB color <csat>.  The override the luminosity of the
  // result with that of the RGB color <clum>.
  vec3 SetLumSat(vec3 cbase, vec3 csat, vec3 clum)
  {
    float minbase = minv3(cbase);
    float sbase = satv3(cbase);
    float ssat = satv3(csat);
    vec3 color;
    if (sbase > 0) {
      // Equivalent (modulo rounding errors) to setting the
      // smallest (R,G,B) component to 0, the largest to <ssat>,
      // and interpolating the "middle" component based on its
      // original value relative to the smallest/largest.
      color = (cbase - minbase) * ssat / sbase;
    } else {
      color = vec3(0.0);
    }
    return SetLum(color, clum);
  }
```

Table 42. Hue-Saturation-Luminosity Advanced Blend Operations

Mode	Result
VK_BLEND_OP_HSL_HUE_EXT	$(X, Y, Z) = (1, 1, 1)$ $f(C_s, C_d) = SetLumSat(C_s, C_d, C_d)$

VK_BLEND_OP_GREEN_EXT	$(R, G, B, A) = (R_d{}', G_s{}', B_d{}', A_d)$
VK_BLEND_OP_BLUE_EXT	$(R, G, B, A) = (R_d{}', G_d{}', B_s{}', A_d)$

33.2. Logical Operations

The application **can** enable a *logical operation* between the fragment's color values and the existing value in the framebuffer attachment. This logical operation is applied prior to updating the framebuffer attachment. Logical operations are applied only for signed and unsigned integer and normalized integer framebuffers. Logical operations are not applied to floating-point or sRGB format color attachments.

Logical operations are controlled by the `logicOpEnable` and `logicOp` members of VkPipelineColorBlendStateCreateInfo. The `logicOpEnable` state can also be controlled by vkCmdSetLogicOpEnableEXT if graphics pipeline is created with VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. The `logicOp` state can also be controlled by vkCmdSetLogicOpEXT if graphics pipeline is created with VK_DYNAMIC_STATE_LOGIC_OP_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. If `logicOpEnable` is VK_TRUE, then a logical operation selected by `logicOp` is applied between each color attachment and the fragment's corresponding output value, and blending of all attachments is treated as if it were disabled. Any attachments using color formats for which logical operations are not supported simply pass through the color values unmodified. The logical operation is applied independently for each of the red, green, blue, and alpha components. The `logicOp` is selected from the following operations:

```
// Provided by VK_VERSION_1_0
typedef enum VkLogicOp {
    VK_LOGIC_OP_CLEAR = 0,
    VK_LOGIC_OP_AND = 1,
    VK_LOGIC_OP_AND_REVERSE = 2,
    VK_LOGIC_OP_COPY = 3,
    VK_LOGIC_OP_AND_INVERTED = 4,
    VK_LOGIC_OP_NO_OP = 5,
    VK_LOGIC_OP_XOR = 6,
    VK_LOGIC_OP_OR = 7,
    VK_LOGIC_OP_NOR = 8,
    VK_LOGIC_OP_EQUIVALENT = 9,
    VK_LOGIC_OP_INVERT = 10,
    VK_LOGIC_OP_OR_REVERSE = 11,
    VK_LOGIC_OP_COPY_INVERTED = 12,
    VK_LOGIC_OP_OR_INVERTED = 13,
    VK_LOGIC_OP_NAND = 14,
    VK_LOGIC_OP_SET = 15,
} VkLogicOp;
```

The logical operations supported by Vulkan are summarized in the following table in which

- ¬ is bitwise invert,
- ∧ is bitwise and,
- ∨ is bitwise or,
- ⊕ is bitwise exclusive or,
- s is the fragment's R_{s0}, G_{s0}, B_{s0} or A_{s0} component value for the fragment output corresponding to the color attachment being updated, and
- d is the color attachment's R, G, B or A component value:

Table 44. Logical Operations

Mode	Operation
VK_LOGIC_OP_CLEAR	0
VK_LOGIC_OP_AND	s ∧ d
VK_LOGIC_OP_AND_REVERSE	s ∧ ¬ d
VK_LOGIC_OP_COPY	s
VK_LOGIC_OP_AND_INVERTED	¬ s ∧ d
VK_LOGIC_OP_NO_OP	d
VK_LOGIC_OP_XOR	s ⊕ d
VK_LOGIC_OP_OR	s ∨ d
VK_LOGIC_OP_NOR	¬ (s ∨ d)
VK_LOGIC_OP_EQUIVALENT	¬ (s ⊕ d)
VK_LOGIC_OP_INVERT	¬ d
VK_LOGIC_OP_OR_REVERSE	s ∨ ¬ d
VK_LOGIC_OP_COPY_INVERTED	¬ s
VK_LOGIC_OP_OR_INVERTED	¬ s ∨ d
VK_LOGIC_OP_NAND	¬ (s ∧ d)
VK_LOGIC_OP_SET	all 1s

The result of the logical operation is then written to the color attachment as controlled by the component write mask, described in Blend Operations.

To dynamically set whether logical operations are enabled, call:

```
// Provided by VK_EXT_extended_dynamic_state3, VK_EXT_shader_object
void vkCmdSetLogicOpEnableEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    logicOpEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `logicOpEnable` specifies whether logical operations are enabled.

This command sets whether logical operations are enabled for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendStateCreateInfo ::`logicOpEnable` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetLogicOpEnableEXT-None-09423
  At least one of the following **must** be true:
  - The `extendedDynamicState3LogicOpEnable` feature is enabled
  - The `shaderObject` feature is enabled
- VUID-vkCmdSetLogicOpEnableEXT-logicOp-07366
  If the `logicOp` feature is not enabled, `logicOpEnable` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-vkCmdSetLogicOpEnableEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetLogicOpEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetLogicOpEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetLogicOpEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetLogicOpEnableEXT is not affected by conditional rendering

To dynamically set the logical operation to apply for blend state, call:

```
// Provided by VK_EXT_extended_dynamic_state2, VK_EXT_shader_object
void vkCmdSetLogicOpEXT(
    VkCommandBuffer                             commandBuffer,
    VkLogicOp                                   logicOp);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `logicOp` specifies the logical operation to apply for blend state.

This command sets the logical operation for blend state for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_LOGIC_OP_EXT set in VkPipelineDynamicStateCreateInfo::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorBlendStateCreateInfo::`logicOp` value used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetLogicOpEXT-None-09422
  At least one of the following **must** be true:
  - The `extendedDynamicState2LogicOp` feature is enabled
  - The `shaderObject` feature is enabled

Valid Usage (Implicit)

- VUID-vkCmdSetLogicOpEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetLogicOpEXT-logicOp-parameter
  `logicOp` **must** be a valid VkLogicOp value
- VUID-vkCmdSetLogicOpEXT-commandBuffer-recording

commandBuffer **must** be in the recording state

- VUID-vkCmdSetLogicOpEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetLogicOpEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetLogicOpEXT is not affected by conditional rendering

33.3. Color Write Mask

Bits which **can** be set in VkPipelineColorBlendAttachmentState::colorWriteMask, determining whether the final color values R, G, B and A are written to the framebuffer attachment, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkColorComponentFlagBits {
    VK_COLOR_COMPONENT_R_BIT = 0x00000001,
    VK_COLOR_COMPONENT_G_BIT = 0x00000002,
    VK_COLOR_COMPONENT_B_BIT = 0x00000004,
    VK_COLOR_COMPONENT_A_BIT = 0x00000008,
} VkColorComponentFlagBits;
```

- VK_COLOR_COMPONENT_R_BIT specifies that the R value is written to the color attachment for the appropriate sample. Otherwise, the value in memory is unmodified.
- VK_COLOR_COMPONENT_G_BIT specifies that the G value is written to the color attachment for the appropriate sample. Otherwise, the value in memory is unmodified.

- VK_COLOR_COMPONENT_B_BIT specifies that the B value is written to the color attachment for the appropriate sample. Otherwise, the value in memory is unmodified.
- VK_COLOR_COMPONENT_A_BIT specifies that the A value is written to the color attachment for the appropriate sample. Otherwise, the value in memory is unmodified.

The color write mask operation is applied regardless of whether blending is enabled.

The color write mask operation is applied only if Color Write Enable is enabled for the respective attachment. Otherwise the color write mask is ignored and writes to all components of the attachment are disabled.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkColorComponentFlags;
```

VkColorComponentFlags is a bitmask type for setting a mask of zero or more VkColorComponentFlagBits.

33.4. Color Write Enable

The VkPipelineColorWriteCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_color_write_enable
typedef struct VkPipelineColorWriteCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           attachmentCount;
    const VkBool32*    pColorWriteEnables;
} VkPipelineColorWriteCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- attachmentCount is the number of VkBool32 elements in pColorWriteEnables.
- pColorWriteEnables is a pointer to an array of per target attachment boolean values specifying whether color writes are enabled for the given attachment.

When this structure is included in the pNext chain of VkPipelineColorBlendStateCreateInfo, it defines per-attachment color write state. If this structure is not included in the pNext chain, it is equivalent to specifying this structure with attachmentCount equal to the attachmentCount member of VkPipelineColorBlendStateCreateInfo, and pColorWriteEnables pointing to an array of as many VK_TRUE values.

If the colorWriteEnable feature is not enabled, all VkBool32 elements in the pColorWriteEnables array **must** be VK_TRUE.

Color Write Enable interacts with the Color Write Mask as follows:

- If colorWriteEnable is VK_TRUE, writes to the attachment are determined by the colorWriteMask.
- If colorWriteEnable is VK_FALSE, the colorWriteMask is ignored and writes to all components of the attachment are disabled. This is equivalent to specifying a colorWriteMask of 0.

Valid Usage

- VUID-VkPipelineColorWriteCreateInfoEXT-pAttachments-04801
  If the colorWriteEnable feature is not enabled, all elements of pColorWriteEnables **must** be VK_TRUE
- VUID-VkPipelineColorWriteCreateInfoEXT-attachmentCount-07608
  If the pipeline is being created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT, VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT, or VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states not set, attachmentCount **must** be equal to the attachmentCount member of the VkPipelineColorBlendStateCreateInfo structure specified during pipeline creation
- VUID-VkPipelineColorWriteCreateInfoEXT-attachmentCount-06655
  attachmentCount **must** be less than or equal to the maxColorAttachments member of VkPhysicalDeviceLimits

Valid Usage (Implicit)

- VUID-VkPipelineColorWriteCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_COLOR_WRITE_CREATE_INFO_EXT
- VUID-VkPipelineColorWriteCreateInfoEXT-pColorWriteEnables-parameter
  If attachmentCount is not 0, pColorWriteEnables **must** be a valid pointer to an array of attachmentCount VkBool32 values

Structure Chaining

Extends the structure

- VkPipelineColorBlendStateCreateInfo

To dynamically enable or disable writes to a color attachment, call:

```
// Provided by VK_EXT_color_write_enable
void vkCmdSetColorWriteEnableEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    attachmentCount,
    const VkBool32*                             pColorWriteEnables);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `attachmentCount` is the number of VkBool32 elements in `pColorWriteEnables`.
- `pColorWriteEnables` is a pointer to an array of per target attachment boolean values specifying whether color writes are enabled for the given attachment.

This command sets the color write enables for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT set in VkPipelineDynamicStateCreateInfo ::`pDynamicStates`. Otherwise, this state is specified by the VkPipelineColorWriteCreateInfoEXT ::`pColorWriteEnables` values used to create the currently active pipeline.

Valid Usage

- VUID-vkCmdSetColorWriteEnableEXT-None-04803
  The `colorWriteEnable` feature **must** be enabled
- VUID-vkCmdSetColorWriteEnableEXT-attachmentCount-06656
  `attachmentCount` **must** be less than or equal to the `maxColorAttachments` member of `VkPhysicalDeviceLimits`

Valid Usage (Implicit)

- VUID-vkCmdSetColorWriteEnableEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetColorWriteEnableEXT-pColorWriteEnables-parameter
  `pColorWriteEnables` **must** be a valid pointer to an array of `attachmentCount` VkBool32 values
- VUID-vkCmdSetColorWriteEnableEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetColorWriteEnableEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetColorWriteEnableEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetColorWriteEnableEXT-attachmentCount-arraylength
  `attachmentCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetColorWriteEnableEXT is not affected by conditional rendering

Chapter 34. Dispatching Commands

The *dispatching commands* described in this chapter provoke work in a compute pipeline. Dispatching commands are recorded into a command buffer and when executed by a queue, will produce work which executes according to the bound compute pipeline. A compute pipeline **must** be bound to a command buffer before any dispatching commands are recorded in that command buffer.

To record a dispatch, call:

```
// Provided by VK_VERSION_1_0
void vkCmdDispatch(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    groupCountX,
    uint32_t                                    groupCountY,
    uint32_t                                    groupCountZ);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `groupCountX` is the number of local workgroups to dispatch in the X dimension.
- `groupCountY` is the number of local workgroups to dispatch in the Y dimension.
- `groupCountZ` is the number of local workgroups to dispatch in the Z dimension.

When the command is executed, a global workgroup consisting of `groupCountX` × `groupCountY` × `groupCountZ` local workgroups is assembled.

Valid Usage

- VUID-vkCmdDispatch-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatch-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatch-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdDispatch-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatch-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatch-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDispatch-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDispatch-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdDispatch-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatch-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatch-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDispatch-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatch-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- VUID-vkCmdDispatch-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatch-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatch-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatch-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatch-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatch-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatch-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatch-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDispatch-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatch-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be

valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDispatch-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatch-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatch-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDispatch-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatch-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatch-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatch-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatch-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatch-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the

descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatch-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatch-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatch-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDispatch-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatch-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatch-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatch-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDispatch-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatch-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatch-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that

instruction **must** have a `Width` of 32

- VUID-vkCmdDispatch-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatch-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatch-sparseImageInt64Atomics-04474
  If the `sparseImageInt64Atomics` feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDispatch-sparseImageInt64Atomics-04475
  If the `sparseImageInt64Atomics` feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdDispatch-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatch-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatch-micromap-11636
  If an acceleration structure is accessed as a result of this command through an `OpRayQueryProceedKHR` operation , the `VK_EXT_opacity_micromap` extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its `pNext` chain, the shader **must** have specified a `OpacityMicromapIdKHR` execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDispatch-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatch-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both

VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR

- VUID-vkCmdDispatch-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatch-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatch-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatch-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDispatch-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDispatch-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdDispatch-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatch-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatch-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatch-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatch-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatch-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatch-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands

- VUID-vkCmdDispatch-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatch-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatch-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatch-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatch-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatch-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDispatch-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatch-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatch-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDispatch-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDispatch-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDispatch-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR

- VUID-vkCmdDispatch-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatch-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatch-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatch-None-10672
  this command **must** be called outside of a render pass instance
- VUID-vkCmdDispatch-None-10743
  If there is no bound compute pipeline, a valid `VkShaderEXT` **must** be bound to the VK_SHADER_STAGE_COMPUTE_BIT stage
- VUID-vkCmdDispatch-commandBuffer-02712
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command **must** not be an unprotected resource
- VUID-vkCmdDispatch-commandBuffer-02713
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command **must** not write to any resource
- VUID-vkCmdDispatch-commandBuffer-04617
  If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this

command uses the RayQueryKHR capability, then commandBuffer **must** not be a protected command buffer

- VUID-vkCmdDispatch-groupCountX-00386
  groupCountX **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[0]
- VUID-vkCmdDispatch-groupCountY-00387
  groupCountY **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[1]
- VUID-vkCmdDispatch-groupCountZ-00388
  groupCountZ **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[2]

Valid Usage (Implicit)

- VUID-vkCmdDispatch-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatch-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDispatch-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdDispatch-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatch-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdDispatch is affected by conditional rendering

VkDispatchIndirect2InfoKHR is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDispatchIndirect2InfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkDeviceAddressRangeKHR     addressRange;
    VkAddressCommandFlagsKHR    addressFlags;
} VkDispatchIndirect2InfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- addressRange is the VkDeviceAddressRangeKHR containing dispatch parameters.
- addressFlags is a VkAddressCommandFlagsKHR value defining the flags for the address range.

Valid Usage

- VUID-VkDispatchIndirect2InfoKHR-addressRange-13097
  If the range specified by addressRange is not bound completely to memory when accessed, addressFlags **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13098
  If the buffer from which the range specified by addressRange was created with VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, addressFlags **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13099
  If the buffer from which the range specified by addressRange was created without VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, addressFlags **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressFlags-13100
  addressFlags **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, addressFlags **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range

backing addressRange, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, addressFlags **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-VkDispatchIndirect2InfoKHR-addressFlags-13101
  addressFlags **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, addressFlags **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing addressRange, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, addressFlags **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13107
  The buffer from which addressRange was queried **must** have been created with VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag
- VUID-VkDispatchIndirect2InfoKHR-protectedNoFault-13108
  If protectedNoFault is not supported, the buffer from which addressRange was queried **must** not have been created with VK_BUFFER_CREATE_PROTECTED_BIT
- VUID-VkDispatchIndirect2InfoKHR-addressRange-13109
  addressRange.address **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkDispatchIndirect2InfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPATCH_INDIRECT_2_INFO_KHR
- VUID-VkDispatchIndirect2InfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkDispatchIndirect2InfoKHR-addressFlags-parameter
  If addressFlags is not 0, addressFlags **must** be a valid combination of VkAddressCommandFlagBitsKHR values

To record an indirect dispatching command, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdDispatchIndirect2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkDispatchIndirect2InfoKHR*           pInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a VkDispatchIndirect2InfoKHR structure defining parameters of this command.

`vkCmdDispatchIndirect2KHR` behaves similarly to vkCmdDispatchIndirect except that the parameters, encoded in a VkDispatchIndirectCommand structure, are read by the device from an address range during execution.

Valid Usage

- VUID-vkCmdDispatchIndirect2KHR-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchIndirect2KHR-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchIndirect2KHR-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchIndirect2KHR-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchIndirect2KHR-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatchIndirect2KHR-None-08609

If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D

- VUID-vkCmdDispatchIndirect2KHR-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdDispatchIndirect2KHR-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values
- VUID-vkCmdDispatchIndirect2KHR-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchIndirect2KHR-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchIndirect2KHR-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdDispatchIndirect2KHR-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatchIndirect2KHR-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchIndirect2KHR-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchIndirect2KHR-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by

vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDispatchIndirect2KHR-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect2KHR-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect2KHR-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect2KHR-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect2KHR-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchIndirect2KHR-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDispatchIndirect2KHR-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchIndirect2KHR-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchIndirect2KHR-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchIndirect2KHR-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-vkCmdDispatchIndirect2KHR-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDispatchIndirect2KHR-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchIndirect2KHR-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchIndirect2KHR-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchIndirect2KHR-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchIndirect2KHR-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect2KHR-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect2KHR-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect2KHR-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer,

it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchIndirect2KHR-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDispatchIndirect2KHR-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchIndirect2KHR-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatchIndirect2KHR-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchIndirect2KHR-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdDispatchIndirect2KHR-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchIndirect2KHR-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchIndirect2KHR-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchIndirect2KHR-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdDispatchIndirect2KHR-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdDispatchIndirect2KHR-sparseImageInt64Atomics-04474
  If the `sparseImageInt64Atomics` feature is not enabled, VkImage objects created with the

VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command

- VUID-vkCmdDispatchIndirect2KHR-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchIndirect2KHR-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchIndirect2KHR-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchIndirect2KHR-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdDispatchIndirect2KHR-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatchIndirect2KHR-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDispatchIndirect2KHR-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT

- VUID-vkCmdDispatchIndirect2KHR-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchIndirect2KHR-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatchIndirect2KHR-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDispatchIndirect2KHR-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdDispatchIndirect2KHR-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchIndirect2KHR-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchIndirect2KHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdDispatchIndirect2KHR-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchIndirect2KHR-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchIndirect2KHR-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchIndirect2KHR-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchIndirect2KHR-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDispatchIndirect2KHR-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchIndirect2KHR-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the

bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written

- VUID-vkCmdDispatchIndirect2KHR-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchIndirect2KHR-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchIndirect2KHR-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatchIndirect2KHR-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdDispatchIndirect2KHR-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect2KHR-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a

uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchIndirect2KHR-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDispatchIndirect2KHR-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect2KHR-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdDispatchIndirect2KHR-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdDispatchIndirect2KHR-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdDispatchIndirect2KHR-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchIndirect2KHR-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchIndirect2KHR-commandBuffer-13049
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchIndirect2KHR-pInfo-13050
  `pInfo->addressRange.size` **must** be greater than or equal to `sizeof`(VkDispatchIndirectCommand)

Valid Usage (Implicit)

- VUID-vkCmdDispatchIndirect2KHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchIndirect2KHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDispatchIndirect2InfoKHR structure
- VUID-vkCmdDispatchIndirect2KHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDispatchIndirect2KHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdDispatchIndirect2KHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdDispatchIndirect2KHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchIndirect2KHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdDispatchIndirect2KHR is affected by conditional rendering

To record an indirect dispatching command, call:

```
// Provided by VK_VERSION_1_0
void vkCmdDispatchIndirect(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    buffer,
    VkDeviceSize                                offset);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `buffer` is the buffer containing dispatch parameters.
- `offset` is the byte offset into `buffer` where parameters begin.

`vkCmdDispatchIndirect` behaves similarly to vkCmdDispatch except that the parameters are read by the device from a buffer during execution. The parameters of the dispatch are encoded in a VkDispatchIndirectCommand structure taken from `buffer` starting at `offset`.

Valid Usage

- VUID-vkCmdDispatchIndirect-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdDispatchIndirect-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchIndirect-mipmapMode-04770
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchIndirect-mipmapMode-09599
  If a VkSampler created with `mipmapMode` equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and `reductionMode` equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchIndirect-unnormalizedCoordinates-09635
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdDispatchIndirect-None-08609
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's `viewType` **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDispatchIndirect-None-08610
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdDispatchIndirect-None-08611
  If a VkSampler created with `unnormalizedCoordinates` equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdDispatchIndirect-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchIndirect-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchIndirect-None-07888

If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

- VUID-vkCmdDispatchIndirect-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatchIndirect-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchIndirect-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchIndirect-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchIndirect-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchIndirect-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline

Layout Compatibility

- VUID-vkCmdDispatchIndirect-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdDispatchIndirect-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchIndirect-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchIndirect-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchIndirect-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchIndirect-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDispatchIndirect-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchIndirect-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchIndirect-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchIndirect-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdDispatchIndirect-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchIndirect-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDispatchIndirect-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchIndirect-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdDispatchIndirect-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchIndirect-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdDispatchIndirect-OpImageWrite-04469
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdDispatchIndirect-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchIndirect-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchIndirect-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchIndirect-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchIndirect-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchIndirect-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchIndirect-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchIndirect-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchIndirect-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its

specialization constant operand equal to VK_TRUE

- VUID-vkCmdDispatchIndirect-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatchIndirect-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDispatchIndirect-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatchIndirect-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchIndirect-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatchIndirect-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDispatchIndirect-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdDispatchIndirect-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchIndirect-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchIndirect-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchIndirect-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchIndirect-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchIndirect-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader

accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdDispatchIndirect-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchIndirect-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDispatchIndirect-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchIndirect-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchIndirect-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchIndirect-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchIndirect-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatchIndirect-None-11398

If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDispatchIndirect-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdDispatchIndirect-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDispatchIndirect-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdDispatchIndirect-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatchIndirect-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchIndirect-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchIndirect-None-10672
  this command **must** be called outside of a render pass instance
- VUID-vkCmdDispatchIndirect-None-10743
  If there is no bound compute pipeline, a valid `VkShaderEXT` **must** be bound to the VK_SHADER_STAGE_COMPUTE_BIT stage
- VUID-vkCmdDispatchIndirect-buffer-02708

If `buffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdDispatchIndirect-buffer-02709
  `buffer` **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdDispatchIndirect-offset-02710
  `offset` **must** be a multiple of `4`
- VUID-vkCmdDispatchIndirect-commandBuffer-02711
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdDispatchIndirect-offset-00407
  The sum of `offset` and the size of `VkDispatchIndirectCommand` **must** be less than or equal to the size of `buffer`

Valid Usage (Implicit)

- VUID-vkCmdDispatchIndirect-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchIndirect-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle
- VUID-vkCmdDispatchIndirect-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdDispatchIndirect-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdDispatchIndirect-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdDispatchIndirect-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchIndirect-commonparent
  Both of `buffer`, and `commandBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdDispatchIndirect is affected by conditional rendering

The VkDispatchIndirectCommand structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDispatchIndirectCommand {
    uint32_t    x;
    uint32_t    y;
    uint32_t    z;
} VkDispatchIndirectCommand;
```

- x is the number of local workgroups to dispatch in the X dimension.
- y is the number of local workgroups to dispatch in the Y dimension.
- z is the number of local workgroups to dispatch in the Z dimension.

The members of VkDispatchIndirectCommand have the same meaning as the corresponding parameters of vkCmdDispatch.

Valid Usage

- VUID-VkDispatchIndirectCommand-x-00417
  x **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0]
- VUID-VkDispatchIndirectCommand-y-00418
  y **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1]
- VUID-VkDispatchIndirectCommand-z-00419
  z **must** be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2]

To record a dispatch using non-zero base values for the components of WorkgroupId, call:

```
// Provided by VK_VERSION_1_1
void vkCmdDispatchBase(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    baseGroupX,
    uint32_t                                    baseGroupY,
    uint32_t                                    baseGroupZ,
    uint32_t                                    groupCountX,
    uint32_t                                    groupCountY,
    uint32_t                                    groupCountZ);
```

```
// Provided by VK_KHR_device_group
// Equivalent to vkCmdDispatchBase
void vkCmdDispatchBaseKHR(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    baseGroupX,
    uint32_t                                    baseGroupY,
    uint32_t                                    baseGroupZ,
    uint32_t                                    groupCountX,
    uint32_t                                    groupCountY,
    uint32_t                                    groupCountZ);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `baseGroupX` is the start value for the X component of `WorkgroupId`.
- `baseGroupY` is the start value for the Y component of `WorkgroupId`.
- `baseGroupZ` is the start value for the Z component of `WorkgroupId`.
- `groupCountX` is the number of local workgroups to dispatch in the X dimension.
- `groupCountY` is the number of local workgroups to dispatch in the Y dimension.
- `groupCountZ` is the number of local workgroups to dispatch in the Z dimension.

When the command is executed, a global workgroup consisting of `groupCountX` × `groupCountY` × `groupCountZ` local workgroups is assembled, with `WorkgroupId` values ranging from [`baseGroup*`, `baseGroup*` + `groupCount*`) in each component. vkCmdDispatch is equivalent to `vkCmdDispatchBase(0,0,0,groupCountX,groupCountY,groupCountZ)`.

Valid Usage

- VUID-vkCmdDispatchBase-magFilter-04553
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR, `reductionMode` equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and `compareEnable` equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchBase-magFilter-09598
  If a VkSampler created with `magFilter` or `minFilter` equal to VK_FILTER_LINEAR and

reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT

- VUID-vkCmdDispatchBase-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdDispatchBase-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdDispatchBase-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdDispatchBase-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdDispatchBase-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdDispatchBase-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values
- VUID-vkCmdDispatchBase-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT
- VUID-vkCmdDispatchBase-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdDispatchBase-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features

must contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

- VUID-vkCmdDispatchBase-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdDispatchBase-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdDispatchBase-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchBase-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdDispatchBase-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchBase-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchBase-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchBase-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdDispatchBase-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdDispatchBase-None-08601

If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader

- VUID-vkCmdDispatchBase-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdDispatchBase-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchBase-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdDispatchBase-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchBase-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdDispatchBase-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdDispatchBase-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdDispatchBase-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdDispatchBase-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdDispatchBase-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this

command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdDispatchBase-None-08612
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchBase-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchBase-None-08613
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdDispatchBase-commandBuffer-02707
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdDispatchBase-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's viewType **must** match the Dim operand of the OpTypeImage as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdDispatchBase-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's format and the Sampled Type operand of the OpTypeImage **must** match
- VUID-vkCmdDispatchBase-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdDispatchBase-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have four components
- VUID-vkCmdDispatchBase-OpImageWrite-04469

If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdDispatchBase-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchBase-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchBase-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 64
- VUID-vkCmdDispatchBase-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction **must** have a Width of 32
- VUID-vkCmdDispatchBase-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchBase-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command
- VUID-vkCmdDispatchBase-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdDispatchBase-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdDispatchBase-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE

- VUID-vkCmdDispatchBase-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdDispatchBase-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdDispatchBase-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with `flags` that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdDispatchBase-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdDispatchBase-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdDispatchBase-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdDispatchBase-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdDispatchBase-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdDispatchBase-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchBase-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdDispatchBase-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdDispatchBase-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdDispatchBase-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address

in push data **must** be a valid VkDeviceAddress

- VUID-vkCmdDispatchBase-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdDispatchBase-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdDispatchBase-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchBase-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchBase-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdDispatchBase-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`
- VUID-vkCmdDispatchBase-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdDispatchBase-None-11398
  If a bound shader was created with a descriptor mapping using

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdDispatchBase-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchBase-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchBase-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdDispatchBase-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdDispatchBase-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping

using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdDispatchBase-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdDispatchBase-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdDispatchBase-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchBase-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdDispatchBase-None-10672
  this command **must** be called outside of a render pass instance
- VUID-vkCmdDispatchBase-None-10743
  If there is no bound compute pipeline, a valid `VkShaderEXT` **must** be bound to the VK_SHADER_STAGE_COMPUTE_BIT stage
- VUID-vkCmdDispatchBase-commandBuffer-02712
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported,

any resource written to by the VkPipeline object bound to the pipeline bind point used by this command **must** not be an unprotected resource

- VUID-vkCmdDispatchBase-commandBuffer-02713
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, pipeline stages other than the framebuffer-space and compute stages in the VkPipeline object bound to the pipeline bind point used by this command **must** not write to any resource
- VUID-vkCmdDispatchBase-commandBuffer-04617
  If any of the shader stages of the VkPipeline bound to the pipeline bind point used by this command uses the RayQueryKHR capability, then commandBuffer **must** not be a protected command buffer
- VUID-vkCmdDispatchBase-baseGroupX-00421
  baseGroupX **must** be less than VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0]
- VUID-vkCmdDispatchBase-baseGroupX-00422
  baseGroupY **must** be less than VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1]
- VUID-vkCmdDispatchBase-baseGroupZ-00423
  baseGroupZ **must** be less than VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2]
- VUID-vkCmdDispatchBase-groupCountX-00424
  groupCountX **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[0] minus baseGroupX
- VUID-vkCmdDispatchBase-groupCountY-00425
  groupCountY **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[1] minus baseGroupY
- VUID-vkCmdDispatchBase-groupCountZ-00426
  groupCountZ **must** be less than or equal to VkPhysicalDeviceLimits ::maxComputeWorkGroupCount[2] minus baseGroupZ
- VUID-vkCmdDispatchBase-baseGroupX-00427
  If any of baseGroupX, baseGroupY, or baseGroupZ are not zero, then the bound compute pipeline **must** have been created with the VK_PIPELINE_CREATE_DISPATCH_BASE_BIT flag or the bound compute shader object **must** have been created with the VK_SHADER_CREATE_DISPATCH_BASE_BIT_EXT flag

Valid Usage (Implicit)

- VUID-vkCmdDispatchBase-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdDispatchBase-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdDispatchBase-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdDispatchBase-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdDispatchBase-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdDispatchBase is affected by conditional rendering

Chapter 35. Device-Generated Commands

This chapter discusses the generation of command buffer content on the device, for which these principle steps are to be taken:

- Define a layout describing the sequence of commands which should be generated.
- Optionally set up device-bindable shaders.
- Retrieve device addresses for setting buffers on the device.
- Fill one or more `VkBuffer` with the appropriate content that gets interpreted by the command layout.
- Create a `preprocess` `VkBuffer` using the device-queried allocation information.
- Optionally preprocess the input data in a separate action.
- Generate and execute the actual commands.

The preprocessing step executes in a separate logical pipeline from either graphics or compute. When preprocessing commands in a separate step they **must** be explicitly synchronized against the command execution. When not preprocessing in a separate step, the preprocessing is automatically synchronized against the command execution.

35.1. Indirect Commands Layout

The device-side command generation happens through an iterative processing of an atomic sequence comprised of command tokens, which are represented by:

```
// Provided by VK_EXT_device_generated_commands
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkIndirectCommandsLayoutEXT)
```

Each indirect command layout **must** have exactly one action command token and it **must** be the last token in the sequence.

NOTE	If the indirect commands layout contains only 1 token, it will be an action command token, and the contents of the indirect buffer will be a sequence of indirect command structures, similar to the ones used for indirect draws and dispatches. On some implementations, using indirect draws and dispatches for these cases will result in increased performance compared to using device-generated commands, due to the overhead that results from using the latter.

35.1.1. Creation and Deletion

Indirect command layouts for `VK_EXT_device_generated_commands` are created by:

```
// Provided by VK_EXT_device_generated_commands
VkResult vkCreateIndirectCommandsLayoutEXT(
    VkDevice                                    device,
    const VkIndirectCommandsLayoutCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkIndirectCommandsLayoutEXT*                pIndirectCommandsLayout);
```

- `device` is the logical device that creates the indirect command layout.
- `pCreateInfo` is a pointer to a VkIndirectCommandsLayoutCreateInfoEXT structure containing parameters affecting creation of the indirect command layout.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pIndirectCommandsLayout` is a pointer to a `VkIndirectCommandsLayoutEXT` handle in which the resulting indirect command layout is returned.

Valid Usage

- VUID-vkCreateIndirectCommandsLayoutEXT-deviceGeneratedCommands-11089
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateIndirectCommandsLayoutEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateIndirectCommandsLayoutEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkIndirectCommandsLayoutCreateInfoEXT structure
- VUID-vkCreateIndirectCommandsLayoutEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateIndirectCommandsLayoutEXT-pIndirectCommandsLayout-parameter
  `pIndirectCommandsLayout` **must** be a valid pointer to a VkIndirectCommandsLayoutEXT handle
- VUID-vkCreateIndirectCommandsLayoutEXT-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkIndirectCommandsLayoutCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsLayoutCreateInfoEXT {
    VkStructureType                                 sType;
    const void*                                     pNext;
    VkIndirectCommandsLayoutUsageFlagsEXT           flags;
    VkShaderStageFlags                              shaderStages;
    uint32_t                                        indirectStride;
    VkPipelineLayout                                pipelineLayout;
    uint32_t                                        tokenCount;
    const VkIndirectCommandsLayoutTokenEXT*         pTokens;
} VkIndirectCommandsLayoutCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkIndirectCommandsLayoutUsageFlagBitsEXT specifying usage rules for this layout.
- shaderStages is the VkShaderStageFlags that this layout supports.
- indirectStride is the distance in bytes between sequences in the indirect buffer
- pipelineLayout is the optional VkPipelineLayout that tokens in this layout use. If the dynamicGeneratedPipelineLayout feature is enabled, pipelineLayout **can** be VK_NULL_HANDLE and the layout **must** be specified by chaining the VkPipelineLayoutCreateInfo structure off the pNext. If the descriptorHeap feature is enabled, pipelineLayout **can** be VK_NULL_HANDLE without providing a VkPipelineLayoutCreateInfo structure.
- tokenCount is the length of the individual command sequence.
- pTokens is a pointer to an array of VkIndirectCommandsLayoutTokenEXT describing each command token in detail.

The following code illustrates some of the flags:

```
void cmdProcessAllSequences(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sequencesCount)
{
  for (s = 0; s < sequencesCount; s++)
  {
    sUsed = s;
```

```
    if (indirectCommandsLayout.flags &
VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT) {
      sUsed = incoherent_implementation_dependent_permutation[ sUsed ];
    }

    cmdProcessSequence( cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sUsed );
  }
}
```

When tokens are consumed, an offset is computed based on token offset and stream stride. The resulting offset is required to be aligned. The alignment for a specific token is equal to the scalar alignment of the data type as defined in Alignment Requirements, or 4, whichever is lower.

Valid Usage

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-indirectStride-11090
  `indirectStride` **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectCommandsIndirectStride`
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11091
  `shaderStages` **must** only contain stages supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStages`
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-tokenCount-11092
  `tokenCount` **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectCommandsTokenCount`
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11093
  The number of tokens in the `pTokens` array with `type` equal to VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT **must** be less than or equal to 1
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11145
  The number of tokens in the `pTokens` array with `type` equal to VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT **must** be less than or equal to 1
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11094
  The number of tokens in the `pTokens` array with `type` equal to VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT **must** be less than or equal to 1
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11095
  If the action command token in the `pTokens` array is not an indexed draw token, then `pTokens` **must** not contain a member with `type` set to

VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11096
  If the action command token in the pTokens array is not a non-mesh draw token, then pTokens **must** not contain a member with type set to VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11097
  If the pTokens array contains multiple tokens with type equal to VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT, then there **must** be no duplicate VkIndirectCommandsVertexBufferTokenEXT::vertexBindingUnit values
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11099
  For all VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, and VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT type tokens in pTokens, there **must** be no overlapping ranges between any specified push constant ranges
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11100
  The action command token **must** be the last token in the pTokens array
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11139
  If the pTokens array contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, then this token **must** be the first token in the array
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11101
  For any element of pTokens, if type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT and the dynamicGeneratedPipelineLayout feature is not enabled, then the pipelineLayout **must** not be VK_NULL_HANDLE
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11102
  For any element of pTokens, if type is either VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT and pipelineLayout is VK_NULL_HANDLE, then the pNext chain **must** include a VkPipelineLayoutCreateInfo struct
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11103
  For any element of pTokens, the offset **must** be greater than or equal to the offset member of the previous tokens
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11104
  For any element of pTokens, if type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT,

VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT, then `shaderStages` **must** contain graphics stages

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11105
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT, then `shaderStages` **must** be VK_SHADER_STAGE_COMPUTE_BIT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11106
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, then `shaderStages` **must** contain VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-11108
  For any element of `pTokens`, if `type` is VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, then `shaderStages` **must** contain ray tracing stages
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11109
  If `shaderStages` contains graphics stages then the state tokens in `pTokens` **must** not include VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11110
  If `shaderStages` is VK_SHADER_STAGE_COMPUTE_BIT then the state tokens in `pTokens` **must** only include VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11111
  If `shaderStages` contains ray tracing stages then the state tokens in `pTokens` **must** only include VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11112
  The `shaderStages` **must** only contain stages from one of the following:
  - VK_SHADER_STAGE_ALL (if the `descriptorHeap` feature is enabled)
  - graphics stages
  - VK_SHADER_STAGE_COMPUTE_BIT
  - mesh stages and VK_SHADER_STAGE_FRAGMENT_BIT
  - ray tracing stages

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-11113
  If `shaderStages` contains VK_SHADER_STAGE_FRAGMENT_BIT, then `shaderStages` **must** also contain VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_CREATE_INFO_EXT
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkIndirectCommandsLayoutUsageFlagBitsEXT values
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-shaderStages-parameter
  `shaderStages` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pipelineLayout-parameter
  If `pipelineLayout` is not VK_NULL_HANDLE, `pipelineLayout` **must** be a valid VkPipelineLayout handle
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-pTokens-parameter
  `pTokens` **must** be a valid pointer to an array of `tokenCount` valid VkIndirectCommandsLayoutTokenEXT structures
- VUID-VkIndirectCommandsLayoutCreateInfoEXT-tokenCount-arraylength
  `tokenCount` **must** be greater than `0`

Bits which **can** be set in VkIndirectCommandsLayoutCreateInfoEXT::`flags`, specifying usage hints of an indirect command layout, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsLayoutUsageFlagBitsEXT {
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT = 0x00000001,
    VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT = 0x00000002,
} VkIndirectCommandsLayoutUsageFlagBitsEXT;
```

- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT specifies that the layout is always used with the manual preprocessing step through calling vkCmdPreprocessGeneratedCommandsEXT and executed by vkCmdExecuteGeneratedCommandsEXT with `isPreprocessed` set to VK_TRUE.
- VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT specifies that the processing of sequences will happen at an implementation-dependent order, which is not guaranteed to be deterministic using the same input data. This flag is ignored when the

`shaderStages` is VK_SHADER_STAGE_COMPUTE_BIT as it is implied that the dispatch sequence is always unordered.

```
// Provided by VK_EXT_device_generated_commands
typedef VkFlags VkIndirectCommandsLayoutUsageFlagsEXT;
```

`VkIndirectCommandsLayoutUsageFlagsEXT` is a bitmask type for setting a mask of zero or more VkIndirectCommandsLayoutUsageFlagBitsEXT.

Indirect command layouts for `VK_EXT_device_generated_commands` are destroyed by:

```
// Provided by VK_EXT_device_generated_commands
void vkDestroyIndirectCommandsLayoutEXT(
    VkDevice                                    device,
    VkIndirectCommandsLayoutEXT                 indirectCommandsLayout,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the layout.
- `indirectCommandsLayout` is the layout to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11114
  All submitted commands that refer to `indirectCommandsLayout` **must** have completed execution
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11115
  If `VkAllocationCallbacks` were provided when `indirectCommandsLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-11116
  If no `VkAllocationCallbacks` were provided when `indirectCommandsLayout` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyIndirectCommandsLayoutEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-parameter
  If `indirectCommandsLayout` is not VK_NULL_HANDLE, `indirectCommandsLayout` **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-vkDestroyIndirectCommandsLayoutEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyIndirectCommandsLayoutEXT-indirectCommandsLayout-parent
  If `indirectCommandsLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectCommandsLayout` **must** be externally synchronized

35.1.2. Token Input Streams

For `VK_EXT_device_generated_commands`, the input streams **can** contain raw `uint32_t` values, existing indirect commands such as:

- VkDrawIndirectCommand
- VkDrawIndexedIndirectCommand
- VkDispatchIndirectCommand
- VkDrawMeshTasksIndirectCommandEXT
- VkTraceRaysIndirectCommandKHR
- VkTraceRaysIndirectCommand2KHR

or additional commands as listed below. How the data is used is described in the next section.

The `VkBindIndexBufferIndirectCommandEXT` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkBindIndexBufferIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    VkIndexType        indexType;
} VkBindIndexBufferIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as index buffer.
- `size` is the byte size range which is available for this operation from the provided address.
- `indexType` is a VkIndexType value specifying how indices are treated.

Valid Usage

- VUID-VkBindIndexBufferIndirectCommandEXT-None-11117
  The buffer's usage flags from which the address was acquired **must** have the VK_BUFFER_USAGE_INDEX_BUFFER_BIT bit set
- VUID-VkBindIndexBufferIndirectCommandEXT-bufferAddress-11118
  The `bufferAddress` **must** be aligned to the VkIndexType of the `indexType` used

Valid Usage (Implicit)

- VUID-VkBindIndexBufferIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value
- VUID-VkBindIndexBufferIndirectCommandEXT-indexType-parameter
  `indexType` **must** be a valid VkIndexType value

The `VkBindVertexBufferIndirectCommandEXT` structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkBindVertexBufferIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           size;
    uint32_t           stride;
} VkBindVertexBufferIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used as vertex input binding.
- `size` is the byte size range which is available for this operation from the provided address.
- `stride` is the byte size stride for this vertex input binding as in `VkVertexInputBindingDescription` ::`stride`.

Valid Usage

- VUID-VkBindVertexBufferIndirectCommandEXT-None-11120
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_VERTEX_BUFFER_BIT bit set

Valid Usage (Implicit)

- VUID-VkBindVertexBufferIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value

The `VkDrawIndirectCountIndirectCommandEXT` structure specifies the input data for all draw-type tokens.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkDrawIndirectCountIndirectCommandEXT {
    VkDeviceAddress    bufferAddress;
    uint32_t           stride;
    uint32_t           commandCount;
} VkDrawIndirectCountIndirectCommandEXT;
```

- `bufferAddress` specifies a physical address of the VkBuffer used for draw commands.
- `stride` is the byte size stride for the command arguments
- `commandCount` is the number of commands to execute

The corresponding indirect draw structure data will be read from the buffer address.

Valid Usage

- VUID-VkDrawIndirectCountIndirectCommandEXT-None-11122
  The buffer's usage flag from which the address was acquired **must** have the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT bit set

Valid Usage (Implicit)

- VUID-VkDrawIndirectCountIndirectCommandEXT-bufferAddress-parameter
  `bufferAddress` **must** be a valid VkDeviceAddress value

35.1.3. Tokenized Command Processing

The processing for `VK_EXT_device_generated_commands` is in principle illustrated below:

```
void cmdProcessSequence(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, s)
{
  for (t = 0; t < indirectCommandsLayout.tokenCount; t++)
  {
    uint32_t offset  = indirectCommandsLayout.pTokens[t].offset;
    uint32_t stride  = indirectCommandsLayout.indirectStride;
    VkDeviceAddress streamData = indirectAddress;
    const void* input = streamData + stride * s + offset;

    // further details later
    indirectCommandsLayout.pTokens[t].command (cmd, indirectExecutionSet, input, s);
  }
}

void cmdProcessAllSequences(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sequencesCount)
{
  for (s = 0; s < sequencesCount; s++)
  {
    sUsed = s;

    if (indirectCommandsLayout.flags &
VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT) {
      sUsed = incoherent_implementation_dependent_permutation[ sUsed ];
```

```
    }

    cmdProcessSequence( cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, sUsed );
  }
}
```

The processing of each sequence is considered stateless, therefore all state changes **must** occur prior to action commands within the sequence. A single sequence is strictly targeting the VkShaderStageFlags it was created with.

The primary input data for each token is provided through VkBuffer content at preprocessing using vkCmdPreprocessGeneratedCommandsEXT or execution time using vkCmdExecuteGeneratedCommandsEXT, however some functional arguments, for example push constant layouts, are specified at layout creation time. The input size is different for each token.

Possible values of those elements of the VkIndirectCommandsLayoutCreateInfoEXT::pTokens array specifying command tokens (other elements of the array specify command parameters) are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsTokenTypeEXT {
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT = 0,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT = 1,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT = 2,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT = 3,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT = 4,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT = 5,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT = 6,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT = 7,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT = 8,
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT = 9,
  // Provided by VK_EXT_descriptor_heap with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT = 1000135000,
  // Provided by VK_EXT_descriptor_heap with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT = 1000135001,
  // Provided by VK_EXT_device_generated_commands with VK_EXT_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT = 1000328000,
  // Provided by VK_EXT_device_generated_commands with VK_EXT_mesh_shader
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT = 1000328001,
  // Provided by VK_KHR_ray_tracing_maintenance1 with VK_EXT_device_generated_commands
    VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT = 1000386004,
} VkIndirectCommandsTokenTypeEXT;
```

Table 45. Supported Indirect Command Tokens

Common Tokens	Command Data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT	u32[] array of indices into the indirect execution set

Common Tokens	Command Data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT	`u32[]` raw data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT	`u8[]` raw data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT	`u32` placeholder data (not accessed by shader)
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT	`u32` placeholder data (not accessed by shader)
Compute Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT	VkDispatchIndirectCommand
Ray Tracing Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT	VkTraceRaysIndirectCommand2KHR
Graphics State Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT	VkBindIndexBufferIndirectCommandEXT
VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT	VkBindVertexBufferIndirectCommandEXT
Graphics Draw Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT	VkDrawIndexedIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT	VkDrawIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT	VkDrawMeshTasksIndirectCommandEXT
Graphics Draw Count Tokens	
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawIndexedIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawIndirectCommand
VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT	VkDrawIndirectCountIndirectCommandEXT with VkDrawMeshTasksIndirectCommandEXT

The VkIndirectCommandsLayoutTokenEXT structure specifies details to the function arguments that need to be known at layout creation time:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsLayoutTokenEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkIndirectCommandsTokenTypeEXT  type;
    VkIndirectCommandsTokenDataEXT  data;
    uint32_t                        offset;
} VkIndirectCommandsLayoutTokenEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- type specifies the VkIndirectCommandsTokenTypeEXT for data.
- data specifies a VkIndirectCommandsTokenDataEXT containing token-specific details for command execution. It is ignored if type does not match any member of the VkIndirectCommandsTokenDataEXT union.
- offset is the relative byte offset for the token within one sequence of the indirect buffer. The data stored at that offset is the command data for the token, e.g. VkDispatchIndirectCommand.

Valid Usage

- VUID-VkIndirectCommandsLayoutTokenEXT-offset-11124
  offset **must** be less than or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectCommandsTokenOffset
- VUID-VkIndirectCommandsLayoutTokenEXT-offset-11125
  offset **must** be aligned to 4
- VUID-VkIndirectCommandsLayoutTokenEXT-meshShader-11126
  If meshShader or taskShader are not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-rayTracingMaintenance1-11128
  If the rayTracingMaintenance1 feature is not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-deviceGeneratedCommandsMultiDrawIndirectCount-11129
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::deviceGeneratedCommandsMultiDrawIndirectCount is not supported, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT

- VUID-VkIndirectCommandsLayoutTokenEXT-deviceGeneratedCommandsMultiDrawIndirectCount-11130
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::deviceGeneratedCommandsMultiDrawIndirectCount is not supported, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-descriptorHeap-11332
  If the descriptorHeap feature is not enabled, type **must** not be VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-type-11333
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT VkIndirectCommandsPushConstantTokenEXT::updateRange.shaderStages **must** be VK_SHADER_STAGE_ALL

Valid Usage (Implicit)

- VUID-VkIndirectCommandsLayoutTokenEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_TOKEN_EXT
- VUID-VkIndirectCommandsLayoutTokenEXT-type-parameter
  type **must** be a valid VkIndirectCommandsTokenTypeEXT value
- VUID-VkIndirectCommandsLayoutTokenEXT-pPushConstant-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, or VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, the pPushConstant member of data **must** be a valid pointer to a valid VkIndirectCommandsPushConstantTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pVertexBuffer-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT, the pVertexBuffer member of data **must** be a valid pointer to a valid VkIndirectCommandsVertexBufferTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pIndexBuffer-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT, the pIndexBuffer member of data **must** be a valid pointer to a valid VkIndirectCommandsIndexBufferTokenEXT structure
- VUID-VkIndirectCommandsLayoutTokenEXT-pExecutionSet-parameter
  If type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT, the pExecutionSet member of data **must** be a valid pointer to a valid VkIndirectCommandsExecutionSetTokenEXT structure

The VkIndirectCommandsTokenDataEXT structure provides token-specific details used to generate the indirect execution layout.

```
// Provided by VK_EXT_device_generated_commands
typedef union VkIndirectCommandsTokenDataEXT {
    const VkIndirectCommandsPushConstantTokenEXT*    pPushConstant;
    const VkIndirectCommandsVertexBufferTokenEXT*    pVertexBuffer;
    const VkIndirectCommandsIndexBufferTokenEXT*     pIndexBuffer;
    const VkIndirectCommandsExecutionSetTokenEXT*    pExecutionSet;
} VkIndirectCommandsTokenDataEXT;
```

- pPushConstant is a pointer to a VkIndirectCommandsPushConstantTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, and VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT tokens
- pVertexBuffer is a pointer to a VkIndirectCommandsVertexBufferTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT tokens
- pIndexBuffer is a pointer to a VkIndirectCommandsIndexBufferTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT tokens
- pExecutionSet is a pointer to a VkIndirectCommandsExecutionSetTokenEXT structure needed for VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT tokens

The appropriate member of the union **must** be set for each token.

The following code provides detailed information on how an individual sequence is processed. For valid usage, all restrictions from the regular commands apply.

```
void cmdProcessSequence(cmd, indirectExecutionSet, indirectCommandsLayout,
indirectAddress, s)
{
  for (uint32_t t = 0; t < indirectCommandsLayout.tokenCount; t++) {
    VkIndirectCommandsLayoutTokenEXT *token = &indirectCommandsLayout.pTokens[t];

    uint32_t offset  = token->offset;
    uint32_t stride  = indirectCommandsLayout.indirectStride;
    VkDeviceAddress streamData = indirectAddress;
    const void* input = streamData + stride * s + offset;

    switch (token->tokenType) {
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT:
      uint32_t *bind = input;
      VkIndirectCommandsExecutionSetTokenEXT *info = token->data.pExecutionSet;

      if (info->type == VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT) {
        vkCmdBindPipeline(cmd, indirectExecutionSet.pipelineBindPoint,
indirectExecutionSet.pipelines[*bind]);
      } else {
        VkShaderStageFlagBits stages[];
        VkShaderEXT shaders[];
```

```
        uint32_t i = 0;
        IterateBitmaskLSBToMSB(iter, info->shaderStages) {
            stages[i] = iter;
            shaders[i] = indirectExecutionSet.shaders[bind[i]].shaderObject;
            i++;
        }
        vkCmdBindShadersEXT(cmd, i, stages, shaders);
      }
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT:
      uint32_t* data = input;
      VkPushConstantsInfoKHR info = {
        VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO_KHR,
        // this can also use `dynamicGeneratedPipelineLayout' to pass a
VkPipelineLayoutCreateInfo from pNext
        indirectCommandsLayout.pipelineLayout,
        token->token.pushConstant.updateRange.shaderStages,
        token->token.pushConstant.updateRange.offset,
        token->token.pushConstant.updateRange.size,
        data
      };

      vkCmdPushConstants2KHR(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT:

      VkHostAddressRangeConstEXT addressRange = {
        token->token.pushConstant.updateRange.data.size,
        input
      };

      VkPushDataInfoEXT info = {
        VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT,
        NULL,
        token->token.pushConstant.updateRange.offset,
        addressRange
      };

      vkCmdPushDataEXT(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT:

        token->token.pushConstant.updateRange.data.size,
        // this just updates the sequence index
        &s
      };

      VkPushDataInfoEXT info = {
        VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT,
        NULL,
        token->token.pushConstant.updateRange.offset,
        addressRange
      };

      vkCmdPushDataEXT(cmd, &info);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT:
      VkBindIndexBufferIndirectCommandEXT* data = input;

      vkCmdBindIndexBuffer(cmd, deriveBuffer(data->bufferAddress), deriveOffset(data-
>bufferAddress), data->indexType);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT:
      VkBindVertexBufferIndirectCommandEXT* data = input;

      vkCmdBindVertexBuffers2(cmd, token->token.vertexBuffer->vertexBindingUnit, 1,
&deriveBuffer(data->bufferAddress),
                              &deriveOffset(data->bufferAddress), data->size, data-
>stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_EXT:
      VkDrawIndexedIndirectCommand *data = input;

      vkCmdDrawIndexed(cmd, data->indexCount, data->instanceCount, data->firstIndex,
data->vertexOffset, data->firstInstance);
      break;
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_INDEXED_COUNT_EXT:
```

```
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawIndexedIndirect(cmd, deriveBuffer(data->bufferAddress),  deriveoffset
(data->bufferAddress), min(data->commandCount, indirectCommandsLayout.maxDrawCount),
data->stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_EXT:
      VkDrawIndirectCommand* data = input;

      vkCmdDraw(cmd, data->vertex_count, data->instanceCount, data->firstVertex, data
->firstIndex);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_COUNT_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawIndirect(cmd, deriveBuffer(data->bufferAddress), deriveoffset(data-
>bufferAddress), min(data->commandCount, indirectCommandsLayout.maxDrawCount), data-
>stride);
      break;

    // only available if VK_NV_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV_EXT:
      VkDrawMeshTasksIndirectCommandNV *data = input;

      vkCmdDrawMeshTasksNV(cmd, data->taskCount, data->firstTask);
     break;

    // only available if VK_NV_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_NV_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawMeshTasksIndirectCountNV(cmd, deriveBuffer(data->bufferAddress),
deriveoffset(data->bufferAddress), min(data->commandCount, indirectCommandsLayout
.maxDrawCount), data->stride);
      break;

    // only available if VK_EXT_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_EXT:
      VkDrawMeshTasksIndirectCommandEXT *data = input;

      vkCmdDrawMeshTasksEXT(cmd, data->groupCountX, data->groupCountY, data-
>groupCountZ);
     break;

    // only available if VK_EXT_mesh_shader is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT:
      VkDrawIndirectCountIndirectCommandEXT* data = input;

      vkCmdDrawMeshTasksIndirectCountEXT(cmd, deriveBuffer(data->bufferAddress),
```

```
deriveoffset(data->bufferAddress), min(data->commandCount, indirectCommandsLayout
.maxDrawCount), data->stride);
      break;

    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT:
      VkDispatchIndirectCommand *data = input;

      vkCmdDispatch(cmd, data->x, data->y, data->z);
      break;

    // only available if VK_KHR_ray_tracing_maintenance1 is enabled
    case VK_INDIRECT_COMMANDS_TOKEN_TYPE_TRACE_RAYS2_EXT:
      vkCmdTraceRaysIndirect2KHR(cmd, deriveBuffer(input));
      break;
    }
  }
}
```

The VkIndirectCommandsPushConstantTokenEXT structure specifies the layout token info for VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT, VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT, and VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT tokens.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsPushConstantTokenEXT {
    VkPushConstantRange    updateRange;
} VkIndirectCommandsPushConstantTokenEXT;
```

- updateRange is the push constant range that will be updated by the token.

The stageFlags member of updateRange is ignored.

Valid Usage

- VUID-VkIndirectCommandsPushConstantTokenEXT-updateRange-11132
  If the token type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, updateRange **must** be contained within the push constant info used by VkIndirectCommandsLayoutCreateInfoEXT
- VUID-VkIndirectCommandsPushConstantTokenEXT-size-11133
  If the token type is VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, the size member of updateRange **must** be 4

Valid Usage (Implicit)

- VUID-VkIndirectCommandsPushConstantTokenEXT-updateRange-parameter
  `updateRange` **must** be a valid VkPushConstantRange structure

The `VkIndirectCommandsVertexBufferTokenEXT` structure specifies the layout token info for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsVertexBufferTokenEXT {
    uint32_t    vertexBindingUnit;
} VkIndirectCommandsVertexBufferTokenEXT;
```

- `vertexBindingUnit` is the vertex input binding number to be bound.

Valid Usage

- VUID-VkIndirectCommandsVertexBufferTokenEXT-vertexBindingUnit-11134
  `vertexBindingUnit` **must** be less than the total number of vertex input bindings in use by the current graphics state

The `VkIndirectCommandsIndexBufferTokenEXT` structure specifies the layout token info for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsIndexBufferTokenEXT {
    VkIndirectCommandsInputModeFlagBitsEXT    mode;
} VkIndirectCommandsIndexBufferTokenEXT;
```

- `mode` specifies the mode to use with this token.

This allows for easy layering of Vulkan atop other APIs. When VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT is specified, the indirect buffer can contain a `D3D12_INDEX_BUFFER_VIEW` instead of VkBindIndexBufferIndirectCommandEXT as D3D's DXGI format value is mapped to the VkIndexType. It works as both structs are otherwise binary compatible.

Valid Usage

- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-11135
  `mode` **must** be non-zero
- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-11136
  `mode` **must** be one of the bits supported in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsIn`

putModes

Valid Usage (Implicit)

- VUID-VkIndirectCommandsIndexBufferTokenEXT-mode-parameter
  mode **must** be a valid VkIndirectCommandsInputModeFlagBitsEXT value

Bits which are set in VkIndirectCommandsIndexBufferTokenEXT::mode, specifying how an index buffer is used, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectCommandsInputModeFlagBitsEXT {
    VK_INDIRECT_COMMANDS_INPUT_MODE_VULKAN_INDEX_BUFFER_EXT = 0x00000001,
    VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT = 0x00000002,
} VkIndirectCommandsInputModeFlagBitsEXT;
```

- VK_INDIRECT_COMMANDS_INPUT_MODE_VULKAN_INDEX_BUFFER_EXT specifies that the indirect buffer contains VkBindIndexBufferIndirectCommandEXT.
- VK_INDIRECT_COMMANDS_INPUT_MODE_DXGI_INDEX_BUFFER_EXT specifies that the indirect buffer contains D3D12_INDEX_BUFFER_VIEW.

```
// Provided by VK_EXT_device_generated_commands
typedef VkFlags VkIndirectCommandsInputModeFlagsEXT;
```

VkIndirectCommandsInputModeFlagsEXT is a bitmask type for setting a mask of zero or more VkIndirectCommandsInputModeFlagBitsEXT.

The VkIndirectCommandsExecutionSetTokenEXT structure specifies the input data for the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token.

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectCommandsExecutionSetTokenEXT {
    VkIndirectExecutionSetInfoTypeEXT    type;
    VkShaderStageFlags                   shaderStages;
} VkIndirectCommandsExecutionSetTokenEXT;
```

- type describes the type of indirect execution set in use.
- shaderStages specifies the shaders that will be changed by this token.

Valid Usage

- VUID-VkIndirectCommandsExecutionSetTokenEXT-shaderStages-11137
  Each bit in shaderStages **must** be supported by

VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding or VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesShaderBinding

Valid Usage (Implicit)

- VUID-VkIndirectCommandsExecutionSetTokenEXT-type-parameter
  `type` **must** be a valid VkIndirectExecutionSetInfoTypeEXT value
- VUID-VkIndirectCommandsExecutionSetTokenEXT-shaderStages-parameter
  `shaderStages` **must** be a valid combination of VkShaderStageFlagBits values

35.2. Indirect Commands Generation and Execution

The generation of commands on the device requires a `preprocess` buffer.

With `VK_EXT_device_generated_commands`, to retrieve the memory size and alignment requirements of a particular execution state call:

```
// Provided by VK_EXT_device_generated_commands
void vkGetGeneratedCommandsMemoryRequirementsEXT(
    VkDevice                                    device,
    const VkGeneratedCommandsMemoryRequirementsInfoEXT* pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a VkGeneratedCommandsMemoryRequirementsInfoEXT structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the buffer object are returned.

If the size returned is zero, the preprocessing step can be skipped for this layout.

Valid Usage (Implicit)

- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkGeneratedCommandsMemoryRequirementsInfoEXT structure
- VUID-vkGetGeneratedCommandsMemoryRequirementsEXT-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsMemoryRequirementsInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkIndirectExecutionSetEXT      indirectExecutionSet;
    VkIndirectCommandsLayoutEXT    indirectCommandsLayout;
    uint32_t                       maxSequenceCount;
    uint32_t                       maxDrawCount;
} VkGeneratedCommandsMemoryRequirementsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indirectExecutionSet` is the indirect execution set to be used for binding shaders.
- `indirectCommandsLayout` is the VkIndirectCommandsLayoutEXT that this buffer memory is intended to be used with.
- `maxSequenceCount` is the maximum number of sequences that this buffer memory can be used with.
- `maxDrawCount` is the maximum number of indirect draws that can be executed by any COUNT-type multi-draw indirect tokens. The draw count in the indirect buffer is clamped to this value for these token types.

If the action command token for the layout is not a COUNT-type multi-draw indirect token, `maxDrawCount` is ignored.

Valid Usage

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-maxSequencesCount-11009
  `maxSequencesCount` **must** be less or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectSequenceCount`
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11010
  If `indirectCommandsLayout` was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, `indirectExecutionSet` **must** not be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11151
  If `indirectCommandsLayout` was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the shader stages used to create the initial shader state of `indirectExecutionSet` **must** equal the VkIndirectCommandsExecutionSetTokenEXT::`shaderStages` used to create `indirectCommandsLayout`
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-11011
  If `indirectCommandsLayout` was not created with a token sequence that contained the

VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, indirectExecutionSet **must** be VK_NULL_HANDLE

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-maxDrawCount-11146
  When not ignored, maxDrawCount × maxSequenceCount **must** be less than 2^24
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectExecutionSet-11012
  If indirectExecutionSet is VK_NULL_HANDLE, either a VkGeneratedCommandsPipelineInfoEXT or a VkGeneratedCommandsShaderInfoEXT **must** be included in the pNext chain

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_MEMORY_REQUIREMENTS_INFO_EXT
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkGeneratedCommandsPipelineInfoEXT or VkGeneratedCommandsShaderInfoEXT
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectExecutionSet-parameter
  If indirectExecutionSet is not VK_NULL_HANDLE, indirectExecutionSet **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-indirectCommandsLayout-parameter
  indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-VkGeneratedCommandsMemoryRequirementsInfoEXT-commonparent
  Both of indirectCommandsLayout, and indirectExecutionSet that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsPipelineInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkPipeline         pipeline;
} VkGeneratedCommandsPipelineInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pipeline is a valid pipeline object.

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsPipelineInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_PIPELINE_INFO_EXT
- VUID-VkGeneratedCommandsPipelineInfoEXT-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

Structure Chaining

Extends the structures

- VkGeneratedCommandsInfoEXT
- VkGeneratedCommandsMemoryRequirementsInfoEXT

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsShaderInfoEXT {
    VkStructureType       sType;
    void*                 pNext;
    uint32_t              shaderCount;
    const VkShaderEXT*    pShaders;
} VkGeneratedCommandsShaderInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCount` is the size of the `pShaders` array.
- `pShaders` is a pointer to an array of shader objects.

Valid Usage

- VUID-VkGeneratedCommandsShaderInfoEXT-pShaders-11127
  `pShaders` **must** not contain more than one shader object for a given VkShaderStageFlagBits stage

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsShaderInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_SHADER_INFO_EXT
- VUID-VkGeneratedCommandsShaderInfoEXT-pShaders-parameter
  `pShaders` **must** be a valid pointer to an array of `shaderCount` valid VkShaderEXT handles
- VUID-VkGeneratedCommandsShaderInfoEXT-shaderCount-arraylength
  `shaderCount` **must** be greater than `0`

Extends the structures

- VkGeneratedCommandsInfoEXT
- VkGeneratedCommandsMemoryRequirementsInfoEXT

35.2.1. Indirect Execution Sets

Indirect Execution Sets contain sets of pipelines or shader objects which can be bound individually.

```
// Provided by VK_EXT_device_generated_commands
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkIndirectExecutionSetEXT)
```

Indirect Execution Sets allow the device to bind different shaders and pipeline states using Device-Generated Commands.

Indirect Execution Sets are created by calling:

```
// Provided by VK_EXT_device_generated_commands
VkResult vkCreateIndirectExecutionSetEXT(
    VkDevice                                    device,
    const VkIndirectExecutionSetCreateInfoEXT*  pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkIndirectExecutionSetEXT*                  pIndirectExecutionSet);
```

- `device` is the logical device that creates the indirect execution set.
- `pCreateInfo` is a pointer to a VkIndirectExecutionSetCreateInfoEXT structure containing parameters affecting creation of the indirect execution set.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pIndirectExecutionSet` is a pointer to a VkIndirectExecutionSetEXT handle in which the resulting indirect execution set is returned.

Valid Usage

- VUID-vkCreateIndirectExecutionSetEXT-deviceGeneratedCommands-11013
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateIndirectExecutionSetEXT-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkCreateIndirectExecutionSetEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkIndirectExecutionSetCreateInfoEXT structure
- VUID-vkCreateIndirectExecutionSetEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateIndirectExecutionSetEXT-pIndirectExecutionSet-parameter
  `pIndirectExecutionSet` **must** be a valid pointer to a VkIndirectExecutionSetEXT handle
- VUID-vkCreateIndirectExecutionSetEXT-device-queuecount
  The device **must** have been created with at least `1` queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkIndirectExecutionSetCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetCreateInfoEXT {
    VkStructureType                       sType;
    const void*                           pNext;
    VkIndirectExecutionSetInfoTypeEXT     type;
    VkIndirectExecutionSetInfoEXT         info;
} VkIndirectExecutionSetCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a VkIndirectExecutionSetInfoTypeEXT describing the type of set being created and determining which field of the `info` union will be used.
- `info` is a VkIndirectExecutionSetInfoEXT union containing layout information for the set.

Valid Usage

- VUID-VkIndirectExecutionSetCreateInfoEXT-maxIndirectShaderObjectCount-11014
  If `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT`::`maxIndirectShaderObjectCount` is

zero or the shaderObject feature is not enabled type **must** not be VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_CREATE_INFO_EXT
- VUID-VkIndirectExecutionSetCreateInfoEXT-type-parameter
  type **must** be a valid VkIndirectExecutionSetInfoTypeEXT value
- VUID-VkIndirectExecutionSetCreateInfoEXT-pPipelineInfo-parameter
  If type is VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT, the pPipelineInfo member of info **must** be a valid pointer to a valid VkIndirectExecutionSetPipelineInfoEXT structure
- VUID-VkIndirectExecutionSetCreateInfoEXT-pShaderInfo-parameter
  If type is VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT, the pShaderInfo member of info **must** be a valid pointer to a valid VkIndirectExecutionSetShaderInfoEXT structure

Values which **can** be set in VkIndirectExecutionSetCreateInfoEXT::type, specifying contents of an indirect execution set, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectExecutionSetInfoTypeEXT {
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT = 0,
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT = 1,
} VkIndirectExecutionSetInfoTypeEXT;
```

- VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT specifies that the indirect execution set contains VkPipeline objects.
- VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT specifies that the indirect execution set contains VkShaderEXT objects.

The VkIndirectExecutionSetInfoEXT union is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef union VkIndirectExecutionSetInfoEXT {
    const VkIndirectExecutionSetPipelineInfoEXT*    pPipelineInfo;
    const VkIndirectExecutionSetShaderInfoEXT*      pShaderInfo;
} VkIndirectExecutionSetInfoEXT;
```

- pPipelineInfo is a pointer to a VkIndirectExecutionSetPipelineInfoEXT structure containing pipeline layout information for the set.
- pShaderInfo is a pointer to a VkIndirectExecutionSetShaderInfoEXT structure containing shader

object layout information for the set.

The VkIndirectExecutionSetPipelineInfoEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetPipelineInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         initialPipeline;
    uint32_t           maxPipelineCount;
} VkIndirectExecutionSetPipelineInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- initialPipeline is the initial pipeline for the set. This pipeline will be automatically added to the set at index 0.
- maxPipelineCount is the maximum number of pipelines stored in the set.

The characteristics of initialPipeline will be used to validate all pipelines added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with pipelines is used, initialPipeline constitutes the initial shader state.

Valid Usage

- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11015
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding does not contain VK_SHADER_STAGE_COMPUTE_BIT, the VkPipelineBindPoint of initialPipeline **must** not be VK_PIPELINE_BIND_POINT_COMPUTE
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11016
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding does not contain VK_SHADER_STAGE_FRAGMENT_BIT, the VkPipelineBindPoint of initialPipeline **must** not be VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11017
  If VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding does not contain ray tracing stages, the VkPipelineBindPoint of initialPipeline **must** not be VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR
- VUID-VkIndirectExecutionSetPipelineInfoEXT-maxPipelineCount-11018

maxPipelineCount must be between 1 and VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectPipelineCount

- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11019
initialPipeline must not use descriptors of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11153
initialPipeline must have been created with VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetPipelineInfoEXT-sType-sType
sType must be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_PIPELINE_INFO_EXT
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-parameter
initialPipeline must be a valid VkPipeline handle

The VkIndirectExecutionSetShaderInfoEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderInfoEXT {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        shaderCount;
    const VkShaderEXT*                              pInitialShaders;
    const VkIndirectExecutionSetShaderLayoutInfoEXT* pSetLayoutInfos;
    uint32_t                                        maxShaderCount;
    uint32_t                                        pushConstantRangeCount;
    const VkPushConstantRange*                      pPushConstantRanges;
} VkIndirectExecutionSetShaderInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- shaderCount is the number of members in the pInitialShaders and pSetLayoutInfos arrays.
- pInitialShaders is a pointer to an array containing a VkShaderEXT object for each shader stage that will be used in the set. These shaders will be automatically added to the set beginning at index 0.
- pSetLayoutInfos is NULL or a pointer to an array containing a VkIndirectExecutionSetShaderLayoutInfoEXT used by each corresponding pInitialShaders shader stage in the set.
- maxShaderCount is the maximum number of shader objects stored in the set.
- pushConstantRangeCount is the number of members in the pPushConstantRanges array.

- `pPushConstantRanges` is a pointer to the array of VkPushConstantRange ranges used by all shaders in the set.

The characteristics of `pInitialShaders` will be used to validate all shaders added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with shader objects is used, `pInitialShaders` constitutes the initial shader state.

If `pSetLayoutInfos` is `NULL`, the descriptor layout parameters are inherited from the shader object.

Valid Usage

- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11020
  All members of `pInitialShaders` **must** have a `stage` supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesShaderBinding`
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11021
  `maxShaderCount` **must** not be zero
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11022
  `maxShaderCount` **must** be less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT`::`maxIndirectShaderObjectCount`
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11036
  `maxShaderCount` **must** be greater than or equal to `shaderCount`
- VUID-VkIndirectExecutionSetShaderInfoEXT-stage-11023
  The `stage` of each element in the `pInitialShaders` array **must** be unique
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11154
  Each member of `pInitialShaders` **must** have been created with VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-10929
  If `pSetLayoutInfos` is not `NULL`, the descriptor layout values specified **must** be compatible with the descriptor set layouts defined at the creation of the shader object
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11321
  If any element of `pInitialShaders` was created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, all elements of `pInitialShaders` **must** have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11322
  If any element of `pInitialShaders` was created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, all elements of `pInitialShaders` **must** have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11323
  If elements of `pInitialShaders` were created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, `pSetLayoutInfos` **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_INFO_EXT
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-parameter
  `pInitialShaders` **must** be a valid pointer to an array of `shaderCount` valid VkShaderEXT handles
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-parameter
  If `pSetLayoutInfos` is not `NULL`, `pSetLayoutInfos` **must** be a valid pointer to an array of `shaderCount` valid VkIndirectExecutionSetShaderLayoutInfoEXT structures
- VUID-VkIndirectExecutionSetShaderInfoEXT-pPushConstantRanges-parameter
  If `pushConstantRangeCount` is not `0`, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid VkPushConstantRange structures
- VUID-VkIndirectExecutionSetShaderInfoEXT-shaderCount-arraylength
  `shaderCount` **must** be greater than `0`

The `VkIndirectExecutionSetShaderLayoutInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderLayoutInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        setLayoutCount;
    const VkDescriptorSetLayout*    pSetLayouts;
} VkIndirectExecutionSetShaderLayoutInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `setLayoutCount` is the number of members in the `pSetLayouts` array
- `pSetLayouts` is a pointer to an array containing VkDescriptorSetLayout objects used by the shader stage. The implementation **must** not access these objects outside of the duration of the command this structure is passed to.

Valid Usage

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-11024
  All members of `pSetLayouts` **must** not contain descriptors of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_LAYOUT_INFO_EXT`
- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-parameter
  If `setLayoutCount` is not `0`, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or VK_NULL_HANDLE VkDescriptorSetLayout handles

Destroy an Indirect Execution Set by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkDestroyIndirectExecutionSetEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-11025
  All submitted commands that refer to `indirectExecutionSet` **must** have completed execution

Valid Usage (Implicit)

- VUID-vkDestroyIndirectExecutionSetEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parameter
  If `indirectExecutionSet` is not VK_NULL_HANDLE, `indirectExecutionSet` **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkDestroyIndirectExecutionSetEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parent
  If `indirectExecutionSet` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectExecutionSet` **must** be externally synchronized

The `VkWriteIndirectExecutionSetPipelineEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkWriteIndirectExecutionSetPipelineEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkPipeline         pipeline;
} VkWriteIndirectExecutionSetPipelineEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `index` is the element of the set to update
- `pipeline` is the pipeline to store in the indirect execution set

Valid Usage

- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11026
  `index` **must** be less than the value of `VkIndirectExecutionSetPipelineInfoEXT::maxPipelineCount` used to create the set
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11027
  `pipeline` **must** have been created with VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11029
  `index` **must** not be referenced by submitted command buffers
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11030
  The shader stages contained in `pipeline` **must** be supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`supportedIndirectCommandsShaderStagesPipelineBinding`

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetPipelineEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_PIPELINE_EXT
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

The VkWriteIndirectExecutionSetShaderEXT structure is defined as:

```
// Provided by VK_EXT_device_generated_commands with VK_EXT_shader_object
typedef struct VkWriteIndirectExecutionSetShaderEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkShaderEXT        shader;
} VkWriteIndirectExecutionSetShaderEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- index is the element of the set to update
- shader is the shader to store in the indirect execution set

Shaders need not be stored in the Indirect Execution Set according to their stage. The only restriction for shader indices within a set is that the value of the index **must** be less than the maximum number of shaders in the set.

Valid Usage

- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11031
  index **must** be less than VkIndirectExecutionSetShaderInfoEXT::maxShaderCount
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-11032
  shader **must** have been created with VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT
- VUID-VkWriteIndirectExecutionSetShaderEXT-pInitialShaders-11033
  A shader created with the same VkShaderStageFlagBits **must** have been passed in the VkIndirectExecutionSetShaderInfoEXT::pInitialShaders array
- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11034
  index **must** not be in use by submitted command buffers

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetShaderEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_SHADER_EXT
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-parameter
  shader **must** be a valid VkShaderEXT handle

Pipeline elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetPipelineEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    uint32_t                                    executionSetWriteCount,
    const VkWriteIndirectExecutionSetPipelineEXT* pExecutionSetWrites);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set being updated.
- `executionSetWriteCount` is the number of elements in the `pExecutionSetWrites` array.
- `pExecutionSetWrites` is a pointer to an array of VkWriteIndirectExecutionSetPipelineEXT structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-11035
  `indirectExecutionSet` **must** have been created with type VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-11037
  `executionSetWriteCount` **must** be less than or equal to `VkIndirectExecutionSetPipelineInfoEXT`::`maxPipelineCount`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-11042
  Each element in the `pExecutionSetWrites` array must have a unique `VkWriteIndirectExecutionSetPipelineEXT`::`index`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11038
  Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11324
  If `initialPipeline` was created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, each pipeline in `pExecutionSetWrites` **must** also have been created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11325
  If `initialPipeline` was created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, each pipeline in `pExecutionSetWrites` **must** also have been created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11039
  If `initialPipeline` was created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, the layout of each pipeline in `pExecutionSetWrites` **must** be compatible with the `initialPipeline` used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11040

Each pipeline in the Indirect Execution Set **must** have identically defined static and dynamic state values to the `initialPipeline` used to create the Indirect Execution Set

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11147
  Each pipeline in the Indirect Execution Set **must** have identically defined fragment outputs interface to the `initialPipeline` used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11152
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its included shader stages
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11098
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `FragDepth`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11086
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `SampleMask`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11085
  Each pipeline in the Indirect Execution Set **must** match the `initialPipeline` used to create the Indirect Execution Set in its use of `StencilExportEXT`

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parameter
  `indirectExecutionSet` **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-parameter
  `pExecutionSetWrites` **must** be a valid pointer to an array of `executionSetWriteCount` valid VkWriteIndirectExecutionSetPipelineEXT structures
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-arraylength
  `executionSetWriteCount` **must** be greater than `0`
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parent
  `indirectExecutionSet` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `indirectExecutionSet` **must** be externally synchronized

Shader object elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetShaderEXT(
    VkDevice                                    device,
    VkIndirectExecutionSetEXT                   indirectExecutionSet,
    uint32_t                                    executionSetWriteCount,
    const VkWriteIndirectExecutionSetShaderEXT* pExecutionSetWrites);
```

- `device` is the logical device that owns the indirect execution set.
- `indirectExecutionSet` is the indirect execution set being updated.
- `executionSetWriteCount` is the number of elements in the `pExecutionSetWrites` array.
- `pExecutionSetWrites` is a pointer to an array of VkWriteIndirectExecutionSetShaderEXT structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-11041
  `indirectExecutionSet` **must** have been created with type VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11043
  Each element in the `pExecutionSetWrites` array must have a unique `VkWriteIndirectExecutionSetShaderEXT`::`index`
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11044
  Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11326
  If the shaders in `pInitialShaders` were created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, each shader in `pExecutionSetWrites` **must** also have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11327
  If the shaders in `pInitialShaders` were created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, each pipeline in `pExecutionSetWrites` **must** also have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11140
  If the shaders in `pInitialShaders` were created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, the descriptor layout of each shader in `pExecutionSetWrites` **must** be compatible with the initial layout info used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11148
  Each fragment shader element in the Indirect Execution Set **must** have identically defined fragment outputs interface to the initial shader state used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-FragDepth-11054
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader

state used to create the Indirect Execution Set in its use of FragDepth

- VUID-vkUpdateIndirectExecutionSetShaderEXT-SampleMask-11050
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of SampleMask
- VUID-vkUpdateIndirectExecutionSetShaderEXT-StencilExportEXT-11003
  Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of StencilExportEXT

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetShaderEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parameter
  indirectExecutionSet **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-parameter
  pExecutionSetWrites **must** be a valid pointer to an array of executionSetWriteCount valid VkWriteIndirectExecutionSetShaderEXT structures
- VUID-vkUpdateIndirectExecutionSetShaderEXT-executionSetWriteCount-arraylength
  executionSetWriteCount **must** be greater than 0
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parent
  indirectExecutionSet **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to indirectExecutionSet **must** be externally synchronized

It is legal to update an Indirect Execution Set that is in flight as long as the element indices in pExecutionSetWrites are not in use. Any change to an indirect execution set requires recalculating memory requirements by calling vkGetGeneratedCommandsMemoryRequirementsEXT for commands that use that modified state. Commands that are in flight or those not using updated elements require no changes.

The lifetimes of pipelines and shader objects contained in a set **must** match or exceed the lifetime of the set.

With VK_EXT_device_generated_commands, the actual generation of commands as well as their execution on the device is handled as single action with:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdExecuteGeneratedCommandsEXT(
    VkCommandBuffer                             commandBuffer,
    VkBool32                                    isPreprocessed,
    const VkGeneratedCommandsInfoEXT*           pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `isPreprocessed` represents whether the input data has already been preprocessed on the device. If it is VK_FALSE this command will implicitly trigger the preprocessing step, otherwise not.
- `pGeneratedCommandsInfo` is a pointer to a VkGeneratedCommandsInfoEXT structure containing parameters affecting the generation of commands.

If the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT flag was used to create the VkGeneratedCommandsInfoEXT::`indirectCommandsLayout` then the execution of sequences through this command **may** use implementation-defined ordering which is not guaranteed to be coherent using the same input data. It does not affect the order of token processing within a sequence. This is the implied ordering with VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT.

After a call to `vkCmdExecuteGeneratedCommandsEXT`, command buffer state will become undefined according to the tokens executed. This table specifies the relationship between tokens used and state invalidation.

Table 46. Indirect Execution State Invalidation

Common Tokens	States Invalidated
VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT	Bound shaders and pipelines
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT	Push constant data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT	Push constant data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT	Push data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT	Push data
VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT	Index buffer
VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT	Vertex buffer

Valid Usage

- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-04553

If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-09598
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-04770
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR, reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-09599
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and reductionMode equal to either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-unnormalizedCoordinates-09635
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's levelCount and layerCount **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08609
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the image view's viewType **must** be VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08610
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08611
  If a VkSampler created with unnormalizedCoordinates equal to VK_TRUE is used to sample a VkImageView as a result of this command, then the sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06479
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02691
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07888
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02692
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02693
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it **must** not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubic-02694
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command **must** have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubic` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command **must** have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::`filterCubicMinmax` returned by vkGetPhysicalDeviceImageFormatProperties2
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features **must** contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07029
  For any VkBufferView being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features **must** contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's buffer features **must** contain

VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08600
  If a a bound shader was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in Pipeline Layout Compatibility
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08601
  If a a bound shader was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are compatible with the push constant range used to create the shader
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10068
  For each array of resources that is used by a bound shader, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08114
  Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, **must** be valid if they are accessed as described by descriptor validity by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-imageLayout-00344
  If an image descriptor is accessed by a shader, the VkImageLayout **must** match the subresource accessible from the VkImageView as defined by the image layout matching rules
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08115
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline **must** have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08116
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, **must** be valid if they are dynamically accessed
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline **must** have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, or a VkShaderEXT created with a `VkDescriptorSetLayout` that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory **must** be resident
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08606
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08612
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-storageBuffers-06936
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08613
  If the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-02707
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by bound shaders **must** not be a protected resource
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewType-07752
  If a VkImageView is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types
- VUID-vkCmdExecuteGeneratedCommandsEXT-format-07753
  If a VkImageView or VkBufferView is accessed as a result of this command, then the numeric type of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08795
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that

instruction **must** have at least as many components as the image view's format

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08796
  If a VkImageView created with the format VK_FORMAT_A8_UNORM is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-04469
  If a VkBufferView is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04474
  If the `sparseImageInt64Atomics` feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04475
  If the `sparseImageInt64Atomics` feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07288
  Any shader invocation executed by this command **must** terminate
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09600
  If a descriptor with type equal to any of VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11636
  If an acceleration structure is accessed as a result of this command through an OpRayQueryProceedKHR operation , the VK_EXT_opacity_micromap extension is not enabled, and the acceleration structure is built using geometry with a VkAccelerationStructureTrianglesOpacityMicromapKHR structure included in its pNext chain, the shader **must** have specified a OpacityMicromapIdKHR execution mode with its specialization constant operand equal to VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11637
  If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11638
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkPipeline bound to the pipeline bind point used by this command **must** not have been created with flags that includes VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-micromap-11639
  If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an indexBuffer containing both VkOpacityMicromapSpecialIndexKHR values and indices into an associated micromap array, any VkShaderEXT that accessed the descriptor **must** not have been created with flags that includes VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12472
  Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11297
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a OpTypeStruct decorated with Block or BufferBlock using that mapping, the calculated offset for the resource heap **must** be a multiple of bufferDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11298
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeImage or OpTypeSampledImage using that mapping, the calculated offset for the resource heap **must** be a multiple of imageDescriptorAlignment

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11299
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses an OpTypeSampler or OpTypeSampledImage using that mapping, the calculated offset for the sampler heap **must** be a multiple of samplerDescriptorAlignment
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11300
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11301
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11302
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11304
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11305
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address at the expected location

in push data **must** be a valid VkDeviceAddress backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11306
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid VkDeviceAddress
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11308
  For each descriptor heap that is statically used by a bound shader, either directly or via a descriptor mapping, a valid descriptor heap **must** be bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11309
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11372
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11373
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2 for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11374
  If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by VkDeviceAddressRangeKHR when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsEXT-pBindInfo-11375
  If any bound shader uses an embedded sampler via a descriptor mapping, the value of `pBindInfo->reservedRangeSize` set for vkCmdBindSamplerHeapEXT **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11376
  If a bound shader was created as a VkShaderEXT with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11398
  If a bound shader was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11437
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11438
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11441
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11439
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or

VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11442
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11485
  If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-index-11450
  If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by VkSamplerCustomBorderColorIndexCreateInfoEXT, the value of VkSamplerCustomBorderColorIndexCreateInfoEXT::`index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11455
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the resource is mapped to **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set
- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11456
  If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the address of the indirect memory **must** have been queried from a buffer created without the VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-02684
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdExecuteGeneratedCommandsEXT-subpass-02685
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to VK_PIPELINE_BIND_POINT_GRAPHICS
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07468
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07469
  Input attachment views accessed in a subpass **must** be created with the same VkFormat as the corresponding subpass definition, and be created with a VkImageView that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound VkFramebuffer as specified by Fragment Input Attachment Compatibility
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09595
  Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by VkRenderingInputAttachmentIndexInfo, or no `InputAttachmentIndex` if VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` or VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are `NULL`, **must** be created with a VkImageView that is compatible with the corresponding color, depth, or stencil attachment in VkRenderingInfo
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09596
  Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both VkRenderingInputAttachmentIndexInfo::`pDepthInputAttachmentIndex` and VkRenderingInputAttachmentIndexInfo::`pStencilInputAttachmentIndex` are non-`NULL`
- VUID-vkCmdExecuteGeneratedCommandsEXT-InputAttachmentIndex-09597
  If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in VkRenderingInputAttachmentIndexInfo
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06537
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10795
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10796
  If a depth attachment is written by any prior command in this subpass or by the load,

store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10797
  If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12338
  If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_COLOR_BIT on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12339
  If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_DEPTH_BIT on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12340
  If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and feedback loop is not enabled for VK_IMAGE_ASPECT_STENCIL_BIT on that attachment, the stencil attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09003
  If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06886
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes **must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06887
  If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back `writeMask` are not zero, and stencil test is enabled, all stencil ops **must** be VK_STENCIL_OP_KEEP
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07831
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT dynamic state enabled then vkCmdSetViewport **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07832
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SCISSOR dynamic state enabled then vkCmdSetScissor **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08617

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_WIDTH dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineWidth **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07834
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBiasEnable` is VK_TRUE, then vkCmdSetDepthBias or vkCmdSetDepthBias2EXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07835
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and an active color attachment current value of `blendEnable` is VK_TRUE with a blend equations where any VkBlendFactor member is VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, then vkCmdSetBlendConstants **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07836
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `depthBoundsTestEnable` is VK_TRUE, then vkCmdSetDepthBounds **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07837
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilCompareMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07838
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilWriteMask **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07839
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_REFERENCE dynamic state enabled, the current value of and `rasterizerDiscardEnable` is VK_FALSE, the current value of `stencilTestEnable` is VK_TRUE, then vkCmdSetStencilReference **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to VkPhysicalDeviceMultiviewProperties::`maxMultiviewInstanceIndex`
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::`sampleLocationsEnable` set to VK_TRUE, then the active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07634
  If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleLocationsEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06666
  If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `sampleLocationsEnable` is VK_TRUE, then vkCmdSetSampleLocationsEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07840
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetCullMode **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07841
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetFrontFace **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07843
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled,

and the current value of rasterizerDiscardEnable is VK_FALSE, vkCmdSetDepthTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07844
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthWriteEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07845
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_COMPARE_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of depthTestEnable is VK_TRUE, then vkCmdSetDepthCompareOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07846
  If the depthBounds feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthBoundsTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07847
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetStencilTestEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07848
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_OP dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, the current value of stencilTestEnable is VK_TRUE, then vkCmdSetStencilOp **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03417
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, then vkCmdSetViewportWithCount **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-scissorCount-03418
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT dynamic state enabled, then vkCmdSetScissorWithCount **must** have been called and not subsequently

invalidated in the current command buffer prior to this drawing

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03419
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic states enabled, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04876
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE dynamic state enabled, then vkCmdSetRasterizerDiscardEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04877
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetDepthBiasEnable **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-logicOp-04878
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `logicOpEnable` is VK_TRUE, then vkCmdSetLogicOpEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitiveFragmentShadingRateWithMultipleViewports-04552
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitiveFragmentShadingRateWithMultipleViewports-08642
  If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then vkCmdSetViewportWithCount **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsEXT-blendEnable-04727
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current

value of rasterizerDiscardEnable is VK_FALSE, then for each color attachment, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding current value of blendEnable **must** be VK_FALSE

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08644
  If a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and none of the following is enabled:

  - the multisampledRenderToSingleSampled feature

  then the current value of rasterizationSamples **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08876
  If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with vkCmdBeginRendering
- VUID-vkCmdExecuteGeneratedCommandsEXT-viewMask-06178
  If the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::viewMask equal to VkRenderingInfo::viewMask
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-06179
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering, the bound graphics pipeline **must** have been created with a VkPipelineRenderingCreateInfo::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08910
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08912
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an imageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08911
  If the dynamicRenderingUnusedAttachments feature is enabled, and the current render pass

instance was begun with vkCmdBeginRendering and VkRenderingInfo ::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo ::pColorAttachments array with an imageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkPipelineRenderingCreateInfo ::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07749
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorWriteEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-attachmentCount-07750
  If the colorWriteEnable feature is enabled, a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the attachmentCount parameter of most recent call to vkCmdSetColorWriteEnableEXT in the current command buffer **must** be greater than or equal to the number of active color attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07751
  If the VK_EXT_discard_rectangles extension is enabled, a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo included a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPipelineDiscardRectangleStateCreateInfoEXT ::discardRectangleCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-09236
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT dynamic state enabled and the pNext chain of VkGraphicsPipelineCreateInfo did not include a VkPipelineDiscardRectangleStateCreateInfoEXT structure, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for each discard rectangle in VkPhysicalDeviceDiscardRectanglePropertiesEXT ::maxDiscardRectangles
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07880
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDiscardRectangleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07881
  If the VK_EXT_discard_rectangles extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of discardRectangleEnable is VK_TRUE, then vkCmdSetDiscardRectangleModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08913
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08914
  If current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08915
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pDepthAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08916
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08917
  If current render pass instance was begun with vkCmdBeginRendering, the

dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08918
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, and the value of VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo::pStencilAttachment->imageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06183
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingLocalRead-11797
  If the current render pass instance was begun with vkCmdBeginRendering, the dynamicRenderingLocalRead feature is enabled, the VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR flag is specified, and an attachment is being used as a feedback loop as specified by VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR, VkRenderingAttachmentFlagsInfoKHR::flags for that attachment **must** include VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR
- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06184
  If the current render pass instance was begun with vkCmdBeginRendering and VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView was not VK_NULL_HANDLE, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07285
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with a imageView not equal to VK_NULL_HANDLE **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07286
  If the multisampledRenderToSingleSampled feature is not enabled, and

vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->imageView

- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07287
  If the multisampledRenderToSingleSampled feature is not enabled, and vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, and VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->imageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-pNext-07935
  If this command is called inside a render pass instance started with vkCmdBeginRendering, and the pNext chain of VkRenderingInfo includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the value of rasterizationSamples for the bound graphics pipeline **must** be equal to VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples
- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-06198
  If the current render pass instance was begun with vkCmdBeginRendering, the bound pipeline **must** have been created with a VkGraphicsPipelineCreateInfo::renderPass equal to VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-08963
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->imageView was not VK_NULL_HANDLE, then the corresponding element of VkPipelineRenderingCreateInfo::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-11539
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the VkRenderingInfo::pColorAttachments->resolveImageView was not VK_NULL_HANDLE, then the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-08964
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->imageView was not VK_NULL_HANDLE, then the

VkPipelineRenderingCreateInfo::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11540
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-08965
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->imageView was not VK_NULL_HANDLE, then the VkPipelineRenderingCreateInfo::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11860
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, then the VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the pipeline **must** not be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-10582
  If the current render pass instance was begun with a vkCmdBeginRendering call in commandBuffer, its VkRenderingInfo::flags parameter **must** not have VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT set unless VK_RENDERING_CONTENTS_INLINE_BIT_KHR is also set
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the primitivesGeneratedQueryWithRasterizerDiscard feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, rasterization discard **must** not be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, the bound graphics pipeline **must** not have been created with a non-zero value in VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07620
  If the depthClamp feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetDepthClampEnableEXT **must** have been called and not subsequently

invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07621
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_POLYGON_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetPolygonModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07622
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetRasterizationSamplesEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07623
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetSampleMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and `alphaToCoverageEnable` was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set `alphaToCoverageEnable` to VK_TRUE, then the Fragment Output Interface **must** contain a variable for the alpha `Component` word in `Location` 0 at `Index` 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07624
  If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07625
  If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetAlphaToOneEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07626
  If the `logicOp` feature is enabled, a shader object is bound to the

VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetLogicOpEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07627
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorBlendEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07629
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and there are color attachments bound, then vkCmdSetColorWriteMaskEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07630
  If the `geometryStreams` feature is enabled, and a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound which was created with both a VK_SHADER_STAGE_GEOMETRY_BIT stage and the VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT dynamic state enabled, then vkCmdSetRasterizationStreamEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07631
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of `rasterizerDiscardEnable` is VK_FALSE, then vkCmdSetConservativeRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07632
  If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT dynamic state enabled, the current value of `rasterizerDiscardEnable` is VK_FALSE, and the current value of `conservativeRasterizationMode` is VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT, then vkCmdSetExtraPrimitiveOverestimationSizeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-conservativePointAndLineRasterization-07499
  If the `VK_EXT_conservative_rasterization` extension is enabled,

conservativePointAndLineRasterization is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line or point topology class, then the current value of conservativeRasterizationMode **must** be VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07633
  If the depthClipEnable feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT dynamic state, then vkCmdSetDepthClipEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07636
  If the VK_EXT_provoking_vertex extension is enabled, a shader object is bound to the VK_SHADER_STAGE_VERTEX_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetProvokingVertexModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08666
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineRasterizationModeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08669
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, and the effective rasterization input topology is in the line topology class, then vkCmdSetLineStippleEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07849
  If any of the stippledRectangularLines, stippledBresenhamLines or stippledSmoothLines features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of stippledLineEnable is VK_TRUE, then vkCmdSetLineStipple **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic state enabled, the effective rasterization input topology is in the line topology class, and the current lineRasterizationMode is VK_LINE_RASTERIZATION_MODE_BRESENHAM or VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the current alphaToCoverageEnable, alphaToOneEnable and sampleShadingEnable states **must** all be VK_FALSE

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07639
  If the depthClipControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT dynamic state enabled, then vkCmdSetDepthClipNegativeOneToOneEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09650
  If the depthClampControl feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT dynamic state enabled, and the current value of depthClampEnable is VK_TRUE, then vkCmdSetDepthClampRangeEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07471
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass
- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07472
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::rasterizationSamples parameter used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07473
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state and VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT states enabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the rasterizationSamples parameter in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09211
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a VkMultisampledRenderToSingleSampledInfoEXT structure with multisampledRenderToSingleSampledEnable equal to VK_TRUE, then the

rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** be the same as the rasterizationSamples member of that structure

- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07476
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorBlendEnableEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07478
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic states enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then the last call to vkCmdSetColorWriteMaskEXT in the current command buffer prior to this drawing command **must** have set a value for all active color attachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-advancedBlendMaxColorAttachments-07480
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic states enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and an active color attachment current value of blendEnable is VK_TRUE, then the number of active color attachments **must** not exceed advancedBlendMaxColorAttachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10862
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT , but not the VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-10863
  If a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10864
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either

vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, a shader object is bound to the VK_SHADER_STAGE_GEOMETRY_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the `rasterizationStream` to zero
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07482
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07483
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of `sampleLocationsEnable` is VK_TRUE, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to vkCmdSetSampleLocationsEXT **must** equal the `rasterizationSamples` parameter of the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07484
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07485
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if `sampleLocationsEnable` was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::`maxSampleLocationGridSize.width` as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07486
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, then the sampleLocationsInfo.maxSampleLocationGridSize.height in the last call to vkCmdSetSampleLocationsEXT **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling rasterizationSamples
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07487
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and if sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT, the fragment shader code **must** not statically use the extended instruction InterpolateAtSample
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07936
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.width **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07937
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationGridSize.height **must** evenly divide VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height as returned by vkGetPhysicalDeviceMultisamplePropertiesEXT with a samples parameter equaling the value of rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07938
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state disabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then sampleLocationsInfo.sampleLocationsPerPixel **must** equal rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07495
  If the bound graphics pipeline state was created with the

VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07496
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07497
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH, then the stippledSmoothLines feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07498
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_DEFAULT, then the stippledRectangularLines feature **must** be enabled and VkPhysicalDeviceLimits::strictLines **must** be VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-stage-07073
  If the bound pipeline was created with the VkPipelineShaderStageCreateInfo::stage member of an element of VkGraphicsPipelineCreateInfo::pStages set to VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then Mesh Shader Queries **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08877
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetAttachmentFeedbackLoopEnableEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-nextStage-10745
  For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a nextStage including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08684

If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_VERTEX_BIT

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08685
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08686
  If there is no bound graphics pipeline, and the tessellationShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08687
  If there is no bound graphics pipeline, and the geometryShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_GEOMETRY_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08688
  If there is no bound graphics pipeline, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08689
  If there is no bound graphics pipeline, and the taskShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_TASK_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08690
  If there is no bound graphics pipeline, and the meshShader feature is enabled, vkCmdBindShadersEXT **must** have been called in the current command buffer with pStages with an element of VK_SHADER_STAGE_MESH_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08693
  If there is no bound graphics pipeline, and at least one of the taskShader and meshShader features is enabled, one of the VK_SHADER_STAGE_VERTEX_BIT or VK_SHADER_STAGE_MESH_BIT_EXT stages **must** have a valid VkShaderEXT bound, and the other **must** have no VkShaderEXT bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08696
  If there is no bound graphics pipeline, and a valid VkShaderEXT is bound to the VK_SHADER_STAGE_VERTEX_BIT stage, there **must** be no VkShaderEXT bound to either the VK_SHADER_STAGE_TASK_BIT_EXT stage or the VK_SHADER_STAGE_MESH_BIT_EXT stage
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08698
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, then all shaders created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag in the same vkCreateShadersEXT call **must** also be bound
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08699
  If any graphics shader is bound which was created with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag, any stages in between stages whose

shaders which did not create a shader with the VK_SHADER_CREATE_LINK_STAGE_BIT_EXT flag as part of the same vkCreateShadersEXT call **must** not have any VkShaderEXT bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08878
  All bound graphics shader objects **must** have been created with identical or identically defined push constant ranges
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08879
  All bound graphics shader objects **must** have either been created with the VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or identically defined arrays of descriptor set layouts
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08715
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpDepthAttachmentReadEXT, the depthWriteEnable parameter in the last call to vkCmdSetDepthWriteEnable **must** be VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08716
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_STENCIL_WRITE_MASK dynamic state enabled, and the fragment shader declares the EarlyFragmentTests execution mode and uses OpStencilAttachmentReadEXT, the writeMask parameter in the last call to vkCmdSetStencilWriteMask **must** be 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09116
  If a shader object is bound to any graphics stage or the bound graphics pipeline was created with VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT, and the format of any color attachment is VK_FORMAT_E5B9G9R9_UFLOAT_PACK32, the corresponding element of the pColorWriteMasks parameter of vkCmdSetColorWriteMaskEXT **must** either include all of VK_COLOR_COMPONENT_R_BIT, VK_COLOR_COMPONENT_G_BIT, VK_COLOR_COMPONENT_B_BIT, and VK_COLOR_COMPONENT_A_BIT, or none of them
- VUID-vkCmdExecuteGeneratedCommandsEXT-maxFragmentDualSrcAttachments-09239
  If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of Location for any output attachment statically used in the Fragment Execution Model executed by this command **must** be less than maxFragmentDualSrcAttachments
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09548
  If the current render pass was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, the value of each element of VkRenderingAttachmentLocationInfo::pColorAttachmentLocations in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09549
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, for each element of

VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices in the bound pipeline, if either pColorAttachmentInputIndices[i] or the value for the corresponding index set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** much

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10927
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10928
  If the current render pass was begun with vkCmdBeginRendering, and there is no shader object bound to any graphics stage, if either the value of VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex in the bound pipeline or the corresponding value set currently in the current render pass instance is statically used in the bound pipeline in an InputAttachmentIndex decoration, the two values **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09642
  If the current render pass was begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag, the bound graphics pipeline **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09643
  If the bound graphics pipeline was created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT, the current render pass **must** have begun with vkCmdBeginRendering with the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10772
  If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-11521
  If current render pass instance was begun with vkCmdBeginRendering with VkRenderingInfo::flags which includes VK_RENDERING_FRAGMENT_REGION_BIT_EXT, and if sample shading is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11522
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** have been created with a VkCustomResolveCreateInfoEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11523
  If the current render pass instance was begun with vkCmdBeginRendering and does not contain a custom resolve, and the dynamicRenderingUnusedAttachments feature is not enabled, the graphics pipeline bound **must** not have been created with a VkCustomResolveCreateInfoEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11524
  If the current render pass instance was begun with vkCmdBeginRendering and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11525
  If the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, and vkCmdBeginCustomResolveEXT has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11861
  If the dynamicRenderingUnusedAttachments feature is not enabled and the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, the bound graphics pipeline **must** have been created with a VkCustomResolveCreateInfoEXT::colorAttachmentCount equal to VkRenderingInfo::colorAttachmentCount
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11862
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11863
  If the dynamicRenderingUnusedAttachments feature is not enabled, and the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView equal to VK_NULL_HANDLE **must** have the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound pipeline equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11864
  If the dynamicRenderingUnusedAttachments feature is enabled, the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, and VkRenderingInfo::colorAttachmentCount greater than 0, then each element of the VkRenderingInfo::pColorAttachments array with an resolveImageView not equal to VK_NULL_HANDLE **must** have been created with a VkFormat equal to the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats used to create the bound graphics pipeline, or the corresponding element of VkCustomResolveCreateInfoEXT::pColorAttachmentFormats, if it exists, **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11865
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and

VkRenderingInfo::pDepthAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11866
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11867
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::depthAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pDepthAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11868
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11869
  If current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is not enabled, and VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline **must** be equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11870
  If the current render pass instance was begun with vkCmdBeginRendering, it contains a custom resolve, the dynamicRenderingUnusedAttachments feature is enabled, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, and the value of VkCustomResolveCreateInfoEXT::stencilAttachmentFormat used to create the bound graphics pipeline was not equal to the VkFormat used to create VkRenderingInfo ::pStencilAttachment->resolveImageView, the value of the format **must** be VK_FORMAT_UNDEFINED
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-11871
  If the current render pass instance was begun with vkCmdBeginRendering with a VkRenderingInfo::colorAttachmentCount parameter greater than 0 and vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, then for

each element of the VkRenderingInfo::pColorAttachments array with a resolveImageView not equal to VK_NULL_HANDLE, the resolveImageView **must** have been created with a sample count equal to the value of rasterizationSamples for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11872
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, and VkRenderingInfo::pDepthAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pDepthAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11873
  If the current render pass instance was begun with vkCmdBeginRendering, vkCmdBeginCustomResolveEXT has been recorded in the render pass instance, VkRenderingInfo::pStencilAttachment->resolveImageView was not VK_NULL_HANDLE, the value of rasterizationSamples for the bound graphics pipeline **must** be equal to the sample count used to create VkRenderingInfo::pStencilAttachment->resolveImageView
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11529
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11530
  If a shader object is bound to the fragment stage, the current render pass instance was begun with vkCmdBeginRendering and contains a custom resolve, a fragment density map attachment is active, and vkCmdBeginCustomResolveEXT has not yet been called, then the fragment shader object bound **must** have been created with VkCustomResolveCreateInfoEXT::customResolve as VK_FALSE
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13361
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, then all bound shader objects **must** have been created with the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13362
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a setLayoutCount not equal to 0, and with pSetLayouts not equal to NULL, then the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-12491
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, with a pushConstantRangeCount not equal to 0, and with pPushConstantRanges not equal to NULL, then the pipeline layout of the bound push constants **must** have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT set
- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13363
  If there are any shader objects bound that were created with flags that includes the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR bit, and any of the descriptor set

layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11045
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11046
  If isPreprocessed is VK_TRUE and vkGetGeneratedCommandsMemoryRequirementsEXT did not return a required size of zero then vkCmdPreprocessGeneratedCommandsEXT **must** have already been executed on the device before this command executes, and the preprocessing command **must** have used the same pGeneratedCommandsInfo content as well as the content of the input buffers it references (all except VkGeneratedCommandsInfoEXT::preprocessAddress)
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11047
  If isPreprocessed is VK_TRUE then the indirectCommandsLayout member of pGeneratedCommandsInfo **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11141
  If the indirectCommandsLayout member of pGeneratedCommandsInfo was created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set, then isPreprocessed **must** be VK_TRUE
- VUID-vkCmdExecuteGeneratedCommandsEXT-preprocessAddress-11142
  The contents of the preprocessAddress member of pGeneratedCommandsInfo **must** not have been previously used to record another vkCmdExecuteGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11048
  If isPreprocessed is VK_TRUE then the bound descriptor sets and push constants **must** match identically with those bound during recording of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-10198
  If isPreprocessed is VK_TRUE then the conditional render state and its predicate value **must** match identically with the state and value set during execution of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11049
  If isPreprocessed is VK_TRUE and the indirectCommandsLayout member of pGeneratedCommandsInfo contains a draw token, then the graphics state bound on commandBuffer **must** match identically with the graphics state bound on the stateCommandBuffer passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11149
  If isPreprocessed is VK_TRUE, then the queue family index of commandBuffer **must** be the same as the queue family index used to allocate the stateCommandBuffer passed to vkCmdPreprocessGeneratedCommandsEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11051
  If `isPreprocessed` is VK_TRUE and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a dispatch token, then the compute state bound on `commandBuffer` **must** match identically with the compute state bound on the `stateCommandBuffer` passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11052
  If `isPreprocessed` is VK_TRUE and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a ray tracing token, then the ray tracing state bound on `commandBuffer` **must** match identically with the ray tracing state bound on the `stateCommandBuffer` passed to vkCmdPreprocessGeneratedCommandsEXT
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11053
  If the token sequence of the passed VkGeneratedCommandsInfoEXT::`indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the initial shader state of VkGeneratedCommandsInfoEXT::`indirectExecutionSet` **must** be bound on `commandBuffer`
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11004
  If `indirectCommandsLayout` was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token and `indirectExecutionSet` was created using VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT, every executed VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token **must** bind all the shader stages set in the VkIndirectCommandsExecutionSetTokenEXT::`shaderStages` used to create `indirectCommandsLayout`
- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11055
  If `isPreprocessed` is VK_TRUE and the token sequence of the passed VkGeneratedCommandsInfoEXT::`indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the members of VkGeneratedCommandsInfoEXT::`indirectExecutionSet` accessed by this command **must** not have been modified since the preprocess buffer was generated
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11056
  If the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a draw token, then the active render pass **must** not have a specified fragment density map
- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommandsTransformFeedback-11057
  If `deviceGeneratedCommandsTransformFeedback` is not supported on device, transform feedback **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectExecutionSet-11058
  If transform feedback is active, VkGeneratedCommandsInfoEXT::`indirectExecutionSet` **must** be VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommands-11059
  The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::`deviceGeneratedCommands` feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-

supportedIndirectCommandsShaderStages-11060
The bound shader stages **must** be supported by VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages

- VUID-vkCmdExecuteGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11061
Only stages specified in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages **can** be set in pGeneratedCommandsInfo->shaderStages
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11062
If a rendering pass is currently active, either the view mask **must** be 0 or indirectExecutionSet **must** be VK_NULL_HANDLE
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11143
commandBuffer **must** not have been recorded with VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-10769
If the indirectCommandsLayout member of pGeneratedCommandsInfo contains a draw token, this command **must** not be called outside a render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-12202
If the indirectCommandsLayout member of pGeneratedCommandsInfo does not contain a draw token, this command **must** not be called inside a render pass instance

Valid Usage (Implicit)

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-parameter
commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdExecuteGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
pGeneratedCommandsInfo **must** be a valid pointer to a valid VkGeneratedCommandsInfoEXT structure
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-recording
commandBuffer **must** be in the recording state
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-cmdpool
The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdExecuteGeneratedCommandsEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdExecuteGeneratedCommandsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdExecuteGeneratedCommandsEXT-bufferlevel
commandBuffer **must** be a primary VkCommandBuffer

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action Indirection

Conditional Rendering

vkCmdExecuteGeneratedCommandsEXT is affected by conditional rendering

The `VkGeneratedCommandsInfoEXT` is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkShaderStageFlags              shaderStages;
    VkIndirectExecutionSetEXT       indirectExecutionSet;
    VkIndirectCommandsLayoutEXT     indirectCommandsLayout;
    VkDeviceAddress                 indirectAddress;
    VkDeviceSize                    indirectAddressSize;
    VkDeviceAddress                 preprocessAddress;
    VkDeviceSize                    preprocessSize;
    uint32_t                        maxSequenceCount;
    VkDeviceAddress                 sequenceCountAddress;
    uint32_t                        maxDrawCount;
} VkGeneratedCommandsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderStages` is the mask of shader stages used by the commands.
- `indirectExecutionSet` is the indirect execution set to be used for binding shaders.
- `indirectCommandsLayout` is the VkIndirectCommandsLayoutEXT that specifies the command

sequence data.

- `indirectAddress` is an address that holds the indirect buffer data.
- `indirectAddressSize` is the size in bytes of indirect buffer data starting at `indirectAddress`.
- `preprocessAddress` specifies a physical address of the `VkBuffer` used for preprocessing the input data for execution. If this structure is used with vkCmdExecuteGeneratedCommandsEXT with its `isPreprocessed` set to VK_TRUE, then the preprocessing step is skipped but data in this address **may** still be modified. The contents and the layout of this address are opaque to applications and **must** not be modified outside functions related to device-generated commands or copied to another buffer for reuse.
- `preprocessSize` is the maximum byte size within `preprocessAddress` that is available for preprocessing.
- `maxSequenceCount` is used to determine the number of sequences to execute.
- `sequenceCountAddress` specifies an optional physical address of a single `uint32_t` value containing the requested number of sequences to execute.
- `maxDrawCount` is the maximum number of indirect draws that can be executed by any COUNT-type multi-draw indirect tokens. The draw count in the indirect buffer is clamped to this value for these token types.

If `sequenceCountAddress` is not `NULL`, then `maxSequenceCount` is the maximum number of sequences that can be executed. The actual number is `min(maxSequenceCount, *sequenceCountAddress)`. If `sequenceCountAddress` is `NULL`, then `maxSequenceCount` is the exact number of sequences to execute.

If the action command token for the layout is not a COUNT-type multi-draw indirect token, `maxDrawCount` is ignored.

Valid Usage

- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11063
  If vkGetGeneratedCommandsMemoryRequirementsEXT returns a non-zero size, `preprocessAddress` **must** not be `0`
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11064
  `VkDeviceMemory` objects bound to the underlying buffer for `preprocessAddress` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the VkMemoryRequirements structure returned by vkGetGeneratedCommandsMemoryRequirementsEXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11065
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in VkIndirectCommandsPushConstantTokenEXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11066
  If the `indirectCommandsLayout` uses a token of VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in

VkIndirectCommandsPushConstantTokenEXT

- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-11067
  `maxSequenceCount` **must** be less or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectSequenceCount` and VkGeneratedCommandsMemoryRequirementsInfoEXT::`maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11068
  If `sequenceCountAddress` is not `NULL`, the value contained in the address **must** be less or equal to VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::`maxIndirectSequenceCount` and VkGeneratedCommandsMemoryRequirementsInfoEXT::`maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-10246
  `maxSequenceCount` **must** not be zero
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11069
  `preprocessAddress` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT usage flag set
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11144
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there is a descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, the pipeline layout **must** be compatible with the descriptor and push constant layout info used by `indirectExecutionSet`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11328
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11329
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was a descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created without VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11330
  If the `indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a VkPipelineLayoutCreateInfo in `pNext` of the VkIndirectCommandsLayoutCreateInfoEXT used to create `indirectCommandsLayout`, shaders in `indirectExecutionSet` **must** have been created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT

- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11331
  If the indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, and there was a descriptor and push constant layout info provided either by pipelineLayout or through a VkPipelineLayoutCreateInfo in pNext of the VkIndirectCommandsLayoutCreateInfoEXT used to create indirectCommandsLayout, shaders in indirectExecutionSet **must** have been created without VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11002
  If indirectCommandsLayout was created with a token sequence that contained the VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the shader stages used to create the initial shader state of indirectExecutionSet **must** equal the VkIndirectCommandsExecutionSetTokenEXT::shaderStages used to create indirectCommandsLayout
- VUID-VkGeneratedCommandsInfoEXT-preprocessSize-11071
  preprocessSize **must** be greater than or equal to the memory requirement's size returned by vkGetGeneratedCommandsMemoryRequirementsEXT using the matching inputs (indirectCommandsLayout, ...) as within this structure
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11072
  The underlying buffer for sequenceCountAddress **must** have the VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR bit set in its usage flag
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11073
  If sequenceCountAddress is not NULL, sequenceCountAddress **must** be aligned to 4
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-12407
  The underlying buffer for indirectAddress **must** have the VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR bit set in its usage flag
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-11074
  indirectAddress **must** be aligned to 4
- VUID-VkGeneratedCommandsInfoEXT-indirectAddressSize-11077
  indirectAddressSize **must** be greater than zero
- VUID-VkGeneratedCommandsInfoEXT-maxDrawCount-11078
  When not ignored, maxDrawCount × maxSequenceCount **must** be less than 2^24
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11079
  If indirectCommandsLayout was created using a VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT token and shader objects are not bound then the bound graphics pipeline **must** have been created with VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE in pDynamicStates
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11083
  If the token sequence of the passed indirectCommandsLayout contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the indirectExecutionSet **must** not be VK_NULL_HANDLE
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-10241
  If the token sequence of the passed indirectCommandsLayout does not contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the

indirectExecutionSet **must** be VK_NULL_HANDLE

- VUID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-11080
  If indirectExecutionSet is VK_NULL_HANDLE, a VkGeneratedCommandsPipelineInfoEXT or VkGeneratedCommandsShaderInfoEXT **must** be included in the pNext chain

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GENERATED_COMMANDS_INFO_EXT
- VUID-VkGeneratedCommandsInfoEXT-shaderStages-parameter
  shaderStages **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-parameter
  If indirectExecutionSet is not VK_NULL_HANDLE, indirectExecutionSet **must** be a valid VkIndirectExecutionSetEXT handle
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-parameter
  indirectCommandsLayout **must** be a valid VkIndirectCommandsLayoutEXT handle
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-parameter
  indirectAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-parameter
  If preprocessAddress is not 0, preprocessAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-parameter
  If sequenceCountAddress is not 0, sequenceCountAddress **must** be a valid VkDeviceAddress value
- VUID-VkGeneratedCommandsInfoEXT-commonparent
  Both of indirectCommandsLayout, and indirectExecutionSet that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Referencing the functions defined in Indirect Commands Layout, vkCmdExecuteGeneratedCommandsEXT behaves as:

```
uint32_t sequencesCount = sequenceCountAddress ?
      min(maxSequenceCount, sequenceCountAddress.load_uint32()) :
      maxSequenceCount;

cmdProcessAllSequences(commandBuffer, indirectExecutionSet,
                       indirectCommandsLayout, indirectAddress,
                       sequencesCount);

// The stateful commands within indirectCommandsLayout will not
// affect the state of subsequent commands in the target
// command buffer (cmd)
```

NOTE It is important to note that the affected values of all state related to the `shaderStages` used are undefined after this command. This means that e.g., if this command indirectly alters push constants, the push constant state becomes undefined.

Commands **can** be preprocessed prior execution using the following command:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdPreprocessGeneratedCommandsEXT(
    VkCommandBuffer                             commandBuffer,
    const VkGeneratedCommandsInfoEXT*           pGeneratedCommandsInfo,
    VkCommandBuffer                             stateCommandBuffer);
```

- `commandBuffer` is the command buffer which does the preprocessing.
- `pGeneratedCommandsInfo` is a pointer to a VkGeneratedCommandsInfoEXT structure containing parameters affecting the preprocessing step.
- `stateCommandBuffer` is a command buffer from which to snapshot current states affecting the preprocessing step. When a graphics command action token is used, graphics state is snapshotted. When a compute action command token is used, compute state is snapshotted. When a ray tracing action command token is used, ray tracing state is snapshotted. It can be deleted at any time after this command has been recorded.

NOTE `stateCommandBuffer` access is not synchronized by the driver, meaning that this command buffer **must** not be modified between threads in an unsafe manner.

Valid Usage

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-11081
  `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-11082
  `pGeneratedCommandsInfo`'s `indirectCommandsLayout` **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set
- VUID-vkCmdPreprocessGeneratedCommandsEXT-indirectCommandsLayout-11084
  If the token sequence of the passed VkGeneratedCommandsInfoEXT::`indirectCommandsLayout` contains a VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT token, the initial shader state of VkGeneratedCommandsInfoEXT::`indirectExecutionSet` **must** be bound on `stateCommandBuffer`
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-11138
  `stateCommandBuffer` **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsEXT-deviceGeneratedCommands-11087
  The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-vkCmdPreprocessGeneratedCommandsEXT-

supportedIndirectCommandsShaderStages-11088
Only stages specified in VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages **can** be set in pGeneratedCommandsInfo->shaderStages

Valid Usage (Implicit)

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-parameter
commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
pGeneratedCommandsInfo **must** be a valid pointer to a valid VkGeneratedCommandsInfoEXT structure
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-parameter
stateCommandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-recording
commandBuffer **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-cmdpool
The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPreprocessGeneratedCommandsEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdPreprocessGeneratedCommandsEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdPreprocessGeneratedCommandsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdPreprocessGeneratedCommandsEXT-bufferlevel
commandBuffer **must** be a primary VkCommandBuffer
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commonparent
Both of commandBuffer, and stateCommandBuffer **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to stateCommandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdPreprocessGeneratedCommandsEXT is not affected by conditional rendering

The bound descriptor sets and push constants that will be used with indirect command generation **must** already be specified on `stateCommandBuffer` at the time of preprocessing commands with vkCmdPreprocessGeneratedCommandsEXT. They **must** match the bound descriptor sets and push constants used in the execution of indirect commands with vkCmdExecuteGeneratedCommandsEXT.

If push constants for shader stages are also specified in the VkGeneratedCommandsInfoEXT ::`indirectCommandsLayout` with a VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT or VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT token, then those values override the push constants that were previously pushed.

All State-setting commands that are bound on `stateCommandBuffer` will be used. Any parameters set by those commands **must** be set identically in a command buffer that vkCmdExecuteGeneratedCommandsEXT is recorded into, at the point vkCmdExecuteGeneratedCommandsEXT is recorded. If conditional rendering is used, the predicate value at preprocessing time **must** match the one at execution time. The queue family index `stateCommandBuffer` was allocated from **must** be the same as the queue family index of the command buffer used in vkCmdExecuteGeneratedCommandsEXT.

On some implementations, preprocessing **may** have no effect on performance.

vkCmdExecuteGeneratedCommandsEXT **may** write to the preprocess buffer, no matter the isPreprocess parameter. In this case, the implementation **must** insert appropriate synchronization automatically, which corresponds to the following pseudocode:

- Barrier
  - srcStageMask = DRAW_INDIRECT
  - srcAccesMask = 0
  - dstStageMask = COMMAND_PREPROCESS_BIT
  - dstAccessMask = COMMAND_PREPROCESS_WRITE_BIT | COMMAND_PREPROCESS_READ_BIT

- Do internal writes
- Barrier
  - srcStageMask = COMMAND_PREPROCESS_BIT
  - srcAccesMask = COMMAND_PREPROCESS_WRITE_BIT
  - dstStageMask = DRAW_INDIRECT
  - dstAccessMask = INDIRECT_COMMAND_READ_BIT
- Execute

Chapter 36. Sparse Resources

As documented in Resource Memory Association, `VkBuffer` and `VkImage` resources in Vulkan **must** be bound completely and contiguously to a single `VkDeviceMemory` object. This binding **must** be done before the resource is used, and the binding is immutable for the lifetime of the resource.

Sparse resources relax these restrictions and provide these additional features:

- Sparse resources **can** be bound non-contiguously to one or more `VkDeviceMemory` allocations.
- Sparse resources **can** be re-bound to different memory allocations over the lifetime of the resource.
- Sparse resources **can** have descriptors generated and used orthogonally with memory binding commands.

36.1. Sparse Resource Features

Sparse resources have several features that **must** be enabled explicitly at resource creation time. The features are enabled by including bits in the `flags` parameter of VkImageCreateInfo or VkBufferCreateInfo. Each feature also has one or more corresponding feature enables specified in VkPhysicalDeviceFeatures.

- The `sparseBinding` feature is the base, and provides the following capabilities:
  - Resources **can** be bound at some defined (sparse block) granularity.
  - The entire resource **must** be bound to memory before use regardless of regions actually accessed.
  - No specific mapping of image region to memory offset is defined, i.e. the location that each texel corresponds to in memory is implementation-dependent.
  - Sparse buffers have a well-defined mapping of buffer range to memory range, where an offset into a range of the buffer that is bound to a single contiguous range of memory corresponds to an identical offset within that range of memory.
  - Requested via the VK_IMAGE_CREATE_SPARSE_BINDING_BIT and VK_BUFFER_CREATE_SPARSE_BINDING_BIT bits.
  - A sparse image created using VK_IMAGE_CREATE_SPARSE_BINDING_BIT (but not VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT) supports all formats that non-sparse usage supports, and supports both VK_IMAGE_TILING_OPTIMAL and VK_IMAGE_TILING_LINEAR tiling.
- *Sparse Residency* builds on (and requires) the `sparseBinding` feature. It includes the following capabilities:
  - Resources do not have to be completely bound to memory before use on the device.
  - Images have a prescribed sparse image block layout, allowing specific rectangular regions of the image to be bound to specific offsets in memory allocations.
  - Consistency of access to unbound regions of the resource is defined by the absence or presence of `VkPhysicalDeviceSparseProperties`::`residencyNonResidentStrict`. If this property is

present, accesses to unbound regions of the resource are well defined and behave as if the data bound is populated with all zeros; writes are discarded. When this property is absent, accesses are considered safe, but reads will return undefined values.

  - Requested via the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT and VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT bits.
  - Sparse residency support is advertised on a finer grain via the following features:
    - The `sparseResidencyBuffer` feature provides support for creating `VkBuffer` objects with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidencyImage2D` feature provides support for creating 2D single-sampled `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidencyImage3D` feature provides support for creating 3D `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency2Samples` feature provides support for creating 2D `VkImage` objects with 2 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency4Samples` feature provides support for creating 2D `VkImage` objects with 4 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency8Samples` feature provides support for creating 2D `VkImage` objects with 8 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
    - The `sparseResidency16Samples` feature provides support for creating 2D `VkImage` objects with 16 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.

    Implementations supporting `sparseResidencyImage2D` are only **required** to support sparse 2D, single-sampled images. Support for sparse 3D and MSAA images is **optional** and **can** be enabled via `sparseResidencyImage3D`, `sparseResidency2Samples`, `sparseResidency4Samples`, `sparseResidency8Samples`, and `sparseResidency16Samples`.
  - A sparse image created using VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT supports all non-compressed color formats with power-of-two element size that non-sparse usage supports. Additional formats **may** also be supported and **can** be queried via vkGetPhysicalDeviceSparseImageFormatProperties. VK_IMAGE_TILING_LINEAR tiling is not supported.
- The `sparseResidencyAliased` feature provides the following capability that **can** be enabled per resource:

  Allows physical memory ranges to be shared between multiple locations in the same sparse resource or between multiple sparse resources, with each binding of a memory location observing a consistent interpretation of the memory contents.

  See Sparse Memory Aliasing for more information.

36.2. Sparse Buffers and Fully-Resident Images

Both `VkBuffer` and `VkImage` objects created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT or VK_BUFFER_CREATE_SPARSE_BINDING_BIT bits **can** be thought of as a linear region of address

space. In the VkImage case if VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT is not used, this linear region is entirely opaque, meaning that there is no application-visible mapping between texel location and memory offset.

Unless VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT or VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT are also used, the entire resource **must** be bound to one or more VkDeviceMemory objects before use.

36.2.1. Sparse Buffer and Fully-Resident Image Block Size

The sparse block size in bytes for sparse buffers and fully-resident images is reported as VkMemoryRequirements::alignment. alignment represents both the memory alignment requirement and the binding granularity (in bytes) for sparse resources.

36.3. Sparse Partially-Resident Buffers

VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT bit allow the buffer to be made only partially resident. Partially resident VkBuffer objects are allocated and bound identically to VkBuffer objects using only the VK_BUFFER_CREATE_SPARSE_BINDING_BIT feature. The only difference is the ability for some regions of the buffer to be unbound during device use. After creating a VkBuffer with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT, the entire buffer region is considered unbound.

36.4. Sparse Partially-Resident Images

VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT bit allow specific rectangular regions of the image called sparse image blocks to be bound to specific ranges of memory. This allows the application to manage residency at either image subresource or sparse image block granularity. Each image subresource (outside of the mip tail) starts on a sparse block boundary and has dimensions that are integer multiples of the corresponding dimensions of the sparse image block. After creating a VkImage with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, all image subresources are considered unbound.

NOTE

Applications **can** use these types of images to control LOD based on total memory consumption. If memory pressure becomes an issue the application **can** unbind and disable specific mipmap levels of images without having to recreate resources or modify texel data of unaffected levels.

The application **can** also use this functionality to access subregions of the image in a “megatexture” fashion. The application **can** create a large image and only populate the region of the image that is currently being used in the scene.

36.4.1. Accessing Unbound Regions

The following member of VkPhysicalDeviceSparseProperties affects how data in unbound regions of sparse resources are handled by the implementation:

- residencyNonResidentStrict

If this property is not present, reads of unbound regions of the image will return undefined values. Both reads and writes are still considered *safe* and will not affect other resources or populated regions of the image.

If this property is present, all reads of unbound regions of the image will behave as if the region was bound to memory populated with all zeros; writes will be discarded.

Image operations performed on unbound memory **may** still alter some component values in the natural way for those accesses, e.g. substituting a value of one for alpha in formats that do not have an alpha component.

> Example: Reading the alpha component of an unbacked VK_FORMAT_R8_UNORM image will return a value of 1.0f.

If a value was previously written to the same unbound sparse memory location in the same shader invocation, that value **may** be returned instead; using the `VolatileTexel` image operand, the `Volatile` memory semantic, or the `Volatile` decoration to load the value will prevent prior stored values from being returned.

NOTE	Getting the value of the previous store is possible as implementations are free to optimize multiple accesses in the general case. There are other ways this **can** be prevented, but using volatile loads is by far the simplest.

See Physical Device Enumeration for instructions for retrieving physical device properties.

> **Implementor's Note**
>
> For implementations that **cannot** natively handle access to unbound regions of a resource, the implementation **may** allocate and bind memory to the unbound regions. Reads and writes to unbound regions will access the implementation-managed memory instead.
>
> Given that the values resulting from reads of unbound regions are undefined in this scenario, implementations **may** use the same physical memory for all unbound regions of multiple resources within the same process.

36.4.2. Mip Tail Regions

Sparse images created using VK_IMAGE_CREATE_SPARSE_BINDING_BIT (without also using VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT) have no specific mapping of image region or image subresource to memory offset defined, so the entire image **can** be thought of as a linear opaque address region. However, images created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT do have a prescribed sparse image block layout, and hence each image subresource **must** start on a sparse block boundary. Within each array layer, the set of mip levels that have a smaller size than the sparse block size in bytes are grouped together into a *mip tail region*.

If the VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT flag is present in the `flags` member of

VkSparseImageFormatProperties, for the image's format, then any mip level which has dimensions that are not integer multiples of the corresponding dimensions of the sparse image block, and all subsequent mip levels, are also included in the mip tail region.

The following member of VkPhysicalDeviceSparseProperties **may** affect how the implementation places mip levels in the mip tail region:

- residencyAlignedMipSize

Each mip tail region is bound to memory as an opaque region (i.e. **must** be bound using a VkSparseImageOpaqueMemoryBindInfo structure) and **may** be of a size greater than or equal to the sparse block size in bytes. This size is guaranteed to be an integer multiple of the sparse block size in bytes.

An implementation **may** choose to allow each array-layer's mip tail region to be bound to memory independently or require that all array-layer's mip tail regions be treated as one. This is dictated by VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT in VkSparseImageMemoryRequirements::flags.

The following diagrams depict how VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT alter memory usage and requirements.

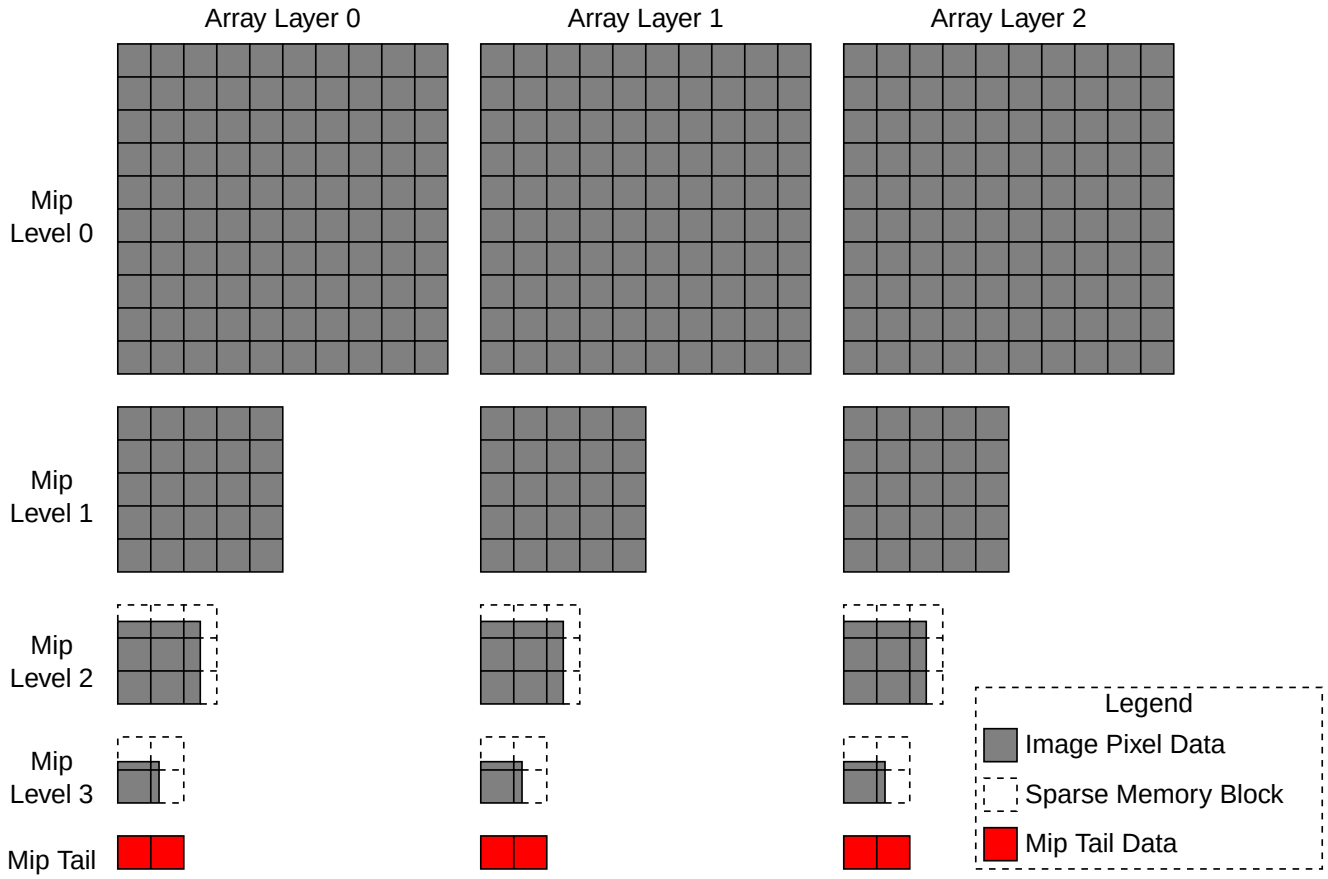

Figure 17. Sparse Image

In the absence of VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, each array layer contains a mip tail region containing texel data for all mip levels smaller than the sparse image block in any dimension.

Mip levels that are as large or larger than a sparse image block in all dimensions **can** be bound

individually. Right-edges and bottom-edges of each level are allowed to have partially used sparse blocks. Any bound partially-used-sparse-blocks **must** still have their full sparse block size in bytes allocated in memory.

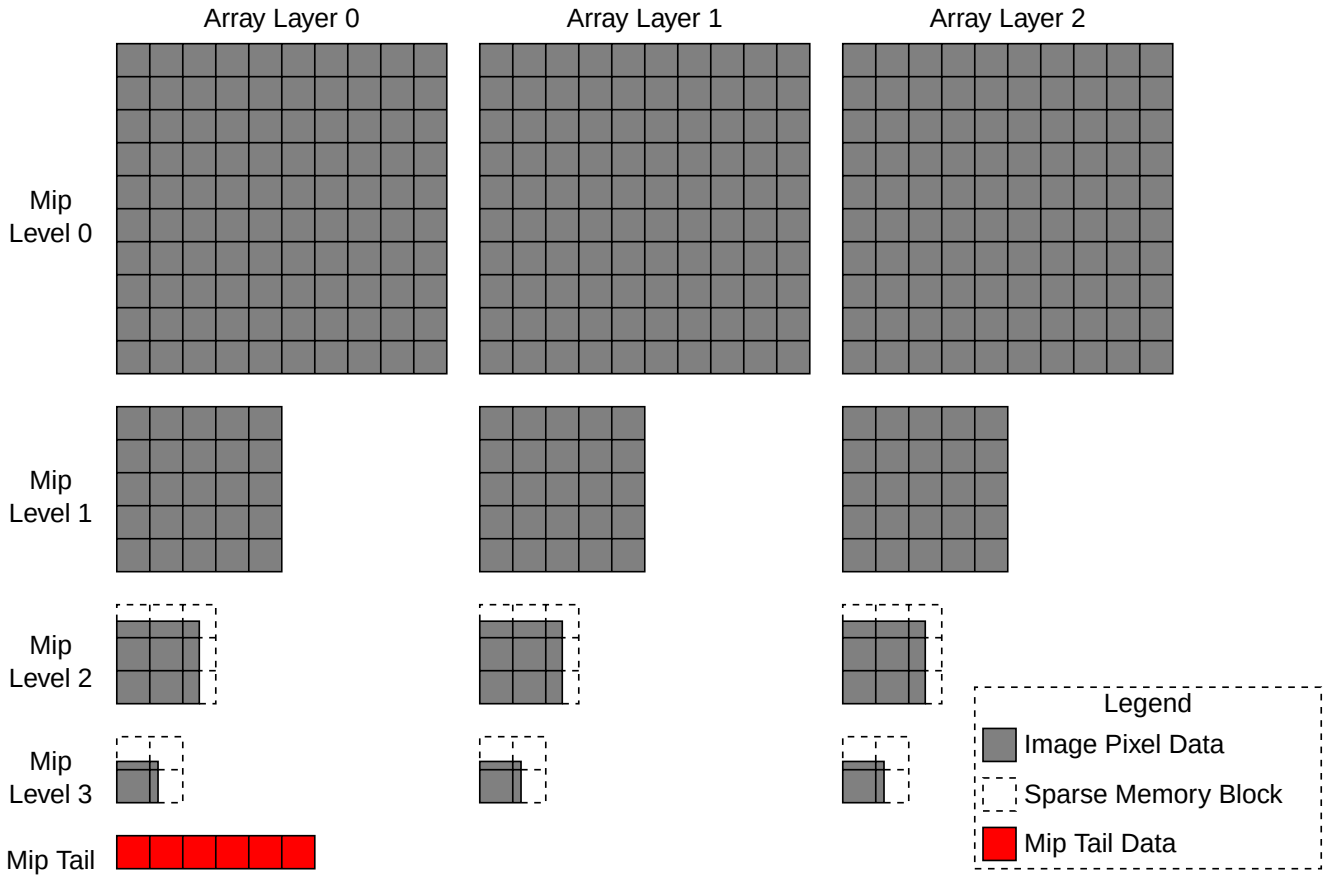

Figure 18. Sparse Image with Single Mip Tail

When VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT is present all array layers will share a single mip tail region.

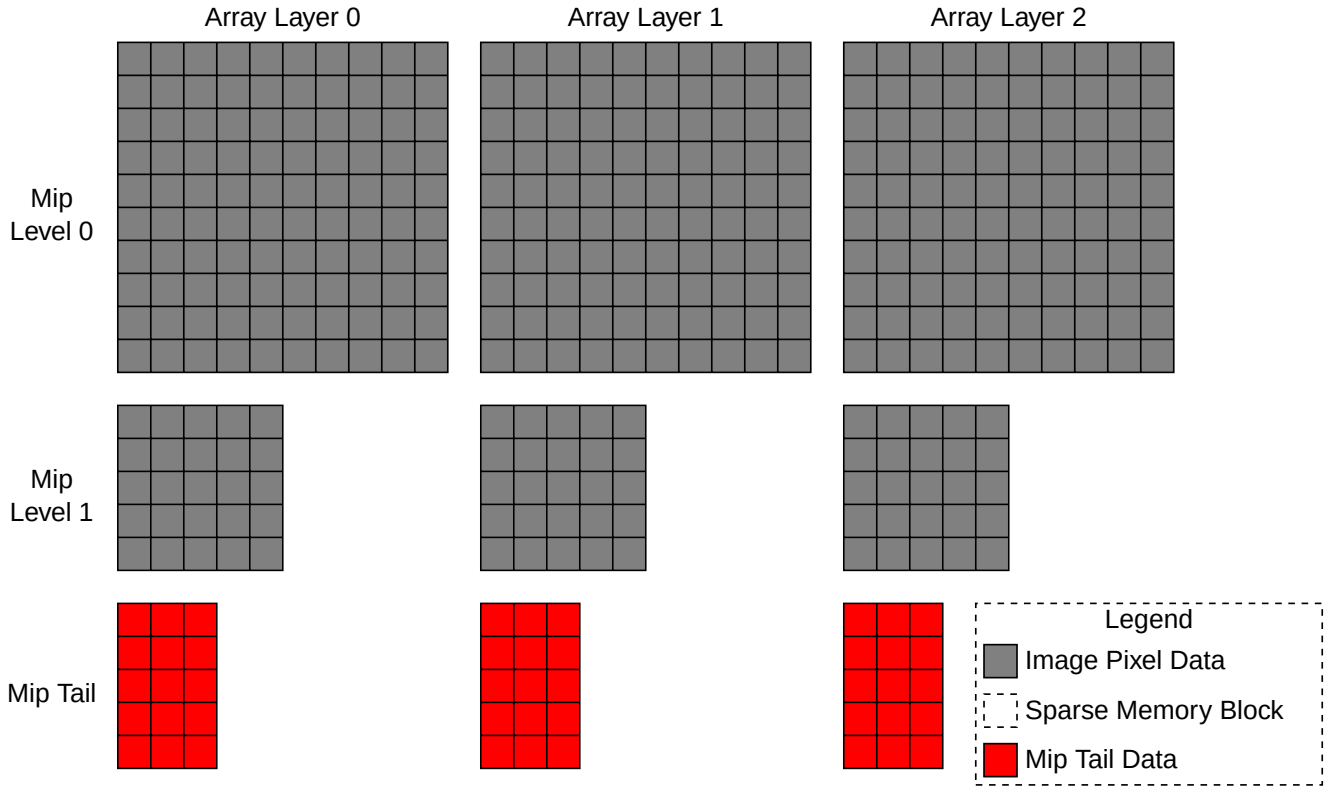

Figure 19. Sparse Image with Aligned Mip Size

NOTE	The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT is present the first mip level that would contain partially used sparse blocks begins the mip tail region. This level and all subsequent levels are placed in the mip tail. Only the first N mip levels whose dimensions are an exact multiple of the sparse image block dimensions **can** be bound and unbound on a sparse block basis.

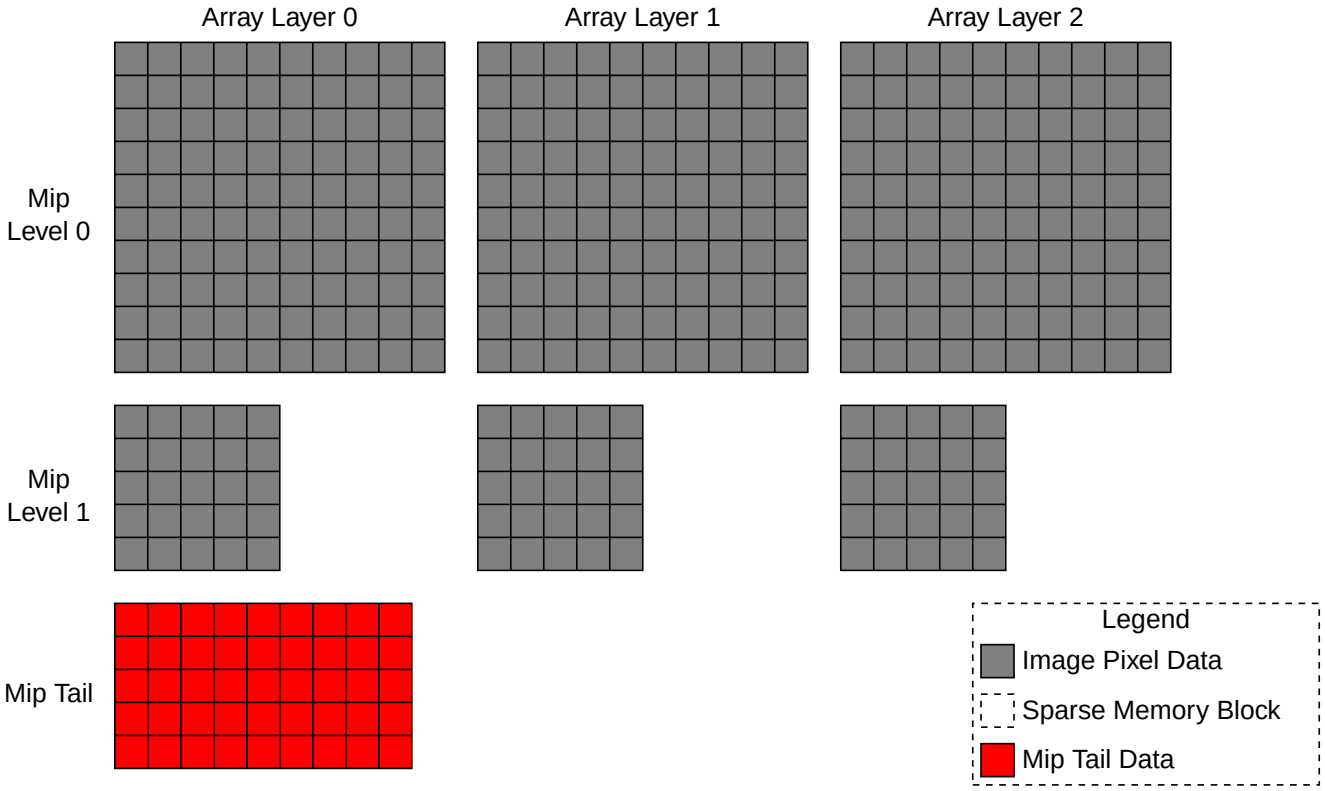

Figure 20. Sparse Image with Aligned Mip Size and Single Mip Tail

NOTE	The mip tail region is presented here in a 2D array simply for figure size reasons. It is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When both VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT and VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT are present the constraints from each of these flags are in effect.

36.4.3. Standard Sparse Image Block Shapes

Standard sparse image block shapes define a standard set of dimensions for sparse image blocks that depend on the format of the image. Layout of texels or compressed texel blocks within a sparse image block is implementation-dependent. All currently defined standard sparse image block shapes are 64 KB in size.

For block-compressed formats (e.g. VK_FORMAT_BC5_UNORM_BLOCK), the texel size is the size of the compressed texel block (e.g. 128-bit for `BC5`) thus the dimensions of the standard sparse image block shapes apply in terms of compressed texel blocks.

NOTE	For block-compressed formats, the dimensions of a sparse image block in terms of texels **can** be calculated by multiplying the sparse image block dimensions by the compressed texel block dimensions.

Table 47. Standard Sparse Image Block Shapes (Single Sample)

TEXEL SIZE (bits)	Block Shape (2D)	Block Shape (3D)
8-Bit	256 × 256 × 1	64 × 32 × 32
16-Bit	256 × 128 × 1	32 × 32 × 32
32-Bit	128 × 128 × 1	32 × 32 × 16
64-Bit	128 × 64 × 1	32 × 16 × 16
128-Bit	64 × 64 × 1	16 × 16 × 16

Table 48. Standard Sparse Image Block Shapes (MSAA)

TEXEL SIZE (bits)	Block Shape (2X)	Block Shape (4X)	Block Shape (8X)	Block Shape (16X)
8-Bit	128 × 256 × 1	128 × 128 × 1	64 × 128 × 1	64 × 64 × 1
16-Bit	128 × 128 × 1	128 × 64 × 1	64 × 64 × 1	64 × 32 × 1
32-Bit	64 × 128 × 1	64 × 64 × 1	32 × 64 × 1	32 × 32 × 1
64-Bit	64 × 64 × 1	64 × 32 × 1	32 × 32 × 1	32 × 16 × 1
128-Bit	32 × 64 × 1	32 × 32 × 1	16 × 32 × 1	16 × 16 × 1

Implementations that support the standard sparse image block shape for all formats listed in the Standard Sparse Image Block Shapes (Single Sample) and Standard Sparse Image Block Shapes (MSAA) tables **may** advertise the following `VkPhysicalDeviceSparseProperties`:

- `residencyStandard2DBlockShape`
- `residencyStandard2DMultisampleBlockShape`
- `residencyStandard3DBlockShape`

Reporting each of these features does *not* imply that all possible image types are supported as sparse. Instead, this indicates that no supported sparse image of the corresponding type will use custom sparse image block dimensions for any formats that have a corresponding standard sparse image block shape.

36.4.4. Custom Sparse Image Block Shapes

An implementation that does not support a standard image block shape for a particular sparse partially-resident image **may** choose to support a custom sparse image block shape for it instead. The dimensions of such a custom sparse image block shape are reported in `VkSparseImageFormatProperties`::`imageGranularity`. As with standard sparse image block shapes, the size in bytes of the custom sparse image block shape will be reported in `VkMemoryRequirements`::`alignment`.

Custom sparse image block dimensions are reported through `vkGetPhysicalDeviceSparseImageFormatProperties` and `vkGetImageSparseMemoryRequirements`.

An implementation **must** not support both the standard sparse image block shape and a custom

sparse image block shape for the same image. The standard sparse image block shape **must** be used if it is supported.

36.4.5. Multiple Aspects

Partially resident images are allowed to report separate sparse properties for different aspects of the image. One example is for depth/stencil images where the implementation separates the depth and stencil data into separate planes. Another reason for multiple aspects is to allow the application to manage memory allocation for implementation-private *metadata* associated with the image. See the figure below:

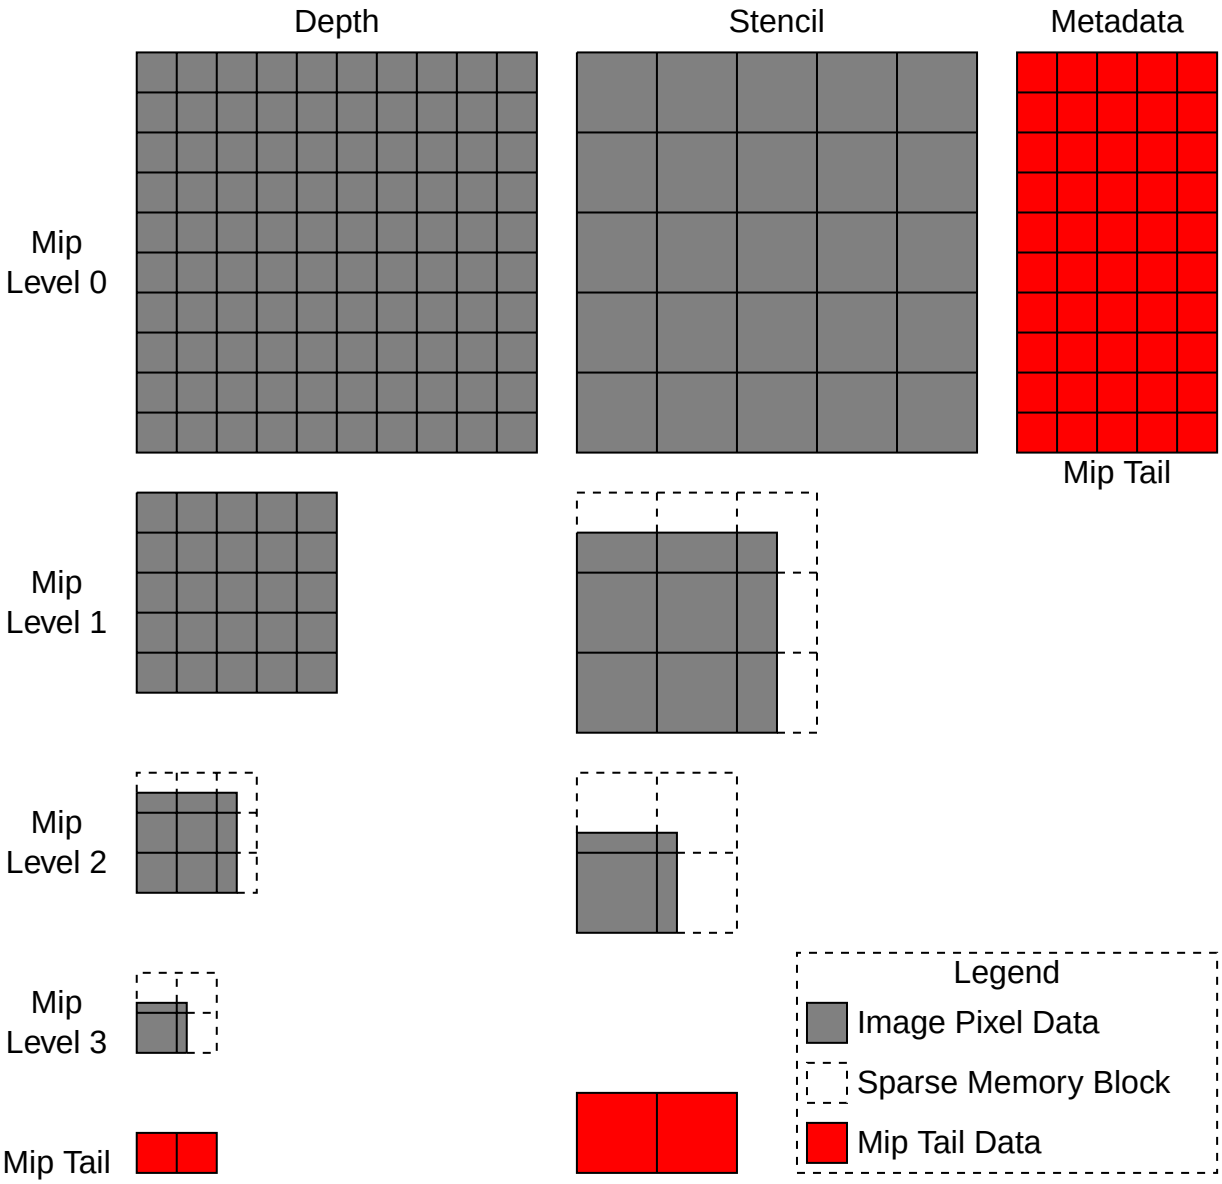

Figure 21. Multiple Aspect Sparse Image

NOTE The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

In the figure above the depth, stencil, and metadata aspects all have unique sparse properties. The per-texel stencil data is ¼ the size of the depth data, hence the stencil sparse blocks include 4 × the number of texels. The sparse block size in bytes for all of the aspects is identical and defined by

`VkMemoryRequirements::alignment`.

Metadata

The metadata aspect of an image has the following constraints:

- All metadata is reported in the mip tail region of the metadata aspect.
- All metadata **must** be bound prior to device use of the sparse image.

36.5. Sparse Memory Aliasing

By default sparse resources have the same aliasing rules as non-sparse resources. See Memory Aliasing for more information.

`VkDevice` objects that have the `sparseResidencyAliased` feature enabled are able to use the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT and VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flags for resource creation. These flags allow resources to access physical memory bound into multiple locations within one or more sparse resources in a *data consistent* fashion. This means that reading physical memory from multiple aliased locations will return the same value.

Care **must** be taken when performing a write operation to aliased physical memory. Memory dependencies **must** be used to separate writes to one alias from reads or writes to another alias. Writes to aliased memory that are not properly guarded against accesses to different aliases will have undefined results for all accesses to the aliased memory.

Applications that wish to make use of data consistent sparse memory aliasing **must** abide by the following guidelines:

- All sparse resources that are bound to aliased physical memory **must** be created with the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT / VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flag.
- All resources that access aliased physical memory **must** interpret the memory in the same way. This implies the following:
  - Buffers and images **cannot** alias the same physical memory in a data consistent fashion. The physical memory ranges **must** be used exclusively by buffers or used exclusively by images for data consistency to be guaranteed.
  - Memory in sparse image mip tail regions **cannot** access aliased memory in a data consistent fashion.
  - Sparse images that alias the same physical memory **must** have compatible formats and be using the same sparse image block shape in order to access aliased memory in a data consistent fashion.

Failure to follow any of the above guidelines will require the application to abide by the normal, non-sparse resource aliasing rules. In this case memory **cannot** be accessed in a data consistent fashion.

NOTE	Enabling sparse resource memory aliasing **can** be a way to lower physical memory use, but it **may** reduce performance on some implementations. An application

> developer **can** test on their target HW and balance the memory / performance trade-offs measured.

36.6. Sparse Resource Implementation Guidelines (Informative)

This section is Informative. It is included to aid in implementors' understanding of sparse resources.

Device Virtual Address

The basic `sparseBinding` feature allows the resource to reserve its own device virtual address range at resource creation time rather than relying on a bind operation to set this. Without any other creation flags, no other constraints are relaxed compared to normal resources. All pages **must** be bound to physical memory before the device accesses the resource.

The `sparseResidency` features allow sparse resources to be used even when not all pages are bound to memory. Implementations that support access to unbound pages without causing a fault **may** support `residencyNonResidentStrict`.

Not faulting on access to unbound pages is not enough to support `residencyNonResidentStrict`. An implementation **must** also guarantee that reads after writes to unbound regions of the resource always return data for the read as if the memory contains zeros. Depending on any caching hierarchy of the implementation this **may** not always be possible.

Any implementation that does not fault, but does not guarantee correct read values **must** not support `residencyNonResidentStrict`.

Any implementation that **cannot** access unbound pages without causing a fault will require the implementation to bind the entire device virtual address range to physical memory. Any pages that the application does not bind to memory **may** be bound to one (or more) "`placeholder" physical page(s) allocated by the implementation. Given the following properties:

- A process **must** not access memory from another process
- Reads return undefined values

It is sufficient for each host process to allocate these placeholder pages and use them for all resources in that process. Implementations **may** allocate more often (per instance, per device, or per resource).

Binding Memory

The byte size reported in `VkMemoryRequirements`::`size` **must** be greater than or equal to the amount of physical memory **required** to fully populate the resource. Some implementations require "holes" in the device virtual address range that are never accessed. These holes **may** be included in the `size` reported for the resource.

Including or not including the device virtual address holes in the resource size will alter how the implementation provides support for VkSparseImageOpaqueMemoryBindInfo. This operation **must** be supported for all sparse images, even ones created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.

- If the holes are included in the size, this bind function becomes very easy. In most cases the resourceOffset is simply a device virtual address offset and the implementation can easily determine what device virtual address to bind. The cost is that the application **may** allocate more physical memory for the resource than it needs.
- If the holes are not included in the size, the application **can** allocate less physical memory than otherwise for the resource. However, in this case the implementation **must** account for the holes when mapping resourceOffset to the actual device virtual address intended to be mapped.

NOTE

If the application always uses VkSparseImageMemoryBindInfo to bind memory for the non-tail mip levels, any holes that are present in the resource size **may** never be bound.

Since VkSparseImageMemoryBindInfo uses texel locations to determine which device virtual addresses to bind, it is impossible to bind device virtual address holes with this operation.

Binding Metadata Memory

All metadata for sparse images have their own sparse properties and are embedded in the mip tail region for said properties. See the Multiaspect section for details.

Given that metadata is in a mip tail region, and the mip tail region **must** be reported as contiguous (either globally or per-array-layer), some implementations will have to resort to complicated offset → device virtual address mapping for handling VkSparseImageOpaqueMemoryBindInfo.

To make this easier on the implementation, the VK_SPARSE_MEMORY_BIND_METADATA_BIT explicitly specifies when metadata is bound with VkSparseImageOpaqueMemoryBindInfo. When this flag is not present, the resourceOffset **may** be treated as a strict device virtual address offset.

When VK_SPARSE_MEMORY_BIND_METADATA_BIT is present, the resourceOffset **must** have been derived explicitly from the imageMipTailOffset in the sparse resource properties returned for the metadata aspect. By manipulating the value returned for imageMipTailOffset, the resourceOffset does not have to correlate directly to a device virtual address offset, and **may** instead be whatever value makes it easiest for the implementation to derive the correct device virtual address.

36.7. Sparse Resource API

The APIs related to sparse resources are grouped into the following categories:

- Physical Device Features
- Physical Device Sparse Properties
- Sparse Image Format Properties
- Sparse Resource Creation
- Sparse Resource Memory Requirements
- Binding Resource Memory

36.7.1. Physical Device Features

Some sparse-resource related features are reported and enabled in `VkPhysicalDeviceFeatures`. These features **must** be supported and enabled on the `VkDevice` object before applications **can** use them. See Physical Device Features for information on how to get and set enabled device features, and for more detailed explanations of these features.

Sparse Physical Device Features

- `sparseBinding`: Support for creating VkBuffer and `VkImage` objects with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT and VK_IMAGE_CREATE_SPARSE_BINDING_BIT flags, respectively.
- `sparseResidencyBuffer`: Support for creating VkBuffer objects with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag.
- `sparseResidencyImage2D`: Support for creating 2D single-sampled `VkImage` objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidencyImage3D`: Support for creating 3D VkImage objects with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency2Samples`: Support for creating 2D VkImage objects with 2 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency4Samples`: Support for creating 2D VkImage objects with 4 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency8Samples`: Support for creating 2D VkImage objects with 8 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidency16Samples`: Support for creating 2D VkImage objects with 16 samples and VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT.
- `sparseResidencyAliased`: Support for creating VkBuffer and `VkImage` objects with the VK_BUFFER_CREATE_SPARSE_ALIASED_BIT and VK_IMAGE_CREATE_SPARSE_ALIASED_BIT flags, respectively.

36.7.2. Physical Device Sparse Properties

Some features of the implementation are not possible to disable, and are reported to allow applications to alter their sparse resource usage accordingly. These read-only capabilities are reported in the VkPhysicalDeviceProperties::`sparseProperties` member, which is a `VkPhysicalDeviceSparseProperties` structure.

The VkPhysicalDeviceSparseProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceSparseProperties {
    VkBool32    residencyStandard2DBlockShape;
    VkBool32    residencyStandard2DMultisampleBlockShape;
    VkBool32    residencyStandard3DBlockShape;
    VkBool32    residencyAlignedMipSize;
    VkBool32    residencyNonResidentStrict;
} VkPhysicalDeviceSparseProperties;
```

- residencyStandard2DBlockShape is VK_TRUE if the physical device will access all single-sample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (Single Sample) table. If this property is not supported the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for single-sample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyStandard2DMultisampleBlockShape is VK_TRUE if the physical device will access all multisample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (MSAA) table. If this property is not supported, the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for multisample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyStandard3DBlockShape is VK_TRUE if the physical device will access all 3D sparse resources using the standard sparse image block shapes (based on image format), as described in the Standard Sparse Image Block Shapes (Single Sample) table. If this property is not supported, the value returned in the imageGranularity member of the VkSparseImageFormatProperties structure for 3D images is not **required** to match the standard sparse image block dimensions listed in the table.
- residencyAlignedMipSize is VK_TRUE if images with mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block **may** be placed in the mip tail. If this property is not reported, only mip levels with dimensions smaller than the imageGranularity member of the VkSparseImageFormatProperties structure will be placed in the mip tail. If this property is reported the implementation is allowed to return VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT in the flags member of VkSparseImageFormatProperties, indicating that mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block will be placed in the mip tail.
- residencyNonResidentStrict specifies whether the physical device **can** consistently access non-resident regions of a resource. If this property is VK_TRUE, access to non-resident regions of resources will be guaranteed to return values as if the resource was populated with 0; writes to non-resident regions will be discarded.

36.7.3. Sparse Image Format Properties

Given that certain aspects of sparse image support, including the sparse image block dimensions,

may be implementation-dependent, vkGetPhysicalDeviceSparseImageFormatProperties **can** be used to query for sparse image format properties prior to resource creation. This command is used to check whether a given set of sparse image parameters is supported and what the sparse image block shape will be.

Sparse Image Format Properties API

The VkSparseImageFormatProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageFormatProperties {
    VkImageAspectFlags          aspectMask;
    VkExtent3D                  imageGranularity;
    VkSparseImageFormatFlags    flags;
} VkSparseImageFormatProperties;
```

- aspectMask is a bitmask VkImageAspectFlagBits specifying which aspects of the image the properties apply to.
- imageGranularity is the width, height, and depth of the sparse image block in texels.
- flags is a bitmask of VkSparseImageFormatFlagBits specifying additional information about the sparse resource.

Bits which **may** be set in VkSparseImageFormatProperties::flags, specifying additional information about the sparse resource, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseImageFormatFlagBits {
    VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT = 0x00000001,
    VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT = 0x00000002,
    VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT = 0x00000004,
} VkSparseImageFormatFlagBits;
```

- VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT specifies that the image uses a single mip tail region for all array layers.
- VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT specifies that the first mip level whose dimensions are not integer multiples of the corresponding dimensions of the sparse image block begins the mip tail region.
- VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT specifies that the image uses non-standard sparse image block dimensions, and the imageGranularity values do not match the standard sparse image block dimensions for the given format.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseImageFormatFlags;
```

VkSparseImageFormatFlags is a bitmask type for setting a mask of zero or more

VkSparseImageFormatFlagBits.

vkGetPhysicalDeviceSparseImageFormatProperties returns an array of VkSparseImageFormatProperties. Each element describes properties for one set of image aspects that are bound simultaneously for a VkImage created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

WARNING	This functionality is superseded by vkGetPhysicalDeviceSparseImageFormatProperties2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceSparseImageFormatProperties(
    VkPhysicalDevice                            physicalDevice,
    VkFormat                                    format,
    VkImageType                                 type,
    VkSampleCountFlagBits                       samples,
    VkImageUsageFlags                           usage,
    VkImageTiling                               tiling,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties*              pProperties);
```

- physicalDevice is the physical device from which to query the sparse image format properties.
- format is the image format.
- type is the dimensionality of the image.
- samples is a VkSampleCountFlagBits value specifying the number of samples per texel.
- usage is a bitmask describing the intended usage of the image.
- tiling is the tiling arrangement of the texel blocks in memory.
- pPropertyCount is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkSparseImageFormatProperties structures.

If pProperties is NULL, then the number of sparse format properties available is returned in pPropertyCount. Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If pPropertyCount is less than the number of sparse format properties available, at most pPropertyCount structures will be written.

If VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT is not supported for the given arguments, pPropertyCount will be zero upon return, and no data will be written to pProperties.

Multiple aspects are returned for depth/stencil images that are implemented as separate planes by the implementation. The depth and stencil data planes each have unique

VkSparseImageFormatProperties data.

Depth/stencil images with depth and stencil data interleaved into a single plane will return a single VkSparseImageFormatProperties structure with the aspectMask set to VK_IMAGE_ASPECT_DEPTH_BIT | VK_IMAGE_ASPECT_STENCIL_BIT.

Valid Usage

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-01094
  samples **must** be a valid VkSampleCountFlagBits value that is set in VkImageFormatProperties::sampleCounts returned by vkGetPhysicalDeviceImageFormatProperties or vkGetPhysicalDeviceQueueFamilyProperties2 with format, type, tiling, and usage equal to those in this command

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-format-parameter
  format **must** be a valid VkFormat value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-type-parameter
  type **must** be a valid VkImageType value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-parameter
  samples **must** be a valid VkSampleCountFlagBits value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-usage-parameter
  usage **must** be a valid combination of VkImageUsageFlagBits values
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-tiling-parameter
  tiling **must** be a valid VkImageTiling value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkSparseImageFormatProperties structures

vkGetPhysicalDeviceSparseImageFormatProperties2 returns an array of VkSparseImageFormatProperties2. Each element describes properties for one set of image aspects that are bound simultaneously for a VkImage created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceSparseImageFormatProperties2(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties2*             pProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceSparseImageFormatProperties2
void vkGetPhysicalDeviceSparseImageFormatProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                                   pPropertyCount,
    VkSparseImageFormatProperties2*             pProperties);
```

- `physicalDevice` is the physical device from which to query the sparse image format properties.
- `pFormatInfo` is a pointer to a VkPhysicalDeviceSparseImageFormatInfo2 structure containing input parameters to the command.
- `pPropertyCount` is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of VkSparseImageFormatProperties2 structures.

`vkGetPhysicalDeviceSparseImageFormatProperties2` behaves identically to vkGetPhysicalDeviceSparseImageFormatProperties, with the ability to return extended information by adding extending structures to the `pNext` chain of its `pProperties` parameter.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pFormatInfo-parameter
  `pFormatInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSparseImageFormatInfo2 structure
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkSparseImageFormatProperties2 structures

The VkPhysicalDeviceSparseImageFormatInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSparseImageFormatInfo2 {
    VkStructureType          sType;
    const void*              pNext;
    VkFormat                 format;
    VkImageType              type;
    VkSampleCountFlagBits    samples;
    VkImageUsageFlags        usage;
    VkImageTiling            tiling;
} VkPhysicalDeviceSparseImageFormatInfo2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceSparseImageFormatInfo2
typedef VkPhysicalDeviceSparseImageFormatInfo2
VkPhysicalDeviceSparseImageFormatInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the image format.
- `type` is the dimensionality of the image.
- `samples` is a VkSampleCountFlagBits value specifying the number of samples per texel.
- `usage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the image.
- `tiling` is the tiling arrangement of the texel blocks in memory.

Only usage flags representable in VkImageUsageFlagBits are returned in `usage`. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, all usage flags are returned in VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-01095
  `samples` **must** be a valid VkSampleCountFlagBits value that is set in `VkImageFormatProperties`::`sampleCounts` returned by `vkGetPhysicalDeviceImageFormatProperties` or vkGetPhysicalDeviceQueueFamilyProperties2 with `format`, `type`, `tiling`, and `usage` equal to those in this command

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SPARSE_IMAGE_FORMAT_INFO_2

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkImageUsageFlags2CreateInfoKHR
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-format-parameter
  `format` **must** be a valid VkFormat value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-type-parameter
  `type` **must** be a valid VkImageType value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-parameter
  `samples` **must** be a valid VkSampleCountFlagBits value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-usage-parameter
  `usage` **must** be a valid combination of VkImageUsageFlagBits values
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-tiling-parameter
  `tiling` **must** be a valid VkImageTiling value

The `VkSparseImageFormatProperties2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageFormatProperties2 {
    VkStructureType                 sType;
    void*                           pNext;
    VkSparseImageFormatProperties   properties;
} VkSparseImageFormatProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkSparseImageFormatProperties2
typedef VkSparseImageFormatProperties2 VkSparseImageFormatProperties2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `properties` is a VkSparseImageFormatProperties structure which is populated with the same values as in vkGetPhysicalDeviceSparseImageFormatProperties.

Valid Usage (Implicit)

- VUID-VkSparseImageFormatProperties2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SPARSE_IMAGE_FORMAT_PROPERTIES_2
- VUID-VkSparseImageFormatProperties2-pNext-pNext
  `pNext` **must** be `NULL`

36.7.4. Sparse Resource Creation

Sparse resources require that one or more sparse feature flags be specified (as part of the VkPhysicalDeviceFeatures structure described previously in the Physical Device Features section) when calling vkCreateDevice. When the appropriate device features are enabled, the VK_BUFFER_CREATE_SPARSE_* and VK_IMAGE_CREATE_SPARSE_* flags **can** be used. See vkCreateBuffer and vkCreateImage for details of the resource creation APIs.

NOTE	Specifying VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT or VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT requires specifying VK_BUFFER_CREATE_SPARSE_BINDING_BIT or VK_IMAGE_CREATE_SPARSE_BINDING_BIT, respectively, as well. This means that resources **must** be created with the appropriate *_SPARSE_BINDING_BIT to be used with the sparse binding command (vkQueueBindSparse).

36.7.5. Sparse Resource Memory Requirements

Sparse resources have specific memory requirements related to binding sparse memory. These memory requirements are reported differently for VkBuffer objects and VkImage objects.

Buffer and Fully-Resident Images

Buffers (both fully and partially resident) and fully-resident images **can** be bound to memory using only the data from VkMemoryRequirements. For all sparse resources the VkMemoryRequirements ::alignment member specifies both the binding granularity in bytes and the **required** alignment of VkDeviceMemory.

Partially Resident Images

Partially resident images have a different method for binding memory. As with buffers and fully resident images, the VkMemoryRequirements::alignment field specifies the binding granularity in bytes for the image.

Requesting sparse memory requirements for VkImage objects using vkGetImageSparseMemoryRequirements will return an array of one or more VkSparseImageMemoryRequirements structures. Each structure describes the sparse memory requirements for a group of aspects of the image.

The sparse image **must** have been created using the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag to retrieve valid sparse image memory requirements.

Sparse Image Memory Requirements

The VkSparseImageMemoryRequirements structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryRequirements {
    VkSparseImageFormatProperties    formatProperties;
    uint32_t                         imageMipTailFirstLod;
    VkDeviceSize                     imageMipTailSize;
    VkDeviceSize                     imageMipTailOffset;
    VkDeviceSize                     imageMipTailStride;
} VkSparseImageMemoryRequirements;
```

- `formatProperties` is a VkSparseImageFormatProperties structure specifying properties of the image format.
- `imageMipTailFirstLod` is the first mip level at which image subresources are included in the mip tail region.
- `imageMipTailSize` is the memory size (in bytes) of the mip tail region. If `formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, this is the size of the whole mip tail, otherwise this is the size of the mip tail of a single array layer. This value is guaranteed to be a multiple of the sparse block size in bytes.
- `imageMipTailOffset` is the opaque memory offset used with VkSparseImageOpaqueMemoryBindInfo to bind the mip tail region(s).
- `imageMipTailStride` is the offset stride between each array-layer's mip tail, if `formatProperties.flags` does not contain VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT (otherwise the value is undefined).

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSparseMemoryRequirements(
    VkDevice                                    device,
    VkImage                                     image,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements*            pSparseMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `image` is the VkImage object to get the memory requirements for.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements` structures.

If `pSparseMemoryRequirements` is `NULL`, then the number of sparse memory requirements available is returned in `pSparseMemoryRequirementCount`. Otherwise, `pSparseMemoryRequirementCount` **must** point to a variable set by the application to the number of elements in the `pSparseMemoryRequirements` array, and on return the variable is overwritten with the number of structures actually written to `pSparseMemoryRequirements`. If `pSparseMemoryRequirementCount` is less than the number of sparse

memory requirements available, at most pSparseMemoryRequirementCount structures will be written.

If the image was not created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT then pSparseMemoryRequirementCount will be zero and pSparseMemoryRequirements will not be written to.

NOTE

It is legal for an implementation to report a larger value in VkMemoryRequirements::size than would be obtained by adding together memory sizes for all VkSparseImageMemoryRequirements returned by vkGetImageSparseMemoryRequirements. This **may** occur when the implementation requires unused padding in the address range describing the resource.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetImageSparseMemoryRequirements-image-parameter
  image **must** be a valid VkImage handle
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter
  pSparseMemoryRequirementCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter
  If the value referenced by pSparseMemoryRequirementCount is not 0, and pSparseMemoryRequirements is not NULL, pSparseMemoryRequirements **must** be a valid pointer to an array of pSparseMemoryRequirementCount VkSparseImageMemoryRequirements structures
- VUID-vkGetImageSparseMemoryRequirements-image-parent
  image **must** have been created, allocated, or retrieved from device

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageSparseMemoryRequirements2(
    VkDevice                                    device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetImageSparseMemoryRequirements2
void vkGetImageSparseMemoryRequirements2KHR(
    VkDevice                                    device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `pInfo` is a pointer to a VkImageSparseMemoryRequirementsInfo2 structure containing parameters required for the memory requirements query.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements2` structures.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageSparseMemoryRequirements2-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkImageSparseMemoryRequirementsInfo2 structure
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirementCount-parameter
  `pSparseMemoryRequirementCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirements-parameter
  If the value referenced by `pSparseMemoryRequirementCount` is not `0`, and `pSparseMemoryRequirements` is not `NULL`, `pSparseMemoryRequirements` **must** be a valid pointer to an array of `pSparseMemoryRequirementCount` VkSparseImageMemoryRequirements2 structures

To determine the sparse memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageSparseMemoryRequirements(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceImageSparseMemoryRequirements
void vkGetDeviceImageSparseMemoryRequirementsKHR(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    uint32_t*                                   pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*           pSparseMemoryRequirements);
```

- `device` is the logical device intended to own the image.
- `pInfo` is a pointer to a VkDeviceImageMemoryRequirements structure containing parameters required for the memory requirements query.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements2` structures.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSparseMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceImageSparseMemoryRequirements-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDeviceImageMemoryRequirements structure
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter
  `pSparseMemoryRequirementCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter
  If the value referenced by `pSparseMemoryRequirementCount` is not `0`, and `pSparseMemoryRequirements` is not `NULL`, `pSparseMemoryRequirements` **must** be a valid pointer to an array of `pSparseMemoryRequirementCount` VkSparseImageMemoryRequirements2 structures

The `VkImageSparseMemoryRequirementsInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageSparseMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
} VkImageSparseMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkImageSparseMemoryRequirementsInfo2
typedef VkImageSparseMemoryRequirementsInfo2 VkImageSparseMemoryRequirementsInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to query.

Valid Usage (Implicit)

- VUID-VkImageSparseMemoryRequirementsInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_SPARSE_MEMORY_REQUIREMENTS_INFO_2
- VUID-VkImageSparseMemoryRequirementsInfo2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageSparseMemoryRequirementsInfo2-image-parameter
  `image` **must** be a valid VkImage handle

The `VkSparseImageMemoryRequirements2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageMemoryRequirements2 {
    VkStructureType                     sType;
    void*                               pNext;
    VkSparseImageMemoryRequirements     memoryRequirements;
} VkSparseImageMemoryRequirements2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkSparseImageMemoryRequirements2
typedef VkSparseImageMemoryRequirements2 VkSparseImageMemoryRequirements2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryRequirements` is a VkSparseImageMemoryRequirements structure describing the memory requirements of the sparse image.

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryRequirements2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SPARSE_IMAGE_MEMORY_REQUIREMENTS_2
- VUID-VkSparseImageMemoryRequirements2-pNext-pNext
  `pNext` **must** be `NULL`

36.7.6. Binding Resource Memory

Non-sparse resources are backed by a single physical allocation prior to device use (via `vkBindImageMemory` or `vkBindBufferMemory`), and their backing **must** not be changed. On the other hand, sparse resources **can** be bound to memory non-contiguously and these bindings **can** be altered during the lifetime of the resource.

NOTE It is important to note that freeing a `VkDeviceMemory` object with `vkFreeMemory` will not

cause resources (or resource regions) bound to the memory object to become unbound. Applications **must** not access resources bound to memory that has been freed.

Sparse memory bindings execute on a queue that includes the VK_QUEUE_SPARSE_BINDING_BIT bit. Applications **must** use synchronization primitives to guarantee that other queues do not access ranges of memory concurrently with a binding change. Applications **can** access other ranges of the same resource while a bind operation is executing.

NOTE

Implementations **must** provide a guarantee that simultaneously binding sparse blocks while another queue accesses those same sparse blocks via a sparse resource **must** not access memory owned by another process or otherwise corrupt the system.

While some implementations **may** include VK_QUEUE_SPARSE_BINDING_BIT support in queue families that also include graphics and compute support, other implementations **may** only expose a VK_QUEUE_SPARSE_BINDING_BIT-only queue family. In either case, applications **must** use synchronization primitives to explicitly request any ordering dependencies between sparse memory binding operations and other graphics/compute/transfer operations, as sparse binding operations are not automatically ordered against command buffer execution, even within a single queue.

When binding memory explicitly for the VK_IMAGE_ASPECT_METADATA_BIT the application **must** use the VK_SPARSE_MEMORY_BIND_METADATA_BIT in the `VkSparseMemoryBind::flags` field when binding memory. Binding memory for metadata is done the same way as binding memory for the mip tail, with the addition of the VK_SPARSE_MEMORY_BIND_METADATA_BIT flag.

Binding the mip tail for any aspect **must** only be performed using VkSparseImageOpaqueMemoryBindInfo. If `formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT, then it **can** be bound with a single VkSparseMemoryBind structure, with `resourceOffset` = `imageMipTailOffset` and `size` = `imageMipTailSize`.

If `formatProperties.flags` does not contain VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT then the offset for the mip tail in each array layer is given as:

```
arrayMipTailOffset = imageMipTailOffset + arrayLayer * imageMipTailStride;
```

and the mip tail **can** be bound with `layerCount` VkSparseMemoryBind structures, each using `size` = `imageMipTailSize` and `resourceOffset` = `arrayMipTailOffset` as defined above.

Sparse memory binding is handled by the following APIs and related data structures.

Sparse Memory Binding Functions

The `VkSparseMemoryBind` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseMemoryBind {
    VkDeviceSize               resourceOffset;
    VkDeviceSize               size;
    VkDeviceMemory             memory;
    VkDeviceSize               memoryOffset;
    VkSparseMemoryBindFlags    flags;
} VkSparseMemoryBind;
```

- `resourceOffset` is the offset into the resource.
- `size` is the size of the memory region to be bound.
- `memory` is the VkDeviceMemory object that the range of the resource is bound to. If `memory` is VK_NULL_HANDLE, the range is unbound.
- `memoryOffset` is the offset into the VkDeviceMemory object to bind the resource range to. If `memory` is VK_NULL_HANDLE, this value is ignored.
- `flags` is a bitmask of VkSparseMemoryBindFlagBits specifying usage of the binding operation.

The *binding range* [`resourceOffset`, `resourceOffset` + `size`) has different constraints based on `flags`. If `flags` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range **must** be within the mip tail region of the metadata aspect. This metadata region is defined by:

metadataRegion = [base, base + `imageMipTailSize`)

base = `imageMipTailOffset` + `imageMipTailStride` × n

and `imageMipTailOffset`, `imageMipTailSize`, and `imageMipTailStride` values are from the VkSparseImageMemoryRequirements corresponding to the metadata aspect of the image, and n is a valid array layer index for the image,

`imageMipTailStride` is considered to be zero for aspects where `VkSparseImageMemoryRequirements::formatProperties.flags` contains VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT.

If `flags` does not contain VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range **must** be within the range [0,VkMemoryRequirements::`size`).

Valid Usage

- VUID-VkSparseMemoryBind-memory-01096
  If `memory` is not VK_NULL_HANDLE, `memory` and `memoryOffset` **must** match the memory requirements of the resource, as described in section Resource Memory Association
- VUID-VkSparseMemoryBind-resourceOffset-09491
  If the resource being bound is a `VkBuffer`, `resourceOffset`, `memoryOffset` and `size` **must** be an integer multiple of the `alignment` of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with the buffer resource

- VUID-VkSparseMemoryBind-resourceOffset-09492
  If the resource being bound is a `VkImage`, `resourceOffset` and `memoryOffset` **must** be an integer multiple of the `alignment` of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with the image resource
- VUID-VkSparseMemoryBind-memory-01097
  If `memory` is not VK_NULL_HANDLE, `memory` **must** not have been created with a memory type that reports VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit set
- VUID-VkSparseMemoryBind-size-01098
  `size` **must** be greater than `0`
- VUID-VkSparseMemoryBind-resourceOffset-01099
  `resourceOffset` **must** be less than the size of the resource
- VUID-VkSparseMemoryBind-size-01100
  `size` **must** be less than or equal to the size of the resource minus `resourceOffset`
- VUID-VkSparseMemoryBind-memoryOffset-01101
  `memoryOffset` **must** be less than the size of `memory`
- VUID-VkSparseMemoryBind-size-01102
  `size` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-VkSparseMemoryBind-memory-02730
  If `memory` was created with VkExportMemoryAllocateInfo::`handleTypes` not equal to `0`, at least one handle type it contained **must** also have been set in VkExternalMemoryBufferCreateInfo::`handleTypes` or VkExternalMemoryImageCreateInfo::`handleTypes` when the resource was created
- VUID-VkSparseMemoryBind-memory-02731
  If `memory` was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryBufferCreateInfo::`handleTypes` or VkExternalMemoryImageCreateInfo::`handleTypes` when the resource was created

Valid Usage (Implicit)

- VUID-VkSparseMemoryBind-memory-parameter
  If `memory` is not VK_NULL_HANDLE, `memory` **must** be a valid VkDeviceMemory handle
- VUID-VkSparseMemoryBind-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkSparseMemoryBindFlagBits values

Bits which **can** be set in VkSparseMemoryBind::`flags`, specifying usage of a sparse memory binding operation, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseMemoryBindFlagBits {
    VK_SPARSE_MEMORY_BIND_METADATA_BIT = 0x00000001,
} VkSparseMemoryBindFlagBits;
```

- VK_SPARSE_MEMORY_BIND_METADATA_BIT specifies that the memory being bound is only for the metadata aspect.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseMemoryBindFlags;
```

VkSparseMemoryBindFlags is a bitmask type for setting a mask of zero or more VkSparseMemoryBindFlagBits.

Memory is bound to VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseBufferMemoryBindInfo {
    VkBuffer                     buffer;
    uint32_t                     bindCount;
    const VkSparseMemoryBind*    pBinds;
} VkSparseBufferMemoryBindInfo;
```

- buffer is the VkBuffer object to be bound.
- bindCount is the number of VkSparseMemoryBind structures in the pBinds array.
- pBinds is a pointer to an array of VkSparseMemoryBind structures.

Valid Usage (Implicit)

- VUID-VkSparseBufferMemoryBindInfo-buffer-parameter
  buffer **must** be a valid VkBuffer handle
- VUID-VkSparseBufferMemoryBindInfo-pBinds-parameter
  pBinds **must** be a valid pointer to an array of bindCount valid VkSparseMemoryBind structures
- VUID-VkSparseBufferMemoryBindInfo-bindCount-arraylength
  bindCount **must** be greater than 0

Memory is bound to opaque regions of VkImage objects created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageOpaqueMemoryBindInfo {
    VkImage                      image;
    uint32_t                     bindCount;
    const VkSparseMemoryBind*    pBinds;
} VkSparseImageOpaqueMemoryBindInfo;
```

- `image` is the VkImage object to be bound.
- `bindCount` is the number of VkSparseMemoryBind structures in the `pBinds` array.
- `pBinds` is a pointer to an array of VkSparseMemoryBind structures.

NOTE

This structure is normally used to bind memory to fully-resident sparse images or for mip tail regions of partially resident images. However, it **can** also be used to bind memory for the entire binding range of partially resident images.

If the `pBinds`[i].flags of an element *i* of `pBinds` does not contain VK_SPARSE_MEMORY_BIND_METADATA_BIT, the `resourceOffset` is in the range [0, VkMemoryRequirements::`size`), This range includes data from all aspects of the image, including metadata. For most implementations this will probably mean that the `resourceOffset` is a simple device address offset within the resource. It is possible for an application to bind a range of memory that includes both resource data and metadata. However, the application would not know what part of the image the memory is used for, or if any range is being used for metadata.

If the `pBinds`[i].flags of an element *i* of `pBinds` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range specified **must** be within the mip tail region of the metadata aspect. In this case the `resourceOffset` is not **required** to be a simple device address offset within the resource. However, it *is* defined to be within [`imageMipTailOffset`, `imageMipTailOffset` + `imageMipTailSize`) for the metadata aspect. See VkSparseMemoryBind for the full constraints on binding region with this flag present.

Valid Usage

- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-01103
  If the `flags` member of any element of `pBinds` contains VK_SPARSE_MEMORY_BIND_METADATA_BIT, the binding range defined **must** be within the mip tail region of the metadata aspect of `image`

Valid Usage (Implicit)

- VUID-VkSparseImageOpaqueMemoryBindInfo-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-parameter

pBinds **must** be a valid pointer to an array of bindCount valid VkSparseMemoryBind structures

- VUID-VkSparseImageOpaqueMemoryBindInfo-bindCount-arraylength
  bindCount **must** be greater than 0

Memory **can** be bound to sparse image blocks of VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBindInfo {
    VkImage                          image;
    uint32_t                         bindCount;
    const VkSparseImageMemoryBind*   pBinds;
} VkSparseImageMemoryBindInfo;
```

- image is the VkImage object to be bound
- bindCount is the number of VkSparseImageMemoryBind structures in pBinds array
- pBinds is a pointer to an array of VkSparseImageMemoryBind structures

Valid Usage

- VUID-VkSparseImageMemoryBindInfo-subresource-01722
  The subresource.mipLevel member of each element of pBinds **must** be less than the mipLevels specified in VkImageCreateInfo when image was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01723
  The subresource.arrayLayer member of each element of pBinds **must** be less than the arrayLayers specified in VkImageCreateInfo when image was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01106
  The subresource.aspectMask member of each element of pBinds **must** be valid for the format specified in VkImageCreateInfo when image was created
- VUID-VkSparseImageMemoryBindInfo-image-02901
  image **must** have been created with VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT set

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBindInfo-image-parameter
  image **must** be a valid VkImage handle
- VUID-VkSparseImageMemoryBindInfo-pBinds-parameter
  pBinds **must** be a valid pointer to an array of bindCount valid VkSparseImageMemoryBind structures
- VUID-VkSparseImageMemoryBindInfo-bindCount-arraylength
  bindCount **must** be greater than 0

The VkSparseImageMemoryBind structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBind {
    VkImageSubresource         subresource;
    VkOffset3D                 offset;
    VkExtent3D                 extent;
    VkDeviceMemory             memory;
    VkDeviceSize               memoryOffset;
    VkSparseMemoryBindFlags    flags;
} VkSparseImageMemoryBind;
```

- subresource is the image *aspect* and region of interest in the image.
- offset are the coordinates of the first texel within the image subresource to bind.
- extent is the size in texels of the region within the image subresource to bind. The extent **must** be a multiple of the sparse image block dimensions, except when binding sparse image blocks along the edge of an image subresource it **can** instead be such that any coordinate of offset + extent equals the corresponding dimensions of the image subresource.
- memory is the VkDeviceMemory object that the sparse image blocks of the image are bound to. If memory is VK_NULL_HANDLE, the sparse image blocks are unbound.
- memoryOffset is an offset into VkDeviceMemory object. If memory is VK_NULL_HANDLE, this value is ignored.
- flags are sparse memory binding flags.

Valid Usage

- VUID-VkSparseImageMemoryBind-memory-01104
  If the sparseResidencyAliased feature is not enabled, and if any other resources are bound to ranges of memory, the range of memory being bound **must** not overlap with those bound ranges
- VUID-VkSparseImageMemoryBind-memory-01105
  memory and memoryOffset **must** match the memory requirements of the calling command's image, as described in section Resource Memory Association
- VUID-VkSparseImageMemoryBind-offset-01107
  offset.x **must** be a multiple of the sparse image block width (VkSparseImageFormatProperties::imageGranularity.width) of the image
- VUID-VkSparseImageMemoryBind-extent-09388
  extent.width **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01108
  extent.width **must** either be a multiple of the sparse image block width of the image, or else (extent.width + offset.x) **must** equal the width of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01109
  offset.y **must** be a multiple of the sparse image block height

(VkSparseImageFormatProperties::imageGranularity.height) of the image

- VUID-VkSparseImageMemoryBind-extent-09389
  extent.height **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01110
  extent.height **must** either be a multiple of the sparse image block height of the image, or else (extent.height + offset.y) **must** equal the height of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01111
  offset.z **must** be a multiple of the sparse image block depth (VkSparseImageFormatProperties::imageGranularity.depth) of the image
- VUID-VkSparseImageMemoryBind-extent-09390
  extent.depth **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01112
  extent.depth **must** either be a multiple of the sparse image block depth of the image, or else (extent.depth + offset.z) **must** equal the depth of the image subresource
- VUID-VkSparseImageMemoryBind-memory-02732
  If memory was created with VkExportMemoryAllocateInfo::handleTypes not equal to 0, at least one handle type it contained **must** also have been set in VkExternalMemoryImageCreateInfo::handleTypes when the image was created
- VUID-VkSparseImageMemoryBind-memory-02733
  If memory was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryImageCreateInfo ::handleTypes when image was created

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBind-subresource-parameter
  subresource **must** be a valid VkImageSubresource structure
- VUID-VkSparseImageMemoryBind-memory-parameter
  If memory is not VK_NULL_HANDLE, memory **must** be a valid VkDeviceMemory handle
- VUID-VkSparseImageMemoryBind-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkSparseMemoryBindFlagBits values

To submit sparse binding operations to a queue, call:

```
// Provided by VK_VERSION_1_0
VkResult vkQueueBindSparse(
    VkQueue                                     queue,
    uint32_t                                    bindInfoCount,
    const VkBindSparseInfo*                     pBindInfo,
    VkFence                                     fence);
```

- `queue` is the queue that the sparse binding operations will be submitted to.
- `bindInfoCount` is the number of elements in the `pBindInfo` array.
- `pBindInfo` is a pointer to an array of VkBindSparseInfo structures, each specifying a sparse binding submission batch.
- `fence` is an **optional** handle to a fence to be signaled. If `fence` is not VK_NULL_HANDLE, it defines a fence signal operation.

`vkQueueBindSparse` is a queue submission command, with each batch defined by an element of `pBindInfo` as a VkBindSparseInfo structure. Batches begin execution in the order they appear in `pBindInfo`, but **may** complete out of order.

Within a batch, a given range of a resource **must** not be bound more than once. Across batches, if a range is to be bound to one allocation and offset and then to another allocation and offset, then the application **must** guarantee (usually using semaphores) that the binding operations are executed in the correct order, as well as to order binding operations against the execution of command buffer submissions.

As no operation to vkQueueBindSparse causes any pipeline stage to access memory, synchronization primitives used in this command effectively only define execution dependencies.

Additional information about fence and semaphore operation is described in the synchronization chapter.

Valid Usage

- VUID-vkQueueBindSparse-fence-01113
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-vkQueueBindSparse-fence-01114
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkQueueBindSparse-pSignalSemaphores-01115
  Each element of the `pSignalSemaphores` member of each element of `pBindInfo` **must** be unsignaled when the semaphore signal operation it defines is executed on the device
- VUID-vkQueueBindSparse-pWaitSemaphores-01116
  When a semaphore wait operation referring to a binary semaphore defined by any element of the `pWaitSemaphores` member of any element of `pBindInfo` executes on `queue`, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueueBindSparse-pWaitSemaphores-03245
  All elements of the `pWaitSemaphores` member of all elements of `pBindInfo` referring to a semaphore created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY **must** reference a semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueueBindSparse-queue-parameter
  `queue` **must** be a valid VkQueue handle
- VUID-vkQueueBindSparse-pBindInfo-parameter
  If `bindInfoCount` is not `0`, `pBindInfo` **must** be a valid pointer to an array of `bindInfoCount` valid VkBindSparseInfo structures
- VUID-vkQueueBindSparse-fence-parameter
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be a valid VkFence handle
- VUID-vkQueueBindSparse-queuetype
  The `queue` **must** support VK_QUEUE_SPARSE_BINDING_BIT operations
- VUID-vkQueueBindSparse-commonparent
  Both of `fence`, and `queue` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR
- Host access to `fence` **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	VK_QUEUE_SPARSE_BINDING_BIT	-

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkBindSparseInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBindSparseInfo {
    VkStructureType                              sType;
    const void*                                  pNext;
    uint32_t                                     waitSemaphoreCount;
    const VkSemaphore*                           pWaitSemaphores;
    uint32_t                                     bufferBindCount;
    const VkSparseBufferMemoryBindInfo*          pBufferBinds;
    uint32_t                                     imageOpaqueBindCount;
    const VkSparseImageOpaqueMemoryBindInfo*     pImageOpaqueBinds;
    uint32_t                                     imageBindCount;
    const VkSparseImageMemoryBindInfo*           pImageBinds;
    uint32_t                                     signalSemaphoreCount;
    const VkSemaphore*                           pSignalSemaphores;
} VkBindSparseInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- waitSemaphoreCount is the number of semaphores upon which to wait before executing the sparse binding operations for the batch.
- pWaitSemaphores is a pointer to an array of semaphores upon which to wait on before the sparse binding operations for this batch begin execution. If semaphores to wait on are provided, they define a semaphore wait operation.
- bufferBindCount is the number of sparse buffer bindings to perform in the batch.
- pBufferBinds is a pointer to an array of VkSparseBufferMemoryBindInfo structures.
- imageOpaqueBindCount is the number of opaque sparse image bindings to perform.
- pImageOpaqueBinds is a pointer to an array of VkSparseImageOpaqueMemoryBindInfo structures, indicating opaque sparse image bindings to perform.
- imageBindCount is the number of sparse image bindings to perform.
- pImageBinds is a pointer to an array of VkSparseImageMemoryBindInfo structures, indicating sparse image bindings to perform.
- signalSemaphoreCount is the number of semaphores to be signaled once the sparse binding operations specified by the structure have completed execution.
- pSignalSemaphores is a pointer to an array of semaphores which will be signaled when the sparse binding operations for this batch have completed execution. If semaphores to be signaled are provided, they define a semaphore signal operation.

The first synchronization scope of each semaphore signal operation defined by this structure includes all sparse binding operations defined by this structure.

The second synchronization scope of each semaphore wait operation defined by this structure includes all sparse binding operations defined by this structure.

Valid Usage

- VUID-VkBindSparseInfo-pWaitSemaphores-03246
  If any element of pWaitSemaphores or pSignalSemaphores was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then the pNext chain **must** include a VkTimelineSemaphoreSubmitInfo structure
- VUID-VkBindSparseInfo-pNext-03247
  If the pNext chain of this structure includes a VkTimelineSemaphoreSubmitInfo structure and any element of pWaitSemaphores was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then its waitSemaphoreValueCount member **must** equal waitSemaphoreCount
- VUID-VkBindSparseInfo-pNext-03248
  If the pNext chain of this structure includes a VkTimelineSemaphoreSubmitInfo structure and any element of pSignalSemaphores was created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE then its signalSemaphoreValueCount member **must** equal signalSemaphoreCount
- VUID-VkBindSparseInfo-pSignalSemaphores-03249
  For each element of pSignalSemaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::pSignalSemaphoreValues **must** have a value greater than the current value of the semaphore when the semaphore signal operation is executed
- VUID-VkBindSparseInfo-pWaitSemaphores-03250
  For each element of pWaitSemaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::pWaitSemaphoreValues **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than maxTimelineSemaphoreValueDifference
- VUID-VkBindSparseInfo-pSignalSemaphores-03251
  For each element of pSignalSemaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE the corresponding element of VkTimelineSemaphoreSubmitInfo::pSignalSemaphoreValues **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than maxTimelineSemaphoreValueDifference

Valid Usage (Implicit)

- VUID-VkBindSparseInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_SPARSE_INFO
- VUID-VkBindSparseInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkDeviceGroupBindSparseInfo,

VkFrameBoundaryEXT, or VkTimelineSemaphoreSubmitInfo

- VUID-VkBindSparseInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkBindSparseInfo-pWaitSemaphores-parameter
  If waitSemaphoreCount is not 0, pWaitSemaphores **must** be a valid pointer to an array of waitSemaphoreCount valid VkSemaphore handles
- VUID-VkBindSparseInfo-pBufferBinds-parameter
  If bufferBindCount is not 0, pBufferBinds **must** be a valid pointer to an array of bufferBindCount valid VkSparseBufferMemoryBindInfo structures
- VUID-VkBindSparseInfo-pImageOpaqueBinds-parameter
  If imageOpaqueBindCount is not 0, pImageOpaqueBinds **must** be a valid pointer to an array of imageOpaqueBindCount valid VkSparseImageOpaqueMemoryBindInfo structures
- VUID-VkBindSparseInfo-pImageBinds-parameter
  If imageBindCount is not 0, pImageBinds **must** be a valid pointer to an array of imageBindCount valid VkSparseImageMemoryBindInfo structures
- VUID-VkBindSparseInfo-pSignalSemaphores-parameter
  If signalSemaphoreCount is not 0, pSignalSemaphores **must** be a valid pointer to an array of signalSemaphoreCount valid VkSemaphore handles
- VUID-VkBindSparseInfo-commonparent
  Both of the elements of pSignalSemaphores, and the elements of pWaitSemaphores that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

To specify the values to use when waiting for and signaling semaphores created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_TIMELINE, add a VkTimelineSemaphoreSubmitInfo structure to the pNext chain of the VkBindSparseInfo structure.

If the pNext chain of VkBindSparseInfo includes a VkDeviceGroupBindSparseInfo structure, then that structure includes device indices specifying which instance of the resources and memory are bound.

The VkDeviceGroupBindSparseInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDeviceGroupBindSparseInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           resourceDeviceIndex;
    uint32_t           memoryDeviceIndex;
} VkDeviceGroupBindSparseInfo;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkDeviceGroupBindSparseInfo
typedef VkDeviceGroupBindSparseInfo VkDeviceGroupBindSparseInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `resourceDeviceIndex` is a device index indicating which instance of the resource is bound.
- `memoryDeviceIndex` is a device index indicating which instance of the memory the resource instance is bound to.

These device indices apply to all buffer and image memory binds included in the batch pointing to this structure. The semaphore waits and signals for the batch are executed only by the physical device specified by the `resourceDeviceIndex`.

If this structure is not present, `resourceDeviceIndex` and `memoryDeviceIndex` are assumed to be zero.

Valid Usage

- VUID-VkDeviceGroupBindSparseInfo-resourceDeviceIndex-01118
  `resourceDeviceIndex` and `memoryDeviceIndex` **must** both be valid device indices
- VUID-VkDeviceGroupBindSparseInfo-memoryDeviceIndex-01119
  Each memory allocation bound in this batch **must** have allocated an instance for `memoryDeviceIndex`

Valid Usage (Implicit)

- VUID-VkDeviceGroupBindSparseInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_BIND_SPARSE_INFO

Structure Chaining

Extends the structure

- VkBindSparseInfo

Chapter 37. Window System Integration (WSI)

This chapter discusses the window system integration (WSI) between the Vulkan API and the various forms of displaying the results of rendering to a user. Since the Vulkan API **can** be used without displaying results, WSI is provided through the use of optional Vulkan extensions. This chapter provides an overview of WSI. See the appendix for additional details of each WSI extension, including which extensions **must** be enabled in order to use each of the functions described in this chapter.

37.1. WSI Platform

A platform is an abstraction for a window system, OS, etc. Some examples include MS Windows, Android, and Wayland. The Vulkan API **may** be integrated in a unique manner for each platform.

The Vulkan API does not define any type of platform object. Platform-specific WSI extensions are defined, each containing platform-specific functions for using WSI. Use of these extensions is guarded by preprocessor symbols as defined in the Window System-Specific Header Control appendix.

In order for an application to be compiled to use WSI with a given platform, it **must** either:

- `#define` the appropriate preprocessor symbol prior to including the `vulkan.h` header file, or
- include `vulkan_core.h` and any native platform headers, followed by the appropriate platform-specific header.

The preprocessor symbols and platform-specific headers are defined in the Window System Extensions and Headers table.

Each platform-specific extension is an instance extension. The application **must** enable instance extensions with `vkCreateInstance` before using them.

37.2. WSI Surface

Native platform surface or window objects are abstracted by surface objects, which are represented by `VkSurfaceKHR` handles:

```
// Provided by VK_KHR_surface
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSurfaceKHR)
```

The `VK_KHR_surface` extension declares the `VkSurfaceKHR` object, and provides a function for destroying `VkSurfaceKHR` objects. Separate platform-specific extensions each provide a function for creating a `VkSurfaceKHR` object for the respective platform. From the application's perspective this is an opaque handle, just like the handles of other Vulkan objects.

NOTE On certain platforms, the Vulkan loader and ICDs **may** have conventions that treat

the handle as a pointer to a structure containing the platform-specific information about the surface. This will be described in the documentation for the loader-ICD interface, and in the `vk_icd.h` header file of the LoaderAndTools source-code repository. This does not affect the loader-layer interface; layers **may** wrap `VkSurfaceKHR` objects.

37.2.1. Android Platform

To create a `VkSurfaceKHR` object for an Android native window, call:

```
// Provided by VK_KHR_android_surface
VkResult vkCreateAndroidSurfaceKHR(
    VkInstance                                  instance,
    const VkAndroidSurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkAndroidSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

During the lifetime of a surface created using a particular ANativeWindow handle any attempts to create another surface for the same ANativeWindow and any attempts to connect to the same ANativeWindow through other platform mechanisms will fail.

NOTE In particular, only one `VkSurfaceKHR` **can** exist at a time for a given window. Similarly, a native window **cannot** be used by both a `VkSurfaceKHR` and `EGLSurface` simultaneously.

If successful, `vkCreateAndroidSurfaceKHR` increments the ANativeWindow's reference count, and `vkDestroySurfaceKHR` will decrement it.

On Android, when a swapchain's `imageExtent` does not match the surface's `currentExtent`, the presentable images will be scaled to the surface's dimensions during presentation. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum image size supported by the consumer. For the system compositor, `currentExtent` is the window size (i.e. the consumer's preferred size).

Valid Usage (Implicit)

- VUID-vkCreateAndroidSurfaceKHR-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateAndroidSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkAndroidSurfaceCreateInfoKHR structure

- VUID-vkCreateAndroidSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateAndroidSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkAndroidSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_android_surface
typedef struct VkAndroidSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkAndroidSurfaceCreateFlagsKHR  flags;
    struct ANativeWindow*           window;
} VkAndroidSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `window` is a pointer to the ANativeWindow to associate the surface with.

Valid Usage

- VUID-VkAndroidSurfaceCreateInfoKHR-window-01248
  `window` **must** point to a valid Android ANativeWindow

Valid Usage (Implicit)

- VUID-VkAndroidSurfaceCreateInfoKHR-sType-sType

sType **must** be VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR

- VUID-VkAndroidSurfaceCreateInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkAndroidSurfaceCreateInfoKHR-flags-zerobitmask
  flags **must** be 0

To remove an unnecessary compile time dependency, an incomplete type definition of ANativeWindow is provided in the Vulkan headers:

```
// Provided by VK_KHR_android_surface
struct ANativeWindow;
```

The actual ANativeWindow type is defined in Android NDK headers.

```
// Provided by VK_KHR_android_surface
typedef VkFlags VkAndroidSurfaceCreateFlagsKHR;
```

VkAndroidSurfaceCreateFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.2. Wayland Platform

To create a VkSurfaceKHR object for a Wayland surface, call:

```
// Provided by VK_KHR_wayland_surface
VkResult vkCreateWaylandSurfaceKHR(
    VkInstance                                  instance,
    const VkWaylandSurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkWaylandSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateWaylandSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle

- VUID-vkCreateWaylandSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkWaylandSurfaceCreateInfoKHR structure
- VUID-vkCreateWaylandSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateWaylandSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkWaylandSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_wayland_surface
typedef struct VkWaylandSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkWaylandSurfaceCreateFlagsKHR  flags;
    struct wl_display*              display;
    struct wl_surface*              surface;
} VkWaylandSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `display` and `surface` are pointers to the Wayland `wl_display` and `wl_surface` to associate the surface with.

Valid Usage

- VUID-VkWaylandSurfaceCreateInfoKHR-display-01304
  `display` **must** point to a valid Wayland `wl_display`
- VUID-VkWaylandSurfaceCreateInfoKHR-surface-01305
  `surface` **must** point to a valid Wayland `wl_surface`

Valid Usage (Implicit)

- VUID-VkWaylandSurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR
- VUID-VkWaylandSurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkWaylandSurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

On Wayland, `currentExtent` is the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that the surface size will be determined by the extent of a swapchain targeting the surface. Whatever the application sets a swapchain's `imageExtent` to will be the size of the window, after the first image is presented. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum supported surface size. Any calls to vkGetPhysicalDeviceSurfacePresentModesKHR on a surface created with `vkCreateWaylandSurfaceKHR` are **required** to return VK_PRESENT_MODE_MAILBOX_KHR as one of the valid present modes.

Some Vulkan functions **may** send protocol over the specified `wl_display` connection when using a swapchain or presentable images created from a `VkSurfaceKHR` referring to a `wl_surface`. Applications **must** therefore ensure that both the `wl_display` and the `wl_surface` remain valid for the lifetime of any `VkSwapchainKHR` objects created from a particular `wl_display` and `wl_surface`. Also, calling vkQueuePresentKHR will result in Vulkan sending `wl_surface.commit` requests to the underlying `wl_surface` of each The `wl_surface.attach`, `wl_surface.damage`, and `wl_surface.commit` requests **must** be issued by the implementation during the call to vkQueuePresentKHR and **must** not be issued by the implementation outside of vkQueuePresentKHR. This ensures that any Wayland requests sent by the client after the call to vkQueuePresentKHR returns will be received by the compositor after the `wl_surface.commit`. Regardless of the mode of swapchain creation, a new `wl_event_queue` **must** be created for each successful vkCreateWaylandSurfaceKHR call, and every Wayland object created by the implementation **must** be assigned to this event queue. If the platform provides Wayland 1.11 or greater, this **must** be implemented by the use of Wayland proxy object wrappers, to avoid race conditions.

If the application wishes to synchronize any window changes with a particular frame, such requests **must** be sent to the Wayland display server prior to calling vkQueuePresentKHR.

The implementation **must** ensure that no `wp_color_management_surface_v1` object exists for a surface, which has no swapchains, or only swapchains with a `imageColorSpace` of VK_COLOR_SPACE_PASS_THROUGH_EXT associated with it.

```
// Provided by VK_KHR_wayland_surface
typedef VkFlags VkWaylandSurfaceCreateFlagsKHR;
```

`VkWaylandSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.3. Win32 Platform

To create a VkSurfaceKHR object for a Win32 window, call:

```
// Provided by VK_KHR_win32_surface
VkResult vkCreateWin32SurfaceKHR(
    VkInstance                                  instance,
    const VkWin32SurfaceCreateInfoKHR*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkWin32SurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateWin32SurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateWin32SurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkWin32SurfaceCreateInfoKHR structure
- VUID-vkCreateWin32SurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateWin32SurfaceKHR-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Some Vulkan functions **may** call the SendMessage system API when interacting with a VkSurfaceKHR

through a VkSwapchainKHR. In a multithreaded environment, calling SendMessage from a thread that is not the thread associated with pCreateInfo->hwnd will block until the application has processed the window message. Thus, applications **should** either call these Vulkan functions on the message pump thread, or make sure their message pump is actively running. Failing to do so **may** result in deadlocks.

The functions subject to this requirement are:

- vkCreateSwapchainKHR
- vkDestroySwapchainKHR
- vkAcquireNextImageKHR and vkAcquireNextImage2KHR
- vkQueuePresentKHR
- vkReleaseSwapchainImagesKHR
- vkAcquireFullScreenExclusiveModeEXT
- vkReleaseFullScreenExclusiveModeEXT
- vkSetHdrMetadataEXT

The VkWin32SurfaceCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_win32_surface
typedef struct VkWin32SurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkWin32SurfaceCreateFlagsKHR    flags;
    HINSTANCE                       hinstance;
    HWND                            hwnd;
} VkWin32SurfaceCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- hinstance is the Win32 HINSTANCE for the window to associate the surface with.
- hwnd is the Win32 HWND for the window to associate the surface with.

Valid Usage

- VUID-VkWin32SurfaceCreateInfoKHR-hinstance-01307
  hinstance **must** be a valid Win32 HINSTANCE
- VUID-VkWin32SurfaceCreateInfoKHR-hwnd-01308
  hwnd **must** be a valid Win32 HWND

Valid Usage (Implicit)

- VUID-VkWin32SurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR
- VUID-VkWin32SurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkWin32SurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

With Win32, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of a Win32 surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR ::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

```
// Provided by VK_KHR_win32_surface
typedef VkFlags VkWin32SurfaceCreateFlagsKHR;
```

`VkWin32SurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.4. XCB Platform

To create a `VkSurfaceKHR` object for an X11 window, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkResult vkCreateXcbSurfaceKHR(
    VkInstance                                  instance,
    const VkXcbSurfaceCreateInfoKHR*            pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkXcbSurfaceCreateInfoKHR structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is

no more specific allocator available (see Memory Allocation).

- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXcbSurfaceKHR-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateXcbSurfaceKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkXcbSurfaceCreateInfoKHR structure
- VUID-vkCreateXcbSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateXcbSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkXcbSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_xcb_surface
typedef struct VkXcbSurfaceCreateInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkXcbSurfaceCreateFlagsKHR      flags;
    xcb_connection_t*               connection;
    xcb_window_t                    window;
} VkXcbSurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `connection` is a pointer to an `xcb_connection_t` to the X server.

- `window` is the `xcb_window_t` for the X11 window to associate the surface with.

Valid Usage

- VUID-VkXcbSurfaceCreateInfoKHR-connection-01310
  `connection` **must** point to a valid X11 `xcb_connection_t`
- VUID-VkXcbSurfaceCreateInfoKHR-window-01311
  `window` **must** be a valid X11 `xcb_window_t`

Valid Usage (Implicit)

- VUID-VkXcbSurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR
- VUID-VkXcbSurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkXcbSurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

With Xcb, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of an Xcb surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR ::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified xcb connection when using a swapchain or presentable images created from a VkSurfaceKHR referring to an xcb window. Applications **must** therefore ensure the xcb connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with xcb-based swapchains **must**

- Avoid holding a server grab on an xcb connection while waiting for Vulkan operations to complete using a swapchain derived from a different xcb connection referring to the same X server instance. Failing to do so **may** result in deadlock.

```
// Provided by VK_KHR_xcb_surface
typedef VkFlags VkXcbSurfaceCreateFlagsKHR;
```

VkXcbSurfaceCreateFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.5. Xlib Platform

To create a VkSurfaceKHR object for an X11 window, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkResult vkCreateXlibSurfaceKHR(
    VkInstance                                  instance,
    const VkXlibSurfaceCreateInfoKHR*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance to associate the surface with.
- pCreateInfo is a pointer to a VkXlibSurfaceCreateInfoKHR structure containing the parameters affecting the creation of the surface object.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXlibSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateXlibSurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkXlibSurfaceCreateInfoKHR structure
- VUID-vkCreateXlibSurfaceKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateXlibSurfaceKHR-pSurface-parameter
  pSurface **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkXlibSurfaceCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_xlib_surface
typedef struct VkXlibSurfaceCreateInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkXlibSurfaceCreateFlagsKHR    flags;
    Display*                       dpy;
    Window                         window;
} VkXlibSurfaceCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- dpy is a pointer to an Xlib Display connection to the X server.
- window is an Xlib Window to associate the surface with.

Valid Usage

- VUID-VkXlibSurfaceCreateInfoKHR-dpy-01313
  dpy **must** point to a valid Xlib Display
- VUID-VkXlibSurfaceCreateInfoKHR-window-01314
  window **must** be a valid Xlib Window

Valid Usage (Implicit)

- VUID-VkXlibSurfaceCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_XLIB_SURFACE_CREATE_INFO_KHR
- VUID-VkXlibSurfaceCreateInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkXlibSurfaceCreateInfoKHR-flags-zerobitmask
  flags **must** be 0

With Xlib, minImageExtent, maxImageExtent, and currentExtent **must** always equal the window size.

The currentExtent of an Xlib surface **must** have both width and height greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless VkSwapchainPresentScalingCreateInfoKHR is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in VkSurfaceCapabilitiesKHR ::`currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified Xlib `Display` connection when using a swapchain or presentable images created from a VkSurfaceKHR referring to an Xlib window. Applications **must** therefore ensure the display connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with Xlib-based swapchains **must**

- Avoid holding a server grab on a display connection while waiting for Vulkan operations to complete using a swapchain derived from a different display connection referring to the same X server instance. Failing to do so **may** result in deadlock.

Some implementations may require threads to implement some presentation modes so applications **must** call `XInitThreads`() before calling any other Xlib functions.

```
// Provided by VK_KHR_xlib_surface
typedef VkFlags VkXlibSurfaceCreateFlagsKHR;
```

`VkXlibSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.6. DirectFB Platform

To create a `VkSurfaceKHR` object for a DirectFB surface, call:

```
// Provided by VK_EXT_directfb_surface
VkResult vkCreateDirectFBSurfaceEXT(
    VkInstance                                  instance,
    const VkDirectFBSurfaceCreateInfoEXT*       pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkDirectFBSurfaceCreateInfoEXT structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDirectFBSurfaceEXT-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateDirectFBSurfaceEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDirectFBSurfaceCreateInfoEXT structure
- VUID-vkCreateDirectFBSurfaceEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDirectFBSurfaceEXT-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDirectFBSurfaceCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_directfb_surface
typedef struct VkDirectFBSurfaceCreateInfoEXT {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDirectFBSurfaceCreateFlagsEXT  flags;
    IDirectFB*                       dfb;
    IDirectFBSurface*                surface;
} VkDirectFBSurfaceCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dfb` is a pointer to the `IDirectFB` main interface of DirectFB.
- `surface` is a pointer to a `IDirectFBSurface` surface interface.

Valid Usage

- VUID-VkDirectFBSurfaceCreateInfoEXT-dfb-04117
  `dfb` **must** point to a valid DirectFB `IDirectFB`
- VUID-VkDirectFBSurfaceCreateInfoEXT-surface-04118
  `surface` **must** point to a valid DirectFB `IDirectFBSurface`

Valid Usage (Implicit)

- VUID-VkDirectFBSurfaceCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DIRECTFB_SURFACE_CREATE_INFO_EXT
- VUID-VkDirectFBSurfaceCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDirectFBSurfaceCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

With DirectFB, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the surface size.

```
// Provided by VK_EXT_directfb_surface
typedef VkFlags VkDirectFBSurfaceCreateFlagsEXT;
```

`VkDirectFBSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.7. Metal Platform

To create a `VkSurfaceKHR` object for a CAMetalLayer, call:

```
// Provided by VK_EXT_metal_surface
VkResult vkCreateMetalSurfaceEXT(
    VkInstance                                  instance,
    const VkMetalSurfaceCreateInfoEXT*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance with which to associate the surface.
- `pCreateInfo` is a pointer to a `VkMetalSurfaceCreateInfoEXT` structure specifying parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateMetalSurfaceEXT-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateMetalSurfaceEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkMetalSurfaceCreateInfoEXT structure
- VUID-vkCreateMetalSurfaceEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateMetalSurfaceEXT-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMetalSurfaceCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_surface
typedef struct VkMetalSurfaceCreateInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkMetalSurfaceCreateFlagsEXT    flags;
    const CAMetalLayer*             pLayer;
} VkMetalSurfaceCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `pLayer` is a reference to a CAMetalLayer object representing a renderable surface.

Valid Usage (Implicit)

- VUID-VkMetalSurfaceCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_METAL_SURFACE_CREATE_INFO_EXT
- VUID-VkMetalSurfaceCreateInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMetalSurfaceCreateInfoEXT-flags-zerobitmask
  `flags` **must** be `0`

To remove an unnecessary compile time dependency, an incomplete type definition of CAMetalLayer is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_surface
#ifdef __OBJC__
@class CAMetalLayer;
#else
typedef void CAMetalLayer;
#endif
```

The actual CAMetalLayer type is defined in the QuartzCore framework.

```
// Provided by VK_EXT_metal_surface
typedef VkFlags VkMetalSurfaceCreateFlagsEXT;
```

`VkMetalSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

37.2.8. Platform-Independent Information

Once created, `VkSurfaceKHR` objects **can** be used in this and other extensions, in particular the `VK_KHR_swapchain` extension.

Several WSI functions return VK_ERROR_SURFACE_LOST_KHR if the surface becomes no longer available. After such an error, the surface (and any child swapchain, if one exists) **should** be destroyed, as there is no way to restore them to a not-lost state. Applications **may** attempt to create a new `VkSurfaceKHR` using the same native platform window object, but whether such re-creation will succeed is platform-dependent and **may** depend on the reason the surface became unavailable. A lost surface does not otherwise cause devices to be lost.

To destroy a `VkSurfaceKHR` object, call:

```
// Provided by VK_KHR_surface
void vkDestroySurfaceKHR(
    VkInstance                                  instance,
    VkSurfaceKHR                                surface,
    const VkAllocationCallbacks*                pAllocator);
```

- `instance` is the instance used to create the surface.
- `surface` is the surface to destroy.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).

Destroying a `VkSurfaceKHR` merely severs the connection between Vulkan and the native surface, and does not imply destroying the native surface, closing a window, or similar behavior.

Valid Usage

- VUID-vkDestroySurfaceKHR-surface-01266
  All `VkSwapchainKHR` objects created for `surface` **must** have been destroyed prior to destroying `surface`
- VUID-vkDestroySurfaceKHR-surface-01267
  If `VkAllocationCallbacks` were provided when `surface` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySurfaceKHR-surface-01268
  If no `VkAllocationCallbacks` were provided when `surface` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroySurfaceKHR-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkDestroySurfaceKHR-surface-parameter
  If `surface` is not VK_NULL_HANDLE, `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkDestroySurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroySurfaceKHR-surface-parent
  If `surface` is a valid handle, it **must** have been created, allocated, or retrieved from `instance`

Host Synchronization

- Host access to `surface` **must** be externally synchronized

37.3. Presenting Directly to Display Devices

In some environments applications **can** also present Vulkan rendering directly to display devices without using an intermediate windowing system. This **can** be useful for embedded applications, or implementing the rendering/presentation backend of a windowing system using Vulkan. The VK_KHR_display extension provides the functionality necessary to enumerate display devices and create VkSurfaceKHR objects that target displays.

37.3.1. Display Enumeration

Displays are represented by VkDisplayKHR handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayKHR)
```

Various functions are provided for enumerating the available display devices present on a Vulkan physical device. To query information about the available displays, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPropertiesKHR*                     pProperties);
```

- physicalDevice is a physical device.
- pPropertyCount is a pointer to an integer related to the number of display devices available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkDisplayPropertiesKHR structures.

If pProperties is NULL, then the number of display devices available for physicalDevice is returned in pPropertyCount. Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If the value of pPropertyCount is less than the number of display devices for physicalDevice, at most pPropertyCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pProperties-parameter

If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayPropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayPropertiesKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPropertiesKHR {
    VkDisplayKHR                  display;
    const char*                   displayName;
    VkExtent2D                    physicalDimensions;
    VkExtent2D                    physicalResolution;
    VkSurfaceTransformFlagsKHR    supportedTransforms;
    VkBool32                      planeReorderPossible;
    VkBool32                      persistentContent;
} VkDisplayPropertiesKHR;
```

- display is a handle that is used to refer to the display described here. This handle will be valid for the lifetime of the Vulkan instance.
- displayName is NULL or a pointer to a null-terminated UTF-8 string containing the name of the display. Generally, this will be the name provided by the display's EDID. If NULL, no suitable name is available. If not NULL, the string pointed to **must** remain accessible and unmodified as long as display is valid.
- physicalDimensions describes the physical width and height of the visible portion of the display, in millimeters.
- physicalResolution describes the physical, native, or preferred resolution of the display.

NOTE For devices which have no natural value to return here, implementations **should** return the maximum resolution supported.

- supportedTransforms is a bitmask of VkSurfaceTransformFlagBitsKHR describing which transforms are supported by this display.

- `planeReorderPossible` tells whether the planes on this display **can** have their z order changed. If this is VK_TRUE, the application **can** re-arrange the planes on this display in any order relative to each other.
- `persistentContent` tells whether the display supports self-refresh/internal buffering. If this is true, the application **can** submit persistent present operations on swapchains created against this display.

NOTE	Persistent presents **may** have higher latency, and **may** use less power when the screen content is updated infrequently, or when only a portion of the screen needs to be updated in most frames.

To query information about the available displays, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayProperties2KHR*                    pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display devices available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayProperties2KHR` structures.

`vkGetPhysicalDeviceDisplayProperties2KHR` behaves similarly to vkGetPhysicalDeviceDisplayPropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkDisplayProperties2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayProperties2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayProperties2KHR {
    VkStructureType           sType;
    void*                     pNext;
    VkDisplayPropertiesKHR    displayProperties;
} VkDisplayProperties2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- displayProperties is a VkDisplayPropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayProperties2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_PROPERTIES_2_KHR
- VUID-VkDisplayProperties2KHR-pNext-pNext
  pNext **must** be NULL

Acquiring and Releasing Displays

On some platforms, access to displays is limited to a single process or native driver instance. On such platforms, some or all of the displays may not be available to Vulkan if they are already in use by a native windowing system or other application.

To acquire permission to directly access a display in Vulkan from an X11 server, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkAcquireXlibDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    Display*                                    dpy,
    VkDisplayKHR                                display);
```

- physicalDevice is the physical device the display is on.
- dpy is a connection to the X11 server that currently owns display.

- `display` is the display the caller wishes to control in Vulkan.

All permissions necessary to control the display are granted to the Vulkan instance associated with `physicalDevice` until the display is released or the X11 connection specified by `dpy` is terminated. Permission to access the display **may** be temporarily revoked during periods when the X11 server from which control was acquired itself loses access to `display`. During such periods, operations which require access to the display **must** fail with an appropriate error code. If the X11 server associated with `dpy` does not own `display`, or if permission to access it has already been acquired by another entity, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

NOTE	One example of when an X11 server loses access to a display is when it loses ownership of its virtual terminal.

Valid Usage (Implicit)

- VUID-vkAcquireXlibDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkAcquireXlibDisplayEXT-dpy-parameter
  `dpy` **must** be a valid pointer to a `Display` value
- VUID-vkAcquireXlibDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkAcquireXlibDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When acquiring displays from an X11 server, an application may also wish to enumerate and identify them using a native handle rather than a `VkDisplayKHR` handle. To determine the `VkDisplayKHR` handle corresponding to an X11 RandR Output, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkGetRandROutputDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    Display*                                    dpy,
    RROutput                                    rrOutput,
    VkDisplayKHR*                               pDisplay);
```

- `physicalDevice` is the physical device to query the display handle on.
- `dpy` is a connection to the X11 server from which `rrOutput` was queried.
- `rrOutput` is an X11 RandR output ID.
- `pDisplay` is a pointer to a VkDisplayKHR handle where the display is returned.

If there is no VkDisplayKHR corresponding to `rrOutput` on `physicalDevice`, VK_NULL_HANDLE will be returned in `pDisplay`.

Valid Usage (Implicit)

- VUID-vkGetRandROutputDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetRandROutputDisplayEXT-dpy-parameter
  `dpy` **must** be a valid pointer to a `Display` value
- VUID-vkGetRandROutputDisplayEXT-pDisplay-parameter
  `pDisplay` **must** be a valid pointer to a VkDisplayKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To acquire permission to directly control a display in Vulkan from the Direct Rendering Manager (DRM) interface, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkAcquireDrmDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    int32_t                                     drmFd,
    VkDisplayKHR                                display);
```

- `physicalDevice` is the physical device the display is on.
- `drmFd` is the DRM primary file descriptor.
- `display` is the display the caller wishes Vulkan to control.

All permissions necessary to control the display are granted to the Vulkan instance associated with the provided `physicalDevice` until the display is either released or the connector is unplugged. The provided `drmFd` **must** correspond to the one owned by the `physicalDevice`. If not, the error code VK_ERROR_UNKNOWN **must** be returned. The DRM FD must have DRM master permissions. If any error is encountered during the acquisition of the display, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

The provided DRM fd should not be closed before the display is released, attempting to do it may result in undefined behavior.

Valid Usage (Implicit)

- VUID-vkAcquireDrmDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkAcquireDrmDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkAcquireDrmDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Before acquiring a display from the DRM interface, the caller may want to select a specific `VkDisplayKHR` handle by identifying it using a `connectorId`. To do so, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkGetDrmDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    int32_t                                     drmFd,
    uint32_t                                    connectorId,
    VkDisplayKHR*                               display);
```

- `physicalDevice` is the physical device to query the display from.

- drmFd is the DRM primary file descriptor.
- connectorId is the identifier of the specified DRM connector.
- pDisplay is a pointer to a VkDisplayKHR handle where the display is returned.

If there is no VkDisplayKHR corresponding to the connectorId on the physicalDevice, the returned display will be VK_NULL_HANDLE. The provided drmFd **must** correspond to the one owned by the physicalDevice. If not, the error code VK_ERROR_UNKNOWN will be returned. Master permissions are not required, because the file descriptor is just used for information gathering purposes. The given connectorId **must** be a resource owned by the provided drmFd. If not, the error code VK_ERROR_UNKNOWN will be returned. If any error is encountered during the identification of the display, the call **must** return the error code VK_ERROR_INITIALIZATION_FAILED.

Valid Usage (Implicit)

- VUID-vkGetDrmDisplayEXT-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDrmDisplayEXT-display-parameter
  display **must** be a valid pointer to a VkDisplayKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To release a previously acquired display, call:

```
// Provided by VK_EXT_direct_mode_display
VkResult vkReleaseDisplayEXT(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display);
```

- physicalDevice is the physical device the display is on.
- display is the display to release control of.

Valid Usage (Implicit)

- VUID-vkReleaseDisplayEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkReleaseDisplayEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkReleaseDisplayEXT-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Display Planes

Images are presented to individual planes on a display. Devices **must** support at least one plane on each display. Planes **can** be stacked and blended to composite multiple images on one display. Devices **may** support only a fixed stacking order and fixed mapping between planes and displays, or they **may** allow arbitrary application-specified stacking orders and mappings between planes and displays. To query the properties of device display planes, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPlanePropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPlanePropertiesKHR*                pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display planes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPlanePropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display planes available for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display planes for `physicalDevice`, at most `pPropertyCount` structures will be written.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-physicalDevice-parameter

physicalDevice **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayPlanePropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayPlanePropertiesKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlanePropertiesKHR {
    VkDisplayKHR    currentDisplay;
    uint32_t        currentStackIndex;
} VkDisplayPlanePropertiesKHR;
```

- currentDisplay is the handle of the display the plane is currently associated with. If the plane is not currently attached to any displays, this will be VK_NULL_HANDLE.
- currentStackIndex is the current z-order of the plane. This will be between 0 and the value returned by vkGetPhysicalDeviceDisplayPlanePropertiesKHR in pPropertyCount.

To query the properties of a device's display planes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayPlaneProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t*                                   pPropertyCount,
    VkDisplayPlaneProperties2KHR*               pProperties);
```

- physicalDevice is a physical device.

- pPropertyCount is a pointer to an integer related to the number of display planes available or queried, as described below.
- pProperties is either NULL or a pointer to an array of VkDisplayPlaneProperties2KHR structures.

vkGetPhysicalDeviceDisplayPlaneProperties2KHR behaves similarly to vkGetPhysicalDeviceDisplayPlanePropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayPlaneProperties2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayPlaneProperties2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneProperties2KHR {
    VkStructureType                sType;
    void*                          pNext;
    VkDisplayPlanePropertiesKHR    displayPlaneProperties;
} VkDisplayPlaneProperties2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `displayPlaneProperties` is a VkDisplayPlanePropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneProperties2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_PROPERTIES_2_KHR
- VUID-VkDisplayPlaneProperties2KHR-pNext-pNext
  `pNext` **must** be `NULL`

To determine which displays a plane is usable with, call

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneSupportedDisplaysKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    planeIndex,
    uint32_t*                                   pDisplayCount,
    VkDisplayKHR*                               pDisplays);
```

- `physicalDevice` is a physical device.
- `planeIndex` is the plane which the application wishes to use, and **must** be in the range [0, physical device plane count - 1].
- `pDisplayCount` is a pointer to an integer related to the number of displays available or queried, as described below.
- `pDisplays` is either `NULL` or a pointer to an array of `VkDisplayKHR` handles.

If `pDisplays` is `NULL`, then the number of displays usable with the specified `planeIndex` for `physicalDevice` is returned in `pDisplayCount`. Otherwise, `pDisplayCount` **must** point to a variable set by the application to the number of elements in the `pDisplays` array, and on return the variable is overwritten with the number of handles actually written to `pDisplays`. If the value of `pDisplayCount` is less than the number of usable display-plane pairs for `physicalDevice`, at most `pDisplayCount` handles will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available pairs were returned.

Valid Usage

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-planeIndex-01249
  `planeIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplayCount-parameter
  `pDisplayCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplays-parameter
  If the value referenced by `pDisplayCount` is not `0`, and `pDisplays` is not `NULL`, `pDisplays` **must** be a valid pointer to an array of `pDisplayCount` VkDisplayKHR handles

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Additional properties of displays are queried using specialized query functions.

Display Modes

Display modes are represented by `VkDisplayModeKHR` handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayModeKHR)
```

Each display has one or more supported modes associated with it by default. These built-in modes are queried by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayModePropertiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    uint32_t*                                   pPropertyCount,
    VkDisplayModePropertiesKHR*                 pProperties);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to query.
- `pPropertyCount` is a pointer to an integer related to the number of display modes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayModePropertiesKHR` structures.

If pProperties is NULL, then the number of display modes available on the specified display for physicalDevice is returned in pPropertyCount. Otherwise, pPropertyCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If the value of pPropertyCount is less than the number of display modes for physicalDevice, at most pPropertyCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available display modes were returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayModePropertiesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayModePropertiesKHR-display-parameter
  display **must** be a valid VkDisplayKHR handle
- VUID-vkGetDisplayModePropertiesKHR-pPropertyCount-parameter
  pPropertyCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetDisplayModePropertiesKHR-pProperties-parameter
  If the value referenced by pPropertyCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pPropertyCount VkDisplayModePropertiesKHR structures
- VUID-vkGetDisplayModePropertiesKHR-display-parent
  display **must** have been created, allocated, or retrieved from physicalDevice

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayModePropertiesKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModePropertiesKHR {
    VkDisplayModeKHR              displayMode;
    VkDisplayModeParametersKHR    parameters;
} VkDisplayModePropertiesKHR;
```

- `displayMode` is a handle to the display mode described in this structure. This handle will be valid for the lifetime of the Vulkan instance.
- `parameters` is a VkDisplayModeParametersKHR structure describing the display parameters associated with `displayMode`.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayModeCreateFlagsKHR;
```

`VkDisplayModeCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

To query the properties of a device's built-in display modes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayModeProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    uint32_t*                                   pPropertyCount,
    VkDisplayModeProperties2KHR*                pProperties);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to query.
- `pPropertyCount` is a pointer to an integer related to the number of display modes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayModeProperties2KHR` structures.

`vkGetDisplayModeProperties2KHR` behaves similarly to vkGetDisplayModePropertiesKHR, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayModeProperties2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayModeProperties2KHR-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkGetDisplayModeProperties2KHR-pPropertyCount-parameter
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayModeProperties2KHR-pProperties-parameter
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` VkDisplayModeProperties2KHR structures
- VUID-vkGetDisplayModeProperties2KHR-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDisplayModeProperties2KHR structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayModeProperties2KHR {
    VkStructureType               sType;
    void*                         pNext;
    VkDisplayModePropertiesKHR    displayModeProperties;
} VkDisplayModeProperties2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- displayModeProperties is a VkDisplayModePropertiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayModeProperties2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DISPLAY_MODE_PROPERTIES_2_KHR
- VUID-VkDisplayModeProperties2KHR-pNext-pNext
  pNext **must** be NULL

The VkDisplayModeParametersKHR structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeParametersKHR {
    VkExtent2D    visibleRegion;
    uint32_t      refreshRate;
} VkDisplayModeParametersKHR;
```

- visibleRegion is the 2D extents of the visible region.
- refreshRate is a uint32_t that is the number of times the display is refreshed each second

multiplied by 1000.

NOTE For example, a 60Hz display mode would report a `refreshRate` of 60,000.

Valid Usage

- VUID-VkDisplayModeParametersKHR-width-01990
  The `width` member of `visibleRegion` **must** be greater than `0`
- VUID-VkDisplayModeParametersKHR-height-01991
  The `height` member of `visibleRegion` **must** be greater than `0`
- VUID-VkDisplayModeParametersKHR-refreshRate-01992
  `refreshRate` **must** be greater than `0`

Additional modes **may** also be created by calling:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayModeKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayKHR                                display,
    const VkDisplayModeCreateInfoKHR*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDisplayModeKHR*                           pMode);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to create an additional mode for.
- `pCreateInfo` is a pointer to a VkDisplayModeCreateInfoKHR structure describing the new mode to create.
- `pAllocator` is the allocator used for host memory allocated for the display mode object when there is no more specific allocator available (see Memory Allocation).
- `pMode` is a pointer to a VkDisplayModeKHR handle in which the mode created is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayModeKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkCreateDisplayModeKHR-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkCreateDisplayModeKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDisplayModeCreateInfoKHR structure
- VUID-vkCreateDisplayModeKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateDisplayModeKHR-pMode-parameter
  `pMode` **must** be a valid pointer to a VkDisplayModeKHR handle
- VUID-vkCreateDisplayModeKHR-display-parent
  `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Host Synchronization

- Host access to `display` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayModeCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeCreateInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkDisplayModeCreateFlagsKHR    flags;
    VkDisplayModeParametersKHR     parameters;
} VkDisplayModeCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use, and **must** be zero.
- `parameters` is a VkDisplayModeParametersKHR structure describing the display parameters to use in creating the new mode. If the parameters are not compatible with the specified display, the implementation **must** return VK_ERROR_INITIALIZATION_FAILED.

Valid Usage (Implicit)

- VUID-VkDisplayModeCreateInfoKHR-sType-sType

`sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_MODE_CREATE_INFO_KHR

- VUID-VkDisplayModeCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDisplayModeCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkDisplayModeCreateInfoKHR-parameters-parameter
  `parameters` **must** be a valid VkDisplayModeParametersKHR structure

Applications that wish to present directly to a display **must** select which layer, or "plane" of the display they wish to target, and a mode to use with the display. Each display supports at least one plane. The capabilities of a given mode and plane combination are determined by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneCapabilitiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkDisplayModeKHR                            mode,
    uint32_t                                    planeIndex,
    VkDisplayPlaneCapabilitiesKHR*              pCapabilities);
```

- `physicalDevice` is the physical device associated with the display specified by `mode`
- `mode` is the display mode the application intends to program when using the specified plane. Note this parameter also implicitly specifies a display.
- `planeIndex` is the plane which the application intends to use with the display, and is less than the number of display planes supported by the device.
- `pCapabilities` is a pointer to a VkDisplayPlaneCapabilitiesKHR structure in which the capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilitiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parameter
  `mode` **must** be a valid VkDisplayModeKHR handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-pCapabilities-parameter
  `pCapabilities` **must** be a valid pointer to a VkDisplayPlaneCapabilitiesKHR structure
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parent
  `mode` **must** have been created, allocated, or retrieved from `physicalDevice`

Host Synchronization

- Host access to `mode` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPlaneCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlaneCapabilitiesKHR {
    VkDisplayPlaneAlphaFlagsKHR    supportedAlpha;
    VkOffset2D                     minSrcPosition;
    VkOffset2D                     maxSrcPosition;
    VkExtent2D                     minSrcExtent;
    VkExtent2D                     maxSrcExtent;
    VkOffset2D                     minDstPosition;
    VkOffset2D                     maxDstPosition;
    VkExtent2D                     minDstExtent;
    VkExtent2D                     maxDstExtent;
} VkDisplayPlaneCapabilitiesKHR;
```

- `supportedAlpha` is a bitmask of VkDisplayPlaneAlphaFlagBitsKHR describing the supported alpha blending modes.
- `minSrcPosition` is the minimum source rectangle offset supported by this plane using the specified mode.
- `maxSrcPosition` is the maximum source rectangle offset supported by this plane using the specified mode. The `x` and `y` components of `maxSrcPosition` **must** each be greater than or equal to the `x` and `y` components of `minSrcPosition`, respectively.
- `minSrcExtent` is the minimum source rectangle size supported by this plane using the specified mode.
- `maxSrcExtent` is the maximum source rectangle size supported by this plane using the specified mode.
- `minDstPosition`, `maxDstPosition`, `minDstExtent`, `maxDstExtent` all have similar semantics to their corresponding `*Src*` equivalents, but apply to the output region within the mode rather than the input region within the source image. Unlike the `*Src*` offsets, `minDstPosition` and `maxDstPosition` **may** contain negative values.

The minimum and maximum position and extent fields describe the implementation limits, if any, as they apply to the specified display mode and plane. Vendors **may** support displaying a subset of a

swapchain's presentable images on the specified display plane. This is expressed by returning `minSrcPosition`, `maxSrcPosition`, `minSrcExtent`, and `maxSrcExtent` values that indicate a range of possible positions and sizes which **may** be used to specify the region within the presentable images that source pixels will be read from when creating a swapchain on the specified display mode and plane.

Vendors **may** also support mapping the presentable images' content to a subset or superset of the visible region in the specified display mode. This is expressed by returning `minDstPosition`, `maxDstPosition`, `minDstExtent` and `maxDstExtent` values that indicate a range of possible positions and sizes which **may** be used to describe the region within the display mode that the source pixels will be mapped to.

Other vendors **may** support only a 1-1 mapping between pixels in the presentable images and the display mode. This **may** be indicated by returning (0,0) for `minSrcPosition`, `maxSrcPosition`, `minDstPosition`, and `maxDstPosition`, and (display mode width, display mode height) for `minSrcExtent`, `maxSrcExtent`, `minDstExtent`, and `maxDstExtent`.

The value `supportedAlpha` **must** contain at least one valid VkDisplayPlaneAlphaFlagBitsKHR bit.

These values indicate the limits of the implementation's individual fields. Not all combinations of values within the offset and extent ranges returned in `VkDisplayPlaneCapabilitiesKHR` are guaranteed to be supported. Presentation requests specifying unsupported combinations **may** fail.

To query the capabilities of a given mode and plane combination, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayPlaneCapabilities2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkDisplayPlaneInfo2KHR*               pDisplayPlaneInfo,
    VkDisplayPlaneCapabilities2KHR*             pCapabilities);
```

- `physicalDevice` is the physical device associated with `pDisplayPlaneInfo`.
- `pDisplayPlaneInfo` is a pointer to a VkDisplayPlaneInfo2KHR structure describing the plane and mode.
- `pCapabilities` is a pointer to a VkDisplayPlaneCapabilities2KHR structure in which the capabilities are returned.

`vkGetDisplayPlaneCapabilities2KHR` behaves similarly to vkGetDisplayPlaneCapabilitiesKHR, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilities2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetDisplayPlaneCapabilities2KHR-pDisplayPlaneInfo-parameter
  `pDisplayPlaneInfo` **must** be a valid pointer to a valid VkDisplayPlaneInfo2KHR structure

- VUID-vkGetDisplayPlaneCapabilities2KHR-pCapabilities-parameter
  `pCapabilities` **must** be a valid pointer to a VkDisplayPlaneCapabilities2KHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPlaneInfo2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneInfo2KHR {
    VkStructureType     sType;
    const void*         pNext;
    VkDisplayModeKHR    mode;
    uint32_t            planeIndex;
} VkDisplayPlaneInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mode` is the display mode the application intends to program when using the specified plane.

> **NOTE** This parameter also implicitly specifies a display.

- `planeIndex` is the plane which the application intends to use with the display.

The members of `VkDisplayPlaneInfo2KHR` correspond to the arguments to vkGetDisplayPlaneCapabilitiesKHR, with `sType` and `pNext` added for extensibility.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneInfo2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_INFO_2_KHR
- VUID-VkDisplayPlaneInfo2KHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDisplayPlaneInfo2KHR-mode-parameter
  `mode` **must** be a valid VkDisplayModeKHR handle

Host Synchronization

- Host access to `mode` **must** be externally synchronized

The `VkDisplayPlaneCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneCapabilities2KHR {
    VkStructureType                 sType;
    void*                           pNext;
    VkDisplayPlaneCapabilitiesKHR   capabilities;
} VkDisplayPlaneCapabilities2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `capabilities` is a VkDisplayPlaneCapabilitiesKHR structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneCapabilities2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PLANE_CAPABILITIES_2_KHR
- VUID-VkDisplayPlaneCapabilities2KHR-pNext-pNext
  `pNext` **must** be `NULL`

37.3.2. Display Control

To set the power state of a display, call:

```
// Provided by VK_EXT_display_control
VkResult vkDisplayPowerControlEXT(
    VkDevice                                    device,
    VkDisplayKHR                                display,
    const VkDisplayPowerInfoEXT*                pDisplayPowerInfo);
```

- `device` is a logical device associated with `display`.
- `display` is the display whose power state is modified.
- `pDisplayPowerInfo` is a pointer to a VkDisplayPowerInfoEXT structure specifying the new power state of `display`.

Valid Usage (Implicit)

- VUID-vkDisplayPowerControlEXT-device-parameter

`device` **must** be a valid VkDevice handle

- VUID-vkDisplayPowerControlEXT-display-parameter
  `display` **must** be a valid VkDisplayKHR handle
- VUID-vkDisplayPowerControlEXT-pDisplayPowerInfo-parameter
  `pDisplayPowerInfo` **must** be a valid pointer to a valid VkDisplayPowerInfoEXT structure
- VUID-vkDisplayPowerControlEXT-commonparent
  Both of `device`, and `display` **must** have been created, allocated, or retrieved from the same VkPhysicalDevice

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplayPowerInfoEXT` structure is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkDisplayPowerInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkDisplayPowerStateEXT    powerState;
} VkDisplayPowerInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `powerState` is a VkDisplayPowerStateEXT value specifying the new power state of the display.

Valid Usage (Implicit)

- VUID-VkDisplayPowerInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_POWER_INFO_EXT
- VUID-VkDisplayPowerInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDisplayPowerInfoEXT-powerState-parameter
  `powerState` **must** be a valid VkDisplayPowerStateEXT value

Possible values of VkDisplayPowerInfoEXT::powerState, specifying the new power state of a display, are:

```
// Provided by VK_EXT_display_control
typedef enum VkDisplayPowerStateEXT {
    VK_DISPLAY_POWER_STATE_OFF_EXT = 0,
    VK_DISPLAY_POWER_STATE_SUSPEND_EXT = 1,
    VK_DISPLAY_POWER_STATE_ON_EXT = 2,
} VkDisplayPowerStateEXT;
```

- VK_DISPLAY_POWER_STATE_OFF_EXT specifies that the display is powered down.
- VK_DISPLAY_POWER_STATE_SUSPEND_EXT specifies that the display is put into a low power mode, from which it **may** be able to transition back to VK_DISPLAY_POWER_STATE_ON_EXT more quickly than if it were in VK_DISPLAY_POWER_STATE_OFF_EXT. This state **may** be the same as VK_DISPLAY_POWER_STATE_OFF_EXT.
- VK_DISPLAY_POWER_STATE_ON_EXT specifies that the display is powered on.

37.3.3. Display Surfaces

A complete display configuration includes a mode, one or more display planes and any parameters describing their behavior, and parameters describing some aspects of the images associated with those planes. Display surfaces describe the configuration of a single plane within a complete display configuration. To create a VkSurfaceKHR object for a display plane, call:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayPlaneSurfaceKHR(
    VkInstance                                  instance,
    const VkDisplaySurfaceCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- instance is the instance corresponding to the physical device the targeted display is on.
- pCreateInfo is a pointer to a VkDisplaySurfaceCreateInfoKHR structure specifying which mode, plane, and other parameters to use, as described below.
- pAllocator is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- pSurface is a pointer to a VkSurfaceKHR handle in which the created surface is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayPlaneSurfaceKHR-instance-parameter
  instance **must** be a valid VkInstance handle
- VUID-vkCreateDisplayPlaneSurfaceKHR-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkDisplaySurfaceCreateInfoKHR structure

- VUID-vkCreateDisplayPlaneSurfaceKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDisplayPlaneSurfaceKHR-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDisplaySurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplaySurfaceCreateInfoKHR {
    VkStructureType                    sType;
    const void*                        pNext;
    VkDisplaySurfaceCreateFlagsKHR     flags;
    VkDisplayModeKHR                   displayMode;
    uint32_t                           planeIndex;
    uint32_t                           planeStackIndex;
    VkSurfaceTransformFlagBitsKHR      transform;
    float                              globalAlpha;
    VkDisplayPlaneAlphaFlagBitsKHR     alphaMode;
    VkExtent2D                         imageExtent;
} VkDisplaySurfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use, and **must** be zero.
- `displayMode` is a VkDisplayModeKHR handle specifying the mode to use when displaying this surface.
- `planeIndex` is the plane on which this surface appears.
- `planeStackIndex` is the z-order of the plane.
- `transform` is a VkSurfaceTransformFlagBitsKHR value specifying the transformation to apply to images as part of the scanout operation.

- `globalAlpha` is the global alpha value. This value is ignored if `alphaMode` is not VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR.
- `alphaMode` is a VkDisplayPlaneAlphaFlagBitsKHR value specifying the type of alpha blending to use.
- `imageExtent` is the size of the presentable images to use with the surface.

NOTE	Creating a display surface **must** not modify the state of the displays, planes, or other resources it names. For example, it **must** not apply the specified mode to be set on the associated display. Application of display configuration occurs as a side effect of presenting to a display surface.

Valid Usage

- VUID-VkDisplaySurfaceCreateInfoKHR-planeIndex-01252
  `planeIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`
- VUID-VkDisplaySurfaceCreateInfoKHR-planeReorderPossible-01253
  If the `planeReorderPossible` member of the `VkDisplayPropertiesKHR` structure returned by `vkGetPhysicalDeviceDisplayPropertiesKHR` for the display corresponding to `displayMode` is VK_TRUE then `planeStackIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`; otherwise `planeStackIndex` **must** equal the `currentStackIndex` member of `VkDisplayPlanePropertiesKHR` returned by `vkGetPhysicalDeviceDisplayPlanePropertiesKHR` for the display plane corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01254
  If `alphaMode` is VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR then `globalAlpha` **must** be between `0` and `1`, inclusive
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01255
  `alphaMode` **must** be one of the bits present in the `supportedAlpha` member of `VkDisplayPlaneCapabilitiesKHR` for the display plane corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-06740
  `transform` **must** be one of the bits present in the `supportedTransforms` member of `VkDisplayPropertiesKHR` for the display corresponding to `displayMode`
- VUID-VkDisplaySurfaceCreateInfoKHR-width-01256
  The `width` and `height` members of `imageExtent` **must** be less than or equal to VkPhysicalDeviceLimits::`maxImageDimension2D`

Valid Usage (Implicit)

- VUID-VkDisplaySurfaceCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_SURFACE_CREATE_INFO_KHR
- VUID-VkDisplaySurfaceCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`

- VUID-VkDisplaySurfaceCreateInfoKHR-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkDisplaySurfaceCreateInfoKHR-displayMode-parameter
  `displayMode` **must** be a valid VkDisplayModeKHR handle
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-parameter
  `transform` **must** be a valid VkSurfaceTransformFlagBitsKHR value
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-parameter
  `alphaMode` **must** be a valid VkDisplayPlaneAlphaFlagBitsKHR value

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplaySurfaceCreateFlagsKHR;
```

`VkDisplaySurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which **can** be set in VkDisplaySurfaceCreateInfoKHR::`alphaMode`, specifying the type of alpha blending to use on a display, are:

```
// Provided by VK_KHR_display
typedef enum VkDisplayPlaneAlphaFlagBitsKHR {
    VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR = 0x00000002,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR = 0x00000004,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR = 0x00000008,
} VkDisplayPlaneAlphaFlagBitsKHR;
```

- VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR specifies that the source image will be treated as opaque.
- VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR specifies that a global alpha value **must** be specified that will be applied to all pixels in the source image.
- VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR specifies that the alpha value will be determined by the alpha component of the source image's pixels. If the source format contains no alpha values, no blending will be applied. The source alpha values are not premultiplied into the source image's other color components.
- VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR is equivalent to VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR, except the source alpha values are assumed to be premultiplied into the source image's other color components.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayPlaneAlphaFlagsKHR;
```

`VkDisplayPlaneAlphaFlagsKHR` is a bitmask type for setting a mask of zero or more VkDisplayPlaneAlphaFlagBitsKHR.

37.3.4. Presenting to Headless Surfaces

Vulkan rendering can be presented to a headless surface, where the presentation operation is a no-op producing no externally-visible result.

NOTE

Because there is no real presentation target, the headless presentation engine may be extended to impose an arbitrary or customizable set of restrictions and features. This makes it a useful portable test target for applications targeting a wide range of presentation engines where the actual target presentation engines might be scarce, unavailable or otherwise undesirable or inconvenient to use for general Vulkan application development.

The usual surface query mechanisms must be used to determine the actual restrictions and features of the implementation.

To create a headless `VkSurfaceKHR` object, call:

```
// Provided by VK_EXT_headless_surface
VkResult vkCreateHeadlessSurfaceEXT(
    VkInstance                                  instance,
    const VkHeadlessSurfaceCreateInfoEXT*       pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSurfaceKHR*                               pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a VkHeadlessSurfaceCreateInfoEXT structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see Memory Allocation).
- `pSurface` is a pointer to a VkSurfaceKHR handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateHeadlessSurfaceEXT-instance-parameter
  `instance` **must** be a valid VkInstance handle
- VUID-vkCreateHeadlessSurfaceEXT-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkHeadlessSurfaceCreateInfoEXT structure
- VUID-vkCreateHeadlessSurfaceEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateHeadlessSurfaceEXT-pSurface-parameter
  `pSurface` **must** be a valid pointer to a VkSurfaceKHR handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkHeadlessSurfaceCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_headless_surface
typedef struct VkHeadlessSurfaceCreateInfoEXT {
    VkStructureType                    sType;
    const void*                        pNext;
    VkHeadlessSurfaceCreateFlagsEXT    flags;
} VkHeadlessSurfaceCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.

Valid Usage (Implicit)

- VUID-VkHeadlessSurfaceCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_HEADLESS_SURFACE_CREATE_INFO_EXT
- VUID-VkHeadlessSurfaceCreateInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkHeadlessSurfaceCreateInfoEXT-flags-zerobitmask
  flags **must** be 0

For headless surfaces, currentExtent is the reserved value (0xFFFFFFFF, 0xFFFFFFFF). Whatever the application sets a swapchain's imageExtent to will be the size of the surface, after the first image is presented.

```
// Provided by VK_EXT_headless_surface
typedef VkFlags VkHeadlessSurfaceCreateFlagsEXT;
```

VkHeadlessSurfaceCreateFlagsEXT is a bitmask type for setting a mask, but is currently reserved for future use.

37.4. Querying for WSI Support

Not all physical devices will include WSI support. Within a physical device, not all queue families will support presentation. WSI support and compatibility **can** be determined in a platform-neutral manner (which determines support for presentation to a particular surface object) and additionally **may** be determined in platform-specific manners (which determine support for presentation on the specified physical device but do not guarantee support for presentation to a particular surface object).

To determine whether a queue family of a physical device supports presentation to a given surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    VkSurfaceKHR                                surface,
    VkBool32*                                   pSupported);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family.
- `surface` is the surface.
- `pSupported` is a pointer to a VkBool32. VK_TRUE indicates support, and VK_FALSE indicates no support.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-queueFamilyIndex-01269
  `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-pSupported-parameter
  `pSupported` **must** be a valid pointer to a VkBool32 value
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

37.4.1. Android Platform

On Android, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Android-specific query for these capabilities.

37.4.2. Wayland Platform

To determine whether a queue family of a physical device supports presentation to a Wayland compositor, call:

```
// Provided by VK_KHR_wayland_surface
VkBool32 vkGetPhysicalDeviceWaylandPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    struct wl_display*                          display);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `display` is a pointer to the `wl_display` associated with a Wayland compositor.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-queueFamilyIndex-01306 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-physicalDevice-parameter

physicalDevice **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-display-parameter
  display **must** be a valid pointer to a wl_display value

37.4.3. Win32 Platform

To determine whether a queue family of a physical device supports presentation to the Microsoft Windows desktop, call:

```
// Provided by VK_KHR_win32_surface
VkBool32 vkGetPhysicalDeviceWin32PresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex);
```

- physicalDevice is the physical device.
- queueFamilyIndex is the queue family index.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-queueFamilyIndex-01309
  queueFamilyIndex **must** be less than pQueueFamilyPropertyCount returned by vkGetPhysicalDeviceQueueFamilyProperties for the given physicalDevice

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle

37.4.4. XCB Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkBool32 vkGetPhysicalDeviceXcbPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    xcb_connection_t*                           connection,
    xcb_visualid_t                              visual_id);
```

- physicalDevice is the physical device.

- `queueFamilyIndex` is the queue family index.
- `connection` is a pointer to an `xcb_connection_t` to the X server.
- `visual_id` is an X11 visual (`xcb_visualid_t`).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-queueFamilyIndex-01312 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-connection-parameter `connection` **must** be a valid pointer to an `xcb_connection_t` value

37.4.5. Xlib Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkBool32 vkGetPhysicalDeviceXlibPresentationSupportKHR(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    Display*                                    dpy,
    VisualID                                    visualID);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dpy` is a pointer to an Xlib `Display` connection to the server.
- `visualID` is an X11 visual (`VisualID`).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-queueFamilyIndex-01315 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-dpy-parameter `dpy` **must** be a valid pointer to a `Display` value

37.4.6. DirectFB Platform

To determine whether a queue family of a physical device supports presentation with DirectFB library, call:

```
// Provided by VK_EXT_directfb_surface
VkBool32 vkGetPhysicalDeviceDirectFBPresentationSupportEXT(
    VkPhysicalDevice                            physicalDevice,
    uint32_t                                    queueFamilyIndex,
    IDirectFB*                                  dfb);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dfb` is a pointer to the `IDirectFB` main interface of DirectFB.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-queueFamilyIndex-04119 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-physicalDevice-parameter `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-dfb-parameter `dfb` **must** be a valid pointer to an `IDirectFB` value

37.4.7. Metal Platform

On Apple platforms with Metal support, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no Apple-specific query for these capabilities.

37.5. Surface Queries

The capabilities of a swapchain targeting a surface are the intersection of the capabilities of the WSI platform, the native window or display, and the physical device. The resulting capabilities **can** be obtained with the queries listed below in this section.

NOTE	In addition to the surface capabilities as obtained by surface queries below, swapchain images are also subject to ordinary image creation limits as reported by vkGetPhysicalDeviceImageFormatProperties. As an application is instructed by the appropriate Valid Usage sections, both the surface capabilities and the image creation limits have to be satisfied whenever swapchain images are created.

37.5.1. Surface Capabilities

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

WARNING	This functionality is superseded by vkGetPhysicalDeviceSurfaceCapabilities2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceCapabilitiesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    VkSurfaceCapabilitiesKHR*                   pSurfaceCapabilities);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilitiesKHR structure in which the capabilities are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-06211
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-pSurfaceCapabilities-parameter
  `pSurfaceCapabilities` **must** be a valid pointer to a VkSurfaceCapabilitiesKHR structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceCapabilitiesKHR` structure is defined as:

WARNING This functionality is superseded by VK_KHR_get_surface_capabilities2. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceCapabilitiesKHR {
    uint32_t                         minImageCount;
    uint32_t                         maxImageCount;
    VkExtent2D                       currentExtent;
    VkExtent2D                       minImageExtent;
    VkExtent2D                       maxImageExtent;
    uint32_t                         maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR       supportedTransforms;
    VkSurfaceTransformFlagBitsKHR    currentTransform;
    VkCompositeAlphaFlagsKHR         supportedCompositeAlpha;
    VkImageUsageFlags                supportedUsageFlags;
} VkSurfaceCapabilitiesKHR;
```

- `minImageCount` is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- `maxImageCount` is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to `minImageCount`. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.

- `currentExtent` is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- `minImageExtent` contains the smallest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be less than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageExtent` contains the largest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `minImageExtent`. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageArrayLayers` is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- `supportedTransforms` is a bitmask of VkSurfaceTransformFlagBitsKHR indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- `currentTransform` is VkSurfaceTransformFlagBitsKHR value indicating the surface's current transform relative to the presentation engine's natural orientation.
- `supportedCompositeAlpha` is a bitmask of VkCompositeAlphaFlagBitsKHR, representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- `supportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the presentable images of a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set. Implementations **may** support additional usages.

NOTE	Supported usage flags of a presentable image when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode are provided by VkSharedPresentSurfaceCapabilities2KHR or VkSharedPresentSurfaceCapabilitiesKHR.

NOTE	Formulas such as min(N, `maxImageCount`) are not correct, since `maxImageCount` **may** be zero.

To query the basic capabilities of a surface defined by the core or extensions, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceCapabilities2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    VkSurfaceCapabilities2KHR*                  pSurfaceCapabilities);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilities2KHR structure in which the capabilities are returned.

`vkGetPhysicalDeviceSurfaceCapabilities2KHR` behaves similarly to vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06521
  `pSurfaceInfo->surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06522
  `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-02671
  If a VkSurfaceCapabilitiesFullScreenExclusiveEXT structure is included in the `pNext` chain of `pSurfaceCapabilities`, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the `pNext` chain of `pSurfaceInfo`
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07776
  If a VkSurfacePresentModeCompatibilityKHR structure is included in the `pNext` chain of `pSurfaceCapabilities`, a VkSurfacePresentModeKHR structure **must** be included in the `pNext` chain of `pSurfaceInfo`
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07777
  If a VkSurfacePresentScalingCapabilitiesKHR structure is included in the `pNext` chain of `pSurfaceCapabilities`, a VkSurfacePresentModeKHR structure **must** be included in the `pNext` chain of `pSurfaceInfo`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR

structure

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceCapabilities-parameter `pSurfaceCapabilities` **must** be a valid pointer to a VkSurfaceCapabilities2KHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPhysicalDeviceSurfaceInfo2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkPhysicalDeviceSurfaceInfo2KHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceKHR       surface;
} VkPhysicalDeviceSurfaceInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surface` is the surface that will be associated with the swapchain.

The members of `VkPhysicalDeviceSurfaceInfo2KHR` correspond to the arguments to vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with `sType` and `pNext` added for extensibility.

Additional capabilities of a surface **may** be available to swapchains created with different full-screen exclusive settings - particularly if exclusive full-screen access is application controlled. These additional capabilities **can** be queried by adding a VkSurfaceFullScreenExclusiveInfoEXT structure to the `pNext` chain of this structure when used to query surface properties. Additionally, for Win32 surfaces with application controlled exclusive full-screen access, chaining a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **may** also report additional surface capabilities. These additional capabilities only apply to swapchains created with the same parameters included in the `pNext` chain of VkSwapchainCreateInfoKHR.

Valid Usage

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-02672
  If the `pNext` chain includes a VkSurfaceFullScreenExclusiveInfoEXT structure with its `fullScreenExclusive` member set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT, and `surface` was created using vkCreateWin32SurfaceKHR, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the `pNext` chain
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-surface-07919
  If surface is not VK_NULL_HANDLE, `surface` **must** be a valid VkSurfaceKHR handle

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SURFACE_INFO_2_KHR
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkSurfaceFullScreenExclusiveInfoEXT, VkSurfaceFullScreenExclusiveWin32InfoEXT, or VkSurfacePresentModeKHR
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

If the `pNext` chain of VkSwapchainCreateInfoKHR includes a `VkSurfaceFullScreenExclusiveInfoEXT` structure, then that structure specifies the application's preferred full-screen transition behavior.

The `VkSurfaceFullScreenExclusiveInfoEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveInfoEXT {
    VkStructureType             sType;
    void*                       pNext;
    VkFullScreenExclusiveEXT    fullScreenExclusive;
} VkSurfaceFullScreenExclusiveInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fullScreenExclusive` is a VkFullScreenExclusiveEXT value specifying the preferred full-screen transition behavior.

If this structure is not present, `fullScreenExclusive` is considered to be VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT.

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_INFO_EXT
- VUID-VkSurfaceFullScreenExclusiveInfoEXT-fullScreenExclusive-parameter
  `fullScreenExclusive` **must** be a valid VkFullScreenExclusiveEXT value

Structure Chaining

Extends the structures

- VkPhysicalDeviceSurfaceInfo2KHR
- VkSwapchainCreateInfoKHR

Possible values of `VkSurfaceFullScreenExclusiveInfoEXT`::`fullScreenExclusive` are:

```
// Provided by VK_EXT_full_screen_exclusive
typedef enum VkFullScreenExclusiveEXT {
    VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT = 0,
    VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT = 1,
    VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT = 2,
    VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT = 3,
} VkFullScreenExclusiveEXT;
```

- VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT specifies that the implementation **should** determine the appropriate full-screen method by whatever means it deems appropriate.
- VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT specifies that the implementation **may** use full-screen exclusive mechanisms when available. Such mechanisms **may** result in better performance and/or the availability of different presentation capabilities, but **may** require a more disruptive transition during swapchain initialization, first presentation and/or destruction.
- VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT specifies that the implementation **should** avoid using full-screen mechanisms which rely on disruptive transitions.
- VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT specifies that the application will manage full-screen exclusive mode by using the vkAcquireFullScreenExclusiveModeEXT and vkReleaseFullScreenExclusiveModeEXT commands.

The `VkSurfaceFullScreenExclusiveWin32InfoEXT` structure is defined as:

```
// Provided by VK_KHR_win32_surface with VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveWin32InfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    HMONITOR           hmonitor;
} VkSurfaceFullScreenExclusiveWin32InfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hmonitor` is the Win32 `HMONITOR` handle identifying the display to create the surface with.

NOTE If `hmonitor` is invalidated (e.g. the monitor is unplugged) during the lifetime of a swapchain created with this structure, operations on that swapchain will return VK_ERROR_OUT_OF_DATE_KHR.

NOTE It is the responsibility of the application to change the display settings of the targeted Win32 display using the appropriate platform APIs. Such changes **may** alter the surface capabilities reported for the created surface.

Valid Usage

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-hmonitor-02673
  `hmonitor` **must** be a valid `HMONITOR`

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_WIN32_INFO_EXT

Structure Chaining

Extends the structures

- VkPhysicalDeviceSurfaceInfo2KHR
- VkSwapchainCreateInfoKHR

The `VkSurfaceCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceCapabilities2KHR {
    VkStructureType             sType;
    void*                       pNext;
    VkSurfaceCapabilitiesKHR    surfaceCapabilities;
} VkSurfaceCapabilities2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCapabilities` is a VkSurfaceCapabilitiesKHR structure describing the capabilities of the specified surface.

Only usage flags representable in VkImageUsageFlagBits are returned in `surfaceCapabilities.supportedUsageFlags`. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, all usage flags are returned in VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_KHR
- VUID-VkSurfaceCapabilities2KHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkImageUsageFlags2CreateInfoKHR, VkPresentTimingSurfaceCapabilitiesEXT, VkSharedPresentSurfaceCapabilities2KHR, VkSharedPresentSurfaceCapabilitiesKHR, VkSurfaceCapabilitiesFullScreenExclusiveEXT, VkSurfaceCapabilitiesPresentId2KHR, VkSurfaceCapabilitiesPresentWait2KHR, VkSurfacePresentModeCompatibilityKHR, VkSurfacePresentScalingCapabilitiesKHR, VkSurfaceProtectedCapabilitiesKHR, or VkSwapchainFlagsSurfaceCapabilitiesEXT
- VUID-VkSurfaceCapabilities2KHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

An application queries if a protected VkSurfaceKHR is displayable on a specific windowing system using `VkSurfaceProtectedCapabilitiesKHR`, which **can** be passed in `pNext` parameter of `VkSurfaceCapabilities2KHR`.

The `VkSurfaceProtectedCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface_protected_capabilities
typedef struct VkSurfaceProtectedCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supportsProtected;
} VkSurfaceProtectedCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportsProtected` specifies whether a protected swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::`surface` for a particular windowing system **can** be displayed on screen or not. If `supportsProtected` is VK_TRUE, then creation of swapchains with the VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR flag set **must** be supported for `surface`.

Valid Usage (Implicit)

- VUID-VkSurfaceProtectedCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PROTECTED_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSurfacePresentScalingCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentScalingCapabilitiesKHR {
    VkStructureType             sType;
    void*                       pNext;
    VkPresentScalingFlagsKHR    supportedPresentScaling;
    VkPresentGravityFlagsKHR    supportedPresentGravityX;
    VkPresentGravityFlagsKHR    supportedPresentGravityY;
    VkExtent2D                  minScaledImageExtent;
    VkExtent2D                  maxScaledImageExtent;
} VkSurfacePresentScalingCapabilitiesKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentScalingCapabilitiesKHR
typedef VkSurfacePresentScalingCapabilitiesKHR VkSurfacePresentScalingCapabilitiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedPresentScaling` is a bitmask of VkPresentScalingFlagBitsKHR representing the scaling methods supported by the surface, or `0` if application-defined scaling is not supported.
- `supportedPresentGravityX` is a bitmask of VkPresentGravityFlagBitsKHR representing the X-axis pixel gravity supported by the surface, or `0` if Vulkan-defined pixel gravity is not supported for the X axis.
- `supportedPresentGravityY` is a bitmask of VkPresentGravityFlagBitsKHR representing the Y-axis

pixel gravity supported by the surface, or `0` if Vulkan-defined pixel gravity is not supported for the Y axis.

- `minScaledImageExtent` contains the smallest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in `supportedPresentScaling` is used, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface. The `width` and `height` of the extent will each be smaller than or equal to the corresponding `width` and `height` of VkSurfaceCapabilitiesKHR::`minImageExtent`.
- `maxScaledImageExtent` contains the largest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in `supportedPresentScaling` is used, or the special value described above for `minScaledImageExtent`. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of VkSurfaceCapabilitiesKHR::`maxImageExtent`.

To query the set of supported scaling modes for a given present mode, add a VkSurfacePresentModeKHR structure in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR when calling vkGetPhysicalDeviceSurfaceCapabilities2KHR. The implementation **must** return the same values in `VkSurfacePresentScalingCapabilitiesKHR` for any of the compatible present modes as obtained through VkSurfacePresentModeCompatibilityKHR.

The application **can** specify the scaling mode when creating a swapchain through the use of VkSwapchainPresentScalingCreateInfoKHR.

Valid Usage (Implicit)

- VUID-VkSurfacePresentScalingCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_SCALING_CAPABILITIES_KHR
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentScaling-parameter
  If `supportedPresentScaling` is not `0`, `supportedPresentScaling` **must** be a valid combination of VkPresentScalingFlagBitsKHR values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityX-parameter
  If `supportedPresentGravityX` is not `0`, `supportedPresentGravityX` **must** be a valid combination of VkPresentGravityFlagBitsKHR values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityY-parameter
  If `supportedPresentGravityY` is not `0`, `supportedPresentGravityY` **must** be a valid combination of VkPresentGravityFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

Bits which **may** be set in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentScaling`, specifying scaling modes supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentScalingFlagBitsKHR {
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR = 0x00000001,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR = 0x00000002,
    VK_PRESENT_SCALING_STRETCH_BIT_KHR = 0x00000004,
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_EXT = VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_EXT =
VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR,
    VK_PRESENT_SCALING_STRETCH_BIT_EXT = VK_PRESENT_SCALING_STRETCH_BIT_KHR,
} VkPresentScalingFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagBitsKHR
typedef VkPresentScalingFlagBitsKHR VkPresentScalingFlagBitsEXT;
```

- VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR specifies that no scaling occurs, and pixels in the swapchain image are mapped to one and only one pixel in the surface. The mapping between pixels is defined by the chosen presentation gravity.
- VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR specifies that the swapchain image will be minified or magnified such that at least one of the resulting width or height is equal to the corresponding surface dimension, and the other resulting dimension is less than or equal to the corresponding surface dimension, with the aspect ratio of the resulting image being identical to that of the original swapchain image.
- VK_PRESENT_SCALING_STRETCH_BIT_KHR specifies that the swapchain image will be minified or magnified such that the resulting image dimensions are equal to those of the surface.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentScalingFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagsKHR
typedef VkPresentScalingFlagsKHR VkPresentScalingFlagsEXT;
```

VkPresentScalingFlagsKHR is a bitmask type for setting a mask of zero or more VkPresentScalingFlagBitsKHR.

Bits which **may** be set in the VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX or supportedPresentGravityY fields, specifying the gravity of presented pixels supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentGravityFlagBitsKHR {
    VK_PRESENT_GRAVITY_MIN_BIT_KHR = 0x00000001,
    VK_PRESENT_GRAVITY_MAX_BIT_KHR = 0x00000002,
    VK_PRESENT_GRAVITY_CENTERED_BIT_KHR = 0x00000004,
    VK_PRESENT_GRAVITY_MIN_BIT_EXT = VK_PRESENT_GRAVITY_MIN_BIT_KHR,
    VK_PRESENT_GRAVITY_MAX_BIT_EXT = VK_PRESENT_GRAVITY_MAX_BIT_KHR,
    VK_PRESENT_GRAVITY_CENTERED_BIT_EXT = VK_PRESENT_GRAVITY_CENTERED_BIT_KHR,
} VkPresentGravityFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagBitsKHR
typedef VkPresentGravityFlagBitsKHR VkPresentGravityFlagBitsEXT;
```

- VK_PRESENT_GRAVITY_MIN_BIT_KHR means that the pixels will gravitate towards the top or left side of the surface.
- VK_PRESENT_GRAVITY_MAX_BIT_KHR means that the pixels will gravitate towards the bottom or right side of the surface.
- VK_PRESENT_GRAVITY_CENTERED_BIT_KHR means that the pixels will be centered in the surface.

If the value in VkSurfaceCapabilitiesKHR::currentTransform is not VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR, it is implementation-defined whether the gravity configuration applies to the presented image before or after transformation.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentGravityFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagsKHR
typedef VkPresentGravityFlagsKHR VkPresentGravityFlagsEXT;
```

VkPresentGravityFlagsKHR is a bitmask type for setting a mask of zero or more VkPresentGravityFlagBitsKHR.

The VkSurfacePresentModeKHR structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeKHR {
    VkStructureType     sType;
    void*               pNext;
    VkPresentModeKHR    presentMode;
} VkSurfacePresentModeKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeKHR
typedef VkSurfacePresentModeKHR VkSurfacePresentModeEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMode` is the presentation mode the swapchain will use.

If the `VkSurfacePresentModeKHR` structure is included in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR, the values returned in VkSurfaceCapabilitiesKHR::`minImageCount`, VkSurfaceCapabilitiesKHR::`maxImageCount`, VkSurfacePresentScalingCapabilitiesKHR::`minScaledImageExtent`, and VkSurfacePresentScalingCapabilitiesKHR::`maxScaledImageExtent` are valid only for the specified `presentMode`. If `presentMode` is VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, the per-present mode image counts **must** both be one. The per-present mode image counts **may** be less-than or greater-than the image counts returned when `VkSurfacePresentModeKHR` is not provided.

NOTE

If VkSwapchainPresentModesCreateInfoKHR is provided to swapchain creation, the requirements for forward progress may be less strict. For example, a FIFO swapchain might only require 2 images to guarantee forward progress, but a MAILBOX one might require 4. Without the per-present image counts, such an implementation would have to return 4 in VkSurfaceCapabilitiesKHR::`minImageCount`, which pessimizes FIFO. Conversely, an implementation may return a low number for minImageCount, but internally bump the image count when application queries vkGetSwapchainImagesKHR, which can surprise applications, and is not discoverable until swapchain creation. Using `VkSurfacePresentModeKHR` and VkSwapchainPresentModesCreateInfoKHR together effectively removes this problem.

VkSwapchainPresentModesCreateInfoKHR is required for the specification to be backwards compatible with applications that do not know about, or make use of this feature.

Valid Usage

- VUID-VkSurfacePresentModeKHR-presentMode-07780
  `presentMode` **must** be a value reported by vkGetPhysicalDeviceSurfacePresentModesKHR for the specified surface

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_KHR

- VUID-VkSurfacePresentModeKHR-presentMode-parameter
  `presentMode` **must** be a valid VkPresentModeKHR value

Structure Chaining

Extends the structure

- VkPhysicalDeviceSurfaceInfo2KHR

The `VkSurfacePresentModeCompatibilityKHR` structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeCompatibilityKHR {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             presentModeCount;
    VkPresentModeKHR*    pPresentModes;
} VkSurfacePresentModeCompatibilityKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeCompatibilityKHR
typedef VkSurfacePresentModeCompatibilityKHR VkSurfacePresentModeCompatibilityEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is an integer related to the number of present modes available or queried, as described below.
- `pPresentModes` is a pointer to an array of VkPresentModeKHR in which present modes compatible with a given present mode are returned.

If `pPresentModes` is `NULL`, then the number of present modes that are compatible with the one specified in VkSurfacePresentModeKHR is returned in `presentModeCount`. Otherwise, `presentModeCount` **must** be set by the application to the number of elements in the `pPresentModes` array, and on return is overwritten with the number of values actually written to `pPresentModes`. If the value of `presentModeCount` is less than the number of compatible present modes that are supported, at most `presentModeCount` values will be written to `pPresentModes`. The implementation **must** include the present mode passed to VkSurfacePresentModeKHR in `pPresentModes`, unless `presentModeCount` is zero.

To query the set of present modes compatible with a given initial present mode, add a VkSurfacePresentModeKHR structure in the `pNext` chain of VkPhysicalDeviceSurfaceInfo2KHR when calling vkGetPhysicalDeviceSurfaceCapabilities2KHR.

The application **can** create a swapchain whose present mode **can** be modified through the use of VkSwapchainPresentModesCreateInfoKHR.

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeCompatibilityKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_COMPATIBILITY_KHR
- VUID-VkSurfacePresentModeCompatibilityKHR-pPresentModes-parameter
  If `presentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` VkPresentModeKHR values

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSharedPresentSurfaceCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkImageUsageFlags    sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sharedPresentSupportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the shared presentable image from a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the `pNext` chain of VkSurfaceCapabilities2KHR to determine supported usage when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode.

Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSharedPresentSurfaceCapabilities2KHR structure is defined as:

```
// Provided by VK_KHR_extended_flags with VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilities2KHR {
    VkStructureType          sType;
    void*                    pNext;
    VkImageUsageFlags2KHR    sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilities2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- sharedPresentSupportedUsageFlags is a bitmask of VkImageUsageFlagBits2KHR representing the ways the application **can** use the shared presentable image from a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR for the surface on the specified device. VK_IMAGE_USAGE_2_COLOR_ATTACHMENT_BIT_KHR **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine supported usage when using VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR presentation mode.

Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilities2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSwapchainFlagsSurfaceCapabilitiesEXT structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_swapchain
typedef struct VkSwapchainFlagsSurfaceCapabilitiesEXT {
    VkStructureType              sType;
    void*                        pNext;
    VkSwapchainCreateFlagsKHR    swapchainSupportedFlags;
} VkSwapchainFlagsSurfaceCapabilitiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainSupportedFlags` is a bitmask of VkSwapchainCreateFlagsKHR representing the supported flags in VkSwapchainCreateInfoKHR when creating a swapchain for the surface on the specified device. If a VkSurfacePresentModeKHR structure is included in the `pNext` chain of `pSurfaceInfo` in vkGetPhysicalDeviceSurfaceCapabilities2KHR, this value represents the supported flags for the specified present mode and those compatible with it as returned in VkSurfacePresentModeCompatibilityKHR.

Valid Usage (Implicit)

- VUID-VkSwapchainFlagsSurfaceCapabilitiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_FLAGS_SURFACE_CAPABILITIES_EXT

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSurfaceCapabilitiesFullScreenExclusiveEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceCapabilitiesFullScreenExclusiveEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fullScreenExclusiveSupported;
} VkSurfaceCapabilitiesFullScreenExclusiveEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fullScreenExclusiveSupported` is a boolean describing whether the surface is able to make use of exclusive full-screen access.

This structure **can** be included in the `pNext` chain of VkSurfaceCapabilities2KHR to determine support for exclusive full-screen access. If `fullScreenExclusiveSupported` is VK_FALSE, it indicates that exclusive full-screen access is not obtainable for this surface.

Applications **must** not attempt to create swapchains with VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT set if `fullScreenExclusiveSupported` is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesFullScreenExclusiveEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_FULL_SCREEN_EXCLUSIVE_EXT

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The `VkSurfaceCapabilitiesPresentId2KHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkSurfaceCapabilitiesPresentId2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2Supported;
} VkSurfaceCapabilitiesPresentId2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2Supported` is a boolean describing whether the surface is able to support the present-ID extension

This structure **can** be included in the `pNext` chain of VkSurfaceCapabilities2KHR to determine support for present-wait. If `presentId2Supported` is VK_FALSE, it indicates that attaching an ID to presentation requests is not possible for this surface.

Applications **must** not attempt to include VkPresentId2KHR in the `pNext` chain of a VkPresentInfoKHR if `presentId2Supported` is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentId2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_ID_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkSurfaceCapabilitiesPresentWait2KHR structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkSurfaceCapabilitiesPresentWait2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2Supported;
} VkSurfaceCapabilitiesPresentWait2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentWait2Supported is a boolean describing whether the surface is able to support the present-wait extension

This structure **can** be included in the pNext chain of VkSurfaceCapabilities2KHR to determine support for present-wait. If presentWait2Supported is VK_FALSE, it indicates that waiting for presentation is not possible for this surface.

Applications **must** not attempt to call vkWaitForPresent2KHR on a swapchain if presentWait2Supported is VK_FALSE.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentWait2KHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_WAIT_2_KHR

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

The VkPresentTimingSurfaceCapabilitiesEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingSurfaceCapabilitiesEXT {
    VkStructureType           sType;
    void*                     pNext;
    VkBool32                  presentTimingSupported;
    VkBool32                  presentAtAbsoluteTimeSupported;
    VkBool32                  presentAtRelativeTimeSupported;
    VkPresentStageFlagsEXT    presentStageQueries;
} VkPresentTimingSurfaceCapabilitiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentTimingSupported` indicates whether querying presentation timestamps is supported for a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::`surface`.
- `presentAtAbsoluteTimeSupported` indicates whether a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::`surface` supports presenting images with absolute times.
- `presentAtRelativeTimeSupported` indicates whether a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::`surface` supports presenting images with relative times.
- `presentStageQueries` is a bitmask of VkPresentStageFlagBitsEXT indicating which present stages a swapchain created from VkPhysicalDeviceSurfaceInfo2KHR::`surface` is able to provide timing information for.

If `presentTimingSupported` is VK_TRUE, the implementation **must** also advertise support for at least the VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT present stage in pname `presentStageQueries`.

Valid Usage (Implicit)

- VUID-VkPresentTimingSurfaceCapabilitiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_TIMING_SURFACE_CAPABILITIES_EXT

Structure Chaining

Extends the structure

- VkSurfaceCapabilities2KHR

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

```
// Provided by VK_EXT_display_surface_counter
VkResult vkGetPhysicalDeviceSurfaceCapabilities2EXT(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    VkSurfaceCapabilities2EXT*                  pSurfaceCapabilities);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceCapabilities` is a pointer to a VkSurfaceCapabilities2EXT structure in which the capabilities are returned.

`vkGetPhysicalDeviceSurfaceCapabilities2EXT` behaves similarly to vkGetPhysicalDeviceSurfaceCapabilitiesKHR, with the ability to return extended information by adding extending structures to the `pNext` chain of its `pSurfaceCapabilities` parameter.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-06211
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-pSurfaceCapabilities-parameter
  `pSurfaceCapabilities` **must** be a valid pointer to a VkSurfaceCapabilities2EXT structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-commonparent
  Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY

- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkSurfaceCapabilities2EXT structure is defined as:

```
// Provided by VK_EXT_display_surface_counter
typedef struct VkSurfaceCapabilities2EXT {
    VkStructureType                  sType;
    void*                            pNext;
    uint32_t                         minImageCount;
    uint32_t                         maxImageCount;
    VkExtent2D                       currentExtent;
    VkExtent2D                       minImageExtent;
    VkExtent2D                       maxImageExtent;
    uint32_t                         maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR       supportedTransforms;
    VkSurfaceTransformFlagBitsKHR    currentTransform;
    VkCompositeAlphaFlagsKHR         supportedCompositeAlpha;
    VkImageUsageFlags                supportedUsageFlags;
    VkSurfaceCounterFlagsEXT         supportedSurfaceCounters;
} VkSurfaceCapabilities2EXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minImageCount is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- maxImageCount is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to minImageCount. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.
- currentExtent is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- minImageExtent contains the smallest valid swapchain extent for the surface on the specified device. The width and height of the extent will each be less than or equal to the corresponding width and height of currentExtent, unless currentExtent has the special value described above.
- maxImageExtent contains the largest valid swapchain extent for the surface on the specified device. The width and height of the extent will each be greater than or equal to the corresponding width and height of minImageExtent. The width and height of the extent will each be greater than or equal to the corresponding width and height of currentExtent, unless currentExtent has the special value described above.
- maxImageArrayLayers is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.

- `supportedTransforms` is a bitmask of VkSurfaceTransformFlagBitsKHR indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- `currentTransform` is VkSurfaceTransformFlagBitsKHR value indicating the surface's current transform relative to the presentation engine's natural orientation.
- `supportedCompositeAlpha` is a bitmask of VkCompositeAlphaFlagBitsKHR, representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- `supportedUsageFlags` is a bitmask of VkImageUsageFlagBits representing the ways the application **can** use the presentable images of a swapchain created with VkPresentModeKHR set to VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR for the surface on the specified device. VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT **must** be included in the set. Implementations **may** support additional usages.
- `supportedSurfaceCounters` is a bitmask of VkSurfaceCounterFlagBitsEXT indicating the supported surface counter types. It **must** not include VK_SURFACE_COUNTER_VBLANK_BIT_EXT unless the surface queried is a display surface

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2EXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_EXT
- VUID-VkSurfaceCapabilities2EXT-pNext-pNext
  `pNext` **must** be `NULL`

Bits which **can** be set in VkSurfaceCapabilities2EXT::`supportedSurfaceCounters`, indicating supported surface counter types, are:

```
// Provided by VK_EXT_display_surface_counter
typedef enum VkSurfaceCounterFlagBitsEXT {
    VK_SURFACE_COUNTER_VBLANK_BIT_EXT = 0x00000001,
  // VK_SURFACE_COUNTER_VBLANK_EXT is a legacy alias
    VK_SURFACE_COUNTER_VBLANK_EXT = VK_SURFACE_COUNTER_VBLANK_BIT_EXT,
} VkSurfaceCounterFlagBitsEXT;
```

- VK_SURFACE_COUNTER_VBLANK_BIT_EXT specifies a counter incrementing once every time a vertical blanking period occurs on the display associated with the surface.

```
// Provided by VK_EXT_display_surface_counter
typedef VkFlags VkSurfaceCounterFlagsEXT;
```

VkSurfaceCounterFlagsEXT is a bitmask type for setting a mask of zero or more VkSurfaceCounterFlagBitsEXT.

Bits which **may** be set in VkSurfaceCapabilitiesKHR::supportedTransforms indicating the presentation transforms supported for the surface on the specified device, and possible values of VkSurfaceCapabilitiesKHR::currentTransform indicating the surface's current transform relative to the presentation engine's natural orientation, are:

```
// Provided by VK_KHR_surface
typedef enum VkSurfaceTransformFlagBitsKHR {
    VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR = 0x00000001,
    VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR = 0x00000002,
    VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR = 0x00000004,
    VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR = 0x00000008,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR = 0x00000010,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR = 0x00000020,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR = 0x00000040,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR = 0x00000080,
    VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR = 0x00000100,
} VkSurfaceTransformFlagBitsKHR;
```

- VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR specifies that image content is presented without being transformed.
- VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR specifies that image content is rotated 90 degrees clockwise.
- VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR specifies that image content is rotated 180 degrees clockwise.
- VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR specifies that image content is rotated 270 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR specifies that image content is mirrored horizontally.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR specifies that image content is mirrored horizontally, then rotated 90 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR specifies that image content is mirrored horizontally, then rotated 180 degrees clockwise.
- VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR specifies that image content is mirrored horizontally, then rotated 270 degrees clockwise.
- VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR specifies that the presentation transform is not specified, and is instead determined by platform-specific considerations and mechanisms outside Vulkan.

```
// Provided by VK_KHR_display, VK_KHR_surface
typedef VkFlags VkSurfaceTransformFlagsKHR;
```

VkSurfaceTransformFlagsKHR is a bitmask type for setting a mask of zero or more VkSurfaceTransformFlagBitsKHR.

The supportedCompositeAlpha member is of type VkCompositeAlphaFlagBitsKHR, containing the following values:

```
// Provided by VK_KHR_surface
typedef enum VkCompositeAlphaFlagBitsKHR {
    VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR = 0x00000002,
    VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR = 0x00000004,
    VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR = 0x00000008,
} VkCompositeAlphaFlagBitsKHR;
```

These values are described as follows:

- VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR: The alpha component, if it exists, of the images is ignored in the compositing process. Instead, the image is treated as if it has a constant alpha of 1.0.
- VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are expected to already be multiplied by the alpha component by the application.
- VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are not expected to already be multiplied by the alpha component by the application; instead, the compositor will multiply the non-alpha components of the image by the alpha component during compositing.
- VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR: The way in which the presentation engine treats the alpha component in the images is unknown to the Vulkan API. Instead, the application is responsible for setting the composite alpha blending mode using native window system commands. If the application does not set the blending mode using native window system commands, then a platform-specific default will be used.

```
// Provided by VK_KHR_surface
typedef VkFlags VkCompositeAlphaFlagsKHR;
```

VkCompositeAlphaFlagsKHR is a bitmask type for setting a mask of zero or more VkCompositeAlphaFlagBitsKHR.

37.5.2. Surface Format Support

To query the supported swapchain format-color space pairs for a surface, call:

WARNING	This functionality is superseded by vkGetPhysicalDeviceSurfaceFormats2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceFormatsKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pSurfaceFormatCount,
    VkSurfaceFormatKHR*                         pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format pairs available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of `VkSurfaceFormatKHR` structures.

If `pSurfaceFormats` is `NULL`, then the number of format pairs supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format pairs supported, at most `pSurfaceFormatCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available format pairs were returned.

The number of format pairs supported **must** be greater than or equal to 1. `pSurfaceFormats` **must** not contain an entry whose value for `format` is VK_FORMAT_UNDEFINED.

If `pSurfaceFormats` includes an entry whose value for `colorSpace` is VK_COLOR_SPACE_SRGB_NONLINEAR_KHR and whose value for `format` is a UNORM (or SRGB) format and the corresponding SRGB (or UNORM) format is a color renderable format for VK_IMAGE_TILING_OPTIMAL, then `pSurfaceFormats` **must** also contain an entry with the same value for `colorSpace` and `format` equal to the corresponding SRGB (or UNORM) format.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06524
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06525
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-parameter

If `surface` is not VK_NULL_HANDLE, `surface` **must** be a valid VkSurfaceKHR handle

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormatCount-parameter
  `pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormats-parameter
  If the value referenced by `pSurfaceFormatCount` is not `0`, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` VkSurfaceFormatKHR structures
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-commonparent
  Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceFormatKHR` structure is defined as:

WARNING This functionality is superseded by VK_KHR_get_surface_capabilities2. See Legacy Functionality for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceFormatKHR {
    VkFormat           format;
    VkColorSpaceKHR    colorSpace;
} VkSurfaceFormatKHR;
```

- `format` is a VkFormat that is compatible with the specified surface.
- `colorSpace` is a presentation VkColorSpaceKHR that is compatible with the surface.

To query the supported swapchain format tuples for a surface, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceFormats2KHR(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    uint32_t*                                   pSurfaceFormatCount,
    VkSurfaceFormat2KHR*                        pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format tuples available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of VkSurfaceFormat2KHR structures.

vkGetPhysicalDeviceSurfaceFormats2KHR behaves similarly to vkGetPhysicalDeviceSurfaceFormatsKHR, with the ability to be extended via `pNext` chains.

If `pSurfaceFormats` is `NULL`, then the number of format tuples supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format tuples supported, at most `pSurfaceFormatCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06521
  `pSurfaceInfo->surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06522
  `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormatCount-parameter
  `pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormats-parameter
  If the value referenced by `pSurfaceFormatCount` is not `0`, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` VkSurfaceFormat2KHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSurfaceFormat2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceFormat2KHR {
    VkStructureType       sType;
    void*                 pNext;
    VkSurfaceFormatKHR    surfaceFormat;
} VkSurfaceFormat2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceFormat` is a VkSurfaceFormatKHR structure describing a format-color space pair that is compatible with the specified surface.

If the `imageCompressionControlSwapchain` feature is supported and a VkImageCompressionPropertiesEXT structure is included in the `pNext` chain of this structure, then it will be filled with the compression properties that are supported for the `surfaceFormat`.

Valid Usage

- VUID-VkSurfaceFormat2KHR-pNext-06750
  If the `VK_EXT_image_compression_control_swapchain` extension is not supported, the `pNext` chain **must** not include an VkImageCompressionPropertiesEXT structure

Valid Usage (Implicit)

- VUID-VkSurfaceFormat2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SURFACE_FORMAT_2_KHR
- VUID-VkSurfaceFormat2KHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkImageCompressionPropertiesEXT
- VUID-VkSurfaceFormat2KHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

While the `format` of a presentable image refers to the encoding of each pixel, the `colorSpace` determines how the presentation engine interprets the pixel values. A color space in this document refers to a specific color space (defined by the chromaticities of its primaries and a white point in CIE Lab), and transfer functions indicating the mapping between the image data and the colorimetry with respect to the given color space.

Possible values of VkSurfaceFormatKHR::`colorSpace`, specifying the color spaces that a presentation engine can accept, are:

```
// Provided by VK_KHR_surface
typedef enum VkColorSpaceKHR {
    VK_COLOR_SPACE_SRGB_NONLINEAR_KHR = 0,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT = 1000104001,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT = 1000104002,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT = 1000104003,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT = 1000104004,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_LINEAR_EXT = 1000104005,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_NONLINEAR_EXT = 1000104006,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT2020_LINEAR_EXT = 1000104007,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_ST2084_EXT = 1000104008,
  // Provided by VK_EXT_swapchain_colorspace
  // VK_COLOR_SPACE_DOLBYVISION_EXT is legacy, but no reason was given in the API XML
    VK_COLOR_SPACE_DOLBYVISION_EXT = 1000104009,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_HLG_EXT = 1000104010,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT = 1000104011,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT = 1000104012,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_PASS_THROUGH_EXT = 1000104013,
  // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT = 1000104014,
  // VK_COLORSPACE_SRGB_NONLINEAR_KHR is a legacy alias
    VK_COLORSPACE_SRGB_NONLINEAR_KHR = VK_COLOR_SPACE_SRGB_NONLINEAR_KHR,
  // Provided by VK_EXT_swapchain_colorspace
  // VK_COLOR_SPACE_DCI_P3_LINEAR_EXT is a legacy alias
    VK_COLOR_SPACE_DCI_P3_LINEAR_EXT = VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT,
} VkColorSpaceKHR;
```

- VK_COLOR_SPACE_SRGB_NONLINEAR_KHR specifies support for the images in sRGB color space, encoded according to the sRGB specification.
- VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT specifies support for the images in Display-P3 color space, encoded using a Display-P3 transfer function.
- VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT specifies support for the images in extended sRGB color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT specifies support for the images in extended sRGB color space, encoded according to the scRGB specification.

- VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT specifies support for the images in Display-P3 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT specifies support for the images in DCI-P3 color space, encoded according to the DCI-P3 specification. Note that values in such an image are interpreted as XYZ encoded color data by the presentation engine.
- VK_COLOR_SPACE_BT709_LINEAR_EXT specifies support for the images in BT709 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_BT709_NONLINEAR_EXT specifies support for the images in BT709 color space, encoded according to the BT709 specification.
- VK_COLOR_SPACE_BT2020_LINEAR_EXT specifies support for the images in BT2020 color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_HDR10_ST2084_EXT specifies support for the images in HDR10 (BT2020) color space, encoded according to SMPTE ST2084 Perceptual Quantizer (PQ) specification.
- VK_COLOR_SPACE_HDR10_HLG_EXT specifies support for the images in HDR10 (BT2020) color space, encoded according to the Hybrid Log Gamma (HLG) specification.
- VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT specifies support for images in Adobe RGB color space, encoded using a linear transfer function.
- VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT specifies support for the images in Adobe RGB color space, encoded according to the Adobe RGB specification (approximately Gamma 2.2).
- VK_COLOR_SPACE_PASS_THROUGH_EXT specifies that color components are used “as is”. This is intended to allow applications to supply data for color spaces not described here.

NOTE

In the initial release of the VK_KHR_surface and VK_KHR_swapchain extensions, the token VK_COLORSPACE_SRGB_NONLINEAR_KHR was used. Starting in the 2016-05-13 updates to the extension branches, matching release 1.0.13 of the core API specification, VK_COLOR_SPACE_SRGB_NONLINEAR_KHR is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

NOTE

In older versions of this extension VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT was misnamed VK_COLOR_SPACE_DCI_P3_LINEAR_EXT. This has been updated to indicate that it uses RGB color encoding, not XYZ. The old name is legacy but is maintained for backwards compatibility.

NOTE

In older versions of the VK_EXT_swapchain_colorspace extension, VK_COLOR_SPACE_DOLBYVISION_EXT was exposed. The intent was to indicate the presentation engine shall decode an image using the SMPTE ST 2084 Perceptual Quantizer (PQ) EOTF, and then apply a proprietary OOTF to process the image. However, Dolby Vision profile 8.4 describes an encoding using the Hybrid Log Gamma (HLG) OETF, and there is no swapchain extension for signaling Dolby Vision metadata to be used by a proprietary OOTF. This enum is legacy but is maintained for backwards compatibility.

NOTE For a traditional “Linear” or non-gamma transfer function color space use VK_COLOR_SPACE_PASS_THROUGH_EXT.

NOTE On Wayland, VK_COLOR_SPACE_PASS_THROUGH_EXT can be used to disable color management by the WSI on a surface, which makes it possible for the application to create a `wp_color_management_surface_v1` object without triggering a `surface_exists` protocol error.

See vkCreateWaylandSurfaceKHR

The presentation engine interprets the pixel values of the R, G, and B components as having been encoded using an appropriate transfer function. Applications **should** ensure that the appropriate transfer function has been applied. Texel encode requires that all implementations implicitly apply the sRGB $EOTF^{-1}$ on R, G, and B components when shaders write to an sRGB pixel format image, which is useful for sRGB color spaces. For sRGB color spaces with other pixel formats, or other non-linear color spaces, applications **can** apply the transfer function explicitly in a shader. The A channel is always interpreted as linearly encoded.

This extension defines enums for VkColorSpaceKHR that correspond to the following color spaces:

Table 49. Color Spaces and Attributes

Name	Red Primary	Green Primary	Blue Primary	White-point	Transfer function
DCI-P3	1.000, 0.000	0.000, 1.000	0.000, 0.000	0.3333, 0.3333	DCI P3
Display-P3	0.680, 0.320	0.265, 0.690	0.150, 0.060	0.3127, 0.3290 (D65)	Display-P3
BT709	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	BT709
sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	sRGB
extended sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	scRGB
HDR10_ST2084	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	ST2084 PQ
HDR10_HLG	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	HLG
Adobe RGB	0.640, 0.330	0.210, 0.710	0.150, 0.060	0.3127, 0.3290 (D65)	Adobe RGB

The transfer functions are described in the “Transfer Functions” chapter of the Khronos Data Format Specification.

Except Display-P3 OETF, which is:

$$E = \begin{cases} 1.055 \times L^{\frac{1}{2.4}} - 0.055 & \text{for } 0.0030186 \leq L \leq 1 \\ 12.92 \times L & \text{for } 0 \leq L < 0.0030186 \end{cases}$$

where L is the linear value of a color component and E is the encoded value (as stored in the image in memory).

NOTE For most uses, the sRGB OETF is equivalent.

37.5.3. Surface Presentation Mode Support

To query the supported presentation modes for a surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfacePresentModesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pPresentModeCount,
    VkPresentModeKHR*                           pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created. See vkCreateSwapchainKHR for details of swapchain creation.
- `surface` is the surface that will be associated with the swapchain.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of VkPresentModeKHR values, indicating the supported presentation modes.

If `pPresentModes` is `NULL`, then the number of presentation modes supported for the given `surface` is returned in `pPresentModeCount`. Otherwise, `pPresentModeCount` **must** point to a variable set by the application to the number of elements in the `pPresentModes` array, and on return the variable is overwritten with the number of values actually written to `pPresentModes`. If the value of `pPresentModeCount` is less than the number of presentation modes supported, at most `pPresentModeCount` values will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available modes were returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06524
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06525
  `surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-parameter
  If `surface` is not VK_NULL_HANDLE, `surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModeCount-parameter
  `pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModes-parameter
  If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` VkPresentModeKHR values
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-commonparent
  Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the supported presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkGetPhysicalDeviceSurfacePresentModes2EXT(
    VkPhysicalDevice                            physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    uint32_t*                                   pPresentModeCount,
    VkPresentModeKHR*                           pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for vkCreateSwapchainKHR.

- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of VkPresentModeKHR values, indicating the supported presentation modes.

`vkGetPhysicalDeviceSurfacePresentModes2EXT` behaves similarly to vkGetPhysicalDeviceSurfacePresentModesKHR, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06521
  `pSurfaceInfo->surface` **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06522
  `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModeCount-parameter
  `pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModes-parameter
  If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` VkPresentModeKHR values

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY

- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Possible values of elements of the vkGetPhysicalDeviceSurfacePresentModesKHR::pPresentModes array, indicating the supported presentation modes for a surface, are:

```
// Provided by VK_KHR_surface
typedef enum VkPresentModeKHR {
    VK_PRESENT_MODE_IMMEDIATE_KHR = 0,
    VK_PRESENT_MODE_MAILBOX_KHR = 1,
    VK_PRESENT_MODE_FIFO_KHR = 2,
    VK_PRESENT_MODE_FIFO_RELAXED_KHR = 3,
  // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR = 1000111000,
  // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR = 1000111001,
  // Provided by VK_KHR_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_KHR = 1000361000,
  // Provided by VK_EXT_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_EXT = VK_PRESENT_MODE_FIFO_LATEST_READY_KHR,
} VkPresentModeKHR;
```

- VK_PRESENT_MODE_IMMEDIATE_KHR specifies that the presentation engine does not wait for a vertical blanking period to update the current image, meaning this mode **may** result in visible tearing. No internal queuing of presentation requests is needed, as the requests are applied immediately.
- VK_PRESENT_MODE_MAILBOX_KHR specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application. One request is removed from the queue and processed during each vertical blanking period in which the queue is non-empty.
- VK_PRESENT_MODE_FIFO_KHR specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty. This is the only value of presentMode that is **required** to be supported.
- VK_PRESENT_MODE_FIFO_RELAXED_KHR specifies that the presentation engine generally waits for the next vertical blanking period to update the current image. If a vertical blanking period has already passed since the last update of the current image then the presentation engine does not wait for another vertical blanking period for the update, meaning this mode **may** result in visible tearing in this case. This mode is useful for reducing visual stutter with an application

that will mostly present a new image before the next vertical blanking period, but may occasionally be late, and present a new image just after the next vertical blanking period. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during or after each vertical blanking period in which the queue is non-empty.

- VK_PRESENT_MODE_FIFO_LATEST_READY_KHR specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue. At each vertical blanking period, the presentation engine dequeues all successive requests that are ready to be presented from the beginning of the queue. If using the `presentAtAbsoluteTime` feature to provide a target present time, the presentation engine checks the specified time for each image. If the target present time is less-than or equal-to the current time, the presentation engine dequeues the image and checks the next one. The image of the last dequeued request is presented. The other dequeued requests are dropped.
- VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine is only required to update the current image after a new presentation request is received. Therefore the application **must** make a presentation request whenever an update is required. However, the presentation engine **may** update the current image at any point, meaning this mode **may** result in visible tearing.
- VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine periodically updates the current image on its regular refresh cycle. The application is only required to make one initial presentation request, after which the presentation engine **must** update the current image without any need for further presentation requests. The application **can** indicate the image contents have been updated by making a presentation request, but this does not guarantee the timing of when it will be updated. This mode **may** result in visible tearing if rendering to the image is not timed correctly.

The supported VkImageUsageFlagBits of the presentable images of a swapchain created for a surface **may** differ depending on the presentation mode, and can be determined as per the table below:

Table 50. Presentable Image Usage Queries

Presentation mode	Image usage flags
VK_PRESENT_MODE_IMMEDIATE_KHR	VkSurfaceCapabilitiesKHR::`supportedUsageFlags`
VK_PRESENT_MODE_MAILBOX_KHR	VkSurfaceCapabilitiesKHR::`supportedUsageFlags`
VK_PRESENT_MODE_FIFO_KHR	VkSurfaceCapabilitiesKHR::`supportedUsageFlags`
VK_PRESENT_MODE_FIFO_RELAXED_KHR	VkSurfaceCapabilitiesKHR::`supportedUsageFlags`
VK_PRESENT_MODE_FIFO_LATEST_READY_KHR	VkSurfaceCapabilitiesKHR::`supportedUsageFlags`
VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::`sharedPresentSupportedUsageFlags`

Presentation mode	Image usage flags
VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags

NOTE For reference, the mode indicated by VK_PRESENT_MODE_FIFO_KHR is equivalent to the behavior of {wgl|glX|egl}SwapBuffers with a swap interval of 1, while the mode indicated by VK_PRESENT_MODE_FIFO_RELAXED_KHR is equivalent to the behavior of {wgl|glX}SwapBuffers with a swap interval of -1 (from the {WGL|GLX}_EXT_swap_control_tear extensions).

37.6. Full Screen Exclusive Control

Swapchains created with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT **must** acquire and release exclusive full-screen access explicitly, using the following commands.

To acquire exclusive full-screen access for a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkAcquireFullScreenExclusiveModeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to acquire exclusive full-screen access for.

Valid Usage

- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02674
  `swapchain` **must** not be in the retired state
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02675
  `swapchain` **must** be a swapchain created with a VkSurfaceFullScreenExclusiveInfoEXT structure, with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02676
  `swapchain` **must** not currently have exclusive full-screen access

A return value of VK_SUCCESS indicates that the `swapchain` successfully acquired exclusive full-screen access. The swapchain will retain this exclusivity until either the application releases exclusive full-screen access with vkReleaseFullScreenExclusiveModeEXT, destroys the swapchain, or if any of the swapchain commands return VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT indicating that the mode was lost because of platform-specific changes.

If the swapchain was unable to acquire exclusive full-screen access to the display then VK_ERROR_INITIALIZATION_FAILED is returned. An application **can** attempt to acquire exclusive full-screen access again for the same swapchain even if this command fails, or if VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT has been returned by a swapchain command.

Valid Usage (Implicit)

- VUID-vkAcquireFullScreenExclusiveModeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To release exclusive full-screen access from a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkReleaseFullScreenExclusiveModeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to release exclusive full-screen access from.

NOTE Applications will not be able to present to `swapchain` after this call until exclusive full-screen access is reacquired. This is usually useful to handle when an application is minimized or otherwise intends to stop presenting for a time.

Valid Usage

- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02677
  `swapchain` **must** not be in the retired state
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02678
  `swapchain` **must** be a swapchain created with a VkSurfaceFullScreenExclusiveInfoEXT structure, with `fullScreenExclusive` set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT

Valid Usage (Implicit)

- VUID-vkReleaseFullScreenExclusiveModeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

37.7. Device Group Queries

A logical device that represents multiple physical devices **may** support presenting from images on more than one physical device, or combining images from multiple physical devices.

To query these capabilities, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupPresentCapabilitiesKHR(
    VkDevice                                    device,
    VkDeviceGroupPresentCapabilitiesKHR*        pDeviceGroupPresentCapabilities);
```

- `device` is the logical device.
- `pDeviceGroupPresentCapabilities` is a pointer to a VkDeviceGroupPresentCapabilitiesKHR structure in which the device's capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-pDeviceGroupPresentCapabilities-parameter
  `pDeviceGroupPresentCapabilities` **must** be a valid pointer to a VkDeviceGroupPresentCapabilitiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkDeviceGroupPresentCapabilitiesKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef struct VkDeviceGroupPresentCapabilitiesKHR {
    VkStructureType                      sType;
    void*                                pNext;
    uint32_t                             presentMask[VK_MAX_DEVICE_GROUP_SIZE];
    VkDeviceGroupPresentModeFlagsKHR     modes;
} VkDeviceGroupPresentCapabilitiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMask` is an array of VK_MAX_DEVICE_GROUP_SIZE `uint32_t` masks, where the mask at element i is non-zero if physical device i has a presentation engine, and where bit j is set in element i if physical device i **can** present swapchain images from physical device j. If element i is non-zero, then bit i **must** be set.
- `modes` is a bitmask of VkDeviceGroupPresentModeFlagBitsKHR indicating which device group presentation modes are supported.

`modes` always has VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR set.

The present mode flags are also used when presenting an image, in VkDeviceGroupPresentInfoKHR::`mode`.

If a device group only includes a single physical device, then `modes` **must** equal VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentCapabilitiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR
- VUID-VkDeviceGroupPresentCapabilitiesKHR-pNext-pNext
  `pNext` **must** be `NULL`

Bits which **may** be set in VkDeviceGroupPresentCapabilitiesKHR::`modes`, indicating which device group presentation modes are supported, are:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef enum VkDeviceGroupPresentModeFlagBitsKHR {
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR = 0x00000001,
    VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR = 0x00000002,
    VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR = 0x00000004,
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR = 0x00000008,
} VkDeviceGroupPresentModeFlagBitsKHR;
```

- VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR specifies that any physical device with a presentation engine **can** present its own swapchain images.
- VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR specifies that any physical device with a presentation engine **can** present swapchain images from any physical device in its `presentMask`.
- VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR specifies that any physical device with a presentation engine **can** present the sum of swapchain images from any physical devices in its `presentMask`.
- VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR specifies that multiple physical devices with a presentation engine **can** each present their own swapchain images.

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef VkFlags VkDeviceGroupPresentModeFlagsKHR;
```

VkDeviceGroupPresentModeFlagsKHR is a bitmask type for setting a mask of zero or more VkDeviceGroupPresentModeFlagBitsKHR.

Some surfaces **may** not be capable of using all the device group present modes.

To query the supported device group present modes for a particular surface, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupSurfacePresentModesKHR(
    VkDevice                                    device,
    VkSurfaceKHR                                surface,
    VkDeviceGroupPresentModeFlagsKHR*           pModes);
```

- device is the logical device.
- surface is the surface.
- pModes is a pointer to a VkDeviceGroupPresentModeFlagsKHR in which the supported device group present modes for the surface are returned.

The modes returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded. These modes **must** be a subset of the modes returned by vkGetDeviceGroupPresentCapabilitiesKHR.

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-06212
  surface **must** be supported by all physical devices associated with device, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-parameter
  surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-pModes-parameter
  pModes **must** be a valid pointer to a VkDeviceGroupPresentModeFlagsKHR value
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-commonparent
  Both of device, and surface **must** have been created, allocated, or retrieved from the same

VkInstance

Host Synchronization

- Host access to `surface` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the supported device group presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive with VK_KHR_device_group or VK_VERSION_1_1
VkResult vkGetDeviceGroupSurfacePresentModes2EXT(
    VkDevice                                    device,
    const VkPhysicalDeviceSurfaceInfo2KHR*      pSurfaceInfo,
    VkDeviceGroupPresentModeFlagsKHR*           pModes);
```

- `device` is the logical device.
- `pSurfaceInfo` is a pointer to a VkPhysicalDeviceSurfaceInfo2KHR structure describing the surface and other fixed parameters that would be consumed by vkCreateSwapchainKHR.
- `pModes` is a pointer to a VkDeviceGroupPresentModeFlagsKHR in which the supported device group present modes for the surface are returned.

`vkGetDeviceGroupSurfacePresentModes2EXT` behaves similarly to vkGetDeviceGroupSurfacePresentModesKHR, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-06213
  `pSurfaceInfo->surface` **must** be supported by all physical devices associated with `device`, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-

specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-parameter
  `pSurfaceInfo` **must** be a valid pointer to a valid VkPhysicalDeviceSurfaceInfo2KHR structure
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pModes-parameter
  `pModes` **must** be a valid pointer to a VkDeviceGroupPresentModeFlagsKHR value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When using VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, the application **may** need to know which regions of the surface are used when presenting locally on each physical device. Presentation of swapchain images to this surface need only have valid contents in the regions returned by this command.

To query a set of rectangles used in presentation on the physical device, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetPhysicalDevicePresentRectanglesKHR(
    VkPhysicalDevice                            physicalDevice,
    VkSurfaceKHR                                surface,
    uint32_t*                                   pRectCount,
    VkRect2D*                                   pRects);
```

- `physicalDevice` is the physical device.
- `surface` is the surface.
- `pRectCount` is a pointer to an integer related to the number of rectangles available or queried, as

described below.

- pRects is either NULL or a pointer to an array of VkRect2D structures.

If pRects is NULL, then the number of rectangles used when presenting the given surface is returned in pRectCount. Otherwise, pRectCount **must** point to a variable set by the application to the number of elements in the pRects array, and on return the variable is overwritten with the number of structures actually written to pRects. If the value of pRectCount is less than the number of rectangles, at most pRectCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available rectangles were returned.

The values returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded.

The rectangles returned by this command **must** not overlap.

Valid Usage

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-06211
  surface **must** be supported by physicalDevice, as reported by vkGetPhysicalDeviceSurfaceSupportKHR or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-parameter
  surface **must** be a valid VkSurfaceKHR handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRectCount-parameter
  pRectCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRects-parameter
  If the value referenced by pRectCount is not 0, and pRects is not NULL, pRects **must** be a valid pointer to an array of pRectCount VkRect2D structures
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-commonparent
  Both of physicalDevice, and surface **must** have been created, allocated, or retrieved from the same VkInstance

Host Synchronization

- Host access to surface **must** be externally synchronized

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

37.8. Present Timing Queries

Traditional game and real-time-animation applications frequently use VK_PRESENT_MODE_FIFO_KHR so that presentable images are updated during the vertical blanking period of a given refresh cycle (RC) of the presentation engine's display. On fixed refresh rate displays, this avoids the visual anomaly known as tearing.

However, synchronizing the presentation of images with the RC does not prevent all forms of visual anomalies. Stuttering occurs when the geometry for each presentable image is not accurately positioned for when that image will be displayed. The geometry may appear to move too little some RCs, and too much for others. Sometimes the animation appears to freeze, when the same image is used for more RCs than other images.

In order to minimize stuttering, an application needs to: 1) render and present images at a consistent rate that is, on fixed refresh rate displays, a multiple of the presentation engine's refresh rate; 2) correctly position its geometry for when the presentable image will be displayed to the user. The `VK_EXT_present_timing` extension allows an application to satisfy these needs.

The presentation engine's display typically refreshes the pixels that are displayed to the user on a periodic basis. This period **may** be fixed (Fixed Refresh Rate, FRR) or variable (Variable Refresh Rate, VRR).

In order to collect timing information about presentation, a swapchain needs an internal queue to store asynchronously updated results until applications collect them.

To allocate the swapchain's internal timing results queue, call:

```
// Provided by VK_EXT_present_timing
VkResult vkSetSwapchainPresentTimingQueueSizeEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint32_t                                    size);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to allocate a results queue for.
- `size` is the requested number of slots in the internal results queue.

If this function is called multiple times, the internal queue is reallocated to fit the new `size`. If the new `size` is less than the current number of outstanding results, VK_NOT_READY is returned and no allocation is performed.

Valid Usage

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-12229
  `swapchain` **must** have been created with `VkSwapchainCreateInfoKHR`::`flags` containing VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

Valid Usage (Implicit)

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's timing properties are modified.

To query the presentation engine's current timing properties for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimingPropertiesEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSwapchainTimingPropertiesEXT*             pSwapchainTimingProperties,
    uint64_t*                                   pSwapchainTimingPropertiesCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain timing properties for.
- `pSwapchainTimingProperties` is a pointer to an instance of the VkSwapchainTimingPropertiesEXT structure.
- `pSwapchainTimingPropertiesCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.

If `vkGetSwapchainTimingPropertiesEXT` returns VK_NOT_READY, the implementation was not able to determine the current refresh cycle duration. Some platforms **may** not provide timing properties until after at least one image has been presented to the `swapchain`. If timing properties change for the `swapchain`, these platforms **may** not provide updated results until after at least one additional image has been presented to the `swapchain`.

Valid Usage (Implicit)

- VUID-vkGetSwapchainTimingPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingProperties-parameter
  `pSwapchainTimingProperties` **must** be a valid pointer to a VkSwapchainTimingPropertiesEXT structure
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingPropertiesCounter-parameter
  If `pSwapchainTimingPropertiesCounter` is not `NULL`, `pSwapchainTimingPropertiesCounter` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainTimingPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimingPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           refreshDuration;
    uint64_t           refreshInterval;
} VkSwapchainTimingPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `refreshDuration` is zero or an indication of the duration of a refresh cycle.
- `refreshInterval` is zero or a duration in nanoseconds indicating the interval between refresh cycle durations.

If `refreshDuration` is zero, the presentation engine is not able to determine the duration of the refresh cycle. Similarly, if `refreshInterval` is zero, the presentation engine is not able to determine whether it is operating in VRR mode.

Otherwise, if `refreshInterval` is the same as `refreshDuration`, the presentation engine is operating in FRR mode. In this case, `refreshDuration` is the number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshInterval` is `UINT64_MAX`, the presentation engine is operating in VRR mode, and `refreshDuration` is the minimum number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshDuration` and `refreshInterval` are not zero, `refreshInterval` is a factor of `refreshDuration`.

Valid Usage (Implicit)

- VUID-VkSwapchainTimingPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_TIMING_PROPERTIES_EXT
- VUID-VkSwapchainTimingPropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

NOTE

Some display technologies allow the vblank interval to be decoupled from the display's effective refresh rate. In other words, presented images are visible for a fixed duration (`refreshDuration`) that is a multiple of the vblank interval (`refreshInterval`) which **may** be much smaller. This allows such displays, for example, to effectively operate at a fixed refresh rate with the ability to quickly change that refresh rate to adapt to the current system's workload.

Note that `VkSwapchainTimingPropertiesEXT` only represents the current swapchain's view of those capabilities, which **may** differ from the actual hardware capabilities, based e.g. on the current surface properties. For example, swapchains that render to a windowed surface requiring complex composition **may** not be able to reach their display hardware's full potential.

NOTE

The rate at which an application renders and presents new images is known as the image present rate (IPR, a.k.a. frame rate). The inverse of IPR, or the duration between each image present, is the image present duration (IPD).

In order to provide a smooth, stutter-free animation on non-VRR displays, an application needs its IPD to be a multiple of `refreshInterval` that is at least equal to `refreshDuration`.

For example, if a FRR display has a set 60Hz refresh rate, where `refreshDuration` is equal to `refreshInterval`, `refreshDuration` will be a value in nanoseconds that is approximately equal to 16.67ms. In such a case, an application will want an IPD of 16.67ms (1X multiplier of `refreshInterval`), or 33.33ms (2X multiplier of `refreshInterval`), or 50.0ms (3X multiplier of `refreshInterval`), etc.

In order to determine a target IPD for a display (i.e. a multiple of `refreshInterval`), an application needs to determine when its images are actually displayed.

Consider an application that has an initial target IPD of 16.67ms (1X multiplier of `refreshDuration`). It will therefore position the geometry of a new image 16.67ms later than the previous image.

If this application is running on slower hardware, so that it actually takes 20ms to render each new image, the images will not be displayed to the user every 16.67ms, nor every 20ms, which will create visual anomalies. In this case, it is better for the application to adjust its target IPD to 33.33ms (i.e. a 2X multiplier of `refreshDuration`), and tell the presentation engine to not present images any sooner than every 33.33ms. This will allow the geometry to be correctly positioned for each

> presentable image.
>
> On VRR displays, where `refreshInterval` is `UINT64_MAX`, applications **should** target an IPD that is at least equal to `refreshDuration`.
>
> Adjustments to an application's IPD may be needed because different views of an application's geometry can take different amounts of time to render. For example, looking at the sky may take less time to render than looking at multiple, complex items in a room.
>
> In general, it is good to not frequently change IPD, as that can cause visual anomalies.
>
> Adjustments to a larger IPD because of late images should happen quickly, but adjustments to a smaller IPD should only happen if the periodic feedback of VkPastPresentationTimingEXT values indicates that the target IPD can be durably achieved.

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's list of supported time domains for a swapchain is modified.

To query the time domains supported by the presentation engine for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimeDomainPropertiesEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSwapchainTimeDomainPropertiesEXT*         pSwapchainTimeDomainProperties,
    uint64_t*                                   pTimeDomainsCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain time domain properties for.
- `pSwapchainTimeDomainProperties` is a pointer to an instance of the VkSwapchainTimeDomainPropertiesEXT structure.
- `pTimeDomainsCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domain properties counter.

If upon return VkSwapchainTimeDomainPropertiesEXT::`timeDomainCount` is smaller than the number of time domains supported for the given `swapchain`, VK_INCOMPLETE will be returned instead of VK_SUCCESS to indicate that not all the available values were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainTimeDomainPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle

- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pSwapchainTimeDomainProperties-parameter
  `pSwapchainTimeDomainProperties` **must** be a valid pointer to a VkSwapchainTimeDomainPropertiesEXT structure
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pTimeDomainsCounter-parameter
  If `pTimeDomainsCounter` is not `NULL`, `pTimeDomainsCounter` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainTimeDomainPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimeDomainPropertiesEXT {
    VkStructureType     sType;
    void*               pNext;
    uint32_t            timeDomainCount;
    VkTimeDomainKHR*    pTimeDomains;
    uint64_t*           pTimeDomainIds;
} VkSwapchainTimeDomainPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timeDomainCount` is an integer related to the number of time domains available or queried, as

described below.

- pTimeDomains is a pointer to an array of VkTimeDomainKHR values representing time domains that are available for the swapchain.
- pTimeDomainIds is a pointer to an array of unique identifiers for each time domain.

When calling vkGetSwapchainTimeDomainPropertiesEXT, if pTimeDomains is NULL and pTimeDomainIds is NULL, then the number of time domains supported for the given swapchain is returned in timeDomainCount. Otherwise, timeDomainCount **must** specify the number of elements in pTimeDomains and pTimeDomainIds, and on return is overwritten with the number of values actually written to each array.

Implementations **must** advertise support for at least one time domain of VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT.

NOTE

Due to the dynamic nature of their underlying VkSurfaceKHR properties, swapchains may need to expose multiple swapchain-local opaque time domains using the same VkTimeDomainKHR value over time, for example when a surface is moved from one display hardware to another. Arbitrary identifiers, provided in timeDomainIds, are used by the implementation to differentiate opaque time domains of identical scopes.

Valid Usage

- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12370
  pTimeDomains and pTimeDomainIds **must** both be NULL or both not be NULL
- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12371
  If pTimeDomains and pTimeDomainIds are not NULL, then timeDomainCount **must** not be zero

Valid Usage (Implicit)

- VUID-VkSwapchainTimeDomainPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_TIME_DOMAIN_PROPERTIES_EXT
- VUID-VkSwapchainTimeDomainPropertiesEXT-pNext-pNext
  pNext **must** be NULL

Because of the asynchronous nature of the presentation engine, the timing information for a given vkQueuePresentKHR command **may** only becomes available some time after the presentation has occurred. These time values **should** be asynchronously queried, and are returned if available. All time values are in nanoseconds, according to the time-domain being used.

To asynchronously query the presentation engine for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetPastPresentationTimingEXT(
    VkDevice                                    device,
    const VkPastPresentationTimingInfoEXT*      pPastPresentationTimingInfo,
    VkPastPresentationTimingPropertiesEXT*      pPastPresentationTimingProperties);
```

- `device` is the device associated with `swapchain`.
- `pPastPresentationTimingInfo` is a pointer to an instance of the VkPastPresentationTimingInfoEXT structure.
- `pPastPresentationTimingProperties` is a pointer to an instance of the VkPastPresentationTimingPropertiesEXT structure.

If upon return the value of `VkPastPresentationTimingPropertiesEXT::presentationTimingCount` is less than the number of available timing records for the given `VkPastPresentationTimingInfoEXT::swapchain`, VK_INCOMPLETE is returned instead of VK_SUCCESS to indicate that not all the available values were returned.

Upon return, zero or more slots of the `swapchain` internal timing results queue, equal to the number of entries written to `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` for which `reportComplete` is VK_TRUE, are made available for future `vkQueuePresentKHR` calls. Elements of `pPresentationTimings` are arranged in ascending order of present ids.

Timing information **may** become available out of order with regards to their associated vkQueuePresentKHR order. VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT **can** be set in `VkPastPresentationTimingInfoEXT::flags` to allow `vkGetPastPresentationTimingEXT` to return results in that same order. Otherwise, results are returned in the order of their associated vkQueuePresentKHR calls.

There is no requirement for any precise timing relationship between the completion of a present stage and the availability of any associated timing information. However, results **must** be made available in finite time.

As an exception to the normal rules for objects which are externally synchronized, `swapchain` **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR and vkCreateSwapchainKHR with `swapchain` used as an `oldSwapchain`. Access to the swapchain timing information **must** be atomic within the implementation.

Valid Usage

- VUID-vkGetPastPresentationTimingEXT-flags-12230
  If VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT is set in `VkPastPresentationTimingInfoEXT::flags`, the `presentStageCount` value of each element of `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` **must** be at least the maximum number of present stages set in VkPresentTimingInfoEXT::`presentStageQueries` among all vkQueuePresentKHR calls, with a non-zero `presentStageQueries`, for which complete results have not been returned yet by a previous call

- VUID-vkGetPastPresentationTimingEXT-flags-12231
  If VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT is not set in VkPastPresentationTimingInfoEXT::flags, the presentStageCount value of each element of VkPastPresentationTimingPropertiesEXT::pPresentationTimings **must** be at least the number of present stages set in VkPresentTimingInfoEXT::presentStageQueries for the earliest call to vkQueuePresentKHR, with a non-zero presentStageQueries, that corresponds to that element's index and for which complete results have not been returned yet by a previous call

Valid Usage (Implicit)

- VUID-vkGetPastPresentationTimingEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingInfo-parameter
  pPastPresentationTimingInfo **must** be a valid pointer to a valid VkPastPresentationTimingInfoEXT structure
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingProperties-parameter
  pPastPresentationTimingProperties **must** be a valid pointer to a VkPastPresentationTimingPropertiesEXT structure

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPastPresentationTimingInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingInfoEXT {
    VkStructureType                     sType;
    const void*                         pNext;
    VkPastPresentationTimingFlagsEXT    flags;
    VkSwapchainKHR                      swapchain;
} VkPastPresentationTimingInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPastPresentationTimingFlagBitsEXT specifying options for queries of past presentation timing information.
- `swapchain` is the swapchain to obtain presentation timing information for.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_INFO_EXT
- VUID-VkPastPresentationTimingInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPastPresentationTimingInfoEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPastPresentationTimingFlagBitsEXT values
- VUID-VkPastPresentationTimingInfoEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPastPresentationTimingFlagsEXT;
```

`VkPastPresentationTimingFlagsEXT` is a bitmask type for setting a mask of zero or more VkPastPresentationTimingFlagBitsEXT.

Bits which **can** be set in VkPastPresentationTimingInfoEXT::`flags`, specifying options for queries of past presentation timing information, are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPastPresentationTimingFlagBitsEXT {
    VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT = 0x00000001,
    VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT = 0x00000002,
} VkPastPresentationTimingFlagBitsEXT;
```

- VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT specifies that vkGetPastPresentationTimingEXT **may** return partial results for presentation requests that have not completed all requested present stages.
- VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT specifies that vkGetPastPresentationTimingEXT **may** return results out of order with respect to the

presentation order.

The VkPastPresentationTimingPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingPropertiesEXT {
    VkStructureType                 sType;
    void*                           pNext;
    uint64_t                        timingPropertiesCounter;
    uint64_t                        timeDomainsCounter;
    uint32_t                        presentationTimingCount;
    VkPastPresentationTimingEXT*    pPresentationTimings;
} VkPastPresentationTimingPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- timingPropertiesCounter is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.
- timeDomainsCounter is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domains list counter.
- presentationTimingCount is an integer related to the number of VkPastPresentationTimingEXT structures available or queried, as described below.
- pPresentationTimings is NULL or a pointer to an array of VkPastPresentationTimingEXT structures.

When calling vkGetPastPresentationTimingEXT, if pPresentationTimings is NULL, then the number of available timing records for the given swapchain is returned in presentationTimingCount. Otherwise, presentationTimingCount **must** specify the number of elements in the pPresentationTimings array, and on return is overwritten with the number of structures actually written to pPresentationTimings.

if VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT is specified in VkPastPresentationTimingInfoEXT::flags, vkGetPastPresentationTimingEXT **may** return incomplete results, containing only information for a subset of the requested present stages. Further calls to vkGetPastPresentationTimingEXT will keep providing all available results for a previously incomplete entry until it is complete.

The implementation **must** return a VkPastPresentationTimingEXT for every vkQueuePresentKHR referencing swapchain where a non-zero VkPresentTimingInfoEXT::presentStageQueries was specified and at least one present stage has available results.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_PROPERTIES_EXT
- VUID-VkPastPresentationTimingPropertiesEXT-pNext-pNext

pNext **must** be NULL

NOTE

The presentation engine **may** change the timing properties of the swapchain for a variety of reasons.

This **may** occur, for example, if the window system changes its mode, including the refresh rate of the display. Another example is if an application's surface is being composited with other windows of a window system, and then the surface's window becomes a borderless, full-screen window. While composited, the timing properties **may** be FRR, and while full-screen, the timing properties **may** be VRR.

The available time domains for a swapchain **may** change for similar or identical reasons. Therefore, it is possible that the same event will cause both the swapchain's internal timing properties counter and time domains list counter to update.

The VkPastPresentationTimingEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingEXT {
    VkStructureType           sType;
    void*                     pNext;
    uint64_t                  presentId;
    uint64_t                  targetTime;
    uint32_t                  presentStageCount;
    VkPresentStageTimeEXT*    pPresentStages;
    VkTimeDomainKHR           timeDomain;
    uint64_t                  timeDomainId;
    VkBool32                  reportComplete;
} VkPastPresentationTimingEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentId is zero or a value that was given to a previous vkQueuePresentKHR command via VkPresentId2KHR::pPresentIds.
- targetTime is the application-provided target absolute time or duration of the associated presentation request in VkPresentTimingInfoEXT::targetTime.
- presentStageCount is a count of items contained in pPresentStages.
- pPresentStages a pointer to an array of VkPresentStageTimeEXT providing timing information for the presentation request associated with presentId.
- timeDomain is the time domain used by the presentation engine to report times in pPresentStages.
- timeDomainId is the id associated with timeDomain.
- reportComplete is VK_TRUE if the presentation engine has reported all the requested results in pPresentStages.

When calling vkGetPastPresentationTimingEXT, the implementation sets `presentStageCount` to the number of present stages it has written results for. If VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT was specified in VkPastPresentationTimingInfoEXT::`flags`, the implementation **may** return an incomplete report containing fewer present stage results than were queried by the associated presentation request. Otherwise, results for all the present stages queried by the presentation request are written by the implementation.

Timing information for some present stages **may** have a time value of 0, indicating that results for that present stage are not available.

For systems with multiple entities operating within the presentation engine, such as multiple displays, `pPresentStages` will return timing results for one entity which has been affected by the presentation.

`timeDomainId` **may** be different than the time domain that was specified in `VkPresentTimingInfoEXT` ::`timeDomainId` if the requirements for using this time domain could not be met at the time the presentation engine processed the presentation request. In such a case, the presentation engine **may** pick a time domain to fall back to, if one is available, and report results in that domain. Applications **can** continue to use this fallback time domain in future `vkQueuePresentKHR` calls, or they **can** call vkGetSwapchainTimeDomainPropertiesEXT to choose from the currently supported time domains.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_EXT
- VUID-VkPastPresentationTimingEXT-pNext-pNext
  `pNext` **must** be `NULL`

The `VkPresentStageTimeEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentStageTimeEXT {
    VkPresentStageFlagsEXT    stage;
    uint64_t                  time;
} VkPresentStageTimeEXT;
```

- `stage` is a VkPresentStageFlagsEXT value specifying a present stage.
- `time` is a time in nanoseconds associated with the `stage`.

37.9. Present Wait

Applications wanting to control the pacing of the application by monitoring when presentation processes have completed to limit the number of outstanding images queued for presentation, need to have a method of being signaled during the presentation process.

Providing a mechanism which allows applications to block, waiting for a specific step of the presentation process to complete allows them to control the amount of outstanding work (and hence the potential lag in responding to user input or changes in the rendering environment).

The VK_KHR_present_wait2 extension allows applications to tell the presentation engine at the vkQueuePresentKHR call that it plans on waiting for presentation by passing a VkPresentId2KHR structure. The presentId passed in that structure may then be passed to a future vkWaitForPresent2KHR call to cause the application to block until that presentation is finished.

This functionality was originally provided by the VK_KHR_present_wait extension, which has been deprecated and replaced by VK_KHR_present_wait2.

The VkPresentWait2InfoKHR structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPresentWait2InfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentId;
    uint64_t           timeout;
} VkPresentWait2InfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- presentId is the presentation presentId to wait for.
- timeout is the timeout period in units of nanoseconds. timeout is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

Valid Usage (Implicit)

- VUID-VkPresentWait2InfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_WAIT_2_INFO_KHR
- VUID-VkPresentWait2InfoKHR-pNext-pNext
  pNext **must** be NULL

37.10. WSI Swapchain

A swapchain object (a.k.a. swapchain) provides the ability to present rendering results to a surface. Swapchain objects are represented by VkSwapchainKHR handles:

```
// Provided by VK_KHR_swapchain
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSwapchainKHR)
```

A swapchain is an abstraction for an array of presentable images that are associated with a surface. The presentable images are represented by `VkImage` objects created by the platform. One image (which **can** be an array image for multiview/stereoscopic-3D surfaces) is displayed at a time, but multiple images **can** be queued for presentation. An application renders to the image, and then queues the image for presentation to the surface.

A native window **cannot** be associated with more than one non-retired swapchain at a time. Further, swapchains **cannot** be created for native windows that have a non-Vulkan graphics API surface associated with them.

NOTE

The presentation engine is an abstraction for the platform's compositor or display engine.

The presentation engine **may** be synchronous or asynchronous with respect to the application and/or logical device.

Some implementations **may** use the device's graphics queue or dedicated presentation hardware to perform presentation.

The presentable images of a swapchain are owned by the presentation engine. An application **can** acquire use of a presentable image from the presentation engine. Use of a presentable image **must** occur only after the image is returned by vkAcquireNextImageKHR, and before it is released by vkQueuePresentKHR. This includes transitioning the image layout and rendering commands.

An application **can** acquire use of a presentable image with vkAcquireNextImageKHR. After acquiring a presentable image and before modifying it, the application **must** use a synchronization primitive to ensure that the presentation engine has finished reading from the image. The application **can** then transition the image's layout, queue rendering commands to it, etc. Finally, the application presents the image with vkQueuePresentKHR, which releases the acquisition of the image. The application **can** also release the acquisition of the image through vkReleaseSwapchainImagesKHR, if the image is not in use by the device, and skip the present operation.

The presentation engine controls the order in which presentable images are acquired for use by the application.

NOTE

This allows the platform to handle situations which require out-of-order return of images after presentation. At the same time, it allows the application to generate command buffers referencing all of the images in the swapchain at initialization time, rather than in its main loop.

How this all works is described below.

If a swapchain is created with `presentMode` set to either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, a single presentable image **can** be acquired, referred to as a shared presentable image. A shared presentable image **may** be concurrently accessed by the application and the presentation engine, without transitioning the image's layout after it is initially presented.

- With VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR, the presentation engine is only required to update to the latest contents of a shared presentable image after a present. The application **must** call vkQueuePresentKHR to guarantee an update. However, the presentation engine **may** update from it at any time.
- With VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, the presentation engine will automatically present the latest contents of a shared presentable image during every refresh cycle. The application is only required to make one initial call to vkQueuePresentKHR, after which the presentation engine will update from it without any need for further present calls. The application **can** indicate the image contents have been updated by calling vkQueuePresentKHR, but this does not guarantee the timing of when updates will occur.

The presentation engine **may** access a shared presentable image at any time after it is first presented. To avoid tearing, an application **should** coordinate access with the presentation engine. This requires presentation engine timing information through platform-specific mechanisms and ensuring that color attachment writes are made available during the portion of the presentation engine's refresh cycle they are intended for.

NOTE The VK_KHR_shared_presentable_image extension does not provide functionality for determining the timing of the presentation engine's refresh cycles.

In order to query a swapchain's status when rendering to a shared presentable image, call:

```
// Provided by VK_KHR_shared_presentable_image
VkResult vkGetSwapchainStatusKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain);
```

- device is the device associated with swapchain.
- swapchain is the swapchain to query.

Valid Usage (Implicit)

- VUID-vkGetSwapchainStatusKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parent
  swapchain **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to swapchain **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The possible return values for `vkGetSwapchainStatusKHR` **should** be interpreted as follows:

- VK_SUCCESS specifies the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's VkPresentModeKHR.
- VK_SUBOPTIMAL_KHR the swapchain no longer matches the surface properties exactly, but the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's VkPresentModeKHR.
- VK_ERROR_OUT_OF_DATE_KHR the surface has changed in such a way that it is no longer compatible with the swapchain.
- VK_ERROR_SURFACE_LOST_KHR the surface is no longer available.

NOTE

The swapchain state **may** be cached by implementations, so applications **should** regularly call `vkGetSwapchainStatusKHR` when using a swapchain with VkPresentModeKHR equal to VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.

To create a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkCreateSwapchainKHR(
    VkDevice                                    device,
    const VkSwapchainCreateInfoKHR*             pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSwapchainKHR*                             pSwapchain);
```

- `device` is the device to create the swapchain for.

- `pCreateInfo` is a pointer to a VkSwapchainCreateInfoKHR structure specifying the parameters of the created swapchain.
- `pAllocator` is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see Memory Allocation).
- `pSwapchain` is a pointer to a VkSwapchainKHR handle in which the created swapchain object will be returned.

As mentioned above, if `vkCreateSwapchainKHR` succeeds, it will return a handle to a swapchain containing an array of at least `pCreateInfo->minImageCount` presentable images.

While acquired by the application, presentable images **can** be used in any way that equivalent non-presentable images **can** be used. A presentable image is equivalent to a non-presentable image created with the following VkImageCreateInfo parameters:

`VkImageCreateInfo` **Field**	**Value**
`flags`	VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT is set if VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR is set VK_IMAGE_CREATE_PROTECTED_BIT is set if VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR is set VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR are both set if VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR is set VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT is set if VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT is set all other bits are unset
`imageType`	VK_IMAGE_TYPE_2D
`format`	`pCreateInfo->imageFormat`
`extent`	{`pCreateInfo->imageExtent.width`, `pCreateInfo->imageExtent.height`, `1`}
`mipLevels`	1
`arrayLayers`	`pCreateInfo->imageArrayLayers`
`samples`	VK_SAMPLE_COUNT_1_BIT

VkImageCreateInfo Field	Value
tiling	VK_IMAGE_TILING_OPTIMAL
usage	pCreateInfo->imageUsage
sharingMode	pCreateInfo->imageSharingMode
queueFamilyIndexCount	pCreateInfo->queueFamilyIndexCount
pQueueFamilyIndices	pCreateInfo->pQueueFamilyIndices
initialLayout	VK_IMAGE_LAYOUT_UNDEFINED

The pCreateInfo->surface **must** not be destroyed until after the swapchain is destroyed.

If oldSwapchain is VK_NULL_HANDLE, and the native window referred to by pCreateInfo->surface is already associated with a Vulkan swapchain, VK_ERROR_NATIVE_WINDOW_IN_USE_KHR **must** be returned.

If oldSwapchain is a valid swapchain and there are outstanding calls to vkWaitForPresent2KHR, then vkCreateSwapchainKHR **may** block until those calls complete.

If the native window referred to by pCreateInfo->surface is already associated with a non-Vulkan graphics API surface, VK_ERROR_NATIVE_WINDOW_IN_USE_KHR **must** be returned.

The native window referred to by pCreateInfo->surface **must** not become associated with a non-Vulkan graphics API surface before all associated Vulkan swapchains have been destroyed.

vkCreateSwapchainKHR will return VK_ERROR_DEVICE_LOST if the logical device was lost. The VkSwapchainKHR is a child of the device, and **must** be destroyed before the device. However, VkSurfaceKHR is not a child of any VkDevice and is not affected by the lost device. After successfully recreating a VkDevice, the same VkSurfaceKHR **can** be used to create a new VkSwapchainKHR, provided the previous one was destroyed.

If the oldSwapchain parameter of pCreateInfo is a valid swapchain, which has exclusive full-screen access, that access is released from pCreateInfo->oldSwapchain. If the command succeeds in this case, the newly created swapchain will automatically acquire exclusive full-screen access from pCreateInfo->oldSwapchain.

NOTE This implicit transfer is intended to avoid exiting and entering full-screen exclusive mode, which may otherwise cause unwanted visual updates to the display.

In some cases, swapchain creation **may** fail if exclusive full-screen mode is requested for application control, but for some implementation-specific reason exclusive full-screen access is unavailable for the particular combination of parameters provided. If this occurs, VK_ERROR_INITIALIZATION_FAILED will be returned.

NOTE In particular, it will fail if the imageExtent member of pCreateInfo does not match the extents of the monitor. Other reasons for failure may include the application not being set as high-dpi aware, or if the physical device and monitor are not compatible in this mode.

Valid Usage (Implicit)

- VUID-vkCreateSwapchainKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateSwapchainKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSwapchainCreateInfoKHR structure
- VUID-vkCreateSwapchainKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSwapchainKHR-pSwapchain-parameter
  `pSwapchain` **must** be a valid pointer to a VkSwapchainKHR handle
- VUID-vkCreateSwapchainKHR-device-queuecount
  The device **must** have been created with at least `1` queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_COMPRESSION_EXHAUSTED_EXT
- VK_ERROR_DEVICE_LOST
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSwapchainCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkSwapchainCreateInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkSwapchainCreateFlagsKHR        flags;
    VkSurfaceKHR                     surface;
    uint32_t                         minImageCount;
    VkFormat                         imageFormat;
    VkColorSpaceKHR                  imageColorSpace;
    VkExtent2D                       imageExtent;
    uint32_t                         imageArrayLayers;
    VkImageUsageFlags                imageUsage;
    VkSharingMode                    imageSharingMode;
    uint32_t                         queueFamilyIndexCount;
    const uint32_t*                  pQueueFamilyIndices;
    VkSurfaceTransformFlagBitsKHR    preTransform;
    VkCompositeAlphaFlagBitsKHR      compositeAlpha;
    VkPresentModeKHR                 presentMode;
    VkBool32                         clipped;
    VkSwapchainKHR                   oldSwapchain;
} VkSwapchainCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkSwapchainCreateFlagBitsKHR indicating parameters of the swapchain creation.
- `surface` is the surface onto which the swapchain will present images. If the creation succeeds, the swapchain becomes associated with `surface`.
- `minImageCount` is the minimum number of presentable images that the application needs. The implementation will either create the swapchain with at least that many images, or it will fail to create the swapchain.
- `imageFormat` is a VkFormat value specifying the format the swapchain image(s) will be created with.
- `imageColorSpace` is a VkColorSpaceKHR value specifying the way the swapchain interprets image data.
- `imageExtent` is the size (in pixels) of the swapchain image(s). The behavior is platform-dependent if the image extent does not match the surface's `currentExtent` as returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`.

> **NOTE**
>
> On some platforms, it is normal that `maxImageExtent` **may** become `(0, 0)`, for example when the window is minimized. In such a case, it is not possible to create a swapchain due to the Valid Usage requirements , unless scaling is selected through VkSwapchainPresentScalingCreateInfoKHR, if supported .

- `imageArrayLayers` is the number of views in a multiview/stereo surface. For non-stereoscopic-3D

applications, this value is 1.

- `imageUsage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the (acquired) swapchain images.
- `imageSharingMode` is the sharing mode used for the image(s) of the swapchain.
- `queueFamilyIndexCount` is the number of queue families having access to the image(s) of the swapchain when `imageSharingMode` is VK_SHARING_MODE_CONCURRENT.
- `pQueueFamilyIndices` is a pointer to an array of queue family indices having access to the images(s) of the swapchain when `imageSharingMode` is VK_SHARING_MODE_CONCURRENT.
- `preTransform` is a VkSurfaceTransformFlagBitsKHR value describing the transform, relative to the presentation engine's natural orientation, applied to the image content prior to presentation. If it does not match the `currentTransform` value returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`, the presentation engine will transform the image content as part of the presentation operation.
- `compositeAlpha` is a VkCompositeAlphaFlagBitsKHR value indicating the alpha compositing mode to use when this surface is composited together with other surfaces on certain window systems.
- `presentMode` is the presentation mode the swapchain will use. A swapchain's present mode determines how incoming present requests will be processed and queued internally.
- `clipped` specifies whether the Vulkan implementation is allowed to discard rendering operations that affect regions of the surface that are not visible.
  - If `clipped` is VK_TRUE, the presentable images associated with the swapchain **may** not own all of their pixels. Pixels in the presentable images that correspond to regions of the target surface obscured by another window on the desktop, or subject to some other clipping mechanism will have undefined content when read back. Fragment shaders **may** not execute for these pixels, and thus any side effects they would have had will not occur. Setting VK_TRUE does not guarantee any clipping will occur, but allows more efficient presentation methods to be used on some platforms.
  - If `clipped` is VK_FALSE, presentable images associated with the swapchain will own all of the pixels they contain.

> **NOTE**
>
> Applications **should** set this value to VK_TRUE if they do not expect to read back the content of presentable images before presenting them or after reacquiring them, and if their fragment shaders do not have any side effects that require them to run for all pixels in the presentable image.

- `oldSwapchain` is VK_NULL_HANDLE, or the existing non-retired swapchain currently associated with `surface`. Providing a valid `oldSwapchain` **may** aid in the resource reuse, and also allows the application to still present any images that are already acquired from it.

Upon calling `vkCreateSwapchainKHR` with an `oldSwapchain` that is not VK_NULL_HANDLE, `oldSwapchain` is retired — even if creation of the new swapchain fails. The new swapchain is created in the non-retired state whether or not `oldSwapchain` is VK_NULL_HANDLE.

Upon calling `vkCreateSwapchainKHR` with an `oldSwapchain` that is not VK_NULL_HANDLE, any images from `oldSwapchain` that are not acquired by the application **may** be freed by the implementation,

which **may** occur even if creation of the new swapchain fails. The application **can** destroy `oldSwapchain` to free all memory associated with `oldSwapchain`.

NOTE

Multiple retired swapchains **can** be associated with the same `VkSurfaceKHR` through multiple uses of `oldSwapchain` that outnumber calls to vkDestroySwapchainKHR.

After `oldSwapchain` is retired, the application **can** pass to vkQueuePresentKHR any images it had already acquired from `oldSwapchain`. E.g., an application may present an image from the old swapchain before an image from the new swapchain is ready to be presented. As usual, vkQueuePresentKHR **may** fail if `oldSwapchain` has entered a state that causes VK_ERROR_OUT_OF_DATE_KHR to be returned.

The application **can** continue to use a shared presentable image obtained from `oldSwapchain` until a presentable image is acquired from the new swapchain, as long as it has not entered a state that causes it to return VK_ERROR_OUT_OF_DATE_KHR.

`imageUsage` defines the effective usage flags for the swapchain image(s). If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, `imageUsage` is ignored, and the effective usage flags are defined by VkImageUsageFlags2CreateInfoKHR::`usage`.

Valid Usage

- VUID-VkSwapchainCreateInfoKHR-surface-01270
  `surface` **must** be a surface that is supported by the device as determined using vkGetPhysicalDeviceSurfaceSupportKHR
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01272
  `minImageCount` **must** be less than or equal to the value returned in the `maxImageCount` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface if the returned `maxImageCount` is not zero
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10155
  If the `swapchainMaintenance1` feature is not enabled, then the `pNext` chain **must** not include a VkSwapchainPresentModesCreateInfoKHR structure
- VUID-VkSwapchainCreateInfoKHR-presentMode-02839
  If `presentMode` is not VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR nor VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, then `minImageCount` **must** be greater than or equal to the value returned in the `minImageCount` member of the `VkSurfaceCapabilitiesKHR` structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01383
  `minImageCount` **must** be `1` if `presentMode` is either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01273
  `imageFormat` and `imageColorSpace` **must** match the `format` and `colorSpace` members, respectively, of one of the `VkSurfaceFormatKHR` structures returned by

vkGetPhysicalDeviceSurfaceFormatsKHR for the surface

- VUID-VkSwapchainCreateInfoKHR-pNext-07781
  If a VkSwapchainPresentScalingCreateInfoKHR structure was not included in the pNext chain, or it is included and VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior is zero then imageExtent **must** be between minImageExtent and maxImageExtent, inclusive, where minImageExtent and maxImageExtent are members of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-pNext-07782
  If a VkSwapchainPresentScalingCreateInfoKHR structure was included in the pNext chain and VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior is not zero then imageExtent **must** be between minScaledImageExtent and maxScaledImageExtent, inclusive, where minScaledImageExtent and maxScaledImageExtent are members of the VkSurfacePresentScalingCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for the surface and presentMode
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10157
  If the swapchainMaintenance1 feature is not enabled, then flags **must** not include VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR
- VUID-VkSwapchainCreateInfoKHR-imageExtent-01689
  imageExtent members width and height **must** both be non-zero
- VUID-VkSwapchainCreateInfoKHR-imageArrayLayers-01275
  imageArrayLayers **must** be greater than 0 and less than or equal to the maxImageArrayLayers member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01427
  If presentMode is VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_IMMEDIATE_KHR, VK_PRESENT_MODE_MAILBOX_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR, imageUsage **must** be a subset of the supported usage flags present in the supportedUsageFlags member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for surface
- VUID-VkSwapchainCreateInfoKHR-imageUsage-01384
  If presentMode is VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR, imageUsage **must** be a subset of the supported usage flags present in the sharedPresentSupportedUsageFlags member of the VkSharedPresentSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for surface
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01277
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, pQueueFamilyIndices **must** be a valid pointer to an array of queueFamilyIndexCount uint32_t values
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01278
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, queueFamilyIndexCount **must** be greater than 1
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01428
  If imageSharingMode is VK_SHARING_MODE_CONCURRENT, each element of

pQueueFamilyIndices **must** be unique and **must** be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties or vkGetPhysicalDeviceQueueFamilyProperties2 for the physicalDevice that was used to create device

- VUID-VkSwapchainCreateInfoKHR-preTransform-01279
  preTransform **must** be one of the bits present in the supportedTransforms member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-01280
  compositeAlpha **must** be one of the bits present in the supportedCompositeAlpha member of the VkSurfaceCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilitiesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01281
  presentMode **must** be one of the VkPresentModeKHR values returned by vkGetPhysicalDeviceSurfacePresentModesKHR for the surface
- VUID-VkSwapchainCreateInfoKHR-presentModeFifoLatestReady-10161
  If the presentModeFifoLatestReady feature is not enabled, presentMode **must** not be VK_PRESENT_MODE_FIFO_LATEST_READY_KHR
- VUID-VkSwapchainCreateInfoKHR-physicalDeviceCount-01429
  If the logical device was created with VkDeviceGroupDeviceCreateInfo ::physicalDeviceCount equal to 1, flags **must** not contain VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-01933
  If oldSwapchain is not VK_NULL_HANDLE, oldSwapchain **must** be a non-retired swapchain associated with native window referred to by surface
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01778
  The implied image creation parameters of the swapchain **must** be supported as reported by vkGetPhysicalDeviceImageFormatProperties or vkGetPhysicalDeviceImageFormatProperties2
- VUID-VkSwapchainCreateInfoKHR-flags-03168
  If flags contains VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR then the pNext chain **must** include a VkImageFormatListCreateInfo structure with a viewFormatCount greater than zero and pViewFormats **must** have an element equal to imageFormat
- VUID-VkSwapchainCreateInfoKHR-pNext-04099
  If a VkImageFormatListCreateInfo structure was included in the pNext chain and VkImageFormatListCreateInfo::viewFormatCount is not zero then all of the formats in VkImageFormatListCreateInfo::pViewFormats **must** be compatible with the format as described in the compatibility table
- VUID-VkSwapchainCreateInfoKHR-flags-04100
  If flags does not contain VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR and the pNext chain include a VkImageFormatListCreateInfo structure then VkImageFormatListCreateInfo::viewFormatCount **must** be 0 or 1
- VUID-VkSwapchainCreateInfoKHR-flags-03187

If `flags` contains VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR, then `VkSurfaceProtectedCapabilitiesKHR::supportsProtected` **must** be VK_TRUE in the VkSurfaceProtectedCapabilitiesKHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for `surface`

- VUID-VkSwapchainCreateInfoKHR-pNext-02679
  If the `pNext` chain includes a VkSurfaceFullScreenExclusiveInfoEXT structure with its `fullScreenExclusive` member set to VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT, and `surface` was created using vkCreateWin32SurfaceKHR, a VkSurfaceFullScreenExclusiveWin32InfoEXT structure **must** be included in the `pNext` chain
- VUID-VkSwapchainCreateInfoKHR-pNext-06752
  If the `imageCompressionControlSwapchain` feature is not enabled, the `pNext` chain **must** not include an VkImageCompressionControlEXT structure
- VUID-VkSwapchainCreateInfoKHR-multisampledRenderToSwapchain-12447
  If the `multisampledRenderToSwapchain` feature is not enabled, `flags` **must** not contain VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT
- VUID-VkSwapchainCreateInfoKHR-flags-12448
  `flags` **must** be a subset of flags returned in VkSwapchainFlagsSurfaceCapabilitiesEXT `::swapchainSupportedFlags`, given VkSwapchainCreateInfoKHR`::presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainCreateInfoKHR-presentTiming-12232
  If none of the `presentTiming`, `presentAtAbsoluteTime`, or `presentAtRelativeTime` features are enabled, `flags` **must** not contain VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

Valid Usage (Implicit)

- VUID-VkSwapchainCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkSwapchainCreateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDeviceGroupSwapchainCreateInfoKHR, VkImageCompressionControlEXT, VkImageFormatListCreateInfo, VkImageUsageFlags2CreateInfoKHR, VkSurfaceFullScreenExclusiveInfoEXT, VkSurfaceFullScreenExclusiveWin32InfoEXT, VkSwapchainCounterCreateInfoEXT, VkSwapchainPresentModesCreateInfoKHR, or VkSwapchainPresentScalingCreateInfoKHR
- VUID-VkSwapchainCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkSwapchainCreateInfoKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkSwapchainCreateFlagBitsKHR values
- VUID-VkSwapchainCreateInfoKHR-surface-parameter
  `surface` **must** be a valid VkSurfaceKHR handle
- VUID-VkSwapchainCreateInfoKHR-imageFormat-parameter

`imageFormat` **must** be a valid VkFormat value

- VUID-VkSwapchainCreateInfoKHR-imageColorSpace-parameter
  `imageColorSpace` **must** be a valid VkColorSpaceKHR value
- VUID-VkSwapchainCreateInfoKHR-imageUsage-parameter
  `imageUsage` **must** be a valid combination of VkImageUsageFlagBits values
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-parameter
  `imageSharingMode` **must** be a valid VkSharingMode value
- VUID-VkSwapchainCreateInfoKHR-preTransform-parameter
  `preTransform` **must** be a valid VkSurfaceTransformFlagBitsKHR value
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-parameter
  `compositeAlpha` **must** be a valid VkCompositeAlphaFlagBitsKHR value
- VUID-VkSwapchainCreateInfoKHR-presentMode-parameter
  `presentMode` **must** be a valid VkPresentModeKHR value
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-parameter
  If `oldSwapchain` is not VK_NULL_HANDLE, `oldSwapchain` **must** be a valid VkSwapchainKHR handle
- VUID-VkSwapchainCreateInfoKHR-commonparent
  Both of `oldSwapchain`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkInstance

Host Synchronization

- Host access to `surface` **must** be externally synchronized
- Host access to `oldSwapchain` **must** be externally synchronized

Bits which **can** be set in VkSwapchainCreateInfoKHR::`flags`, specifying parameters of swapchain creation, are:

```
// Provided by VK_KHR_swapchain
typedef enum VkSwapchainCreateFlagBitsKHR {
  // Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR = 0x00000001,
  // Provided by VK_VERSION_1_1 with VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR = 0x00000002,
  // Provided by VK_KHR_swapchain_mutable_format
    VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR = 0x00000004,
  // Provided by VK_EXT_present_timing
    VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT = 0x00000200,
  // Provided by VK_KHR_present_id2
    VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR = 0x00000040,
  // Provided by VK_KHR_present_wait2
    VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR = 0x00000080,
  // Provided by VK_KHR_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR = 0x00000008,
  // Provided by VK_EXT_multisampled_render_to_swapchain
    VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT = 0x00000100,
  // Provided by VK_EXT_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT =
VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR,
} VkSwapchainCreateFlagBitsKHR;
```

- VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR specifies that images created from the swapchain (i.e. with the `swapchain` member of VkImageSwapchainCreateInfoKHR set to this swapchain's handle) **must** use VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT.
- VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR specifies that images created from the swapchain are protected images.
- VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR specifies that the images of the swapchain **can** be used to create a `VkImageView` with a different format than what the swapchain was created with. The list of allowed image view formats is specified by adding a VkImageFormatListCreateInfo structure to the `pNext` chain of VkSwapchainCreateInfoKHR. In addition, this flag also specifies that the swapchain **can** be created with usage flags that are not supported for the format the swapchain is created with but are supported for at least one of the allowed image view formats.
- VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR specifies that the implementation **may** defer allocation of memory associated with each swapchain image until its index is to be returned from vkAcquireNextImageKHR or vkAcquireNextImage2KHR for the first time.
- VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR specifies that applications **can** include the `VkPresentId2KHR` structure in the `pNext` chain of the VkPresentInfoKHR structure to associate an identifier with each presentation request.
- VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR specifies that applications **can** use `vkWaitForPresent2KHR` to wait for the presentation engine to have begun presentation of the

presentation request associated with VkPresentWait2InfoKHR::presentId on swapchain.

- VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT specifies that an image **can** be used with multisampled rendering as a single-sampled render pass attachment
- VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT specifies that features supported by the swapchain device in VkPhysicalDevicePresentTimingFeaturesEXT **can** be used to collect timing information or schedule presentation requests at specific times.

```
// Provided by VK_KHR_swapchain
typedef VkFlags VkSwapchainCreateFlagsKHR;
```

VkSwapchainCreateFlagsKHR is a bitmask type for setting a mask of zero or more VkSwapchainCreateFlagBitsKHR.

If the pNext chain of VkSwapchainCreateInfoKHR includes a VkDeviceGroupSwapchainCreateInfoKHR structure, then that structure includes a set of device group present modes that the swapchain **can** be used with.

The VkDeviceGroupSwapchainCreateInfoKHR structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupSwapchainCreateInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDeviceGroupPresentModeFlagsKHR modes;
} VkDeviceGroupSwapchainCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- modes is a bitfield of modes that the swapchain **can** be used with.

If this structure is not present, modes is considered to be VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage (Implicit)

- VUID-VkDeviceGroupSwapchainCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkDeviceGroupSwapchainCreateInfoKHR-modes-parameter
  modes **must** be a valid combination of VkDeviceGroupPresentModeFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

If the `pNext` chain of VkSwapchainCreateInfoKHR includes a VkSurfaceFullScreenExclusiveInfoEXT structure, then that structure specifies the application's preferred full-screen presentation behavior. If this structure is not present, `fullScreenExclusive` is considered to be VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT.

To enable surface counters when creating a swapchain, add a `VkSwapchainCounterCreateInfoEXT` structure to the `pNext` chain of VkSwapchainCreateInfoKHR. `VkSwapchainCounterCreateInfoEXT` is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkSwapchainCounterCreateInfoEXT {
    VkStructureType              sType;
    const void*                  pNext;
    VkSurfaceCounterFlagsEXT     surfaceCounters;
} VkSwapchainCounterCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCounters` is a bitmask of VkSurfaceCounterFlagBitsEXT specifying surface counters to enable for the swapchain.

Valid Usage

- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-01244
  The bits in `surfaceCounters` **must** be supported by VkSwapchainCreateInfoKHR::`surface`, as reported by vkGetPhysicalDeviceSurfaceCapabilities2EXT

Valid Usage (Implicit)

- VUID-VkSwapchainCounterCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_COUNTER_CREATE_INFO_EXT
- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-parameter
  If `surfaceCounters` is not `0`, `surfaceCounters` **must** be a valid combination of VkSurfaceCounterFlagBitsEXT values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

The requested counters become active when the first presentation command for the associated swapchain is processed by the presentation engine. To query the value of an active counter, use:

```
// Provided by VK_EXT_display_control
VkResult vkGetSwapchainCounterEXT(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    VkSurfaceCounterFlagBitsEXT                 counter,
    uint64_t*                                   pCounterValue);
```

- `device` is the VkDevice associated with `swapchain`.
- `swapchain` is the swapchain from which to query the counter value.
- `counter` is a VkSurfaceCounterFlagBitsEXT value specifying the counter to query.
- `pCounterValue` will return the current value of the counter.

If a counter is not available because the swapchain is out of date, the implementation **may** return VK_ERROR_OUT_OF_DATE_KHR.

Valid Usage

- VUID-vkGetSwapchainCounterEXT-swapchain-01245
  One or more present commands on `swapchain` **must** have been processed by the presentation engine

Valid Usage (Implicit)

- VUID-vkGetSwapchainCounterEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainCounterEXT-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainCounterEXT-counter-parameter
  `counter` **must** be a valid VkSurfaceCounterFlagBitsEXT value
- VUID-vkGetSwapchainCounterEXT-pCounterValue-parameter
  `pCounterValue` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainCounterEXT-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To specify compression properties for the swapchain images in this swapchain, add a VkImageCompressionControlEXT structure to the `pNext` chain of the VkSwapchainCreateInfoKHR structure.

Applications **can** modify the presentation mode used by the swapchain on a per-presentation basis. However, all presentation modes the application intends to use with the swapchain **must** be specified at swapchain creation time. To specify more than one presentation mode when creating a swapchain, include the `VkSwapchainPresentModesCreateInfoKHR` structure in the `pNext` chain of the VkSwapchainCreateInfoKHR structure.

The `VkSwapchainPresentModesCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModesCreateInfoKHR {
    VkStructureType            sType;
    const void*                pNext;
    uint32_t                   presentModeCount;
    const VkPresentModeKHR*    pPresentModes;
} VkSwapchainPresentModesCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModesCreateInfoKHR
typedef VkSwapchainPresentModesCreateInfoKHR VkSwapchainPresentModesCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is the number of presentation modes provided.
- `pPresentModes` is a list of presentation modes with `presentModeCount` entries

Valid Usage

- VUID-VkSwapchainPresentModesCreateInfoKHR-None-07762
  Each entry in pPresentModes **must** be one of the VkPresentModeKHR values returned by `vkGetPhysicalDeviceSurfacePresentModesKHR` for the surface
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeFifoLatestReady-10160
  If the `presentModeFifoLatestReady` feature is not enabled, pPresentModes **must** not contain VK_PRESENT_MODE_FIFO_LATEST_READY_KHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-07763
  The entries in pPresentModes **must** be a subset of the present modes returned in VkSurfacePresentModeCompatibilityKHR::`pPresentModes`, given VkSwapchainCreateInfoKHR::`presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentMode-07764
  VkSwapchainCreateInfoKHR::`presentMode` **must** be included in `pPresentModes`

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModesCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODES_CREATE_INFO_KHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-parameter
  `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` valid VkPresentModeKHR values
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeCount-arraylength
  `presentModeCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

When an application presents a swapchain image with dimensions different than those of the target surface, different behavior is possible on different platforms per their respective specifications:

- Presentation fails and VK_ERROR_OUT_OF_DATE_KHR is returned
- Scaling is done and VK_SUCCESS or VK_SUBOPTIMAL_KHR is returned
- Unspecified scaling using an arbitrary combination of stretching, centering and/or clipping.

Applications **can** define specific behavior when creating a swapchain by including the `VkSwapchainPresentScalingCreateInfoKHR` structure in the `pNext` chain of the VkSwapchainCreateInfoKHR structure.

The VkSwapchainPresentScalingCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentScalingCreateInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkPresentScalingFlagsKHR    scalingBehavior;
    VkPresentGravityFlagsKHR    presentGravityX;
    VkPresentGravityFlagsKHR    presentGravityY;
} VkSwapchainPresentScalingCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentScalingCreateInfoKHR
typedef VkSwapchainPresentScalingCreateInfoKHR VkSwapchainPresentScalingCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- scalingBehavior is 0 or the scaling method to use when the dimensions of the surface and swapchain images differ.
- presentGravityX is 0 or the x-axis direction in which swapchain image pixels gravitate relative to the surface when scalingBehavior does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.
- presentGravityY is 0 or the y-axis direction in which swapchain image pixels gravitate relative to the surface when scalingBehavior does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.

If scalingBehavior is 0, the result of presenting a swapchain image with dimensions that do not match the surface dimensions is implementation and platform-dependent. If presentGravityX or presentGravityY are 0, the presentation gravity **must** match that defined by the native platform surface on platforms which define surface gravity.

Valid Usage

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07765
  If presentGravityX is 0, presentGravityY **must** be 0
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07766
  If presentGravityX is not 0, presentGravityY **must** not be 0
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07767
  scalingBehavior **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07768
  presentGravityX **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07769
  presentGravityY **must** not have more than one bit set

- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07770
  `scalingBehavior` **must** be `0` or a valid scaling method for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentScaling`, given VkSwapchainCreateInfoKHR::`presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07771
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, `scalingBehavior` **must** be `0` or a valid scaling method for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentScaling`, given each present mode in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07772
  `presentGravityX` **must** be `0` or a valid x-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentGravityX`, given VkSwapchainCreateInfoKHR::`presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07773
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, `presentGravityX` **must** be `0` or a valid x-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentGravityX`, given each present mode in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07774
  `presentGravityY` **must** be `0` or a valid y-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentGravityY`, given VkSwapchainCreateInfoKHR::`presentMode` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07775
  If the swapchain is created with VkSwapchainPresentModesCreateInfoKHR, `presentGravityY` **must** be `0` or a valid y-axis present gravity for the surface as returned in VkSurfacePresentScalingCapabilitiesKHR::`supportedPresentGravityY`, given each present mode in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` in VkSurfacePresentModeKHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-swapchainMaintenance1-10154
  If the `swapchainMaintenance1` feature is not enabled, then `scalingBehavior`, `presentGravityX`, and `presentGravityY` **must** be `0`

Valid Usage (Implicit)

- VUID-VkSwapchainPresentScalingCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_SCALING_CREATE_INFO_KHR
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-parameter
  If `scalingBehavior` is not `0`, `scalingBehavior` **must** be a valid combination of VkPresentScalingFlagBitsKHR values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-parameter

If `presentGravityX` is not `0`, `presentGravityX` **must** be a valid combination of VkPresentGravityFlagBitsKHR values

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-parameter
  If `presentGravityY` is not `0`, `presentGravityY` **must** be a valid combination of VkPresentGravityFlagBitsKHR values

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

To destroy a swapchain object call:

```
// Provided by VK_KHR_swapchain
void vkDestroySwapchainKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the VkDevice associated with `swapchain`.
- `swapchain` is the swapchain to destroy.
- `pAllocator` is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see Memory Allocation).

The application **must** not destroy a swapchain until after completion of all outstanding operations on images that were acquired from the swapchain. `swapchain` and all associated `VkImage` handles are destroyed, and **must** not be acquired or used any more by the application. The memory of each `VkImage` will only be freed after that image is no longer used by the presentation engine. For example, if one image of the swapchain is being displayed in a window, the memory for that image **may** not be freed until the window is destroyed, or another swapchain is created for the window. Destroying the swapchain does not invalidate the parent `VkSurfaceKHR`, and a new swapchain **can** be created with it.

When a swapchain associated with a display surface is destroyed, if the image most recently presented to the display surface is from the swapchain being destroyed, then either any display resources modified by presenting images from any swapchain associated with the display surface **must** be reverted by the implementation to their state prior to the first present performed on one of these swapchains, or such resources **must** be left in their current state.

If `swapchain` has exclusive full-screen access, it is released before the swapchain is destroyed.

Valid Usage

- VUID-vkDestroySwapchainKHR-swapchain-01282

All uses of presentable images acquired from `swapchain` **must** have completed execution

- VUID-vkDestroySwapchainKHR-swapchain-01283
  If `VkAllocationCallbacks` were provided when `swapchain` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySwapchainKHR-swapchain-01284
  If no `VkAllocationCallbacks` were provided when `swapchain` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroySwapchainKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroySwapchainKHR-swapchain-parameter
  If `swapchain` is not VK_NULL_HANDLE, `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkDestroySwapchainKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroySwapchainKHR-swapchain-parent
  If `swapchain` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

When the `VK_KHR_display_swapchain` extension is enabled, multiple swapchains that share presentable images are created by calling:

```
// Provided by VK_KHR_display_swapchain
VkResult vkCreateSharedSwapchainsKHR(
    VkDevice                                    device,
    uint32_t                                    swapchainCount,
    const VkSwapchainCreateInfoKHR*             pCreateInfos,
    const VkAllocationCallbacks*                pAllocator,
    VkSwapchainKHR*                             pSwapchains);
```

- `device` is the device to create the swapchains for.
- `swapchainCount` is the number of swapchains to create.
- `pCreateInfos` is a pointer to an array of VkSwapchainCreateInfoKHR structures specifying the parameters of the created swapchains.

- `pAllocator` is the allocator used for host memory allocated for the swapchain objects when there is no more specific allocator available (see Memory Allocation).
- `pSwapchains` is a pointer to an array of VkSwapchainKHR handles in which the created swapchain objects will be returned.

`vkCreateSharedSwapchainsKHR` is similar to vkCreateSwapchainKHR, except that it takes an array of VkSwapchainCreateInfoKHR structures, and returns an array of swapchain objects.

The swapchain creation parameters that affect the properties and number of presentable images **must** match between all the swapchains. If the displays used by any of the swapchains do not use the same presentable image layout or are incompatible in a way that prevents sharing images, swapchain creation will fail with the result code VK_ERROR_INCOMPATIBLE_DISPLAY_KHR. If any error occurs, no swapchains will be created. Images presented to multiple swapchains **must** be re-acquired from all of them before being modified. After destroying one or more of the swapchains, the remaining swapchains and the presentable images **can** continue to be used.

Valid Usage (Implicit)

- VUID-vkCreateSharedSwapchainsKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateSharedSwapchainsKHR-pCreateInfos-parameter
  `pCreateInfos` **must** be a valid pointer to an array of `swapchainCount` valid VkSwapchainCreateInfoKHR structures
- VUID-vkCreateSharedSwapchainsKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSharedSwapchainsKHR-pSwapchains-parameter
  `pSwapchains` **must** be a valid pointer to an array of `swapchainCount` VkSwapchainKHR handles
- VUID-vkCreateSharedSwapchainsKHR-device-queuecount
  The device **must** have been created with at least `1` queue
- VUID-vkCreateSharedSwapchainsKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_INCOMPATIBLE_DISPLAY_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To obtain the array of presentable images associated with a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkGetSwapchainImagesKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint32_t*                                   pSwapchainImageCount,
    VkImage*                                    pSwapchainImages);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.
- `pSwapchainImageCount` is a pointer to an integer related to the number of presentable images available or queried, as described below.
- `pSwapchainImages` is either `NULL` or a pointer to an array of `VkImage` handles.

If `pSwapchainImages` is `NULL`, then the number of presentable images for `swapchain` is returned in `pSwapchainImageCount`. Otherwise, `pSwapchainImageCount` **must** point to a variable set by the application to the number of elements in the `pSwapchainImages` array, and on return the variable is overwritten with the number of structures actually written to `pSwapchainImages`. If the value of `pSwapchainImageCount` is less than the number of presentable images for `swapchain`, at most `pSwapchainImageCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available presentable images were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainImagesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetSwapchainImagesKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkGetSwapchainImagesKHR-pSwapchainImageCount-parameter
  `pSwapchainImageCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetSwapchainImagesKHR-pSwapchainImages-parameter
  If the value referenced by `pSwapchainImageCount` is not `0`, and `pSwapchainImages` is not `NULL`, `pSwapchainImages` **must** be a valid pointer to an array of `pSwapchainImageCount` VkImage handles
- VUID-vkGetSwapchainImagesKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

NOTE

By knowing all presentable images used in the swapchain, the application can create command buffers that reference these images prior to entering its main rendering loop. However, command buffers are not allowed to reference presentable images created with VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR until their indices have been returned from vkAcquireNextImageKHR at least once.

Images returned by vkGetSwapchainImagesKHR are fully backed by memory before they are passed to the application, as if they are each bound completely and contiguously to a single `VkDeviceMemory` object , unless the swapchain is created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag . All presentable images are initially in the VK_IMAGE_LAYOUT_UNDEFINED layout, thus before using presentable images, the application **must** transition them to a valid layout for the intended use.

Further, the lifetime of presentable images is controlled by the implementation, so applications **must** not destroy a presentable image. See vkDestroySwapchainKHR for further details on the lifetime of presentable images.

Images **can** also be created by using vkCreateImage with VkImageSwapchainCreateInfoKHR and bound to swapchain memory using vkBindImageMemory2 with VkBindImageMemorySwapchainInfoKHR. These images **can** be used anywhere swapchain images are used, and are useful in logical devices with multiple physical devices to create peer memory bindings of swapchain memory. These images and bindings have no effect on what memory is presented. Unlike images retrieved from `vkGetSwapchainImagesKHR`, these images **must** be destroyed with vkDestroyImage.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_KHR_swapchain
VkResult vkAcquireNextImageKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint64_t                                    timeout,
    VkSemaphore                                 semaphore,
    VkFence                                     fence,
    uint32_t*                                   pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain from which an image is being acquired.
- `timeout` specifies how long the function waits, in nanoseconds, if no image is available.
- `semaphore` is VK_NULL_HANDLE or a semaphore defining a semaphore signal operation.
- `fence` is VK_NULL_HANDLE or a fence to signal.
- `pImageIndex` is a pointer to a `uint32_t` in which the index of the next image to use (i.e. an index into the array of images returned by `vkGetSwapchainImagesKHR`) is returned.

If the `swapchain` has been created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application, as if it is bound completely and contiguously to a single `VkDeviceMemory` object.

If `semaphore` defines a semaphore signal operation, its first synchronization scope includes acquisition of the image.

Valid Usage

- VUID-vkAcquireNextImageKHR-swapchain-01285
  `swapchain` **must** not be in the retired state
- VUID-vkAcquireNextImageKHR-semaphore-01286
  If `semaphore` is not VK_NULL_HANDLE, it **must** be unsignaled
- VUID-vkAcquireNextImageKHR-semaphore-01779
  If `semaphore` is not VK_NULL_HANDLE, it **must** not have any uncompleted signal or wait operations pending
- VUID-vkAcquireNextImageKHR-fence-01287
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-vkAcquireNextImageKHR-fence-10066
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkAcquireNextImageKHR-semaphore-01780
  `semaphore` and `fence` **must** not both be equal to VK_NULL_HANDLE
- VUID-vkAcquireNextImageKHR-surface-07783
  If forward progress cannot be guaranteed for the `surface` used to create the `swapchain`

member of pAcquireInfo, timeout **must** not be UINT64_MAX

- VUID-vkAcquireNextImageKHR-semaphore-03265
  semaphore **must** have a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY

Valid Usage (Implicit)

- VUID-vkAcquireNextImageKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkAcquireNextImageKHR-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle
- VUID-vkAcquireNextImageKHR-semaphore-parameter
  If semaphore is not VK_NULL_HANDLE, semaphore **must** be a valid VkSemaphore handle
- VUID-vkAcquireNextImageKHR-fence-parameter
  If fence is not VK_NULL_HANDLE, fence **must** be a valid VkFence handle
- VUID-vkAcquireNextImageKHR-pImageIndex-parameter
  pImageIndex **must** be a valid pointer to a uint32_t value
- VUID-vkAcquireNextImageKHR-swapchain-parent
  swapchain **must** have been created, allocated, or retrieved from device
- VUID-vkAcquireNextImageKHR-semaphore-parent
  If semaphore is a valid handle, it **must** have been created, allocated, or retrieved from device
- VUID-vkAcquireNextImageKHR-fence-parent
  If fence is a valid handle, it **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to swapchain **must** be externally synchronized
- Host access to semaphore **must** be externally synchronized
- Host access to fence **must** be externally synchronized

Return Codes

Success

- VK_NOT_READY
- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST

- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

If an image is acquired successfully, vkAcquireNextImageKHR **must** either return VK_SUCCESS or VK_SUBOPTIMAL_KHR. The implementation **may** return VK_SUBOPTIMAL_KHR if the swapchain no longer matches the surface properties exactly, but **can** still be used for presentation.

When successful, vkAcquireNextImageKHR acquires a presentable image from swapchain that an application **can** use, and sets pImageIndex to the index of that image within the swapchain. The presentation engine **may** not have finished reading from the image at the time it is acquired, so the application **must** use semaphore and/or fence to ensure that the image layout and contents are not modified until the presentation engine reads have completed. Once vkAcquireNextImageKHR successfully acquires an image, the semaphore signal operation referenced by semaphore, if not VK_NULL_HANDLE, and the fence signal operation referenced by fence, if not VK_NULL_HANDLE, are submitted for execution. If vkAcquireNextImageKHR does not successfully acquire an image, semaphore and fence are unaffected. The order in which images are acquired is implementation-dependent, and **may** be different than the order the images were presented.

If timeout is zero, then vkAcquireNextImageKHR does not wait, and will either successfully acquire an image, or fail and return VK_NOT_READY if no image is available.

If the specified timeout period expires before an image is acquired, vkAcquireNextImageKHR returns VK_TIMEOUT. If timeout is UINT64_MAX, the timeout period is treated as infinite, and vkAcquireNextImageKHR will block until an image is acquired or an error occurs.

Let S be the number of images in swapchain. If swapchain is created with VkSwapchainPresentModesCreateInfoKHR, let M be the maximum of the values in VkSurfaceCapabilitiesKHR::minImageCount when queried with each present mode in VkSwapchainPresentModesCreateInfoKHR::pPresentModes in VkSurfacePresentModeKHR. Otherwise, let M be the value of VkSurfaceCapabilitiesKHR::minImageCount without a VkSurfacePresentModeKHR as part of the query input.

vkAcquireNextImageKHR **should** not be called if the number of images that the application has currently acquired is greater than S-M. If vkAcquireNextImageKHR is called when the number of images that the application has currently acquired is less than or equal to S-M, vkAcquireNextImageKHR **must** return in finite time with an allowed VkResult code.

NOTE

Returning a result in finite time guarantees that the implementation cannot deadlock an application, or suspend its execution indefinitely with correct API usage. Acquiring too many images at once may block indefinitely, which is covered by valid usage when attempting to use UINT64_MAX. For example, a scenario here is

when a compositor holds on to images which are currently being presented, and there are not any vacant images left to be acquired.

If the swapchain images no longer match native surface properties, either VK_SUBOPTIMAL_KHR or VK_ERROR_OUT_OF_DATE_KHR **must** be returned. If VK_ERROR_OUT_OF_DATE_KHR is returned, no image is acquired and attempts to present previously acquired images to the swapchain will also fail with VK_ERROR_OUT_OF_DATE_KHR. Applications need to create a new swapchain for the surface to continue presenting if VK_ERROR_OUT_OF_DATE_KHR is returned.

NOTE

VK_SUBOPTIMAL_KHR **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain in this state, or to re-create the swapchain to better match the platform surface properties.

If device loss occurs (see Lost Device) before the timeout has expired, `vkAcquireNextImageKHR` **must** return in finite time with either one of the allowed success codes, or VK_ERROR_DEVICE_LOST.

If `semaphore` is not VK_NULL_HANDLE, the semaphore **must** be unsignaled, with no signal or wait operations pending. It will become signaled when the application **can** use the image.

NOTE

Use of `semaphore` allows rendering operations to be recorded and submitted before the presentation engine has completed its use of the image.

If `fence` is not equal to VK_NULL_HANDLE, the fence **must** be unsignaled, with no signal operations pending. It will become signaled when the application **can** use the image.

NOTE

Applications **should** not rely on `vkAcquireNextImageKHR` blocking in order to meter their rendering speed. The implementation **may** return from this function immediately regardless of how many presentation requests are queued, and regardless of when queued presentation requests will complete relative to the call. Instead, applications **can** use `fence` to meter their frame generation work to match the presentation rate.

An application **must** wait until either the `semaphore` or `fence` is signaled before accessing the image's data.

NOTE

When the presentable image will be accessed by some stage S, the recommended idiom for ensuring correct synchronization is:

- The VkSubmitInfo used to submit the image layout transition for execution includes `vkAcquireNextImageKHR`::`semaphore` in its `pWaitSemaphores` member, with the corresponding element of `pWaitDstStageMask` including S.
- The synchronization command that performs any necessary image layout transition includes S in both the `srcStageMask` and `dstStageMask`.

After a successful return, the image indicated by `pImageIndex` and its data will be unmodified compared to when it was presented.

NOTE

Exclusive ownership of presentable images corresponding to a swapchain created with VK_SHARING_MODE_EXCLUSIVE as defined in Resource Sharing is not altered by a call to `vkAcquireNextImageKHR`. That means upon the first acquisition from such a swapchain presentable images are not owned by any queue family, while at subsequent acquisitions the presentable images remain owned by the queue family the image was previously presented on.

The possible return values for `vkAcquireNextImageKHR` depend on the `timeout` provided:

- VK_SUCCESS is returned if an image became available.
- VK_ERROR_SURFACE_LOST_KHR is returned if the surface becomes no longer available.
- VK_NOT_READY is returned if `timeout` is zero and no image was available.
- VK_TIMEOUT is returned if `timeout` is greater than zero and less than `UINT64_MAX`, and no image became available within the time allowed.
- VK_SUBOPTIMAL_KHR **may** be returned if an image became available, and the swapchain no longer matches the surface properties exactly, but **can** still be used to present to the surface successfully.

NOTE

This **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain indefinitely or temporarily in this state, or to re-create the swapchain to better match the platform surface properties.

- VK_ERROR_OUT_OF_DATE_KHR is returned if the surface has changed in such a way that it is no longer compatible with the swapchain, and further presentation requests using the swapchain will fail. Applications **must** query the new surface properties and recreate their swapchain if they wish to continue presenting to the surface.

If the native surface and presented image sizes no longer match, presentation **may** fail unless the swapchain is created with a non-zero value in VkSwapchainPresentScalingCreateInfoKHR ::`scalingBehavior` . If presentation does succeed, the mapping from the presented image to the native surface is defined by the VkSwapchainPresentScalingCreateInfoKHR structure if provided. Otherwise it is implementation-defined. It is the application's responsibility to detect surface size changes and react appropriately. If presentation fails because of a mismatch in the surface and presented image sizes, a VK_ERROR_OUT_OF_DATE_KHR error will be returned.

NOTE

For example, consider a 4x3 window/surface that gets resized to be 3x4 (taller than wider). On some window systems, the portion of the window/surface that was previously and still is visible (the 3x3 part) will contain the same contents as before, while the remaining parts of the window will have undefined contents. Other window systems **may** squash/stretch the image to fill the new window size without any undefined contents, or apply some other mapping.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
VkResult vkAcquireNextImage2KHR(
    VkDevice                                    device,
    const VkAcquireNextImageInfoKHR*            pAcquireInfo,
    uint32_t*                                   pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `pAcquireInfo` is a pointer to a VkAcquireNextImageInfoKHR structure containing parameters of the acquire.
- `pImageIndex` is a pointer to a `uint32_t` value specifying the index of the next image to use.

If the `swapchain` has been created with the VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application.

Valid Usage

- VUID-vkAcquireNextImage2KHR-surface-07784
  If forward progress cannot be guaranteed for the `surface` used to create `swapchain`, the `timeout` member of `pAcquireInfo` **must** not be `UINT64_MAX`

Valid Usage (Implicit)

- VUID-vkAcquireNextImage2KHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireNextImage2KHR-pAcquireInfo-parameter
  `pAcquireInfo` **must** be a valid pointer to a valid VkAcquireNextImageInfoKHR structure
- VUID-vkAcquireNextImage2KHR-pImageIndex-parameter
  `pImageIndex` **must** be a valid pointer to a `uint32_t` value

Return Codes

Success

- VK_NOT_READY
- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST

- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkAcquireNextImageInfoKHR structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkAcquireNextImageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint64_t           timeout;
    VkSemaphore        semaphore;
    VkFence            fence;
    uint32_t           deviceMask;
} VkAcquireNextImageInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchain is a non-retired swapchain from which an image is acquired.
- timeout specifies how long the function waits, in nanoseconds, if no image is available.
- semaphore is VK_NULL_HANDLE or a semaphore that defines a semaphore signal operation.
- fence is VK_NULL_HANDLE or a fence to signal.
- deviceMask is a mask of physical devices for which the swapchain image will be ready to use when the semaphore or fence is signaled.

If vkAcquireNextImageKHR is used, the device mask is considered to include all physical devices in the logical device.

NOTE

vkAcquireNextImage2KHR signals at most one semaphore, even if the application requests waiting for multiple physical devices to be ready via the deviceMask. However, only a single physical device **can** wait on that semaphore, since the semaphore becomes unsignaled when the wait succeeds. For other physical devices to wait for the image to be ready, it is necessary for the application to submit semaphore signal operation(s) to that first physical device to signal additional semaphore(s) after the wait succeeds, which the other physical device(s) **can** wait upon.

Valid Usage

- VUID-VkAcquireNextImageInfoKHR-swapchain-01675
  `swapchain` **must** not be in the retired state
- VUID-VkAcquireNextImageInfoKHR-semaphore-01288
  If `semaphore` is not VK_NULL_HANDLE, it **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-semaphore-01781
  If `semaphore` is not VK_NULL_HANDLE, it **must** not have any uncompleted signal or wait operations pending
- VUID-VkAcquireNextImageInfoKHR-fence-01289
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-fence-10067
  If `fence` is not VK_NULL_HANDLE, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-VkAcquireNextImageInfoKHR-semaphore-01782
  `semaphore` and `fence` **must** not both be equal to VK_NULL_HANDLE
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01290
  `deviceMask` **must** be a valid device mask
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01291
  `deviceMask` **must** not be zero
- VUID-VkAcquireNextImageInfoKHR-semaphore-03266
  `semaphore` **must** have a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY

Valid Usage (Implicit)

- VUID-VkAcquireNextImageInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR
- VUID-VkAcquireNextImageInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkAcquireNextImageInfoKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-VkAcquireNextImageInfoKHR-semaphore-parameter
  If `semaphore` is not VK_NULL_HANDLE, `semaphore` **must** be a valid VkSemaphore handle
- VUID-VkAcquireNextImageInfoKHR-fence-parameter
  If `fence` is not VK_NULL_HANDLE, `fence` **must** be a valid VkFence handle
- VUID-VkAcquireNextImageInfoKHR-commonparent
  Each of `fence`, `semaphore`, and `swapchain` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized
- Host access to `semaphore` **must** be externally synchronized
- Host access to `fence` **must** be externally synchronized

After queueing all rendering commands and transitioning the image to the correct layout, to queue an image for presentation, call:

```
// Provided by VK_KHR_swapchain
VkResult vkQueuePresentKHR(
    VkQueue                                     queue,
    const VkPresentInfoKHR*                     pPresentInfo);
```

- `queue` is a queue that is capable of presentation to the target surface's platform on the same device as the image's swapchain.
- `pPresentInfo` is a pointer to a VkPresentInfoKHR structure specifying parameters of the presentation.

NOTE There is no requirement for an application to present images in the same order that they were acquired - applications can arbitrarily present any image that is currently acquired.

NOTE The origin of the native orientation of the surface coordinate system is not specified in the Vulkan specification; it depends on the platform. For most platforms the origin is by default upper-left, meaning the pixel of the presented VkImage at coordinates (0,0) would appear at the upper left pixel of the platform surface (assuming VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR, and the display standing the right way up).

The result codes VK_ERROR_OUT_OF_DATE_KHR and VK_SUBOPTIMAL_KHR have the same meaning when returned by `vkQueuePresentKHR` as they do when returned by `vkAcquireNextImageKHR`. If any `swapchain` member of `pPresentInfo` was created with VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT, VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT will be returned if that swapchain does not have exclusive full-screen access, possibly for implementation-specific reasons outside of the application's control. If multiple swapchains are presented, the result code is determined by applying the following rules in order:

- If the device is lost, VK_ERROR_DEVICE_LOST is returned.
- If any of the target surfaces are no longer available the error VK_ERROR_SURFACE_LOST_KHR is returned.
- If any of the presents would have a result of VK_ERROR_OUT_OF_DATE_KHR if issued separately then VK_ERROR_OUT_OF_DATE_KHR is returned.

- If any of the presents would have a result of VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT if issued separately then VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT is returned.
- If any of the presents would have a result of VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT if issued separately then VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT is returned.
- If any of the presents would have a result of VK_SUBOPTIMAL_KHR if issued separately then VK_SUBOPTIMAL_KHR is returned.
- Otherwise VK_SUCCESS is returned.

Any writes to memory backing the images referenced by the `pImageIndices` and `pSwapchains` members of `pPresentInfo`, that are available before vkQueuePresentKHR is executed, are automatically made visible to the read access performed by the presentation engine. This automatic visibility operation for an image happens-after the semaphore wait operation, and happens-before the presentation engine accesses the image.

Presentation is a read-only operation that will not affect the content of the presentable images. Upon reacquiring the image and transitioning it away from the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR layout, the contents will be the same as they were prior to transitioning the image to the present source layout and presenting it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

Calls to `vkQueuePresentKHR` **may** block, but **must** return in finite time. The processing of the presentation happens in issue order with other queue operations, but semaphores **must** be used to ensure that prior rendering and other commands in the specified queue complete before the presentation begins. The presentation command itself does not delay processing of subsequent commands on the queue. However, presentation requests sent to a particular queue are always performed in order. Exact presentation timing is controlled by the semantics of the presentation engine and native platform in use.

If an image is presented to a swapchain created from a display surface, the mode of the associated display will be updated, if necessary, to match the mode specified when creating the display surface. The mode switch and presentation of the specified image will be performed as one atomic operation.

Queueing an image for presentation defines a set of *queue operations*, including waiting on the semaphores and submitting a presentation request to the presentation engine. However, the scope of this set of queue operations does not include the actual processing of the image by the presentation engine.

If `vkQueuePresentKHR` fails to enqueue the corresponding set of queue operations, it **may** return VK_ERROR_OUT_OF_HOST_MEMORY or VK_ERROR_OUT_OF_DEVICE_MEMORY. If it does, the implementation **must** ensure that the state and contents of any resources or synchronization primitives referenced is unaffected by the call or its failure.

If `vkQueuePresentKHR` fails in such a way that the implementation is unable to make that guarantee, the implementation **must** return VK_ERROR_DEVICE_LOST.

However, if the presentation request is rejected by the presentation engine with an error VK_ERROR_OUT_OF_DATE_KHR, VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT, VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT, or VK_ERROR_SURFACE_LOST_KHR, the set of queue operations are still considered to be enqueued and thus any semaphore wait operation specified in VkPresentInfoKHR will execute when the corresponding queue operation is complete.

vkQueuePresentKHR releases the acquisition of the images referenced by imageIndices. The queue family corresponding to the queue vkQueuePresentKHR is executed on **must** have ownership of the presented images as defined in Resource Sharing. vkQueuePresentKHR does not alter the queue family ownership, but the presented images **must** not be used again before they have been reacquired using vkAcquireNextImageKHR.

NOTE The application **can** continue to present any acquired images from a retired swapchain as long as the swapchain has not entered a state that causes vkQueuePresentKHR to return VK_ERROR_OUT_OF_DATE_KHR.

Valid Usage

- VUID-vkQueuePresentKHR-pSwapchains-01292
  Each element of pSwapchains member of pPresentInfo **must** be a swapchain that is created for a surface for which presentation is supported from queue as determined using a call to vkGetPhysicalDeviceSurfaceSupportKHR
- VUID-vkQueuePresentKHR-pSwapchains-01293
  If more than one member of pSwapchains was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same display mode
- VUID-vkQueuePresentKHR-pWaitSemaphores-01294
  When a semaphore wait operation referring to a binary semaphore defined by the elements of the pWaitSemaphores member of pPresentInfo executes on queue, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueuePresentKHR-pWaitSemaphores-03267
  All elements of the pWaitSemaphores member of pPresentInfo **must** be created with a VkSemaphoreType of VK_SEMAPHORE_TYPE_BINARY
- VUID-vkQueuePresentKHR-pWaitSemaphores-03268
  All elements of the pWaitSemaphores member of pPresentInfo **must** reference a semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueuePresentKHR-queue-parameter
  queue **must** be a valid VkQueue handle
- VUID-vkQueuePresentKHR-pPresentInfo-parameter
  pPresentInfo **must** be a valid pointer to a valid VkPresentInfoKHR structure

Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPresentInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkPresentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 waitSemaphoreCount;
    const VkSemaphore*       pWaitSemaphores;
    uint32_t                 swapchainCount;
    const VkSwapchainKHR*    pSwapchains;
    const uint32_t*          pImageIndices;
    VkResult*                pResults;
} VkPresentInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `waitSemaphoreCount` is the number of semaphores to wait for before issuing the present request. The number **may** be zero.
- `pWaitSemaphores` is `NULL` or a pointer to an array of VkSemaphore objects with `waitSemaphoreCount` entries, and specifies the semaphores to wait for before issuing the present request.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pSwapchains` is a pointer to an array of VkSwapchainKHR objects with `swapchainCount` entries.
- `pImageIndices` is a pointer to an array of indices into the array of each swapchain's presentable images, with `swapchainCount` entries. Each entry in this array identifies the image to present on the corresponding entry in the `pSwapchains` array.
- `pResults` is a pointer to an array of VkResult typed elements with `swapchainCount` entries. Applications that do not need per-swapchain results **can** use `NULL` for `pResults`. If non-`NULL`, each entry in `pResults` will be set to the VkResult for presenting the swapchain corresponding to the same index in `pSwapchains`.

Before an application **can** present an image, the image's layout **must** be transitioned to the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR layout, or for a shared presentable image the VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR layout.

NOTE

When transitioning the image to the appropriate layout, there is no need to delay subsequent processing, or perform any visibility operations (as vkQueuePresentKHR performs automatic visibility operations). To achieve this, the `dstAccessMask` member of the VkImageMemoryBarrier **should** be `0`, and the `dstStageMask` parameter **should** be VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT.

The second synchronization scope of each semaphore wait operation defined by this structure includes presentation of each image indicated by `pSwapchains` and `pImageIndices`.

Valid Usage

- VUID-VkPresentInfoKHR-pSwapchain-09231

Elements of pSwapchain **must** be unique

- VUID-VkPresentInfoKHR-pImageIndices-01430
  Each element of pImageIndices **must** be the index of a presentable image acquired from the swapchain specified by the corresponding element of the pSwapchains array, and the presented image subresource **must** be in the VK_IMAGE_LAYOUT_PRESENT_SRC_KHR or VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR layout at the time the operation is executed on a VkDevice
- VUID-VkPresentInfoKHR-pNext-06235
  If a VkPresentIdKHR structure is included in the pNext chain, and the presentId feature is not enabled, each presentIds entry in that structure **must** be NULL
- VUID-VkPresentInfoKHR-swapchainMaintenance1-10158
  If the swapchainMaintenance1 feature is not enabled, then the pNext chain **must** not include a VkSwapchainPresentFenceInfoKHR structure
- VUID-VkPresentInfoKHR-pSwapchains-09199
  If any element of the pSwapchains array has been created with VkSwapchainPresentModesCreateInfoKHR, all of the elements of this array **must** be created with VkSwapchainPresentModesCreateInfoKHR
- VUID-VkPresentInfoKHR-pNext-10821
  If a VkPresentId2KHR structure is included in the pNext chain, and the presentId2 feature is not enabled, each presentIds entry in that structure **must** be zero
- VUID-VkPresentInfoKHR-presentId2Supported-10822
  If a VkPresentId2KHR structure is included and contains non-zero presentIds, presentId2Supported **must** be VK_TRUE in the VkSurfaceCapabilitiesPresentId2KHR structure returned by vkGetPhysicalDeviceSurfaceCapabilities2KHR for the surface

Valid Usage (Implicit)

- VUID-VkPresentInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_INFO_KHR
- VUID-VkPresentInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkDeviceGroupPresentInfoKHR, VkDisplayPresentInfoKHR, VkFrameBoundaryEXT, VkPresentId2KHR, VkPresentIdKHR, VkPresentRegionsKHR, VkPresentTimingsInfoEXT, VkSwapchainPresentFenceInfoKHR, or VkSwapchainPresentModeInfoKHR
- VUID-VkPresentInfoKHR-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkPresentInfoKHR-pWaitSemaphores-parameter
  If waitSemaphoreCount is not 0, pWaitSemaphores **must** be a valid pointer to an array of waitSemaphoreCount valid VkSemaphore handles
- VUID-VkPresentInfoKHR-pSwapchains-parameter
  pSwapchains **must** be a valid pointer to an array of swapchainCount valid VkSwapchainKHR handles

- VUID-VkPresentInfoKHR-pImageIndices-parameter
  `pImageIndices` **must** be a valid pointer to an array of `swapchainCount` `uint32_t` values
- VUID-VkPresentInfoKHR-pResults-parameter
  If `pResults` is not `NULL`, `pResults` **must** be a valid pointer to an array of `swapchainCount` VkResult values
- VUID-VkPresentInfoKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`
- VUID-VkPresentInfoKHR-commonparent
  Both of the elements of `pSwapchains`, and the elements of `pWaitSemaphores` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to each member of `pWaitSemaphores` **must** be externally synchronized
- Host access to each member of `pSwapchains` **must** be externally synchronized

When the `VK_KHR_incremental_present` extension is enabled, additional fields **can** be specified that allow an application to specify that only certain rectangular regions of the presentable images of a swapchain are changed. This is an optimization hint that a presentation engine **may** use to only update the region of a surface that is actually changing. The application still **must** ensure that all pixels of a presented image contain the desired values, in case the presentation engine ignores this hint. An application **can** provide this hint by adding a `VkPresentRegionsKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentRegionsKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionsKHR {
    VkStructureType              sType;
    const void*                  pNext;
    uint32_t                     swapchainCount;
    const VkPresentRegionKHR*    pRegions;
} VkPresentRegionsKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pRegions` is `NULL` or a pointer to an array of `VkPresentRegionKHR` elements with `swapchainCount` entries. If not `NULL`, each element of `pRegions` contains the region that has changed since the last present to the swapchain in the corresponding entry in the `VkPresentInfoKHR`::`pSwapchains` array.

Valid Usage

- VUID-VkPresentRegionsKHR-swapchainCount-01260
  `swapchainCount` **must** be the same value as `VkPresentInfoKHR`::`swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentRegionsKHR` structure

Valid Usage (Implicit)

- VUID-VkPresentRegionsKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR
- VUID-VkPresentRegionsKHR-pRegions-parameter
  If `pRegions` is not `NULL`, `pRegions` **must** be a valid pointer to an array of `swapchainCount` valid VkPresentRegionKHR structures
- VUID-VkPresentRegionsKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

For a given image and swapchain, the region to present is specified by the `VkPresentRegionKHR` structure, which is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionKHR {
    uint32_t                rectangleCount;
    const VkRectLayerKHR*   pRectangles;
} VkPresentRegionKHR;
```

- `rectangleCount` is the number of rectangles in `pRectangles`, or zero if the entire image has changed and should be presented.
- `pRectangles` is either `NULL` or a pointer to an array of `VkRectLayerKHR` structures. The `VkRectLayerKHR` structure is the framebuffer coordinates, plus layer, of a portion of a presentable image that has changed and **must** be presented. If non-`NULL`, each entry in `pRectangles` is a rectangle of the given image that has changed since the last image was presented to the given swapchain. The rectangles **must** be specified relative to VkSurfaceCapabilitiesKHR ::`currentTransform`, regardless of the swapchain's `preTransform`. The presentation engine will apply the `preTransform` transformation to the rectangles, along with any further transformation it applies to the image content.

Valid Usage (Implicit)

- VUID-VkPresentRegionKHR-pRectangles-parameter
  If `rectangleCount` is not `0`, and `pRectangles` is not `NULL`, `pRectangles` **must** be a valid pointer to an array of `rectangleCount` valid VkRectLayerKHR structures

The `VkRectLayerKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkRectLayerKHR {
    VkOffset2D    offset;
    VkExtent2D    extent;
    uint32_t      layer;
} VkRectLayerKHR;
```

- `offset` is the origin of the rectangle, in pixels.
- `extent` is the size of the rectangle, in pixels.
- `layer` is the layer of the image. For images with only one layer, the value of `layer` **must** be 0.

Some platforms allow the size of a surface to change, and then scale the pixels of the image to fit the surface. `VkRectLayerKHR` specifies pixels of the swapchain's image(s), which will be constant for the life of the swapchain.

Valid Usage

- VUID-VkRectLayerKHR-offset-04864
  The sum of `offset` and `extent`, after being transformed according to the `preTransform` member of the VkSwapchainCreateInfoKHR structure, **must** be no greater than the `imageExtent` member of the VkSwapchainCreateInfoKHR structure passed to vkCreateSwapchainKHR
- VUID-VkRectLayerKHR-layer-01262
  `layer` **must** be less than the `imageArrayLayers` member of the VkSwapchainCreateInfoKHR structure passed to vkCreateSwapchainKHR

When the `VK_KHR_display_swapchain` extension is enabled, additional fields **can** be specified when presenting an image to a swapchain by setting VkPresentInfoKHR::`pNext` to point to a VkDisplayPresentInfoKHR structure.

The `VkDisplayPresentInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display_swapchain
typedef struct VkDisplayPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkRect2D           srcRect;
    VkRect2D           dstRect;
    VkBool32           persistent;
} VkDisplayPresentInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcRect` is a rectangular region of pixels to present. It **must** be a subset of the image being presented. If `VkDisplayPresentInfoKHR` is not specified, this region will be assumed to be the entire presentable image.
- `dstRect` is a rectangular region within the visible region of the swapchain's display mode. If `VkDisplayPresentInfoKHR` is not specified, this region will be assumed to be the entire visible region of the swapchain's mode. If the specified rectangle is a subset of the display mode's visible region, content from display planes below the swapchain's plane will be visible outside the rectangle. If there are no planes below the swapchain's, the area outside the specified rectangle will be black. If portions of the specified rectangle are outside of the display's visible region, pixels mapping only to those portions of the rectangle will be discarded.
- `persistent`: If this is VK_TRUE, the display engine will enable buffered mode on displays that support it. This allows the display engine to stop sending content to the display until a new image is presented. The display will instead maintain a copy of the last presented image. This allows less power to be used, but **may** increase presentation latency. If `VkDisplayPresentInfoKHR` is not specified, persistent mode will not be used.

If the extent of the `srcRect` and `dstRect` are not equal, the presented pixels will be scaled accordingly.

Valid Usage

- VUID-VkDisplayPresentInfoKHR-srcRect-01257
  `srcRect` **must** specify a rectangular region that is a subset of the image being presented
- VUID-VkDisplayPresentInfoKHR-dstRect-01258
  `dstRect` **must** specify a rectangular region that is a subset of the `visibleRegion` parameter of the display mode the swapchain being presented uses
- VUID-VkDisplayPresentInfoKHR-persistentContent-01259
  If the `persistentContent` member of the `VkDisplayPropertiesKHR` structure returned by `vkGetPhysicalDeviceDisplayPropertiesKHR` for the display the present operation targets is VK_FALSE, then `persistent` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-VkDisplayPresentInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR

Structure Chaining

Extends the structure

- VkPresentInfoKHR

If the `pNext` chain of VkPresentInfoKHR includes a `VkDeviceGroupPresentInfoKHR` structure, then that structure includes an array of device masks and a device group present mode.

The `VkDeviceGroupPresentInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupPresentInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    uint32_t                                 swapchainCount;
    const uint32_t*                          pDeviceMasks;
    VkDeviceGroupPresentModeFlagBitsKHR      mode;
} VkDeviceGroupPresentInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is zero or the number of elements in `pDeviceMasks`.
- `pDeviceMasks` is a pointer to an array of device masks, one for each element of VkPresentInfoKHR::`pSwapchains`.
- `mode` is a VkDeviceGroupPresentModeFlagBitsKHR value specifying the device group present mode that will be used for this present.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding physical device **must** have a presentation engine as reported by VkDeviceGroupPresentCapabilitiesKHR.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its VkDeviceGroupPresentCapabilitiesKHR::`presentMask`.

If `mode` is VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR, then each element of `pDeviceMasks`

selects which instances of the swapchain image are component-wise summed and the sum of those images is presented. If the sum in any component is outside the representable range, the value of that component is undefined. Each element of pDeviceMasks **must** have a value for which all set bits are set in one of the elements of VkDeviceGroupPresentCapabilitiesKHR::presentMask.

If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, then each element of pDeviceMasks selects which instance(s) of the swapchain images are presented. For each bit set in each element of pDeviceMasks, the corresponding physical device **must** have a presentation engine as reported by VkDeviceGroupPresentCapabilitiesKHR.

If VkDeviceGroupPresentInfoKHR is not provided or swapchainCount is zero then the masks are considered to be 1. If VkDeviceGroupPresentInfoKHR is not provided, mode is considered to be VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR.

Valid Usage

- VUID-VkDeviceGroupPresentInfoKHR-swapchainCount-01297
  swapchainCount **must** equal 0 or VkPresentInfoKHR::swapchainCount
- VUID-VkDeviceGroupPresentInfoKHR-mode-01298
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR, then each element of pDeviceMasks **must** have exactly one bit set, and the corresponding element of VkDeviceGroupPresentCapabilitiesKHR::presentMask **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-mode-01299
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR, then each element of pDeviceMasks **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its VkDeviceGroupPresentCapabilitiesKHR::presentMask
- VUID-VkDeviceGroupPresentInfoKHR-mode-01300
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR, then each element of pDeviceMasks **must** have a value for which all set bits are set in one of the elements of VkDeviceGroupPresentCapabilitiesKHR::presentMask
- VUID-VkDeviceGroupPresentInfoKHR-mode-01301
  If mode is VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR, then for each bit set in each element of pDeviceMasks, the corresponding element of VkDeviceGroupPresentCapabilitiesKHR::presentMask **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-01302
  The value of each element of pDeviceMasks **must** be equal to the device mask passed in VkAcquireNextImageInfoKHR::deviceMask when the image index was last acquired
- VUID-VkDeviceGroupPresentInfoKHR-mode-01303
  mode **must** have exactly one bit set, and that bit **must** have been included in VkDeviceGroupSwapchainCreateInfoKHR::modes

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentInfoKHR-sType-sType

sType must be VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR

- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-parameter
  If swapchainCount is not 0, pDeviceMasks must be a valid pointer to an array of swapchainCount uint32_t values
- VUID-VkDeviceGroupPresentInfoKHR-mode-parameter
  mode must be a valid VkDeviceGroupPresentModeFlagBitsKHR value

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the presentAtAbsoluteTime or presentAtRelativeTime feature is enabled, an application **can** instruct the presentation engine to attempt to display an image at a specified time, or for a minimum duration, by including the VkPresentTimingsInfoEXT structure in the pNext chain of the VkPresentInfoKHR structure.

The VkPresentTimingsInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingsInfoEXT {
    VkStructureType                  sType;
    const void*                      pNext;
    uint32_t                         swapchainCount;
    const VkPresentTimingInfoEXT*    pTimingInfos;
} VkPresentTimingsInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pTimingInfos is NULL or a pointer to an array of VkPresentTimingInfoEXT elements with swapchainCount entries. If not NULL, each element of pTimingInfos contains timing information for the presentation of the image corresponding to the entry in the VkPresentInfoKHR::pImageIndices array.

Valid Usage

- VUID-VkPresentTimingsInfoEXT-swapchainCount-12233
  swapchainCount must be equal to VkPresentInfoKHR::swapchainCount
- VUID-VkPresentTimingsInfoEXT-pSwapchains-12234
  All swapchains in VkPresentInfoKHR::pSwapchains must have been created with the VkSwapchainCreateInfoKHR::flags field containing VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT

- VUID-VkPresentTimingsInfoEXT-pSwapchains-12235
  For each member of VkPresentInfoKHR::pSwapchains, if the associated VkPresentTimingInfoEXT::targetTime is not zero, the swapchain's current present mode **must** be VK_PRESENT_MODE_FIFO_LATEST_READY_KHR, VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR

Valid Usage (Implicit)

- VUID-VkPresentTimingsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PRESENT_TIMINGS_INFO_EXT
- VUID-VkPresentTimingsInfoEXT-pTimingInfos-parameter
  If pTimingInfos is not NULL, pTimingInfos **must** be a valid pointer to an array of swapchainCount valid VkPresentTimingInfoEXT structures
- VUID-VkPresentTimingsInfoEXT-swapchainCount-arraylength
  swapchainCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The VkPresentTimingInfoEXT structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    VkPresentTimingInfoFlagsEXT    flags;
    uint64_t                       targetTime;
    uint64_t                       timeDomainId;
    VkPresentStageFlagsEXT         presentStageQueries;
    VkPresentStageFlagsEXT         targetTimeDomainPresentStage;
} VkPresentTimingInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkPresentTimingInfoFlagBitsEXT specifying options for how to interpret the timing information.
- targetTime is zero or a value specifying the target present time or duration, in nanoseconds, of the presentation request.
- timeDomainId is the id of the time domain used to specify the absolute target present time and the timing results obtained in a subsequent vkGetPastPresentationTimingEXT call for the

current presentation request.

- `presentStageQueries` is zero or a valid VkPresentStageFlagsEXT value indicating which present stages the presentation engine will collect timing information for.
- `targetTimeDomainPresentStage` is a valid VkPresentStageFlagsEXT specifying a single present stage used to interpret `targetTime`.

If `targetTime` is not zero, the implementation attempts to align the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage of that presentation request with the time specified in `targetTime` according to the time domain used. If VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT is not set in `flags`, it indicates that the application would strictly prefer the image to not be visible before `targetTime` has lapsed.

If `targetTime` is not zero and `timeDomainId` is associated with a VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT time domain, `targetTimeDomainPresentStage` is used to specify which present stage's time domain `targetTime` is specified for. Otherwise, `targetTimeDomainPresentStage` is ignored.

If `presentStageQueries` is not zero, a slot in the swapchain's internal results queue is reserved to hold the requested present timing data until the application retrieves them. If no slots are available, or if vkSetSwapchainPresentTimingQueueSizeEXT was never called, presentation fails and returns VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT.

NOTE

Some platforms, due to hardware or system limitations, **may** not be able to accurately time `targetTime` with the actual physical event of the image becoming visible on the display. However, those timing capabilities **may** still be useful and result in improved animation quality.

As such, the `presentAtAbsoluteTime` and `presentAtRelativeTime` features do not provide a strict guarantee regarding the completion of the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage relative to the `targetTime`, and implementations **must** strive to make it as consistent and accurate as possible.

NOTE

Applications that specify an absolute present time **should** regularly rebase their calculations for their next target time on the feedback from vkGetPastPresentationTimingEXT to compensate for accumulated precision errors or potential clock drift. It is recommended that when targeting the time of a vertical blanking period, applications set VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT to allow the implementation to compensate for small precision errors that may cause an image to be displayed one refresh cycle later than intended.

Some implementations **may** not provide timing data for the VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT present stage. Applications **should** use the supported present stage nearest to it to compute a desired target presentation time.

Valid Usage

- VUID-VkPresentTimingInfoEXT-targetTime-12236
  If `targetTime` is not zero and `flags` does not contain VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT, the `presentAtAbsoluteTime` feature **must** be enabled and the `presentAtAbsoluteTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be VK_TRUE
- VUID-VkPresentTimingInfoEXT-targetTime-12237
  If `targetTime` is not zero and `flags` contains VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT, the `presentAtRelativeTime` feature **must** be enabled and the `presentAtRelativeTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be VK_TRUE
- VUID-VkPresentTimingInfoEXT-timeDomainId-12238
  If `timeDomainId` is associated with a VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT time domain, and `targetTime` is not zero, `targetTimeDomainPresentStage` **must** be a single `VkPresentStageFlagsEXT` value
- VUID-VkPresentTimingInfoEXT-timeDomainId-12400
  `timeDomainId` **must** be an id previously returned by vkGetSwapchainTimeDomainPropertiesEXT

Valid Usage (Implicit)

- VUID-VkPresentTimingInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_TIMING_INFO_EXT
- VUID-VkPresentTimingInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPresentTimingInfoEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPresentTimingInfoFlagBitsEXT values
- VUID-VkPresentTimingInfoEXT-presentStageQueries-parameter
  If `presentStageQueries` is not `0`, `presentStageQueries` **must** be a valid combination of VkPresentStageFlagBitsEXT values
- VUID-VkPresentTimingInfoEXT-targetTimeDomainPresentStage-parameter
  If `targetTimeDomainPresentStage` is not `0`, `targetTimeDomainPresentStage` **must** be a valid combination of VkPresentStageFlagBitsEXT values

Bits which **can** be set in VkPresentTimingInfoEXT::`flags`, specifying options for how to interpret timing information:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentTimingInfoFlagBitsEXT {
    VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT = 0x00000001,
    VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT = 0x00000002,
} VkPresentTimingInfoFlagBitsEXT;
```

- VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT specifies that VkPresentTimingInfoEXT::targetTime is to be interpreted as a relative time from the previous presentation's VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT stage. If the swapchain has never been used to present an image, the provided targetTime is ignored.
- VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT specifies that the application would prefer the image to be presented earlier than the time specified in VkPresentTimingInfoEXT::targetTime if that time falls within the first half of a refresh cycle. In that case, the presentation engine **may** choose to display the image at the start of that refresh cycle.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentTimingInfoFlagsEXT;
```

VkPresentTimingInfoFlagsEXT is a bitmask type for setting a mask of zero or more VkPresentTimingInfoFlagBitsEXT.

Presenting an image to the user typically involves multiple stages. Bits which **can** be set to specify present stages are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentStageFlagBitsEXT {
    VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT = 0x00000001,
    VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT = 0x00000002,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT = 0x00000004,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT = 0x00000008,
} VkPresentStageFlagBitsEXT;
```

- VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT marks the end of the set of queue operations enqueued by vkQueuePresentKHR on the provided VkQueue for a presentation request.
- VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT is the stage after which the presentation request has been dequeued from the swapchain's internal presentation request queue, if any, as specified by the present mode associated with that request.
- VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT is the stage after which data for the first pixel of the presentation request associated with the image has left the presentation engine for a display hardware.
- VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT is the stage after which a display hardware has made the first pixel visible for the presentation request associated with the image

to be presented.

NOTE	The set of queue operations delimited by VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT includes the wait for the semaphores specified in VkPresentInfoKHR::pWaitSemaphores, if any, and any work implicitly enqueued by the implementation.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentStageFlagsEXT;
```

VkPresentStageFlagsEXT is a bitmask type for setting a mask of zero or more VkPresentStageFlagBitsEXT.

The VkPresentIdKHR structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPresentIdKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*    pPresentIds;
} VkPresentIdKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to the vkQueuePresentKHR command.
- pPresentIds is NULL or a pointer to an array of uint64_t with swapchainCount entries. If not NULL, each non-zero value in pPresentIds specifies the present id to be associated with the presentation of the swapchain with the same index in the vkQueuePresentKHR call.

For applications to be able to reference specific presentation events queued by a call to vkQueuePresentKHR, an identifier needs to be associated with them. When the presentId feature is enabled, applications **can** include the VkPresentIdKHR structure in the pNext chain of the VkPresentInfoKHR structure to supply identifiers.

Each VkSwapchainKHR has a presentId associated with it. This value is initially zero when the VkSwapchainKHR is created.

When a VkPresentIdKHR structure with a non-NULL pPresentIds is included in the pNext chain of a VkPresentInfoKHR structure, each pSwapchains entry has a presentId associated in the pPresentIds array at the same index as the swapchain in the pSwapchains array. If this presentId is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated presentId. A non-zero presentId **must** be greater than any non-zero presentId passed previously by the application for the same swapchain.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the presentId value, but implementations **should** make this as close as possible to the presentation of the first pixel in the new image to the user.

Valid Usage

- VUID-VkPresentIdKHR-swapchainCount-04998
  `swapchainCount` **must** be the same value as VkPresentInfoKHR::`swapchainCount`, where this `VkPresentIdKHR` is in the `pNext` chain of the VkPresentInfoKHR structure
- VUID-VkPresentIdKHR-presentIds-04999
  Each non-zero entry in `presentIds` **must** be greater than all previously submitted present ids for the associated swapchain in VkPresentInfoKHR::`pSwapchains`

Valid Usage (Implicit)

- VUID-VkPresentIdKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_ID_KHR
- VUID-VkPresentIdKHR-pPresentIds-parameter
  If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount` `uint64_t` values
- VUID-VkPresentIdKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the `presentWait` feature is enabled, an application **can** wait for an image to be presented to the user by first specifying a presentId for the target presentation by adding a VkPresentIdKHR structure to the `pNext` chain of the VkPresentInfoKHR structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait
VkResult vkWaitForPresentKHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    uint64_t                                    presentId,
    uint64_t                                    timeout);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain on which an image was queued for presentation.

- `presentId` is the presentation presentId to wait for.
- `timeout` is the timeout period in units of nanoseconds. `timeout` is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

The call to `vkWaitForPresentKHR` will block until either the presentId associated with `swapchain` is greater than or equal to `presentId`, or `timeout` nanoseconds passes. When the swapchain becomes OUT_OF_DATE, the call will either return VK_SUCCESS (if the image was delivered to the presentation engine and may have been presented to the user) or will return early with status VK_ERROR_OUT_OF_DATE_KHR (if the image could not be presented to the user).

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the presentId value, but implementations **should** make this as close as possible to the presentation of the first pixel in the next image being presented to the user.

For VK_PRESENT_MODE_MAILBOX_KHR (or other present mode where images may be replaced in the presentation queue) any wait of this type associated with such an image **must** be signaled no later than a wait associated with the replacing image would be signaled.

As an exception to the normal rules for objects which are externally synchronized, the `swapchain` passed to `vkWaitForPresentKHR` **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresentKHR-swapchain-04997
  `swapchain` **must** not be in the retired state
- VUID-vkWaitForPresentKHR-presentWait-06234
  The `presentWait` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkWaitForPresentKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWaitForPresentKHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkWaitForPresentKHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPresentId2KHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPresentId2KHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*    pPresentIds;
} VkPresentId2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to the vkQueuePresentKHR command.
- `pPresentIds` is `NULL` or a pointer to an array of uint64_t with `swapchainCount` entries. If not `NULL`, each non-zero value in `pPresentIds` specifies the present id to be associated with the presentation of the swapchain with the same index in the vkQueuePresentKHR call.

For applications to be able to reference specific presentation events queued by a call to vkQueuePresentKHR, an identifier needs to be associated with them.

When the VkSurfaceCapabilitiesPresentId2KHR surface capability is present for a surface, applications **can** include the `VkPresentId2KHR` structure in the `pNext` chain of the VkPresentInfoKHR structure to associate an identifier with each presentation request. The `pPresentIds` provides an identifier for the swapchain present at the corresponding index in VkPresentInfoKHR's `pSwapchains`

array.

If this presentId is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated presentId. A non-zero presentId **must** be greater than any non-zero presentId passed previously by the application for the same swapchain.

If a non-zero presentId was provided, this may be used with vkWaitForPresent2KHR for the application to synchronize against the presentation engine's processing of the presentation request.

NOTE

The ID namespace used by this extension **must** be shared with other extensions that allow the application to provide a 64-bit monotonically increasing presentation ID, such as the original VK_KHR_present_id.

This is to allow existing extensions that depend on VK_KHR_present_id to use VK_KHR_present_id2 provided IDs without change, as well as to simplify writing future extensions that require application provided presentation IDs.

Valid Usage

- VUID-VkPresentId2KHR-swapchainCount-10818
  `swapchainCount` **must** be the same value as VkPresentInfoKHR::`swapchainCount`, where this `VkPresentId2KHR` is in the `pNext` chain of the VkPresentInfoKHR structure
- VUID-VkPresentId2KHR-presentIds-10819
  Each non-zero entry in `presentIds` **must** be greater than all previously submitted present ids for the associated swapchain in VkPresentInfoKHR::`pSwapchains`
- VUID-VkPresentId2KHR-None-10820
  The swapchain must have been created with VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR bit set in the VkSwapchainCreateFlagBitsKHR field

Valid Usage (Implicit)

- VUID-VkPresentId2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRESENT_ID_2_KHR
- VUID-VkPresentId2KHR-pPresentIds-parameter
  If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount` `uint64_t` values
- VUID-VkPresentId2KHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

When the VkSurfaceCapabilitiesPresentWait2KHR surface capability is present for a given surface, an application **can** wait for an image to be presented to the user by first specifying a presentId for the target presentation by adding a VkPresentId2KHR structure to the pNext chain of the VkPresentInfoKHR structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait2
VkResult vkWaitForPresent2KHR(
    VkDevice                                    device,
    VkSwapchainKHR                              swapchain,
    const VkPresentWait2InfoKHR*                pPresentWait2Info);
```

- device is the device associated with swapchain.
- swapchain is the non-retired swapchain on which an image was queued for presentation.
- pPresentWait2Info is a pointer to a VkPresentWait2InfoKHR structure specifying the parameters of the wait.

vkWaitForPresent2KHR waits for the presentation engine to have begun presentation of the presentation request associated with the VkPresentWait2InfoKHR::presentId on swapchain, or for VkPresentWait2InfoKHR::timeout to have expired.

The wait request will complete when the timeout expires, or after the corresponding presentation request has either taken effect within the presentation engine or has been replaced without presentation.

The timing relationship between the presentation of the image to the user and the wait request completing is implementation-dependent due to variations in window system implementations.

If the swapchain becomes VK_ERROR_OUT_OF_DATE_KHR either before or during this call, the call **may** either return VK_SUCCESS (if the image was delivered to the presentation engine and **may** have been presented to the user) or return early with status VK_ERROR_OUT_OF_DATE_KHR (if the image could not be presented to the user).

As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to vkWaitForPresent2KHR **may** be simultaneously used by other threads in calls to functions other than vkDestroySwapchainKHR. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresent2KHR-presentWait2-10814
  The presentWait2 feature **must** be enabled

- VUID-vkWaitForPresent2KHR-None-10815
  The VkSurfaceCapabilitiesPresentWait2KHR surface capability **must** be present for the underlying surface
- VUID-vkWaitForPresent2KHR-None-10816
  The swapchain must have been created with VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR bit set in the VkSwapchainCreateFlagBitsKHR field
- VUID-vkWaitForPresent2KHR-presentId-10817
  The `presentId` value **must** have been associated with a vkQueuePresentKHR request on the `swapchain` which returned a non-error value

Valid Usage (Implicit)

- VUID-vkWaitForPresent2KHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWaitForPresent2KHR-swapchain-parameter
  `swapchain` **must** be a valid VkSwapchainKHR handle
- VUID-vkWaitForPresent2KHR-pPresentWait2Info-parameter
  `pPresentWait2Info` **must** be a valid pointer to a valid VkPresentWait2InfoKHR structure
- VUID-vkWaitForPresent2KHR-swapchain-parent
  `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- VK_SUBOPTIMAL_KHR
- VK_SUCCESS
- VK_TIMEOUT

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT
- VK_ERROR_OUT_OF_DATE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_SURFACE_LOST_KHR

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkSwapchainPresentModeInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModeInfoKHR {
    VkStructureType            sType;
    const void*                pNext;
    uint32_t                   swapchainCount;
    const VkPresentModeKHR*    pPresentModes;
} VkSwapchainPresentModeInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModeInfoKHR
typedef VkSwapchainPresentModeInfoKHR VkSwapchainPresentModeInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pPresentModes is a list of presentation modes with swapchainCount entries.

If the pNext chain of VkPresentInfoKHR includes a VkSwapchainPresentModeInfoKHR structure, then that structure defines the presentation modes used for the current and subsequent presentation operations.

When the application changes present modes with VkSwapchainPresentModeInfoKHR, images that have already been queued for presentation will continue to be presented according to the previous present mode. The current image being queued for presentation and subsequent images will be presented according to the new present mode. The behavior during the transition between the two modes is defined as follows.

- Transition from VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR to VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR: the presentation engine updates the shared presentable image according to the behavior of VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR.
- Transition from VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR to VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR: the presentation engine **may** update the shared presentable image or defer that to its regular refresh cycle, according to the behavior of VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.
- Transition between VK_PRESENT_MODE_FIFO_KHR and VK_PRESENT_MODE_FIFO_RELAXED_KHR: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period will follow the new mode for current and subsequent images.

- Transition from VK_PRESENT_MODE_IMMEDIATE_KHR to VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR : As all prior present requests in the VK_PRESENT_MODE_IMMEDIATE_KHR mode are applied immediately, there are no outstanding present operations in this mode, and current and subsequent images are appended to the FIFO queue and presented according to the new mode.
- Transition from VK_PRESENT_MODE_MAILBOX_KHR to VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR : Presentation in FIFO modes require waiting for the next vertical blanking period, with VK_PRESENT_MODE_MAILBOX_KHR allowing the pending present operation to be replaced by a new one. In this case, the current present operation will replace the pending present operation and is applied according to the new mode.
- Transition from VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR or VK_PRESENT_MODE_FIFO_LATEST_READY_KHR to VK_PRESENT_MODE_IMMEDIATE_KHR or VK_PRESENT_MODE_MAILBOX_KHR: If the FIFO queue is empty, presentation is done according to the behavior of the new mode. If there are present operations in the FIFO queue, once the last present operation is performed based on the respective vertical blanking period, the current and subsequent updates are applied according to the new mode.
- Transition between VK_PRESENT_MODE_FIFO_KHR or VK_PRESENT_MODE_FIFO_RELAXED_KHR, and VK_PRESENT_MODE_FIFO_LATEST_READY_KHR: Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period and dequeuing requests will follow the new mode for current and subsequent images.
- The behavior during transition between any other present modes, if possible, is implementation defined.

Valid Usage

- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-07760
  `swapchainCount` **must** be equal to VkPresentInfoKHR::`swapchainCount`
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-07761
  Each entry in `pPresentModes` **must** be a presentation mode specified in VkSwapchainPresentModesCreateInfoKHR::`pPresentModes` when creating the entry's corresponding swapchain

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModeInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODE_INFO_KHR
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-parameter
  `pPresentModes` **must** be a valid pointer to an array of `swapchainCount` valid VkPresentModeKHR values
- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkPresentInfoKHR

The VkSwapchainPresentFenceInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentFenceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkFence*     pFences;
} VkSwapchainPresentFenceInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentFenceInfoKHR
typedef VkSwapchainPresentFenceInfoKHR VkSwapchainPresentFenceInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchainCount is the number of swapchains being presented to by this command.
- pFences is a list of fences with swapchainCount entries. Each entry **must** be VK_NULL_HANDLE or the handle of a fence to signal when the relevant operations on the associated swapchain have completed.

The set of *queue operations* defined by queuing an image for presentation, as well as operations performed by the presentation engine, access the payloads of objects associated with the presentation operation. The associated objects include:

- The swapchain image, its implicitly bound memory, and any other resources bound to that memory.
- The wait semaphores specified when queuing the image for presentation.

The application **can** provide a fence that the implementation will signal after all such queue operations have completed, and after the presentation engine has taken a reference to the payloads of all objects provided in VkPresentInfoKHR that the presentation engine accesses as part of the present operation. The fence **may** not wait for the present operation to complete. For all binary wait semaphores imported by the presentation engine using the equivalent of reference transference, as described in Importing Semaphore Payloads, this fence **must** not signal until all such semaphore payloads have been reset by the presentation engine.

The application **can** destroy the wait semaphores associated with a given presentation operation when at least one of the associated fences is signaled, and **can** destroy the swapchain when the

fences associated with all past presentation requests referring to that swapchain have signaled.

Fences associated with presentations to the same swapchain on the same VkQueue **must** be signaled in the same order as the present operations.

To specify a fence for each swapchain in a present operation, include the VkSwapchainPresentFenceInfoKHR structure in the pNext chain of the VkPresentInfoKHR structure.

Valid Usage

- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-07757
  swapchainCount **must** be equal to VkPresentInfoKHR::swapchainCount
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07758
  Each element of pFences that is not VK_NULL_HANDLE **must** be unsignaled
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07759
  Each element of pFences that is not VK_NULL_HANDLE **must** not be associated with any other queue command that has not yet completed execution on that queue

Valid Usage (Implicit)

- VUID-VkSwapchainPresentFenceInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_FENCE_INFO_KHR
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-parameter
  pFences **must** be a valid pointer to an array of swapchainCount valid or VK_NULL_HANDLE VkFence handles
- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-arraylength
  swapchainCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkPresentInfoKHR

To release images previously acquired through vkAcquireNextImage2KHR or vkAcquireNextImageKHR, call:

```
// Provided by VK_KHR_swapchain_maintenance1
VkResult vkReleaseSwapchainImagesKHR(
    VkDevice                                    device,
    const VkReleaseSwapchainImagesInfoKHR*      pReleaseInfo);
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to vkReleaseSwapchainImagesKHR
VkResult vkReleaseSwapchainImagesEXT(
    VkDevice                                    device,
    const VkReleaseSwapchainImagesInfoKHR*      pReleaseInfo);
```

- `device` is the device associated with VkReleaseSwapchainImagesInfoKHR::`swapchain`.
- `pReleaseInfo` is a pointer to a VkReleaseSwapchainImagesInfoKHR structure containing parameters of the release.

Only images that are not in use by the device **can** be released.

Releasing images is a read-only operation that will not affect the content of the released images. Upon reacquiring the image, the image contents and its layout will be the same as they were prior to releasing it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

NOTE This functionality is useful during swapchain recreation, where acquired images from the old swapchain can be released instead of presented.

Valid Usage

- VUID-vkReleaseSwapchainImagesKHR-swapchainMaintenance1-10159
  Feature `swapchainMaintenance1` **must** be enabled

Valid Usage (Implicit)

- VUID-vkReleaseSwapchainImagesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkReleaseSwapchainImagesKHR-pReleaseInfo-parameter
  `pReleaseInfo` **must** be a valid pointer to a valid VkReleaseSwapchainImagesInfoKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_SURFACE_LOST_KHR
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkReleaseSwapchainImagesInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkReleaseSwapchainImagesInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndexCount;
    const uint32_t*    pImageIndices;
} VkReleaseSwapchainImagesInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkReleaseSwapchainImagesInfoKHR
typedef VkReleaseSwapchainImagesInfoKHR VkReleaseSwapchainImagesInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- swapchain is a swapchain to which images are being released.
- imageIndexCount is the number of image indices to be released.
- pImageIndices is a pointer to an array of indices into the array of swapchain's presentable images, with imageIndexCount entries.

Valid Usage

- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07785
  Each element of pImageIndices **must** be the index of a presentable image acquired from the swapchain specified by swapchain
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07786
  All uses of presentable images identified by elements of pImageIndices **must** have completed execution

Valid Usage (Implicit)

- VUID-VkReleaseSwapchainImagesInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_RELEASE_SWAPCHAIN_IMAGES_INFO_KHR
- VUID-VkReleaseSwapchainImagesInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkReleaseSwapchainImagesInfoKHR-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-parameter
  pImageIndices **must** be a valid pointer to an array of imageIndexCount uint32_t values

- VUID-VkReleaseSwapchainImagesInfoKHR-imageIndexCount-arraylength
  `imageIndexCount` **must** be greater than `0`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

37.11. HDR Metadata

This section describes how to improve color reproduction of content to better reproduce colors as seen on the display used to originally optimize the content.

To provide HDR metadata to an implementation, call:

```
// Provided by VK_EXT_hdr_metadata
void vkSetHdrMetadataEXT(
    VkDevice                                    device,
    uint32_t                                    swapchainCount,
    const VkSwapchainKHR*                       pSwapchains,
    const VkHdrMetadataEXT*                     pMetadata);
```

- `device` is the logical device where the swapchain(s) were created.
- `swapchainCount` is the number of swapchains included in `pSwapchains`.
- `pSwapchains` is a pointer to an array of `swapchainCount` VkSwapchainKHR handles.
- `pMetadata` is a pointer to an array of `swapchainCount` VkHdrMetadataEXT structures.

The metadata will be applied to the specified VkSwapchainKHR objects at the next vkQueuePresentKHR call using that VkSwapchainKHR object. The metadata will persist until a subsequent `vkSetHdrMetadataEXT` changes it.

Valid Usage (Implicit)

- VUID-vkSetHdrMetadataEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetHdrMetadataEXT-pSwapchains-parameter
  `pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid VkSwapchainKHR handles
- VUID-vkSetHdrMetadataEXT-pMetadata-parameter
  `pMetadata` **must** be a valid pointer to an array of `swapchainCount` valid VkHdrMetadataEXT structures
- VUID-vkSetHdrMetadataEXT-swapchainCount-arraylength
  `swapchainCount` **must** be greater than `0`

- VUID-vkSetHdrMetadataEXT-pSwapchains-parent
  Each element of `pSwapchains` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to each member of `pSwapchains` **must** be externally synchronized

The `VkHdrMetadataEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkHdrMetadataEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkXYColorEXT       displayPrimaryRed;
    VkXYColorEXT       displayPrimaryGreen;
    VkXYColorEXT       displayPrimaryBlue;
    VkXYColorEXT       whitePoint;
    float              maxLuminance;
    float              minLuminance;
    float              maxContentLightLevel;
    float              maxFrameAverageLightLevel;
} VkHdrMetadataEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayPrimaryRed` is a VkXYColorEXT structure specifying the red primary of the display used to optimize the content
- `displayPrimaryGreen` is a VkXYColorEXT structure specifying the green primary of the display used to optimize the content
- `displayPrimaryBlue` is a VkXYColorEXT structure specifying the blue primary of the display used to optimize the content
- `whitePoint` is a VkXYColorEXT structure specifying the white-point of the display used to optimize the content
- `maxLuminance` is the maximum luminance of the display used to optimize the content in nits
- `minLuminance` is the minimum luminance of the display used to optimize the content in nits
- `maxContentLightLevel` is the value in nits of the desired luminance for the brightest pixels in the displayed image.
- `maxFrameAverageLightLevel` is the value in nits of the average luminance of the frame which has the brightest average luminance anywhere in the content.

If any of the above values are unknown, they **can** be set to 0.

NOTE The meta-data provided here is intended to be used as defined in the SMPTE 2086,

> CTA 861.3 and CIE 15:2004 specifications. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrMetadataEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_HDR_METADATA_EXT
- VUID-VkHdrMetadataEXT-pNext-pNext
  `pNext` **must** be `NULL`

The `VkXYColorEXT` structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkXYColorEXT {
    float    x;
    float    y;
} VkXYColorEXT;
```

- `x` is the x chromaticity coordinate.
- `y` is the y chromaticity coordinate.

Chromaticity coordinates are as specified in CIE 15:2004 “Calculation of chromaticity coordinates” (Section 7.3) and are limited to between 0 and 1 for real colors.

Chapter 38. Deferred Host Operations

Certain Vulkan commands are inherently expensive for the host CPU to execute. It is often desirable to offload such work onto background threads, and to parallelize the work across multiple CPUs. The concept of *deferred operations* allows applications and drivers to coordinate the execution of expensive host commands using an application-managed thread pool.

The `VK_KHR_deferred_host_operations` extension defines the infrastructure and usage patterns for *deferrable commands*, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on `VK_KHR_deferred_host_operations`. This specification will refer to such extensions as *deferral extensions*.

38.1. Requesting Deferral

When an application requests an operation deferral, the implementation **may** defer the operation. When deferral is requested and the implementation defers any operation, the implementation **must** return VK_OPERATION_DEFERRED_KHR as the success code if no errors occurred. When deferral is requested, the implementation **should** defer the operation when the workload is significant, however if the implementation chooses not to defer any of the requested operations and instead executes all of them immediately, the implementation **must** return VK_OPERATION_NOT_DEFERRED_KHR as the success code if no errors occurred.

A deferred operation is created *complete* with an initial result value of VK_SUCCESS. The deferred operation becomes *pending* when an operation has been successfully deferred with that deferred operation object.

A deferred operation is considered pending until the deferred operation completes. A pending deferred operation becomes *complete* when it has been fully executed by one or more threads. Pending deferred operations will never complete until they are *joined* by an application thread, using vkDeferredOperationJoinKHR. Applications **can** join multiple threads to the same deferred operation, enabling concurrent execution of subtasks within that operation.

The application **can** query the status of a VkDeferredOperationKHR using the vkGetDeferredOperationMaxConcurrencyKHR or vkGetDeferredOperationResultKHR commands.

Parameters to the command requesting a deferred operation **may** be accessed by the implementation at any time until the deferred operation enters the complete state. The application **must** obey the following rules while a deferred operation is pending:

- Externally synchronized parameters **must** not be accessed.
- Pointer parameters **must** not be modified (e.g. reallocated/freed).
- The contents of pointer parameters which **may** be read by the command **must** not be modified.
- The contents of pointer parameters which **may** be written by the command **must** not be read.
- Vulkan object parameters **must** not be passed as externally synchronized parameters to any other command.

When the deferred operation is complete, the application **should** call vkGetDeferredOperationResultKHR to obtain the VkResult indicating success or failure of the operation. The VkResult value returned will be one of the values that the command requesting the deferred operation is able to return. Writes to output parameters of the requesting command will happen-before the deferred operation is complete.

When a deferral is requested for a command, the implementation **may** perform memory management operations on the allocator supplied to vkCreateDeferredOperationKHR for the deferred operation object, as described in the Memory Allocation chapter. Such allocations **must** occur on the thread which requests deferral.

If an allocator was supplied for the deferred command at the time of the deferral request, then the implementation **may** perform memory management operations on this allocator during the execution of vkDeferredOperationJoinKHR. These operations **may** occur concurrently and **may** be performed by any joined thread. The application **must** ensure that the supplied allocator is able to operate correctly under these conditions.

38.2. Deferred Host Operations API

The VkDeferredOperationKHR handle is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeferredOperationKHR)
```

This handle refers to a tracking structure which manages the execution state for a deferred command.

To construct the tracking object for a deferred command, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkCreateDeferredOperationKHR(
    VkDevice                                    device,
    const VkAllocationCallbacks*                pAllocator,
    VkDeferredOperationKHR*                     pDeferredOperation);
```

- `device` is the device which owns `operation`.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pDeferredOperation` is a pointer to a handle in which the created VkDeferredOperationKHR is returned.

Valid Usage (Implicit)

- VUID-vkCreateDeferredOperationKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDeferredOperationKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateDeferredOperationKHR-pDeferredOperation-parameter
  `pDeferredOperation` **must** be a valid pointer to a VkDeferredOperationKHR handle
- VUID-vkCreateDeferredOperationKHR-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To assign a thread to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkDeferredOperationJoinKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation that the calling thread should work on.

The `vkDeferredOperationJoinKHR` command will execute a portion of the deferred operation on the calling thread.

The return value will be one of the following:

- A return value of VK_SUCCESS indicates that `operation` is complete. The application **should** use vkGetDeferredOperationResultKHR to retrieve the result of `operation`.
- A return value of VK_THREAD_DONE_KHR indicates that the deferred operation is not complete, but there is no work remaining to assign to threads. Future calls to vkDeferredOperationJoinKHR are not necessary and will simply harm performance. This situation **may** occur when other threads executing vkDeferredOperationJoinKHR are about to complete `operation`, and the implementation is unable to partition the workload any further.
- A return value of VK_THREAD_IDLE_KHR indicates that the deferred operation is not complete, and there is no work for the thread to do at the time of the call. This situation **may** occur if the operation encounters a temporary reduction in parallelism. By returning VK_THREAD_IDLE_KHR, the implementation is signaling that it expects that more opportunities for parallelism will emerge as execution progresses, and that future calls to

vkDeferredOperationJoinKHR **can** be beneficial. In the meantime, the application **can** perform other work on the calling thread.

Implementations **must** guarantee forward progress by enforcing the following invariants:

1. If only one thread has invoked vkDeferredOperationJoinKHR on a given operation, that thread **must** execute the operation to completion and return VK_SUCCESS.
2. If multiple threads have concurrently invoked vkDeferredOperationJoinKHR on the same operation, then at least one of them **must** complete the operation and return VK_SUCCESS.

Valid Usage (Implicit)

- VUID-vkDeferredOperationJoinKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDeferredOperationJoinKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkDeferredOperationJoinKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS
- VK_THREAD_DONE_KHR
- VK_THREAD_IDLE_KHR

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

When a deferred operation is completed, the application **can** destroy the tracking object by calling:

```
// Provided by VK_KHR_deferred_host_operations
void vkDestroyDeferredOperationKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the device which owns `operation`.
- `operation` is the completed operation to be destroyed.

- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDeferredOperationKHR-operation-03434
  If `VkAllocationCallbacks` were provided when `operation` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDeferredOperationKHR-operation-03435
  If no `VkAllocationCallbacks` were provided when `operation` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyDeferredOperationKHR-operation-03436
  `operation` **must** be completed

Valid Usage (Implicit)

- VUID-vkDestroyDeferredOperationKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyDeferredOperationKHR-operation-parameter
  If `operation` is not VK_NULL_HANDLE, `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkDestroyDeferredOperationKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDeferredOperationKHR-operation-parent
  If `operation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `operation` **must** be externally synchronized

To query the number of additional threads that can usefully be joined to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
uint32_t vkGetDeferredOperationMaxConcurrencyKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation to be queried.

The returned value is the maximum number of threads that can usefully execute a deferred

operation concurrently, reported for the state of the deferred operation at the point this command is called. This value is intended to be used to better schedule work onto available threads. Applications **can** join any number of threads to the deferred operation and expect it to eventually complete, though excessive joins **may** return VK_THREAD_DONE_KHR immediately, performing no useful work.

If `operation` is complete, `vkGetDeferredOperationMaxConcurrencyKHR` returns zero.

If `operation` is currently joined to any threads, the value returned by this command **may** immediately be out of date.

If `operation` is pending, implementations **must** not return zero unless at least one thread is currently executing vkDeferredOperationJoinKHR on `operation`. If there are such threads, the implementation **should** return an estimate of the number of additional threads which it could profitably use.

Implementations **may** return 2^{32}-1 to indicate that the maximum concurrency is unknown and cannot be easily derived. Implementations **may** return values larger than the maximum concurrency available on the host CPU. In these situations, an application **should** clamp the return value rather than oversubscribing the machine.

NOTE	The recommended usage pattern for applications is to query this value once, after deferral, and schedule no more than the specified number of threads to join the operation. Each time a joined thread receives VK_THREAD_IDLE_KHR, the application should schedule an additional join at some point in the future, but is not required to do so.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationMaxConcurrencyKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

The `vkGetDeferredOperationResultKHR` function is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkGetDeferredOperationResultKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      operation);
```

- `device` is the device which owns `operation`.
- `operation` is the operation whose deferred result is being queried.

If no command has been deferred on `operation`, `vkGetDeferredOperationResultKHR` returns VK_SUCCESS.

If the deferred operation is pending, `vkGetDeferredOperationResultKHR` returns VK_NOT_READY.

If the deferred operation is complete, it returns the appropriate return value from the original command. This value **must** be one of the VkResult values which could have been returned by the original command if the operation had not been deferred.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationResultKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeferredOperationResultKHR-operation-parameter
  `operation` **must** be a valid VkDeferredOperationKHR handle
- VUID-vkGetDeferredOperationResultKHR-operation-parent
  `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Chapter 39. Private Data

The private data extension provides a way for users to associate arbitrary application-defined data with Vulkan objects. This association is accomplished by storing 64-bit unsigned integers of application-defined data in private data slots. A private data slot represents a storage allocation for one data item for each child object of the device.

An application **can** reserve private data slots at device creation. To reserve private data slots, insert a VkDevicePrivateDataCreateInfo in the pNext chain in VkDeviceCreateInfo before device creation. Multiple VkDevicePrivateDataCreateInfo structures **can** be chained together, and the sum of the requested slots will be reserved. This is an exception to the specified valid usage for structure pointer chains. Reserving slots in this manner is not strictly necessary but it **may** improve performance.

Private data slots are represented by VkPrivateDataSlot handles:

```
// Provided by VK_VERSION_1_3
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPrivateDataSlot)
```

To create a private data slot, call:

```
// Provided by VK_VERSION_1_3
VkResult vkCreatePrivateDataSlot(
    VkDevice                                    device,
    const VkPrivateDataSlotCreateInfo*          pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPrivateDataSlot*                          pPrivateDataSlot);
```

- device is the logical device associated with the creation of the object(s) holding the private data slot.
- pCreateInfo is a pointer to a VkPrivateDataSlotCreateInfo
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pPrivateDataSlot is a pointer to a VkPrivateDataSlot handle in which the resulting private data slot is returned

Valid Usage

- VUID-vkCreatePrivateDataSlot-privateData-04564
  The privateData feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreatePrivateDataSlot-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkCreatePrivateDataSlot-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkPrivateDataSlotCreateInfo structure
- VUID-vkCreatePrivateDataSlot-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreatePrivateDataSlot-pPrivateDataSlot-parameter
  `pPrivateDataSlot` **must** be a valid pointer to a VkPrivateDataSlot handle
- VUID-vkCreatePrivateDataSlot-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPrivateDataSlotCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPrivateDataSlotCreateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkPrivateDataSlotCreateFlags    flags;
} VkPrivateDataSlotCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPrivateDataSlotCreateFlagBits specifying additional parameters of the private data slot.

Valid Usage

Valid Usage (Implicit)

- VUID-VkPrivateDataSlotCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PRIVATE_DATA_SLOT_CREATE_INFO

- VUID-VkPrivateDataSlotCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPrivateDataSlotCreateInfo-flags-zerobitmask
  `flags` **must** be `0`

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPrivateDataSlotCreateFlags;
```

`VkPrivateDataSlotCreateFlags` is a bitmask type for setting a mask of zero or more VkPrivateDataSlotCreateFlagBits.

To destroy a private data slot, call:

```
// Provided by VK_VERSION_1_3
void vkDestroyPrivateDataSlot(
    VkDevice                                    device,
    VkPrivateDataSlot                           privateDataSlot,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device associated with the creation of the object(s) holding the private data slot.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `privateDataSlot` is the private data slot to destroy.

Valid Usage

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04062
  If `VkAllocationCallbacks` were provided when `privateDataSlot` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04063
  If no `VkAllocationCallbacks` were provided when `privateDataSlot` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPrivateDataSlot-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parameter
  If `privateDataSlot` is not VK_NULL_HANDLE, `privateDataSlot` **must** be a valid VkPrivateDataSlot handle
- VUID-vkDestroyPrivateDataSlot-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid

VkAllocationCallbacks structure

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parent
  If `privateDataSlot` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `privateDataSlot` **must** be externally synchronized

To store application-defined data in a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
VkResult vkSetPrivateData(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t                                    data);
```

- `device` is the device that created the object.
- `objectType` is a VkObjectType specifying the type of object to associate data with.
- `objectHandle` is a handle to the object to associate data with.
- `privateDataSlot` is a handle to a VkPrivateDataSlot specifying location of private data storage.
- `data` is application-defined data to associate the object with. This data will be stored at `privateDataSlot`.

Valid Usage

- VUID-vkSetPrivateData-objectHandle-04016
  `objectHandle` **must** be `device` or a child of `device`
- VUID-vkSetPrivateData-objectHandle-04017
  `objectHandle` **must** be a valid handle to an object of type `objectType`

Valid Usage (Implicit)

- VUID-vkSetPrivateData-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetPrivateData-objectType-parameter
  `objectType` **must** be a valid VkObjectType value
- VUID-vkSetPrivateData-privateDataSlot-parameter
  `privateDataSlot` **must** be a valid VkPrivateDataSlot handle

- VUID-vkSetPrivateData-privateDataSlot-parent
  `privateDataSlot` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To retrieve application-defined data from a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
void vkGetPrivateData(
    VkDevice                                    device,
    VkObjectType                                objectType,
    uint64_t                                    objectHandle,
    VkPrivateDataSlot                           privateDataSlot,
    uint64_t*                                   pData);
```

- `device` is the device that created the object
- `objectType` is a VkObjectType specifying the type of object data is associated with.
- `objectHandle` is a handle to the object data is associated with.
- `privateDataSlot` is a handle to a VkPrivateDataSlot specifying location of private data pointer storage.
- `pData` is a pointer to specify where application-defined data is returned. `0` will be written in the absence of a previous call to `vkSetPrivateData` using the object specified by `objectHandle`.

NOTE

Due to platform details on Android, implementations might not be able to reliably return `0` from calls to `vkGetPrivateData` for VkSwapchainKHR objects on which `vkSetPrivateData` has not previously been called. This erratum is exclusive to the Android platform and objects of type VkSwapchainKHR.

Valid Usage

- VUID-vkGetPrivateData-objectType-04018
  `objectHandle` **must** be `device` or a child of `device`
- VUID-vkGetPrivateData-objectHandle-09498
  `objectHandle` **must** be a valid handle to an object of type `objectType`

Valid Usage (Implicit)

- VUID-vkGetPrivateData-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPrivateData-objectType-parameter
  `objectType` **must** be a valid VkObjectType value
- VUID-vkGetPrivateData-privateDataSlot-parameter
  `privateDataSlot` **must** be a valid VkPrivateDataSlot handle
- VUID-vkGetPrivateData-pData-parameter
  `pData` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetPrivateData-privateDataSlot-parent
  `privateDataSlot` **must** have been created, allocated, or retrieved from `device`

Chapter 40. Acceleration Structures

40.1. Acceleration Structures

Acceleration structures are data structures used by the implementation to efficiently manage scene geometry as it is traversed during a ray tracing query. The application is responsible for managing acceleration structure objects (see Acceleration Structures), including allocation, destruction, executing builds or updates, and synchronizing resources used during ray tracing queries.

There are two types of acceleration structures, *top level acceleration structures* and *bottom level acceleration structures*.

An acceleration structure is considered to be constructed if an acceleration structure build command or copy command has been executed with the given acceleration structure as the destination.

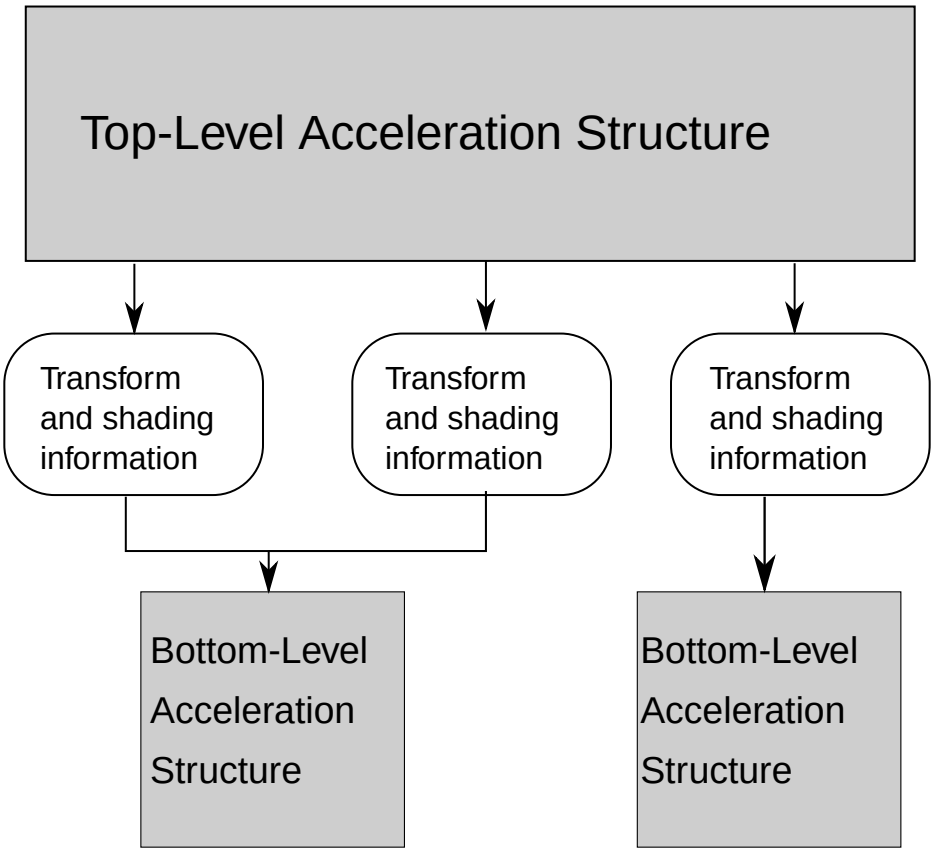

Figure 22. Acceleration Structure

Caption

The diagram shows the relationship between top and bottom level acceleration structures.

40.1.1. Geometry

Geometries refer to a triangle, or axis-aligned bounding box.

A triangle is a fundamental geometric primitive defined by three vertices in 3D space, forming a flat, planar surface.

An axis-aligned bounding box (AABB) is a rectangular box defined by two points (minimum and maximum corners) that encloses a 3D object or scene. Its faces are aligned with the coordinate axes, making intersection tests efficient for spatial partitioning and acceleration structures.

40.1.2. Top Level Acceleration Structures

Opaque acceleration structure for an array of instances. The descriptor or device address referencing this is the starting point for traversal.

The top level acceleration structure takes a reference to any bottom level acceleration structure referenced by its instances. Those bottom level acceleration structure objects **must** be valid when the top level acceleration structure is accessed.

40.1.3. Bottom Level Acceleration Structures

Opaque acceleration structure for an array of geometries.

40.1.4. Acceleration Structure Update Rules

The API defines two types of operations to produce acceleration structures from geometry:

- A *build* operation is used to construct an acceleration structure.
- An *update* operation is used to modify an existing acceleration structure.

An update operation imposes certain constraints on the input, in exchange for considerably faster execution. When performing an update, the application is required to provide a full description of the acceleration structure, but is prohibited from changing anything other than instance definitions, transform matrices, and vertex or AABB positions. All other aspects of the description **must** exactly match the one from the original build.

More precisely, the application **must** not use an update operation to do any of the following:

- Change primitives or instances from *active* to *inactive*, or vice versa (as defined in Inactive Primitives and Instances).
- Change the index or vertex formats of triangle geometry.
- Change triangle geometry transform pointers from null to non-null or vice versa.
- Change the number of geometries or instances in the structure.
- Change the geometry flags for any geometry in the structure.
- Change the number of vertices or primitives for any geometry in the structure.

If the original acceleration structure was built using opacity micromaps and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT was set in `flags`, the application **must** provide a micromap matching the original micromap in structure with only opacity values updated. The application is prohibited from changing anything

other than the specific opacity values assigned to the triangles.

More precisely, the application **must** not use an update operation to do any of the following:

- Remove micromaps or VkOpacityMicromapSpecialIndexKHR values from a geometry which previously had them, or vice versa.
- Change between use of VkOpacityMicromapSpecialIndexKHR values and explicit micro-map triangles.
- Change the subdivision level or format of the micromap triangle associated with any acceleration-structure triangle.

Acceleration structures constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR and originally built with the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT flag **must** provide a micromap deserialized using the exact serialized output of the micromap that was originally referenced by the serialized acceleration structure.

NOTE If applications need to update micromap data referenced by a deserialized acceleration structure, then it must originally build the acceleration structure with the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag and perform a full micromap update.

If the original acceleration structure was built using opacity micromaps and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR was set in `flags`, the application **must** provide a micromap to the update operation.

A VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR operation transfers the reference in the acceleration structure to the new micromap unless VkMicromapBuildSizesInfoEXT::`discardable` is VK_TRUE .

If the original acceleration structure was built using opacity micromaps and neither opacity micromap update flag is set, the application **must** provide the original micromap to the update operation or the deserialized micromap from the original micromap's exact serialized data if the original acceleration structure was deserialized prior.

40.1.5. Inactive Primitives and Instances

Acceleration structures allow the use of particular input values to signal *inactive* primitives or instances.

An *inactive* triangle is one for which the first (X) component of any vertex is NaN. If any other vertex component is NaN, and the first is not, the behavior is undefined. If the vertex format does not have a NaN representation, then all triangles are considered active.

An *inactive* instance is one whose acceleration structure reference is `0`.

An *inactive* AABB is one for which the minimum X coordinate is NaN. If any other component is

NaN, and the first is not, the behavior is undefined.

In the above definitions, “NaN” refers to any type of NaN. Signaling, non-signaling, quiet, loud, or otherwise.

An inactive object is considered invisible to all rays, and **should** not be represented in the acceleration structure. Implementations **should** ensure that the presence of inactive objects does not seriously degrade traversal performance.

Inactive objects are counted in the auto-generated index sequences which are provided to shaders via `InstanceId` and `PrimitiveId` SPIR-V decorations. This allows objects in the scene to change freely between the active and inactive states, without affecting the layout of any arrays which are being indexed using the ID values.

Any transition between the active and inactive states requires a full acceleration structure rebuild. Applications **must** not perform an acceleration structure update where an object is active in the source acceleration structure but would be inactive in the destination, or vice versa.

40.1.6. Degenerate Primitives and Instances

Degenerate primitives and instances behave differently to inactive primitives and instances, and are defined as:

- triangles that have one or more vertices whose respective (X), (Y), (Z) components are identical, or have three vertices that have at least two of the (X), (Y), or (Z) components identical, therefore forming a line or point. Degenerate triangles do not generate any intersections.
- AABBs whose `minX`=`maxX`, `minY`=`maxY`, and `minZ`=`maxZ`. Degenerate AABBs **may** invoke the intersection shader.
- instances that reference bottom level acceleration structures that contain no active primitives. When building an acceleration structure, implementations **should** treat degenerate instances as though they are a point at the instance origin, specified by VkAccelerationStructureInstanceKHR::`transform`.

Unlike *inactive* primitives and instances, *degenerate* primitives and instances **may** transition from the degenerate to the non-degenerate state, or vice versa, when performing an acceleration structure update.

If an acceleration structure is built without VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::`flags` , degenerate primitives **may** be discarded. Primitives that are defined with the same index value for more than one vertex **can** always be discarded.

40.1.7. Building Acceleration Structures

To build acceleration structures call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresKHR(
    VkCommandBuffer                                 commandBuffer,
    uint32_t                                        infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` VkAccelerationStructureBuildGeometryInfoKHR structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of VkAccelerationStructureBuildRangeInfoKHR structures. Each `ppBuildRangeInfos`[i] is a pointer to an array of `pInfos`[i].`geometryCount` VkAccelerationStructureBuildRangeInfoKHR structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos`[i].

The `vkCmdBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE This means that an application **cannot** build a top-level acceleration structure in the same vkCmdBuildAccelerationStructuresKHR call as the associated bottom-level or instance acceleration structures are being built. Similarly, the application **cannot** build a bottom-level acceleration structure in the same vkCmdBuildAccelerationStructuresKHR call as the associated micromaps are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

The input buffers passed to this commands will be referenced by the implementation for the duration of this command's execution on the device.

After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained. Micromaps **must** always be fully-self-contained.

The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of future commands, provided proper synchronization is used as described below.

NOTE A VkAccelerationStructureBuildRangeInfoKHR structure is not used when building an acceleration structure with any of the following geometry types, and **must** be NULL: ** VK_GEOMETRY_TYPE_MICROMAP_KHR

NOTE The required alignment of the device addresses passed in to parameters below

> might not be provided by the base address of a VkBuffer created with the correct usage flags and must still be manually aligned by the application code.

Accesses to the acceleration structure scratch buffers as identified by the VkAccelerationStructureBuildGeometryInfoKHR::scratchData buffer device addresses **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of (VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR). Accesses to each VkAccelerationStructureBuildGeometryInfoKHR::srcAccelerationStructure and VkAccelerationStructureBuildGeometryInfoKHR::dstAccelerationStructure **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR, as appropriate.

Accesses to other input buffers as identified by any used values of VkAccelerationStructureGeometryMicromapDataKHR::data, VkAccelerationStructureGeometryMicromapDataKHR::triangleArray, VkAccelerationStructureGeometryTrianglesDataKHR::vertexData, VkAccelerationStructureGeometryTrianglesDataKHR::indexData, VkAccelerationStructureGeometryTrianglesDataKHR::transformData, VkAccelerationStructureGeometryAabbsDataKHR::data, and VkAccelerationStructureGeometryInstancesDataKHR::data **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresKHR-accelerationStructure-08923
  The VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11543
  Each element of ppBuildRangeInfos[i] **must** be a valid pointer to an array of pInfos[i].geometryCount VkAccelerationStructureBuildRangeInfoKHR structures if the pInfos[i].type is not one of:
  - VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11544
  For each element of pInfos[i] whose pGeometries or ppGeometries members have a geometryType of VK_GEOMETRY_TYPE_MICROMAP_KHR, ppBuildRangeInfos[i] **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-mode-11545
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its mode **must** equal VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-11546
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its srcAccelerationStructure **must** be VK_NULL_HANDLE

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11547
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11548
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by any VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap member included in the pNext chain of any geometry.triangles member of any element of pGeometries or ppGeometries in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11549
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap member included in the pNext chain of any geometry.triangles member of any element of pGeometries or ppGeometries in any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11550
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, its data and triangleArray members **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11551
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, the buffers from which the buffer device addresses for its data and triangleArray members are queried **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11552
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, its data and triangleArray members **must** be a multiple of 128
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11553
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its triangleArray member **must** specify an access within the range of the VkBuffer that data was retrieved from, given by [dataOffset, dataOffset triangleSize] where triangleSize is calculated using its format and subdivisionLevel members rounded up to the nearest byte
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11554
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, the range of [triangleArray, triangleArray + (triangleArrayStride * numTriangles)] **must** be within the range of the VkBuffer from which the triangleArray member was retrieved

from, where *numTriangles* is the sum of `count` of all elements of `pUsageCounts` or `ppUsageCounts`

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11555
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries`, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its `pNext` chain, each element of its `geometry.triangleArray` member **must** have a `format` with a valid value from VkOpacityMicromapFormatKHR

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11556
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries`, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its `pNext` chain, for each element of its `triangleArray` member with a `format` equal to VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR, `subdivisionLevel` **must** be less than or equal to `maxOpacity2StateSubdivisionLevel`

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11575
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its `geometry.triangles` member includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its `pNext` chain, the micromap's `indexType` member is not VK_INDEX_TYPE_NONE_KHR, and `micromap` is not VK_NULL_HANDLE, for each *index* in `indexBuffer`[*j*] greater than zero where *j* is within the range [0, numTrianglesInGeometry - 1] where *numTrianglesInGeometry* is equal to `ppBuildRangeInfos`[i]→primitiveCount, *index* plus `baseTriangle` **must** be less than or equal to *numTriangles*, where *numTriangles* is given by the sum of all `count` parameters in the `pUsageCounts` or `ppUsageCounts` provided to the micromap's build command

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11577
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its `geometry.triangles` member includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its `pNext` chain, and the micromap's `indexType` member is not VK_INDEX_TYPE_NONE_KHR, `indexBuffer`
  (`indexStride` * numTrianglesInGeometry) **must** be within the range of the VkBuffer from which the `indexBuffer` device address was obtained from where *numTrianglesInGeometry* is equal to `ppBuildRangeInfos`[i]→primitiveCount

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11578
  For each element of `pInfos`[i].`pGeometries` or `pInfos`[i].`ppGeometries` with a `geometryType` equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its `geometry.triangles` member includes a VkAccelerationStructureTrianglesOpacityMicromapKHR structure in its `pNext` chain, the micromap's `indexType` member is not VK_INDEX_TYPE_NONE_KHR, and `micromap` is VK_NULL_HANDLE, for each *index* in `indexBuffer`[*j*] where *j* is within the range from [0, numTrianglesInGeometry - 1], *index* **must** be a valid VkOpacityMicromapSpecialIndexKHR value where *numTrianglesInGeometry* is equal to `ppBuildRangeInfos`[i]→primitiveCount

- VUID-vkCmdBuildAccelerationStructuresKHR-mode-04628
  The `mode` member of each element of `pInfos` **must** be a valid VkBuildAccelerationStructureModeKHR value

- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
  If the srcAccelerationStructure member of any element of pInfos is not VK_NULL_HANDLE, the srcAccelerationStructure member **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-04630
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** not be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03708
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, srcAccelerationStructure **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03403
  The srcAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
  The dstAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
  The dstAccelerationStructure member of any element of pInfos **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03707
  For each element of pInfos, its dstAccelerationStructure member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03699
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03700
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03663
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, inactive primitives in its srcAccelerationStructure member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03664

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, active primitives in its srcAccelerationStructure member **must** not be made inactive

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03709
  For each element of pInfos, if an acceleration structure is referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, it **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-None-03407
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03701
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any other element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03702
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstAccelerationStructure member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03703
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03704
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03705
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03706
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos, which is accessed

by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03667
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags in the build
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03668
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure and dstAccelerationStructure members **must** either be the same VkAccelerationStructureKHR, or not have any memory aliasing
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03758
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its geometryCount member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03759
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03760
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its type member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03761
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its geometryType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03762
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03763
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03764
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03765
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03766
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03767
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03768
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index referenced **must** be the same as the corresponding index value when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-primitiveCount-03769
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, the primitiveCount member of its corresponding VkAccelerationStructureBuildRangeInfoKHR structure **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03801
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of

VK_GEOMETRY_TYPE_INSTANCES_KHR, the corresponding ppBuildRangeInfos[i][j].primitiveCount **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12258
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12259
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresKHR-geometry-03673
  The buffers from which the buffer device addresses for all of the geometry.triangles.vertexData, geometry.triangles.indexData, geometry.triangles.transformData, geometry.aabbs.data, and geometry.instances.data members of all pInfos[i].pGeometries and pInfos[i].ppGeometries are queried **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12260
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and the size reported by updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12261
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and the size reported by buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03710
  For each element of pInfos, its scratchData.deviceAddress member **must** be a multiple of VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03804
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03711
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be aligned to:
  - the size of the format specified in vertexFormat, in bytes, if that format is a packed format
  - the component size of the format specified in vertexFormat, in bytes, if that format is not a packed format
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03806
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03712
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, and with geometry.triangles.indexType not equal to VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be aligned to the size in bytes of the type in indexType
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03808
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03810
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03811
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03714
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be aligned to 8 bytes

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03715
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_FALSE, geometry.instances.data.deviceAddress **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03716
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, geometry.instances.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03717
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, each element of geometry.instances.data.deviceAddress in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03813
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, geometry.instances.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12281
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, each VkAccelerationStructureInstanceKHR ::accelerationStructureReference value in geometry.instances.data.deviceAddress **must** be 0 or a value obtained from vkGetAccelerationStructureDeviceAddressKHR for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10607
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR is set in VkAccelerationStructureInstanceKHR::flags then geometry.instances.data.deviceAddress **must** refer to an acceleration structure that was built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-09547
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11701
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11624
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been built with a type of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11625
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with a valid micromap member
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11626
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11627
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was not built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** not be included in the in the geometry.triangles.pNext chain
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11628
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag, and srcAccelerationStructure was constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with a micromap that was deserialized from the serialized data of the micromap in the original build of srcAccelerationStructure

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11629
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without either the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flags, and srcAccelerationStructure was not constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with the same micromap handle as the original build
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11632
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, then its micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10904
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10905
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10126
  For each pInfos[i], dstAccelerationStructure **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::size greater than or equal to either:
  - the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and with each element of the pMaxPrimitiveCounts array greater than or equal to the equivalent ppBuildRangeInfos[i][j].primitiveCount values for j in [0,pInfos[i].geometryCount) or,
  - the result of querying the corresponding VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, if updating a compacted acceleration structure

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-parameter
  `pInfos` **must** be a valid pointer to an array of `infoCount` valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter
  `ppBuildRangeInfos` **must** be a valid pointer to an array of `infoCount` VkAccelerationStructureBuildRangeInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildAccelerationStructuresKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresKHR-infoCount-arraylength
  `infoCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructuresKHR is not affected by conditional rendering

To build acceleration structures with some parameters sourced on the device call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresIndirectKHR(
    VkCommandBuffer                                 commandBuffer,
    uint32_t                                        infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkDeviceAddress*                          pIndirectDeviceAddresses,
    const uint32_t*                                 pIndirectStrides,
    const uint32_t* const*                          ppMaxPrimitiveCounts);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build.
- `pInfos` is a pointer to an array of `infoCount` VkAccelerationStructureBuildGeometryInfoKHR structures defining the geometry used to build each acceleration structure.
- `pIndirectDeviceAddresses` is a pointer to an array of `infoCount` buffer device addresses which point to `pInfos`[i].`geometryCount` VkAccelerationStructureBuildRangeInfoKHR structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos`[i].
- `pIndirectStrides` is a pointer to an array of `infoCount` byte strides between elements of `pIndirectDeviceAddresses`.
- `ppMaxPrimitiveCounts` is a pointer to an array of `infoCount` pointers to arrays of `pInfos`[i].`geometryCount` values indicating the maximum number of primitives that will be built by this command for each geometry.

Accesses to any device memory referenced by this command **must** be synchronized as with vkCmdBuildAccelerationStructuresKHR.

Accesses to any element of `pIndirectDeviceAddresses` **must** be synchronized with the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access type of VK_ACCESS_INDIRECT_COMMAND_READ_BIT.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-accelerationStructureIndirectBuild-03650
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureIndirectBuild` feature **must** be enabled

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-mode-04628
  The `mode` member of each element of `pInfos` **must** be a valid VkBuildAccelerationStructureModeKHR value

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-srcAccelerationStructure-04629
  If the srcAccelerationStructure member of any element of pInfos is not VK_NULL_HANDLE, the srcAccelerationStructure member **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-04630
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** not be VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03708
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, srcAccelerationStructure **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03403
  The srcAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03698
  The dstAccelerationStructure member of any element of pInfos **must** not be the same acceleration structure as the dstAccelerationStructure member of any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03800
  The dstAccelerationStructure member of any element of pInfos **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03707
  For each element of pInfos, its dstAccelerationStructure member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03699
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03700
  For each element of pInfos, if its type member is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR, its dstAccelerationStructure member **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::type equal to either VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03663
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, inactive primitives in its srcAccelerationStructure member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03664

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, active primitives in its srcAccelerationStructure member **must** not be made inactive

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03709
  For each element of pInfos, if an acceleration structure is referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, it **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-None-03407
  The dstAccelerationStructure member of any element of pInfos **must** not be referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03701
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any other element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03702
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the dstAccelerationStructure member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03703
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any element of pInfos (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03704
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the scratchData member of any other element of pInfos, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03705
  The range of memory backing the scratchData member of any element of pInfos that is accessed by this command **must** not overlap the memory backing the srcAccelerationStructure member of any element of pInfos with a mode equal to VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03706
  The range of memory backing the dstAccelerationStructure member of any element of pInfos that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR in any other element of pInfos, which is accessed

by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03667
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure member **must** have previously been constructed with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags in the build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03668
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure and dstAccelerationStructure members **must** either be the same VkAccelerationStructureKHR, or not have any memory aliasing
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03758
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its geometryCount member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03759
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03760
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its type member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03761
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its geometryType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03762
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, its flags member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03763
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03764
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03765
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03766
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03767
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03768
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, then the value of each index referenced **must** be the same as the corresponding index value when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-primitiveCount-03769
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, the primitiveCount member of its corresponding VkAccelerationStructureBuildRangeInfoKHR structure **must** have the same value which was specified when srcAccelerationStructure was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03801
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of

VK_GEOMETRY_TYPE_INSTANCES_KHR, the corresponding ppMaxPrimitiveCounts[i][j] **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12258
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12259
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and N is not 0, all addresses between pInfos[i].scratchData.deviceAddress and pInfos[i].scratchData.deviceAddress + N - 1 **must** be in the buffer device address range of the same buffer, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-geometry-03673
  The buffers from which the buffer device addresses for all of the geometry.triangles.vertexData, geometry.triangles.indexData, geometry.triangles.transformData, geometry.aabbs.data, and geometry.instances.data members of all pInfos[i].pGeometries and pInfos[i].ppGeometries are queried **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12260
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, and the size reported by updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12261
  If pInfos[i].mode is VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR, and the size reported by buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count is non-zero, pInfos[i].scratchData.deviceAddress **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03710
  For each element of pInfos, its scratchData.deviceAddress member **must** be a multiple of VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03804
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03711
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, geometry.triangles.vertexData.deviceAddress **must** be aligned to:
  - the size of the format specified in vertexFormat, in bytes, if that format is a packed format
  - the component size of the format specified in vertexFormat, in bytes, if that format is not a packed format
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03806
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.indexType is not VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03712
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, and with geometry.triangles.indexType not equal to VK_INDEX_TYPE_NONE_KHR, geometry.triangles.indexData.deviceAddress **must** be aligned to the size in bytes of the type in indexType
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03808
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03810
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if geometry.triangles.transformData.deviceAddress is not 0, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03811
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03714
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_AABBS_KHR, geometry.aabbs.data.deviceAddress **must** be aligned to 8 bytes

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03715
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_FALSE, geometry.instances.data.deviceAddress **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03716
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, geometry.instances.data.deviceAddress **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03717
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if geometry.arrayOfPointers is VK_TRUE, each element of geometry.instances.data.deviceAddress in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03813
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, geometry.instances.data.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12281
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, each VkAccelerationStructureInstanceKHR ::accelerationStructureReference value in geometry.instances.data.deviceAddress **must** be 0 or a value obtained from vkGetAccelerationStructureDeviceAddressKHR for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10607
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_INSTANCES_KHR, if VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR is set in VkAccelerationStructureInstanceKHR::flags then geometry.instances.data.deviceAddress **must** refer to an acceleration structure that was built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR set in VkAccelerationStructureBuildGeometryInfoKHR::flags
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-09547
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11701
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11624
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in the geometry.triangles.pNext chain with a valid micromap member, then the micromap member **must** have been built with a type of VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11625
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with a valid micromap member
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11626
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with its micromap member equal to VK_NULL_HANDLE
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11627
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was not built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** not be included in the in the geometry.triangles.pNext chain
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11628
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flag, and srcAccelerationStructure was constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with a micromap that was deserialized from the serialized data of the micromap in the original build of srcAccelerationStructure

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11629
  For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, its srcAccelerationStructure was originally built without either the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT or the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR flags, and srcAccelerationStructure was not constructed by deserialization with vkCmdCopyMemoryToAccelerationStructureKHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, and the same geometry in the original build of srcAccelerationStructure was built with an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR in its geometry.triangles.pNext chain with a valid micromap member, then an instance of VkAccelerationStructureTrianglesOpacityMicromapKHR **must** be included in the in the geometry.triangles.pNext chain with the same micromap handle as the original build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11632
  For any element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, then its micromap member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10904
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10905
  For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of VkAccelerationStructureTrianglesOpacityMicromapEXT in the geometry.triangles.pNext chain, and its indexType is not VK_INDEX_TYPE_NONE_KHR, then its indexBuffer.deviceAddress **must** be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03646
  For each element of pIndirectDeviceAddresses[i], all device addresses between pIndirectDeviceAddresses[i] and pIndirectDeviceAddresses[i] + (pInfos[i].geometryCount × pIndirectStrides[i]) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03647
  For each element of pIndirectDeviceAddresses, the buffer from which it was queried **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03648
  Each element of pIndirectDeviceAddresses **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-03787
  Each element of pIndirectStrides **must** be a multiple of 4

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03651
  Each VkAccelerationStructureBuildRangeInfoKHR structure referenced by any element of `pIndirectDeviceAddresses` **must** be a valid VkAccelerationStructureBuildRangeInfoKHR structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03652
  `pInfos`[i].`dstAccelerationStructure` **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::`size` greater than or equal to the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with `pBuildInfo` = `pInfos`[i] and `pMaxPrimitiveCounts` = `ppMaxPrimitiveCounts`[i]
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-03653
  Each `ppMaxPrimitiveCounts`[i][j] **must** be greater than or equal to the `primitiveCount` value specified by the VkAccelerationStructureBuildRangeInfoKHR structure located at `pIndirectDeviceAddresses`[i] + (`j` × `pIndirectStrides`[i])
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-type-11557
  For any element of `pInfos`, its `type` member **must** not be VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-parameter
  `pInfos` **must** be a valid pointer to an array of `infoCount` valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-parameter
  `pIndirectDeviceAddresses` **must** be a valid pointer to an array of `infoCount` VkDeviceAddress values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-parameter
  `pIndirectStrides` **must** be a valid pointer to an array of `infoCount` `uint32_t` values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-parameter
  `ppMaxPrimitiveCounts` **must** be a valid pointer to an array of `infoCount` `uint32_t` values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-suspended
  This command **must** not be called between suspended render pass instances

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-infoCount-arraylength
  `infoCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructuresIndirectKHR is not affected by conditional rendering

The `VkAccelerationStructureBuildGeometryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildGeometryInfoKHR {
    VkStructureType                                    sType;
    const void*                                        pNext;
    VkAccelerationStructureTypeKHR                     type;
    VkBuildAccelerationStructureFlagsKHR               flags;
    VkBuildAccelerationStructureModeKHR                mode;
    VkAccelerationStructureKHR                         srcAccelerationStructure;
    VkAccelerationStructureKHR                         dstAccelerationStructure;
    uint32_t                                           geometryCount;
    const VkAccelerationStructureGeometryKHR*          pGeometries;
    const VkAccelerationStructureGeometryKHR* const*   ppGeometries;
    VkDeviceOrHostAddressKHR                           scratchData;
} VkAccelerationStructureBuildGeometryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a VkAccelerationStructureTypeKHR value specifying the type of acceleration structure

being built.

- `flags` is a bitmask of VkBuildAccelerationStructureFlagBitsKHR specifying additional parameters of the acceleration structure.
- `mode` is a VkBuildAccelerationStructureModeKHR value specifying the type of operation to perform.
- `srcAccelerationStructure` is a pointer to an existing acceleration structure that is to be used to update the `dstAccelerationStructure` acceleration structure when `mode` is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR.
- `dstAccelerationStructure` is a pointer to the target acceleration structure for the build.
- `geometryCount` specifies the number of geometries that will be built into `dstAccelerationStructure`.
- `pGeometries` is a pointer to an array of VkAccelerationStructureGeometryKHR structures.
- `ppGeometries` is a pointer to an array of pointers to VkAccelerationStructureGeometryKHR structures.
- `scratchData` is the device or host address of memory that will be used as scratch memory for the build.

Only one of `pGeometries` or `ppGeometries` **can** be a valid pointer, the other **must** be `NULL`. Each element of the non-`NULL` array describes the data used to build each acceleration structure geometry.

For bottom-level acceleration structures, the index of each element of the `pGeometries` or `ppGeometries` members of VkAccelerationStructureBuildGeometryInfoKHR is used as the *geometry index* during ray traversal. The geometry index is available in ray shaders via the `RayGeometryIndexKHR` built-in, and is used to determine hit and intersection shaders executed during traversal. The geometry index is available to ray queries via the `OpRayQueryGetIntersectionGeometryIndexKHR` instruction.

Members `srcAccelerationStructure` and `dstAccelerationStructure` **may** be the same or different for an update operation (when `mode` is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR). If they are the same, the update happens in-place. Otherwise, the target acceleration structure is updated and the source is not modified.

Valid Usage

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03654
  `type` **must** not be VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-03788
  If `geometryCount` is not `0`, exactly one of `pGeometries` or `ppGeometries` **must** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03789
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** be VK_GEOMETRY_TYPE_INSTANCES_KHR

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03790
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, `geometryCount` **must** be `1`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03791
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** not be VK_GEOMETRY_TYPE_INSTANCES_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03792
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR then the `geometryType` member of each geometry in either `pGeometries` or `ppGeometries` **must** be the same
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03793
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR then `geometryCount` **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxGeometryCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03794
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR and the `geometryType` member of either `pGeometries` or `ppGeometries` is VK_GEOMETRY_TYPE_AABBS_KHR, the total number of AABBs in all geometries **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03795
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR and the `geometryType` member of either `pGeometries` or `ppGeometries` is VK_GEOMETRY_TYPE_TRIANGLES_KHR, the total number of triangles in all geometries **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-03796
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR bit set, then it **must** not have the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11558
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR bit set then it **must** not have the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11709
  If `flags` has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT bit set, the VkPhysicalDeviceOpacityMicromapFeaturesEXT::`micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11710
  If `flags` has the

VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR bit set, the VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap or VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature **must** be enabled

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11711
  If flags has the VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR bit set, the VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap or VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-micromap-11559
  If type is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryCount-11560
  If type is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, geometryCount **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11561
  If type is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the geometryType member of elements of either pGeometries or ppGeometries **must** be VK_GEOMETRY_TYPE_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11707
  If type is not VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the geometryType member of elements of either pGeometries or ppGeometries **must** not be VK_GEOMETRY_TYPE_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11562
  If type is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, flags **must** only include the following bits:
  - VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR
  - VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-11563
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, type **must** be VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11712
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its pUsageCounts or ppUsageCounts members **must** have its format member equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11564
  If flags does not include VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for

each element of its pUsageCounts or ppUsageCounts members, if its format member is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, its subdivisionLevel member **must** be less than or equal to maxOpacity4StateSubdivisionLevel

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11565
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its pUsageCounts or ppUsageCounts members, its subdivisionLevel member **must** be less than or equal to maxOpacityLossy4StateSubdivisionLevel
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11713
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, each element of its triangleArray member **must** have its format member equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11566
  If flags does not include VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its triangleArray member, if its format member is VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR, its subdivisionLevel member **must** be less than or equal to maxOpacity4StateSubdivisionLevel
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11567
  If flags includes VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR, for each element of pGeometries or ppGeometries, if it includes a VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain, for each element of its triangleArray member, its subdivisionLevel member **must** be less than or equal to maxOpacityLossy4StateSubdivisionLevel

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-parameter
  type **must** be a valid VkAccelerationStructureTypeKHR value
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkBuildAccelerationStructureFlagBitsKHR values
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-parameter

If `geometryCount` is not `0`, and `pGeometries` is not `NULL`, `pGeometries` **must** be a valid pointer to an array of `geometryCount` valid VkAccelerationStructureGeometryKHR structures

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-ppGeometries-parameter
  If `geometryCount` is not `0`, and `ppGeometries` is not `NULL`, `ppGeometries` **must** be a valid pointer to an array of `geometryCount` valid pointers to valid VkAccelerationStructureGeometryKHR structures
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-commonparent
  Both of `dstAccelerationStructure`, and `srcAccelerationStructure` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

The VkBuildAccelerationStructureModeKHR enumeration is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureModeKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR = 0,
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR = 1,
} VkBuildAccelerationStructureModeKHR;
```

- VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR specifies that the destination acceleration structure will be built using the specified geometries.
- VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR specifies that the destination acceleration structure will be built using data in a source acceleration structure, updated by the specified geometries.

The `VkDeviceOrHostAddressKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressKHR {
    VkDeviceAddress    deviceAddress;
    void*              hostAddress;
} VkDeviceOrHostAddressKHR;
```

- `deviceAddress` is a buffer device address as returned by the vkGetBufferDeviceAddressKHR command.
- `hostAddress` is a host memory address.

The `VkDeviceOrHostAddressConstKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressConstKHR {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstKHR;
```

- `deviceAddress` is a buffer device address as returned by the vkGetBufferDeviceAddressKHR command.
- `hostAddress` is a const host memory address.

The `VkAccelerationStructureGeometryKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryKHR {
    VkStructureType                              sType;
    const void*                                  pNext;
    VkGeometryTypeKHR                            geometryType;
    VkAccelerationStructureGeometryDataKHR       geometry;
    VkGeometryFlagsKHR                           flags;
} VkAccelerationStructureGeometryKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `geometryType` describes which type of geometry this `VkAccelerationStructureGeometryKHR` refers to.
- `geometry` is a VkAccelerationStructureGeometryDataKHR union describing the geometry data for the relevant geometry type.
- `flags` is a bitmask of VkGeometryFlagBitsKHR values describing additional properties of how the geometry should be built.

Valid Usage

- VUID-VkAccelerationStructureGeometryKHR-micromap-11568
  If `geometryType` is VK_GEOMETRY_TYPE_MICROMAP_KHR, `pNext` chain **must** include a single VkAccelerationStructureGeometryMicromapDataKHR structure
- VUID-VkAccelerationStructureGeometryKHR-flags-11569
  If `geometryType` is VK_GEOMETRY_TYPE_MICROMAP_KHR, `flags` **must** be `0`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_KHR
- VUID-VkAccelerationStructureGeometryKHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkAccelerationStructureGeometryMicromapDataKHR
- VUID-VkAccelerationStructureGeometryKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureGeometryKHR-geometryType-parameter
  `geometryType` **must** be a valid VkGeometryTypeKHR value

- VUID-VkAccelerationStructureGeometryKHR-triangles-parameter
  If `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `triangles` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryTrianglesDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-aabbs-parameter
  If `geometryType` is `VK_GEOMETRY_TYPE_AABBS_KHR`, the `aabbs` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryAabbsDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-instances-parameter
  If `geometryType` is `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the `instances` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryInstancesDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of `VkGeometryFlagBitsKHR` values

The `VkAccelerationStructureGeometryDataKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkAccelerationStructureGeometryDataKHR {
    VkAccelerationStructureGeometryTrianglesDataKHR    triangles;
    VkAccelerationStructureGeometryAabbsDataKHR        aabbs;
    VkAccelerationStructureGeometryInstancesDataKHR    instances;
} VkAccelerationStructureGeometryDataKHR;
```

- `triangles` is a `VkAccelerationStructureGeometryTrianglesDataKHR` structure.
- `aabbs` is a `VkAccelerationStructureGeometryAabbsDataKHR` structure.
- `instances` is a `VkAccelerationStructureGeometryInstancesDataKHR` structure.

The `VkAccelerationStructureGeometryTrianglesDataKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryTrianglesDataKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkFormat                         vertexFormat;
    VkDeviceOrHostAddressConstKHR    vertexData;
    VkDeviceSize                     vertexStride;
    uint32_t                         maxVertex;
    VkIndexType                      indexType;
    VkDeviceOrHostAddressConstKHR    indexData;
    VkDeviceOrHostAddressConstKHR    transformData;
} VkAccelerationStructureGeometryTrianglesDataKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the `VkFormat` of each vertex element.
- `vertexData` is a device or host address of memory containing vertex data for this geometry.

- `vertexStride` is the stride in bytes between each vertex.
- `maxVertex` is the number of vertices in `vertexData` minus one.
- `indexType` is the VkIndexType of each index element.
- `indexData` is a device or host address of memory containing index data for this geometry. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `transformData` is a device or host address to memory containing an optional reference to a VkTransformMatrixKHR structure describing a transformation from the space in which the vertices in this geometry are described to the space in which the acceleration structure is defined.

NOTE Unlike the stride for vertex buffers in VkVertexInputBindingDescription for graphics pipelines which must not exceed `maxVertexInputBindingStride`, `vertexStride` for acceleration structure geometry is instead restricted to being a 32-bit value.

Valid Usage

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03735
  `vertexStride` **must** be a multiple of the size in bytes of the smallest component of `vertexFormat`
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03819
  `vertexStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-03797
  The format features of `vertexFormat` **must** contain VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-03798
  `indexType` **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_TRIANGLES_DATA_KHR
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkAccelerationStructureTrianglesOpacityMicromapEXT or VkAccelerationStructureTrianglesOpacityMicromapKHR
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-parameter

vertexFormat **must** be a valid VkFormat value

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-parameter indexType **must** be a valid VkIndexType value

The VkAccelerationStructureTrianglesOpacityMicromapKHR structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapKHR {
    VkStructureType                sType;
    void*                          pNext;
    VkIndexType                    indexType;
    VkDeviceAddress                indexBuffer;
    VkDeviceSize                   indexStride;
    uint32_t                       baseTriangle;
    VkAccelerationStructureKHR     micromap;
} VkAccelerationStructureTrianglesOpacityMicromapKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- indexType is the type of triangle indices used when indexing this micromap
- indexBuffer is the address containing the triangle indices
- indexStride is the byte stride between triangle indices
- baseTriangle is the base value added to the non-negative triangle indices
- micromap is the handle to the micromap object to include in this geometry

If VkAccelerationStructureTrianglesOpacityMicromapKHR is included in the pNext chain of a VkAccelerationStructureGeometryTrianglesDataKHR structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from indexBuffer using indexType and indexStride if present. If indexType is VK_INDEX_TYPE_NONE_KHR, then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from VkOpacityMicromapSpecialIndexKHR then that triangle behaves as described for that special value in Ray Opacity Micromap.

Otherwise that triangle uses the opacity micromap information from micromap at that index plus baseTriangle.

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-11570 indexType **must** be VK_INDEX_TYPE_UINT8, VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11571
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, `indexBuffer` **must** be 0
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11572
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexBuffer` **must** be a valid VkDeviceAddress
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11573
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11574
  If `indexType` is not VK_INDEX_TYPE_NONE_KHR, `indexStride` **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-geometry-11576
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, for each triangle index in the geometry, index plus `baseTriangle` **must** be less than or equal to *numTriangles*, where *numTriangles* is given by the sum of all `count` parameters in the `pUsageCounts` or `ppUsageCounts` provided to the micromap's build command
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-11579
  If `indexType` is VK_INDEX_TYPE_NONE_KHR, `micromap` **must** not be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_KHR
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-parameter
  `indexType` **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-parameter
  If `micromap` is not VK_NULL_HANDLE, `micromap` **must** be a valid VkAccelerationStructureKHR handle

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryTrianglesDataKHR

The `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapEXT {
    VkStructureType                       sType;
    void*                                 pNext;
    VkIndexType                           indexType;
    VkDeviceOrHostAddressConstKHR         indexBuffer;
    VkDeviceSize                          indexStride;
    uint32_t                              baseTriangle;
    uint32_t                              usageCountsCount;
    const VkMicromapUsageEXT*             pUsageCounts;
    const VkMicromapUsageEXT* const*      ppUsageCounts;
    VkMicromapEXT                         micromap;
} VkAccelerationStructureTrianglesOpacityMicromapEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is a device or host address of memory containing the triangle indices. When `indexType` is VK_INDEX_TYPE_NONE_KHR it **must** be `NULL`.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of VkMicromapUsageEXT structures.
- `ppUsageCounts` is a pointer to an array of pointers to VkMicromapUsageEXT structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesOpacityMicromapEXT` is included in the `pNext` chain of a VkAccelerationStructureGeometryTrianglesDataKHR structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride` if present. If `indexType` is VK_INDEX_TYPE_NONE_KHR, then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from VkOpacityMicromapSpecialIndexEXT then that triangle behaves as described for that special value in Ray Opacity Micromap.

Otherwise that triangle uses the opacity micromap information from micromap at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection and special index handling **must** be equal to the sum of matching `count` provided.

If micromap is VK_NULL_HANDLE, then every value read from indexBuffer **must** be one of the values in VkOpacityMicromapSpecialIndexEXT.

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-07335
  Only one of pUsageCounts or ppUsageCounts **can** be a valid pointer, the other **must** be NULL
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10719
  indexType **must** be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_KHR
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10722
  If indexType is not VK_INDEX_TYPE_NONE_KHR, then indexStride **must** be a multiple of the size in bytes of indexType
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10723
  If indexType is not VK_INDEX_TYPE_NONE_KHR, then indexStride **must** be less than or equal to 2^{32}-1
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-format-11679
  If micromap is not VK_NULL_HANDLE, the type used to construct micromap is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, the format member of each element of pUsageCounts or ppUsageCounts **must** be a valid value from VkOpacityMicromapFormatEXT
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11680
  If micromap is not VK_NULL_HANDLE, the type used to build micromap is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of pUsageCounts or ppUsageCounts with format equal to VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT, subdivisionLevel **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11681
  If micromap is not VK_NULL_HANDLE, the type used to build micromap is VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT, for each member of pUsageCounts or ppUsageCounts with format equal to VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT, subdivisionLevel **must** be less than or equal to VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_EXT
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-parameter
  indexType **must** be a valid VkIndexType value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-parameter
  If usageCountsCount is not 0, and pUsageCounts is not NULL, pUsageCounts **must** be a valid

pointer to an array of `usageCountsCount` VkMicromapUsageEXT structures

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-ppUsageCounts-parameter
  If `usageCountsCount` is not `0`, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to VkMicromapUsageEXT structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-micromap-parameter
  If `micromap` is not VK_NULL_HANDLE, `micromap` **must** be a valid VkMicromapEXT handle

Structure Chaining

Extends the structure

- VkAccelerationStructureGeometryTrianglesDataKHR

The VkOpacityMicromapSpecialIndexKHR enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkOpacityMicromapSpecialIndexKHR {
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR = -1,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR = -2,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR = -3,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR = -4,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR,
  // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR,
} VkOpacityMicromapSpecialIndexKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkOpacityMicromapSpecialIndexKHR
typedef VkOpacityMicromapSpecialIndexKHR VkOpacityMicromapSpecialIndexEXT;
```

- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR specifies that the entire triangle is fully transparent.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR specifies that the entire triangle is fully opaque.
- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR specifies that the entire triangle is unknown-transparent.

- VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR specifies that the entire triangle is unknown-opaque.

The VkAccelerationStructureSerializedBlockTypeKHR enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkAccelerationStructureSerializedBlockTypeKHR {
    VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR = 0,
} VkAccelerationStructureSerializedBlockTypeKHR;
```

- VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR specifies that the block contains opacity micromaps.

The VkTransformMatrixKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkTransformMatrixKHR {
    float    matrix[3][4];
} VkTransformMatrixKHR;
```

- matrix is a 3x4 row-major affine transformation matrix.

Valid Usage

- VUID-VkTransformMatrixKHR-matrix-03799
  The first three columns of matrix **must** define an invertible 3x3 matrix

The VkAccelerationStructureGeometryAabbsDataKHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryAabbsDataKHR {
    VkStructureType                  sType;
