  If depthAttachmentFormat is not VK_FORMAT_UNDEFINED, it **must** be a format with potential format features that include VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkCustomResolveCreateInfoEXT-pColorAttachmentFormats-11510
  If any element of pColorAttachmentFormats is not VK_FORMAT_UNDEFINED, it **must** be a format with potential format features that include VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT
- VUID-VkCustomResolveCreateInfoEXT-stencilAttachmentFormat-11511
  If stencilAttachmentFormat is not VK_FORMAT_UNDEFINED, it **must** be a format that includes a stencil aspect
- VUID-VkCustomResolveCreateInfoEXT-stencilAttachmentFormat-11512
  If stencilAttachmentFormat is not VK_FORMAT_UNDEFINED, it **must** be a format with potential format features that include VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkCustomResolveCreateInfoEXT-depthAttachmentFormat-11513
  If depthAttachmentFormat is not VK_FORMAT_UNDEFINED and stencilAttachmentFormat is not VK_FORMAT_UNDEFINED, depthAttachmentFormat **must** equal stencilAttachmentFormat

Valid Usage (Implicit)

- VUID-VkCustomResolveCreateInfoEXT-sType-sType

sType **must** be VK_STRUCTURE_TYPE_CUSTOM_RESOLVE_CREATE_INFO_EXT

Structure Chaining

Extends the structures

- VkCommandBufferInheritanceInfo
- VkGraphicsPipelineCreateInfo
- VkShaderCreateInfoEXT

The VkPipelineBinaryInfoKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        binaryCount;
    const VkPipelineBinaryKHR*      pPipelineBinaries;
} VkPipelineBinaryInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- binaryCount is the number of elements in the pPipelineBinaries array.
- pPipelineBinaries is a pointer to an array of VkPipelineBinaryKHR handles.

If a VkPipelineBinaryInfoKHR structure with a binaryCount greater than 0 is included in the pNext chain of any Vk*PipelineCreateInfo structure when creating a pipeline, implementations **must** use the data in pPipelineBinaries instead of recalculating it. Any shader module identifiers, shader modules, or chained VkShaderModuleCreateInfo structures declared in VkPipelineShaderStageCreateInfo instances, are ignored. Any VkShaderDescriptorSetAndBindingMappingInfoEXT in the pNext chains of VkPipelineShaderStageCreateInfo instances are ignored.

If this structure is not included in the pNext chain, it is equivalent to specifying this structure with a binaryCount of 0.

Valid Usage

- VUID-VkPipelineBinaryInfoKHR-binaryCount-09603
  binaryCount and the order of the elements in pPipelineBinaries **must** exactly match that returned by vkCreatePipelineBinariesKHR for the matching Vk*PipelineCreateInfo structure and its pNext chain, ignoring the presence of the VkPipelineBinaryInfoKHR structure, the presence of the VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR flag, and absence of any shader module identifiers, shader modules, or VkShaderModuleCreateInfo structures, for the same global pipeline key, from either:

- VkPipelineBinaryCreateInfoKHR::pPipelineCreateInfo, or
- VkPipelineBinaryCreateInfoKHR::pipeline

Valid Usage (Implicit)

- VUID-VkPipelineBinaryInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_BINARY_INFO_KHR
- VUID-VkPipelineBinaryInfoKHR-pPipelineBinaries-parameter
  If binaryCount is not 0, pPipelineBinaries **must** be a valid pointer to an array of binaryCount valid VkPipelineBinaryKHR handles

Structure Chaining

Extends the structures

- VkComputePipelineCreateInfo
- VkGraphicsPipelineCreateInfo
- VkRayTracingPipelineCreateInfoKHR

The VkGraphicsPipelineLibraryCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkGraphicsPipelineLibraryCreateInfoEXT {
    VkStructureType                    sType;
    const void*                        pNext;
    VkGraphicsPipelineLibraryFlagsEXT  flags;
} VkGraphicsPipelineLibraryCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkGraphicsPipelineLibraryFlagBitsEXT specifying the subsets of the graphics pipeline that are being compiled.

If a VkGraphicsPipelineLibraryCreateInfoEXT structure is included in the pNext chain of VkGraphicsPipelineCreateInfo, it specifies the subsets of the graphics pipeline being created, excluding any subsets from linked pipeline libraries. If the pipeline is created with pipeline libraries, state from those libraries is aggregated with said subset.

If this structure is omitted, and either VkGraphicsPipelineCreateInfo::flags includes VK_PIPELINE_CREATE_LIBRARY_BIT_KHR or the VkGraphicsPipelineCreateInfo::pNext chain includes a VkPipelineLibraryCreateInfoKHR structure with a libraryCount greater than 0, it is as if flags is 0. Otherwise if this structure is omitted, it is as if flags includes all possible subsets of the graphics pipeline (i.e. a complete graphics pipeline).

Valid Usage (Implicit)

- VUID-VkGraphicsPipelineLibraryCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_LIBRARY_CREATE_INFO_EXT
- VUID-VkGraphicsPipelineLibraryCreateInfoEXT-flags-parameter
  `flags` **must** be a valid combination of VkGraphicsPipelineLibraryFlagBitsEXT values

Structure Chaining

Extends the structure

- VkGraphicsPipelineCreateInfo

```
// Provided by VK_EXT_graphics_pipeline_library
typedef VkFlags VkGraphicsPipelineLibraryFlagsEXT;
```

`VkGraphicsPipelineLibraryFlagsEXT` is a bitmask type for setting a mask of zero or more VkGraphicsPipelineLibraryFlagBitsEXT.

Possible values of the `flags` member of VkGraphicsPipelineLibraryCreateInfoEXT, specifying the subsets of a graphics pipeline to compile are:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef enum VkGraphicsPipelineLibraryFlagBitsEXT {
    VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT = 0x00000001,
    VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT = 0x00000002,
    VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT = 0x00000004,
    VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT = 0x00000008,
} VkGraphicsPipelineLibraryFlagBitsEXT;
```

- VK_GRAPHICS_PIPELINE_LIBRARY_VERTEX_INPUT_INTERFACE_BIT_EXT specifies that a pipeline will include vertex input interface state.
- VK_GRAPHICS_PIPELINE_LIBRARY_PRE_RASTERIZATION_SHADERS_BIT_EXT specifies that a pipeline will include pre-rasterization shader state.
- VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_SHADER_BIT_EXT specifies that a pipeline will include fragment shader state.
- VK_GRAPHICS_PIPELINE_LIBRARY_FRAGMENT_OUTPUT_INTERFACE_BIT_EXT specifies that a pipeline will include fragment output interface state.

The `VkPipelineDynamicStateCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineDynamicStateCreateInfo {
    VkStructureType                      sType;
    const void*                          pNext;
    VkPipelineDynamicStateCreateFlags    flags;
    uint32_t                             dynamicStateCount;
    const VkDynamicState*                pDynamicStates;
} VkPipelineDynamicStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dynamicStateCount` is the number of elements in the `pDynamicStates` array.
- `pDynamicStates` is a pointer to an array of VkDynamicState values specifying which pieces of pipeline state will use the values from dynamic state commands rather than from pipeline state creation information.

Valid Usage

- VUID-VkPipelineDynamicStateCreateInfo-pDynamicStates-01442
  Each element of `pDynamicStates` **must** be unique

Valid Usage (Implicit)

- VUID-VkPipelineDynamicStateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_DYNAMIC_STATE_CREATE_INFO
- VUID-VkPipelineDynamicStateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineDynamicStateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkPipelineDynamicStateCreateInfo-pDynamicStates-parameter
  If `dynamicStateCount` is not `0`, `pDynamicStates` **must** be a valid pointer to an array of `dynamicStateCount` valid VkDynamicState values

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineDynamicStateCreateFlags;
```

`VkPipelineDynamicStateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The source of different pieces of dynamic state is specified by the VkPipelineDynamicStateCreateInfo::`pDynamicStates` property of the currently active pipeline, each

of whose elements **must** be one of the values:

```
// Provided by VK_VERSION_1_0
typedef enum VkDynamicState {
    VK_DYNAMIC_STATE_VIEWPORT = 0,
    VK_DYNAMIC_STATE_SCISSOR = 1,
    VK_DYNAMIC_STATE_LINE_WIDTH = 2,
    VK_DYNAMIC_STATE_DEPTH_BIAS = 3,
    VK_DYNAMIC_STATE_BLEND_CONSTANTS = 4,
    VK_DYNAMIC_STATE_DEPTH_BOUNDS = 5,
    VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK = 6,
    VK_DYNAMIC_STATE_STENCIL_WRITE_MASK = 7,
    VK_DYNAMIC_STATE_STENCIL_REFERENCE = 8,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_CULL_MODE = 1000267000,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_FRONT_FACE = 1000267001,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY = 1000267002,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT = 1000267003,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT = 1000267004,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE = 1000267005,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE = 1000267006,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE = 1000267007,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_DEPTH_COMPARE_OP = 1000267008,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE = 1000267009,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE = 1000267010,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_STENCIL_OP = 1000267011,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE = 1000377001,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE = 1000377002,
  // Provided by VK_VERSION_1_3
    VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE = 1000377004,
  // Provided by VK_VERSION_1_4
    VK_DYNAMIC_STATE_LINE_STIPPLE = 1000259000,
  // Provided by VK_EXT_discard_rectangles
    VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT = 1000099000,
  // Provided by VK_EXT_discard_rectangles
    VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT = 1000099001,
  // Provided by VK_EXT_discard_rectangles
```

```
    VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT = 1000099002,
  // Provided by VK_EXT_sample_locations
    VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT = 1000143000,
  // Provided by VK_KHR_ray_tracing_pipeline

    VK_DYNAMIC_STATE_LINE_STIPPLE_KHR = VK_DYNAMIC_STATE_LINE_STIPPLE,
} VkDynamicState;
```

- VK_DYNAMIC_STATE_VIEWPORT specifies that the pViewports state in VkPipelineViewportStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetViewport before any drawing commands. The number of viewports used by a pipeline is still specified by the viewportCount member of VkPipelineViewportStateCreateInfo.
- VK_DYNAMIC_STATE_SCISSOR specifies that the pScissors state in VkPipelineViewportStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetScissor before any drawing commands. The number of scissor rectangles used by a pipeline is still specified by the scissorCount member of VkPipelineViewportStateCreateInfo.
- VK_DYNAMIC_STATE_LINE_WIDTH specifies that the lineWidth state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLineWidth before any drawing commands that generate line primitives for the rasterizer.
- VK_DYNAMIC_STATE_DEPTH_BIAS specifies that any instance of VkDepthBiasRepresentationInfoEXT included in the pNext chain of VkPipelineRasterizationStateCreateInfo as well as the depthBiasConstantFactor, depthBiasClamp and depthBiasSlopeFactor states in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthBias or vkCmdSetDepthBias2EXT before any draws are performed with depth bias enabled.
- VK_DYNAMIC_STATE_BLEND_CONSTANTS specifies that the blendConstants state in VkPipelineColorBlendStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetBlendConstants before any draws are performed with a pipeline state with VkPipelineColorBlendAttachmentState member blendEnable set to VK_TRUE and any of the blend functions using a constant blend color.
- VK_DYNAMIC_STATE_DEPTH_BOUNDS specifies that the minDepthBounds and maxDepthBounds states of VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthBounds before any draws are performed with a pipeline state with VkPipelineDepthStencilStateCreateInfo member depthBoundsTestEnable set to VK_TRUE.
- VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK specifies that the compareMask state in VkPipelineDepthStencilStateCreateInfo for both front and back will be ignored and **must** be set dynamically with vkCmdSetStencilCompareMask before any draws are performed with a pipeline state with VkPipelineDepthStencilStateCreateInfo member stencilTestEnable set to VK_TRUE
- VK_DYNAMIC_STATE_STENCIL_WRITE_MASK specifies that the writeMask state in VkPipelineDepthStencilStateCreateInfo for both front and back will be ignored and **must** be set dynamically with vkCmdSetStencilWriteMask before any draws are performed with a pipeline state with VkPipelineDepthStencilStateCreateInfo member stencilTestEnable set to VK_TRUE
- VK_DYNAMIC_STATE_STENCIL_REFERENCE specifies that the reference state in VkPipelineDepthStencilStateCreateInfo for both front and back will be ignored and **must** be set dynamically with vkCmdSetStencilReference before any draws are performed with a pipeline state with VkPipelineDepthStencilStateCreateInfo member stencilTestEnable set to VK_TRUE
- VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT specifies that the pDiscardRectangles state in VkPipelineDiscardRectangleStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetDiscardRectangleEXT before any draw or clear commands.
- VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT specifies that the presence of the

VkPipelineDiscardRectangleStateCreateInfoEXT structure in the VkGraphicsPipelineCreateInfo chain with a `discardRectangleCount` greater than zero does not implicitly enable discard rectangles and they **must** be enabled dynamically with vkCmdSetDiscardRectangleEnableEXT before any draw commands. This is available on implementations that support at least `specVersion` `2` of the `VK_EXT_discard_rectangles` extension.

- VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT specifies that the `discardRectangleMode` state in VkPipelineDiscardRectangleStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetDiscardRectangleModeEXT before any draw commands. This is available on implementations that support at least `specVersion` `2` of the `VK_EXT_discard_rectangles` extension.
- VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT specifies that the `sampleLocationsInfo` state in VkPipelineSampleLocationsStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetSampleLocationsEXT before any draw or clear commands. Enabling custom sample locations is still indicated by the `sampleLocationsEnable` member of VkPipelineSampleLocationsStateCreateInfoEXT.
- VK_DYNAMIC_STATE_LINE_STIPPLE specifies that the `lineStippleFactor` and `lineStipplePattern` state in VkPipelineRasterizationLineStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLineStipple before any draws are performed with a pipeline state with VkPipelineRasterizationLineStateCreateInfo member `stippledLineEnable` set to VK_TRUE.
- VK_DYNAMIC_STATE_CULL_MODE specifies that the `cullMode` state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetCullMode before any drawing commands.
- VK_DYNAMIC_STATE_FRONT_FACE specifies that the `frontFace` state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetFrontFace before any drawing commands.
- VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY specifies that the `topology` state in VkPipelineInputAssemblyStateCreateInfo only specifies the topology class, and the specific topology order and adjacency **must** be set dynamically with vkCmdSetPrimitiveTopology before any drawing commands.
- VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT specifies that the `viewportCount` and `pViewports` state in VkPipelineViewportStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetViewportWithCount before any draw call.
- VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT specifies that the `scissorCount` and `pScissors` state in VkPipelineViewportStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetScissorWithCount before any draw call.
- VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE specifies that the `stride` state in VkVertexInputBindingDescription will be ignored and **must** be set dynamically with vkCmdBindVertexBuffers2 before any draw call.
- VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE specifies that the `depthTestEnable` state in VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthTestEnable before any draw call.
- VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE specifies that the `depthWriteEnable` state in VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with

vkCmdSetDepthWriteEnable before any draw call.

- VK_DYNAMIC_STATE_DEPTH_COMPARE_OP specifies that the depthCompareOp state in VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthCompareOp before any draw call.
- VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE specifies that the depthBoundsTestEnable state in VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthBoundsTestEnable before any draw call.
- VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE specifies that the stencilTestEnable state in VkPipelineDepthStencilStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetStencilTestEnable before any draw call.
- VK_DYNAMIC_STATE_STENCIL_OP specifies that the failOp, passOp, depthFailOp, and compareOp states in VkPipelineDepthStencilStateCreateInfo for both front and back will be ignored and **must** be set dynamically with vkCmdSetStencilOp before any draws are performed with a pipeline state with VkPipelineDepthStencilStateCreateInfo member stencilTestEnable set to VK_TRUE
- VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT specifies that the patchControlPoints state in VkPipelineTessellationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetPatchControlPointsEXT before any drawing commands.
- VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE specifies that the rasterizerDiscardEnable state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetRasterizerDiscardEnable before any drawing commands.
- VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE specifies that the depthBiasEnable state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthBiasEnable before any drawing commands.
- VK_DYNAMIC_STATE_LOGIC_OP_EXT specifies that the logicOp state in VkPipelineColorBlendStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLogicOpEXT before any drawing commands.
- VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE specifies that the primitiveRestartEnable state in VkPipelineInputAssemblyStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetPrimitiveRestartEnable before any drawing commands.
- VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR specifies that state in VkPipelineFragmentShadingRateStateCreateInfoKHR will be ignored and **must** be set dynamically with vkCmdSetFragmentShadingRateKHR before any drawing commands.
- VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR specifies that the default stack size computation for the pipeline will be ignored and **must** be set dynamically with vkCmdSetRayTracingPipelineStackSizeKHR before any ray tracing calls are performed.
- VK_DYNAMIC_STATE_VERTEX_INPUT_EXT specifies that the pVertexInputState state will be ignored and **must** be set dynamically with vkCmdSetVertexInputEXT before any drawing commands
- VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT specifies that the pColorWriteEnables state in VkPipelineColorWriteCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetColorWriteEnableEXT before any draw call.

- VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT specifies that the domainOrigin state in VkPipelineTessellationDomainOriginStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetTessellationDomainOriginEXT before any draw call.
- VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT specifies that the depthClampEnable state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetDepthClampEnableEXT before any draw call.
- VK_DYNAMIC_STATE_POLYGON_MODE_EXT specifies that the polygonMode state in VkPipelineRasterizationStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetPolygonModeEXT before any draw call.
- VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT specifies that the rasterizationSamples state in VkPipelineMultisampleStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetRasterizationSamplesEXT before any draw call.
- VK_DYNAMIC_STATE_SAMPLE_MASK_EXT specifies that the pSampleMask state in VkPipelineMultisampleStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetSampleMaskEXT before any draw call.
- VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT specifies that the alphaToCoverageEnable state in VkPipelineMultisampleStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetAlphaToCoverageEnableEXT before any draw call.
- VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT specifies that the alphaToOneEnable state in VkPipelineMultisampleStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetAlphaToOneEnableEXT before any draw call.
- VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT specifies that the logicOpEnable state in VkPipelineColorBlendStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLogicOpEnableEXT before any draw call.
- VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT specifies that the blendEnable state in VkPipelineColorBlendAttachmentState will be ignored and **must** be set dynamically with vkCmdSetColorBlendEnableEXT before any draw call.
- VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT specifies that the srcColorBlendFactor, dstColorBlendFactor, colorBlendOp, srcAlphaBlendFactor, dstAlphaBlendFactor, and alphaBlendOp states in VkPipelineColorBlendAttachmentState will be ignored and **must** be set dynamically with vkCmdSetColorBlendEquationEXT before any draw call.
- VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT specifies that the colorWriteMask state in VkPipelineColorBlendAttachmentState will be ignored and **must** be set dynamically with vkCmdSetColorWriteMaskEXT before any draw call.
- VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT specifies that the rasterizationStream state in VkPipelineRasterizationStateStreamCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetRasterizationStreamEXT before any draw call.
- VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT specifies that the conservativeRasterizationMode state in VkPipelineRasterizationConservativeStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetConservativeRasterizationModeEXT before any draw call.
- VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT specifies that the extraPrimitiveOverestimationSize state in

VkPipelineRasterizationConservativeStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetExtraPrimitiveOverestimationSizeEXT before any draw call.

- VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT specifies that the `depthClipEnable` state in VkPipelineRasterizationDepthClipStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetDepthClipEnableEXT before any draw call.
- VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT specifies that the `sampleLocationsEnable` state in VkPipelineSampleLocationsStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetSampleLocationsEnableEXT before any draw call.
- VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT specifies that the `colorBlendOp` state in VkPipelineColorBlendAttachmentState, and `srcPremultiplied`, `dstPremultiplied`, and `blendOverlap` states in VkPipelineColorBlendAdvancedStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetColorBlendAdvancedEXT before any draw call.
- VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT specifies that the `provokingVertexMode` state in VkPipelineRasterizationProvokingVertexStateCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetProvokingVertexModeEXT before any draw call.
- VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT specifies that the `lineRasterizationMode` state in VkPipelineRasterizationLineStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLineRasterizationModeEXT before any draw call.
- VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT specifies that the `stippledLineEnable` state in VkPipelineRasterizationLineStateCreateInfo will be ignored and **must** be set dynamically with vkCmdSetLineStippleEnableEXT before any draw call.
- VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT specifies that the `negativeOneToOne` state in VkPipelineViewportDepthClipControlCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetDepthClipNegativeOneToOneEXT before any draw call.
- VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT specifies that the `depthClampMode` and `pDepthClampRange` state in VkPipelineViewportDepthClampControlCreateInfoEXT will be ignored and **must** be set dynamically with vkCmdSetDepthClampRangeEXT before any draw call.
- VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT specifies that the VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT and VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT flags will be ignored and **must** be set dynamically with vkCmdSetAttachmentFeedbackLoopEnableEXT before any draw call.

10.4.1. Valid Combinations of Stages for Graphics Pipelines

Primitive processing can be handled either on a per primitive basis by the vertex, tessellation, and geometry shader stages, or on a per mesh basis using task and mesh shader stages. If the pipeline includes a mesh shader stage, it uses the mesh pipeline, otherwise it uses the primitive pipeline.

If a task shader is omitted, the task shading stage is skipped.

If tessellation shader stages are omitted, the tessellation shading and fixed-function stages of the pipeline are skipped.

If a geometry shader is omitted, the geometry shading stage is skipped.

If a fragment shader is omitted, fragment color outputs have undefined values, and the fragment depth value is determined by Fragment Operations state. This **can** be useful for depth-only rendering.

Presence of a shader stage in a pipeline is indicated by including a valid VkPipelineShaderStageCreateInfo with `module` and `pName` selecting an entry point from a shader module, where that entry point is valid for the stage specified by `stage`.

Presence of some of the fixed-function stages in the pipeline is implicitly derived from enabled shaders and provided state. For example, the fixed-function tessellator is always present when the pipeline has valid Tessellation Control and Tessellation Evaluation shaders.

For example:

- Depth/stencil-only rendering in a subpass with no color attachments
  - Active Pipeline Shader Stages
    - Vertex Shader
  - Required: Fixed-Function Pipeline Stages
    - VkPipelineVertexInputStateCreateInfo
    - VkPipelineInputAssemblyStateCreateInfo
    - VkPipelineViewportStateCreateInfo
    - VkPipelineRasterizationStateCreateInfo
    - VkPipelineMultisampleStateCreateInfo
    - VkPipelineDepthStencilStateCreateInfo
- Color-only rendering in a subpass with no depth/stencil attachment
  - Active Pipeline Shader Stages
    - Vertex Shader
    - Fragment Shader
  - Required: Fixed-Function Pipeline Stages
    - VkPipelineVertexInputStateCreateInfo
    - VkPipelineInputAssemblyStateCreateInfo
    - VkPipelineViewportStateCreateInfo
    - VkPipelineRasterizationStateCreateInfo
    - VkPipelineMultisampleStateCreateInfo
    - VkPipelineColorBlendStateCreateInfo
- Rendering pipeline with tessellation and geometry shaders
  - Active Pipeline Shader Stages
    - Vertex Shader

        - Tessellation Control Shader
        - Tessellation Evaluation Shader
        - Geometry Shader
        - Fragment Shader
    - Required: Fixed-Function Pipeline Stages
        - VkPipelineVertexInputStateCreateInfo
        - VkPipelineInputAssemblyStateCreateInfo
        - VkPipelineTessellationStateCreateInfo
        - VkPipelineViewportStateCreateInfo
        - VkPipelineRasterizationStateCreateInfo
        - VkPipelineMultisampleStateCreateInfo
        - VkPipelineDepthStencilStateCreateInfo
        - VkPipelineColorBlendStateCreateInfo
- Rendering pipeline with task and mesh shaders
    - Active Pipeline Shader Stages
        - Task Shader
        - Mesh Shader
        - Fragment Shader
    - Required: Fixed-Function Pipeline Stages
        - VkPipelineViewportStateCreateInfo
        - VkPipelineRasterizationStateCreateInfo
        - VkPipelineMultisampleStateCreateInfo
        - VkPipelineDepthStencilStateCreateInfo
        - VkPipelineColorBlendStateCreateInfo

10.5. Ray Tracing Pipelines

Ray tracing pipelines consist of multiple shader stages, fixed-function traversal stages, and a pipeline layout.

10.5.1. Ray Tracing Pipeline Enums and Types

VK_SHADER_UNUSED_KHR is a special shader index used to indicate that a ray generation, miss, or callable shader member is not used.

```
#define VK_SHADER_UNUSED_KHR            (~0U)
```

The VkRayTracingShaderGroupTypeKHR enumeration is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkRayTracingShaderGroupTypeKHR {
    VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR = 0,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR = 1,
    VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR = 2,
} VkRayTracingShaderGroupTypeKHR;
```

- VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR specifies that a shader group with a single VK_SHADER_STAGE_RAYGEN_BIT_KHR, VK_SHADER_STAGE_MISS_BIT_KHR, or VK_SHADER_STAGE_CALLABLE_BIT_KHR shader in it.
- VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR specifies that a shader group that only hits triangles and **must** not contain an intersection shader, only closest hit and any-hit shaders.
- VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR specifies that a shader group that only intersects with custom geometry and **must** contain an intersection shader and **may** contain closest hit and any-hit shaders.

NOTE For current group types, the hit group type could be inferred from the presence or absence of the intersection shader, but we provide the type explicitly for future hit groups that do not have that property.

10.5.2. Ray Tracing Pipeline Creation

To create ray tracing pipelines, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkCreateRayTracingPipelinesKHR(
    VkDevice                                    device,
    VkDeferredOperationKHR                      deferredOperation,
    VkPipelineCache                             pipelineCache,
    uint32_t                                    createInfoCount,
    const VkRayTracingPipelineCreateInfoKHR*    pCreateInfos,
    const VkAllocationCallbacks*                pAllocator,
    VkPipeline*                                 pPipelines);
```

- `device` is the logical device that creates the ray tracing pipelines.
- `deferredOperation` is VK_NULL_HANDLE or the handle of a valid VkDeferredOperationKHR request deferral object for this command.
- `pipelineCache` is either VK_NULL_HANDLE, indicating that pipeline caching is disabled, or to enable caching, the handle of a valid VkPipelineCache object. The implementation **must** not access this object outside of the duration of this command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of VkRayTracingPipelineCreateInfoKHR structures.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

- `pPipelines` is a pointer to an array in which the resulting ray tracing pipeline objects are returned.

The VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS error is returned if the implementation is unable to reuse the shader group handles provided in VkRayTracingShaderGroupCreateInfoKHR::`pShaderGroupCaptureReplayHandle` when VkPhysicalDeviceRayTracingPipelineFeaturesKHR::`rayTracingPipelineShaderGroupHandleCaptureReplay` is enabled.

Pipelines are created and returned as described for Multiple Pipeline Creation.

Valid Usage

- VUID-vkCreateRayTracingPipelinesKHR-device-09677
  `device` **must** support at least one queue family with the VK_QUEUE_COMPUTE_BIT capability
- VUID-vkCreateRayTracingPipelinesKHR-flags-03415
  If the `flags` member of any element of `pCreateInfos` contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and the `basePipelineIndex` member of that same element is not `-1`, `basePipelineIndex` **must** be less than the index into `pCreateInfos` that corresponds to that element
- VUID-vkCreateRayTracingPipelinesKHR-flags-03416
  If the `flags` member of any element of `pCreateInfos` contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, the base pipeline **must** have been created with the VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT flag set
- VUID-vkCreateRayTracingPipelinesKHR-flags-03816
  `flags` **must** not contain the VK_PIPELINE_CREATE_DISPATCH_BASE_BIT flag
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-02903
  If `pipelineCache` was created with VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT, host access to `pipelineCache` **must** be externally synchronized
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03678
  Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09616
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, `pipelineCache` **must** be VK_NULL_HANDLE
- VUID-vkCreateRayTracingPipelinesKHR-pNext-09617
  If a VkPipelineCreateFlags2CreateInfoKHR structure with the VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR flag set is included in the `pNext` chain of any element of `pCreateInfos`, `pipelineCache` **must** be VK_NULL_HANDLE
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09620
  If VkPipelineBinaryInfoKHR::`binaryCount` is not `0` for any element of `pCreateInfos`, VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT **must** not be set in the `flags` of that element

- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09621
  If VkPipelineBinaryInfoKHR::binaryCount is not 0 for any element of pCreateInfos, VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT **must** not be set in the flags of that element
- VUID-vkCreateRayTracingPipelinesKHR-binaryCount-09622
  If VkPipelineBinaryInfoKHR::binaryCount is not 0 for any element of pCreateInfos, VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT **must** not be set in the flags of that element
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-11414
  If any element of pCreateInfos sets VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT and includes embedded sampler mappings, there **must** be less than (maxSamplerAllocationCount - (minSamplerHeapReservedRangeWithEmbedded / samplerDescriptorSize)) VkSampler objects currently created on the device
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-11429
  If any element of pCreateInfos sets VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT and includes embedded sampler mappings, this command **must** not cause the total number of unique embedded samplers in pipelines and shaders on this device to exceed maxDescriptorHeapEmbeddedSamplers
- VUID-vkCreateRayTracingPipelinesKHR-rayTracingPipeline-03586
  The rayTracingPipeline feature **must** be enabled
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-03587
  If deferredOperation is not VK_NULL_HANDLE, the flags member of elements of pCreateInfos **must** not include VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT

Valid Usage (Implicit)

- VUID-vkCreateRayTracingPipelinesKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parameter
  If deferredOperation is not VK_NULL_HANDLE, deferredOperation **must** be a valid VkDeferredOperationKHR handle
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parameter
  If pipelineCache is not VK_NULL_HANDLE, pipelineCache **must** be a valid VkPipelineCache handle
- VUID-vkCreateRayTracingPipelinesKHR-pCreateInfos-parameter
  pCreateInfos **must** be a valid pointer to an array of createInfoCount valid VkRayTracingPipelineCreateInfoKHR structures
- VUID-vkCreateRayTracingPipelinesKHR-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateRayTracingPipelinesKHR-pPipelines-parameter
  pPipelines **must** be a valid pointer to an array of createInfoCount VkPipeline handles

- VUID-vkCreateRayTracingPipelinesKHR-createInfoCount-arraylength
  `createInfoCount` **must** be greater than `0`
- VUID-vkCreateRayTracingPipelinesKHR-deferredOperation-parent
  If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- VUID-vkCreateRayTracingPipelinesKHR-pipelineCache-parent
  If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkRayTracingPipelineCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineCreateInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    VkPipelineCreateFlags                           flags;
    uint32_t                                        stageCount;
    const VkPipelineShaderStageCreateInfo*          pStages;
    uint32_t                                        groupCount;
    const VkRayTracingShaderGroupCreateInfoKHR*     pGroups;
    uint32_t                                        maxPipelineRayRecursionDepth;
    const VkPipelineLibraryCreateInfoKHR*           pLibraryInfo;
    const VkRayTracingPipelineInterfaceCreateInfoKHR* pLibraryInterface;
    const VkPipelineDynamicStateCreateInfo*         pDynamicState;
    VkPipelineLayout                                layout;
    VkPipeline                                      basePipelineHandle;
    int32_t                                         basePipelineIndex;
} VkRayTracingPipelineCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineCreateFlagBits specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `stageCount` VkPipelineShaderStageCreateInfo structures describing the set of the shader stages to be included in the ray tracing pipeline.
- `groupCount` is the number of entries in the `pGroups` array.
- `pGroups` is a pointer to an array of `groupCount` VkRayTracingShaderGroupCreateInfoKHR structures describing the set of the shader stages to be included in each shader group in the ray tracing pipeline.
- `maxPipelineRayRecursionDepth` is the maximum recursion depth of shaders executed by this pipeline.
- `pLibraryInfo` is a pointer to a VkPipelineLibraryCreateInfoKHR structure defining pipeline libraries to include.
- `pLibraryInterface` is a pointer to a VkRayTracingPipelineInterfaceCreateInfoKHR structure defining additional information when using pipeline libraries.
- `pDynamicState` is a pointer to a VkPipelineDynamicStateCreateInfo structure, and is used to indicate which properties of the pipeline state object are dynamic and **can** be changed independently of the pipeline state. This **can** be `NULL`, which means no state in the pipeline is considered dynamic.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline. If VkPhysicalDeviceProperties::`apiVersion` is greater than or equal to Vulkan 1.3 or VK_KHR_maintenance4 is enabled `layout` **must** not be accessed by the implementation outside of the duration of the command this structure is passed to.
- `basePipelineHandle` is a pipeline to derive from.
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from.

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in Pipeline Derivatives.

When VK_PIPELINE_CREATE_LIBRARY_BIT_KHR is specified, this pipeline defines a *pipeline library* which **cannot** be bound as a ray tracing pipeline directly. Instead, pipeline libraries define common shaders and shader groups which **can** be included in future pipeline creation.

If pipeline libraries are included in `pLibraryInfo`, shaders defined in those libraries are treated as if they were defined as additional entries in `pStages`, appended in the order they appear in the `pLibraries` array and in the `pStages` array when those libraries were defined.

When referencing shader groups in order to obtain a shader group handle, groups defined in those libraries are treated as if they were defined as additional entries in `pGroups`, appended in the order they appear in the `pLibraries` array and in the `pGroups` array when those libraries were defined. The shaders these groups reference are set when the pipeline library is created, referencing those specified in the pipeline library, not in the pipeline that includes it.

The default stack size for a pipeline if VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR is not provided is computed as described in Ray Tracing Pipeline Stack.

If the pNext chain includes a VkPipelineCreateFlags2CreateInfo structure, VkPipelineCreateFlags2CreateInfo::flags from that structure is used instead of flags from this structure.

Valid Usage

- VUID-VkRayTracingPipelineCreateInfoKHR-None-09497
  If the pNext chain does not include a VkPipelineCreateFlags2CreateInfo structure, flags **must** be a valid combination of VkPipelineCreateFlagBits values
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07984
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and basePipelineIndex is -1, basePipelineHandle **must** be a valid ray tracing VkPipeline handle
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07985
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, and basePipelineHandle is VK_NULL_HANDLE, basePipelineIndex **must** be a valid index into the calling command's pCreateInfos parameter
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07986
  If flags contains the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag, basePipelineIndex **must** be -1 or basePipelineHandle **must** be VK_NULL_HANDLE
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07987
  If a push constant block is declared in a shader and layout is not VK_NULL_HANDLE, a push constant range in layout **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-10069
  If a push constant block is declared in a shader and layout is not VK_NULL_HANDLE, the block must be contained inside the push constant range in layout that matches the stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07988
  If a resource variable is declared in a shader and layout is not VK_NULL_HANDLE, the corresponding descriptor set in layout **must** match the shader stage
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07990
  If a resource variable is declared in a shader, layout is not VK_NULL_HANDLE, and the descriptor type is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the corresponding descriptor set in layout **must** match the descriptor type
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-07991
  If a resource variable is declared in a shader as an array and layout is not VK_NULL_HANDLE, the corresponding descriptor binding used to create layout **must** have a descriptorCount that is greater than or equal to the length of the array
- VUID-VkRayTracingPipelineCreateInfoKHR-None-10391
  If a resource variables is declared in a shader as an array of descriptors, then the descriptor type of that variable **must** not be VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11798
  If shader64BitIndexing feature is not enabled, flags **must** not contain VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineCreationCacheControl-02878
  If the pipelineCreationCacheControl feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT nor VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineProtectedAccess-07368
  If the pipelineProtectedAccess feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT nor VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-07369
  flags **must** not include both VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT and VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11311
  If VkPipelineCreateFlags2CreateInfoKHR::flags includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, layout **must** be VK_NULL_HANDLE
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11312
  If VkPipelineCreateFlags2CreateInfoKHR::flags includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all shader variables in the shader resource interface with a DescriptorSet and Binding decoration **must** have a mapping declared in VkShaderDescriptorSetAndBindingMappingInfoEXT::pMappings
- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-03426
  The shader code for the entry points identified by pStages, and the rest of the state identified by this structure **must** adhere to the pipeline linking rules described in the Shader Interfaces chapter
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-03428
  The number of resources in layout accessible to each shader stage that is used by the pipeline **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageResources
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12341
  flags **must** not include VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT nor VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-12402
  If layout is not VK_NULL_HANDLE, it **must** not have been created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT
- VUID-VkRayTracingPipelineCreateInfoKHR-stage-03425
  If flags does not include VK_PIPELINE_CREATE_LIBRARY_BIT_KHR, the stage member of at least one element of pStages, including those implicitly added by pLibraryInfo, **must** be VK_SHADER_STAGE_RAYGEN_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-maxPipelineRayRecursionDepth-03589
  maxPipelineRayRecursionDepth **must** be less than or equal to VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayRecursionDepth

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03465
  If `flags` includes VK_PIPELINE_CREATE_LIBRARY_BIT_KHR, `pLibraryInterface` **must** not be `NULL`
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03590
  If `pLibraryInfo` is not `NULL` and its `libraryCount` member is greater than `0`, `pLibraryInterface` **must** not be `NULL`
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraries-03591
  Each element of `pLibraryInfo->pLibraries` **must** have been created with the value of `maxPipelineRayRecursionDepth` equal to that in this pipeline
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03592
  If `pLibraryInfo` is not `NULL` and `layout` is not VK_NULL_HANDLE, each element of `pLibraryInfo->pLibraries` **must** have been created with a `layout` that is compatible with the `layout` in this pipeline
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03593
  If `pLibraryInfo` is not `NULL`, each element of its `pLibraries` member **must** have been created with values of the `maxPipelineRayPayloadSize` and `maxPipelineRayHitAttributeSize` members of `pLibraryInterface` equal to those in this pipeline
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03594
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04718
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04719
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04720
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04721
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04722
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR,

each element of pLibraryInfo->pLibraries **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR bit set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-04723
  If flags includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR, each element of pLibraryInfo->pLibraries **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-03595
  If the VK_KHR_pipeline_library extension is not enabled, pLibraryInfo and pLibraryInterface **must** be NULL
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03470
  If flags includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR, for each element of pGroups with a type of VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR or VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, the anyHitShader of that element **must** not be VK_SHADER_UNUSED_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03471
  If flags includes VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR, for each element of pGroups with a type of VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR or VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, the closestHitShader of that element **must** not be VK_SHADER_UNUSED_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03596
  If the rayTraversalPrimitiveCulling feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTraversalPrimitiveCulling-03597
  If the rayTraversalPrimitiveCulling feature is not enabled, flags **must** not include VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-06546
  flags **must** not include both VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR and VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-03598
  If flags includes VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR, rayTracingPipelineShaderGroupHandleCaptureReplay **must** be enabled
- VUID-VkRayTracingPipelineCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03599
  If VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay is VK_TRUE and the pShaderGroupCaptureReplayHandle member of any element of pGroups is not NULL, flags

must include VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR

- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-07999
  If `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `stageCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-08700
  If `flags` does not include VK_PIPELINE_CREATE_LIBRARY_BIT_KHR and either `pLibraryInfo` is `NULL` or its `libraryCount` is `0`, `groupCount` **must** not be `0`
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicStates-03602
  Any element of the `pDynamicStates` member of `pDynamicState` **must** be VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-pipelineStageCreationFeedbackCount-06652
  If VkPipelineCreationFeedbackCreateInfo::`pipelineStageCreationFeedbackCount` is not `0`, it **must** be equal to `stageCount`
- VUID-VkRayTracingPipelineCreateInfoKHR-stage-06899
  The `stage` value in all `pStages` elements **must** be one of VK_SHADER_STAGE_RAYGEN_BIT_KHR, VK_SHADER_STAGE_ANY_HIT_BIT_KHR, VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR, VK_SHADER_STAGE_MISS_BIT_KHR, VK_SHADER_STAGE_INTERSECTION_BIT_KHR, or VK_SHADER_STAGE_CALLABLE_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11597
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR, at least one of the following features **must** be enabled
  - VkPhysicalDeviceOpacityMicromapFeaturesKHR::`micromap`
  - VkPhysicalDeviceOpacityMicromapFeaturesEXT::`micromap`
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraries-11598
  If `flags` includes VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR, each element of `pLibraryInfo->pLibraries` **must** have been created with the VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR bit set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11599
  If the VkPhysicalDeviceOpacityMicromapFeaturesKHR::`micromap` feature is not enabled or `flags` does not include VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR, `flags` **must** not include VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11275
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` includes VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-11276
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` does not include VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, all libraries linked to this pipeline

must also not have that flag set

- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12361
  If `flags` includes VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, all libraries linked to this pipeline **must** also have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-flags-12362
  If `flags` does not include VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, all libraries linked to this pipeline **must** also not have that flag set
- VUID-VkRayTracingPipelineCreateInfoKHR-None-11369
  If VkPipelineCreateFlags2CreateInfoKHR::`flags` does not include VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, `layout` **must** not be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_KHR
- VUID-VkRayTracingPipelineCreateInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkPipelineBinaryInfoKHR, VkPipelineCreateFlags2CreateInfo, VkPipelineCreationFeedbackCreateInfo, VkPipelineRobustnessCreateInfo, or VkValidationFeaturesEXT
- VUID-VkRayTracingPipelineCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkRayTracingPipelineCreateInfoKHR-pStages-parameter
  If `stageCount` is not `0`, `pStages` **must** be a valid pointer to an array of `stageCount` valid VkPipelineShaderStageCreateInfo structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pGroups-parameter
  If `groupCount` is not `0`, `pGroups` **must** be a valid pointer to an array of `groupCount` valid VkRayTracingShaderGroupCreateInfoKHR structures
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInfo-parameter
  If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid VkPipelineLibraryCreateInfoKHR structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pLibraryInterface-parameter
  If `pLibraryInterface` is not `NULL`, `pLibraryInterface` **must** be a valid pointer to a valid VkRayTracingPipelineInterfaceCreateInfoKHR structure
- VUID-VkRayTracingPipelineCreateInfoKHR-pDynamicState-parameter
  If `pDynamicState` is not `NULL`, `pDynamicState` **must** be a valid pointer to a valid VkPipelineDynamicStateCreateInfo structure
- VUID-VkRayTracingPipelineCreateInfoKHR-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkRayTracingPipelineCreateInfoKHR-commonparent
  Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters

must have been created, allocated, or retrieved from the same VkDevice

The VkRayTracingShaderGroupCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingShaderGroupCreateInfoKHR {
    VkStructureType                   sType;
    const void*                       pNext;
    VkRayTracingShaderGroupTypeKHR    type;
    uint32_t                          generalShader;
    uint32_t                          closestHitShader;
    uint32_t                          anyHitShader;
    uint32_t                          intersectionShader;
    const void*                       pShaderGroupCaptureReplayHandle;
} VkRayTracingShaderGroupCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- type is the type of hit group specified in this structure.
- generalShader is the index of the ray generation, miss, or callable shader from VkRayTracingPipelineCreateInfoKHR::pStages in the group if the shader group has type of VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR, and VK_SHADER_UNUSED_KHR otherwise.
- closestHitShader is the optional index of the closest hit shader from VkRayTracingPipelineCreateInfoKHR::pStages in the group if the shader group has type of VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR or VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, and VK_SHADER_UNUSED_KHR otherwise.
- anyHitShader is the optional index of the any-hit shader from VkRayTracingPipelineCreateInfoKHR::pStages in the group if the shader group has type of VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR or VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, and VK_SHADER_UNUSED_KHR otherwise.
- intersectionShader is the index of the intersection shader from VkRayTracingPipelineCreateInfoKHR::pStages in the group if the shader group has type of VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR, and VK_SHADER_UNUSED_KHR otherwise.
- pShaderGroupCaptureReplayHandle is NULL or a pointer to replay information for this shader group queried from vkGetRayTracingCaptureReplayShaderGroupHandlesKHR, as described in Ray Tracing Capture Replay. Ignored if VkPhysicalDeviceRayTracingPipelineFeaturesKHR::rayTracingPipelineShaderGroupHandleCaptureReplay is VK_FALSE.

If the pipeline is created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR and the pipelineLibraryGroupHandles feature is enabled, pShaderGroupCaptureReplayHandle is inherited by

all pipelines which link against this pipeline and remains bitwise identical for any pipeline which references this pipeline library.

Valid Usage

- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03474
  If `type` is VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR then `generalShader` **must** be a valid index into the list of shaders, formed by shaders in VkRayTracingPipelineCreateInfoKHR::`pStages` and the shaders imported from pipeline libraries, referring to a shader of VK_SHADER_STAGE_RAYGEN_BIT_KHR, VK_SHADER_STAGE_MISS_BIT_KHR, or VK_SHADER_STAGE_CALLABLE_BIT_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03475
  If `type` is VK_RAY_TRACING_SHADER_GROUP_TYPE_GENERAL_KHR then `closestHitShader`, `anyHitShader`, and `intersectionShader` **must** be VK_SHADER_UNUSED_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03476
  If `type` is VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR then `intersectionShader` **must** be a valid index into the list of shaders, formed by shaders in VkRayTracingPipelineCreateInfoKHR::`pStages` and the shaders imported from pipeline libraries, referring to a shader of VK_SHADER_STAGE_INTERSECTION_BIT_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-03477
  If `type` is VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR then `intersectionShader` **must** be VK_SHADER_UNUSED_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-closestHitShader-03478
  `closestHitShader` **must** be either VK_SHADER_UNUSED_KHR or a valid index into the list of shaders, formed by shaders in VkRayTracingPipelineCreateInfoKHR::`pStages` and the shaders imported from pipeline libraries, referring to a shader of VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-anyHitShader-03479
  `anyHitShader` **must** be either VK_SHADER_UNUSED_KHR or a valid index into the list of shaders, formed by shaders in VkRayTracingPipelineCreateInfoKHR::`pStages` and the shaders imported from pipeline libraries, referring to a shader of VK_SHADER_STAGE_ANY_HIT_BIT_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03603
  If VkPhysicalDeviceRayTracingPipelineFeaturesKHR::`rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is VK_FALSE then `pShaderGroupCaptureReplayHandle` **must** not be provided if it has not been provided on a previous call to ray tracing pipeline creation
- VUID-VkRayTracingShaderGroupCreateInfoKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03604
  If VkPhysicalDeviceRayTracingPipelineFeaturesKHR::`rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is VK_FALSE then the caller **must** guarantee that no ray tracing pipeline creation commands with `pShaderGroupCaptureReplayHandle` provided execute simultaneously with ray tracing pipeline creation commands without `pShaderGroupCaptureReplayHandle` provided

Valid Usage (Implicit)

- VUID-VkRayTracingShaderGroupCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_KHR
- VUID-VkRayTracingShaderGroupCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkRayTracingShaderGroupCreateInfoKHR-type-parameter
  `type` **must** be a valid VkRayTracingShaderGroupTypeKHR value

The `VkRayTracingPipelineInterfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkRayTracingPipelineInterfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maxPipelineRayPayloadSize;
    uint32_t           maxPipelineRayHitAttributeSize;
} VkRayTracingPipelineInterfaceCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPipelineRayPayloadSize` is the maximum payload size in bytes used by any shader in the pipeline.
- `maxPipelineRayHitAttributeSize` is the maximum attribute structure size in bytes used by any shader in the pipeline.

`maxPipelineRayPayloadSize` is calculated as the maximum size of the block (in bytes) declared in the `RayPayloadKHR` or `IncomingRayPayloadKHR` storage classes. `maxPipelineRayHitAttributeSize` is calculated as the maximum size of any block (in bytes) declared in the `HitAttributeKHR` or `HitObjectAttributeEXT` storage class. As variables in these storage classes do not have explicit offsets, the size should be calculated as if each variable has a scalar alignment equal to the largest scalar alignment of any of the block's members.

NOTE There is no explicit upper limit for `maxPipelineRayPayloadSize`, but in practice it should be kept as small as possible. Similar to invocation local memory, it must be allocated for each shader invocation and for devices which support many simultaneous invocations, this storage can rapidly be exhausted, resulting in failure.

Valid Usage

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-maxPipelineRayHitAttributeSize-03605
  `maxPipelineRayHitAttributeSize` **must** be less than or equal to

VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayHitAttributeSize

Valid Usage (Implicit)

- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_INTERFACE_CREATE_INFO_KHR
- VUID-VkRayTracingPipelineInterfaceCreateInfoKHR-pNext-pNext
  pNext **must** be NULL

10.5.3. Ray Tracing Pipeline Queries and Commands

To query the opaque handles of shaders in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingShaderGroupHandlesKHR(
    VkDevice                                    device,
    VkPipeline                                  pipeline,
    uint32_t                                    firstGroup,
    uint32_t                                    groupCount,
    size_t                                      dataSize,
    void*                                       pData);
```

- device is the logical device containing the ray tracing pipeline.
- pipeline is the ray tracing pipeline object containing the shaders.
- firstGroup is the index of the first group to retrieve a handle for from the VkRayTracingPipelineCreateInfoKHR::pGroups array.
- groupCount is the number of shader handles to retrieve.
- dataSize is the size in bytes of the buffer pointed to by pData.
- pData is a pointer to an application-allocated buffer where the results will be written.

On success, an array of groupCount shader handles will be written to pData, with each element being of size VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleSize. The first handle written corresponds to the group identified by firstGroup, with subsequent handles corresponding to consecutive shader groups in the order they appear in the VkRayTracingPipelineCreateInfoKHR ::pGroups array.

If pipeline was created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR and the pipelineLibraryGroupHandles feature is enabled applications **can** query group handles from that pipeline, even if the pipeline is a library and is never bound to a command buffer. These group handles remain bitwise identical for any pipeline which references the pipeline library. Group indices are assigned as-if the pipeline was created without VK_PIPELINE_CREATE_LIBRARY_BIT_KHR.

Valid Usage

- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-04619
  `pipeline` **must** be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-04050
  `firstGroup` **must** be less than the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-firstGroup-02419
  The sum of `firstGroup` and `groupCount` **must** be less than or equal to the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-02420
  `dataSize` **must** be at least VkPhysicalDeviceRayTracingPipelinePropertiesKHR::`shaderGroupHandleSize` × `groupCount`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-07828
  If the pipelineLibraryGroupHandles feature is not enabled, `pipeline` **must** not have been created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupHandlesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetRayTracingShaderGroupHandlesKHR-dataSize-arraylength
  `dataSize` **must** be greater than `0`
- VUID-vkGetRayTracingShaderGroupHandlesKHR-pipeline-parent
  `pipeline` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the opaque capture data of shader groups in a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkResult vkGetRayTracingCaptureReplayShaderGroupHandlesKHR(
    VkDevice                                    device,
    VkPipeline                                  pipeline,
    uint32_t                                    firstGroup,
    uint32_t                                    groupCount,
    size_t                                      dataSize,
    void*                                       pData);
```

- `device` is the logical device containing the ray tracing pipeline.
- `pipeline` is the ray tracing pipeline object containing the shaders.
- `firstGroup` is the index of the first group to retrieve a handle for from the VkRayTracingPipelineCreateInfoKHR::`pGroups` array.
- `groupCount` is the number of shader handles to retrieve.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.

On success, an array of `groupCount` shader handles will be written to `pData`, with each element being of size VkPhysicalDeviceRayTracingPipelinePropertiesKHR::`shaderGroupHandleCaptureReplaySize`. The first handle written corresponds to the group identified by `firstGroup`, with subsequent handles corresponding to consecutive shader groups in the order they appear in the VkRayTracingPipelineCreateInfoKHR::`pGroups` array.

Once queried, this opaque data **can** be provided at pipeline creation time (in a subsequent execution), using VkRayTracingShaderGroupCreateInfoKHR::`pShaderGroupCaptureReplayHandle`, as described in Ray Tracing Capture Replay.

If `pipeline` was created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR and the pipelineLibraryGroupHandles feature is enabled applications **can** query capture replay group handles from that pipeline. The capture replay handle remains bitwise identical for any `pipeline` which references the pipeline library. Group indices are assigned as-if the pipeline was created without VK_PIPELINE_CREATE_LIBRARY_BIT_KHR.

Valid Usage

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-04620
  `pipeline` **must** be a ray tracing pipeline
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-04051
  `firstGroup` **must** be less than the number of shader groups in `pipeline`
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-firstGroup-03483
  The sum of `firstGroup` and `groupCount` **must** be less than or equal to the number of shader groups in `pipeline`
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-03484

`dataSize` **must** be at least VkPhysicalDeviceRayTracingPipelinePropertiesKHR::`shaderGroupHandleCaptureReplaySize` × `groupCount`

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-rayTracingPipelineShaderGroupHandleCaptureReplay-03606
  `VkPhysicalDeviceRayTracingPipelineFeaturesKHR`::`rayTracingPipelineShaderGroupHandleCaptureReplay` **must** be enabled to call this function
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-03607
  `pipeline` **must** have been created with a `flags` that included VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-07829
  If the pipelineLibraryGroupHandles feature is not enabled, `pipeline` **must** not have been created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR

Valid Usage (Implicit)

- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-dataSize-arraylength
  `dataSize` **must** be greater than `0`
- VUID-vkGetRayTracingCaptureReplayShaderGroupHandlesKHR-pipeline-parent
  `pipeline` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To query the pipeline stack size of shaders in a shader group in the ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
VkDeviceSize vkGetRayTracingShaderGroupStackSizeKHR(
    VkDevice                                    device,
    VkPipeline                                  pipeline,
    uint32_t                                    group,
    VkShaderGroupShaderKHR                      groupShader);
```

- `device` is the logical device containing the ray tracing pipeline.
- `pipeline` is the ray tracing pipeline object containing the shaders groups.
- `group` is the index of the shader group to query.
- `groupShader` is the type of shader from the group to query.

The return value is the ray tracing pipeline stack size in bytes for the specified shader as called from the specified shader group.

Valid Usage

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-04622
  `pipeline` **must** be a ray tracing pipeline
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-group-03608
  The value of `group` **must** be less than the number of shader groups in `pipeline`
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-03609
  The shader identified by `groupShader` in `group` **must** not be VK_SHADER_UNUSED_KHR

Valid Usage (Implicit)

- VUID-vkGetRayTracingShaderGroupStackSizeKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-groupShader-parameter
  `groupShader` **must** be a valid VkShaderGroupShaderKHR value
- VUID-vkGetRayTracingShaderGroupStackSizeKHR-pipeline-parent
  `pipeline` **must** have been created, allocated, or retrieved from `device`

Possible values of `groupShader` in vkGetRayTracingShaderGroupStackSizeKHR are:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef enum VkShaderGroupShaderKHR {
    VK_SHADER_GROUP_SHADER_GENERAL_KHR = 0,
    VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR = 1,
    VK_SHADER_GROUP_SHADER_ANY_HIT_KHR = 2,
    VK_SHADER_GROUP_SHADER_INTERSECTION_KHR = 3,
} VkShaderGroupShaderKHR;
```

- VK_SHADER_GROUP_SHADER_GENERAL_KHR uses the shader specified in the group with VkRayTracingShaderGroupCreateInfoKHR::generalShader
- VK_SHADER_GROUP_SHADER_CLOSEST_HIT_KHR uses the shader specified in the group with VkRayTracingShaderGroupCreateInfoKHR::closestHitShader
- VK_SHADER_GROUP_SHADER_ANY_HIT_KHR uses the shader specified in the group with VkRayTracingShaderGroupCreateInfoKHR::anyHitShader
- VK_SHADER_GROUP_SHADER_INTERSECTION_KHR uses the shader specified in the group with VkRayTracingShaderGroupCreateInfoKHR::intersectionShader

To dynamically set the stack size for a ray tracing pipeline, call:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdSetRayTracingPipelineStackSizeKHR(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    pipelineStackSize);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pipelineStackSize is the stack size to use for subsequent ray tracing trace commands.

This command sets the stack size for subsequent ray tracing commands when the ray tracing pipeline is created with VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR set in VkPipelineDynamicStateCreateInfo::pDynamicStates. Otherwise, the stack size is computed as described in Ray Tracing Pipeline Stack.

Valid Usage

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-pipelineStackSize-03610
  pipelineStackSize **must** be large enough for any dynamic execution through the shaders in the ray tracing pipeline used by a subsequent trace call

Valid Usage (Implicit)

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-recording

`commandBuffer` **must** be in the recording state

- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT operations
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdSetRayTracingPipelineStackSizeKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	State

Conditional Rendering

vkCmdSetRayTracingPipelineStackSizeKHR is not affected by conditional rendering

10.6. Pipeline Destruction

To destroy a pipeline, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipeline(
    VkDevice                                    device,
    VkPipeline                                  pipeline,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the pipeline.
- `pipeline` is the handle of the pipeline to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyPipeline-pipeline-00765
  All submitted commands that refer to `pipeline` **must** have completed execution
- VUID-vkDestroyPipeline-pipeline-00766
  If `VkAllocationCallbacks` were provided when `pipeline` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipeline-pipeline-00767
  If no `VkAllocationCallbacks` were provided when `pipeline` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipeline-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyPipeline-pipeline-parameter
  If `pipeline` is not VK_NULL_HANDLE, `pipeline` **must** be a valid VkPipeline handle
- VUID-vkDestroyPipeline-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyPipeline-pipeline-parent
  If `pipeline` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipeline` **must** be externally synchronized

10.7. Pipeline Derivatives

A pipeline derivative is a child pipeline created from a parent pipeline, where the child and parent are expected to have much commonality.

The goal of derivative pipelines is that they be cheaper to create using the parent as a starting point, and that it be more efficient (on either host or device) to switch/bind between children of the same parent.

A derivative pipeline is created by setting the VK_PIPELINE_CREATE_DERIVATIVE_BIT flag in the `Vk*PipelineCreateInfo` structure. If this is set, then exactly one of `basePipelineHandle` or `basePipelineIndex` members of the structure **must** have a valid handle/index, and specifies the parent pipeline. If `basePipelineHandle` is used, the parent pipeline **must** have already been created. If `basePipelineIndex` is used, then the parent is being created in the same command. VK_NULL_HANDLE acts as the invalid handle for `basePipelineHandle`, and -1 is the invalid index for

basePipelineIndex. If basePipelineIndex is used, the base pipeline **must** appear earlier in the array. The base pipeline **must** have been created with the VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT flag set.

10.8. Pipeline Cache

Pipeline cache objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse between pipelines is achieved by passing the same pipeline cache object when creating multiple related pipelines. Reuse across runs of an application is achieved by retrieving pipeline cache contents in one run of an application, saving the contents, and using them to preinitialize a pipeline cache on a subsequent run. The contents of the pipeline cache objects are managed by the implementation. Applications **can** manage the host memory consumed by a pipeline cache object and control the amount of data retrieved from a pipeline cache object.

Pipeline cache objects are represented by VkPipelineCache handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineCache)
```

10.8.1. Creating a Pipeline Cache

To create pipeline cache objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineCache(
    VkDevice                                    device,
    const VkPipelineCacheCreateInfo*            pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPipelineCache*                            pPipelineCache);
```

- device is the logical device that creates the pipeline cache object.
- pCreateInfo is a pointer to a VkPipelineCacheCreateInfo structure containing initial parameters for the pipeline cache object.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pPipelineCache is a pointer to a VkPipelineCache handle in which the resulting pipeline cache object is returned.

NOTE

Applications **can** track and manage the total host memory size of a pipeline cache object using the pAllocator. Applications **can** limit the amount of data retrieved from a pipeline cache object in vkGetPipelineCacheData. Implementations **should** not internally limit the total number of entries added to a pipeline cache object or the total host memory consumed.

Once created, a pipeline cache **can** be passed to the vkCreateGraphicsPipelines

vkCreateRayTracingPipelinesKHR, and vkCreateComputePipelines commands. If the pipeline cache passed into these commands is not VK_NULL_HANDLE, the implementation will query it for possible reuse opportunities and update it with new content. The use of the pipeline cache object in these commands is internally synchronized, and the same pipeline cache object **can** be used in multiple threads simultaneously.

If `flags` of `pCreateInfo` includes VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT, all commands that modify the returned pipeline cache object **must** be externally synchronized.

NOTE	Implementations **should** make every effort to limit any critical sections to the actual accesses to the cache, which is expected to be significantly shorter than the duration of the `vkCreate*Pipelines` commands.

Valid Usage (Implicit)

- VUID-vkCreatePipelineCache-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreatePipelineCache-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkPipelineCacheCreateInfo structure
- VUID-vkCreatePipelineCache-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreatePipelineCache-pPipelineCache-parameter
  `pPipelineCache` **must** be a valid pointer to a VkPipelineCache handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelineCacheCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheCreateInfo {
    VkStructureType               sType;
    const void*                   pNext;
    VkPipelineCacheCreateFlags    flags;
    size_t                        initialDataSize;
    const void*                   pInitialData;
} VkPipelineCacheCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineCacheCreateFlagBits specifying the behavior of the pipeline cache.
- `initialDataSize` is the number of bytes in `pInitialData`. If `initialDataSize` is zero, the pipeline cache will initially be empty.
- `pInitialData` is a pointer to previously retrieved pipeline cache data. If the pipeline cache data is incompatible (as defined below) with the device, the pipeline cache will be initially empty. If `initialDataSize` is zero, `pInitialData` is ignored.

Valid Usage

- VUID-VkPipelineCacheCreateInfo-initialDataSize-00768
  If `initialDataSize` is not `0`, it **must** be equal to the size of `pInitialData`, as returned by `vkGetPipelineCacheData` when `pInitialData` was originally retrieved
- VUID-VkPipelineCacheCreateInfo-initialDataSize-00769
  If `initialDataSize` is not `0`, `pInitialData` **must** have been retrieved from a previous call to `vkGetPipelineCacheData`
- VUID-VkPipelineCacheCreateInfo-pipelineCreationCacheControl-02892
  If the `pipelineCreationCacheControl` feature is not enabled, `flags` **must** not include VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT
- VUID-VkPipelineCacheCreateInfo-maintenance8-10200
  If the `maintenance8` feature is not enabled, `flags` **must** not include VK_PIPELINE_CACHE_CREATE_INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR
- VUID-VkPipelineCacheCreateInfo-flags-10201
  If `flags` includes VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT, it **must** not include VK_PIPELINE_CACHE_CREATE_INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR

Valid Usage (Implicit)

- VUID-VkPipelineCacheCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_CACHE_CREATE_INFO

- VUID-VkPipelineCacheCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineCacheCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPipelineCacheCreateFlagBits values
- VUID-VkPipelineCacheCreateInfo-pInitialData-parameter
  If `initialDataSize` is not `0`, `pInitialData` **must** be a valid pointer to an array of `initialDataSize` bytes

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineCacheCreateFlags;
```

`VkPipelineCacheCreateFlags` is a bitmask type for setting a mask of zero or more VkPipelineCacheCreateFlagBits.

Bits which **can** be set in VkPipelineCacheCreateInfo::`flags`, specifying behavior of the pipeline cache, are:

```
// Provided by VK_VERSION_1_0, VK_KHR_maintenance8
typedef enum VkPipelineCacheCreateFlagBits {
  // Provided by VK_VERSION_1_3
    VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT = 0x00000001,
  // Provided by VK_KHR_maintenance8
    VK_PIPELINE_CACHE_CREATE_INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR = 0x00000008,
} VkPipelineCacheCreateFlagBits;
```

- VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT specifies that all commands that modify the created VkPipelineCache will be externally synchronized. When set, the implementation **may** skip any unnecessary processing needed to support simultaneous modification from multiple threads where allowed.
- VK_PIPELINE_CACHE_CREATE_INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR specifies that when the created VkPipelineCache is used as the `dstCache` parameter of vkMergePipelineCaches, it does not need to be externally synchronized. This flag is mutually exclusive with VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT.

10.8.2. Merging Pipeline Caches

Pipeline cache objects **can** be merged using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkMergePipelineCaches(
    VkDevice                                    device,
    VkPipelineCache                             dstCache,
    uint32_t                                    srcCacheCount,
    const VkPipelineCache*                      pSrcCaches);
```

- `device` is the logical device that owns the pipeline cache objects.
- `dstCache` is the handle of the pipeline cache to merge results into.
- `srcCacheCount` is the length of the `pSrcCaches` array.
- `pSrcCaches` is a pointer to an array of pipeline cache handles, which will be merged into `dstCache`. The previous contents of `dstCache` are included after the merge.

NOTE	The details of the merge operation are implementation-dependent, but implementations **should** merge the contents of the specified pipelines and prune duplicate entries.

Valid Usage

- VUID-vkMergePipelineCaches-dstCache-00770
  `dstCache` **must** not appear in the list of source caches
- VUID-vkMergePipelineCaches-dstCache-10202
  Host access to `dstCache` **must** be externally synchronized if it was not created with VK_PIPELINE_CACHE_CREATE_INTERNALLY_SYNCHRONIZED_MERGE_BIT_KHR

Valid Usage (Implicit)

- VUID-vkMergePipelineCaches-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkMergePipelineCaches-dstCache-parameter
  `dstCache` **must** be a valid VkPipelineCache handle
- VUID-vkMergePipelineCaches-pSrcCaches-parameter
  `pSrcCaches` **must** be a valid pointer to an array of `srcCacheCount` valid VkPipelineCache handles
- VUID-vkMergePipelineCaches-srcCacheCount-arraylength
  `srcCacheCount` **must** be greater than `0`
- VUID-vkMergePipelineCaches-dstCache-parent
  `dstCache` **must** have been created, allocated, or retrieved from `device`
- VUID-vkMergePipelineCaches-pSrcCaches-parent
  Each element of `pSrcCaches` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

10.8.3. Retrieving Pipeline Cache Data

Data **can** be retrieved from a pipeline cache object using the command:

```
// Provided by VK_VERSION_1_0
VkResult vkGetPipelineCacheData(
    VkDevice                                    device,
    VkPipelineCache                             pipelineCache,
    size_t*                                     pDataSize,
    void*                                       pData);
```

- `device` is the logical device that owns the pipeline cache.
- `pipelineCache` is the pipeline cache to retrieve data from.
- `pDataSize` is a pointer to a `size_t` value related to the amount of data in the pipeline cache, as described below.
- `pData` is either `NULL` or a pointer to a buffer.

If `pData` is `NULL`, then the maximum size of the data that **can** be retrieved from the pipeline cache, in bytes, is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the amount of data actually written to `pData`. If `pDataSize` is less than the maximum size that **can** be retrieved by the pipeline cache, at most `pDataSize` bytes will be written to `pData`, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all of the pipeline cache was returned.

Any data written to `pData` is valid and **can** be provided as the `pInitialData` member of the VkPipelineCacheCreateInfo structure passed to `vkCreatePipelineCache`.

Two calls to `vkGetPipelineCacheData` with the same parameters **must** retrieve the same data unless a command that modifies the contents of the cache is called between them.

The initial bytes written to `pData` **must** be a header as described in the Pipeline Cache Header section.

If pDataSize is less than what is necessary to store this header, nothing will be written to pData and zero will be written to pDataSize.

NOTE

This query does not behave consistently with the behavior described in Opaque Binary Data Results, for historical reasons.

If the amount of data available is larger than the passed pDataSize, the query returns up to the size of the passed buffer, and signals overflow with a VK_INCOMPLETE success status instead of returning a VK_ERROR_NOT_ENOUGH_SPACE_KHR error status.

Valid Usage (Implicit)

- VUID-vkGetPipelineCacheData-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPipelineCacheData-pipelineCache-parameter
  pipelineCache **must** be a valid VkPipelineCache handle
- VUID-vkGetPipelineCacheData-pDataSize-parameter
  pDataSize **must** be a valid pointer to a size_t value
- VUID-vkGetPipelineCacheData-pData-parameter
  If the value referenced by pDataSize is not 0, and pData is not NULL, pData **must** be a valid pointer to an array of pDataSize bytes
- VUID-vkGetPipelineCacheData-pipelineCache-parent
  pipelineCache **must** have been created, allocated, or retrieved from device

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

10.8.4. Pipeline Cache Header

Applications **can** store the data retrieved from the pipeline cache, and use these data, possibly in a future run of the application, to populate new pipeline cache objects. The results of pipeline compiles, however, **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable applications to detect when previously retrieved data is incompatible with the

device, the pipeline cache data **must** begin with a valid pipeline cache header.

NOTE

Structures described in this section are not part of the Vulkan API and are only used to describe the representation of data elements in pipeline cache data. Accordingly, the valid usage clauses defined for structures defined in this section do not define valid usage conditions for APIs accepting pipeline cache data as input, as providing invalid pipeline cache data as input to any Vulkan API commands will result in the provided pipeline cache data being ignored.

Version one of the pipeline cache header is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineCacheHeaderVersionOne {
    uint32_t                        headerSize;
    VkPipelineCacheHeaderVersion    headerVersion;
    uint32_t                        vendorID;
    uint32_t                        deviceID;
    uint8_t                         pipelineCacheUUID[VK_UUID_SIZE];
} VkPipelineCacheHeaderVersionOne;
```

- `headerSize` is the length in bytes of the pipeline cache header.
- `headerVersion` is a VkPipelineCacheHeaderVersion value specifying the version of the header. A consumer of the pipeline cache **should** use the cache version to interpret the remainder of the cache header. `headerVersion` **must** be written as exactly 4 bytes.
- `vendorID` is the `VkPhysicalDeviceProperties`::`vendorID` of the implementation.
- `deviceID` is the `VkPhysicalDeviceProperties`::`deviceID` of the implementation.
- `pipelineCacheUUID` is the `VkPhysicalDeviceProperties`::`pipelineCacheUUID` of the implementation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 32 bytes. If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values at the correct offsets.

Valid Usage

- VUID-VkPipelineCacheHeaderVersionOne-headerSize-04967
  `headerSize` **must** be 32
- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-04968
  `headerVersion` **must** be VK_PIPELINE_CACHE_HEADER_VERSION_ONE
- VUID-VkPipelineCacheHeaderVersionOne-headerSize-08990
  `headerSize` **must** not exceed the size of the pipeline cache

Valid Usage (Implicit)

- VUID-VkPipelineCacheHeaderVersionOne-headerVersion-parameter
  `headerVersion` **must** be a valid VkPipelineCacheHeaderVersion value

Possible values of the `headerVersion` value of the pipeline cache header are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineCacheHeaderVersion {
    VK_PIPELINE_CACHE_HEADER_VERSION_ONE = 1,
} VkPipelineCacheHeaderVersion;
```

- VK_PIPELINE_CACHE_HEADER_VERSION_ONE specifies version one of the pipeline cache, described by VkPipelineCacheHeaderVersionOne.

10.8.5. Destroying a Pipeline Cache

To destroy a pipeline cache, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineCache(
    VkDevice                                    device,
    VkPipelineCache                             pipelineCache,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the pipeline cache object.
- `pipelineCache` is the handle of the pipeline cache to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyPipelineCache-pipelineCache-00771
  If `VkAllocationCallbacks` were provided when `pipelineCache` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineCache-pipelineCache-00772
  If no `VkAllocationCallbacks` were provided when `pipelineCache` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipelineCache-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkDestroyPipelineCache-pipelineCache-parameter
  If `pipelineCache` is not VK_NULL_HANDLE, `pipelineCache` **must** be a valid VkPipelineCache handle
- VUID-vkDestroyPipelineCache-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyPipelineCache-pipelineCache-parent
  If `pipelineCache` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineCache` **must** be externally synchronized

10.9. Pipeline Binaries

Pipeline binary objects allow the result of pipeline construction to be reused between pipelines and between runs of an application. Reuse is achieved by extracting pipeline binaries from a VkPipeline object, associating them with a corresponding VkPipelineBinaryKeyKHR and then adding a VkPipelineBinaryInfoKHR to the `pNext` chain of any `Vk*PipelineCreateInfo` when creating a pipeline. Pipeline binaries can be reused between runs by extracting `VkPipelineBinaryDataKHR` from `VkPipelineBinaryKHR` objects, saving the contents, and then using them to create a `VkPipelineBinaryKHR` object on subsequent runs.

When creating a pipeline that includes VkPipelineBinaryInfoKHR in the `pNext` chain, or has the VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR flag set, the use of VkPipelineCache objects is not allowed.

Pipeline binary objects are represented by `VkPipelineBinaryKHR` handles:

```
// Provided by VK_KHR_pipeline_binary
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineBinaryKHR)
```

10.9.1. Generating the Pipeline Key

To generate the key for a particular pipeline creation info, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineKeyKHR(
    VkDevice                                    device,
    const VkPipelineCreateInfoKHR*              pPipelineCreateInfo,
    VkPipelineBinaryKeyKHR*                     pPipelineKey);
```

- `device` is the logical device that creates the pipeline object.

- `pPipelineCreateInfo` is `NULL` or a pointer to a VkPipelineCreateInfoKHR structure.
- `pPipelineKey` is a pointer to a VkPipelineBinaryKeyKHR structure in which the resulting key is returned.

If `pPipelineCreateInfo` is `NULL`, then the implementation **must** return the global key that applies to all pipelines. If the key obtained in this way changes between saving and restoring data obtained from vkGetPipelineBinaryDataKHR in a different VkDevice, then the application **must** assume that the restored data is invalid and cannot be passed to vkCreatePipelineBinariesKHR. Otherwise the application **can** assume the data is still valid.

If `pPipelineCreateInfo` is not `NULL`, the key obtained functions as a method to compare two pipeline creation info structures. Implementations **may** not compare parts of a pipeline creation info which would not contribute to the final binary output. If a shader module identifier is used instead of a shader module, the `pPipelineKey` generated **must** be equal to the key generated when using the shader module from which the identifier was queried. If the content of two `pPipelineKey` are equal, pipelines created with the two `pPipelineCreateInfo->pNext` create infos **must** produce the same VkPipelineBinaryKHR contents.

The pipeline key is distinct from pipeline binary key. Pipeline binary keys **can** only be obtained after compilation. The pipeline key is intended to optionally allow associating pipeline create info with multiple pipeline binary keys.

Valid Usage

- VUID-vkGetPipelineKeyKHR-pNext-09605
  The `pNext` chain of `pPipelineCreateInfo` **must** not set VkPipelineBinaryInfoKHR ::`binaryCount` to a value greater than `0`

Valid Usage (Implicit)

- VUID-vkGetPipelineKeyKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineKeyKHR-pPipelineCreateInfo-parameter
  If `pPipelineCreateInfo` is not `NULL`, `pPipelineCreateInfo` **must** be a valid pointer to a valid VkPipelineCreateInfoKHR structure
- VUID-vkGetPipelineKeyKHR-pPipelineKey-parameter
  `pPipelineKey` **must** be a valid pointer to a VkPipelineBinaryKeyKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPipelineCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineCreateInfoKHR {
    VkStructureType    sType;
    void*              pNext;
} VkPipelineCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is a pointer to a structure extending this structure.

Valid Usage

- VUID-VkPipelineCreateInfoKHR-pNext-09604
  pNext **must** be pointer to a valid instance of VkGraphicsPipelineCreateInfo, VkRayTracingPipelineCreateInfoKHR, or VkComputePipelineCreateInfo

Valid Usage (Implicit)

- VUID-VkPipelineCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_CREATE_INFO_KHR

The VkPipelineBinaryKeyKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeyKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           keySize;
    uint8_t            key[VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR];
} VkPipelineBinaryKeyKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- keySize is the size, in bytes, of valid data returned in key.
- key is a buffer of opaque data specifying a pipeline binary key.

Any returned values beyond the first keySize bytes are undefined. Implementations **must** return a

keySize greater than 0, and less-or-equal to VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR.

Two keys are considered equal if keySize is equal and the first keySize bytes of key compare equal.

Implementations **may** return a different keySize for different binaries.

Implementations **should** ensure that keySize is large enough to uniquely identify a pipeline binary.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeyKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_BINARY_KEY_KHR
- VUID-VkPipelineBinaryKeyKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkPipelineBinaryKeyKHR-key-parameter
  Each element of key **must** be a valid pointer to an array of keySize uint8_t values
- VUID-VkPipelineBinaryKeyKHR-keySize-arraylength
  keySize **must** be greater than 0

VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR is the length in bytes of a binary key, as returned in VkPipelineBinaryKeyKHR::keySize.

```
#define VK_MAX_PIPELINE_BINARY_KEY_SIZE_KHR 32U
```

10.9.2. Creating Pipeline Binaries

To create pipeline binary objects, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkCreatePipelineBinariesKHR(
    VkDevice                                    device,
    const VkPipelineBinaryCreateInfoKHR*        pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPipelineBinaryHandlesInfoKHR*             pBinaries);
```

- device is the logical device that creates the pipeline binary objects.
- pCreateInfo is a pointer to a VkPipelineBinaryCreateInfoKHR structure that contains the data to create the pipeline binaries from.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pBinaries is a pointer to a VkPipelineBinaryHandlesInfoKHR structure in which the resulting pipeline binaries are returned.

The implementation will attempt to create all pipeline binaries. If creation fails for any pipeline binary, then:

- The corresponding entry in the `pPipelineBinaries` output array will be filled with VK_NULL_HANDLE.
- The VkResult returned by vkCreatePipelineBinariesKHR will contain the error value for the first entry in the output array in `pBinaries` containing VK_NULL_HANDLE.

Valid Usage (Implicit)

- VUID-vkCreatePipelineBinariesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreatePipelineBinariesKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkPipelineBinaryCreateInfoKHR structure
- VUID-vkCreatePipelineBinariesKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreatePipelineBinariesKHR-pBinaries-parameter
  `pBinaries` **must** be a valid pointer to a VkPipelineBinaryHandlesInfoKHR structure

Return Codes

Success

- VK_INCOMPLETE
- VK_PIPELINE_BINARY_MISSING_KHR
- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelineBinaryHandlesInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryHandlesInfoKHR {
    VkStructureType         sType;
    const void*             pNext;
    uint32_t                pipelineBinaryCount;
    VkPipelineBinaryKHR*    pPipelineBinaries;
} VkPipelineBinaryHandlesInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- pNext is NULL or a pointer to a structure extending this structure.
- pipelineBinaryCount is the number of binaries associated with this pipeline or the number of entries in the pPipelineBinaries array.
- pPipelineBinaries is NULL or a pointer to an array of VkPipelineBinaryKHR handles in which the resulting pipeline binaries are returned.

If pPipelineBinaries is NULL, the number of binaries that would be created is returned in pipelineBinaryCount. Otherwise, pipelineBinaryCount **must** be the number of entries in the pPipelineBinaries array, and on return from vkCreatePipelineBinariesKHR pipelineBinaryCount is overwritten with the number of handles actually written to pPipelineBinaries. If the value of pipelineBinaryCount is less than the number of binaries that would have been created, at most pipelineBinaryCount handles will be written to pPipelineBinaries and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that pPipelineBinaries was not large enough to create all the binaries.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryHandlesInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_BINARY_HANDLES_INFO_KHR
- VUID-VkPipelineBinaryHandlesInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkPipelineBinaryHandlesInfoKHR-pPipelineBinaries-parameter
  If pipelineBinaryCount is not 0, and pPipelineBinaries is not NULL, pPipelineBinaries **must** be a valid pointer to an array of pipelineBinaryCount VkPipelineBinaryKHR handles

The VkPipelineBinaryCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryCreateInfoKHR {
    VkStructureType                          sType;
    const void*                              pNext;
    const VkPipelineBinaryKeysAndDataKHR*    pKeysAndDataInfo;
    VkPipeline                               pipeline;
    const VkPipelineCreateInfoKHR*           pPipelineCreateInfo;
} VkPipelineBinaryCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pKeysAndDataInfo is NULL or a pointer to a VkPipelineBinaryKeysAndDataKHR structure that contains keys and data to create the pipeline binaries from.
- pipeline is VK_NULL_HANDLE or a VkPipeline that contains data to create the pipeline binaries from.
- pPipelineCreateInfo is NULL or a pointer to a VkPipelineCreateInfoKHR structure with the pipeline creation info. This is used to probe the implementation's internal cache for pipeline

binaries.

When pPipelineCreateInfo is not NULL, an implementation will attempt to retrieve pipeline binary data from an internal cache external to the application if pipelineBinaryInternalCache is VK_TRUE. Applications **can** use this to determine if a pipeline **can** be created without compilation. If the implementation fails to create a pipeline binary due to missing an internal cache entry, VK_PIPELINE_BINARY_MISSING_KHR is returned. If creation succeeds, the resulting binary **can** be used to create a pipeline. VK_PIPELINE_BINARY_MISSING_KHR **may** be returned for any reason in this situation, even if creating a pipeline binary with the same parameters that succeeded earlier.

If pipelineBinaryPrecompiledInternalCache is VK_TRUE, the implementation **may** be able to create pipeline binaries even when pPipelineCreateInfo has not been used to create binaries before by the application.

NOTE On some platforms, internal pipeline caches may be pre-populated before running the application.

Valid Usage

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09607
  If pipeline is not VK_NULL_HANDLE, pipeline **must** have been created with VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR
- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-09608
  If pipeline is not VK_NULL_HANDLE, vkReleaseCapturedPipelineDataKHR **must** not have been called on pipeline prior to this command
- VUID-VkPipelineBinaryCreateInfoKHR-pipelineBinaryInternalCache-09609
  If pipelineBinaryInternalCache is VK_FALSE pPipelineCreateInfo **must** be NULL
- VUID-VkPipelineBinaryCreateInfoKHR-device-09610
  If device was created with VkDevicePipelineBinaryInternalCacheControlKHR ::disableInternalCache set to VK_TRUE, pPipelineCreateInfo **must** be NULL
- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-09619
  One and only one of pKeysAndDataInfo, pipeline, or pPipelineCreateInfo **must** be non-NULL
- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-09606
  If pPipelineCreateInfo is not NULL, the pNext chain of pPipelineCreateInfo **must** not set VkPipelineBinaryInfoKHR::binaryCount to a value greater than 0

Valid Usage (Implicit)

- VUID-VkPipelineBinaryCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PIPELINE_BINARY_CREATE_INFO_KHR
- VUID-VkPipelineBinaryCreateInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkPipelineBinaryCreateInfoKHR-pKeysAndDataInfo-parameter
  If pKeysAndDataInfo is not NULL, pKeysAndDataInfo **must** be a valid pointer to a valid

VkPipelineBinaryKeysAndDataKHR structure

- VUID-VkPipelineBinaryCreateInfoKHR-pipeline-parameter
  If `pipeline` is not VK_NULL_HANDLE, `pipeline` **must** be a valid VkPipeline handle
- VUID-VkPipelineBinaryCreateInfoKHR-pPipelineCreateInfo-parameter
  If `pPipelineCreateInfo` is not `NULL`, `pPipelineCreateInfo` **must** be a valid pointer to a valid VkPipelineCreateInfoKHR structure

The `VkPipelineBinaryKeysAndDataKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryKeysAndDataKHR {
    uint32_t                            binaryCount;
    const VkPipelineBinaryKeyKHR*       pPipelineBinaryKeys;
    const VkPipelineBinaryDataKHR*      pPipelineBinaryData;
} VkPipelineBinaryKeysAndDataKHR;
```

- `binaryCount` is the size of the `pPipelineBinaryKeys` and `pPipelineBinaryData` arrays
- `pPipelineBinaryKeys` is a pointer to an array of VkPipelineBinaryKeyKHR structures containing the pipeline binary keys
- `pPipelineBinaryData` is a pointer to an array of VkPipelineBinaryDataKHR structures containing the pipeline binary data

Valid Usage (Implicit)

- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryKeys-parameter
  `pPipelineBinaryKeys` **must** be a valid pointer to an array of `binaryCount` valid VkPipelineBinaryKeyKHR structures
- VUID-VkPipelineBinaryKeysAndDataKHR-pPipelineBinaryData-parameter
  `pPipelineBinaryData` **must** be a valid pointer to an array of `binaryCount` valid VkPipelineBinaryDataKHR structures
- VUID-VkPipelineBinaryKeysAndDataKHR-binaryCount-arraylength
  `binaryCount` **must** be greater than `0`

The `VkPipelineBinaryDataKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataKHR {
    size_t    dataSize;
    void*     pData;
} VkPipelineBinaryDataKHR;
```

- `dataSize` is the size of the `pData` buffer in bytes.

- `pData` is a pointer to a buffer of `size` bytes that contains pipeline binary data obtained from `vkGetPipelineBinaryDataKHR`.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataKHR-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkPipelineBinaryDataKHR-dataSize-arraylength
  `dataSize` **must** be greater than `0`

10.9.3. Retrieving Pipeline Binary Data

Data **can** be retrieved from a pipeline binary object using the command:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkGetPipelineBinaryDataKHR(
    VkDevice                                    device,
    const VkPipelineBinaryDataInfoKHR*          pInfo,
    VkPipelineBinaryKeyKHR*                     pPipelineBinaryKey,
    size_t*                                     pPipelineBinaryDataSize,
    void*                                       pPipelineBinaryData);
```

- `device` is the logical device that created the pipeline binary.
- `pInfo` is a pointer to a VkPipelineBinaryDataInfoKHR structure which describes the pipeline binary to get data from.
- `pPipelineBinaryKey` is a pointer to a VkPipelineBinaryKeyKHR structure where the key for this binary will be written.
- `pPipelineBinaryDataSize` is a pointer to a `size_t` value related to the amount of data in the pipeline binary, as described below.
- `pPipelineBinaryData` is either `NULL` or a pointer to a buffer.

If `pPipelineBinaryData` is `NULL`, then the size of the data, in bytes, that is required to store the binary is returned in `pPipelineBinaryDataSize`. Otherwise, `pPipelineBinaryDataSize` **must** contain the size of the buffer, in bytes, pointed to by `pPipelineBinaryData`, and on return `pPipelineBinaryDataSize` is overwritten with the size of the data, in bytes, that is required to store the binary. If `pPipelineBinaryDataSize` is less than the size that is required to store the binary, nothing is written to `pPipelineBinaryData` and VK_ERROR_NOT_ENOUGH_SPACE_KHR will be returned, instead of VK_SUCCESS.

If the call returns one of the success return codes, the pipeline binary key is written to `pPipelineBinaryKey`, regardless of whether `pPipelineBinaryData` is `NULL` or not.

If pipelineBinaryCompressedData is VK_FALSE, implementations **should** not return compressed pipeline binary data to the application.

Valid Usage (Implicit)

- VUID-vkGetPipelineBinaryDataKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineBinaryDataKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkPipelineBinaryDataInfoKHR structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryKey-parameter
  `pPipelineBinaryKey` **must** be a valid pointer to a VkPipelineBinaryKeyKHR structure
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryDataSize-parameter
  `pPipelineBinaryDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetPipelineBinaryDataKHR-pPipelineBinaryData-parameter
  If the value referenced by `pPipelineBinaryDataSize` is not `0`, and `pPipelineBinaryData` is not `NULL`, `pPipelineBinaryData` **must** be a valid pointer to an array of `pPipelineBinaryDataSize` bytes

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_NOT_ENOUGH_SPACE_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelineBinaryDataInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPipelineBinaryDataInfoKHR {
    VkStructureType        sType;
    void*                  pNext;
    VkPipelineBinaryKHR    pipelineBinary;
} VkPipelineBinaryDataInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinary` is the pipeline binary to get data from.

Valid Usage (Implicit)

- VUID-VkPipelineBinaryDataInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_BINARY_DATA_INFO_KHR
- VUID-VkPipelineBinaryDataInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineBinaryDataInfoKHR-pipelineBinary-parameter
  `pipelineBinary` **must** be a valid VkPipelineBinaryKHR handle

10.9.4. Releasing Captured Pipeline Binary Data

To release pipeline resources captured with VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR, call:

```
// Provided by VK_KHR_pipeline_binary
VkResult vkReleaseCapturedPipelineDataKHR(
    VkDevice                                    device,
    const VkReleaseCapturedPipelineDataInfoKHR* pInfo,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that created the pipeline object.
- `pInfo` is a pointer to a VkReleaseCapturedPipelineDataInfoKHR structure which describes the pipeline to release the data from.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

The implementation **may** free any resources captured as a result of creating the pipeline with VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR and put the pipeline into a state as if VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR had not been provided at pipeline creation time.

NOTE	Any resources captured as a result of creating the pipeline with VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR are implicitly freed by vkDestroyPipeline.

Valid Usage

- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09611
  If `VkAllocationCallbacks` were provided when `pipeline` was created, a compatible set of callbacks **must** be provided in `pAllocator`
- VUID-vkReleaseCapturedPipelineDataKHR-pipeline-09612
  If no VkAllocationCallbacks were provided when `pipeline` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkReleaseCapturedPipelineDataKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkReleaseCapturedPipelineDataKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkReleaseCapturedPipelineDataInfoKHR structure
- VUID-vkReleaseCapturedPipelineDataKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkReleaseCapturedPipelineDataInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkReleaseCapturedPipelineDataInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPipeline         pipeline;
} VkReleaseCapturedPipelineDataInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` the handle of the pipeline object to release the data from.

Valid Usage

- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09613
  `pipeline` **must** have been created with VK_PIPELINE_CREATE_2_CAPTURE_DATA_BIT_KHR
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-09618
  `pipeline` **must** not have been used in a previous call to `vkReleaseCapturedPipelineDataKHR`

Valid Usage (Implicit)

- VUID-VkReleaseCapturedPipelineDataInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RELEASE_CAPTURED_PIPELINE_DATA_INFO_KHR
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkReleaseCapturedPipelineDataInfoKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

Host Synchronization

- Host access to `pipeline` **must** be externally synchronized

10.9.5. Destroying Pipeline Binaries

To destroy a VkPipelineBinaryKHR, call:

```
// Provided by VK_KHR_pipeline_binary
void vkDestroyPipelineBinaryKHR(
    VkDevice                                    device,
    VkPipelineBinaryKHR                         pipelineBinary,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that created the pipeline binary object.
- `pipelineBinary` is the handle of the pipeline binary object to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09614
  If `VkAllocationCallbacks` were provided when `pipelineBinary` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-09615
  If no VkAllocationCallbacks were provided when `pipelineBinary` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyPipelineBinaryKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parameter

If `pipelineBinary` is not VK_NULL_HANDLE, `pipelineBinary` **must** be a valid VkPipelineBinaryKHR handle

- VUID-vkDestroyPipelineBinaryKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyPipelineBinaryKHR-pipelineBinary-parent
  If `pipelineBinary` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineBinary` **must** be externally synchronized

10.10. Specialization Constants

Specialization constants are a mechanism whereby constants in a SPIR-V module **can** have their constant value specified at the time the `VkPipeline` is created. This allows a SPIR-V module to have constants that **can** be modified while executing an application that uses the Vulkan API.

NOTE Specialization constants are useful to allow a compute shader to have its local workgroup size changed at runtime by the user, for example.

Each VkPipelineShaderStageCreateInfo structure contains a `pSpecializationInfo` member, which **can** be `NULL` to indicate no specialization constants, or point to a `VkSpecializationInfo` structure.

The `VkSpecializationInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationInfo {
    uint32_t                           mapEntryCount;
    const VkSpecializationMapEntry*    pMapEntries;
    size_t                             dataSize;
    const void*                        pData;
} VkSpecializationInfo;
```

- `mapEntryCount` is the number of entries in the `pMapEntries` array.
- `pMapEntries` is a pointer to an array of `VkSpecializationMapEntry` structures, which map constant IDs to offsets in `pData`.
- `dataSize` is the byte size of the `pData` buffer.
- `pData` contains the actual constant values to specialize with.

Valid Usage

- VUID-VkSpecializationInfo-offset-00773
  The `offset` member of each element of `pMapEntries` **must** be less than `dataSize`
- VUID-VkSpecializationInfo-pMapEntries-00774
  The `size` member of each element of `pMapEntries` **must** be less than or equal to `dataSize` minus `offset`
- VUID-VkSpecializationInfo-constantID-04911
  The `constantID` value of each element of `pMapEntries` **must** be unique within `pMapEntries`

Valid Usage (Implicit)

- VUID-VkSpecializationInfo-pMapEntries-parameter
  If `mapEntryCount` is not `0`, `pMapEntries` **must** be a valid pointer to an array of `mapEntryCount` valid VkSpecializationMapEntry structures
- VUID-VkSpecializationInfo-pData-parameter
  If `dataSize` is not `0`, `pData` **must** be a valid pointer to an array of `dataSize` bytes

The `VkSpecializationMapEntry` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSpecializationMapEntry {
    uint32_t    constantID;
    uint32_t    offset;
    size_t      size;
} VkSpecializationMapEntry;
```

- `constantID` is the ID of the specialization constant in SPIR-V.
- `offset` is the byte offset of the specialization constant value within the supplied data buffer.
- `size` is the byte size of the specialization constant value within the supplied data buffer.

If a `constantID` value is not a specialization constant ID used in the shader, that map entry does not affect the behavior of the pipeline.

Valid Usage

- VUID-VkSpecializationMapEntry-constantID-00776
  For a `constantID` specialization constant declared in a shader, `size` **must** match the byte size of the `constantID`. If the specialization constant is of type `boolean`, `size` **must** be the byte size of VkBool32

In human readable SPIR-V:

```
OpDecorate %x SpecId 13 ; decorate .x component of WorkgroupSize with ID 13
OpDecorate %y SpecId 42 ; decorate .y component of WorkgroupSize with ID 42
OpDecorate %z SpecId 3  ; decorate .z component of WorkgroupSize with ID 3
OpDecorate %wgsize BuiltIn WorkgroupSize ; decorate WorkgroupSize onto constant
%i32 = OpTypeInt 32 0 ; declare an unsigned 32-bit type
%uvec3 = OpTypeVector %i32 3 ; declare a 3 element vector type of unsigned 32-bit
%x = OpSpecConstant %i32 1 ; declare the .x component of WorkgroupSize
%y = OpSpecConstant %i32 1 ; declare the .y component of WorkgroupSize
%z = OpSpecConstant %i32 1 ; declare the .z component of WorkgroupSize
%wgsize = OpSpecConstantComposite %uvec3 %x %y %z ; declare WorkgroupSize
```

From the above we have three specialization constants, one for each of the x, y, and z elements of the WorkgroupSize vector.

Now to specialize the above via the specialization constants mechanism:

```
const VkSpecializationMapEntry entries[] =
{
    {
        .constantID = 13,
        .offset = 0 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 42,
        .offset = 1 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    },
    {
        .constantID = 3,
        .offset = 2 * sizeof(uint32_t),
        .size = sizeof(uint32_t)
    }
};

const uint32_t data[] = { 16, 8, 4 }; // our workgroup size is 16x8x4

const VkSpecializationInfo info =
{
    .mapEntryCount = 3,
    .pMapEntries  = entries,
    .dataSize = 3 * sizeof(uint32_t),
    .pData = data,
};
```

Then when calling vkCreateComputePipelines, and passing the `VkSpecializationInfo` we defined as the `pSpecializationInfo` parameter of VkPipelineShaderStageCreateInfo, we will create a compute pipeline with the runtime specified local workgroup size.

Another example would be that an application has a SPIR-V module that has some platform-dependent constants they wish to use.

In human readable SPIR-V:

```
OpDecorate %1 SpecId 0  ; decorate our signed 32-bit integer constant
OpDecorate %2 SpecId 12 ; decorate our 32-bit floating-point constant
%i32 = OpTypeInt 32 1   ; declare a signed 32-bit type
%float = OpTypeFloat 32 ; declare a 32-bit floating-point type
%1 = OpSpecConstant %i32 -1 ; some signed 32-bit integer constant
%2 = OpSpecConstant %float 0.5 ; some 32-bit floating-point constant
```

From the above we have two specialization constants, one is a signed 32-bit integer and the second is a 32-bit floating-point value.

Now to specialize the above via the specialization constants mechanism:

```
struct SpecializationData {
    int32_t data0;
    float data1;
};

const VkSpecializationMapEntry entries[] =
{
    {
        .constantID = 0,
        .offset = offsetof(SpecializationData, data0),
        .size = sizeof(SpecializationData::data0)
    },
    {
        .constantID = 12,
        .offset = offsetof(SpecializationData, data1),
        .size = sizeof(SpecializationData::data1)
    }
};

SpecializationData data;
data.data0 = -42;    // set the data for the 32-bit integer
data.data1 = 42.0f;  // set the data for the 32-bit floating-point

const VkSpecializationInfo info =
{
    .mapEntryCount = 2,
    .pMapEntries = entries,
    .dataSize = sizeof(data),
    .pdata = &data,
};
```

It is legal for a SPIR-V module with specializations to be compiled into a pipeline where no

specialization information was provided. SPIR-V specialization constants contain default values such that if a specialization is not provided, the default value will be used. In the examples above, it would be valid for an application to only specialize some of the specialization constants within the SPIR-V module, and let the other constants use their default values encoded within the OpSpecConstant declarations.

10.11. Pipeline Libraries

A pipeline library is a special pipeline that was created using the VK_PIPELINE_CREATE_LIBRARY_BIT_KHR and cannot be bound, instead it defines a set of pipeline state which can be linked into other pipelines. For ray tracing pipelines this includes shaders and shader groups. For graphics pipelines this includes distinct library types defined by VkGraphicsPipelineLibraryFlagBitsEXT. The application **must** maintain the lifetime of a pipeline library based on the pipelines that link with it.

This linkage is achieved by using the following structure within the appropriate creation mechanisms:

The VkPipelineLibraryCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_library
typedef struct VkPipelineLibraryCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             libraryCount;
    const VkPipeline*    pLibraries;
} VkPipelineLibraryCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- libraryCount is the number of pipeline libraries in pLibraries.
- pLibraries is a pointer to an array of VkPipeline structures specifying pipeline libraries to use when creating a pipeline.

Valid Usage

- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-03381
  Each element of pLibraries **must** have been created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-06855
  If any library in pLibraries was created with a shader stage with VkPipelineShaderStageModuleIdentifierCreateInfoEXT and identifierSize not equal to 0, the pipeline **must** be created with the VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT flag set

Valid Usage (Implicit)

- VUID-VkPipelineLibraryCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_LIBRARY_CREATE_INFO_KHR
- VUID-VkPipelineLibraryCreateInfoKHR-pLibraries-parameter
  If `libraryCount` is not `0`, `pLibraries` **must** be a valid pointer to an array of `libraryCount` valid VkPipeline handles

Structure Chaining

Extends the structure

- VkGraphicsPipelineCreateInfo

Pipelines created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR libraries **can** depend on other pipeline libraries in VkPipelineLibraryCreateInfoKHR.

A pipeline library is considered in-use, as long as one of the linking pipelines is in-use. This applies recursively if a pipeline library includes other pipeline libraries.

10.12. Pipeline Binding

Once a pipeline has been created, it **can** be bound to the command buffer using the command:

```
// Provided by VK_VERSION_1_0
void vkCmdBindPipeline(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipeline                                  pipeline);
```

- `commandBuffer` is the command buffer that the pipeline will be bound to.
- `pipelineBindPoint` is a VkPipelineBindPoint value specifying to which bind point the pipeline is bound. Binding one does not disturb the others.
- `pipeline` is the pipeline to be bound.

Once bound, a pipeline binding affects subsequent commands that interact with the given pipeline type in the command buffer until a different pipeline of the same type is bound to the bind point, or until the pipeline bind point is disturbed by binding a shader object as described in Interaction with Pipelines. Commands that do not interact with the given pipeline type **must** not be affected by the pipeline state.

Valid Usage

- VUID-vkCmdBindPipeline-pipelineBindPoint-00777

If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_COMPUTE, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations

- VUID-vkCmdBindPipeline-pipelineBindPoint-00778
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_GRAPHICS, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-00779
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_COMPUTE, `pipeline` **must** be a compute pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-00780
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_GRAPHICS, `pipeline` **must** be a graphics pipeline
- VUID-vkCmdBindPipeline-pipeline-00781
  If the `variableMultisampleRate` feature is not supported, `pipeline` is a graphics pipeline, the current subpass uses no attachments, and this is not the first call to this function with a graphics pipeline after transitioning to the current subpass, then the sample count specified by this pipeline **must** match that set in the previous pipeline
- VUID-vkCmdBindPipeline-variableSampleLocations-01525
  If VkPhysicalDeviceSampleLocationsPropertiesEXT::`variableSampleLocations` is VK_FALSE, and `pipeline` is a graphics pipeline created with a `renderPass` that is not VK_NULL_HANDLE and with a VkPipelineSampleLocationsStateCreateInfoEXT structure having its `sampleLocationsEnable` member set to VK_TRUE but without VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT enabled then the current render pass instance **must** have been begun by specifying a VkRenderPassSampleLocationsBeginInfoEXT structure whose `pPostSubpassSampleLocations` member contains an element with a `subpassIndex` matching the current subpass index and the `sampleLocationsInfo` member of that element **must** match the `sampleLocationsInfo` specified in VkPipelineSampleLocationsStateCreateInfoEXT when the pipeline was created
- VUID-vkCmdBindPipeline-None-02323
  This command **must** not be recorded when transform feedback is active
- VUID-vkCmdBindPipeline-pipelineBindPoint-02391
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR, the `VkCommandPool` that `commandBuffer` was allocated from **must** support compute operations
- VUID-vkCmdBindPipeline-pipelineBindPoint-02392
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR, `pipeline` **must** be a ray tracing pipeline
- VUID-vkCmdBindPipeline-pipelineBindPoint-06721
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR, `commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07408
  If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is a protected command buffer, `pipeline` **must** have been created without VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT

- VUID-vkCmdBindPipeline-pipelineProtectedAccess-07409
  If the `pipelineProtectedAccess` feature is enabled, and `commandBuffer` is not a protected command buffer, `pipeline` **must** have been created without VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT
- VUID-vkCmdBindPipeline-pipeline-03382
  `pipeline` **must** not have been created with VK_PIPELINE_CREATE_LIBRARY_BIT_KHR set
- VUID-vkCmdBindPipeline-pipelineBindPoint-04881
  If `pipelineBindPoint` is VK_PIPELINE_BIND_POINT_GRAPHICS and the `provokingVertexModePerPipeline` limit is VK_FALSE, then pipeline's VkPipelineRasterizationProvokingVertexStateCreateInfoEXT::`provokingVertexMode` **must** be the same as that of any other pipelines previously bound to this bind point within the current render pass instance, including any pipeline already bound when beginning the render pass instance

Valid Usage (Implicit)

- VUID-vkCmdBindPipeline-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindPipeline-pipelineBindPoint-parameter
  `pipelineBindPoint` **must** be a valid VkPipelineBindPoint value
- VUID-vkCmdBindPipeline-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle
- VUID-vkCmdBindPipeline-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindPipeline-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindPipeline-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindPipeline-commonparent
  Both of `commandBuffer`, and `pipeline` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindPipeline is not affected by conditional rendering

Possible values of vkCmdBindPipeline::`pipelineBindPoint`, specifying the bind point of a pipeline object, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkPipelineBindPoint {
    VK_PIPELINE_BIND_POINT_GRAPHICS = 0,
    VK_PIPELINE_BIND_POINT_COMPUTE = 1,
  // Provided by VK_KHR_ray_tracing_pipeline
    VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR = 1000165000,
} VkPipelineBindPoint;
```

- VK_PIPELINE_BIND_POINT_COMPUTE specifies binding as a compute pipeline.
- VK_PIPELINE_BIND_POINT_GRAPHICS specifies binding as a graphics pipeline.
- VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR specifies binding as a ray tracing pipeline.

10.12.1. Interaction With Shader Objects

If the `shaderObject` feature is enabled, applications **can** use both pipelines and shader objects at the same time. The interaction between pipelines and shader objects is described in Interaction with Pipelines.

10.13. Dynamic State

When a pipeline object is bound, any pipeline object state that is not specified as dynamic is applied to the command buffer state. Pipeline object state that is specified as dynamic is not applied to the command buffer state at this time.

Instead, dynamic state **can** be modified at any time and persists for the lifetime of the command buffer, or until modified by another dynamic state setting command, or made invalid by binding a pipeline in which that state is statically specified.

When a pipeline object is bound, the following applies to each state parameter:

- If the state is not specified as dynamic in the new pipeline object, then that command buffer state is overwritten by the state in the new pipeline object. Before any draw or dispatch call with this pipeline there **must** not have been any calls to any of the corresponding dynamic state setting commands after this pipeline was bound.
- If the state is specified as dynamic in the new pipeline object, then that command buffer state is not disturbed. Before any draw or dispatch call with this pipeline there **must** have been at least one call to each of the corresponding dynamic state setting commands. The state-setting commands **must** be recorded after command buffer recording was begun, or after the last command binding a pipeline object with that state specified as static, whichever was the latter.
- If the state is not included (corresponding pointer in VkGraphicsPipelineCreateInfo was `NULL` or was ignored) in the new pipeline object, then that command buffer state is not disturbed. For example, mesh shading pipelines do not include vertex input state and therefore do not disturb any such command buffer state.

Dynamic state that does not affect the result of operations **can** be left undefined.

NOTE	For example, if blending is disabled by the pipeline object state then the dynamic color blend constants do not need to be specified in the command buffer, even if this state is specified as dynamic in the pipeline object.

NOTE	Applications running on Vulkan implementations advertising a VkPhysicalDeviceDriverProperties::`conformanceVersion` less than 1.3.8.0 should be aware that rebinding the bound pipeline object may not reapply static state.

10.14. Pipeline Properties and Shader Information

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. To query the properties of these pipeline executables, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutablePropertiesKHR(
    VkDevice                                    device,
    const VkPipelineInfoKHR*                    pPipelineInfo,
    uint32_t*                                   pExecutableCount,
    VkPipelineExecutablePropertiesKHR*          pProperties);
```

- `device` is the device that created the pipeline.
- `pPipelineInfo` describes the pipeline being queried.
- `pExecutableCount` is a pointer to an integer related to the number of pipeline executables available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of VkPipelineExecutablePropertiesKHR structures.

If pProperties is NULL, then the number of pipeline executables associated with the pipeline is returned in pExecutableCount. Otherwise, pExecutableCount **must** point to a variable set by the application to the number of elements in the pProperties array, and on return the variable is overwritten with the number of structures actually written to pProperties. If pExecutableCount is less than the number of pipeline executables associated with the pipeline, at most pExecutableCount structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

Valid Usage

- VUID-vkGetPipelineExecutablePropertiesKHR-pipelineExecutableInfo-03270
  The pipelineExecutableInfo feature **must** be enabled
- VUID-vkGetPipelineExecutablePropertiesKHR-pipeline-03271
  The pipeline member of pPipelineInfo **must** have been created with device

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutablePropertiesKHR-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetPipelineExecutablePropertiesKHR-pPipelineInfo-parameter
  pPipelineInfo **must** be a valid pointer to a valid VkPipelineInfoKHR structure
- VUID-vkGetPipelineExecutablePropertiesKHR-pExecutableCount-parameter
  pExecutableCount **must** be a valid pointer to a uint32_t value
- VUID-vkGetPipelineExecutablePropertiesKHR-pProperties-parameter
  If the value referenced by pExecutableCount is not 0, and pProperties is not NULL, pProperties **must** be a valid pointer to an array of pExecutableCount VkPipelineExecutablePropertiesKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPipelineExecutablePropertiesKHR structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutablePropertiesKHR {
    VkStructureType       sType;
    void*                 pNext;
    VkShaderStageFlags    stages;
    char                  name[VK_MAX_DESCRIPTION_SIZE];
    char                  description[VK_MAX_DESCRIPTION_SIZE];
    uint32_t              subgroupSize;
} VkPipelineExecutablePropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stages` is a bitmask of zero or more VkShaderStageFlagBits indicating which shader stages (if any) were principally used as inputs to compile this pipeline executable.
- `name` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a short human readable name for this pipeline executable.
- `description` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a human readable description for this pipeline executable.
- `subgroupSize` is the subgroup size with which this pipeline executable is dispatched.

Not all implementations have a 1:1 mapping between shader stages and pipeline executables and some implementations **may** reduce a given shader stage to fixed function hardware programming such that no pipeline executable is available. No guarantees are provided about the mapping between shader stages and pipeline executables and `stages` **should** be considered a best effort hint. Because the application **cannot** rely on the `stages` field to provide an exact description, `name` and `description` provide a human readable name and description which more accurately describes the given pipeline executable.

Valid Usage (Implicit)

- VUID-VkPipelineExecutablePropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_PROPERTIES_KHR
- VUID-VkPipelineExecutablePropertiesKHR-pNext-pNext
  `pNext` **must** be `NULL`

To query the pipeline properties call:

```
// Provided by VK_EXT_pipeline_properties
VkResult vkGetPipelinePropertiesEXT(
    VkDevice                                    device,
    const VkPipelineInfoKHR*                    pPipelineInfo,
    VkBaseOutStructure*                         pPipelineProperties);
```

- `device` is the logical device that created the pipeline.

- `pPipelineInfo` is a pointer to a VkPipelineInfoEXT structure which describes the pipeline being queried.
- `pPipelineProperties` is a pointer to a VkBaseOutStructure structure in which the pipeline properties will be written.

To query a pipeline's `pipelineIdentifier` pass a VkPipelinePropertiesIdentifierEXT structure in `pPipelineProperties`. Each pipeline is associated with a `pipelineIdentifier` and the identifier is implementation specific.

Valid Usage

- VUID-vkGetPipelinePropertiesEXT-pipeline-06738
  The `pipeline` member of `pPipelineInfo` **must** have been created with `device`
- VUID-vkGetPipelinePropertiesEXT-pPipelineProperties-06739
  `pPipelineProperties` **must** be a valid pointer to a VkPipelinePropertiesIdentifierEXT structure
- VUID-vkGetPipelinePropertiesEXT-None-06766
  The `pipelinePropertiesIdentifier` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPipelinePropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelinePropertiesEXT-pPipelineInfo-parameter
  `pPipelineInfo` **must** be a valid pointer to a valid VkPipelineInfoKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelinePropertiesIdentifierEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_properties
typedef struct VkPipelinePropertiesIdentifierEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            pipelineIdentifier[VK_UUID_SIZE];
} VkPipelinePropertiesIdentifierEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineIdentifier` is an array of `VK_UUID_SIZE` `uint8_t` values into which the pipeline identifier will be written.

Valid Usage (Implicit)

- VUID-VkPipelinePropertiesIdentifierEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_PROPERTIES_IDENTIFIER_EXT
- VUID-VkPipelinePropertiesIdentifierEXT-pNext-pNext
  `pNext` **must** be `NULL`

The `VkPipelineInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         pipeline;
} VkPipelineInfoKHR;
```

```
// Provided by VK_EXT_pipeline_properties
// Equivalent to VkPipelineInfoKHR
typedef VkPipelineInfoKHR VkPipelineInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` is a `VkPipeline` handle.

Valid Usage (Implicit)

- VUID-VkPipelineInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_INFO_KHR
- VUID-VkPipelineInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`

- VUID-VkPipelineInfoKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

Each pipeline executable **may** have a set of statistics associated with it that are generated by the pipeline compilation process. These statistics **may** include things such as instruction counts, amount of spilling (if any), maximum number of simultaneous threads, or anything else which **may** aid developers in evaluating the expected performance of a shader. To query the compile time statistics associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableStatisticsKHR(
    VkDevice                                    device,
    const VkPipelineExecutableInfoKHR*          pExecutableInfo,
    uint32_t*                                   pStatisticCount,
    VkPipelineExecutableStatisticKHR*           pStatistics);
```

- `device` is the device that created the pipeline.
- `pExecutableInfo` describes the pipeline executable being queried.
- `pStatisticCount` is a pointer to an integer related to the number of statistics available or queried, as described below.
- `pStatistics` is either `NULL` or a pointer to an array of VkPipelineExecutableStatisticKHR structures.

If `pStatistics` is `NULL`, then the number of statistics associated with the pipeline executable is returned in `pStatisticCount`. Otherwise, `pStatisticCount` **must** point to a variable set by the application to the number of elements in the `pStatistics` array, and on return the variable is overwritten with the number of structures actually written to `pStatistics`. If `pStatisticCount` is less than the number of statistics associated with the pipeline executable, at most `pStatisticCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available statistics were returned.

Valid Usage

- VUID-vkGetPipelineExecutableStatisticsKHR-pipelineExecutableInfo-03272
  The `pipelineExecutableInfo` feature **must** be enabled
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03273
  The `pipeline` member of `pExecutableInfo` **must** have been created with `device`
- VUID-vkGetPipelineExecutableStatisticsKHR-pipeline-03274
  The `pipeline` member of `pExecutableInfo` **must** have been created with VK_PIPELINE_CREATE_CAPTURE_STATISTICS_BIT_KHR

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableStatisticsKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineExecutableStatisticsKHR-pExecutableInfo-parameter
  `pExecutableInfo` **must** be a valid pointer to a valid VkPipelineExecutableInfoKHR structure
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatisticCount-parameter
  `pStatisticCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutableStatisticsKHR-pStatistics-parameter
  If the value referenced by `pStatisticCount` is not `0`, and `pStatistics` is not `NULL`, `pStatistics` **must** be a valid pointer to an array of `pStatisticCount` VkPipelineExecutableStatisticKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelineExecutableInfoKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPipeline         pipeline;
    uint32_t           executableIndex;
} VkPipelineExecutableInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipeline` is the pipeline to query.
- `executableIndex` is the index of the pipeline executable to query in the array of executable properties returned by vkGetPipelineExecutablePropertiesKHR.

Valid Usage

- VUID-VkPipelineExecutableInfoKHR-executableIndex-03275
  `executableIndex` **must** be less than the number of pipeline executables associated with `pipeline` as returned in the `pExecutableCount` parameter of `vkGetPipelineExecutablePropertiesKHR`

Valid Usage (Implicit)

- VUID-VkPipelineExecutableInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INFO_KHR
- VUID-VkPipelineExecutableInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPipelineExecutableInfoKHR-pipeline-parameter
  `pipeline` **must** be a valid VkPipeline handle

The `VkPipelineExecutableStatisticKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableStatisticKHR {
    VkStructureType                           sType;
    void*                                     pNext;
    char                                      name[VK_MAX_DESCRIPTION_SIZE];
    char                                      description[VK_MAX_DESCRIPTION_SIZE];
    VkPipelineExecutableStatisticFormatKHR    format;
    VkPipelineExecutableStatisticValueKHR     value;
} VkPipelineExecutableStatisticKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a short human readable name for this statistic.
- `description` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a human readable description for this statistic.
- `format` is a VkPipelineExecutableStatisticFormatKHR value specifying the format of the data found in `value`.
- `value` is the value of this statistic.

Valid Usage (Implicit)

- VUID-VkPipelineExecutableStatisticKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_STATISTIC_KHR

- VUID-VkPipelineExecutableStatisticKHR-pNext-pNext
  `pNext` **must** be `NULL`

The VkPipelineExecutableStatisticFormatKHR enum is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef enum VkPipelineExecutableStatisticFormatKHR {
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR = 0,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR = 1,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR = 2,
    VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR = 3,
} VkPipelineExecutableStatisticFormatKHR;
```

- VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR specifies that the statistic is returned as a 32-bit boolean value which **must** be either VK_TRUE or VK_FALSE and **should** be read from the `b32` field of `VkPipelineExecutableStatisticValueKHR`.
- VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR specifies that the statistic is returned as a signed 64-bit integer and **should** be read from the `i64` field of `VkPipelineExecutableStatisticValueKHR`.
- VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR specifies that the statistic is returned as an unsigned 64-bit integer and **should** be read from the `u64` field of `VkPipelineExecutableStatisticValueKHR`.
- VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR specifies that the statistic is returned as a 64-bit floating-point value and **should** be read from the `f64` field of `VkPipelineExecutableStatisticValueKHR`.

The `VkPipelineExecutableStatisticValueKHR` union is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef union VkPipelineExecutableStatisticValueKHR {
    VkBool32    b32;
    int64_t     i64;
    uint64_t    u64;
    double      f64;
} VkPipelineExecutableStatisticValueKHR;
```

- `b32` is the 32-bit boolean value if the VkPipelineExecutableStatisticFormatKHR is VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_BOOL32_KHR.
- `i64` is the signed 64-bit integer value if the VkPipelineExecutableStatisticFormatKHR is VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_INT64_KHR.
- `u64` is the unsigned 64-bit integer value if the VkPipelineExecutableStatisticFormatKHR is VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_UINT64_KHR.
- `f64` is the 64-bit floating-point value if the VkPipelineExecutableStatisticFormatKHR is VK_PIPELINE_EXECUTABLE_STATISTIC_FORMAT_FLOAT64_KHR.

Each pipeline executable **may** have one or more text or binary internal representations associated with it which are generated as part of the compile process. These **may** include the final shader assembly, a binary form of the compiled shader, or the shader compiler's internal representation at any number of intermediate compile steps. To query the internal representations associated with a pipeline executable, call:

```
// Provided by VK_KHR_pipeline_executable_properties
VkResult vkGetPipelineExecutableInternalRepresentationsKHR(
    VkDevice                                    device,
    const VkPipelineExecutableInfoKHR*          pExecutableInfo,
    uint32_t*                                   pInternalRepresentationCount,
    VkPipelineExecutableInternalRepresentationKHR* pInternalRepresentations);
```

- `device` is the device that created the pipeline.
- `pExecutableInfo` describes the pipeline executable being queried.
- `pInternalRepresentationCount` is a pointer to an integer related to the number of internal representations available or queried, as described below.
- `pInternalRepresentations` is either `NULL` or a pointer to an array of VkPipelineExecutableInternalRepresentationKHR structures.

If `pInternalRepresentations` is `NULL`, then the number of internal representations associated with the pipeline executable is returned in `pInternalRepresentationCount`. Otherwise, `pInternalRepresentationCount` **must** point to a variable set by the application to the number of elements in the `pInternalRepresentations` array, and on return the variable is overwritten with the number of structures actually written to `pInternalRepresentations`. If `pInternalRepresentationCount` is less than the number of internal representations associated with the pipeline executable, at most `pInternalRepresentationCount` structures will be written, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available representations were returned.

While the details of the internal representations remain implementation-dependent, the implementation **should** order the internal representations in the order in which they occur in the compiled pipeline with the final shader assembly (if any) last.

Valid Usage

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipelineExecutableInfo-03276
  The `pipelineExecutableInfo` feature **must** be enabled
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03277
  The `pipeline` member of `pExecutableInfo` **must** have been created with `device`
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pipeline-03278
  The `pipeline` member of `pExecutableInfo` **must** have been created with VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR

Valid Usage (Implicit)

- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pExecutableInfo-parameter
  `pExecutableInfo` **must** be a valid pointer to a valid VkPipelineExecutableInfoKHR structure
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentationCount-parameter
  `pInternalRepresentationCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPipelineExecutableInternalRepresentationsKHR-pInternalRepresentations-parameter
  If the value referenced by `pInternalRepresentationCount` is not `0`, and `pInternalRepresentations` is not `NULL`, `pInternalRepresentations` **must** be a valid pointer to an array of `pInternalRepresentationCount` VkPipelineExecutableInternalRepresentationKHR structures

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkPipelineExecutableInternalRepresentationKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPipelineExecutableInternalRepresentationKHR {
    VkStructureType    sType;
    void*              pNext;
    char               name[VK_MAX_DESCRIPTION_SIZE];
    char               description[VK_MAX_DESCRIPTION_SIZE];
    VkBool32           isText;
    size_t             dataSize;
    void*              pData;
} VkPipelineExecutableInternalRepresentationKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `name` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a short human readable name for this internal representation.
- `description` is an array of VK_MAX_DESCRIPTION_SIZE `char` containing a null-terminated UTF-8 string which is a human readable description for this internal representation.
- `isText` specifies whether the returned data is text or opaque data. If `isText` is VK_TRUE then the data returned in `pData` is text and is guaranteed to be a null-terminated UTF-8 string.
- `dataSize` is an integer related to the size, in bytes, of the internal representation's data, as described below.
- `pData` is either `NULL` or a pointer to a block of data into which the implementation will write the internal representation.

If `pData` is `NULL`, then the size, in bytes, of the internal representation data is returned in `dataSize`. Otherwise, `dataSize` **must** be the size of the buffer, in bytes, pointed to by `pData` and on return `dataSize` is overwritten with the number of bytes of data actually written to `pData` including any trailing null character. If `dataSize` is less than the size, in bytes, of the internal representation's data, at most `dataSize` bytes of data will be written to `pData`, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available representation was returned.

If `isText` is VK_TRUE and `pData` is not `NULL` and `dataSize` is not zero, the last byte written to `pData` will be a null character.

Valid Usage (Implicit)

- VUID-VkPipelineExecutableInternalRepresentationKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INTERNAL_REPRESENTATION_KHR
- VUID-VkPipelineExecutableInternalRepresentationKHR-pNext-pNext
  `pNext` **must** be `NULL`

10.15. Pipeline Creation Feedback

Feedback about the creation of a particular pipeline object **can** be obtained by adding a `VkPipelineCreationFeedbackCreateInfo` structure to the `pNext` chain of VkGraphicsPipelineCreateInfo, VkRayTracingPipelineCreateInfoKHR, or VkComputePipelineCreateInfo. The `VkPipelineCreationFeedbackCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedbackCreateInfo {
    VkStructureType                sType;
    const void*                    pNext;
    VkPipelineCreationFeedback*    pPipelineCreationFeedback;
    uint32_t                       pipelineStageCreationFeedbackCount;
    VkPipelineCreationFeedback*    pPipelineStageCreationFeedbacks;
} VkPipelineCreationFeedbackCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPipelineCreationFeedback` is a pointer to a VkPipelineCreationFeedback structure.
- `pipelineStageCreationFeedbackCount` is the number of elements in `pPipelineStageCreationFeedbacks`.
- `pPipelineStageCreationFeedbacks` is a pointer to an array of `pipelineStageCreationFeedbackCount` VkPipelineCreationFeedback structures.

An implementation **should** write pipeline creation feedback to `pPipelineCreationFeedback` and **may** write pipeline stage creation feedback to `pPipelineStageCreationFeedbacks`. An implementation **must** set or clear the VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT in VkPipelineCreationFeedback::`flags` for `pPipelineCreationFeedback` and every element of `pPipelineStageCreationFeedbacks`.

NOTE One common scenario for an implementation to skip per-stage feedback is when VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT is set in `pPipelineCreationFeedback`.

When chained to VkRayTracingPipelineCreateInfoKHR, or VkGraphicsPipelineCreateInfo, the `i` element of `pPipelineStageCreationFeedbacks` corresponds to the `i` element of VkRayTracingPipelineCreateInfoKHR::`pStages`, or VkGraphicsPipelineCreateInfo::`pStages`. When chained to VkComputePipelineCreateInfo, the first element of `pPipelineStageCreationFeedbacks` corresponds to VkComputePipelineCreateInfo::`stage`.

Valid Usage (Implicit)

- VUID-VkPipelineCreationFeedbackCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_CREATION_FEEDBACK_CREATE_INFO
- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineCreationFeedback-parameter
  `pPipelineCreationFeedback` **must** be a valid pointer to a VkPipelineCreationFeedback structure
- VUID-VkPipelineCreationFeedbackCreateInfo-pPipelineStageCreationFeedbacks-parameter
  If `pipelineStageCreationFeedbackCount` is not `0`, `pPipelineStageCreationFeedbacks` **must** be a valid pointer to an array of `pipelineStageCreationFeedbackCount` VkPipelineCreationFeedback structures

Structure Chaining

Extends the structures

- VkComputePipelineCreateInfo
- VkGraphicsPipelineCreateInfo
- VkRayTracingPipelineCreateInfoKHR

The VkPipelineCreationFeedback structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPipelineCreationFeedback {
    VkPipelineCreationFeedbackFlags    flags;
    uint64_t                           duration;
} VkPipelineCreationFeedback;
```

- flags is a bitmask of VkPipelineCreationFeedbackFlagBits providing feedback about the creation of a pipeline or of a pipeline stage.
- duration is the duration spent creating a pipeline or pipeline stage in nanoseconds.

If the VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT is not set in flags, an implementation **must** not set any other bits in flags, and the values of all other VkPipelineCreationFeedback data members are undefined.

Possible values of the flags member of VkPipelineCreationFeedback are:

```
// Provided by VK_VERSION_1_3
typedef enum VkPipelineCreationFeedbackFlagBits {
    VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT = 0x00000001,
    VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT = 0x00000002,
    VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT = 0x00000004,
} VkPipelineCreationFeedbackFlagBits;
```

- VK_PIPELINE_CREATION_FEEDBACK_VALID_BIT specifies that the feedback information is valid.
- VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT specifies that a readily usable pipeline or pipeline stage was found in the pipelineCache specified by the application in the pipeline creation command.

  An implementation **should** set the VK_PIPELINE_CREATION_FEEDBACK_APPLICATION_PIPELINE_CACHE_HIT_BIT bit if it was able to avoid the large majority of pipeline or pipeline stage creation work by using the pipelineCache parameter of vkCreateGraphicsPipelines, vkCreateRayTracingPipelinesKHR, or vkCreateComputePipelines. When an implementation sets this bit for the entire pipeline, it **may** leave it unset for any stage.

NOTE	Implementations are encouraged to provide a meaningful signal to applications using this bit. The intention is to communicate to the application that the pipeline or pipeline stage was created “as fast as it gets” using the pipeline cache provided by the application. If an implementation uses an internal cache, it is discouraged from setting this bit as the feedback would be unactionable.

- VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT specifies that the base pipeline specified by the `basePipelineHandle` or `basePipelineIndex` member of the `Vk*PipelineCreateInfo` structure was used to accelerate the creation of the pipeline.

  An implementation **should** set the VK_PIPELINE_CREATION_FEEDBACK_BASE_PIPELINE_ACCELERATION_BIT bit if it was able to avoid a significant amount of work by using the base pipeline.

NOTE	While “significant amount of work” is subjective, implementations are encouraged to provide a meaningful signal to applications using this bit. For example, a 1% reduction in duration may not warrant setting this bit, while a 50% reduction would.

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPipelineCreationFeedbackFlags;
```

`VkPipelineCreationFeedbackFlags` is a bitmask type for providing zero or more VkPipelineCreationFeedbackFlagBits.

Chapter 11. Memory Allocation

Vulkan memory is broken up into two categories, *host memory* and *device memory*.

11.1. Host Memory

Host memory is memory needed by the Vulkan implementation for non-device-visible storage.

NOTE	This memory **may** be used to store the implementation's representation and state of Vulkan objects.

Vulkan provides applications the opportunity to perform host memory allocations on behalf of the Vulkan implementation. If this feature is not used, the implementation will perform its own memory allocations. Since most memory allocations are off the critical path, this is not meant as a performance feature. Rather, this **can** be useful for certain embedded systems, for debugging purposes (e.g. putting a guard page after all host allocations), or for memory allocation logging.

Allocators are provided by the application as a pointer to a `VkAllocationCallbacks` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkAllocationCallbacks {
    void*                                   pUserData;
    PFN_vkAllocationFunction                pfnAllocation;
    PFN_vkReallocationFunction              pfnReallocation;
    PFN_vkFreeFunction                      pfnFree;
    PFN_vkInternalAllocationNotification    pfnInternalAllocation;
    PFN_vkInternalFreeNotification          pfnInternalFree;
} VkAllocationCallbacks;
```

- `pUserData` is NULL or an application-defined user data pointer to be interpreted by the implementation of the callbacks. When any of the callbacks in `VkAllocationCallbacks` are called, the Vulkan implementation will pass this value as the first parameter to the callback. This value **can** vary each time an allocator is passed into a command, even when the same object takes an allocator in multiple commands.
- `pfnAllocation` is a PFN_vkAllocationFunction pointer to an application-defined memory allocation function.
- `pfnReallocation` is a PFN_vkReallocationFunction pointer to an application-defined memory reallocation function.
- `pfnFree` is a PFN_vkFreeFunction pointer to an application-defined memory free function.
- `pfnInternalAllocation` is a PFN_vkInternalAllocationNotification pointer to an application-defined function that is called by the implementation when the implementation makes internal allocations.
- `pfnInternalFree` is a PFN_vkInternalFreeNotification pointer to an application-defined function that is called by the implementation when the implementation frees internal allocations.

Valid Usage

- VUID-VkAllocationCallbacks-pfnAllocation-00632
  `pfnAllocation` **must** be a valid pointer to a valid application-defined PFN_vkAllocationFunction
- VUID-VkAllocationCallbacks-pfnReallocation-00633
  `pfnReallocation` **must** be a valid pointer to a valid application-defined PFN_vkReallocationFunction
- VUID-VkAllocationCallbacks-pfnFree-00634
  `pfnFree` **must** be a valid pointer to a valid application-defined PFN_vkFreeFunction
- VUID-VkAllocationCallbacks-pfnInternalAllocation-00635
  If either of `pfnInternalAllocation` or `pfnInternalFree` is not `NULL`, both **must** be valid callbacks

The type of `pfnAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void* (*PFN_vkAllocationFunction)(
    void*                                       pUserData,
    size_t                                      size,
    size_t                                      alignment,
    VkSystemAllocationScope                     allocationScope);
```

- `pUserData` is the value specified for VkAllocationCallbacks::`pUserData` in the allocator specified by the application.
- `size` is the size in bytes of the requested allocation.
- `alignment` is the requested alignment of the allocation in bytes and **must** be a power of two.
- `allocationScope` is a VkSystemAllocationScope value specifying the allocation scope of the lifetime of the allocation, as described here.

If `pfnAllocation` is unable to allocate the requested memory, it **must** return `NULL`. If the allocation was successful, it **must** return a valid pointer to memory allocation containing at least `size` bytes, and with the pointer value being a multiple of `alignment`.

NOTE

Correct Vulkan operation **cannot** be assumed if the application does not follow these rules.

For example, `pfnAllocation` (or `pfnReallocation`) could cause termination of running Vulkan instance(s) on a failed allocation for debugging purposes, either directly or indirectly. In these circumstances, it **cannot** be assumed that any part of any affected VkInstance objects are going to operate correctly (even vkDestroyInstance), and the application **must** ensure it cleans up properly via other means (e.g. process termination).

If pfnAllocation returns NULL, and if the implementation is unable to continue correct processing of the current command without the requested allocation, it **must** treat this as a runtime error, and generate VK_ERROR_OUT_OF_HOST_MEMORY at the appropriate time for the command in which the condition was detected, as described in Return Codes.

If the implementation is able to continue correct processing of the current command without the requested allocation, then it **may** do so, and **must** not generate VK_ERROR_OUT_OF_HOST_MEMORY as a result of this failed allocation.

The type of pfnReallocation is:

```
// Provided by VK_VERSION_1_0
typedef void* (*PFN_vkReallocationFunction)(
    void*                                       pUserData,
    void*                                       pOriginal,
    size_t                                      size,
    size_t                                      alignment,
    VkSystemAllocationScope                     allocationScope);
```

- pUserData is the value specified for VkAllocationCallbacks::pUserData in the allocator specified by the application.
- pOriginal **must** be either NULL or a pointer previously returned by pfnReallocation or pfnAllocation of a compatible allocator.
- size is the size in bytes of the requested allocation.
- alignment is the requested alignment of the allocation in bytes and **must** be a power of two.
- allocationScope is a VkSystemAllocationScope value specifying the allocation scope of the lifetime of the allocation, as described here.

If the reallocation was successful, pfnReallocation **must** return an allocation with enough space for size bytes, and the contents of the original allocation from bytes zero to min(original size, new size) - 1 **must** be preserved in the returned allocation. If size is larger than the old size, the contents of the additional space are undefined. If satisfying these requirements involves creating a new allocation, then the old allocation **should** be freed.

If pOriginal is NULL, then pfnReallocation **must** behave equivalently to a call to PFN_vkAllocationFunction with the same parameter values (without pOriginal).

If size is zero, then pfnReallocation **must** behave equivalently to a call to PFN_vkFreeFunction with the same pUserData parameter value, and pMemory equal to pOriginal.

If pOriginal is non-NULL, the implementation **must** ensure that alignment is equal to the alignment used to originally allocate pOriginal.

If this function fails and pOriginal is non-NULL the application **must** not free the old allocation.

pfnReallocation **must** follow the same rules for return values as PFN_vkAllocationFunction.

The type of pfnFree is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkFreeFunction)(
    void*                                       pUserData,
    void*                                       pMemory);
```

- `pUserData` is the value specified for VkAllocationCallbacks::`pUserData` in the allocator specified by the application.
- `pMemory` is the allocation to be freed.

`pMemory` **may** be `NULL`, which the callback **must** handle safely. If `pMemory` is non-`NULL`, it **must** be a pointer previously allocated by `pfnAllocation` or `pfnReallocation`. The application **should** free this memory.

The type of `pfnInternalAllocation` is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkInternalAllocationNotification)(
    void*                                       pUserData,
    size_t                                      size,
    VkInternalAllocationType                    allocationType,
    VkSystemAllocationScope                     allocationScope);
```

- `pUserData` is the value specified for VkAllocationCallbacks::`pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.
- `allocationType` is a VkInternalAllocationType value specifying the requested type of an allocation.
- `allocationScope` is a VkSystemAllocationScope value specifying the allocation scope of the lifetime of the allocation, as described here.

This is a purely informational callback.

The type of `pfnInternalFree` is:

```
// Provided by VK_VERSION_1_0
typedef void (*PFN_vkInternalFreeNotification)(
    void*                                       pUserData,
    size_t                                      size,
    VkInternalAllocationType                    allocationType,
    VkSystemAllocationScope                     allocationScope);
```

- `pUserData` is the value specified for VkAllocationCallbacks::`pUserData` in the allocator specified by the application.
- `size` is the requested size of an allocation.

- `allocationType` is a VkInternalAllocationType value specifying the requested type of an allocation.
- `allocationScope` is a VkSystemAllocationScope value specifying the allocation scope of the lifetime of the allocation, as described here.

Each allocation has an *allocation scope* defining its lifetime and which object it is associated with. Possible values passed to the `allocationScope` parameter of the callback functions specified by VkAllocationCallbacks, indicating the allocation scope, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSystemAllocationScope {
    VK_SYSTEM_ALLOCATION_SCOPE_COMMAND = 0,
    VK_SYSTEM_ALLOCATION_SCOPE_OBJECT = 1,
    VK_SYSTEM_ALLOCATION_SCOPE_CACHE = 2,
    VK_SYSTEM_ALLOCATION_SCOPE_DEVICE = 3,
    VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE = 4,
} VkSystemAllocationScope;
```

- VK_SYSTEM_ALLOCATION_SCOPE_COMMAND specifies that the allocation is scoped to the duration of the Vulkan command.
- VK_SYSTEM_ALLOCATION_SCOPE_OBJECT specifies that the allocation is scoped to the lifetime of the Vulkan object that is being created or used.
- VK_SYSTEM_ALLOCATION_SCOPE_CACHE specifies that the allocation is scoped to the lifetime of a `VkPipelineCache` or `VkValidationCacheEXT` object.
- VK_SYSTEM_ALLOCATION_SCOPE_DEVICE specifies that the allocation is scoped to the lifetime of the Vulkan device.
- VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE specifies that the allocation is scoped to the lifetime of the Vulkan instance.

Most Vulkan commands operate on a single object, or there is a sole object that is being created or manipulated. When an allocation uses an allocation scope of VK_SYSTEM_ALLOCATION_SCOPE_OBJECT or VK_SYSTEM_ALLOCATION_SCOPE_CACHE, the allocation is scoped to the object being created or manipulated.

When an implementation requires host memory, it will make callbacks to the application using the most specific allocator and allocation scope available:

- If an allocation is scoped to the duration of a command, the allocator will use the VK_SYSTEM_ALLOCATION_SCOPE_COMMAND allocation scope. The most specific allocator available is used: if the object being created or manipulated has an allocator, that object's allocator will be used, else if the parent `VkDevice` has an allocator it will be used, else if the parent `VkInstance` has an allocator it will be used. Else,
- If an allocation is associated with a `VkValidationCacheEXT` or `VkPipelineCache` object, the allocator will use the VK_SYSTEM_ALLOCATION_SCOPE_CACHE allocation scope. The most specific allocator available is used (cache, else device, else instance). Else,

- If an allocation is scoped to the lifetime of an object, that object is being created or manipulated by the command, and that object's type is not `VkDevice` or `VkInstance`, the allocator will use an allocation scope of VK_SYSTEM_ALLOCATION_SCOPE_OBJECT. The most specific allocator available is used (object, else device, else instance). Else,
- If an allocation is scoped to the lifetime of a device, the allocator will use an allocation scope of VK_SYSTEM_ALLOCATION_SCOPE_DEVICE. The most specific allocator available is used (device, else instance). Else,
- If the allocation is scoped to the lifetime of an instance and the instance has an allocator, its allocator will be used with an allocation scope of VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE.
- Otherwise an implementation will allocate memory through an alternative mechanism that is unspecified.

Objects that are allocated from pools do not specify their own allocator. When an implementation requires host memory for such an object, that memory is sourced from the object's parent pool's allocator.

The application is not expected to handle allocating memory that is intended for execution by the host due to the complexities of differing security implementations across multiple platforms. The implementation will allocate such memory internally and invoke an application provided informational callback when these *internal allocations* are allocated and freed. Upon allocation of executable memory, `pfnInternalAllocation` will be called. Upon freeing executable memory, `pfnInternalFree` will be called. An implementation will only call an informational callback for executable memory allocations and frees.

The `allocationType` parameter to the `pfnInternalAllocation` and `pfnInternalFree` functions **may** be one of the following values:

```
// Provided by VK_VERSION_1_0
typedef enum VkInternalAllocationType {
    VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE = 0,
} VkInternalAllocationType;
```

- VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE specifies that the allocation is intended for execution by the host.

An implementation **must** only make calls into an application-provided allocator during the execution of an API command. An implementation **must** only make calls into an application-provided allocator from the same thread that called the provoking API command. The implementation **should** not synchronize calls to any of the callbacks. If synchronization is needed, the callbacks **must** provide it themselves. The informational callbacks are subject to the same restrictions as the allocation callbacks.

If an implementation intends to make calls through a `VkAllocationCallbacks` structure between the time a `vkCreate*` command returns and the time a corresponding `vkDestroy*` command begins, that implementation **must** save a copy of the allocator before the `vkCreate*` command returns. The callback functions and any data structures they rely upon **must** remain valid for the lifetime of the object they are associated with.

If an allocator is provided to a vkCreate* command, a *compatible* allocator **must** be provided to the corresponding vkDestroy* command. Two VkAllocationCallbacks structures are compatible if memory allocated with pfnAllocation or pfnReallocation in each **can** be freed with pfnReallocation or pfnFree in the other. An allocator **must** not be provided to a vkDestroy* command if an allocator was not provided to the corresponding vkCreate* command.

If a non-NULL allocator is used, the pfnAllocation, pfnReallocation and pfnFree members **must** be non-NULL and point to valid implementations of the callbacks. An application **can** choose to not provide informational callbacks by setting both pfnInternalAllocation and pfnInternalFree to NULL. pfnInternalAllocation and pfnInternalFree **must** either both be NULL or both be non-NULL.

If pfnAllocation or pfnReallocation fail, the implementation **may** fail object creation and/or generate a VK_ERROR_OUT_OF_HOST_MEMORY error, as appropriate.

Allocation callbacks **must** not call any Vulkan commands.

The following sets of rules define when an implementation is permitted to call the allocator callbacks.

pfnAllocation or pfnReallocation **may** be called in the following situations:

- Allocations scoped to a VkDevice or VkInstance **may** be allocated from any API command.
- Allocations scoped to a command **may** be allocated from any API command.
- Allocations scoped to a VkPipelineCache **may** only be allocated from:
  - vkCreatePipelineCache
  - vkMergePipelineCaches for dstCache
  - vkCreateGraphicsPipelines for pipelineCache
  - vkCreateComputePipelines for pipelineCache
- Allocations scoped to a VkValidationCacheEXT **may** only be allocated from:
  - vkCreateValidationCacheEXT
  - vkMergeValidationCachesEXT for dstCache
  - vkCreateShaderModule for validationCache in VkShaderModuleValidationCacheCreateInfoEXT
- Allocations scoped to a VkDescriptorPool **may** only be allocated from:
  - any command that takes the pool as a direct argument
  - vkAllocateDescriptorSets for the descriptorPool member of its pAllocateInfo parameter
  - vkCreateDescriptorPool
- Allocations scoped to a VkCommandPool **may** only be allocated from:
  - any command that takes the pool as a direct argument
  - vkCreateCommandPool
  - vkAllocateCommandBuffers for the commandPool member of its pAllocateInfo parameter
  - any vkCmd* command whose commandBuffer was allocated from that VkCommandPool

- Allocations scoped to any other object **may** only be allocated in that object's `vkCreate*` command.

`pfnFree`, or `pfnReallocation` with zero `size`, **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be freed from any API command.
- Allocations scoped to a command **must** be freed by any API command which allocates such memory.
- Allocations scoped to a `VkPipelineCache` **may** be freed from `vkDestroyPipelineCache`.
- Allocations scoped to a `VkValidationCacheEXT` **may** be freed from `vkDestroyValidationCacheEXT`.
- Allocations scoped to a `VkDescriptorPool` **may** be freed from
  - any command that takes the pool as a direct argument
- Allocations scoped to a `VkCommandPool` **may** be freed from:
  - any command that takes the pool as a direct argument
  - `vkResetCommandBuffer` whose `commandBuffer` was allocated from that `VkCommandPool`
- Allocations scoped to any other object **may** be freed in that object's `vkDestroy*` command.
- Any command that allocates host memory **may** also free host memory of the same scope.

11.2. Device Memory

Device memory is memory that is visible to the device — for example the contents of the image or buffer objects, which **can** be natively used by the device.

11.2.1. Device Memory Properties

Memory properties of a physical device describe the memory heaps and memory types available.

To query memory properties, call:

WARNING	This functionality is superseded by vkGetPhysicalDeviceMemoryProperties2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceMemoryProperties(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceMemoryProperties*           pMemoryProperties);
```

- `physicalDevice` is the handle to the device to query.
- `pMemoryProperties` is a pointer to a VkPhysicalDeviceMemoryProperties structure in which the properties are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceMemoryProperties-pMemoryProperties-parameter
  `pMemoryProperties` **must** be a valid pointer to a VkPhysicalDeviceMemoryProperties structure

The `VkPhysicalDeviceMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceMemoryProperties {
    uint32_t        memoryTypeCount;
    VkMemoryType    memoryTypes[VK_MAX_MEMORY_TYPES];
    uint32_t        memoryHeapCount;
    VkMemoryHeap    memoryHeaps[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryProperties;
```

- `memoryTypeCount` is the number of valid elements in the `memoryTypes` array.
- `memoryTypes` is an array of VK_MAX_MEMORY_TYPES VkMemoryType structures describing the *memory types* that **can** be used to access memory allocated from the heaps specified by `memoryHeaps`.
- `memoryHeapCount` is the number of valid elements in the `memoryHeaps` array.
- `memoryHeaps` is an array of VK_MAX_MEMORY_HEAPS VkMemoryHeap structures describing the *memory heaps* from which memory **can** be allocated.

The `VkPhysicalDeviceMemoryProperties` structure describes a number of *memory heaps* as well as a number of *memory types* that **can** be used to access memory allocated in those heaps. Each heap describes a memory resource of a particular size, and each memory type describes a set of memory properties (e.g. host cached vs. uncached) that **can** be used with a given memory heap. Allocations using a particular memory type will consume resources from the heap indicated by that memory type's heap index. More than one memory type **may** share each heap, and the heaps and memory types provide a mechanism to advertise an accurate size of the physical memory resources while allowing the memory to be used with a variety of different properties.

The number of memory heaps is given by `memoryHeapCount` and is less than or equal to VK_MAX_MEMORY_HEAPS. Each heap is described by an element of the `memoryHeaps` array as a VkMemoryHeap structure. The number of memory types available across all memory heaps is given by `memoryTypeCount` and is less than or equal to VK_MAX_MEMORY_TYPES. Each memory type is described by an element of the `memoryTypes` array as a VkMemoryType structure.

At least one heap **must** include VK_MEMORY_HEAP_DEVICE_LOCAL_BIT in VkMemoryHeap::`flags`. If there are multiple heaps that all have similar performance characteristics, they **may** all include VK_MEMORY_HEAP_DEVICE_LOCAL_BIT. In a unified memory architecture (UMA) system there is often only a single memory heap which is considered to be equally "local" to the host and to the

device, and such an implementation **must** advertise the heap as device-local.

Each memory type returned by vkGetPhysicalDeviceMemoryProperties **must** have its `propertyFlags` set to one of the following values:

- 0
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT
- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT
- VK_MEMORY_PROPERTY_PROTECTED_BIT
- VK_MEMORY_PROPERTY_PROTECTED_BIT | VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT

There **must** be at least one memory type with both the VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT and VK_MEMORY_PROPERTY_HOST_COHERENT_BIT bits set in its `propertyFlags`. There **must** be at least one memory type with the VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT bit set in its `propertyFlags`.

For each pair of elements **X** and **Y** returned in `memoryTypes`, **X** **must** be placed at a lower index position than **Y** if:

- the set of bit flags returned in the `propertyFlags` member of **X** is a strict subset of the set of bit flags returned in the `propertyFlags` member of **Y**; or
- the `propertyFlags` members of **X** and **Y** are equal, and **X** belongs to a memory heap with greater performance (as determined in an implementation-specific manner)

NOTE

There is no ordering requirement between **X** and **Y** elements for the case their `propertyFlags` members are not in a subset relation. That potentially allows more than one possible way to order the same set of memory types. Notice that the list of

> all allowed memory property flag combinations is written in a valid order. But if instead VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT was before VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT, the list would still be in a valid order.

This ordering requirement enables applications to use a simple search loop to select the desired memory type along the lines of:

```
// Find a memory in `memoryTypeBitsRequirement` that includes all of
`requiredProperties`
int32_t findProperties(const VkPhysicalDeviceMemoryProperties* pMemoryProperties,
                       uint32_t memoryTypeBitsRequirement,
                       VkMemoryPropertyFlags requiredProperties) {
    const uint32_t memoryCount = pMemoryProperties->memoryTypeCount;
    for (uint32_t memoryIndex = 0; memoryIndex < memoryCount; ++memoryIndex) {
        const uint32_t memoryTypeBits = (1 << memoryIndex);
        const bool isRequiredMemoryType = memoryTypeBitsRequirement & memoryTypeBits;

        const VkMemoryPropertyFlags properties =
            pMemoryProperties->memoryTypes[memoryIndex].propertyFlags;
        const bool hasRequiredProperties =
            (properties & requiredProperties) == requiredProperties;

        if (isRequiredMemoryType && hasRequiredProperties)
            return static_cast<int32_t>(memoryIndex);
    }

    // failed to find memory type
    return -1;
}

// Try to find an optimal memory type, or if it does not exist try fallback memory
type
// `device` is the VkDevice
// `image` is the VkImage that requires memory to be bound
// `memoryProperties` properties as returned by vkGetPhysicalDeviceMemoryProperties
// `requiredProperties` are the property flags that must be present
// `optimalProperties` are the property flags that are preferred by the application
VkMemoryRequirements memoryRequirements;
vkGetImageMemoryRequirements(device, image, &memoryRequirements);
int32_t memoryType =
    findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
optimalProperties);
if (memoryType == -1) // not found; try fallback properties
    memoryType =
        findProperties(&memoryProperties, memoryRequirements.memoryTypeBits,
requiredProperties);
```

VK_MAX_MEMORY_TYPES is the length of an array of VkMemoryType structures describing memory types, as returned in VkPhysicalDeviceMemoryProperties::memoryTypes.

```
#define VK_MAX_MEMORY_TYPES             32U
```

VK_MAX_MEMORY_HEAPS is the length of an array of VkMemoryHeap structures describing memory heaps, as returned in VkPhysicalDeviceMemoryProperties::memoryHeaps.

```
#define VK_MAX_MEMORY_HEAPS             16U
```

To query memory properties, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceMemoryProperties2(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceMemoryProperties2*          pMemoryProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceMemoryProperties2
void vkGetPhysicalDeviceMemoryProperties2KHR(
    VkPhysicalDevice                            physicalDevice,
    VkPhysicalDeviceMemoryProperties2*          pMemoryProperties);
```

- physicalDevice is the handle to the device to query.
- pMemoryProperties is a pointer to a VkPhysicalDeviceMemoryProperties2 structure in which the properties are returned.

vkGetPhysicalDeviceMemoryProperties2 behaves similarly to vkGetPhysicalDeviceMemoryProperties, with the ability to return extended information in a pNext chain of output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties2-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceMemoryProperties2-pMemoryProperties-parameter
  pMemoryProperties **must** be a valid pointer to a VkPhysicalDeviceMemoryProperties2 structure

The VkPhysicalDeviceMemoryProperties2 structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMemoryProperties2 {
    VkStructureType                     sType;
    void*                               pNext;
    VkPhysicalDeviceMemoryProperties    memoryProperties;
} VkPhysicalDeviceMemoryProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceMemoryProperties2
typedef VkPhysicalDeviceMemoryProperties2 VkPhysicalDeviceMemoryProperties2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryProperties` is a VkPhysicalDeviceMemoryProperties structure which is populated with the same values as in vkGetPhysicalDeviceMemoryProperties.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryProperties2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2
- VUID-VkPhysicalDeviceMemoryProperties2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPhysicalDeviceMemoryBudgetPropertiesEXT
- VUID-VkPhysicalDeviceMemoryProperties2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

The `VkMemoryHeap` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryHeap {
    VkDeviceSize         size;
    VkMemoryHeapFlags    flags;
} VkMemoryHeap;
```

- `size` is the total memory size in bytes in the heap.
- `flags` is a bitmask of VkMemoryHeapFlagBits specifying attribute flags for the heap.

Bits which **may** be set in VkMemoryHeap::`flags`, indicating attribute flags for the heap, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryHeapFlagBits {
    VK_MEMORY_HEAP_DEVICE_LOCAL_BIT = 0x00000001,
  // Provided by VK_VERSION_1_1
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT = 0x00000002,
  // Provided by VK_KHR_device_group_creation
    VK_MEMORY_HEAP_MULTI_INSTANCE_BIT_KHR = VK_MEMORY_HEAP_MULTI_INSTANCE_BIT,
} VkMemoryHeapFlagBits;
```

- VK_MEMORY_HEAP_DEVICE_LOCAL_BIT specifies that the heap corresponds to device-local memory. Device-local memory **may** have different performance characteristics than host-local memory, and **may** support different memory property flags.
- VK_MEMORY_HEAP_MULTI_INSTANCE_BIT specifies that in a logical device representing more than one physical device, there is a per-physical device instance of the heap memory. By default, an allocation from such a heap will be replicated to each physical device's instance of the heap.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryHeapFlags;
```

`VkMemoryHeapFlags` is a bitmask type for setting a mask of zero or more VkMemoryHeapFlagBits.

The `VkMemoryType` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryType {
    VkMemoryPropertyFlags    propertyFlags;
    uint32_t                 heapIndex;
} VkMemoryType;
```

- `heapIndex` describes which memory heap this memory type corresponds to, and **must** be less than `memoryHeapCount` from the VkPhysicalDeviceMemoryProperties structure.
- `propertyFlags` is a bitmask of VkMemoryPropertyFlagBits of properties for this memory type.

Bits which **may** be set in VkMemoryType::`propertyFlags`, indicating properties of a memory type, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryPropertyFlagBits {
    VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT = 0x00000001,
    VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT = 0x00000002,
    VK_MEMORY_PROPERTY_HOST_COHERENT_BIT = 0x00000004,
    VK_MEMORY_PROPERTY_HOST_CACHED_BIT = 0x00000008,
    VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT = 0x00000010,
  // Provided by VK_VERSION_1_1
    VK_MEMORY_PROPERTY_PROTECTED_BIT = 0x00000020,
} VkMemoryPropertyFlagBits;
```

- VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT bit specifies that memory allocated with this type is the most efficient for device access. This property will be set if and only if the memory type belongs to a heap with the VK_MEMORY_HEAP_DEVICE_LOCAL_BIT set.
- VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT bit specifies that memory allocated with this type **can** be mapped for host access using vkMapMemory.
- VK_MEMORY_PROPERTY_HOST_COHERENT_BIT bit specifies that the host cache management commands vkFlushMappedMemoryRanges and vkInvalidateMappedMemoryRanges are not needed to manage availability and visibility on the host.
- VK_MEMORY_PROPERTY_HOST_CACHED_BIT bit specifies that memory allocated with this type is cached on the host. Host memory read accesses to uncached memory are slower than to cached memory, however uncached memory is always host coherent.
- VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit specifies that the memory type only allows device access to the memory. Memory types **must** not have both VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT and VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT set. Additionally, the object's backing memory **may** be provided by the implementation lazily as specified in Lazily Allocated Memory.
- VK_MEMORY_PROPERTY_PROTECTED_BIT bit specifies that the memory type only allows device access to the memory, and allows protected queue operations to access the memory. Memory types **must** not have VK_MEMORY_PROPERTY_PROTECTED_BIT set and any of VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT set, or VK_MEMORY_PROPERTY_HOST_COHERENT_BIT set, or VK_MEMORY_PROPERTY_HOST_CACHED_BIT set.

NOTE

Between the memory types which support VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT on any particular implementation, there may be different properties which cater to different memory access patterns.

VK_MEMORY_PROPERTY_HOST_CACHED_BIT is expected to be used when the host performs any read or read-modify-write operations on the memory. The typical scenario for this is when data flows from device to host. A typical implementation of this is normal `malloc`-like memory.

VK_MEMORY_PROPERTY_HOST_COHERENT_BIT without VK_MEMORY_PROPERTY_HOST_CACHED_BIT is expected for upload operations where data flows from host to device, for purposes of initializing resources or

similar. A typical implementation of this memory type is write-combined memory which avoids polluting caches on the host, but has severe performance penalties if it is read from. The host is also expected to write complete cache lines for maximum performance.

Some implementations may not support uncached memory types. The expectation is that applications will end up using a memory type that support VK_MEMORY_PROPERTY_HOST_COHERENT_BIT and VK_MEMORY_PROPERTY_HOST_CACHED_BIT together. Either way, applications are expected to look for the first memory type which supports VK_MEMORY_PROPERTY_HOST_COHERENT_BIT and use that. On VK_PHYSICAL_DEVICE_TYPE_INTEGRATED_GPU with a unified memory architecture, VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT is less of a concern since all memory is effectively device-local, but on VK_PHYSICAL_DEVICE_TYPE_DISCRETE_GPU, there may be a distinction between a VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT memory type which is additionally VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT or not.

On discrete GPUs, using VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT, VK_MEMORY_PROPERTY_HOST_COHERENT_BIT, and VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT together is intended for small uploads to device memory which is optimized for fast device access without the need to go through a separate copy operation. Also known as BAR on PCI-e platforms. Peak write performance may be lower than system memory, and is not recommended for large uploads to the device. Common use cases for this type may be updating descriptors in a descriptor heap with vkWriteResourceDescriptorsEXT and vkWriteSamplerDescriptorsEXT, updating descriptors in a descriptor buffer with vkGetDescriptorEXT, or writing uniform buffer data.

Some implementations may support host visible types which are VK_MEMORY_PROPERTY_HOST_CACHED_BIT, where some types support VK_MEMORY_PROPERTY_HOST_COHERENT_BIT alongside CACHED, and some types which do not support VK_MEMORY_PROPERTY_HOST_COHERENT_BIT in combination with CACHED. Unless coherency is required by the application's usage patterns, the VK_MEMORY_PROPERTY_HOST_COHERENT_BIT supporting type is likely to be less optimal. If an application only looks for the CACHED property, it must come before the CACHED | COHERENT memory type in the memory types list, so this suggestion will be followed by default.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryPropertyFlags;
```

VkMemoryPropertyFlags is a bitmask type for setting a mask of zero or more VkMemoryPropertyFlagBits.

If the VkPhysicalDeviceMemoryBudgetPropertiesEXT structure is included in the pNext chain of VkPhysicalDeviceMemoryProperties2, it is filled with the current memory budgets and usages.

The VkPhysicalDeviceMemoryBudgetPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_memory_budget
typedef struct VkPhysicalDeviceMemoryBudgetPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       heapBudget[VK_MAX_MEMORY_HEAPS];
    VkDeviceSize       heapUsage[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryBudgetPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- heapBudget is an array of VK_MAX_MEMORY_HEAPS VkDeviceSize values in which memory budgets are returned, with one element for each memory heap. A heap's budget is a rough estimate of how much memory the process **can** allocate from that heap before allocations **may** fail or cause performance degradation. The budget includes any currently allocated device memory.
- heapUsage is an array of VK_MAX_MEMORY_HEAPS VkDeviceSize values in which memory usages are returned, with one element for each memory heap. A heap's usage is an estimate of how much memory the process is currently using in that heap.

The values returned in this structure are not invariant. The heapBudget and heapUsage values **must** be zero for array elements greater than or equal to VkPhysicalDeviceMemoryProperties::memoryHeapCount. The heapBudget value **must** be non-zero for array elements less than VkPhysicalDeviceMemoryProperties::memoryHeapCount. The heapBudget value **must** be less than or equal to VkMemoryHeap::size for each heap.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryBudgetPropertiesEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_BUDGET_PROPERTIES_EXT

Structure Chaining

Extends the structure

- VkPhysicalDeviceMemoryProperties2

11.2.2. Device Memory Objects

A Vulkan device operates on data in device memory via memory objects that are represented in the API by a VkDeviceMemory handle:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeviceMemory)
```

11.2.3. Device Memory Allocation

To allocate memory objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateMemory(
    VkDevice                                    device,
    const VkMemoryAllocateInfo*                 pAllocateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDeviceMemory*                             pMemory);
```

- `device` is the logical device that owns the memory.
- `pAllocateInfo` is a pointer to a VkMemoryAllocateInfo structure describing parameters of the allocation. A successfully returned allocation **must** use the requested parameters — no substitution is permitted by the implementation.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pMemory` is a pointer to a VkDeviceMemory handle in which information about the allocated memory is returned.

Allocations returned by `vkAllocateMemory` are guaranteed to meet any alignment requirement of the implementation. For example, if an implementation requires 128 byte alignment for images and 64 byte alignment for buffers, the device memory returned through this mechanism would be 128-byte aligned. This ensures that applications **can** correctly suballocate objects of different types (with potentially different alignment requirements) in the same memory object.

When memory is allocated, its contents are undefined with the following constraint:

- The contents of unprotected memory **must** not be a function of the contents of data protected memory objects, even if those memory objects were previously freed.

NOTE The contents of memory allocated by one application **should** not be a function of data from protected memory objects of another application, even if those memory objects were previously freed.

The maximum number of valid memory allocations that **can** exist simultaneously within a VkDevice **may** be restricted by implementation- or platform-dependent limits. The `maxMemoryAllocationCount` feature describes the number of allocations that **can** exist simultaneously before encountering these internal limits.

NOTE For historical reasons, if `maxMemoryAllocationCount` is exceeded, some implementations may return VK_ERROR_TOO_MANY_OBJECTS. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of

the returned error code in order to identify when the limit is reached.

NOTE

Many protected memory implementations involve complex hardware and system software support, and often have additional and much lower limits on the number of simultaneous protected memory allocations (from memory types with the VK_MEMORY_PROPERTY_PROTECTED_BIT property) than for non-protected memory allocations. These limits can be system-wide, and depend on a variety of factors outside of the Vulkan implementation, so they cannot be queried in Vulkan. Applications **should** use as few allocations as possible from such memory types by suballocating aggressively, and be prepared for allocation failure even when there is apparently plenty of capacity remaining in the memory heap. As a guideline, the Vulkan conformance test suite requires that at least 80 minimum-size allocations can exist concurrently when no other uses of protected memory are active in the system.

Some platforms **may** have a limit on the maximum size of a single allocation. For example, certain systems **may** fail to create allocations with a size greater than or equal to 4GB. Such a limit is implementation-dependent, and if such a failure occurs then the error VK_ERROR_OUT_OF_DEVICE_MEMORY **must** be returned. This limit is advertised in VkPhysicalDeviceMaintenance3Properties::`maxMemoryAllocationSize`.

If the VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::`pageableDeviceLocalMemory` feature is enabled, memory allocations made from a heap that includes VK_MEMORY_HEAP_DEVICE_LOCAL_BIT in VkMemoryHeap::`flags` **may** be transparently moved to host-local memory allowing multiple applications to share device-local memory. If there is no space left in device-local memory when this new allocation is made, other allocations **may** be moved out transparently to make room. The operating system will determine which allocations to move to device-local memory or host-local memory based on platform-specific criteria. To help the operating system make good choices, the application **should** set the appropriate memory priority with VkMemoryPriorityAllocateInfoEXT and adjust it as necessary with vkSetDeviceMemoryPriorityEXT. Higher priority allocations will moved to device-local memory first.

Memory allocations made on heaps without the VK_MEMORY_HEAP_DEVICE_LOCAL_BIT property will not be transparently promoted to device-local memory by the operating system.

Valid Usage

- VUID-vkAllocateMemory-pAllocateInfo-01713
  `pAllocateInfo->allocationSize` **must** be less than or equal to VkPhysicalDeviceMemoryProperties::`memoryHeaps`[memindex].`size` where `memindex` = VkPhysicalDeviceMemoryProperties::`memoryTypes`[`pAllocateInfo->memoryTypeIndex`].`heapIndex` as returned by vkGetPhysicalDeviceMemoryProperties for the VkPhysicalDevice that `device` was created from
- VUID-vkAllocateMemory-pAllocateInfo-01714
  `pAllocateInfo->memoryTypeIndex` **must** be less than VkPhysicalDeviceMemoryProperties::`memoryTypeCount` as returned by vkGetPhysicalDeviceMemoryProperties for the

VkPhysicalDevice that device was created from

- VUID-vkAllocateMemory-maxMemoryAllocationCount-04101
  There **must** be less than VkPhysicalDeviceLimits::maxMemoryAllocationCount device memory allocations currently allocated on the device

Valid Usage (Implicit)

- VUID-vkAllocateMemory-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkAllocateMemory-pAllocateInfo-parameter
  pAllocateInfo **must** be a valid pointer to a valid VkMemoryAllocateInfo structure
- VUID-vkAllocateMemory-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkAllocateMemory-pMemory-parameter
  pMemory **must** be a valid pointer to a VkDeviceMemory handle
- VUID-vkAllocateMemory-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_EXTERNAL_HANDLE
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMemoryAllocateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize       allocationSize;
    uint32_t           memoryTypeIndex;
} VkMemoryAllocateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allocationSize` is the size of the allocation in bytes.
- `memoryTypeIndex` is an index identifying a memory type from the `memoryTypes` array of the VkPhysicalDeviceMemoryProperties structure.

The internal data of an allocated device memory object **must** include a reference to implementation-specific resources, referred to as the memory object's *payload*. Applications **can** also import and export that internal data to and from device memory objects to share data between Vulkan instances and other compatible APIs. A `VkMemoryAllocateInfo` structure defines a memory import operation if its `pNext` chain includes one of the following structures:

- VkImportMemoryWin32HandleInfoKHR with a non-zero `handleType` value
- VkImportMemoryFdInfoKHR with a non-zero `handleType` value
- VkImportMemoryHostPointerInfoEXT with a non-zero `handleType` value
- VkImportMemoryMetalHandleInfoEXT with a non-zero `handleType` value

If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT, or VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, `allocationSize` is ignored. The implementation **must** query the size of these allocations from the OS.

If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT, `allocationSize` is ignored. The implementation **must** query the size of these allocations from the OS.

Whether device memory objects constructed via a memory import operation hold a reference to their payload depends on the properties of the handle type used to perform the import, as defined below for each valid handle type. Importing memory **must** not modify the content of the memory. Implementations **must** ensure that importing memory does not enable the importing Vulkan instance to access any memory or resources in other Vulkan instances other than that corresponding to the memory object imported. Implementations **must** also ensure accessing imported memory which has not been initialized does not allow the importing Vulkan instance to obtain data from the exporting Vulkan instance or vice-versa.

NOTE How exported and imported memory is isolated is left to the implementation, but applications should be aware that such isolation **may** prevent implementations from placing multiple exportable memory objects in the same physical or virtual page. Hence, applications **should** avoid creating many small external memory objects whenever possible.

Importing memory **must** not increase overall heap usage within a system. However, it **must** affect the following per-process values:

- VkPhysicalDeviceLimits::`maxMemoryAllocationCount`

- VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage

When performing a memory import operation, it is the responsibility of the application to ensure the external handles and their associated payloads meet all valid usage requirements. However, implementations **must** perform sufficient validation of external handles and payloads to ensure that the operation results in a valid memory object which will not cause program termination, device loss, queue stalls, or corruption of other resources when used as allowed according to its allocation parameters. If the external handle provided does not meet these requirements, the implementation **must** fail the memory import operation with the error code VK_ERROR_INVALID_EXTERNAL_HANDLE.

Valid Usage

- VUID-VkMemoryAllocateInfo-allocationSize-07897
  If the parameters do not define an import or export operation, `allocationSize` **must** be greater than `0`
- VUID-VkMemoryAllocateInfo-None-06657
  The parameters **must** not define more than one import operation
- VUID-VkMemoryAllocateInfo-allocationSize-07899
  If the parameters define an export operation , `allocationSize` **must** be greater than `0`
- VUID-VkMemoryAllocateInfo-pNext-00639
  If the `pNext` chain includes a `VkExportMemoryAllocateInfo` structure, and any of the handle types specified in `VkExportMemoryAllocateInfo`::`handleTypes` require a dedicated allocation, as reported by vkGetPhysicalDeviceImageFormatProperties2 in `VkExternalImageFormatProperties`::`externalMemoryProperties.externalMemoryFeatures`, or by vkGetPhysicalDeviceExternalBufferProperties in `VkExternalBufferProperties`::`externalMemoryProperties.externalMemoryFeatures`, the `pNext` chain **must** include a `VkMemoryDedicatedAllocateInfo` or `VkDedicatedAllocationMemoryAllocateInfoNV` structure with either its `image` or `buffer` member set to a value other than VK_NULL_HANDLE
- VUID-VkMemoryAllocateInfo-allocationSize-01742
  If the parameters define an import operation, the external handle specified was created by the Vulkan API, and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-None-00643
  If the parameters define an import operation and the external handle specified was created by the Vulkan API, the device mask specified by VkMemoryAllocateFlagsInfo **must** match the mask specified when the payload being imported was allocated
- VUID-VkMemoryAllocateInfo-None-00644
  If the parameters define an import operation and the external handle specified was created by the Vulkan API, the list of physical devices that comprise the logical device passed to vkAllocateMemory **must** match the list of physical devices that comprise the logical device on which the payload was originally allocated
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00645

If the parameters define an import operation and the external handle is an NT handle or a global share handle created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by vkGetMemoryWin32HandlePropertiesKHR

- VUID-VkMemoryAllocateInfo-allocationSize-01743
  If the parameters define an import operation, the external handle was created by the Vulkan API, and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created
- VUID-VkMemoryAllocateInfo-allocationSize-00647
  If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT, `allocationSize` **must** match the size specified when creating the Direct3D 12 heap from which the payload was extracted
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-00648
  If the parameters define an import operation and the external handle is a POSIX file descriptor created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by vkGetMemoryFdPropertiesKHR
- VUID-VkMemoryAllocateInfo-None-12523
  If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT, the number of instances allocated **must** be 1
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01872
  If the `protectedMemory` feature is not enabled, the `VkMemoryAllocateInfo`::`memoryTypeIndex` **must** not indicate a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkMemoryAllocateInfo-memoryTypeIndex-01744
  If the parameters define an import operation and the external handle is a host pointer, the value of `memoryTypeIndex` **must** be one of those returned by vkGetMemoryHostPointerPropertiesEXT
- VUID-VkMemoryAllocateInfo-allocationSize-01745
  If the parameters define an import operation and the external handle is a host pointer, `allocationSize` **must** be an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT`::`minImportedHostPointerAlignment`
- VUID-VkMemoryAllocateInfo-pNext-02806
  If the parameters define an import operation and the external handle is a host pointer, the `pNext` chain **must** not include a VkMemoryDedicatedAllocateInfo structure with either its `image` or `buffer` field set to a value other than VK_NULL_HANDLE
- VUID-VkMemoryAllocateInfo-pNext-10395
  If the parameters define an import operation and the external handle is a VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT, then `pNext` **must** include a VkMemoryDedicatedAllocateInfo with `image` that is not VK_NULL_HANDLE
- VUID-VkMemoryAllocateInfo-pNext-10396
  If the parameters define an import operation, the external handle is a Metal MTLTexture,

and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, the width, height, array layer dimensions, and mipmap levels of image and the Metal MTLTexture's **must** be identical

- VUID-VkMemoryAllocateInfo-pNext-10397
  If the parameters define an import operation, the external handle is a Metal MTLTexture, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image that is not VK_NULL_HANDLE, allocationSize **must** be 0
- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03329
  If VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress is not zero, VkMemoryAllocateFlagsInfo::flags **must** include VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT
- VUID-VkMemoryAllocateInfo-flags-03330
  If VkMemoryAllocateFlagsInfo::flags includes VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, the bufferDeviceAddressCaptureReplay feature **must** be enabled
- VUID-VkMemoryAllocateInfo-flags-03331
  If VkMemoryAllocateFlagsInfo::flags includes VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT, the bufferDeviceAddress feature **must** be enabled
- VUID-VkMemoryAllocateInfo-pNext-03332
  If the pNext chain includes a VkImportMemoryHostPointerInfoEXT structure, VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress **must** be zero
- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03333
  If the parameters define an import operation, VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress **must** be zero
- VUID-VkMemoryAllocateInfo-pNext-06780
  If the pNext chain includes a VkExportMetalObjectCreateInfoEXT structure, its exportObjectType member **must** be VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT

Valid Usage (Implicit)

- VUID-VkMemoryAllocateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO
- VUID-VkMemoryAllocateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkExportMemoryAllocateInfo, VkExportMemoryWin32HandleInfoKHR, VkExportMetalObjectCreateInfoEXT, VkImportMemoryFdInfoKHR, VkImportMemoryHostPointerInfoEXT, VkImportMemoryMetalHandleInfoEXT, VkImportMemoryWin32HandleInfoKHR, VkImportMetalBufferInfoEXT, VkMemoryAllocateFlagsInfo, VkMemoryDedicatedAllocateInfo, VkMemoryOpaqueCaptureAddressAllocateInfo, or VkMemoryPriorityAllocateInfoEXT

- VUID-VkMemoryAllocateInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique, with the exception of structures of type VkExportMetalObjectCreateInfoEXT

If the pNext chain includes a VkMemoryDedicatedAllocateInfo structure, then that structure includes a handle of the sole buffer or image resource that the memory **can** be bound to.

The VkMemoryDedicatedAllocateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
    VkBuffer           buffer;
} VkMemoryDedicatedAllocateInfo;
```

```
// Provided by VK_KHR_dedicated_allocation
// Equivalent to VkMemoryDedicatedAllocateInfo
typedef VkMemoryDedicatedAllocateInfo VkMemoryDedicatedAllocateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- image is VK_NULL_HANDLE or a handle of an image which this memory will be bound to.
- buffer is VK_NULL_HANDLE or a handle of a buffer which this memory will be bound to.

Valid Usage

- VUID-VkMemoryDedicatedAllocateInfo-image-01432
  At least one of image and buffer **must** be VK_NULL_HANDLE
- VUID-VkMemoryDedicatedAllocateInfo-image-02964
  If image is not VK_NULL_HANDLE , VkMemoryAllocateInfo::allocationSize **must** be greater than or equal to the VkMemoryRequirements::size of the image
- VUID-VkMemoryDedicatedAllocateInfo-image-01434
  If image is not VK_NULL_HANDLE, image **must** have been created without VK_IMAGE_CREATE_SPARSE_BINDING_BIT set in VkImageCreateInfo::flags
- VUID-VkMemoryDedicatedAllocateInfo-buffer-02965
  If buffer is not VK_NULL_HANDLE , VkMemoryAllocateInfo::allocationSize **must** be greater than or equal to the VkMemoryRequirements::size of the buffer
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01436
  If buffer is not VK_NULL_HANDLE, buffer **must** have been created without VK_BUFFER_CREATE_SPARSE_BINDING_BIT set in VkBufferCreateInfo::flags
- VUID-VkMemoryDedicatedAllocateInfo-image-01876

If `image` is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT, or VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, and the external handle was created by the Vulkan API, then the memory being imported **must** also be a dedicated image allocation and `image` **must** be identical to the image associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-buffer-01877
  If `buffer` is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT, or VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, and the external handle was created by the Vulkan API, then the memory being imported **must** also be a dedicated buffer allocation and `buffer` **must** be identical to the buffer associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-image-01878
  If `image` is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT, the memory being imported **must** also be a dedicated image allocation and `image` **must** be identical to the image associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-buffer-01879
  If `buffer` is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT, the memory being imported **must** also be a dedicated buffer allocation and `buffer` **must** be identical to the buffer associated with the imported memory
- VUID-VkMemoryDedicatedAllocateInfo-image-01797
  If `image` is not VK_NULL_HANDLE, `image` **must** not have been created with VK_IMAGE_CREATE_DISJOINT_BIT set in VkImageCreateInfo::`flags`

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedAllocateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO
- VUID-VkMemoryDedicatedAllocateInfo-image-parameter
  If `image` is not VK_NULL_HANDLE, `image` **must** be a valid VkImage handle
- VUID-VkMemoryDedicatedAllocateInfo-buffer-parameter

If `buffer` is not VK_NULL_HANDLE, `buffer` **must** be a valid VkBuffer handle

- VUID-VkMemoryDedicatedAllocateInfo-commonparent
  Both of `buffer`, and `image` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

If the `pNext` chain includes a `VkMemoryPriorityAllocateInfoEXT` structure, then that structure includes a priority for the memory.

The `VkMemoryPriorityAllocateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkMemoryPriorityAllocateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float              priority;
} VkMemoryPriorityAllocateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `priority` is a floating-point value between `0` and `1`, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

If this structure is not included, it is as if the `priority` value were `0.5`.

Valid Usage

- VUID-VkMemoryPriorityAllocateInfoEXT-priority-02602
  `priority` **must** be between `0` and `1`, inclusive

Valid Usage (Implicit)

- VUID-VkMemoryPriorityAllocateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_PRIORITY_ALLOCATE_INFO_EXT

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To modify the priority of an existing memory allocation, call:

```
// Provided by VK_EXT_pageable_device_local_memory
void vkSetDeviceMemoryPriorityEXT(
    VkDevice                                    device,
    VkDeviceMemory                              memory,
    float                                       priority);
```

- `device` is the logical device that owns the memory.
- `memory` is the VkDeviceMemory object to which the new priority will be applied.
- `priority` is a floating-point value between `0` and `1`, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority **may** be more likely to stay in device-local memory when the system is under memory pressure.

Valid Usage

- VUID-vkSetDeviceMemoryPriorityEXT-priority-06258
  `priority` **must** be between `0` and `1`, inclusive

Valid Usage (Implicit)

- VUID-vkSetDeviceMemoryPriorityEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

When allocating memory whose payload **may** be exported to another process or Vulkan instance, add a VkExportMemoryAllocateInfo structure to the `pNext` chain of the VkMemoryAllocateInfo structure, specifying the handle types that **may** be exported.

The VkExportMemoryAllocateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExportMemoryAllocateInfo {
    VkStructureType                    sType;
    const void*                        pNext;
    VkExternalMemoryHandleTypeFlags    handleTypes;
} VkExportMemoryAllocateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExportMemoryAllocateInfo
typedef VkExportMemoryAllocateInfo VkExportMemoryAllocateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of VkExternalMemoryHandleTypeFlagBits specifying one or more memory handle types the application **can** export from the resulting allocation. The application **can** request multiple handle types for the same allocation.

Valid Usage

- VUID-VkExportMemoryAllocateInfo-handleTypes-09860
  The bits in `handleTypes` **must** be supported and compatible, as reported by VkExternalImageFormatProperties, or VkExternalBufferProperties

Valid Usage (Implicit)

- VUID-VkExportMemoryAllocateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO
- VUID-VkExportMemoryAllocateInfo-handleTypes-parameter
  If `handleTypes` is not `0`, `handleTypes` **must** be a valid combination of VkExternalMemoryHandleTypeFlagBits values

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

11.2.4. Win32 External Memory

To specify additional attributes of NT handles exported from a memory object, add a VkExportMemoryWin32HandleInfoKHR structure to the `pNext` chain of the VkMemoryAllocateInfo structure. The `VkExportMemoryWin32HandleInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoKHR {
    VkStructureType               sType;
    const void*                   pNext;
    const SECURITY_ATTRIBUTES*    pAttributes;
    DWORD                         dwAccess;
    LPCWSTR                       name;
} VkExportMemoryWin32HandleInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pAttributes` is a pointer to a Windows `SECURITY_ATTRIBUTES` structure specifying security attributes of the handle.
- `dwAccess` is a `DWORD` specifying access rights of the handle.
- `name` is a null-terminated UTF-16 string to associate with the payload referenced by NT handles exported from the created memory.

If VkExportMemoryAllocateInfo is not included in the same `pNext` chain, this structure is ignored.

If VkExportMemoryAllocateInfo is included in the `pNext` chain of VkMemoryAllocateInfo with a Windows `handleType`, but either `VkExportMemoryWin32HandleInfoKHR` is not included in the `pNext` chain, or it is included but `pAttributes` is set to `NULL`, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for "Synchronization Object Security and Access Rights"[1]. Further, if the structure is not present, the access rights used depend on the handle type.

For handles of the following types:

- VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT

The implementation **must** ensure the access rights allow read and write access to the memory.

1

https://docs.microsoft.com/en-us/windows/win32/sync/synchronization-object-security-and-access-rights

Valid Usage

- VUID-VkExportMemoryWin32HandleInfoKHR-handleTypes-00657
  If VkExportMemoryAllocateInfo::`handleTypes` does not include VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT, a `VkExportMemoryWin32HandleInfoKHR` structure **must** not be included in the `pNext` chain of VkMemoryAllocateInfo

Valid Usage (Implicit)

- VUID-VkExportMemoryWin32HandleInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR
- VUID-VkExportMemoryWin32HandleInfoKHR-pAttributes-parameter
  If `pAttributes` is not `NULL`, `pAttributes` **must** be a valid pointer to a valid `SECURITY_ATTRIBUTES` value

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To import memory from a Windows handle, add a VkImportMemoryWin32HandleInfoKHR structure to the `pNext` chain of the VkMemoryAllocateInfo structure.

The `VkImportMemoryWin32HandleInfoKHR` structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExternalMemoryHandleTypeFlagBits    handleType;
    HANDLE                                handle;
    LPCWSTR                               name;
} VkImportMemoryWin32HandleInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the type of `handle` or `name`.
- `handle` is `NULL` or the external handle to import.
- `name` is `NULL` or a null-terminated UTF-16 string naming the payload to import.

Importing memory object payloads from Windows handles does not transfer ownership of the handle to the Vulkan implementation. For handle types defined as NT handles, the application **must** release handle ownership using the `CloseHandle` system call when the handle is no longer needed. For handle types defined as NT handles, the imported memory object holds a reference to its payload.

NOTE	Non-NT handle import operations do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Valid Usage

- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-09861
  If `handleType` is not `0`, it **must** be supported for import, as reported by VkExternalImageFormatProperties, or VkExternalBufferProperties
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-00659
  The memory from which `handle` was exported, or the memory named by `name` **must** have been created on the same underlying physical device as `device`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00660
  If `handleType` is not `0`, it **must** be defined as an NT handle or a global share handle
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01439
  If `handleType` is not VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT, or VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT, `name` **must** be `NULL`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01440
  If `handleType` is not `0` and `handle` is `NULL`, `name` **must** name a valid memory resource of the type specified by `handleType`
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00661
  If `handleType` is not `0` and `name` is `NULL`, `handle` **must** be a valid handle of the type specified by `handleType`
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01441
  If `handle` is not `NULL`, `name` **must** be `NULL`
- VUID-VkImportMemoryWin32HandleInfoKHR-handle-01518
  If `handle` is not `NULL`, it **must** obey any requirements listed for `handleType` in external memory handle types compatibility
- VUID-VkImportMemoryWin32HandleInfoKHR-name-01519
  If `name` is not `NULL`, it **must** obey any requirements listed for `handleType` in external memory handle types compatibility

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-parameter
  If `handleType` is not `0`, `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To export a Windows handle representing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandleKHR(
    VkDevice                                    device,
    const VkMemoryGetWin32HandleInfoKHR*        pGetWin32HandleInfo,
    HANDLE*                                     pHandle);
```

- `device` is the logical device that created the device memory being exported.
- `pGetWin32HandleInfo` is a pointer to a VkMemoryGetWin32HandleInfoKHR structure containing parameters of the export operation.
- `pHandle` will return the Windows handle representing the payload of the device memory object.

For handle types defined as NT handles, the handles returned by `vkGetMemoryWin32HandleKHR` are owned by the application and hold a reference to their payload. To avoid leaking resources, the application **must** release ownership of them using the `CloseHandle` system call when they are no longer needed.

NOTE	Non-NT handle types do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryWin32HandleKHR-pGetWin32HandleInfo-parameter
  `pGetWin32HandleInfo` **must** be a valid pointer to a valid VkMemoryGetWin32HandleInfoKHR structure
- VUID-vkGetMemoryWin32HandleKHR-pHandle-parameter
  `pHandle` **must** be a valid pointer to a `HANDLE` value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMemoryGetWin32HandleInfoKHR structure is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryGetWin32HandleInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkDeviceMemory                        memory;
    VkExternalMemoryHandleTypeFlagBits    handleType;
} VkMemoryGetWin32HandleInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memory is the memory object from which the handle will be exported.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the type of handle requested.

The properties of the handle returned depend on the value of handleType. See VkExternalMemoryHandleTypeFlagBits for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00662
  handleType **must** have been included in VkExportMemoryAllocateInfo::handleTypes when memory was created
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00663
  If handleType is defined as an NT handle, vkGetMemoryWin32HandleKHR **must** be called no more than once for each valid unique combination of memory and handleType
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00664
  handleType **must** be defined as an NT handle or a global share handle

Valid Usage (Implicit)

- VUID-VkMemoryGetWin32HandleInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR
- VUID-VkMemoryGetWin32HandleInfoKHR-pNext-pNext

pNext must be NULL

- VUID-VkMemoryGetWin32HandleInfoKHR-memory-parameter
memory must be a valid VkDeviceMemory handle
- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-parameter
handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

Windows memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandlePropertiesKHR(
    VkDevice                                    device,
    VkExternalMemoryHandleTypeFlagBits          handleType,
    HANDLE                                      handle,
    VkMemoryWin32HandlePropertiesKHR*           pMemoryWin32HandleProperties);
```

- device is the logical device that will be importing handle.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the type of the handle handle.
- handle is the handle which will be imported.
- pMemoryWin32HandleProperties is a pointer to a VkMemoryWin32HandlePropertiesKHR structure in which properties of handle are returned.

Valid Usage

- VUID-vkGetMemoryWin32HandlePropertiesKHR-handle-00665
handle must point to a valid Windows memory handle
- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-00666
handleType must not be one of the handle types defined as opaque

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandlePropertiesKHR-device-parameter
device must be a valid VkDevice handle
- VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-parameter
handleType must be a valid VkExternalMemoryHandleTypeFlagBits value
- VUID-vkGetMemoryWin32HandlePropertiesKHR-pMemoryWin32HandleProperties-parameter
pMemoryWin32HandleProperties must be a valid pointer to a VkMemoryWin32HandlePropertiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_EXTERNAL_HANDLE
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMemoryWin32HandlePropertiesKHR structure returned is defined as:

```
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryWin32HandlePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryWin32HandlePropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memoryTypeBits is a bitmask containing one bit set for every memory type which the specified windows handle **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryWin32HandlePropertiesKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR
- VUID-VkMemoryWin32HandlePropertiesKHR-pNext-pNext
  pNext **must** be NULL

11.2.5. File Descriptor External Memory

To import memory from a POSIX file descriptor handle, add a VkImportMemoryFdInfoKHR structure to the pNext chain of the VkMemoryAllocateInfo structure. The VkImportMemoryFdInfoKHR structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkImportMemoryFdInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExternalMemoryHandleTypeFlagBits    handleType;
    int                                   fd;
} VkImportMemoryFdInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the handle type of `fd`.
- `fd` is the external handle to import.

Importing memory from a file descriptor transfers ownership of the file descriptor from the application to the Vulkan implementation. The application **must** not perform any operations on the file descriptor after a successful import. The imported memory object holds a reference to its payload.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

Valid Usage

- VUID-VkImportMemoryFdInfoKHR-handleType-09862
  If `handleType` is not `0`, it **must** be supported for import, as reported by VkExternalImageFormatProperties or VkExternalBufferProperties
- VUID-VkImportMemoryFdInfoKHR-fd-00668
  The memory from which `fd` was exported **must** have been created on the same underlying physical device as `device`
- VUID-VkImportMemoryFdInfoKHR-handleType-00669
  If `handleType` is not `0`, it **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT
- VUID-VkImportMemoryFdInfoKHR-handleType-00670
  If `handleType` is not `0`, `fd` **must** be a valid handle of the type specified by `handleType`
- VUID-VkImportMemoryFdInfoKHR-fd-01746
  The memory represented by `fd` **must** have been created from a physical device and driver that is compatible with `device` and `handleType`, as described in external memory handle types compatibility
- VUID-VkImportMemoryFdInfoKHR-fd-01520
  `fd` **must** obey any requirements listed for `handleType` in external memory handle types compatibility

Valid Usage (Implicit)

- VUID-VkImportMemoryFdInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR
- VUID-VkImportMemoryFdInfoKHR-handleType-parameter
  If `handleType` is not `0`, `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To export a POSIX file descriptor referencing the payload of a Vulkan device memory object, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdKHR(
    VkDevice                                    device,
    const VkMemoryGetFdInfoKHR*                 pGetFdInfo,
    int*                                        pFd);
```

- `device` is the logical device that created the device memory being exported.
- `pGetFdInfo` is a pointer to a VkMemoryGetFdInfoKHR structure containing parameters of the export operation.
- `pFd` will return a file descriptor referencing the payload of the device memory object.

Each call to `vkGetMemoryFdKHR` **must** create a new file descriptor holding a reference to the memory object's payload and transfer ownership of the file descriptor to the application. To avoid leaking resources, the application **must** release ownership of the file descriptor using the `close` system call when it is no longer needed, or by importing a Vulkan memory object from it. Where supported by the operating system, the implementation **must** set the file descriptor to be closed automatically when an `execve` system call is made.

Valid Usage (Implicit)

- VUID-vkGetMemoryFdKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryFdKHR-pGetFdInfo-parameter
  `pGetFdInfo` **must** be a valid pointer to a valid VkMemoryGetFdInfoKHR structure
- VUID-vkGetMemoryFdKHR-pFd-parameter
  `pFd` **must** be a valid pointer to an `int` value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMemoryGetFdInfoKHR structure is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryGetFdInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkDeviceMemory                        memory;
    VkExternalMemoryHandleTypeFlagBits    handleType;
} VkMemoryGetFdInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memory is the memory object from which the handle will be exported.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the type of handle requested.

The properties of the file descriptor exported depend on the value of handleType. See VkExternalMemoryHandleTypeFlagBits for a description of the properties of the defined external memory handle types.

NOTE The size of the exported file **may** be larger than the size requested by VkMemoryAllocateInfo::allocationSize. If handleType is VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT, then the application **can** query the file's actual size with lseek.

Valid Usage

- VUID-VkMemoryGetFdInfoKHR-handleType-00671
  handleType **must** have been included in VkExportMemoryAllocateInfo::handleTypes when memory was created
- VUID-VkMemoryGetFdInfoKHR-handleType-00672
  handleType **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT or

VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT

- VUID-VkMemoryGetFdInfoKHR-handleType-12524
  If `handleType` is VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT, `memory` **must** not have been allocated with multiple instances

Valid Usage (Implicit)

- VUID-VkMemoryGetFdInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_GET_FD_INFO_KHR
- VUID-VkMemoryGetFdInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMemoryGetFdInfoKHR-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-VkMemoryGetFdInfoKHR-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value

POSIX file descriptor memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdPropertiesKHR(
    VkDevice                                    device,
    VkExternalMemoryHandleTypeFlagBits          handleType,
    int                                         fd,
    VkMemoryFdPropertiesKHR*                    pMemoryFdProperties);
```

- `device` is the logical device that will be importing `fd`.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the type of the handle `fd`.
- `fd` is the handle which will be imported.
- `pMemoryFdProperties` is a pointer to a VkMemoryFdPropertiesKHR structure in which the properties of the handle `fd` are returned.

Valid Usage

- VUID-vkGetMemoryFdPropertiesKHR-fd-00673
  `fd` **must** point to a valid POSIX file descriptor memory handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-00674
  `handleType` **must** not be VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT

Valid Usage (Implicit)

- VUID-vkGetMemoryFdPropertiesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryFdPropertiesKHR-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value
- VUID-vkGetMemoryFdPropertiesKHR-pMemoryFdProperties-parameter
  `pMemoryFdProperties` **must** be a valid pointer to a VkMemoryFdPropertiesKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_EXTERNAL_HANDLE
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMemoryFdPropertiesKHR` structure returned is defined as:

```
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryFdPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryFdPropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified file descriptor **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryFdPropertiesKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR
- VUID-VkMemoryFdPropertiesKHR-pNext-pNext
  `pNext` **must** be `NULL`

11.2.6. Host External Memory

To import memory from a host pointer, add a VkImportMemoryHostPointerInfoEXT structure to the pNext chain of the VkMemoryAllocateInfo structure. The VkImportMemoryHostPointerInfoEXT structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkImportMemoryHostPointerInfoEXT {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExternalMemoryHandleTypeFlagBits    handleType;
    void*                                 pHostPointer;
} VkImportMemoryHostPointerInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the handle type.
- pHostPointer is the host pointer to import from.

Importing memory from a host pointer shares ownership of the memory between the host and the Vulkan implementation. The application **can** continue to access the memory through the host pointer but it is the application's responsibility to synchronize device and non-device access to the payload as defined in Host Access to Device Memory Objects.

Applications **can** import the same payload into multiple instances of Vulkan and multiple times into a given Vulkan instance. However, implementations **may** fail to import the same payload multiple times into a given physical device due to platform constraints.

Importing memory from a particular host pointer **may** not be possible due to additional platform-specific restrictions beyond the scope of this specification in which case the implementation **must** fail the memory import operation with the error code VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR.

Whether device memory objects imported from a host pointer hold a reference to their payload is undefined. As such, the application **must** ensure that the imported memory range remains valid and accessible for the lifetime of the imported memory object.

Implementations **may** support importing host pointers for memory types which are not host-visible. In this case, after a successful call to vkAllocateMemory, the memory range imported from pHostPointer **must** not be accessed by the application until the VkDeviceMemory has been destroyed. Memory contents for the host memory becomes undefined on import, and is left undefined after the VkDeviceMemory has been destroyed. Applications **must** also not access host memory which is mapped to the same physical memory as pHostPointer, but mapped to a different host pointer while the VkDeviceMemory handle is valid. Implementations running on general-purpose operating systems **should** not support importing host pointers for memory types which are not host-visible.

NOTE

Using host pointers to back non-host visible allocations is a platform-specific use case, and applications should not attempt to do this unless instructed by the platform.

Valid Usage

- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01747
  If `handleType` is not `0`, it **must** be supported for import, as reported in VkExternalMemoryProperties
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01748
  If `handleType` is not `0`, it **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-01749
  `pHostPointer` **must** be a pointer aligned to an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT`::`minImportedHostPointerAlignment`
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01750
  If `handleType` is VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT, `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-01751
  If `handleType` is VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT, `pHostPointer` **must** be a pointer to `allocationSize` number of bytes of host mapped foreign memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

Valid Usage (Implicit)

- VUID-VkImportMemoryHostPointerInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_MEMORY_HOST_POINTER_INFO_EXT
- VUID-VkImportMemoryHostPointerInfoEXT-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value
- VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-parameter
  `pHostPointer` **must** be a pointer value

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To determine the correct parameters to use when importing host pointers, call:

```
// Provided by VK_EXT_external_memory_host
VkResult vkGetMemoryHostPointerPropertiesEXT(
    VkDevice                                    device,
    VkExternalMemoryHandleTypeFlagBits          handleType,
    const void*                                 pHostPointer,
    VkMemoryHostPointerPropertiesEXT*           pMemoryHostPointerProperties);
```

- `device` is the logical device that will be importing `pHostPointer`.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the type of the handle `pHostPointer`.
- `pHostPointer` is the host pointer to import from.
- `pMemoryHostPointerProperties` is a pointer to a VkMemoryHostPointerPropertiesEXT structure in which the host pointer properties are returned.

Valid Usage

- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01752
  `handleType` **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT
- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-01753
  `pHostPointer` **must** be a pointer aligned to an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT`::`minImportedHostPointerAlignment`
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01754
  If `handleType` is VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT, `pHostPointer` **must** be a pointer to host memory
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01755
  If `handleType` is VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT, `pHostPointer` **must** be a pointer to host mapped foreign memory

Valid Usage (Implicit)

- VUID-vkGetMemoryHostPointerPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-parameter
  `pHostPointer` **must** be a pointer value
- VUID-vkGetMemoryHostPointerPropertiesEXT-pMemoryHostPointerProperties-

parameter `pMemoryHostPointerProperties` **must** be a valid pointer to a VkMemoryHostPointerPropertiesEXT structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_EXTERNAL_HANDLE
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMemoryHostPointerPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkMemoryHostPointerPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryHostPointerPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified host pointer **can** be imported as.

The value returned by `memoryTypeBits` **should** only include bits that identify memory types which are host visible. Implementations **may** include bits that identify memory types which are not host visible. Behavior for imported pointers of such types is defined by VkImportMemoryHostPointerInfoEXT.

Valid Usage (Implicit)

- VUID-VkMemoryHostPointerPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_HOST_POINTER_PROPERTIES_EXT
- VUID-VkMemoryHostPointerPropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

11.2.7. Metal Objects

A Vulkan implementation that is layered on top of Metal on Apple device platform, and implements the VK_EXT_metal_objects extension, supports the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

The underlying Metal objects associated with certain Vulkan objects can be exported from those Vulkan objects using the pNext chain of the VkExportMetalObjectsInfoEXT parameter of the vkExportMetalObjectsEXT command.

An VkDeviceMemory object can be allocated on an existing MTLBuffer object, by including the MTLBuffer object in a VkImportMetalBufferInfoEXT structure in the pNext chain of the VkMemoryAllocateInfo structure in the vkAllocateMemory command.

A new VkImage object can be created on an existing IOSurface object, or one or more existing Metal MTLTexture objects, by including those Metal objects in either VkImportMetalIOSurfaceInfoEXT or VkImportMetalTextureInfoEXT structures in the pNext chain of the VkImageCreateInfo structure in the vkCreateImage command.

To export Metal objects from Vulkan objects, the application **must** first indicate the intention to do so during the creation of the Vulkan object, by including one or more VkExportMetalObjectCreateInfoEXT structures in the pNext chain of the VkInstanceCreateInfo, VkMemoryAllocateInfo, VkImageCreateInfo, VkImageViewCreateInfo, VkBufferViewCreateInfo, VkSemaphoreCreateInfo, or VkEventCreateInfo, in the corresponding Vulkan object creation command.

The VkExportMetalObjectCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectCreateInfoEXT {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExportMetalObjectTypeFlagBitsEXT    exportObjectType;
} VkExportMetalObjectCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- exportObjectType is a VkExportMetalObjectTypeFlagBitsEXT indicating the type of Metal object that the application may request to be exported from the Vulkan object.

Valid Usage (Implicit)

- VUID-VkExportMetalObjectCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECT_CREATE_INFO_EXT
- VUID-VkExportMetalObjectCreateInfoEXT-exportObjectType-parameter
  If exportObjectType is not 0, exportObjectType **must** be a valid VkExportMetalObjectTypeFlagBitsEXT value

Structure Chaining

Extends the structures

- VkBufferViewCreateInfo
- VkEventCreateInfo
- VkImageCreateInfo
- VkImageViewCreateInfo
- VkInstanceCreateInfo
- VkMemoryAllocateInfo
- VkSemaphoreCreateInfo

Bits which indicate the types of Metal objects that may be exported from a corresponding Vulkan object are:

```
// Provided by VK_EXT_metal_objects
typedef enum VkExportMetalObjectTypeFlagBitsEXT {
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT = 0x00000001,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT = 0x00000002,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT = 0x00000004,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT = 0x00000008,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT = 0x00000010,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT = 0x00000020,
} VkExportMetalObjectTypeFlagBitsEXT;
```

- VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT specifies that a Metal MTLDevice may be exported.
- VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT specifies that a Metal MTLCommandQueue may be exported.
- VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT specifies that a Metal MTLBuffer may be exported.
- VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT specifies that a Metal MTLTexture may be exported.
- VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT specifies that a Metal IOSurface may be exported.
- VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT specifies that a Metal MTLSharedEvent may be exported.

```
// Provided by VK_EXT_metal_objects
typedef VkFlags VkExportMetalObjectTypeFlagsEXT;
```

VkExportMetalObjectTypeFlagsEXT is a bitmask type for setting a mask of zero or more

VkExportMetalObjectTypeFlagBitsEXT.

To export Metal objects that underlie Vulkan objects, call:

```
// Provided by VK_EXT_metal_objects
void vkExportMetalObjectsEXT(
    VkDevice                                    device,
    VkExportMetalObjectsInfoEXT*                pMetalObjectsInfo);
```

- `device` is the device that created the Vulkan objects.
- `pMetalObjectsInfo` is a pointer to a VkExportMetalObjectsInfoEXT structure whose `pNext` chain contains structures, each identifying a Vulkan object and providing a pointer through which the Metal object will be returned.

Valid Usage (Implicit)

- VUID-vkExportMetalObjectsEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkExportMetalObjectsEXT-pMetalObjectsInfo-parameter
  `pMetalObjectsInfo` **must** be a valid pointer to a VkExportMetalObjectsInfoEXT structure

The `VkExportMetalObjectsInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectsInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
} VkExportMetalObjectsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

Valid Usage

- VUID-VkExportMetalObjectsInfoEXT-pNext-06791
  If the `pNext` chain includes a VkExportMetalDeviceInfoEXT structure, the VkInstance **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT in the `exportObjectType` member of a VkExportMetalObjectCreateInfoEXT structure in the `pNext` chain of the VkInstanceCreateInfo structure in the vkCreateInstance command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06792
  If the `pNext` chain includes a VkExportMetalCommandQueueInfoEXT structure, the VkInstance **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT in the `exportObjectType` member of a VkExportMetalObjectCreateInfoEXT structure in the `pNext`

chain of the VkInstanceCreateInfo structure in the vkCreateInstance command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06793
  If the pNext chain includes a VkExportMetalBufferInfoEXT structure, the VkDeviceMemory in its memory member **must** have been allocated with VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkMemoryAllocateInfo structure in the vkAllocateMemory command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06794
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, exactly one of its image, imageView, or bufferView members **must** not be VK_NULL_HANDLE
- VUID-VkExportMetalObjectsInfoEXT-pNext-06795
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its image member is not VK_NULL_HANDLE, the VkImage in its image member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in the vkCreateImage command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06796
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its imageView member is not VK_NULL_HANDLE, the VkImageView in its imageView member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageViewCreateInfo structure in the vkCreateImageView command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06797
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its bufferView member is not VK_NULL_HANDLE, the VkBufferView in its bufferView member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkBufferViewCreateInfo structure in the vkCreateBufferView command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06798
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if either its image or imageView member is not VK_NULL_HANDLE, then plane **must** be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT
- VUID-VkExportMetalObjectsInfoEXT-pNext-06799
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImage in its image member does not have a multi-planar format, then its plane member **must** be VK_IMAGE_ASPECT_PLANE_0_BIT
- VUID-VkExportMetalObjectsInfoEXT-pNext-06800
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImage in its image member has a multi-planar format with only two planes, then its plane member **must** not be VK_IMAGE_ASPECT_PLANE_2_BIT
- VUID-VkExportMetalObjectsInfoEXT-pNext-06801
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImageView in its imageView member does not have a multi-planar format, then its plane

member **must** be VK_IMAGE_ASPECT_PLANE_0_BIT

- VUID-VkExportMetalObjectsInfoEXT-pNext-06802
  If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImageView in its imageView member has a multi-planar format with only two planes, then its plane member **must** not be VK_IMAGE_ASPECT_PLANE_2_BIT
- VUID-VkExportMetalObjectsInfoEXT-pNext-06803
  If the pNext chain includes a VkExportMetalIOSurfaceInfoEXT structure, the VkImage in its image member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in the vkCreateImage command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06804
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, exactly one of its semaphore or event members **must** not be VK_NULL_HANDLE
- VUID-VkExportMetalObjectsInfoEXT-pNext-06805
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, and its semaphore member is not VK_NULL_HANDLE, the VkSemaphore in its semaphore member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkSemaphoreCreateInfo structure in the vkCreateSemaphore command
- VUID-VkExportMetalObjectsInfoEXT-pNext-06806
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, and its event member is not VK_NULL_HANDLE, the VkEvent in its event member **must** have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkEventCreateInfo structure in the vkCreateEvent command

Valid Usage (Implicit)

- VUID-VkExportMetalObjectsInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECTS_INFO_EXT
- VUID-VkExportMetalObjectsInfoEXT-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkExportMetalBufferInfoEXT, VkExportMetalCommandQueueInfoEXT, VkExportMetalDeviceInfoEXT, VkExportMetalIOSurfaceInfoEXT, VkExportMetalSharedEventInfoEXT, or VkExportMetalTextureInfoEXT
- VUID-VkExportMetalObjectsInfoEXT-sType-unique
  The sType value of each structure in the pNext chain **must** be unique, with the exception of structures of type VkExportMetalBufferInfoEXT, VkExportMetalCommandQueueInfoEXT, VkExportMetalIOSurfaceInfoEXT, VkExportMetalSharedEventInfoEXT, or VkExportMetalTextureInfoEXT

To export the Metal MTLDevice object underlying the VkPhysicalDevice associated with a VkDevice object, include a VkExportMetalDeviceInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter of a vkExportMetalObjectsEXT call.

The VkExportMetalDeviceInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalDeviceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLDevice_id       mtlDevice;
} VkExportMetalDeviceInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- mtlDevice is the Metal id<MTLDevice> object underlying the VkPhysicalDevice associated with the VkDevice object identified in the call. The implementation will return the MTLDevice in this member, or it will return NULL if no MTLDevice could be found underlying the VkPhysicalDevice object.

Valid Usage (Implicit)

- VUID-VkExportMetalDeviceInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_DEVICE_INFO_EXT

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

The type id<MTLDevice> is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLDevice_id is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLDevice;
typedef __unsafe_unretained id<MTLDevice> MTLDevice_id;
#else
typedef void* MTLDevice_id;
#endif
```

To export the Metal MTLCommandQueue object underlying a VkQueue object, include a VkExportMetalCommandQueueInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter

of a vkExportMetalObjectsEXT call.

The VkExportMetalCommandQueueInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalCommandQueueInfoEXT {
    VkStructureType       sType;
    const void*           pNext;
    VkQueue               queue;
    MTLCommandQueue_id    mtlCommandQueue;
} VkExportMetalCommandQueueInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- queue is a VkQueue.
- mtlCommandQueue is the Metal id<MTLCommandQueue> object underlying the VkQueue object in queue. The implementation will return the MTLCommandQueue in this member, or it will return NULL if no MTLCommandQueue could be found underlying the VkQueue object.

Valid Usage (Implicit)

- VUID-VkExportMetalCommandQueueInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_COMMAND_QUEUE_INFO_EXT
- VUID-VkExportMetalCommandQueueInfoEXT-queue-parameter
  queue **must** be a valid VkQueue handle

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

The type id<MTLCommandQueue> is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLCommandQueue_id is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLCommandQueue;
typedef __unsafe_unretained id<MTLCommandQueue> MTLCommandQueue_id;
#else
typedef void* MTLCommandQueue_id;
#endif
```

To export the Metal MTLBuffer object underlying a VkDeviceMemory object, include a VkExportMetalBufferInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter of a vkExportMetalObjectsEXT call.

The VkExportMetalBufferInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
    MTLBuffer_id       mtlBuffer;
} VkExportMetalBufferInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memory is a VkDeviceMemory.
- mtlBuffer is the Metal id<MTLBuffer> object underlying the VkDeviceMemory object in memory. The implementation will return the MTLBuffer in this member, or it will return NULL if no MTLBuffer could be found underlying the VkDeviceMemory object.

Valid Usage (Implicit)

- VUID-VkExportMetalBufferInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_BUFFER_INFO_EXT
- VUID-VkExportMetalBufferInfoEXT-memory-parameter
  memory **must** be a valid VkDeviceMemory handle

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

To import a Metal MTLBuffer object to underlie a VkDeviceMemory object, include a VkImportMetalBufferInfoEXT structure in the pNext chain of the VkMemoryAllocateInfo structure in a vkAllocateMemory command.

The VkImportMetalBufferInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalBufferInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    MTLBuffer_id       mtlBuffer;
} VkImportMetalBufferInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object that is to underlie the VkDeviceMemory.

The application **must** ensure that the configuration of the `id<MTLBuffer>` object is compatible with the configuration of the VkDeviceMemory. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalBufferInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_BUFFER_INFO_EXT

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

The type `id<MTLBuffer>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLBuffer_id is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLBuffer;
typedef __unsafe_unretained id<MTLBuffer> MTLBuffer_id;
#else
typedef void* MTLBuffer_id;
#endif
```

To export a Metal `MTLTexture` object underlying a VkImage, VkImageView, or VkBufferView object, include a `VkExportMetalTextureInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a vkExportMetalObjectsEXT call.

The `VkExportMetalTextureInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalTextureInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkImage                  image;
    VkImageView              imageView;
    VkBufferView             bufferView;
    VkImageAspectFlagBits    plane;
    MTLTexture_id            mtlTexture;
} VkExportMetalTextureInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is VK_NULL_HANDLE or a VkImage.
- `imageView` is VK_NULL_HANDLE or a VkImageView.
- `bufferView` is VK_NULL_HANDLE or a VkBufferView.
- `plane` specifies the plane of a multi-planar VkImage or VkImageView.
- `mtlTexture` is the Metal `id<MTLTexture>` object underlying the VkImage, VkImageView, or VkBufferView object in `image`, `imageView`, or `bufferView`, respectively, at the plane indicated in `aspectMask`. The implementation will return the `MTLTexture` in this member, or it will return `NULL` if no `MTLTexture` could be found underlying the VkImage, VkImageView, or VkBufferView object, at the plane indicated in `aspectMask`.

Valid Usage (Implicit)

- VUID-VkExportMetalTextureInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_TEXTURE_INFO_EXT
- VUID-VkExportMetalTextureInfoEXT-image-parameter
  If `image` is not VK_NULL_HANDLE, `image` **must** be a valid VkImage handle
- VUID-VkExportMetalTextureInfoEXT-imageView-parameter
  If `imageView` is not VK_NULL_HANDLE, `imageView` **must** be a valid VkImageView handle
- VUID-VkExportMetalTextureInfoEXT-bufferView-parameter
  If `bufferView` is not VK_NULL_HANDLE, `bufferView` **must** be a valid VkBufferView handle
- VUID-VkExportMetalTextureInfoEXT-plane-parameter
  `plane` **must** be a valid VkImageAspectFlagBits value
- VUID-VkExportMetalTextureInfoEXT-commonparent
  Each of `bufferView`, `image`, and `imageView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

To import one or more existing Metal `MTLTexture` objects to underlie a VkImage object, include one or more `VkImportMetalTextureInfoEXT` structures in the `pNext` chain of the VkImageCreateInfo structure in a vkCreateImage command.

The `VkImportMetalTextureInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalTextureInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkImageAspectFlagBits    plane;
    MTLTexture_id            mtlTexture;
} VkImportMetalTextureInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `plane` specifies the plane of the VkImage that the `id<MTLTexture>` object should be attached to.
- `mtlTexture` is a the Metal `id<MTLTexture>` object that is to underlie the VkImage plane.

The `pNext` chain **must** include one `VkImportMetalTextureInfoEXT` structure for each plane in the VkImage. The application **must** ensure that the configuration of the Metal `id<MTLTexture>` objects are compatible with the configuration of the VkImage. Failure to do so results in undefined behavior.

NOTE Due to `id<MTLTexture>` already being backed by memory, images created with `VkImportMetalTextureInfoEXT` in the `pNext` of the VkImageCreateInfo will be treated as bound to a VkDeviceMemory.

Valid Usage (Implicit)

- VUID-VkImportMetalTextureInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_TEXTURE_INFO_EXT
- VUID-VkImportMetalTextureInfoEXT-plane-parameter
  `plane` **must** be a valid VkImageAspectFlagBits value

Structure Chaining

Extends the structure

- VkImageCreateInfo

The type `id<MTLTexture>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLTexture_id is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLTexture;
typedef __unsafe_unretained id<MTLTexture> MTLTexture_id;
#else
typedef void* MTLTexture_id;
#endif
```

To export the Metal IOSurfaceRef object underlying a VkImage object, include a `VkExportMetalIOSurfaceInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a vkExportMetalObjectsEXT call.

The `VkExportMetalIOSurfaceInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
    IOSurfaceRef       ioSurface;
} VkExportMetalIOSurfaceInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is a VkImage.
- `ioSurface` is the Metal IOSurfaceRef object underlying the VkImage object in `image`. The implementation will return the IOSurfaceRef in this member, or it will return `NULL` if no IOSurfaceRef could be found underlying the VkImage object.

Valid Usage (Implicit)

- VUID-VkExportMetalIOSurfaceInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_IO_SURFACE_INFO_EXT
- VUID-VkExportMetalIOSurfaceInfoEXT-image-parameter
  `image` **must** be a valid VkImage handle

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

To import, or create, a Metal IOSurfaceRef object to underlie a VkImage object, include a VkImportMetalIOSurfaceInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in a vkCreateImage command.

The VkImportMetalIOSurfaceInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalIOSurfaceInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    IOSurfaceRef       ioSurface;
} VkImportMetalIOSurfaceInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ioSurface is VK_NULL_HANDLE or the Metal IOSurfaceRef object that is to underlie the VkImage.

If ioSurface is not VK_NULL_HANDLE, it will be used to underlie the VkImage. If ioSurface is VK_NULL_HANDLE, the implementation will create a new IOSurface to underlie the VkImage.

If provided, the application **must** ensure that the configuration of the IOSurfaceRef object is compatible with the configuration of the VkImage. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalIOSurfaceInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_IO_SURFACE_INFO_EXT

Structure Chaining

Extends the structure

- VkImageCreateInfo

The type IOSurfaceRef is defined in Apple's CoreGraphics framework, but to remove an unnecessary compile time dependency, an incomplete type definition of IOSurfaceRef is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
typedef struct __IOSurface* IOSurfaceRef;
```

To export the Metal `MTLSharedEvent` object underlying a VkSemaphore or VkEvent object, include a `VkExportMetalSharedEventInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a vkExportMetalObjectsEXT call.

The `VkExportMetalSharedEventInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalSharedEventInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkSemaphore          semaphore;
    VkEvent              event;
    MTLSharedEvent_id    mtlSharedEvent;
} VkExportMetalSharedEventInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `semaphore` is VK_NULL_HANDLE or a VkSemaphore.
- `event` is VK_NULL_HANDLE or a VkEvent.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object underlying the VkSemaphore or VkEvent object in `semaphore` or `event`, respectively. The implementation will return the `MTLSharedEvent` in this member, or it will return `NULL` if no `MTLSharedEvent` could be found underlying the VkSemaphore or VkEvent object.

Valid Usage (Implicit)

- VUID-VkExportMetalSharedEventInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_SHARED_EVENT_INFO_EXT
- VUID-VkExportMetalSharedEventInfoEXT-semaphore-parameter
  If `semaphore` is not VK_NULL_HANDLE, `semaphore` **must** be a valid VkSemaphore handle
- VUID-VkExportMetalSharedEventInfoEXT-event-parameter
  If `event` is not VK_NULL_HANDLE, `event` **must** be a valid VkEvent handle
- VUID-VkExportMetalSharedEventInfoEXT-commonparent
  Both of `event`, and `semaphore` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Structure Chaining

Extends the structure

- VkExportMetalObjectsInfoEXT

To import a Metal `id<MTLSharedEvent>` object to underlie a VkSemaphore or VkEvent object, include a `VkImportMetalSharedEventInfoEXT` structure in the `pNext` chain of the VkSemaphoreCreateInfo or VkEventCreateInfo structure in a vkCreateSemaphore or vkCreateEvent command, respectively.

The `VkImportMetalSharedEventInfoEXT` structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalSharedEventInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    MTLSharedEvent_id    mtlSharedEvent;
} VkImportMetalSharedEventInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object that is to underlie the VkSemaphore or VkEvent.

If the `pNext` chain of the VkSemaphoreCreateInfo structure includes both `VkImportMetalSharedEventInfoEXT` and VkSemaphoreTypeCreateInfo, the `signaledValue` property of the imported `id<MTLSharedEvent>` object will be set to VkSemaphoreTypeCreateInfo::`initialValue`.

Valid Usage (Implicit)

- VUID-VkImportMetalSharedEventInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_SHARED_EVENT_INFO_EXT

Structure Chaining

Extends the structures

- VkEventCreateInfo
- VkSemaphoreCreateInfo

The type `id<MTLSharedEvent>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLSharedEvent_id is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLSharedEvent;
typedef __unsafe_unretained id<MTLSharedEvent> MTLSharedEvent_id;
#else
typedef void* MTLSharedEvent_id;
#endif
```

11.2.8. Metal External Memory

To import memory from a Metal handle, add a VkImportMemoryMetalHandleInfoEXT structure to the pNext chain of the VkMemoryAllocateInfo structure.

The VkImportMemoryMetalHandleInfoEXT structure is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkImportMemoryMetalHandleInfoEXT {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExternalMemoryHandleTypeFlagBits    handleType;
    void*                                 handle;
} VkImportMemoryMetalHandleInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the type of handle or name.
- handle is NULL or the external handle to import.

Importing memory object payloads from Metal handles shares the ownership of the handle to the Vulkan implementation.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct VkDeviceMemory object.

Valid Usage

- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10408
  If handleType is not 0, it **must** be supported for import, as reported by VkExternalImageFormatProperties or VkExternalBufferProperties
- VUID-VkImportMemoryMetalHandleInfoEXT-handle-10409
  The memory from which handle was exported **must** have been created on the same underlying physical device as device
- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10410

If handleType is not 0, it **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT

- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-10411
  If handleType is not 0 , handle **must** be a valid non-NULL handle of the type specified by handleType
- VUID-VkImportMemoryMetalHandleInfoEXT-handle-10412
  handle **must** obey any requirements listed for handleType in external memory handle types compatibility

Valid Usage (Implicit)

- VUID-VkImportMemoryMetalHandleInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMPORT_MEMORY_METAL_HANDLE_INFO_EXT
- VUID-VkImportMemoryMetalHandleInfoEXT-handleType-parameter
  If handleType is not 0, handleType **must** be a valid VkExternalMemoryHandleTypeFlagBits value

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

To export a Metal handle representing the payload of a Vulkan device memory object, call:

```
// Provided by VK_EXT_external_memory_metal
VkResult vkGetMemoryMetalHandleEXT(
    VkDevice                                    device,
    const VkMemoryGetMetalHandleInfoEXT*        pGetMetalHandleInfo,
    void**                                      pHandle);
```

- device is the logical device that created the device memory being exported.
- pGetMetalHandleInfo is a pointer to a VkMemoryGetMetalHandleInfoEXT structure containing parameters of the export operation.
- pHandle will return the Metal handle representing the payload of the device memory object.

Unless the app retains the handle object returned by the call, the lifespan will be the same as the associated VkDeviceMemory.

Valid Usage (Implicit)

- VUID-vkGetMemoryMetalHandleEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryMetalHandleEXT-pGetMetalHandleInfo-parameter
  `pGetMetalHandleInfo` **must** be a valid pointer to a valid VkMemoryGetMetalHandleInfoEXT structure
- VUID-vkGetMemoryMetalHandleEXT-pHandle-parameter
  `pHandle` **must** be a valid pointer to a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMemoryGetMetalHandleInfoEXT` structure is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkMemoryGetMetalHandleInfoEXT {
    VkStructureType                       sType;
    const void*                           pNext;
    VkDeviceMemory                        memory;
    VkExternalMemoryHandleTypeFlagBits    handleType;
} VkMemoryGetMetalHandleInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object from which the handle will be exported.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the type of handle requested.

The properties of the handle returned depend on the value of `handleType`. See VkExternalMemoryHandleTypeFlagBits for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetMetalHandleInfoEXT-memory-10413
  `memory` **must** have been created with a valid VkExportMemoryAllocateInfo
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-10414
  `handleType` **must** have been included in VkExportMemoryAllocateInfo::`handleTypes` when `memory` was created
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-10415
  `handleType` **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT

Valid Usage (Implicit)

- VUID-VkMemoryGetMetalHandleInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_GET_METAL_HANDLE_INFO_EXT
- VUID-VkMemoryGetMetalHandleInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMemoryGetMetalHandleInfoEXT-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-VkMemoryGetMetalHandleInfoEXT-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value

Metal memory handles compatible with Vulkan **may** also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```
// Provided by VK_EXT_external_memory_metal
VkResult vkGetMemoryMetalHandlePropertiesEXT(
    VkDevice                                    device,
    VkExternalMemoryHandleTypeFlagBits          handleType,
    const void*                                 pHandle,
    VkMemoryMetalHandlePropertiesEXT*           pMemoryMetalHandleProperties);
```

- `device` is the logical device that will be importing `pHandle`.
- `handleType` is a VkExternalMemoryHandleTypeFlagBits value specifying the type of the handle `pHandle`.
- `pHandle` is the handle which will be imported.
- `pMemoryMetalHandleProperties` is a pointer to a VkMemoryMetalHandlePropertiesEXT structure in which properties of `pHandle` are returned.

Valid Usage

- VUID-vkGetMemoryMetalHandlePropertiesEXT-handle-10416
  `pHandle` **must** point to a valid id<MTLBuffer>, id<MTLTexture> or id<MTLDevice>
- VUID-vkGetMemoryMetalHandlePropertiesEXT-handleType-10417
  `handleType` **must** be VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT, VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT

Valid Usage (Implicit)

- VUID-vkGetMemoryMetalHandlePropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMemoryMetalHandlePropertiesEXT-handleType-parameter
  `handleType` **must** be a valid VkExternalMemoryHandleTypeFlagBits value
- VUID-vkGetMemoryMetalHandlePropertiesEXT-pHandle-parameter
  `pHandle` **must** be a pointer value
- VUID-vkGetMemoryMetalHandlePropertiesEXT-pMemoryMetalHandleProperties-parameter
  `pMemoryMetalHandleProperties` **must** be a valid pointer to a VkMemoryMetalHandlePropertiesEXT structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_EXTERNAL_HANDLE
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMemoryMetalHandlePropertiesEXT` structure returned is defined as:

```
// Provided by VK_EXT_external_memory_metal
typedef struct VkMemoryMetalHandlePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryTypeBits;
} VkMemoryMetalHandlePropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified Metal handle **can** be imported as.

Valid Usage (Implicit)

- VUID-VkMemoryMetalHandlePropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_METAL_HANDLE_PROPERTIES_EXT
- VUID-VkMemoryMetalHandlePropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

11.2.9. Device Group Memory Allocations

If the `pNext` chain of VkMemoryAllocateInfo includes a `VkMemoryAllocateFlagsInfo` structure, then that structure includes flags and a device mask controlling how many instances of the memory will be allocated.

The `VkMemoryAllocateFlagsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryAllocateFlagsInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkMemoryAllocateFlags    flags;
    uint32_t                 deviceMask;
} VkMemoryAllocateFlagsInfo;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlagsInfo
typedef VkMemoryAllocateFlagsInfo VkMemoryAllocateFlagsInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkMemoryAllocateFlagBits controlling the allocation.
- `deviceMask` is a mask of physical devices in the logical device, indicating that memory **must** be allocated on each device in the mask, if VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is set in `flags`.

If VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is not set, the number of instances allocated depends on whether VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is set in the memory heap. If VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is set, then memory is allocated for every physical device in the logical device (as if `deviceMask` has bits set for all device indices). If

VK_MEMORY_HEAP_MULTI_INSTANCE_BIT is not set, then a single instance of memory is allocated (as if deviceMask is set to one).

On some implementations, allocations from a multi-instance heap **may** consume memory on all physical devices even if the deviceMask excludes some devices. If VkPhysicalDeviceGroupProperties::subsetAllocation is VK_TRUE, then memory is only consumed for the devices in the device mask.

NOTE	In practice, most allocations on a multi-instance heap will be allocated across all physical devices. Unicast allocation support is an optional optimization for a minority of allocations.

Valid Usage

- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00675
  If VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is set, deviceMask **must** be a valid device mask
- VUID-VkMemoryAllocateFlagsInfo-deviceMask-00676
  If VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT is set, deviceMask **must** not be zero
- VUID-VkMemoryAllocateFlagsInfo-flags-10760
  If the allocation is performing a memory import operation, then flags **must** not contain VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT
- VUID-VkMemoryAllocateFlagsInfo-flags-10761
  If the allocation uses protected memory, then flags **must** not contain VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT

Valid Usage (Implicit)

- VUID-VkMemoryAllocateFlagsInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_FLAGS_INFO
- VUID-VkMemoryAllocateFlagsInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkMemoryAllocateFlagBits values

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

Bits which **can** be set in VkMemoryAllocateFlagsInfo::flags, controlling device memory allocation, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkMemoryAllocateFlagBits {
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT = 0x00000001,
  // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT = 0x00000002,
  // Provided by VK_VERSION_1_2
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000004,
  // Provided by VK_EXT_zero_initialize_device_memory
    VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT = 0x00000008,
  // Provided by VK_KHR_device_group
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT,
  // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT,
  // Provided by VK_KHR_buffer_device_address
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkMemoryAllocateFlagBits;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlagBits
typedef VkMemoryAllocateFlagBits VkMemoryAllocateFlagBitsKHR;
```

- VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT specifies that memory will be allocated for the devices in VkMemoryAllocateFlagsInfo::deviceMask.
- VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT specifies that the memory **can** be attached to a buffer object created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag set.
- VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT specifies that the memory's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see VkBufferOpaqueCaptureAddressCreateInfo for more detail. If this bit is set, VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT **must** also be set.
- VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT specifies that the memory will be zeroed automatically by the implementation before application is able to access it.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkMemoryAllocateFlags;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkMemoryAllocateFlags
typedef VkMemoryAllocateFlags VkMemoryAllocateFlagsKHR;
```

VkMemoryAllocateFlags is a bitmask type for setting a mask of zero or more VkMemoryAllocateFlagBits.

11.2.10. Opaque Capture Address Allocation

To request a specific device address for a memory allocation, add a VkMemoryOpaqueCaptureAddressAllocateInfo structure to the pNext chain of the VkMemoryAllocateInfo structure. The VkMemoryOpaqueCaptureAddressAllocateInfo structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkMemoryOpaqueCaptureAddressAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkMemoryOpaqueCaptureAddressAllocateInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkMemoryOpaqueCaptureAddressAllocateInfo
typedef VkMemoryOpaqueCaptureAddressAllocateInfo
VkMemoryOpaqueCaptureAddressAllocateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- opaqueCaptureAddress is the opaque capture address requested for the memory allocation.

If opaqueCaptureAddress is zero, no specific address is requested.

If opaqueCaptureAddress is not zero, it **should** be an address retrieved from vkGetDeviceMemoryOpaqueCaptureAddress on an identically created memory allocation on the same implementation.

NOTE

In most cases, it is expected that a non-zero opaqueAddress is an address retrieved from vkGetDeviceMemoryOpaqueCaptureAddress on an identically created memory allocation. If this is not the case, it is likely that VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS errors will occur.

This is, however, not a strict requirement because trace capture/replay tools may need to adjust memory allocation parameters for imported memory.

If this structure is not present, it is as if opaqueCaptureAddress is zero.

Valid Usage (Implicit)

- VUID-VkMemoryOpaqueCaptureAddressAllocateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_OPAQUE_CAPTURE_ADDRESS_ALLOCATE_INFO

Structure Chaining

Extends the structure

- VkMemoryAllocateInfo

11.2.11. Freeing Device Memory

To free a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkFreeMemory(
    VkDevice                                    device,
    VkDeviceMemory                              memory,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that owns the memory.
- `memory` is the VkDeviceMemory object to be freed.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Before freeing a memory object, an application **must** ensure the memory object is no longer in use by the device — for example by command buffers in the *pending state*. Memory **can** be freed whilst still bound to resources, but those resources **must** not be used afterwards. Freeing a memory object releases the reference it held, if any, to its payload. If there are still any bound images or buffers, the memory object's payload **may** not be immediately released by the implementation, but **must** be released by the time all bound images and buffers have been destroyed. Once all references to a payload are released, it is returned to the heap from which it was allocated.

How memory objects are bound to Images and Buffers is described in detail in the Resource Memory Association section.

If a memory object is mapped at the time it is freed, it is implicitly unmapped.

NOTE As described below, host writes are not implicitly flushed when the memory object is unmapped, but the implementation **must** guarantee that writes that have not been flushed do not affect any other memory.

Valid Usage

- VUID-vkFreeMemory-memory-00677
  All submitted commands that refer to `memory` (via images or buffers) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkFreeMemory-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkFreeMemory-memory-parameter
  If `memory` is not VK_NULL_HANDLE, `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkFreeMemory-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkFreeMemory-memory-parent
  If `memory` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

11.2.12. Host Access to Device Memory Objects

Memory objects created with vkAllocateMemory are not directly host accessible.

Memory objects created with the memory property VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT are considered *mappable*. Memory objects **must** be mappable in order to be successfully mapped on the host.

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkMapMemory(
    VkDevice                                    device,
    VkDeviceMemory                              memory,
    VkDeviceSize                                offset,
    VkDeviceSize                                size,
    VkMemoryMapFlags                            flags,
    void**                                      ppData);
```

- `device` is the logical device that owns the memory.
- `memory` is the VkDeviceMemory object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.
- `size` is the size of the memory range to map, or VK_WHOLE_SIZE to map from `offset` to the end of the allocation.
- `flags` is a bitmask of VkMemoryMapFlagBits specifying additional parameters of the memory map operation.

- `ppData` is a pointer to a `void*` variable in which a host-accessible pointer to the beginning of the mapped range is returned. The value of the returned pointer minus `offset` **must** be aligned to VkPhysicalDeviceLimits::`minMemoryMapAlignment`.

After a successful call to `vkMapMemory` the memory object `memory` is considered to be currently *host mapped*.

NOTE	It is an application error to call `vkMapMemory` on a memory object that is already *host mapped*.

NOTE	`vkMapMemory` will fail if the implementation is unable to allocate an appropriately sized contiguous virtual address range, e.g. due to virtual address space fragmentation or platform limits. In such cases, `vkMapMemory` **must** return VK_ERROR_MEMORY_MAP_FAILED. The application **can** improve the likelihood of success by reducing the size of the mapped range and/or removing unneeded mappings using vkUnmapMemory.

`vkMapMemory` does not check whether the device memory is currently in use before returning the host-accessible pointer. The application **must** guarantee that any previously submitted command that writes to this range has completed before the host reads from or writes to that range, and that any previously submitted command that reads from that range has completed before the host writes to that region (see here for details on fulfilling such a guarantee). If the device memory was allocated without the VK_MEMORY_PROPERTY_HOST_COHERENT_BIT set, these guarantees **must** be made for an extended range: the application **must** round down the start of the range to the nearest multiple of VkPhysicalDeviceLimits::`nonCoherentAtomSize`, and round the end of the range up to the nearest multiple of VkPhysicalDeviceLimits::`nonCoherentAtomSize`.

While a range of device memory is host mapped, the application is responsible for synchronizing both device and host access to that memory range.

NOTE	It is important for the application developer to become meticulously familiar with all of the mechanisms described in the chapter on Synchronization and Cache Control as they are crucial to maintaining memory access ordering.

Calling `vkMapMemory` is equivalent to calling vkMapMemory2 with an empty `pNext` chain.

Valid Usage

- VUID-vkMapMemory-memory-00678
  `memory` **must** not be currently host mapped
- VUID-vkMapMemory-offset-00679
  `offset` **must** be less than the size of `memory`
- VUID-vkMapMemory-size-00680
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be greater than `0`
- VUID-vkMapMemory-size-00681
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be less than or equal to the size of the

`memory` minus `offset`

- VUID-vkMapMemory-memory-00682
  `memory` **must** have been created with a memory type that reports VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT
- VUID-vkMapMemory-memory-00683
  `memory` **must** not have been allocated with multiple instances
- VUID-vkMapMemory-flags-09568
  VK_MEMORY_MAP_PLACED_BIT_EXT **must** not be set in `flags`

Valid Usage (Implicit)

- VUID-vkMapMemory-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkMapMemory-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkMapMemory-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkMemoryMapFlagBits values
- VUID-vkMapMemory-ppData-parameter
  `ppData` **must** be a valid pointer to a pointer value
- VUID-vkMapMemory-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Bits which **can** be set in vkMapMemory::`flags` and VkMemoryMapInfo::`flags`, specifying additional properties of a memory map, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkMemoryMapFlagBits {
  // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_MAP_PLACED_BIT_EXT = 0x00000001,
} VkMemoryMapFlagBits;
```

- VK_MEMORY_MAP_PLACED_BIT_EXT requests that the implementation place the memory map at the virtual address specified by the application via VkMemoryMapPlacedInfoEXT ::pPlacedAddress, replacing any existing mapping at that address. This flag **must** not be used with vkMapMemory as there is no way to specify the placement address.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryMapFlags;
```

VkMemoryMapFlags is a bitmask type for setting a mask of zero or more VkMemoryMapFlagBits.

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```
// Provided by VK_VERSION_1_4
VkResult vkMapMemory2(
    VkDevice                                    device,
    const VkMemoryMapInfo*                      pMemoryMapInfo,
    void**                                      ppData);
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to vkMapMemory2
VkResult vkMapMemory2KHR(
    VkDevice                                    device,
    const VkMemoryMapInfo*                      pMemoryMapInfo,
    void**                                      ppData);
```

- device is the logical device that owns the memory.
- pMemoryMapInfo is a pointer to a VkMemoryMapInfo structure describing parameters of the map.
- ppData is a pointer to a void * variable in which is returned a host-accessible pointer to the beginning of the mapped range. This pointer minus VkMemoryMapInfo::offset **must** be aligned to at least VkPhysicalDeviceLimits::minMemoryMapAlignment.

This function behaves identically to vkMapMemory except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkMapMemory2-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkMapMemory2-pMemoryMapInfo-parameter
  `pMemoryMapInfo` **must** be a valid pointer to a valid VkMemoryMapInfo structure
- VUID-vkMapMemory2-ppData-parameter
  `ppData` **must** be a valid pointer to a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMemoryMapInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryMapInfo {
    VkStructureType     sType;
    const void*         pNext;
    VkMemoryMapFlags    flags;
    VkDeviceMemory      memory;
    VkDeviceSize        offset;
    VkDeviceSize        size;
} VkMemoryMapInfo;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryMapInfo
typedef VkMemoryMapInfo VkMemoryMapInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkMemoryMapFlagBits specifying additional parameters of the memory map operation.
- `memory` is the VkDeviceMemory object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.
- `size` is the size of the memory range to map, or VK_WHOLE_SIZE to map from `offset` to the end of the allocation.

Valid Usage

- VUID-VkMemoryMapInfo-memory-07958
  `memory` **must** not be currently host mapped
- VUID-VkMemoryMapInfo-offset-07959
  `offset` **must** be less than the size of `memory`
- VUID-VkMemoryMapInfo-size-07960
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be greater than `0`
- VUID-VkMemoryMapInfo-size-07961
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be less than or equal to the size of the `memory` minus `offset`
- VUID-VkMemoryMapInfo-memory-07962
  `memory` **must** have been created with a memory type that reports VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT
- VUID-VkMemoryMapInfo-memory-07963
  `memory` **must** not have been allocated with multiple instances
- VUID-VkMemoryMapInfo-flags-09569
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags`, the `memoryMapPlaced` feature **must** be enabled
- VUID-VkMemoryMapInfo-flags-09570
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags`, the `pNext` chain **must** include a VkMemoryMapPlacedInfoEXT structure and `VkMemoryMapPlacedInfoEXT`::`pPlacedAddress` **must** not be `NULL`
- VUID-VkMemoryMapInfo-flags-09571
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `offset` **must** be zero
- VUID-VkMemoryMapInfo-flags-09572
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags` and the `memoryMapRangePlaced` feature is not enabled, `size` **must** be VK_WHOLE_SIZE or `VkMemoryAllocateInfo`::`allocationSize`
- VUID-VkMemoryMapInfo-flags-09573
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags` and the `memoryMapRangePlaced` feature is enabled, `offset` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT`::`minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfo-flags-09574
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags` and `size` is not VK_WHOLE_SIZE, `size` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT`::`minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapInfo-flags-09651
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in `flags` and `size` is VK_WHOLE_SIZE, `VkMemoryAllocateInfo`::`allocationSize` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT`::`minPlacedMemoryMapAlignment`

- VUID-VkMemoryMapInfo-flags-09575
  If VK_MEMORY_MAP_PLACED_BIT_EXT is set in flags, the memory object **must** not have been imported from a handle type of VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT

Valid Usage (Implicit)

- VUID-VkMemoryMapInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_MEMORY_MAP_INFO
- VUID-VkMemoryMapInfo-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkMemoryMapPlacedInfoEXT
- VUID-VkMemoryMapInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkMemoryMapInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkMemoryMapFlagBits values
- VUID-VkMemoryMapInfo-memory-parameter
  memory **must** be a valid VkDeviceMemory handle

Host Synchronization

- Host access to memory **must** be externally synchronized

If VK_MEMORY_MAP_PLACED_BIT_EXT is set in VkMemoryMapInfo::flags and the pNext chain of VkMemoryMapInfo includes a VkMemoryMapPlacedInfoEXT structure, then that structure specifies the placement address of the memory map. The implementation will place the memory map at the specified address, replacing any existing maps in the specified memory range. Replacing memory maps in this way does not implicitly unmap Vulkan memory objects. Instead, the application **must** ensure no other Vulkan memory objects are mapped anywhere in the specified virtual address range. If successful, ppData will be set to the same value as VkMemoryMapPlacedInfoEXT::pPlacedAddress and vkMapMemory2 will return VK_SUCCESS. If it cannot place the map at the requested address for any reason, the memory object is left unmapped and vkMapMemory2 will return VK_ERROR_MEMORY_MAP_FAILED.

The VkMemoryMapPlacedInfoEXT structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkMemoryMapPlacedInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    void*              pPlacedAddress;
} VkMemoryMapPlacedInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pPlacedAddress` is the virtual address at which to place the address. If `VkMemoryMapInfo::flags` does not contain VK_MEMORY_MAP_PLACED_BIT_EXT, this value is ignored.

Valid Usage

- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09577
  `pPlacedAddress` **must** be aligned to an integer multiple of `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT::minPlacedMemoryMapAlignment`
- VUID-VkMemoryMapPlacedInfoEXT-pPlacedAddress-09578
  The address range specified by `pPlacedAddress` and `VkMemoryMapInfo::size` **must** not overlap any existing Vulkan memory object mapping

Valid Usage (Implicit)

- VUID-VkMemoryMapPlacedInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_MAP_PLACED_INFO_EXT

Structure Chaining

Extends the structure

- VkMemoryMapInfo

Two commands are provided to enable applications to work with non-coherent memory allocations: `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`.

NOTE

If the memory object was created with the VK_MEMORY_PROPERTY_HOST_COHERENT_BIT set, `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges` are unnecessary and **may** have a performance cost. However, availability and visibility operations still need to be managed on the device. See the description of host access types for more information.

NOTE

While memory objects imported from a handle type of VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT are inherently mapped to host address space, they are not considered to be host mapped device memory unless they are explicitly host mapped using vkMapMemory. That means flushing or invalidating host caches with respect to host accesses performed on such memory through the original host pointer specified at import time is the responsibility of the application and **must** be performed with appropriate synchronization primitives provided by the platform which are outside the scope of Vulkan. `vkFlushMappedMemoryRanges` and

> vkInvalidateMappedMemoryRanges, however, **can** still be used on such memory objects to synchronize host accesses performed through the host pointer of the host mapped device memory range returned by vkMapMemory.

After a successful call to vkMapMemory or vkMapMemory2 the memory object memory is considered to be currently *host mapped*.

To flush ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFlushMappedMemoryRanges(
    VkDevice                                    device,
    uint32_t                                    memoryRangeCount,
    const VkMappedMemoryRange*                  pMemoryRanges);
```

- device is the logical device that owns the memory ranges.
- memoryRangeCount is the length of the pMemoryRanges array.
- pMemoryRanges is a pointer to an array of VkMappedMemoryRange structures describing the memory ranges to flush.

vkFlushMappedMemoryRanges guarantees that host writes to the memory ranges described by pMemoryRanges are made available to the host memory domain, such that they **can** be made available to the device memory domain via memory domain operations using the VK_ACCESS_HOST_WRITE_BIT access type.

The first synchronization scope includes all host operations that happened-before it, as defined by the host memory model.

> **NOTE** Some systems allow writes that do not directly integrate with the host memory model; these have to be synchronized by the application manually. One example of this is non-temporal store instructions on x86; to ensure these happen-before submission, applications should call _mm_sfence().

The second synchronization scope is empty.

The first access scope includes host writes to the specified memory ranges.

> **NOTE** When a host write to a memory location is made available in this way, each whole aligned set of nonCoherentAtomSize bytes that the memory location exists in will also be made available as if they were written by the host. For example, with a nonCoherentAtomSize of 128, if an application writes to the first byte of a memory object via a host mapping, the first 128 bytes of the memory object will be made available by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.

The second access scope is empty.

Unmapping non-coherent memory does not implicitly flush the host mapped memory, and host writes that have not been flushed **may** not ever be visible to the device. However, implementations **must** ensure that writes that have not been flushed do not become visible to any other memory.

NOTE The above guarantee avoids a potential memory corruption in scenarios where host writes to a mapped memory object have not been flushed before the memory is unmapped (or freed), and the virtual address range is subsequently reused for a different mapping (or memory allocation).

Valid Usage (Implicit)

- VUID-vkFlushMappedMemoryRanges-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkFlushMappedMemoryRanges-pMemoryRanges-parameter
  `pMemoryRanges` **must** be a valid pointer to an array of `memoryRangeCount` valid VkMappedMemoryRange structures
- VUID-vkFlushMappedMemoryRanges-memoryRangeCount-arraylength
  `memoryRangeCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To invalidate ranges of non-coherent memory from the host caches, call:

```
// Provided by VK_VERSION_1_0
VkResult vkInvalidateMappedMemoryRanges(
    VkDevice                                    device,
    uint32_t                                    memoryRangeCount,
    const VkMappedMemoryRange*                  pMemoryRanges);
```

- `device` is the logical device that owns the memory ranges.
- `memoryRangeCount` is the length of the `pMemoryRanges` array.
- `pMemoryRanges` is a pointer to an array of VkMappedMemoryRange structures describing the memory ranges to invalidate.

vkInvalidateMappedMemoryRanges guarantees that device writes to the memory ranges described by pMemoryRanges, which have been made available to the host memory domain using the VK_ACCESS_HOST_WRITE_BIT and VK_ACCESS_HOST_READ_BIT access types, are made visible to the host. If a range of non-coherent memory is written by the host and then invalidated without first being flushed, its contents are undefined.

The first synchronization scope includes all host operations that happened-before it, as defined by the host memory model.

NOTE

This function does not synchronize with device operations directly - other host synchronization operations that depend on device operations such as vkWaitForFences must be executed beforehand. So for any non-coherent device write to be made visible to the host, there has to be a dependency chain along the following lines:

1. Device write
2. Device memory barrier including host reads in its second scope
3. Signal on the device (e.g. a fence signal operation)
4. Wait on the host (e.g. vkWaitForFences)
5. vkInvalidateMappedMemoryRanges

The second synchronization scope includes all host operations that happen-after it, as defined by the host memory model.

The first access scope is empty.

The second access scope includes host reads to the specified memory ranges.

NOTE

When a device write to a memory location is made visible to the host in this way, each whole aligned set of nonCoherentAtomSize bytes that the memory location exists in will also be made visible as if they were written by the device. For example, with a nonCoherentAtomSize of 128, if an application writes to the first byte of a memory object on the device, the first 128 bytes of the memory object will be made visible by this command. While the value of the following 127 bytes will be unchanged, this does count as an access for the purpose of synchronization, so care must be taken to avoid data races.

NOTE

Mapping non-coherent memory does not implicitly invalidate that memory.

Valid Usage (Implicit)

- VUID-vkInvalidateMappedMemoryRanges-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkInvalidateMappedMemoryRanges-pMemoryRanges-parameter
  pMemoryRanges **must** be a valid pointer to an array of memoryRangeCount valid VkMappedMemoryRange structures

- VUID-vkInvalidateMappedMemoryRanges-memoryRangeCount-arraylength
  `memoryRangeCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkMappedMemoryRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMappedMemoryRange {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
    VkDeviceSize       offset;
    VkDeviceSize       size;
} VkMappedMemoryRange;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object to which this range belongs.
- `offset` is the zero-based byte offset from the beginning of the memory object.
- `size` is either the size of range, or VK_WHOLE_SIZE to affect the range from `offset` to the end of the current mapping of the allocation.

Valid Usage

- VUID-VkMappedMemoryRange-memory-00684
  `memory` **must** be currently host mapped
- VUID-VkMappedMemoryRange-size-00685
  If `size` is not equal to VK_WHOLE_SIZE, `offset` and `size` **must** specify a range contained within the currently mapped range of `memory`
- VUID-VkMappedMemoryRange-size-00686
  If `size` is equal to VK_WHOLE_SIZE, `offset` **must** be within the currently mapped range of `memory`

- VUID-VkMappedMemoryRange-offset-00687
  `offset` **must** be a multiple of VkPhysicalDeviceLimits::`nonCoherentAtomSize`
- VUID-VkMappedMemoryRange-size-01389
  If `size` is equal to VK_WHOLE_SIZE, the end of the current mapping of `memory` **must** either be a multiple of VkPhysicalDeviceLimits::`nonCoherentAtomSize` bytes from the beginning of the memory object, or be equal to the end of the memory object
- VUID-VkMappedMemoryRange-size-01390
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** either be a multiple of VkPhysicalDeviceLimits::`nonCoherentAtomSize`, or `offset` plus `size` **must** equal the size of `memory`

Valid Usage (Implicit)

- VUID-VkMappedMemoryRange-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MAPPED_MEMORY_RANGE
- VUID-VkMappedMemoryRange-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMappedMemoryRange-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle

To unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_VERSION_1_0
void vkUnmapMemory(
    VkDevice                                    device,
    VkDeviceMemory                              memory);
```

- `device` is the logical device that owns the memory.
- `memory` is the memory object to be unmapped.

Calling `vkUnmapMemory` is equivalent to calling vkUnmapMemory2 with an empty `pNext` chain and `flags` set to zero.

Valid Usage

- VUID-vkUnmapMemory-memory-00689
  `memory` **must** be currently host mapped

Valid Usage (Implicit)

- VUID-vkUnmapMemory-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkUnmapMemory-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkUnmapMemory-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `memory` **must** be externally synchronized

To unmap a memory object once host access to it is no longer needed by the application, call:

```
// Provided by VK_VERSION_1_4
VkResult vkUnmapMemory2(
    VkDevice                                    device,
    const VkMemoryUnmapInfo*                    pMemoryUnmapInfo);
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to vkUnmapMemory2
VkResult vkUnmapMemory2KHR(
    VkDevice                                    device,
    const VkMemoryUnmapInfo*                    pMemoryUnmapInfo);
```

- `device` is the logical device that owns the memory.
- `pMemoryUnmapInfo` is a pointer to a VkMemoryUnmapInfo structure describing parameters of the unmap.

This function behaves identically to vkUnmapMemory except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

Valid Usage (Implicit)

- VUID-vkUnmapMemory2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkUnmapMemory2-pMemoryUnmapInfo-parameter
  `pMemoryUnmapInfo` **must** be a valid pointer to a valid VkMemoryUnmapInfo structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMemoryUnmapInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryUnmapInfo {
    VkStructureType       sType;
    const void*           pNext;
    VkMemoryUnmapFlags    flags;
    VkDeviceMemory        memory;
} VkMemoryUnmapInfo;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapInfo
typedef VkMemoryUnmapInfo VkMemoryUnmapInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkMemoryUnmapFlagBits specifying additional parameters of the memory map operation.
- memory is the VkDeviceMemory object to be unmapped.

Valid Usage

- VUID-VkMemoryUnmapInfo-memory-07964
  memory **must** be currently host mapped
- VUID-VkMemoryUnmapInfo-flags-09579
  If VK_MEMORY_UNMAP_RESERVE_BIT_EXT is set in flags, the memoryUnmapReserve **must** be enabled
- VUID-VkMemoryUnmapInfo-flags-09580
  If VK_MEMORY_UNMAP_RESERVE_BIT_EXT is set in flags, the memory object **must** not have been imported from a handle type of VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT

Valid Usage (Implicit)

- VUID-VkMemoryUnmapInfo-sType-sType

`sType` **must** be VK_STRUCTURE_TYPE_MEMORY_UNMAP_INFO

- VUID-VkMemoryUnmapInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMemoryUnmapInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkMemoryUnmapFlagBits values
- VUID-VkMemoryUnmapInfo-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle

Host Synchronization

- Host access to `memory` **must** be externally synchronized

Bits which **can** be set in VkMemoryUnmapInfo::`flags`, specifying additional properties of a memory unmap, are:

```
// Provided by VK_VERSION_1_4
typedef enum VkMemoryUnmapFlagBits {
  // Provided by VK_EXT_map_memory_placed
    VK_MEMORY_UNMAP_RESERVE_BIT_EXT = 0x00000001,
} VkMemoryUnmapFlagBits;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapFlagBits
typedef VkMemoryUnmapFlagBits VkMemoryUnmapFlagBitsKHR;
```

- VK_MEMORY_UNMAP_RESERVE_BIT_EXT requests that virtual address range currently occupied by the memory map remain reserved after the vkUnmapMemory2 call completes. Future system memory map operations or calls to vkMapMemory or vkMapMemory2 will not return addresses in that range unless the range has since been unreserved by the client or the mapping is explicitly placed in that range by calling vkMapMemory2 with VK_MEMORY_MAP_PLACED_BIT_EXT, or doing the system memory map equivalent. When VK_MEMORY_UNMAP_RESERVE_BIT_EXT is set, the memory unmap operation **may** fail, in which case the memory object will remain host mapped and vkUnmapMemory2 will return VK_ERROR_MEMORY_MAP_FAILED.

```
// Provided by VK_VERSION_1_4
typedef VkFlags VkMemoryUnmapFlags;
```

```
// Provided by VK_KHR_map_memory2
// Equivalent to VkMemoryUnmapFlags
typedef VkMemoryUnmapFlags VkMemoryUnmapFlagsKHR;
```

VkMemoryUnmapFlags is a bitmask type for setting a mask of zero or more VkMemoryUnmapFlagBits.

11.2.13. Lazily Allocated Memory

If the memory object is allocated from a heap with the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit set, that object's backing memory **may** be provided by the implementation lazily. The actual committed size of the memory **may** initially be as small as zero (or as large as the requested size), and monotonically increases as additional memory is needed.

A memory type with this flag set is only allowed to be bound to a VkImage whose usage flags include VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT.

NOTE	Using lazily allocated memory objects for framebuffer attachments that are not needed once a render pass instance has completed **may** allow some implementations to never allocate memory for such attachments.

To determine the amount of lazily-allocated memory that is currently committed for a memory object, call:

```
// Provided by VK_VERSION_1_0
void vkGetDeviceMemoryCommitment(
    VkDevice                                    device,
    VkDeviceMemory                              memory,
    VkDeviceSize*                               pCommittedMemoryInBytes);
```

- device is the logical device that owns the memory.
- memory is the memory object being queried.
- pCommittedMemoryInBytes is a pointer to a VkDeviceSize value in which the number of bytes currently committed is returned, on success.

The implementation **may** update the commitment at any time, and the value returned by this query **may** be out of date.

The implementation guarantees to allocate any committed memory from the heapIndex indicated by the memory type that the memory object was created with.

Valid Usage

- VUID-vkGetDeviceMemoryCommitment-memory-00690
  memory **must** have been created with a memory type that reports VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryCommitment-device-parameter

`device` **must** be a valid VkDevice handle

- VUID-vkGetDeviceMemoryCommitment-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkGetDeviceMemoryCommitment-pCommittedMemoryInBytes-parameter
  `pCommittedMemoryInBytes` **must** be a valid pointer to a VkDeviceSize value
- VUID-vkGetDeviceMemoryCommitment-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

11.2.14. Protected Memory

Protected memory divides device memory into protected device memory and unprotected device memory.

Protected memory adds the following concepts:

- Memory:
  - Unprotected device memory, which **can** be visible to the device and **can** be visible to the host
  - Protected device memory, which **can** be visible to the device but **must** not be visible to the host
- Resources:
  - Unprotected images and unprotected buffers, to which unprotected memory **can** be bound
  - Protected images and protected buffers, to which protected memory **can** be bound
- Command buffers:
  - Unprotected command buffers, which **can** be submitted to a device queue to execute unprotected queue operations
  - Protected command buffers, which **can** be submitted to a protected-capable device queue to execute protected queue operations
- Device queues:
  - Unprotected device queues, to which unprotected command buffers **can** be submitted
  - Protected-capable device queues, to which unprotected command buffers or protected command buffers **can** be submitted
- Queue submissions
  - Unprotected queue submissions, through which unprotected command buffers **can** be submitted
  - Protected queue submissions, through which protected command buffers **can** be submitted
- Queue operations
  - Unprotected queue operations
  - Protected queue operations

NOTE	When the `protectedMemory` feature is enabled, all pipelines **may** be recorded in either protected or unprotected command buffers (or both), which may incur an extra cost on some implementations. This **can** be mitigated by enabling the `pipelineProtectedAccess` feature, in which case pipelines created with VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT may only be recorded in protected command buffers, and pipelines created with VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT may only be recorded in unprotected command buffers.

Protected Memory Access Rules

If VkPhysicalDeviceProtectedMemoryProperties::`protectedNoFault` is VK_FALSE, applications **must** not perform any of the following operations:

- Write to unprotected memory within protected queue operations.
- Access protected memory within protected queue operations other than in framebuffer-space pipeline stages, the compute shader stage, in video decode operations, in video encode operations, or the transfer stage.
- Perform a query within protected queue operations.

If VkPhysicalDeviceProtectedMemoryProperties::`protectedNoFault` is VK_TRUE, these operations are valid, but reads will return undefined values, and writes will either be dropped or store undefined values.

Additionally, indirect operations **must** not be performed within protected queue operations.

Whether these operations are valid or not, or if any other invalid usage is performed, the implementation **must** guarantee that:

- Protected device memory **must** never be visible to the host.
- Values written to unprotected device memory **must** not be a function of values from protected memory.

11.2.15. Peer Memory Features

Peer memory is memory that is allocated for a given physical device and then bound to a resource and accessed by a different physical device, in a logical device that represents multiple physical devices. Some ways of reading and writing peer memory **may** not be supported by a device.

To determine how peer memory **can** be accessed, call:

```
// Provided by VK_VERSION_1_1
void vkGetDeviceGroupPeerMemoryFeatures(
    VkDevice                                    device,
    uint32_t                                    heapIndex,
    uint32_t                                    localDeviceIndex,
    uint32_t                                    remoteDeviceIndex,
    VkPeerMemoryFeatureFlags*                   pPeerMemoryFeatures);
```

```
// Provided by VK_KHR_device_group
// Equivalent to vkGetDeviceGroupPeerMemoryFeatures
void vkGetDeviceGroupPeerMemoryFeaturesKHR(
    VkDevice                                    device,
    uint32_t                                    heapIndex,
    uint32_t                                    localDeviceIndex,
    uint32_t                                    remoteDeviceIndex,
    VkPeerMemoryFeatureFlags*                   pPeerMemoryFeatures);
```

- `device` is the logical device that owns the memory.
- `heapIndex` is the index of the memory heap from which the memory is allocated.
- `localDeviceIndex` is the device index of the physical device that performs the memory access.
- `remoteDeviceIndex` is the device index of the physical device that the memory is allocated for.
- `pPeerMemoryFeatures` is a pointer to a VkPeerMemoryFeatureFlags bitmask indicating which types of memory accesses are supported for the combination of heap, local, and remote devices.

Valid Usage

- VUID-vkGetDeviceGroupPeerMemoryFeatures-heapIndex-00691
  `heapIndex` **must** be less than `memoryHeapCount`
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00692
  `localDeviceIndex` **must** be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-remoteDeviceIndex-00693
  `remoteDeviceIndex` **must** be a valid device index
- VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00694
  `localDeviceIndex` **must** not equal `remoteDeviceIndex`

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPeerMemoryFeatures-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceGroupPeerMemoryFeatures-pPeerMemoryFeatures-parameter
  `pPeerMemoryFeatures` **must** be a valid pointer to a VkPeerMemoryFeatureFlags value

Bits which **may** be set in vkGetDeviceGroupPeerMemoryFeatures::pPeerMemoryFeatures, indicating supported peer memory features, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkPeerMemoryFeatureFlagBits {
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT = 0x00000001,
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT = 0x00000002,
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT = 0x00000004,
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT = 0x00000008,
  // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT,
  // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_DST_BIT,
  // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT,
  // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT_KHR =
VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT,
} VkPeerMemoryFeatureFlagBits;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkPeerMemoryFeatureFlagBits
typedef VkPeerMemoryFeatureFlagBits VkPeerMemoryFeatureFlagBitsKHR;
```

- VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT specifies that the memory **can** be accessed as the source of any vkCmdCopy* command.
- VK_PEER_MEMORY_FEATURE_COPY_DST_BIT specifies that the memory **can** be accessed as the destination of any vkCmdCopy* command.
- VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT specifies that the memory **can** be read as any memory access type.
- VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT specifies that the memory **can** be written as any memory access type. Shader atomics are considered to be writes.

NOTE	The peer memory features of a memory heap also apply to any accesses that **may** be performed during image layout transitions.

VK_PEER_MEMORY_FEATURE_COPY_DST_BIT **must** be supported for all host local heaps and for at least one device-local memory heap.

If a device does not support a peer memory feature, it is still valid to use a resource that includes both local and peer memory bindings with the corresponding access type as long as only the local bindings are actually accessed. For example, an application doing split-frame rendering would use framebuffer attachments that include both local and peer memory bindings, but would scissor the rendering to only update local memory.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkPeerMemoryFeatureFlags;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkPeerMemoryFeatureFlags
typedef VkPeerMemoryFeatureFlags VkPeerMemoryFeatureFlagsKHR;
```

VkPeerMemoryFeatureFlags is a bitmask type for setting a mask of zero or more VkPeerMemoryFeatureFlagBits.

11.2.16. Opaque Capture Address Query

To query a 64-bit opaque capture address value from a memory object, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetDeviceMemoryOpaqueCaptureAddress(
    VkDevice                                    device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetDeviceMemoryOpaqueCaptureAddress
uint64_t vkGetDeviceMemoryOpaqueCaptureAddressKHR(
    VkDevice                                    device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

- device is the logical device that the memory object was allocated on.
- pInfo is a pointer to a VkDeviceMemoryOpaqueCaptureAddressInfo structure specifying the memory object to retrieve an address for.

The 64-bit return value is an opaque address representing the start of pInfo->memory.

If the memory object was allocated with a non-zero value of VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress, the return value **must** be the same address.

NOTE The expected usage for these opaque addresses is only for trace capture/replay tools to store these addresses in a trace and subsequently specify them during replay.

Valid Usage

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-None-03334
  The bufferDeviceAddress and bufferDeviceAddressCaptureReplay features **must** be enabled
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-10727

pInfo->memory **must** have been allocated using the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-03335
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-parameter
  pInfo **must** be a valid pointer to a valid VkDeviceMemoryOpaqueCaptureAddressInfo structure

The VkDeviceMemoryOpaqueCaptureAddressInfo structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDeviceMemoryOpaqueCaptureAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceMemory     memory;
} VkDeviceMemoryOpaqueCaptureAddressInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkDeviceMemoryOpaqueCaptureAddressInfo
typedef VkDeviceMemoryOpaqueCaptureAddressInfo
VkDeviceMemoryOpaqueCaptureAddressInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memory specifies the memory whose address is being queried.

Valid Usage

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-03336
  memory **must** have been allocated with VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT

Valid Usage (Implicit)

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEVICE_MEMORY_OPAQUE_CAPTURE_ADDRESS_INFO

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle

Chapter 12. Resource Creation

Vulkan supports two primary resource types: *buffers* and *images*. Resources are views of memory with associated formatting and dimensionality. Buffers provide access to raw arrays of bytes, whereas images **can** be multidimensional and **may** have associated metadata.

Other resource types, such as acceleration structures and micromaps use buffers as the backing store for opaque data structures.

12.1. Buffers

Buffers represent linear arrays of data which are used for various purposes by binding them to a graphics or compute pipeline via descriptor sets or certain commands, or by directly specifying them as parameters to certain commands.

Buffers are represented by `VkBuffer` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBuffer)
```

To create buffers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBuffer(
    VkDevice                                    device,
    const VkBufferCreateInfo*                   pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkBuffer*                                   pBuffer);
```

- `device` is the logical device that creates the buffer object.
- `pCreateInfo` is a pointer to a VkBufferCreateInfo structure containing parameters affecting creation of the buffer.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pBuffer` is a pointer to a VkBuffer handle in which the resulting buffer object is returned.

Implementations **may** fail to create a buffer if the effective usage includes the VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and `size` is greater than the maximum of `maxResourceHeapSize` and `maxSamplerHeapSize`. If this happens, VK_ERROR_OUT_OF_DEVICE_MEMORY will be returned.

NOTE

This is an issue identified with VK_EXT_descriptor_heap, which we plan to tighten up for the KHR version. Applications using VK_EXT_descriptor_heap may wish to avoid suballocating heaps from the same buffer, instead creating one buffer per heap, to avoid situations where this causes issues.

Valid Usage

- VUID-vkCreateBuffer-device-09664
  `device` **must** support at least one queue family with one of the VK_QUEUE_VIDEO_ENCODE_BIT_KHR, VK_QUEUE_VIDEO_DECODE_BIT_KHR, VK_QUEUE_SPARSE_BINDING_BIT, VK_QUEUE_TRANSFER_BIT, VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT capabilities
- VUID-vkCreateBuffer-flags-00911
  If the `flags` member of `pCreateInfo` includes VK_BUFFER_CREATE_SPARSE_BINDING_BIT, creating this `VkBuffer` **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed `VkPhysicalDeviceLimits ::sparseAddressSpaceSize`

Valid Usage (Implicit)

- VUID-vkCreateBuffer-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateBuffer-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkBufferCreateInfo structure
- VUID-vkCreateBuffer-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateBuffer-pBuffer-parameter
  `pBuffer` **must** be a valid pointer to a VkBuffer handle
- VUID-vkCreateBuffer-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkBufferCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCreateInfo {
    VkStructureType        sType;
    const void*            pNext;
    VkBufferCreateFlags    flags;
    VkDeviceSize           size;
    VkBufferUsageFlags     usage;
    VkSharingMode          sharingMode;
    uint32_t               queueFamilyIndexCount;
    const uint32_t*        pQueueFamilyIndices;
} VkBufferCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkBufferCreateFlagBits specifying additional parameters of the buffer.
- `size` is the size in bytes of the buffer to be created.
- `usage` is a bitmask of VkBufferUsageFlagBits specifying allowed usages of the buffer.
- `sharingMode` is a VkSharingMode value specifying the sharing mode of the buffer when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access this buffer. It is ignored if `sharingMode` is not VK_SHARING_MODE_CONCURRENT.

`usage` defines the effective usage flags for the buffer. If the `pNext` chain includes a VkBufferUsageFlags2CreateInfo structure, `usage` is ignored, and the effective usage flags are defined by VkBufferUsageFlags2CreateInfo::`usage`.

Valid Usage

- VUID-VkBufferCreateInfo-None-09499
  If the `pNext` chain does not include a VkBufferUsageFlags2CreateInfo structure, `usage` **must** be a valid combination of VkBufferUsageFlagBits values
- VUID-VkBufferCreateInfo-None-09500
  If the `pNext` chain does not include a VkBufferUsageFlags2CreateInfo structure, `usage` **must** not be 0
- VUID-VkBufferCreateInfo-size-00912
  `size` **must** be greater than `0`
- VUID-VkBufferCreateInfo-sharingMode-00913
  If `sharingMode` is VK_SHARING_MODE_CONCURRENT, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkBufferCreateInfo-maintenance11-13353
  If the `maintenance11` feature is enabled and `sharingMode` is VK_SHARING_MODE_CONCURRENT, then `queueFamilyIndexCount` **must** be greater than `0`

- VUID-VkBufferCreateInfo-sharingMode-00914
  If the maintenance11 feature is not enabled and sharingMode is VK_SHARING_MODE_CONCURRENT, then queueFamilyIndexCount **must** be greater than 1
- VUID-VkBufferCreateInfo-sharingMode-01419
  If sharingMode is VK_SHARING_MODE_CONCURRENT, each element of pQueueFamilyIndices **must** be unique and **must** be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties2 or vkGetPhysicalDeviceQueueFamilyProperties for the physicalDevice that was used to create device
- VUID-VkBufferCreateInfo-flags-00915
  If the sparseBinding feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_BINDING_BIT
- VUID-VkBufferCreateInfo-flags-00916
  If the sparseResidencyBuffer feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkBufferCreateInfo-flags-00917
  If the sparseResidencyAliased feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_SPARSE_ALIASED_BIT
- VUID-VkBufferCreateInfo-flags-00918
  If flags contains VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT or VK_BUFFER_CREATE_SPARSE_ALIASED_BIT, it **must** also contain VK_BUFFER_CREATE_SPARSE_BINDING_BIT
- VUID-VkBufferCreateInfo-pNext-00920
  If the pNext chain includes a VkExternalMemoryBufferCreateInfo structure, its handleTypes member **must** only contain bits that are also in VkExternalBufferProperties::externalMemoryProperties.compatibleHandleTypes, as returned by vkGetPhysicalDeviceExternalBufferProperties with pExternalBufferInfo->handleType equal to any one of the handle types specified in VkExternalMemoryBufferCreateInfo::handleTypes
- VUID-VkBufferCreateInfo-flags-01887
  If the protectedMemory feature is not enabled, flags **must** not contain VK_BUFFER_CREATE_PROTECTED_BIT
- VUID-VkBufferCreateInfo-None-01888
  If any of the bits VK_BUFFER_CREATE_SPARSE_BINDING_BIT, VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT, or VK_BUFFER_CREATE_SPARSE_ALIASED_BIT are set, VK_BUFFER_CREATE_PROTECTED_BIT **must** not also be set
- VUID-VkBufferCreateInfo-opaqueCaptureAddress-03337
  If VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress is not zero, flags **must** include VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT
- VUID-VkBufferCreateInfo-flags-03338
  If flags includes VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, the bufferDeviceAddressCaptureReplay feature **must** be enabled

- VUID-VkBufferCreateInfo-usage-04813
  If `usage` includes VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR or VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR, and `flags` does not include VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the `pNext` chain **must** include a VkVideoProfileListInfoKHR structure with `profileCount` greater than `0` and `pProfiles` including at least one VkVideoProfileInfoKHR structure with a `videoCodecOperation` member specifying a decode operation
- VUID-VkBufferCreateInfo-usage-04814
  If `usage` includes VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR or VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR, and `flags` does not include VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the `pNext` chain **must** include a VkVideoProfileListInfoKHR structure with `profileCount` greater than `0` and `pProfiles` including at least one VkVideoProfileInfoKHR structure with a `videoCodecOperation` member specifying an encode operation
- VUID-VkBufferCreateInfo-flags-08325
  If `flags` includes VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then `videoMaintenance1` **must** be enabled
- VUID-VkBufferCreateInfo-pNext-10783
  If the `pNext` chain includes a VkVideoProfileListInfoKHR structure and for any element of its `pProfiles` member `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the `videoDecodeVP9` feature **must** be enabled
- VUID-VkBufferCreateInfo-pNext-10249
  If the `pNext` chain includes a VkVideoProfileListInfoKHR structure and for any element of its `pProfiles` member `videoCodecOperation` is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the `videoEncodeAV1` feature **must** be enabled
- VUID-VkBufferCreateInfo-size-06409
  `size` **must** be less than or equal to VkPhysicalDeviceMaintenance4Properties::`maxBufferSize`
- VUID-VkBufferCreateInfo-usage-08097
  If `usage` includes VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed VkPhysicalDeviceDescriptorBufferPropertiesEXT::`samplerDescriptorBufferAddressSpaceSize` or VkPhysicalDeviceDescriptorBufferPropertiesEXT::`descriptorBufferAddressSpaceSize`
- VUID-VkBufferCreateInfo-usage-08098
  If `usage` includes VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, creating this `VkBuffer` **must** not cause the total required space for all currently valid buffers using this flag on the device to exceed VkPhysicalDeviceDescriptorBufferPropertiesEXT::`resourceDescriptorBufferAddressSpaceSize` or VkPhysicalDeviceDescriptorBufferPropertiesEXT::`descriptorBufferAddressSpaceSize`
- VUID-VkBufferCreateInfo-flags-08099
  If `flags` includes VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the `descriptorBufferCaptureReplay` feature **must** be enabled

- VUID-VkBufferCreateInfo-pNext-08100
  If the pNext chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, flags **must** contain VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
- VUID-VkBufferCreateInfo-usage-08101
  If usage includes VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT, the descriptorBufferPushDescriptors feature **must** be enabled
- VUID-VkBufferCreateInfo-usage-08102
  If usage includes VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors **must** be VK_FALSE
- VUID-VkBufferCreateInfo-usage-08103
  If usage includes VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT, usage **must** contain at least one of VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT or VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-VkBufferCreateInfo-flags-09641
  If flags includes VK_BUFFER_CREATE_PROTECTED_BIT, then the effective usage flags **must** not contain bits other than
  - VK_BUFFER_USAGE_TRANSFER_SRC_BIT
  - VK_BUFFER_USAGE_TRANSFER_DST_BIT
  - VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
  - VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT
  - VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT
  - VK_BUFFER_USAGE_STORAGE_BUFFER_BIT
  - VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT
  - VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR
  - VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR
  - VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT
- VUID-VkBufferCreateInfo-flags-11277
  If the protectedDescriptorHeaps property is not supported and the effective usage flags include the VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT flag, flags **must** not include the VK_BUFFER_CREATE_PROTECTED_BIT flag
- VUID-VkBufferCreateInfo-flags-11279
  If the sparseDescriptorHeaps property is not supported and the effective usage flags include the VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT flag, flags **must** not include any of the VK_BUFFER_CREATE_SPARSE_BINDING_BIT, VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT, or VK_BUFFER_CREATE_SPARSE_ALIASED_BIT flags

Valid Usage (Implicit)

- VUID-VkBufferCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_CREATE_INFO
- VUID-VkBufferCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkBufferOpaqueCaptureAddressCreateInfo, VkBufferUsageFlags2CreateInfo, VkExternalMemoryBufferCreateInfo, VkOpaqueCaptureDescriptorDataCreateInfoEXT, or VkVideoProfileListInfoKHR
- VUID-VkBufferCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBufferCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkBufferCreateFlagBits values
- VUID-VkBufferCreateInfo-sharingMode-parameter
  `sharingMode` **must** be a valid VkSharingMode value

The `VkBufferUsageFlags2CreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBufferUsageFlags2CreateInfo {
    VkStructureType        sType;
    const void*            pNext;
    VkBufferUsageFlags2    usage;
} VkBufferUsageFlags2CreateInfo;
```

```
// Provided by VK_KHR_extended_flags, VK_KHR_maintenance5
// Equivalent to VkBufferUsageFlags2CreateInfo
typedef VkBufferUsageFlags2CreateInfo VkBufferUsageFlags2CreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of VkBufferUsageFlagBits2 specifying allowed usages of the buffer.

If this structure is included in the `pNext` chain of a buffer creation structure, `usage` is used instead of the corresponding `usage` value passed in that creation structure, allowing additional usage flags to be specified.

If this structure is included in the `pNext` chain of a query structure including VkBufferUsageFlags, the usage flags of the buffer are returned in `flags` of this structure, allowing additional usage flags to be queried. The flags representable in VkBufferUsageFlags are still returned in the query structure in this case.

Valid Usage (Implicit)

- VUID-VkBufferUsageFlags2CreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_USAGE_FLAGS_2_CREATE_INFO
- VUID-VkBufferUsageFlags2CreateInfo-usage-parameter
  `usage` **must** be a valid combination of VkBufferUsageFlagBits2 values

Structure Chaining

Extends the structures

- VkBufferCreateInfo
- VkBufferViewCreateInfo
- VkDescriptorBufferBindingInfoEXT
- VkPhysicalDeviceExternalBufferInfo

Bits which **can** be set in VkBufferUsageFlags2CreateInfo::`usage`, specifying usage behavior of a buffer, are:

```
// Provided by VK_VERSION_1_4
// Flag bits for VkBufferUsageFlagBits2
typedef VkFlags64 VkBufferUsageFlagBits2;
static const VkBufferUsageFlagBits2 VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT =
0x00000001ULL;
static const VkBufferUsageFlagBits2 VK_BUFFER_USAGE_2_TRANSFER_DST_BIT =
0x00000002ULL;
static const VkBufferUsageFlagBits2 VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT =
0x00000004ULL;

// Provided by VK_EXT_device_generated_commands
static const VkBufferUsageFlagBits2 VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT =
0x80000000ULL;
```

```
// Provided by VK_KHR_extended_flags, VK_KHR_maintenance5
// Equivalent to VkBufferUsageFlagBits2
typedef VkBufferUsageFlagBits2 VkBufferUsageFlagBits2KHR;
```

- VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of VK_PIPELINE_STAGE_TRANSFER_BIT).
- VK_BUFFER_USAGE_2_TRANSFER_DST_BIT specifies that the buffer **can** be used as the destination of a transfer command.
- VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT specifies that the buffer **can** be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.
- VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT specifies that the buffer **can** be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.
- VK_BUFFER_USAGE_2_UNIFORM_BUFFER_BIT specifies that the buffer **can** be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC.
- VK_BUFFER_USAGE_2_STORAGE_BUFFER_BIT specifies that the buffer **can** be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC.
- VK_BUFFER_USAGE_2_INDEX_BUFFER_BIT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBindIndexBuffer2 and vkCmdBindIndexBuffer.
- VK_BUFFER_USAGE_2_VERTEX_BUFFER_BIT specifies that the buffer is suitable for passing as an element of the pBuffers array to vkCmdBindVertexBuffers.
- VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdDrawIndirect, vkCmdDrawIndexedIndirect, vkCmdDrawMeshTasksIndirectEXT, vkCmdDrawMeshTasksIndirectCountEXT, or vkCmdDispatchIndirect. It is also suitable for passing as the underlying buffer of either the preprocessAddress or sequenceCountAddress members of VkGeneratedCommandsInfoEXT.
- VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBeginConditionalRenderingEXT.
- VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT specifies that the buffer is suitable for using for binding as a transform feedback buffer with vkCmdBindTransformFeedbackBuffers2EXT or vkCmdBindTransformFeedbackBuffersEXT.
- VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT specifies that the buffer is suitable for using as a counter buffer with vkCmdBeginTransformFeedback2EXT, vkCmdEndTransformFeedback2EXT, vkCmdBeginTransformFeedbackEXT, and vkCmdEndTransformFeedbackEXT.
- VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a

descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT.

- VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.
- VK_BUFFER_USAGE_2_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR specifies that the buffer is suitable for use as a Shader Binding Table.
- VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR specifies that the buffer is suitable for use as a read-only input to an acceleration structure build.
- VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR specifies that the buffer is suitable for storage space for a VkAccelerationStructureKHR.
- VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT specifies that the buffer **can** be used to retrieve a buffer device address via vkGetBufferDeviceAddress and use that address to access the buffer's memory from a shader.
- VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR specifies that the buffer **can** be used as the source video bitstream buffer in a video decode operation.
- VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR is reserved for future use.
- VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR specifies that the buffer **can** be used as the destination video bitstream buffer in a video encode operation.
- VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR is reserved for future use.
- VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT specifies that the buffer **can** be used as a preprocess buffer for Device-Generated Commands.
- VK_BUFFER_USAGE_2_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT specifies that the buffer **can** be used as a read-only VkMicromapEXT build input, which includes the `data` and `triangleArray` parameters
- VK_BUFFER_USAGE_2_MICROMAP_STORAGE_BIT_EXT specifies that the buffer **can** be used to create VkMicromapEXT objects.
- VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT specifies that the buffer **can** be used as a destination buffer in memory decompression.
- VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT specifies that the buffer **can** be used as a descriptor heap.

```
// Provided by VK_VERSION_1_4
typedef VkFlags64 VkBufferUsageFlags2;
```

```
// Provided by VK_KHR_extended_flags, VK_KHR_maintenance5
// Equivalent to VkBufferUsageFlags2
typedef VkBufferUsageFlags2 VkBufferUsageFlags2KHR;
```

VkBufferUsageFlags2 is a bitmask type for setting a mask of zero or more VkBufferUsageFlagBits2.

Bits which **can** be set in VkBufferCreateInfo::usage, specifying usage behavior of a buffer, are:

WARNING	This functionality is superseded by VkBufferUsageFlagBits2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
typedef enum VkBufferUsageFlagBits {
    VK_BUFFER_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_BUFFER_USAGE_TRANSFER_DST_BIT = 0x00000002,

    VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT_KHR =
VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT,
} VkBufferUsageFlagBits;
```

- VK_BUFFER_USAGE_TRANSFER_SRC_BIT specifies that the buffer **can** be used as the source of a *transfer command* (see the definition of VK_PIPELINE_STAGE_TRANSFER_BIT).
- VK_BUFFER_USAGE_TRANSFER_DST_BIT specifies that the buffer **can** be used as the destination of a transfer command.
- VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT specifies that the buffer **can** be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.
- VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT specifies that the buffer **can** be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.
- VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT specifies that the buffer **can** be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC.
- VK_BUFFER_USAGE_STORAGE_BUFFER_BIT specifies that the buffer **can** be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC.
- VK_BUFFER_USAGE_INDEX_BUFFER_BIT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBindIndexBuffer2 and vkCmdBindIndexBuffer.
- VK_BUFFER_USAGE_VERTEX_BUFFER_BIT specifies that the buffer is suitable for passing as an element of the pBuffers array to vkCmdBindVertexBuffers.
- VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdDrawIndirect, vkCmdDrawIndexedIndirect, vkCmdDrawMeshTasksIndirectEXT, vkCmdDrawMeshTasksIndirectCountEXT, or vkCmdDispatchIndirect. It is also suitable for passing as the underlying buffer of either the preprocessAddress or sequenceCountAddress members of VkGeneratedCommandsInfoEXT.
- VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBeginConditionalRenderingEXT.
- VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT specifies that the buffer is suitable for using for binding as a transform feedback buffer with vkCmdBindTransformFeedbackBuffers2EXT or vkCmdBindTransformFeedbackBuffersEXT.
- VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT specifies that the buffer is suitable for using as a counter buffer with vkCmdBeginTransformFeedback2EXT, vkCmdEndTransformFeedback2EXT, vkCmdBeginTransformFeedbackEXT, and vkCmdEndTransformFeedbackEXT.
- VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors **must** also specify VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT.
- VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.

- VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT specifies that the buffer, when bound, **can** be used by the implementation to support push descriptors when using descriptor buffers.
- VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT specifies that when building a VkMicromapEXT, the buffer **can** be used as a read-only micromap build input, which includes the `data` and `triangleArray` parameters
- VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT specifies that the buffer **can** be used to create VkMicromapEXT objects.
- VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR specifies that the buffer is suitable for use as a Shader Binding Table.
- VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR specifies that the buffer is suitable for use as a read-only input to an acceleration structure build.
- VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR specifies that the buffer is suitable for storage space for a VkAccelerationStructureKHR.
- VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT specifies that the buffer **can** be used to retrieve a buffer device address via vkGetBufferDeviceAddress and use that address to access the buffer's memory from a shader.
- VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR specifies that the buffer **can** be used as the source video bitstream buffer in a video decode operation.
- VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR is reserved for future use.
- VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR specifies that the buffer **can** be used as the destination video bitstream buffer in a video encode operation.
- VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR is reserved for future use.
- VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT specifies that the buffer **can** be used as a descriptor heap.

WARNING	This functionality is superseded by VkBufferUsageFlags2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferUsageFlags;
```

`VkBufferUsageFlags` is a bitmask type for setting a mask of zero or more VkBufferUsageFlagBits.

Bits which **can** be set in VkBufferCreateInfo::`flags`, specifying additional parameters of a buffer, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBufferCreateFlagBits {
    VK_BUFFER_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_BUFFER_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
  // Provided by VK_VERSION_1_1
    VK_BUFFER_CREATE_PROTECTED_BIT = 0x00000008,
  // Provided by VK_VERSION_1_2
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000010,
  // Provided by VK_EXT_descriptor_buffer
    VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000020,
  // Provided by VK_KHR_video_maintenance1
    VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00000040,
  // Provided by VK_KHR_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkBufferCreateFlagBits;
```

- VK_BUFFER_CREATE_SPARSE_BINDING_BIT specifies that the buffer will be backed using sparse memory binding.
- VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT specifies that the buffer **can** be partially backed using sparse memory binding. Buffers created with this flag **must** also be created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag.
- VK_BUFFER_CREATE_SPARSE_ALIASED_BIT specifies that the buffer will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another buffer (or another portion of the same buffer). Buffers created with this flag **must** also be created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag.
- VK_BUFFER_CREATE_PROTECTED_BIT specifies that the buffer is a protected buffer.
- VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT specifies that the buffer's address **can** be saved and reused on a subsequent run (e.g. for trace capture and replay), see VkBufferOpaqueCaptureAddressCreateInfo for more detail.
- VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the buffer **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.
- VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR specifies that the buffer **can** be used in video coding operations without having to specify at buffer creation time the set of video profiles the buffer will be used with.

See Sparse Resource Features and Physical Device Features for details of the sparse memory features supported on a device.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferCreateFlags;
```

VkBufferCreateFlags is a bitmask type for setting a mask of zero or more VkBufferCreateFlagBits.

To define a set of external memory handle types that **may** be used as backing store for a buffer, add a VkExternalMemoryBufferCreateInfo structure to the pNext chain of the VkBufferCreateInfo structure. The VkExternalMemoryBufferCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryBufferCreateInfo {
    VkStructureType                    sType;
    const void*                        pNext;
    VkExternalMemoryHandleTypeFlags    handleTypes;
} VkExternalMemoryBufferCreateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExternalMemoryBufferCreateInfo
typedef VkExternalMemoryBufferCreateInfo VkExternalMemoryBufferCreateInfoKHR;
```

NOTE A VkExternalMemoryBufferCreateInfo structure with a non-zero handleTypes field must be included in the creation parameters for a buffer that will be bound to memory that is either exported or imported.

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleTypes is zero or a bitmask of VkExternalMemoryHandleTypeFlagBits specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryBufferCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_BUFFER_CREATE_INFO
- VUID-VkExternalMemoryBufferCreateInfo-handleTypes-parameter
  If handleTypes is not 0, handleTypes **must** be a valid combination of VkExternalMemoryHandleTypeFlagBits values

Structure Chaining

Extends the structure

- VkBufferCreateInfo

To request a specific device address for a buffer, add a VkBufferOpaqueCaptureAddressCreateInfo structure to the pNext chain of the VkBufferCreateInfo structure. The VkBufferOpaqueCaptureAddressCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferOpaqueCaptureAddressCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           opaqueCaptureAddress;
} VkBufferOpaqueCaptureAddressCreateInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkBufferOpaqueCaptureAddressCreateInfo
typedef VkBufferOpaqueCaptureAddressCreateInfo
VkBufferOpaqueCaptureAddressCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureAddress` is the opaque capture address requested for the buffer.

If `opaqueCaptureAddress` is zero, no specific address is requested.

If `opaqueCaptureAddress` is not zero, then it **should** be an address retrieved from vkGetBufferOpaqueCaptureAddress for an identically created buffer on the same implementation.

If this structure is not present, it is as if `opaqueCaptureAddress` is zero.

Applications **should** avoid creating buffers with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag to all buffers that use VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT, and during capture will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, to avoid address space allocation conflicts.

Valid Usage (Implicit)

- VUID-VkBufferOpaqueCaptureAddressCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_OPAQUE_CAPTURE_ADDRESS_CREATE_INFO

Structure Chaining

Extends the structure

- VkBufferCreateInfo

To destroy a buffer, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBuffer(
    VkDevice                                    device,
    VkBuffer                                    buffer,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the buffer.
- `buffer` is the buffer to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyBuffer-buffer-00922
  All submitted commands that refer to `buffer`, either directly or via a `VkBufferView`, **must** have completed execution
- VUID-vkDestroyBuffer-buffer-00923
  If `VkAllocationCallbacks` were provided when `buffer` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBuffer-buffer-00924
  If no `VkAllocationCallbacks` were provided when `buffer` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyBuffer-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyBuffer-buffer-parameter
  If `buffer` is not VK_NULL_HANDLE, `buffer` **must** be a valid VkBuffer handle
- VUID-vkDestroyBuffer-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyBuffer-buffer-parent
  If `buffer` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `buffer` **must** be externally synchronized

12.2. Buffer Views

A *buffer view* represents a contiguous range of a buffer and a specific format to be used to interpret the data. Buffer views are used to enable shaders to access buffer contents using image operations. In order to create a valid buffer view, the buffer **must** have been created with at least one of the following usage flags:

- VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT

Buffer views are represented by `VkBufferView` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferView)
```

To create a buffer view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateBufferView(
    VkDevice                                    device,
    const VkBufferViewCreateInfo*               pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkBufferView*                               pView);
```

- `device` is the logical device that creates the buffer view.
- `pCreateInfo` is a pointer to a VkBufferViewCreateInfo structure containing parameters to be used to create the buffer view.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pView` is a pointer to a VkBufferView handle in which the resulting buffer view object is returned.

Valid Usage

- VUID-vkCreateBufferView-device-09665
  `device` **must** support at least one queue family with one of the VK_QUEUE_COMPUTE_BIT or VK_QUEUE_GRAPHICS_BIT capabilities

Valid Usage (Implicit)

- VUID-vkCreateBufferView-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateBufferView-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkBufferViewCreateInfo structure
- VUID-vkCreateBufferView-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateBufferView-pView-parameter
  `pView` **must** be a valid pointer to a VkBufferView handle
- VUID-vkCreateBufferView-device-queuecount
  The device **must** have been created with at least `1` queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkBufferViewCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferViewCreateInfo {
    VkStructureType            sType;
    const void*                pNext;
    VkBufferViewCreateFlags    flags;
    VkBuffer                   buffer;
    VkFormat                   format;
    VkDeviceSize               offset;
    VkDeviceSize               range;
} VkBufferViewCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `buffer` is a VkBuffer on which the view will be created.

- `format` is a VkFormat describing the format of the data elements in the buffer.
- `offset` is an offset in bytes from the base address of the buffer. Accesses to the buffer view from shaders use addressing that is relative to this starting offset.
- `range` is a size in bytes of the buffer view. If `range` is equal to VK_WHOLE_SIZE, the range from `offset` to the end of the buffer is used. If VK_WHOLE_SIZE is used and the remaining size of the buffer is not a multiple of the texel block size of `format`, the nearest smaller multiple is used.

The buffer view has a *buffer view usage* identifying which descriptor types can be created from it. This usage **can** be defined by including the VkBufferUsageFlags2CreateInfo structure in the `pNext` chain, and specifying the `usage` value there. If this structure is not included, it is equal to the VkBufferCreateInfo::`usage` value used to create `buffer`.

Valid Usage

- VUID-VkBufferViewCreateInfo-offset-00925
  `offset` **must** be less than the size of `buffer`
- VUID-VkBufferViewCreateInfo-range-00928
  If `range` is not equal to VK_WHOLE_SIZE, `range` **must** be greater than `0`
- VUID-VkBufferViewCreateInfo-range-00929
  If `range` is not equal to VK_WHOLE_SIZE, `range` **must** be an integer multiple of the texel block size of `format`
- VUID-VkBufferViewCreateInfo-range-00930
  If `range` is not equal to VK_WHOLE_SIZE, the number of texel buffer elements given by (⌊`range` / (texel block size)⌋ × (texels per block)) where texel block size and texels per block are as defined in the Compatible Formats table for `format`, **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxTexelBufferElements`
- VUID-VkBufferViewCreateInfo-offset-00931
  If `range` is not equal to VK_WHOLE_SIZE, the sum of `offset` and `range` **must** be less than or equal to the size of `buffer`
- VUID-VkBufferViewCreateInfo-range-04059
  If `range` is equal to VK_WHOLE_SIZE, the number of texel buffer elements given by (⌊(size - `offset`) / (texel block size)⌋ × (texels per block)) where size is the size of `buffer`, and texel block size and texels per block are as defined in the Compatible Formats table for `format`, **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxTexelBufferElements`
- VUID-VkBufferViewCreateInfo-buffer-00932
  `buffer` **must** have been created with at least one of the VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT usage flags set
- VUID-VkBufferViewCreateInfo-format-08778
  If the buffer view usage contains VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT, then format features of `format` **must** contain VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT
- VUID-VkBufferViewCreateInfo-format-08779
  If the buffer view usage contains VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT, then

format features of `format` **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

- VUID-VkBufferViewCreateInfo-buffer-00935
  If `buffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkBufferViewCreateInfo-buffer-02750
  If `buffer` was created with the VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT usage flag set, `offset` **must** be a multiple of the effective alignment requirement of `format` for VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER as defined by `minTexelBufferOffsetAlignment`
- VUID-VkBufferViewCreateInfo-buffer-02751
  If `buffer` was created with the VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT usage flag set, `offset` **must** be a multiple of the effective alignment requirement of `format` for VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER as defined by `minTexelBufferOffsetAlignment`
- VUID-VkBufferViewCreateInfo-pNext-06782
  If the `pNext` chain includes a VkExportMetalObjectCreateInfoEXT structure, its `exportObjectType` member **must** be VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT
- VUID-VkBufferViewCreateInfo-pNext-08780
  If the `pNext` chain includes a VkBufferUsageFlags2CreateInfo, its `usage` **must** not contain any other bit than VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT
- VUID-VkBufferViewCreateInfo-pNext-08781
  If the `pNext` chain includes a VkBufferUsageFlags2CreateInfo, its `usage` **must** be a subset of the VkBufferCreateInfo::`usage` specified or VkBufferUsageFlags2CreateInfo::`usage` from VkBufferCreateInfo::`pNext` when creating `buffer`

Valid Usage (Implicit)

- VUID-VkBufferViewCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_VIEW_CREATE_INFO
- VUID-VkBufferViewCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkBufferUsageFlags2CreateInfo or VkExportMetalObjectCreateInfoEXT
- VUID-VkBufferViewCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type VkExportMetalObjectCreateInfoEXT
- VUID-VkBufferViewCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkBufferViewCreateInfo-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle

- VUID-VkBufferViewCreateInfo-format-parameter
  `format` **must** be a valid VkFormat value

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferViewCreateFlags;
```

`VkBufferViewCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

To destroy a buffer view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyBufferView(
    VkDevice                                    device,
    VkBufferView                                bufferView,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the buffer view.
- `bufferView` is the buffer view to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyBufferView-bufferView-00936
  All submitted commands that refer to `bufferView` **must** have completed execution
- VUID-vkDestroyBufferView-bufferView-00937
  If `VkAllocationCallbacks` were provided when `bufferView` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBufferView-bufferView-00938
  If no `VkAllocationCallbacks` were provided when `bufferView` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyBufferView-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyBufferView-bufferView-parameter
  If `bufferView` is not VK_NULL_HANDLE, `bufferView` **must** be a valid VkBufferView handle
- VUID-vkDestroyBufferView-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyBufferView-bufferView-parent

If `bufferView` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `bufferView` **must** be externally synchronized

12.2.1. Buffer View Format Features

Valid uses of a VkBufferView **may** depend on the buffer view's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the `VK_KHR_format_feature_flags2` extension is supported, then the buffer view's set of *format features* is the value of VkFormatProperties3::`bufferFeatures` found by calling vkGetPhysicalDeviceFormatProperties2 on the same `format` as VkBufferViewCreateInfo::`format`.

12.3. Buffer Device Addresses

To query a 64-bit buffer device address value which can be used to identify a buffer to API commands or through which buffer memory **can** be accessed, call:

```
// Provided by VK_VERSION_1_2
VkDeviceAddress vkGetBufferDeviceAddress(
    VkDevice                                    device,
    const VkBufferDeviceAddressInfo*            pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetBufferDeviceAddress
VkDeviceAddress vkGetBufferDeviceAddressKHR(
    VkDevice                                    device,
    const VkBufferDeviceAddressInfo*            pInfo);
```

- `device` is the logical device that the buffer was created on.
- `pInfo` is a pointer to a VkBufferDeviceAddressInfo structure specifying the buffer to retrieve an address for.

The 64-bit return value, `bufferBaseAddress`, is an address of the start of `pInfo->buffer`. Addresses in the range [`bufferBaseAddress`, `bufferBaseAddress` + VkBufferCreateInfo::`size`) **can** be used to access the memory bound to this buffer on the device.

A value of zero is reserved as a "null" pointer and **must** not be returned as a valid buffer device address.

If the buffer was created with a non-zero value of VkBufferOpaqueCaptureAddressCreateInfo

::opaqueCaptureAddress, the return value will be the same address that was returned at capture time.

The returned address **must** satisfy alignment requirements if certain conditions are met, outlined below. The required alignment **must** be observed for either the returned address of the buffer, or, if the buffer was created without VK_BUFFER_CREATE_SPARSE_BINDING_BIT, the returned address of the buffer minus VkBindBufferMemoryInfo::memoryOffset or equivalent vkBindBufferMemory offset. The required alignment is the maximum of the following values:

- The value of VkMemoryRequirements::alignment queried via vkGetBufferMemoryRequirements for pInfo->buffer
- minStorageBufferOffsetAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_STORAGE_BUFFER_BIT
- minUniformBufferOffsetAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_UNIFORM_BUFFER_BIT
- minTexelBufferOffsetAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT
- resourceHeapAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT
- samplerHeapAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT
- descriptorBufferOffsetAlignment if pInfo->buffer was created with VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT or VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT
- 256, if pInfo->buffer was created with VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR, and VK_KHR_device_address_commands is supported

If multiple VkBuffer objects are bound to overlapping ranges of VkDeviceMemory, implementations **may** return address ranges which overlap. In this case, it is ambiguous which VkBuffer is associated with any given device address. For purposes of valid usage, if multiple VkBuffer objects **can** be attributed to a device address, a VkBuffer is selected such that valid usage passes, if it exists.

Valid Usage

- VUID-vkGetBufferDeviceAddress-bufferDeviceAddress-03324
  The bufferDeviceAddress feature **must** be enabled, and at least one of the following conditions **must** be met
  - buffer is sparse
  - buffer is bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkGetBufferDeviceAddress-device-03325
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferDeviceAddress-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetBufferDeviceAddress-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkBufferDeviceAddressInfo structure

The `VkBufferDeviceAddressInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkBufferDeviceAddressInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkBufferDeviceAddressInfo;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkBufferDeviceAddressInfo
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` specifies the buffer whose address is being queried.

Valid Usage

- VUID-VkBufferDeviceAddressInfo-buffer-02601
  `buffer` **must** have been created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag set

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_INFO
- VUID-VkBufferDeviceAddressInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBufferDeviceAddressInfo-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle

To query a 64-bit buffer opaque capture address, call:

```
// Provided by VK_VERSION_1_2
uint64_t vkGetBufferOpaqueCaptureAddress(
    VkDevice                                    device,
    const VkBufferDeviceAddressInfo*            pInfo);
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to vkGetBufferOpaqueCaptureAddress
uint64_t vkGetBufferOpaqueCaptureAddressKHR(
    VkDevice                                    device,
    const VkBufferDeviceAddressInfo*            pInfo);
```

- `device` is the logical device that the buffer was created on.
- `pInfo` is a pointer to a VkBufferDeviceAddressInfo structure specifying the buffer to retrieve an address for.

The 64-bit return value is an opaque capture address of the start of `pInfo->buffer`.

If the buffer was created with a non-zero value of VkBufferOpaqueCaptureAddressCreateInfo ::`opaqueCaptureAddress` the return value **must** be the same address.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureAddress-None-03326
  The `bufferDeviceAddress` and `bufferDeviceAddressCaptureReplay` features **must** be enabled
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-10725
  `pInfo->buffer` **must** have been created with the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag
- VUID-vkGetBufferOpaqueCaptureAddress-device-03327
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureAddress-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkBufferDeviceAddressInfo structure

The `VkStridedDeviceAddressRegionKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkStridedDeviceAddressRegionKHR {
    VkDeviceAddress    deviceAddress;
    VkDeviceSize       stride;
    VkDeviceSize       size;
} VkStridedDeviceAddressRegionKHR;
```

- `deviceAddress` is the device address (as returned by the vkGetBufferDeviceAddress command) at which the region starts, or zero if the region is unused.
- `stride` is the byte stride between consecutive elements.
- `size` is the size in bytes of the region starting at `deviceAddress`.

Valid Usage

- VUID-VkStridedDeviceAddressRegionKHR-size-04631
  If `size` is not zero, all addresses between `deviceAddress` and `deviceAddress` + `size` - 1 **must** be in the buffer device address range of the same buffer
- VUID-VkStridedDeviceAddressRegionKHR-size-04632
  If `size` is not zero, `stride` **must** be less than or equal to the size of the buffer from which `deviceAddress` was queried

Valid Usage (Implicit)

- VUID-VkStridedDeviceAddressRegionKHR-deviceAddress-parameter
  If `deviceAddress` is not `0`, `deviceAddress` **must** be a valid VkDeviceAddress value

12.4. Images

Images are specialized resources that have multi-dimensional access, as outlined in the Images chapter. Images **can** be used for various purposes, such as rendering attachments, for copy operations, or accessed through shaders via resource descriptors.

Images are represented by `VkImage` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImage)
```

To create images, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImage(
    VkDevice                                    device,
    const VkImageCreateInfo*                    pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkImage*                                    pImage);
```

- `device` is the logical device that creates the image.
- `pCreateInfo` is a pointer to a VkImageCreateInfo structure containing parameters to be used to create the image.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pImage` is a pointer to a VkImage handle in which the resulting image object is returned.

Valid Usage

- VUID-vkCreateImage-device-09666
  `device` **must** support at least one queue family with one of the VK_QUEUE_VIDEO_ENCODE_BIT_KHR, VK_QUEUE_VIDEO_DECODE_BIT_KHR, VK_QUEUE_SPARSE_BINDING_BIT, VK_QUEUE_TRANSFER_BIT, VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT capabilities
- VUID-vkCreateImage-flags-00939
  If the `flags` member of `pCreateInfo` includes VK_IMAGE_CREATE_SPARSE_BINDING_BIT, creating this `VkImage` **must** not cause the total required sparse memory for all currently valid sparse resources on the device to exceed `VkPhysicalDeviceLimits::sparseAddressSpaceSize`

Valid Usage (Implicit)

- VUID-vkCreateImage-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateImage-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkImageCreateInfo structure
- VUID-vkCreateImage-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateImage-pImage-parameter
  `pImage` **must** be a valid pointer to a VkImage handle
- VUID-vkCreateImage-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_COMPRESSION_EXHAUSTED_EXT
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkImageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCreateInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkImageCreateFlags       flags;
    VkImageType              imageType;
    VkFormat                 format;
    VkExtent3D               extent;
    uint32_t                 mipLevels;
    uint32_t                 arrayLayers;
    VkSampleCountFlagBits    samples;
    VkImageTiling            tiling;
    VkImageUsageFlags        usage;
    VkSharingMode            sharingMode;
    uint32_t                 queueFamilyIndexCount;
    const uint32_t*          pQueueFamilyIndices;
    VkImageLayout            initialLayout;
} VkImageCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkImageCreateFlagBits describing additional parameters of the image.
- `imageType` is a VkImageType value specifying the basic dimensionality of the image. Layers in array textures do not count as a dimension for the purposes of the image type.
- `format` is a VkFormat describing the format and type of the texel blocks that will be contained in the image.
- `extent` is a VkExtent3D describing the number of texels/pixels in each dimension of the base level.

- `mipLevels` describes the number of levels of detail available for minified sampling of the image.
- `arrayLayers` is the number of layers in the image.
- `samples` is a VkSampleCountFlagBits value specifying the number of samples per texel.
- `tiling` is a VkImageTiling value specifying the tiling arrangement of the texel blocks in memory.
- `usage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the image.
- `sharingMode` is a VkSharingMode value specifying the sharing mode of the image when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access this image. It is ignored if `sharingMode` is not VK_SHARING_MODE_CONCURRENT.
- `initialLayout` is a VkImageLayout value specifying the initial VkImageLayout of all image subresources of the image. See Image Layouts.

`flags` defines the effective create flags for the image. If the `pNext` chain includes a VkImageCreateFlags2CreateInfoKHR structure, `flags` is ignored, and the effective create flags are defined by VkImageCreateFlags2CreateInfoKHR::`flags`.

`usage` defines the effective usage flags for the image. If the `pNext` chain includes a VkImageUsageFlags2CreateInfoKHR structure, `usage` is ignored, and the effective usage flags are defined by VkImageUsageFlags2CreateInfoKHR::`usage`.

Images created with `tiling` equal to VK_IMAGE_TILING_LINEAR have further restrictions on their limits and capabilities compared to images created with `tiling` equal to VK_IMAGE_TILING_OPTIMAL. Creation of images with tiling VK_IMAGE_TILING_LINEAR **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is VK_IMAGE_TYPE_2D
- `format` is not a depth/stencil format
- `mipLevels` is 1
- `arrayLayers` is 1
- `samples` is VK_SAMPLE_COUNT_1_BIT
- `usage` only includes VK_IMAGE_USAGE_TRANSFER_SRC_BIT and/or VK_IMAGE_USAGE_TRANSFER_DST_BIT

Images created with one of the formats that require a sampler $Y'C_BC_R$ conversion, have further restrictions on their limits and capabilities compared to images created with other formats. Creation of images with a format requiring $Y'C_BC_R$ conversion **may** not be supported unless other parameters meet all of the constraints:

- `imageType` is VK_IMAGE_TYPE_2D
- `mipLevels` is 1
- `arrayLayers` is 1, unless the `ycbcrImageArrays` feature is enabled, or otherwise indicated by VkImageFormatProperties::`maxArrayLayers`, as returned by

vkGetPhysicalDeviceImageFormatProperties

- `samples` is VK_SAMPLE_COUNT_1_BIT

Implementations **may** support additional limits and capabilities beyond those listed above.

To determine the set of valid `usage` bits for a given format, call vkGetPhysicalDeviceFormatProperties.

If the size of the resultant image would exceed `maxResourceSize`, then vkCreateImage **must** fail and return VK_ERROR_OUT_OF_DEVICE_MEMORY. This failure **may** occur even when all image creation parameters satisfy their valid usage requirements.

If the implementation reports VK_TRUE in VkPhysicalDeviceHostImageCopyProperties::`identicalMemoryTypeRequirements`, usage of VK_IMAGE_USAGE_HOST_TRANSFER_BIT **must** not affect the memory type requirements of the image as described in Sparse Resource Memory Requirements and Resource Memory Association.

NOTE

For images created without the VK_IMAGE_CREATE_EXTENDED_USAGE_BIT flag set, a `usage` bit is valid if it is supported for the format the image is created with.

For images created with VK_IMAGE_CREATE_EXTENDED_USAGE_BIT a `usage` bit is valid if it is supported for at least one of the formats a `VkImageView` created from the image **can** have (see Image Views for more detail).

Image Creation Limits

Valid values for some image creation parameters are limited by a numerical upper bound or by inclusion in a bitset. For example, VkImageCreateInfo::`arrayLayers` is limited by `imageCreateMaxArrayLayers`, defined below; and VkImageCreateInfo::`samples` is limited by `imageCreateSampleCounts`, also defined below.

Several limiting values are defined below, as well as assisting values from which the limiting values are derived. The limiting values are referenced by the relevant valid usage statements of VkImageCreateInfo.

- Let `uint64_t imageCreateDrmFormatModifiers[]` be the set of Linux DRM format modifiers that the resultant image **may** have.
  - If `tiling` is not VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then `imageCreateDrmFormatModifiers` is empty.
  - If VkImageCreateInfo::`pNext` contains VkImageDrmFormatModifierExplicitCreateInfoEXT, then `imageCreateDrmFormatModifiers` contains exactly one modifier, VkImageDrmFormatModifierExplicitCreateInfoEXT::`drmFormatModifier`.
  - If VkImageCreateInfo::`pNext` contains VkImageDrmFormatModifierListCreateInfoEXT, then `imageCreateDrmFormatModifiers` contains the entire array VkImageDrmFormatModifierListCreateInfoEXT::`pDrmFormatModifiers`.
- Let `VkBool32 imageCreateMaybeLinear` indicate if the resultant image may be linear.

- If `tiling` is VK_IMAGE_TILING_LINEAR, then `imageCreateMaybeLinear` is VK_TRUE.
- If `tiling` is VK_IMAGE_TILING_OPTIMAL, then `imageCreateMaybeLinear` is VK_FALSE.
- If `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then `imageCreateMaybeLinear` is VK_TRUE if and only if `imageCreateDrmFormatModifiers` contains `DRM_FORMAT_MOD_LINEAR`.

- Let `VkFormatFeatureFlags imageCreateFormatFeatures` be the set of valid *format features* available during image creation.
  - If `tiling` is VK_IMAGE_TILING_LINEAR, then `imageCreateFormatFeatures` is the value of VkFormatProperties::`linearTilingFeatures` found by calling vkGetPhysicalDeviceFormatProperties with parameter `format` equal to VkImageCreateInfo::`format`.
  - If `tiling` is VK_IMAGE_TILING_OPTIMAL, then `imageCreateFormatFeatures` is the value of VkFormatProperties::`optimalTilingFeatures` found by calling vkGetPhysicalDeviceFormatProperties with parameter `format` equal to VkImageCreateInfo::`format`.
  - If `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the value of `imageCreateFormatFeatures` is found by calling vkGetPhysicalDeviceFormatProperties2 with VkImageFormatProperties::`format` equal to VkImageCreateInfo::`format` and with VkDrmFormatModifierPropertiesListEXT chained into VkFormatProperties2; by collecting all members of the returned array VkDrmFormatModifierPropertiesListEXT::`pDrmFormatModifierProperties` whose `drmFormatModifier` belongs to `imageCreateDrmFormatModifiers`; and by taking the bitwise intersection, over the collected array members, of `drmFormatModifierTilingFeatures`. (The resultant `imageCreateFormatFeatures` **may** be empty).

- Let `VkImageFormatProperties2 imageCreateImageFormatPropertiesList[]` be the list of structures obtained by calling vkGetPhysicalDeviceImageFormatProperties2, possibly multiple times, as follows:
  - The parameters VkPhysicalDeviceImageFormatInfo2::`format`, `imageType`, `tiling`, `usage`, and `flags` **must** be equal to those in VkImageCreateInfo.
  - If VkImageCreateInfo::`pNext` contains a VkExternalMemoryImageCreateInfo structure whose `handleTypes` is not `0`, then VkPhysicalDeviceImageFormatInfo2::`pNext` **must** contain a VkPhysicalDeviceExternalImageFormatInfo structure whose `handleType` is not `0`; and vkGetPhysicalDeviceImageFormatProperties2 **must** be called for each handle type in VkExternalMemoryImageCreateInfo::`handleTypes`, successively setting VkPhysicalDeviceExternalImageFormatInfo::`handleType` on each call.
  - If VkImageCreateInfo::`pNext` contains no VkExternalMemoryImageCreateInfo structure, or contains a structure whose `handleTypes` is `0`, then VkPhysicalDeviceImageFormatInfo2::`pNext` **must** either contain no VkPhysicalDeviceExternalImageFormatInfo structure, or contain a structure whose `handleType` is `0`.
  - If VkImageCreateInfo::`pNext` contains a VkVideoProfileListInfoKHR structure then VkPhysicalDeviceImageFormatInfo2::`pNext` **must** also contain the same VkVideoProfileListInfoKHR structure on each call.

- If `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then:
  - VkPhysicalDeviceImageFormatInfo2::`pNext` **must** contain a VkPhysicalDeviceImageDrmFormatModifierInfoEXT structure where `sharingMode` is equal to VkImageCreateInfo::`sharingMode`;
  - if `sharingMode` is VK_SHARING_MODE_CONCURRENT, then `queueFamilyIndexCount` and `pQueueFamilyIndices` **must** be equal to those in VkImageCreateInfo;
  - if `flags` contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, then the VkImageFormatListCreateInfo structure included in the `pNext` chain of VkPhysicalDeviceImageFormatInfo2 **must** be equivalent to the one included in the `pNext` chain of VkImageCreateInfo;
  - if VkImageCreateInfo::`pNext` contains a VkImageCompressionControlEXT structure, then the VkPhysicalDeviceImageFormatInfo2::`pNext` chain **must** contain an equivalent structure;
  - vkGetPhysicalDeviceImageFormatProperties2 **must** be called for each modifier in `imageCreateDrmFormatModifiers`, successively setting VkPhysicalDeviceImageDrmFormatModifierInfoEXT::`drmFormatModifier` on each call.
- If `tiling` is not VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then VkPhysicalDeviceImageFormatInfo2::`pNext` **must** contain no VkPhysicalDeviceImageDrmFormatModifierInfoEXT structure.
- If any call to vkGetPhysicalDeviceImageFormatProperties2 returns an error, then `imageCreateImageFormatPropertiesList` is defined to be the empty list.

- Let `uint32_t imageCreateMaxMipLevels` be the minimum value of VkImageFormatProperties::`maxMipLevels` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `uint32_t imageCreateMaxArrayLayers` be the minimum value of VkImageFormatProperties::`maxArrayLayers` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkExtent3D imageCreateMaxExtent` be the component-wise minimum over all VkImageFormatProperties::`maxExtent` values in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkSampleCountFlags imageCreateSampleCounts` be the intersection of each VkImageFormatProperties::`sampleCounts` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkVideoFormatPropertiesKHR videoFormatProperties[]` be defined as follows.
  - If VkImageCreateInfo::`pNext` contains a VkVideoProfileListInfoKHR structure, then `videoFormatProperties` is the list of structures obtained by calling vkGetPhysicalDeviceVideoFormatPropertiesKHR with VkPhysicalDeviceVideoFormatInfoKHR::`imageUsage` equal to the `usage` member of VkImageCreateInfo and VkPhysicalDeviceVideoFormatInfoKHR::`pNext` containing the same VkVideoProfileListInfoKHR structure chained to VkImageCreateInfo.
  - If VkImageCreateInfo::`pNext` contains no VkVideoProfileListInfoKHR structure, then

videoFormatProperties is an empty list.

- Let VkBool32 supportedVideoFormat indicate if the image parameters are supported by the specified video profiles.
  - supportedVideoFormat is VK_TRUE if there exists an element in the videoFormatProperties list for which all of the following conditions are true:
    - VkImageCreateInfo::format equals VkVideoFormatPropertiesKHR::format.
    - VkImageCreateInfo::flags only contains VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR and/or bits also set in VkVideoFormatPropertiesKHR::imageCreateFlags.
    - VkImageCreateInfo::imageType equals VkVideoFormatPropertiesKHR::imageType.
    - VkImageCreateInfo::tiling equals VkVideoFormatPropertiesKHR::imageTiling.
    - VkImageCreateInfo::usage only contains bits also set in VkVideoFormatPropertiesKHR::imageUsageFlags, or VkImageCreateInfo::flags includes VK_IMAGE_CREATE_EXTENDED_USAGE_BIT.
  - Otherwise supportedVideoFormat is VK_FALSE.

Valid Usage

- VUID-VkImageCreateInfo-imageCreateMaxMipLevels-02251
  Each of the following values (as described in Image Creation Limits) **must** not be undefined : imageCreateMaxMipLevels, imageCreateMaxArrayLayers, imageCreateMaxExtent, and imageCreateSampleCounts
- VUID-VkImageCreateInfo-sharingMode-00941
  If sharingMode is VK_SHARING_MODE_CONCURRENT, pQueueFamilyIndices **must** be a valid pointer to an array of queueFamilyIndexCount uint32_t values
- VUID-VkImageCreateInfo-maintenance11-13354
  If the maintenance11 feature is enabled and sharingMode is VK_SHARING_MODE_CONCURRENT, then queueFamilyIndexCount **must** be greater than 0
- VUID-VkImageCreateInfo-sharingMode-00942
  If the maintenance11 feature is not enabled and sharingMode is VK_SHARING_MODE_CONCURRENT, then queueFamilyIndexCount **must** be greater than 1
- VUID-VkImageCreateInfo-sharingMode-01420
  If sharingMode is VK_SHARING_MODE_CONCURRENT, each element of pQueueFamilyIndices **must** be unique and **must** be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties or vkGetPhysicalDeviceQueueFamilyProperties2 for the physicalDevice that was used to create device
- VUID-VkImageCreateInfo-format-00943
  format **must** not be VK_FORMAT_UNDEFINED
- VUID-VkImageCreateInfo-extent-00944
  extent.width **must** be greater than 0

- VUID-VkImageCreateInfo-extent-00945
  `extent.height` **must** be greater than `0`
- VUID-VkImageCreateInfo-extent-00946
  `extent.depth` **must** be greater than `0`
- VUID-VkImageCreateInfo-mipLevels-00947
  `mipLevels` **must** be greater than `0`
- VUID-VkImageCreateInfo-arrayLayers-00948
  `arrayLayers` **must** be greater than `0`
- VUID-VkImageCreateInfo-flags-00949
  If `flags` contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, `imageType` **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-flags-08865
  If `flags` contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, `extent.width` and `extent.height` **must** be equal
- VUID-VkImageCreateInfo-flags-08866
  If `flags` contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, `arrayLayers` **must** be greater than or equal to 6
- VUID-VkImageCreateInfo-initialLayout-10765
  If the zeroInitializeDeviceMemory feature is not enabled, `initialLayout` **must** not be VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT
- VUID-VkImageCreateInfo-flags-02557
  If `flags` contains VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, `imageType` **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-flags-00950
  If `flags` contains VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT, `imageType` **must** be VK_IMAGE_TYPE_3D
- VUID-VkImageCreateInfo-flags-09403
  If `flags` contains VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT, `flags` **must** not include VK_IMAGE_CREATE_SPARSE_ALIASED_BIT, VK_IMAGE_CREATE_SPARSE_BINDING_BIT, or VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-flags-07755
  If `flags` contains VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT, `imageType` **must** be VK_IMAGE_TYPE_3D
- VUID-VkImageCreateInfo-imageType-10197
  If `flags` contains VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT and either the `maintenance9` feature is not enabled on the device or `image2DViewOf3DSparse` is VK_FALSE , `flags` **must** not include VK_IMAGE_CREATE_SPARSE_ALIASED_BIT, VK_IMAGE_CREATE_SPARSE_BINDING_BIT, or VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-extent-02252
  `extent.width` **must** be less than or equal to `imageCreateMaxExtent.width` (as defined in Image Creation Limits)

- VUID-VkImageCreateInfo-extent-02253
  `extent.height` **must** be less than or equal to `imageCreateMaxExtent.height` (as defined in Image Creation Limits)
- VUID-VkImageCreateInfo-extent-02254
  `extent.depth` **must** be less than or equal to `imageCreateMaxExtent.depth` (as defined in Image Creation Limits)
- VUID-VkImageCreateInfo-imageType-00956
  If `imageType` is VK_IMAGE_TYPE_1D, both `extent.height` and `extent.depth` **must** be `1`
- VUID-VkImageCreateInfo-imageType-00957
  If `imageType` is VK_IMAGE_TYPE_2D, `extent.depth` **must** be `1`
- VUID-VkImageCreateInfo-mipLevels-00958
  `mipLevels` **must** be less than or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`
- VUID-VkImageCreateInfo-mipLevels-02255
  `mipLevels` **must** be less than or equal to `imageCreateMaxMipLevels` (as defined in Image Creation Limits)
- VUID-VkImageCreateInfo-arrayLayers-02256
  `arrayLayers` **must** be less than or equal to `imageCreateMaxArrayLayers` (as defined in Image Creation Limits)
- VUID-VkImageCreateInfo-imageType-00961
  If `imageType` is VK_IMAGE_TYPE_3D, `arrayLayers` **must** be `1`
- VUID-VkImageCreateInfo-samples-02257
  If `samples` is not VK_SAMPLE_COUNT_1_BIT, then `imageType` **must** be VK_IMAGE_TYPE_2D, `flags` **must** not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, `mipLevels` **must** be equal to `1`, and `imageCreateMaybeLinear` (as defined in Image Creation Limits) **must** be VK_FALSE,
- VUID-VkImageCreateInfo-samples-02558
  If `samples` is not VK_SAMPLE_COUNT_1_BIT, `usage` **must** not contain VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT
- VUID-VkImageCreateInfo-usage-00963
  If `usage` includes VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, then bits other than VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT **must** not be set
- VUID-VkImageCreateInfo-usage-00964
  If `usage` includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT, `extent.width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferWidth`
- VUID-VkImageCreateInfo-usage-00965
  If `usage` includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT,

VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT, extent.height **must** be less than or equal to VkPhysicalDeviceLimits::maxFramebufferHeight

- VUID-VkImageCreateInfo-usage-02559
  If usage includes VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, extent.width **must** be less than or equal to $\lceil \frac{maxFramebufferWidth}{minFragmentDensityTexelSize_{width}} \rceil$
- VUID-VkImageCreateInfo-usage-02560
  If usage includes VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, extent.height **must** be less than or equal to $\lceil \frac{maxFramebufferHeight}{minFragmentDensityTexelSize_{height}} \rceil$
- VUID-VkImageCreateInfo-usage-00966
  If usage includes VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, usage **must** also contain at least one of VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT
- VUID-VkImageCreateInfo-samples-02258
  samples **must** be a valid VkSampleCountFlagBits value that is set in imageCreateSampleCounts (as defined in Image Creation Limits)
- VUID-VkImageCreateInfo-usage-00968
  If the shaderStorageImageMultisample feature is not enabled, and usage contains VK_IMAGE_USAGE_STORAGE_BIT, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-flags-00969
  If the sparseBinding feature is not enabled, flags **must** not contain VK_IMAGE_CREATE_SPARSE_BINDING_BIT
- VUID-VkImageCreateInfo-flags-01924
  If the sparseResidencyAliased feature is not enabled, flags **must** not contain VK_IMAGE_CREATE_SPARSE_ALIASED_BIT
- VUID-VkImageCreateInfo-tiling-04121
  If tiling is VK_IMAGE_TILING_LINEAR, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00970
  If imageType is VK_IMAGE_TYPE_1D, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00971
  If the sparseResidencyImage2D feature is not enabled, and imageType is VK_IMAGE_TYPE_2D, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00972
  If the sparseResidencyImage3D feature is not enabled, and imageType is VK_IMAGE_TYPE_3D, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00973
  If the sparseResidency2Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and samples is VK_SAMPLE_COUNT_2_BIT, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00974

If the sparseResidency4Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and samples is VK_SAMPLE_COUNT_4_BIT, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

- VUID-VkImageCreateInfo-imageType-00975
  If the sparseResidency8Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and samples is VK_SAMPLE_COUNT_8_BIT, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-imageType-00976
  If the sparseResidency16Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and samples is VK_SAMPLE_COUNT_16_BIT, flags **must** not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkImageCreateInfo-flags-00987
  If flags contains VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT, it **must** also contain VK_IMAGE_CREATE_SPARSE_BINDING_BIT
- VUID-VkImageCreateInfo-None-01925
  If any of the bits VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT are set, VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT **must** not also be set
- VUID-VkImageCreateInfo-flags-01890
  If the protectedMemory feature is not enabled, flags **must** not contain VK_IMAGE_CREATE_PROTECTED_BIT
- VUID-VkImageCreateInfo-None-01891
  If any of the bits VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT are set, VK_IMAGE_CREATE_PROTECTED_BIT **must** not also be set
- VUID-VkImageCreateInfo-pNext-00990
  If the pNext chain includes a VkExternalMemoryImageCreateInfo structure, its handleTypes member **must** only contain bits that are also in VkExternalImageFormatProperties::externalMemoryProperties.compatibleHandleTypes, as returned by vkGetPhysicalDeviceImageFormatProperties2 with format, imageType, tiling, usage, and flags equal to those in this structure, and with a VkPhysicalDeviceExternalImageFormatInfo structure included in the pNext chain, with a handleType equal to any one of the handle types specified in VkExternalMemoryImageCreateInfo::handleTypes
- VUID-VkImageCreateInfo-physicalDeviceCount-01421
  If the logical device was created with VkDeviceGroupDeviceCreateInfo::physicalDeviceCount equal to 1, flags **must** not contain VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT
- VUID-VkImageCreateInfo-flags-02259
  If flags contains VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT, then mipLevels **must** be one, arrayLayers **must** be one, imageType **must** be VK_IMAGE_TYPE_2D,

and imageCreateMaybeLinear (as defined in Image Creation Limits) **must** be VK_FALSE

- VUID-VkImageCreateInfo-flags-01572
  If flags contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, then format **must** be a compressed image format
- VUID-VkImageCreateInfo-flags-01573
  If flags contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, then flags **must** also contain VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT
- VUID-VkImageCreateInfo-initialLayout-00993
  initialLayout **must** be VK_IMAGE_LAYOUT_UNDEFINED, VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT, or VK_IMAGE_LAYOUT_PREINITIALIZED
- VUID-VkImageCreateInfo-initialLayout-12478
  If initialLayout is VK_IMAGE_LAYOUT_PREINITIALIZED, tiling **must** be VK_IMAGE_TILING_LINEAR
- VUID-VkImageCreateInfo-pNext-01443
  If the pNext chain includes a VkExternalMemoryImageCreateInfo or VkExternalMemoryImageCreateInfoNV structure whose handleTypes member is not 0, initialLayout **must** be VK_IMAGE_LAYOUT_UNDEFINED
- VUID-VkImageCreateInfo-format-06410
  If the image format is one of the formats that require a sampler $Y'C_BC_R$ conversion, mipLevels **must** be 1
- VUID-VkImageCreateInfo-format-06411
  If the image format is one of the formats that require a sampler $Y'C_BC_R$ conversion, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-format-06412
  If the image format is one of the formats that require a sampler $Y'C_BC_R$ conversion, imageType **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-imageCreateFormatFeatures-02260
  If format is a *multi-planar* format, and if imageCreateFormatFeatures (as defined in Image Creation Limits) does not contain VK_FORMAT_FEATURE_DISJOINT_BIT, then flags **must** not contain VK_IMAGE_CREATE_DISJOINT_BIT
- VUID-VkImageCreateInfo-format-01577
  If format is not a *multi-planar* format, and flags does not include VK_IMAGE_CREATE_ALIAS_BIT, flags **must** not contain VK_IMAGE_CREATE_DISJOINT_BIT
- VUID-VkImageCreateInfo-format-04712
  If format has a _422 or _420 suffix, extent.width **must** be a multiple of 2
- VUID-VkImageCreateInfo-format-04713
  If format has a _420 suffix, extent.height **must** be a multiple of 2
- VUID-VkImageCreateInfo-tiling-02261
  If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the pNext chain **must** include exactly one of VkImageDrmFormatModifierListCreateInfoEXT or VkImageDrmFormatModifierExplicitCreateInfoEXT structures

- VUID-VkImageCreateInfo-pNext-02262
  If the pNext chain includes a VkImageDrmFormatModifierListCreateInfoEXT or VkImageDrmFormatModifierExplicitCreateInfoEXT structure, then tiling **must** be VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT
- VUID-VkImageCreateInfo-tiling-02353
  If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT and flags contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, then the pNext chain **must** include a VkImageFormatListCreateInfo structure with non-zero viewFormatCount
- VUID-VkImageCreateInfo-flags-01533
  If flags contains VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT format **must** be a depth or depth/stencil format
- VUID-VkImageCreateInfo-format-02795
  If format is a depth-stencil format, usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and the pNext chain includes a VkImageStencilUsageCreateInfo structure, then its VkImageStencilUsageCreateInfo ::stencilUsage member **must** also include VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkImageCreateInfo-format-02796
  If format is a depth-stencil format, usage does not include VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and the pNext chain includes a VkImageStencilUsageCreateInfo structure, then its VkImageStencilUsageCreateInfo ::stencilUsage member **must** also not include VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkImageCreateInfo-format-02797
  If format is a depth-stencil format, usage includes VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, and the pNext chain includes a VkImageStencilUsageCreateInfo structure, then its VkImageStencilUsageCreateInfo ::stencilUsage member **must** also include VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT
- VUID-VkImageCreateInfo-format-02798
  If format is a depth-stencil format, usage does not include VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, and the pNext chain includes a VkImageStencilUsageCreateInfo structure, then its VkImageStencilUsageCreateInfo ::stencilUsage member **must** also not include VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT
- VUID-VkImageCreateInfo-Format-02536
  If Format is a depth-stencil format and the pNext chain includes a VkImageStencilUsageCreateInfo structure with its stencilUsage member including VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT, extent.width **must** be less than or equal to VkPhysicalDeviceLimits::maxFramebufferWidth
- VUID-VkImageCreateInfo-format-02537
  If format is a depth-stencil format and the pNext chain includes a VkImageStencilUsageCreateInfo structure with its stencilUsage member including VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT, extent.height **must** be less than or equal to

VkPhysicalDeviceLimits::maxFramebufferHeight

- VUID-VkImageCreateInfo-format-02538
  If the shaderStorageImageMultisample feature is not enabled, format is a depth-stencil format and the pNext chain includes a VkImageStencilUsageCreateInfo structure with its stencilUsage including VK_IMAGE_USAGE_STORAGE_BIT, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-imageType-02082
  If usage includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, imageType **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-samples-02083
  If usage includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-flags-02565
  If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, tiling **must** be VK_IMAGE_TILING_OPTIMAL
- VUID-VkImageCreateInfo-flags-02566
  If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, imageType **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-flags-02567
  If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, flags **must** not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT
- VUID-VkImageCreateInfo-flags-02568
  If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, mipLevels **must** be 1
- VUID-VkImageCreateInfo-imageView2DOn3DImage-04459
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageView2DOn3DImage is VK_FALSE, flags **must** not contain VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT
- VUID-VkImageCreateInfo-multisampleArrayImage-04460
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::multisampleArrayImage is VK_FALSE, and samples is not VK_SAMPLE_COUNT_1_BIT, then arrayLayers **must** be 1
- VUID-VkImageCreateInfo-pNext-06722
  If a VkImageFormatListCreateInfo structure was included in the pNext chain and format is not a multi-planar format and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in VkImageFormatListCreateInfo::pViewFormats **must** either be compatible with the format as described in the compatibility table or, if flags contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, be an uncompressed format that is size-compatible with format
- VUID-VkImageCreateInfo-pNext-10062
  If a VkImageFormatListCreateInfo structure was included in the pNext chain and format is a multi-planar format and flags contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT

and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in VkImageFormatListCreateInfo::pViewFormats **must** be compatible with the VkFormat for the plane of the image format

- VUID-VkImageCreateInfo-flags-04738
  If flags does not contain VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and the pNext chain includes a VkImageFormatListCreateInfo structure, then VkImageFormatListCreateInfo ::viewFormatCount **must** be 0 or 1
- VUID-VkImageCreateInfo-usage-04815
  If usage includes VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR, VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR, or VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, and flags does not include VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the pNext chain **must** include a VkVideoProfileListInfoKHR structure with profileCount greater than 0 and pProfiles including at least one VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying a decode operation
- VUID-VkImageCreateInfo-usage-04816
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR, VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR, or VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR, and flags does not include VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the pNext chain **must** include a VkVideoProfileListInfoKHR structure with profileCount greater than 0 and pProfiles including at least one VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying an encode operation
- VUID-VkImageCreateInfo-flags-08328
  If flags includes VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then videoMaintenance1 **must** be enabled
- VUID-VkImageCreateInfo-flags-08329
  If flags includes VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR and usage does not include VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR, then usage **must** not include VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR
- VUID-VkImageCreateInfo-flags-08331
  If flags includes VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then usage **must** not include VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, or VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR
- VUID-VkImageCreateInfo-pNext-06811
  If the pNext chain includes a VkVideoProfileListInfoKHR structure with profileCount greater than 0, then supportedVideoFormat **must** be VK_TRUE
- VUID-VkImageCreateInfo-pNext-10784
  If the pNext chain includes a VkVideoProfileListInfoKHR structure and for any element of its pProfiles member videoCodecOperation is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the videoDecodeVP9 feature **must** be enabled

- VUID-VkImageCreateInfo-pNext-10250
  If the pNext chain includes a VkVideoProfileListInfoKHR structure and for any element of its pProfiles member videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the videoEncodeAV1 feature **must** be enabled
- VUID-VkImageCreateInfo-usage-10251
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, then the videoEncodeQuantizationMap feature **must** be enabled
- VUID-VkImageCreateInfo-usage-10252
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, imageType **must** be VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-usage-10253
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-usage-10254
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, then the pNext chain **must** include a VkVideoProfileListInfoKHR structure with profileCount equal to 1 and pProfiles pointing to a VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying an encode operation
- VUID-VkImageCreateInfo-usage-10255
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, then VkVideoEncodeCapabilitiesKHR::flags **must** include VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in the pProfiles member of the VkVideoProfileListInfoKHR structure included in the pNext chain
- VUID-VkImageCreateInfo-usage-10256
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, then VkVideoEncodeCapabilitiesKHR::flags **must** include VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in the pProfiles member of the VkVideoProfileListInfoKHR structure included in the pNext chain
- VUID-VkImageCreateInfo-usage-10257
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, extent.width **must** be less than or equal to VkVideoEncodeQuantizationMapCapabilitiesKHR

::maxQuantizationMapExtent.width, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in the pProfiles member of the VkVideoProfileListInfoKHR structure included in the pNext chain

- VUID-VkImageCreateInfo-usage-10258
  If usage includes VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, extent.height **must** be less than or equal to VkVideoEncodeQuantizationMapCapabilitiesKHR::maxQuantizationMapExtent.height, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile specified in the pProfiles member of the VkVideoProfileListInfoKHR structure included in the pNext chain
- VUID-VkImageCreateInfo-multisampledRenderToSingleSampled-06882
  If the multisampledRenderToSingleSampled feature is not enabled, flags **must** not contain VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT
- VUID-VkImageCreateInfo-flags-06883
  If flags contains VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT, samples **must** be VK_SAMPLE_COUNT_1_BIT
- VUID-VkImageCreateInfo-pNext-06743
  If the pNext chain includes a VkImageCompressionControlEXT structure, format is a multi-planar format, and VkImageCompressionControlEXT::flags includes VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, then VkImageCompressionControlEXT::compressionControlPlaneCount **must** be equal to the number of planes in format
- VUID-VkImageCreateInfo-pNext-06744
  If the pNext chain includes a VkImageCompressionControlEXT structure, format is not a multi-planar format, and VkImageCompressionControlEXT::flags includes VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, then VkImageCompressionControlEXT::compressionControlPlaneCount **must** be 1
- VUID-VkImageCreateInfo-pNext-06746
  If the pNext chain includes a VkImageCompressionControlEXT structure, it **must** not contain a VkImageDrmFormatModifierExplicitCreateInfoEXT structure
- VUID-VkImageCreateInfo-flags-08104
  If flags includes VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT, the descriptorBufferCaptureReplay or descriptorHeapCaptureReplay feature **must** be enabled
- VUID-VkImageCreateInfo-pNext-08105
  If the pNext chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, flags **must** contain VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
- VUID-VkImageCreateInfo-pNext-06783
  If the pNext chain includes a VkExportMetalObjectCreateInfoEXT structure, its exportObjectType member **must** be either VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT or VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT

- VUID-VkImageCreateInfo-pNext-06784
  If the pNext chain includes a VkImportMetalTextureInfoEXT structure its plane member **must** be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT
- VUID-VkImageCreateInfo-pNext-06785
  If the pNext chain includes a VkImportMetalTextureInfoEXT structure and the image does not have a multi-planar format, then VkImportMetalTextureInfoEXT::plane **must** be VK_IMAGE_ASPECT_PLANE_0_BIT
- VUID-VkImageCreateInfo-pNext-06786
  If the pNext chain includes a VkImportMetalTextureInfoEXT structure and the image has a multi-planar format with only two planes, then VkImportMetalTextureInfoEXT::plane **must** not be VK_IMAGE_ASPECT_PLANE_2_BIT
- VUID-VkImageCreateInfo-imageCreateFormatFeatures-09048
  If imageCreateFormatFeatures (as defined in Image Creation Limits) does not contain VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT, then usage **must** not contain VK_IMAGE_USAGE_HOST_TRANSFER_BIT
- VUID-VkImageCreateInfo-usage-10245
  If usage includes VK_IMAGE_USAGE_HOST_TRANSFER_BIT, then the hostImageCopy feature **must** be enabled
- VUID-VkImageCreateInfo-flags-13355
  If flags contains VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR, the maintenance11 feature **must** be enabled
- VUID-VkImageCreateInfo-flags-13356
  If flags contains VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR, imageType **must** be VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D
- VUID-VkImageCreateInfo-flags-11281
  If VkOpaqueCaptureDataCreateInfoEXT::pData is not NULL, flags **must** contain VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT
- VUID-VkImageCreateInfo-pData-11286
  If flags contains VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT, and VkOpaqueCaptureDataCreateInfoEXT::pData is not NULL, VkOpaqueCaptureDataCreateInfoEXT::pData->size **must** be equal to imageCaptureReplayOpaqueDataSize
- VUID-VkImageCreateInfo-pNext-12442
  pNext **must** contain at most one of the structures VkImageStencilUsageCreateInfo and VkImageStencilUsage2CreateInfoKHR

Valid Usage (Implicit)

- VUID-VkImageCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_CREATE_INFO
- VUID-VkImageCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either

NULL or a pointer to a valid instance of VkExportMetalObjectCreateInfoEXT, VkExternalMemoryImageCreateInfo, VkImageCompressionControlEXT, VkImageCreateFlags2CreateInfoKHR, VkImageDrmFormatModifierExplicitCreateInfoEXT, VkImageDrmFormatModifierListCreateInfoEXT, VkImageFormatListCreateInfo, VkImageStencilUsage2CreateInfoKHR, VkImageStencilUsageCreateInfo, VkImageSwapchainCreateInfoKHR, VkImageUsageFlags2CreateInfoKHR, VkImportMetalIOSurfaceInfoEXT, VkImportMetalTextureInfoEXT, VkOpaqueCaptureDataCreateInfoEXT, VkOpaqueCaptureDescriptorDataCreateInfoEXT, or VkVideoProfileListInfoKHR

- VUID-VkImageCreateInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique, with the exception of structures of type VkExportMetalObjectCreateInfoEXT or VkImportMetalTextureInfoEXT
- VUID-VkImageCreateInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkImageCreateFlagBits values
- VUID-VkImageCreateInfo-imageType-parameter
  imageType **must** be a valid VkImageType value
- VUID-VkImageCreateInfo-format-parameter
  format **must** be a valid VkFormat value
- VUID-VkImageCreateInfo-samples-parameter
  samples **must** be a valid VkSampleCountFlagBits value
- VUID-VkImageCreateInfo-tiling-parameter
  tiling **must** be a valid VkImageTiling value
- VUID-VkImageCreateInfo-usage-parameter
  usage **must** be a valid combination of VkImageUsageFlagBits values
- VUID-VkImageCreateInfo-sharingMode-parameter
  sharingMode **must** be a valid VkSharingMode value
- VUID-VkImageCreateInfo-initialLayout-parameter
  initialLayout **must** be a valid VkImageLayout value

The VkImageCreateFlags2CreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkImageCreateFlags2CreateInfoKHR {
    VkStructureType           sType;
    void*                     pNext;
    VkImageCreateFlags2KHR    flags;
} VkImageCreateFlags2CreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkImageCreateFlagBits2KHR specifying creation flags of the image.

If this structure is included in the pNext chain of an image creation structure, flags is used instead

of the corresponding `flags` value passed in that creation structure, allowing additional create flags to be specified.

If this structure is included in the `pNext` chain of a query structure including VkImageCreateFlags, the create flags of the image are returned in `flags` of this structure, allowing additional create flags to be queried. The flags representable in VkImageCreateFlags are still returned in the query structure in this case.

Valid Usage (Implicit)

- VUID-VkImageCreateFlags2CreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_CREATE_FLAGS_2_CREATE_INFO_KHR
- VUID-VkImageCreateFlags2CreateInfoKHR-flags-parameter
  `flags` **must** be a valid combination of VkImageCreateFlagBits2KHR values

Structure Chaining

Extends the structures

- VkFramebufferAttachmentImageInfo
- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2
- VkVideoFormatPropertiesKHR

The `VkImageUsageFlags2CreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkImageUsageFlags2CreateInfoKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkImageUsageFlags2KHR    usage;
} VkImageUsageFlags2CreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of VkImageUsageFlagBits2KHR specifying allowed usages of the image.

If this structure is included in the `pNext` chain of an image creation structure, `usage` is used instead of the corresponding `usage` value passed in that creation structure, allowing additional usage flags to be specified.

If this structure is included in the `pNext` chain of a query structure including VkImageCreateFlags, the usage flags of the image are returned in `flags` of this structure, allowing additional usage flags to be queried. The flags representable in VkImageUsageFlags are still returned in the query

structure in this case.

Valid Usage (Implicit)

- VUID-VkImageUsageFlags2CreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_USAGE_FLAGS_2_CREATE_INFO_KHR
- VUID-VkImageUsageFlags2CreateInfoKHR-usage-parameter
  `usage` **must** be a valid combination of VkImageUsageFlagBits2KHR values

Structure Chaining

Extends the structures

- VkFramebufferAttachmentImageInfo
- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2
- VkPhysicalDeviceSparseImageFormatInfo2
- VkPhysicalDeviceVideoFormatInfoKHR
- VkSurfaceCapabilities2KHR
- VkSwapchainCreateInfoKHR
- VkVideoFormatPropertiesKHR

The `VkImageStencilUsageCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageStencilUsageCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageUsageFlags    stencilUsage;
} VkImageStencilUsageCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stencilUsage` is a bitmask of VkImageUsageFlagBits describing the intended usage of the stencil aspect of the image.

If the `pNext` chain of VkImageCreateInfo includes a `VkImageStencilUsageCreateInfo` structure, then that structure includes the usage flags specific to the stencil aspect of the image for an image with a depth-stencil format.

This structure specifies image usages which only apply to the stencil aspect of a depth/stencil format image. When this structure is included in the `pNext` chain of VkImageCreateInfo, the stencil aspect of the image **must** only be used as specified by `stencilUsage`. Use of other aspects of an image

are unaffected by this structure.

This structure **can** also be included in the pNext chain of VkPhysicalDeviceImageFormatInfo2 to query additional capabilities specific to image creation parameter combinations including a separate set of usage flags for the stencil aspect of the image using vkGetPhysicalDeviceImageFormatProperties2. When this structure is not included in the pNext chain of VkPhysicalDeviceImageFormatInfo2 then the implicit value of stencilUsage matches that of VkPhysicalDeviceImageFormatInfo2::usage.

Valid Usage

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-02539
  If stencilUsage includes VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, it **must** not include bits other than VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT

Valid Usage (Implicit)

- VUID-VkImageStencilUsageCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_CREATE_INFO
- VUID-VkImageStencilUsageCreateInfo-stencilUsage-parameter
  stencilUsage **must** be a valid combination of VkImageUsageFlagBits values

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2

The VkImageStencilUsage2CreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_extended_flags with VK_VERSION_1_2 or
VK_EXT_separate_stencil_usage
typedef struct VkImageStencilUsage2CreateInfoKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkImageUsageFlags2KHR    stencilUsage;
} VkImageStencilUsage2CreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stencilUsage is a bitmask of VkImageUsageFlagBits2KHR describing the intended usage of the stencil aspect of the image.

If the pNext chain of VkImageCreateInfo includes a VkImageStencilUsage2CreateInfoKHR structure, then that structure includes the usage flags specific to the stencil aspect of the image for an image with a depth-stencil format.

This structure specifies image usages which only apply to the stencil aspect of a depth/stencil format image. When this structure is included in the pNext chain of VkImageCreateInfo, the stencil aspect of the image **must** only be used as specified by stencilUsage. Use of other aspects of an image are unaffected by this structure.

This structure **can** also be included in the pNext chain of VkPhysicalDeviceImageFormatInfo2 to query additional capabilities specific to image creation parameter combinations including a separate set of usage flags for the stencil aspect of the image using vkGetPhysicalDeviceImageFormatProperties2. When this structure is not included in the pNext chain of VkPhysicalDeviceImageFormatInfo2 then the implicit value of stencilUsage matches that of VkPhysicalDeviceImageFormatInfo2::usage.

Valid Usage

- VUID-VkImageStencilUsage2CreateInfoKHR-stencilUsage-12443
  If stencilUsage includes VK_IMAGE_USAGE_2_TRANSIENT_ATTACHMENT_BIT_KHR, it **must** not include bits other than VK_IMAGE_USAGE_2_DEPTH_STENCIL_ATTACHMENT_BIT_KHR or VK_IMAGE_USAGE_2_INPUT_ATTACHMENT_BIT_KHR

Valid Usage (Implicit)

- VUID-VkImageStencilUsage2CreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_2_CREATE_INFO_KHR
- VUID-VkImageStencilUsage2CreateInfoKHR-stencilUsage-parameter
  stencilUsage **must** be a valid combination of VkImageUsageFlagBits2KHR values

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2

To define a set of external memory handle types that **may** be used as backing store for an image, add a VkExternalMemoryImageCreateInfo structure to the pNext chain of the VkImageCreateInfo structure. The VkExternalMemoryImageCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryImageCreateInfo {
    VkStructureType                       sType;
    const void*                           pNext;
    VkExternalMemoryHandleTypeFlags       handleTypes;
} VkExternalMemoryImageCreateInfo;
```

```
// Provided by VK_KHR_external_memory
// Equivalent to VkExternalMemoryImageCreateInfo
typedef VkExternalMemoryImageCreateInfo VkExternalMemoryImageCreateInfoKHR;
```

NOTE	A VkExternalMemoryImageCreateInfo structure with a non-zero handleTypes field must be included in the creation parameters for an image that will be bound to memory that is either exported or imported.

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleTypes is zero or a bitmask of VkExternalMemoryHandleTypeFlagBits specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryImageCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO
- VUID-VkExternalMemoryImageCreateInfo-handleTypes-parameter
  If handleTypes is not 0, handleTypes **must** be a valid combination of VkExternalMemoryHandleTypeFlagBits values

Structure Chaining

Extends the structure

- VkImageCreateInfo

If the pNext chain of VkImageCreateInfo includes a VkImageSwapchainCreateInfoKHR structure, then that structure includes a swapchain handle indicating that the image will be bound to memory from that swapchain.

The VkImageSwapchainCreateInfoKHR structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkImageSwapchainCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
} VkImageSwapchainCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is VK_NULL_HANDLE or a handle of a swapchain that the image will be bound to.

Valid Usage

- VUID-VkImageSwapchainCreateInfoKHR-swapchain-00995
  If `swapchain` is not VK_NULL_HANDLE, the fields of VkImageCreateInfo **must** match the implied image creation parameters of the swapchain

Valid Usage (Implicit)

- VUID-VkImageSwapchainCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkImageSwapchainCreateInfoKHR-swapchain-parameter
  If `swapchain` is not VK_NULL_HANDLE, `swapchain` **must** be a valid VkSwapchainKHR handle

Structure Chaining

Extends the structure

- VkImageCreateInfo

If the `pNext` chain of VkImageCreateInfo includes a `VkImageFormatListCreateInfo` structure, then that structure contains a list of all formats that **can** be used when creating views of this image.

The `VkImageFormatListCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkImageFormatListCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           viewFormatCount;
    const VkFormat*    pViewFormats;
} VkImageFormatListCreateInfo;
```

```
// Provided by VK_KHR_image_format_list
// Equivalent to VkImageFormatListCreateInfo
typedef VkImageFormatListCreateInfo VkImageFormatListCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `viewFormatCount` is the number of entries in the `pViewFormats` array.
- `pViewFormats` is a pointer to an array of VkFormat values specifying all formats which **can** be used when creating views of this image.

If `viewFormatCount` is zero, `pViewFormats` is ignored and the image is created as if the `VkImageFormatListCreateInfo` structure were not included in the `pNext` chain of VkImageCreateInfo.

Valid Usage

- VUID-VkImageFormatListCreateInfo-viewFormatCount-09540
  If `viewFormatCount` is not 0, each element of `pViewFormats` **must** not be VK_FORMAT_UNDEFINED

Valid Usage (Implicit)

- VUID-VkImageFormatListCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_FORMAT_LIST_CREATE_INFO
- VUID-VkImageFormatListCreateInfo-pViewFormats-parameter
  If `viewFormatCount` is not `0`, `pViewFormats` **must** be a valid pointer to an array of `viewFormatCount` valid VkFormat values

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2
- VkSwapchainCreateInfoKHR

If the pNext chain of VkImageCreateInfo includes a VkImageDrmFormatModifierListCreateInfoEXT structure, then the image will be created with one of the Linux DRM format modifiers listed in the structure. The choice of modifier is implementation-dependent.

The VkImageDrmFormatModifierListCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierListCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           drmFormatModifierCount;
    const uint64_t*    pDrmFormatModifiers;
} VkImageDrmFormatModifierListCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- drmFormatModifierCount is the length of the pDrmFormatModifiers array.
- pDrmFormatModifiers is a pointer to an array of *Linux DRM format modifiers*.

Valid Usage

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-02263
  Each *modifier* in pDrmFormatModifiers **must** be compatible with the parameters in VkImageCreateInfo and its pNext chain, as determined by querying VkPhysicalDeviceImageFormatInfo2 extended with VkPhysicalDeviceImageDrmFormatModifierInfoEXT

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierListCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-parameter
  pDrmFormatModifiers **must** be a valid pointer to an array of drmFormatModifierCount uint64_t values
- VUID-VkImageDrmFormatModifierListCreateInfoEXT-drmFormatModifierCount-arraylength
  drmFormatModifierCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkImageCreateInfo

If the pNext chain of VkImageCreateInfo includes a VkImageDrmFormatModifierExplicitCreateInfoEXT structure, then the image will be created with the Linux DRM format modifier and memory layout defined by the structure.

The VkImageDrmFormatModifierExplicitCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierExplicitCreateInfoEXT {
    VkStructureType                sType;
    const void*                    pNext;
    uint64_t                       drmFormatModifier;
    uint32_t                       drmFormatModifierPlaneCount;
    const VkSubresourceLayout*     pPlaneLayouts;
} VkImageDrmFormatModifierExplicitCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- drmFormatModifier is the *Linux DRM format modifier* with which the image will be created.
- drmFormatModifierPlaneCount is the number of *memory planes* in the image (as reported by VkDrmFormatModifierPropertiesEXT) as well as the length of the pPlaneLayouts array.
- pPlaneLayouts is a pointer to an array of VkSubresourceLayout structures describing the image's *memory planes*.

The i^{th} member of pPlaneLayouts describes the layout of the image's i^{th} *memory plane* (that is, VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT). In each element of pPlaneLayouts, the implementation **must** ignore size. The implementation calculates the size of each plane, which the application **can** query with vkGetImageSubresourceLayout.

When creating an image with VkImageDrmFormatModifierExplicitCreateInfoEXT, it is the application's responsibility to satisfy all valid usage requirements. However, the implementation **must** validate that the provided pPlaneLayouts, when combined with the provided drmFormatModifier and other creation parameters in VkImageCreateInfo and its pNext chain, produce a valid image. (This validation is necessarily implementation-dependent and outside the scope of Vulkan, and therefore not described by valid usage requirements). If this validation fails, then vkCreateImage returns VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT.

Valid Usage

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifier-02264
  drmFormatModifier **must** be compatible with the parameters in VkImageCreateInfo and its pNext chain, as determined by querying VkPhysicalDeviceImageFormatInfo2 extended with VkPhysicalDeviceImageDrmFormatModifierInfoEXT
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-02265
  drmFormatModifierPlaneCount **must** be equal to the VkDrmFormatModifierPropertiesEXT ::drmFormatModifierPlaneCount associated with VkImageCreateInfo::format and

drmFormatModifier, as found by querying VkDrmFormatModifierPropertiesListEXT

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-size-02267
  For each element of pPlaneLayouts, size **must** be 0
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-arrayPitch-02268
  For each element of pPlaneLayouts, arrayPitch **must** be 0 if VkImageCreateInfo ::arrayLayers is 1
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-depthPitch-02269
  For each element of pPlaneLayouts, depthPitch **must** be 0 if VkImageCreateInfo ::extent.depth is 1

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-pPlaneLayouts-parameter
  pPlaneLayouts **must** be a valid pointer to an array of drmFormatModifierPlaneCount VkSubresourceLayout structures
- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-arraylength
  drmFormatModifierPlaneCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkImageCreateInfo

If the pNext list of VkImageCreateInfo includes a VkImageCompressionControlEXT structure, then that structure describes compression controls for this image.

The VkImageCompressionControlEXT structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionControlEXT {
    VkStructureType                          sType;
    const void*                              pNext;
    VkImageCompressionFlagsEXT               flags;
    uint32_t                                 compressionControlPlaneCount;
    VkImageCompressionFixedRateFlagsEXT*     pFixedRateFlags;
} VkImageCompressionControlEXT;
```

- sType is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkImageCompressionFlagBitsEXT describing compression controls for the image.
- `compressionControlPlaneCount` is the number of entries in the `pFixedRateFlags` array.
- `pFixedRateFlags` is `NULL` or a pointer to an array of VkImageCompressionFixedRateFlagsEXT bitfields describing allowed fixed-rate compression rates of each image plane. It is ignored if `flags` does not include VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT.

If enabled, fixed-rate compression is done in an implementation-defined manner and **may** be applied at block granularity. In that case, a write to an individual texel **may** modify the value of other texels in the same block.

Valid Usage

- VUID-VkImageCompressionControlEXT-flags-06747
  `flags` **must** be one of VK_IMAGE_COMPRESSION_DEFAULT_EXT, VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT, VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, or VK_IMAGE_COMPRESSION_DISABLED_EXT
- VUID-VkImageCompressionControlEXT-flags-06748
  If `flags` includes VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, `pFixedRateFlags` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkImageCompressionControlEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_CONTROL_EXT

Structure Chaining

Extends the structures

- VkImageCreateInfo
- VkPhysicalDeviceImageFormatInfo2
- VkSwapchainCreateInfoKHR

NOTE

Some combinations of compression properties may not be supported. For example, some implementations may not support different fixed-rate compression rates per plane of a multi-planar format and will not be able to enable fixed-rate compression for any plane if the requested rates differ.

Possible values of VkImageCompressionControlEXT::`flags`, specifying compression controls for an image, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFlagBitsEXT {
    VK_IMAGE_COMPRESSION_DEFAULT_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_DISABLED_EXT = 0x00000004,
} VkImageCompressionFlagBitsEXT;
```

- VK_IMAGE_COMPRESSION_DEFAULT_EXT specifies that the default image compression setting is used. Implementations **must** not apply fixed-rate compression.
- VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT specifies that the implementation **may** choose any supported fixed-rate compression setting in an implementation-defined manner based on the properties of the image.
- VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT specifies that fixed-rate compression **may** be used and that the allowed compression rates are specified by VkImageCompressionControlEXT::pFixedRateFlags.
- VK_IMAGE_COMPRESSION_DISABLED_EXT specifies that all lossless and fixed-rate compression **should** be disabled.

If VkImageCompressionControlEXT::flags is VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, then the i^{th} member of the pFixedRateFlags array specifies the allowed compression rates for the image's i^{th} plane.

NOTE If VK_IMAGE_COMPRESSION_DISABLED_EXT is included in VkImageCompressionControlEXT::flags, both lossless and fixed-rate compression will be disabled. This is likely to have a negative impact on performance and is only intended to be used for debugging purposes.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFlagsEXT;
```

VkImageCompressionFlagsEXT is a bitmask type for setting a mask of zero or more VkImageCompressionFlagBitsEXT.

```
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFixedRateFlagsEXT;
```

VkImageCompressionFixedRateFlagsEXT is a bitmask type for setting a mask of zero or more VkImageCompressionFixedRateFlagBitsEXT.

Bits which **can** be set in VkImageCompressionControlEXT::pFixedRateFlags, specifying allowed compression rates for an image plane, are:

```
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFixedRateFlagBitsEXT {
    VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT = 0x00000004,

    VK_IMAGE_COMPRESSION_FIXED_RATE_23BPC_BIT_EXT = 0x00400000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_24BPC_BIT_EXT = 0x00800000,
} VkImageCompressionFixedRateFlagBitsEXT;
```

- VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT specifies that fixed-rate compression **must** not be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [1,2) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [2,3) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [3,4) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [4,5) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [5,6) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [6,7) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [7,8) bits per component **may** be used.

- VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [8,9) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [9,10) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [10,11) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of [11,12) bits per component **may** be used.
- VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT specifies that fixed-rate compression with a bitrate of at least 12 bits per component **may** be used.

If the format has a different bit rate for different components, VkImageCompressionControlEXT ::`pFixedRateFlags` describes the rate of the component with the largest number of bits assigned to it, scaled pro rata. For example, to request that a VK_FORMAT_A2R10G10B10_UNORM_PACK32 format be stored at a rate of 8 bits per pixel, use VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT (10 bits for the largest component, stored at quarter the original size, 2.5 bits, rounded down).

If `flags` includes VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT, and multiple bits are set in VkImageCompressionControlEXT::`pFixedRateFlags` for a plane, implementations **should** apply the lowest allowed bitrate that is supported.

NOTE The choice of "bits per component" terminology was chosen so that the same compression rate describes the same degree of compression applied to formats that differ only in the number of components. For example, VK_FORMAT_R8G8_UNORM compressed to half its original size is a rate of 4 bits per component, 8 bits per pixel. VK_FORMAT_R8G8B8A8_UNORM compressed to half *its* original size is 4 bits per component, 16 bits per pixel. Both of these cases can be requested with VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT.

To query the compression properties of an image, add a VkImageCompressionPropertiesEXT structure to the `pNext` chain of the VkSubresourceLayout2 structure in a call to vkGetImageSubresourceLayout2.

To determine the compression rates that are supported for a given image format, add a VkImageCompressionPropertiesEXT structure to the `pNext` chain of the VkImageFormatProperties2 structure in a call to vkGetPhysicalDeviceImageFormatProperties2.

NOTE Since fixed-rate compression is disabled by default, the VkImageCompressionPropertiesEXT structure passed to vkGetPhysicalDeviceImageFormatProperties2 will not indicate any fixed-rate compression support unless a VkImageCompressionControlEXT structure is also included in the `pNext` chain of the VkPhysicalDeviceImageFormatInfo2 structure passed to the same command.

The `VkImageCompressionPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionPropertiesEXT {
    VkStructureType                         sType;
    void*                                   pNext;
    VkImageCompressionFlagsEXT              imageCompressionFlags;
    VkImageCompressionFixedRateFlagsEXT     imageCompressionFixedRateFlags;
} VkImageCompressionPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionFlags` returns a value describing the compression controls that apply to the image. The value will be either VK_IMAGE_COMPRESSION_DEFAULT_EXT to indicate no fixed-rate compression, VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT to indicate fixed-rate compression, or VK_IMAGE_COMPRESSION_DISABLED_EXT to indicate no compression.
- `imageCompressionFixedRateFlags` returns a VkImageCompressionFixedRateFlagsEXT value describing the compression rates that apply to the specified aspect of the image.

Valid Usage (Implicit)

- VUID-VkImageCompressionPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_PROPERTIES_EXT

Structure Chaining

Extends the structures

- VkImageFormatProperties2
- VkSubresourceLayout2
- VkSurfaceFormat2KHR

Bits which **can** be set in VkImageUsageFlags2CreateInfoKHR::`usage`, specifying intended usage of an image, are:

```
// Provided by VK_KHR_extended_flags

```

- VK_IMAGE_USAGE_2_TRANSFER_SRC_BIT_KHR specifies that the image **can** be used as the source of a transfer command.
- VK_IMAGE_USAGE_2_TRANSFER_DST_BIT_KHR specifies that the image **can** be used as the destination of a transfer command.

- VK_IMAGE_USAGE_2_SAMPLED_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and be sampled by a shader.
- VK_IMAGE_USAGE_2_STORAGE_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.
- VK_IMAGE_USAGE_2_COLOR_ATTACHMENT_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for use as a color or resolve attachment in a VkFramebuffer.
- VK_IMAGE_USAGE_2_DEPTH_STENCIL_ATTACHMENT_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for use as a depth/stencil or depth/stencil resolve attachment in a VkFramebuffer.
- VK_IMAGE_USAGE_2_TRANSIENT_ATTACHMENT_BIT_KHR specifies that implementations **may** support using memory allocations with the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT to back an image with this usage. This bit **can** be set for any image that **can** be used to create a VkImageView suitable for use as a color, resolve, depth/stencil, or input attachment.
- VK_IMAGE_USAGE_2_INPUT_ATTACHMENT_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for occupying VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT; be read from a shader as an input attachment; and be used as an input attachment in a framebuffer.
- VK_IMAGE_USAGE_2_FRAGMENT_DENSITY_MAP_BIT_EXT specifies that the image **can** be used to create a VkImageView suitable for use as a fragment density map image.
- VK_IMAGE_USAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for use as a fragment shading rate attachment
- VK_IMAGE_USAGE_2_VIDEO_DECODE_DST_BIT_KHR specifies that the image **can** be used as a decode output picture in a video decode operation.
- VK_IMAGE_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR is reserved for future use.
- VK_IMAGE_USAGE_2_VIDEO_DECODE_DPB_BIT_KHR specifies that the image **can** be used as an output reconstructed picture or an input reference picture in a video decode operation.
- VK_IMAGE_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR is reserved for future use.
- VK_IMAGE_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR specifies that the image **can** be used as an encode input picture in a video encode operation.
- VK_IMAGE_USAGE_2_VIDEO_ENCODE_DPB_BIT_KHR specifies that the image **can** be used as an output reconstructed picture or an input reference picture in a video encode operation.
- VK_IMAGE_USAGE_2_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT specifies that the image **can** be used as a color or depth/stencil attachment with feedback loop enabled.
- VK_IMAGE_USAGE_2_HOST_TRANSFER_BIT_KHR specifies that the image **can** be used with host copy commands and host layout transitions.
- VK_IMAGE_USAGE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR specifies that the image **can** be used as a quantization delta map in a video encode operation.

- VK_IMAGE_USAGE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR specifies that the image **can** be used as an emphasis map in a video encode operation.

```
// Provided by VK_KHR_extended_flags
typedef VkFlags64 VkImageUsageFlags2KHR;
```

VkImageUsageFlags2KHR is a bitmask type for setting a mask of zero or more VkImageUsageFlagBits2KHR.

Bits which **can** be set in

- VkImageViewUsageCreateInfo::usage
- VkImageStencilUsageCreateInfo::stencilUsage
- VkImageCreateInfo::usage

specify intended usage of an image, and are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageUsageFlagBits {
    VK_IMAGE_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_IMAGE_USAGE_TRANSFER_DST_BIT = 0x00000002,
    VK_IMAGE_USAGE_SAMPLED_BIT = 0x00000004,
    VK_IMAGE_USAGE_STORAGE_BIT = 0x00000008,
    VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT = 0x00000010,
    VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000020,
    VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT = 0x00000040,
    VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT = 0x00000080,
  // Provided by VK_VERSION_1_4
    VK_IMAGE_USAGE_HOST_TRANSFER_BIT = 0x00400000,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR = 0x00000400,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR = 0x00000800,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR = 0x00001000,

  // Provided by VK_KHR_video_encode_quantization_map
    VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR = 0x04000000,
  // Provided by VK_EXT_host_image_copy
    VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT = VK_IMAGE_USAGE_HOST_TRANSFER_BIT,
} VkImageUsageFlagBits;
```

- VK_IMAGE_USAGE_TRANSFER_SRC_BIT specifies that the image **can** be used as the source of a transfer command.
- VK_IMAGE_USAGE_TRANSFER_DST_BIT specifies that the image **can** be used as the destination of a transfer command.
- VK_IMAGE_USAGE_SAMPLED_BIT specifies that the image **can** be used to create a VkImageView suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and be sampled by a shader.
- VK_IMAGE_USAGE_STORAGE_BIT specifies that the image **can** be used to create a VkImageView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.

- VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT specifies that the image **can** be used to create a VkImageView suitable for use as a color or resolve attachment in a VkFramebuffer.
- VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT specifies that the image **can** be used to create a VkImageView suitable for use as a depth/stencil or depth/stencil resolve attachment in a VkFramebuffer.
- VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT specifies that implementations **may** support using memory allocations with the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT to back an image with this usage. This bit **can** be set for any image that **can** be used to create a VkImageView suitable for use as a color, resolve, depth/stencil, or input attachment.
- VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT specifies that the image **can** be used to create a VkImageView suitable for occupying VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT; be read from a shader as an input attachment; and be used as an input attachment in a framebuffer.
- VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT specifies that the image **can** be used to create a VkImageView suitable for use as a fragment density map image.
- VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR specifies that the image **can** be used to create a VkImageView suitable for use as a fragment shading rate attachment
- VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR specifies that the image **can** be used as a decode output picture in a video decode operation.
- VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR is reserved for future use.
- VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR specifies that the image **can** be used as an output reconstructed picture or an input reference picture in a video decode operation.
- VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR is reserved for future use.
- VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR specifies that the image **can** be used as an encode input picture in a video encode operation.
- VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR specifies that the image **can** be used as an output reconstructed picture or an input reference picture in a video encode operation.
- VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT specifies that the image **can** be used as a color or depth/stencil attachment with feedback loop enabled.
- VK_IMAGE_USAGE_HOST_TRANSFER_BIT specifies that the image **can** be used with host copy commands and host layout transitions.
- VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR specifies that the image **can** be used as a quantization delta map in a video encode operation.
- VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR specifies that the image **can** be used as an emphasis map in a video encode operation.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageUsageFlags;
```

VkImageUsageFlags is a bitmask type for setting a mask of zero or more VkImageUsageFlagBits.

Bits which **can** be set in VkImageCreateFlags2CreateInfoKHR::flags, specifying additional parameters of an image, are:

```
// Provided by VK_KHR_extended_flags
// Flag bits for VkImageCreateFlagBits2KHR
typedef VkFlags64 VkImageCreateFlagBits2KHR;

```

- VK_IMAGE_CREATE_2_SPARSE_BINDING_BIT_KHR specifies that the image will be backed using sparse memory binding.
- VK_IMAGE_CREATE_2_SPARSE_RESIDENCY_BIT_KHR specifies that the image **can** be partially backed using sparse memory binding. Images created with this flag **must** also be created with the VK_IMAGE_CREATE_2_SPARSE_BINDING_BIT_KHR flag.
- VK_IMAGE_CREATE_2_SPARSE_ALIASED_BIT_KHR specifies that the image will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another image (or another portion of the same image). Images created with this flag **must** also be created with the VK_IMAGE_CREATE_2_SPARSE_BINDING_BIT_KHR flag.
- VK_IMAGE_CREATE_2_MUTABLE_FORMAT_BIT_KHR specifies that the image **can** be used to create a VkImageView with a different format from the image. For multi-planar formats, VK_IMAGE_CREATE_2_MUTABLE_FORMAT_BIT_KHR specifies that a VkImageView can be created of a *plane* of the image.
- VK_IMAGE_CREATE_2_CUBE_COMPATIBLE_BIT_KHR specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_CUBE or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY.
- VK_IMAGE_CREATE_2_2D_ARRAY_COMPATIBLE_BIT_KHR specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY.
- VK_IMAGE_CREATE_2_2D_VIEW_COMPATIBLE_BIT_EXT specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_2D.
- VK_IMAGE_CREATE_2_PROTECTED_BIT_KHR specifies that the image is a protected image.
- VK_IMAGE_CREATE_2_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR specifies that the image **can** be used with a non-zero value of the splitInstanceBindRegionCount member of a VkBindImageMemoryDeviceGroupInfo structure passed into vkBindImageMemory2. This flag also has the effect of making the image use the standard sparse image block dimensions.
- VK_IMAGE_CREATE_2_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR specifies that the image having a compressed format **can** be used to create a VkImageView with an uncompressed format where each texel in the image view corresponds to a compressed texel block of the image.
- VK_IMAGE_CREATE_2_EXTENDED_USAGE_BIT_KHR specifies that the image **can** be created with usage flags that are not supported for the format the image is created with but are supported for at least one format a VkImageView created from the image **can** have.

- VK_IMAGE_CREATE_2_DISJOINT_BIT_KHR specifies that an image with a multi-planar format **must** have each plane separately bound to memory, rather than having a single memory binding for the whole image; the presence of this bit distinguishes a *disjoint image* from an image without this bit set.
- VK_IMAGE_CREATE_2_ALIAS_BIT_KHR specifies that two images created with the same creation parameters and aliased to the same memory **can** interpret the contents of the memory consistently with each other, subject to the rules described in the Memory Aliasing section. This flag further specifies that each plane of a *disjoint* image **can** share an in-memory non-linear representation with single-plane images, and that a single-plane image **can** share an in-memory non-linear representation with a plane of a multi-planar disjoint image, according to the rules in Compatible Formats of Planes of Multi-Planar Formats. If the `pNext` chain includes a VkExternalMemoryImageCreateInfo structure whose `handleTypes` member is not `0`, it is as if VK_IMAGE_CREATE_2_ALIAS_BIT_KHR is set.
- VK_IMAGE_CREATE_2_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT specifies that an image with a depth or depth/stencil format **can** be used with custom sample locations when used as a depth/stencil attachment.
- VK_IMAGE_CREATE_2_SUBSAMPLED_BIT_EXT specifies that an image **can** be in a subsampled format which **may** be more optimal when written as an attachment by a render pass that has a fragment density map attachment. Accessing a subsampled image has additional considerations:
  - Image data read as an image sampler will have undefined values if the sampler was not created with `flags` containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT or was not sampled through the use of a combined image sampler with an immutable sampler in `VkDescriptorSetLayoutBinding`.
  - Image data read with an input attachment will have undefined values if the contents were not written as an attachment in an earlier subpass of the same render pass.
  - Image data read as an image sampler in the fragment shader will be additionally be read by the device during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledCoarseReconstructionEarlyAccess` is VK_TRUE and the sampler was created with `flags` containing VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT.
  - Image data read with load operations are resampled to the fragment density of the render pass if `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledLoads` is VK_TRUE. Otherwise, values of image data are undefined.
  - Image contents outside of the render area take on undefined values if the image is stored as a render pass attachment.
- VK_IMAGE_CREATE_2_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT specifies that an image **can** be used in a render pass with non-zero fragment density map offsets. In a render pass with non-zero offsets, fragment density map attachments, input attachments, color attachments, depth/stencil attachment, resolve attachments, and preserve attachments **must** be created with VK_IMAGE_CREATE_2_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT.
- VK_IMAGE_CREATE_2_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the image **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

- VK_IMAGE_CREATE_2_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT specifies that an image **can** be used with multisampled rendering as a single-sampled framebuffer attachment
- VK_IMAGE_CREATE_2_VIDEO_PROFILE_INDEPENDENT_BIT_KHR specifies that the image **can** be used in video coding operations without having to specify at image creation time the set of video profiles the image will be used with, except for images used only as DPB pictures, as long as the image is otherwise compatible with the video profile in question.

  NOTE

  This enables exchanging video picture data without additional copies or conversions when used as:

  - Decode output pictures, regardless of the video profile used to produce them.
  - Encode input pictures, regardless of the video profile used to consume them.

  This includes images created with both VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR and VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, which is necessary to use the same video picture as the reconstructed picture and decode output picture in a video decode operation on implementations supporting VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR.

  However, images with only DPB usage remain tied to the video profiles the image was created with, as the data layout of such DPB-only images **may** be implementation- and codec-dependent.

  If an application would like to share or reuse the device memory backing such images (e.g. for the purposes of temporal aliasing), then it **should** create separate image objects for each video profile and bind them to the same underlying device memory range, similar to how memory resources **can** be shared across separate video sessions or any other memory-backed resource.

See Sparse Resource Features and Sparse Physical Device Features for more details.

```
// Provided by VK_KHR_extended_flags
typedef VkFlags64 VkImageCreateFlags2KHR;
```

VkImageCreateFlags2KHR is a bitmask type for setting a mask of zero or more VkImageCreateFlagBits2KHR.

Bits which **can** be set in VkImageCreateInfo::flags, specifying additional parameters of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageCreateFlagBits {
    VK_IMAGE_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_IMAGE_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
```

```
    VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT = 0x00000008,
    VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT = 0x00000010,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_ALIAS_BIT = 0x00000400,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT = 0x00000040,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT = 0x00000020,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT = 0x00000080,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_EXTENDED_USAGE_BIT = 0x00000100,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_PROTECTED_BIT = 0x00000800,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_DISJOINT_BIT = 0x00000200,
  // Provided by VK_EXT_descriptor_heap

    VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00100000,
  // Provided by VK_EXT_fragment_density_map_offset
    VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT = 0x00008000,
  // Provided by VK_KHR_maintenance11
    VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR = 0x00400000,
  // Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR =
VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT,
  // Provided by VK_KHR_maintenance1
    VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT_KHR =
VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT,
  // Provided by VK_KHR_maintenance2
    VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR =
VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT,
  // Provided by VK_KHR_maintenance2
    VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR = VK_IMAGE_CREATE_EXTENDED_USAGE_BIT,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_CREATE_DISJOINT_BIT_KHR = VK_IMAGE_CREATE_DISJOINT_BIT,
  // Provided by VK_KHR_bind_memory2
    VK_IMAGE_CREATE_ALIAS_BIT_KHR = VK_IMAGE_CREATE_ALIAS_BIT,
  // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT,
```

```
} VkImageCreateFlagBits;
```

- VK_IMAGE_CREATE_SPARSE_BINDING_BIT specifies that the image will be backed using sparse memory binding.
- VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT specifies that the image **can** be partially backed using sparse memory binding. Images created with this flag **must** also be created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT flag.
- VK_IMAGE_CREATE_SPARSE_ALIASED_BIT specifies that the image will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another image (or another portion of the same image). Images created with this flag **must** also be created with the VK_IMAGE_CREATE_SPARSE_BINDING_BIT flag.
- VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT specifies that the image **can** be used to create a VkImageView with a different format from the image. For multi-planar formats, VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT specifies that a VkImageView can be created of a *plane* of the image.
- VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_CUBE or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY.
- VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY.
- VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT specifies that the image **can** be used to create a VkImageView of type VK_IMAGE_VIEW_TYPE_2D.
- VK_IMAGE_CREATE_PROTECTED_BIT specifies that the image is a protected image.
- VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT specifies that the image **can** be used with a non-zero value of the splitInstanceBindRegionCount member of a VkBindImageMemoryDeviceGroupInfo structure passed into vkBindImageMemory2. This flag also has the effect of making the image use the standard sparse image block dimensions.
- VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT specifies that the image having a compressed format **can** be used to create a VkImageView with an uncompressed format where each texel in the image view corresponds to a compressed texel block of the image.
- VK_IMAGE_CREATE_EXTENDED_USAGE_BIT specifies that the image **can** be created with usage flags that are not supported for the format the image is created with but are supported for at least one format a VkImageView created from the image **can** have.
- VK_IMAGE_CREATE_DISJOINT_BIT specifies that an image with a multi-planar format **must** have each plane separately bound to memory, rather than having a single memory binding for the whole image; the presence of this bit distinguishes a *disjoint image* from an image without this bit set.
- VK_IMAGE_CREATE_ALIAS_BIT specifies that two images created with the same creation parameters and aliased to the same memory **can** interpret the contents of the memory consistently with each other, subject to the rules described in the Memory Aliasing section. This flag further specifies that each plane of a *disjoint* image **can** share an in-memory non-linear representation with single-plane images, and that a single-plane image **can** share an in-memory non-linear representation with a plane of a multi-planar disjoint image, according to the rules in Compatible Formats of Planes of Multi-Planar Formats. If the pNext chain includes a

VkExternalMemoryImageCreateInfo structure whose handleTypes member is not 0, it is as if VK_IMAGE_CREATE_ALIAS_BIT is set.

- VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT specifies that an image with a depth or depth/stencil format **can** be used with custom sample locations when used as a depth/stencil attachment.
- VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT specifies that an image **can** be in a subsampled format which **may** be more optimal when written as an attachment by a render pass that has a fragment density map attachment. Accessing a subsampled image has additional considerations:
  - Image data read as an image sampler will have undefined values if the sampler was not created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT or was not sampled through a combined embedded sampler and image mapping if using descriptor heaps, or the use of a combined image sampler with an immutable sampler in VkDescriptorSetLayoutBinding.
  - Image data read with an input attachment will have undefined values if the contents were not written as an attachment in an earlier subpass of the same render pass.
  - Image data read as an image sampler in the fragment shader will be additionally be read by the device during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT if VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledCoarseReconstructionEarlyAccess is VK_TRUE and the sampler was created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT.
  - Image data read with load operations are resampled to the fragment density of the render pass if VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledLoads is VK_TRUE. Otherwise, values of image data are undefined.
  - Image contents outside of the render area take on undefined values if the image is stored as a render pass attachment.
- VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT specifies that an image **can** be used in a render pass with non-zero fragment density map offsets. In a render pass with non-zero offsets, fragment density map attachments, input attachments, color attachments, depth/stencil attachment, resolve attachments, and preserve attachments **must** be created with VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT.
- VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the image **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.
- VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT specifies that an image **can** be used with multisampled rendering as a single-sampled render pass attachment
- VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR specifies that a single layer image view created from this image can be accessed with both Arrayed equal to 0 and Arrayed equal to 1 in a shader. If accessed with Arrayed equal to 1 in a shader, and VkImageViewCreateInfo::viewType is VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D, the image is treated as having an array size of 1, and subresourceRange.baseArrayLayer is accessed. If accessed with Arrayed equal to 0 in a shader, and VkImageViewCreateInfo::viewType is VK_IMAGE_VIEW_TYPE_1D_ARRAY or VK_IMAGE_VIEW_TYPE_2D_ARRAY, the descriptor is

accessed as-if the view was created with VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D respectively. Cube map view aliasing is not included by this flag bit. Also, image views created with a multi-planar format **can** not alias like this.

- VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR specifies that the image **can** be used in video coding operations without having to specify at image creation time the set of video profiles the image will be used with, except for images used only as DPB pictures, as long as the image is otherwise compatible with the video profile in question.

NOTE

This enables exchanging video picture data without additional copies or conversions when used as:

- Decode output pictures, regardless of the video profile used to produce them.
- Encode input pictures, regardless of the video profile used to consume them.

This includes images created with both VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR and VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, which is necessary to use the same video picture as the reconstructed picture and decode output picture in a video decode operation on implementations supporting VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR.

However, images with only DPB usage remain tied to the video profiles the image was created with, as the data layout of such DPB-only images **may** be implementation- and codec-dependent.

If an application would like to share or reuse the device memory backing such images (e.g. for the purposes of temporal aliasing), then it **should** create separate image objects for each video profile and bind them to the same underlying device memory range, similar to how memory resources **can** be shared across separate video sessions or any other memory-backed resource.

See Sparse Resource Features and Sparse Physical Device Features for more details.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageCreateFlags;
```

`VkImageCreateFlags` is a bitmask type for setting a mask of zero or more VkImageCreateFlagBits.

Possible values of VkImageCreateInfo::`imageType`, specifying the basic dimensionality of an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageType {
    VK_IMAGE_TYPE_1D = 0,
    VK_IMAGE_TYPE_2D = 1,
    VK_IMAGE_TYPE_3D = 2,
} VkImageType;
```

- VK_IMAGE_TYPE_1D specifies a one-dimensional image.
- VK_IMAGE_TYPE_2D specifies a two-dimensional image.
- VK_IMAGE_TYPE_3D specifies a three-dimensional image.

Possible values of VkImageCreateInfo::`tiling`, specifying the tiling arrangement of texel blocks in an image, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageTiling {
    VK_IMAGE_TILING_OPTIMAL = 0,
    VK_IMAGE_TILING_LINEAR = 1,
  // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT = 1000158000,
} VkImageTiling;
```

- VK_IMAGE_TILING_OPTIMAL specifies optimal tiling (texels are laid out in an implementation-dependent arrangement, for more efficient memory access).
- VK_IMAGE_TILING_LINEAR specifies linear tiling (texels are laid out in memory in row-major order, possibly with some padding on each row).
- VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT specifies that the image's tiling is defined by a Linux DRM format modifier. The modifier is specified at image creation with VkImageDrmFormatModifierListCreateInfoEXT or VkImageDrmFormatModifierExplicitCreateInfoEXT, and **can** be queried with vkGetImageDrmFormatModifierPropertiesEXT.

To query the memory layout of an image subresource, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSubresourceLayout(
    VkDevice                                    device,
    VkImage                                     image,
    const VkImageSubresource*                   pSubresource,
    VkSubresourceLayout*                        pLayout);
```

- `device` is the logical device that owns the image.
- `image` is the image whose layout is being queried.
- `pSubresource` is a pointer to a VkImageSubresource structure selecting a specific image

subresource from the image.

- `pLayout` is a pointer to a VkSubresourceLayout structure in which the layout is returned.

If the image is linear, then the returned layout is valid for host access.

If the image's tiling is VK_IMAGE_TILING_LINEAR and its format is a multi-planar format, then `vkGetImageSubresourceLayout` describes one *format plane* of the image. If the image's tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then `vkGetImageSubresourceLayout` describes one *memory plane* of the image. If the image's tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT and the image is non-linear, then the returned layout has an implementation-dependent meaning; the vendor of the image's DRM format modifier **may** provide documentation that explains how to interpret the returned layout.

`vkGetImageSubresourceLayout` is invariant for the lifetime of a single image.

Valid Usage

- VUID-vkGetImageSubresourceLayout-image-07790
  `image` **must** have been created with `tiling` equal to VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT
- VUID-vkGetImageSubresourceLayout-aspectMask-00997
  The `aspectMask` member of `pSubresource` **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout-mipLevel-01716
  The `mipLevel` member of `pSubresource` **must** be less than the `mipLevels` specified in `image`
- VUID-vkGetImageSubresourceLayout-arrayLayer-01717
  The `arrayLayer` member of `pSubresource` **must** be less than the `arrayLayers` specified in `image`
- VUID-vkGetImageSubresourceLayout-format-08886
  If `format` of the `image` is a color format that is not a multi-planar format, and `tiling` of the `image` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, the `aspectMask` member of `pSubresource` **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-vkGetImageSubresourceLayout-format-04462
  If `format` of the `image` has a depth component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_DEPTH_BIT
- VUID-vkGetImageSubresourceLayout-format-04463
  If `format` of the `image` has a stencil component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkGetImageSubresourceLayout-format-04464
  If `format` of the `image` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` **must** not contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkGetImageSubresourceLayout-tiling-08717
  If the `tiling` of the `image` is VK_IMAGE_TILING_LINEAR and has a multi-planar format, then the `aspectMask` member of `pSubresource` **must** be a single valid multi-planar aspect

mask bit

- VUID-vkGetImageSubresourceLayout-tiling-09433
  If the `tiling` of the `image` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` and the index *i* **must** be less than the VkDrmFormatModifierPropertiesEXT::`drmFormatModifierPlaneCount` associated with the image's `format` and VkImageDrmFormatModifierPropertiesEXT::`drmFormatModifier`

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageSubresourceLayout-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkGetImageSubresourceLayout-pSubresource-parameter
  `pSubresource` **must** be a valid pointer to a valid VkImageSubresource structure
- VUID-vkGetImageSubresourceLayout-pLayout-parameter
  `pLayout` **must** be a valid pointer to a VkSubresourceLayout structure
- VUID-vkGetImageSubresourceLayout-image-parent
  `image` **must** have been created, allocated, or retrieved from `device`

The `VkImageSubresource` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresource {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              arrayLayer;
} VkImageSubresource;
```

- `aspectMask` is a VkImageAspectFlags value selecting the image *aspect*.
- `mipLevel` selects the mipmap level.
- `arrayLayer` selects the array layer.

Valid Usage (Implicit)

- VUID-VkImageSubresource-aspectMask-parameter
  `aspectMask` **must** be a valid combination of VkImageAspectFlagBits values

Information about the layout of the image subresource is returned in a `VkSubresourceLayout` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSubresourceLayout {
    VkDeviceSize    offset;
    VkDeviceSize    size;
    VkDeviceSize    rowPitch;
    VkDeviceSize    arrayPitch;
    VkDeviceSize    depthPitch;
} VkSubresourceLayout;
```

- `offset` is the byte offset from the start of the image or the plane where the image subresource begins.
- `size` is the size in bytes of the image subresource. `size` includes any extra memory that is required based on `rowPitch`.
- `rowPitch` describes the number of bytes between each row of texels in an image.
- `arrayPitch` describes the number of bytes between each array layer of an image.
- `depthPitch` describes the number of bytes between each slice of 3D image.

If the image is linear, then `rowPitch`, `arrayPitch` and `depthPitch` describe the layout of the image subresource in linear memory. For uncompressed formats, `rowPitch` is the number of bytes between texels with the same x coordinate in adjacent rows (y coordinates differ by one). `arrayPitch` is the number of bytes between texels with the same x and y coordinate in adjacent array layers of the image (array layer values differ by one). `depthPitch` is the number of bytes between texels with the same x and y coordinate in adjacent slices of a 3D image (z coordinates differ by one). Expressed as an addressing formula, the starting byte of a texel in the image subresource has address:

```
// (x,y,z,layer) are in texel coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x*elementSize +
offset
```

For compressed formats, the `rowPitch` is the number of bytes between compressed texel blocks in adjacent rows. `arrayPitch` is the number of bytes between compressed texel blocks in adjacent array layers. `depthPitch` is the number of bytes between compressed texel blocks in adjacent slices of a 3D image.

```
// (x,y,z,layer) are in compressed texel block coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x
*compressedTexelBlockByteSize + offset;
```

The value of `arrayPitch` is undefined for images that were not created as arrays. `depthPitch` is defined only for 3D images.

If the image has a *single-plane* color format and its tiling is VK_IMAGE_TILING_LINEAR , then the `aspectMask` member of `VkImageSubresource` **must** be VK_IMAGE_ASPECT_COLOR_BIT.

If the image has a depth/stencil format and its tiling is VK_IMAGE_TILING_LINEAR , then `aspectMask`

must be either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT. On implementations that store depth and stencil aspects separately, querying each of these image subresource layouts will return a different `offset` and `size` representing the region of memory used for that aspect. On implementations that store depth and stencil aspects interleaved, the same `offset` and `size` are returned and represent the interleaved memory allocation.

If the image has a multi-planar format and its tiling is VK_IMAGE_TILING_LINEAR , then the `aspectMask` member of `VkImageSubresource` **must** be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or (for 3-plane formats only) VK_IMAGE_ASPECT_PLANE_2_BIT. Querying each of these image subresource layouts will return a different `offset` and `size` representing the region of memory used for that plane. If the image is *disjoint*, then the `offset` is relative to the base address of the plane. If the image is *non-disjoint*, then the `offset` is relative to the base address of the image.

If the image's tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the `aspectMask` member of `VkImageSubresource` **must** be one of `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT`, where the maximum allowed plane index *i* is defined by the VkDrmFormatModifierPropertiesEXT ::`drmFormatModifierPlaneCount` associated with the image's VkImageCreateInfo::`format` and modifier. The memory range used by the subresource is described by `offset` and `size`. If the image is *disjoint*, then the `offset` is relative to the base address of the *memory plane*. If the image is *non-disjoint*, then the `offset` is relative to the base address of the image. If the image is non-linear, then `rowPitch`, `arrayPitch`, and `depthPitch` have an implementation-dependent meaning.

To query the memory layout of an image subresource, call:

```
// Provided by VK_VERSION_1_4
void vkGetImageSubresourceLayout2(
    VkDevice                                    device,
    VkImage                                     image,
    const VkImageSubresource2*                  pSubresource,
    VkSubresourceLayout2*                       pLayout);
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to vkGetImageSubresourceLayout2
void vkGetImageSubresourceLayout2KHR(
    VkDevice                                    device,
    VkImage                                     image,
    const VkImageSubresource2*                  pSubresource,
    VkSubresourceLayout2*                       pLayout);
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to vkGetImageSubresourceLayout2
void vkGetImageSubresourceLayout2EXT(
    VkDevice                                    device,
    VkImage                                     image,
    const VkImageSubresource2*                  pSubresource,
    VkSubresourceLayout2*                       pLayout);
```

- `device` is the logical device that owns the image.
- `image` is the image whose layout is being queried.
- `pSubresource` is a pointer to a VkImageSubresource2 structure selecting a specific image for the image subresource.
- `pLayout` is a pointer to a VkSubresourceLayout2 structure in which the layout is returned.

`vkGetImageSubresourceLayout2` behaves similarly to vkGetImageSubresourceLayout, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

It is legal to call `vkGetImageSubresourceLayout2` with an `image` created with `tiling` equal to VK_IMAGE_TILING_OPTIMAL, but the members of VkSubresourceLayout2::`subresourceLayout` will have undefined values in this case.

NOTE Structures chained from VkImageSubresource2::`pNext` will also be updated when `tiling` is equal to VK_IMAGE_TILING_OPTIMAL.

Valid Usage

- VUID-vkGetImageSubresourceLayout2-aspectMask-00997
  The `aspectMask` member of `pSubresource` **must** only have a single bit set
- VUID-vkGetImageSubresourceLayout2-mipLevel-01716
  The `mipLevel` member of `pSubresource` **must** be less than the `mipLevels` specified in `image`
- VUID-vkGetImageSubresourceLayout2-arrayLayer-01717
  The `arrayLayer` member of `pSubresource` **must** be less than the `arrayLayers` specified in `image`
- VUID-vkGetImageSubresourceLayout2-format-08886
  If `format` of the `image` is a color format that is not a multi-planar format, and `tiling` of the `image` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, the `aspectMask` member of `pSubresource` **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-vkGetImageSubresourceLayout2-format-04462
  If `format` of the `image` has a depth component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_DEPTH_BIT
- VUID-vkGetImageSubresourceLayout2-format-04463
  If `format` of the `image` has a stencil component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_STENCIL_BIT

- VUID-vkGetImageSubresourceLayout2-format-04464
  If `format` of the `image` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` **must** not contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkGetImageSubresourceLayout2-tiling-08717
  If the `tiling` of the `image` is VK_IMAGE_TILING_LINEAR and has a multi-planar format, then the `aspectMask` member of `pSubresource` **must** be a single valid multi-planar aspect mask bit
- VUID-vkGetImageSubresourceLayout2-tiling-09435
  If the `tiling` of the `image` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the `aspectMask` member of `pSubresource` **must** be `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` and the index *i* **must** be less than the VkDrmFormatModifierPropertiesEXT::`drmFormatModifierPlaneCount` associated with the image's `format` and VkImageDrmFormatModifierPropertiesEXT::`drmFormatModifier`

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageSubresourceLayout2-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkGetImageSubresourceLayout2-pSubresource-parameter
  `pSubresource` **must** be a valid pointer to a valid VkImageSubresource2 structure
- VUID-vkGetImageSubresourceLayout2-pLayout-parameter
  `pLayout` **must** be a valid pointer to a VkSubresourceLayout2 structure
- VUID-vkGetImageSubresourceLayout2-image-parent
  `image` **must** have been created, allocated, or retrieved from `device`

The `VkImageSubresource2` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkImageSubresource2 {
    VkStructureType       sType;
    void*                 pNext;
    VkImageSubresource    imageSubresource;
} VkImageSubresource2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkImageSubresource2
typedef VkImageSubresource2 VkImageSubresource2KHR;
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to VkImageSubresource2
typedef VkImageSubresource2 VkImageSubresource2EXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageSubresource` is a VkImageSubresource structure.

Valid Usage (Implicit)

- VUID-VkImageSubresource2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_SUBRESOURCE_2
- VUID-VkImageSubresource2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageSubresource2-imageSubresource-parameter
  `imageSubresource` **must** be a valid VkImageSubresource structure

Information about the layout of the image subresource is returned in a `VkSubresourceLayout2` structure:

```
// Provided by VK_VERSION_1_4
typedef struct VkSubresourceLayout2 {
    VkStructureType        sType;
    void*                  pNext;
    VkSubresourceLayout    subresourceLayout;
} VkSubresourceLayout2;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkSubresourceLayout2
typedef VkSubresourceLayout2 VkSubresourceLayout2KHR;
```

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
// Equivalent to VkSubresourceLayout2
typedef VkSubresourceLayout2 VkSubresourceLayout2EXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subresourceLayout` is a VkSubresourceLayout structure.

Valid Usage (Implicit)

- VUID-VkSubresourceLayout2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SUBRESOURCE_LAYOUT_2
- VUID-VkSubresourceLayout2-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkImageCompressionPropertiesEXT or VkSubresourceHostMemcpySize
- VUID-VkSubresourceLayout2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

To query the memory size needed to copy to or from an image using vkCopyMemoryToImage or vkCopyImageToMemory when the VK_HOST_IMAGE_COPY_MEMCPY_BIT flag is specified, add a VkSubresourceHostMemcpySize structure to the `pNext` chain of the VkSubresourceLayout2 structure in a call to vkGetImageSubresourceLayout2.

The `VkSubresourceHostMemcpySize` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkSubresourceHostMemcpySize {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       size;
} VkSubresourceHostMemcpySize;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkSubresourceHostMemcpySize
typedef VkSubresourceHostMemcpySize VkSubresourceHostMemcpySizeEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `size` is the size in bytes of the image subresource.

Valid Usage (Implicit)

- VUID-VkSubresourceHostMemcpySize-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SUBRESOURCE_HOST_MEMCPY_SIZE

Structure Chaining

Extends the structure

- VkSubresourceLayout2

To query the memory layout of an image subresource, without an image object, call:

```
// Provided by VK_VERSION_1_4
void vkGetDeviceImageSubresourceLayout(
    VkDevice                                    device,
    const VkDeviceImageSubresourceInfo*         pInfo,
    VkSubresourceLayout2*                       pLayout);
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to vkGetDeviceImageSubresourceLayout
void vkGetDeviceImageSubresourceLayoutKHR(
    VkDevice                                    device,
    const VkDeviceImageSubresourceInfo*         pInfo,
    VkSubresourceLayout2*                       pLayout);
```

- `device` is the logical device that owns the image.
- `pInfo` is a pointer to a VkDeviceImageSubresourceInfo structure containing parameters required for the subresource layout query.
- `pLayout` is a pointer to a VkSubresourceLayout2 structure in which the layout is returned.

`vkGetDeviceImageSubresourceLayout` behaves similarly to vkGetImageSubresourceLayout2, but uses a VkImageCreateInfo structure to specify the image rather than a VkImage object.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSubresourceLayout-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceImageSubresourceLayout-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDeviceImageSubresourceInfo structure
- VUID-vkGetDeviceImageSubresourceLayout-pLayout-parameter
  `pLayout` **must** be a valid pointer to a VkSubresourceLayout2 structure

The `VkDeviceImageSubresourceInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkDeviceImageSubresourceInfo {
    VkStructureType               sType;
    const void*                   pNext;
    const VkImageCreateInfo*      pCreateInfo;
    const VkImageSubresource2*    pSubresource;
} VkDeviceImageSubresourceInfo;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkDeviceImageSubresourceInfo
typedef VkDeviceImageSubresourceInfo VkDeviceImageSubresourceInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a VkImageCreateInfo structure containing parameters affecting creation of the image to query.
- `pSubresource` is a pointer to a VkImageSubresource2 structure selecting a specific image subresource for the query.

Valid Usage

- VUID-VkDeviceImageSubresourceInfo-aspectMask-00997
  The `aspectMask` member of `pSubresource` **must** only have a single bit set
- VUID-VkDeviceImageSubresourceInfo-mipLevel-01716
  The `mipLevel` member of `pSubresource` **must** be less than the `mipLevels` specified in `pCreateInfo`
- VUID-VkDeviceImageSubresourceInfo-arrayLayer-01717
  The `arrayLayer` member of `pSubresource` **must** be less than the `arrayLayers` specified in `pCreateInfo`
- VUID-VkDeviceImageSubresourceInfo-format-08886
  If `format` of the `image` is a color format that is not a multi-planar format, and `tiling` of the `pCreateInfo` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, the `aspectMask` member of `pSubresource` **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-VkDeviceImageSubresourceInfo-format-04462
  If `format` of the `pCreateInfo` has a depth component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_DEPTH_BIT
- VUID-VkDeviceImageSubresourceInfo-format-04463
  If `format` of the `pCreateInfo` has a stencil component, the `aspectMask` member of `pSubresource` **must** contain VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkDeviceImageSubresourceInfo-format-04464
  If `format` of the `pCreateInfo` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` **must** not contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkDeviceImageSubresourceInfo-tiling-08717
  If the `tiling` of the `pCreateInfo` is VK_IMAGE_TILING_LINEAR and has a multi-planar format, then the `aspectMask` member of `pSubresource` **must** be a single valid multi-planar aspect mask bit

Valid Usage (Implicit)

- VUID-VkDeviceImageSubresourceInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_IMAGE_SUBRESOURCE_INFO
- VUID-VkDeviceImageSubresourceInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDeviceImageSubresourceInfo-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkImageCreateInfo structure
- VUID-VkDeviceImageSubresourceInfo-pSubresource-parameter
  `pSubresource` **must** be a valid pointer to a valid VkImageSubresource2 structure

If an image was created with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the image has a Linux DRM format modifier. To query the *modifier*, call:

```
// Provided by VK_EXT_image_drm_format_modifier
VkResult vkGetImageDrmFormatModifierPropertiesEXT(
    VkDevice                                    device,
    VkImage                                     image,
    VkImageDrmFormatModifierPropertiesEXT*      pProperties);
```

- `device` is the logical device that owns the image.
- `image` is the queried image.
- `pProperties` is a pointer to a VkImageDrmFormatModifierPropertiesEXT structure in which properties of the image's *DRM format modifier* are returned.

Valid Usage

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-02272
  `image` **must** have been created with `tiling` equal to VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT

Valid Usage (Implicit)

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-pProperties-parameter
  `pProperties` **must** be a valid pointer to a VkImageDrmFormatModifierPropertiesEXT structure
- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parent

`image` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkImageDrmFormatModifierPropertiesEXT structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           drmFormatModifier;
} VkImageDrmFormatModifierPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` returns the image's Linux DRM format modifier.

If the `image` was created with VkImageDrmFormatModifierListCreateInfoEXT, then the returned `drmFormatModifier` **must** belong to the list of modifiers provided at time of image creation in VkImageDrmFormatModifierListCreateInfoEXT::`pDrmFormatModifiers`. If the `image` was created with VkImageDrmFormatModifierExplicitCreateInfoEXT, then the returned `drmFormatModifier` **must** be the modifier provided at time of image creation in VkImageDrmFormatModifierExplicitCreateInfoEXT::`drmFormatModifier`.

Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierPropertiesEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT
- VUID-VkImageDrmFormatModifierPropertiesEXT-pNext-pNext
  `pNext` **must** be `NULL`

To destroy an image, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImage(
    VkDevice                                    device,
    VkImage                                     image,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the image.
- `image` is the image to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyImage-image-01000
  All submitted commands that refer to `image`, either directly or via a `VkImageView`, **must** have completed execution
- VUID-vkDestroyImage-image-01001
  If `VkAllocationCallbacks` were provided when `image` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImage-image-01002
  If no `VkAllocationCallbacks` were provided when `image` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyImage-image-04882
  `image` **must** not have been acquired from vkGetSwapchainImagesKHR

Valid Usage (Implicit)

- VUID-vkDestroyImage-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyImage-image-parameter
  If `image` is not VK_NULL_HANDLE, `image` **must** be a valid VkImage handle
- VUID-vkDestroyImage-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyImage-image-parent
  If `image` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `image` **must** be externally synchronized

12.4.1. Image Format Features

Valid uses of a VkImage **may** depend on the image's *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If the image was created with VK_IMAGE_TILING_LINEAR, then its set of *format features* is the value of VkFormatProperties::`linearTilingFeatures` found by calling vkGetPhysicalDeviceFormatProperties on the same `format` as VkImageCreateInfo::`format`.
- If the image was created with VK_IMAGE_TILING_OPTIMAL, then its set of *format features* is the value of VkFormatProperties::`optimalTilingFeatures` found by calling vkGetPhysicalDeviceFormatProperties on the same `format` as VkImageCreateInfo::`format`.
- If the image was created with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then:
  - The image's DRM format modifier is the value of VkImageDrmFormatModifierPropertiesEXT::`drmFormatModifier` found by calling vkGetImageDrmFormatModifierPropertiesEXT.
  - Let VkDrmFormatModifierPropertiesListEXT::`pDrmFormatModifierProperties` be the array found by calling vkGetPhysicalDeviceFormatProperties2 on the same `format` as VkImageCreateInfo::`format`.
  - Let `VkDrmFormatModifierPropertiesEXT prop` be the array element whose `drmFormatModifier` member is the value of the image's DRM format modifier.
  - Then the image's set of *format features* is the value of `prop`::`drmFormatModifierTilingFeatures`.

12.4.2. Image Mip Level Sizing

A *complete mipmap chain* is the full set of mip levels, from the largest mip level provided, down to the *minimum mip level size*.

Conventional Images

For conventional images, the dimensions of each successive mip level, n+1, are:

$$width_{n+1} = \max(\lfloor width_n/2 \rfloor, 1)$$

$$height_{n+1} = \max(\lfloor height_n/2 \rfloor, 1)$$

$$depth_{n+1} = \max(\lfloor depth_n/2 \rfloor, 1)$$

where $width_n$, $height_n$, and $depth_n$ are the dimensions of the next larger mip level, n.

The minimum mip level size is:

- 1 for one-dimensional images,
- 1x1 for two-dimensional images, and

- 1x1x1 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lfloor \log_2(\max(\texttt{width}_0, \texttt{height}_0, \texttt{depth}_0)) \rfloor + 1$$

where $\texttt{width}_0$, $\texttt{height}_0$, and $\texttt{depth}_0$ are the dimensions of the largest (most detailed) mip level, `0`.

12.4.3. Image Capture Replay for Descriptor Heaps

To allow for a replay tool to capture and replay image descriptors used with descriptor heaps, opaque data **must** be captured during the initial recording and provided when recreating the image during replay, using the following functions:

To get the opaque capture descriptor data for images, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkGetImageOpaqueCaptureDataEXT(
    VkDevice                                    device,
    uint32_t                                    imageCount,
    const VkImage*                              pImages,
    VkHostAddressRangeEXT*                      pDatas);
```

- `device` is the logical device that gets the data.
- `imageCount` is the number of images to retrieve data from.
- `pImages` is a pointer to an array of VkImage objects to retrieve the opaque capture data from.
- `pDatas` is a pointer to an array of VkHostAddressRangeEXT structures defining the host address ranges where each image's opaque capture data will be written.

Valid Usage

- VUID-vkGetImageOpaqueCaptureDataEXT-descriptorHeapCaptureReplay-11282
  The `descriptorHeapCaptureReplay` feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDataEXT-size-11283
  The `size` member of each element of `pDatas` **must** be equal to `imageCaptureReplayOpaqueDataSize`
- VUID-vkGetImageOpaqueCaptureDataEXT-device-11284
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-11285
  Each element of `pImages` **must** have been created with VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT set in VkImageCreateInfo::`flags`

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDataEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-parameter
  `pImages` **must** be a valid pointer to an array of `imageCount` valid VkImage handles
- VUID-vkGetImageOpaqueCaptureDataEXT-pDatas-parameter
  `pDatas` **must** be a valid pointer to an array of `imageCount` VkHostAddressRangeEXT structures
- VUID-vkGetImageOpaqueCaptureDataEXT-imageCount-arraylength
  `imageCount` **must** be greater than `0`
- VUID-vkGetImageOpaqueCaptureDataEXT-pImages-parent
  Each element of `pImages` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkOpaqueCaptureDataCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkOpaqueCaptureDataCreateInfoEXT {
    VkStructureType                     sType;
    const void*                         pNext;
    const VkHostAddressRangeConstEXT*   pData;
} VkOpaqueCaptureDataCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pData` is a pointer to the range of host memory containing opaque data previously captured via vkGetImageOpaqueCaptureDataEXT.

When an image is created with VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT set in VkImageCreateInfo ::`flags`, if the `pNext` chain of VkImageCreateInfo includes this structure, and `pData` is not `NULL`, the

implementation will attempt to recreate the image such that descriptors written with vkWriteResourceDescriptorsEXT will be reproduced with the same bit pattern as during capture if possible. If the implementation is unable to recreate the image based on this data, image creation will fail and return VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS.

If this structure is not present, it is equivalent to setting `pData` to `NULL`.

Valid Usage (Implicit)

- VUID-VkOpaqueCaptureDataCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DATA_CREATE_INFO_EXT
- VUID-VkOpaqueCaptureDataCreateInfoEXT-pData-parameter
  If `pData` is not `NULL`, `pData` **must** be a valid pointer to a valid VkHostAddressRangeConstEXT structure

Structure Chaining

Extends the structure

- VkImageCreateInfo

12.5. Image Layouts

Images are stored in implementation-dependent opaque layouts in memory. Each layout has limitations on what kinds of operations are supported for image subresources using the layout. At any given time, the data representing an image subresource in memory exists in a particular layout which is determined by the most recent layout transition that was performed on that image subresource. Applications have control over which layout each image subresource uses, and **can** transition an image subresource from one layout to another. Transitions **can** happen with an image memory barrier, included as part of a vkCmdPipelineBarrier or a vkCmdWaitEvents command buffer command (see Image Memory Barriers), or as part of a subpass dependency within a render pass (see `VkSubpassDependency`).

Image layout is per-image subresource. Separate image subresources of the same image **can** be in different layouts at the same time, with the exception that depth and stencil aspects of a given image subresource **can** only be in different layouts if the `separateDepthStencilLayouts` feature is enabled. When an `VkImageView` descriptor is accessed on the device, all image subresources must be in a valid image layout.

NOTE

Each layout **may** offer optimal performance for a specific usage of image memory. For example, an image with a layout of VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL **may** provide optimal performance for use as a color attachment, but be unsupported for use in transfer commands. Applications **can** transition an image subresource from one layout to another in order to achieve optimal performance when the image subresource is used for multiple kinds of operations. After initialization, applications need not use

> any layout other than the general layout, though this **may** produce suboptimal performance on some implementations.

Upon creation, all image subresources of an image are initially in the same layout, where that layout is selected by the `VkImageCreateInfo::initialLayout` member. The `initialLayout` **must** be either VK_IMAGE_LAYOUT_UNDEFINED, VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT, or VK_IMAGE_LAYOUT_PREINITIALIZED. If it is VK_IMAGE_LAYOUT_PREINITIALIZED and the image has linear tiling, then the image data **can** be preinitialized by the host while using this layout, and the transition away from this layout will preserve that data. If it is VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT, then the image data is interpreted to be zeroed. If the memory bound to this image is not fully zeroed when the image is transitioned to a different layout, the results are undefined. If it is VK_IMAGE_LAYOUT_UNDEFINED, then the contents of the data are considered to be undefined, and the transition away from this layout is not guaranteed to preserve that data. For either of these initial layouts, any image subresources **must** be transitioned to another layout before they are accessed by the device.

Host access to image memory is only well-defined for linear images and for image subresources of those images which are currently in any of the following layouts:

- VK_IMAGE_LAYOUT_PREINITIALIZED
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT

Calling vkGetImageSubresourceLayout for a linear image returns a subresource layout mapping that is valid for either of those image layouts.

The set of image layouts consists of:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageLayout {
    VK_IMAGE_LAYOUT_UNDEFINED = 0,
    VK_IMAGE_LAYOUT_GENERAL = 1,
    VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL = 2,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL = 3,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL = 4,
    VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL = 5,
    VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL = 6,
    VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL = 7,
    VK_IMAGE_LAYOUT_PREINITIALIZED = 8,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL = 1000117000,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL = 1000117001,
  // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL = 1000241000,
  // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL = 1000241001,
  // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL = 1000241002,
```

```
  // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL = 1000241003,
  // Provided by VK_VERSION_1_3
    VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL = 1000314000,
  // Provided by VK_VERSION_1_3
    VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL = 1000314001,
  // Provided by VK_VERSION_1_4
    VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ = 1000232000,
  // Provided by VK_KHR_swapchain
    VK_IMAGE_LAYOUT_PRESENT_SRC_KHR = 1000001002,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR = 1000024000,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR = 1000024001,
  // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR = 1000024002,
  // Provided by VK_KHR_shared_presentable_image
    VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR = 1000111000,
  // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT = 1000218000,
  // Provided by VK_KHR_fragment_shading_rate
    VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR = 1000164003,
  // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR = 1000299000,
  // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR = 1000299001,
  // Provided by VK_KHR_video_encode_queue
    VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR = 1000299002,
  // Provided by VK_EXT_attachment_feedback_loop_layout
    VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT = 1000339000,
  // Provided by VK_KHR_video_encode_quantization_map
    VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR = 1000553000,
  // Provided by VK_EXT_zero_initialize_device_memory
    VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT = 1000620000,
  // Provided by VK_KHR_maintenance2
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL,
  // Provided by VK_KHR_maintenance2
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL,
  // Provided by VK_KHR_dynamic_rendering_local_read
    VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR = VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ,
  // Provided by VK_KHR_separate_depth_stencil_layouts
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL,
  // Provided by VK_KHR_separate_depth_stencil_layouts
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL,
  // Provided by VK_KHR_separate_depth_stencil_layouts
    VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL,
```

```
  // Provided by VK_KHR_separate_depth_stencil_layouts
    VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL_KHR =
VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL,
  // Provided by VK_KHR_synchronization2
    VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR = VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL,
  // Provided by VK_KHR_synchronization2
    VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR = VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL,
} VkImageLayout;
```

The type(s) of device access supported by each layout are:

- VK_IMAGE_LAYOUT_UNDEFINED specifies that the layout is unknown. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the `initialLayout` member of VkImageCreateInfo. This layout **can** be used in place of the current image layout in a layout transition, but doing so will cause the contents of the image's memory to be undefined.
- VK_IMAGE_LAYOUT_PREINITIALIZED specifies that a linear image's memory is in a defined layout and **can** be populated by data, but that it has not yet been initialized by the driver. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the `initialLayout` member of VkImageCreateInfo when `tiling` is VK_IMAGE_TILING_LINEAR. This layout is intended to be used as the initial layout for an image whose contents are written by the host, and hence the data **can** be written to memory immediately, without first executing a layout transition.
- VK_IMAGE_LAYOUT_GENERAL supports all types of device access, unless specified otherwise.
- VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT specifies that an image's memory is in a defined layout and is zeroed, but that it has not yet been initialized by the driver. Image memory **cannot** be transitioned into this layout. This layout **can** be used as the `initialLayout` member of VkImageCreateInfo. This layout is intended to be used as the initial layout for an image whose contents are already zeroed, either from being explicitly set to zero by an application or from being allocated with VK_MEMORY_ALLOCATE_ZERO_INITIALIZE_BIT_EXT.
- VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL specifies a layout that **must** only be used with attachment accesses in the graphics pipeline.
- VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL specifies a layout allowing read only access as an attachment, or in shaders as a sampled image, combined image/sampler, or input attachment.
- VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL **must** only be used as a color or resolve attachment in a `VkFramebuffer`. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT usage flag set.
- VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read and write access as a depth/stencil attachment. It is equivalent to VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL and VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL.
- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read only access as a depth/stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL and

VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL.

- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL specifies a layout for depth/stencil format images allowing read and write access to the stencil aspect as a stencil attachment, and read only access to the depth aspect as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL and VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL.
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL specifies a layout for depth/stencil format images allowing read and write access to the depth aspect as a depth attachment, and read only access to the stencil aspect as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL and VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL.
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL specifies a layout for the depth aspect of a depth/stencil format image allowing read and write access as a depth attachment.
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL specifies a layout for the depth aspect of a depth/stencil format image allowing read-only access as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL specifies a layout for the stencil aspect of a depth/stencil format image allowing read and write access as a stencil attachment.
- VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL specifies a layout for the stencil aspect of a depth/stencil format image allowing read-only access as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment.
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL specifies a layout allowing read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_SAMPLED_BIT or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT usage bits enabled.
- VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL **must** only be used as a source image of a transfer command (see the definition of VK_PIPELINE_STAGE_TRANSFER_BIT). This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set.
- VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL **must** only be used as a destination image of a transfer command. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set.
- VK_IMAGE_LAYOUT_PRESENT_SRC_KHR **must** only be used for presenting a presentable image for display.
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR is valid only for shared presentable images, and **must** be used for any usage the image supports.
- VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR **must** only be used as a fragment shading rate attachment or This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR usage flag set.

- VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT **must** only be used as a fragment density map attachment in a VkRenderPass. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT usage flag set.
- VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR **must** only be used as a decode output picture in a video decode operation. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR usage flag set.
- VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR is reserved for future use.
- VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR **must** only be used as an output reconstructed picture or an input reference picture in a video decode operation. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR usage flag set.
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR is reserved for future use.
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR **must** only be used as an encode input picture in a video encode operation. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR usage flag set.
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR **must** only be used as an output reconstructed picture or an input reference picture in a video encode operation. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR usage flag set.
- VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT **must** only be used as either a color attachment or depth/stencil attachment and/or read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT usage flag set, and either the VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT or VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT usage flags set, and either the VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT or VK_IMAGE_USAGE_SAMPLED_BIT usage flags set
- VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ **must** only be used as either a storage image, or a color or depth/stencil attachment and an input attachment. This layout is valid only for image subresources of images created with either the VK_IMAGE_USAGE_STORAGE_BIT usage flag set, or both the VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT and either of the VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT or VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT usage flags set.
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR **must** only be used as a quantization map in a video encode operation. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR usage flags set.

The layout of each image subresource is not a state of the image subresource itself, but is rather a property of how the data in memory is organized, and thus for each mechanism of accessing an image in the API the application **must** specify a parameter or structure member that indicates

which image layout the image subresource(s) are considered to be in when the image will be accessed. For transfer commands, this is a parameter to the command (see Clear Commands and Copy Commands). For use as a framebuffer attachment, this is a member in the substructures of the VkRenderPassCreateInfo (see Render Pass). For use in a descriptor set, this is a member in the VkDescriptorImageInfo structure (see Descriptor Set Updates).

If the unifiedImageLayouts feature is enabled, the VK_IMAGE_LAYOUT_GENERAL image layout **may** be used in place of the other layouts where allowed with no loss of performance.

NOTE

VK_IMAGE_LAYOUT_GENERAL can be a useful catch-all image layout, but there are situations where a dedicated image layout must be used instead. Some examples include:

- VK_IMAGE_LAYOUT_PRESENT_SRC_KHR
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR, VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR, and VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR without the unifiedImageLayoutsVideo feature
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR, VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR, and VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR without the unifiedImageLayoutsVideo feature
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR without the unifiedImageLayoutsVideo feature

NOTE

While VK_IMAGE_LAYOUT_GENERAL suggests that all types of device access is possible, it does not mean that all patterns of memory accesses are safe in all situations. Common Render Pass Data Races outlines some situations where data races are unavoidable. For example, when a subresource is used as both an attachment and a sampled image (i.e., not an input attachment), enabling feedback loop adds extra guarantees which VK_IMAGE_LAYOUT_GENERAL alone does not.

12.5.1. Image Layout Matching Rules

At the time that any command buffer command accessing an image executes on any queue, the layouts of the image subresources that are accessed **must** all match exactly the layout specified via the API controlling those accesses, except in case of accesses to an image with a depth/stencil format performed through descriptors referring to only a single aspect of the image, where the following relaxed matching rules apply:

- Descriptors referring just to the depth aspect of a depth/stencil image only need to match in the image layout of the depth aspect, thus VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL and VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL are considered to match.

- Descriptors referring just to the stencil aspect of a depth/stencil image only need to match in the image layout of the stencil aspect, thus VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL and VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL are considered to match.

When performing a layout transition on an image subresource, the old layout value **must** either equal the current layout of the image subresource (at the time the transition executes), or else be VK_IMAGE_LAYOUT_UNDEFINED (implying that the contents of the image subresource need not be preserved). The new layout used in a transition **must** not be any of:

- VK_IMAGE_LAYOUT_UNDEFINED
- VK_IMAGE_LAYOUT_PREINITIALIZED
- VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT

The image layout of each image subresource of a depth/stencil image created with VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT is dependent on the last sample locations used to render to the image subresource as a depth/stencil attachment, thus applications **must** provide the same sample locations that were last used to render to the given image subresource whenever a layout transition of the image subresource happens, otherwise the contents of the depth aspect of the image subresource become undefined.

In addition, depth reads from a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range return undefined values.

Similarly, depth writes to a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range make the contents of the depth aspect of those image subresources undefined.

12.5.2. Image Layout Rules with External Memory

When images created with external memory handle types listed in the external image implied layouts table are accessed outside of Vulkan, they **must** be in the layout specified in the table, and **can** be assumed to be in that layout when they are accessed in Vulkan after external access.

Table 12. External Image Implied Layouts

External Memory Handle Type	Implied Layout When Accessed Externally
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT	VK_IMAGE_LAYOUT_GENERAL
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT	VK_IMAGE_LAYOUT_GENERAL

12.6. Image Views

Image objects are not directly accessed by pipeline shaders for reading or writing image data. Instead, *image views* representing contiguous ranges of the image subresources and containing additional metadata are used for that purpose. Views **must** be created on images of compatible types, and **must** represent a valid subset of image subresources.

Image views are represented by VkImageView handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImageView)
```

VK_REMAINING_ARRAY_LAYERS is a special constant value used for image views to indicate that all remaining array layers in an image after the base layer should be included in the view.

```
#define VK_REMAINING_ARRAY_LAYERS         (~0U)
```

VK_REMAINING_MIP_LEVELS is a special constant value used for image views to indicate that all remaining mipmap levels in an image after the base level should be included in the view.

```
#define VK_REMAINING_MIP_LEVELS           (~0U)
```

The types of image views that **can** be created are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewType {
    VK_IMAGE_VIEW_TYPE_1D = 0,
    VK_IMAGE_VIEW_TYPE_2D = 1,
    VK_IMAGE_VIEW_TYPE_3D = 2,
    VK_IMAGE_VIEW_TYPE_CUBE = 3,
    VK_IMAGE_VIEW_TYPE_1D_ARRAY = 4,
    VK_IMAGE_VIEW_TYPE_2D_ARRAY = 5,
    VK_IMAGE_VIEW_TYPE_CUBE_ARRAY = 6,
} VkImageViewType;
```

To create an image view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImageView(
    VkDevice                                    device,
    const VkImageViewCreateInfo*                pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkImageView*                                pView);
```

- `device` is the logical device that creates the image view.
- `pCreateInfo` is a pointer to a VkImageViewCreateInfo structure containing parameters to be used to create the image view.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pView` is a pointer to a VkImageView handle in which the resulting image view object is returned.

Valid Usage

- VUID-vkCreateImageView-device-09667
  `device` **must** support at least one queue family with one of the VK_QUEUE_VIDEO_ENCODE_BIT_KHR, VK_QUEUE_VIDEO_DECODE_BIT_KHR, VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT capabilities
- VUID-vkCreateImageView-image-09179
  VkImageViewCreateInfo::`image` **must** have been created from `device`

Valid Usage (Implicit)

- VUID-vkCreateImageView-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateImageView-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkImageViewCreateInfo structure
- VUID-vkCreateImageView-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateImageView-pView-parameter
  `pView` **must** be a valid pointer to a VkImageView handle
- VUID-vkCreateImageView-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkImageViewCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageViewCreateInfo {
    VkStructureType            sType;
    const void*                pNext;
    VkImageViewCreateFlags     flags;
    VkImage                    image;
    VkImageViewType            viewType;
    VkFormat                   format;
    VkComponentMapping         components;
    VkImageSubresourceRange    subresourceRange;
} VkImageViewCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkImageViewCreateFlagBits specifying additional parameters of the image view.
- image is a VkImage on which the view will be created.
- viewType is a VkImageViewType value specifying the type of the image view.
- format is a VkFormat specifying the format and type used to interpret texel blocks of the image.
- components is a VkComponentMapping structure specifying a remapping of color components (or of depth or stencil components after they have been converted into color components).
- subresourceRange is a VkImageSubresourceRange structure selecting the set of mipmap levels and array layers to be accessible to the view.

Some of the image creation parameters are inherited by the view. In particular, image view creation inherits the implicit parameter usage specifying the allowed usages of the image view that, by default, takes the value of the corresponding usage parameter specified in VkImageCreateInfo at image creation time. The implicit usage **can** be overridden by adding a VkImageViewUsageCreateInfo or VkImageViewUsage2CreateInfoKHR structure to the pNext chain, but the view usage **must** be a subset of the image usage. If image has a depth-stencil format and was created with a VkImageStencilUsageCreateInfo structure included in the pNext chain of VkImageCreateInfo, the usage is calculated based on the subresourceRange.aspectMask provided:

- If aspectMask includes only VK_IMAGE_ASPECT_STENCIL_BIT, the implicit usage is equal to VkImageStencilUsageCreateInfo::stencilUsage.
- If aspectMask includes only VK_IMAGE_ASPECT_DEPTH_BIT, the implicit usage is equal to VkImageCreateInfo::usage.
- If both aspects are included in aspectMask, the implicit usage is equal to the intersection of VkImageCreateInfo::usage and VkImageStencilUsageCreateInfo::stencilUsage.

If image is a 3D image, its Z range **can** be restricted to a subset by adding a VkImageViewSlicedCreateInfoEXT to the pNext chain.

If `image` was not created with VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, `format` **must** equal the `format` used to create `image`.

If `image` was created with VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, `format` **can** be set to a different format as follows:

- If `image` was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag and `format` is an uncompressed format, it **must** be *size-compatible* with the `format` used to create `image`.
- If creating a single-plane view, `format` **must** equal one of the *plane view formats*.
- If creating a multi-plane view, `format` **must** equal the `format` used to create `image`.
- Otherwise, `format` **must** be compatible with the `format` of `image`.

Views of compatible formats will have the same mapping between texel coordinates and memory locations irrespective of the `format`, with only the interpretation of the bit pattern changing.

NOTE

Values intended to be used with one view format **may** not be exactly preserved when written or read through a different format. For example, an integer value that happens to have the bit pattern of a floating-point denorm or NaN **may** be flushed or canonicalized when written or read through a view with a floating-point format. Similarly, a value written through a signed normalized format that has a bit pattern exactly equal to -2^b **may** be changed to $-2^b + 1$ as described in Conversion from Normalized Fixed-Point to Floating-Point.

The texel dimensions of the view are derived as follows:

- If `image` was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag and `format` is an uncompressed format, the dimensions equal the dimensions of the selected mip level divided by the compressed texel block size and rounded up.
- If creating a single-plane view, the dimensions equal the *plane view dimensions*.
- Otherwise, the dimensions are equal to the dimensions of the selected mip level as defined in Image Mip Level Sizing

If `subresourceRange.aspectMask` is one of the multi-planar aspect mask bits, a single-plane image view will be created. The `image` of a single-plane view **must** have been created with a multi-planar format and the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT create flag.

The set of *plane view formats* for the plane is the compatible plane format and the formats compatible with it.

The *plane view dimensions* are derived from the dimensions of the `image` in the manner listed for plane compatibility for the plane.

The plane view's aspect mask is considered to be equivalent to VK_IMAGE_ASPECT_COLOR_BIT when used as a framebuffer attachment.

If the `format` of the `image` is a multi-planar format and `subresourceRange.aspectMask` is equal to VK_IMAGE_ASPECT_COLOR_BIT, a multi-plane image view will be created.

The VkComponentMapping `components` member describes a remapping from components of the image to components of the vector returned by shader image instructions. This remapping **must** be the identity swizzle for any `VkImageView` used with a combined image sampler that enables sampler $Y'C_BC_R$ conversion, input attachment descriptors, framebuffer attachments, and storage image descriptors.

Image views with formats that require YC_BC_R conversion and `usage` containing VK_IMAGE_USAGE_SAMPLED_BIT **must** be created with a VkSamplerYcbcrConversionInfo structure in the `pNext` chain to be used with sampling. Any image view created with a VkSamplerYcbcrConversionInfo structure in the `pNext` chain **must** only be sampled using a sampler with an identically defined VkSamplerYcbcrConversion. When used in a video coding operation, the specified sampler $Y'C_BC_R$ conversion has no effect.

Table 13. Image Type and Image View Type Compatibility Requirements

Image View Type	Compatible Image Types
VK_IMAGE_VIEW_TYPE_1D	VK_IMAGE_TYPE_1D
VK_IMAGE_VIEW_TYPE_1D_ARRAY	VK_IMAGE_TYPE_1D
VK_IMAGE_VIEW_TYPE_2D	VK_IMAGE_TYPE_2D , VK_IMAGE_TYPE_3D
VK_IMAGE_VIEW_TYPE_2D_ARRAY	VK_IMAGE_TYPE_2D , VK_IMAGE_TYPE_3D
VK_IMAGE_VIEW_TYPE_CUBE	VK_IMAGE_TYPE_2D
VK_IMAGE_VIEW_TYPE_CUBE_ARRAY	VK_IMAGE_TYPE_2D
VK_IMAGE_VIEW_TYPE_3D	VK_IMAGE_TYPE_3D

Valid Usage

- VUID-VkImageViewCreateInfo-image-01003
  If `image` was not created with VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT then `viewType` **must** not be VK_IMAGE_VIEW_TYPE_CUBE or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-VkImageViewCreateInfo-viewType-01004
  If the `imageCubeArray` feature is not enabled, `viewType` **must** not be VK_IMAGE_VIEW_TYPE_CUBE_ARRAY
- VUID-VkImageViewCreateInfo-image-06723
  If `image` was created with VK_IMAGE_TYPE_3D but without VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set then `viewType` **must** not be VK_IMAGE_VIEW_TYPE_2D_ARRAY
- VUID-VkImageViewCreateInfo-image-06728
  If `image` was created with VK_IMAGE_TYPE_3D but without VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, then `viewType` **must** not be VK_IMAGE_VIEW_TYPE_2D
- VUID-VkImageViewCreateInfo-image-04970
  If `image` was created with VK_IMAGE_TYPE_3D and `viewType` is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY then `subresourceRange.levelCount` **must** be 1

- VUID-VkImageViewCreateInfo-image-04972
  If `image` was created with a `samples` value not equal to VK_SAMPLE_COUNT_1_BIT then `viewType` **must** be either VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY
- VUID-VkImageViewCreateInfo-image-04441
  `image` **must** have been created with a `usage` value containing at least one of the following:
  - VK_IMAGE_USAGE_SAMPLED_BIT
  - VK_IMAGE_USAGE_STORAGE_BIT
  - VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT
  - VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT
  - VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT
  - VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT
  - VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
  - VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT
  - VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR
  - VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR
  - VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR
  - VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR
  - VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
  - VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR
- VUID-VkImageViewCreateInfo-None-02273
  The format features of the resultant image view **must** contain at least one bit
- VUID-VkImageViewCreateInfo-usage-02274
  If `usage` contains VK_IMAGE_USAGE_SAMPLED_BIT, then the format features of the resultant image view **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
- VUID-VkImageViewCreateInfo-usage-02275
  If `usage` contains VK_IMAGE_USAGE_STORAGE_BIT, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT
- VUID-VkImageViewCreateInfo-usage-02276
  If `usage` contains VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT, then the image view's format features **must** contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT
- VUID-VkImageViewCreateInfo-usage-02277
  If `usage` contains VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, then the image view's format features **must** contain VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkImageViewCreateInfo-image-08333
  If `usage` contains VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR
- VUID-VkImageViewCreateInfo-image-08334
  If `usage` contains VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, then the image

view's format features **must** contain VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR

- VUID-VkImageViewCreateInfo-image-08335
  `usage` **must** not include VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR
- VUID-VkImageViewCreateInfo-image-08336
  If `usage` contains VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR
- VUID-VkImageViewCreateInfo-image-08337
  If `usage` contains VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR
- VUID-VkImageViewCreateInfo-image-08338
  `usage` **must** not include VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR
- VUID-VkImageViewCreateInfo-usage-10259
  If `usage` contains VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR
- VUID-VkImageViewCreateInfo-usage-10260
  If `usage` contains VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR
- VUID-VkImageViewCreateInfo-usage-08932
  If `usage` contains VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT,

  then the image view's format features **must** contain at least one of VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT or VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT
- VUID-VkImageViewCreateInfo-subresourceRange-01478
  `subresourceRange.baseMipLevel` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-VkImageViewCreateInfo-subresourceRange-01718
  If `subresourceRange.levelCount` is not VK_REMAINING_MIP_LEVELS, `subresourceRange.baseMipLevel` + `subresourceRange.levelCount` **must** be less than or equal to the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-VkImageViewCreateInfo-usage-12488
  If `usage` contains VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, then the image view's format features **must** contain VK_FORMAT_FEATURE_2_FRAGMENT_DENSITY_MAP_BIT_EXT
- VUID-VkImageViewCreateInfo-image-02571
  If `image` was created with the VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT usage flag set, `subresourceRange.levelCount` **must** be `1`
- VUID-VkImageViewCreateInfo-image-06724

If image is not a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, or viewType is not VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.baseArrayLayer **must** be less than the arrayLayers specified in VkImageCreateInfo when image was created

- VUID-VkImageViewCreateInfo-subresourceRange-06725
  If subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, image is not a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, or viewType is not VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.layerCount **must** be non-zero and subresourceRange.baseArrayLayer + subresourceRange.layerCount **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when image was created
- VUID-VkImageViewCreateInfo-image-02724
  If image is a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set, and viewType is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.baseArrayLayer **must** be less than the depth computed from baseMipLevel and extent.depth specified in VkImageCreateInfo when image was created, according to the formula defined in Image Mip Level Sizing
- VUID-VkImageViewCreateInfo-subresourceRange-02725
  If subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, image is a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set, and viewType is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.layerCount **must** be non-zero and subresourceRange.baseArrayLayer + subresourceRange.layerCount **must** be less than or equal to the depth computed from baseMipLevel and extent.depth specified in VkImageCreateInfo when image was created, according to the formula defined in Image Mip Level Sizing
- VUID-VkImageViewCreateInfo-image-01761
  If image was created with the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT flag, but without the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, and a single-plane view and a multi-plane view is not being created, format **must** be compatible with the format used to create image, as defined in Format Compatibility Classes
- VUID-VkImageViewCreateInfo-image-01583
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, format **must** be compatible with, or **must** be an uncompressed format that is size-compatible with, the format used to create image
- VUID-VkImageViewCreateInfo-image-07072
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag and format is a non-compressed format, the levelCount member of subresourceRange **must** be 1
- VUID-VkImageViewCreateInfo-image-09487
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, the VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers property is not VK_TRUE, and format is a non-compressed format, then the layerCount member of subresourceRange **must** be 1

- VUID-VkImageViewCreateInfo-pNext-01585
  If a VkImageFormatListCreateInfo structure was included in the pNext chain of the VkImageCreateInfo structure used when creating image and VkImageFormatListCreateInfo::viewFormatCount is not zero then format **must** be one of the formats in VkImageFormatListCreateInfo::pViewFormats
- VUID-VkImageViewCreateInfo-image-12397
  If image was not created with the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT flag format **must** be identical to the format used to create image
- VUID-VkImageViewCreateInfo-image-01586
  If creating a single-plane view, format **must** be compatible with the VkFormat for the plane of the image format indicated by subresourceRange.aspectMask, as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-VkImageViewCreateInfo-subresourceRange-07818
  subresourceRange.aspectMask **must** only have at most 1 valid multi-planar aspect mask bit
- VUID-VkImageViewCreateInfo-format-12398
  If creating a multi-plane view, format **must** be identical to the format used to create image
- VUID-VkImageViewCreateInfo-format-06415
  If the image view's format requires a sampler $Y'C_BC_R$ conversion and usage contains VK_IMAGE_USAGE_SAMPLED_BIT, then the pNext chain **must** include a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE
- VUID-VkImageViewCreateInfo-format-04714
  If format has a _422 or _420 suffix then image **must** have been created with a width that is a multiple of 2
- VUID-VkImageViewCreateInfo-format-04715
  If format has a _420 suffix then image **must** have been created with a height that is a multiple of 2
- VUID-VkImageViewCreateInfo-pNext-01970
  If the pNext chain includes a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE, all members of components **must** have the identity swizzle
- VUID-VkImageViewCreateInfo-pNext-06658
  If the pNext chain includes a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE, format **must** be the same used in VkSamplerYcbcrConversionCreateInfo::format
- VUID-VkImageViewCreateInfo-image-01020
  If image is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-VkImageViewCreateInfo-subResourceRange-01021
  viewType **must** be compatible with the type of image as shown in the view type compatibility table
- VUID-VkImageViewCreateInfo-image-02086
  If image was created with the

VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR usage flag set, viewType **must** be VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY

- VUID-VkImageViewCreateInfo-attachmentFragmentShadingRate-12386
  If the attachmentFragmentShadingRate feature is not enabled, the usage for the image view **must** not contain VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-VkImageViewCreateInfo-usage-04550
  If the usage for the image view includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, then the image view's format features **must** contain VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-VkImageViewCreateInfo-usage-04551
  If the usage for the image view includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, and layeredShadingRateAttachments is VK_FALSE, subresourceRange.layerCount **must** be 1
- VUID-VkImageViewCreateInfo-flags-02572
  If the fragmentDensityMapDynamic feature is not enabled, flags **must** not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT
- VUID-VkImageViewCreateInfo-flags-03567
  If the fragmentDensityMapDeferred feature is not enabled, flags **must** not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT
- VUID-VkImageViewCreateInfo-flags-03568
  If flags contains VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT, flags **must** not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT
- VUID-VkImageViewCreateInfo-image-03569
  If image was created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT and the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set, subresourceRange.layerCount **must** be less than or equal to VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxSubsampledArrayLayers
- VUID-VkImageViewCreateInfo-flags-04116
  If flags does not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT, and image was created with the VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT usage flag set, its flags **must** not contain any of VK_IMAGE_CREATE_PROTECTED_BIT, VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT
- VUID-VkImageViewCreateInfo-pNext-02662
  If the pNext chain includes a VkImageViewUsageCreateInfo structure, and image was not created with a VkImageStencilUsageCreateInfo structure included in the pNext chain of VkImageCreateInfo, its usage member **must** not include any bits that were not set in the usage member of the VkImageCreateInfo structure used to create image
- VUID-VkImageViewCreateInfo-pNext-02663
  If the pNext chain includes a VkImageViewUsageCreateInfo structure, image was created

with a VkImageStencilUsageCreateInfo structure included in the pNext chain of VkImageCreateInfo, and subresourceRange.aspectMask includes VK_IMAGE_ASPECT_STENCIL_BIT, the usage member of the VkImageViewUsageCreateInfo structure **must** not include any bits that were not set in the usage member of the VkImageStencilUsageCreateInfo structure used to create image

- VUID-VkImageViewCreateInfo-pNext-02664
  If the pNext chain includes a VkImageViewUsageCreateInfo structure, image was created with a VkImageStencilUsageCreateInfo structure included in the pNext chain of VkImageCreateInfo, and subresourceRange.aspectMask includes bits other than VK_IMAGE_ASPECT_STENCIL_BIT, the usage member of the VkImageViewUsageCreateInfo structure **must** not include any bits that were not set in the usage member of the VkImageCreateInfo structure used to create image
- VUID-VkImageViewCreateInfo-imageViewType-04973
  If viewType is VK_IMAGE_VIEW_TYPE_1D, VK_IMAGE_VIEW_TYPE_2D, or VK_IMAGE_VIEW_TYPE_3D; and subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, then subresourceRange.layerCount **must** be 1
- VUID-VkImageViewCreateInfo-imageViewType-04974
  If viewType is VK_IMAGE_VIEW_TYPE_1D, VK_IMAGE_VIEW_TYPE_2D, or VK_IMAGE_VIEW_TYPE_3D; and subresourceRange.layerCount is VK_REMAINING_ARRAY_LAYERS, then the remaining number of layers **must** be 1
- VUID-VkImageViewCreateInfo-viewType-02960
  If viewType is VK_IMAGE_VIEW_TYPE_CUBE and subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, subresourceRange.layerCount **must** be 6
- VUID-VkImageViewCreateInfo-viewType-02961
  If viewType is VK_IMAGE_VIEW_TYPE_CUBE_ARRAY and subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, subresourceRange.layerCount **must** be a multiple of 6
- VUID-VkImageViewCreateInfo-viewType-02962
  If viewType is VK_IMAGE_VIEW_TYPE_CUBE and subresourceRange.layerCount is VK_REMAINING_ARRAY_LAYERS, the remaining number of layers **must** be 6
- VUID-VkImageViewCreateInfo-viewType-02963
  If viewType is VK_IMAGE_VIEW_TYPE_CUBE_ARRAY and subresourceRange.layerCount is VK_REMAINING_ARRAY_LAYERS, the remaining number of layers **must** be a multiple of 6
- VUID-VkImageViewCreateInfo-imageViewFormatSwizzle-04465
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatSwizzle is VK_FALSE, all elements of components **must** have the identity swizzle
- VUID-VkImageViewCreateInfo-imageViewFormatReinterpretation-04466
  If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatReinterpretation is VK_FALSE, the VkFormat in format **must** not contain a different number of components, or a different number of bits in each component, than the format of the VkImage in image
- VUID-VkImageViewCreateInfo-image-04817
  If image was created with the VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR usage flag set, VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR, or

VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, then the viewType **must** be VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY

- VUID-VkImageViewCreateInfo-image-04818
  If image was created with the VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR usage flag set, VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR, or VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR, then the viewType **must** be VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY
- VUID-VkImageViewCreateInfo-image-10261
  If image was created with the VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR usage flags set, then viewType **must** be VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY
- VUID-VkImageViewCreateInfo-flags-08106
  If flags includes VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the descriptorBufferCaptureReplay feature **must** be enabled
- VUID-VkImageViewCreateInfo-pNext-08107
  If the pNext chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, flags **must** contain VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
- VUID-VkImageViewCreateInfo-pNext-06787
  If the pNext chain includes a VkExportMetalObjectCreateInfoEXT structure, its exportObjectType member **must** be VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT
- VUID-VkImageViewCreateInfo-subresourceRange-09594
  subresourceRange.aspectMask **must** be valid for the format the image was created with
- VUID-VkImageViewCreateInfo-image-13357
  If image was created with VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR, format **must** not be a multi-planar format
- VUID-VkImageViewCreateInfo-pNext-12508
  The pNext chain **must** contain at most one of the VkImageViewUsageCreateInfo and VkImageViewUsage2CreateInfoKHR structures

Valid Usage (Implicit)

- VUID-VkImageViewCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO
- VUID-VkImageViewCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkExportMetalObjectCreateInfoEXT, VkImageViewASTCDecodeModeEXT, VkImageViewMinLodCreateInfoEXT, VkImageViewSlicedCreateInfoEXT, VkImageViewUsage2CreateInfoKHR,

VkImageViewUsageCreateInfo, VkOpaqueCaptureDescriptorDataCreateInfoEXT, or VkSamplerYcbcrConversionInfo

- VUID-VkImageViewCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique, with the exception of structures of type VkExportMetalObjectCreateInfoEXT
- VUID-VkImageViewCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkImageViewCreateFlagBits values
- VUID-VkImageViewCreateInfo-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-VkImageViewCreateInfo-viewType-parameter
  `viewType` **must** be a valid VkImageViewType value
- VUID-VkImageViewCreateInfo-format-parameter
  `format` **must** be a valid VkFormat value
- VUID-VkImageViewCreateInfo-components-parameter
  `components` **must** be a valid VkComponentMapping structure
- VUID-VkImageViewCreateInfo-subresourceRange-parameter
  `subresourceRange` **must** be a valid VkImageSubresourceRange structure

Bits which **can** be set in VkImageViewCreateInfo::`flags`, specifying additional parameters of an image view, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageViewCreateFlagBits {
  // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT = 0x00000001,
  // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000004,
  // Provided by VK_EXT_fragment_density_map2
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT = 0x00000002,
} VkImageViewCreateFlagBits;
```

- VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT specifies that the fragment density map will be read by device during VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT
- VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT specifies that the fragment density map will be read by the host during vkEndCommandBuffer for the primary command buffer that the render pass is recorded into
- VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the image view **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageViewCreateFlags;
```

VkImageViewCreateFlags is a bitmask type for setting a mask of zero or more VkImageViewCreateFlagBits.

The set of usages for the created image view **can** be restricted compared to the parent image's usage flags by adding a VkImageViewUsageCreateInfo structure to the pNext chain of VkImageViewCreateInfo.

The VkImageViewUsageCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageViewUsageCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkImageUsageFlags    usage;
} VkImageViewUsageCreateInfo;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkImageViewUsageCreateInfo
typedef VkImageViewUsageCreateInfo VkImageViewUsageCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- usage is a bitmask of VkImageUsageFlagBits specifying allowed usages of the image view.

When this structure is chained to VkImageViewCreateInfo the usage field overrides the implicit usage parameter inherited from image creation time and its value is used instead for the purposes of determining the valid usage conditions of VkImageViewCreateInfo.

Valid Usage (Implicit)

- VUID-VkImageViewUsageCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO
- VUID-VkImageViewUsageCreateInfo-usage-parameter
  usage **must** be a valid combination of VkImageUsageFlagBits values

Structure Chaining

Extends the structure

- VkImageViewCreateInfo

The set of usages for the created image view **can** be restricted compared to the parent image's `usage` flags by adding a `VkImageViewUsage2CreateInfoKHR` structure to the `pNext` chain of VkImageViewCreateInfo.

The `VkImageViewUsage2CreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkImageViewUsage2CreateInfoKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkImageUsageFlags2KHR    usage;
} VkImageViewUsage2CreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of VkImageUsageFlagBits2KHR specifying allowed usages of the image view.

When this structure is chained to VkImageViewCreateInfo the `usage` field overrides the implicit `usage` parameter inherited from image creation time and its value is used instead for the purposes of determining the valid usage conditions of VkImageViewCreateInfo.

Valid Usage (Implicit)

- VUID-VkImageViewUsage2CreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_2_CREATE_INFO_KHR
- VUID-VkImageViewUsage2CreateInfoKHR-usage-parameter
  `usage` **must** be a valid combination of VkImageUsageFlagBits2KHR values

Structure Chaining

Extends the structure

- VkImageViewCreateInfo

The range of 3D slices for the created image view **can** be restricted to a subset of the parent image's Z range by adding a `VkImageViewSlicedCreateInfoEXT` structure to the `pNext` chain of VkImageViewCreateInfo.

The `VkImageViewSlicedCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkImageViewSlicedCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           sliceOffset;
    uint32_t           sliceCount;
} VkImageViewSlicedCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sliceOffset` is the Z-offset for the first 3D slice accessible to the image view.
- `sliceCount` is the number of 3D slices accessible to the image view.

When this structure is chained to VkImageViewCreateInfo the `sliceOffset` field is treated as a Z-offset for the sliced view and `sliceCount` specifies the range. Shader accesses using a Z coordinate of 0 will access the depth slice corresponding to `sliceOffset` in the image, and in a shader, the maximum in-bounds Z coordinate for the view is `sliceCount` - 1.

A sliced 3D view **must** only be used with a single mip level. The slice coordinates are integer coordinates within the `subresourceRange.baseMipLevel` used to create the image view.

The effective view depth is equal to `extent.depth` used to create the `image` for this view adjusted by `subresourceRange.baseMipLevel` as specified in Image Mip Level Sizing.

Shader access to this image view is only affected by `VkImageViewSlicedCreateInfoEXT` if it uses a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE. For access using any other descriptor type, the contents of `VkImageViewSlicedCreateInfoEXT` are ignored; instead, `sliceOffset` is treated as being equal to 0, and `sliceCount` is treated as being equal to VK_REMAINING_3D_SLICES_EXT.

Valid Usage

- VUID-VkImageViewSlicedCreateInfoEXT-sliceOffset-07867
  `sliceOffset` **must** be less than the effective view depth as specified in Image Mip Level Sizing
- VUID-VkImageViewSlicedCreateInfoEXT-sliceCount-07868
  If `sliceCount` is not VK_REMAINING_3D_SLICES_EXT, it **must** be non-zero and `sliceOffset` + `sliceCount` **must** be less than or equal to the effective view depth as specified in Image Mip Level Sizing
- VUID-VkImageViewSlicedCreateInfoEXT-image-07869
  `image` **must** have been created with `imageType` equal to VK_IMAGE_TYPE_3D
- VUID-VkImageViewSlicedCreateInfoEXT-viewType-07909
  `viewType` **must** be VK_IMAGE_VIEW_TYPE_3D
- VUID-VkImageViewSlicedCreateInfoEXT-None-07870
  The image view **must** reference exactly 1 mip level

- VUID-VkImageViewSlicedCreateInfoEXT-None-07871
  The imageSlicedViewOf3D feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkImageViewSlicedCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_SLICED_CREATE_INFO_EXT

Structure Chaining

Extends the structure

- VkImageViewCreateInfo

VK_REMAINING_3D_SLICES_EXT is a special constant value used for VkImageViewSlicedCreateInfoEXT::`sliceCount` to indicate that all remaining 3D slices in an image after the first slice offset specified should be included in the view.

```
#define VK_REMAINING_3D_SLICES_EXT        (~0U)
```

The `VkImageSubresourceRange` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceRange {
    VkImageAspectFlags    aspectMask;
    uint32_t              baseMipLevel;
    uint32_t              levelCount;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceRange;
```

- `aspectMask` is a bitmask of VkImageAspectFlagBits specifying which aspect(s) of the image are included in the view.
- `baseMipLevel` is the first mipmap level accessible to the view.
- `levelCount` is the number of mipmap levels (starting from `baseMipLevel`) accessible to the view.
- `baseArrayLayer` is the first array layer accessible to the view.
- `layerCount` is the number of array layers (starting from `baseArrayLayer`) accessible to the view.

The number of mipmap levels and array layers **must** be a subset of the image subresources in the image. If an application wants to use all mip levels or layers in an image after the `baseMipLevel` or `baseArrayLayer`, it **can** set `levelCount` and `layerCount` to the special values VK_REMAINING_MIP_LEVELS and VK_REMAINING_ARRAY_LAYERS without knowing the exact number of mip levels or layers.

For cube and cube array image views, the layers of the image view starting at `baseArrayLayer` correspond to faces in the order +X, -X, +Y, -Y, +Z, -Z. For cube arrays, each set of six sequential layers is a single cube, so the number of cube maps in a cube map array view is `layerCount` / *6*, and image array layer (`baseArrayLayer` + i) is face index (i mod 6) of cube *i* / *6*. If the number of layers in the view, whether set explicitly in `layerCount` or implied by VK_REMAINING_ARRAY_LAYERS, is not a multiple of 6, the last cube map in the array **must** not be accessed.

`aspectMask` **must** be only VK_IMAGE_ASPECT_COLOR_BIT, VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT if `format` is a color, depth-only or stencil-only format, respectively.

When creating a VkImageView, if `image` was created with VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, and the image `format` is a multi-planar format, then `aspectMask` **can** be set to one of the multi-planar aspect bits.

If using a depth/stencil format with both depth and stencil components, `aspectMask` **must** include at least one of VK_IMAGE_ASPECT_DEPTH_BIT and VK_IMAGE_ASPECT_STENCIL_BIT, and **can** include both.

When creating an image view of a depth/stencil image to be used as a descriptor (e.g. for sampling in the shader, or for use as an input attachment), the `aspectMask` **must** only include one bit, which selects whether the image view is used for depth reads (i.e. using a floating-point sampler or input attachment in the shader) or stencil reads (i.e. using an unsigned integer sampler or input attachment in the shader). When an image view of a depth/stencil image is used as a depth/stencil framebuffer attachment, the `aspectMask` is ignored and both depth and stencil image subresources are used.

When the `VkImageSubresourceRange` structure is used to select a subset of the slices of a 3D image's mip level in order to create a 2D or 2D array image view of a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT, `baseArrayLayer` and `layerCount` specify the first slice index and the number of slices to include in the created image view. Such an image view **can** be used as a framebuffer attachment that refers only to the specified range of slices of the selected mip level. If the `maintenance9` feature is not enabled, any layout transitions performed on such an attachment view during a render pass instance still apply to the entire subresource referenced which includes all the slices of the selected mip level.

Valid Usage

- VUID-VkImageSubresourceRange-levelCount-01720
  If `levelCount` is not VK_REMAINING_MIP_LEVELS, it **must** be greater than `0`
- VUID-VkImageSubresourceRange-layerCount-01721
  If `layerCount` is not VK_REMAINING_ARRAY_LAYERS, it **must** be greater than `0`
- VUID-VkImageSubresourceRange-aspectMask-01670
  If `aspectMask` includes VK_IMAGE_ASPECT_COLOR_BIT, then it **must** not include any of the multi-planar aspect mask bits
- VUID-VkImageSubresourceRange-aspectMask-02278
  `aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*

Valid Usage (Implicit)

- VUID-VkImageSubresourceRange-aspectMask-parameter
  `aspectMask` **must** be a valid combination of VkImageAspectFlagBits values

Bits which **can** be set in an aspect mask to specify aspects of an image for purposes such as identifying a subresource, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkImageAspectFlagBits {
    VK_IMAGE_ASPECT_COLOR_BIT = 0x00000001,
    VK_IMAGE_ASPECT_DEPTH_BIT = 0x00000002,
    VK_IMAGE_ASPECT_STENCIL_BIT = 0x00000004,
    VK_IMAGE_ASPECT_METADATA_BIT = 0x00000008,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_0_BIT = 0x00000010,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_1_BIT = 0x00000020,
  // Provided by VK_VERSION_1_1
    VK_IMAGE_ASPECT_PLANE_2_BIT = 0x00000040,
  // Provided by VK_VERSION_1_3
    VK_IMAGE_ASPECT_NONE = 0,
  // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT = 0x00000080,
  // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT = 0x00000100,
  // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT = 0x00000200,
  // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT = 0x00000400,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_0_BIT_KHR = VK_IMAGE_ASPECT_PLANE_0_BIT,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_1_BIT_KHR = VK_IMAGE_ASPECT_PLANE_1_BIT,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_IMAGE_ASPECT_PLANE_2_BIT_KHR = VK_IMAGE_ASPECT_PLANE_2_BIT,
  // Provided by VK_KHR_maintenance4
    VK_IMAGE_ASPECT_NONE_KHR = VK_IMAGE_ASPECT_NONE,
} VkImageAspectFlagBits;
```

- VK_IMAGE_ASPECT_NONE specifies no image aspect, or the image aspect is not applicable.
- VK_IMAGE_ASPECT_COLOR_BIT specifies the color aspect.
- VK_IMAGE_ASPECT_DEPTH_BIT specifies the depth aspect.
- VK_IMAGE_ASPECT_STENCIL_BIT specifies the stencil aspect.
- VK_IMAGE_ASPECT_METADATA_BIT specifies the metadata aspect used for sparse resource operations.

- VK_IMAGE_ASPECT_PLANE_0_BIT specifies plane 0 of a *multi-planar* image format.
- VK_IMAGE_ASPECT_PLANE_1_BIT specifies plane 1 of a *multi-planar* image format.
- VK_IMAGE_ASPECT_PLANE_2_BIT specifies plane 2 of a *multi-planar* image format.
- VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT specifies *memory plane* 0.
- VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT specifies *memory plane* 1.
- VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT specifies *memory plane* 2.
- VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT specifies *memory plane* 3.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageAspectFlags;
```

`VkImageAspectFlags` is a bitmask type for setting a mask of zero or more VkImageAspectFlagBits.

The `VkComponentMapping` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkComponentMapping {
    VkComponentSwizzle    r;
    VkComponentSwizzle    g;
    VkComponentSwizzle    b;
    VkComponentSwizzle    a;
} VkComponentMapping;
```

- `r` is a VkComponentSwizzle specifying the component value placed in the R component of the output vector.
- `g` is a VkComponentSwizzle specifying the component value placed in the G component of the output vector.
- `b` is a VkComponentSwizzle specifying the component value placed in the B component of the output vector.
- `a` is a VkComponentSwizzle specifying the component value placed in the A component of the output vector.

Valid Usage (Implicit)

- VUID-VkComponentMapping-r-parameter
  `r` **must** be a valid VkComponentSwizzle value
- VUID-VkComponentMapping-g-parameter
  `g` **must** be a valid VkComponentSwizzle value
- VUID-VkComponentMapping-b-parameter
  `b` **must** be a valid VkComponentSwizzle value
- VUID-VkComponentMapping-a-parameter
  `a` **must** be a valid VkComponentSwizzle value

Possible values of the members of VkComponentMapping, specifying the component values placed in each component of the output vector, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkComponentSwizzle {
    VK_COMPONENT_SWIZZLE_IDENTITY = 0,
    VK_COMPONENT_SWIZZLE_ZERO = 1,
    VK_COMPONENT_SWIZZLE_ONE = 2,
    VK_COMPONENT_SWIZZLE_R = 3,
    VK_COMPONENT_SWIZZLE_G = 4,
    VK_COMPONENT_SWIZZLE_B = 5,
    VK_COMPONENT_SWIZZLE_A = 6,
} VkComponentSwizzle;
```

- VK_COMPONENT_SWIZZLE_IDENTITY specifies that the component is set to the identity swizzle.
- VK_COMPONENT_SWIZZLE_ZERO specifies that the component is set to zero.
- VK_COMPONENT_SWIZZLE_ONE specifies that the component is set to either 1 or 1.0, depending on whether the type of the image view format is integer or floating-point respectively, as determined by the Format Definition section for each VkFormat.
- VK_COMPONENT_SWIZZLE_R specifies that the component is set to the value of the R component of the image.
- VK_COMPONENT_SWIZZLE_G specifies that the component is set to the value of the G component of the image.
- VK_COMPONENT_SWIZZLE_B specifies that the component is set to the value of the B component of the image.
- VK_COMPONENT_SWIZZLE_A specifies that the component is set to the value of the A component of the image.

Setting the identity swizzle on a component is equivalent to setting the identity mapping on that component. That is:

Table 14. Component Mappings Equivalent To VK_COMPONENT_SWIZZLE_IDENTITY

Component	Identity Mapping
components.r	VK_COMPONENT_SWIZZLE_R
components.g	VK_COMPONENT_SWIZZLE_G
components.b	VK_COMPONENT_SWIZZLE_B
components.a	VK_COMPONENT_SWIZZLE_A

If the pNext chain includes a VkImageViewASTCDecodeModeEXT structure, then that structure includes a parameter specifying the decode mode for image views using ASTC compressed formats.

The VkImageViewASTCDecodeModeEXT structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkImageViewASTCDecodeModeEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat           decodeMode;
} VkImageViewASTCDecodeModeEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decodeMode` is the intermediate format used to decode ASTC compressed formats.

Valid Usage

- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02230
  `decodeMode` **must** be one of VK_FORMAT_R16G16B16A16_SFLOAT, VK_FORMAT_R8G8B8A8_UNORM, or VK_FORMAT_E5B9G9R9_UFLOAT_PACK32
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02231
  If the `decodeModeSharedExponent` feature is not enabled, `decodeMode` **must** not be VK_FORMAT_E5B9G9R9_UFLOAT_PACK32
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02232
  If `decodeMode` is VK_FORMAT_R8G8B8A8_UNORM the image view **must** not include blocks using any of the ASTC HDR modes
- VUID-VkImageViewASTCDecodeModeEXT-format-04084
  `format` of the image view **must** be one of the ASTC Compressed Image Formats

If `format` uses sRGB encoding then the `decodeMode` has no effect.

Valid Usage (Implicit)

- VUID-VkImageViewASTCDecodeModeEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT
- VUID-VkImageViewASTCDecodeModeEXT-decodeMode-parameter
  `decodeMode` **must** be a valid VkFormat value

Structure Chaining

Extends the structure

- VkImageViewCreateInfo

To destroy an image view, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyImageView(
    VkDevice                                    device,
    VkImageView                                 imageView,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the image view.
- `imageView` is the image view to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyImageView-imageView-01026
  All submitted commands that refer to `imageView` **must** have completed execution
- VUID-vkDestroyImageView-imageView-01027
  If `VkAllocationCallbacks` were provided when `imageView` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyImageView-imageView-01028
  If no `VkAllocationCallbacks` were provided when `imageView` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyImageView-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyImageView-imageView-parameter
  If `imageView` is not VK_NULL_HANDLE, `imageView` **must** be a valid VkImageView handle
- VUID-vkDestroyImageView-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyImageView-imageView-parent
  If `imageView` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `imageView` **must** be externally synchronized

12.6.1. Image View Format Features

Valid uses of a VkImageView **may** depend on the image view's *format features*, defined below. Such

constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the VK_KHR_format_feature_flags2 extension is supported, and VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_LINEAR, then the image view's set of *format features* is the value of VkFormatProperties3::linearTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties2 on the same format as VkImageViewCreateInfo::format.
- If Vulkan 1.3 is not supported and the VK_KHR_format_feature_flags2 extension is not supported, and VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_LINEAR, then the image view's set of *format features* is the union of the value of VkFormatProperties::linearTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties on the same format as VkImageViewCreateInfo::format, with:
  - VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT if the format is a depth/stencil format and the image view features also contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT.
  - VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and the shaderStorageImageReadWithoutFormat feature is enabled.
  - VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and the shaderStorageImageWriteWithoutFormat feature is enabled.
- If Vulkan 1.3 is supported or the VK_KHR_format_feature_flags2 extension is supported, and VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_OPTIMAL, then the image view's set of *format features* is the value of VkFormatProperties::optimalTilingFeatures or VkFormatProperties3::optimalTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties or vkGetPhysicalDeviceImageFormatProperties2 on the same format as VkImageViewCreateInfo::format.
- If Vulkan 1.3 is not supported and the VK_KHR_format_feature_flags2 extension is not supported, and VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_OPTIMAL, then the image view's set of *format features* is the union of the value of VkFormatProperties::optimalTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties on the same format as VkImageViewCreateInfo::format, with:
  - VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT if the format is a depth/stencil format and the image view features also contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT.
  - VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and the shaderStorageImageReadWithoutFormat feature is enabled.
  - VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and the shaderStorageImageWriteWithoutFormat feature is enabled.
- If VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then:
  - The image's DRM format modifier is the value of

VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier found by calling vkGetImageDrmFormatModifierPropertiesEXT.

- Let VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties be the array found by calling vkGetPhysicalDeviceFormatProperties2 on the same format as VkImageViewCreateInfo::format.
- Let VkDrmFormatModifierPropertiesEXT prop be the array element whose drmFormatModifier member is the value of the image's DRM format modifier.
- Then the image view's set of *format features* is prop::drmFormatModifierTilingFeatures.

The VkImageViewMinLodCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkImageViewMinLodCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    float              minLod;
} VkImageViewMinLodCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minLod is the value to clamp the minimum LOD accessible by this VkImageView.

If the pNext chain includes a VkImageViewMinLodCreateInfoEXT structure, then that structure includes a parameter specifying a value to clamp the minimum LOD value during Image Level(s) Selection, Texel Gathering and Integer Texel Coordinate Operations.

If the image view contains VkImageViewMinLodCreateInfoEXT and it is used as part of a sampling operation:

$\text{minLodFloat}_{\text{imageView}}$ = minLod

otherwise:

$\text{minLodFloat}_{\text{imageView}}$ = 0.0

An integer variant of this parameter is also defined for sampling operations which access integer mipmap levels:

$\text{minLodInteger}_{\text{imageView}} = \square\text{minLodFloat}_{\text{imageView}}\square$

Valid Usage

- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06455
  If the minLod feature is not enabled, minLod **must** be 0.0
- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06456
  minLod **must** be less or equal to the index of the last mipmap level accessible to the view

Valid Usage (Implicit)

- VUID-VkImageViewMinLodCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_VIEW_MIN_LOD_CREATE_INFO_EXT

Structure Chaining

Extends the structure

- VkImageViewCreateInfo

12.7. Acceleration Structures

Acceleration structures are opaque data structures that are built by the implementation to more efficiently perform spatial queries on the provided geometric data. For these extensions, an acceleration structure is either a top-level acceleration structure containing a set of bottom-level acceleration structures or a bottom-level acceleration structure containing either a set of axis-aligned bounding boxes for custom geometry or a set of triangles.

Each instance in the top-level acceleration structure contains a reference to a bottom-level acceleration structure as well as an instance transform plus information required to index into the shader bindings. The top-level acceleration structure is what is bound to the acceleration descriptor, for example to trace inside the shader in the ray tracing pipeline.

Acceleration structures for the `VK_KHR_acceleration_structure` extension and micromaps for the `VK_KHR_opacity_micromap` extension are represented by `VkAccelerationStructureKHR` handles:

```
// Provided by VK_KHR_acceleration_structure
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureKHR)
```

To create an acceleration structure using a device address, call:

```
// Provided by VK_KHR_acceleration_structure with VK_KHR_device_address_commands
VkResult vkCreateAccelerationStructure2KHR(
    VkDevice                                    device,
    const VkAccelerationStructureCreateInfo2KHR* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkAccelerationStructureKHR*                 pAccelerationStructure);
```

- `device` is the logical device that creates the acceleration structure object.
- `pCreateInfo` is a pointer to a VkAccelerationStructureCreateInfo2KHR structure containing parameters affecting creation of the acceleration structure.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureKHR` handle in which the

resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of VkAccelerationStructureCreateInfo2KHR.

The acceleration structure data is stored in the object referred to by `VkAccelerationStructureCreateInfo2KHR::addressRange.address`.

Once the `VkAccelerationStructureKHR` object has been created, it **must** be populated by acceleration structure build or acceleration structure copy commands such as vkCmdBuildAccelerationStructuresKHR and vkCmdCopyAccelerationStructureKHR. Acceleration structures created with this command **must** not be used by host commands.

NOTE The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use vkCmdCopyAccelerationStructureToMemoryKHR with a `mode` of VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR, and vkCmdCopyMemoryToAccelerationStructureKHR with a `mode` of VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR during replay.

Valid Usage

- VUID-vkCreateAccelerationStructure2KHR-accelerationStructure-03611
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCreateAccelerationStructure2KHR-deviceAddressCommands-13086
  The `VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR::deviceAddressCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructure2KHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateAccelerationStructure2KHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkAccelerationStructureCreateInfo2KHR structure
- VUID-vkCreateAccelerationStructure2KHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateAccelerationStructure2KHR-pAccelerationStructure-parameter
  `pAccelerationStructure` **must** be a valid pointer to a VkAccelerationStructureKHR handle
- VUID-vkCreateAccelerationStructure2KHR-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkAccelerationStructureCreateInfo2KHR structure is defined as:

```
// Provided by VK_KHR_acceleration_structure with VK_KHR_device_address_commands
typedef struct VkAccelerationStructureCreateInfo2KHR {
    VkStructureType                          sType;
    const void*                              pNext;
    VkAccelerationStructureCreateFlagsKHR    createFlags;
    VkDeviceAddressRangeKHR                  addressRange;
    VkAddressCommandFlagsKHR                 addressFlags;
    VkAccelerationStructureTypeKHR           type;
} VkAccelerationStructureCreateInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- createFlags is a bitmask of VkAccelerationStructureCreateFlagBitsKHR specifying additional creation parameters of the acceleration structure.
- addressRange is a VkDeviceAddressRangeKHR structure defining the size required for the acceleration structure and its starting address.
- addressFlags is a VkAddressCommandFlagsKHR value defining the flags for the address range.
- type is a VkAccelerationStructureTypeKHR value specifying the type of acceleration structure that will be created.

Applications **should** create an acceleration structure with a specific VkAccelerationStructureTypeKHR other than VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

NOTE

VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type must be specified as VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR when the build is

performed.

During replay, if `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR, `addressRange.address` **must** be an address used to create an identical acceleration structure on the same implementation. The address **must** be in the range of an identically created VkBuffer at the same offset.

Applications **should** avoid creating acceleration structures with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag and VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT to all buffers used as storage for an acceleration structure with VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR included in `createFlags`. This also means that the tool will need to add VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT to memory allocations to allow the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, to avoid address space allocation conflicts.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure **can** be queried with vkGetAccelerationStructureBuildSizesKHR. If the acceleration structure is going to be the target of a copy, vkCmdWriteAccelerationStructuresPropertiesKHR **can** be used to obtain the size required depending on the type of copy.

Valid Usage

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13097
  If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13098
  If the buffer from which the range specified by `addressRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13099
  If the buffer from which the range specified by `addressRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-13100
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-13101
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11602
  `addressRange.address` **must** be a valid VkDeviceAddress
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11603
  `addressRange` **must** specify a range within a valid address retrieved from `buffer` that was created with a `usage` value containing VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11604
  `addressRange` **must** specify a range within a valid address retrieved from `buffer` that was not created with a `flags` value containing VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT

- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11605
  `addressRange.address` **must** be a multiple of `256` bytes
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11606
  If the `address` member of `addressRange` was retrieved from a VkBuffer created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, `createFlags` **must** include VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11607
  If the `address` member of `addressRange` was retrieved from a VkBuffer not created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, `createFlags` **must** not include VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-addressRange-11608
  `addressRange.size` **must** be greater than zero
- VUID-VkAccelerationStructureCreateInfo2KHR-micromap-11609
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11610
  If `type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `createFlags` **must** not include VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-03613
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR, VkPhysicalDeviceAccelerationStructureFeaturesKHR::`accelerationStructureCaptureReplay` **must** be VK_TRUE
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-11673
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR and `device` was created with multiple physical devices, the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-08108
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfo2KHR-pNext-08109
  If the `pNext` chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, `createFlags` **must** contain VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfo2KHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_2_KHR
- VUID-VkAccelerationStructureCreateInfo2KHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkOpaqueCaptureDescriptorDataCreateInfoEXT
- VUID-VkAccelerationStructureCreateInfo2KHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureCreateInfo2KHR-createFlags-parameter
  If `createFlags` is not `0`, `createFlags` **must** be a valid combination of VkAccelerationStructureCreateFlagBitsKHR values
- VUID-VkAccelerationStructureCreateInfo2KHR-addressFlags-parameter
  If `addressFlags` is not `0`, `addressFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-VkAccelerationStructureCreateInfo2KHR-type-parameter
  `type` **must** be a valid VkAccelerationStructureTypeKHR value

To create an acceleration structure using a buffer, call:

WARNING	This functionality is superseded by vkCreateAccelerationStructure2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCreateAccelerationStructureKHR(
    VkDevice                                    device,
    const VkAccelerationStructureCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkAccelerationStructureKHR*                 pAccelerationStructure);
```

- `device` is the logical device that creates the acceleration structure object.
- `pCreateInfo` is a pointer to a VkAccelerationStructureCreateInfoKHR structure containing parameters affecting creation of the acceleration structure.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureKHR` handle in which the resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of VkAccelerationStructureCreateInfoKHR.

The acceleration structure data is stored in the object referred to by `VkAccelerationStructureCreateInfoKHR`::`buffer`. Once memory has been bound to that buffer, it **must**

be populated by acceleration structure build or acceleration structure copy commands such as vkCmdBuildAccelerationStructuresKHR, vkBuildAccelerationStructuresKHR, vkCmdCopyAccelerationStructureKHR, and vkCopyAccelerationStructureKHR.

NOTE The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use vkCopyAccelerationStructureToMemoryKHR or vkCmdCopyAccelerationStructureToMemoryKHR with a `mode` of VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR, and vkCopyMemoryToAccelerationStructureKHR or vkCmdCopyMemoryToAccelerationStructureKHR with a `mode` of VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR during replay.

NOTE Memory does not need to be bound to the underlying buffer when vkCreateAccelerationStructureKHR is called.

Valid Usage

- VUID-vkCreateAccelerationStructureKHR-accelerationStructure-03611
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCreateAccelerationStructureKHR-deviceAddress-03488
  If VkAccelerationStructureCreateInfoKHR::`deviceAddress` is not zero, the `accelerationStructureCaptureReplay` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateAccelerationStructureKHR-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkAccelerationStructureCreateInfoKHR structure
- VUID-vkCreateAccelerationStructureKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateAccelerationStructureKHR-pAccelerationStructure-parameter
  `pAccelerationStructure` **must** be a valid pointer to a VkAccelerationStructureKHR handle
- VUID-vkCreateAccelerationStructureKHR-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkAccelerationStructureCreateInfoKHR structure is defined as:

WARNING	This functionality is superseded by VkAccelerationStructureCreateInfo2KHR. See Legacy Functionality for more information.

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureCreateInfoKHR {
    VkStructureType                           sType;
    const void*                               pNext;
    VkAccelerationStructureCreateFlagsKHR     createFlags;
    VkBuffer                                  buffer;
    VkDeviceSize                              offset;
    VkDeviceSize                              size;
    VkAccelerationStructureTypeKHR            type;
    VkDeviceAddress                           deviceAddress;
} VkAccelerationStructureCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- createFlags is a bitmask of VkAccelerationStructureCreateFlagBitsKHR specifying additional creation parameters of the acceleration structure.
- buffer is the buffer on which the acceleration structure will be stored.
- offset is an offset in bytes from the base address of the buffer at which the acceleration structure will be stored, and **must** be a multiple of 256.
- size is the size required for the acceleration structure.
- type is a VkAccelerationStructureTypeKHR value specifying the type of acceleration structure that will be created.
- deviceAddress is the device address requested for the acceleration structure, obtained from vkGetAccelerationStructureDeviceAddressKHR, if the accelerationStructureCaptureReplay feature is being used. If deviceAddress is zero, no specific address is requested.

Applications **should** avoid creating acceleration structures with application-provided addresses

and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag to all buffers that use VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT, and will add VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT to all buffers used as storage for an acceleration structure where `deviceAddress` is not zero. This also means that the tool will need to add VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, to avoid address space allocation conflicts.

Applications **should** create an acceleration structure with a specific VkAccelerationStructureTypeKHR other than VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

NOTE

VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type is determined when the acceleration structure is constructed as VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR. For acceleration structures constructed by build commands, this type is specified by the build parameters. For acceleration structures constructed by acceleration structure copy commands, this type is determined by the source acceleration structure or serialized data, depending on the copy command.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure **can** be queried with vkGetAccelerationStructureBuildSizesKHR. If the acceleration structure is going to be the target of a compacting copy, vkCmdWriteAccelerationStructuresPropertiesKHR or vkWriteAccelerationStructuresPropertiesKHR **can** be used to obtain the compacted size required.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-03612
  If `deviceAddress` is not zero, `createFlags` **must** include VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09488
  If `deviceAddress` is not zero, it **must** have been retrieved from an identically created acceleration structure, except for `buffer` and `deviceAddress`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09489
  If `deviceAddress` is not zero, `buffer` **must** have been created identically to the `buffer` used to create the acceleration structure from which `deviceAddress` was retrieved, except for VkBufferOpaqueCaptureAddressCreateInfo::`opaqueCaptureAddress`
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09490
  If `deviceAddress` is not zero, `buffer` **must** have been created with a VkBufferOpaqueCaptureAddressCreateInfo::`opaqueCaptureAddress` that was retrieved from vkGetBufferOpaqueCaptureAddress for the `buffer` that was used to create the acceleration structure from which `deviceAddress` was retrieved
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03614
  `buffer` **must** have been created with the VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR usage flag set
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03615
  `buffer` **must** not have been created with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03616
  The sum of `offset` and `size` **must** be less than or equal to the size of `buffer`
- VUID-VkAccelerationStructureCreateInfoKHR-offset-03734
  `offset` **must** be a multiple of `256` bytes
- VUID-VkAccelerationStructureCreateInfoKHR-type-11600
  `type` **must** not equal VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-03613
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR, VkPhysicalDeviceAccelerationStructureFeaturesKHR::`accelerationStructureCaptureReplay` **must** be VK_TRUE
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-11673
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR and `device` was created with multiple physical devices, the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-08108
  If `createFlags` includes VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkAccelerationStructureCreateInfoKHR-pNext-08109
  If the `pNext` chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, `createFlags` **must** contain VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_KHR
- VUID-VkAccelerationStructureCreateInfoKHR-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkOpaqueCaptureDescriptorDataCreateInfoEXT
- VUID-VkAccelerationStructureCreateInfoKHR-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-parameter
  If `createFlags` is not `0`, `createFlags` **must** be a valid combination of VkAccelerationStructureCreateFlagBitsKHR values
- VUID-VkAccelerationStructureCreateInfoKHR-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle
- VUID-VkAccelerationStructureCreateInfoKHR-type-parameter
  `type` **must** be a valid VkAccelerationStructureTypeKHR value
- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-parameter
  If `deviceAddress` is not `0`, `deviceAddress` **must** be a valid VkDeviceAddress value

To get the build sizes for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetAccelerationStructureBuildSizesKHR(
    VkDevice                                    device,
    VkAccelerationStructureBuildTypeKHR         buildType,
    const VkAccelerationStructureBuildGeometryInfoKHR* pBuildInfo,
    const uint32_t*                             pMaxPrimitiveCounts,
    VkAccelerationStructureBuildSizesInfoKHR*   pSizeInfo);
```

- `device` is the logical device that will be used for creating the acceleration structure.
- `buildType` defines whether host or device operations (or both) are being queried for.
- `pBuildInfo` is a pointer to a VkAccelerationStructureBuildGeometryInfoKHR structure describing parameters of a build operation.
- `pMaxPrimitiveCounts` is a pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values defining the number of primitives built into each geometry.
- `pSizeInfo` is a pointer to a VkAccelerationStructureBuildSizesInfoKHR structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

The `srcAccelerationStructure`, `dstAccelerationStructure`, and `mode` members of `pBuildInfo` are ignored. Any VkDeviceOrHostAddressKHR, VkDeviceOrHostAddressConstKHR, or VkDeviceAddress members of `pBuildInfo` are ignored by this command, except that the `hostAddress` member of

VkAccelerationStructureGeometryTrianglesDataKHR::transformData will be examined to check if it is NULL.

An acceleration structure created with the accelerationStructureSize returned by this command supports any build or update with a VkAccelerationStructureBuildGeometryInfoKHR structure and array of VkAccelerationStructureBuildRangeInfoKHR structures subject to the following properties:

- The build command is a host build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- The build command is a device build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- For VkAccelerationStructureBuildGeometryInfoKHR:
  - Its type, and flags members are equal to pBuildInfo->type and pBuildInfo->flags, respectively.
  - geometryCount is less than or equal to pBuildInfo->geometryCount.
  - For each element of either pGeometries or ppGeometries at a given index, its geometryType member is equal to pBuildInfo->geometryType.
  - For each element of either pGeometries or ppGeometries at a given index, its flags member is equal to the corresponding member of the same element in pBuildInfo.
  - For each element of either pGeometries or ppGeometries at a given index, with a geometryType member equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, the vertexFormat and indexType members of geometry.triangles are equal to the corresponding members of the same element in pBuildInfo.
  - For each element of either pGeometries or ppGeometries at a given index, with a geometryType member equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, the maxVertex member of geometry.triangles is less than or equal to the corresponding member of the same element in pBuildInfo.
  - For each element of either pGeometries or ppGeometries at a given index, with a geometryType member equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the applicable address in the transformData member of geometry.triangles is not NULL, the corresponding transformData.hostAddress parameter in pBuildInfo is not NULL.
  - For each element of either pGeometries or ppGeometries at a given index, with a geometryType member equal to VK_GEOMETRY_TYPE_MICROMAP_KHR, the sum of usage information in either the pUsageCounts or ppUsageCounts members of the VkAccelerationStructureGeometryMicromapDataKHR structure in its pNext chain is equal to the sum of usage information in the corresponding members of pBuild info.
  - For each element of either pGeometries or ppGeometries at a given index, with a geometryType member equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the pNext chain contains VkAccelerationStructureTrianglesOpacityMicromapKHR the corresponding member of pBuildInfo also contains VkAccelerationStructureTrianglesOpacityMicromapKHR and with an equivalent micromap.

- For each VkAccelerationStructureBuildRangeInfoKHR corresponding to the VkAccelerationStructureBuildGeometryInfoKHR:
  - Its `primitiveCount` member is less than or equal to the corresponding element of `pMaxPrimitiveCounts`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to VK_GEOMETRY_TYPE_TRIANGLES_KHR, if the `pNext` chain contains VkAccelerationStructureTrianglesOpacityMicromapEXT the corresponding member of `pBuildInfo` also contains VkAccelerationStructureTrianglesOpacityMicromapEXT and with an equivalent `micromap`.
- For each VkAccelerationStructureBuildRangeInfoKHR corresponding to the VkAccelerationStructureBuildGeometryInfoKHR:
  - Its `primitiveCount` member is less than or equal to the corresponding element of `pMaxPrimitiveCounts`.

Similarly, the `updateScratchSize` value will support any build command specifying the VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR `mode` under the above conditions, and the `buildScratchSize` value will support any build command specifying the VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR `mode` under the above conditions.

Valid Usage

- VUID-vkGetAccelerationStructureBuildSizesKHR-accelerationStructure-08933
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-device-03618
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-11612
  If `pBuildInfo->geometryCount` is not `0` and `pBuildInfo->type` is not VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR , `pMaxPrimitiveCounts` **must** be a valid pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-11613
  If `pBuildInfo->type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `pMaxPrimitiveCounts` **must** equal `NULL`
- VUID-vkGetAccelerationStructureBuildSizesKHR-buildType-11614
  If `pBuildInfo->type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR, `buildType` **must** equal VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03785
  If `pBuildInfo->pGeometries` or `pBuildInfo->ppGeometries` has a `geometryType` of VK_GEOMETRY_TYPE_INSTANCES_KHR, each `pMaxPrimitiveCounts`[i] **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::`maxInstanceCount`

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureBuildSizesKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetAccelerationStructureBuildSizesKHR-buildType-parameter
  `buildType` **must** be a valid VkAccelerationStructureBuildTypeKHR value
- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-parameter
  `pBuildInfo` **must** be a valid pointer to a valid VkAccelerationStructureBuildGeometryInfoKHR structure
- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-parameter
  If `pMaxPrimitiveCounts` is not `NULL`, `pMaxPrimitiveCounts` **must** be a valid pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
- VUID-vkGetAccelerationStructureBuildSizesKHR-pSizeInfo-parameter
  `pSizeInfo` **must** be a valid pointer to a VkAccelerationStructureBuildSizesInfoKHR structure

The `VkAccelerationStructureBuildSizesInfoKHR` structure describes the required build sizes for an acceleration structure and scratch buffers and is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildSizesInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize       accelerationStructureSize;
    VkDeviceSize       updateScratchSize;
    VkDeviceSize       buildScratchSize;
} VkAccelerationStructureBuildSizesInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureSize` is the size in bytes required in a VkAccelerationStructureKHR for a build or update operation.
- `updateScratchSize` is the size in bytes required in a scratch buffer for an update operation.
- `buildScratchSize` is the size in bytes required in a scratch buffer for a build operation.

Acceleration structure objects that represent micromaps **cannot** be the target for update commands. Implementations **must** set `updateScratchSize` equal to `0` if the `pBuildInfo->type` is VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildSizesInfoKHR-sType-sType
  `sType` **must** be

VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR

- VUID-VkAccelerationStructureBuildSizesInfoKHR-pNext-pNext
  pNext **must** be NULL

Values which **can** be set in VkAccelerationStructureCreateInfoKHR::type specifying the type of acceleration structure, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureTypeKHR {
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR = 0,
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR = 1,
    VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR = 2,
  // Provided by VK_KHR_opacity_micromap
    VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR = 1000623000,
} VkAccelerationStructureTypeKHR;
```

- VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR is a top-level acceleration structure containing instance data referring to bottom-level acceleration structures.
- VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR is a bottom-level acceleration structure containing the AABBs or geometry to be intersected.
- VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR is an acceleration structure whose type is determined at build time used for special circumstances. In these cases, the acceleration structure type is not known at creation time, but **must** be specified at build time as micromap, top, or bottom.
- VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR is a micromap containing opacity information, which **can** be referenced by geometry in bottom-level acceleration structures.

Bits which **can** be set in VkAccelerationStructureCreateInfoKHR::createFlags, specifying additional creation parameters for acceleration structures, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCreateFlagBitsKHR {
    VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
0x00000001,
  // Provided by VK_EXT_descriptor_buffer
    VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
0x00000008,
} VkAccelerationStructureCreateFlagBitsKHR;
```

- VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR specifies that the acceleration structure's address **can** be saved and reused on a subsequent run.
- VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the acceleration structure **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see

VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkAccelerationStructureCreateFlagsKHR;
```

VkAccelerationStructureCreateFlagsKHR is a bitmask type for setting a mask of zero or more VkAccelerationStructureCreateFlagBitsKHR.

Bits which **can** be set in VkAccelerationStructureBuildGeometryInfoKHR::`flags` specifying additional parameters for acceleration structure builds, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureFlagBitsKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR = 0x00000001,
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR = 0x00000002,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR = 0x00000004,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR = 0x00000008,
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR = 0x00000010,
  // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT =
0x00000100,
  // Provided by VK_KHR_ray_tracing_position_fetch
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR = 0x00000800,
  // Provided by VK_KHR_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR =
0x00000040,
  // Provided by VK_KHR_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR =
0x00000080,
  // Provided by VK_KHR_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR = 0x00000400,
  // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR,
  // Provided by VK_EXT_opacity_micromap
  // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT is a legacy
alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT,
  // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR,
  // Provided by VK_EXT_opacity_micromap
  // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT is a legacy
alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT,
  // Provided by VK_EXT_opacity_micromap
  // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT is a
legacy alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT,
  // Provided by VK_KHR_ray_tracing_position_fetch
  // VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR is a legacy alias
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR =
VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR,
} VkBuildAccelerationStructureFlagBitsKHR;
```

- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR specifies that the specified acceleration structure **can** be updated with a mode of

VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR in VkAccelerationStructureBuildGeometryInfoKHR .

- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR specifies that the specified acceleration structure **can** act as the source for a copy acceleration structure command with `mode` of VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR to produce a compacted acceleration structure.
- VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR specifies that the given acceleration structure build **should** prioritize trace performance over build time.
- VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR specifies that the given acceleration structure build **should** prioritize build time over trace performance.
- VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR specifies that this acceleration structure **should** minimize the size of the scratch memory and the final result acceleration structure, potentially at the expense of build time or trace performance.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR specifies that the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT specifies that the data of the opacity micromaps associated with the specified acceleration structure **may** change with an acceleration structure update.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR specifies that the specified acceleration structure **may** be referenced in an instance with VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR set.
- VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR specifies that the specified acceleration structure **can** be used when fetching the vertex positions of a hit triangle.
- VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR specifies that micromaps **can** be compressed with a lossy encoding as described in Ray Opacity Micromap, which **may** support additional subdivision levels.

NOTE VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR **may** take more time and memory than a normal build, and so **should** only be used when those features are needed.

NOTE VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR and VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR are allowed to be used together. In that case, the result of the compaction copy is used as the source of a build with `mode` of VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR to perform the compacted update.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkBuildAccelerationStructureFlagsKHR;
```

VkBuildAccelerationStructureFlagsKHR is a bitmask type for setting a mask of zero or more VkBuildAccelerationStructureFlagBitsKHR.

Geometry types are specified by VkGeometryTypeKHR, which takes values:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryTypeKHR {
    VK_GEOMETRY_TYPE_TRIANGLES_KHR = 0,
    VK_GEOMETRY_TYPE_AABBS_KHR = 1,
    VK_GEOMETRY_TYPE_INSTANCES_KHR = 2,
  // Provided by VK_KHR_opacity_micromap
    VK_GEOMETRY_TYPE_MICROMAP_KHR = 1000623000,
} VkGeometryTypeKHR;
```

- VK_GEOMETRY_TYPE_TRIANGLES_KHR specifies a geometry type consisting of triangles.
- VK_GEOMETRY_TYPE_AABBS_KHR specifies a geometry type consisting of axis-aligned bounding boxes.
- VK_GEOMETRY_TYPE_INSTANCES_KHR specifies a geometry type consisting of acceleration structure instances.
- VK_GEOMETRY_TYPE_MICROMAP_KHR specifies a geometry type consisting of a micromap array.

Bits specifying additional parameters for geometries in acceleration structure builds, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryFlagBitsKHR {
    VK_GEOMETRY_OPAQUE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR = 0x00000002,
} VkGeometryFlagBitsKHR;
```

- VK_GEOMETRY_OPAQUE_BIT_KHR specifies that this geometry does not invoke the any-hit shaders even if present in a hit group.
- VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR specifies that the implementation **must** only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent an implementation **may** invoke the any-hit shader more than once for this geometry.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryFlagsKHR;
```

VkGeometryFlagsKHR is a bitmask type for setting a mask of zero or more VkGeometryFlagBitsKHR.

To destroy an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
void vkDestroyAccelerationStructureKHR(
    VkDevice                                    device,
    VkAccelerationStructureKHR                  accelerationStructure,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the acceleration structure.
- `accelerationStructure` is the acceleration structure to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-08934
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02442
  All submitted commands that refer to `accelerationStructure` **must** have completed execution
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02443
  If `VkAllocationCallbacks` were provided when `accelerationStructure` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02444
  If no `VkAllocationCallbacks` were provided when `accelerationStructure` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parameter
  If `accelerationStructure` is not VK_NULL_HANDLE, `accelerationStructure` **must** be a valid VkAccelerationStructureKHR handle
- VUID-vkDestroyAccelerationStructureKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parent
  If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized

Possible values of `buildType` in vkGetAccelerationStructureBuildSizesKHR are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureBuildTypeKHR {
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR = 0,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR = 1,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR = 2,
} VkAccelerationStructureBuildTypeKHR;
```

- VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR requests the memory requirement for operations performed by the host.
- VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR requests the memory requirement for operations performed by the device.
- VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR requests the memory requirement for operations performed by either the host, or the device.

To query the 64-bit device address for an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkDeviceAddress vkGetAccelerationStructureDeviceAddressKHR(
    VkDevice                                    device,
    const VkAccelerationStructureDeviceAddressInfoKHR* pInfo);
```

- `device` is the logical device that the acceleration structure was created on.
- `pInfo` is a pointer to a VkAccelerationStructureDeviceAddressInfoKHR structure specifying the acceleration structure to retrieve an address for.

The 64-bit return value is an address of the acceleration structure, which can be used for device and shader operations that involve acceleration structures, such as ray traversal and acceleration structure building.

If the acceleration structure was created with vkCreateAccelerationStructure2KHR, the return value will be the same address as `addressRange.address`.

If the acceleration structure was created with vkCreateAccelerationStructureKHR with a non-zero value of VkAccelerationStructureCreateInfoKHR::`deviceAddress`, the return value will be the same address.

Otherwise, if the acceleration structure was created with a `type` of VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR, the returned address **must** be consistent with the relative offset to other acceleration structures with `type`

VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR allocated with the same VkBuffer. That is, the difference in returned addresses between the two **must** be the same as the difference in offsets provided at acceleration structure creation.

The returned address **must** be aligned to 256 bytes.

NOTE For acceleration structures created with vkCreateAccelerationStructureKHR, their device address **may** be different from the buffer device address corresponding to the acceleration structure's start offset in its storage buffer for acceleration structure types other than VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

Valid Usage

- VUID-vkGetAccelerationStructureDeviceAddressKHR-accelerationStructure-08935
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-03504
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09541
  If the buffer on which `pInfo->accelerationStructure` was placed is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09542
  The buffer on which `pInfo->accelerationStructure` was placed **must** have been created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag set

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureDeviceAddressKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkAccelerationStructureDeviceAddressInfoKHR structure

The `VkAccelerationStructureDeviceAddressInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureDeviceAddressInfoKHR {
    VkStructureType              sType;
    const void*                  pNext;
    VkAccelerationStructureKHR   accelerationStructure;
} VkAccelerationStructureDeviceAddressInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` specifies the acceleration structure whose address is being queried.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureDeviceAddressInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DEVICE_ADDRESS_INFO_KHR`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-accelerationStructure-parameter
  `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle

12.8. Micromaps

Micromaps are opaque data structures that are built by the implementation to encode sub-triangle data to be included in an acceleration structure.

Micromaps are represented by `VkAccelerationStructureKHR` handles for use with `VK_KHR_opacity_micromap` commands.

Micromaps are represented by `VkMicromapEXT` handles for use with `VK_EXT_opacity_micromap` commands:

```
// Provided by VK_EXT_opacity_micromap
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkMicromapEXT)
```

To create a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCreateMicromapEXT(
    VkDevice                                    device,
    const VkMicromapCreateInfoEXT*              pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkMicromapEXT*                              pMicromap);
```

- `device` is the logical device that creates the micromap structure object.
- `pCreateInfo` is a pointer to a `VkMicromapCreateInfoEXT` structure containing parameters affecting creation of the micromap.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pMicromap` is a pointer to a `VkMicromapEXT` handle in which the resulting micromap object is returned.

Similar to other objects in Vulkan, the micromap creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into a micromap is determined by the parameters of VkMicromapCreateInfoEXT.

The micromap data is stored in the object referred to by VkMicromapCreateInfoEXT::buffer. Once memory has been bound to that buffer, it must be populated by micromap build or micromap copy commands such as vkCmdBuildMicromapsEXT, vkBuildMicromapsEXT, vkCmdCopyMicromapEXT, and vkCopyMicromapEXT.

NOTE

The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the micromap data using micromap copy commands. During capture the tool will set VkCopyMicromapToMemoryInfoEXT::mode to VK_COPY_MICROMAP_MODE_SERIALIZE_EXT, and during replay the tool will set VkCopyMemoryToMicromapInfoEXT::mode to VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT.

Valid Usage

- VUID-vkCreateMicromapEXT-micromap-11615
  The VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateMicromapEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkCreateMicromapEXT-pCreateInfo-parameter
  pCreateInfo **must** be a valid pointer to a valid VkMicromapCreateInfoEXT structure
- VUID-vkCreateMicromapEXT-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateMicromapEXT-pMicromap-parameter
  pMicromap **must** be a valid pointer to a VkMicromapEXT handle
- VUID-vkCreateMicromapEXT-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_HOST_MEMORY

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkMicromapCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapCreateInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkMicromapCreateFlagsEXT    createFlags;
    VkBuffer                    buffer;
    VkDeviceSize                offset;
    VkDeviceSize                size;
    VkMicromapTypeEXT           type;
    VkDeviceAddress             deviceAddress;
} VkMicromapCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- createFlags is a bitmask of VkMicromapCreateFlagBitsEXT specifying additional creation parameters of the micromap.
- buffer is the buffer on which the micromap will be stored.
- offset is an offset in bytes from the base address of the buffer at which the micromap will be stored, and **must** be a multiple of 256.
- size is the size required for the micromap.
- type is a VkMicromapTypeEXT value specifying the type of micromap that will be created.
- deviceAddress is the device address requested for the micromap if the VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapCaptureReplay feature is being used.

If deviceAddress is zero, no specific address is requested.

If deviceAddress is not zero, deviceAddress **must** be an address retrieved from an identically created micromap on the same implementation. The micromap **must** also be placed on an identically created buffer and at the same offset.

Applications **should** avoid creating micromaps with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR errors.

NOTE

The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag and VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT to all buffers used as storage for a micromap with VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT included in createFlags. This also means that the tool will need to add

> VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT to memory allocations to allow the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.
>
> Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Applications and tools should avoid mixing application-provided and implementation-provided addresses for buffers created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, to avoid address space allocation conflicts.

If the micromap will be the target of a build operation, the required size for a micromap **can** be queried with vkGetMicromapBuildSizesEXT.

Valid Usage

- VUID-VkMicromapCreateInfoEXT-deviceAddress-07433
  If `deviceAddress` is not zero, `createFlags` **must** include VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT
- VUID-VkMicromapCreateInfoEXT-micromapCaptureReplay-11616
  If `createFlags` includes VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT, `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapCaptureReplay` **must** be VK_TRUE
- VUID-VkMicromapCreateInfoEXT-bufferDeviceAddressMultiDevice-11617
  If `createFlags` includes VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT and `device` was created with multiple physical devices, the `bufferDeviceAddressMultiDevice` feature **must** be enabled
- VUID-VkMicromapCreateInfoEXT-buffer-07435
  `buffer` **must** have been created with the VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT usage flag set
- VUID-VkMicromapCreateInfoEXT-buffer-07436
  `buffer` **must** not have been created with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT
- VUID-VkMicromapCreateInfoEXT-offset-07437
  The sum of `offset` and `size` **must** be less than or equal to the size of `buffer`
- VUID-VkMicromapCreateInfoEXT-offset-07438
  `offset` **must** be a multiple of `256` bytes

Valid Usage (Implicit)

- VUID-VkMicromapCreateInfoEXT-sType-sType

sType **must** be VK_STRUCTURE_TYPE_MICROMAP_CREATE_INFO_EXT

- VUID-VkMicromapCreateInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkMicromapCreateInfoEXT-createFlags-parameter
  If createFlags is not 0, createFlags **must** be a valid combination of VkMicromapCreateFlagBitsEXT values
- VUID-VkMicromapCreateInfoEXT-buffer-parameter
  buffer **must** be a valid VkBuffer handle
- VUID-VkMicromapCreateInfoEXT-type-parameter
  type **must** be a valid VkMicromapTypeEXT value
- VUID-VkMicromapCreateInfoEXT-deviceAddress-parameter
  If deviceAddress is not 0, deviceAddress **must** be a valid VkDeviceAddress value

To get the build sizes for a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetMicromapBuildSizesEXT(
    VkDevice                                    device,
    VkAccelerationStructureBuildTypeKHR         buildType,
    const VkMicromapBuildInfoEXT*               pBuildInfo,
    VkMicromapBuildSizesInfoEXT*                pSizeInfo);
```

- device is the logical device that will be used for creating the micromap.
- buildType defines whether host or device operations (or both) are being queried for.
- pBuildInfo is a pointer to a VkMicromapBuildInfoEXT structure describing parameters of a build operation.
- pSizeInfo is a pointer to a VkMicromapBuildSizesInfoEXT structure which returns the size required for a micromap and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

The dstMicromap, mode, data, scratchData, and triangleArray members of pBuildInfo are ignored by this command.

A micromap created with the micromapSize returned by this command supports any build with a VkMicromapBuildInfoEXT structure subject to the following properties:

- The build command is a host build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- The build command is a device build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- For VkMicromapBuildInfoEXT:

- Its `type`, and `flags` members are equal to `pBuildInfo->type` and `pBuildInfo->flags`, respectively.
- The sum of usage information in either `pUsageCounts` or `ppUsageCounts` is equal to the sum of usage information in either `pBuildInfo->pUsageCounts` or `pBuildInfo->ppUsageCounts`.

Similarly, the `buildScratchSize` value will support any build command specifying the VK_BUILD_MICROMAP_MODE_BUILD_EXT `mode` under the above conditions.

Valid Usage

- VUID-vkGetMicromapBuildSizesEXT-micromap-11618
  The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-vkGetMicromapBuildSizesEXT-device-07440
  If `device` was created with multiple physical devices, the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetMicromapBuildSizesEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetMicromapBuildSizesEXT-buildType-parameter
  `buildType` **must** be a valid VkAccelerationStructureBuildTypeKHR value
- VUID-vkGetMicromapBuildSizesEXT-pBuildInfo-parameter
  `pBuildInfo` **must** be a valid pointer to a valid VkMicromapBuildInfoEXT structure
- VUID-vkGetMicromapBuildSizesEXT-pSizeInfo-parameter
  `pSizeInfo` **must** be a valid pointer to a VkMicromapBuildSizesInfoEXT structure

The `VkMicromapBuildSizesInfoEXT` structure describes the required build sizes for a micromap and scratch buffers and is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildSizesInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize       micromapSize;
    VkDeviceSize       buildScratchSize;
    VkBool32           discardable;
} VkMicromapBuildSizesInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromapSize` is the size in bytes required in a VkMicromapEXT for a build or update operation.

- `buildScratchSize` is the size in bytes required in a scratch buffer for a build operation.
- `discardable` indicates whether or not the micromap object may be destroyed after an acceleration structure build or update. A false value means that acceleration structures built with this micromap **may** contain references to the data contained therein, and the application **must** not destroy the micromap until ray traversal has concluded. A true value means that the information in the micromap will be copied by value into the acceleration structure, and the micromap **can** be destroyed after the acceleration structure build concludes.

Valid Usage (Implicit)

- VUID-VkMicromapBuildSizesInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MICROMAP_BUILD_SIZES_INFO_EXT
- VUID-VkMicromapBuildSizesInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`

Values which **can** be set in VkMicromapCreateInfoEXT::`type` specifying the type of micromap, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapTypeEXT {
    VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT = 0,
} VkMicromapTypeEXT;
```

- VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT is a micromap containing data to control the opacity of a triangle.

Bits which **can** be set in VkMicromapCreateInfoEXT::`createFlags`, specifying additional creation parameters for micromaps, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapCreateFlagBitsEXT {
    VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT = 0x00000001,
} VkMicromapCreateFlagBitsEXT;
```

- VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT specifies that the micromap's address **can** be saved and reused on a subsequent run.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkMicromapCreateFlagsEXT;
```

`VkMicromapCreateFlagsEXT` is a bitmask type for setting a mask of zero or more VkMicromapCreateFlagBitsEXT.

To destroy a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkDestroyMicromapEXT(
    VkDevice                                    device,
    VkMicromapEXT                               micromap,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the micromap.
- `micromap` is the micromap to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyMicromapEXT-micromap-11619
  The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-vkDestroyMicromapEXT-micromap-07441
  All submitted commands that refer to `micromap` **must** have completed execution
- VUID-vkDestroyMicromapEXT-micromap-07442
  If `VkAllocationCallbacks` were provided when `micromap` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyMicromapEXT-micromap-07443
  If no `VkAllocationCallbacks` were provided when `micromap` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyMicromapEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyMicromapEXT-micromap-parameter
  If `micromap` is not VK_NULL_HANDLE, `micromap` **must** be a valid VkMicromapEXT handle
- VUID-vkDestroyMicromapEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyMicromapEXT-micromap-parent
  If `micromap` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `micromap` **must** be externally synchronized

12.9. Resource Memory Association

Resources are initially created as *virtual allocations* with no backing memory. Device memory is allocated separately (see Device Memory) and then associated with the resource. This association is done differently for sparse and non-sparse resources.

Resources created with any of the sparse creation flags are considered sparse resources. Resources created without these flags are non-sparse. The details on resource memory association for sparse resources is described in Sparse Resources.

Non-sparse resources **must** be bound completely and contiguously to a single `VkDeviceMemory` object before the resource is passed as a parameter to any of the following operations:

- creating image or buffer views
- updating descriptor sets
- recording commands in a command buffer

Once bound, the memory binding is immutable for the lifetime of the resource.

In a logical device representing more than one physical device, buffer and image resources exist on all physical devices but **can** be bound to memory differently on each. Each such replicated resource is an *instance* of the resource. For sparse resources, each instance **can** be bound to memory arbitrarily differently. For non-sparse resources, each instance **can** either be bound to the local or a peer instance of the memory, or for images **can** be bound to rectangular regions from the local and/or peer instances. When a resource is used in a descriptor set, each physical device interprets the descriptor according to its own instance's binding to memory.

NOTE	There are no new copy commands to transfer data between physical devices. Instead, an application **can** create a resource with a peer mapping and use it as the source or destination of a transfer command executed by a single physical device to copy the data from one physical device to another.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_0
void vkGetBufferMemoryRequirements(
    VkDevice                                    device,
    VkBuffer                                    buffer,
    VkMemoryRequirements*                       pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `buffer` is the buffer to query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetBufferMemoryRequirements-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle
- VUID-vkGetBufferMemoryRequirements-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements structure
- VUID-vkGetBufferMemoryRequirements-buffer-parent
  `buffer` **must** have been created, allocated, or retrieved from `device`

To determine the memory requirements for an image resource which is not created with the VK_IMAGE_CREATE_DISJOINT_BIT flag set, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageMemoryRequirements(
    VkDevice                                    device,
    VkImage                                     image,
    VkMemoryRequirements*                       pMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `image` is the image to query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements structure in which the memory requirements of the image object are returned.

Valid Usage

- VUID-vkGetImageMemoryRequirements-image-01588
  `image` **must** not have been created with the VK_IMAGE_CREATE_DISJOINT_BIT flag set

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageMemoryRequirements-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkGetImageMemoryRequirements-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements structure
- VUID-vkGetImageMemoryRequirements-image-parent
  `image` **must** have been created, allocated, or retrieved from `device`

The VkMemoryRequirements structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkMemoryRequirements {
    VkDeviceSize    size;
    VkDeviceSize    alignment;
    uint32_t        memoryTypeBits;
} VkMemoryRequirements;
```

- size is the size, in bytes, of the memory allocation **required** for the resource.
- alignment is the alignment, in bytes, of the offset within the allocation **required** for the resource.
- memoryTypeBits is a bitmask and contains one bit set for every supported memory type for the resource. Bit i is set if and only if the memory type i in the VkPhysicalDeviceMemoryProperties structure for the physical device is supported for the resource.

The value of size has no meaning and **should** be ignored if the resource being queried was created with any of the following external memory handle types:

- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT

The implementation guarantees certain properties about the memory requirements returned by vkGetBufferMemoryRequirements2, vkGetImageMemoryRequirements2, vkGetDeviceBufferMemoryRequirements, vkGetDeviceImageMemoryRequirements, vkGetBufferMemoryRequirements and vkGetImageMemoryRequirements:

- The memoryTypeBits member always contains at least one bit set.
- If buffer is a VkBuffer not created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT or VK_BUFFER_CREATE_PROTECTED_BIT bits set, or if image is a linear image that was not created with the VK_IMAGE_CREATE_PROTECTED_BIT bit set, then the memoryTypeBits member always contains at least one bit set corresponding to a VkMemoryType with a propertyFlags that has both the VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT bit and the VK_MEMORY_PROPERTY_HOST_COHERENT_BIT bit set. In other words, mappable coherent memory **can** always be attached to these objects.
- If buffer was created with VkExternalMemoryBufferCreateInfo::handleTypes set to 0 or image was created with VkExternalMemoryImageCreateInfo::handleTypes set to 0, the memoryTypeBits member always contains at least one bit set corresponding to a VkMemoryType with a propertyFlags that has the VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT bit set.
- The memoryTypeBits member is identical for all VkBuffer objects created with the same value for the flags and usage members in the VkBufferCreateInfo structure and the handleTypes member of the VkExternalMemoryBufferCreateInfo structure passed to vkCreateBuffer. Further, if usage1 and usage2 of type VkBufferUsageFlags are such that the bits set in usage2 are a subset of

the bits set in usage1, and they have the same flags and VkExternalMemoryBufferCreateInfo::handleTypes, then the bits set in memoryTypeBits returned for usage1 **must** be a subset of the bits set in memoryTypeBits returned for usage2, for all values of flags.

- The alignment member is a power of two.
- The alignment member is identical for all VkBuffer objects created with the same combination of values for the usage and flags members in the VkBufferCreateInfo structure passed to vkCreateBuffer.
- If the maintenance4 feature is enabled, then the alignment member is identical for all VkImage objects created with the same combination of values for the flags, imageType, format, extent, mipLevels, arrayLayers, samples, tiling and usage members in the VkImageCreateInfo structure passed to vkCreateImage.
- The alignment member satisfies the buffer descriptor offset alignment requirements associated with the VkBuffer's usage:
  - If usage included VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT, alignment **must** be an integer multiple of VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment.
  - If usage included VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT, alignment **must** be an integer multiple of VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment.
  - If usage included VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, alignment **must** be an integer multiple of VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment.
- For images created with a color format, the memoryTypeBits member is identical for all VkImage objects created with the same combination of values for the tiling member, the VK_IMAGE_CREATE_SPARSE_BINDING_BIT bit and VK_IMAGE_CREATE_PROTECTED_BIT bit of the flags member, the VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT bit of the flags member, the VK_IMAGE_USAGE_HOST_TRANSFER_BIT bit of the usage member if the VkPhysicalDeviceHostImageCopyProperties::identicalMemoryTypeRequirements property is VK_FALSE, handleTypes member of VkExternalMemoryImageCreateInfo, and the VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT of the usage member in the VkImageCreateInfo structure passed to vkCreateImage.
- For images created with a depth/stencil format, the memoryTypeBits member is identical for all VkImage objects created with the same combination of values for the format member, the tiling member, the VK_IMAGE_CREATE_SPARSE_BINDING_BIT bit and VK_IMAGE_CREATE_PROTECTED_BIT bit of the flags member, the VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT bit of the flags member, the VK_IMAGE_USAGE_HOST_TRANSFER_BIT bit of the usage member if the VkPhysicalDeviceHostImageCopyProperties::identicalMemoryTypeRequirements property is VK_FALSE, handleTypes member of VkExternalMemoryImageCreateInfo, and the VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT of the usage member in the VkImageCreateInfo structure passed to vkCreateImage.
- If the memory requirements are for a VkImage, the memoryTypeBits member **must** not refer to a VkMemoryType with a propertyFlags that has the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit set if the image did not have VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT bit set in the usage member of the VkImageCreateInfo structure passed to vkCreateImage.

- If the memory requirements are for a VkBuffer, the memoryTypeBits member **must** not refer to a VkMemoryType with a propertyFlags that has the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT bit set.

> **NOTE** The implication of this requirement is that lazily allocated memory is disallowed for buffers in all cases.

- The size member is identical for all VkBuffer objects created with the same combination of creation parameters specified in VkBufferCreateInfo and its pNext chain.
- The size member is identical for all VkImage objects created with the same combination of creation parameters specified in VkImageCreateInfo and its pNext chain.

> **NOTE** This, however, does not imply that they interpret the contents of the bound memory identically with each other. That additional guarantee, however, **can** be explicitly requested using VK_IMAGE_CREATE_ALIAS_BIT.

- If the maintenance4 feature is enabled, these additional guarantees apply:
  - For a VkBuffer, the size memory requirement is never greater than that of another VkBuffer created with a greater or equal size specified in VkBufferCreateInfo, all other creation parameters being identical.
  - For a VkBuffer, the size memory requirement is never greater than the result of aligning VkBufferCreateInfo::size with the alignment memory requirement.
  - For a VkImage, the size memory requirement is never greater than that of another VkImage created with a greater or equal value in each of extent.width, extent.height, and extent.depth; all other creation parameters being identical.
  - The memory requirements returned by vkGetDeviceBufferMemoryRequirements are identical to those that would be returned by vkGetBufferMemoryRequirements2 if it were called with a VkBuffer created with the same VkBufferCreateInfo values.
  - The memory requirements returned by vkGetDeviceImageMemoryRequirements are identical to those that would be returned by vkGetImageMemoryRequirements2 if it were called with a VkImage created with the same VkImageCreateInfo values.

To determine the memory requirements for a buffer resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetBufferMemoryRequirements2(
    VkDevice                                    device,
    const VkBufferMemoryRequirementsInfo2*      pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetBufferMemoryRequirements2
void vkGetBufferMemoryRequirements2KHR(
    VkDevice                                    device,
    const VkBufferMemoryRequirementsInfo2*      pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a VkBufferMemoryRequirementsInfo2 structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetBufferMemoryRequirements2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetBufferMemoryRequirements2-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkBufferMemoryRequirementsInfo2 structure
- VUID-vkGetBufferMemoryRequirements2-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

To determine the memory requirements for a buffer resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceBufferMemoryRequirements(
    VkDevice                                    device,
    const VkDeviceBufferMemoryRequirements*     pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceBufferMemoryRequirements
void vkGetDeviceBufferMemoryRequirementsKHR(
    VkDevice                                    device,
    const VkDeviceBufferMemoryRequirements*     pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device intended to own the buffer.
- `pInfo` is a pointer to a VkDeviceBufferMemoryRequirements structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the buffer object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceBufferMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceBufferMemoryRequirements-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDeviceBufferMemoryRequirements structure
- VUID-vkGetDeviceBufferMemoryRequirements-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

The `VkBufferMemoryRequirementsInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBufferMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkBufferMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkBufferMemoryRequirementsInfo2
typedef VkBufferMemoryRequirementsInfo2 VkBufferMemoryRequirementsInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the buffer to query.

Valid Usage (Implicit)

- VUID-VkBufferMemoryRequirementsInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_MEMORY_REQUIREMENTS_INFO_2
- VUID-VkBufferMemoryRequirementsInfo2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBufferMemoryRequirementsInfo2-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle

The `VkDeviceBufferMemoryRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceBufferMemoryRequirements {
    VkStructureType              sType;
    const void*                  pNext;
    const VkBufferCreateInfo*    pCreateInfo;
} VkDeviceBufferMemoryRequirements;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkDeviceBufferMemoryRequirements
typedef VkDeviceBufferMemoryRequirements VkDeviceBufferMemoryRequirementsKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a VkBufferCreateInfo structure containing parameters affecting creation of the buffer to query.

Valid Usage (Implicit)

- VUID-VkDeviceBufferMemoryRequirements-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS
- VUID-VkDeviceBufferMemoryRequirements-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDeviceBufferMemoryRequirements-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkBufferCreateInfo structure

To determine the memory requirements for an image resource, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageMemoryRequirements2(
    VkDevice                                    device,
    const VkImageMemoryRequirementsInfo2*       pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetImageMemoryRequirements2
void vkGetImageMemoryRequirements2KHR(
    VkDevice                                    device,
    const VkImageMemoryRequirementsInfo2*       pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `pInfo` is a pointer to a VkImageMemoryRequirementsInfo2 structure containing parameters

required for the memory requirements query.

- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageMemoryRequirements2-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkImageMemoryRequirementsInfo2 structure
- VUID-vkGetImageMemoryRequirements2-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

To determine the memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageMemoryRequirements(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceImageMemoryRequirements
void vkGetDeviceImageMemoryRequirementsKHR(
    VkDevice                                    device,
    const VkDeviceImageMemoryRequirements*      pInfo,
    VkMemoryRequirements2*                      pMemoryRequirements);
```

- `device` is the logical device intended to own the image.
- `pInfo` is a pointer to a VkDeviceImageMemoryRequirements structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a VkMemoryRequirements2 structure in which the memory requirements of the image object are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageMemoryRequirements-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDeviceImageMemoryRequirements-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkDeviceImageMemoryRequirements structure
- VUID-vkGetDeviceImageMemoryRequirements-pMemoryRequirements-parameter
  `pMemoryRequirements` **must** be a valid pointer to a VkMemoryRequirements2 structure

The VkImageMemoryRequirementsInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
} VkImageMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkImageMemoryRequirementsInfo2
typedef VkImageMemoryRequirementsInfo2 VkImageMemoryRequirementsInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- image is the image to query.

Valid Usage

- VUID-VkImageMemoryRequirementsInfo2-image-01589
  If image was created with a *multi-planar* format and the VK_IMAGE_CREATE_DISJOINT_BIT flag, there **must** be a VkImagePlaneMemoryRequirementsInfo included in the pNext chain of the VkImageMemoryRequirementsInfo2 structure
- VUID-VkImageMemoryRequirementsInfo2-image-02279
  If image was created with VK_IMAGE_CREATE_DISJOINT_BIT and with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then there **must** be a VkImagePlaneMemoryRequirementsInfo included in the pNext chain of the VkImageMemoryRequirementsInfo2 structure
- VUID-VkImageMemoryRequirementsInfo2-image-01590
  If image was not created with the VK_IMAGE_CREATE_DISJOINT_BIT flag, there **must** not be a VkImagePlaneMemoryRequirementsInfo included in the pNext chain of the VkImageMemoryRequirementsInfo2 structure
- VUID-VkImageMemoryRequirementsInfo2-image-02280
  If image was created with a single-plane format and with any tiling other than VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then there **must** not be a VkImagePlaneMemoryRequirementsInfo included in the pNext chain of the VkImageMemoryRequirementsInfo2 structure

Valid Usage (Implicit)

- VUID-VkImageMemoryRequirementsInfo2-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2

- VUID-VkImageMemoryRequirementsInfo2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkImagePlaneMemoryRequirementsInfo
- VUID-VkImageMemoryRequirementsInfo2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkImageMemoryRequirementsInfo2-image-parameter
  `image` **must** be a valid VkImage handle

The `VkDeviceImageMemoryRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDeviceImageMemoryRequirements {
    VkStructureType             sType;
    const void*                 pNext;
    const VkImageCreateInfo*    pCreateInfo;
    VkImageAspectFlagBits       planeAspect;
} VkDeviceImageMemoryRequirements;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkDeviceImageMemoryRequirements
typedef VkDeviceImageMemoryRequirements VkDeviceImageMemoryRequirementsKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a VkImageCreateInfo structure containing parameters affecting creation of the image to query.
- `planeAspect` is a VkImageAspectFlagBits value specifying the aspect corresponding to the image plane to query. This parameter is ignored unless `pCreateInfo->tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, or `pCreateInfo->flags` has VK_IMAGE_CREATE_DISJOINT_BIT set.

Valid Usage

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06416
  The `pCreateInfo->pNext` chain **must** not contain a VkImageSwapchainCreateInfoKHR structure
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-12489
  `pCreateInfo->tiling` **must** not be VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06417
  If `pCreateInfo->format` specifies a *multi-planar* format and `pCreateInfo->flags` has VK_IMAGE_CREATE_DISJOINT_BIT set then `planeAspect` **must** not be VK_IMAGE_ASPECT_NONE_KHR

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06419
  If `pCreateInfo->flags` has VK_IMAGE_CREATE_DISJOINT_BIT set and if the `pCreateInfo->tiling` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, then `planeAspect` **must** be a single valid multi-planar aspect mask bit
- VUID-VkDeviceImageMemoryRequirements-planeAspect-12399
  If `planeAspect` is not 0 and `pCreateInfo->flags` does not have VK_IMAGE_CREATE_DISJOINT_BIT set, then `planeAspect` must be a valid VkImageAspectFlagBits value

Valid Usage (Implicit)

- VUID-VkDeviceImageMemoryRequirements-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS
- VUID-VkDeviceImageMemoryRequirements-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkImageCreateInfo structure

To determine the memory requirements for a plane of a disjoint image, add a `VkImagePlaneMemoryRequirementsInfo` structure to the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure.

The `VkImagePlaneMemoryRequirementsInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImagePlaneMemoryRequirementsInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkImageAspectFlagBits    planeAspect;
} VkImagePlaneMemoryRequirementsInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkImagePlaneMemoryRequirementsInfo
typedef VkImagePlaneMemoryRequirementsInfo VkImagePlaneMemoryRequirementsInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `planeAspect` is a VkImageAspectFlagBits value specifying the aspect corresponding to the image plane to query.

Valid Usage

- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02281
  If the image's `tiling` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, then `planeAspect` **must** be a single valid multi-planar aspect mask bit
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02282
  If the image's `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then `planeAspect` **must** be a single valid *memory plane* for the image (that is, `aspectMask` **must** specify a plane index that is less than the VkDrmFormatModifierPropertiesEXT::`drmFormatModifierPlaneCount` associated with the image's `format` and VkImageDrmFormatModifierPropertiesEXT::`drmFormatModifier`)

Valid Usage (Implicit)

- VUID-VkImagePlaneMemoryRequirementsInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_PLANE_MEMORY_REQUIREMENTS_INFO
- VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-parameter
  `planeAspect` **must** be a valid VkImageAspectFlagBits value

Structure Chaining

Extends the structure

- VkImageMemoryRequirementsInfo2

The `VkMemoryRequirements2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryRequirements2 {
    VkStructureType         sType;
    void*                   pNext;
    VkMemoryRequirements    memoryRequirements;
} VkMemoryRequirements2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkMemoryRequirements2
typedef VkMemoryRequirements2 VkMemoryRequirements2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryRequirements` is a VkMemoryRequirements structure describing the memory requirements of the resource.

Valid Usage (Implicit)

- VUID-VkMemoryRequirements2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2
- VUID-VkMemoryRequirements2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkMemoryDedicatedRequirements
- VUID-VkMemoryRequirements2-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique

The `VkMemoryDedicatedRequirements` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedRequirements {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           prefersDedicatedAllocation;
    VkBool32           requiresDedicatedAllocation;
} VkMemoryDedicatedRequirements;
```

```
// Provided by VK_KHR_dedicated_allocation
// Equivalent to VkMemoryDedicatedRequirements
typedef VkMemoryDedicatedRequirements VkMemoryDedicatedRequirementsKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `prefersDedicatedAllocation` specifies that the implementation would prefer a dedicated allocation for this resource. The application is still free to suballocate the resource but it **may** get better performance if a dedicated allocation is used.
- `requiresDedicatedAllocation` specifies that a dedicated allocation is required for this resource.

To determine the dedicated allocation requirements of a buffer or image resource, add a VkMemoryDedicatedRequirements structure to the `pNext` chain of the VkMemoryRequirements2 structure passed as the `pMemoryRequirements` parameter of vkGetBufferMemoryRequirements2, vkGetDeviceBufferMemoryRequirements, vkGetDeviceImageMemoryRequirements, or vkGetImageMemoryRequirements2 respectively.

Constraints on the values returned for buffer resources are:

- `requiresDedicatedAllocation` **may** be VK_TRUE if the `pNext` chain of VkBufferCreateInfo for the call to `vkCreateBuffer` used to create the buffer being queried included a VkExternalMemoryBufferCreateInfo structure, and any of the handle types specified in VkExternalMemoryBufferCreateInfo::`handleTypes` requires dedicated allocation, as reported by vkGetPhysicalDeviceExternalBufferProperties in `VkExternalBufferProperties` ::`externalMemoryProperties.externalMemoryFeatures`. Otherwise, `requiresDedicatedAllocation` will

be VK_FALSE.

- When the implementation sets `requiresDedicatedAllocation` to VK_TRUE, it **must** also set `prefersDedicatedAllocation` to VK_TRUE.
- If VK_BUFFER_CREATE_SPARSE_BINDING_BIT was set in VkBufferCreateInfo::`flags` when `buffer` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be VK_FALSE.

Constraints on the values returned for image resources are:

- `requiresDedicatedAllocation` **may** be VK_TRUE if the `pNext` chain of VkImageCreateInfo for the call to vkCreateImage used to create the image being queried included a VkExternalMemoryImageCreateInfo structure, and any of the handle types specified in VkExternalMemoryImageCreateInfo::`handleTypes` requires dedicated allocation, as reported by vkGetPhysicalDeviceImageFormatProperties2 in `VkExternalImageFormatProperties` ::`externalMemoryProperties.externalMemoryFeatures`.
- `requiresDedicatedAllocation` **may** be VK_TRUE if the image's tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT.
- `requiresDedicatedAllocation` will otherwise be VK_FALSE
- If VK_IMAGE_CREATE_SPARSE_BINDING_BIT was set in VkImageCreateInfo::`flags` when `image` was created, then both `prefersDedicatedAllocation` and `requiresDedicatedAllocation` will be VK_FALSE.

Valid Usage (Implicit)

- VUID-VkMemoryDedicatedRequirements-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS

Structure Chaining

Extends the structure

- VkMemoryRequirements2

To attach memory to a buffer object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindBufferMemory(
    VkDevice                                    device,
    VkBuffer                                    buffer,
    VkDeviceMemory                              memory,
    VkDeviceSize                                memoryOffset);
```

- `device` is the logical device that owns the buffer and memory.
- `buffer` is the buffer to be attached to memory.

- `memory` is a VkDeviceMemory object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the buffer. The number of bytes returned in the `VkMemoryRequirements`::`size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified buffer.

`vkBindBufferMemory` is equivalent to passing the same parameters through VkBindBufferMemoryInfo to vkBindBufferMemory2.

Valid Usage

- VUID-vkBindBufferMemory-buffer-07459
  `buffer` **must** not have been bound to a memory object
- VUID-vkBindBufferMemory-buffer-01030
  `buffer` **must** not have been created with any sparse memory binding flags
- VUID-vkBindBufferMemory-memoryOffset-01031
  `memoryOffset` **must** be less than the size of `memory`
- VUID-vkBindBufferMemory-memory-01035
  `memory` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-vkBindBufferMemory-None-10739
  `memoryOffset` **must** be an integer multiple of the `alignment` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer`
- VUID-vkBindBufferMemory-None-10741
  `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-vkBindBufferMemory-buffer-01444
  If `buffer` requires a dedicated allocation (as reported by vkGetBufferMemoryRequirements2 in VkMemoryDedicatedRequirements::`requiresDedicatedAllocation` for `buffer`), `memory` **must** have been allocated with VkMemoryDedicatedAllocateInfo::`buffer` equal to `buffer`
- VUID-vkBindBufferMemory-memory-01508
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, and VkMemoryDedicatedAllocateInfo::`buffer` was not VK_NULL_HANDLE, then `buffer` **must** equal VkMemoryDedicatedAllocateInfo::`buffer`, and `memoryOffset` **must** be zero
- VUID-vkBindBufferMemory-memory-10925
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, VkMemoryDedicatedAllocateInfo::`image` **must** have been VK_NULL_HANDLE
- VUID-vkBindBufferMemory-None-01898
  If `buffer` was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit set, the buffer

must be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT

- VUID-vkBindBufferMemory-None-01899
  If `buffer` was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-vkBindBufferMemory-memory-02726
  If the value of VkExportMemoryAllocateInfo::`handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in VkExternalMemoryBufferCreateInfo ::`handleTypes` when `buffer` was created
- VUID-vkBindBufferMemory-memory-02985
  If `memory` was allocated by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryBufferCreateInfo ::`handleTypes` when `buffer` was created
- VUID-vkBindBufferMemory-bufferDeviceAddress-03339
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::`bufferDeviceAddress` feature is enabled and `buffer` was created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-vkBindBufferMemory-bufferDeviceAddressCaptureReplay-09200
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::`bufferDeviceAddressCaptureReplay` feature is enabled and `buffer` was created with the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set
- VUID-vkBindBufferMemory-descriptorBufferCaptureReplay-08112
  If the `buffer` was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-vkBindBufferMemory-buffer-09201
  If the `buffer` was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set
- VUID-vkBindBufferMemory-buffer-11408
  If the `buffer` was created with the VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT or VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set

Valid Usage (Implicit)

- VUID-vkBindBufferMemory-device-parameter

`device` **must** be a valid VkDevice handle

- VUID-vkBindBufferMemory-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle
- VUID-vkBindBufferMemory-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkBindBufferMemory-buffer-parent
  `buffer` **must** have been created, allocated, or retrieved from `device`
- VUID-vkBindBufferMemory-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `buffer` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To attach memory to buffer objects for one or more buffers at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindBufferMemory2(
    VkDevice                                    device,
    uint32_t                                    bindInfoCount,
    const VkBindBufferMemoryInfo*               pBindInfos);
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to vkBindBufferMemory2
VkResult vkBindBufferMemory2KHR(
    VkDevice                                    device,
    uint32_t                                    bindInfoCount,
    const VkBindBufferMemoryInfo*               pBindInfos);
```

- `device` is the logical device that owns the buffers and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of `bindInfoCount` VkBindBufferMemoryInfo structures describing buffers and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the `maintenance6` feature is enabled, this command **must** attempt to perform all of the memory binding operations described by `pBindInfos`, and **must** not early exit on the first failure.

If any of the memory binding operations described by `pBindInfos` fail, the VkResult returned by this command **must** be the return value of any one of the memory binding operations which did not return VK_SUCCESS.

NOTE

If the `vkBindBufferMemory2` command failed, VkBindMemoryStatus structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the buffers referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these buffers.

Valid Usage (Implicit)

- VUID-vkBindBufferMemory2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkBindBufferMemory2-pBindInfos-parameter
  `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid VkBindBufferMemoryInfo structures
- VUID-vkBindBufferMemory2-bindInfoCount-arraylength
  `bindInfoCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

VkBindBufferMemoryInfo contains members corresponding to the parameters of vkBindBufferMemory.

The VkBindBufferMemoryInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
    VkDeviceMemory     memory;
    VkDeviceSize       memoryOffset;
} VkBindBufferMemoryInfo;
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to VkBindBufferMemoryInfo
typedef VkBindBufferMemoryInfo VkBindBufferMemoryInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- buffer is the buffer to be attached to memory.
- memory is a VkDeviceMemory object describing the device memory to attach.
- memoryOffset is the start offset of the region of memory which is to be bound to the buffer. The number of bytes returned in the VkMemoryRequirements::size member in memory, starting from memoryOffset bytes, will be bound to the specified buffer.

Valid Usage

- VUID-VkBindBufferMemoryInfo-buffer-07459
  buffer **must** not have been bound to a memory object
- VUID-VkBindBufferMemoryInfo-buffer-01030
  buffer **must** not have been created with any sparse memory binding flags
- VUID-VkBindBufferMemoryInfo-memoryOffset-01031
  memoryOffset **must** be less than the size of memory
- VUID-VkBindBufferMemoryInfo-memory-01035
  memory **must** have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer
- VUID-VkBindBufferMemoryInfo-None-10739
  memoryOffset **must** be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer
- VUID-VkBindBufferMemoryInfo-None-10741

`size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with `buffer` **must** be less than or equal to the size of `memory` minus `memoryOffset`

- VUID-VkBindBufferMemoryInfo-buffer-01444
  If `buffer` requires a dedicated allocation (as reported by vkGetBufferMemoryRequirements2 in VkMemoryDedicatedRequirements ::`requiresDedicatedAllocation` for `buffer`), `memory` **must** have been allocated with VkMemoryDedicatedAllocateInfo::`buffer` equal to `buffer`
- VUID-VkBindBufferMemoryInfo-memory-01508
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, and VkMemoryDedicatedAllocateInfo::`buffer` was not VK_NULL_HANDLE, then `buffer` **must** equal VkMemoryDedicatedAllocateInfo::`buffer`, and `memoryOffset` **must** be zero
- VUID-VkBindBufferMemoryInfo-memory-10925
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, VkMemoryDedicatedAllocateInfo::`image` **must** have been VK_NULL_HANDLE
- VUID-VkBindBufferMemoryInfo-None-01898
  If `buffer` was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit set, the buffer **must** be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindBufferMemoryInfo-None-01899
  If `buffer` was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit not set, the buffer **must** not be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindBufferMemoryInfo-memory-02726
  If the value of VkExportMemoryAllocateInfo::`handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in VkExternalMemoryBufferCreateInfo ::`handleTypes` when `buffer` was created
- VUID-VkBindBufferMemoryInfo-memory-02985
  If `memory` was allocated by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryBufferCreateInfo ::`handleTypes` when `buffer` was created
- VUID-VkBindBufferMemoryInfo-bufferDeviceAddress-03339
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::`bufferDeviceAddress` feature is enabled and `buffer` was created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-VkBindBufferMemoryInfo-bufferDeviceAddressCaptureReplay-09200
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::`bufferDeviceAddressCaptureReplay` feature is enabled and `buffer` was created with the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set

- VUID-VkBindBufferMemoryInfo-descriptorBufferCaptureReplay-08112
  If the `buffer` was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-VkBindBufferMemoryInfo-buffer-09201
  If the `buffer` was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set
- VUID-VkBindBufferMemoryInfo-buffer-11408
  If the `buffer` was created with the VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT or VK_BUFFER_USAGE_2_DESCRIPTOR_HEAP_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-VkBindBufferMemoryInfo-pNext-01605
  If the `pNext` chain includes a VkBindBufferMemoryDeviceGroupInfo structure, all instances of `memory` specified by VkBindBufferMemoryDeviceGroupInfo::`pDeviceIndices` **must** have been allocated

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_INFO
- VUID-VkBindBufferMemoryInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkBindBufferMemoryDeviceGroupInfo or VkBindMemoryStatus
- VUID-VkBindBufferMemoryInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBindBufferMemoryInfo-buffer-parameter
  `buffer` **must** be a valid VkBuffer handle
- VUID-VkBindBufferMemoryInfo-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-VkBindBufferMemoryInfo-commonparent
  Both of `buffer`, and `memory` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `buffer` **must** be externally synchronized

The `VkBindBufferMemoryDeviceGroupInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*    pDeviceIndices;
} VkBindBufferMemoryDeviceGroupInfo;
```

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
// Equivalent to VkBindBufferMemoryDeviceGroupInfo
typedef VkBindBufferMemoryDeviceGroupInfo VkBindBufferMemoryDeviceGroupInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

If the `pNext` chain of VkBindBufferMemoryInfo includes a `VkBindBufferMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to buffers across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index i the buffer is attached to the instance of `memory` on the physical device with device index `pDeviceIndices`[i].

If `deviceIndexCount` is zero and `memory` comes from a memory heap with the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of `memory`.

If `deviceIndexCount` is zero and `memory` comes from a memory heap without the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindBufferMemoryDeviceGroupInfo-deviceIndexCount-01606
  `deviceIndexCount` **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-01607
  All elements of `pDeviceIndices` **must** be valid device indices

Valid Usage (Implicit)

- VUID-VkBindBufferMemoryDeviceGroupInfo-sType-sType

sType **must** be VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_DEVICE_GROUP_INFO

- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-parameter
  If deviceIndexCount is not 0, pDeviceIndices **must** be a valid pointer to an array of deviceIndexCount uint32_t values

Structure Chaining

Extends the structure

- VkBindBufferMemoryInfo

The VkBindMemoryStatus structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBindMemoryStatus {
    VkStructureType    sType;
    const void*        pNext;
    VkResult*          pResult;
} VkBindMemoryStatus;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkBindMemoryStatus
typedef VkBindMemoryStatus VkBindMemoryStatusKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pResult is a pointer to a VkResult value.

If the pNext chain of VkBindBufferMemoryInfo or VkBindImageMemoryInfo includes a VkBindMemoryStatus structure, then the VkBindMemoryStatus::pResult will be populated with a value describing the result of the corresponding memory binding operation.

Valid Usage (Implicit)

- VUID-VkBindMemoryStatus-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_MEMORY_STATUS
- VUID-VkBindMemoryStatus-pResult-parameter
  pResult **must** be a valid pointer to a VkResult value

Structure Chaining

Extends the structures

- VkBindBufferMemoryInfo
- VkBindImageMemoryInfo

To attach memory to a VkImage object created without the VK_IMAGE_CREATE_DISJOINT_BIT set, call:

```
// Provided by VK_VERSION_1_0
VkResult vkBindImageMemory(
    VkDevice                                    device,
    VkImage                                     image,
    VkDeviceMemory                              memory,
    VkDeviceSize                                memoryOffset);
```

- device is the logical device that owns the image and memory.
- image is the image.
- memory is the VkDeviceMemory object describing the device memory to attach.
- memoryOffset is the start offset of the region of memory which is to be bound to the image. The number of bytes returned in the VkMemoryRequirements::size member in memory, starting from memoryOffset bytes, will be bound to the specified image.

vkBindImageMemory is equivalent to passing the same parameters through VkBindImageMemoryInfo to vkBindImageMemory2.

Valid Usage

- VUID-vkBindImageMemory-image-07460
  image **must** not have been bound to a memory object
- VUID-vkBindImageMemory-image-01045
  image **must** not have been created with any sparse memory binding flags
- VUID-vkBindImageMemory-memoryOffset-01046
  memoryOffset **must** be less than the size of memory
- VUID-vkBindImageMemory-image-01445
  If image requires a dedicated allocation (as reported by vkGetImageMemoryRequirements2 in VkMemoryDedicatedRequirements::requiresDedicatedAllocation for image), memory **must** have been created with VkMemoryDedicatedAllocateInfo::image equal to image
- VUID-vkBindImageMemory-memory-02628
  If the VkMemoryAllocateInfo provided when memory was allocated included a VkMemoryDedicatedAllocateInfo structure in its pNext chain, and VkMemoryDedicatedAllocateInfo::image was not VK_NULL_HANDLE, then image **must**

equal VkMemoryDedicatedAllocateInfo::image and memoryOffset **must** be zero

- VUID-vkBindImageMemory-memory-10926
  If the VkMemoryAllocateInfo provided when memory was allocated included a VkMemoryDedicatedAllocateInfo structure in its pNext chain, VkMemoryDedicatedAllocateInfo::buffer **must** have been VK_NULL_HANDLE
- VUID-vkBindImageMemory-None-01901
  If image was created with the VK_IMAGE_CREATE_PROTECTED_BIT bit set, the image **must** be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-vkBindImageMemory-None-01902
  If image was created with the VK_IMAGE_CREATE_PROTECTED_BIT bit not set, the image **must** not be bound to a memory object created with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-vkBindImageMemory-memory-02728
  If the value of VkExportMemoryAllocateInfo::handleTypes used to allocate memory is not 0, it **must** include at least one of the handles set in VkExternalMemoryImageCreateInfo ::handleTypes when image was created
- VUID-vkBindImageMemory-memory-02989
  If memory was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryImageCreateInfo ::handleTypes when image was created
- VUID-vkBindImageMemory-image-08113
  If the image was created with the VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT bit set, memory **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-vkBindImageMemory-image-09202
  If the image was created with the VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT bit set, memory **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set
- VUID-vkBindImageMemory-image-01608
  image **must** not have been created with the VK_IMAGE_CREATE_DISJOINT_BIT set
- VUID-vkBindImageMemory-memory-01047
  memory **must** have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with image
- VUID-vkBindImageMemory-None-10735
  memoryOffset **must** be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with image
- VUID-vkBindImageMemory-None-10737
  size member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with image **must** be less than or equal to the size of memory

minus `memoryOffset`

Valid Usage (Implicit)

- VUID-vkBindImageMemory-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkBindImageMemory-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkBindImageMemory-memory-parameter
  `memory` **must** be a valid VkDeviceMemory handle
- VUID-vkBindImageMemory-image-parent
  `image` **must** have been created, allocated, or retrieved from `device`
- VUID-vkBindImageMemory-memory-parent
  `memory` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `image` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To attach memory to image objects for one or more images at a time, call:

```
// Provided by VK_VERSION_1_1
VkResult vkBindImageMemory2(
    VkDevice                                    device,
    uint32_t                                    bindInfoCount,
    const VkBindImageMemoryInfo*                pBindInfos);
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to vkBindImageMemory2
VkResult vkBindImageMemory2KHR(
    VkDevice                                    device,
    uint32_t                                    bindInfoCount,
    const VkBindImageMemoryInfo*                pBindInfos);
```

- `device` is the logical device that owns the images and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of VkBindImageMemoryInfo structures, describing images and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the `maintenance6` feature is enabled, this command **must** attempt to perform all of the memory binding operations described by `pBindInfos`, and **must** not early exit on the first failure.

If any of the memory binding operations described by `pBindInfos` fail, the VkResult returned by this command **must** be the return value of any one of the memory binding operations which did not return VK_SUCCESS.

NOTE

If the `vkBindImageMemory2` command failed, VkBindMemoryStatus structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the images referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these images.

Valid Usage

- VUID-vkBindImageMemory2-pBindInfos-02858
  If any VkBindImageMemoryInfo::`image` was created with VK_IMAGE_CREATE_DISJOINT_BIT then all planes of VkBindImageMemoryInfo::`image` **must** be bound individually in separate `pBindInfos`
- VUID-vkBindImageMemory2-pBindInfos-04006
  `pBindInfos` **must** not refer to the same image subresource more than once

Valid Usage (Implicit)

- VUID-vkBindImageMemory2-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkBindImageMemory2-pBindInfos-parameter
  `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid VkBindImageMemoryInfo structures

- VUID-vkBindImageMemory2-bindInfoCount-arraylength
  `bindInfoCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

`VkBindImageMemoryInfo` contains members corresponding to the parameters of vkBindImageMemory.

The `VkBindImageMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
    VkDeviceMemory     memory;
    VkDeviceSize       memoryOffset;
} VkBindImageMemoryInfo;
```

```
// Provided by VK_KHR_bind_memory2
// Equivalent to VkBindImageMemoryInfo
typedef VkBindImageMemoryInfo VkBindImageMemoryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to be attached to memory.
- `memory` is a VkDeviceMemory object describing the device memory to attach.
- `memoryOffset` is the start offset of the region of `memory` which is to be bound to the image. The number of bytes returned in the `VkMemoryRequirements`::`size` member in `memory`, starting from `memoryOffset` bytes, will be bound to the specified image.

Valid Usage

- VUID-VkBindImageMemoryInfo-image-07460
  `image` **must** not have been bound to a memory object
- VUID-VkBindImageMemoryInfo-image-01045
  `image` **must** not have been created with any sparse memory binding flags
- VUID-VkBindImageMemoryInfo-memoryOffset-01046
  `memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindImageMemoryInfo-image-01445
  If `image` requires a dedicated allocation (as reported by vkGetImageMemoryRequirements2 in VkMemoryDedicatedRequirements::`requiresDedicatedAllocation` for `image`), `memory` **must** have been created with VkMemoryDedicatedAllocateInfo::`image` equal to `image`
- VUID-VkBindImageMemoryInfo-memory-02628
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, and VkMemoryDedicatedAllocateInfo::`image` was not VK_NULL_HANDLE, then `image` **must** equal VkMemoryDedicatedAllocateInfo::`image` and `memoryOffset` **must** be zero
- VUID-VkBindImageMemoryInfo-memory-10926
  If the `VkMemoryAllocateInfo` provided when `memory` was allocated included a VkMemoryDedicatedAllocateInfo structure in its `pNext` chain, VkMemoryDedicatedAllocateInfo::`buffer` **must** have been VK_NULL_HANDLE
- VUID-VkBindImageMemoryInfo-None-01901
  If image was created with the VK_IMAGE_CREATE_PROTECTED_BIT bit set, the image **must** be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindImageMemoryInfo-None-01902
  If image was created with the VK_IMAGE_CREATE_PROTECTED_BIT bit not set, the image **must** not be bound to a memory object created with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT
- VUID-VkBindImageMemoryInfo-memory-02728
  If the value of VkExportMemoryAllocateInfo::`handleTypes` used to allocate `memory` is not `0`, it **must** include at least one of the handles set in VkExternalMemoryImageCreateInfo::`handleTypes` when `image` was created
- VUID-VkBindImageMemoryInfo-memory-02989
  If `memory` was created by a memory import operation, the external handle type of the imported memory **must** also have been set in VkExternalMemoryImageCreateInfo::`handleTypes` when `image` was created
- VUID-VkBindImageMemoryInfo-image-08113
  If the `image` was created with the VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT bit set, `memory` **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set
- VUID-VkBindImageMemoryInfo-image-09202

If the image was created with the VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT bit set, memory **must** have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set

- VUID-VkBindImageMemoryInfo-pNext-01615
  If the pNext chain does not include a VkBindImagePlaneMemoryInfo structure, then memory **must** have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image
- VUID-VkBindImageMemoryInfo-pNext-01616
  If the pNext chain does not include a VkBindImagePlaneMemoryInfo structure, then memoryOffset **must** be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image
- VUID-VkBindImageMemoryInfo-pNext-01617
  If the pNext chain does not include a VkBindImagePlaneMemoryInfo structure, then the difference of the size of memory and memoryOffset **must** be greater than or equal to the size member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with the same image
- VUID-VkBindImageMemoryInfo-pNext-01618
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, image **must** have been created with the VK_IMAGE_CREATE_DISJOINT_BIT bit set
- VUID-VkBindImageMemoryInfo-image-07736
  If image was created with the VK_IMAGE_CREATE_DISJOINT_BIT bit set, then the pNext chain **must** include a VkBindImagePlaneMemoryInfo structure
- VUID-VkBindImageMemoryInfo-pNext-01619
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, memory **must** have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image and where VkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain
- VUID-VkBindImageMemoryInfo-pNext-01620
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, memoryOffset **must** be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image and where VkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain
- VUID-VkBindImageMemoryInfo-pNext-01621
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, the difference of the size of memory and memoryOffset **must** be greater than or equal to the size member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with the same image and where

VkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain

- VUID-VkBindImageMemoryInfo-pNext-01626
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, all instances of memory specified by VkBindImageMemoryDeviceGroupInfo::pDeviceIndices **must** have been allocated
- VUID-VkBindImageMemoryInfo-pNext-01627
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, and VkBindImageMemoryDeviceGroupInfo::splitInstanceBindRegionCount is not zero, then image **must** have been created with the VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT bit set
- VUID-VkBindImageMemoryInfo-pNext-01628
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, all elements of VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions **must** be valid rectangles contained within the dimensions of image
- VUID-VkBindImageMemoryInfo-pNext-01629
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, the union of the areas of all elements of VkBindImageMemoryDeviceGroupInfo ::pSplitInstanceBindRegions that correspond to the same instance of image **must** cover the entire image
- VUID-VkBindImageMemoryInfo-image-01630
  If image was created with a valid swapchain handle in VkImageSwapchainCreateInfoKHR::swapchain, then the pNext chain **must** include a VkBindImageMemorySwapchainInfoKHR structure containing the same swapchain handle
- VUID-VkBindImageMemoryInfo-pNext-01631
  If the pNext chain includes a VkBindImageMemorySwapchainInfoKHR structure, memory **must** be VK_NULL_HANDLE
- VUID-VkBindImageMemoryInfo-pNext-01632
  If the pNext chain does not include a VkBindImageMemorySwapchainInfoKHR structure, memory **must** be a valid VkDeviceMemory handle

Valid Usage (Implicit)

- VUID-VkBindImageMemoryInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_INFO
- VUID-VkBindImageMemoryInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkBindImageMemoryDeviceGroupInfo, VkBindImageMemorySwapchainInfoKHR, VkBindImagePlaneMemoryInfo, or VkBindMemoryStatus
- VUID-VkBindImageMemoryInfo-sType-unique

The sType value of each structure in the pNext chain **must** be unique

- VUID-VkBindImageMemoryInfo-image-parameter
  image **must** be a valid VkImage handle
- VUID-VkBindImageMemoryInfo-commonparent
  Both of image, and memory that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to image **must** be externally synchronized

The VkBindImageMemoryDeviceGroupInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryDeviceGroupInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           deviceIndexCount;
    const uint32_t*    pDeviceIndices;
    uint32_t           splitInstanceBindRegionCount;
    const VkRect2D*    pSplitInstanceBindRegions;
} VkBindImageMemoryDeviceGroupInfo;
```

```
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
// Equivalent to VkBindImageMemoryDeviceGroupInfo
typedef VkBindImageMemoryDeviceGroupInfo VkBindImageMemoryDeviceGroupInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceIndexCount is the number of elements in pDeviceIndices.
- pDeviceIndices is a pointer to an array of device indices.
- splitInstanceBindRegionCount is the number of elements in pSplitInstanceBindRegions.
- pSplitInstanceBindRegions is a pointer to an array of VkRect2D structures describing which regions of the image are attached to each instance of memory.

If the pNext chain of VkBindImageMemoryInfo includes a VkBindImageMemoryDeviceGroupInfo structure, then that structure determines how memory is bound to images across multiple devices in a device group.

If deviceIndexCount is greater than zero, then on device index i image is attached to the instance of the memory on the physical device with device index pDeviceIndices[i].

Let N be the number of physical devices in the logical device. If splitInstanceBindRegionCount is

greater than zero, then pSplitInstanceBindRegions is a pointer to an array of N^2 rectangles, where the image region specified by the rectangle at element i*N+j in resource instance i is bound to the memory instance j. The blocks of the memory that are bound to each sparse image block region use an offset in memory, relative to memoryOffset, computed as if the whole image was being bound to a contiguous range of memory. In other words, horizontally adjacent image blocks use consecutive blocks of memory, vertically adjacent image blocks are separated by the number of bytes per block multiplied by the width in blocks of image, and the block at (0,0) corresponds to memory starting at memoryOffset.

If splitInstanceBindRegionCount and deviceIndexCount are zero and the memory comes from a memory heap with the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if pDeviceIndices contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of the memory.

If splitInstanceBindRegionCount and deviceIndexCount are zero and the memory comes from a memory heap without the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if pDeviceIndices contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01633
  At least one of deviceIndexCount and splitInstanceBindRegionCount **must** be zero
- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01634
  deviceIndexCount **must** either be zero or equal to the number of physical devices in the logical device
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-01635
  All elements of pDeviceIndices **must** be valid device indices
- VUID-VkBindImageMemoryDeviceGroupInfo-splitInstanceBindRegionCount-01636
  splitInstanceBindRegionCount **must** either be zero or equal to the number of physical devices in the logical device squared
- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-01637
  Elements of pSplitInstanceBindRegions that correspond to the same instance of an image **must** not overlap
- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01638
  The offset.x member of any element of pSplitInstanceBindRegions **must** be a multiple of the sparse image block width (VkSparseImageFormatProperties::imageGranularity.width) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01639
  The offset.y member of any element of pSplitInstanceBindRegions **must** be a multiple of the sparse image block height (VkSparseImageFormatProperties::imageGranularity.height) of all non-metadata aspects of the image
- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01640
  The extent.width member of any element of pSplitInstanceBindRegions **must** either be a

multiple of the sparse image block width of all non-metadata aspects of the image, or else `extent.width` + `offset.x` **must** equal the width of the image subresource

- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01641
  The `extent.height` member of any element of `pSplitInstanceBindRegions` **must** either be a multiple of the sparse image block height of all non-metadata aspects of the image, or else `extent.height` + `offset.y` **must** equal the height of the image subresource

Valid Usage (Implicit)

- VUID-VkBindImageMemoryDeviceGroupInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_DEVICE_GROUP_INFO
- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-parameter
  If `deviceIndexCount` is not `0`, `pDeviceIndices` **must** be a valid pointer to an array of `deviceIndexCount` `uint32_t` values
- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-parameter
  If `splitInstanceBindRegionCount` is not `0`, `pSplitInstanceBindRegions` **must** be a valid pointer to an array of `splitInstanceBindRegionCount` VkRect2D structures

Structure Chaining

Extends the structure

- VkBindImageMemoryInfo

If the `pNext` chain of VkBindImageMemoryInfo includes a `VkBindImageMemorySwapchainInfoKHR` structure, then that structure includes a swapchain handle and image index indicating that the image will be bound to memory from that swapchain.

The `VkBindImageMemorySwapchainInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkBindImageMemorySwapchainInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndex;
} VkBindImageMemorySwapchainInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is VK_NULL_HANDLE or a swapchain handle.
- `imageIndex` is an image index within `swapchain`.

If swapchain is not NULL, the swapchain and imageIndex are used to determine the memory that the image is bound to, instead of memory and memoryOffset.

Memory **can** be bound to a swapchain and use the pDeviceIndices or pSplitInstanceBindRegions members of VkBindImageMemoryDeviceGroupInfo.

Valid Usage

- VUID-VkBindImageMemorySwapchainInfoKHR-imageIndex-01644
  imageIndex **must** be less than the number of images in swapchain
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-07756
  If the swapchain has been created with VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR, imageIndex **must** be one that has previously been returned by vkAcquireNextImageKHR or vkAcquireNextImage2KHR

Valid Usage (Implicit)

- VUID-VkBindImageMemorySwapchainInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR
- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-parameter
  swapchain **must** be a valid VkSwapchainKHR handle

Host Synchronization

- Host access to swapchain **must** be externally synchronized

Structure Chaining

Extends the structure

- VkBindImageMemoryInfo

In order to bind *planes* of a *disjoint image*, add a VkBindImagePlaneMemoryInfo structure to the pNext chain of VkBindImageMemoryInfo.

The VkBindImagePlaneMemoryInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkBindImagePlaneMemoryInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkImageAspectFlagBits    planeAspect;
} VkBindImagePlaneMemoryInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkBindImagePlaneMemoryInfo
typedef VkBindImagePlaneMemoryInfo VkBindImagePlaneMemoryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `planeAspect` is a VkImageAspectFlagBits value specifying the aspect of the disjoint image plane to bind.

Valid Usage

- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02283
  If the image's `tiling` is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, then `planeAspect` **must** be a single valid multi-planar aspect mask bit
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-02284
  If the image's `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then `planeAspect` **must** be a single valid *memory plane* for the image (that is, `aspectMask` **must** specify a plane index that is less than the VkDrmFormatModifierPropertiesEXT::`drmFormatModifierPlaneCount` associated with the image's `format` and VkImageDrmFormatModifierPropertiesEXT::`drmFormatModifier`)

Valid Usage (Implicit)

- VUID-VkBindImagePlaneMemoryInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_IMAGE_PLANE_MEMORY_INFO
- VUID-VkBindImagePlaneMemoryInfo-planeAspect-parameter
  `planeAspect` **must** be a valid VkImageAspectFlagBits value

Structure Chaining

Extends the structure

- VkBindImageMemoryInfo

12.9.1. Buffer-Image Granularity

The implementation-dependent limit `bufferImageGranularity` specifies a page-like granularity at which linear and non-linear resources **must** be placed in adjacent memory locations to avoid aliasing. Two resources which do not satisfy this granularity requirement are said to alias. `bufferImageGranularity` is specified in bytes, and **must** be a power of two. Implementations which do not impose a granularity restriction **may** report a `bufferImageGranularity` value of one.

> **NOTE** Despite its name, `bufferImageGranularity` is really a granularity between "linear" and "non-linear" resources.

Given resourceA at the lower memory offset and resourceB at the higher memory offset in the same `VkDeviceMemory` object, where one resource is linear and the other is non-linear (as defined in the Glossary), and the following:

```
resourceA.end       = resourceA.memoryOffset + resourceA.size - 1
resourceA.endPage   = resourceA.end & ~(bufferImageGranularity-1)
resourceB.start     = resourceB.memoryOffset
resourceB.startPage = resourceB.start & ~(bufferImageGranularity-1)
```

The following property **must** hold:

```
resourceA.endPage < resourceB.startPage
```

That is, the end of the first resource (A) and the beginning of the second resource (B) **must** be on separate "pages" of size `bufferImageGranularity`. `bufferImageGranularity` **may** be different than the physical page size of the memory heap. This restriction is only needed when a linear resource and a non-linear resource are adjacent in memory and will be used simultaneously. The memory ranges of adjacent resources **can** be closer than `bufferImageGranularity`, provided they meet the `alignment` requirement for the objects in question.

Sparse block size in bytes and sparse image and buffer memory alignments **must** all be multiples of the `bufferImageGranularity`. Therefore, memory bound to sparse resources naturally satisfies the `bufferImageGranularity`.

12.10. Resource Sharing Mode

Buffer and image objects are created with a *sharing mode* controlling how they **can** be accessed from queues. The supported sharing modes are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSharingMode {
    VK_SHARING_MODE_EXCLUSIVE = 0,
    VK_SHARING_MODE_CONCURRENT = 1,
} VkSharingMode;
```

- VK_SHARING_MODE_EXCLUSIVE specifies that access to any range or image subresource of the object will be exclusive to a single queue family at a time.
- VK_SHARING_MODE_CONCURRENT specifies that concurrent access to any range or image subresource of the object from multiple queue families is supported.

NOTE	VK_SHARING_MODE_CONCURRENT **may** result in lower performance access to the buffer or image than VK_SHARING_MODE_EXCLUSIVE.

Ranges of buffers and image subresources of image objects created using VK_SHARING_MODE_EXCLUSIVE **must** only be accessed by queues in the queue family that has *ownership* of the resource. Upon creation, such resources are not owned by any queue family; ownership is implicitly acquired upon first use within a queue. Once a resource using VK_SHARING_MODE_EXCLUSIVE is owned by some queue family, unless the `maintenance9` feature is enabled, the application **must** perform a queue family ownership transfer if it wishes to make the memory contents of a range or image subresource accessible to a different queue family. VK_SHARING_MODE_EXCLUSIVE resources that are already owned by a queue family **may** be acquired by a different queue family without a queue family ownership transfer, but unless the `maintenance9` feature is enabled, their contents become undefined.

If the `maintenance9` feature is enabled, the contents of buffer resources, and of linear image resources (i.e., those created with `tiling` set to VK_IMAGE_TILING_LINEAR) are always preserved when they are implicitly acquired by a different queue family on the same logical device (i.e., neither queue family is VK_QUEUE_FAMILY_FOREIGN_EXT or VK_QUEUE_FAMILY_EXTERNAL). This means that whenever the `maintenance9` feature is enabled, explicit queue family ownership transfers of buffer and linear image resources between different queue families on the same logical device are **optional**.

Additionally, if the `maintenance9` feature is enabled, the contents of some optimal image resources (i.e., those created with VK_IMAGE_TILING_OPTIMAL) are always preserved when they are implicitly acquired by a different queue family on the same logical device (i.e., neither queue family is VK_QUEUE_FAMILY_FOREIGN_EXT or VK_QUEUE_FAMILY_EXTERNAL). This applies only to optimal images that are being implicitly acquired by a queue family whose index bit is set in the current queue family's VkQueueFamilyOwnershipTransferPropertiesKHR ::`optimalImageTransferToQueueFamilies`, and that were created without any of the following bits set in `usage`:

- VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT
- VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT
- VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT
- VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT
- VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT
- VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

This means that whenever the `maintenance9` feature is enabled, explicit queue family ownership transfers of such image resources between such combinations of queue families are **optional**. For all other optimal images and/or combinations of queue families, the application **must** still perform

an explicit queue family ownership transfer if it wishes to make the memory contents of an optimal image subresource already owned by a queue family accessible to a different queue family.

NOTE Applications are allowed to perform explicit queue family ownership transfers in circumstances where they are not required, but there is no functional nor performance advantage in doing so. Performing explicit transfers in such cases remains supported for backward compatibility and is not recommended for new applications.

NOTE Before being used on the first queue, images still require a layout transition from these layouts:

- VK_IMAGE_LAYOUT_UNDEFINED
- VK_IMAGE_LAYOUT_PREINITIALIZED
- VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT

A queue family **can** take ownership of an image subresource or buffer range of a resource created with VK_SHARING_MODE_EXCLUSIVE, without an ownership transfer, in the same way as for a resource that was just created; however, taking ownership in this way has the effect that the contents of the image subresource or buffer range are undefined.

Ranges of buffers and image subresources of image objects created using VK_SHARING_MODE_CONCURRENT **must** only be accessed by queues from the queue families specified through the `queueFamilyIndexCount` and `pQueueFamilyIndices` members of the corresponding create info structures.

12.10.1. External Resource Sharing

Resources **should** only be accessed in the Vulkan instance that has exclusive ownership of their underlying memory. Only one Vulkan instance has exclusive ownership of a resource's underlying memory at a given time, regardless of whether the resource was created using VK_SHARING_MODE_EXCLUSIVE or VK_SHARING_MODE_CONCURRENT. Applications can transfer ownership of a resource's underlying memory only if the memory has been imported from or exported to another instance or external API using external memory handles. The semantics for transferring ownership outside of the instance are similar to those used for transferring ownership of VK_SHARING_MODE_EXCLUSIVE resources between queues, and is also accomplished using VkBufferMemoryBarrier or VkImageMemoryBarrier operations. To make the contents of the underlying memory accessible in the destination instance or API, applications **must**

1. Release exclusive ownership from the source instance or API.
2. Ensure the release operation has completed using semaphores or fences.
3. Acquire exclusive ownership in the destination instance or API

Unlike queue family ownership transfers, the destination instance or API is not specified explicitly when releasing ownership, nor is the source instance or API specified when acquiring ownership. Instead, the image or memory barrier's `dstQueueFamilyIndex` or `srcQueueFamilyIndex` parameters are set to the reserved queue family index VK_QUEUE_FAMILY_EXTERNAL or

VK_QUEUE_FAMILY_FOREIGN_EXT to represent the external destination or source respectively.

Binding a resource to a memory object shared between multiple Vulkan instances or other APIs does not change the ownership of the underlying memory. The first entity to access the resource implicitly acquires ownership. An entity **can** also implicitly take ownership from another entity in the same way without an explicit ownership transfer. However, taking ownership in this way has the effect that the contents of the underlying memory are undefined.

Accessing a resource backed by memory that is owned by a particular instance or API has the same semantics as accessing a VK_SHARING_MODE_EXCLUSIVE resource, with one exception: Implementations **must** ensure layout transitions performed on one member of a set of identical subresources of identical images that alias the same range of an underlying memory object affect the layout of all the subresources in the set.

As a corollary, writes to any image subresources in such a set **must** not make the contents of memory used by other subresources in the set undefined. An application **can** define the content of a subresource of one image by performing device writes to an identical subresource of another image provided both images are bound to the same region of external memory. Applications **may** also add resources to such a set after the content of the existing set members has been defined without making the content undefined by creating a new image with the initial layout VK_IMAGE_LAYOUT_UNDEFINED and binding it to the same region of external memory as the existing images.

NOTE

Because layout transitions apply to all identical images aliasing the same region of external memory, the actual layout of the memory backing a new image as well as an existing image with defined content will not be undefined. Such an image is not usable until it acquires ownership of its memory from the existing owner. Therefore, the layout specified as part of this transition will be the true initial layout of the image. The undefined layout specified when creating it is a placeholder to simplify valid usage requirements.

When sharing resources with other APIs, it is generally left to those APIs to define how they interact with the Vulkan concepts of image layouts and fine-grained synchronization. However, some external memory handle types require use of specific image layouts when transitioning to or from external usage, as defined in the external image implied layouts table.

12.11. Memory Aliasing

A range of a `VkDeviceMemory` allocation is *aliased* if it is bound to multiple resources simultaneously, as described below, via vkBindImageMemory, vkBindBufferMemory, via sparse memory bindings, or by binding the memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms.

Consider two resources, resource_A and resource_B, bound respectively to memory range_A and range_B. Let paddedRange_A and paddedRange_B be, respectively, range_A and range_B aligned to `bufferImageGranularity`. If the resources are both linear or both non-linear (as defined in the Glossary), then the resources *alias* the memory in the intersection of range_A and range_B. If one resource is linear and the other is non-linear, then the resources *alias* the memory in the

intersection of paddedRange_A and paddedRange_B.

Applications **can** alias memory, but use of multiple aliases is subject to several constraints.

NOTE	Memory aliasing **can** be useful to reduce the total device memory footprint of an application, if some large resources are used for disjoint periods of time.

When a non-linear, non-VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT image is bound to an aliased range, all image subresources of the image *overlap* the range. When a linear image is bound to an aliased range, the image subresources that (according to the image's advertised layout) include bytes from the aliased range overlap the range. When a VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT image has sparse image blocks bound to an aliased range, only image subresources including those sparse image blocks overlap the range, and when the memory bound to the image's mip tail overlaps an aliased range all image subresources in the mip tail overlap the range.

Buffers, and linear image subresources are considered *host-accessible subresources* when they are in any of these layouts:

- VK_IMAGE_LAYOUT_PREINITIALIZED
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT

That is, the host has a well-defined addressing scheme to interpret the contents, and thus the layout of the data in memory **can** be consistently interpreted across aliases if each of those aliases is a host-accessible subresource. Non-linear images, and linear image subresources in other layouts, are not host-accessible.

If two aliases are both host-accessible, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

For an acceleration structure `AS_2` that is an alias of another acceleration structure `AS_1`, `AS_2` **can** be used in place of `AS_1` for operations acting on acceleration structures if the following conditions are met:

- The buffer referred to by the `buffer` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with **must** be bound to the same VkDeviceMemory as the buffer referred to by the `buffer` member of the VkAccelerationStructureCreateInfoKHR that `AS_1` was created with.
- The start of the memory range occupied by `AS_2`, defined by the sum of the `offset` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with and the offset at which the buffer associated with `AS_2` is bound to a VkDeviceMemory, **must** match the start of the memory range occupied by `AS_1`.
- If the `deviceAddress` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with is non-zero, it **must** match the `deviceAddress` member of the VkAccelerationStructureCreateInfoKHR that `AS_1` was created with.
- The `createFlags` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with **must** match the `createFlags` member of the VkAccelerationStructureCreateInfoKHR that

`AS_1` was created with.

- The `type` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with **must** match the `type` member of the VkAccelerationStructureCreateInfoKHR that `AS_1` was created with.
- The `size` member of the VkAccelerationStructureCreateInfoKHR that `AS_2` was created with **must** be greater or equal to the `size` returned by vkGetAccelerationStructureBuildSizesKHR for the build parameters `AS_1` was built with.

After an acceleration structure object is destroyed, aliased acceleration structures **may** continue being used to refer to that acceleration structure for operations acting on acceleration structures.

If two aliases are both images that were created with identical creation parameters, both were created with the VK_IMAGE_CREATE_ALIAS_BIT flag set, and both are bound identically to memory except for VkBindImageMemoryDeviceGroupInfo::`pDeviceIndices` and VkBindImageMemoryDeviceGroupInfo::`pSplitInstanceBindRegions`, then they interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Additionally, if an individual plane of a multi-planar image and a single-plane image alias the same memory, then they also interpret the contents of the memory in consistent ways under the same conditions, but with the following modifications:

- Both **must** have been created with the VK_IMAGE_CREATE_DISJOINT_BIT flag.
- The single-plane image **must** have a VkFormat that is equivalent to that of the multi-planar image's individual plane.
- The single-plane image and the individual plane of the multi-planar image **must** be bound identically to memory except for VkBindImageMemoryDeviceGroupInfo::`pDeviceIndices` and VkBindImageMemoryDeviceGroupInfo::`pSplitInstanceBindRegions`.
- The `width` and `height` of the single-plane image are derived from the multi-planar image's dimensions in the manner listed for plane compatibility for the aliased plane.
- If either image's `tiling` is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then both images **must** be linear.
- All other creation parameters **must** be identical

Aliases created by binding the same memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms interpret the contents of the memory in consistent ways, and data written to one alias **can** be read by the other alias.

Otherwise, the aliases interpret the contents of the memory differently, and writes via one alias make the contents of memory partially or completely undefined to the other alias. If the first alias is a host-accessible subresource, then the bytes affected are those written by the memory operations according to its addressing scheme. If the first alias is not host-accessible, then the bytes affected are those overlapped by the image subresources that were written. If the second alias is a host-accessible subresource, the affected bytes become undefined. If the second alias is not host-accessible, all sparse image blocks (for sparse partially-resident images) or all image subresources (for non-sparse image and fully resident sparse images) that overlap the affected bytes become undefined.

If any image subresources are made undefined due to writes to an alias, then each of those image subresources **must** have its layout transitioned from VK_IMAGE_LAYOUT_UNDEFINED to a valid layout before it is used, from VK_IMAGE_LAYOUT_ZERO_INITIALIZED_EXT if it is zeroed, or from VK_IMAGE_LAYOUT_PREINITIALIZED if the memory has been written by the host. If any sparse blocks of a sparse image have been made undefined, then only the image subresources containing them **must** be transitioned.

Use of an overlapping range by two aliases **must** be separated by a memory dependency using the appropriate access types if at least one of those uses performs writes, whether the aliases interpret memory consistently or not. If buffer or image memory barriers are used, the scope of the barrier **must** contain the entire range and/or set of image subresources that overlap.

If two aliasing image views are used in the same framebuffer, then the render pass **must** declare the attachments using the VK_ATTACHMENT_DESCRIPTION_MAY_ALIAS_BIT, and follow the other rules listed in that section.

NOTE	Memory recycled via an application suballocator (i.e. without freeing and reallocating the memory objects) is not substantially different from memory aliasing. However, a suballocator usually waits on a fence before recycling a region of memory, and signaling a fence involves sufficient implicit dependencies to satisfy all the above requirements.

12.11.1. Resource Memory Overlap

Applications **can** safely access resources concurrently via separate device and host operations as long as the accessed memory locations are guaranteed to not overlap, as defined in Memory Location, and the operation, resource, and access are otherwise independently valid.

Some operations have alignment requirements or access ambiguous memory locations, so the semantics of a particular operation **should** be considered when determining the overlap. Such requirements will be described alongside the operation. Operations between host and device when using non-coherent memory are aligned to `nonCoherentAtomSize`, as defined by vkFlushMappedMemoryRanges and vkInvalidateMappedMemoryRanges.

NOTE	The intent is that buffers (or linear images) can be accessed concurrently, even when they share cache lines, but otherwise do not access the same memory range. The concept of a device cache line size is not exposed in the memory model.

Chapter 13. Images

Images are specialized resources that have multi-dimensional access rather than the typical linear access to memory. These resources allow implementations to optimize the memory layout for common access patterns, by mapping multi-dimensional coordinates to an implementation-dependent offset in the underlying memory.

Additionally, images are homogeneous, with every discrete coordinate associated with data that is in the same format as the data associated with any other coordinate. Each set of data associated with one of these coordinates is referred to in this specification as a *texel*. A texel can consist of up to 4 separate components, labeled as (R,G,B,A) in this chapter. Each texel block in an image maps to a distinct set of memory locations within the memory they are bound to. Unless otherwise noted by the specification, the mapping from texels to memory is implementation-defined.

NOTE

This terminology is historical; texel is a combination of the words "**tex**ture" and "**el**ement", and (R,G,B,A) are abbreviations for **R**ed, **G**reen, **B**lue, and **A**lpha. Early interactive computer graphics only supported operations that allowed image data to be used to add color "texture" to rendered objects, which is just a small subset of what the image operations on images described here enable. These terms are deeply embedded in the industry, and so are still used here by convention, despite images being used in far more varied ways than they were in the past.

Some image formats identify components as D for **d**epth, S for **s**tencil, or X for padding elements. Image format components identified as D are treated as R, and S components are treated as G for the purpose of image accesses. X components are ignored when reading, and **may** be modified in implementation-dependent ways when writing to that texel.

The coordinates used to identify a texel are six-dimensional, made up of the following integer indices:

- x - The first spatial index
- y - The second spatial index
- z - The third spatial index
- layer - The array index for arrayed images
- sample - The sample index
- level - The detail level

Each image is constructed with a number of texels in each dimension, with the integer size in each dimension for that image identified as:

- width - The number of x indices
- height - The number of y indices
- depth - The number of z indices
- layers - The number of layers
- samples - The number of samples

- levels - The number of detail levels

Of these sizes, the number of levels is somewhat unique - each further level reduces the number of indices in each of the x, y, and z dimensions by half, according to these formulae:

- $width_{level}$ = max(1, ⌊width / 2^{level}⌋)
- $height_{level}$ = max(1, ⌊height / 2^{level}⌋)
- $depth_{level}$ = max(1, ⌊depth / 2^{level}⌋)

An image will have no more than one level where all of the above dimensions are set to 1. See Image Mip Level Sizing for more details.

The Vulkan specification allows the creation of resources with fewer dimensions than this (e.g. texel buffers); these can be considered equivalent to an image with all dimensions specified, with the missing dimensions having a size of 1, and an implicit coordinate value of 0.

These parameters are set for an image during image creation, and are adjusted when accessing an image through an image view.

13.1. Image Coordinate Validation

When accessing an image, a set of (x,y,z,layer,sample,level) coordinates are used to indicate which texel is accessed. These coordinates are first checked to see if they refer to texels within the image dimensions, according to the following equations:

- x < $width_{level}$
- y < $height_{level}$
- z < $depth_{level}$
- layer < layers
- sample < samples
- level < levels

If any of these equations evaluates to false, the coordinate is considered out of bounds, otherwise they are *in bounds*.

13.2. Image Reads

Image reads use a set of (x,y,z,layer,sample,level) coordinates, validated as per Image Coordinate Validation, and return a converted value for the texel at that coordinate. If the coordinates are out of bounds, behavior of the read is as described in Shader Out-of-Bounds Memory Access. If the coordinates are in bounds, but the texel is not backed by memory, behavior of the read is as described in Accessing Unbound Regions. Otherwise, the read proceeds as follows.

13.2.1. Texel Decode

The formatted value of the texel at the (x,y,z,layer,sample,level) coordinate is read and decoded

according to the procedures outlined in the Khronos Data Format Specification.

For sRGB formats, the (R,G,B,A) components are first converted as if they are UNORM formats, and then sRGB to linear conversion is performed on the converted (R,G,B) components, as described in the “sRGB EOTF” section of the Khronos Data Format Specification.

13.2.2. Component Substitution

If after conversion, less than four of the (R,G,B,A) components are present, missing components are substituted by the components of (0,0,0,1) for missing (R,G,B,A) components, respectively.

13.2.3. Numeric Encoding

The values are encoded according to the bit width and numeric format of each component:

- Components with a fixed-point numeric format or with a floating-point numeric format and a bit width less than or equal to 32 are encoded into the IEEE-754 binary32 format.
- Components with a floating-point numeric format and a bit width greater than 32 are encoded into the IEEE-754 binary64 format.
- Components with an integer numeric format and a bit width less than or equal to 32 are directly encoded as 32-bit integer values with the same signedness.
- Components with an integer numeric format and a bit width greater than 32 are directly encoded as 64-bit integer values with the same signedness.

These values are then returned as the result of the image read.

13.3. Image Writes

Image writes also use a set of (x,y,z,layer,sample,level) coordinates, validated as per Image Coordinate Validation, and with a value to be written. If the coordinates are out of bounds, the write is discarded. If the coordinates are in bounds, but the texel is not backed by memory, the write is silently discarded. Otherwise, an image write is performed as follows:

13.3.1. Texel Encode

If the image format is sRGB, a linear to sRGB conversion is applied to the (R,G,B) components of value as described in the “sRGB EOTF” section of the Khronos Data Format Specification.

The converted (R,G,B) and original A values are then encoded to the image format according to the procedures outlined in the Khronos Data Format Specification. Components not present in the image format are discarded.

The final value is then written to the texel at (x,y,z,layer,sample,level).

13.4. SPIR-V Image Access

Images are represented in SPIR-V by variables with the OpTypeImage type, and operated on by

image instructions.

Images are mapped to a shader using image views, which define access to a subset of the base image resource, specified by VkImageSubresourceRange.

13.4.1. SPIR-V Image Read Instructions

Texels **can** be read from an image using OpImageRead or OpImageSparseRead. The elements of the *Coordinate* operand and the optional `Sample` image operand map to image coordinates, modified by the parameters of the image view used, as:

- x = `u`
- y = `v`
- z = `w`
- layer = `array_layer`
- sample = `Sample`
- level = 0

Any index missing in the instruction is implicitly set to 0.

After the coordinates are validated, some indices are offset before performing the access as follows:

- layer += VkImageSubresourceRange::`baseArrayLayer`
- level += VkImageSubresourceRange::`baseMipLevel`
- z += VkImageViewSlicedCreateInfoEXT::`sliceOffset`

13.4.2. SPIR-V Image Write Instructions

Texels **can** be written to an image using OpImageWrite. The elements of the *Coordinate* operand and the optional `Sample` image operand map to image coordinates, modified by the parameters of the image view used, in the same ways as for image reads.

13.4.3. SPIR-V Image Atomic Instructions

SPIR-V atomic instructions operate on pointers rather than texels, but **can** be used with texels via OpImageTexelPointer. OpImageTexelPointer **can** be used to obtain a valid pointer to a specific texel in an image. The elements of the *Coordinate* operand and the optional `Sample` image operand map to image coordinates, modified by the parameters of the image view used, in the same ways as for image reads. The resulting pointer **can** be used to access the identified texel, with atomic operations potentially reading and writing to that texel.

13.4.4. SPIR-V Image Query Instructions

Query operations return properties of an image, allowing the accessible size of each dimension of an image to be queried from within a shader. Query operations do not access any texels in the image.

- `OpImageQuerySizeLod` returns the values of $width_{level}$, $height_{level}$, $depth_{level}$, and layers for the image at a specified level, where level is equal to the sum of the `Level of Detail` operand and VkImageSubresourceRange::`baseMipLevel`. If the image is not a sampled image and VkImageViewSlicedCreateInfoEXT::`sliceCount` is not set to VK_REMAINING_3D_SLICES_EXT, `sliceCount` will be returned in place of $depth_{level}$. If the image is not a sampled image and VkImageViewSlicedCreateInfoEXT::`sliceCount` is set to VK_REMAINING_3D_SLICES_EXT, the value returned will be equal to $depth_{level}$:minus: VkImageViewSlicedCreateInfoEXT::`sliceOffset`. If `Level of Detail` is greater than VkImageSubresourceRange::`levelCount`, the result is undefined.
- `OpImageQuerySize` is equivalent to `OpImageQuerySizeLod` with level set to VkImageSubresourceRange::`baseMipLevel`.
- `OpImageQueryLevels` returns the value of VkImageSubresourceRange::`levelCount` specified for the image view used.
- `OpImageQuerySamples` returns the value of samples for the image.

NOTE	`OpImageQueryLod` is performed as a sampling operation, so is not included here.

If the descriptor bound to the image is a null descriptor, all values returned by the above queries are replaced with 0.

13.4.5. SPIR-V Image Sampling Instructions

Sampling operations **can** also be performed on images, typically in conjunction with a sampler, as defined in the Sampling chapter.

Chapter 14. Samplers

VkSampler objects represent the state of an image sampler which is used by the implementation to read image data and apply filtering and other transformations for the shader.

Samplers are represented by VkSampler handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSampler)
```

To create a sampler object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateSampler(
    VkDevice                                    device,
    const VkSamplerCreateInfo*                  pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSampler*                                  pSampler);
```

- device is the logical device that creates the sampler.
- pCreateInfo is a pointer to a VkSamplerCreateInfo structure specifying the state of the sampler object.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pSampler is a pointer to a VkSampler handle in which the resulting sampler object is returned.

Valid Usage

- VUID-vkCreateSampler-device-09668
  device **must** support at least one queue family with one of the VK_QUEUE_COMPUTE_BIT or VK_QUEUE_GRAPHICS_BIT capabilities
- VUID-vkCreateSampler-maxSamplerAllocationCount-04110
  There **must** be less than VkPhysicalDeviceLimits::maxSamplerAllocationCount VkSampler objects currently created on the device
- VUID-vkCreateSampler-maxSamplerAllocationCount-11412
  If there are any pipelines or shaders with embedded samplers currently created on the device, there **must** be less than (maxSamplerAllocationCount - (minSamplerHeapReservedRangeWithEmbedded / samplerDescriptorSize)) VkSampler objects currently created on the device

Valid Usage (Implicit)

- VUID-vkCreateSampler-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkCreateSampler-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSamplerCreateInfo structure
- VUID-vkCreateSampler-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSampler-pSampler-parameter
  `pSampler` **must** be a valid pointer to a VkSampler handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkSamplerCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSamplerCreateInfo {
    VkStructureType         sType;
    const void*             pNext;
    VkSamplerCreateFlags    flags;
    VkFilter                magFilter;
    VkFilter                minFilter;
    VkSamplerMipmapMode     mipmapMode;
    VkSamplerAddressMode    addressModeU;
    VkSamplerAddressMode    addressModeV;
    VkSamplerAddressMode    addressModeW;
    float                   mipLodBias;
    VkBool32                anisotropyEnable;
    float                   maxAnisotropy;
    VkBool32                compareEnable;
    VkCompareOp             compareOp;
    float                   minLod;
    float                   maxLod;
    VkBorderColor           borderColor;
    VkBool32                unnormalizedCoordinates;
} VkSamplerCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkSamplerCreateFlagBits describing additional parameters of the sampler.
- `magFilter` is a VkFilter value specifying the magnification filter to apply to lookups.
- `minFilter` is a VkFilter value specifying the minification filter to apply to lookups.
- `mipmapMode` is a VkSamplerMipmapMode value specifying the mipmap filter to apply to lookups.
- `addressModeU` is a VkSamplerAddressMode value specifying the wrapping operation used when the i coordinate used to sample the image would be out of bounds.
- `addressModeV` is a VkSamplerAddressMode value specifying the wrapping operation used when the j coordinate used to sample the image would be out of bounds.
- `addressModeW` is a VkSamplerAddressMode value specifying the wrapping operation used when the k coordinate used to sample the image would be out of bounds. If `unnormalizedCoordinates` is VK_TRUE, `addressModeW` is ignored.
- `mipLodBias` is the bias to be added to mipmap LOD calculation and bias provided by image sampling functions in SPIR-V, as described in the LOD Operation section.
- `anisotropyEnable` is VK_TRUE to enable anisotropic filtering, as described in the Texel Anisotropic Filtering section, or VK_FALSE otherwise.
- `maxAnisotropy` is the anisotropy value clamp used by the sampler when `anisotropyEnable` is VK_TRUE. If `anisotropyEnable` is VK_FALSE, `maxAnisotropy` is ignored.
- `compareEnable` is VK_TRUE to enable comparison against a reference value during lookups, or VK_FALSE otherwise.
  - Note: Some implementations will default to shader state if this member does not match.
- `compareOp` is a VkCompareOp value specifying the comparison operator to apply to fetched data before filtering as described in the Depth Compare Operation section.
- `minLod` is used to clamp the minimum of the computed LOD value.
- `maxLod` is used to clamp the maximum of the computed LOD value. To avoid clamping the maximum value, set `maxLod` to the constant VK_LOD_CLAMP_NONE.
- `borderColor` is a VkBorderColor value specifying the predefined border color to use.
- `unnormalizedCoordinates` controls whether to use unnormalized or normalized texel coordinates to address texels of the image. When `unnormalizedCoordinates` is VK_TRUE, the range of the image coordinates used to lookup the texel is in the range of zero to the image size in each dimension. When `unnormalizedCoordinates` is VK_FALSE, the range of image coordinates is zero to one.

  When `unnormalizedCoordinates` is VK_TRUE, images the sampler is used with in the shader have the following requirements:

  - The `viewType` **must** be either VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D.
  - The image view **must** have a single layer and a single mip level.

    When `unnormalizedCoordinates` is VK_TRUE, image built-in functions in the shader that use

the sampler have the following requirements:

- The functions **must** not use projection.
- The functions **must** not use offsets.

Mapping of OpenGL to Vulkan Filter Modes

`magFilter` values of VK_FILTER_NEAREST and VK_FILTER_LINEAR directly correspond to `GL_NEAREST` and `GL_LINEAR` magnification filters. `minFilter` and `mipmapMode` combine to correspond to the similarly named OpenGL minification filter of `GL_minFilter_MIPMAP_mipmapMode` (e.g. `minFilter` of VK_FILTER_LINEAR and `mipmapMode` of VK_SAMPLER_MIPMAP_MODE_NEAREST correspond to `GL_LINEAR_MIPMAP_NEAREST`).

NOTE

There are no Vulkan filter modes that directly correspond to OpenGL minification filters of `GL_LINEAR` or `GL_NEAREST`, but they **can** be emulated using VK_SAMPLER_MIPMAP_MODE_NEAREST, `minLod` = 0, and `maxLod` = 0.25, and using `minFilter` = VK_FILTER_LINEAR or `minFilter` = VK_FILTER_NEAREST, respectively.

Note that using a `maxLod` of zero would cause magnification to always be performed, and the `magFilter` to always be used. This is valid, just not an exact match for OpenGL behavior. Clamping the maximum LOD to 0.25 allows the λ value to be non-zero and minification to be performed, while still always rounding down to the base level. If the `minFilter` and `magFilter` are equal, then using a `maxLod` of zero also works.

The maximum number of sampler objects which **can** be simultaneously created on a device is implementation-dependent and specified by the `maxSamplerAllocationCount` member of the VkPhysicalDeviceLimits structure.

NOTE

For historical reasons, if `maxSamplerAllocationCount` is exceeded, some implementations may return VK_ERROR_TOO_MANY_OBJECTS. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

Since VkSampler is a non-dispatchable handle type, implementations **may** return the same handle for sampler state vectors that are identical. In such cases, all such objects would only count once against the `maxSamplerAllocationCount` limit.

When this structure is used to write a descriptor via vkWriteSamplerDescriptorsEXT, applications **can** give the descriptor a debug name in a similar way to naming an object, via the VkDebugUtilsObjectNameInfoEXT structure. However, as there is no actual object, VkDebugUtilsObjectNameInfoEXT **must** be passed via the `pNext` chain of this structure, with a `objectType` of VK_OBJECT_TYPE_UNKNOWN and a `objectHandle` of VK_NULL_HANDLE. The name is attached to the unique set of descriptor bits written by the implementation, and writing the same bits again with new debug info **may** rename the original descriptor.

NOTE

Implementations are not prevented from returning the same bits for different descriptors. This can result in multiple different samplers mapping to the same

name.

VkDescriptorSetAndBindingMappingEXT **can** also be chained in the same way when defining an embedded sampler via VkDescriptorSetAndBindingMappingEXT, naming the embedded sampler.

Valid Usage

- VUID-VkSamplerCreateInfo-mipLodBias-01069
  The absolute value of `mipLodBias` **must** be less than or equal to `VkPhysicalDeviceLimits::maxSamplerLodBias`
- VUID-VkSamplerCreateInfo-samplerMipLodBias-04467
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`samplerMipLodBias` is VK_FALSE, `mipLodBias` **must** be zero
- VUID-VkSamplerCreateInfo-maxLod-01973
  `maxLod` **must** be greater than or equal to `minLod`
- VUID-VkSamplerCreateInfo-anisotropyEnable-01070
  If the `samplerAnisotropy` feature is not enabled, `anisotropyEnable` **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-anisotropyEnable-01071
  If `anisotropyEnable` is VK_TRUE, `maxAnisotropy` **must** be between `1.0` and `VkPhysicalDeviceLimits::maxSamplerAnisotropy`, inclusive
- VUID-VkSamplerCreateInfo-minFilter-01645
  If sampler $Y'C_BC_R$ conversion is enabled and the potential format features of the sampler $Y'C_BC_R$ conversion do not support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT, `minFilter` and `magFilter` **must** be equal to the sampler $Y'C_BC_R$ conversion's `chromaFilter`
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01072
  If `unnormalizedCoordinates` is VK_TRUE, `minFilter` and `magFilter` **must** be equal
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01073
  If `unnormalizedCoordinates` is VK_TRUE, `mipmapMode` **must** be VK_SAMPLER_MIPMAP_MODE_NEAREST
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01074
  If `unnormalizedCoordinates` is VK_TRUE, `minLod` and `maxLod` **must** be zero
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01075
  If `unnormalizedCoordinates` is VK_TRUE, `addressModeU` and `addressModeV` **must** each be either VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE or VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01076
  If `unnormalizedCoordinates` is VK_TRUE, `anisotropyEnable` **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01077
  If `unnormalizedCoordinates` is VK_TRUE, `compareEnable` **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-addressModeU-01078

If any of addressModeU, addressModeV or addressModeW are VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER, borderColor **must** be a valid VkBorderColor value

- VUID-VkSamplerCreateInfo-addressModeU-01646
  If sampler $Y'C_BC_R$ conversion is enabled, addressModeU, addressModeV, and addressModeW **must** be VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, anisotropyEnable **must** be VK_FALSE, and unnormalizedCoordinates **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-None-01647
  If sampler $Y'C_BC_R$ conversion is enabled and the pNext chain includes a VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode **must** be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
- VUID-VkSamplerCreateInfo-pNext-06726
  If the samplerFilterMinmax feature is not enabled and the pNext chain includes a VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode **must** be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
- VUID-VkSamplerCreateInfo-addressModeU-01079
  If the samplerMirrorClampToEdge feature is not enabled, and if the VK_KHR_sampler_mirror_clamp_to_edge extension is not enabled, addressModeU, addressModeV and addressModeW **must** not be VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE
- VUID-VkSamplerCreateInfo-compareEnable-01080
  If compareEnable is VK_TRUE, compareOp **must** be a valid VkCompareOp value
- VUID-VkSamplerCreateInfo-magFilter-01081
  If either magFilter or minFilter is VK_FILTER_CUBIC_EXT, anisotropyEnable **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-compareEnable-01423
  If compareEnable is VK_TRUE, the reductionMode member of VkSamplerReductionModeCreateInfo **must** be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
- VUID-VkSamplerCreateInfo-flags-02574
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then minFilter and magFilter **must** be equal
- VUID-VkSamplerCreateInfo-flags-02575
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then mipmapMode **must** be VK_SAMPLER_MIPMAP_MODE_NEAREST
- VUID-VkSamplerCreateInfo-flags-02576
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then minLod and maxLod **must** be zero
- VUID-VkSamplerCreateInfo-flags-02577
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then addressModeU and addressModeV **must** each be either VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE or VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER
- VUID-VkSamplerCreateInfo-flags-02578
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then anisotropyEnable

must be VK_FALSE

- VUID-VkSamplerCreateInfo-flags-02579
  If `flags` includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then `compareEnable` **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-flags-02580
  If `flags` includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then `unnormalizedCoordinates` **must** be VK_FALSE
- VUID-VkSamplerCreateInfo-nonSeamlessCubeMap-06788
  If the `nonSeamlessCubeMap` feature is not enabled, `flags` **must** not include VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT
- VUID-VkSamplerCreateInfo-borderColor-04011
  If `borderColor` is one of VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT, then a VkSamplerCustomBorderColorCreateInfoEXT **must** be included in the `pNext` chain
- VUID-VkSamplerCreateInfo-customBorderColors-04085
  If the `customBorderColors` feature is not enabled, `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkSamplerCreateInfo-borderColor-04442
  If `borderColor` is one of VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT, and VkSamplerCustomBorderColorCreateInfoEXT::`format` is not VK_FORMAT_UNDEFINED, VkSamplerCustomBorderColorCreateInfoEXT::`customBorderColor` **must** be within the range of values representable in `format`
- VUID-VkSamplerCreateInfo-None-04012
  The maximum number of samplers with custom border colors which **can** be simultaneously created on a device is implementation-dependent and specified by the `maxCustomBorderColorSamplers` member of the VkPhysicalDeviceCustomBorderColorPropertiesEXT structure
- VUID-VkSamplerCreateInfo-flags-08110
  If `flags` includes VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-VkSamplerCreateInfo-pNext-08111
  If the `pNext` chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, `flags` **must** contain VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

Valid Usage (Implicit)

- VUID-VkSamplerCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO
- VUID-VkSamplerCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either

`NULL` or a pointer to a valid instance of VkDebugUtilsObjectNameInfoEXT, VkOpaqueCaptureDescriptorDataCreateInfoEXT, VkSamplerBorderColorComponentMappingCreateInfoEXT, VkSamplerCustomBorderColorCreateInfoEXT, VkSamplerCustomBorderColorIndexCreateInfoEXT, VkSamplerReductionModeCreateInfo, or VkSamplerYcbcrConversionInfo

- VUID-VkSamplerCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkSamplerCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkSamplerCreateFlagBits values
- VUID-VkSamplerCreateInfo-magFilter-parameter
  `magFilter` **must** be a valid VkFilter value
- VUID-VkSamplerCreateInfo-minFilter-parameter
  `minFilter` **must** be a valid VkFilter value
- VUID-VkSamplerCreateInfo-mipmapMode-parameter
  `mipmapMode` **must** be a valid VkSamplerMipmapMode value
- VUID-VkSamplerCreateInfo-addressModeU-parameter
  `addressModeU` **must** be a valid VkSamplerAddressMode value
- VUID-VkSamplerCreateInfo-addressModeV-parameter
  `addressModeV` **must** be a valid VkSamplerAddressMode value
- VUID-VkSamplerCreateInfo-addressModeW-parameter
  `addressModeW` **must** be a valid VkSamplerAddressMode value

VK_LOD_CLAMP_NONE is a special constant value used for VkSamplerCreateInfo::`maxLod` to indicate that maximum LOD clamping should not be performed.

```
#define VK_LOD_CLAMP_NONE                 1000.0F
```

Bits which **can** be set in VkSamplerCreateInfo::`flags`, specifying additional parameters of a sampler, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerCreateFlagBits {
  // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT = 0x00000001,
  // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT = 0x00000002,
  // Provided by VK_EXT_descriptor_buffer
    VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000008,
  // Provided by VK_EXT_non_seamless_cube_map
    VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT = 0x00000004,
} VkSamplerCreateFlagBits;
```

- VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT specifies that the sampler will read from an image created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT.
- VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT specifies that the implementation **may** use approximations when reconstructing a full color value for texture access from a subsampled image.
- VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT specifies that cube map edge handling is not performed.

NOTE	The approximations used when VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT is specified are implementation defined. Some implementations **may** interpolate between fragment density levels in a subsampled image. In that case, this bit **may** be used to decide whether the interpolation factors are calculated per fragment or at a coarser granularity.

- VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the sampler **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSamplerCreateFlags;
```

VkSamplerCreateFlags is a bitmask type for setting a mask of zero or more VkSamplerCreateFlagBits.

The VkSamplerReductionModeCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkSamplerReductionModeCreateInfo {
    VkStructureType           sType;
    const void*               pNext;
    VkSamplerReductionMode    reductionMode;
} VkSamplerReductionModeCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- reductionMode is a VkSamplerReductionMode value controlling how texture filtering combines texel values.

If the pNext chain of VkSamplerCreateInfo includes a VkSamplerReductionModeCreateInfo structure, then that structure includes a mode controlling how texture filtering combines texel values.

If this structure is not present, reductionMode is considered to be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE.

Valid Usage (Implicit)

- VUID-VkSamplerReductionModeCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_REDUCTION_MODE_CREATE_INFO
- VUID-VkSamplerReductionModeCreateInfo-reductionMode-parameter
  `reductionMode` **must** be a valid VkSamplerReductionMode value

Structure Chaining

Extends the structure

- VkSamplerCreateInfo

Reduction modes are specified by VkSamplerReductionMode, which takes values:

```
// Provided by VK_VERSION_1_2
typedef enum VkSamplerReductionMode {
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE = 0,
    VK_SAMPLER_REDUCTION_MODE_MIN = 1,
    VK_SAMPLER_REDUCTION_MODE_MAX = 2,
} VkSamplerReductionMode;
```

- VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE specifies that texel values are combined by computing a weighted average of values in the footprint, using weights as specified in the image operations chapter.
- VK_SAMPLER_REDUCTION_MODE_MIN specifies that texel values are combined by taking the component-wise minimum of values in the footprint with non-zero weights.
- VK_SAMPLER_REDUCTION_MODE_MAX specifies that texel values are combined by taking the component-wise maximum of values in the footprint with non-zero weights.

Possible values of the VkSamplerCreateInfo::`magFilter` and `minFilter` parameters, specifying filters used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkFilter {
    VK_FILTER_NEAREST = 0,
    VK_FILTER_LINEAR = 1,
  // Provided by VK_EXT_filter_cubic
    VK_FILTER_CUBIC_EXT = 1000015000,
} VkFilter;
```

- VK_FILTER_NEAREST specifies nearest filtering.
- VK_FILTER_LINEAR specifies linear filtering.
- VK_FILTER_CUBIC_EXT specifies cubic filtering.

These filters are described in detail in Texel Filtering.

Possible values of the VkSamplerCreateInfo::mipmapMode, specifying the mipmap mode used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerMipmapMode {
    VK_SAMPLER_MIPMAP_MODE_NEAREST = 0,
    VK_SAMPLER_MIPMAP_MODE_LINEAR = 1,
} VkSamplerMipmapMode;
```

- VK_SAMPLER_MIPMAP_MODE_NEAREST specifies nearest filtering.
- VK_SAMPLER_MIPMAP_MODE_LINEAR specifies linear filtering.

These modes are described in detail in Texel Filtering.

Possible values of the VkSamplerCreateInfo::addressMode* parameters, corresponding to different wrapping operations used during sampling, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSamplerAddressMode {
    VK_SAMPLER_ADDRESS_MODE_REPEAT = 0,
    VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT = 1,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE = 2,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER = 3,
  // Provided by VK_VERSION_1_2, VK_KHR_sampler_mirror_clamp_to_edge
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE = 4,
  // Provided by VK_KHR_sampler_mirror_clamp_to_edge
  // VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR is a legacy alias
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR =
VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE,
} VkSamplerAddressMode;
```

- VK_SAMPLER_ADDRESS_MODE_REPEAT specifies that the repeat wrap mode will be used.
- VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT specifies that the mirrored repeat wrap mode will be used.
- VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE specifies that the clamp to edge wrap mode will be used.
- VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER specifies that the clamp to border wrap mode will be used.
- VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE specifies that the mirror clamp to edge wrap mode will be used. This is only valid if the samplerMirrorClampToEdge feature is enabled, or if the VK_KHR_sampler_mirror_clamp_to_edge extension is enabled.

Comparison operators compare a *reference* and a *test* value, and return a true (“passed”) or false (“failed”) value depending on the comparison operator chosen. The supported operators are:

```
// Provided by VK_VERSION_1_0
typedef enum VkCompareOp {
    VK_COMPARE_OP_NEVER = 0,
    VK_COMPARE_OP_LESS = 1,
    VK_COMPARE_OP_EQUAL = 2,
    VK_COMPARE_OP_LESS_OR_EQUAL = 3,
    VK_COMPARE_OP_GREATER = 4,
    VK_COMPARE_OP_NOT_EQUAL = 5,
    VK_COMPARE_OP_GREATER_OR_EQUAL = 6,
    VK_COMPARE_OP_ALWAYS = 7,
} VkCompareOp;
```

- VK_COMPARE_OP_NEVER specifies that the comparison always evaluates false.
- VK_COMPARE_OP_LESS specifies that the comparison evaluates *reference* < *test*.
- VK_COMPARE_OP_EQUAL specifies that the comparison evaluates *reference* = *test*.
- VK_COMPARE_OP_LESS_OR_EQUAL specifies that the comparison evaluates *reference* ≤ *test*.
- VK_COMPARE_OP_GREATER specifies that the comparison evaluates *reference* > *test*.
- VK_COMPARE_OP_NOT_EQUAL specifies that the comparison evaluates *reference* ≠ *test*.
- VK_COMPARE_OP_GREATER_OR_EQUAL specifies that the comparison evaluates *reference* ≥ *test*.
- VK_COMPARE_OP_ALWAYS specifies that the comparison always evaluates true.

Comparison operators are used for:

- The Depth Compare Operation operator for a sampler, specified by VkSamplerCreateInfo ::`compareOp`.
- The stencil comparison operator for the stencil test, specified by vkCmdSetStencilOp::`compareOp` or VkStencilOpState::`compareOp`.
- The Depth Comparison operator for the depth test, specified by vkCmdSetDepthCompareOp ::`depthCompareOp` or VkPipelineDepthStencilStateCreateInfo::`depthCompareOp`.

Each such use describes how the *reference* and *test* values for that comparison are determined.

Possible values of VkSamplerCreateInfo::`borderColor`, specifying the border color used for texture lookups, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkBorderColor {
    VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK = 0,
    VK_BORDER_COLOR_INT_TRANSPARENT_BLACK = 1,
    VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK = 2,
    VK_BORDER_COLOR_INT_OPAQUE_BLACK = 3,
    VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE = 4,
    VK_BORDER_COLOR_INT_OPAQUE_WHITE = 5,
  // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_FLOAT_CUSTOM_EXT = 1000287003,
  // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_INT_CUSTOM_EXT = 1000287004,
} VkBorderColor;
```

- VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK specifies a transparent, floating-point format, black color.
- VK_BORDER_COLOR_INT_TRANSPARENT_BLACK specifies a transparent, integer format, black color.
- VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK specifies an opaque, floating-point format, black color.
- VK_BORDER_COLOR_INT_OPAQUE_BLACK specifies an opaque, integer format, black color.
- VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE specifies an opaque, floating-point format, white color.
- VK_BORDER_COLOR_INT_OPAQUE_WHITE specifies an opaque, integer format, white color.
- VK_BORDER_COLOR_FLOAT_CUSTOM_EXT specifies that a VkSamplerCustomBorderColorCreateInfoEXT structure is included in the VkSamplerCreateInfo::pNext chain containing the color data in floating-point format.
- VK_BORDER_COLOR_INT_CUSTOM_EXT specifies that a VkSamplerCustomBorderColorCreateInfoEXT structure is included in the VkSamplerCreateInfo::pNext chain containing the color data in integer format.

These colors are described in detail in Border Replacement.

To destroy a sampler, call:

```
// Provided by VK_VERSION_1_0
void vkDestroySampler(
    VkDevice                                    device,
    VkSampler                                   sampler,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the logical device that destroys the sampler.
- sampler is the sampler to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroySampler-sampler-01082
  All submitted commands that refer to `sampler` **must** have completed execution
- VUID-vkDestroySampler-sampler-01083
  If `VkAllocationCallbacks` were provided when `sampler` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySampler-sampler-01084
  If no `VkAllocationCallbacks` were provided when `sampler` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroySampler-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroySampler-sampler-parameter
  If `sampler` is not VK_NULL_HANDLE, `sampler` **must** be a valid VkSampler handle
- VUID-vkDestroySampler-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroySampler-sampler-parent
  If `sampler` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `sampler` **must** be externally synchronized

14.1. Sampler $Y'C_BC_R$ Conversion

To create a sampler with $Y'C_BC_R$ conversion enabled, add a VkSamplerYcbcrConversionInfo structure to the `pNext` chain of the VkSamplerCreateInfo structure. To create a sampler $Y'C_BC_R$ conversion, the `samplerYcbcrConversion` feature **must** be enabled. Conversion **must** be fixed at pipeline creation time, through use of a combined embedded sampler and image mapping if using descriptor heaps, or a combined image sampler with an immutable sampler in `VkDescriptorSetLayoutBinding`.

A VkSamplerYcbcrConversionInfo **must** be provided for samplers to be used with image views that access VK_IMAGE_ASPECT_COLOR_BIT if the format is one of the formats that require a sampler $Y'C_BC_R$ conversion .

The `VkSamplerYcbcrConversionInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionInfo {
    VkStructureType             sType;
    const void*                 pNext;
    VkSamplerYcbcrConversion    conversion;
} VkSamplerYcbcrConversionInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversionInfo
typedef VkSamplerYcbcrConversionInfo VkSamplerYcbcrConversionInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `conversion` is a VkSamplerYcbcrConversion handle created with vkCreateSamplerYcbcrConversion.

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_INFO
- VUID-VkSamplerYcbcrConversionInfo-conversion-parameter
  `conversion` **must** be a valid VkSamplerYcbcrConversion handle

Structure Chaining

Extends the structures

- VkImageViewCreateInfo
- VkSamplerCreateInfo

A sampler $Y'C_BC_R$ conversion is an opaque representation of a device-specific sampler $Y'C_BC_R$ conversion description, represented as a `VkSamplerYcbcrConversion` handle:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSamplerYcbcrConversion)
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversion
typedef VkSamplerYcbcrConversion VkSamplerYcbcrConversionKHR;
```

To create a VkSamplerYcbcrConversion, call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateSamplerYcbcrConversion(
    VkDevice                                    device,
    const VkSamplerYcbcrConversionCreateInfo*   pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSamplerYcbcrConversion*                   pYcbcrConversion);
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to vkCreateSamplerYcbcrConversion
VkResult vkCreateSamplerYcbcrConversionKHR(
    VkDevice                                    device,
    const VkSamplerYcbcrConversionCreateInfo*   pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkSamplerYcbcrConversion*                   pYcbcrConversion);
```

- `device` is the logical device that creates the sampler $Y'C_BC_R$ conversion.
- `pCreateInfo` is a pointer to a VkSamplerYcbcrConversionCreateInfo structure specifying the requested sampler $Y'C_BC_R$ conversion.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pYcbcrConversion` is a pointer to a VkSamplerYcbcrConversion handle in which the resulting sampler $Y'C_BC_R$ conversion is returned.

The interpretation of the configured sampler $Y'C_BC_R$ conversion is described in more detail in the description of sampler $Y'C_BC_R$ conversion in the Image Operations chapter.

Valid Usage

- VUID-vkCreateSamplerYcbcrConversion-None-01648
  The `samplerYcbcrConversion` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateSamplerYcbcrConversion-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateSamplerYcbcrConversion-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSamplerYcbcrConversionCreateInfo structure
- VUID-vkCreateSamplerYcbcrConversion-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateSamplerYcbcrConversion-pYcbcrConversion-parameter
  `pYcbcrConversion` **must** be a valid pointer to a VkSamplerYcbcrConversion handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkSamplerYcbcrConversionCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionCreateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkFormat                        format;
    VkSamplerYcbcrModelConversion   ycbcrModel;
    VkSamplerYcbcrRange             ycbcrRange;
    VkComponentMapping              components;
    VkChromaLocation                xChromaOffset;
    VkChromaLocation                yChromaOffset;
    VkFilter                        chromaFilter;
    VkBool32                        forceExplicitReconstruction;
} VkSamplerYcbcrConversionCreateInfo;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversionCreateInfo
typedef VkSamplerYcbcrConversionCreateInfo VkSamplerYcbcrConversionCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- format is the format of the image from which color information will be retrieved.
- ycbcrModel describes the color matrix for conversion between color models.
- ycbcrRange describes whether the encoded values have headroom and foot room, or whether the encoding uses the full numerical range.
- components applies a *swizzle* based on VkComponentSwizzle enums prior to range expansion and color model conversion.
- xChromaOffset describes the sample location associated with downsampled chroma components in the x dimension. xChromaOffset has no effect for formats in which chroma components are not downsampled horizontally.

- `yChromaOffset` describes the sample location associated with downsampled chroma components in the y dimension. `yChromaOffset` has no effect for formats in which the chroma components are not downsampled vertically.
- `chromaFilter` is the filter for chroma reconstruction.
- `forceExplicitReconstruction` **can** be used to ensure that reconstruction is done explicitly, if supported.

NOTE

Setting `forceExplicitReconstruction` to VK_TRUE **may** have a performance penalty on implementations where explicit reconstruction is not the default mode of operation.

If `format` supports VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT the `forceExplicitReconstruction` value behaves as if it were VK_TRUE.

Sampler $Y'C_BC_R$ conversion objects do not support *external format conversion* without additional extensions defining *external formats*.

Valid Usage

- VUID-VkSamplerYcbcrConversionCreateInfo-format-04061
  `format` **must** represent unsigned normalized values (i.e. the format **must** be a `UNORM` format)
- VUID-VkSamplerYcbcrConversionCreateInfo-format-01650
  The potential format features of the sampler $Y'C_BC_R$ conversion **must** support VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT or VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01651
  If the potential format features of the sampler $Y'C_BC_R$ conversion do not support VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT, `xChromaOffset` and `yChromaOffset` **must** not be VK_CHROMA_LOCATION_COSITED_EVEN if the corresponding components are downsampled
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01652
  If the potential format features of the sampler $Y'C_BC_R$ conversion do not support VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT, `xChromaOffset` and `yChromaOffset` **must** not be VK_CHROMA_LOCATION_MIDPOINT if the corresponding components are downsampled
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02581
  If the format has a `_422` or `_420` suffix, then `components.g` **must** be the identity swizzle
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02582
  If the format has a `_422` or `_420` suffix, then `components.a` **must** be the identity swizzle, VK_COMPONENT_SWIZZLE_ONE, or VK_COMPONENT_SWIZZLE_ZERO
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02583

If the format has a _422 or _420 suffix, then components.r **must** be the identity swizzle or VK_COMPONENT_SWIZZLE_B

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02584
  If the format has a _422 or _420 suffix, then components.b **must** be the identity swizzle or VK_COMPONENT_SWIZZLE_R
- VUID-VkSamplerYcbcrConversionCreateInfo-components-02585
  If the format has a _422 or _420 suffix, and if either components.r or components.b is the identity swizzle, both values **must** be the identity swizzle
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-01655
  If ycbcrModel is not VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY, then components.r, components.g, and components.b **must** correspond to components of the format; that is, components.r, components.g, and components.b **must** not be VK_COMPONENT_SWIZZLE_ZERO or VK_COMPONENT_SWIZZLE_ONE, and **must** not correspond to a component containing zero or one as a consequence of component substitution
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-02748
  If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_NARROW, then the R, G, and B components obtained by applying the component swizzle to format **must** each have a bit-depth greater than or equal to 8
- VUID-VkSamplerYcbcrConversionCreateInfo-forceExplicitReconstruction-01656
  If the potential format features of the sampler $Y'C_BC_R$ conversion do not support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT forceExplicitReconstruction **must** be VK_FALSE
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-01657
  If the potential format features of the sampler $Y'C_BC_R$ conversion do not support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT, chromaFilter **must** not be VK_FILTER_LINEAR

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_CREATE_INFO
- VUID-VkSamplerYcbcrConversionCreateInfo-pNext-pNext
  pNext **must** be NULL
- VUID-VkSamplerYcbcrConversionCreateInfo-format-parameter
  format **must** be a valid VkFormat value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-parameter
  ycbcrModel **must** be a valid VkSamplerYcbcrModelConversion value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-parameter
  ycbcrRange **must** be a valid VkSamplerYcbcrRange value
- VUID-VkSamplerYcbcrConversionCreateInfo-components-parameter
  components **must** be a valid VkComponentMapping structure

- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-parameter
  `xChromaOffset` **must** be a valid VkChromaLocation value
- VUID-VkSamplerYcbcrConversionCreateInfo-yChromaOffset-parameter
  `yChromaOffset` **must** be a valid VkChromaLocation value
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-parameter
  `chromaFilter` **must** be a valid VkFilter value

If `chromaFilter` is VK_FILTER_NEAREST, chroma samples are reconstructed to luma component resolution using nearest-neighbour sampling. Otherwise, chroma samples are reconstructed using interpolation. More details can be found in the description of sampler $Y'C_BC_R$ conversion in the Image Operations chapter.

VkSamplerYcbcrModelConversion defines the conversion from the source color model to the shader color model. Possible values are:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrModelConversion {
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY = 0,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY = 1,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709 = 2,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601 = 3,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020 = 4,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020_KHR =
VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020,
} VkSamplerYcbcrModelConversion;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrModelConversion
typedef VkSamplerYcbcrModelConversion VkSamplerYcbcrModelConversionKHR;
```

- VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY specifies that the input values to the conversion are unmodified.
- VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY specifies no model conversion

but the inputs are range expanded as for $Y'C_BC_R$.

- VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709 specifies the color model conversion from $Y'C_BC_R$ to R'G'B' defined in BT.709 and described in the "BT.709 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.
- VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601 specifies the color model conversion from $Y'C_BC_R$ to R'G'B' defined in BT.601 and described in the "BT.601 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.
- VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020 specifies the color model conversion from $Y'C_BC_R$ to R'G'B' defined in BT.2020 and described in the "BT.2020 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.

In the `VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_*` color models, for the input to the sampler $Y'C_BC_R$ range expansion and model conversion:

- the Y (Y' luma) component corresponds to the G component of an RGB image.
- the CB (C_B or "U" blue color difference) component corresponds to the B component of an RGB image.
- the CR (C_R or "V" red color difference) component corresponds to the R component of an RGB image.
- the alpha component, if present, is not modified by color model conversion.

These rules reflect the mapping of components after the component swizzle operation (controlled by VkSamplerYcbcrConversionCreateInfo::`components`).

NOTE

For example, an "YUVA" 32-bit format comprising four 8-bit components can be implemented as VK_FORMAT_R8G8B8A8_UNORM with a component mapping:

- `components.a` = VK_COMPONENT_SWIZZLE_IDENTITY
- `components.r` = VK_COMPONENT_SWIZZLE_B
- `components.g` = VK_COMPONENT_SWIZZLE_R
- `components.b` = VK_COMPONENT_SWIZZLE_G

The VkSamplerYcbcrRange enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room. VkSamplerYcbcrRange is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrRange {
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL = 0,
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW = 1,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_FULL,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_NARROW,
} VkSamplerYcbcrRange;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrRange
typedef VkSamplerYcbcrRange VkSamplerYcbcrRangeKHR;
```

- VK_SAMPLER_YCBCR_RANGE_ITU_FULL specifies that the full range of the encoded values are valid and interpreted according to the ITU “full range” quantization rules.
- VK_SAMPLER_YCBCR_RANGE_ITU_NARROW specifies that headroom and foot room are reserved in the numerical range of encoded values, and the remaining values are expanded according to the ITU “narrow range” quantization rules.

The formulae for these conversions is described in the Sampler $Y'C_BC_R$ Range Expansion section of the Image Operations chapter.

No range modification takes place if `ycbcrModel` is VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY; the `ycbcrRange` field of VkSamplerYcbcrConversionCreateInfo is ignored in this case.

The VkChromaLocation enum defines the location of downsampled chroma component samples relative to the luma samples, and is defined as:

```
// Provided by VK_VERSION_1_1
typedef enum VkChromaLocation {
    VK_CHROMA_LOCATION_COSITED_EVEN = 0,
    VK_CHROMA_LOCATION_MIDPOINT = 1,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_COSITED_EVEN_KHR = VK_CHROMA_LOCATION_COSITED_EVEN,
  // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_MIDPOINT_KHR = VK_CHROMA_LOCATION_MIDPOINT,
} VkChromaLocation;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkChromaLocation
typedef VkChromaLocation VkChromaLocationKHR;
```

- VK_CHROMA_LOCATION_COSITED_EVEN specifies that downsampled chroma samples are

aligned with luma samples with even coordinates.

- VK_CHROMA_LOCATION_MIDPOINT specifies that downsampled chroma samples are located half way between each even luma sample and the nearest higher odd luma sample.

To destroy a sampler $Y'C_BC_R$ conversion, call:

```
// Provided by VK_VERSION_1_1
void vkDestroySamplerYcbcrConversion(
    VkDevice                                    device,
    VkSamplerYcbcrConversion                    ycbcrConversion,
    const VkAllocationCallbacks*                pAllocator);
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to vkDestroySamplerYcbcrConversion
void vkDestroySamplerYcbcrConversionKHR(
    VkDevice                                    device,
    VkSamplerYcbcrConversion                    ycbcrConversion,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the $Y'C_BC_R$ conversion.
- `ycbcrConversion` is the conversion to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage (Implicit)

- VUID-vkDestroySamplerYcbcrConversion-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parameter
  If `ycbcrConversion` is not VK_NULL_HANDLE, `ycbcrConversion` **must** be a valid VkSamplerYcbcrConversion handle
- VUID-vkDestroySamplerYcbcrConversion-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parent
  If `ycbcrConversion` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `ycbcrConversion` **must** be externally synchronized

14.2. Custom Border Colors

In addition to the predefined border color values, applications **can** provide a custom border color value by including the VkSamplerCustomBorderColorCreateInfoEXT structure in the VkSamplerCreateInfo::pNext chain.

The VkSamplerCustomBorderColorCreateInfoEXT structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkSamplerCustomBorderColorCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkClearColorValue    customBorderColor;
    VkFormat             format;
} VkSamplerCustomBorderColorCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- customBorderColor is a VkClearColorValue representing the desired custom sampler border color.
- format is a VkFormat representing the format of the sampled image view(s). This field may be VK_FORMAT_UNDEFINED if the customBorderColorWithoutFormat feature is enabled.

NOTE

If format is a depth/stencil format, the aspect is determined by the value of VkSamplerCreateInfo::borderColor. If VkSamplerCreateInfo::borderColor is VK_BORDER_COLOR_FLOAT_CUSTOM_EXT, the depth aspect is considered. If VkSamplerCreateInfo::borderColor is VK_BORDER_COLOR_INT_CUSTOM_EXT, the stencil aspect is considered.

If format is VK_FORMAT_UNDEFINED, the VkSamplerCreateInfo::borderColor is VK_BORDER_COLOR_INT_CUSTOM_EXT, and the sampler is used with an image with a stencil format, then the implementation **must** source the custom border color from either the first or second components of VkSamplerCreateInfo ::borderColor and **should** source it from the first component.

In some cases, implementations **may** return undefined values instead of the specified custom border color when used on VK_QUEUE_COMPUTE_BIT queues that do not also support VK_QUEUE_GRAPHICS_BIT. Undefined: values **may** also be returned in task shaders.

NOTE

Tests added in 2026 revealed issues around custom border colors on AMD in compute-only queues and with task shaders, that were not fixable in software. While this will be fixed in future hardware, there is no reasonable workaround for existing hardware. Use of standard border colors is unaffected.

Valid Usage

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-07605
  If `format` is not VK_FORMAT_UNDEFINED and `format` is not a depth/stencil format then the VkSamplerCreateInfo::`borderColor` type **must** match the sampled type of the provided `format`, as shown in the *SPIR-V Type* column of the Interpretation of Numeric Format table
- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04014
  If the `customBorderColorWithoutFormat` feature is not enabled then `format` **must** not be VK_FORMAT_UNDEFINED
- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04015
  If the sampler is used to sample an image view of VK_FORMAT_B4G4R4A4_UNORM_PACK16, VK_FORMAT_B5G6R5_UNORM_PACK16, VK_FORMAT_A1B5G5R5_UNORM_PACK16, or VK_FORMAT_B5G5R5A1_UNORM_PACK16 format then `format` **must** not be VK_FORMAT_UNDEFINED

Valid Usage (Implicit)

- VUID-VkSamplerCustomBorderColorCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_CREATE_INFO_EXT
- VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-parameter
  `format` **must** be a valid VkFormat value

Structure Chaining

Extends the structure

- VkSamplerCreateInfo

If the sampler is created with VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK, VK_BORDER_COLOR_INT_OPAQUE_BLACK, VK_BORDER_COLOR_FLOAT_CUSTOM_EXT, or VK_BORDER_COLOR_INT_CUSTOM_EXT `borderColor`, and that sampler will be combined with an image view that does not have an identity swizzle, and VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::`borderColorSwizzleFromImage` is not enabled, then it is necessary to specify the component mapping of the border color, by including the `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure in the VkSamplerCreateInfo::`pNext` chain, to get defined results.

The `VkSamplerBorderColorComponentMappingCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkSamplerBorderColorComponentMappingCreateInfoEXT {
    VkStructureType       sType;
    const void*           pNext;
    VkComponentMapping    components;
    VkBool32              srgb;
} VkSamplerBorderColorComponentMappingCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `components` is a VkComponentMapping structure specifying a remapping of the border color components.
- `srgb` indicates that the sampler will be combined with an image view that has an image format which is sRGB encoded.

The VkComponentMapping `components` member describes a remapping from components of the border color to components of the vector returned by shader image instructions when the border color is used.

Valid Usage

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-borderColorSwizzle-06437
  The `borderColorSwizzle` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT
- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-components-parameter
  `components` **must** be a valid VkComponentMapping structure

Structure Chaining

Extends the structure

- VkSamplerCreateInfo

14.2.1. Custom Border Color Registration

When using descriptor heaps, it is possible to create a sampler descriptor without creating a

sampler object. Without this object, implementations using a fixed palette of border colors have no way to know which custom border colors are active or not.

In order to use custom border colors with descriptor heaps, border colors **must** instead be registered with the implementation and unregistered when they are no longer in use, and the registered index provided when writing the sampler descriptor.

To register a custom border color, call:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
VkResult vkRegisterCustomBorderColorEXT(
    VkDevice                                    device,
    const VkSamplerCustomBorderColorCreateInfoEXT* pBorderColor,
    VkBool32                                    requestIndex,
    uint32_t*                                   pIndex);
```

- `device` is the logical device where the border color is registered.
- `pBorderColor` is a pointer to a VkSamplerCustomBorderColorCreateInfoEXT structure specifying the custom border color value to register.
- `requestIndex` is a Boolean value indicating if a specific index is requested or not.
- `pIndex` is a pointer to a `uint32_t` index value that will be written by the command upon success.

If `requestIndex` is VK_TRUE, the value present in `pIndex` when passed to the command is a requested index, and rather than returning a new index, the implementation will attempt to register that index, leaving the value intact. If the implementation is unable to register a requested index, VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS will be returned. If an index has not been registered (either explicitly or implicitly by creating a sampler object), or if it has been subsequently unregistered, the implementation **must** register that index successfully.

If `requestIndex` is VK_FALSE, the value stored in `pIndex` is ignored, and a new index will be returned if the implementation is able to register a new index. If the implementation is unable to register a new index, VK_ERROR_TOO_MANY_OBJECTS will be returned.

If an index is successfully registered, it **can** be used when writing a sampler descriptor or creating a sampler object to use with the custom border color, via VkSamplerCustomBorderColorIndexCreateInfoEXT.

NOTE The type of border color is not specified by this command (VK_BORDER_COLOR_FLOAT_CUSTOM_EXT vs. VK_BORDER_COLOR_INT_CUSTOM_EXT); the data will be interpreted at the point the border color is sampled with an actual sampler. Implementations are expected to store the data as raw bytes if they do not need the format to be specified.

Valid Usage

- VUID-vkRegisterCustomBorderColorEXT-requestIndex-11287
  If `requestIndex` is VK_TRUE, the value stored in `pIndex` **must** be less than

maxCustomBorderColorSamplers

Valid Usage (Implicit)

- VUID-vkRegisterCustomBorderColorEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkRegisterCustomBorderColorEXT-pBorderColor-parameter
  `pBorderColor` **must** be a valid pointer to a valid VkSamplerCustomBorderColorCreateInfoEXT structure
- VUID-vkRegisterCustomBorderColorEXT-pIndex-parameter
  `pIndex` **must** be a valid pointer to a `uint32_t` value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To unregister a custom border color, call:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
void vkUnregisterCustomBorderColorEXT(
    VkDevice                                    device,
    uint32_t                                    index);
```

- `device` is the logical device where the border color is registered.
- `index` is the `uint32_t` index value to unregister.

Valid Usage

- VUID-vkUnregisterCustomBorderColorEXT-index-11288
  `index` **must** be less than `maxCustomBorderColorSamplers`

Valid Usage (Implicit)

- VUID-vkUnregisterCustomBorderColorEXT-device-parameter
  `device` **must** be a valid VkDevice handle

The `VkSamplerCustomBorderColorIndexCreateInfoEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color with VK_EXT_descriptor_heap
typedef struct VkSamplerCustomBorderColorIndexCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
} VkSamplerCustomBorderColorIndexCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `index` is the `uint32_t` index value to use with the sampler

If this structure is included in the `pNext` chain of VkSamplerCreateInfo, the value of `index` will be used for the custom border color registration. `index` does not need to be registered at the point that a sampler object is created or a sampler descriptor is written; as long as it is registered when any use of the sampler is recorded to a command, and remains registered while the sampler is in use. The color registered with the index and the color specified in the sampler **must** be identically defined.

If this structure is not provided when creating a sampler object with a custom border color, it is equivalent to registering a new custom border color by calling vkRegisterCustomBorderColorEXT with that custom border color value, and using that value as `index` in this structure. This implicit registration will be implicitly unregistered when the sampler is destroyed.

If this structure is not provided when creating a sampler object without a custom border color, it is equivalent to setting `index` to 0.

Valid Usage

- VUID-VkSamplerCustomBorderColorIndexCreateInfoEXT-index-11289
  `index` **must** be less than `maxCustomBorderColorSamplers`

Valid Usage (Implicit)

- VUID-VkSamplerCustomBorderColorIndexCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_INDEX_CREATE_INFO_EXT

Structure Chaining

Extends the structure

- VkSamplerCreateInfo

Chapter 15. Resource Descriptors

A *descriptor* is an opaque data structure used to access shader resources such as buffers, images, or samplers. Rather than existing as distinct objects, descriptors are handled as opaque data, which can be accessed by a shader through descriptor heaps, descriptor buffers, or descriptor sets.

Shaders access descriptors via the `ResourceHeapEXT` and `SamplerHeapEXT` built-ins, or through variables decorated with `DescriptorSet` and `Binding` values linking them to the API. Details of the shader interface mapping are described in the Shader Resource Interface section.

NOTE Shaders can also access buffers without going through descriptors by using Physical Storage Buffer Access to access them through 64-bit addresses.

15.1. Descriptor Types

There are a number of different types of descriptor supported by Vulkan, corresponding to different resources or usage. The following sections describe the API definitions of each descriptor type. The mapping of each type to SPIR-V is listed in the Shader Resource and Descriptor Type Correspondence and Shader Resource and Storage Class Correspondence tables in the Shader Interfaces chapter.

Possible descriptor types are:

```
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorType {
    VK_DESCRIPTOR_TYPE_SAMPLER = 0,
    VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER = 1,
    VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE = 2,
    VK_DESCRIPTOR_TYPE_STORAGE_IMAGE = 3,
    VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER = 4,
    VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER = 5,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER = 6,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER = 7,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC = 8,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC = 9,
    VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT = 10,
  // Provided by VK_VERSION_1_3
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK = 1000138000,
  // Provided by VK_KHR_acceleration_structure
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR = 1000150000,
  // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_EXT = 1000351000,
} VkDescriptorType;
```

- VK_DESCRIPTOR_TYPE_SAMPLER specifies a sampler descriptor.
- VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER specifies a combined image sampler descriptor.

- VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE specifies a sampled image descriptor.
- VK_DESCRIPTOR_TYPE_STORAGE_IMAGE specifies a storage image descriptor.
- VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER specifies a uniform texel buffer descriptor.
- VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER specifies a storage texel buffer descriptor.
- VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER specifies a uniform buffer descriptor.
- VK_DESCRIPTOR_TYPE_STORAGE_BUFFER specifies a storage buffer descriptor.
- VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC specifies a dynamic uniform buffer descriptor.
- VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC specifies a dynamic storage buffer descriptor.
- VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT specifies an input attachment descriptor.
- VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK specifies an inline uniform block.
- VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR specifies an acceleration structure descriptor.
- VK_DESCRIPTOR_TYPE_MUTABLE_EXT specifies a descriptor of mutable type.

15.1.1. Storage Image

A *storage image* (VK_DESCRIPTOR_TYPE_STORAGE_IMAGE) is a descriptor type associated with an image resource via an image view that load, store, and atomic operations **can** be performed on.

Storage image loads are supported in all shader stages for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT.

Stores to storage images are supported in task, mesh and compute shaders for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT.

Atomic operations on storage images are supported in task, mesh and compute shaders for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT.

When the `fragmentStoresAndAtomics` feature is enabled, stores and atomic operations are also supported for storage images in fragment shaders with the same set of image formats as supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of image formats as supported in compute shaders.

The image subresources for a storage image **must** be in the VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR or VK_IMAGE_LAYOUT_GENERAL layout in order to access its data in a shader.

15.1.2. Sampler

A *sampler descriptor* (VK_DESCRIPTOR_TYPE_SAMPLER) is a descriptor type associated with a sampler object, used to control the behavior of sampling operations performed on a sampled image.

15.1.3. Sampled Image

A *sampled image* (VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE) is a descriptor type associated with an image resource via an image view that sampling operations **can** be performed on.

Shaders combine a sampled image variable and a sampler variable to perform sampling operations.

Sampled images are supported in all shader stages for image views whose format features contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT.

An image subresources for a sampled image **must** be in one of the following layouts:

- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
- VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT

15.1.4. Combined Image Sampler

A *combined image sampler* (VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER) is a single descriptor type associated with both a sampler and an image resource, combining both a sampler and sampled image descriptor into a single descriptor.

If the descriptor refers to a sampler that performs $Y'C_BC_R$ conversion or samples a subsampled image, the sampler **must** only be used to sample the image in the same descriptor. Otherwise, the sampler and image in this type of descriptor **can** be used freely with any other samplers and images.

An image subresources for a combined image sampler **must** be in one of the following layouts:

- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL

- VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
- VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT

NOTE	On some implementations, it **may** be more efficient to sample from an image using a combination of sampler and sampled image that are stored together in the descriptor set in a combined descriptor.

15.1.5. Uniform Texel Buffer

A *uniform texel buffer* (VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER) is a descriptor type associated with a buffer resource via a buffer view that image sampling operations **can** be performed on.

Uniform texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image.

Load operations from uniform texel buffers are supported in all shader stages for buffer view formats which report format features support for VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT

15.1.6. Storage Texel Buffer

A *storage texel buffer* (VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER) is a descriptor type associated with a buffer resource via a buffer view that image load, store, and atomic operations **can** be performed on.

Storage texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image. Unlike uniform texel buffers, these buffers can also be written to in the same way as for storage images.

Storage texel buffer loads are supported in all shader stages for texel buffer view formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

Stores to storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

Atomic operations on storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

When the `fragmentStoresAndAtomics` feature is enabled, stores and atomic operations are also supported for storage texel buffers in fragment shaders with the same set of texel buffer formats as supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of texel buffer formats as supported in compute shaders.

15.1.7. Storage Buffer

A *storage buffer* (VK_DESCRIPTOR_TYPE_STORAGE_BUFFER) is a descriptor type associated with a buffer resource directly, described in a shader as a structure with various members that load, store, and atomic operations **can** be performed on.

NOTE	Atomic operations **can** only be performed on members of certain types as defined in the SPIR-V environment appendix.

15.1.8. Uniform Buffer

A *uniform buffer* (VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER) is a descriptor type associated with a buffer resource directly, described in a shader as a structure with various members that load operations **can** be performed on.

15.1.9. Dynamic Uniform Buffer

A *dynamic uniform buffer* (VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC) is almost identical to a uniform buffer, and differs only in how the offset into the buffer is specified. This descriptor type is only valid when using descriptor sets. The base offset calculated by VkDescriptorBufferInfo when initially updating a descriptor set is added to a dynamic offset when binding a descriptor set.

15.1.10. Dynamic Storage Buffer

A *dynamic storage buffer* (VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC) is almost identical to a storage buffer, and differs only in how the offset into the buffer is specified. This descriptor type is only valid when using descriptor sets. The base offset calculated by VkDescriptorBufferInfo when initially updating a descriptor set is added to a dynamic offset when binding a descriptor set.

15.1.11. Inline Uniform Block

An *inline uniform block* (VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK) is almost identical to a uniform buffer in how it is accessed in the shader. Where it differs is that its storage is taken directly from a containing descriptor set or descriptor buffer, instead of being backed by a separate buffer object. This descriptor type is not valid when using descriptor heaps; applications **can** directly access the heap pointer in a shader or use the VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT mapping.

Inline uniform blocks are typically used to access a small set of constant data that does not require the additional flexibility provided by the indirection enabled when using a uniform buffer where the descriptor and the referenced buffer memory are decoupled. Compared to push constants, they allow reusing the same set of constant data across multiple disjoint sets of drawing and dispatching commands.

Inline uniform block descriptors **cannot** be aggregated into arrays. Instead, the array size specified for an inline uniform block descriptor binding specifies the binding's capacity in bytes.

15.1.12. Input Attachment

An *input attachment* (VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT) is a descriptor type associated with an image resource via an image view that **can** be used for framebuffer local load operations in fragment shaders.

All image formats that are supported for color attachments (VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT) or depth/stencil attachments (VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT) for a given image tiling mode are also supported for input attachments.

An image view used as an input attachment **must** be in one of the following layouts:

- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
- VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT
- VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ

15.1.13. Acceleration Structure

An *acceleration structure* (VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR) is a descriptor type that is used to retrieve scene geometry from within shaders that are used for ray traversal. Shaders have read-only access to the memory.

15.1.14. Mutable

A descriptor of *mutable* (VK_DESCRIPTOR_TYPE_MUTABLE_EXT) type indicates that this descriptor **can** mutate to a number of different types. This descriptor type is not valid when using descriptor heaps, as the elements of a descriptor heap **can** be manually adjusted to hold different descriptor types already. When specified in a descriptor set layout, any of the descriptor types given in the VkMutableDescriptorTypeListEXT::`pDescriptorTypes` list of descriptor types in the `pNext` chain of VkDescriptorSetLayoutCreateInfo for this binding. At any point, each individual descriptor of mutable type has an active descriptor type. The active descriptor type **can** be any one of the declared types in `pDescriptorTypes`. Additionally, a mutable descriptor's active descriptor type **can** be of the VK_DESCRIPTOR_TYPE_MUTABLE_EXT type, which is the initial active descriptor type. The active descriptor type **can** change when the descriptor is updated. When a descriptor is consumed by binding a descriptor buffer or set, the active descriptor type is considered, not VK_DESCRIPTOR_TYPE_MUTABLE_EXT.

An active descriptor type of VK_DESCRIPTOR_TYPE_MUTABLE_EXT is considered an undefined descriptor. If a descriptor is consumed where the active descriptor type does not match what the shader expects, the descriptor is considered an undefined descriptor.

NOTE

To find which descriptor types are supported as VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the application **can** use vkGetDescriptorSetLayoutSupport with a VK_DESCRIPTOR_TYPE_MUTABLE_EXT binding, with the list of descriptor types to query in the VkMutableDescriptorTypeCreateInfoEXT::`pMutableDescriptorTypeLists` array for that binding.

NOTE

The intention of a mutable descriptor type is that implementations allocate N bytes per descriptor, where N is determined by the maximum descriptor size for a given descriptor binding. Implementations are not expected to keep track of the active descriptor type, and it should be considered a C-like union type.

A mutable descriptor type is not considered as efficient in terms of runtime performance as using a non-mutable descriptor type, and applications are not encouraged to use them outside API layering efforts. Mutable descriptor types can be more efficient if the alternative is using many different descriptors to emulate mutable descriptor types.

15.2. Physical Storage Buffer Access

Buffer device addresses **can** also be used to access buffer memory in a shader, using the `SPV_KHR_physical_storage_buffer` extension and the `PhysicalStorageBuffer` storage class. For example, this value **can** be stored in a uniform buffer, and the shader **can** read the value from the uniform buffer and use it to do a dependent read/write to this buffer. All loads, stores, and atomics in a shader through `PhysicalStorageBuffer` pointers **must** access addresses in the address range of some buffer.

Chapter 16. Descriptor Heaps

When the descriptorHeap feature is enabled, applications can use descriptor heaps to specify the descriptors that they will be accessing from shaders. Descriptor heaps are not objects, rather they are state that is bound to a command buffer indicating the device address of descriptors that can be accessed from a shader. There are two heaps available to the application - the sampler heap and the resource heap. The sampler heap contains sampler descriptors, the resource heap contains image, acceleration structure, and buffer descriptors.

16.1. Writing Descriptors

Descriptors can be obtained for the different heaps with commands that write descriptors to a host address, with the application responsible for transferring those descriptors into device memory for access via heaps.

To write sampler descriptors to memory, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkWriteSamplerDescriptorsEXT(
    VkDevice                                    device,
    uint32_t                                    samplerCount,
    const VkSamplerCreateInfo*                  pSamplers,
    const VkHostAddressRangeEXT*                pDescriptors);
```

- device is the logical device that the descriptors are for.
- samplerCount is the number of elements in pSamplers and pDescriptors.
- pSamplers is a pointer to an array of VkSamplerCreateInfo structures defining properties of the sampler descriptors that will be written.
- pDescriptors is a pointer to an array of VkHostAddressRangeEXT structures defining the host address ranges that will be written to for each descriptor.

Each descriptor will be written to pDescriptors[i].address where i is the index of its create info in pSamplers.

Descriptors written using a fully identical VkSamplerCreateInfo structure on the same VkDevice will always return the same bit pattern. If the descriptorHeapCaptureReplay feature is enabled, descriptors written using a fully identical VkSamplerCreateInfo structure on a VkDevice created from the same VkPhysicalDevice with identical parameters will always return the same bit pattern.

NOTE YC_BC_R samplers must be embedded in a shader by using VkShaderDescriptorSetAndBindingMappingInfoEXT, they cannot be specified here.

Valid Usage

- VUID-vkWriteSamplerDescriptorsEXT-descriptorHeap-11202

The descriptorHeap feature **must** be enabled

- VUID-vkWriteSamplerDescriptorsEXT-size-11203
  The size member of each element of pDescriptors **must** be greater than or equal to the value returned by vkGetPhysicalDeviceDescriptorSizeEXT with a descriptorType equal to VK_DESCRIPTOR_TYPE_SAMPLER
- VUID-vkWriteSamplerDescriptorsEXT-pSamplers-11204
  Elements of pSamplers **must** not include VkSamplerYcbcrConversionInfo structures in their pNext chains
- VUID-vkWriteSamplerDescriptorsEXT-borderColor-11444
  If the borderColor of any element of pSamplers is VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT, VkSamplerCustomBorderColorIndexCreateInfoEXT **must** be included in the pNext chain of that element
- VUID-vkWriteSamplerDescriptorsEXT-borderColor-11205
  If the borderColor of any element of pSamplers is VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT, VkSamplerCustomBorderColorIndexCreateInfoEXT::index **must** be a value less than maxCustomBorderColorSamplers
- VUID-vkWriteSamplerDescriptorsEXT-pNext-11400
  If there is a VkDebugUtilsObjectNameInfoEXT structure in the pNext chain of any element of pSamplers, its objectType **must** be VK_OBJECT_TYPE_UNKNOWN

Valid Usage (Implicit)

- VUID-vkWriteSamplerDescriptorsEXT-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkWriteSamplerDescriptorsEXT-pSamplers-parameter
  pSamplers **must** be a valid pointer to an array of samplerCount valid VkSamplerCreateInfo structures
- VUID-vkWriteSamplerDescriptorsEXT-pDescriptors-parameter
  pDescriptors **must** be a valid pointer to an array of samplerCount valid VkHostAddressRangeEXT structures
- VUID-vkWriteSamplerDescriptorsEXT-samplerCount-arraylength
  samplerCount **must** be greater than 0

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To write resource descriptors to memory, call:

```
// Provided by VK_EXT_descriptor_heap
VkResult vkWriteResourceDescriptorsEXT(
    VkDevice                                    device,
    uint32_t                                    resourceCount,
    const VkResourceDescriptorInfoEXT*          pResources,
    const VkHostAddressRangeEXT*                pDescriptors);
```

- `device` is the logical device that the descriptors are for.
- `resourceCount` is the number of elements in `pResources` and `pDescriptors`.
- `pResources` is a pointer to an array of VkResourceDescriptorInfoEXT structures defining properties of the resource descriptors that will be written.
- `pDescriptors` is a pointer to an array of VkHostAddressRangeEXT structures defining the host address ranges that will be written to for each descriptor.

Each descriptor will be written to `pDescriptors`[i].address where i is the index of its create info in `pResources`.

If any image descriptor written by this command includes a VkSamplerYcbcrConversion, multiple descriptors will be written adjacent to each other for that descriptor, equal to VkSamplerYcbcrConversionImageFormatProperties::`combinedImageSamplerDescriptorCount` for the image .

If any image descriptor written by this command is for an image created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, multiple descriptors will be written adjacent to each other for that descriptor, equal to VkSubsampledImageFormatPropertiesEXT ::`subsampledImageDescriptorCount` for the image.

Descriptors using the same `type` and written using a fully identical VkTexelBufferDescriptorInfoEXT or VkDeviceAddressRangeKHR structure on the same VkDevice will always return the same bit pattern. If the descriptorHeapCaptureReplay feature is enabled, this applies to any VkDevice created with identical parameters from the same VkPhysicalDevice.

NOTE Recreating the same buffer descriptor during replay of a prior capture requires that the device address is the same, which requires additional data to be captured and provided during replay when creating a buffer and allocating memory for it.

Image descriptors using the same `type` and written using a fully identical VkImageDescriptorInfoEXT other than VkImageDescriptorInfoEXT::`pView->image`, where image was successfully created with VK_IMAGE_CREATE_DESCRIPTOR_HEAP_CAPTURE_REPLAY_BIT_EXT and a VkOpaqueCaptureDataCreateInfoEXT with data captured via vkGetImageOpaqueCaptureDataEXT

from an image used previously, will write a descriptor with the same bit pattern if possible; if the same bit pattern cannot be generated, VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS will be returned instead.

NOTE

Image creation is sufficiently complex that it may not be possible to recreate all possible descriptors from an image during replay, even if the image itself was successfully recreated. The conditions for this happening will be largely the same as those which could cause allocating a buffer with the same device address during replay to fail. Replay tools are advised to recreate captured descriptors for an image immediately after recreating the image itself wherever possible.

Valid Usage

- VUID-vkWriteResourceDescriptorsEXT-descriptorHeap-11206
  The `descriptorHeap` feature **must** be enabled
- VUID-vkWriteResourceDescriptorsEXT-size-11207
  The `size` member of each element of `pDescriptors` **must** be greater than or equal to the value returned by vkGetPhysicalDeviceDescriptorSizeEXT with a `descriptorType` equal to `type`
- VUID-vkWriteResourceDescriptorsEXT-pResources-11208
  If any element of `pResources` specifies a VkImageViewCreateInfo structure with a VkSamplerYcbcrConversionInfo structure in its `pNext` chain, the corresponding element of `pDescriptors` **must** have a `size` member that is greater than or equal to the product of the value returned by vkGetPhysicalDeviceDescriptorSizeEXT with a `descriptorType` equal to `type` and VkSamplerYcbcrConversionImageFormatProperties::`combinedImageSamplerDescriptorCount`, as queried from VkPhysicalDeviceImageFormatInfo2 with image format info equivalent to the image view the descriptor is being created for
- VUID-vkWriteResourceDescriptorsEXT-pResources-11209
  If any element of `pResources` specifies a VkImageViewCreateInfo structure with an `image` created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, the corresponding element of `pDescriptors` **must** have a `size` member that is greater than or equal to the product of the value returned by vkGetPhysicalDeviceDescriptorSizeEXT with a `descriptorType` equal to `type` and VkSubsampledImageFormatPropertiesEXT::`subsampledImageDescriptorCount`, as queried from VkPhysicalDeviceImageFormatInfo2 with image format info equivalent to the image view the descriptor is being created for
- VUID-vkWriteResourceDescriptorsEXT-pResources-12494
  If any element of `pResources` specifies a VkImageViewCreateInfo structure, `device` **must** support at least one queue family with one of the VK_QUEUE_VIDEO_ENCODE_BIT_KHR, VK_QUEUE_VIDEO_DECODE_BIT_KHR, VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT capabilities
- VUID-vkWriteResourceDescriptorsEXT-pResources-12495
  If any element of `pResources` specifies a VkImageViewCreateInfo structure, VkImageViewCreateInfo::`image` **must** have been created from `device`

Valid Usage (Implicit)

- VUID-vkWriteResourceDescriptorsEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkWriteResourceDescriptorsEXT-pResources-parameter
  `pResources` **must** be a valid pointer to an array of `resourceCount` valid VkResourceDescriptorInfoEXT structures
- VUID-vkWriteResourceDescriptorsEXT-pDescriptors-parameter
  `pDescriptors` **must** be a valid pointer to an array of `resourceCount` valid VkHostAddressRangeEXT structures
- VUID-vkWriteResourceDescriptorsEXT-resourceCount-arraylength
  `resourceCount` **must** be greater than `0`

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

`VkResourceDescriptorInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkResourceDescriptorInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDescriptorType                type;
    VkResourceDescriptorDataEXT     data;
} VkResourceDescriptorInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of descriptor to get.
- `data` is a VkResourceDescriptorDataEXT union defining the properties of a resource descriptor according to `type`

If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, `data->pTexelBuffer` is used to construct the

descriptor.

If `type` is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, `data->pAddressRange` is used to construct the descriptor. For acceleration structures, the size of the range is not used by the descriptor, and **can** be set to 0. If a non-zero size is provided though, it **must** be a valid range.

> **NOTE** Applications may wish to provide a valid range as a way to check their own assumptions about the range they are binding; but it has no bearing on anything except validation. Implementations cannot make any assumptions based on the size of the provided range.

If `type` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, `data->pImage` is used to construct the descriptor.

If the `nullDescriptor` feature is enabled, the corresponding element of `data` **may** be `NULL` to generate a null descriptor.

Applications **can** give resource descriptors a debug name in a similar way to naming an object, via the VkDebugUtilsObjectNameInfoEXT structure. However, as there is no actual object, this structure **must** be passed via the `pNext` chain of this structure, with a `objectType` of VK_OBJECT_TYPE_UNKNOWN and a `objectHandle` of VK_NULL_HANDLE. The name is attached to the unique set of descriptor bits written by the implementation, and writing the same bits again with new debug info **may** rename the original descriptor.

> **NOTE** Implementations are not prevented from returning the same bits for different descriptors. This can result in multiple different resources mapping to the same name. A common case for this might be something like a uniform buffer and storage buffer with the same device address range.

If a descriptor becomes invalid due to the underlying resource becoming invalid, implementations **may** remove the name association.

Valid Usage

- VUID-VkResourceDescriptorInfoEXT-type-11210
  `type` **must** be one of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT
- VUID-VkResourceDescriptorInfoEXT-None-11211
  If the `nullDescriptor` feature is not enabled, and `type` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, `data->pImage` **must** not be `NULL`

- VUID-VkResourceDescriptorInfoEXT-type-11469
  If `type` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, `data->pImage` **must** not be `NULL`
- VUID-VkResourceDescriptorInfoEXT-None-11212
  If the `nullDescriptor` feature is not enabled, and `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, `data->pTexelBuffer` **must** not be `NULL`
- VUID-VkResourceDescriptorInfoEXT-None-11213
  If the `nullDescriptor` feature is not enabled, and `type` is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, `data->pAddressRange` **must** not be `NULL`
- VUID-VkResourceDescriptorInfoEXT-type-12349
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, `data->pTexelBuffer->addressRange.address` **must** be a multiple of the effective alignment requirement of `data->pTexelBuffer->format` as determined by `minTexelBufferOffsetAlignment`
- VUID-VkResourceDescriptorInfoEXT-type-12350
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, `data->pAddressRange->address` **must** be a multiple of `minUniformBufferOffsetAlignment`
- VUID-VkResourceDescriptorInfoEXT-type-12351
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, `data->pAddressRange->address` **must** be a multiple of `minStorageBufferOffsetAlignment`
- VUID-VkResourceDescriptorInfoEXT-type-11454
  If `type` is one of
  - VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR

    `data->pAddressRange->address` **must** be a multiple of 256
- VUID-VkResourceDescriptorInfoEXT-type-12496
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, `data->pAddressRange->size` **must** be less than or equal to `maxUniformBufferRange`
- VUID-VkResourceDescriptorInfoEXT-type-12497
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, and the `shader64BitIndexing` feature is not enabled, `data->pAddressRange->size` **must** be less than or equal to `maxStorageBufferRange`
- VUID-VkResourceDescriptorInfoEXT-pNext-11401
  If there is a VkDebugUtilsObjectNameInfoEXT structure in the `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkResourceDescriptorInfoEXT-type-11422
  If `type` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, `data.pImage->pView->image` **must** not have been created with an `imageType` of VK_IMAGE_TYPE_3D
- VUID-VkResourceDescriptorInfoEXT-type-11424
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, `data.pImage->pView->viewType` is VK_IMAGE_VIEW_TYPE_2D, and the `image2DViewOf3D` feature is not enabled, `data.pImage-`

>pView->image **must** not have been created with an imageType of VK_IMAGE_TYPE_3D

- VUID-VkResourceDescriptorInfoEXT-type-11425
  If type is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, data.pImage->pView->viewType is VK_IMAGE_VIEW_TYPE_2D, and the sampler2DViewOf3D feature is not enabled, data.pImage->pView->image **must** not have been created with an imageType of VK_IMAGE_TYPE_3D
- VUID-VkResourceDescriptorInfoEXT-type-11433
  If type is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, data.pAddressRange->size **must** not be 0
- VUID-VkResourceDescriptorInfoEXT-type-11458
  If type is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE and data.pImage is not NULL, the effective usage of the VkImageViewCreateInfo **must** include the VK_IMAGE_USAGE_SAMPLED_BIT usage flag
- VUID-VkResourceDescriptorInfoEXT-type-11459
  If type is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE and data.pImage is not NULL, the effective usage of the VkImageViewCreateInfo **must** include the VK_IMAGE_USAGE_STORAGE_BIT usage flag
- VUID-VkResourceDescriptorInfoEXT-type-11460
  If type is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT and data.pImage is not NULL, the effective usage of the VkImageViewCreateInfo **must** include the VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT usage flag
- VUID-VkResourceDescriptorInfoEXT-type-11461
  If type is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER and data.pAddressRange is not NULL, data.pAddressRange **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11462
  If type is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER and data.pAddressRange is not NULL, data.pAddressRange **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11463
  If type is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER and data.pTexelBuffer is not NULL, data.pTexelBuffer->addressRange **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11464
  If type is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER and data.pTexelBuffer is not NULL, data.pTexelBuffer->addressRange **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT usage flag set
- VUID-VkResourceDescriptorInfoEXT-type-11483
  If type is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, and data.pAddressRange is not NULL, data.pAddressRange->address **must** be an acceleration structure address retrieved from a VkAccelerationStructureKHR object via vkGetAccelerationStructureDeviceAddressKHR

- VUID-VkResourceDescriptorInfoEXT-type-11484
  If `type` is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, `data.pAddressRange` is not `NULL`, and `data.pAddressRange->size` is not 0, `data.pAddressRange` **must** be a device address range allocated to the application from the buffer used to create the acceleration structure that `data.pAddressRange->address` was retrieved from, and within the buffer range bound to that acceleration structure

Valid Usage (Implicit)

- VUID-VkResourceDescriptorInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RESOURCE_DESCRIPTOR_INFO_EXT
- VUID-VkResourceDescriptorInfoEXT-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkDebugUtilsObjectNameInfoEXT
- VUID-VkResourceDescriptorInfoEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkResourceDescriptorInfoEXT-type-parameter
  `type` **must** be a valid VkDescriptorType value
- VUID-VkResourceDescriptorInfoEXT-pImage-parameter
  If `type` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM, or VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM, and if `pImage` is not `NULL`, the `pImage` member of `data` **must** be a valid pointer to a valid VkImageDescriptorInfoEXT structure
- VUID-VkResourceDescriptorInfoEXT-pTexelBuffer-parameter
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, and if `pTexelBuffer` is not `NULL`, the `pTexelBuffer` member of `data` **must** be a valid pointer to a valid VkTexelBufferDescriptorInfoEXT structure
- VUID-VkResourceDescriptorInfoEXT-pAddressRange-parameter
  If `type` is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, and if `pAddressRange` is not `NULL`, the `pAddressRange` member of `data` **must** be a valid pointer to a valid VkDeviceAddressRangeEXT structure
- VUID-VkResourceDescriptorInfoEXT-pTensorARM-parameter
  If `type` is VK_DESCRIPTOR_TYPE_TENSOR_ARM, and if `pTensorARM` is not `NULL`, the `pTensorARM` member of `data` **must** be a valid pointer to a valid VkTensorViewCreateInfoARM structure

The `VkResourceDescriptorDataEXT` union is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef union VkResourceDescriptorDataEXT {
    const VkImageDescriptorInfoEXT*          pImage;
    const VkTexelBufferDescriptorInfoEXT*    pTexelBuffer;
    const VkDeviceAddressRangeEXT*           pAddressRange;
    const VkTensorViewCreateInfoARM*         pTensorARM;
} VkResourceDescriptorDataEXT;
```

- `pImage` is a pointer to a VkImageDescriptorInfoEXT structure.
- `pTexelBuffer` is a pointer to a VkTexelBufferDescriptorInfoEXT structure.
- `pAddressRange` is a pointer to a VkDeviceAddressRangeKHR structure.

`VkTexelBufferDescriptorInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkTexelBufferDescriptorInfoEXT {
    VkStructureType            sType;
    const void*                pNext;
    VkFormat                   format;
    VkDeviceAddressRangeEXT    addressRange;
} VkTexelBufferDescriptorInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `format` is the VkFormat of the descriptor.
- `addressRange` is a VkDeviceAddressRangeKHR defining the range of data backing the descriptor.

Valid Usage (Implicit)

- VUID-VkTexelBufferDescriptorInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_TEXEL_BUFFER_DESCRIPTOR_INFO_EXT
- VUID-VkTexelBufferDescriptorInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkTexelBufferDescriptorInfoEXT-format-parameter
  `format` **must** be a valid VkFormat value

`VkImageDescriptorInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkImageDescriptorInfoEXT {
    VkStructureType                 sType;
    const void*                     pNext;
    const VkImageViewCreateInfo*    pView;
    VkImageLayout                   layout;
} VkImageDescriptorInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pView` is an VkImageViewCreateInfo describing the descriptor.
- `layout` is the VkImageLayout that the image view will be in when accessed as a descriptor.

Valid Usage

- VUID-VkImageDescriptorInfoEXT-pView-11426
  `pView->viewType` **must** not be VK_IMAGE_VIEW_TYPE_2D_ARRAY if `pView->image` was created with an `imageType` of VK_IMAGE_TYPE_3D
- VUID-VkImageDescriptorInfoEXT-pView-11427
  If `pView->viewType` is VK_IMAGE_VIEW_TYPE_2D and `pView->image` was created with an `imageType` of VK_IMAGE_TYPE_3D, `pView->image` **must** have been created with VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set
- VUID-VkImageDescriptorInfoEXT-layout-11219
  `layout` **must** be VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR, VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT, or VK_IMAGE_LAYOUT_GENERAL
- VUID-VkImageDescriptorInfoEXT-layout-11221
  If `layout` is VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL, or VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL, then `pView->aspectMask` **must** not include VK_IMAGE_ASPECT_COLOR_BIT
- VUID-VkImageDescriptorInfoEXT-pView-11430
  If `pView->image` is a depth/stencil image, `pView->subresourceRange.aspectMask` **must** include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT but not both

Valid Usage (Implicit)

- VUID-VkImageDescriptorInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_DESCRIPTOR_INFO_EXT
- VUID-VkImageDescriptorInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageDescriptorInfoEXT-pView-parameter
  `pView` **must** be a valid pointer to a valid VkImageViewCreateInfo structure
- VUID-VkImageDescriptorInfoEXT-layout-parameter
  `layout` **must** be a valid VkImageLayout value

16.2. Using Heaps

One descriptor heap of each type can be bound to a command buffer for use with shaders. When using descriptor heaps, pipelines **must** be created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT and shaders created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT in order to make use of the heaps.

When any heap state command is recorded to a command buffer, it immediately invalidates all descriptor set and descriptor buffer state set by vkCmdBindDescriptorSets2, vkCmdPushDescriptorSet2, vkCmdPushDescriptorSetWithTemplate2, vkCmdSetDescriptorBufferOffsets2EXT, vkCmdBindDescriptorBufferEmbeddedSamplers2EXT, vkCmdPushConstants2, vkCmdBindDescriptorSets, vkCmdPushDescriptorSet, vkCmdPushDescriptorSetWithTemplate, vkCmdBindDescriptorBuffersEXT, vkCmdSetDescriptorBufferOffsetsEXT, vkCmdBindDescriptorBufferEmbeddedSamplersEXT, or vkCmdPushConstants. Similarly, recording any of these commands immediately invalidates all state set by commands in this chapter.

Implementations **may** require storage in descriptor heaps for their own internal descriptors. Storage for these extra descriptors **must** be allocated by the application as part of each descriptor heap address range, and **must** not be accessed by the application while it is bound as a reserved range, in any command buffer, until all such command buffers are freed or reset. The amount of storage required by an implementation is advertised by `minResourceHeapReservedRange` for the resource heap, and `minSamplerHeapReservedRange` or `minSamplerHeapReservedRangeWithEmbedded` for the sampler heap (the latter being required when using embedded samplers).

Applications **can** set different heaps to use the same address ranges, but **must** take care to ensure that the reserved ranges for each heap do not overlap with each other or with user ranges.

To bind a sampler heap to a command buffer, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdBindSamplerHeapEXT(
    VkCommandBuffer                             commandBuffer,
    const VkBindHeapInfoEXT*                    pBindInfo);
```

- `commandBuffer` is the command buffer that the sampler heap will be bound to.
- `pBindInfo` is a VkBindHeapInfoEXT specifying the device address range used for the heap and any implementation reservations.

Addresses in the range defined by `pBindInfo->heapRange` are bound as the sampler heap. The application **can** access samplers and data through this heap anywhere except for the reserved range specified by `pBindInfo->reservedRangeOffset`. Addresses in the range [`pBindInfo->reservedRangeOffset`, `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) are reserved for the implementation and **must** not be accessed by the application at any time from when this command is recorded until there are no command buffers with that range bound.

The reserved range is bound to the command buffer until it has been reset.

NOTE	Implementations may require a larger sampler heap reservation to store embedded sampler descriptors when used in a mapping, as advertised by `minSamplerHeapReservedRangeWithEmbedded`.

Shaders executed by commands recorded after this command **can** use the specified sampler heap to access resources. `pBindInfo->heapRange.address` will be available to shaders to access samplers and data through the `SamplerHeapEXT` `BuiltIn` or via shader bindings.

When `vkCmdBindSamplerHeapEXT` is recorded, it immediately invalidates all non-heap descriptor state. Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

Valid Usage

- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11223
  The sum of `pBindInfo->reservedRangeOffset` and `pBindInfo->reservedRangeSize` **must** be less than or equal to `pBindInfo->heapRange.size`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11224
  `pBindInfo->reservedRangeSize` **must** be greater than or equal to `minSamplerHeapReservedRange`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11225
  `pBindInfo->heapRange.size` **must** less than or equal to `maxSamplerHeapSize`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11226
  `pBindInfo->heapRange.address` **must** be a multiple of `samplerHeapAlignment`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11434
  `pBindInfo->reservedRangeOffset` **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-11228
  Memory bound to addresses in the range [`pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset`, `pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) **must** not be bound to any other command buffer as a reserved range for any heap unless the reserved range matches exactly and it is the same heap type

- VUID-vkCmdBindSamplerHeapEXT-heapRange-11230
  `heapRange` **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT usage flag set
- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-11231
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindSamplerHeapEXT-pBindInfo-parameter
  `pBindInfo` **must** be a valid pointer to a valid VkBindHeapInfoEXT structure
- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindSamplerHeapEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindSamplerHeapEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindSamplerHeapEXT is not affected by conditional rendering

To bind a resource heap to a command buffer, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdBindResourceHeapEXT(
    VkCommandBuffer                             commandBuffer,
    const VkBindHeapInfoEXT*                    pBindInfo);
```

- `commandBuffer` is the command buffer that the resource heap will be bound to.
- `pBindInfo` is a VkBindHeapInfoEXT specifying the device address range used for the heap and any implementation reservations.

Addresses in the range defined by `pBindInfo->heapRange` are bound as the resource heap. The application **can** access resources and data through this heap anywhere except for the reserved range specified by `pBindInfo->reservedRangeOffset`. Addresses in the range [`pBindInfo->reservedRangeOffset`, `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) are reserved for the implementation and **must** not be accessed by the application at any time from when this command is recorded until there are no command buffers with that range bound.

The reserved range is bound to the command buffer until it has been reset.

Shaders executed by commands recorded after this command **can** use the specified resource heap to access resources. `pBindInfo->heapRange.address` will be available to shaders to access resources through the `ResourceHeapEXT BuiltIn` or via shader bindings.

When `vkCmdBindResourceHeapEXT` is recorded, it immediately invalidates all non-heap descriptor state. Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

Valid Usage

- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11232
  The sum of `pBindInfo->reservedRangeOffset` and `pBindInfo->reservedRangeSize` **must** be less than or equal to `pBindInfo->heapRange.size`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11233
  `pBindInfo->reservedRangeSize` **must** be greater than or equal to `minResourceHeapReservedRange`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11234
  `pBindInfo->heapRange.size` **must** less than or equal to `maxResourceHeapSize`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11235
  `pBindInfo->heapRange.address` **must** be a multiple of `resourceHeapAlignment`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11435

`pBindInfo->reservedRangeOffset` **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11436
  `pBindInfo->reservedRangeOffset` **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-11236
  Memory bound to addresses in the range [`pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset`, `pBindInfo->heapRange.address` + `pBindInfo->reservedRangeOffset` + `pBindInfo->reservedRangeSize`) **must** not be bound to any other command buffer as a reserved range for any heap unless the reserved range matches exactly and it is the same heap type
- VUID-vkCmdBindResourceHeapEXT-heapRange-11237
  `heapRange` **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_DESCRIPTOR_HEAP_BIT_EXT usage flag set
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-11238
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdBindResourceHeapEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindResourceHeapEXT-pBindInfo-parameter
  `pBindInfo` **must** be a valid pointer to a valid VkBindHeapInfoEXT structure
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindResourceHeapEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindResourceHeapEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindResourceHeapEXT is not affected by conditional rendering

`VkBindHeapInfoEXT` is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkBindHeapInfoEXT {
    VkStructureType            sType;
    const void*                pNext;
    VkDeviceAddressRangeEXT    heapRange;
    VkDeviceSize               reservedRangeOffset;
    VkDeviceSize               reservedRangeSize;
} VkBindHeapInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `heapRange` is a VkDeviceAddressRangeKHR defining the device address range used for the heap, inclusive of the implementation reserved range.
- `reservedRangeOffset` is the offset within `heapRange` to the start of the reserved range for the implementation.
- `reservedRangeSize` is the size of the reserved range for the implementation within `heapRange`.

Valid Usage (Implicit)

- VUID-VkBindHeapInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_HEAP_INFO_EXT
- VUID-VkBindHeapInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`

`SamplerHeapEXT`

Decorating a variable with the `SamplerHeapEXT` built-in decoration will back it with the contents of

the sampler heap bound by vkCmdBindSamplerHeapEXT.

Valid Usage

- VUID-SamplerHeapEXT-SamplerHeapEXT-11239
  The variable decorated with `SamplerHeapEXT` **must** be declared using the `UniformConstant` Storage Class

`ResourceHeapEXT`

Decorating a variable with the `ResourceHeapEXT` built-in decoration will back it with the contents of the resource heap bound by vkCmdBindResourceHeapEXT.

Valid Usage

- VUID-ResourceHeapEXT-ResourceHeapEXT-11241
  The variable decorated with `ResourceHeapEXT` **must** be declared using the `UniformConstant` Storage Class

16.2.1. Push Data

Push constants specified by vkCmdPushConstants or vkCmdPushConstants2KHR rely on descriptor set layout state, and are not compatible with descriptor heaps. A new push interface is provided for use with descriptor heaps:

To update push data when using descriptor heaps, call:

```
// Provided by VK_EXT_descriptor_heap
void vkCmdPushDataEXT(
    VkCommandBuffer                             commandBuffer,
    const VkPushDataInfoEXT*                    pPushDataInfo);
```

- `commandBuffer` is the command buffer in which the push data update will be recorded.
- `pPushDataInfo` is a pointer to a VkPushDataInfoEXT structure.

When `vkCmdPushDataEXT` is recorded, it immediately invalidates all non-heap descriptor state. Similarly, recording any non-heap descriptor state commands immediately invalidates state set by this command.

All push data is available to all shaders using the existing `PushConstant` Storage Class.

NOTE Device addresses in push data are intended as the fast path for shader-constant data that does not fit into push data directly. These addresses can also be mapped to an existing buffer declaration in the shader using set and binding decorations, which will be the preferred path for some implementations initially, though such implementations are expected to lean less on this mechanism over time.

Valid Usage (Implicit)

- VUID-vkCmdPushDataEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushDataEXT-pPushDataInfo-parameter
  `pPushDataInfo` **must** be a valid pointer to a valid VkPushDataInfoEXT structure
- VUID-vkCmdPushDataEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdPushDataEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushDataEXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushDataEXT is not affected by conditional rendering

The `VkPushDataInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPushDataInfoEXT {
    VkStructureType               sType;
    const void*                   pNext;
    uint32_t                      offset;
    VkHostAddressRangeConstEXT    data;
} VkPushDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `offset` is the start offset of the push data range to update, in units of bytes.
- `data` is the host address range containing the push data to update.

Valid Usage

- VUID-VkPushDataInfoEXT-offset-11243
  The sum of `offset` and `data.size` **must** be less than or equal to `maxPushDataSize`
- VUID-VkPushDataInfoEXT-offset-11418
  `offset` **must** be a multiple of 4
- VUID-VkPushDataInfoEXT-data-11419
  `data.size` **must** be a multiple of 4

Valid Usage (Implicit)

- VUID-VkPushDataInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PUSH_DATA_INFO_EXT
- VUID-VkPushDataInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkPushDataInfoEXT-data-parameter
  `data` **must** be a valid VkHostAddressRangeConstEXT structure

16.3. Shader Bindings

While descriptor heaps can be accessed directly through the `SamplerHeapEXT` and `ResourceHeapEXT` built-ins, shaders using the existing `DescriptorSet` and `Binding` decorations **can** map these to heap offsets. In place of descriptor set layouts and pipeline layouts, information **can** be provided at pipeline or shader creation time to indicate how these bindings are mapped, through a combination of constants, push data, and indirections through device addresses. This interface provides significantly more flexibility than descriptor set layouts, enabling applications to specify precisely where they expect each descriptor to be.

The `VkShaderDescriptorSetAndBindingMappingInfoEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkShaderDescriptorSetAndBindingMappingInfoEXT {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        mappingCount;
    const VkDescriptorSetAndBindingMappingEXT*      pMappings;
} VkShaderDescriptorSetAndBindingMappingInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mappingCount` is the number of elements in `pMappings`.
- `pMappings` is a pointer to an array of VkDescriptorSetAndBindingMappingEXT structures specifying mappings for a set of descriptors

Including this structure in the `pNext` chain of VkPipelineShaderStageCreateInfo will set mappings for the shader defined by that structure. Similarly, including this structure in the `pNext` chain of a VkShaderCreateInfoEXT with a `codeType` of VK_SHADER_CODE_TYPE_SPIRV_EXT, will set mappings for that shader.

If this structure is not present, it is equivalent to setting `mappingCount` to 0.

Valid Usage

- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-pMappings-11244
  Any two elements of `pMappings` **must** not have the same value of `descriptorSet`, an overlapping range specified by `firstBinding` and `bindingCount`, and any overlapping bits in `resourceMask`

Valid Usage (Implicit)

- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SHADER_DESCRIPTOR_SET_AND_BINDING_MAPPING_INFO_EXT
- VUID-VkShaderDescriptorSetAndBindingMappingInfoEXT-pMappings-parameter
  If `mappingCount` is not `0`, `pMappings` **must** be a valid pointer to an array of `mappingCount` valid VkDescriptorSetAndBindingMappingEXT structures

Structure Chaining

Extends the structures

- VkPipelineShaderStageCreateInfo
- VkShaderCreateInfoEXT

The VkDescriptorSetAndBindingMappingEXT structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorSetAndBindingMappingEXT {
    VkStructureType                     sType;
    const void*                         pNext;
    uint32_t                            descriptorSet;
    uint32_t                            firstBinding;
    uint32_t                            bindingCount;
    VkSpirvResourceTypeFlagsEXT         resourceMask;
    VkDescriptorMappingSourceEXT        source;
    VkDescriptorMappingSourceDataEXT    sourceData;
} VkDescriptorSetAndBindingMappingEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- descriptorSet is the value of DescriptorSet for resources that this mapping affects.
- firstBinding is the first value of Binding of resources that this mapping affects.
- bindingCount is the number of consecutive Binding values of resources that this mapping affects.
- resourceMask is a mask of VkSpirvResourceTypeFlagBitsEXT values indicating which resource types are specified by this mapping.
- source is a VkDescriptorMappingSourceEXT value specifying the method of mapping specified for the affected resources.
- sourceData is a VkDescriptorMappingSourceDataEXT that provides the details of how each mapping is specified according to source.

Resources specified in a shader with a DescriptorSet decoration set to descriptorSet, a Binding decoration greater than or equal to firstBinding and less than the sum of firstBinding and bindingCount, and a resource type matching one of the bits in resourceMask will be mapped according to source and sourceData.

NOTE

Applications are free to overspecify bindings that are not present; allowing reuse of the same mapping structures with multiple shaders, even when those shaders only partially reuse those mappings. This includes things like setting binding counts higher than the number used in the shader, specifying bindings that are not present in the shader, and setting resourceMask to all possible resources that may be encountered.

If source selects an element of sourceData defined by a structure, the description of that structure defines how resources are mapped. Source mappings using a single base type are defined here.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT, the resource will be backed by heap data as specified by constantOffset.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, the resource will

be backed by heap data as specified by pushIndex.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, the resource will be backed by heap data as specified by indirectIndex.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the resource will be backed by heap data as specified by indirectIndexArray.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, the resource will be backed by heap data as specified by heapData.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, the resource will be backed by push data at a range from pushDataOffset to the size of the resource, allowing a uniform buffer to be backed by push data access push data. Accessing data in the uniform buffer at an offset of shaderOffset in the shader will access push data at an offset equal to

offset = shaderOffset + pushDataOffset.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, the resource will be backed by data pointed to by a device address in push data at an offset of pushAddressOffset. Accessing data via the mapped resource in the shader will access data backing the address specified in push data:

address = ((VkDeviceAddress*)pPushData)[pushAddressOffset/8]

where pPushData is the total set of push data specified by vkCmdPushDataEXT. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the resource will be backed by heap data as specified by indirectAddress.

NOTE Accesses to resources using mappings to anything that is not a descriptor in a heap are not subject to robustness guarantees; resources for such mappings must not be accessed out of bounds.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, the resource will be backed by heap data as specified by shaderRecordIndex.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, the resource will be backed by shader record data at a range from shaderRecordDataOffset to the size of the resource, allowing a uniform buffer to be used as a way to access shader record data. Accessing data in the uniform buffer at an offset shaderOffset in the shader will access shader record data at an offset equal to

offset = shaderOffset + shaderRecordDataOffset.

If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the resource will be backed by data pointed to by a device address in the shader record at

shaderRecordAddressOffset. Accessing data via the mapped resource in the shader will access data backing the address specified in shader record data:

```
address = ((VkDeviceAddress*)pShaderRecordData)[shaderRecordAddressOffset/8]
```

where pShaderRecord is the memory associated with a given shader as its shader record. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

NOTE	Accesses to resources using VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT mappings are not subject to robustness guarantees; data must not be accessed outside of the allocated memory range.

Mappings must be declared for all variables with a DescriptorSet and Binding in the shader resource interface.

Valid Usage

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11245
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, bindingCount **must** be 1
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11246
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, sourceData.pushDataOffset **must** be a multiple of 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12452
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, sourceData.pushDataOffset **must** be less than or equal to maxPushDataSize - 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11247
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, sourceData.pushAddressOffset **must** be a multiple of 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12453
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, sourceData.pushAddressOffset **must** be less than or equal to maxPushDataSize - 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11248
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, bindingCount **must** be 1
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11249
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, sourceData.shaderRecordDataOffset **must** be a multiple of 4

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11250
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `sourceData.shaderRecordAddressOffset` **must** be a multiple of 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11251
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeImage` variables, any `heapOffset`, and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `imageDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11252
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeStruct` variables, any `heapOffset`, and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `bufferDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11253
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeSampler` variables, any `heapOffset` and `heapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `samplerDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11254
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and `descriptorSet`, `firstBinding`, and `bindingCount` identify any `OpTypeSampledImage` variables, and `pEmbeddedSampler` is `NULL`, then any `samplerHeapOffset` and `samplerHeapArrayStride` members of the corresponding member of `sourceData` **must** be 0 or a multiple of `samplerDescriptorAlignment`
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12406
  If `source` is `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, and

descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, any heapOffset and heapArrayStride members of the corresponding member of sourceData **must** be 0 or a multiple of imageDescriptorAlignment

- VUID-VkDescriptorSetAndBindingMappingEXT-source-12456
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, and pEmbeddedSampler is NULL, samplerPushOffset **must** be a multiple of 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12457
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, and pEmbeddedSampler is NULL, samplerPushOffset **must** be less than or equal to maxPushDataSize - 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12458
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, and pEmbeddedSampler is NULL, samplerPushOffset **must** be a multiple of 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12459
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, and pEmbeddedSampler is NULL, samplerPushOffset **must** be less than or equal to maxPushDataSize - 8
- VUID-VkDescriptorSetAndBindingMappingEXT-source-12460
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and descriptorSet, firstBinding, and bindingCount identify any OpTypeSampledImage variables, and pEmbeddedSampler is NULL, samplerAddressOffset **must** be a multiple of 4
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11356
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, resourceMask **must** include VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11357
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT or VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, resourceMask **must** include at least one of VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT, or VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT
- VUID-VkDescriptorSetAndBindingMappingEXT-source-11358
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT,

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and the mapping sets useCombinedImageSamplerIndex to VK_TRUE, resourceMask **must** include at least one of VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT, VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT, or VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT

- VUID-VkDescriptorSetAndBindingMappingEXT-source-11389
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, and bindingCount is not 1, the pEmbeddedSampler member of the corresponding mapping structure **must** be NULL

Valid Usage (Implicit)

- VUID-VkDescriptorSetAndBindingMappingEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_AND_BINDING_MAPPING_EXT
- VUID-VkDescriptorSetAndBindingMappingEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkDescriptorSetAndBindingMappingEXT-resourceMask-parameter
  resourceMask **must** be a valid combination of VkSpirvResourceTypeFlagBitsEXT values
- VUID-VkDescriptorSetAndBindingMappingEXT-source-parameter
  source **must** be a valid VkDescriptorMappingSourceEXT value
- VUID-VkDescriptorSetAndBindingMappingEXT-constantOffset-parameter
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT, the constantOffset member of sourceData **must** be a valid VkDescriptorMappingSourceConstantOffsetEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-pushIndex-parameter
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT, the pushIndex member of sourceData **must** be a valid VkDescriptorMappingSourcePushIndexEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-indirectIndex-parameter
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, the indirectIndex member of sourceData **must** be a valid VkDescriptorMappingSourceIndirectIndexEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-indirectIndexArray-parameter
  If source is VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the indirectIndexArray member of sourceData **must** be a valid VkDescriptorMappingSourceIndirectIndexArrayEXT structure
- VUID-VkDescriptorSetAndBindingMappingEXT-shaderRecordIndex-parameter
  If source is

VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT, the shaderRecordIndex member of sourceData **must** be a valid VkDescriptorMappingSourceShaderRecordIndexEXT structure

Bits which **can** be set in VkDescriptorSetAndBindingMappingEXT::resourceMask, are:

```
// Provided by VK_EXT_descriptor_heap
typedef enum VkSpirvResourceTypeFlagBitsEXT {
    VK_SPIRV_RESOURCE_TYPE_ALL_EXT = 0x7FFFFFFF,
    VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT = 0x00000001,
    VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT = 0x00000002,
    VK_SPIRV_RESOURCE_TYPE_READ_ONLY_IMAGE_BIT_EXT = 0x00000004,
    VK_SPIRV_RESOURCE_TYPE_READ_WRITE_IMAGE_BIT_EXT = 0x00000008,
    VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT = 0x00000010,
    VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT = 0x00000020,
    VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT = 0x00000040,
    VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT = 0x00000080,
  // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
VK_NV_ray_tracing
    VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT = 0x00000100,
} VkSpirvResourceTypeFlagBitsEXT;
```

- VK_SPIRV_RESOURCE_TYPE_ALL_EXT specifies that all resource declarations are included.
- VK_SPIRV_RESOURCE_TYPE_SAMPLER_BIT_EXT specifies OpTypeSampler variables.
- VK_SPIRV_RESOURCE_TYPE_SAMPLED_IMAGE_BIT_EXT specifies OpTypeImage variables with a Sampled parameter of 1.
- VK_SPIRV_RESOURCE_TYPE_READ_ONLY_IMAGE_BIT_EXT specifies OpTypeImage variables with a Sampled parameter of 2 and decorated with NonWritable.
- VK_SPIRV_RESOURCE_TYPE_READ_WRITE_IMAGE_BIT_EXT specifies OpTypeImage variables with a Sampled parameter of 2 and not decorated with NonWritable.
- VK_SPIRV_RESOURCE_TYPE_COMBINED_SAMPLED_IMAGE_BIT_EXT specifies OpTypeSampledImage variables.
- VK_SPIRV_RESOURCE_TYPE_UNIFORM_BUFFER_BIT_EXT specifies OpTypeStruct variables in the Uniform storage class decorated with Block
- VK_SPIRV_RESOURCE_TYPE_READ_ONLY_STORAGE_BUFFER_BIT_EXT specifies OpTypeStruct variables either in the StorageBuffer storage class decorated with Block or in the Uniform storage class decorated with BufferBlock, and decorated with NonWritable
- VK_SPIRV_RESOURCE_TYPE_READ_WRITE_STORAGE_BUFFER_BIT_EXT specifies OpTypeStruct variables either in the StorageBuffer storage class decorated with Block or in the Uniform storage class decorated with BufferBlock, but not decorated with NonWritable
- VK_SPIRV_RESOURCE_TYPE_ACCELERATION_STRUCTURE_BIT_EXT specifies OpTypeAccelerationStructureKHR variables

```
// Provided by VK_EXT_descriptor_heap
typedef VkFlags VkSpirvResourceTypeFlagsEXT;
```

VkSpirvResourceTypeFlagsEXT is a bitmask type for setting a mask of zero or more VkSpirvResourceTypeFlagBitsEXT.

The possible mapping sources for a shader binding are:

```
// Provided by VK_EXT_descriptor_heap
typedef enum VkDescriptorMappingSourceEXT {
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT = 0,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT = 1,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT = 2,
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT = 3,
    VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT = 4,
    VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT = 5,
    VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT = 6,
    VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT = 7,
  // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT = 8,
  // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT = 9,
  // Provided by VK_EXT_descriptor_heap with VK_KHR_ray_tracing_pipeline or
VK_NV_ray_tracing
    VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT = 10,
} VkDescriptorMappingSourceEXT;
```

- VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_CONSTANT_OFFSET_EXT specifies that the resource will be backed by a descriptor from the heap at a constant index.
- VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT specifies that the resource will be backed by a descriptor from the heap at an index sourced from push data, added to a constant index.
- VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT specifies that the resource will be backed by a descriptor from the heap at an index sourced from an address in push data, added to a constant index. If the mapping is an array, the array will be mapped to a base offset in indirect memory, and subsequent elements are mapped as offsets to that base.
- VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT specifies that the resource will be backed by a descriptor from the heap at an index sourced from an address in push data, added to a constant index. If the mapping is an array, each array element will be mapped to a separate index in indirect memory.
- VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT specifies that the resource will be backed by heap data directly.
- VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT specifies that the resource will be backed

by push data directly.

- VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT specifies that the resource will be backed by an address in push data.
- VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT specifies that the resource will be backed by an address sourced via another address in push data.
- VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT specifies that the resource will be backed by a descriptor from the heap at an index sourced from shader record data, added to a constant index.
- VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT specifies that the resource will be backed by shader record data directly.
- VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT specifies that the resource will be backed by an address in shader record data.

The VkDescriptorMappingSourceDataEXT union is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef union VkDescriptorMappingSourceDataEXT {
    VkDescriptorMappingSourceConstantOffsetEXT        constantOffset;
    VkDescriptorMappingSourcePushIndexEXT             pushIndex;
    VkDescriptorMappingSourceIndirectIndexEXT         indirectIndex;
    VkDescriptorMappingSourceIndirectIndexArrayEXT    indirectIndexArray;
    VkDescriptorMappingSourceHeapDataEXT              heapData;
    uint32_t                                          pushDataOffset;
    uint32_t                                          pushAddressOffset;
    VkDescriptorMappingSourceIndirectAddressEXT       indirectAddress;
    VkDescriptorMappingSourceShaderRecordIndexEXT     shaderRecordIndex;
    uint32_t                                          shaderRecordDataOffset;
    uint32_t                                          shaderRecordAddressOffset;
} VkDescriptorMappingSourceDataEXT;
```

- constantOffset is a VkDescriptorMappingSourceConstantOffsetEXT structure specifying the mapping for resources at a constant byte offset into a heap.
- pushIndex is a VkDescriptorMappingSourcePushIndexEXT structure specifying the mapping for resources at an index into a heap source from push data.
- indirectIndex is a VkDescriptorMappingSourceIndirectIndexEXT structure specifying the mapping for resources at an index into a heap source from an address in push data.
- indirectIndexArray is a VkDescriptorMappingSourceIndirectIndexArrayEXT structure specifying the mapping for resources to an array of indices into a heap source from an address in push data.
- heapData is a VkDescriptorMappingSourceHeapDataEXT structure specifying an offset into heap data for a uniform buffer to map to.
- pushDataOffset an offset into push data for a uniform buffer to map to.
- pushAddressOffset an offset into push data storing an address for a resource to map to.

- `indirectAddress` is a VkDescriptorMappingSourceIndirectAddressEXT structure specifying an address in push data containing another address for a resource to map to.
- `shaderRecordIndex` is a VkDescriptorMappingSourceShaderRecordIndexEXT structure specifying the mapping for resources at an index into a heap source from shader record data.
- `shaderRecordDataOffset` an offset into shader record data for a uniform buffer to map to.
- `shaderRecordAddressOffset` an offset into shader record data storing an address for a resource to map to.

The `VkDescriptorMappingSourceConstantOffsetEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceConstantOffsetEXT {
    uint32_t                    heapOffset;
    uint32_t                    heapArrayStride;
    const VkSamplerCreateInfo*  pEmbeddedSampler;
    uint32_t                    samplerHeapOffset;
    uint32_t                    samplerHeapArrayStride;
} VkDescriptorMappingSourceConstantOffsetEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional VkSamplerCreateInfo structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

shaderIndex = (Binding - `firstBinding`) + arrayIndex

offset = heapOffset + (shaderIndex * heapArrayStride)

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

offset = samplerHeapOffset + (shaderIndex * samplerHeapArrayStride)

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`,

the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-11445
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, its `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-11415
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, and there is a VkDebugUtilsObjectNameInfoEXT structure in its `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-12432
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, the VkSamplerCreateInfo ::`pNext` chain **must** not contain VkOpaqueCaptureDescriptorDataCreateInfoEXT

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceConstantOffsetEXT-pEmbeddedSampler-parameter
  If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

The `VkDescriptorMappingSourcePushIndexEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourcePushIndexEXT {
    uint32_t                    heapOffset;
    uint32_t                    pushOffset;
    uint32_t                    heapIndexStride;
    uint32_t                    heapArrayStride;
    const VkSamplerCreateInfo*  pEmbeddedSampler;
    VkBool32                    useCombinedImageSamplerIndex;
    uint32_t                    samplerHeapOffset;
    uint32_t                    samplerPushOffset;
    uint32_t                    samplerHeapIndexStride;
    uint32_t                    samplerHeapArrayStride;
} VkDescriptorMappingSourcePushIndexEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `pushOffset` is an index into push data where an index into the heap for the mapped resource will be retrieved.
- `heapIndexStride` is a constant byte stride that multiplies the index in push data.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.

- `pEmbeddedSampler` is an optional VkSamplerCreateInfo structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an `OpTypeSampledImage`.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerPushOffset` is used only when mapping a combined image sampler, used in place of `pushOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

pushIndex = ((uint32_t*)pPushData)[pushOffset/4]

shaderIndex = (Binding - firstBinding) + arrayIndex

offset = heapOffset + (pushIndex × heapIndexStride) + (shaderIndex × heapArrayStride)

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array, and pPushData is the total set of push data specified by vkCmdPushDataEXT.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

samplerPushIndex = ((uint32_t*)pPushData)[samplerPushOffset/4]

offset = samplerHeapOffset + (samplerPushIndex × samplerHeapIndexStride) + (shaderIndex × samplerHeapArrayStride)

If `useCombinedImageSamplerIndex` is VK_TRUE, and the mapped resource is a `OpTypeSampledImage`, pushIndex and samplerPushIndex in the above equations are instead calculated as

pushIndex = ((uint32_t*)pPushData)[pushOffset/4] & 0xFFFFF

samplerPushIndex = (((uint32_t*)pPushData)[pushOffset/4] >> 20) & 0xFFF

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`,

the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourcePushIndexEXT-pushOffset-11258
  `pushOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourcePushIndexEXT-pushOffset-11259
  `pushOffset` **must** be less than or equal to `maxPushDataSize` - 4
- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-11445
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, its `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-11415
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, and there is a VkDebugUtilsObjectNameInfoEXT structure in its `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-12432
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, the VkSamplerCreateInfo ::`pNext` chain **must** not contain VkOpaqueCaptureDescriptorDataCreateInfoEXT

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourcePushIndexEXT-pEmbeddedSampler-parameter
  If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

The `VkDescriptorMappingSourceIndirectIndexEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectIndexEXT {
    uint32_t                        heapOffset;
    uint32_t                        pushOffset;
    uint32_t                        addressOffset;
    uint32_t                        heapIndexStride;
    uint32_t                        heapArrayStride;
    const VkSamplerCreateInfo*      pEmbeddedSampler;
    VkBool32                        useCombinedImageSamplerIndex;
    uint32_t                        samplerHeapOffset;
    uint32_t                        samplerPushOffset;
    uint32_t                        samplerAddressOffset;
    uint32_t                        samplerHeapIndexStride;
    uint32_t                        samplerHeapArrayStride;
} VkDescriptorMappingSourceIndirectIndexEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or

sampler.

- `pushOffset` is an offset into push data where an the indirect address will be.
- `addressOffset` is an index into the address in push data where an index into the heap for the mapped resource will be retrieved.
- `heapIndexStride` is a constant byte stride that multiplies the index in indirect data.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional VkSamplerCreateInfo structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an `OpTypeSampledImage`.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerPushOffset` is used only when mapping a combined image sampler, used in place of `pushOffset` to retrieve the sampler.
- `samplerAddressOffset` is used only when mapping a combined image sampler, used in place of `addressOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

```
uint32_t *indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]

indirectIndex = indirectAddress[(addressOffset / 4)]

shaderIndex = (Binding - firstBinding) + arrayIndex

offset = heapOffset + (indirectIndex × heapIndexStride) + (shaderIndex × heapArrayStride)
```

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array, and pPushData is the total set of push data specified by vkCmdPushDataEXT. The value of the address in push data **must** be a multiple of 4. Index reads through indirectAddress are performed as non-volatile uniform buffer reads, and can be synchronized using VK_ACCESS_2_UNIFORM_READ_BIT. The value in memory **must** remain static while any shader invocation using this mapping is in flight to avoid a data race.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

uint32_t *samplerIndirectAddress = ((VkDeviceAddress*)pPushData)[samplerPushOffset/8]

samplerIndirectIndex = samplerIndirectAddress[(samplerAddressOffset / 4)]

offset = samplerHeapOffset + (samplerIndirectIndex × samplerHeapIndexStride) + (shaderIndex × samplerHeapArrayStride)

If `useCombinedImageSamplerIndex` is VK_TRUE, and the mapped resource is a `OpTypeSampledImage`, indirectIndex and samplerIndirectIndex in the above equations are instead calculated as

indirectIndex = indirectAddress[addressOffset/4] & 0xFFFFF

samplerIndirectIndex = indirectAddress[addressOffset/4] >> 20) & 0xFFF

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pushOffset-11260
  `pushOffset` **must** be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pushOffset-11261
  `pushOffset` **must** be less than or equal to `maxPushDataSize` - 8
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-addressOffset-11262
  `addressOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-11445
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, its `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-11415
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, and there is a VkDebugUtilsObjectNameInfoEXT structure in its `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-12432
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, the VkSamplerCreateInfo ::`pNext` chain **must** not contain VkOpaqueCaptureDescriptorDataCreateInfoEXT

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceIndirectIndexEXT-pEmbeddedSampler-parameter

If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

The `VkDescriptorMappingSourceIndirectIndexArrayEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectIndexArrayEXT {
    uint32_t                      heapOffset;
    uint32_t                      pushOffset;
    uint32_t                      addressOffset;
    uint32_t                      heapIndexStride;
    const VkSamplerCreateInfo*    pEmbeddedSampler;
    VkBool32                      useCombinedImageSamplerIndex;
    uint32_t                      samplerHeapOffset;
    uint32_t                      samplerPushOffset;
    uint32_t                      samplerAddressOffset;
    uint32_t                      samplerHeapIndexStride;
} VkDescriptorMappingSourceIndirectIndexArrayEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `pushOffset` is an offset into push data where an the indirect address will be.
- `addressOffset` is an index into the address in push data where an index into the heap for the mapped resource will be retrieved.
- `heapIndexStride` is a constant byte stride that multiplies the index in indirect data.
- `pEmbeddedSampler` is an optional VkSamplerCreateInfo structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an `OpTypeSampledImage`.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerPushOffset` is used only when mapping a combined image sampler, used in place of `pushOffset` to retrieve the sampler.
- `samplerAddressOffset` is used only when mapping a combined image sampler, used in place of `addressOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

```
uint32_t *indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]
```

shaderIndex = (Binding - firstBinding) + arrayIndex

indirectIndex = indirectAddress[(addressOffset / 4) + shaderIndex]

offset = heapOffset + (indirectIndex × heapIndexStride)

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array, and pPushData is the total set of push data specified by vkCmdPushDataEXT. The value of the address in push data **must** be a multiple of 4. Index reads through indirectAddress are performed as non-volatile uniform buffer reads, and can be synchronized using VK_ACCESS_2_UNIFORM_READ_BIT. The value in memory **must** remain static while any shader invocation using this mapping is in flight to avoid a data race.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

uint32_t *samplerIndirectAddress = ((VkDeviceAddress*)pPushData)[samplerPushOffset/8]

samplerIndirectIndex = samplerAddr[(samplerAddressOffset / 4) + shaderIndex]

offset = samplerHeapOffset + (samplerIndirectIndex × samplerHeapIndexStride)

If `useCombinedImageSamplerIndex` is VK_TRUE, and the mapped resource is a `OpTypeSampledImage`, indirectIndex and samplerIndirectIndex in the above equations are instead calculated as

indirectIndex = indirectAddress[addressOffset/4 + shaderIndex] & 0xFFFFF

samplerIndirectIndex = indirectAddress[addressOffset/4 + shaderIndex] >> 20) & 0xFFF

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pushOffset-11359
  `pushOffset` **must** be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pushOffset-11360
  `pushOffset` **must** be less than or equal to `maxPushDataSize` - 8
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-addressOffset-11361
  `addressOffset` **must** be a multiple of 4

- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-11445
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, its `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-11415
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, and there is a VkDebugUtilsObjectNameInfoEXT structure in its `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-12432
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, the VkSamplerCreateInfo ::`pNext` chain **must** not contain VkOpaqueCaptureDescriptorDataCreateInfoEXT

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceIndirectIndexArrayEXT-pEmbeddedSampler-parameter
  If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

The `VkDescriptorMappingSourceHeapDataEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceHeapDataEXT {
    uint32_t    heapOffset;
    uint32_t    pushOffset;
} VkDescriptorMappingSourceHeapDataEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped buffer.
- `pushOffset` is an index into push data where an additional offset into the heap for the mapped resource will be retrieved.

Uniform buffers using this mapping will be backed directly by data in the heap. Accessing data in the uniform buffer at an offset of shaderOffset in the shader will access heap data at an offset equal to

offset = shaderOffset + heapOffset + ((uint32_t*)pPushData)[pushOffset/4]

where pPushData is the total set of push data specified by vkCmdPushDataEXT. Shader reads through the heap mapped in this way are performed according to the mapped resource.

Valid Usage

- VUID-VkDescriptorMappingSourceHeapDataEXT-heapOffset-11263
  `heapOffset` **must** be a multiple of `minUniformBufferOffsetAlignment`

- VUID-VkDescriptorMappingSourceHeapDataEXT-pushOffset-11264
  `pushOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceHeapDataEXT-pushOffset-11265
  `pushOffset` **must** be less than or equal to `maxPushDataSize` - 4

The `VkDescriptorMappingSourceIndirectAddressEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceIndirectAddressEXT {
    uint32_t    pushOffset;
    uint32_t    addressOffset;
} VkDescriptorMappingSourceIndirectAddressEXT;
```

- `pushOffset` is a byte offset into push data where an indirect address containing the address for the mapped resource will be retrieved.
- `addressOffset` is a byte offset into the indirect address where the address for the mapped resource will be retrieved.

Accessing data via the mapped resource in the shader will access data backing the address specified in the indirect address at the supplied offset:

indirectAddress = ((VkDeviceAddress*)pPushData)[pushOffset/8]

resourceAddress = ((VkDeviceAddress*)indirectAddress)[addressOffset/8]

where pPushData is the total set of push data specified by vkCmdPushDataEXT. Reads through indirectAddress are performed as non-volatile uniform buffer reads, and can be synchronized using VK_ACCESS_2_UNIFORM_READ_BIT. Shader reads through resourceAddress are performed according to the mapped resource. If the shader resource is an acceleration structure, the address **must** be a valid acceleration structure address.

Valid Usage

- VUID-VkDescriptorMappingSourceIndirectAddressEXT-pushOffset-11266
  `pushOffset` **must** be a multiple of 8
- VUID-VkDescriptorMappingSourceIndirectAddressEXT-pushOffset-11267
  `pushOffset` **must** be less than or equal to `maxPushDataSize` - 8
- VUID-VkDescriptorMappingSourceIndirectAddressEXT-addressOffset-11268
  `addressOffset` **must** be a multiple of 8

The `VkDescriptorMappingSourceShaderRecordIndexEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkDescriptorMappingSourceShaderRecordIndexEXT {
    uint32_t                        heapOffset;
    uint32_t                        shaderRecordOffset;
    uint32_t                        heapIndexStride;
    uint32_t                        heapArrayStride;
    const VkSamplerCreateInfo*      pEmbeddedSampler;
    VkBool32                        useCombinedImageSamplerIndex;
    uint32_t                        samplerHeapOffset;
    uint32_t                        samplerShaderRecordOffset;
    uint32_t                        samplerHeapIndexStride;
    uint32_t                        samplerHeapArrayStride;
} VkDescriptorMappingSourceShaderRecordIndexEXT;
```

- `heapOffset` is a constant byte offset added to the heap address for the mapped resource or sampler.
- `shaderRecordOffset` is an index into shader record data where an index into the heap for the mapped resource will be retrieved.
- `heapIndexStride` is a constant byte stride that multiplies the index in shader record data.
- `heapArrayStride` is a constant byte stride that multiplies the shader binding and array index.
- `pEmbeddedSampler` is an optional VkSamplerCreateInfo structure specifying a sampler to embed into the shader, in place of looking the sampler up in a heap.
- `useCombinedImageSamplerIndex` specifies whether the generated index value will be decoded as two packed indices if the mapped resource is an `OpTypeSampledImage`.
- `samplerHeapOffset` is used only when mapping a combined image sampler, used in place of `heapOffset` to retrieve the sampler.
- `samplerShaderRecordOffset` is used only when mapping a combined image sampler, used in place of `shaderRecordOffset` to retrieve the sampler.
- `samplerHeapIndexStride` is used only when mapping a combined image sampler, used in place of `heapIndexStride` to retrieve the sampler.
- `samplerHeapArrayStride` is used only when mapping a combined image sampler, used in place of `heapArrayStride` to retrieve the sampler.

Resources using this mapping will be backed by a descriptor in the heap, at an offset calculated as

shaderRecordIndex = ((uint32_t*)pShaderRecordData)[shaderRecordOffset/4]

shaderIndex = (Binding - firstBinding) + arrayIndex

offset = heapOffset + (shaderRecordIndex × heapIndexStride) + (shaderIndex × heapArrayStride)

where Binding is the binding value in the shader, arrayIndex is the index into the array if the shader binding is declared as an array, and pShaderRecordData is the set of shader record data accessible to the shader.

If the mapped resource is a `OpTypeSampledImage`, offset is instead calculated for the sampler as

samplerShaderRecordIndex = ((uint32_t*)pShaderRecordData)[samplerShaderRecordOffset/4]

offset = samplerHeapOffset + (samplerShaderRecordIndex × samplerHeapIndexStride) + (shaderIndex × samplerHeapArrayStride)

If `useCombinedImageSamplerIndex` is VK_TRUE, and the mapped resource is a `OpTypeSampledImage`, shaderRecordIndex and samplerShaderRecordIndex in the above equations are instead calculated as

shaderRecordIndex = ((uint32_t*)pShaderRecordData)[shaderRecordOffset/4] & 0xFFFFF

samplerShaderRecordIndex = (((uint32_t*)pShaderRecordData)[shaderRecordOffset/4] >> 20) & 0xFFF

If the mapped resource is a `OpTypeSampler` or `OpTypeSampledImage`, and `pEmbeddedSampler` is not `NULL`, the specified embedded sampler will be used rather than accessing the sampler heap.

Valid Usage

- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-shaderRecordOffset-11269
  `shaderRecordOffset` **must** be a multiple of 4
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-shaderRecordOffset-11270
  `shaderRecordOffset` **must** be less than or equal to `maxShaderGroupStride` - 4
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-11445
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, its `borderColor` **must** not be VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-11415
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, and there is a VkDebugUtilsObjectNameInfoEXT structure in its `pNext` chain, its `objectType` **must** be VK_OBJECT_TYPE_UNKNOWN
- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-12432
  If `pEmbeddedSampler` is a valid pointer to a VkSamplerCreateInfo, the VkSamplerCreateInfo ::`pNext` chain **must** not contain VkOpaqueCaptureDescriptorDataCreateInfoEXT

Valid Usage (Implicit)

- VUID-VkDescriptorMappingSourceShaderRecordIndexEXT-pEmbeddedSampler-parameter
  If `pEmbeddedSampler` is not `NULL`, `pEmbeddedSampler` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

16.4. Packing descriptors more tightly

For simplicity, descriptor sizes are advertised and treated by default as equal to the advertised descriptor size limits:

- `samplerDescriptorSize`
- `bufferDescriptorSize`
- `imageDescriptorSize`

However, for some specific use cases it is useful to be able to pack specific descriptors into memory more tightly than this when the implementation allows for this.

To query the size of heap descriptor for a specific VkDescriptorType, call:

```
// Provided by VK_EXT_descriptor_heap
VkDeviceSize vkGetPhysicalDeviceDescriptorSizeEXT(
    VkPhysicalDevice                            physicalDevice,
    VkDescriptorType                            descriptorType);
```

- `physicalDevice` is the physical device from which to query the descriptor sizes.
- `descriptorType` is a VkDescriptorType specifying the type of heap descriptor to query the size for.

The return value of this function will be a VkDeviceSize indicating the size in bytes (N) of a heap descriptor with a type equal to `descriptorType`. When a descriptor of this type is written by vkWriteResourceDescriptorsEXT or vkWriteSamplerDescriptorsEXT, only the first N bytes are written; the rest will not be accessed and **can** be safely discarded when copying descriptors around. Additionally, those first N bytes are the only bytes that will be accessed when the descriptor is accessed in the shader. N will never be larger than the applicable limits in VkPhysicalDeviceDescriptorHeapPropertiesEXT.

NOTE	Values returned by this function may be non power-of-two.
NOTE	This command is not intended for general use, and is for tools that already take advantage of tighter packing with other similar features (e.g. `VK_EXT_descriptor_buffer`) to optimize accesses in some cases. Applications can safely ignore this function and are advised to do so, to avoid depending on non-portable packing.

Valid Usage

- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-type-11362
  `type` **must** be one of VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-physicalDevice-parameter
  `physicalDevice` **must** be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceDescriptorSizeEXT-descriptorType-parameter
  `descriptorType` **must** be a valid VkDescriptorType value

Chapter 17. Descriptor Sets

A descriptor set object is an opaque object containing storage for a set of descriptors, where the types and number of descriptors is defined by a descriptor set layout. The layout object **may** be used to define the association of each descriptor binding with memory or other implementation resources. The layout is used both for determining the resources that need to be associated with the descriptor set, and determining the interface between shader stages and shader resources.

17.1. Descriptor Set Layout

A descriptor set layout object is defined by an array of zero or more descriptor bindings. Each individual descriptor binding is specified by a descriptor type, a count (array size) of the number of descriptors in the binding, a set of shader stages that **can** access the binding, and (if using immutable samplers) an array of sampler descriptors.

Descriptor set layout objects are represented by `VkDescriptorSetLayout` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSetLayout)
```

To create descriptor set layout objects, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorSetLayout(
    VkDevice                                    device,
    const VkDescriptorSetLayoutCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDescriptorSetLayout*                      pSetLayout);
```

- `device` is the logical device that creates the descriptor set layout.
- `pCreateInfo` is a pointer to a VkDescriptorSetLayoutCreateInfo structure specifying the state of the descriptor set layout object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pSetLayout` is a pointer to a VkDescriptorSetLayout handle in which the resulting descriptor set layout object is returned.

Valid Usage

- VUID-vkCreateDescriptorSetLayout-support-09582
  If the descriptor layout exceeds the limits reported through the physical device limits, then vkGetDescriptorSetLayoutSupport **must** have returned VkDescriptorSetLayoutSupport with `support` equal to VK_TRUE for `pCreateInfo`

Valid Usage (Implicit)

- VUID-vkCreateDescriptorSetLayout-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDescriptorSetLayout-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDescriptorSetLayoutCreateInfo structure
- VUID-vkCreateDescriptorSetLayout-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDescriptorSetLayout-pSetLayout-parameter
  `pSetLayout` **must** be a valid pointer to a VkDescriptorSetLayout handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the descriptor set layout is passed in a `VkDescriptorSetLayoutCreateInfo` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutCreateInfo {
    VkStructureType                        sType;
    const void*                            pNext;
    VkDescriptorSetLayoutCreateFlags       flags;
    uint32_t                               bindingCount;
    const VkDescriptorSetLayoutBinding*    pBindings;
} VkDescriptorSetLayoutCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkDescriptorSetLayoutCreateFlagBits specifying options for descriptor set layout creation.
- `bindingCount` is the number of elements in `pBindings`.
- `pBindings` is a pointer to an array of VkDescriptorSetLayoutBinding structures.

Valid Usage

- VUID-VkDescriptorSetLayoutCreateInfo-binding-00279
  The VkDescriptorSetLayoutBinding::binding members of the elements of the pBindings array **must** each have different values
- VUID-VkDescriptorSetLayoutCreateInfo-flags-10354
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, and the VK_KHR_push_descriptor extension is not enabled, pushDescriptor **must** be enabled
- VUID-VkDescriptorSetLayoutCreateInfo-flags-00280
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, then all elements of pBindings **must** not have a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkDescriptorSetLayoutCreateInfo-flags-02208
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, then all elements of pBindings **must** not have a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
- VUID-VkDescriptorSetLayoutCreateInfo-flags-00281
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, then the total number of elements of all bindings **must** be less than or equal to VkPhysicalDevicePushDescriptorProperties::maxPushDescriptors
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04590
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, flags **must** not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04591
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, pBindings **must** not have a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkDescriptorSetLayoutCreateInfo-flags-03000
  If any binding has the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit set, flags **must** include VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT
- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-03001
  If any binding has the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit set, then all bindings **must** not have descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04592
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, flags **must** not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT
- VUID-VkDescriptorSetLayoutCreateInfo-pBindings-07303
  If any element pBindings[i] has a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT, then the pNext chain **must** include a VkMutableDescriptorTypeCreateInfoEXT structure, and mutableDescriptorTypeListCount **must** be greater than i

- VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-04594
  If a binding has a `descriptorType` value of VK_DESCRIPTOR_TYPE_MUTABLE_EXT, then `pImmutableSamplers` **must** be `NULL`
- VUID-VkDescriptorSetLayoutCreateInfo-mutableDescriptorType-04595
  If VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::`mutableDescriptorType` is not enabled, `pBindings` **must** not contain a `descriptorType` of VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkDescriptorSetLayoutCreateInfo-flags-04596
  If `flags` contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT, VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::`mutableDescriptorType` **must** be enabled
- VUID-VkDescriptorSetLayoutCreateInfo-flags-08000
  If `flags` contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then all elements of `pBindings` **must** not have a `descriptorType` of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkDescriptorSetLayoutCreateInfo-flags-08001
  If `flags` contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, `flags` **must** also contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-VkDescriptorSetLayoutCreateInfo-flags-08002
  If `flags` contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then `flags` **must** not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT
- VUID-VkDescriptorSetLayoutCreateInfo-flags-08003
  If `flags` contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then `flags` **must** not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO
- VUID-VkDescriptorSetLayoutCreateInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of VkDescriptorSetLayoutBindingFlagsCreateInfo or VkMutableDescriptorTypeCreateInfoEXT
- VUID-VkDescriptorSetLayoutCreateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDescriptorSetLayoutCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkDescriptorSetLayoutCreateFlagBits values

- VUID-VkDescriptorSetLayoutCreateInfo-pBindings-parameter
  If `bindingCount` is not `0`, `pBindings` **must** be a valid pointer to an array of `bindingCount` valid VkDescriptorSetLayoutBinding structures

If the `pNext` chain of a VkDescriptorSetLayoutCreateInfo or VkDescriptorPoolCreateInfo structure includes a VkMutableDescriptorTypeCreateInfoEXT structure, then that structure specifies Information about the possible descriptor types for mutable descriptor types.

The `VkMutableDescriptorTypeCreateInfoEXT` structure is defined as:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeCreateInfoEXT {
    VkStructureType                          sType;
    const void*                              pNext;
    uint32_t                                 mutableDescriptorTypeListCount;
    const VkMutableDescriptorTypeListEXT*    pMutableDescriptorTypeLists;
} VkMutableDescriptorTypeCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mutableDescriptorTypeListCount` is the number of elements in `pMutableDescriptorTypeLists`.
- `pMutableDescriptorTypeLists` is a pointer to an array of `VkMutableDescriptorTypeListEXT` structures.

If `mutableDescriptorTypeListCount` is zero or if this structure is not included in the `pNext` chain, the VkMutableDescriptorTypeListEXT for each element is considered to be zero or `NULL` for each member. Otherwise, the descriptor set layout binding at VkDescriptorSetLayoutCreateInfo ::`pBindings`[i] uses the descriptor type lists in VkMutableDescriptorTypeCreateInfoEXT ::`pMutableDescriptorTypeLists`[i].

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MUTABLE_DESCRIPTOR_TYPE_CREATE_INFO_EXT
- VUID-VkMutableDescriptorTypeCreateInfoEXT-pMutableDescriptorTypeLists-parameter
  If `mutableDescriptorTypeListCount` is not `0`, `pMutableDescriptorTypeLists` **must** be a valid pointer to an array of `mutableDescriptorTypeListCount` valid VkMutableDescriptorTypeListEXT structures

Structure Chaining

Extends the structures

- VkDescriptorPoolCreateInfo
- VkDescriptorSetLayoutCreateInfo

The list of potential descriptor types a given mutable descriptor **can** mutate to is passed in a `VkMutableDescriptorTypeListEXT` structure.

The `VkMutableDescriptorTypeListEXT` structure is defined as:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeListEXT {
    uint32_t                  descriptorTypeCount;
    const VkDescriptorType*   pDescriptorTypes;
} VkMutableDescriptorTypeListEXT;
```

- `descriptorTypeCount` is the number of elements in `pDescriptorTypes`.
- `pDescriptorTypes` is `NULL` or a pointer to an array of `descriptorTypeCount` VkDescriptorType values defining which descriptor types a given binding may mutate to.

Valid Usage

- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04597
  `descriptorTypeCount` **must** not be `0` if the corresponding binding is of VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04598
  `pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid, unique VkDescriptorType values if the given binding is of VK_DESCRIPTOR_TYPE_MUTABLE_EXT type
- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04599
  `descriptorTypeCount` **must** be `0` if the corresponding binding is not of VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04600
  `pDescriptorTypes` **must** not contain VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04601
  `pDescriptorTypes` **must** not contain VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04602
  `pDescriptorTypes` **must** not contain VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC

- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04603
  `pDescriptorTypes` **must** not contain VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK

Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-parameter
  If `descriptorTypeCount` is not `0`, `pDescriptorTypes` **must** be a valid pointer to an array of `descriptorTypeCount` valid VkDescriptorType values

Bits which **can** be set in VkDescriptorSetLayoutCreateInfo::`flags`, specifying options for descriptor set layout, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorSetLayoutCreateFlagBits {
  // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT = 0x00000002,
  // Provided by VK_VERSION_1_4
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT = 0x00000001,
  // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT = 0x00000010,
  // Provided by VK_EXT_descriptor_buffer
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT = 0x00000020,
  // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT = 0x00000004,
  // Provided by VK_KHR_push_descriptor
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT_EXT =
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT,
} VkDescriptorSetLayoutCreateFlagBits;
```

- VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT specifies that descriptor sets **must** not be allocated using this layout, and descriptors are instead pushed by vkCmdPushDescriptorSet.
- VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit set. Descriptor set layouts created with this bit set have alternate limits for the maximum number of descriptors per-stage and per-pipeline layout. The non-UpdateAfterBind limits only count descriptors in sets created without this flag. The UpdateAfterBind limits count all descriptors, but the limits **may** be higher than the non-UpdateAfterBind limits.
- VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT specifies that this layout **must** only be used with descriptor buffers.
- VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT

specifies that this is a layout only containing immutable samplers that **can** be bound by vkCmdBindDescriptorBufferEmbeddedSamplersEXT. Unlike normal immutable samplers, embedded immutable samplers do not require the application to provide them in a descriptor buffer.

- VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT specifies that descriptor sets using this layout **must** be allocated from a descriptor pool created with the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT bit set. Descriptor set layouts created with this bit have no expressible limit for maximum number of descriptors per-stage. Host descriptor sets are limited only by available host memory, but **may** be limited for implementation specific reasons. Implementations **may** limit the number of supported descriptors to UpdateAfterBind limits or non-UpdateAfterBind limits, whichever is larger.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorSetLayoutCreateFlags;
```

VkDescriptorSetLayoutCreateFlags is a bitmask type for setting a mask of zero or more VkDescriptorSetLayoutCreateFlagBits.

The VkDescriptorSetLayoutBinding structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutBinding {
    uint32_t              binding;
    VkDescriptorType      descriptorType;
    uint32_t              descriptorCount;
    VkShaderStageFlags    stageFlags;
    const VkSampler*      pImmutableSamplers;
} VkDescriptorSetLayoutBinding;
```

- binding is the binding number of this entry and corresponds to a resource of the same binding number in the shader stages.
- descriptorType is a VkDescriptorType specifying which type of resource descriptors are used for this binding.
- descriptorCount is the number of descriptors contained in the binding, accessed in a shader as an array, except if descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK in which case descriptorCount is the size in bytes of the inline uniform block. If descriptorCount is zero this binding entry is reserved and the resource **must** not be accessed from any stage via this binding within any pipeline using the set layout.
- stageFlags member is a bitmask of VkShaderStageFlagBits specifying which pipeline shader stages **can** access a resource for this binding. VK_SHADER_STAGE_ALL is a shorthand specifying that all defined shader stages, including any additional stages defined by extensions, **can** access the resource.

  If a shader stage is not included in stageFlags, then a resource **must** not be accessed from that stage via this binding within any pipeline using the set layout. Other than input attachments

which are limited to the fragment shader, there are no limitations on what combinations of stages **can** use a descriptor binding, and in particular a binding **can** be used by both graphics stages and the compute stage.

- `pImmutableSamplers` affects initialization of samplers. If `descriptorType` specifies a VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER type descriptor, then `pImmutableSamplers` **can** be used to initialize a set of *immutable samplers*. Immutable samplers are permanently bound into the set layout and **must** not be changed; updating a VK_DESCRIPTOR_TYPE_SAMPLER descriptor with immutable samplers is not allowed and updates to a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptor with immutable samplers does not modify the samplers (the image views are updated, but the sampler updates are ignored). If `pImmutableSamplers` is not `NULL`, then it is a pointer to an array of sampler handles that will be copied into the set layout and used for the corresponding binding. Only the sampler handles are copied; the sampler objects **must** not be destroyed before the final use of the set layout and any descriptor pools and sets created using it. If `pImmutableSamplers` is `NULL`, then the sampler slots are dynamic and sampler handles **must** be bound into descriptor sets using this layout. If `descriptorType` is not one of these descriptor types, then `pImmutableSamplers` is ignored.

The above layout definition allows the descriptor bindings to be specified sparsely such that not all binding numbers between 0 and the maximum binding number need to be specified in the `pBindings` array. Bindings that are not specified have a `descriptorCount` and `stageFlags` of zero, and the value of `descriptorType` is undefined. However, all binding numbers between 0 and the maximum binding number in the VkDescriptorSetLayoutCreateInfo::`pBindings` array **may** consume memory in the descriptor set layout even if not all descriptor bindings are used, though it **should** not consume additional memory from the descriptor pool.

NOTE	The maximum binding number specified **should** be as compact as possible to avoid wasted memory.

Valid Usage

- VUID-VkDescriptorSetLayoutBinding-descriptorType-00282
  If `descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and `descriptorCount` is not `0` and `pImmutableSamplers` is not `NULL`, `pImmutableSamplers` **must** be a valid pointer to an array of `descriptorCount` valid `VkSampler` handles
- VUID-VkDescriptorSetLayoutBinding-descriptorType-12200
  If `descriptorType` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and `descriptorCount` is not `0` and `pImmutableSamplers` is not `NULL`, either each element of `pImmutableSamplers` **must** be a `VkSampler` that enables sampler $Y'C_BC_R$ conversion or none of them enable sampler $Y'C_BC_R$ conversion
- VUID-VkDescriptorSetLayoutBinding-descriptorType-12215
  If `descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLER, each element of `pImmutableSamplers` **must** not be a `VkSampler` object that enables sampler $Y'C_BC_R$ conversion
- VUID-VkDescriptorSetLayoutBinding-descriptorType-04604

If the inlineUniformBlock feature is not enabled, descriptorType **must** not be VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK

- VUID-VkDescriptorSetLayoutBinding-descriptorType-02209
  If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount **must** be a multiple of 4
- VUID-VkDescriptorSetLayoutBinding-descriptorType-08004
  If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK and VkDescriptorSetLayoutCreateInfo::flags does not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT then descriptorCount **must** be less than or equal to VkPhysicalDeviceInlineUniformBlockProperties::maxInlineUniformBlockSize
- VUID-VkDescriptorSetLayoutBinding-flags-08005
  If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, descriptorType **must** be VK_DESCRIPTOR_TYPE_SAMPLER
- VUID-VkDescriptorSetLayoutBinding-flags-08006
  If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, descriptorCount **must** be less than or equal to 1
- VUID-VkDescriptorSetLayoutBinding-flags-08007
  If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, and descriptorCount is equal to 1, pImmutableSamplers **must** not be NULL
- VUID-VkDescriptorSetLayoutBinding-descriptorCount-09465
  If descriptorCount is not 0, stageFlags **must** be VK_SHADER_STAGE_ALL or a valid combination of other VkShaderStageFlagBits values
- VUID-VkDescriptorSetLayoutBinding-descriptorType-01510
  If descriptorType is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT and descriptorCount is not 0, then stageFlags **must** be 0 or VK_SHADER_STAGE_FRAGMENT_BIT
- VUID-VkDescriptorSetLayoutBinding-pImmutableSamplers-04009
  The sampler objects indicated by pImmutableSamplers **must** not have a borderColor with one of the values VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT
- VUID-VkDescriptorSetLayoutBinding-descriptorType-04605
  If descriptorType is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, then pImmutableSamplers **must** be NULL

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBinding-descriptorType-parameter
  descriptorType **must** be a valid VkDescriptorType value

If the pNext chain of a VkDescriptorSetLayoutCreateInfo structure includes a

VkDescriptorSetLayoutBindingFlagsCreateInfo structure, then that structure includes an array of flags, one for each descriptor set layout binding.

The VkDescriptorSetLayoutBindingFlagsCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetLayoutBindingFlagsCreateInfo {
    VkStructureType                    sType;
    const void*                        pNext;
    uint32_t                           bindingCount;
    const VkDescriptorBindingFlags*    pBindingFlags;
} VkDescriptorSetLayoutBindingFlagsCreateInfo;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetLayoutBindingFlagsCreateInfo
typedef VkDescriptorSetLayoutBindingFlagsCreateInfo
VkDescriptorSetLayoutBindingFlagsCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- bindingCount is zero or the number of elements in pBindingFlags.
- pBindingFlags is a pointer to an array of VkDescriptorBindingFlags bitfields, one for each descriptor set layout binding.

If bindingCount is zero or if this structure is not included in the pNext chain, the VkDescriptorBindingFlags for each descriptor set layout binding is considered to be zero. Otherwise, the descriptor set layout binding at VkDescriptorSetLayoutCreateInfo::pBindings[i] uses the flags in pBindingFlags[i].

Valid Usage

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-bindingCount-03002
  If bindingCount is not zero, bindingCount **must** equal VkDescriptorSetLayoutCreateInfo ::bindingCount
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-flags-03003
  If VkDescriptorSetLayoutCreateInfo::flags includes VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT, then all elements of pBindingFlags **must** not include VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT, or VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03004
  If an element of pBindingFlags includes VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, then it **must** be the element with the highest binding number

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformBufferUpdateAfterBind-03005
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingSampledImageUpdateAfterBind-03006
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingSampledImageUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageImageUpdateAfterBind-03007
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageImageUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageBufferUpdateAfterBind-03008
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformTexelBufferUpdateAfterBind-03009
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformTexelBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageTexelBufferUpdateAfterBind-03010
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageTexelBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingInlineUniformBlockUpdateAfterBind-02211
  If VkPhysicalDeviceInlineUniformBlockFeatures::descriptorBindingInlineUniformBlockUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-

descriptorBindingAccelerationStructureUpdateAfterBind-03570
If VkPhysicalDeviceAccelerationStructureFeaturesKHR ::descriptorBindingAccelerationStructureUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-None-03011
  All bindings with descriptor type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUpdateUnusedWhilePending-03012
  If VkPhysicalDeviceDescriptorIndexingFeatures ::descriptorBindingUpdateUnusedWhilePending is not enabled, all elements of pBindingFlags **must** not include VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingPartiallyBound-03013
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingPartiallyBound is not enabled, all elements of pBindingFlags **must** not include VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingVariableDescriptorCount-03014
  If VkPhysicalDeviceDescriptorIndexingFeatures ::descriptorBindingVariableDescriptorCount is not enabled, all elements of pBindingFlags **must** not include VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03015
  If an element of pBindingFlags includes VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, that element's descriptorType **must** not be VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_BINDING_FLAGS_CREATE_INFO
- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-parameter
  If bindingCount is not 0, pBindingFlags **must** be a valid pointer to an array of bindingCount valid combinations of VkDescriptorBindingFlagBits values

Structure Chaining

Extends the structure

- VkDescriptorSetLayoutCreateInfo

Bits which **can** be set in each element of VkDescriptorSetLayoutBindingFlagsCreateInfo ::pBindingFlags, specifying options for the corresponding descriptor set layout binding, are:

```
// Provided by VK_VERSION_1_2
typedef enum VkDescriptorBindingFlagBits {
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT = 0x00000001,
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT = 0x00000002,
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT = 0x00000004,
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT = 0x00000008,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT_EXT =
VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT_EXT =
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT,
} VkDescriptorBindingFlagBits;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorBindingFlagBits
typedef VkDescriptorBindingFlagBits VkDescriptorBindingFlagBitsEXT;
```

- VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT specifies that if descriptors in this binding are updated between when the descriptor set is bound in a command buffer and when that command buffer is submitted to a queue, then the submission will use the most recently set descriptors for this binding and the updates do not invalidate the command buffer. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in vkUpdateDescriptorSetWithTemplateKHR and vkUpdateDescriptorSets. Multiple descriptors with this flag set **can** be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads. Descriptors with this flag set **can** be updated concurrently with the set being bound to a command buffer in another thread, but not concurrently with the set being reset or freed.
- VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT specifies that descriptors in this binding that are not *dynamically used* need not contain valid descriptors at the time the descriptors are consumed. A descriptor is dynamically used if any shader invocation executes an instruction

that performs any memory access using the descriptor. If a descriptor is not dynamically used, any resource referenced by the descriptor is not considered to be referenced during command execution.

- VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT specifies that descriptors in this binding **can** be updated after a command buffer has bound this descriptor set, or while a command buffer that uses this descriptor set is pending execution, as long as the descriptors that are updated are not used by those command buffers. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in vkUpdateDescriptorSetWithTemplateKHR and vkUpdateDescriptorSets in the same way as for VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT. If VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT is also set, then descriptors **can** be updated as long as they are not dynamically used by any shader invocations. If VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT is not set, then descriptors **can** be updated as long as they are not statically used by any shader invocations.
- VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT specifies that this is a *variable-sized descriptor binding* whose size will be specified when a descriptor set is allocated using this layout. The value of `descriptorCount` is treated as an upper bound on the size of the binding. This **must** only be used for the last binding in the descriptor set layout (i.e. the binding with the largest value of `binding`). For the purposes of counting against limits such as `maxDescriptorSet*` and `maxPerStageDescriptor*`, the full value of `descriptorCount` is counted, except for descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, when VkDescriptorSetLayoutCreateInfo::`flags` does not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT. In this case, `descriptorCount` specifies the upper bound on the byte size of the binding; thus it counts against the `maxInlineUniformTotalSize` limit instead.

NOTE Note that while VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT and VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT both involve updates to descriptor sets after they are bound, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT is a weaker requirement since it is only about descriptors that are not used, whereas VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT requires the implementation to observe updates to descriptors that are used.

```
// Provided by VK_VERSION_1_2
typedef VkFlags VkDescriptorBindingFlags;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorBindingFlags
typedef VkDescriptorBindingFlags VkDescriptorBindingFlagsEXT;
```

`VkDescriptorBindingFlags` is a bitmask type for setting a mask of zero or more VkDescriptorBindingFlagBits.

To query information about whether a descriptor set layout **can** be created, call:

```
// Provided by VK_VERSION_1_1
void vkGetDescriptorSetLayoutSupport(
    VkDevice                                    device,
    const VkDescriptorSetLayoutCreateInfo*      pCreateInfo,
    VkDescriptorSetLayoutSupport*               pSupport);
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to vkGetDescriptorSetLayoutSupport
void vkGetDescriptorSetLayoutSupportKHR(
    VkDevice                                    device,
    const VkDescriptorSetLayoutCreateInfo*      pCreateInfo,
    VkDescriptorSetLayoutSupport*               pSupport);
```

- `device` is the logical device that would create the descriptor set layout.
- `pCreateInfo` is a pointer to a VkDescriptorSetLayoutCreateInfo structure specifying the state of the descriptor set layout object.
- `pSupport` is a pointer to a VkDescriptorSetLayoutSupport structure, in which information about support for the descriptor set layout object is returned.

Some implementations have limitations on what fits in a descriptor set which are not easily expressible in terms of existing limits like `maxDescriptorSet*`, for example if all descriptor types share a limited space in memory but each descriptor is a different size or alignment. This command returns information about whether a descriptor set satisfies this limit. If the descriptor set layout satisfies the VkPhysicalDeviceMaintenance3Properties::`maxPerSetDescriptors` limit, this command is guaranteed to return VK_TRUE in VkDescriptorSetLayoutSupport::`supported`. If the descriptor set layout exceeds the VkPhysicalDeviceMaintenance3Properties::`maxPerSetDescriptors` limit, whether the descriptor set layout is supported is implementation-dependent and **may** depend on whether the descriptor sizes and alignments cause the layout to exceed an internal limit.

This command does not consider other limits such as `maxPerStageDescriptor*`, and so a descriptor set layout that is supported according to this command **must** still satisfy the pipeline layout limits such as `maxPerStageDescriptor*` in order to be used in a pipeline layout.

NOTE This is a `VkDevice` query rather than `VkPhysicalDevice` because the answer **may** depend on enabled features.

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSupport-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDescriptorSetLayoutSupport-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDescriptorSetLayoutCreateInfo structure
- VUID-vkGetDescriptorSetLayoutSupport-pSupport-parameter
  `pSupport` **must** be a valid pointer to a VkDescriptorSetLayoutSupport structure

Information about support for the descriptor set layout is returned in a VkDescriptorSetLayoutSupport structure:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorSetLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supported;
} VkDescriptorSetLayoutSupport;
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to VkDescriptorSetLayoutSupport
typedef VkDescriptorSetLayoutSupport VkDescriptorSetLayoutSupportKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- supported specifies whether the descriptor set layout **can** be created.

supported will be VK_TRUE if the descriptor set **can** be created, or else VK_FALSE.

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutSupport-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_SUPPORT
- VUID-VkDescriptorSetLayoutSupport-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkDescriptorSetVariableDescriptorCountLayoutSupport
- VUID-VkDescriptorSetLayoutSupport-sType-unique
  The sType value of each structure in the pNext chain **must** be unique

If the pNext chain of a VkDescriptorSetLayoutSupport structure includes a VkDescriptorSetVariableDescriptorCountLayoutSupport structure, then that structure returns additional information about whether the descriptor set layout is supported.

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountLayoutSupport {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVariableDescriptorCount;
} VkDescriptorSetVariableDescriptorCountLayoutSupport;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetVariableDescriptorCountLayoutSupport
typedef VkDescriptorSetVariableDescriptorCountLayoutSupport
VkDescriptorSetVariableDescriptorCountLayoutSupportEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVariableDescriptorCount` indicates the maximum number of descriptors supported in the highest numbered binding of the layout, if that binding is variable-sized. If the highest numbered binding of the layout has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `maxVariableDescriptorCount` indicates the maximum byte size supported for the binding, if that binding is variable-sized.

If the VkDescriptorSetLayoutCreateInfo structure specified in vkGetDescriptorSetLayoutSupport ::`pCreateInfo` includes a variable-sized descriptor, then `supported` is determined assuming the requested size of the variable-sized descriptor, and `maxVariableDescriptorCount` is the maximum size of that descriptor that **can** be successfully created (which is greater than or equal to the requested size passed in). If the VkDescriptorSetLayoutCreateInfo structure does not include a variable-sized descriptor, or if the VkPhysicalDeviceDescriptorIndexingFeatures ::`descriptorBindingVariableDescriptorCount` feature is not enabled, then `maxVariableDescriptorCount` is zero. For the purposes of this command, a variable-sized descriptor binding with a `descriptorCount` of zero is treated as having a `descriptorCount` of four if `descriptorType` is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, or one otherwise, and thus the binding is not ignored and the maximum descriptor count will be returned. If the layout is not supported, then the value written to `maxVariableDescriptorCount` is undefined.

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountLayoutSupport-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_LAYOUT_SUPPORT

Structure Chaining

Extends the structure

- VkDescriptorSetLayoutSupport

The following examples show a shader snippet using two descriptor sets, and application code that creates corresponding descriptor set layouts.

GLSL Example

```
//
// binding to a single sampled image descriptor in set 0
```

```
//
layout (set=0, binding=0) uniform texture2D mySampledImage;

//
// binding to an array of sampled image descriptors in set 0
//
layout (set=0, binding=1) uniform texture2D myArrayOfSampledImages[12];

//
// binding to a single uniform buffer descriptor in set 1
//
layout (set=1, binding=0) uniform myUniformBuffer
{
    vec4 myElement[32];
};
```

SPIR-V Example

```
          ...
     %1 = OpExtInstImport "GLSL.std.450"
          ...
          OpName %9 "mySampledImage"
          OpName %14 "myArrayOfSampledImages"
          OpName %18 "myUniformBuffer"
          OpMemberName %18 0 "myElement"
          OpName %20 ""
          OpDecorate %9 DescriptorSet 0
          OpDecorate %9 Binding 0
          OpDecorate %14 DescriptorSet 0
          OpDecorate %14 Binding 1
          OpDecorate %17 ArrayStride 16
          OpMemberDecorate %18 0 Offset 0
          OpDecorate %18 Block
          OpDecorate %20 DescriptorSet 1
          OpDecorate %20 Binding 0
     %2 = OpTypeVoid
     %3 = OpTypeFunction %2
     %6 = OpTypeFloat 32
     %7 = OpTypeImage %6 2D 0 0 0 1 Unknown
     %8 = OpTypePointer UniformConstant %7
     %9 = OpVariable %8 UniformConstant
    %10 = OpTypeInt 32 0
    %11 = OpConstant %10 12
    %12 = OpTypeArray %7 %11
    %13 = OpTypePointer UniformConstant %12
    %14 = OpVariable %13 UniformConstant
    %15 = OpTypeVector %6 4
    %16 = OpConstant %10 32
    %17 = OpTypeArray %15 %16
    %18 = OpTypeStruct %17
```

```
        %19 = OpTypePointer Uniform %18
        %20 = OpVariable %19 Uniform
              ...
```

API Example

```
VkResult myResult;

const VkDescriptorSetLayoutBinding myDescriptorSetLayoutBinding[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to an array of image descriptors
    {
        .binding = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 12,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },

    // binding to a single uniform buffer descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    }
};

const VkDescriptorSetLayoutCreateInfo myDescriptorSetLayoutCreateInfo[] =
{
    // Information for first descriptor set with two descriptor bindings
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 2,
        .pBindings = &myDescriptorSetLayoutBinding[0]
    },

    // Information for second descriptor set with one descriptor binding
```

```
    {
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 1,
        .pBindings = &myDescriptorSetLayoutBinding[2]
    }
};

VkDescriptorSetLayout myDescriptorSetLayout[2];

//
// Create first descriptor set layout
//
myResult = vkCreateDescriptorSetLayout(
    myDevice,
    &myDescriptorSetLayoutCreateInfo[0],
    NULL,
    &myDescriptorSetLayout[0]);

//
// Create second descriptor set layout
//
myResult = vkCreateDescriptorSetLayout(
    myDevice,
    &myDescriptorSetLayoutCreateInfo[1],
    NULL,
    &myDescriptorSetLayout[1]);
```

To destroy a descriptor set layout, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyDescriptorSetLayout(
    VkDevice                                    device,
    VkDescriptorSetLayout                       descriptorSetLayout,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the descriptor set layout.
- `descriptorSetLayout` is the descriptor set layout to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00284
  If `VkAllocationCallbacks` were provided when `descriptorSetLayout` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-00285

If no VkAllocationCallbacks were provided when descriptorSetLayout was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorSetLayout-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parameter
  If descriptorSetLayout is not VK_NULL_HANDLE, descriptorSetLayout **must** be a valid VkDescriptorSetLayout handle
- VUID-vkDestroyDescriptorSetLayout-pAllocator-parameter
  If pAllocator is not NULL, pAllocator **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDescriptorSetLayout-descriptorSetLayout-parent
  If descriptorSetLayout is a valid handle, it **must** have been created, allocated, or retrieved from device

Host Synchronization

- Host access to descriptorSetLayout **must** be externally synchronized

17.2. Pipeline Layouts

Access to descriptor sets from a pipeline is accomplished through a *pipeline layout*. Zero or more descriptor set layouts and zero or more push constant ranges are combined to form a pipeline layout object describing the complete set of resources that **can** be accessed by a pipeline. The pipeline layout represents a sequence of descriptor sets with each having a specific layout. This sequence of layouts is used to determine the interface between shader stages and shader resources. Each pipeline is created using a pipeline layout.

Pipeline layout objects are represented by VkPipelineLayout handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineLayout)
```

To create a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineLayout(
    VkDevice                                    device,
    const VkPipelineLayoutCreateInfo*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkPipelineLayout*                           pPipelineLayout);
```

- `device` is the logical device that creates the pipeline layout.
- `pCreateInfo` is a pointer to a VkPipelineLayoutCreateInfo structure specifying the state of the pipeline layout object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pPipelineLayout` is a pointer to a VkPipelineLayout handle in which the resulting pipeline layout object is returned.

Valid Usage (Implicit)

- VUID-vkCreatePipelineLayout-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreatePipelineLayout-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkPipelineLayoutCreateInfo structure
- VUID-vkCreatePipelineLayout-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreatePipelineLayout-pPipelineLayout-parameter
  `pPipelineLayout` **must** be a valid pointer to a VkPipelineLayout handle

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkPipelineLayoutCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPipelineLayoutCreateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkPipelineLayoutCreateFlags     flags;
    uint32_t                        setLayoutCount;
    const VkDescriptorSetLayout*    pSetLayouts;
    uint32_t                        pushConstantRangeCount;
    const VkPushConstantRange*      pPushConstantRanges;
} VkPipelineLayoutCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineLayoutCreateFlagBits specifying options for pipeline layout creation.
- `setLayoutCount` is the number of descriptor sets included in the pipeline layout.
- `pSetLayouts` is a pointer to an array of `VkDescriptorSetLayout` objects. The implementation **must** not access these objects outside of the duration of the command this structure is passed to.
- `pushConstantRangeCount` is the number of push constant ranges included in the pipeline layout.
- `pPushConstantRanges` is a pointer to an array of VkPushConstantRange structures defining a set of push constant ranges for use in a single pipeline layout. In addition to descriptor set layouts, a pipeline layout also describes how many push constants **can** be accessed by each stage of the pipeline.

NOTE	Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

Valid Usage

- VUID-VkPipelineLayoutCreateInfo-setLayoutCount-00286
  `setLayoutCount` **must** be less than or equal to `VkPhysicalDeviceLimits::maxBoundDescriptorSets`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03016
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a `descriptorType` of VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSamplers`
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03017
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a `descriptorType` of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER and

VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageDescriptorUniformBuffers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03018
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER and VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageDescriptorStorageBuffers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-06939
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageDescriptorSampledImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03020
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageDescriptorStorageImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03021
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxPerStageDescriptorInputAttachments
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02214
  The total number of bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set and with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK accessible to any given shader stage across all elements of pSetLayouts, **must** be less than or equal to VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03022
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorSamplers and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSamplers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03023
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER and VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorUniformBuffers and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindUniformBuffers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03024
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER and VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorStorageBuffers and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageBuffers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03025
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorSampledImages and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSampledImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03026
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorStorageImages and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03027
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxPerStageDescriptorInputAttachments and VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindInputAttachments
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02215
  The total number of bindings with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks and VkPhysicalDeviceInlineUniformBlockProperties

::maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03028
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetSamplers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03029
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03030
  If the maintenance7 feature is not enabled, the total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-maintenance7-10003
  If the maintenance7 feature is enabled, the total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalUniformBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03031
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffers
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03032
  If the maintenance7 feature is not enabled, the total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-maintenance7-10004
  If the maintenance7 feature is enabled, the total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a

descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalStorageBuffersDynamic

- VUID-VkPipelineLayoutCreateInfo-None-10005
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-10006
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalBuffersDynamic and VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03033
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetSampledImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03034
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetStorageImages
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03035
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetInputAttachments
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02216
  The total number of bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetInlineUniformBlocks

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03036
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetSamplers and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSamplers
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03037
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffers and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindUniformBuffers
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03038
  If the maintenance7 feature is not enabled, the total number of descriptors of the type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffersDynamic and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindUniformBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-maintenance7-10007
  If the maintenance7 feature is enabled, the total number of descriptors of the type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalUniformBuffersDynamic and VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03039
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffers and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageBuffers
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03040
  If the maintenance7 feature is not enabled, the total number of descriptors of the type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffersDynamic and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageBuffersDynamic
- VUID-VkPipelineLayoutCreateInfo-maintenance7-10008
  If the maintenance7 feature is enabled, the total number of descriptors of the type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceMaintenance7PropertiesKHR::maxDescriptorSetTotalStorageBuffersDynamic and VkPhysicalDeviceMaintenance7PropertiesKHR

::maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03041
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetSampledImages and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindSampledImages
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03042
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetStorageImages and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageImages
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-03043
  The total number of descriptors of the type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceLimits::maxDescriptorSetInputAttachments and VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindInputAttachments
- VUID-VkPipelineLayoutCreateInfo-descriptorType-02217
  The total number of bindings with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetInlineUniformBlocks and VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetUpdateAfterBindInlineUniformBlocks
- VUID-VkPipelineLayoutCreateInfo-descriptorType-06531
  The total number of descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceVulkan13Properties::maxInlineUniformTotalSize
- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-00292
  Any two elements of pPushConstantRanges **must** not include the same stage in stageFlags
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-00293
  pSetLayouts **must** not contain more than one descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT set
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03571
  The total number of bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to

VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03572
  The total number of bindings with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR accessible to any given shader stage across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures and VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorUpdateAfterBindAccelerationStructures
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03573
  The total number of bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetAccelerationStructures
- VUID-VkPipelineLayoutCreateInfo-descriptorType-03574
  The total number of bindings with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR accessible across all shader stages and across all elements of pSetLayouts **must** be less than or equal to the maximum of VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetAccelerationStructures and VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetUpdateAfterBindAccelerationStructures
- VUID-VkPipelineLayoutCreateInfo-pImmutableSamplers-03566
  The total number of pImmutableSamplers created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT or VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT across all shader stages and across all elements of pSetLayouts **must** be less than or equal to VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxDescriptorSetSubsampledSamplers
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-04606
  Any element of pSetLayouts **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT bit set
- VUID-VkPipelineLayoutCreateInfo-graphicsPipelineLibrary-06753
  If the graphicsPipelineLibrary feature is not enabled, elements of pSetLayouts **must** be valid VkDescriptorSetLayout objects
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-08008
  If any element of pSetLayouts was created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set, all elements of pSetLayouts **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set
- VUID-VkPipelineLayoutCreateInfo-flags-13352
  If flags has VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set, then VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT **must** also be set

Valid Usage (Implicit)

- VUID-VkPipelineLayoutCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO
- VUID-VkPipelineLayoutCreateInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkPipelineLayoutCreateFlagBits values
- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-parameter
  If `setLayoutCount` is not `0`, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or VK_NULL_HANDLE VkDescriptorSetLayout handles
- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-parameter
  If `pushConstantRangeCount` is not `0`, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid VkPushConstantRange structures

Structure Chaining

Extends the structures

- VkBindDescriptorBufferEmbeddedSamplersInfoEXT
- VkBindDescriptorSetsInfo
- VkIndirectCommandsLayoutCreateInfoEXT
- VkPushConstantsInfo
- VkPushDescriptorSetInfo
- VkPushDescriptorSetWithTemplateInfo
- VkSetDescriptorBufferOffsetsInfoEXT

```
// Provided by VK_VERSION_1_0, VK_EXT_graphics_pipeline_library
typedef enum VkPipelineLayoutCreateFlagBits {
  // Provided by VK_KHR_maintenance11 with VK_EXT_shader_object,
VK_EXT_graphics_pipeline_library
    VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT = 0x00000002,
  // Provided by VK_KHR_maintenance11 with VK_EXT_shader_object and
(VK_EXT_mesh_shader or VK_NV_mesh_shader)
    VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR = 0x00000004,
} VkPipelineLayoutCreateFlagBits;
```

- VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT specifies that implementations **must** ensure that the properties and/or absence of a particular descriptor set do not influence any other properties of the pipeline layout. This allows pipelines libraries linked without VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT to be created with a subset of the total descriptor sets.
- VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR, when used in combination with

VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT, specifies that this pipeline layout will only be used to draw with shader objects created with VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineLayoutCreateFlags;
```

VkPipelineLayoutCreateFlags is a bitmask type for setting a mask of VkPipelineLayoutCreateFlagBits.

The VkPushConstantRange structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPushConstantRange {
    VkShaderStageFlags    stageFlags;
    uint32_t              offset;
    uint32_t              size;
} VkPushConstantRange;
```

- stageFlags is a set of stage flags describing the shader stages that will access a range of push constants. If a particular stage is not included in the range, then accessing members of that range of push constants from the corresponding shader stage will return undefined values.
- offset and size are the start offset and size, respectively, consumed by the range. Both offset and size are in units of bytes and **must** be a multiple of 4. The layout of the push constant variables is specified in the shader.

Valid Usage

- VUID-VkPushConstantRange-offset-00294
  offset **must** be less than VkPhysicalDeviceLimits::maxPushConstantsSize
- VUID-VkPushConstantRange-offset-00295
  offset **must** be a multiple of 4
- VUID-VkPushConstantRange-size-00296
  size **must** be greater than 0
- VUID-VkPushConstantRange-size-00297
  size **must** be a multiple of 4
- VUID-VkPushConstantRange-size-00298
  size **must** be less than or equal to VkPhysicalDeviceLimits::maxPushConstantsSize minus offset

Valid Usage (Implicit)

- VUID-VkPushConstantRange-stageFlags-parameter
  stageFlags **must** be a valid combination of VkShaderStageFlagBits values

Once created, pipeline layouts **can** be used as part of pipeline creation (see Pipelines), as part of binding descriptor sets (see Descriptor Set Binding), and as part of setting push constants (see Push Constant Updates). Pipeline creation accepts a pipeline layout as input, and the layout **may** be used to map (set, binding, arrayElement) tuples to implementation resources or memory locations within a descriptor set. The assignment of implementation resources depends only on the bindings defined in the descriptor sets that comprise the pipeline layout, and not on any shader source.

All resource variables statically used in all shaders in a pipeline **must** be declared with a (set, binding, arrayElement) that exists in the corresponding descriptor set layout and is of an appropriate descriptor type and includes the set of shader stages it is used by in `stageFlags`. The pipeline layout **can** include entries that are not used by a particular pipeline. The pipeline layout allows the application to provide a consistent set of bindings across multiple pipeline compiles, which enables those pipelines to be compiled in a way that the implementation **may** cheaply switch pipelines without reprogramming the bindings.

Similarly, the push constant block declared in each shader (if present) **must** only place variables at offsets that are each included in a push constant range with `stageFlags` including the bit corresponding to the shader stage that uses it. The pipeline layout **can** include ranges or portions of ranges that are not used by a particular pipeline.

There is a limit on the total number of resources of each type that **can** be included in bindings in all descriptor set layouts in a pipeline layout as shown in Pipeline Layout Resource Limits. The “Total Resources Available” column gives the limit on the number of each type of resource that **can** be included in bindings in all descriptor sets in the pipeline layout. Some resource types count against multiple limits. Additionally, there are limits on the total number of each type of resource that **can** be used in any pipeline stage as described in Shader Resource Limits.

Table 15. Pipeline Layout Resource Limits

Total Resources Available	Resource Types
`maxDescriptorSetSamplers` or `maxDescriptorSetUpdateAfterBindSamplers`	sampler
	combined image sampler
`maxDescriptorSetSampledImages` or `maxDescriptorSetUpdateAfterBindSampledImages`	sampled image
	combined image sampler
	uniform texel buffer
`maxDescriptorSetStorageImages` or `maxDescriptorSetUpdateAfterBindStorageImages`	storage image
	storage texel buffer
`maxDescriptorSetUniformBuffers` or `maxDescriptorSetUpdateAfterBindUniformBuffers`	uniform buffer
	uniform buffer dynamic
`maxDescriptorSetUniformBuffersDynamic` or `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` or `maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic`	uniform buffer dynamic

Total Resources Available	Resource Types
maxDescriptorSetStorageBuffers or maxDescriptorSetUpdateAfterBindStorageBuffers	storage buffer
	storage buffer dynamic
maxDescriptorSetStorageBuffersDynamic or maxDescriptorSetUpdateAfterBindStorageBuffersDynamic or maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic	storage buffer dynamic
maxDescriptorSetInputAttachments or maxDescriptorSetUpdateAfterBindInputAttachments	input attachment
maxDescriptorSetInlineUniformBlocks or maxDescriptorSetUpdateAfterBindInlineUniformBlocks	inline uniform block
maxDescriptorSetAccelerationStructures or maxDescriptorSetUpdateAfterBindAccelerationStructures	acceleration structure

To destroy a pipeline layout, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyPipelineLayout(
    VkDevice                                    device,
    VkPipelineLayout                            pipelineLayout,
    const VkAllocationCallbacks*                pAllocator);
```

- device is the logical device that destroys the pipeline layout.
- pipelineLayout is the pipeline layout to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyPipelineLayout-pipelineLayout-00299
  If VkAllocationCallbacks were provided when pipelineLayout was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPipelineLayout-pipelineLayout-00300
  If no VkAllocationCallbacks were provided when pipelineLayout was created, pAllocator **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyPipelineLayout-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkDestroyPipelineLayout-pipelineLayout-parameter
  If `pipelineLayout` is not VK_NULL_HANDLE, `pipelineLayout` **must** be a valid VkPipelineLayout handle
- VUID-vkDestroyPipelineLayout-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyPipelineLayout-pipelineLayout-parent
  If `pipelineLayout` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `pipelineLayout` **must** be externally synchronized

17.2.1. Pipeline Layout Compatibility

Two pipeline layouts are defined to be "compatible for push constants" if they were created with identical push constant ranges. Two pipeline layouts are defined to be "compatible for set N" if they were created with identically defined descriptor set layouts for sets zero through N, if both of them either were or were not created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT, and if they were created with identical push constant ranges.

When binding a descriptor set (see Descriptor Set Binding) to set number N, a previously bound descriptor set bound with lower index M than N is disturbed if the pipeline layouts for set M and N are not compatible for set M. Otherwise, the bound descriptor set in M is not disturbed.

If, additionally, the previously bound descriptor set for set N was bound using a pipeline layout not compatible for set N, then all bindings in sets numbered greater than N are disturbed.

When binding a pipeline, the pipeline **can** correctly access any previously bound descriptor set N if it was bound with compatible pipeline layout for set N, and it was not disturbed.

Layout compatibility means that descriptor sets **can** be bound to a command buffer for use by any pipeline created with a compatible pipeline layout, and without having bound a particular pipeline first. It also means that descriptor sets **can** remain valid across a pipeline change, and the same resources will be accessible to the newly bound pipeline.

When a descriptor set is disturbed by binding descriptor sets, the disturbed set is considered to contain undefined descriptors bound with the same pipeline layout as the disturbing descriptor set.

Implementor's Note

A consequence of layout compatibility is that when the implementation compiles a pipeline layout and maps pipeline resources to implementation resources, the mechanism for set N

should only be a function of sets [0..N].

NOTE	Place the least frequently changing descriptor sets near the start of the pipeline layout, and place the descriptor sets representing the most frequently changing resources near the end. When pipelines are switched, only the descriptor set bindings that have been invalidated will need to be updated and the remainder of the descriptor set bindings will remain in place.

The maximum number of descriptor sets that **can** be bound to a pipeline layout is queried from physical device properties (see `maxBoundDescriptorSets` in Limits).

API Example

```
const VkDescriptorSetLayout layouts[] = { layout1, layout2 };

const VkPushConstantRange ranges[] =
{
    {
        .stageFlags = VK_SHADER_STAGE_VERTEX_BIT,
        .offset = 0,
        .size = 4
    },
    {
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .offset = 4,
        .size = 4
    },
};

const VkPipelineLayoutCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .setLayoutCount = 2,
    .pSetLayouts = layouts,
    .pushConstantRangeCount = 2,
    .pPushConstantRanges = ranges
};

VkPipelineLayout myPipelineLayout;
myResult = vkCreatePipelineLayout(
    myDevice,
    &createInfo,
    NULL,
    &myPipelineLayout);
```

17.3. Allocation of Descriptor Sets

A *descriptor pool* maintains a pool of descriptors, from which descriptor sets are allocated. Descriptor pools are externally synchronized, meaning that the application **must** not allocate and/or free descriptor sets from the same pool in multiple threads simultaneously.

Descriptor pools are represented by `VkDescriptorPool` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorPool)
```

To create a descriptor pool object, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorPool(
    VkDevice                                    device,
    const VkDescriptorPoolCreateInfo*           pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDescriptorPool*                           pDescriptorPool);
```

- `device` is the logical device that creates the descriptor pool.
- `pCreateInfo` is a pointer to a VkDescriptorPoolCreateInfo structure specifying the state of the descriptor pool object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pDescriptorPool` is a pointer to a VkDescriptorPool handle in which the resulting descriptor pool object is returned.

The created descriptor pool is returned in `pDescriptorPool`.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorPool-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDescriptorPool-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDescriptorPoolCreateInfo structure
- VUID-vkCreateDescriptorPool-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDescriptorPool-pDescriptorPool-parameter
  `pDescriptorPool` **must** be a valid pointer to a VkDescriptorPool handle
- VUID-vkCreateDescriptorPool-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_FRAGMENTATION_EXT
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Additional information about the pool is passed in a `VkDescriptorPoolCreateInfo` structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolCreateInfo {
    VkStructureType                sType;
    const void*                    pNext;
    VkDescriptorPoolCreateFlags    flags;
    uint32_t                       maxSets;
    uint32_t                       poolSizeCount;
    const VkDescriptorPoolSize*    pPoolSizes;
} VkDescriptorPoolCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkDescriptorPoolCreateFlagBits specifying certain supported operations on the pool.
- `maxSets` is the maximum number of descriptor sets that **can** be allocated from the pool.
- `poolSizeCount` is the number of elements in `pPoolSizes`.
- `pPoolSizes` is a pointer to an array of VkDescriptorPoolSize structures, each containing a descriptor type and number of descriptors of that type to be allocated in the pool.

If multiple `VkDescriptorPoolSize` structures containing the same descriptor type appear in the `pPoolSizes` array then the pool will be created with enough storage for the total number of descriptors of each type.

Fragmentation of a descriptor pool is possible and **may** lead to descriptor set allocation failures. A failure due to fragmentation is defined as failing a descriptor set allocation despite the sum of all outstanding descriptor set allocations from the pool plus the requested allocation requiring no more than the total number of descriptors requested at pool creation. Implementations provide certain guarantees of when fragmentation **must** not cause allocation failure, as described below.

If a descriptor pool has not had any descriptor sets freed since it was created or most recently reset

then fragmentation **must** not cause an allocation failure (note that this is always the case for a pool created without the VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT bit set). Additionally, if all sets allocated from the pool since it was created or most recently reset use the same number of descriptors (of each type) and the requested allocation also uses that same number of descriptors (of each type), then fragmentation **must** not cause an allocation failure.

If an allocation failure occurs due to fragmentation, an application **can** create an additional descriptor pool to perform further descriptor set allocations.

If `flags` has the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit set, descriptor pool creation **may** fail with the error VK_ERROR_FRAGMENTATION if the total number of descriptors across all pools (including this one) created with this bit set exceeds `maxUpdateAfterBindDescriptorsInAllPools`, or if fragmentation of the underlying hardware resources occurs.

If a `pPoolSizes`[i]::`type` is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, a VkMutableDescriptorTypeCreateInfoEXT structure in the `pNext` chain **can** be used to specify which mutable descriptor types **can** be allocated from the pool. If included in the `pNext` chain, VkMutableDescriptorTypeCreateInfoEXT::`pMutableDescriptorTypeLists`[i] specifies which kind of VK_DESCRIPTOR_TYPE_MUTABLE_EXT descriptors **can** be allocated from this pool entry. If VkMutableDescriptorTypeCreateInfoEXT does not exist in the `pNext` chain, or VkMutableDescriptorTypeCreateInfoEXT::`pMutableDescriptorTypeLists`[i] is out of range, the descriptor pool allocates enough memory to be able to allocate a VK_DESCRIPTOR_TYPE_MUTABLE_EXT descriptor with any supported VkDescriptorType as a mutable descriptor. A mutable descriptor **can** be allocated from a pool entry if the type list in VkDescriptorSetLayoutCreateInfo is a subset of the type list declared in the descriptor pool, or if the pool entry is created without a descriptor type list. Multiple `pPoolSizes` entries with VK_DESCRIPTOR_TYPE_MUTABLE_EXT **can** be declared. When multiple such pool entries are present in `pPoolSizes`, they specify sets of supported descriptor types which either fully overlap, partially overlap, or are disjoint. Two sets fully overlap if the sets of supported descriptor types are equal. If the sets are not disjoint they partially overlap. A pool entry without a `VkMutableDescriptorTypeListEXT` assigned to it is considered to partially overlap any other pool entry which has a `VkMutableDescriptorTypeListEXT` assigned to it. The application **must** ensure that partial overlap does not exist in `pPoolSizes`.

NOTE	The requirement of no partial overlap is intended to resolve ambiguity for validation as there is no confusion which `pPoolSizes` entries will be allocated from. An implementation is not expected to depend on this requirement.

Valid Usage

- VUID-VkDescriptorPoolCreateInfo-descriptorPoolOverallocation-09227
  `maxSets` **must** be greater than `0`
- VUID-VkDescriptorPoolCreateInfo-flags-04607
  If `flags` has the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT bit set, then the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit **must** not be set
- VUID-VkDescriptorPoolCreateInfo-mutableDescriptorType-04608

If VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType is not enabled, pPoolSizes **must** not contain a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT

- VUID-VkDescriptorPoolCreateInfo-flags-04609
  If flags has the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT bit set, VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType **must** be enabled
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-04787
  If pPoolSizes contains a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT, any other VK_DESCRIPTOR_TYPE_MUTABLE_EXT element in pPoolSizes **must** not have sets of supported descriptor types which partially overlap
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-09424
  If pPoolSizes contains a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, the pNext chain **must** include a VkDescriptorPoolInlineUniformBlockCreateInfo structure whose maxInlineUniformBlockBindings member is not zero

Valid Usage (Implicit)

- VUID-VkDescriptorPoolCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_CREATE_INFO
- VUID-VkDescriptorPoolCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkDescriptorPoolInlineUniformBlockCreateInfo or VkMutableDescriptorTypeCreateInfoEXT
- VUID-VkDescriptorPoolCreateInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkDescriptorPoolCreateInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkDescriptorPoolCreateFlagBits values
- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-parameter
  If poolSizeCount is not 0, pPoolSizes **must** be a valid pointer to an array of poolSizeCount valid VkDescriptorPoolSize structures

In order to be able to allocate descriptor sets having inline uniform block bindings the descriptor pool **must** be created with specifying the inline uniform block binding capacity of the descriptor pool, in addition to the total inline uniform data capacity in bytes which is specified through a VkDescriptorPoolSize structure with a descriptorType value of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK. This **can** be done by adding a VkDescriptorPoolInlineUniformBlockCreateInfo structure to the pNext chain of VkDescriptorPoolCreateInfo.

The VkDescriptorPoolInlineUniformBlockCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkDescriptorPoolInlineUniformBlockCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           maxInlineUniformBlockBindings;
} VkDescriptorPoolInlineUniformBlockCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockBindings` is the number of inline uniform block bindings to allocate.

Valid Usage (Implicit)

- VUID-VkDescriptorPoolInlineUniformBlockCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_INLINE_UNIFORM_BLOCK_CREATE_INFO

Structure Chaining

Extends the structure

- VkDescriptorPoolCreateInfo

Bits which **can** be set in VkDescriptorPoolCreateInfo::`flags`, enabling operations on a descriptor pool, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorPoolCreateFlagBits {
    VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT = 0x00000001,
  // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT = 0x00000002,
  // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT = 0x00000004,
  // Provided by VK_EXT_descriptor_indexing
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT,
} VkDescriptorPoolCreateFlagBits;
```

- VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT specifies that descriptor sets **can** return their individual allocations to the pool, i.e. all of vkAllocateDescriptorSets, vkFreeDescriptorSets, and vkResetDescriptorPool are allowed. Otherwise, descriptor sets allocated from the pool **must** not be individually freed back to the pool, i.e. only vkAllocateDescriptorSets and vkResetDescriptorPool are allowed.
- VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT specifies that descriptor sets

allocated from this pool **can** include bindings with the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit set. It is valid to allocate descriptor sets that have bindings that do not set the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit from a pool that has VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT set.

- VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT specifies that this descriptor pool and the descriptor sets allocated from it reside entirely in host memory and cannot be bound. Similar to descriptor sets allocated without this flag, applications **can** copy-from and copy-to descriptors sets allocated from this descriptor pool. Descriptor sets allocated from this pool are partially exempt from the external synchronization requirement in vkUpdateDescriptorSetWithTemplateKHR and vkUpdateDescriptorSets. Descriptor sets and their descriptors can be updated concurrently in different threads, though the same descriptor **must** not be updated concurrently by two threads.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolCreateFlags;
```

VkDescriptorPoolCreateFlags is a bitmask type for setting a mask of zero or more VkDescriptorPoolCreateFlagBits.

The VkDescriptorPoolSize structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolSize {
    VkDescriptorType    type;
    uint32_t            descriptorCount;
} VkDescriptorPoolSize;
```

- type is the type of descriptor.
- descriptorCount is the number of descriptors of that type to allocate. If type is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount is the number of bytes to allocate for descriptors of this type.

NOTE

When creating a descriptor pool that will contain descriptors for combined image samplers with $Y'C_BC_R$ conversion, an application needs to account for non-trivial descriptor consumption when choosing the descriptorCount value, as indicated by VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount.

For simplicity, the application **can** use the VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount property to conservatively size the descriptorCount value instead of querying combinedImageSamplerDescriptorCount for each format.

Valid Usage

- VUID-VkDescriptorPoolSize-descriptorCount-00302
  `descriptorCount` **must** be greater than `0`
- VUID-VkDescriptorPoolSize-type-02218
  If `type` is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `descriptorCount` **must** be a multiple of `4`

Valid Usage (Implicit)

- VUID-VkDescriptorPoolSize-type-parameter
  `type` **must** be a valid VkDescriptorType value

To destroy a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyDescriptorPool(
    VkDevice                                    device,
    VkDescriptorPool                            descriptorPool,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the descriptor pool.
- `descriptorPool` is the descriptor pool to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

When a pool is destroyed, all descriptor sets allocated from the pool are implicitly freed and become invalid. Descriptor sets allocated from a given pool do not need to be freed before destroying that descriptor pool.

Valid Usage

- VUID-vkDestroyDescriptorPool-descriptorPool-00303
  All submitted commands that refer to `descriptorPool` (via any allocated descriptor sets) **must** have completed execution
- VUID-vkDestroyDescriptorPool-descriptorPool-00304
  If `VkAllocationCallbacks` were provided when `descriptorPool` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorPool-descriptorPool-00305
  If no `VkAllocationCallbacks` were provided when `descriptorPool` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorPool-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyDescriptorPool-descriptorPool-parameter
  If `descriptorPool` is not VK_NULL_HANDLE, `descriptorPool` **must** be a valid VkDescriptorPool handle
- VUID-vkDestroyDescriptorPool-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDescriptorPool-descriptorPool-parent
  If `descriptorPool` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized

Descriptor sets are allocated from descriptor pool objects, and are represented by `VkDescriptorSet` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSet)
```

To allocate descriptor sets from a descriptor pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkAllocateDescriptorSets(
    VkDevice                                    device,
    const VkDescriptorSetAllocateInfo*          pAllocateInfo,
    VkDescriptorSet*                            pDescriptorSets);
```

- `device` is the logical device that owns the descriptor pool.
- `pAllocateInfo` is a pointer to a VkDescriptorSetAllocateInfo structure describing parameters of the allocation.
- `pDescriptorSets` is a pointer to an array of VkDescriptorSet handles in which the resulting descriptor set objects are returned.

The allocated descriptor sets are returned in `pDescriptorSets`.

When a descriptor set is allocated, the initial state is largely uninitialized and all descriptors are undefined, with the exception that samplers with a non-null `pImmutableSamplers` are initialized on allocation. Descriptors also become undefined if the underlying resource or view object is

destroyed. Descriptor sets containing undefined descriptors **can** still be bound and used, subject to the following conditions:

- For descriptor set bindings created with the VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT bit set, all descriptors in that binding that are dynamically used **must** have been populated before the descriptor set is consumed.
- For descriptor set bindings created without the VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT bit set, all descriptors in that binding that are statically used **must** have been populated before the descriptor set is consumed.
- Descriptor bindings with descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK **can** be undefined when the descriptor set is consumed; though values in that block will be undefined.
- Entries that are not used by a pipeline **can** have undefined descriptors.

If a call to `vkAllocateDescriptorSets` would cause the total number of descriptor sets allocated from the pool to exceed the value of VkDescriptorPoolCreateInfo::`maxSets` used to create `pAllocateInfo->descriptorPool`, then the allocation **may** fail due to lack of space in the descriptor pool. Similarly, the allocation **may** fail due to lack of space if the call to `vkAllocateDescriptorSets` would cause the number of any given descriptor type to exceed the sum of all the `descriptorCount` members of each element of VkDescriptorPoolCreateInfo::`pPoolSizes` with a `type` equal to that type.

Additionally, the allocation **may** also fail if a call to `vkAllocateDescriptorSets` would cause the total number of inline uniform block bindings allocated from the pool to exceed the value of VkDescriptorPoolInlineUniformBlockCreateInfo::`maxInlineUniformBlockBindings` used to create the descriptor pool.

If the allocation fails due to no more space in the descriptor pool, and not because of system or device memory exhaustion, then VK_ERROR_OUT_OF_POOL_MEMORY **must** be returned.

`vkAllocateDescriptorSets` **can** be used to create multiple descriptor sets. If the creation of any of those descriptor sets fails, then the implementation **must** destroy all successfully created descriptor set objects from this command, set all entries of the `pDescriptorSets` array to VK_NULL_HANDLE and return the error.

Valid Usage (Implicit)

- VUID-vkAllocateDescriptorSets-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAllocateDescriptorSets-pAllocateInfo-parameter
  `pAllocateInfo` **must** be a valid pointer to a valid VkDescriptorSetAllocateInfo structure
- VUID-vkAllocateDescriptorSets-pDescriptorSets-parameter
  `pDescriptorSets` **must** be a valid pointer to an array of `pAllocateInfo->descriptorSetCount` VkDescriptorSet handles
- VUID-vkAllocateDescriptorSets-device-queuecount
  The device **must** have been created with at least 1 queue
- VUID-vkAllocateDescriptorSets-pAllocateInfo::descriptorSetCount-arraylength

pAllocateInfo->descriptorSetCount **must** be greater than 0

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_FRAGMENTED_POOL
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_POOL_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDescriptorSetAllocateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetAllocateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkDescriptorPool                descriptorPool;
    uint32_t                        descriptorSetCount;
    const VkDescriptorSetLayout*    pSetLayouts;
} VkDescriptorSetAllocateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- descriptorPool is the pool which the sets will be allocated from.
- descriptorSetCount determines the number of descriptor sets to be allocated from the pool.
- pSetLayouts is a pointer to an array of descriptor set layouts, with each member specifying how the corresponding descriptor set is allocated.

Valid Usage

- VUID-VkDescriptorSetAllocateInfo-apiVersion-07895
  If the VK_KHR_maintenance1 extension is not enabled and VkPhysicalDeviceProperties ::apiVersion is less than Vulkan 1.1, descriptorSetCount **must** not be greater than the number of sets that are currently available for allocation in descriptorPool
- VUID-VkDescriptorSetAllocateInfo-apiVersion-07896
  If the VK_KHR_maintenance1 extension is not enabled and VkPhysicalDeviceProperties ::apiVersion is less than Vulkan 1.1, descriptorPool **must** have enough free descriptor

capacity remaining to allocate the descriptor sets of the specified layouts

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-00308
  Each element of `pSetLayouts` **must** not have been created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-03044
  If any element of `pSetLayouts` was created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set, `descriptorPool` **must** have been created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-09380
  If `pSetLayouts`[i] was created with an element of `pBindingFlags` that includes VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, and VkDescriptorSetVariableDescriptorCountAllocateInfo is included in the `pNext` chain, and `VkDescriptorSetVariableDescriptorCountAllocateInfo`::`descriptorSetCount` is not zero, then VkDescriptorSetVariableDescriptorCountAllocateInfo::`pDescriptorCounts`[i] **must** be less than or equal to VkDescriptorSetLayoutBinding::`descriptorCount` for the corresponding binding used to create `pSetLayouts`[i]
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-04610
  If any element of `pSetLayouts` was created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT bit set, `descriptorPool` **must** have been created with the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT flag set
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-08009
  Each element of `pSetLayouts` **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set

Valid Usage (Implicit)

- VUID-VkDescriptorSetAllocateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_ALLOCATE_INFO
- VUID-VkDescriptorSetAllocateInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkDescriptorSetVariableDescriptorCountAllocateInfo
- VUID-VkDescriptorSetAllocateInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDescriptorSetAllocateInfo-descriptorPool-parameter
  `descriptorPool` **must** be a valid VkDescriptorPool handle
- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-parameter
  `pSetLayouts` **must** be a valid pointer to an array of `descriptorSetCount` valid VkDescriptorSetLayout handles
- VUID-VkDescriptorSetAllocateInfo-descriptorSetCount-arraylength
  `descriptorSetCount` **must** be greater than `0`

- VUID-VkDescriptorSetAllocateInfo-commonparent
  Both of `descriptorPool`, and the elements of `pSetLayouts` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized

If the `pNext` chain of a VkDescriptorSetAllocateInfo structure includes a `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure, then that structure includes an array of descriptor counts for variable-sized descriptor bindings, one for each descriptor set being allocated.

The `VkDescriptorSetVariableDescriptorCountAllocateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           descriptorSetCount;
    const uint32_t*    pDescriptorCounts;
} VkDescriptorSetVariableDescriptorCountAllocateInfo;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkDescriptorSetVariableDescriptorCountAllocateInfo
typedef VkDescriptorSetVariableDescriptorCountAllocateInfo
VkDescriptorSetVariableDescriptorCountAllocateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorSetCount` is zero or the number of elements in `pDescriptorCounts`.
- `pDescriptorCounts` is a pointer to an array of descriptor counts, with each member specifying the number of descriptors in a variable-sized descriptor binding in the corresponding descriptor set being allocated.

If `descriptorSetCount` is zero or this structure is not included in the `pNext` chain, then the variable lengths are considered to be zero. Otherwise, `pDescriptorCounts`[i] is the number of descriptors in the variable-sized descriptor binding in the corresponding descriptor set layout. If the variable-sized descriptor binding in the corresponding descriptor set layout has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `pDescriptorCounts`[i] specifies the binding's capacity in bytes. If VkDescriptorSetAllocateInfo::`pSetLayouts`[i] does not include a variable-sized descriptor binding, then `pDescriptorCounts`[i] is ignored.

Valid Usage

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-descriptorSetCount-03045
  If `descriptorSetCount` is not zero, `descriptorSetCount` **must** equal VkDescriptorSetAllocateInfo::`descriptorSetCount`

Valid Usage (Implicit)

- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_ALLOCATE_INFO
- VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-pDescriptorCounts-parameter
  If `descriptorSetCount` is not `0`, `pDescriptorCounts` **must** be a valid pointer to an array of `descriptorSetCount` `uint32_t` values

Structure Chaining

Extends the structure

- VkDescriptorSetAllocateInfo

To free allocated descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkFreeDescriptorSets(
    VkDevice                                    device,
    VkDescriptorPool                            descriptorPool,
    uint32_t                                    descriptorSetCount,
    const VkDescriptorSet*                      pDescriptorSets);
```

- `device` is the logical device that owns the descriptor pool.
- `descriptorPool` is the descriptor pool from which the descriptor sets were allocated.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to VkDescriptorSet objects.

After calling `vkFreeDescriptorSets`, all descriptor sets in `pDescriptorSets` are invalid.

Valid Usage

- VUID-vkFreeDescriptorSets-pDescriptorSets-00309
  All submitted commands that refer to any element of `pDescriptorSets` **must** have completed execution

- VUID-vkFreeDescriptorSets-pDescriptorSets-00310
  `pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` `VkDescriptorSet` handles, each element of which **must** either be a valid handle or VK_NULL_HANDLE
- VUID-vkFreeDescriptorSets-descriptorPool-00312
  `descriptorPool` **must** have been created with the VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT flag

Valid Usage (Implicit)

- VUID-vkFreeDescriptorSets-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkFreeDescriptorSets-descriptorPool-parameter
  `descriptorPool` **must** be a valid VkDescriptorPool handle
- VUID-vkFreeDescriptorSets-descriptorSetCount-arraylength
  `descriptorSetCount` **must** be greater than `0`
- VUID-vkFreeDescriptorSets-descriptorPool-parent
  `descriptorPool` **must** have been created, allocated, or retrieved from `device`
- VUID-vkFreeDescriptorSets-pDescriptorSets-parent
  Each element of `pDescriptorSets` that is a valid handle **must** have been created, allocated, or retrieved from `descriptorPool`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized
- Host access to each member of `pDescriptorSets` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

To return all descriptor sets allocated from a given pool to the pool, rather than freeing individual descriptor sets, call:

```
// Provided by VK_VERSION_1_0
VkResult vkResetDescriptorPool(
    VkDevice                                    device,
    VkDescriptorPool                            descriptorPool,
    VkDescriptorPoolResetFlags                  flags);
```

- `device` is the logical device that owns the descriptor pool.
- `descriptorPool` is the descriptor pool to be reset.
- `flags` is reserved for future use.

Resetting a descriptor pool recycles all of the resources from all of the descriptor sets allocated from the descriptor pool back to the descriptor pool, and the descriptor sets are implicitly freed.

Valid Usage

- VUID-vkResetDescriptorPool-descriptorPool-00313
  All uses of `descriptorPool` (via any allocated descriptor sets) **must** have completed execution

Valid Usage (Implicit)

- VUID-vkResetDescriptorPool-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkResetDescriptorPool-descriptorPool-parameter
  `descriptorPool` **must** be a valid VkDescriptorPool handle
- VUID-vkResetDescriptorPool-flags-zerobitmask
  `flags` **must** be `0`
- VUID-vkResetDescriptorPool-descriptorPool-parent
  `descriptorPool` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized
- Host access to any `VkDescriptorSet` objects allocated from `descriptorPool` **must** be externally synchronized

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolResetFlags;
```

VkDescriptorPoolResetFlags is a bitmask type for setting a mask, but is currently reserved for future use.

17.4. Descriptor Set Updates

Once allocated, descriptor sets **can** be updated with a combination of write and copy operations. To update descriptor sets, call:

```
// Provided by VK_VERSION_1_0
void vkUpdateDescriptorSets(
    VkDevice                                    device,
    uint32_t                                    descriptorWriteCount,
    const VkWriteDescriptorSet*                 pDescriptorWrites,
    uint32_t                                    descriptorCopyCount,
    const VkCopyDescriptorSet*                  pDescriptorCopies);
```

- device is the logical device that updates the descriptor sets.
- descriptorWriteCount is the number of elements in the pDescriptorWrites array.
- pDescriptorWrites is a pointer to an array of VkWriteDescriptorSet structures describing the descriptor sets to write to.
- descriptorCopyCount is the number of elements in the pDescriptorCopies array.
- pDescriptorCopies is a pointer to an array of VkCopyDescriptorSet structures describing the descriptor sets to copy between.

The operations described by pDescriptorWrites are performed first, followed by the operations described by pDescriptorCopies. Within each array, the operations are performed in the order they appear in the array.

Each element in the pDescriptorWrites array describes an operation updating the descriptor set using descriptors for resources specified in the structure.

Each element in the pDescriptorCopies array is a VkCopyDescriptorSet structure describing an operation copying descriptors between sets.

If the dstSet member of any element of pDescriptorWrites or pDescriptorCopies is bound, accessed, or modified by any command that was recorded to a command buffer which is currently in the recording or executable state, and any of the descriptor bindings that are updated were not created

with the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT or VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT bits set, that command buffer becomes invalid.

Copying a descriptor from a descriptor set does not constitute a use of the referenced resource or view, as it is the reference itself that is copied. Applications **can** copy a descriptor referencing a destroyed resource, and it **can** copy an undefined descriptor. The destination descriptor becomes undefined in both cases.

Valid Usage

- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06236
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, elements of the pTexelBufferView member of pDescriptorWrites[i] **must** have been created on device
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06237
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, the buffer member of any element of the pBufferInfo member of pDescriptorWrites[i] **must** have been created on device
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06238
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and dstSet was not allocated with a layout that included immutable samplers for dstBinding with descriptorType, the sampler member of any element of the pImageInfo member of pDescriptorWrites[i] **must** have been created on device
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06239
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER the imageView member of any element of pDescriptorWrites[i] **must** have been created on device
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06240
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, elements of the pAccelerationStructures member of a VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain of pDescriptorWrites[i] **must** have been created on device
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06493
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo **must** be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid

VkDescriptorImageInfo structures

- VUID-vkUpdateDescriptorSets-None-03047
  The dstSet member of each element of pDescriptorWrites or pDescriptorCopies for bindings which were created without the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT or VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT bits set **must** not be used by any command that was recorded to a command buffer which is in the pending state
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-06993
  Host access to pDescriptorWrites[i].dstSet and pDescriptorCopies[i].dstSet **must** be externally synchronized unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSets-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkUpdateDescriptorSets-pDescriptorWrites-parameter
  If descriptorWriteCount is not 0, pDescriptorWrites **must** be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures
- VUID-vkUpdateDescriptorSets-pDescriptorCopies-parameter
  If descriptorCopyCount is not 0, pDescriptorCopies **must** be a valid pointer to an array of descriptorCopyCount valid VkCopyDescriptorSet structures

The VkWriteDescriptorSet structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkWriteDescriptorSet {
    VkStructureType                  sType;
    const void*                      pNext;
    VkDescriptorSet                  dstSet;
    uint32_t                         dstBinding;
    uint32_t                         dstArrayElement;
    uint32_t                         descriptorCount;
    VkDescriptorType                 descriptorType;
    const VkDescriptorImageInfo*     pImageInfo;
    const VkDescriptorBufferInfo*    pBufferInfo;
    const VkBufferView*              pTexelBufferView;
} VkWriteDescriptorSet;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- dstSet is the destination descriptor set to update.
- dstBinding is the descriptor binding within that set.

- `dstArrayElement` is the starting element in that array. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `dstArrayElement` specifies the starting byte offset within the binding.
- `descriptorCount` is the number of descriptors to update. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, then `descriptorCount` specifies the number of bytes to update. Otherwise, `descriptorCount` is one of
  - the number of elements in `pImageInfo`
  - the number of elements in `pBufferInfo`
  - the number of elements in `pTexelBufferView`
  - a value matching the `dataSize` member of a VkWriteDescriptorSetInlineUniformBlock structure in the `pNext` chain
  - a value matching the `accelerationStructureCount` of a VkWriteDescriptorSetAccelerationStructureKHR structure in the `pNext` chain
- `descriptorType` is a VkDescriptorType specifying the type of each descriptor in `pImageInfo`, `pBufferInfo`, or `pTexelBufferView`, as described below. If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is not equal to VK_DESCRIPTOR_TYPE_MUTABLE_EXT, `descriptorType` **must** be the same type as the `descriptorType` specified in `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding`. The type of the descriptor also controls which array the descriptors are taken from.
- `pImageInfo` is a pointer to an array of VkDescriptorImageInfo structures or is ignored, as described below.
- `pBufferInfo` is a pointer to an array of VkDescriptorBufferInfo structures or is ignored, as described below.
- `pTexelBufferView` is a pointer to an array of VkBufferView handles as described in the Buffer Views section or is ignored, as described below.

Members of `pImageInfo`, `pBufferInfo` and `pTexelBufferView` are only accessed by the implementation when they correspond to a descriptor type being defined - otherwise they are ignored. The members accessed are as follows for each descriptor type:

- For VK_DESCRIPTOR_TYPE_SAMPLER, only the `sampler` member of each element of VkWriteDescriptorSet::`pImageInfo` is accessed.
- For VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, only the `imageView` and `imageLayout` members of each element of VkWriteDescriptorSet::`pImageInfo` are accessed.
- For VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, all members of each element of VkWriteDescriptorSet::`pImageInfo` are accessed.
- For VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, all members of each element of VkWriteDescriptorSet::`pBufferInfo` are accessed.
- For VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or

VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, each element of VkWriteDescriptorSet ::pTexelBufferView is accessed.

When updating descriptor sets with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, none of the pImageInfo, pBufferInfo, or pTexelBufferView members are accessed, instead the source data of the descriptor update operation is taken from the VkWriteDescriptorSetInlineUniformBlock structure in the pNext chain of VkWriteDescriptorSet. When updating descriptor sets with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, none of the pImageInfo, pBufferInfo, or pTexelBufferView members are accessed, instead the source data of the descriptor update operation is taken from the VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain of VkWriteDescriptorSet.

If the nullDescriptor feature is enabled, the buffer, acceleration structure, imageView, or bufferView **can** be VK_NULL_HANDLE. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded. A null acceleration structure descriptor results in the miss shader being invoked.

If the destination descriptor is a mutable descriptor, the active descriptor type for the destination descriptor becomes descriptorType.

Consecutive Binding Updates

If the dstBinding has fewer than descriptorCount array elements remaining starting from dstArrayElement, then the remainder will be used to update the subsequent binding - dstBinding+1 starting at array element zero. If a binding has a descriptorCount of zero, it is skipped. This behavior applies recursively, with the update affecting consecutive bindings as needed to update all descriptorCount descriptors. Consecutive bindings **must** have identical VkDescriptorType, VkShaderStageFlags, VkDescriptorBindingFlagBits, and immutable samplers references. In addition, if the VkDescriptorType is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the supported descriptor types in VkMutableDescriptorTypeCreateInfoEXT **must** be equally defined.

NOTE

The same behavior applies to bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK where descriptorCount specifies the number of bytes to update while dstArrayElement specifies the starting byte offset, thus in this case if the dstBinding has a smaller byte size than the sum of dstArrayElement and descriptorCount, then the remainder will be used to update the subsequent binding - dstBinding+1 starting at offset zero. This falls out as a special case of the above rule.

Valid Usage

- VUID-VkWriteDescriptorSet-dstBinding-00315
  dstBinding **must** be less than or equal to the maximum value of binding of all VkDescriptorSetLayoutBinding structures specified when dstSet's descriptor set layout was created
- VUID-VkWriteDescriptorSet-dstBinding-00316

dstBinding **must** be a binding with a non-zero descriptorCount

- VUID-VkWriteDescriptorSet-dstBinding-10009
  dstBinding **must** be a binding with a non-zero VkDescriptorSetLayoutCreateInfo ::bindingCount
- VUID-VkWriteDescriptorSet-descriptorCount-00317
  All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, **must** have identical descriptorType
- VUID-VkWriteDescriptorSet-descriptorCount-10776
  All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, **must** have identical stageFlags
- VUID-VkWriteDescriptorSet-descriptorCount-00318
  All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, **must** all either use immutable samplers or **must** all not use immutable samplers
- VUID-VkWriteDescriptorSet-descriptorCount-10777
  All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, **must** have identical VkDescriptorBindingFlagBits
- VUID-VkWriteDescriptorSet-descriptorType-00319
  descriptorType **must** match the type of dstBinding within dstSet
- VUID-VkWriteDescriptorSet-dstSet-00320
  dstSet **must** be a valid VkDescriptorSet handle
- VUID-VkWriteDescriptorSet-dstArrayElement-00321
  The sum of dstArrayElement and descriptorCount **must** be less than or equal to the number of array elements in the descriptor set binding specified by dstBinding, and all applicable consecutive bindings
- VUID-VkWriteDescriptorSet-descriptorType-02219
  If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, dstArrayElement **must** be an integer multiple of 4
- VUID-VkWriteDescriptorSet-descriptorType-02220
  If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, descriptorCount **must** be an integer multiple of 4
- VUID-VkWriteDescriptorSet-descriptorType-02994
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, each element of pTexelBufferView **must** be either a valid VkBufferView handle or VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-02995
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER and the nullDescriptor feature is not enabled, each element of pTexelBufferView **must** not be VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-00324
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or

VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, pBufferInfo **must** be a valid pointer to an array of descriptorCount valid VkDescriptorBufferInfo structures

- VUID-VkWriteDescriptorSet-descriptorType-00325
  If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and dstSet was not allocated with a layout that included immutable samplers for dstBinding with descriptorType, the sampler member of each element of pImageInfo **must** be a valid VkSampler object
- VUID-VkWriteDescriptorSet-descriptorType-02996
  If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, the imageView member of each element of pImageInfo **must** be either a valid VkImageView handle or VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-02997
  If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and the nullDescriptor feature is not enabled, the imageView member of each element of pImageInfo **must** not be VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-07683
  If descriptorType is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, then the imageView member of each element of pImageInfo **must** not be VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-02221
  If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, the pNext chain **must** include a VkWriteDescriptorSetInlineUniformBlock structure whose dataSize member equals descriptorCount
- VUID-VkWriteDescriptorSet-descriptorType-02382
  If descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, the pNext chain **must** include a VkWriteDescriptorSetAccelerationStructureKHR structure whose accelerationStructureCount member equals descriptorCount
- VUID-VkWriteDescriptorSet-descriptorType-01946
  If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, then the imageView member of each pImageInfo element **must** have been created without a VkSamplerYcbcrConversionInfo structure in its pNext chain
- VUID-VkWriteDescriptorSet-descriptorType-02738
  If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and if any element of pImageInfo has an imageView member that was created with a VkSamplerYcbcrConversionInfo structure in its pNext chain, then dstSet **must** have been allocated with a layout that included immutable samplers for dstBinding, and the corresponding immutable sampler **must** have been created with an identically defined VkSamplerYcbcrConversionInfo object
- VUID-VkWriteDescriptorSet-descriptorType-01948
  If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and dstSet was allocated with a layout that included immutable samplers for dstBinding, then the imageView member of each element of pImageInfo which corresponds to an immutable sampler that enables sampler $Y'C_BC_R$ conversion **must** have been created with a

VkSamplerYcbcrConversionInfo structure in its pNext chain with an identically defined VkSamplerYcbcrConversionInfo to the corresponding immutable sampler

- VUID-VkWriteDescriptorSet-descriptorType-09506
  If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, dstSet was allocated with a layout that included immutable samplers for dstBinding, and those samplers enable sampler $Y'C_BC_R$ conversion, then imageView **must** not be VK_NULL_HANDLE
- VUID-VkWriteDescriptorSet-descriptorType-00327
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, the offset member of each element of pBufferInfo **must** be a multiple of VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment
- VUID-VkWriteDescriptorSet-descriptorType-00328
  If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, the offset member of each element of pBufferInfo **must** be a multiple of VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment
- VUID-VkWriteDescriptorSet-descriptorType-00329
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, and the buffer member of any element of pBufferInfo is the handle of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-VkWriteDescriptorSet-descriptorType-00330
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, the buffer member of each element of pBufferInfo **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-00331
  If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, the buffer member of each element of pBufferInfo **must** have been created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-00332
  If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, the range member of each element of pBufferInfo, or the effective range if range is VK_WHOLE_SIZE, **must** be less than or equal to VkPhysicalDeviceLimits::maxUniformBufferRange
- VUID-VkWriteDescriptorSet-descriptorType-00333
  If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, and the shader64BitIndexing feature is not enabled, the range member of each element of pBufferInfo, or the effective range if range is VK_WHOLE_SIZE, **must** be less than or equal to VkPhysicalDeviceLimits::maxStorageBufferRange

- VUID-VkWriteDescriptorSet-descriptorType-08765
  If `descriptorType` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, the `pTexelBufferView` buffer view usage **must** include VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
- VUID-VkWriteDescriptorSet-descriptorType-08766
  If `descriptorType` is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, the `pTexelBufferView` buffer view usage **must** include VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT
- VUID-VkWriteDescriptorSet-descriptorType-00336
  If `descriptorType` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the `imageView` member of each element of `pImageInfo` **must** have been created with the identity swizzle
- VUID-VkWriteDescriptorSet-descriptorType-00337
  If `descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the `imageView` member of each element of `pImageInfo` **must** have been created with the VK_IMAGE_USAGE_SAMPLED_BIT usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-04149
  If `descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in Sampled Image
- VUID-VkWriteDescriptorSet-descriptorType-04150
  If `descriptorType` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in Combined Image Sampler
- VUID-VkWriteDescriptorSet-descriptorType-04151
  If `descriptorType` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in Input Attachment
- VUID-VkWriteDescriptorSet-descriptorType-04152
  If `descriptorType` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in Storage Image
- VUID-VkWriteDescriptorSet-descriptorType-00338
  If `descriptorType` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the `imageView` member of each element of `pImageInfo` **must** have been created with the VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-00339
  If `descriptorType` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, the `imageView` member of each element of `pImageInfo` **must** have been created with the VK_IMAGE_USAGE_STORAGE_BIT usage flag set
- VUID-VkWriteDescriptorSet-descriptorType-02752
  If `descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLER, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`
- VUID-VkWriteDescriptorSet-dstSet-04611
  If the `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is

VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the new active descriptor type descriptorType **must** exist in the corresponding pMutableDescriptorTypeLists list for dstBinding

- VUID-VkWriteDescriptorSet-descriptorType-06450
  If descriptorType is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the imageView member of each element of pImageInfo **must** have either been created without a VkImageViewMinLodCreateInfoEXT included in the pNext chain or with a VkImageViewMinLodCreateInfoEXT::minLod of 0.0

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSet-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET
- VUID-VkWriteDescriptorSet-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkWriteDescriptorSetAccelerationStructureKHR or VkWriteDescriptorSetInlineUniformBlock
- VUID-VkWriteDescriptorSet-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkWriteDescriptorSet-descriptorType-parameter
  descriptorType **must** be a valid VkDescriptorType value
- VUID-VkWriteDescriptorSet-descriptorCount-arraylength
  descriptorCount **must** be greater than 0
- VUID-VkWriteDescriptorSet-commonparent
  Both of dstSet, and the elements of pTexelBufferView that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

The VkDescriptorBufferInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorBufferInfo {
    VkBuffer        buffer;
    VkDeviceSize    offset;
    VkDeviceSize    range;
} VkDescriptorBufferInfo;
```

- buffer is VK_NULL_HANDLE or the buffer resource.
- offset is the offset in bytes from the start of buffer. Access to buffer memory via this descriptor uses addressing that is relative to this starting offset.
- range is the size in bytes that is used for this descriptor update, or VK_WHOLE_SIZE to use the range from offset to the end of the buffer.

NOTE	When setting range to VK_WHOLE_SIZE, the effective range **must** not be larger

than the maximum range for the descriptor type (maxUniformBufferRange or maxStorageBufferRange). This means that VK_WHOLE_SIZE is not typically useful in the common case where uniform buffer descriptors are suballocated from a buffer that is much larger than maxUniformBufferRange.

For VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC and VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC descriptor types, offset is the base offset from which the dynamic offset is applied and range is the static size used for all dynamic offsets.

When range is VK_WHOLE_SIZE the effective range is calculated at vkUpdateDescriptorSets is by taking the size of buffer minus the offset.

Valid Usage

- VUID-VkDescriptorBufferInfo-offset-00340
  offset **must** be less than the size of buffer
- VUID-VkDescriptorBufferInfo-range-00341
  If range is not equal to VK_WHOLE_SIZE, range **must** be greater than 0
- VUID-VkDescriptorBufferInfo-range-00342
  If range is not equal to VK_WHOLE_SIZE, range **must** be less than or equal to the size of buffer minus offset
- VUID-VkDescriptorBufferInfo-buffer-02998
  If the nullDescriptor feature is not enabled, buffer **must** not be VK_NULL_HANDLE
- VUID-VkDescriptorBufferInfo-buffer-02999
  If buffer is VK_NULL_HANDLE, offset **must** be zero and range **must** be VK_WHOLE_SIZE

Valid Usage (Implicit)

- VUID-VkDescriptorBufferInfo-buffer-parameter
  If buffer is not VK_NULL_HANDLE, buffer **must** be a valid VkBuffer handle

The VkDescriptorImageInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorImageInfo {
    VkSampler        sampler;
    VkImageView      imageView;
    VkImageLayout    imageLayout;
} VkDescriptorImageInfo;
```

- sampler is a sampler handle, and is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER if the binding being updated does not use immutable samplers.

- `imageView` is VK_NULL_HANDLE or an image view handle, and is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in at the time this descriptor is accessed. `imageLayout` is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT.

Members of `VkDescriptorImageInfo` that are not used in an update (as described above) are ignored.

Valid Usage

- VUID-VkDescriptorImageInfo-imageView-06712
  `imageView` **must** not be a 2D array image view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-07795
  If `imageView` is a 2D view created from a 3D image, then `descriptorType` **must** be VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
- VUID-VkDescriptorImageInfo-imageView-07796
  If `imageView` is a 2D view created from a 3D image, then the image **must** have been created with VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set
- VUID-VkDescriptorImageInfo-descriptorType-06713
  If the `image2DViewOf3D` feature is not enabled or `descriptorType` is not VK_DESCRIPTOR_TYPE_STORAGE_IMAGE then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-descriptorType-06714
  If the `sampler2DViewOf3D` feature is not enabled or `descriptorType` is not VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER then `imageView` **must** not be a 2D view created from a 3D image
- VUID-VkDescriptorImageInfo-imageView-01976
  If `imageView` is created from a depth/stencil image, the `aspectMask` used to create the `imageView` **must** include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT but not both
- VUID-VkDescriptorImageInfo-imageLayout-09425
  If `imageLayout` is VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL, then the `aspectMask` used to create `imageView` **must** not include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkDescriptorImageInfo-imageLayout-09426
  If `imageLayout` is VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL,

VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL, VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL, VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL or VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL, then the `aspectMask` used to create `imageView` **must** not include VK_IMAGE_ASPECT_COLOR_BIT

- VUID-VkDescriptorImageInfo-sampler-01564
  If `sampler` is used and the VkFormat of the image is a multi-planar format, the image **must** have been created with VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, and the `aspectMask` of the `imageView` **must** be a valid multi-planar aspect mask bit
- VUID-VkDescriptorImageInfo-mutableComparisonSamplers-04450
  If the `VK_KHR_portability_subset` extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::`mutableComparisonSamplers` is VK_FALSE, then `sampler` **must** have been created with VkSamplerCreateInfo::`compareEnable` set to VK_FALSE

Valid Usage (Implicit)

- VUID-VkDescriptorImageInfo-commonparent
  Both of `imageView`, and `sampler` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

If the `descriptorType` member of VkWriteDescriptorSet is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then the data to write to the descriptor set is specified through a `VkWriteDescriptorSetInlineUniformBlock` structure included in the `pNext` chain of `VkWriteDescriptorSet`.

The `VkWriteDescriptorSetInlineUniformBlock` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkWriteDescriptorSetInlineUniformBlock {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dataSize;
    const void*        pData;
} VkWriteDescriptorSetInlineUniformBlock;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dataSize` is the number of bytes of inline uniform block data pointed to by `pData`.
- `pData` is a pointer to `dataSize` number of bytes of data to write to the inline uniform block.

Valid Usage

- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-02222
  `dataSize` **must** be an integer multiple of `4`

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetInlineUniformBlock-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK
- VUID-VkWriteDescriptorSetInlineUniformBlock-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-arraylength
  `dataSize` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkWriteDescriptorSet

The `VkWriteDescriptorSetAccelerationStructureKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkWriteDescriptorSetAccelerationStructureKHR {
    VkStructureType                      sType;
    const void*                          pNext;
    uint32_t                             accelerationStructureCount;
    const VkAccelerationStructureKHR*    pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureCount` is the number of elements in `pAccelerationStructures`.
- `pAccelerationStructures` is a pointer to an array of VkAccelerationStructureKHR structures specifying the acceleration structures to update.

Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03579
  Each acceleration structure in `pAccelerationStructures` **must** have been created with a `type` of VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or

VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03580
  If the `nullDescriptor` feature is not enabled, each element of `pAccelerationStructures` **must** not be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_KHR
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-parameter
  `pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid or VK_NULL_HANDLE VkAccelerationStructureKHR handles
- VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-arraylength
  `accelerationStructureCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- VkWriteDescriptorSet

The `VkCopyDescriptorSet` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkCopyDescriptorSet {
    VkStructureType    sType;
    const void*        pNext;
    VkDescriptorSet    srcSet;
    uint32_t           srcBinding;
    uint32_t           srcArrayElement;
    VkDescriptorSet    dstSet;
    uint32_t           dstBinding;
    uint32_t           dstArrayElement;
    uint32_t           descriptorCount;
} VkCopyDescriptorSet;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSet`, `srcBinding`, and `srcArrayElement` are the source set, binding, and array element, respectively. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `srcArrayElement` specifies the starting

byte offset within the binding to copy from.

- `dstSet`, `dstBinding`, and `dstArrayElement` are the destination set, binding, and array element, respectively. If the descriptor binding identified by `dstSet` and `dstBinding` has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `dstArrayElement` specifies the starting byte offset within the binding to copy to.
- `descriptorCount` is the number of descriptors to copy from the source to destination. If `descriptorCount` is greater than the number of remaining array elements in the source or destination binding, those affect consecutive bindings in a manner similar to VkWriteDescriptorSet above. If the descriptor binding identified by `srcSet` and `srcBinding` has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then `descriptorCount` specifies the number of bytes to copy and the remaining array elements in the source or destination binding refer to the remaining number of bytes in those.

If the `VkDescriptorSetLayoutBinding` for `dstBinding` is VK_DESCRIPTOR_TYPE_MUTABLE_EXT and `srcBinding` is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the new active descriptor type becomes the descriptor type of `srcBinding`. If both `VkDescriptorSetLayoutBinding` for `srcBinding` and `dstBinding` are VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the active descriptor type in each source descriptor is copied into the corresponding destination descriptor. The active descriptor type **can** be different for each source descriptor.

NOTE The intention is that copies to and from mutable descriptors is a simple memcpy. Copies between non-mutable and mutable descriptors are expected to require one memcpy per descriptor to handle the difference in size, but this use case with more than one `descriptorCount` is considered rare.

Valid Usage

- VUID-VkCopyDescriptorSet-srcBinding-00345
  `srcBinding` **must** be a valid binding within `srcSet`
- VUID-VkCopyDescriptorSet-srcArrayElement-00346
  The sum of `srcArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `srcBinding`, and all applicable consecutive bindings
- VUID-VkCopyDescriptorSet-dstBinding-00347
  `dstBinding` **must** be a valid binding within `dstSet`
- VUID-VkCopyDescriptorSet-dstArrayElement-00348
  The sum of `dstArrayElement` and `descriptorCount` **must** be less than or equal to the number of array elements in the descriptor set binding specified by `dstBinding`, and all applicable consecutive bindings
- VUID-VkCopyDescriptorSet-dstBinding-02632
  The type of `dstBinding` within `dstSet` **must** be equal to the type of `srcBinding` within `srcSet`
- VUID-VkCopyDescriptorSet-srcSet-00349
  If `srcSet` is equal to `dstSet`, then the source and destination ranges of descriptors **must** not overlap, where the ranges **may** include array elements from consecutive bindings

- VUID-VkCopyDescriptorSet-srcBinding-02223
  If the descriptor type of the descriptor set binding specified by `srcBinding` is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, `srcArrayElement` **must** be an integer multiple of `4`
- VUID-VkCopyDescriptorSet-dstBinding-02224
  If the descriptor type of the descriptor set binding specified by `dstBinding` is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, `dstArrayElement` **must** be an integer multiple of `4`
- VUID-VkCopyDescriptorSet-srcBinding-02225
  If the descriptor type of the descriptor set binding specified by either `srcBinding` or `dstBinding` is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, `descriptorCount` **must** be an integer multiple of `4`
- VUID-VkCopyDescriptorSet-srcSet-01918
  If `srcSet`'s layout was created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set, then `dstSet`'s layout **must** also have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set
- VUID-VkCopyDescriptorSet-srcSet-04885
  If `srcSet`'s layout was created without either the VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT flag or the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set, then `dstSet`'s layout **must** have been created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set
- VUID-VkCopyDescriptorSet-srcSet-01920
  If the descriptor pool from which `srcSet` was allocated was created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set, then the descriptor pool from which `dstSet` was allocated **must** also have been created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set
- VUID-VkCopyDescriptorSet-srcSet-04887
  If the descriptor pool from which `srcSet` was allocated was created without either the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT flag or the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set, then the descriptor pool from which `dstSet` was allocated **must** have been created without the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set
- VUID-VkCopyDescriptorSet-dstBinding-02753
  If the descriptor type of the descriptor set binding specified by `dstBinding` is VK_DESCRIPTOR_TYPE_SAMPLER, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`
- VUID-VkCopyDescriptorSet-dstSet-04612
  If `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the new active descriptor type **must** exist in the corresponding `pMutableDescriptorTypeLists` list for `dstBinding` if the new active descriptor type is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT
- VUID-VkCopyDescriptorSet-srcSet-04613

If VkDescriptorSetLayoutBinding for srcSet at srcBinding is VK_DESCRIPTOR_TYPE_MUTABLE_EXT and the VkDescriptorSetLayoutBinding for dstSet at dstBinding is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the active descriptor type for the source descriptor **must** match the descriptor type of dstBinding

- VUID-VkCopyDescriptorSet-dstSet-04614
  If VkDescriptorSetLayoutBinding for dstSet at dstBinding is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, and the new active descriptor type is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the pMutableDescriptorTypeLists for srcBinding and dstBinding **must** match exactly

Valid Usage (Implicit)

- VUID-VkCopyDescriptorSet-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_DESCRIPTOR_SET
- VUID-VkCopyDescriptorSet-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyDescriptorSet-srcSet-parameter
  srcSet **must** be a valid VkDescriptorSet handle
- VUID-VkCopyDescriptorSet-dstSet-parameter
  dstSet **must** be a valid VkDescriptorSet handle
- VUID-VkCopyDescriptorSet-commonparent
  Both of dstSet, and srcSet **must** have been created, allocated, or retrieved from the same VkDevice

17.5. Descriptor Update Templates

A descriptor update template specifies a mapping from descriptor update information in host memory to descriptors in a descriptor set. It is designed to avoid passing redundant information to the driver when frequently updating the same set of descriptors in descriptor sets.

Descriptor update template objects are represented by VkDescriptorUpdateTemplate handles:

```
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorUpdateTemplate)
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplate
typedef VkDescriptorUpdateTemplate VkDescriptorUpdateTemplateKHR;
```

17.6. Descriptor Set Updates With Templates

Updating a large VkDescriptorSet array **can** be an expensive operation since an application **must** specify one VkWriteDescriptorSet structure for each descriptor or descriptor array to update, each of which re-specifies the same state when updating the same descriptor in multiple descriptor sets. For cases when an application wishes to update the same set of descriptors in multiple descriptor sets allocated using the same VkDescriptorSetLayout, vkUpdateDescriptorSetWithTemplate **can** be used as a replacement for vkUpdateDescriptorSets.

VkDescriptorUpdateTemplate allows implementations to convert a set of descriptor update operations on a single descriptor set to an internal format. In conjunction with vkCmdPushDescriptorSetWithTemplate or vkUpdateDescriptorSetWithTemplate, this **can** be more efficient compared to calling vkCmdPushDescriptorSet or vkUpdateDescriptorSets. The descriptors themselves are not specified in the VkDescriptorUpdateTemplate, rather, offsets into an application provided pointer to host memory are specified, which are combined with a pointer passed to vkCmdPushDescriptorSetWithTemplate or vkUpdateDescriptorSetWithTemplate. This allows large batches of updates to be executed without having to convert application data structures into a strictly-defined Vulkan data structure.

To create a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
VkResult vkCreateDescriptorUpdateTemplate(
    VkDevice                                    device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDescriptorUpdateTemplate*                 pDescriptorUpdateTemplate);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkCreateDescriptorUpdateTemplate
VkResult vkCreateDescriptorUpdateTemplateKHR(
    VkDevice                                    device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkDescriptorUpdateTemplate*                 pDescriptorUpdateTemplate);
```

- device is the logical device that creates the descriptor update template.
- pCreateInfo is a pointer to a VkDescriptorUpdateTemplateCreateInfo structure specifying the set of descriptors to update with a single call to vkCmdPushDescriptorSetWithTemplate or vkUpdateDescriptorSetWithTemplate.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
- pDescriptorUpdateTemplate is a pointer to a VkDescriptorUpdateTemplate handle in which the resulting descriptor update template object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorUpdateTemplate-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateDescriptorUpdateTemplate-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkDescriptorUpdateTemplateCreateInfo structure
- VUID-vkCreateDescriptorUpdateTemplate-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateDescriptorUpdateTemplate-pDescriptorUpdateTemplate-parameter
  `pDescriptorUpdateTemplate` **must** be a valid pointer to a VkDescriptorUpdateTemplate handle
- VUID-vkCreateDescriptorUpdateTemplate-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The VkDescriptorUpdateTemplateCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateCreateInfo {
    VkStructureType                           sType;
    const void*                               pNext;
    VkDescriptorUpdateTemplateCreateFlags     flags;
    uint32_t                                  descriptorUpdateEntryCount;
    const VkDescriptorUpdateTemplateEntry*    pDescriptorUpdateEntries;
    VkDescriptorUpdateTemplateType            templateType;
    VkDescriptorSetLayout                     descriptorSetLayout;
    VkPipelineBindPoint                       pipelineBindPoint;
    VkPipelineLayout                          pipelineLayout;
    uint32_t                                  set;
} VkDescriptorUpdateTemplateCreateInfo;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateCreateInfo
typedef VkDescriptorUpdateTemplateCreateInfo VkDescriptorUpdateTemplateCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `descriptorUpdateEntryCount` is the number of elements in the `pDescriptorUpdateEntries` array.
- `pDescriptorUpdateEntries` is a pointer to an array of VkDescriptorUpdateTemplateEntry structures describing the descriptors to be updated by the descriptor update template.
- `templateType` Specifies the type of the descriptor update template. If set to VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET it **can** only be used to update descriptor sets with a fixed `descriptorSetLayout`. If set to VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS it **can** only be used to push descriptor sets using the provided `pipelineBindPoint`, `pipelineLayout`, and `set` number.
- `descriptorSetLayout` is the descriptor set layout used to build the descriptor update template. All descriptor sets which are going to be updated through the newly created descriptor update template **must** be created with a layout that matches (is the same as, or defined identically to) this layout. This parameter is ignored if `templateType` is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET. The implementation **must** not access this object outside of the duration of the command this structure is passed to.
- `pipelineBindPoint` is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors. This parameter is ignored if `templateType` is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS
- `pipelineLayout` is a VkPipelineLayout object used to program the bindings. This parameter is ignored if `templateType` is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This parameter is ignored if `templateType` is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS

Valid Usage

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00350
  If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET, `descriptorSetLayout` **must** be a valid `VkDescriptorSetLayout` handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-10355
  If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS, and the VK_KHR_push_descriptor extension is not enabled, `pushDescriptor` **must** be enabled
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00351
  If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS, `pipelineBindPoint` **must** be a valid VkPipelineBindPoint value
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00352

If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS, `pipelineLayout` **must** be a valid `VkPipelineLayout` handle

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00353
  If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS, `set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-04615
  If `templateType` is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET, `descriptorSetLayout` **must** not contain a binding with type VK_DESCRIPTOR_TYPE_MUTABLE_EXT

Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateCreateInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO
- VUID-VkDescriptorUpdateTemplateCreateInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDescriptorUpdateTemplateCreateInfo-flags-zerobitmask
  `flags` **must** be `0`
- VUID-VkDescriptorUpdateTemplateCreateInfo-pDescriptorUpdateEntries-parameter
  `pDescriptorUpdateEntries` **must** be a valid pointer to an array of `descriptorUpdateEntryCount` valid VkDescriptorUpdateTemplateEntry structures
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-parameter
  `templateType` **must** be a valid VkDescriptorUpdateTemplateType value
- VUID-VkDescriptorUpdateTemplateCreateInfo-descriptorUpdateEntryCount-arraylength
  `descriptorUpdateEntryCount` **must** be greater than `0`
- VUID-VkDescriptorUpdateTemplateCreateInfo-commonparent
  Both of `descriptorSetLayout`, and `pipelineLayout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkDescriptorUpdateTemplateCreateFlags;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateCreateFlags
typedef VkDescriptorUpdateTemplateCreateFlags
VkDescriptorUpdateTemplateCreateFlagsKHR;
```

`VkDescriptorUpdateTemplateCreateFlags` is a bitmask type for setting a mask, but is currently reserved for future use.

The descriptor update template type is determined by the VkDescriptorUpdateTemplateCreateInfo ::templateType property, which takes the following values:

```
// Provided by VK_VERSION_1_1
typedef enum VkDescriptorUpdateTemplateType {
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET = 0,
  // Provided by VK_VERSION_1_4
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS = 1,
  // Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,
VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR =
VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS,
  // Provided by VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET_KHR =
VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
} VkDescriptorUpdateTemplateType;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateType
typedef VkDescriptorUpdateTemplateType VkDescriptorUpdateTemplateTypeKHR;
```

- VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET specifies that the descriptor update template will be used for descriptor set updates only.
- VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS specifies that the descriptor update template will be used for push descriptor updates only.

The VkDescriptorUpdateTemplateEntry structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateEntry {
    uint32_t            dstBinding;
    uint32_t            dstArrayElement;
    uint32_t            descriptorCount;
    VkDescriptorType    descriptorType;
    size_t              offset;
    size_t              stride;
} VkDescriptorUpdateTemplateEntry;
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to VkDescriptorUpdateTemplateEntry
typedef VkDescriptorUpdateTemplateEntry VkDescriptorUpdateTemplateEntryKHR;
```

- dstBinding is the descriptor binding to update when using this descriptor update template.
- dstArrayElement is the starting element in the array belonging to dstBinding. If the descriptor binding identified by dstBinding has a descriptor type of

VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then dstArrayElement specifies the starting byte offset to update.

- descriptorCount is the number of descriptors to update. If descriptorCount is greater than the number of remaining array elements in the destination binding, those affect consecutive bindings in a manner similar to VkWriteDescriptorSet above. If the descriptor binding identified by dstBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount specifies the number of bytes to update and the remaining array elements in the destination binding refer to the remaining number of bytes in it.
- descriptorType is a VkDescriptorType specifying the type of the descriptor.
- offset is the offset in bytes of the first binding in the raw data structure.
- stride is the stride in bytes between two consecutive array elements of the descriptor update information in the raw data structure. The actual pointer ptr for each array element j of update entry i is computed using the following formula:

```
    const char *ptr = (const char *)pData + pDescriptorUpdateEntries[i].offset + j
* pDescriptorUpdateEntries[i].stride
```

The stride is useful in case the bindings are stored in structs along with other data. If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then the value of stride is ignored and the stride is assumed to be 1, i.e. the descriptor update information for them is always specified as a contiguous range.

Valid Usage

- VUID-VkDescriptorUpdateTemplateEntry-dstBinding-00354
  dstBinding **must** be a valid binding in the descriptor set layout implicitly specified when using a descriptor update template to update descriptors
- VUID-VkDescriptorUpdateTemplateEntry-dstArrayElement-00355
  dstArrayElement and descriptorCount **must** be less than or equal to the number of array elements in the descriptor set binding implicitly specified when using a descriptor update template to update descriptors, and all applicable consecutive bindings
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02226
  If descriptor type is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, dstArrayElement **must** be an integer multiple of 4
- VUID-VkDescriptorUpdateTemplateEntry-descriptor-02227
  If descriptor type is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, descriptorCount **must** be an integer multiple of 4

Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateEntry-descriptorType-parameter
  descriptorType **must** be a valid VkDescriptorType value

To destroy a descriptor update template, call:

```
// Provided by VK_VERSION_1_1
void vkDestroyDescriptorUpdateTemplate(
    VkDevice                                    device,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    const VkAllocationCallbacks*                pAllocator);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkDestroyDescriptorUpdateTemplate
void vkDestroyDescriptorUpdateTemplateKHR(
    VkDevice                                    device,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that has been used to create the descriptor update template
- `descriptorUpdateTemplate` is the descriptor update template to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00356
  If `VkAllocationCallbacks` were provided when `descriptorUpdateTemplate` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00357
  If no `VkAllocationCallbacks` were provided when `descriptorUpdateTemplate` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorUpdateTemplate-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parameter
  If `descriptorUpdateTemplate` is not VK_NULL_HANDLE, `descriptorUpdateTemplate` **must** be a valid VkDescriptorUpdateTemplate handle
- VUID-vkDestroyDescriptorUpdateTemplate-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parent
  If `descriptorUpdateTemplate` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `descriptorUpdateTemplate` **must** be externally synchronized

Once a `VkDescriptorUpdateTemplate` has been created, descriptor sets **can** be updated by calling:

```
// Provided by VK_VERSION_1_1
void vkUpdateDescriptorSetWithTemplate(
    VkDevice                                    device,
    VkDescriptorSet                             descriptorSet,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    const void*                                 pData);
```

```
// Provided by VK_KHR_descriptor_update_template
// Equivalent to vkUpdateDescriptorSetWithTemplate
void vkUpdateDescriptorSetWithTemplateKHR(
    VkDevice                                    device,
    VkDescriptorSet                             descriptorSet,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    const void*                                 pData);
```

- `device` is the logical device that updates the descriptor set.
- `descriptorSet` is the descriptor set to update
- `descriptorUpdateTemplate` is a VkDescriptorUpdateTemplate object specifying the update mapping between `pData` and the descriptor set to update.
- `pData` is a pointer to memory containing one or more VkDescriptorImageInfo, VkDescriptorBufferInfo, or VkBufferView structures or VkAccelerationStructureKHR handles used to write the descriptors.

Valid Usage

- VUID-vkUpdateDescriptorSetWithTemplate-pData-01685
  `pData` **must** be a valid pointer to a memory containing one or more valid instances of VkAccelerationStructureKHR handles, VkDescriptorImageInfo, VkDescriptorBufferInfo, or VkBufferView in a layout defined by `descriptorUpdateTemplate` when it was created with vkCreateDescriptorUpdateTemplate
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-06995
  Host access to `descriptorSet` **must** be externally synchronized unless explicitly denoted otherwise for specific flags

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSetWithTemplate-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parameter
  `descriptorSet` **must** be a valid VkDescriptorSet handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter
  `descriptorUpdateTemplate` **must** be a valid VkDescriptorUpdateTemplate handle
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parent
  `descriptorSet` **must** have been created, allocated, or retrieved from `device`
- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parent
  `descriptorUpdateTemplate` **must** have been created, allocated, or retrieved from `device`

API Example

```
struct AppBufferView {
    VkBufferView bufferView;
    uint32_t     applicationRelatedInformation;
};

struct AppDataStructure
{
    VkDescriptorImageInfo  imageInfo;          // a single image info
    VkDescriptorBufferInfo bufferInfoArray[3]; // 3 buffer infos in an array
    AppBufferView          bufferView[2];      // An application-defined structure
containing a bufferView
    // ... some more application-related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0         // stride not required if descriptorCount is 1
    },

    // binding to an array of buffer descriptors
    {
        .binding = 1,
        .dstArrayElement = 0,
        .descriptorCount = 3,
        .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
```

```
        .offset = offsetof(AppDataStructure, bufferInfoArray),
        .stride = sizeof(VkDescriptorBufferInfo)    // descriptor buffer infos are
compact
    },

    // binding to an array of buffer views
    {
        .binding = 2,
        .dstArrayElement = 0,
        .descriptorCount = 2,
        .descriptorType = VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER,
        .offset = offsetof(AppDataStructure, bufferView) +
                  offsetof(AppBufferView, bufferView),
        .stride = sizeof(AppBufferView)             // bufferViews do not have to be
compact
    },
};

// create a descriptor update template for descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 3,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
    .descriptorSetLayout = myLayout,
    .pipelineBindPoint = 0,     // ignored by given templateType
    .pipelineLayout = 0,        // ignored by given templateType
    .set = 0,                   // ignored by given templateType
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;

// fill appData here or cache it in your engine
vkUpdateDescriptorSetWithTemplate(myDevice, myDescriptorSet,
myDescriptorUpdateTemplate, &appData);
```

17.7. Descriptor Set Binding

To bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBindDescriptorSets(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipelineLayout                            layout,
    uint32_t                                    firstSet,
    uint32_t                                    descriptorSetCount,
    const VkDescriptorSet*                      pDescriptorSets,
    uint32_t                                    dynamicOffsetCount,
    const uint32_t*                             pDynamicOffsets);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.
- `pipelineBindPoint` is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors. There is a separate set of bind points for each pipeline type, so binding one does not disturb the others.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to VkDescriptorSet objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

`vkCmdBindDescriptorSets` binds descriptor sets `pDescriptorSets`[0..`descriptorSetCount`-1] to set numbers [`firstSet`..`firstSet`+`descriptorSetCount`-1] for subsequent bound pipeline commands set by `pipelineBindPoint`. Any bindings that were previously applied via these sets , or calls to vkCmdSetDescriptorBufferOffsetsEXT or vkCmdBindDescriptorBufferEmbeddedSamplersEXT, are no longer valid.

Once bound, a descriptor set affects rendering of subsequent commands that interact with the given pipeline type in the command buffer until either a different set is bound to the same set number, or the set is disturbed as described in Pipeline Layout Compatibility.

A compatible descriptor set **must** be bound for all set numbers that any shaders in a pipeline access, at the time that a drawing or dispatching command is recorded to execute using that pipeline. However, if none of the shaders in a pipeline statically use any bindings with a particular set number, then no descriptor set need be bound for that set number, even if the pipeline layout includes a non-trivial descriptor set layout for that set number.

When consuming a descriptor, a descriptor is considered valid if the descriptor is not undefined as described by descriptor set allocation. If the `nullDescriptor` feature is enabled, a null descriptor is also considered valid. A descriptor that was disturbed by Pipeline Layout Compatibility, or was never bound by `vkCmdBindDescriptorSets` is not considered valid. For any given descriptor, VkDescriptorBindingFlagBits and VkDescriptorSetLayoutCreateFlagBits determine if validity is defined in terms of the descriptor being statically accessed, or dynamically accessed. If the

descriptor is determined to be accessed by the appropriate definition, the consuming descriptor type in the pipeline **must** match the VkDescriptorType in VkDescriptorSetLayoutCreateInfo for the descriptor to be considered valid. If a descriptor is a mutable descriptor, the consuming descriptor type in the pipeline **must** match the active descriptor type for the descriptor to be considered valid.

NOTE	Further validation may be carried out beyond validation for descriptor types, e.g. Texel Input Validation.

If any of the sets being bound include dynamic uniform or storage buffers, then `pDynamicOffsets` includes one element for each array element in each dynamic descriptor type binding in each set. Values are taken from `pDynamicOffsets` in an order such that all entries for set N come before set N+1; within a set, entries are ordered by the binding numbers in the descriptor set layouts; and within a binding array, elements are in order. `dynamicOffsetCount` **must** equal the total number of dynamic descriptors in the sets being bound.

The effective offset used for dynamic uniform and storage buffer bindings is the sum of the relative offset taken from `pDynamicOffsets`, and the base address of the buffer plus base offset in the descriptor set. The range of the dynamic uniform and storage buffer bindings is the buffer range as specified in the descriptor set.

Each of the `pDescriptorSets` **must** be compatible with the pipeline layout specified by `layout`. The layout used to program the bindings **must** also be compatible with the pipeline used in subsequent bound pipeline commands with that pipeline type, as defined in the Pipeline Layout Compatibility section.

The descriptor set contents bound by a call to `vkCmdBindDescriptorSets` **may** be consumed at the following times:

- For descriptor bindings created with the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit set, the contents **may** be consumed when the command buffer is submitted to a queue, or during shader execution of the resulting draws and dispatches, or any time in between. Otherwise,
- during host execution of the command, or during shader execution of the resulting draws and dispatches, or any time in between.

Thus, the contents of a descriptor set binding **must** not be altered (overwritten by an update command, or freed) between the first point in time that it **may** be consumed, and when the command completes executing on the queue.

The contents of `pDynamicOffsets` are consumed immediately during execution of `vkCmdBindDescriptorSets`. Once all pending uses have completed, it is legal to update and reuse a descriptor set.

Valid Usage

- VUID-vkCmdBindDescriptorSets-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to

NULL

- VUID-vkCmdBindDescriptorSets-commandBuffer-11296
  If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo equal to NULL

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-00358
  Each element of pDescriptorSets that is not VK_NULL_HANDLE **must** have been allocated with a VkDescriptorSetLayout that matches (is the same as, or identically defined as) the VkDescriptorSetLayout at set *n* in layout, where *n* is the sum of firstSet and the index into pDescriptorSets
- VUID-vkCmdBindDescriptorSets-dynamicOffsetCount-00359
  dynamicOffsetCount **must** be equal to the total number of dynamic descriptors in pDescriptorSets
- VUID-vkCmdBindDescriptorSets-firstSet-00360
  The sum of firstSet and descriptorSetCount **must** be less than or equal to VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created
- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01971
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC **must** be a multiple of VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment
- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01972
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** be a multiple of VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-01979
  For each dynamic uniform or storage buffer binding in pDescriptorSets, the sum of the effective offset and the range of the binding **must** be less than or equal to the size of the buffer
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06715
  For each dynamic uniform or storage buffer binding in pDescriptorSets, if the range was set with VK_WHOLE_SIZE then pDynamicOffsets which corresponds to the descriptor binding **must** be 0
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-04616
  Each element of pDescriptorSets **must** not have been allocated from a VkDescriptorPool with the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT flag set
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06563
  If the graphicsPipelineLibrary feature is not enabled, each element of pDescriptorSets **must** be a valid VkDescriptorSet
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-08010
  Each element of pDescriptorSets **must** have been allocated with a VkDescriptorSetLayout which was not created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-00361

`pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-parameter
  `pipelineBindPoint` **must** be a valid VkPipelineBindPoint value
- VUID-vkCmdBindDescriptorSets-layout-parameter
  `layout` **must** be a valid VkPipelineLayout handle
- VUID-vkCmdBindDescriptorSets-pDescriptorSets-parameter
  `pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid or VK_NULL_HANDLE VkDescriptorSet handles
- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-parameter
  If `dynamicOffsetCount` is not `0`, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` `uint32_t` values
- VUID-vkCmdBindDescriptorSets-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindDescriptorSets-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindDescriptorSets-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorSets-descriptorSetCount-arraylength
  `descriptorSetCount` **must** be greater than `0`
- VUID-vkCmdBindDescriptorSets-commonparent
  Each of `commandBuffer`, `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorSets is not affected by conditional rendering

To bind one or more descriptor sets to a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdBindDescriptorSets2(
    VkCommandBuffer                             commandBuffer,
    const VkBindDescriptorSetsInfo*             pBindDescriptorSetsInfo);
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to vkCmdBindDescriptorSets2
void vkCmdBindDescriptorSets2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkBindDescriptorSetsInfo*             pBindDescriptorSetsInfo);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.
- `pBindDescriptorSetsInfo` is a pointer to a `VkBindDescriptorSetsInfo` structure.

Valid Usage

- VUID-vkCmdBindDescriptorSets2-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorSets2-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorSets2-pBindDescriptorSetsInfo-09467
  Each bit in `pBindDescriptorSetsInfo->stageFlags` **must** be a stage supported by the

commandBuffer's parent VkCommandPool's queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindDescriptorSets2-pBindDescriptorSetsInfo-parameter
  pBindDescriptorSetsInfo **must** be a valid pointer to a valid VkBindDescriptorSetsInfo structure
- VUID-vkCmdBindDescriptorSets2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBindDescriptorSets2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindDescriptorSets2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorSets2 is not affected by conditional rendering

The VkBindDescriptorSetsInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkBindDescriptorSetsInfo {
    VkStructureType           sType;
    const void*               pNext;
    VkShaderStageFlags        stageFlags;
    VkPipelineLayout          layout;
    uint32_t                  firstSet;
    uint32_t                  descriptorSetCount;
    const VkDescriptorSet*    pDescriptorSets;
    uint32_t                  dynamicOffsetCount;
    const uint32_t*           pDynamicOffsets;
} VkBindDescriptorSetsInfo;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkBindDescriptorSetsInfo
typedef VkBindDescriptorSetsInfo VkBindDescriptorSetsInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of VkShaderStageFlagBits specifying the shader stages the descriptor sets will be bound to.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to VkDescriptorSet objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT is equivalent to calling the original version of this command once with VK_PIPELINE_BIND_POINT_GRAPHICS and once with VK_PIPELINE_BIND_POINT_COMPUTE.

Valid Usage

- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-00358
  Each element of `pDescriptorSets` that is not VK_NULL_HANDLE **must** have been allocated with a `VkDescriptorSetLayout` that matches (is the same as, or identically defined as) the `VkDescriptorSetLayout` at set *n* in `layout`, where *n* is the sum of `firstSet` and the index into

pDescriptorSets

- VUID-VkBindDescriptorSetsInfo-dynamicOffsetCount-00359
  dynamicOffsetCount **must** be equal to the total number of dynamic descriptors in pDescriptorSets
- VUID-VkBindDescriptorSetsInfo-firstSet-00360
  The sum of firstSet and descriptorSetCount **must** be less than or equal to VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-01971
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC **must** be a multiple of VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-01972
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC **must** be a multiple of VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-01979
  For each dynamic uniform or storage buffer binding in pDescriptorSets, the sum of the effective offset and the range of the binding **must** be less than or equal to the size of the buffer
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-06715
  For each dynamic uniform or storage buffer binding in pDescriptorSets, if the range was set with VK_WHOLE_SIZE then pDynamicOffsets which corresponds to the descriptor binding **must** be 0
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-04616
  Each element of pDescriptorSets **must** not have been allocated from a VkDescriptorPool with the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT flag set
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-06563
  If the graphicsPipelineLibrary feature is not enabled, each element of pDescriptorSets **must** be a valid VkDescriptorSet
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-08010
  Each element of pDescriptorSets **must** have been allocated with a VkDescriptorSetLayout which was not created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-VkBindDescriptorSetsInfo-None-09495
  layout **must** be a valid VkPipelineLayout handle

Valid Usage (Implicit)

- VUID-VkBindDescriptorSetsInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_SETS_INFO
- VUID-VkBindDescriptorSetsInfo-pNext-pNext
  pNext **must** be NULL or a pointer to a valid instance of VkPipelineLayoutCreateInfo

- VUID-VkBindDescriptorSetsInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBindDescriptorSetsInfo-stageFlags-parameter
  `stageFlags` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkBindDescriptorSetsInfo-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkBindDescriptorSetsInfo-pDescriptorSets-parameter
  `pDescriptorSets` **must** be a valid pointer to an array of `descriptorSetCount` valid VkDescriptorSet handles
- VUID-VkBindDescriptorSetsInfo-pDynamicOffsets-parameter
  If `dynamicOffsetCount` is not `0`, and `pDynamicOffsets` is not `NULL`, `pDynamicOffsets` **must** be a valid pointer to an array of `dynamicOffsetCount` or VK_NULL_HANDLE `uint32_t` values
- VUID-VkBindDescriptorSetsInfo-descriptorSetCount-arraylength
  `descriptorSetCount` **must** be greater than `0`
- VUID-VkBindDescriptorSetsInfo-commonparent
  Both of `layout`, and the elements of `pDescriptorSets` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

17.8. Push Descriptor Updates

In addition to allocating descriptor sets and binding them to a command buffer, an application **can** record descriptor updates into the command buffer.

To push descriptor updates into a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSet(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipelineLayout                            layout,
    uint32_t                                    set,
    uint32_t                                    descriptorWriteCount,
    const VkWriteDescriptorSet*                 pDescriptorWrites);
```

```
// Provided by VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSet
void vkCmdPushDescriptorSetKHR(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipelineLayout                            layout,
    uint32_t                                    set,
    uint32_t                                    descriptorWriteCount,
    const VkWriteDescriptorSet*                 pDescriptorWrites);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pipelineBindPoint` is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors. There is a separate set of push descriptor bindings for each pipeline type, so binding one does not disturb the others.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated.
- `descriptorWriteCount` is the number of elements in the `pDescriptorWrites` array.
- `pDescriptorWrites` is a pointer to an array of VkWriteDescriptorSet structures describing the descriptors to be updated.

Push descriptors are a small bank of descriptors whose storage is internally managed by the command buffer rather than being written into a descriptor set and later bound to a command buffer. Push descriptors allow for incremental updates of descriptors without managing the lifetime of descriptor sets.

When a command buffer begins recording, all push descriptors are undefined. Push descriptors **can** be updated incrementally and cause shaders to use the updated descriptors for subsequent bound pipeline commands with the pipeline type set by `pipelineBindPoint` until the descriptor is overwritten, or else until the set is disturbed as described in Pipeline Layout Compatibility. When the set is disturbed or push descriptors with a different descriptor set layout are set, all push descriptors are undefined.

Push descriptors that are statically used by a pipeline **must** not be undefined at the time that a drawing or dispatching command is recorded to execute using that pipeline. This includes immutable sampler descriptors, which **must** be pushed before they are accessed by a pipeline (the immutable samplers are pushed, rather than the samplers in `pDescriptorWrites`). Push descriptors that are not statically used **can** remain undefined.

Push descriptors do not use dynamic offsets. Instead, the corresponding non-dynamic descriptor types **can** be used and the `offset` member of VkDescriptorBufferInfo **can** be changed each time the descriptor is written.

Each element of `pDescriptorWrites` is interpreted as in VkWriteDescriptorSet, except the `dstSet` member is ignored.

To push an immutable sampler, use a VkWriteDescriptorSet with `dstBinding` and `dstArrayElement` selecting the immutable sampler's binding. If the descriptor type is VK_DESCRIPTOR_TYPE_SAMPLER, the `pImageInfo` parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout. If the descriptor type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the `sampler` member of the `pImageInfo` parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout.

Valid Usage

- VUID-vkCmdPushDescriptorSet-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with

VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo equal to NULL

- VUID-vkCmdPushDescriptorSet-commandBuffer-11296
  If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo equal to NULL
- VUID-vkCmdPushDescriptorSet-set-00364
  set **must** be less than VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created
- VUID-vkCmdPushDescriptorSet-set-00365
  set **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT
- VUID-vkCmdPushDescriptorSet-pDescriptorWrites-06494
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo **must** be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures
- VUID-vkCmdPushDescriptorSet-pipelineBindPoint-00363
  pipelineBindPoint **must** be supported by the commandBuffer's parent VkCommandPool's queue family
- VUID-vkCmdPushDescriptorSet-None-10356
  If the VK_KHR_push_descriptor extension is not enabled, pushDescriptor **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSet-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushDescriptorSet-pipelineBindPoint-parameter
  pipelineBindPoint **must** be a valid VkPipelineBindPoint value
- VUID-vkCmdPushDescriptorSet-layout-parameter
  layout **must** be a valid VkPipelineLayout handle
- VUID-vkCmdPushDescriptorSet-pDescriptorWrites-parameter
  pDescriptorWrites **must** be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures
- VUID-vkCmdPushDescriptorSet-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdPushDescriptorSet-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushDescriptorSet-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdPushDescriptorSet-descriptorWriteCount-arraylength
  `descriptorWriteCount` **must** be greater than `0`
- VUID-vkCmdPushDescriptorSet-commonparent
  Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushDescriptorSet is not affected by conditional rendering

To push descriptor updates into a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSet2(
    VkCommandBuffer                             commandBuffer,
    const VkPushDescriptorSetInfo*              pPushDescriptorSetInfo);
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSet2
void vkCmdPushDescriptorSet2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkPushDescriptorSetInfo*              pPushDescriptorSetInfo);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.

- pPushDescriptorSetInfo is a pointer to a VkPushDescriptorSetInfo structure.

Valid Usage

- VUID-vkCmdPushDescriptorSet2-commandBuffer-11295
  If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo equal to NULL
- VUID-vkCmdPushDescriptorSet2-commandBuffer-11296
  If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo equal to NULL
- VUID-vkCmdPushDescriptorSet2-pPushDescriptorSetInfo-09468
  Each bit in pPushDescriptorSetInfo->stageFlags **must** be a stage supported by the commandBuffer's parent VkCommandPool's queue family
- VUID-vkCmdPushDescriptorSet2-None-10357
  If the VK_KHR_push_descriptor extension is not enabled, pushDescriptor **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSet2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushDescriptorSet2-pPushDescriptorSetInfo-parameter
  pPushDescriptorSetInfo **must** be a valid pointer to a valid VkPushDescriptorSetInfo structure
- VUID-vkCmdPushDescriptorSet2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdPushDescriptorSet2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushDescriptorSet2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushDescriptorSet2 is not affected by conditional rendering

The VkPushDescriptorSetInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushDescriptorSetInfo {
    VkStructureType                sType;
    const void*                    pNext;
    VkShaderStageFlags             stageFlags;
    VkPipelineLayout               layout;
    uint32_t                       set;
    uint32_t                       descriptorWriteCount;
    const VkWriteDescriptorSet*    pDescriptorWrites;
} VkPushDescriptorSetInfo;
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to VkPushDescriptorSetInfo
typedef VkPushDescriptorSetInfo VkPushDescriptorSetInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stageFlags is a bitmask of VkShaderStageFlagBits specifying the shader stages that will use the descriptors.
- layout is a VkPipelineLayout object used to program the bindings.
- set is the set number of the descriptor set in the pipeline layout that will be updated.
- descriptorWriteCount is the number of elements in the pDescriptorWrites array.
- pDescriptorWrites is a pointer to an array of VkWriteDescriptorSet structures describing the descriptors to be updated.

If stageFlags specifies a subset of all stages corresponding to one or more pipeline bind points, the

binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT is equivalent to calling the original version of this command once with VK_PIPELINE_BIND_POINT_GRAPHICS and once with VK_PIPELINE_BIND_POINT_COMPUTE.

Valid Usage

- VUID-VkPushDescriptorSetInfo-set-00364
  `set` **must** be less than VkPipelineLayoutCreateInfo::`setLayoutCount` provided when `layout` was created
- VUID-VkPushDescriptorSetInfo-set-00365
  `set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT
- VUID-VkPushDescriptorSetInfo-pDescriptorWrites-06494
  For each element i where `pDescriptorWrites`[i].`descriptorType` is VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, `pDescriptorWrites`[i].`pImageInfo` **must** be a valid pointer to an array of `pDescriptorWrites`[i].`descriptorCount` valid `VkDescriptorImageInfo` structures
- VUID-VkPushDescriptorSetInfo-None-09495
  `layout` **must** be a valid VkPipelineLayout handle

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_INFO
- VUID-VkPushDescriptorSetInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkPushDescriptorSetInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPushDescriptorSetInfo-stageFlags-parameter
  `stageFlags` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkPushDescriptorSetInfo-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkPushDescriptorSetInfo-pDescriptorWrites-parameter
  `pDescriptorWrites` **must** be a valid pointer to an array of `descriptorWriteCount` valid VkWriteDescriptorSet structures
- VUID-VkPushDescriptorSetInfo-descriptorWriteCount-arraylength
  `descriptorWriteCount` **must** be greater than `0`

17.9. Push Descriptor Updates With Descriptor Update Templates

To use a descriptor update template to specify the push descriptors to update in a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSetWithTemplate(
    VkCommandBuffer                             commandBuffer,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    VkPipelineLayout                            layout,
    uint32_t                                    set,
    const void*                                 pData);
```

```
// Provided by VK_KHR_descriptor_update_template with VK_KHR_push_descriptor,
VK_KHR_push_descriptor with VK_VERSION_1_1 or VK_KHR_descriptor_update_template
// Equivalent to vkCmdPushDescriptorSetWithTemplate
void vkCmdPushDescriptorSetWithTemplateKHR(
    VkCommandBuffer                             commandBuffer,
    VkDescriptorUpdateTemplate                  descriptorUpdateTemplate,
    VkPipelineLayout                            layout,
    uint32_t                                    set,
    const void*                                 pData);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a VkPipelineLayout object used to program the bindings. It **must** be compatible with the layout used to create the `descriptorUpdateTemplate` handle.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-00366
  The `pipelineBindPoint` specified during the creation of the descriptor update template **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family
- VUID-vkCmdPushDescriptorSetWithTemplate-pData-01686
  `pData` **must** be a valid pointer to a memory containing one or more valid instances of VkDescriptorImageInfo, VkDescriptorBufferInfo, or VkBufferView in a layout defined by `descriptorUpdateTemplate` when it was created with vkCreateDescriptorUpdateTemplate
- VUID-vkCmdPushDescriptorSetWithTemplate-layout-07993
  `layout` **must** be compatible with the layout used to create `descriptorUpdateTemplate`
- VUID-vkCmdPushDescriptorSetWithTemplate-descriptorUpdateTemplate-07994
  `descriptorUpdateTemplate` **must** have been created with a `templateType` of VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS
- VUID-vkCmdPushDescriptorSetWithTemplate-set-07995
  `set` **must** be the same value used to create `descriptorUpdateTemplate`
- VUID-vkCmdPushDescriptorSetWithTemplate-set-07304
  `set` **must** be less than VkPipelineLayoutCreateInfo::`setLayoutCount` provided when `layout` was created
- VUID-vkCmdPushDescriptorSetWithTemplate-set-11854
  `set` **must** reference a valid VkDescriptorSetLayout handle in `layout`
- VUID-vkCmdPushDescriptorSetWithTemplate-set-07305
  `set` **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT
- VUID-vkCmdPushDescriptorSetWithTemplate-None-10358
  If the VK_KHR_push_descriptor extension is not enabled, `pushDescriptor` **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter
  `descriptorUpdateTemplate` **must** be a valid VkDescriptorUpdateTemplate handle
- VUID-vkCmdPushDescriptorSetWithTemplate-layout-parameter
  `layout` **must** be a valid VkPipelineLayout handle
- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdPushDescriptorSetWithTemplate-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushDescriptorSetWithTemplate-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushDescriptorSetWithTemplate-commonparent

Each of `commandBuffer`, `descriptorUpdateTemplate`, and `layout` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushDescriptorSetWithTemplate is not affected by conditional rendering

API Example

```
struct AppDataStructure
{
    VkDescriptorImageInfo  imageInfo;          // a single image info
    // ... some more application-related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0     // not required if descriptorCount is 1
    }
};

// create a descriptor update template for push descriptor set updates
```

```
const VkDescriptorUpdateTemplateCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 1,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS,
    .descriptorSetLayout = 0,   // ignored by given templateType
    .pipelineBindPoint = VK_PIPELINE_BIND_POINT_GRAPHICS,
    .pipelineLayout = myPipelineLayout,
    .set = 0,
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;
// fill appData here or cache it in your engine
vkCmdPushDescriptorSetWithTemplate(myCmdBuffer, myDescriptorUpdateTemplate,
myPipelineLayout, 0,&appData);
```

To use a descriptor update template to specify the push descriptors to update in a command buffer, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushDescriptorSetWithTemplate2(
    VkCommandBuffer                             commandBuffer,
    const VkPushDescriptorSetWithTemplateInfo*  pPushDescriptorSetWithTemplateInfo);
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to vkCmdPushDescriptorSetWithTemplate2
void vkCmdPushDescriptorSetWithTemplate2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkPushDescriptorSetWithTemplateInfo*  pPushDescriptorSetWithTemplateInfo);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pPushDescriptorSetWithTemplateInfo` is a pointer to a `VkPushDescriptorSetWithTemplateInfo` structure.

Valid Usage

- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-11295

If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`

- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushDescriptorSetWithTemplate2-pPushDescriptorSetWithTemplateInfo-parameter
  `pPushDescriptorSetWithTemplateInfo` **must** be a valid pointer to a valid VkPushDescriptorSetWithTemplateInfo structure
- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdPushDescriptorSetWithTemplate2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushDescriptorSetWithTemplate2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushDescriptorSetWithTemplate2 is not affected by conditional rendering

The VkPushDescriptorSetWithTemplateInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushDescriptorSetWithTemplateInfo {
    VkStructureType               sType;
    const void*                   pNext;
    VkDescriptorUpdateTemplate    descriptorUpdateTemplate;
    VkPipelineLayout              layout;
    uint32_t                      set;
    const void*                   pData;
} VkPushDescriptorSetWithTemplateInfo;
```

```
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
// Equivalent to VkPushDescriptorSetWithTemplateInfo
typedef VkPushDescriptorSetWithTemplateInfo VkPushDescriptorSetWithTemplateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- descriptorUpdateTemplate is a descriptor update template defining how to interpret the descriptor information in pData.
- layout is a VkPipelineLayout object used to program the bindings. It **must** be compatible with the layout used to create the descriptorUpdateTemplate handle.
- set is the set number of the descriptor set in the pipeline layout that will be updated. This **must** be the same number used to create the descriptorUpdateTemplate handle.
- pData is a pointer to memory containing descriptors for the templated update.

Valid Usage

- VUID-VkPushDescriptorSetWithTemplateInfo-commandBuffer-00366
  The pipelineBindPoint specified during the creation of the descriptor update template **must** be supported by the commandBuffer's parent VkCommandPool's queue family
- VUID-VkPushDescriptorSetWithTemplateInfo-pData-01686
  pData **must** be a valid pointer to a memory containing one or more valid instances of VkDescriptorImageInfo, VkDescriptorBufferInfo, or VkBufferView in a layout defined by descriptorUpdateTemplate when it was created with vkCreateDescriptorUpdateTemplate
- VUID-VkPushDescriptorSetWithTemplateInfo-layout-07993
  layout **must** be compatible with the layout used to create descriptorUpdateTemplate
- VUID-VkPushDescriptorSetWithTemplateInfo-descriptorUpdateTemplate-07994

descriptorUpdateTemplate **must** have been created with a templateType of VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS

- VUID-VkPushDescriptorSetWithTemplateInfo-set-07995
set **must** be the same value used to create descriptorUpdateTemplate
- VUID-VkPushDescriptorSetWithTemplateInfo-set-07304
set **must** be less than VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created
- VUID-VkPushDescriptorSetWithTemplateInfo-set-11854
set **must** reference a valid VkDescriptorSetLayout handle in layout
- VUID-VkPushDescriptorSetWithTemplateInfo-set-07305
set **must** be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT
- VUID-VkPushDescriptorSetWithTemplateInfo-None-09495
layout **must** be a valid VkPipelineLayout handle
- VUID-VkPushDescriptorSetWithTemplateInfo-None-10359
If the VK_KHR_push_descriptor extension is not enabled, pushDescriptor **must** be enabled

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetWithTemplateInfo-sType-sType
sType **must** be VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_WITH_TEMPLATE_INFO
- VUID-VkPushDescriptorSetWithTemplateInfo-pNext-pNext
pNext **must** be NULL or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkPushDescriptorSetWithTemplateInfo-sType-unique
The sType value of each structure in the pNext chain **must** be unique
- VUID-VkPushDescriptorSetWithTemplateInfo-descriptorUpdateTemplate-parameter
descriptorUpdateTemplate **must** be a valid VkDescriptorUpdateTemplate handle
- VUID-VkPushDescriptorSetWithTemplateInfo-layout-parameter
If layout is not VK_NULL_HANDLE, layout **must** be a valid VkPipelineLayout handle
- VUID-VkPushDescriptorSetWithTemplateInfo-pData-parameter
pData **must** be a pointer value
- VUID-VkPushDescriptorSetWithTemplateInfo-commonparent
Both of descriptorUpdateTemplate, and layout that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

17.10. Push Constant Updates

As described above in section Pipeline Layouts, the pipeline layout defines shader push constants which are updated via Vulkan commands rather than via writes to memory or copy commands.

NOTE Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

To update push constants, call:

```
// Provided by VK_VERSION_1_0
void vkCmdPushConstants(
    VkCommandBuffer                             commandBuffer,
    VkPipelineLayout                            layout,
    VkShaderStageFlags                          stageFlags,
    uint32_t                                    offset,
    uint32_t                                    size,
    const void*                                 pValues);
```

- `commandBuffer` is the command buffer in which the push constant update will be recorded.
- `layout` is the pipeline layout used to program the push constant updates.
- `stageFlags` is a bitmask of VkShaderStageFlagBits specifying the shader stages that will use the push constants in the updated range.
- `offset` is the start offset of the push constant range to update, in units of bytes.
- `size` is the size of the push constant range to update, in units of bytes.
- `pValues` is a pointer to an array of `size` bytes containing the new push constant values.

When a command buffer begins recording, all push constant values are undefined. Reads of undefined push constant values by the executing shader return undefined values.

Push constant values **can** be updated incrementally, causing shader stages in `stageFlags` to read the new data from `pValues` for push constants modified by this command, while still reading the previous data for push constants not modified by this command. When a bound pipeline command is issued, the bound pipeline's layout **must** be compatible with the layouts used to set the values of all push constants in the pipeline layout's push constant ranges, as described in Pipeline Layout Compatibility. Binding a pipeline with a layout that is not compatible with the push constant layout does not disturb the push constant values.

NOTE As `stageFlags` needs to include all flags the relevant push constant ranges were created with, any flags that are not supported by the queue family that the VkCommandPool used to allocate `commandBuffer` was created on are ignored.

Valid Usage

- VUID-vkCmdPushConstants-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdPushConstants-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with

VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo equal to NULL

- VUID-vkCmdPushConstants-offset-01795
  For each byte in the range specified by offset and size and for each shader stage in stageFlags, there **must** be a push constant range in layout that includes that byte and that stage
- VUID-vkCmdPushConstants-offset-01796
  For each byte in the range specified by offset and size and for each push constant range that overlaps that byte, stageFlags **must** include all stages in that push constant range's VkPushConstantRange::stageFlags
- VUID-vkCmdPushConstants-offset-00368
  offset **must** be a multiple of 4
- VUID-vkCmdPushConstants-size-00369
  size **must** be a multiple of 4
- VUID-vkCmdPushConstants-offset-00370
  offset **must** be less than VkPhysicalDeviceLimits::maxPushConstantsSize
- VUID-vkCmdPushConstants-size-00371
  size **must** be less than or equal to VkPhysicalDeviceLimits::maxPushConstantsSize minus offset

Valid Usage (Implicit)

- VUID-vkCmdPushConstants-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushConstants-layout-parameter
  layout **must** be a valid VkPipelineLayout handle
- VUID-vkCmdPushConstants-stageFlags-parameter
  stageFlags **must** be a valid combination of VkShaderStageFlagBits values
- VUID-vkCmdPushConstants-pValues-parameter
  pValues **must** be a valid pointer to an array of size bytes
- VUID-vkCmdPushConstants-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdPushConstants-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushConstants-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdPushConstants-size-arraylength
  size **must** be greater than 0
- VUID-vkCmdPushConstants-commonparent
  Both of commandBuffer, and layout **must** have been created, allocated, or retrieved from

the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushConstants is not affected by conditional rendering

To update push constants, call:

```
// Provided by VK_VERSION_1_4
void vkCmdPushConstants2(
    VkCommandBuffer                             commandBuffer,
    const VkPushConstantsInfo*                  pPushConstantsInfo);
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to vkCmdPushConstants2
void vkCmdPushConstants2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkPushConstantsInfo*                  pPushConstantsInfo);
```

- `commandBuffer` is the command buffer in which the push constant update will be recorded.
- `pPushConstantsInfo` is a pointer to a VkPushConstantsInfo structure.

Valid Usage

- VUID-vkCmdPushConstants2-commandBuffer-11295

If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pSamplerHeapBindInfo equal to NULL

- VUID-vkCmdPushConstants2-commandBuffer-11296
  If commandBuffer is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::pResourceHeapBindInfo equal to NULL

Valid Usage (Implicit)

- VUID-vkCmdPushConstants2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdPushConstants2-pPushConstantsInfo-parameter
  pPushConstantsInfo **must** be a valid pointer to a valid VkPushConstantsInfo structure
- VUID-vkCmdPushConstants2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdPushConstants2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdPushConstants2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdPushConstants2 is not affected by conditional rendering

The VkPushConstantsInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPushConstantsInfo {
    VkStructureType       sType;
    const void*           pNext;
    VkPipelineLayout      layout;
    VkShaderStageFlags    stageFlags;
    uint32_t              offset;
    uint32_t              size;
    const void*           pValues;
} VkPushConstantsInfo;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPushConstantsInfo
typedef VkPushConstantsInfo VkPushConstantsInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- layout is the pipeline layout used to program the push constant updates.
- stageFlags is a bitmask of VkShaderStageFlagBits specifying the shader stages that will use the push constants in the updated range.
- offset is the start offset of the push constant range to update, in units of bytes.
- size is the size of the push constant range to update, in units of bytes.
- pValues is a pointer to an array of size bytes containing the new push constant values.

Valid Usage

- VUID-VkPushConstantsInfo-offset-01795
  For each byte in the range specified by offset and size and for each shader stage in stageFlags, there **must** be a push constant range in layout that includes that byte and that stage
- VUID-VkPushConstantsInfo-offset-01796
  For each byte in the range specified by offset and size and for each push constant range that overlaps that byte, stageFlags **must** include all stages in that push constant range's VkPushConstantRange::stageFlags
- VUID-VkPushConstantsInfo-offset-00368
  offset **must** be a multiple of 4

- VUID-VkPushConstantsInfo-size-00369
  `size` **must** be a multiple of `4`
- VUID-VkPushConstantsInfo-offset-00370
  `offset` **must** be less than `VkPhysicalDeviceLimits`::`maxPushConstantsSize`
- VUID-VkPushConstantsInfo-size-00371
  `size` **must** be less than or equal to `VkPhysicalDeviceLimits`::`maxPushConstantsSize` minus `offset`
- VUID-VkPushConstantsInfo-None-09495
  `layout` **must** be a valid VkPipelineLayout handle

Valid Usage (Implicit)

- VUID-VkPushConstantsInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO
- VUID-VkPushConstantsInfo-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkPushConstantsInfo-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPushConstantsInfo-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkPushConstantsInfo-stageFlags-parameter
  `stageFlags` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkPushConstantsInfo-pValues-parameter
  `pValues` **must** be a valid pointer to an array of `size` bytes
- VUID-VkPushConstantsInfo-size-arraylength
  `size` **must** be greater than `0`

Chapter 18. Descriptor Buffers

If the descriptorBuffer feature is enabled, an alternative way to specify descriptor sets is via buffers, rather than descriptor set objects.

18.1. Putting Descriptors in Memory

Commands are provided to retrieve descriptor data, and also to locate where in memory that data **must** be written to match the given descriptor set layout.

To determine the amount of memory needed to store all descriptors with a given layout, call:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutSizeEXT(
    VkDevice                                    device,
    VkDescriptorSetLayout                       layout,
    VkDeviceSize*                               pLayoutSizeInBytes);
```

- device is the logical device that gets the size.
- layout is the descriptor set layout being queried.
- pLayoutSizeInBytes is a pointer to VkDeviceSize where the size in bytes will be written.

The size of a descriptor set layout will be at least as large as the sum total of the size of all descriptors in the layout, and **may** be larger. This size represents the amount of memory that will be required to store all of the descriptors for this layout in memory, when placed according to the layout's offsets as obtained by vkGetDescriptorSetLayoutBindingOffsetEXT.

If any binding in layout is VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, the returned size includes space for the maximum descriptorCount descriptors as declared for that binding. To compute the required size of a descriptor set with a VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT:

$$size = offset + descriptorSize \times variableDescriptorCount$$

where offset is obtained by vkGetDescriptorSetLayoutBindingOffsetEXT and descriptorSize is the size of the relevant descriptor as obtained from VkPhysicalDeviceDescriptorBufferPropertiesEXT, and variableDescriptorCount is the equivalent of VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts. For VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, variableDescriptorCount is the size in bytes for the inline uniform block, and descriptorSize is 1.

If VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray is

VK_FALSE and the variable descriptor type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, variableDescriptorCount is always considered to be the upper bound.

Valid Usage

- VUID-vkGetDescriptorSetLayoutSizeEXT-None-08011
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-08012
  `layout` **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT flag set
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-11811
  `layout` **must** have not been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT flag set
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-11812
  `layout` **must** have not been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT flag set

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSizeEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parameter
  `layout` **must** be a valid VkDescriptorSetLayout handle
- VUID-vkGetDescriptorSetLayoutSizeEXT-pLayoutSizeInBytes-parameter
  `pLayoutSizeInBytes` **must** be a valid pointer to a VkDeviceSize value
- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parent
  `layout` **must** have been created, allocated, or retrieved from `device`

To get the offset of a binding within a descriptor set layout in memory, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutBindingOffsetEXT(
    VkDevice                                    device,
    VkDescriptorSetLayout                       layout,
    uint32_t                                    binding,
    VkDeviceSize*                               pOffset);
```

- `device` is the logical device that gets the offset.

- `layout` is the descriptor set layout being queried.
- `binding` is the binding number being queried.
- `pOffset` is a pointer to VkDeviceSize where the byte offset of the binding will be written.

Each binding in a descriptor set layout is assigned an offset in memory by the implementation. When a shader accesses a resource with that binding, it will access the bound descriptor buffer from that offset to look for its descriptor. This command provides an application with that offset, so that descriptors can be placed in the correct locations. The precise location accessed by a shader for a given descriptor is as follows:

$$location = bufferAddress + setOffset + descriptorOffset + (arrayElement \times descriptorSize)$$

where bufferAddress and setOffset are the base address and offset for the identified descriptor set as specified by vkCmdBindDescriptorBuffersEXT and vkCmdSetDescriptorBufferOffsetsEXT, descriptorOffset is the offset for the binding returned by this command, arrayElement is the index into the array specified in the shader, and descriptorSize is the size of the relevant descriptor as obtained from VkPhysicalDeviceDescriptorBufferPropertiesEXT. Applications are responsible for placing valid descriptors at the expected location in order for a shader to access it. The overall offset added to bufferAddress to calculate location **must** be less than VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxSamplerDescriptorBufferRange` for samplers and VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxResourceDescriptorBufferRange` for resources.

If any `binding` in `layout` is VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, that `binding` **must** have the largest offset of any `binding`.

A descriptor `binding` with type VK_DESCRIPTOR_TYPE_MUTABLE_EXT **can** be used. Any potential types in VkMutableDescriptorTypeCreateInfoEXT::`pDescriptorTypes` for `binding` share the same offset. If the size of the mutable descriptor is larger than the size of a concrete descriptor type being accessed, the padding area is ignored by the implementation.

Valid Usage

- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-None-08013
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-08014
  `layout` **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT flag set
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-11813
  `layout` **must** have not been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT flag set
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-11814
  `layout` **must** have not been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT flag set

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parameter
  `layout` **must** be a valid VkDescriptorSetLayout handle
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-pOffset-parameter
  `pOffset` **must** be a valid pointer to a VkDeviceSize value
- VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parent
  `layout` **must** have been created, allocated, or retrieved from `device`

To get descriptor data to place in a buffer, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorEXT(
    VkDevice                                    device,
    const VkDescriptorGetInfoEXT*               pDescriptorInfo,
    size_t                                      dataSize,
    void*                                       pDescriptor);
```

- `device` is the logical device that gets the descriptor.
- `pDescriptorInfo` is a pointer to a VkDescriptorGetInfoEXT structure specifying the parameters of the descriptor to get.
- `dataSize` is the amount of the descriptor data to get in bytes.
- `pDescriptor` is a pointer to an application-allocated buffer where the descriptor will be written.

The size of the data for each descriptor type is determined by the value in VkPhysicalDeviceDescriptorBufferPropertiesEXT. This value also defines the stride in bytes for arrays of that descriptor type.

If the VkPhysicalDeviceDescriptorBufferPropertiesEXT::`combinedImageSamplerDescriptorSingleArray` property is VK_FALSE the implementation requires an array of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors. Applications **must** write the first VkPhysicalDeviceDescriptorBufferPropertiesEXT::`sampledImageDescriptorSize` bytes of the data returned through `pDescriptor` to the first array, and the remaining VkPhysicalDeviceDescriptorBufferPropertiesEXT::`samplerDescriptorSize` bytes of the data to the second array. For variable-sized descriptor bindings of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors, the two arrays each have a size equal to the upper bound `descriptorCount` of that binding.

A descriptor obtained by this command references the underlying VkImageView or VkSampler, and these objects **must** not be destroyed before the last time a descriptor is dynamically accessed. For descriptor types which consume an address instead of an object, the underlying VkBuffer is referenced instead.

Valid Usage

- VUID-vkGetDescriptorEXT-None-08015
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkGetDescriptorEXT-dataSize-08125
  If `pDescriptorInfo->type` is not VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER or `pDescriptorInfo->data.pCombinedImageSampler` has an `imageView` member that was not created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, `dataSize` **must** equal the size of a descriptor of type VkDescriptorGetInfoEXT::`type` determined by the value in VkPhysicalDeviceDescriptorBufferPropertiesEXT , or determined by VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT::`combinedImageSamplerDensityMapDescriptorSize` if `pDescriptorInfo` specifies a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER whose VkSampler was created with VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT set
- VUID-vkGetDescriptorEXT-descriptorType-09469
  If `pDescriptorInfo->type` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER and `pDescriptorInfo->data.pCombinedImageSampler` has an `imageView` member that was created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, `dataSize` **must** equal the size of VkPhysicalDeviceDescriptorBufferPropertiesEXT::`combinedImageSamplerDescriptorSize` times VkSamplerYcbcrConversionImageFormatProperties::`combinedImageSamplerDescriptorCount`
- VUID-vkGetDescriptorEXT-pDescriptorInfo-09507
  If `pDescriptorInfo->type` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER and it has a `imageView` that is VK_NULL_HANDLE then `dataSize` **must** be equal to the size of VkPhysicalDeviceDescriptorBufferPropertiesEXT::`combinedImageSamplerDescriptorSize`

Valid Usage (Implicit)

- VUID-vkGetDescriptorEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetDescriptorEXT-pDescriptorInfo-parameter
  `pDescriptorInfo` **must** be a valid pointer to a valid VkDescriptorGetInfoEXT structure
- VUID-vkGetDescriptorEXT-pDescriptor-parameter
  `pDescriptor` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetDescriptorEXT-dataSize-arraylength
  `dataSize` **must** be greater than `0`

Information about the descriptor to get is passed in a `VkDescriptorGetInfoEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorGetInfoEXT {
    VkStructureType        sType;
    const void*            pNext;
    VkDescriptorType       type;
    VkDescriptorDataEXT    data;
} VkDescriptorGetInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is the type of descriptor to get.
- `data` is a VkDescriptorDataEXT union containing the information needed to get the descriptor.

Valid Usage

- VUID-VkDescriptorGetInfoEXT-type-08018
  `type` **must** not be VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
- VUID-VkDescriptorGetInfoEXT-type-08019
  If `type` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the `pCombinedImageSampler->sampler` member of `data` **must** be a VkSampler created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08020
  If `type` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the `pCombinedImageSampler->imageView` member of `data` **must** be a VkImageView created on `device`, or VK_NULL_HANDLE
- VUID-VkDescriptorGetInfoEXT-type-08021
  If `type` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the `pInputAttachmentImage->imageView` member of `data` **must** be a VkImageView created on `device`
- VUID-VkDescriptorGetInfoEXT-type-08022
  If `type` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and if `pSampledImage` is not `NULL`, the `pSampledImage->imageView` member of `data` **must** be a VkImageView created on `device`, or VK_NULL_HANDLE
- VUID-VkDescriptorGetInfoEXT-type-08023
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and if `pStorageImage` is not `NULL`, the `pStorageImage->imageView` member of `data` **must** be a VkImageView created on `device`, or VK_NULL_HANDLE
- VUID-VkDescriptorGetInfoEXT-type-09427
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, `pUniformBuffer` is not `NULL` , the number of texel buffer elements given by (⌊`pUniformBuffer->range` / (texel block size)⌋

× (texels per block)) where texel block size and texels per block are as defined in the Compatible Formats table for pUniformBuffer->format, **must** be less than or equal to VkPhysicalDeviceLimits::maxTexelBufferElements

- VUID-VkDescriptorGetInfoEXT-type-09428
  If type is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, pStorageBuffer is not NULL , the number of texel buffer elements given by (⌊pStorageBuffer->range / (texel block size)⌋ × (texels per block)) where texel block size and texels per block are as defined in the Compatible Formats table for pStorageBuffer->format, **must** be less than or equal to VkPhysicalDeviceLimits::maxTexelBufferElements
- VUID-VkDescriptorGetInfoEXT-type-08028
  If type is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR and accelerationStructure is not 0, accelerationStructure **must** contain the address of a VkAccelerationStructureKHR created on device
- VUID-VkDescriptorGetInfoEXT-type-12216
  If type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER and pCombinedImageSampler->imageView is not VK_NULL_HANDLE, the pCombinedImageSampler->imageView member of data **must** have been created with VK_IMAGE_USAGE_SAMPLED_BIT set
- VUID-VkDescriptorGetInfoEXT-type-12217
  If type is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, pSampledImage is not NULL, and pSampledImage->imageView is not VK_NULL_HANDLE, the pSampledImage->imageView member of data **must** have been created with VK_IMAGE_USAGE_SAMPLED_BIT set
- VUID-VkDescriptorGetInfoEXT-type-12218
  If type is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, pStorageImage is not NULL, and pStorageImage->imageView is not VK_NULL_HANDLE, the pStorageImage->imageView member of data **must** have been created with VK_IMAGE_USAGE_STORAGE_BIT set
- VUID-VkDescriptorGetInfoEXT-type-12219
  If type is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the pInputAttachmentImage->imageView member of data **must** have been created with VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT set
- VUID-VkDescriptorGetInfoEXT-type-12220
  If type is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, pUniformBuffer is not NULL and pUniformBuffer->address is not zero, pUniformBuffer->address **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set
- VUID-VkDescriptorGetInfoEXT-type-12221
  If type is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, pStorageBuffer is not NULL and pStorageBuffer->address is not zero, pStorageBuffer->address **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_BUFFER_BIT usage flag set
- VUID-VkDescriptorGetInfoEXT-type-12222
  If type is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, pUniformTexelBuffer is not NULL and pUniformTexelBuffer->address is not zero, pUniformTexelBuffer->address **must** be a device address allocated to the application from a buffer created with the

VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT usage flag set

- VUID-VkDescriptorGetInfoEXT-type-12223
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, `pStorageTexelBuffer` is not `NULL` and `pStorageTexelBuffer->address` is not zero, `pStorageTexelBuffer->address` **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT usage flag set
- VUID-VkDescriptorGetInfoEXT-type-12265
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER and `pUniformBuffer` is not `NULL`, `pUniformBuffer->address` **must** be aligned to `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`
- VUID-VkDescriptorGetInfoEXT-type-12266
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER and `pStorageBuffer` is not `NULL`, `pStorageBuffer->address` **must** be aligned to `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`
- VUID-VkDescriptorGetInfoEXT-type-12269
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, and `pUniformTexelBuffer` is not `NULL`, `pUniformTexelBuffer->address` **must** be a multiple of the effective alignment requirement as determined by `minTexelBufferOffsetAlignment`
- VUID-VkDescriptorGetInfoEXT-type-12270
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, and `pStorageTexelBuffer` is not `NULL`, `pStorageTexelBuffer->address` **must** be a multiple of the effective alignment requirement as determined by `minTexelBufferOffsetAlignment`
- VUID-VkDescriptorGetInfoEXT-type-12492
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER and `pUniformBuffer->address` is not 0, `pUniformBuffer->range` **must** be less than or equal to `maxUniformBufferRange`
- VUID-VkDescriptorGetInfoEXT-type-12493
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, the `shader64BitIndexing` feature is not enabled, and `pUniformBuffer->address` is not 0, `pStorageBuffer->range` **must** be less than or equal to `maxStorageBufferRange`

Valid Usage (Implicit)

- VUID-VkDescriptorGetInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_GET_INFO_EXT
- VUID-VkDescriptorGetInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDescriptorGetInfoEXT-type-parameter
  `type` **must** be a valid VkDescriptorType value
- VUID-VkDescriptorGetInfoEXT-pSampler-parameter
  If `type` is VK_DESCRIPTOR_TYPE_SAMPLER, the `pSampler` member of `data` **must** be a valid pointer to a valid VkSampler handle
- VUID-VkDescriptorGetInfoEXT-pCombinedImageSampler-parameter

If `type` is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the `pCombinedImageSampler` member of `data` **must** be a valid pointer to a valid VkDescriptorImageInfo structure

- VUID-VkDescriptorGetInfoEXT-pInputAttachmentImage-parameter
  If `type` is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the `pInputAttachmentImage` member of `data` **must** be a valid pointer to a valid VkDescriptorImageInfo structure
- VUID-VkDescriptorGetInfoEXT-pSampledImage-parameter
  If `type` is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and if `pSampledImage` is not `NULL`, the `pSampledImage` member of `data` **must** be a valid pointer to a valid VkDescriptorImageInfo structure
- VUID-VkDescriptorGetInfoEXT-pStorageImage-parameter
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and if `pStorageImage` is not `NULL`, the `pStorageImage` member of `data` **must** be a valid pointer to a valid VkDescriptorImageInfo structure
- VUID-VkDescriptorGetInfoEXT-pUniformTexelBuffer-parameter
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, and if `pUniformTexelBuffer` is not `NULL`, the `pUniformTexelBuffer` member of `data` **must** be a valid pointer to a valid VkDescriptorAddressInfoEXT structure
- VUID-VkDescriptorGetInfoEXT-pStorageTexelBuffer-parameter
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, and if `pStorageTexelBuffer` is not `NULL`, the `pStorageTexelBuffer` member of `data` **must** be a valid pointer to a valid VkDescriptorAddressInfoEXT structure
- VUID-VkDescriptorGetInfoEXT-pUniformBuffer-parameter
  If `type` is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, and if `pUniformBuffer` is not `NULL`, the `pUniformBuffer` member of `data` **must** be a valid pointer to a valid VkDescriptorAddressInfoEXT structure
- VUID-VkDescriptorGetInfoEXT-pStorageBuffer-parameter
  If `type` is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, and if `pStorageBuffer` is not `NULL`, the `pStorageBuffer` member of `data` **must** be a valid pointer to a valid VkDescriptorAddressInfoEXT structure
- VUID-VkDescriptorGetInfoEXT-accelerationStructure-parameter
  If `type` is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV, the `accelerationStructure` member of `data` **must** be a valid VkDeviceAddress value

Data describing the descriptor is passed in a `VkDescriptorDataEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef union VkDescriptorDataEXT {
    const VkSampler*                    pSampler;
    const VkDescriptorImageInfo*        pCombinedImageSampler;
    const VkDescriptorImageInfo*        pInputAttachmentImage;
    const VkDescriptorImageInfo*        pSampledImage;
    const VkDescriptorImageInfo*        pStorageImage;
    const VkDescriptorAddressInfoEXT*   pUniformTexelBuffer;
    const VkDescriptorAddressInfoEXT*   pStorageTexelBuffer;
    const VkDescriptorAddressInfoEXT*   pUniformBuffer;
    const VkDescriptorAddressInfoEXT*   pStorageBuffer;
    VkDeviceAddress                     accelerationStructure;
} VkDescriptorDataEXT;
```

- `pSampler` is a pointer to a VkSampler handle specifying the parameters of a VK_DESCRIPTOR_TYPE_SAMPLER descriptor.
- `pCombinedImageSampler` is a pointer to a VkDescriptorImageInfo structure specifying the parameters of a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptor.
- `pInputAttachmentImage` is a pointer to a VkDescriptorImageInfo structure specifying the parameters of a VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT descriptor.
- `pSampledImage` is a pointer to a VkDescriptorImageInfo structure specifying the parameters of a VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE descriptor.
- `pStorageImage` is a pointer to a VkDescriptorImageInfo structure specifying the parameters of a VK_DESCRIPTOR_TYPE_STORAGE_IMAGE descriptor.
- `pUniformTexelBuffer` is a pointer to a VkDescriptorAddressInfoEXT structure specifying the parameters of a VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER descriptor.
- `pStorageTexelBuffer` is a pointer to a VkDescriptorAddressInfoEXT structure specifying the parameters of a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor.
- `pUniformBuffer` is a pointer to a VkDescriptorAddressInfoEXT structure specifying the parameters of a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER descriptor.
- `pStorageBuffer` is a pointer to a VkDescriptorAddressInfoEXT structure specifying the parameters of a VK_DESCRIPTOR_TYPE_STORAGE_BUFFER descriptor.
- `accelerationStructure` is reserved for future use and is ignored.

If the `nullDescriptor` feature is enabled, `pSampledImage`, `pStorageImage`, `pUniformTexelBuffer`, `pStorageTexelBuffer`, `pUniformBuffer`, and `pStorageBuffer` **can** each be `NULL`. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

If the `nullDescriptor` feature is enabled, `accelerationStructure` **can** be `0`. A null acceleration structure descriptor results in the miss shader being invoked.

Valid Usage

- VUID-VkDescriptorDataEXT-type-08034

If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and the nullDescriptor feature is not enabled, pCombinedImageSampler->imageView **must** not be VK_NULL_HANDLE

- VUID-VkDescriptorDataEXT-type-08035
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and the nullDescriptor feature is not enabled, pSampledImage **must** not be NULL and pSampledImage->imageView **must** not be VK_NULL_HANDLE
- VUID-VkDescriptorDataEXT-type-08036
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and the nullDescriptor feature is not enabled, pStorageImage **must** not be NULL and pStorageImage->imageView **must** not be VK_NULL_HANDLE
- VUID-VkDescriptorDataEXT-type-08037
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, and the nullDescriptor feature is not enabled, pUniformTexelBuffer **must** not be NULL
- VUID-VkDescriptorDataEXT-type-08038
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, and the nullDescriptor feature is not enabled, pStorageTexelBuffer **must** not be NULL
- VUID-VkDescriptorDataEXT-type-08039
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, and the nullDescriptor feature is not enabled, pUniformBuffer **must** not be NULL
- VUID-VkDescriptorDataEXT-type-08040
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, and the nullDescriptor feature is not enabled, pStorageBuffer **must** not be NULL
- VUID-VkDescriptorDataEXT-type-08041
  If VkDescriptorGetInfoEXT::type is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, and the nullDescriptor feature is not enabled, accelerationStructure **must** not be 0

Data describing a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is passed in a VkDescriptorAddressInfoEXT structure:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorAddressInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceAddress    address;
    VkDeviceSize       range;
    VkFormat           format;
} VkDescriptorAddressInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `address` is either `0` or a device address at an offset in a buffer, where the base address can be queried from vkGetBufferDeviceAddress.
- `range` is the size in bytes of the buffer or buffer view used by the descriptor.
- `format` is the format of the data elements in the buffer view and is ignored for buffers.

Valid Usage

- VUID-VkDescriptorAddressInfoEXT-None-09508
  If `address` is not zero, and the descriptor is of type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, then `format` **must** not be VK_FORMAT_UNDEFINED
- VUID-VkDescriptorAddressInfoEXT-address-08043
  If the `nullDescriptor` feature is not enabled, `address` **must** not be zero
- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08938
  If `address` is zero, `range` **must** be VK_WHOLE_SIZE
- VUID-VkDescriptorAddressInfoEXT-nullDescriptor-08939
  If `address` is not zero, `range` **must** not be VK_WHOLE_SIZE
- VUID-VkDescriptorAddressInfoEXT-range-08045
  If `address` is not zero, then `range` **must** be less than or equal to the size of the buffer containing `address` minus the offset of `address` from the base address of the buffer
- VUID-VkDescriptorAddressInfoEXT-range-08940
  `range` **must** not be zero

Valid Usage (Implicit)

- VUID-VkDescriptorAddressInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_ADDRESS_INFO_EXT
- VUID-VkDescriptorAddressInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`

- VUID-VkDescriptorAddressInfoEXT-address-parameter
  If `address` is not `0`, `address` **must** be a valid VkDeviceAddress value
- VUID-VkDescriptorAddressInfoEXT-format-parameter
  `format` **must** be a valid VkFormat value

If the `nullDescriptor` feature is enabled, `address` **can** be zero. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

Immutable samplers specified in a descriptor set layout through `pImmutableSamplers` **must** be provided by applications when obtaining descriptor data. Immutable samplers written in a descriptor buffer **must** have identical parameters to the immutable samplers in the descriptor set layout that consumes the sampler.

NOTE If the descriptor set layout was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, there is no buffer backing for the immutable sampler, so this requirement does not exist. The implementation handles allocation of these descriptors internally.

NOTE As descriptors are now in regular memory, drivers cannot hide copies of immutable samplers that end up in descriptor sets from the application. As such, applications are required to provide these samplers as if they were not provided immutably.

18.2. Binding Descriptor Buffers

Descriptor buffers have their own separate binding point on the command buffer, with buffers bound using vkCmdBindDescriptorBuffersEXT. vkCmdSetDescriptorBufferOffsetsEXT assigns pairs of buffer binding indices and buffer offsets to the same binding point on the command buffer as vkCmdBindDescriptorSets, allowing subsequent bound pipeline commands to use the specified descriptor buffers. Bindings applied via vkCmdBindDescriptorSets **cannot** exist simultaneously with those applied via calls to vkCmdSetDescriptorBufferOffsetsEXT or vkCmdBindDescriptorBufferEmbeddedSamplersEXT, as calls to vkCmdSetDescriptorBufferOffsetsEXT or vkCmdBindDescriptorBufferEmbeddedSamplersEXT invalidate any bindings by previous calls to vkCmdBindDescriptorSets and vice-versa.

To bind descriptor buffers to a command buffer, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBuffersEXT(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    bufferCount,
    const VkDescriptorBufferBindingInfoEXT*     pBindingInfos);
```

- `commandBuffer` is the command buffer that the descriptor buffers will be bound to.
- `bufferCount` is the number of elements in the `pBindingInfos` array.
- `pBindingInfos` is a pointer to an array of VkDescriptorBufferBindingInfoEXT structures.

`vkCmdBindDescriptorBuffersEXT` causes any offsets previously set by vkCmdSetDescriptorBufferOffsetsEXT that use the bindings numbered [`0`.. `bufferCount`-1] to be no longer valid for subsequent bound pipeline commands. Any previously bound buffers at binding points greater than or equal to `bufferCount` are unbound.

Valid Usage

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBuffersEXT-None-08047
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBuffersEXT-maxSamplerDescriptorBufferBindings-08048
  There **must** be no more than VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxSamplerDescriptorBufferBindings` elements in `pBindingInfos` with VkDescriptorBufferBindingInfoEXT::`usage` containing VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdBindDescriptorBuffersEXT-maxResourceDescriptorBufferBindings-08049
  There **must** be no more than VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxResourceDescriptorBufferBindings` elements in `pBindingInfos` with VkDescriptorBufferBindingInfoEXT::`usage` containing VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdBindDescriptorBuffersEXT-None-08050
  There **must** be no more than `1` element in `pBindingInfos` with VkDescriptorBufferBindingInfoEXT::`usage` containing VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT
- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-08051
  `bufferCount` **must** be less than or equal to VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxDescriptorBufferBindings`
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08053
  For each element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT usage flag set if it contains sampler descriptor data
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08054

For each element of pBindingInfos, the buffer from which address was queried **must** have been created with the VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT usage flag set if it contains resource descriptor data

- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08055
  For each element of pBindingInfos, at least one buffer from which address was queried must contain usage

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-parameter
  pBindingInfos **must** be a valid pointer to an array of bufferCount valid VkDescriptorBufferBindingInfoEXT structures
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindDescriptorBuffersEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-arraylength
  bufferCount **must** be greater than 0

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorBuffersEXT is not affected by conditional rendering

Data describing a descriptor buffer binding is passed in a VkDescriptorBufferBindingInfoEXT structure:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingInfoEXT {
    VkStructureType       sType;
    const void*           pNext;
    VkDeviceAddress       address;
    VkBufferUsageFlags    usage;
} VkDescriptorBufferBindingInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- address is a VkDeviceAddress specifying the device address defining the descriptor buffer to be bound.
- usage is a bitmask of VkBufferUsageFlagBits specifying the VkBufferCreateInfo::usage for the buffer from which address was queried. Usage flags other than VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, and VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT are ignored.

If the pNext chain includes a VkBufferUsageFlags2CreateInfo structure, VkBufferUsageFlags2CreateInfo::usage from that structure is used instead of usage from this structure.

Valid Usage

- VUID-VkDescriptorBufferBindingInfoEXT-None-09499
  If the pNext chain does not include a VkBufferUsageFlags2CreateInfo structure, usage **must** be a valid combination of VkBufferUsageFlagBits values
- VUID-VkDescriptorBufferBindingInfoEXT-None-09500
  If the pNext chain does not include a VkBufferUsageFlags2CreateInfo structure, usage **must** not be 0
- VUID-VkDescriptorBufferBindingInfoEXT-usage-10998
  The usage must include at least one of VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, or

VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-VkDescriptorBufferBindingInfoEXT-bufferlessPushDescriptors-08056
  If VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors is VK_FALSE, and usage contains VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT, then the pNext chain **must** include a VkDescriptorBufferBindingPushDescriptorBufferHandleEXT structure
- VUID-VkDescriptorBufferBindingInfoEXT-address-08057
  address **must** be aligned to VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08122
  If usage includes VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, address **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT usage flag set
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08123
  If usage includes VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, address **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT usage flag set
- VUID-VkDescriptorBufferBindingInfoEXT-usage-08124
  If usage includes VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT, address **must** be a device address allocated to the application from a buffer created with the VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT usage flag set

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_INFO_EXT
- VUID-VkDescriptorBufferBindingInfoEXT-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkBufferUsageFlags2CreateInfo or VkDescriptorBufferBindingPushDescriptorBufferHandleEXT
- VUID-VkDescriptorBufferBindingInfoEXT-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkDescriptorBufferBindingInfoEXT-address-parameter
  address **must** be a valid VkDeviceAddress value

When the VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors property is VK_FALSE, the VkBuffer handle of the buffer for push descriptors is passed in a VkDescriptorBufferBindingPushDescriptorBufferHandleEXT structure:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingPushDescriptorBufferHandleEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkDescriptorBufferBindingPushDescriptorBufferHandleEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the `VkBuffer` handle of the buffer for push descriptors.

Valid Usage

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-bufferlessPushDescriptors-08059 `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors` **must** be VK_FALSE

Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_PUSH_DESCRIPTOR_BUFFER_HANDLE_EXT
- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-buffer-parameter `buffer` **must** be a valid VkBuffer handle

Structure Chaining

Extends the structure

- VkDescriptorBufferBindingInfoEXT

To set descriptor buffer offsets in a command buffer, call:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsetsEXT(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipelineLayout                            layout,
    uint32_t                                    firstSet,
    uint32_t                                    setCount,
    const uint32_t*                             pBufferIndices,
    const VkDeviceSize*                         pOffsets);
```

- `commandBuffer` is the command buffer in which the descriptor buffer offsets will be set.
- `pipelineBindPoint` is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `firstSet` is the number of the first set to be bound.
- `setCount` is the number of elements in the `pBufferIndices` and `pOffsets` arrays.
- `pBufferIndices` is a pointer to an array of indices into the descriptor buffer binding points set by vkCmdBindDescriptorBuffersEXT.
- `pOffsets` is a pointer to an array of VkDeviceSize offsets to apply to the bound descriptor buffers.

`vkCmdSetDescriptorBufferOffsetsEXT` binds `setCount` pairs of descriptor buffers, specified by indices into the binding points bound using vkCmdBindDescriptorBuffersEXT, and buffer offsets to set numbers [`firstSet`..`firstSet`+`setCount`-1] for subsequent bound pipeline commands set by `pipelineBindPoint`. Set [`firstSet` + i] is bound to the descriptor buffer at binding `pBufferIndices`[i] at an offset of `pOffsets`[i]. Any bindings that were previously applied via these sets, or calls to vkCmdBindDescriptorSets, are no longer valid. Other sets will also be invalidated upon calling this command if `layout` differs from the pipeline layout used to bind those other sets, as described in Pipeline Layout Compatibility.

After binding descriptors, applications **can** modify descriptor memory either by performing writes on the host or with device commands. When descriptor memory is updated with device commands, visibility for the shader stage accessing a descriptor is ensured with the VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT access flag. Implementations **must** not access resources referenced by these descriptors unless they are dynamically accessed by shaders. Descriptors bound with this call **can** be undefined if they are not dynamically accessed by shaders.

Implementations **may** read descriptor data for any statically accessed descriptor if the `binding` in `layout` is not declared with the VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT flag. If the `binding` in `layout` is declared with VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, implementations **must** not read descriptor data that is not dynamically accessed.

Applications **must** ensure that any descriptor which the implementation **may** read **must** be in-bounds of the underlying descriptor buffer binding.

NOTE Applications can freely decide how large a variable descriptor buffer binding is, so it may not be safe to read such descriptor payloads statically. The intention of these rules is to allow implementations to speculatively prefetch descriptor payloads where feasible.

Dynamically accessing a resource through descriptor data from an unbound region of a sparse partially-resident buffer will result in invalid descriptor data being read, and therefore undefined behavior.

NOTE For descriptors written by the host, visibility is implied through the automatic visibility operation on queue submit, and there is no need to consider `VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT`. Explicit synchronization for descriptors is only required when descriptors are updated on the device.

NOTE The requirements above imply that all descriptor bindings have been defined with the equivalent of VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT and VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT, but enabling those features is not required to get this behavior.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08061
  The offsets in `pOffsets` **must** be aligned to VkPhysicalDeviceDescriptorBufferPropertiesEXT::`descriptorBufferOffsetAlignment`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08063
  The offsets in `pOffsets` **must** be small enough such that any descriptor binding referenced by `layout` without the VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT flag computes a valid address inside the underlying VkBuffer
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08126
  The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxSamplerDescriptorBufferRange` of the sampler descriptor buffer binding
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08127
  The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within

VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange of the resource descriptor buffer binding

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08064
  Each element of pBufferIndices **must** be less than VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08065
  Each element of pBufferIndices **must** reference a valid descriptor buffer binding set by a previous call to vkCmdBindDescriptorBuffersEXT in commandBuffer
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-08066
  The sum of firstSet and setCount **must** be less than or equal to VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-09006
  The VkDescriptorSetLayout for each set from firstSet to firstSet + setCount when layout was created **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-11803
  The VkDescriptorSetLayout for each set from firstSet to firstSet + setCount when layout was created **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR bit set
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-11804
  The VkDescriptorSetLayout for each set from firstSet to firstSet + setCount when layout was created **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT bit set
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-None-08060
  The descriptorBuffer feature **must** be enabled
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-08067
  pipelineBindPoint **must** be supported by the commandBuffer's parent VkCommandPool's queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-parameter
  pipelineBindPoint **must** be a valid VkPipelineBindPoint value
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-layout-parameter
  layout **must** be a valid VkPipelineLayout handle
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-parameter
  pBufferIndices **must** be a valid pointer to an array of setCount uint32_t values
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-parameter
  pOffsets **must** be a valid pointer to an array of setCount VkDeviceSize values

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-setCount-arraylength
  `setCount` **must** be greater than `0`
- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commonparent
  Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDescriptorBufferOffsetsEXT is not affected by conditional rendering

To set descriptor buffer offsets in a command buffer, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsets2EXT(
    VkCommandBuffer                             commandBuffer,
    const VkSetDescriptorBufferOffsetsInfoEXT*  pSetDescriptorBufferOffsetsInfo);
```

- `commandBuffer` is the command buffer in which the descriptor buffer offsets will be set.
- `pSetDescriptorBufferOffsetsInfo` is a pointer to a `VkSetDescriptorBufferOffsetsInfoEXT` structure.

Valid Usage

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-descriptorBuffer-09470
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-09471
  Each bit in `pSetDescriptorBufferOffsetsInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-parameter
  `pSetDescriptorBufferOffsetsInfo` **must** be a valid pointer to a valid VkSetDescriptorBufferOffsetsInfoEXT structure
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetDescriptorBufferOffsets2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetDescriptorBufferOffsets2EXT is not affected by conditional rendering

The `VkSetDescriptorBufferOffsetsInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkSetDescriptorBufferOffsetsInfoEXT {
    VkStructureType        sType;
    const void*            pNext;
    VkShaderStageFlags     stageFlags;
    VkPipelineLayout       layout;
    uint32_t               firstSet;
    uint32_t               setCount;
    const uint32_t*        pBufferIndices;
    const VkDeviceSize*    pOffsets;
} VkSetDescriptorBufferOffsetsInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of VkShaderStageFlagBits specifying the shader stages the descriptor sets will be bound to
- `layout` is a VkPipelineLayout object used to program the bindings.
- `firstSet` is the number of the first set to be bound.
- `setCount` is the number of elements in the `pBufferIndices` and `pOffsets` arrays.
- `pBufferIndices` is a pointer to an array of indices into the descriptor buffer binding points set by

vkCmdBindDescriptorBuffersEXT.

- `pOffsets` is a pointer to an array of VkDeviceSize offsets to apply to the bound descriptor buffers.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT is equivalent to calling the original version of this command once with VK_PIPELINE_BIND_POINT_GRAPHICS and once with VK_PIPELINE_BIND_POINT_COMPUTE.

Valid Usage

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08061
  The offsets in `pOffsets` **must** be aligned to VkPhysicalDeviceDescriptorBufferPropertiesEXT::`descriptorBufferOffsetAlignment`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08063
  The offsets in `pOffsets` **must** be small enough such that any descriptor binding referenced by `layout` without the VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT flag computes a valid address inside the underlying VkBuffer
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08126
  The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a sampler descriptor **must** be within VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxSamplerDescriptorBufferRange` of the sampler descriptor buffer binding
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08127
  The offsets in `pOffsets` **must** be small enough such that any location accessed by a shader as a resource descriptor **must** be within VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxResourceDescriptorBufferRange` of the resource descriptor buffer binding
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08064
  Each element of `pBufferIndices` **must** be less than VkPhysicalDeviceDescriptorBufferPropertiesEXT::`maxDescriptorBufferBindings`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-08065
  Each element of `pBufferIndices` **must** reference a valid descriptor buffer binding set by a previous call to vkCmdBindDescriptorBuffersEXT in `commandBuffer`
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-08066
  The sum of `firstSet` and `setCount` **must** be less than or equal to VkPipelineLayoutCreateInfo::`setLayoutCount` provided when `layout` was created
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-09006
  The VkDescriptorSetLayout for each set from `firstSet` to `firstSet` + `setCount` when `layout` was created **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-11803

The VkDescriptorSetLayout for each set from `firstSet` to `firstSet` + `setCount` when `layout` was created **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-firstSet-11804
  The VkDescriptorSetLayout for each set from `firstSet` to `firstSet` + `setCount` when `layout` was created **must** not have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT bit set

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-None-09495
  `layout` **must** be a valid VkPipelineLayout handle

Valid Usage (Implicit)

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SET_DESCRIPTOR_BUFFER_OFFSETS_INFO_EXT
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-stageFlags-parameter
  `stageFlags` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pBufferIndices-parameter
  `pBufferIndices` **must** be a valid pointer to an array of `setCount` `uint32_t` values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-parameter
  `pOffsets` **must** be a valid pointer to an array of `setCount` VkDeviceSize values
- VUID-VkSetDescriptorBufferOffsetsInfoEXT-setCount-arraylength
  `setCount` **must** be greater than `0`

To bind an embedded immutable sampler set to a command buffer, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplersEXT(
    VkCommandBuffer                             commandBuffer,
    VkPipelineBindPoint                         pipelineBindPoint,
    VkPipelineLayout                            layout,
    uint32_t                                    set);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pipelineBindPoint` is a VkPipelineBindPoint indicating the type of the pipeline that will use the embedded immutable samplers.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `set` is the number of the set to be bound.

`vkCmdBindDescriptorBufferEmbeddedSamplersEXT` binds the embedded immutable samplers in `set` of `layout` to `set` for the command buffer for subsequent bound pipeline commands set by `pipelineBindPoint`. Any previous binding to this set by vkCmdSetDescriptorBufferOffsetsEXT or this command is overwritten. Any sets that were last bound by a call to vkCmdBindDescriptorSets are invalidated upon calling this command. Other sets will also be invalidated upon calling this command if `layout` differs from the pipeline layout used to bind those other sets, as described in Pipeline Layout Compatibility.

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08070
  The VkDescriptorSetLayout at index `set` when `layout` was created **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT bit set
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08071
  `set` **must** be less than or equal to VkPipelineLayoutCreateInfo::`setLayoutCount` provided when `layout` was created
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-None-08068
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-08069
  `pipelineBindPoint` **must** be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-parameter

`pipelineBindPoint` **must** be a valid VkPipelineBindPoint value

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-layout-parameter
  `layout` **must** be a valid VkPipelineLayout handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commonparent
  Both of `commandBuffer`, and `layout` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorBufferEmbeddedSamplersEXT is not affected by conditional rendering

To bind an embedded immutable sampler set to a command buffer, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBufferEmbeddedSamplers2EXT(
    VkCommandBuffer                             commandBuffer,
    const VkBindDescriptorBufferEmbeddedSamplersInfoEXT*
pBindDescriptorBufferEmbeddedSamplersInfo);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pBindDescriptorBufferEmbeddedSamplersInfo` is a pointer to a `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure.

Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-11295
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pSamplerHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-11296
  If `commandBuffer` is a secondary command buffer, it **must** have begun with VkCommandBufferInheritanceDescriptorHeapInfoEXT::`pResourceHeapBindInfo` equal to `NULL`
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-descriptorBuffer-09472
  The `descriptorBuffer` feature **must** be enabled
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-09473
  Each bit in `pBindDescriptorBufferEmbeddedSamplersInfo->stageFlags` **must** be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-pBindDescriptorBufferEmbeddedSamplersInfo-parameter
  `pBindDescriptorBufferEmbeddedSamplersInfo` **must** be a valid pointer to a valid VkBindDescriptorBufferEmbeddedSamplersInfoEXT structure
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdBindDescriptorBufferEmbeddedSamplers2EXT-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdBindDescriptorBufferEmbeddedSamplers2EXT is not affected by conditional rendering

The `VkBindDescriptorBufferEmbeddedSamplersInfoEXT` structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkBindDescriptorBufferEmbeddedSamplersInfoEXT {
    VkStructureType       sType;
    const void*           pNext;
    VkShaderStageFlags    stageFlags;
    VkPipelineLayout      layout;
    uint32_t              set;
} VkBindDescriptorBufferEmbeddedSamplersInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stageFlags` is a bitmask of VkShaderStageFlagBits specifying the shader stages that will use the embedded immutable samplers.
- `layout` is a VkPipelineLayout object used to program the bindings.
- `set` is the number of the set to be bound.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of VK_SHADER_STAGE_VERTEX_BIT |

VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT is equivalent to calling the original version of this command once with VK_PIPELINE_BIND_POINT_GRAPHICS and once with VK_PIPELINE_BIND_POINT_COMPUTE.

Valid Usage

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08070
  The VkDescriptorSetLayout at index `set` when `layout` was created **must** have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT bit set
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08071
  `set` **must** be less than or equal to VkPipelineLayoutCreateInfo::`setLayoutCount` provided when `layout` was created
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-None-09495
  `layout` **must** be a valid VkPipelineLayout handle

Valid Usage (Implicit)

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_BUFFER_EMBEDDED_SAMPLERS_INFO_EXT
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of VkPipelineLayoutCreateInfo
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-unique
  The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-parameter
  `stageFlags` **must** be a valid combination of VkShaderStageFlagBits values
- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-parameter
  If `layout` is not VK_NULL_HANDLE, `layout` **must** be a valid VkPipelineLayout handle

18.3. Updating Descriptor Buffers

Updates to descriptor data in buffers **can** be performed by any operation on either the host or device that **can** access memory.

Descriptor buffer reads **can** be synchronized using VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT in the relevant shader stage.

18.4. Push Descriptors With Descriptor Buffers

If the `descriptorBufferPushDescriptors` feature is enabled, push descriptors **can** be used with

descriptor buffers in the same way as with descriptor sets.

The VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors property indicates whether the implementation requires a buffer to back push descriptors. If the property is VK_FALSE then before recording any push descriptors, the application **must** bind exactly 1 descriptor buffer that was created with the VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT usage flag set. When this buffer is bound, any previously recorded push descriptors that are required for a subsequent command **must** be recorded again.

18.5. Capture and Replay

In a similar way to bufferDeviceAddressCaptureReplay, the descriptorBufferCaptureReplay feature allows the creation of opaque handles for objects at capture time that **can** be passed into object creation calls in a future replay, causing descriptors to be created with the same data. The opaque memory address for any memory used by these resources **must** have been captured using vkGetDeviceMemoryOpaqueCaptureAddress and be replayed using VkMemoryOpaqueCaptureAddressAllocateInfo.

To get the opaque descriptor data for a buffer, call:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetBufferOpaqueCaptureDescriptorDataEXT(
    VkDevice                                    device,
    const VkBufferCaptureDescriptorDataInfoEXT* pInfo,
    void*                                       pData);
```

- device is the logical device that gets the data.
- pInfo is a pointer to a VkBufferCaptureDescriptorDataInfoEXT structure specifying the buffer.
- pData is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-None-08072
  The descriptorBufferCaptureReplay feature **must** be enabled
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-08073
  pData **must** point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferCaptureReplayDescriptorDataSize bytes in size
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-08074
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkBufferCaptureDescriptorDataInfoEXT structure
- VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-parameter
  `pData` **must** be a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the buffer to get descriptor buffer capture data for is passed in a `VkBufferCaptureDescriptorDataInfoEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkBufferCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkBuffer           buffer;
} VkBufferCaptureDescriptorDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the `VkBuffer` handle of the buffer to get opaque capture data for.

Valid Usage

- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-08075
  `buffer` **must** have been created with VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in

VkBufferCreateInfo::flags

Valid Usage (Implicit)

- VUID-VkBufferCaptureDescriptorDataInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_BUFFER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
- VUID-VkBufferCaptureDescriptorDataInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-parameter
  buffer **must** be a valid VkBuffer handle

To get the opaque capture descriptor data for an image, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageOpaqueCaptureDescriptorDataEXT(
    VkDevice                                    device,
    const VkImageCaptureDescriptorDataInfoEXT*  pInfo,
    void*                                       pData);
```

- device is the logical device that gets the data.
- pInfo is a pointer to a VkImageCaptureDescriptorDataInfoEXT structure specifying the image.
- pData is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-None-08076
  The descriptorBufferCaptureReplay feature **must** be enabled
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-08077
  pData **must** point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageCaptureReplayDescriptorDataSize bytes in size
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-08078
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-parameter

`device` **must** be a valid VkDevice handle

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkImageCaptureDescriptorDataInfoEXT structure
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-parameter
  `pData` **must** be a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the image to get descriptor buffer capture data for is passed in a `VkImageCaptureDescriptorDataInfoEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
} VkImageCaptureDescriptorDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the `VkImage` handle of the image to get opaque capture data for.

Valid Usage

- VUID-VkImageCaptureDescriptorDataInfoEXT-image-08079
  `image` **must** have been created with VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in VkImageCreateInfo::`flags`

Valid Usage (Implicit)

- VUID-VkImageCaptureDescriptorDataInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
- VUID-VkImageCaptureDescriptorDataInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageCaptureDescriptorDataInfoEXT-image-parameter
  `image` **must** be a valid VkImage handle

To get the opaque capture descriptor data for an image view, call:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageViewOpaqueCaptureDescriptorDataEXT(
    VkDevice                                    device,
    const VkImageViewCaptureDescriptorDataInfoEXT* pInfo,
    void*                                       pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a VkImageViewCaptureDescriptorDataInfoEXT structure specifying the image view.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-None-08080
  The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-08081
  `pData` **must** point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::`imageViewCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-08082
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pInfo-parameter

pInfo **must** be a valid pointer to a valid VkImageViewCaptureDescriptorDataInfoEXT structure

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-parameter
  pData **must** be a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the image view to get descriptor buffer capture data for is passed in a VkImageViewCaptureDescriptorDataInfoEXT structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageViewCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView        imageView;
} VkImageViewCaptureDescriptorDataInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- imageView is the VkImageView handle of the image view to get opaque capture data for.

Valid Usage

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-08083
  imageView **must** have been created with VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in VkImageViewCreateInfo::flags

Valid Usage (Implicit)

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-parameter
  `imageView` **must** be a valid VkImageView handle

To get the opaque capture descriptor data for a sampler, call:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetSamplerOpaqueCaptureDescriptorDataEXT(
    VkDevice                                    device,
    const VkSamplerCaptureDescriptorDataInfoEXT* pInfo,
    void*                                       pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a VkSamplerCaptureDescriptorDataInfoEXT structure specifying the sampler.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-None-08084
  The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-08085
  `pData` **must** point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::`samplerCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-08086
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkSamplerCaptureDescriptorDataInfoEXT structure
- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-parameter
  `pData` **must** be a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the sampler to get descriptor buffer capture data for is passed in a `VkSamplerCaptureDescriptorDataInfoEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkSamplerCaptureDescriptorDataInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkSampler          sampler;
} VkSamplerCaptureDescriptorDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampler` is the `VkSampler` handle of the sampler to get opaque capture data for.

Valid Usage

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-08087
  `sampler` **must** have been created with VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in VkSamplerCreateInfo::`flags`

Valid Usage (Implicit)

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_SAMPLER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-parameter
  `sampler` **must** be a valid VkSampler handle

To get the opaque capture descriptor data for an acceleration structure, call:

WARNING	This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
VK_NV_ray_tracing
VkResult vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT(
    VkDevice                                    device,
    const VkAccelerationStructureCaptureDescriptorDataInfoEXT* pInfo,
    void*                                       pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a VkAccelerationStructureCaptureDescriptorDataInfoEXT structure specifying the acceleration structure.
- `pData` is a pointer to an application-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-None-08088
  The `descriptorBufferCaptureReplay` feature **must** be enabled
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-08089
  `pData` **must** point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::`accelerationStructureCaptureReplayDescriptorDataSize` bytes in size
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-08090
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pInfo-parameter `pInfo` **must** be a valid pointer to a valid VkAccelerationStructureCaptureDescriptorDataInfoEXT structure
- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-parameter `pData` **must** be a pointer value

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Information about the acceleration structure to get descriptor buffer capture data for is passed in a `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
VK_NV_ray_tracing
typedef struct VkAccelerationStructureCaptureDescriptorDataInfoEXT {
    VkStructureType               sType;
    const void*                   pNext;
    VkAccelerationStructureKHR    accelerationStructure;
    VkAccelerationStructureNV     accelerationStructureNV;
} VkAccelerationStructureCaptureDescriptorDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` is the `VkAccelerationStructureKHR` handle of the acceleration structure to get opaque capture data for.
- `accelerationStructureNV` is the `VkAccelerationStructureNV` handle of the acceleration structure to get opaque capture data for.

Valid Usage

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08091

If accelerationStructure is not VK_NULL_HANDLE then accelerationStructure **must** have been created with VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in VkAccelerationStructureCreateInfoKHR::createFlags

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08093
  If accelerationStructure is not VK_NULL_HANDLE then accelerationStructureNV **must** be VK_NULL_HANDLE
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08094
  If accelerationStructureNV is not VK_NULL_HANDLE then accelerationStructure **must** be VK_NULL_HANDLE
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-None-12430
  If the accelerationStructure feature is not enabled, accelerationStructure **must** be VK_NULL_HANDLE
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-12431
  If the VK_NV_ray_tracing extension is not enabled, then accelerationStructureNV **must** be VK_NULL_HANDLE

Valid Usage (Implicit)

- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-pNext-pNext
  pNext **must** be NULL
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-parameter
  If accelerationStructure is not VK_NULL_HANDLE, accelerationStructure **must** be a valid VkAccelerationStructureKHR handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-parameter
  If accelerationStructureNV is not VK_NULL_HANDLE, accelerationStructureNV **must** be a valid VkAccelerationStructureNV handle
- VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-commonparent
  Both of accelerationStructure, and accelerationStructureNV that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same VkDevice

The VkOpaqueCaptureDescriptorDataCreateInfoEXT structure is defined as:

WARNING This functionality is superseded by VK_EXT_descriptor_heap. See Legacy Functionality for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkOpaqueCaptureDescriptorDataCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const void*        opaqueCaptureDescriptorData;
} VkOpaqueCaptureDescriptorDataCreateInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureDescriptorData` is a pointer to an application-allocated buffer containing opaque capture data retrieved using vkGetBufferOpaqueCaptureDescriptorDataEXT, vkGetImageOpaqueCaptureDescriptorDataEXT, vkGetImageViewOpaqueCaptureDescriptorDataEXT, vkGetSamplerOpaqueCaptureDescriptorDataEXT, or vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT.

During replay, opaque descriptor capture data **can** be specified by adding a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure to the relevant `pNext` chain of a VkAccelerationStructureCreateInfoKHR, VkBufferCreateInfo, VkImageCreateInfo, VkImageViewCreateInfo, or VkSamplerCreateInfo structure.

When providing opaque capture data for an image, if the `pNext` chain of VkImageCreateInfo contains an instance of both this structure and VkOpaqueCaptureDataCreateInfoEXT, they **should** both specify data from the same original resource. If they have capture data from different original resources, resource creation is much more likely to fail.

Valid Usage (Implicit)

- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DESCRIPTOR_DATA_CREATE_INFO_EXT
- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-opaqueCaptureDescriptorData-parameter
  `opaqueCaptureDescriptorData` **must** be a pointer value

Chapter 19. Shader Interfaces

When a pipeline is created, the set of shaders specified in the corresponding `VkPipelineCreateInfo` structure are implicitly linked at a number of different interfaces.

- Shader Input and Output Interface
- Vertex Input Interface
- Fragment Output Interface
- Fragment Tile Image Interface
- Fragment Input Attachment Interface
- Ray Tracing Pipeline Interface
- Shader Resource Interface

This chapter describes valid uses for a set of SPIR-V decorations. Any other use of one of these decorations is invalid, with the exception that, when using SPIR-V versions 1.4 and earlier: `Block`, `BufferBlock`, `Offset`, `ArrayStride`, and `MatrixStride` can also decorate types and type members used by variables in the `Private` and `Function` storage classes.

NOTE In this chapter, there are references to SPIR-V terms such as the `MeshNV` execution model. These terms will appear even in a build of the specification which does not support any extensions. This is as intended, since these terms appear in the unified SPIR-V specification without such qualifiers.

19.1. Shader Input and Output Interfaces

When multiple stages are present in a pipeline, the outputs of one stage form an interface with the inputs of the next stage. When such an interface involves a shader, shader outputs are matched against the inputs of the next stage, and shader inputs are matched against the outputs of the previous stage.

All the variables forming the shader input and output *interfaces* are listed as operands to the `OpEntryPoint` instruction and are declared with the `Input` or `Output` storage classes, respectively, in the SPIR-V module. These generally form the interfaces between consecutive shader stages, regardless of any non-shader stages between the consecutive shader stages.

There are two classes of variables that **can** be matched between shader stages, built-in variables and user-defined variables. Each class has a different set of matching criteria.

For compute shaders, the input interface is formed by the built-in interface. The output interface is empty.

19.1.1. Built-In Interface Block

Shader built-in variables meeting the following requirements define the *built-in interface block*. They **must**

- be explicitly declared (there are no implicit built-ins),
- be identified with a `BuiltIn` decoration,
- form object types as described in the Built-in Variables section, and
- be declared in a block whose top-level members are the built-ins.

There **must** be no more than one built-in interface block per shader per interface , except for the mesh output interface where there **must** be at most one built-in interface block decorated with the `PerPrimitiveEXT` decoration and at most one built-in interface block without this decoration .

Built-ins **must** not have any `Location` or `Component` decorations.

19.1.2. User-Defined Variable Interface

The non-built-in variables listed by `OpEntryPoint` with the `Input` or `Output` storage class form the *user-defined variable interface*. These **must** have numeric type or, recursively, composite types of such types. If an implementation supports `storageInputOutput16`, components **can** have a width of 16 bits. These variables **must** be identified with a `Location` decoration and **can** also be identified with a `Component` decoration.

19.1.3. Interface Matching

An output variable, block, or structure member in a given shader stage has an interface match with an input variable, block, or structure member in a subsequent shader stage if they both adhere to the following conditions:

- They have equivalent decorations, other than:
  - `XfbBuffer`, `XfbStride`, `Offset`, and `Stream`
  - one is not decorated with `Component` and the other is declared with a `Component` of `0`
  - Interpolation decorations
  - `RelaxedPrecision` if one is an input variable and the other an output variable
- Their types match as follows:
  - if the input is declared in a tessellation control or geometry shader as an `OpTypeArray` with an `Element Type` equivalent to the `OpType*` declaration of the output, and neither is a structure member; or
  - if the `maintenance4` feature is enabled, they are declared as `OpTypeVector` variables, and the output has a `Component Count` value higher than that of the input but the same `Component Type`; or
  - if the output is declared in a mesh shader as an `OpTypeArray` with an `Element Type` equivalent to the `OpType*` declaration of the input, and neither is a structure member; or
  - if the input is decorated with `PerVertexKHR`, and is declared in a fragment shader as an `OpTypeArray` with an `Element Type` equivalent to the `OpType*` declaration of the output, and neither the input nor the output is a structure member; or
  - if in any other case they are declared with an equivalent `OpType*` declaration.

- If both are structures and every member has an interface match.

NOTE	The word “structure” above refers to both variables that have an `OpTypeStruct` type and interface blocks (which are also declared as `OpTypeStruct`).

If the pipeline is compiled as separate graphics pipeline libraries and the `graphicsPipelineLibraryIndependentInterpolationDecoration` limit is not supported, matches are not found if the interpolation decorations differ between the last pre-rasterization shader stage and the fragment shader stage.

All input variables and blocks **must** have an interface match in the preceding shader stage, except for built-in variables in fragment shaders. Shaders **can** declare and write to output variables that are not declared or read by the subsequent stage.

The value of an input variable is undefined if the preceding stage does not write to a matching output variable, as described above.

19.1.4. Location and Component Assignment

User-defined variables in interfaces between shader stages in the graphics pipeline consume a unique set of `Location` and `Component` values.

Available space for user-defined interface variables is partitioned into a number of 32-bit four-component vectors, each identified by a `Location` value. Each individual 32-bit component of a vector is then further identified by a `Component` value.

16-bit scalar or vector values consume one `Component` slot per 16-bit component and **must** be specified within a single `Location`. 32-bit scalar or vector values consume one `Component` slot per 32-bit component and **must** be specified within a single `Location`. 64-bit scalar or vector values consume two consecutive `Component` slots per 64-bit component from up to two consecutive `Location` slots.

For any shader interface variable where one level of the array is disregarded for type matching, the outer array level is also disregarded when assigning `Location` slots.

An array of size n with elements consuming l `Location` slots each will consume l × n `Location` slots. Each element of the array will consume `Component` slots in each `Location` slot identically to a declaration using the element type.

NOTE	Applications running on Vulkan implementations advertising a VkPhysicalDeviceDriverProperties::`conformanceVersion` less than 1.4.6.0 should be aware that arrays may consume all four `Component` slots in each `Location` slot.

Matrices of size n × m are assigned locations identically to arrays of size n of vectors of length m with an identical element type.

When a variable with a structure type is decorated with a `Location`, the members in the structure type **must** not be decorated with a `Location`. The variable’s members are assigned consecutive locations in declaration order, starting from the first member, which is assigned the location

decoration from the variable. The `Location` slots consumed by structure members are determined by applying the rules above in a depth-first traversal of the instantiated members as though the structure or block member were declared as an input or output variable of the same type.

A variable with a structure type that is not decorated with `Block` **must** be decorated with a `Location`.

When a variable with a structure type decorated with `Block` is declared without a `Location` decoration, each member in the structure **must** be decorated with a `Location`. Types nested deeper than the top-level members **must** not have `Location` decorations.

Multiple variable declarations in the same storage class **must** not have overlapping `Component` slots within the same `Location`.

The number of input and output locations available for a shader input or output interface depend on the shader stage as described in Shader Input and Output Locations. All variables in both the built-in interface block and the user-defined variable interface count against these limits. Each effective `Location` **must** have a value less than the number of `Location` slots available for the given interface, as specified in the "Locations Available" column in Shader Input and Output Locations.

Table 16. Shader Input and Output Locations

Shader Interface	Locations Available
vertex input	`maxVertexInputAttributes`
vertex output	`maxVertexOutputComponents` / 4
tessellation control input	`maxTessellationControlPerVertexInputComponents` / 4
tessellation control output	`maxTessellationControlPerVertexOutputComponents` / 4
tessellation evaluation input	`maxTessellationEvaluationInputComponents` / 4
tessellation evaluation output	`maxTessellationEvaluationOutputComponents` / 4
geometry input	`maxGeometryInputComponents` / 4
geometry output	`maxGeometryOutputComponents` / 4
fragment input	`maxFragmentInputComponents` / 4
fragment output	`maxFragmentOutputAttachments`
mesh output	`maxMeshOutputComponents` / 4

19.2. Vertex Input Interface

When the vertex stage is present in a pipeline, the vertex shader input variables form an interface with the vertex input attributes. The vertex shader input variables are matched by the `Location` and `Component` decorations to the vertex input attributes specified in the `pVertexInputState` member of the VkGraphicsPipelineCreateInfo structure.

The vertex shader input variables listed by `OpEntryPoint` with the `Input` storage class form the *vertex input interface*. These variables **must** be identified with a `Location` decoration and **can** also be

identified with a Component decoration.

For the purposes of interface matching: variables declared without a Component decoration are considered to have a Component decoration of zero. The number of available vertex input Location slots is given by the maxVertexInputAttributes member of the VkPhysicalDeviceLimits structure.

See Attribute Location and Component Assignment for details.

All vertex shader inputs declared as above **must** have a corresponding attribute and binding in the pipeline.

Components and locations are consumed as defined for Location and Component Assignment. Multiple user-defined input variable declarations **must** not have overlapping Component slots within the same Location.

19.3. Fragment Output Interface

When the fragment stage is present in a pipeline, the fragment shader outputs form an interface with the output attachments defined by a render pass instance. The fragment shader output variables are matched by the Location and Component decorations to specified color attachments.

The fragment shader output variables listed by OpEntryPoint with the Output storage class form the *fragment output interface*. These variables **must** be identified with a Location decoration. They **can** also be identified with a Component decoration and/or an Index decoration. For the purposes of interface matching: variables declared without a Component decoration are considered to have a Component decoration of zero, and variables declared without an Index decoration are considered to have an Index decoration of zero.

A fragment shader output variable identified with a Location decoration of *i* is associated with the color attachment indicated by VkRenderingInfo::pColorAttachments[*i*]. When using render pass objects, it is associated with the color attachment indicated by VkSubpassDescription ::pColorAttachments[*i*]. Values are written to those attachments after passing through the blending unit as described in Blending, if enabled. The number of available fragment output Location slots is given by the maxFragmentOutputAttachments member of the VkPhysicalDeviceLimits structure.

If the dynamicRenderingLocalRead feature is supported, fragment output locations **can** be remapped when using dynamic rendering.

To set the fragment output location mappings during rendering, call:

```
// Provided by VK_VERSION_1_4
void vkCmdSetRenderingAttachmentLocations(
    VkCommandBuffer                             commandBuffer,
    const VkRenderingAttachmentLocationInfo*    pLocationInfo);
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to vkCmdSetRenderingAttachmentLocations
void vkCmdSetRenderingAttachmentLocationsKHR(
    VkCommandBuffer                             commandBuffer,
    const VkRenderingAttachmentLocationInfo*    pLocationInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pLocationInfo` is a VkRenderingAttachmentLocationInfo structure indicating the new mappings.

This command sets the attachment location mappings for subsequent drawing commands, and **must** match the mappings provided to the bound pipeline, if one is bound, which **can** be set by chaining VkRenderingAttachmentLocationInfo to VkGraphicsPipelineCreateInfo.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in vkCmdBeginRendering having a location equal to its index in VkRenderingInfo::`pColorAttachments`. This state is reset whenever vkCmdBeginRendering is called.

Valid Usage

- VUID-vkCmdSetRenderingAttachmentLocations-dynamicRenderingLocalRead-09509
  `dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingAttachmentLocations-pLocationInfo-09510
  `pLocationInfo->colorAttachmentCount` **must** be equal to the value of VkRenderingInfo ::`colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-09511
  The current render pass instance **must** have been started or resumed by vkCmdBeginRendering in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRenderingAttachmentLocations-pLocationInfo-parameter
  `pLocationInfo` **must** be a valid pointer to a valid VkRenderingAttachmentLocationInfo structure
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetRenderingAttachmentLocations-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetRenderingAttachmentLocations-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingAttachmentLocations-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetRenderingAttachmentLocations is not affected by conditional rendering

The `VkRenderingAttachmentLocationInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkRenderingAttachmentLocationInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*    pColorAttachmentLocations;
} VkRenderingAttachmentLocationInfo;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkRenderingAttachmentLocationInfo
typedef VkRenderingAttachmentLocationInfo VkRenderingAttachmentLocationInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentCount` is the number of elements in `pColorAttachmentLocations`.
- `pColorAttachmentLocations` is a pointer to an array of `colorAttachmentCount uint32_t` values defining remapped locations for color attachments.

This structure allows applications to remap the locations of color attachments to different fragment

shader output locations.

Each element of pColorAttachmentLocations set to VK_ATTACHMENT_UNUSED will be inaccessible to this pipeline as a color attachment; no location will map to it. Each element of pColorAttachmentLocations set to any other value will map the specified location value to the color attachment specified in the render pass at the corresponding index in the pColorAttachmentLocations array. Any writes to a fragment output location that is not mapped to an attachment **must** be discarded.

If pColorAttachmentLocations is NULL, it is equivalent to setting each element to its index within the array.

This structure **can** be included in the pNext chain of a VkGraphicsPipelineCreateInfo structure to set this state for a pipeline. If this structure is not included in the pNext chain of VkGraphicsPipelineCreateInfo, it is equivalent to specifying this structure with the following properties:

- colorAttachmentCount set to VkPipelineRenderingCreateInfo::colorAttachmentCount.
- pColorAttachmentLocations set to NULL.

This structure **can** be included in the pNext chain of a VkCommandBufferInheritanceInfo structure to specify inherited state from the primary command buffer. If VkCommandBufferInheritanceInfo ::renderPass is not VK_NULL_HANDLE, or VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT is not specified in VkCommandBufferBeginInfo::flags, members of this structure are ignored. If this structure is not included in the pNext chain of VkCommandBufferInheritanceInfo, it is equivalent to specifying this structure with the following properties:

- colorAttachmentCount set to VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount.
- pColorAttachmentLocations set to NULL.

Valid Usage

- VUID-VkRenderingAttachmentLocationInfo-dynamicRenderingLocalRead-09512
  If the dynamicRenderingLocalRead feature is not enabled, and pColorAttachmentLocations is not NULL, each element **must** be the value of its index within the array
- VUID-VkRenderingAttachmentLocationInfo-pColorAttachmentLocations-09513
  Elements of pColorAttachmentLocations that are not VK_ATTACHMENT_UNUSED **must** each be unique
- VUID-VkRenderingAttachmentLocationInfo-colorAttachmentCount-09514
  colorAttachmentCount **must** be less than or equal to maxColorAttachments
- VUID-VkRenderingAttachmentLocationInfo-pColorAttachmentLocations-09515
  Each element of pColorAttachmentLocations **must** be less than maxColorAttachments

Valid Usage (Implicit)

- VUID-VkRenderingAttachmentLocationInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_RENDERING_ATTACHMENT_LOCATION_INFO

Structure Chaining

Extends the structures

- VkCommandBufferInheritanceInfo
- VkGraphicsPipelineCreateInfo

When an active fragment shader invocation finishes, the values of all fragment shader outputs are copied out and used as blend inputs or color attachments writes. If an output variable is declared, but there is no color attachment at that `Location`, any values written to it are discarded. If a color attachment at a given `Location` does not have an output variable declared, the values **must** not be modified.

Output `Component` words identified as 0, 1, 2, and 3 will be directed to the R, G, B, and A inputs to the blending unit, respectively, or to the output attachment if blending is disabled. If two variables are placed within the same `Location`, they **must** have the same numeric type. `Component` words which do not correspond to any fragment shader output will also result in undefined values for blending or color attachment writes.

Fragment outputs identified with an `Index` of zero are directed to the first input of the blending unit associated with the corresponding `Location`. Outputs identified with an `Index` of one are directed to the second input of the corresponding blending unit.

Components and locations are consumed as defined for Location and Component Assignment. Output variable declarations **must** not consume any of the same `Component` slots within the same `Location` and with the same `Index` value as any other output variable declaration.

Output values written by a fragment shader **must** be declared with either `OpTypeFloat` or `OpTypeInt`, and a `Width` of 32. If `storageInputOutput16` is supported, output values written by a fragment shader **can** be also declared with either `OpTypeFloat` or `OpTypeInt` and a `Width` of 16. Composites of these types are also permitted. If the color attachment has a signed or unsigned normalized fixed-point format, color values are assumed to be floating-point and are converted to fixed-point as described in Conversion From Floating-Point to Normalized Fixed-Point; If the color attachment has an integer format, color values are assumed to be integers and converted to the bit-depth of the target. Any value that cannot be represented in the attachment's format is undefined. For any other attachment format no conversion is performed. If the type of the values written by the fragment shader do not match the format of the corresponding color attachment, the resulting values are undefined for those components.

19.4. Legacy Dithering

The application **can** enable dithering to be applied to the color output of a subpass, by using the VK_SUBPASS_DESCRIPTION_ENABLE_LEGACY_DITHERING_BIT_EXT flag. For use in a dynamic render pass, the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flag **must** be used. In that case, the pipelines used **must** have been created with VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT.

When dithering is enabled, the implementation **may** modify the output color value c by one ULP. This modification **must** only depend on the framebuffer coordinates (x_f,y_f) of the sample, as well as on the value of c.

The exact details of the dithering algorithm are unspecified, including the algorithm itself, the formats dithering is applied to, and the stage in which it is applied.

NOTE	This extension is intended only for use by OpenGL emulation layers, and as such the dithering algorithm applied to the subpass **should** be equivalent to the vendor's OpenGL implementation, if any.

19.5. Fragment Tile Image Interface

When a fragment stage is present in a pipeline, the fragment shader tile image variables decorated with `Location` form an interface with the color attachments defined by the render pass instance. The fragment shader tile image variables are matched by `Location` decorations to the color attachments specified in the `pColorAttachments` array of the VkRenderingInfoKHR structure describing the render pass instance the fragment shader is executed in.

The fragment shader variables listed by `OpEntryPoint` with the `TileImageEXT` storage class and a decoration of `Location` form the *fragment tile image interface*. These variables **must** be declared with a type of `OpTypeImage`, and a `Dim` operand of `TileImageDataEXT`. The `Component` decoration is not supported for these variables.

Reading from a tile image variable with a `Location` decoration of *i* reads from the color attachment identified by the element of VkRenderingInfoKHR::`pColorAttachments` with a `location` equal to *i*. If the tile image variable is declared as an array of size N, it consumes N consecutive tile image locations, starting with the index specified. There **must** not be more than one tile image variable with the same `Location` whether explicitly declared or implied by an array declaration. The number of available tile image locations is the same as the number of available fragment output locations as given by the `maxFragmentOutputAttachments` member of the `VkPhysicalDeviceLimits` structure.

The basic data type (floating-point, integer, unsigned integer) of the tile image variable **must** match the basic format of the corresponding color attachment, or the values read from the tile image variables are poison.

19.6. Fragment Input Attachment Interface

When a fragment stage is present in a pipeline, the fragment shader subpass inputs form an interface with the input attachments of the current subpass. The fragment shader subpass input

variables are matched by InputAttachmentIndex decorations to the input attachments specified in the pInputAttachments array of the VkSubpassDescription structure describing the subpass that the fragment shader is executed in.

The fragment shader subpass input variables with the UniformConstant storage class and a decoration of InputAttachmentIndex that are statically used by OpEntryPoint form the *fragment input attachment interface*. These variables **must** be declared with a type of OpTypeImage, a Dim operand of SubpassData, an Arrayed operand of 0, and a Sampled operand of 2. The MS operand of the OpTypeImage **must** be 0 if the samples field of the corresponding VkAttachmentDescription is VK_SAMPLE_COUNT_1_BIT and multisampled-render-to-single-sampled is not enabled, and 1 otherwise.

A subpass input variable identified with an InputAttachmentIndex decoration of *i* reads from the input attachment indicated by pInputAttachments[*i*] member of VkSubpassDescription. If the subpass input variable is declared as an array of size N, or a runtime-sized array, it consumes consecutive input attachments, starting with the index specified. For runtime-sized arrays, the number of input attachment indices consumed is equal to VkDescriptorSetLayoutBinding::descriptorCount. There **must** not be more than one input variable with the same InputAttachmentIndex whether explicitly declared or implied by an array declaration per image aspect. A multi-aspect image (e.g. a depth/stencil format) **can** use the same input variable. The number of available input attachment indices is given by the maxPerStageDescriptorInputAttachments member of the VkPhysicalDeviceLimits structure.

When using dynamic rendering with the dynamicRenderingLocalRead feature enabled, a subpass input variable with a InputAttachmentIndex decoration of *i* can be mapped to a color, depth, or stencil attachment.

To set the input attachment index mappings during dynamic rendering, call:

```
// Provided by VK_VERSION_1_4
void vkCmdSetRenderingInputAttachmentIndices(
    VkCommandBuffer                             commandBuffer,
    const VkRenderingInputAttachmentIndexInfo*  pInputAttachmentIndexInfo);
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to vkCmdSetRenderingInputAttachmentIndices
void vkCmdSetRenderingInputAttachmentIndicesKHR(
    VkCommandBuffer                             commandBuffer,
    const VkRenderingInputAttachmentIndexInfo*  pInputAttachmentIndexInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pInputAttachmentIndexInfo is a VkRenderingInputAttachmentIndexInfo structure indicating the new mappings.

This command sets the input attachment index mappings for subsequent drawing commands, and **must** match the mappings provided to the bound pipeline, if one is bound, which **can** be set by chaining VkRenderingInputAttachmentIndexInfo to VkGraphicsPipelineCreateInfo.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in vkCmdBeginRendering mapping to subpass inputs with a `InputAttachmentIndex` equal to its index in VkRenderingInfo::`pColorAttachments`, and depth/stencil attachments mapping to input attachments without these decorations. This state is reset whenever vkCmdBeginRendering is called.

Valid Usage

- VUID-vkCmdSetRenderingInputAttachmentIndices-dynamicRenderingLocalRead-09516
  `dynamicRenderingLocalRead` **must** be enabled
- VUID-vkCmdSetRenderingInputAttachmentIndices-pInputAttachmentIndexInfo-09517
  `pInputAttachmentIndexInfo->colorAttachmentCount` **must** be equal to the value of VkRenderingInfo::`colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-09518
  The current render pass instance **must** have been started or resumed by vkCmdBeginRendering in this `commandBuffer`

Valid Usage (Implicit)

- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdSetRenderingInputAttachmentIndices-pInputAttachmentIndexInfo-parameter
  `pInputAttachmentIndexInfo` **must** be a valid pointer to a valid VkRenderingInputAttachmentIndexInfo structure
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetRenderingInputAttachmentIndices-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdSetRenderingInputAttachmentIndices-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndices-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	State

Conditional Rendering

vkCmdSetRenderingInputAttachmentIndices is not affected by conditional rendering

The VkRenderingInputAttachmentIndexInfo structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkRenderingInputAttachmentIndexInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           colorAttachmentCount;
    const uint32_t*    pColorAttachmentInputIndices;
    const uint32_t*    pDepthInputAttachmentIndex;
    const uint32_t*    pStencilInputAttachmentIndex;
} VkRenderingInputAttachmentIndexInfo;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkRenderingInputAttachmentIndexInfo
typedef VkRenderingInputAttachmentIndexInfo VkRenderingInputAttachmentIndexInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- colorAttachmentCount is the number of elements in pColorAttachmentInputIndices.
- pColorAttachmentInputIndices is a pointer to an array of colorAttachmentCount uint32_t values defining indices for color attachments to be used as input attachments.
- pDepthInputAttachmentIndex is either NULL, or a pointer to a uint32_t value defining the index for the depth attachment to be used as an input attachment.
- pStencilInputAttachmentIndex is either NULL, or a pointer to a uint32_t value defining the index for the stencil attachment to be used as an input attachment.

This structure allows applications to remap attachments to different input attachment indices.

Each element of pColorAttachmentInputIndices set to a value of VK_ATTACHMENT_UNUSED indicates that the corresponding attachment will not be used as an input attachment in this pipeline. Any other value in each of those elements will map the corresponding attachment to a

InputAttachmentIndex value defined in shader code.

If pColorAttachmentInputIndices is NULL, it is equivalent to setting each element to its index within the array.

If pDepthInputAttachmentIndex or pStencilInputAttachmentIndex are set to NULL, they map to input attachments without a InputAttachmentIndex decoration. If they point to a value of VK_ATTACHMENT_UNUSED, it indicates that the corresponding attachment will not be used as an input attachment in this pipeline. If they point to any other value it maps the corresponding attachment to a InputAttachmentIndex value defined in shader code.

This structure **can** be included in the pNext chain of a VkGraphicsPipelineCreateInfo structure to set this state for a pipeline. If this structure is not included in the pNext chain of VkGraphicsPipelineCreateInfo, it is equivalent to specifying this structure with the following properties:

- colorAttachmentCount set to VkPipelineRenderingCreateInfo::colorAttachmentCount.
- pColorAttachmentInputIndices set to NULL.
- pDepthInputAttachmentIndex set to NULL.
- pStencilInputAttachmentIndex set to NULL.

This structure **can** be included in the pNext chain of a VkCommandBufferInheritanceInfo structure to specify inherited state from the primary command buffer. If this structure is not included in the pNext chain of VkCommandBufferInheritanceInfo, it is equivalent to specifying this structure with the following properties:

- colorAttachmentCount set to VkCommandBufferInheritanceRenderingInfo::colorAttachmentCount.
- pColorAttachmentInputIndices set to NULL.
- pDepthInputAttachmentIndex set to NULL.
- pStencilInputAttachmentIndex set to NULL.

Valid Usage

- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09519
  If the dynamicRenderingLocalRead feature is not enabled, and pColorAttachmentInputIndices is not NULL, each element **must** be VK_ATTACHMENT_UNUSED
- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09520
  If the dynamicRenderingLocalRead feature is not enabled, pDepthInputAttachmentIndex **must** be a valid pointer to a value of VK_ATTACHMENT_UNUSED
- VUID-VkRenderingInputAttachmentIndexInfo-dynamicRenderingLocalRead-09521
  If the dynamicRenderingLocalRead feature is not enabled, pStencilInputAttachmentIndex **must** be a valid pointer to a value of VK_ATTACHMENT_UNUSED
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09522
  Elements of pColorAttachmentInputIndices that are not VK_ATTACHMENT_UNUSED **must** each be unique

- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09523 Elements of `pColorAttachmentInputIndices` that are not VK_ATTACHMENT_UNUSED **must** not take the same value as the content of `pDepthInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-09524 Elements of `pColorAttachmentInputIndices` that are not VK_ATTACHMENT_UNUSED **must** not take the same value as the content of `pStencilInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfo-colorAttachmentCount-09525 `colorAttachmentCount` **must** be less than or equal to `maxColorAttachments`
- VUID-VkRenderingInputAttachmentIndexInfo-pDepthInputAttachmentIndex-12274 Elements of `pDepthInputAttachmentIndex`, `pStencilInputAttachmentIndex`, and `pColorAttachmentInputIndices` that are not VK_ATTACHMENT_UNUSED **must** be less than `maxPerStageDescriptorInputAttachments`

Valid Usage (Implicit)

- VUID-VkRenderingInputAttachmentIndexInfo-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_RENDERING_INPUT_ATTACHMENT_INDEX_INFO
- VUID-VkRenderingInputAttachmentIndexInfo-pColorAttachmentInputIndices-parameter If `colorAttachmentCount` is not `0`, and `pColorAttachmentInputIndices` is not `NULL`, `pColorAttachmentInputIndices` **must** be a valid pointer to an array of `colorAttachmentCount` `uint32_t` values
- VUID-VkRenderingInputAttachmentIndexInfo-pDepthInputAttachmentIndex-parameter If `pDepthInputAttachmentIndex` is not `NULL`, `pDepthInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value
- VUID-VkRenderingInputAttachmentIndexInfo-pStencilInputAttachmentIndex-parameter If `pStencilInputAttachmentIndex` is not `NULL`, `pStencilInputAttachmentIndex` **must** be a valid pointer to a valid `uint32_t` value

Structure Chaining

Extends the structures

- VkCommandBufferInheritanceInfo
- VkGraphicsPipelineCreateInfo

Variables identified with the `InputAttachmentIndex` **must** only be used by a fragment stage. The numeric format of the subpass input **must** match the format of the corresponding input attachment, or the values of subpass loads from these variables are poison. If the framebuffer attachment contains both depth and stencil aspects, the numeric format of the subpass input determines if depth or stencil aspect is accessed by the shader.

See Input Attachment for more details.

19.6.1. Fragment Input Attachment Compatibility

An input attachment that is statically accessed by a fragment shader **must** be backed by a descriptor that is equivalent to the VkImageView in the VkFramebuffer, except for `subresourceRange.aspectMask`. The `aspectMask` **must** be equal to the aspect accessed by the shader.

19.7. Ray Tracing Pipeline Interface

Ray tracing pipelines **may** have more stages than other pipelines with multiple instances of each stage and more dynamic interactions between the stages, but still have interface structures that obey the same general rules as interfaces between shader stages in other pipelines. The three types of inter-stage interface variables for ray tracing pipelines are:

- Ray payloads containing data preserved for the entire lifetime of the ray.
- Hit attributes containing data about a specific hit for the duration of its processing.
- Callable data for passing data into and out of a callable shader.

Ray payloads and callable data are used in explicit shader call instructions, so they have an incoming variant to distinguish the parameter passed to the invocation from any other payloads or data being used by subsequent shader call instructions.

An interface structure between stages **must** match between the stages using it. Specifically:

- If an intersection shader is present, the hit attribute structure read in an any-hit or closest hit shader **must** be the same structure as the hit attribute structure written in the corresponding intersection shader in the same hit group.
- If an intersection shader is not present, the hit attribute structure read in an any-hit or closest hit shader **must** be a vector of 2 32-bit floating-point values that accepts the barycentric coordinates for triangle hits.
- The incoming callable data for a callable shader **must** be the same structure as the callable data referenced by the execute callable instruction in the calling shader.
- The ray payload for a shader invoked by a ray tracing command **must** be the same structure for all shader stages using the payload for that ray, and **must** be declared in the shader even if it is not referenced.

Any shader with an incoming ray payload, incoming callable data, or hit attribute **must** only declare one variable of that type.

Table 17. Ray Pipeline Shader Interface

Shader Stage	Ray Payload	Incoming Ray Payload	Hit Attribute	Callable Data	Incoming Callable Data
Ray Generation	r/w			r/w	
Intersection			r/w		

Shader Stage	Ray Payload	Incoming Ray Payload	Hit Attribute	Callable Data	Incoming Callable Data
Any-Hit		r/w	r		
Closest Hit	r/w	r/w	r	r/w	
Miss	r/w	r/w		r/w	
Callable				r/w	r/w

19.8. Shader Resource Interface

Shaders **can** access resources and samplers through Resource Descriptors created in the API, via the Descriptor Heap Interface or the Descriptor Set Interface.

The set of shader variables that form the *shader resource interface* for a stage are the variables statically used by that stage's `OpEntryPoint` with a storage class of `Uniform`, `UniformConstant`, `StorageBuffer`, or `PushConstant`. For the fragment shader, this includes the fragment input attachment interface.

The shader resource interface is made up of the sub-interfaces defined in the following sections.

19.8.1. Push Constant Interface

The shader variables defined with a storage class of `PushConstant` that are statically used by the shader entry points for the pipeline define the *push constant interface*. They **must** be:

- typed as `OpTypeStruct`,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in Offset and Stride Assignment.

There **must** be no more than one push constant block statically used per shader entry point.

When using descriptor heaps, each statically used member of a push constant block **must** be placed at an `Offset` such that the entire member is entirely contained within the range specified by vkCmdPushDataEXT in the command buffer. The `Offset` decoration for any member of a push constant block **must** not cause the space required for that member to extend outside the range [0, `maxPushDataSize`).

When using descriptor buffers or descriptor sets, each statically used member of a push constant block **must** be placed at an `Offset` such that the entire member is entirely contained within the VkPushConstantRange for each `OpEntryPoint` that uses it, and the `stageFlags` for that range **must** specify the appropriate VkShaderStageFlagBits for that stage. The `Offset` decoration for any member of a push constant block **must** not cause the space required for that member to extend outside the range [0, `maxPushConstantsSize`).

Any member of a push constant block that is declared as an array **must** only be accessed with

dynamically uniform indices.

19.8.2. Descriptor Heap Interface

The *descriptor heap interface* provides access to resources through pointers to heaps of different types, without many of the restrictions that apply to the descriptor set interface.

Two built-in pointers are available to shaders:

- `SamplerHeapEXT` for samplers
- `ResourceHeapEXT` for resources

These built-ins **must** be declared as pointers in the `UniformConstant Storage Class`. These built-ins **must** not be used to access data outside of the heap bound to them.

These built-ins **can** be accessed non-uniformly, with no further decoration required, and with no dependency on other features or properties. The `UniformId` decoration **can** be applied to the result of accesses to indicate that the data will be accessed uniformly to a given scope, as a hint to improve performance on some implementations.

Resources retrieved from each heap **must** have been created with descriptors that match the variable being declared, as follows:

Table 18. Heap Resource Type Correspondence

Descriptor Type	Heap	SPIR-V Type
VK_DESCRIPTOR_TYPE_SAMPLER	`SamplerHeapEXT`	`OpTypeSampler`
VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_STORAGE_IMAGE	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER	`ResourceHeapEXT`	`OpTypeImage`
VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER	`ResourceHeapEXT`	`OpTypeBufferEXT` with the `Uniform Storage Class`
VK_DESCRIPTOR_TYPE_STORAGE_BUFFER	`ResourceHeapEXT`	`OpTypeBufferEXT` with the `StorageBuffer Storage Class`

Descriptor Type	Heap	SPIR-V Type
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR	ResourceHeapEXT	OpTypeAccelerationStructureKHR

While the built-in heap pointers **can** be declared and dereferenced as pointing to any type, applications **must** not access data types valid for one heap from any other heap.

When one of the types above is read from a heap in the shader, it will read a number of bytes equal to value advertised for the VkDescriptorType as returned by vkGetPhysicalDeviceDescriptorSizeEXT.

For image types, there are further restrictions on the operands used for the type, according to the descriptor type:

Table 19. Heap Image Operand Correspondence

Descriptor Type	Dim	Arrayed	MS	Sampled
VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE	*	*	0	1
VK_DESCRIPTOR_TYPE_STORAGE_IMAGE	*	*	0 or 1	2
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT	SubpassData	0	0 or 1	2
VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER	Buffer	0	0	2
VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER	Buffer	0	0	2
VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM	2D	1	0	1
VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM	2D	0	0	1

For storage images and input attachments, MS is 0 if the image has one sample per pixel, or 1 otherwise. For sampled and storage images, the Dim and Arrayed qualifiers depend on the VkImageViewType specified when writing the descriptor:

Table 20. Heap Image View Type Dimensionality

Image View Type	Dim	Arrayed
VK_IMAGE_VIEW_TYPE_1D	1D	0
VK_IMAGE_VIEW_TYPE_2D	2D	0
VK_IMAGE_VIEW_TYPE_3D	3D	0
VK_IMAGE_VIEW_TYPE_CUBE	Cube	0

Image View Type	Dim	Arrayed
VK_IMAGE_VIEW_TYPE_1D_ARRAY	1D	1
VK_IMAGE_VIEW_TYPE_2D_ARRAY	2D	1
VK_IMAGE_VIEW_TYPE_CUBE_ARRAY	Cube	1

The type and format of the image resource **must** also match between the API and SPIR-V.

Descriptors accessed via the ResourceHeapEXT built-in **must** be explicitly laid out.

There is no further limit to the number of resources that **can** be accessed by a shader through a heap pointer beyond the size of the bound range for each heap.

19.8.3. Descriptor Set Interface

The *descriptor set interface* is comprised of the shader variables with the storage class of StorageBuffer, Uniform, or UniformConstant (including the variables in the fragment input attachment interface) that are statically used by the shader entry points for the pipeline.

When using descriptor heaps, this interface is not used directly to access heaps, but **may** be accessed by specifying Shader Bindings to map to the descriptor heaps.

These variables **must** have DescriptorSet and Binding decorations specified, which are assigned and matched with the VkDescriptorSetLayout objects in the pipeline layout as described in DescriptorSet and Binding Assignment.

The Image Format of an OpTypeImage declaration **must** not be **Unknown**, for variables which are used for OpImageRead, OpImageSparseRead, or OpImageWrite operations, except under the following conditions:

- For OpImageWrite, if the image format is listed in the storage without format list and if the shaderStorageImageWriteWithoutFormat feature is enabled and the shader module declares the StorageImageWriteWithoutFormat capability.
- For OpImageWrite, if the image format supports VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT and the shader module declares the StorageImageWriteWithoutFormat capability.
- For OpImageRead or OpImageSparseRead, if the image format is listed in the storage without format list and if the shaderStorageImageReadWithoutFormat feature is enabled and the shader module declares the StorageImageReadWithoutFormat capability.
- For OpImageRead or OpImageSparseRead, if the image format supports VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT and the shader module declares the StorageImageReadWithoutFormat capability.
- For OpImageRead, if Dim is SubpassData (indicating a read from an input attachment).

The Image Format of an OpTypeImage declaration **must** not be **Unknown**, for variables which are used

for OpAtomic* operations.

Variables identified with the Uniform storage class are used to access transparent buffer backed resources. Such variables **must** be:

- typed as OpTypeStruct, or an array of this type,
- identified with a Block or BufferBlock decoration, and
- laid out explicitly using the Offset, ArrayStride, and MatrixStride decorations as specified in Offset and Stride Assignment.

Variables identified with the StorageBuffer storage class are used to access transparent buffer backed resources. Such variables **must** be:

- typed as OpTypeStruct, or an array of this type,
- identified with a Block decoration, and
- laid out explicitly using the Offset, ArrayStride, and MatrixStride decorations as specified in Offset and Stride Assignment.

The Offset decoration for any member of a Block-decorated variable in the Uniform storage class **must** not cause the space required for that variable to extend outside the range [0, maxUniformBufferRange). The Offset decoration for any member of a Block-decorated variable in the StorageBuffer storage class **must** not cause the space required for that variable to extend outside the range [0, maxStorageBufferRange).

Variables identified with the Uniform storage class **can** also be used to access transparent descriptor set backed resources when the variable is assigned to a descriptor set layout binding with a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK. In this case the variable **must** be typed as OpTypeStruct and **cannot** be aggregated into arrays of that type. Further, the Offset decoration for any member of such a variable **must** not cause the space required for that variable to extend outside the range [0,maxInlineUniformBlockSize).

Variables identified with a storage class of UniformConstant and a decoration of InputAttachmentIndex **must** be declared as described in Fragment Input Attachment Interface.

SPIR-V variables decorated with a descriptor set and binding that identify a combined image sampler descriptor **can** have a type of OpTypeImage, OpTypeSampler (Sampled=1), or OpTypeSampledImage.

NOTE	When using descriptor heaps, there is no combined image sampler descriptor type, but shader variables of OpTypeSampledImage can be mapped to a separate image and sampler for compatibility.

When accessing a resource through such a variable, the resource **must** be selected via compile time constant expressions unless features are enabled to allow dynamically uniform or non-uniform expressions, as described below:

- Storage images (except storage texel buffers and input attachments):
  - Dynamically uniform: shaderStorageImageArrayDynamicIndexing and StorageImageArrayDynamicIndexing

    - Non-uniform: `shaderStorageImageArrayNonUniformIndexing` and `StorageImageArrayNonUniformIndexing`
- Storage texel buffers:
    - Dynamically uniform: `shaderStorageTexelBufferArrayDynamicIndexing` and `StorageTexelBufferArrayDynamicIndexing`
    - Non-uniform: `shaderStorageTexelBufferArrayNonUniformIndexing` and `StorageTexelBufferArrayNonUniformIndexing`
- Input attachments:
    - Dynamically uniform: `shaderInputAttachmentArrayDynamicIndexing` and `InputAttachmentArrayDynamicIndexing`
    - Non-uniform: `shaderInputAttachmentArrayNonUniformIndexing` and `InputAttachmentArrayNonUniformIndexing`
- Sampled images (except uniform texel buffers), samplers and combined image samplers:
    - Dynamically uniform: `shaderSampledImageArrayDynamicIndexing` and `SampledImageArrayDynamicIndexing`
    - Non-uniform: `shaderSampledImageArrayNonUniformIndexing` and `SampledImageArrayNonUniformIndexing`
- Uniform texel buffers:
    - Dynamically uniform: `shaderUniformTexelBufferArrayDynamicIndexing` and `UniformTexelBufferArrayDynamicIndexing`
    - Non-uniform: `shaderUniformTexelBufferArrayNonUniformIndexing` and `UniformTexelBufferArrayNonUniformIndexing`
- Uniform buffers:
    - Dynamically uniform: `shaderUniformBufferArrayDynamicIndexing` and `UniformBufferArrayDynamicIndexing`
    - Non-uniform: `shaderUniformBufferArrayNonUniformIndexing` and `UniformBufferArrayNonUniformIndexing`
- Storage buffers:
    - Dynamically uniform: `shaderStorageBufferArrayDynamicIndexing` and `StorageBufferArrayDynamicIndexing`
    - Non-uniform: `shaderStorageBufferArrayNonUniformIndexing` and `StorageBufferArrayNonUniformIndexing`
- Acceleration structures:
    - Dynamically uniform: Always supported.
    - Non-uniform: Always supported.

NOTE

Implementations must take care when implementing this if subgroups are not necessarily a subset of the invocation group for their hardware (e.g. if multiple draw calls are packed together). If such an implementation needs uniformity across the subgroup for any resource access, the implementation is responsible for

> ensuring that indices that are only dynamically uniform across the invocation group still function as expected if they advertise the respective feature.

A combined image sampler in an array that enables sampler $Y'C_BC_R$ conversion or samples a subsampled image **must** only be indexed by constant integral expressions.

Table 21. Shader Resource and Descriptor Type Correspondence

Resource type	Descriptor Type
sampler	VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
sampled image	VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER
storage image	VK_DESCRIPTOR_TYPE_STORAGE_IMAGE
combined image sampler	VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER or both VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE and VK_DESCRIPTOR_TYPE_SAMPLER when using heaps
uniform texel buffer	VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER
storage texel buffer	VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER
uniform buffer	VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC
storage buffer	VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC
input attachment	VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT
inline uniform block	VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK
acceleration structure	VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR

Table 22. Shader Resource and Storage Class Correspondence

Resource type	Storage Class	Type[1]	Decoration(s)[2]
sampler	UniformConstant	OpTypeSampler	
sampled image	UniformConstant	OpTypeImage (Sampled=1)	
storage image	UniformConstant	OpTypeImage (Sampled=2)	
combined image sampler	UniformConstant	OpTypeSampledImage OpTypeImage (Sampled=1) OpTypeSampler	
uniform texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=1)	
storage texel buffer	UniformConstant	OpTypeImage (Dim=Buffer, Sampled=2)	
uniform buffer	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)

Resource type	Storage Class	Type[1]	Decoration(s)[2]
storage buffer	Uniform	OpTypeStruct	BufferBlock, Offset, (ArrayStride), (MatrixStride)
	StorageBuffer		Block, Offset, (ArrayStride), (MatrixStride)
input attachment	UniformConstant	OpTypeImage (Dim =SubpassData, Sampled=2)	InputAttachmentIndex
inline uniform block	Uniform	OpTypeStruct	Block, Offset, (ArrayStride), (MatrixStride)
acceleration structure	UniformConstant	OpTypeAccelerationStructureKHR	

1

Where OpTypeImage is referenced, the Dim values Buffer and Subpassdata are only accepted where they are specifically referenced. They do not correspond to resource types where a generic OpTypeImage is specified.

2

In addition to DescriptorSet and Binding.

19.8.4. DescriptorSet and Binding Assignment

A variable decorated with a DescriptorSet decoration of s and a Binding decoration of b indicates that this variable is associated with the VkDescriptorSetLayoutBinding that has a binding equal to b in pSetLayouts[s] that was specified in VkPipelineLayoutCreateInfo. If using descriptor heaps, such a variable will instead be associated with a shader binding.

If not using descriptor heaps, DescriptorSet decoration values **must** be between zero and maxBoundDescriptorSets minus one, inclusive. If a pipeline is created with VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT, or a shader is created with VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT, DescriptorSet decorations **can** be any 32-bit unsigned integer value. Binding decoration values **can** be any 32-bit unsigned integer value. Each descriptor set has its own binding name space.

If the Binding decoration is used with an array, the entire array is assigned that binding value. The decorated array **must** have an Element Type corresponding to a descriptor type, and the size of the array **must** be no larger than the number of descriptors in the binding. If the array is runtime-sized, then array elements greater than or equal to the size of that binding in the bound descriptor set **must** not be used. If the array is runtime-sized, the runtimeDescriptorArray feature **must** be enabled and the RuntimeDescriptorArray capability **must** be declared. The index of each element of the array is referred to as the *arrayElement*. For the purposes of interface matching and descriptor set operations, if a resource variable is not an array, it is treated as if it has an arrayElement of zero.

NOTE Even though an array is assigned to a single Binding, when using descriptor heap mappings, each element will be assigned a consecutive offset according to the stride for that type. Applications should take care to set subsequent bindings with this in

mind to avoid unintentional overlap.

There is a limit on the number of resources of each type that **can** be accessed by a pipeline stage as shown in Shader Resource Limits. The "Resources Per Stage" column gives the limit on the number each type of resource that **can** be statically used for an entry point in any given stage in a pipeline. The "Resource Types" column lists which resource types are counted against the limit. Some resource types count against multiple limits. The VK_DESCRIPTOR_TYPE_MUTABLE_EXT descriptor type counts as one individual resource and one for every unique resource limit per descriptor set type that is present in the associated binding's VkMutableDescriptorTypeListEXT. If multiple descriptor types in VkMutableDescriptorTypeListEXT map to the same resource limit, only one descriptor is consumed for purposes of computing resource limits. These limits only apply to resources accessed with `DescriptorSet` and `Binding` values.

A pipeline layout **may** include descriptor sets and bindings which are not referenced by any variables statically used by the entry points for the shader stages in the binding's `stageFlags`. Similarly, descriptor heap bindings **may** include mappings that are unused by the shader.

However, if a variable assigned to a given `DescriptorSet` and `Binding` is statically used by the entry point for a shader stage, the heap bindings **must** specify a mapping for it when using heaps, or the pipeline layout **must** contain a descriptor set layout binding in that descriptor set layout and for that binding number, and that binding's `stageFlags` **must** include the appropriate VkShaderStageFlagBits for that stage. The variable **must** be of a valid resource type determined by its SPIR-V type and storage class, as defined in Shader Resource and Storage Class Correspondence. The descriptor set layout binding **must** be of a corresponding descriptor type, as defined in Shader Resource and Descriptor Type Correspondence.

NOTE

There are no limits on the number of shader variables that can have overlapping set and binding values in a shader; but which resources are statically used has an impact. If any shader variable identifying a resource is statically used in a shader, then the underlying descriptor bound at the declared set and binding **must** support the declared type in the shader when the shader executes.

If multiple shader variables are declared with the same set and binding values, and with the same underlying descriptor type, they can all be statically used within the same shader. However, accesses are not automatically synchronized, and `Aliased` decorations should be used to avoid data hazards (see section 2.18.2 Aliasing in the SPIR-V specification).

If multiple shader variables with the same set and binding values are declared in a single shader, but with different declared types, where any of those are not supported by the relevant bound descriptor, that shader can only be executed if the variables with the unsupported type are not statically used.

A noteworthy example of using multiple statically-used shader variables sharing the same descriptor set and binding values is a descriptor of type VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER that has multiple corresponding shader variables in the `UniformConstant` storage class, where some could be `OpTypeImage` (`Sampled`=1), some could be `OpTypeSampler`, and some could be

`OpTypeSampledImage`.

Table 23. Shader Resource Limits

Resources per Stage	Resource Types
`maxPerStageDescriptorSamplers` or `maxPerStageDescriptorUpdateAfterBindSamplers`	sampler
	combined image sampler
`maxPerStageDescriptorSampledImages` or `maxPerStageDescriptorUpdateAfterBindSampledImages`	sampled image
	combined image sampler
	uniform texel buffer
`maxPerStageDescriptorStorageImages` or `maxPerStageDescriptorUpdateAfterBindStorageImages`	storage image
	storage texel buffer
`maxPerStageDescriptorUniformBuffers` or `maxPerStageDescriptorUpdateAfterBindUniformBuffers`	uniform buffer
	uniform buffer dynamic
`maxPerStageDescriptorStorageBuffers` or `maxPerStageDescriptorUpdateAfterBindStorageBuffers`	storage buffer
	storage buffer dynamic
`maxPerStageDescriptorInputAttachments` or `maxPerStageDescriptorUpdateAfterBindInputAttachments`	input attachment[1]
`maxPerStageDescriptorInlineUniformBlocks` or `maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks`	inline uniform block
`maxPerStageDescriptorAccelerationStructures` or `maxPerStageDescriptorUpdateAfterBindAccelerationStructures`	acceleration structure

NOTE Resources accessed directly through the descriptor heap interface do not count towards these limits.

1

Input attachments **can** only be used in the fragment shader stage

19.8.5. Offset and Stride Assignment

When a SPIR-V object is declared using an explicit layout, it **must** be laid out according to the following additional requirements.

NOTE The numeric order of `Offset` decorations does not need to follow member declaration order.

Alignment Requirements

There are different alignment requirements depending on the specific resources and on the features enabled.

Matrix types are defined in terms of arrays as follows:

- A column-major matrix with C columns and R rows is equivalent to a C element array of vectors with R components.
- A row-major matrix with C columns and R rows is equivalent to an R element array of vectors with C components.

The *scalar alignment* of the type of an `OpTypeStruct` member is defined recursively as follows:

- A scalar of size N has a scalar alignment of N.
- A vector type has a scalar alignment equal to that of its component type.
- An array type has a scalar alignment equal to that of its element type.
- A structure has a scalar alignment equal to the largest scalar alignment of any of its members.
- A matrix type inherits *scalar alignment* from the equivalent array declaration.
- `OpTypeImage` has a scalar alignment equal to the value of `imageDescriptorAlignment`
- `OpTypeBufferEXT` has a scalar alignment equal to the value of `bufferDescriptorAlignment`
- `OpTypeSampler` has a scalar alignment equal to the value of `samplerDescriptorAlignment`

The aligned size of a `OpTypeImage`, `OpTypeBufferEXT`, or `OpTypeSampler` can be queried from within SPIR-V using `OpConstantSizeOfEXT`, which can be used with the `OffsetIdEXT` or `ArrayStrideIdEXT` decorations to lay out types in a descriptor heap. `OpConstantSizeOfEXT` returns the following for values for each type:

Table 24. Shader Descriptor Sizes

Type	Size
`OpTypeSampler`	`samplerDescriptorSize` aligned to `samplerDescriptorAlignment`
`OpTypeImage`	`imageDescriptorSize` aligned to `imageDescriptorAlignment`
`OpTypeBufferEXT`	`bufferDescriptorSize` aligned to `bufferDescriptorAlignment`
`OpTypeAccelerationStructureKHR`	`bufferDescriptorSize` aligned to `bufferDescriptorAlignment`

The *base alignment* of the type of an `OpTypeStruct` member is defined recursively as follows:

- A scalar has a base alignment equal to its scalar alignment.
- A two-component vector has a base alignment equal to twice its scalar alignment.
- A three- or four-component vector has a base alignment equal to four times its scalar alignment.
- An array has a base alignment equal to the base alignment of its element type.
- A structure has a base alignment equal to the largest base alignment of any of its members. An empty structure has a base alignment equal to the size of the smallest scalar type permitted by the capabilities declared in the SPIR-V module. (e.g., for a 1 byte aligned empty structure in the

`StorageBuffer` storage class, `StorageBuffer8BitAccess` or `UniformAndStorageBuffer8BitAccess` **must** be declared in the SPIR-V module.)

- A matrix type inherits *base alignment* from the equivalent array declaration.

The *extended alignment* of the type of an `OpTypeStruct` member is similarly defined as follows:

- A scalar or vector type has an extended alignment equal to its base alignment.
- An array or structure type has an extended alignment equal to the largest extended alignment of any of its members, rounded up to a multiple of 16.
- A matrix type inherits extended alignment from the equivalent array declaration.

A member is defined to *improperly straddle* if either of the following are true:

- It is a vector with total size less than or equal to 16 bytes, and has `Offset` decorations placing its first byte at F and its last byte at L, where floor(F / 16) != floor(L / 16).
- It is a vector with total size greater than 16 bytes and has its `Offset` decorations placing its first byte at a non-integer multiple of 16.

Standard Buffer Layout

Every member of an `OpTypeStruct` that is required to be explicitly laid out **must** be aligned according to the first matching rule as follows. If the structure is contained in pointer types of multiple storage classes, it **must** satisfy the requirements for every storage class used to reference it.

1. If the `scalarBlockLayout` feature is enabled and the storage class is `Uniform`, `StorageBuffer`, `PhysicalStorageBuffer`, `ShaderRecordBufferKHR`, or `PushConstant`, or the storage class is `UniformConstant` and the type is decorated with either `SamplerHeapEXT` or `ResourceHeapEXT`, then every member **must** be aligned according to its scalar alignment.
2. If the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is enabled and the storage class is `Workgroup` then every member **must** be aligned according to its scalar alignment.
3. All vectors **must** be aligned according to their scalar alignment.
4. If the `uniformBufferStandardLayout` feature is not enabled, then any member of an `OpTypeStruct` with a storage class of `Uniform` and a decoration of `Block` **must** be aligned according to its extended alignment.
5. Every other member **must** be aligned according to its base alignment.

NOTE	Even if scalar alignment is supported, it is generally more performant to use the *base alignment*.

The memory layout **must** obey the following rules:

- The `Offset` or `OffsetIdEXT` decoration of any member **must** be a multiple of its alignment.
- Any `ArrayStride`, or `ArrayStrideIdEXT`, or `MatrixStride` decoration **must** be a multiple of the alignment of the array or matrix as defined above.

If one of the conditions below applies

- The storage class is `Uniform`, `StorageBuffer`, `PhysicalStorageBuffer`, `ShaderRecordBufferKHR`, or `PushConstant`, and the `scalarBlockLayout` feature is not enabled.
- The storage class is `Workgroup`, and either the structure member is not part of a `Block` or the `workgroupMemoryExplicitLayoutScalarBlockLayout` feature is not enabled.
- The storage class is any other storage class.

the memory layout **must** also obey the following rules:

- Vectors **must** not improperly straddle, as defined above.
- The `Offset` decoration of a member **must** not place it between the end of a structure, an array, or a matrix and the next multiple of the alignment of that structure, array, or matrix.

NOTE	The **std430 layout** in GLSL satisfies these rules for types using the base alignment. The **std140 layout** satisfies the rules for types using the extended alignment.

NOTE	An alternate explanation of the shader memory requirements, discussing the underlying extensions and core versions which affect them, is found in the Vulkan Guide.

19.9. Built-In Variables

Built-in variables are accessed in shaders by declaring a variable decorated with a `BuiltIn` SPIR-V decoration. The meaning of each `BuiltIn` decoration is as follows. In the remainder of this section, the name of a built-in is used interchangeably with a term equivalent to a variable decorated with that particular built-in. Built-ins that represent integer values **can** be declared as either signed or unsigned 32-bit integers.

As mentioned above, some inputs and outputs have an additional level of arrayness relative to other shader inputs and outputs. This level of arrayness is not included in the type descriptions below, but **must** be included when declaring the built-in.

Any two variables declared in the `Input` storage class listed as operands on the same `OpEntryPoint` **must** not have the same `BuiltIn` decoration. Any two variables declared in the `Output` storage class listed as operands on the same `OpEntryPoint` **must** not have the same `BuiltIn` decoration.

Built-in values for descriptor heaps are listed in the descriptor heap chapter:

- [SamplerHeapEXT]
- [ResourceHeapEXT]

Types used to access these built-ins **must** be laid out explicitly using the `Offset`, `OffsetIdEXT`, `ArrayStride`, `ArrayStrideIdEXT`, and `MatrixStride` decorations as specified in Offset and Stride Assignment.

`BaryCoordKHR`

The `BaryCoordKHR` decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using perspective interpolation.

Valid Usage

- VUID-BaryCoordKHR-BaryCoordKHR-04154
  The `BaryCoordKHR` decoration **must** be used only within the `Fragment Execution Model`
- VUID-BaryCoordKHR-BaryCoordKHR-04155
  The variable decorated with `BaryCoordKHR` **must** be declared using the `Input Storage Class`
- VUID-BaryCoordKHR-BaryCoordKHR-04156
  The variable decorated with `BaryCoordKHR` **must** be declared as a three-component vector of 32-bit floating-point values

`BaryCoordNoPerspKHR`

The `BaryCoordNoPerspKHR` decoration **can** be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using linear interpolation.

Valid Usage

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04160
  The `BaryCoordNoPerspKHR` decoration **must** be used only within the `Fragment Execution Model`
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04161
  The variable decorated with `BaryCoordNoPerspKHR` **must** be declared using the `Input Storage Class`
- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04162
  The variable decorated with `BaryCoordNoPerspKHR` **must** be declared as a three-component vector of 32-bit floating-point values

`BaseInstance`

Decorating a variable with the `BaseInstance` built-in will make that variable contain the integer value corresponding to the first instance that was passed to the command that invoked the current vertex shader invocation. `BaseInstance` is the `firstInstance` parameter to a *direct drawing command* or the `firstInstance` member of a structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseInstance-BaseInstance-04181

The BaseInstance decoration **must** be used only within the Vertex Execution Model

- VUID-BaseInstance-BaseInstance-04182
  The variable decorated with BaseInstance **must** be declared using the Input Storage Class
- VUID-BaseInstance-BaseInstance-04183
  The variable decorated with BaseInstance **must** be declared as a scalar 32-bit integer value

BaseVertex

Decorating a variable with the BaseVertex built-in will make that variable contain the integer value corresponding to the first vertex or vertex offset that was passed to the command that invoked the current vertex shader invocation. For *non-indexed drawing commands*, this variable is the firstVertex parameter to a *direct drawing command* or the firstVertex member of the structure consumed by an *indirect drawing command*. For *indexed drawing commands*, this variable is the vertexOffset parameter to a *direct drawing command* or the vertexOffset member of the structure consumed by an *indirect drawing command*.

Valid Usage

- VUID-BaseVertex-BaseVertex-04184
  The BaseVertex decoration **must** be used only within the Vertex Execution Model
- VUID-BaseVertex-BaseVertex-04185
  The variable decorated with BaseVertex **must** be declared using the Input Storage Class
- VUID-BaseVertex-BaseVertex-04186
  The variable decorated with BaseVertex **must** be declared as a scalar 32-bit integer value

ClipDistance

Decorating a variable with the ClipDistance built-in decoration will make that variable contain the mechanism for controlling user clipping. ClipDistance is an array such that the i^{th} element of the array specifies the clip distance for plane i. A clip distance of 0 means the vertex is on the plane, a positive distance means the vertex is inside the clip half-space, and a negative distance means the vertex is outside the clip half-space.

NOTE The array variable decorated with ClipDistance is explicitly sized by the shader.

NOTE In the last pre-rasterization shader stage, these values will be linearly interpolated across the primitive and the portion of the primitive with interpolated distances less than 0 will be considered outside the clip volume. If ClipDistance is then used by a fragment shader, ClipDistance contains these linearly interpolated values.

Valid Usage

- VUID-ClipDistance-ClipDistance-04187
  The ClipDistance decoration **must** be used only within the MeshEXT, MeshNV, Vertex,

Fragment, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-ClipDistance-ClipDistance-04188
  The variable decorated with ClipDistance within the MeshEXT, MeshNV, or Vertex Execution Model **must** be declared using the Output Storage Class
- VUID-ClipDistance-ClipDistance-04189
  The variable decorated with ClipDistance within the Fragment Execution Model **must** be declared using the Input Storage Class
- VUID-ClipDistance-ClipDistance-04190
  The variable decorated with ClipDistance within the TessellationControl, TessellationEvaluation, or Geometry Execution Model **must** not be declared in a Storage Class other than Input or Output
- VUID-ClipDistance-ClipDistance-04191
  The variable decorated with ClipDistance **must** be declared as an array of 32-bit floating-point values

CullDistance

Decorating a variable with the CullDistance built-in decoration will make that variable contain the mechanism for controlling user culling. If any member of this array is assigned a negative value for all vertices belonging to a primitive, then the primitive is discarded before rasterization.

NOTE In fragment shaders, the values of the CullDistance array are linearly interpolated across each primitive.

NOTE If CullDistance decorates an input variable, that variable will contain the corresponding value from the CullDistance decorated output variable from the previous shader stage.

Valid Usage

- VUID-CullDistance-CullDistance-04196
  The CullDistance decoration **must** be used only within the MeshEXT, MeshNV, Vertex, Fragment, TessellationControl, TessellationEvaluation, or Geometry Execution Model
- VUID-CullDistance-CullDistance-04197
  The variable decorated with CullDistance within the MeshEXT, MeshNV or Vertex Execution Model **must** be declared using the Output Storage Class
- VUID-CullDistance-CullDistance-04198
  The variable decorated with CullDistance within the Fragment Execution Model **must** be declared using the Input Storage Class
- VUID-CullDistance-CullDistance-04199
  The variable decorated with CullDistance within the TessellationControl, TessellationEvaluation, or Geometry Execution Model **must** not be declared using a Storage Class other than Input or Output

- VUID-CullDistance-CullDistance-04200
  The variable decorated with `CullDistance` **must** be declared as an array of 32-bit floating-point values

`CullPrimitiveEXT`

Decorating a variable with the `CullPrimitiveEXT` built-in decoration will make that variable contain the culling state of output primitives. If the per-primitive boolean value is `true`, the primitive will be culled, if it is `false` it will not be culled.

Valid Usage

- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07034
  The `CullPrimitiveEXT` decoration **must** be used only within the `MeshEXT Execution Model`
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07035
  The variable decorated with `CullPrimitiveEXT` **must** be declared using the `Output Storage Class`
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07036
  `CullPrimitiveEXT` **must** decorate a scalar boolean member of a structure decorated as `Block`, or decorate a variable of type `OpTypeArray` of boolean values
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10589
  If `CullPrimitiveEXT` is declared as an array of boolean values, the size of the array **must** match the value specified by `OutputPrimitivesEXT`
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10590
  If `CullPrimitiveEXT` decorates a member of a structure, the variable declaration of the containing `Block` type **must** have an array size that matches the value specified by `OutputPrimitivesEXT`
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-10591
  There must be only one declaration of the `CullPrimitiveEXT` associated with a entry point's interface
- VUID-CullPrimitiveEXT-CullPrimitiveEXT-07038
  The variable decorated with `CullPrimitiveEXT` within the `MeshEXT Execution Model` **must** also be decorated with the `PerPrimitiveEXT` decoration

`CullMaskKHR`

A variable decorated with the `CullMaskKHR` decoration will specify the cull mask of the ray being processed. The value is given by the `Cull Mask` parameter passed into one of the `OpTrace*` instructions.

Valid Usage

- VUID-CullMaskKHR-CullMaskKHR-06735
  The `CullMaskKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR Execution Model`

- VUID-CullMaskKHR-CullMaskKHR-06736
  The variable decorated with `CullMaskKHR` **must** be declared using the `Input Storage Class`
- VUID-CullMaskKHR-CullMaskKHR-06737
  The variable decorated with `CullMaskKHR` **must** be declared as a scalar 32-bit integer value

`DeviceIndex`

The `DeviceIndex` decoration **can** be applied to a shader input which will be filled with the device index of the physical device that is executing the current shader invocation. This value will be in the range $[0, max(1, physicalDeviceCount))$, where physicalDeviceCount is the `physicalDeviceCount` member of VkDeviceGroupDeviceCreateInfo.

Valid Usage

- VUID-DeviceIndex-DeviceIndex-04205
  The variable decorated with `DeviceIndex` **must** be declared using the `Input Storage Class`
- VUID-DeviceIndex-DeviceIndex-04206
  The variable decorated with `DeviceIndex` **must** be declared as a scalar 32-bit integer value

`DrawIndex`

Decorating a variable with the `DrawIndex` built-in will make that variable contain the integer value corresponding to the zero-based index of the draw that invoked the current task, mesh, or vertex shader invocation. For *indirect drawing commands*, `DrawIndex` begins at zero and increments by one for each draw executed. The number of draws is given by the `drawCount` parameter. For *direct drawing commands*, if vkCmdDrawMultiEXT or vkCmdDrawMultiIndexedEXT is used, this variable contains the integer value corresponding to the zero-based index of the draw. Otherwise `DrawIndex` is always zero. `DrawIndex` is dynamically uniform.

When task or mesh shaders are used, only the first active stage will have proper access to the variable. The value read by other stages is poison.

Valid Usage

- VUID-DrawIndex-DrawIndex-04207
  The `DrawIndex` decoration **must** be used only within the `Vertex`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV Execution Model`
- VUID-DrawIndex-DrawIndex-04208
  The variable decorated with `DrawIndex` **must** be declared using the `Input Storage Class`
- VUID-DrawIndex-DrawIndex-04209
  The variable decorated with `DrawIndex` **must** be declared as a scalar 32-bit integer value

`FragCoord`

Decorating a variable with the `FragCoord` built-in decoration will make that variable contain the

coordinates (x,y,z,1/w) of the fragment being processed.

The (x,y) values are the framebuffer coordinates (x_f,y_f) of the fragment.

When Sample Shading is enabled, the x and y components of `FragCoord` reflect the location of one of the samples corresponding to the shader invocation.

Otherwise, the x and y components of `FragCoord` reflect the location of the center of the fragment.

The z component of `FragCoord` is the interpolated depth value of the primitive.

The w component is the interpolated $\frac{1}{w}$.

The `Centroid` interpolation decoration is ignored, but allowed, on `FragCoord`.

Valid Usage

- VUID-FragCoord-FragCoord-04210
  The `FragCoord` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragCoord-FragCoord-04211
  The variable decorated with `FragCoord` **must** be declared using the `Input Storage Class`
- VUID-FragCoord-FragCoord-04212
  The variable decorated with `FragCoord` **must** be declared as a four-component vector of 32-bit floating-point values

`FragDepth`

To have a shader supply a fragment-depth value, the shader **must** declare the `DepthReplacing` execution mode. Such a shader's fragment-depth value will come from the variable decorated with the `FragDepth` built-in decoration.

This value will be used for any subsequent depth testing performed by the implementation or writes to the depth attachment. See fragment shader depth replacement for details.

Valid Usage

- VUID-FragDepth-FragDepth-04213
  The `FragDepth` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragDepth-FragDepth-04214
  The variable decorated with `FragDepth` **must** be declared using the `Output Storage Class`
- VUID-FragDepth-FragDepth-04215
  The variable decorated with `FragDepth` **must** be declared as a scalar 32-bit floating-point value
- VUID-FragDepth-FragDepth-04216
  If the shader dynamically writes to the variable decorated with `FragDepth`, the `DepthReplacing Execution Mode` **must** be declared

`FragInvocationCountEXT`

Decorating a variable with the `FragInvocationCountEXT` built-in decoration will make that variable contain the maximum number of fragment shader invocations for the fragment, as determined by `minSampleShading`.

If Sample Shading is not enabled, `FragInvocationCountEXT` will be filled with a value of 1.

Valid Usage

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04217
  The `FragInvocationCountEXT` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04218
  The variable decorated with `FragInvocationCountEXT` **must** be declared using the `Input Storage Class`
- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04219
  The variable decorated with `FragInvocationCountEXT` **must** be declared as a scalar 32-bit integer value

`FragSizeEXT`

Decorating a variable with the `FragSizeEXT` built-in decoration will make that variable contain the dimensions in pixels of the area that the fragment covers for that invocation.

> **NOTE** When used in a custom resolve operation and the `customResolve` feature is enabled, the dimensions in pixels returned **may** be (1,1) if the fragment area was reduced.

If fragment density map is not enabled, `FragSizeEXT` will be filled with a value of (1,1).

Valid Usage

- VUID-FragSizeEXT-FragSizeEXT-04220
  The `FragSizeEXT` decoration **must** be used only within the `Fragment Execution Model`
- VUID-FragSizeEXT-FragSizeEXT-04221
  The variable decorated with `FragSizeEXT` **must** be declared using the `Input Storage Class`
- VUID-FragSizeEXT-FragSizeEXT-04222
  The variable decorated with `FragSizeEXT` **must** be declared as a two-component vector of 32-bit integer values

`FragStencilRefEXT`

Decorating a variable with the `FragStencilRefEXT` built-in decoration will make that variable contain the new stencil reference value for all samples covered by the fragment. This value will be used as the stencil reference value used in stencil testing.

To write to FragStencilRefEXT, a shader **must** declare the StencilRefReplacingEXT execution mode. If a shader declares the StencilRefReplacingEXT execution mode and there is an execution path through the shader that does not set FragStencilRefEXT, then the fragment's stencil reference value is undefined for executions of the shader that take that path.

Only the least significant **s** bits of the integer value of the variable decorated with FragStencilRefEXT are considered for stencil testing, where **s** is the number of bits in the stencil framebuffer attachment, and higher order bits are discarded.

See fragment shader stencil reference replacement for more details.

Valid Usage

- VUID-FragStencilRefEXT-FragStencilRefEXT-04223
  The FragStencilRefEXT decoration **must** be used only within the Fragment Execution Model
- VUID-FragStencilRefEXT-FragStencilRefEXT-04224
  The variable decorated with FragStencilRefEXT **must** be declared using the Output Storage Class
- VUID-FragStencilRefEXT-FragStencilRefEXT-04225
  The variable decorated with FragStencilRefEXT **must** be declared as a scalar integer value

FrontFacing

Decorating a variable with the FrontFacing built-in decoration will make that variable contain whether the fragment is front or back facing. This variable is non-zero if the current fragment is considered to be part of a front-facing polygon primitive or of a non-polygon primitive and is zero if the fragment is considered to be part of a back-facing polygon primitive.

Valid Usage

- VUID-FrontFacing-FrontFacing-04229
  The FrontFacing decoration **must** be used only within the Fragment Execution Model
- VUID-FrontFacing-FrontFacing-04230
  The variable decorated with FrontFacing **must** be declared using the Input Storage Class
- VUID-FrontFacing-FrontFacing-04231
  The variable decorated with FrontFacing **must** be declared as a boolean value

FullyCoveredEXT

Decorating a variable with the FullyCoveredEXT built-in decoration will make that variable indicate whether the fragment area is fully covered by the generating primitive. This variable is non-zero if conservative rasterization is enabled and the current fragment area is fully covered by the generating primitive, and is zero if the fragment is not covered or partially covered, or conservative rasterization is disabled.

Valid Usage

- VUID-FullyCoveredEXT-FullyCoveredEXT-04232
  The `FullyCoveredEXT` decoration **must** be used only within the `Fragment` `Execution` `Model`
- VUID-FullyCoveredEXT-FullyCoveredEXT-04233
  The variable decorated with `FullyCoveredEXT` **must** be declared using the `Input` `Storage` `Class`
- VUID-FullyCoveredEXT-FullyCoveredEXT-04234
  The variable decorated with `FullyCoveredEXT` **must** be declared as a boolean value
- VUID-FullyCoveredEXT-conservativeRasterizationPostDepthCoverage-04235
  If `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` ::`conservativeRasterizationPostDepthCoverage` is not supported the `PostDepthCoverage` `Execution` `Mode` **must** not be declared, when a variable with the `FullyCoveredEXT` decoration is declared

`GlobalInvocationId`

Decorating a variable with the `GlobalInvocationId` built-in decoration will make that variable contain the location of the current invocation within the global workgroup. Each component is equal to the index of the local workgroup multiplied by the size of the local workgroup plus `LocalInvocationId`.

Valid Usage

- VUID-GlobalInvocationId-GlobalInvocationId-04236
  The `GlobalInvocationId` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV` `Execution` `Model`
- VUID-GlobalInvocationId-GlobalInvocationId-04237
  The variable decorated with `GlobalInvocationId` **must** be declared using the `Input` `Storage` `Class`
- VUID-GlobalInvocationId-GlobalInvocationId-04238
  The variable decorated with `GlobalInvocationId` **must** be declared as a three-component vector of 32-bit integer values

`HelperInvocation`

Decorating a variable with the `HelperInvocation` built-in decoration will make that variable contain whether the current invocation is a helper invocation. This variable is non-zero if the current fragment being shaded is a helper invocation and zero otherwise. A helper invocation is an invocation of the shader that is produced to satisfy internal requirements such as the generation of derivatives.

NOTE	It is very likely that a helper invocation will have a value of `SampleMask` fragment shader input value that is zero.

Valid Usage

- VUID-HelperInvocation-HelperInvocation-04239
  The `HelperInvocation` decoration **must** be used only within the `Fragment` `Execution Model`
- VUID-HelperInvocation-HelperInvocation-04240
  The variable decorated with `HelperInvocation` **must** be declared using the `Input` `Storage Class`
- VUID-HelperInvocation-HelperInvocation-04241
  The variable decorated with `HelperInvocation` **must** be declared as a boolean value

`HitKindKHR`

A variable decorated with the `HitKindKHR` decoration will describe the intersection that triggered the execution of the current shader. The values are determined by the intersection shader. For user-defined intersection shaders this is the value that was passed to the "Hit Kind" operand of `OpReportIntersectionKHR`. For triangle intersection candidates, this will be one of `HitKindFrontFacingTriangleKHR` or `HitKindBackFacingTriangleKHR`.

Valid Usage

- VUID-HitKindKHR-HitKindKHR-04242
  The `HitKindKHR` decoration **must** be used only within the `AnyHitKHR` or `ClosestHitKHR` `Execution Model`
- VUID-HitKindKHR-HitKindKHR-04243
  The variable decorated with `HitKindKHR` **must** be declared using the `Input` `Storage Class`
- VUID-HitKindKHR-HitKindKHR-04244
  The variable decorated with `HitKindKHR` **must** be declared as a scalar 32-bit integer value

`HitTriangleVertexPositionsKHR`

A variable decorated with the `HitTriangleVertexPositionsKHR` decoration will specify the object space vertices of the triangle at the current intersection in application-provided order. The positions returned are transformed by the geometry transform, which is performed at standard floating-point precision, but without a specifically defined order of floating-point operations to perform the matrix multiplication.

Valid Usage

- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08747
  The `HitTriangleVertexPositionsKHR` decoration **must** be used only within the `AnyHitKHR` or `ClosestHitKHR` `Execution Model`
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08748
  The variable decorated with `HitTriangleVertexPositionsKHR` **must** be declared using the `Input` `Storage Class`
- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08749

The variable decorated with HitTriangleVertexPositionsKHR **must** be declared as an array of three vectors of three 32-bit float values

- VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08750
  The variable decorated with HitTriangleVertexPositionsKHR **must** be used only if the value of HitKindKHR is HitKindFrontFacingTriangleKHR or HitKindBackFacingTriangleKHR
- VUID-HitTriangleVertexPositionsKHR-None-08751
  The acceleration structure corresponding to the current intersection **must** have been built with VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR

IncomingRayFlagsKHR

A variable with the IncomingRayFlagsKHR decoration will contain the ray flags passed in to the trace call that invoked this particular shader. Setting pipeline flags on the ray tracing pipeline **must** not cause any corresponding flags to be set in variables with this decoration.

Valid Usage

- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04248
  The IncomingRayFlagsKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04249
  The variable decorated with IncomingRayFlagsKHR **must** be declared using the Input Storage Class
- VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04250
  The variable decorated with IncomingRayFlagsKHR **must** be declared as a scalar 32-bit integer value

InstanceCustomIndexKHR

A variable decorated with the InstanceCustomIndexKHR decoration will contain the application-defined value of the instance that intersects the current ray. This variable contains the value that was specified in VkAccelerationStructureInstanceKHR::instanceCustomIndex for the current acceleration structure instance in the lower 24 bits and the upper 8 bits will be zero.

Valid Usage

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04251
  The InstanceCustomIndexKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model
- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04252
  The variable decorated with InstanceCustomIndexKHR **must** be declared using the Input Storage Class
- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04253
  The variable decorated with InstanceCustomIndexKHR **must** be declared as a scalar 32-bit integer value

`InstanceId`

Decorating a variable in an intersection, any-hit, or closest hit shader with the `InstanceId` decoration will make that variable contain the index of the instance that intersects the current ray.

Valid Usage

- VUID-InstanceId-InstanceId-04254
  The `InstanceId` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-InstanceId-InstanceId-04255
  The variable decorated with `InstanceId` **must** be declared using the `Input` `Storage Class`
- VUID-InstanceId-InstanceId-04256
  The variable decorated with `InstanceId` **must** be declared as a scalar 32-bit integer value

`InvocationId`

Decorating a variable with the `InvocationId` built-in decoration will make that variable contain the index of the current shader invocation in a geometry shader, or the index of the output patch vertex in a tessellation control shader.

In a geometry shader, the index of the current shader invocation ranges from zero to the number of instances declared in the shader minus one. If the instance count of the geometry shader is one or is not specified, then `InvocationId` will be zero.

Valid Usage

- VUID-InvocationId-InvocationId-04257
  The `InvocationId` decoration **must** be used only within the `TessellationControl` or `Geometry` `Execution Model`
- VUID-InvocationId-InvocationId-04258
  The variable decorated with `InvocationId` **must** be declared using the `Input` `Storage Class`
- VUID-InvocationId-InvocationId-04259
  The variable decorated with `InvocationId` **must** be declared as a scalar 32-bit integer value

`InstanceIndex`

Decorating a variable in a vertex shader with the `InstanceIndex` built-in decoration will make that variable contain the index of the instance that is being processed by the current vertex shader invocation. `InstanceIndex` begins at the `firstInstance` parameter to vkCmdDraw or vkCmdDrawIndexed or at the `firstInstance` member of a structure consumed by vkCmdDrawIndirect or vkCmdDrawIndexedIndirect.

Valid Usage

- VUID-InstanceIndex-InstanceIndex-04263
  The `InstanceIndex` decoration **must** be used only within the `Vertex` Execution Model
- VUID-InstanceIndex-InstanceIndex-04264
  The variable decorated with `InstanceIndex` **must** be declared using the `Input` Storage Class
- VUID-InstanceIndex-InstanceIndex-04265
  The variable decorated with `InstanceIndex` **must** be declared as a scalar 32-bit integer value

`LaunchIdKHR`

A variable decorated with the `LaunchIdKHR` decoration will specify the index of the work item being processed. One work item is generated for each of the `width` × `height` × `depth` items dispatched by a vkCmdTraceRaysKHR command. All shader invocations inherit the same value for variables decorated with `LaunchIdKHR`.

Valid Usage

- VUID-LaunchIdKHR-LaunchIdKHR-04266
  The `LaunchIdKHR` decoration **must** be used only within the `RayGenerationKHR`, `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, `MissKHR`, or `CallableKHR` Execution Model
- VUID-LaunchIdKHR-LaunchIdKHR-04267
  The variable decorated with `LaunchIdKHR` **must** be declared using the `Input` Storage Class
- VUID-LaunchIdKHR-LaunchIdKHR-04268
  The variable decorated with `LaunchIdKHR` **must** be declared as a three-component vector of 32-bit integer values

`LaunchSizeKHR`

A variable decorated with the `LaunchSizeKHR` decoration will contain the `width`, `height`, and `depth` dimensions passed to the vkCmdTraceRaysKHR command that initiated this shader execution. The `width` is in the first component, the `height` is in the second component, and the `depth` is in the third component.

Valid Usage

- VUID-LaunchSizeKHR-LaunchSizeKHR-04269
  The `LaunchSizeKHR` decoration **must** be used only within the `RayGenerationKHR`, `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, `MissKHR`, or `CallableKHR` Execution Model
- VUID-LaunchSizeKHR-LaunchSizeKHR-04270
  The variable decorated with `LaunchSizeKHR` **must** be declared using the `Input` Storage Class
- VUID-LaunchSizeKHR-LaunchSizeKHR-04271
  The variable decorated with `LaunchSizeKHR` **must** be declared as a three-component vector of 32-bit integer values

`Layer`

Decorating a variable with the `Layer` built-in decoration will make that variable contain the select layer of a multi-layer framebuffer attachment.

In a mesh, vertex, tessellation evaluation, or geometry shader, any variable decorated with `Layer` can be written with the framebuffer layer index to which the primitive produced by that shader will be directed.

The last active pre-rasterization shader stage (in pipeline order) controls the `Layer` that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the `Layer`.

If the last active pre-rasterization shader stage shader entry point's interface does not include a variable decorated with `Layer`, then the first layer is used. If a pre-rasterization shader stage shader entry point's interface includes a variable decorated with `Layer`, it **must** write the same value to `Layer` for all output vertices of a given primitive. If the `Layer` value is less than 0 or greater than or equal to the number of layers in the framebuffer, then primitives **may** still be rasterized, fragment shaders **may** be executed, and the framebuffer values for all layers are undefined. In a mesh shader this also applies when the `Layer` value is greater than or equal to the `maxMeshOutputLayers` limit.

In a fragment shader, a variable decorated with `Layer` contains the layer index of the primitive that the fragment invocation belongs to.

Valid Usage

- VUID-Layer-Layer-04272
  The `Layer` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, `Geometry`, or `Fragment` `Execution Model`
- VUID-Layer-Layer-04273
  If the `shaderOutputLayer` feature is not enabled then the `Layer` decoration **must** be used only within the `Geometry` or `Fragment` `Execution Model`
- VUID-Layer-Layer-04274
  The variable decorated with `Layer` within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, or `Geometry` `Execution Model` **must** be declared using the `Output` `Storage Class`
- VUID-Layer-Layer-04275
  The variable decorated with `Layer` within the `Fragment` `Execution Model` **must** be declared using the `Input` `Storage Class`
- VUID-Layer-Layer-04276
  The variable decorated with `Layer` **must** be declared as a scalar 32-bit integer value for all supported execution models except `MeshEXT`
- VUID-Layer-Layer-07039
  The variable decorated with `Layer` within the `MeshEXT` `Execution Model` **must** also be decorated with the `PerPrimitiveEXT` decoration
- VUID-Layer-Layer-10592
  `Layer` within the `MeshEXT` `Execution Model` **must** decorate a scalar 32-bit integer member of

a structure decorated as Block, or decorate a variable of type OpTypeArray of scalar 32-bit integer values

- VUID-Layer-Layer-10593
  If Layer is declared as an array of 32-bit integer values, within the MeshEXT Execution Model, size of the array **must** match the value specified by OutputPrimitivesEXT
- VUID-Layer-Layer-10594
  If Layer decorates a member of a structure, the variable declaration of the containing Block type **must** have an array size that matches the value specified by OutputPrimitivesEXT

LocalInvocationId

Decorating a variable with the LocalInvocationId built-in decoration will make that variable contain the location of the current task, mesh, or compute shader invocation within the local workgroup. Each component ranges from zero through to the size of the workgroup in that dimension minus one.

NOTE If the size of the workgroup in a particular dimension is one, then the LocalInvocationId in that dimension will be zero. If the workgroup is effectively two-dimensional, then LocalInvocationId.z will be zero. If the workgroup is effectively one-dimensional, then both LocalInvocationId.y and LocalInvocationId.z will be zero.

Valid Usage

- VUID-LocalInvocationId-LocalInvocationId-04281
  The LocalInvocationId decoration **must** be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model
- VUID-LocalInvocationId-LocalInvocationId-04282
  The variable decorated with LocalInvocationId **must** be declared using the Input Storage Class
- VUID-LocalInvocationId-LocalInvocationId-04283
  The variable decorated with LocalInvocationId **must** be declared as a three-component vector of 32-bit integer values

LocalInvocationIndex

Decorating a variable with the LocalInvocationIndex built-in decoration will make that variable contain a one-dimensional representation of LocalInvocationId. This is computed as:

```
LocalInvocationIndex =
    LocalInvocationId.z * WorkgroupSize.x * WorkgroupSize.y +
    LocalInvocationId.y * WorkgroupSize.x +
    LocalInvocationId.x;
```

Valid Usage

- VUID-LocalInvocationIndex-LocalInvocationIndex-04284
  The `LocalInvocationIndex` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV` `Execution Model`
- VUID-LocalInvocationIndex-LocalInvocationIndex-04285
  The variable decorated with `LocalInvocationIndex` **must** be declared using the `Input` `Storage Class`
- VUID-LocalInvocationIndex-LocalInvocationIndex-04286
  The variable decorated with `LocalInvocationIndex` **must** be declared as a scalar 32-bit integer value

`NumSubgroups`

Decorating a variable with the `NumSubgroups` built-in decoration will make that variable contain the number of subgroups in the local workgroup.

Valid Usage

- VUID-NumSubgroups-NumSubgroups-04293
  The `NumSubgroups` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`, `MeshNV`, or `TaskNV` `Execution Model`
- VUID-NumSubgroups-NumSubgroups-04294
  The variable decorated with `NumSubgroups` **must** be declared using the `Input` `Storage Class`
- VUID-NumSubgroups-NumSubgroups-04295
  The variable decorated with `NumSubgroups` **must** be declared as a scalar 32-bit integer value

`NumWorkgroups`

Decorating a variable with the `NumWorkgroups` built-in decoration will make that variable contain the number of local workgroups that are part of the dispatch that the invocation belongs to. Each component is equal to the values of the workgroup count parameters passed into the dispatching commands.

Valid Usage

- VUID-NumWorkgroups-NumWorkgroups-04296
  The `NumWorkgroups` decoration **must** be used only within the `GLCompute`, `MeshEXT`, or `TaskEXT` `Execution Model`
- VUID-NumWorkgroups-NumWorkgroups-04297
  The variable decorated with `NumWorkgroups` **must** be declared using the `Input` `Storage Class`
- VUID-NumWorkgroups-NumWorkgroups-04298
  The variable decorated with `NumWorkgroups` **must** be declared as a three-component vector of 32-bit integer values

`ObjectRayDirectionKHR`

A variable decorated with the `ObjectRayDirectionKHR` decoration will specify the direction of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04299
  The `ObjectRayDirectionKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04300
  The variable decorated with `ObjectRayDirectionKHR` **must** be declared using the `Input` `Storage Class`
- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04301
  The variable decorated with `ObjectRayDirectionKHR` **must** be declared as a three-component vector of 32-bit floating-point values

`ObjectRayOriginKHR`

A variable decorated with the `ObjectRayOriginKHR` decoration will specify the origin of the ray being processed, in object space.

Valid Usage

- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04302
  The `ObjectRayOriginKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04303
  The variable decorated with `ObjectRayOriginKHR` **must** be declared using the `Input` `Storage Class`
- VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04304
  The variable decorated with `ObjectRayOriginKHR` **must** be declared as a three-component vector of 32-bit floating-point values

`ObjectToWorldKHR`

A variable decorated with the `ObjectToWorldKHR` decoration will contain the current object-to-world transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04305
  The `ObjectToWorldKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04306
  The variable decorated with `ObjectToWorldKHR` **must** be declared using the `Input` `Storage`

Class

- VUID-ObjectToWorldKHR-ObjectToWorldKHR-04307
  The variable decorated with ObjectToWorldKHR **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

PatchVertices

Decorating a variable with the PatchVertices built-in decoration will make that variable contain the number of vertices in the input patch being processed by the shader. In a Tessellation Control Shader, this is the same as the name:patchControlPoints member of VkPipelineTessellationStateCreateInfo. In a Tessellation Evaluation Shader, PatchVertices is equal to the tessellation control output patch size. When the same shader is used in different pipelines where the patch sizes are configured differently, the value of the PatchVertices variable will also differ.

Valid Usage

- VUID-PatchVertices-PatchVertices-04308
  The PatchVertices decoration **must** be used only within the TessellationControl or TessellationEvaluation Execution Model
- VUID-PatchVertices-PatchVertices-04309
  The variable decorated with PatchVertices **must** be declared using the Input Storage Class
- VUID-PatchVertices-PatchVertices-04310
  The variable decorated with PatchVertices **must** be declared as a scalar 32-bit integer value

PointCoord

Decorating a variable with the PointCoord built-in decoration will make that variable contain the coordinate of the current fragment within the point being rasterized, normalized to the size of the point with origin in the upper left corner of the point, as described in Basic Point Rasterization. If the primitive the fragment shader invocation belongs to is not a point, then the variable decorated with PointCoord contains poison.

NOTE Depending on how the point is rasterized, PointCoord **may** never reach (0,0) or (1,1).

Valid Usage

- VUID-PointCoord-PointCoord-04311
  The PointCoord decoration **must** be used only within the Fragment Execution Model
- VUID-PointCoord-PointCoord-04312
  The variable decorated with PointCoord **must** be declared using the Input Storage Class
- VUID-PointCoord-PointCoord-04313
  The variable decorated with PointCoord **must** be declared as a two-component vector of 32-bit floating-point values

PointSize

Decorating a variable with the PointSize built-in decoration will make that variable contain the size of point primitives or the final rasterization of polygons if polygon mode is VK_POLYGON_MODE_POINT when VkPhysicalDeviceMaintenance5Properties ::polygonModePointSize is set to VK_TRUE . The value written to the variable decorated with PointSize by the last pre-rasterization shader stage in the pipeline is used as the framebuffer-space size of points produced by rasterization. If the maintenance5 feature is enabled and a value is not written to a variable decorated with PointSize, a value of 1.0 is used as the size of points.

NOTE When PointSize decorates a variable in the Input Storage Class, it contains the data written to the output variable decorated with PointSize from the previous shader stage.

Valid Usage

- VUID-PointSize-PointSize-04314
  The PointSize decoration **must** be used only within the MeshEXT, MeshNV, Vertex, TessellationControl, TessellationEvaluation, or Geometry Execution Model
- VUID-PointSize-PointSize-04315
  The variable decorated with PointSize within the MeshEXT, MeshNV, or Vertex Execution Model **must** be declared using the Output Storage Class
- VUID-PointSize-PointSize-04316
  The variable decorated with PointSize within the TessellationControl, TessellationEvaluation, or Geometry Execution Model **must** not be declared using a Storage Class other than Input or Output
- VUID-PointSize-PointSize-04317
  The variable decorated with PointSize **must** be declared as a scalar 32-bit floating-point value

Position

Decorating a variable with the Position built-in decoration will make that variable contain the position of the current vertex. In the last pre-rasterization shader stage, the value of the variable decorated with Position is used in subsequent primitive assembly, clipping, and rasterization operations.

NOTE When Position decorates a variable in the Input Storage Class, it contains the data written to the output variable decorated with Position from the previous shader stage.

Valid Usage

- VUID-Position-Position-04318
  The Position decoration **must** be used only within the MeshEXT, MeshNV, Vertex, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-Position-Position-04319
  The variable decorated with `Position` within the `MeshEXT`, `MeshNV`, or `Vertex Execution Model` **must** be declared using the `Output Storage Class`
- VUID-Position-Position-04320
  The variable decorated with `Position` within the `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model` **must** not be declared using a `Storage Class` other than `Input` or `Output`
- VUID-Position-Position-04321
  The variable decorated with `Position` **must** be declared as a four-component vector of 32-bit floating-point values

`PrimitiveId`

Decorating a variable with the `PrimitiveId` built-in decoration will make that variable contain the index of the current primitive.

The index of the first primitive generated by a drawing command is zero, and the index is incremented after every individual point, line, or triangle primitive is processed.

For triangles drawn as points or line segments (see Polygon Mode), the primitive index is incremented only once, even if multiple points or lines are eventually drawn.

Variables decorated with `PrimitiveId` are reset to zero between each instance drawn.

Restarting a primitive topology using primitive restart has no effect on the value of variables decorated with `PrimitiveId`.

In tessellation control and tessellation evaluation shaders, it will contain the index of the patch within the current set of rendering primitives that corresponds to the shader invocation.

In a geometry shader, it will contain the number of primitives presented as input to the shader since the current set of rendering primitives was started. If the previous stage is a tessellation evaluation shader, it will contain the same value as the tessellation shaders would read.

In a fragment shader, it will contain the primitive index written by the mesh shader if a mesh shader is present, or the primitive index written by the geometry shader if a geometry shader is present, or with the value that would have been presented as input to the geometry shader had it been present.

In an intersection, any-hit, or closest hit shader, it will contain the index within the geometry of the triangle or bounding box being processed.

NOTE

When the `PrimitiveId` decoration is applied to an output variable in the mesh shader or geometry shader, the resulting value is seen through the `PrimitiveId` decorated input variable in the fragment shader.

The fragment shader using `PrimitiveId` will need to declare either the `MeshShadingEXT`, `Geometry` or `Tessellation` capability to satisfy the requirement SPIR-V has to use `PrimitiveId`.

Valid Usage

- VUID-PrimitiveId-PrimitiveId-04330
  The PrimitiveId decoration **must** be used only within the MeshEXT, MeshNV, IntersectionKHR, AnyHitKHR, ClosestHitKHR, TessellationControl, TessellationEvaluation, Geometry, or Fragment Execution Model
- VUID-PrimitiveId-Fragment-04331
  If pipeline contains both the Fragment and Geometry Execution Model and a variable decorated with PrimitiveId is read from Fragment shader, then the Geometry shader **must** write to the output variables decorated with PrimitiveId in all execution paths
- VUID-PrimitiveId-Fragment-04332
  If pipeline contains both the Fragment and MeshEXT or MeshNV Execution Model and a variable decorated with PrimitiveId is read from Fragment shader, then the MeshEXT or MeshNV shader **must** write to the output variables decorated with PrimitiveId in all execution paths
- VUID-PrimitiveId-Fragment-04333
  If Fragment Execution Model contains a variable decorated with PrimitiveId, then either the MeshShadingEXT, MeshShadingNV, Geometry or Tessellation capability **must** also be declared
- VUID-PrimitiveId-PrimitiveId-04334
  The variable decorated with PrimitiveId within the TessellationControl, TessellationEvaluation, Fragment, IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model **must** be declared using the Input Storage Class
- VUID-PrimitiveId-PrimitiveId-04335
  The variable decorated with PrimitiveId within the Geometry Execution Model **must** be declared using the Input or Output Storage Class
- VUID-PrimitiveId-PrimitiveId-04336
  The variable decorated with PrimitiveId within the MeshEXT or MeshNV Execution Model **must** be declared using the Output Storage Class
- VUID-PrimitiveId-PrimitiveId-04337
  The variable decorated with PrimitiveId **must** be declared as a scalar 32-bit integer value for all supported execution models except MeshEXT
- VUID-PrimitiveId-PrimitiveId-07040
  The variable decorated with PrimitiveId within the MeshEXT Execution Model **must** also be decorated with the PerPrimitiveEXT decoration
- VUID-PrimitiveId-PrimitiveId-10595
  PrimitiveId within the MeshEXT Execution Model **must** decorate a scalar 32-bit integer member of a structure decorated as Block, or decorate a variable of type OpTypeArray of 32-bit integer values
- VUID-PrimitiveId-PrimitiveId-10596
  If PrimitiveId is declared as an array of 32-bit integer values, within the MeshEXT Execution Model, size of the array **must** match the value specified by OutputPrimitivesEXT
- VUID-PrimitiveId-PrimitiveId-10597
  If PrimitiveId decorates a member of a structure, the variable declaration of the

containing `Block` type **must** have an array size that matches the value specified by `OutputPrimitivesEXT`

`PrimitivePointIndicesEXT`

Decorating a variable with the `PrimitivePointIndicesEXT` decoration will make that variable contain the output array of vertex index values for point primitives.

Valid Usage

- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07041
  The `PrimitivePointIndicesEXT` decoration **must** be used only within the `MeshEXT Execution Model`
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07042
  The `PrimitivePointIndicesEXT` decoration **must** be used with the `OutputPoints Execution Mode`
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07043
  The variable decorated with `PrimitivePointIndicesEXT` **must** be declared using the `Output Storage Class`
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07044
  The variable decorated with `PrimitivePointIndicesEXT` **must** be declared as an array of scalar 32-bit integer values
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07045
  The index to access the array decorated with `PrimitivePointIndicesEXT` **must** be in the range [0, N-1], where N is the value specified by the “Primitive Count” operand of `OpSetMeshOutputsEXT`
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-12335
  All index values written to the array decorated with `PrimitivePointIndicesEXT` **must** be in the range [0, N-1], where N is the value specified by the “Vertex Count” operand of `OpSetMeshOutputsEXT`
- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07046
  The size of the array decorated with `PrimitivePointIndicesEXT` **must** match the value specified by `OutputPrimitivesEXT`

`PrimitiveLineIndicesEXT`

Decorating a variable with the `PrimitiveLineIndicesEXT` decoration will make that variable contain the output array of vertex index values for line primitives.

Valid Usage

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07047
  The `PrimitiveLineIndicesEXT` decoration **must** be used only within the `MeshEXT Execution Model`
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07048

The PrimitiveLineIndicesEXT decoration **must** be used with the OutputLinesEXT Execution Mode

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07049
  The variable decorated with PrimitiveLineIndicesEXT **must** be declared using the Output Storage Class
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07050
  The variable decorated with PrimitiveLineIndicesEXT **must** be declared as an array of two component vector 32-bit integer values
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07051
  The index to access the array decorated with PrimitiveLineIndicesEXT **must** be in the range [0, N-1], where N is the value specified by the “Primitive Count” operand of OpSetMeshOutputsEXT
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-12336
  All index values written to the array decorated with PrimitiveLineIndicesEXT **must** be in the range [0, N-1], where N is the value specified by the “Vertex Count” operand of OpSetMeshOutputsEXT
- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07052
  The size of the array decorated with PrimitiveLineIndicesEXT **must** match the value specified by OutputPrimitivesEXT

PrimitiveTriangleIndicesEXT

Decorating a variable with the PrimitiveTriangleIndicesEXT decoration will make that variable contain the output array of vertex index values for triangle primitives.

Valid Usage

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07053
  The PrimitiveTriangleIndicesEXT decoration **must** be used only within the MeshEXT Execution Model
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07054
  The PrimitiveTriangleIndicesEXT decoration **must** be used with the OutputTrianglesEXT Execution Mode
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07055
  The variable decorated with PrimitiveTriangleIndicesEXT **must** be declared using the Output Storage Class
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07056
  The variable decorated with PrimitiveTriangleIndicesEXT **must** be declared as an array of three component vector 32-bit integer values
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07057
  The index to access the array decorated with PrimitiveTriangleIndicesEXT **must** be in the range [0, N-1], where N is the value specified by the “Primitive Count” operand of OpSetMeshOutputsEXT
- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-12337

All index values written to the array decorated with `PrimitiveTriangleIndicesEXT` **must** be in the range [0, N-1], where N is the value specified by the "Vertex Count" operand of `OpSetMeshOutputsEXT`

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07058
  The size of the array decorated with `PrimitiveTriangleIndicesEXT` **must** match the value specified by `OutputPrimitivesEXT`

`PrimitiveShadingRateKHR`

Decorating a variable with the `PrimitiveShadingRateKHR` built-in decoration will make that variable contain the primitive fragment shading rate.

The value written to the variable decorated with `PrimitiveShadingRateKHR` by the last pre-rasterization shader stage in the pipeline is used as the primitive fragment shading rate. Outputs in previous shader stages are ignored.

If the last active pre-rasterization shader stage shader entry point's interface does not include a variable decorated with `PrimitiveShadingRateKHR`, then it is as if the shader specified a fragment shading rate value of 0, indicating a horizontal and vertical rate of 1 pixel.

Valid Usage

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04484
  The `PrimitiveShadingRateKHR` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, or `Geometry` `Execution Model`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04485
  The variable decorated with `PrimitiveShadingRateKHR` **must** be declared using the `Output` `Storage Class`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04486
  The variable decorated with `PrimitiveShadingRateKHR` **must** be declared as a scalar 32-bit integer value for all supported execution models except `MeshEXT`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04487
  The value written to `PrimitiveShadingRateKHR` **must** include no more than one of `Vertical2Pixels` and `Vertical4Pixels`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04488
  The value written to `PrimitiveShadingRateKHR` **must** include no more than one of `Horizontal2Pixels` and `Horizontal4Pixels`
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04489
  The value written to `PrimitiveShadingRateKHR` **must** not have any bits set other than those defined by **Fragment Shading Rate Flags** enumerants in the SPIR-V specification
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-07059
  The variable decorated with `PrimitiveShadingRateKHR` within the `MeshEXT` `Execution Model` **must** also be decorated with the `PerPrimitiveEXT` decoration
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10598
  `PrimitiveShadingRateKHR` within the `MeshEXT` `Execution Model` **must** decorate a scalar 32-bit

integer member of a structure decorated as Block, or decorate a variable of type OpTypeArray of 32-bit integer values

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10599
  If PrimitiveShadingRateKHR is declared as an array of 32-bit integer values, within the MeshEXT Execution Model, size of the array **must** match the value specified by OutputPrimitivesEXT
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-10600
  If PrimitiveShadingRateKHR decorates a member of a structure, the variable declaration of the containing Block type **must** have an array size that matches the value specified by OutputPrimitivesEXT
- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-12275
  If PrimitiveShadingRateKHR is declared in the MeshEXT Execution Model, the primitiveFragmentShadingRateMeshShader feature **must** be enabled

RayGeometryIndexKHR

A variable decorated with the RayGeometryIndexKHR decoration will contain the geometry index for the acceleration structure geometry currently being shaded.

Valid Usage

- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04345
  The RayGeometryIndexKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04346
  The variable decorated with RayGeometryIndexKHR **must** be declared using the Input Storage Class
- VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04347
  The variable decorated with RayGeometryIndexKHR **must** be declared as a scalar 32-bit integer value

RayTmaxKHR

A variable decorated with the RayTmaxKHR decoration will contain the parametric t_{max} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is initialized to the parameter passed into the pipeline trace ray instruction.

The t_{max} value changes throughout the lifetime of the ray that produced the intersection. In the closest hit shader, the value reflects the closest distance to the intersected primitive. In the any-hit shader, it reflects the distance to the primitive currently being intersected. In the intersection shader, it reflects the distance to the closest primitive intersected so far or the initial value. The value can change in the intersection shader after calling OpReportIntersectionKHR if the corresponding any-hit shader does not ignore the intersection. In a miss shader, the value is identical to the parameter passed into the pipeline trace ray instruction.

Valid Usage

- VUID-RayTmaxKHR-RayTmaxKHR-04348
  The RayTmaxKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model
- VUID-RayTmaxKHR-RayTmaxKHR-04349
  The variable decorated with RayTmaxKHR **must** be declared using the Input Storage Class
- VUID-RayTmaxKHR-RayTmaxKHR-04350
  The variable decorated with RayTmaxKHR **must** be declared as a scalar 32-bit floating-point value

RayTminKHR

A variable decorated with the RayTminKHR decoration will contain the parametric t_{min} value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is the parameter passed into the pipeline trace ray instruction.

The t_{min} value remains constant for the duration of the ray query.

Valid Usage

- VUID-RayTminKHR-RayTminKHR-04351
  The RayTminKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model
- VUID-RayTminKHR-RayTminKHR-04352
  The variable decorated with RayTminKHR **must** be declared using the Input Storage Class
- VUID-RayTminKHR-RayTminKHR-04353
  The variable decorated with RayTminKHR **must** be declared as a scalar 32-bit floating-point value

SampleId

Decorating a variable with the SampleId built-in decoration will make that variable contain the coverage index for the current fragment shader invocation. SampleId ranges from zero to the number of samples in the framebuffer minus one. If a fragment shader entry point's interface includes an input variable decorated with SampleId, Sample Shading is considered enabled with a minSampleShading value of 1.0.

Valid Usage

- VUID-SampleId-SampleId-04354
  The SampleId decoration **must** be used only within the Fragment Execution Model
- VUID-SampleId-SampleId-04355
  The variable decorated with SampleId **must** be declared using the Input Storage Class
- VUID-SampleId-SampleId-04356

The variable decorated with SampleId **must** be declared as a scalar 32-bit integer value

SampleMask

Decorating a variable with the SampleMask built-in decoration will make any variable contain the sample mask for the current fragment shader invocation.

A variable in the Input storage class decorated with SampleMask will contain a bitmask of the set of samples covered by the primitive generating the fragment during rasterization. It has a sample bit set if and only if the sample is considered covered for this fragment shader invocation. SampleMask[] is an array of integers. Bits are mapped to samples in a manner where bit B of mask M (SampleMask[M]) corresponds to sample 32 × M + B.

A variable in the Output storage class decorated with SampleMask is an array of integers forming a bit array in a manner similar to an input variable decorated with SampleMask, but where each bit represents coverage as computed by the shader. This computed SampleMask is combined with the generated coverage mask in the multisample coverage operation.

Variables decorated with SampleMask **must** be either an unsized array, or explicitly sized to be no larger than the implementation-dependent maximum sample-mask (as an array of 32-bit elements), determined by the maximum number of samples.

If a fragment shader entry point's interface does not include an output variable decorated with SampleMask, the sample mask has no effect on the processing of a fragment.

Valid Usage

- VUID-SampleMask-SampleMask-04357
  The SampleMask decoration **must** be used only within the Fragment Execution Model
- VUID-SampleMask-SampleMask-04358
  The variable decorated with SampleMask **must** be declared using the Input or Output Storage Class
- VUID-SampleMask-SampleMask-04359
  The variable decorated with SampleMask **must** be declared as an array of 32-bit integer values

SamplePosition

Decorating a variable with the SamplePosition built-in decoration will make that variable contain the sub-pixel position of the sample being shaded. The top left of the pixel is considered to be at coordinate (0,0) and the bottom right of the pixel is considered to be at coordinate (1,1).

If the render pass has a fragment density map attachment, the variable will instead contain the sub-fragment position of the sample being shaded. The top left of the fragment is considered to be at coordinate (0,0) and the bottom right of the fragment is considered to be at coordinate (1,1) for any fragment area.

If a fragment shader entry point's interface includes an input variable decorated with

SamplePosition, Sample Shading is considered enabled with a minSampleShading value of 1.0.

If the current pipeline uses custom sample locations the value of any variable decorated with the SamplePosition built-in decoration is poison.

Valid Usage

- VUID-SamplePosition-SamplePosition-04360
  The SamplePosition decoration **must** be used only within the Fragment Execution Model
- VUID-SamplePosition-SamplePosition-04361
  The variable decorated with SamplePosition **must** be declared using the Input Storage Class
- VUID-SamplePosition-SamplePosition-04362
  The variable decorated with SamplePosition **must** be declared as a two-component vector of 32-bit floating-point values

ShadingRateKHR

Decorating a variable with the ShadingRateKHR built-in decoration will make that variable contain the fragment shading rate for the current fragment invocation.

Valid Usage

- VUID-ShadingRateKHR-ShadingRateKHR-04490
  The ShadingRateKHR decoration **must** be used only within the Fragment Execution Model
- VUID-ShadingRateKHR-ShadingRateKHR-04491
  The variable decorated with ShadingRateKHR **must** be declared using the Input Storage Class
- VUID-ShadingRateKHR-ShadingRateKHR-04492
  The variable decorated with ShadingRateKHR **must** be declared as a scalar 32-bit integer value

SubgroupId

Decorating a variable with the SubgroupId built-in decoration will make that variable contain the index of the subgroup within the local workgroup. This variable is in range [0, NumSubgroups-1].

Valid Usage

- VUID-SubgroupId-SubgroupId-04367
  The SubgroupId decoration **must** be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model
- VUID-SubgroupId-SubgroupId-04368
  The variable decorated with SubgroupId **must** be declared using the Input Storage Class
- VUID-SubgroupId-SubgroupId-04369

The variable decorated with SubgroupId **must** be declared as a scalar 32-bit integer value

SubgroupEqMask

Decorating a variable with the SubgroupEqMask builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bit corresponding to the SubgroupLocalInvocationId is set in the variable decorated with SubgroupEqMask. All other bits are set to zero.

SubgroupEqMaskKHR is an alias of SubgroupEqMask.

Valid Usage

- VUID-SubgroupEqMask-SubgroupEqMask-04370
  The variable decorated with SubgroupEqMask **must** be declared using the Input Storage Class
- VUID-SubgroupEqMask-SubgroupEqMask-04371
  The variable decorated with SubgroupEqMask **must** be declared as a four-component vector of 32-bit integer values

SubgroupGeMask

Decorating a variable with the SubgroupGeMask builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than or equal to SubgroupLocalInvocationId through SubgroupSize-1 are set in the variable decorated with SubgroupGeMask. All other bits are set to zero.

SubgroupGeMaskKHR is an alias of SubgroupGeMask.

Valid Usage

- VUID-SubgroupGeMask-SubgroupGeMask-04372
  The variable decorated with SubgroupGeMask **must** be declared using the Input Storage Class
- VUID-SubgroupGeMask-SubgroupGeMask-04373
  The variable decorated with SubgroupGeMask **must** be declared as a four-component vector of 32-bit integer values

SubgroupGtMask

Decorating a variable with the SubgroupGtMask builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than SubgroupLocalInvocationId through SubgroupSize-1 are set in the variable decorated with SubgroupGtMask. All other bits are set to zero.

SubgroupGtMaskKHR is an alias of SubgroupGtMask.

Valid Usage

- VUID-SubgroupGtMask-SubgroupGtMask-04374
  The variable decorated with `SubgroupGtMask` **must** be declared using the `Input` `Storage Class`
- VUID-SubgroupGtMask-SubgroupGtMask-04375
  The variable decorated with `SubgroupGtMask` **must** be declared as a four-component vector of 32-bit integer values

`SubgroupLeMask`

Decorating a variable with the `SubgroupLeMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than or equal to `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLeMask`. All other bits are set to zero.

`SubgroupLeMaskKHR` is an alias of `SubgroupLeMask`.

Valid Usage

- VUID-SubgroupLeMask-SubgroupLeMask-04376
  The variable decorated with `SubgroupLeMask` **must** be declared using the `Input` `Storage Class`
- VUID-SubgroupLeMask-SubgroupLeMask-04377
  The variable decorated with `SubgroupLeMask` **must** be declared as a four-component vector of 32-bit integer values

`SubgroupLtMask`

Decorating a variable with the `SubgroupLtMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLtMask`. All other bits are set to zero.

`SubgroupLtMaskKHR` is an alias of `SubgroupLtMask`.

Valid Usage

- VUID-SubgroupLtMask-SubgroupLtMask-04378
  The variable decorated with `SubgroupLtMask` **must** be declared using the `Input` `Storage Class`
- VUID-SubgroupLtMask-SubgroupLtMask-04379
  The variable decorated with `SubgroupLtMask` **must** be declared as a four-component vector of 32-bit integer values

SubgroupLocalInvocationId

Decorating a variable with the SubgroupLocalInvocationId builtin decoration will make that variable contain the index of the invocation within the subgroup. This variable is in range [0,SubgroupSize-1].

NOTE

There is no direct relationship between SubgroupLocalInvocationId and LocalInvocationId or LocalInvocationIndex. If the shader was created with full subgroups, applications can compute their own local invocation index to serve the same purpose:

index = SubgroupLocalInvocationId + SubgroupId × SubgroupSize

If full subgroups are not enabled, some subgroups may be dispatched with inactive invocations that do not correspond to a local workgroup invocation, making the value of index unreliable.

Valid Usage

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04380
  The variable decorated with SubgroupLocalInvocationId **must** be declared using the Input Storage Class
- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04381
  The variable decorated with SubgroupLocalInvocationId **must** be declared as a scalar 32-bit integer value

SubgroupSize

Decorating a variable with the SubgroupSize builtin decoration will make that variable contain the implementation-dependent number of invocations in a subgroup. This value **must** be a power-of-two integer.

If the shader was created with varying subgroup size allowed, the SubgroupSize decorated variable will contain the subgroup size for each subgroup that gets dispatched. This value **must** be between minSubgroupSize and maxSubgroupSize and **must** be uniform with subgroup scope.

If the shader was created with a required subgroup size, the SubgroupSize decorated variable will match that value.

If the shader does not allow varying subgroup sizes, the variable decorated with SubgroupSize will match subgroupSize.

The maximum number of invocations that an implementation can support per subgroup is 128.

Valid Usage

- VUID-SubgroupSize-SubgroupSize-04382
  The variable decorated with SubgroupSize **must** be declared using the Input Storage Class

- VUID-SubgroupSize-SubgroupSize-04383
  The variable decorated with `SubgroupSize` **must** be declared as a scalar 32-bit integer value

`TessCoord`

Decorating a variable with the `TessCoord` built-in decoration will make that variable contain the three-dimensional (u,v,w) barycentric coordinate of the tessellated vertex within the patch. u, v, and w are in the range [0,1] and vary linearly across the primitive being subdivided. For the tessellation modes of `Quads` or `IsoLines`, the third component is always zero.

Valid Usage

- VUID-TessCoord-TessCoord-04387
  The `TessCoord` decoration **must** be used only within the `TessellationEvaluation` `Execution Model`
- VUID-TessCoord-TessCoord-04388
  The variable decorated with `TessCoord` **must** be declared using the `Input` `Storage Class`
- VUID-TessCoord-TessCoord-04389
  The variable decorated with `TessCoord` **must** be declared as a three-component vector of 32-bit floating-point values

`TessLevelOuter`

Decorating a variable with the `TessLevelOuter` built-in decoration will make that variable contain the outer tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with `TessLevelOuter` **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with `TessLevelOuter` **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelOuter-TessLevelOuter-04390
  The `TessLevelOuter` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` `Execution Model`
- VUID-TessLevelOuter-TessLevelOuter-04391
  The variable decorated with `TessLevelOuter` within the `TessellationControl` `Execution Model` **must** be declared using the `Output` `Storage Class`
- VUID-TessLevelOuter-TessLevelOuter-04392
  The variable decorated with `TessLevelOuter` within the `TessellationEvaluation` `Execution Model` **must** be declared using the `Input` `Storage Class`
- VUID-TessLevelOuter-TessLevelOuter-04393

The variable decorated with `TessLevelOuter` **must** be declared as an array of size four, containing 32-bit floating-point values

`TessLevelInner`

Decorating a variable with the `TessLevelInner` built-in decoration will make that variable contain the inner tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with `TessLevelInner` **can** be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and **can** be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with `TessLevelInner` **can** read the values written by the tessellation control shader.

Valid Usage

- VUID-TessLevelInner-TessLevelInner-04394
  The `TessLevelInner` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` `Execution Model`
- VUID-TessLevelInner-TessLevelInner-04395
  The variable decorated with `TessLevelInner` within the `TessellationControl` `Execution Model` **must** be declared using the `Output` `Storage Class`
- VUID-TessLevelInner-TessLevelInner-04396
  The variable decorated with `TessLevelInner` within the `TessellationEvaluation` `Execution Model` **must** be declared using the `Input` `Storage Class`
- VUID-TessLevelInner-TessLevelInner-04397
  The variable decorated with `TessLevelInner` **must** be declared as an array of size two, containing 32-bit floating-point values

`VertexIndex`

Decorating a variable with the `VertexIndex` built-in decoration will make that variable contain the index of the vertex that is being processed by the current vertex shader invocation. For non-indexed draws, this variable begins at the `firstVertex` parameter to vkCmdDraw or the `firstVertex` member of a structure consumed by vkCmdDrawIndirect and increments by one for each vertex in the draw. For indexed draws, its value is the content of the index buffer for the vertex plus the `vertexOffset` parameter to vkCmdDrawIndexed or the `vertexOffset` member of the structure consumed by vkCmdDrawIndexedIndirect.

NOTE `VertexIndex` starts at the same starting value for each instance.

Valid Usage

- VUID-VertexIndex-VertexIndex-04398
  The `VertexIndex` decoration **must** be used only within the `Vertex` `Execution Model`

- VUID-VertexIndex-VertexIndex-04399
  The variable decorated with `VertexIndex` **must** be declared using the `Input` `Storage Class`
- VUID-VertexIndex-VertexIndex-04400
  The variable decorated with `VertexIndex` **must** be declared as a scalar 32-bit integer value

`ViewIndex`

The `ViewIndex` decoration **can** be applied to a shader input which will be filled with the index of the view that is being processed by the current shader invocation.

If multiview is enabled in the render pass, this value will be the index of one of the bits set in the view mask of the subpass the pipeline is compiled against. If multiview is not enabled in the render pass, this value will be zero.

Valid Usage

- VUID-ViewIndex-ViewIndex-04401
  The `ViewIndex` decoration **must** be used only within the `MeshEXT`, `Vertex`, `Geometry`, `TessellationControl`, `TessellationEvaluation` or `Fragment` `Execution Model`
- VUID-ViewIndex-ViewIndex-04402
  The variable decorated with `ViewIndex` **must** be declared using the `Input` `Storage Class`
- VUID-ViewIndex-ViewIndex-04403
  The variable decorated with `ViewIndex` **must** be declared as a scalar 32-bit integer value

`ViewportIndex`

Decorating a variable with the `ViewportIndex` built-in decoration will make that variable contain the index of the viewport.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with `ViewportIndex` can be written to with the viewport index to which the primitive produced by that shader will be directed.

The selected viewport index is used to select the viewport transform and scissor rectangle.

The last active *pre-rasterization shader stage* (in pipeline order) controls the `ViewportIndex` that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the `ViewportIndex`.

If the last active pre-rasterization shader stage shader entry point's interface does not include a variable decorated with `ViewportIndex` then the first viewport is used. If a pre-rasterization shader stage shader entry point's interface includes a variable decorated with `ViewportIndex`, it **must** write the same value to `ViewportIndex` for all output vertices of a given primitive.

In a fragment shader, the variable decorated with `ViewportIndex` contains the viewport index of the primitive that the fragment invocation belongs to.

Valid Usage

- VUID-ViewportIndex-ViewportIndex-04404
  The `ViewportIndex` decoration **must** be used only within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, `Geometry`, or `Fragment` `Execution Model`
- VUID-ViewportIndex-ViewportIndex-04405
  If the `shaderOutputViewportIndex` feature is not enabled then the `ViewportIndex` decoration **must** be used only within the `Geometry` or `Fragment` `Execution Model`
- VUID-ViewportIndex-ViewportIndex-04406
  The variable decorated with `ViewportIndex` within the `MeshEXT`, `MeshNV`, `Vertex`, `TessellationEvaluation`, or `Geometry` `Execution Model` **must** be declared using the `Output` `Storage Class`
- VUID-ViewportIndex-ViewportIndex-04407
  The variable decorated with `ViewportIndex` within the `Fragment` `Execution Model` **must** be declared using the `Input` `Storage Class`
- VUID-ViewportIndex-ViewportIndex-04408
  The variable decorated with `ViewportIndex` **must** be declared as a scalar 32-bit integer value for all supported execution models except `MeshEXT`
- VUID-ViewportIndex-ViewportIndex-07060
  The variable decorated with `ViewportIndex` within the `MeshEXT` `Execution Model` **must** also be decorated with the `PerPrimitiveEXT` decoration
- VUID-ViewportIndex-ViewportIndex-10601
  `ViewportIndex` within the `MeshEXT` `Execution Model` **must** decorate a scalar 32-bit integer member of a structure decorated as `Block`, or decorate a variable of type `OpTypeArray` of scalar 32-bit integer values
- VUID-ViewportIndex-ViewportIndex-10602
  If `ViewportIndex` is declared as an array of 32-bit integer values, within the `MeshEXT` `Execution Model`, size of the array **must** match the value specified by `OutputPrimitivesEXT`
- VUID-ViewportIndex-ViewportIndex-10603
  If `ViewportIndex` decorates a member of a structure, the variable declaration of the containing `Block` type **must** have an array size that matches the value specified by `OutputPrimitivesEXT`

`WorkgroupId`

Decorating a variable with the `WorkgroupId` built-in decoration will make that variable contain the global coordinate of the local workgroup that the current invocation is a member of. Each component is in the range [base,base + count), where base and count are based on the parameters passed into the dispatching or drawing commands in each dimension.

Valid Usage

- VUID-WorkgroupId-WorkgroupId-04422
  The `WorkgroupId` decoration **must** be used only within the `GLCompute`, `MeshEXT`, `TaskEXT`,

MeshNV, or TaskNV Execution Model

- VUID-WorkgroupId-WorkgroupId-04423
  The variable decorated with WorkgroupId **must** be declared using the Input Storage Class
- VUID-WorkgroupId-WorkgroupId-04424
  The variable decorated with WorkgroupId **must** be declared as a three-component vector of 32-bit integer values

WorkgroupSize

NOTE	SPIR-V 1.6 deprecated WorkgroupSize in favor of using the LocalSizeId Execution Mode instead. Support for LocalSizeId was added with VK_KHR_maintenance4 and promoted to core in Version 1.3.

Decorating an object with the WorkgroupSize built-in decoration will make that object contain the dimensions of a local workgroup. If an object is decorated with the WorkgroupSize decoration, this takes precedence over any LocalSize or LocalSizeId execution mode.

Valid Usage

- VUID-WorkgroupSize-WorkgroupSize-04425
  The WorkgroupSize decoration **must** be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model
- VUID-WorkgroupSize-WorkgroupSize-04426
  The variable decorated with WorkgroupSize **must** be a specialization constant or a constant
- VUID-WorkgroupSize-WorkgroupSize-04427
  The variable decorated with WorkgroupSize **must** be declared as a three-component vector of 32-bit integer values

WorldRayDirectionKHR

A variable decorated with the WorldRayDirectionKHR decoration will specify the direction of the ray being processed, in world space. The value is the parameter passed into the pipeline trace ray instruction.

Valid Usage

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04428
  The WorldRayDirectionKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model
- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04429
  The variable decorated with WorldRayDirectionKHR **must** be declared using the Input Storage Class
- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04430
  The variable decorated with WorldRayDirectionKHR **must** be declared as a three-component

vector of 32-bit floating-point values

`WorldRayOriginKHR`

A variable decorated with the `WorldRayOriginKHR` decoration will specify the origin of the ray being processed, in world space. The value is the parameter passed into the pipeline trace ray instruction.

Valid Usage

- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04431
  The `WorldRayOriginKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR` `Execution Model`
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04432
  The variable decorated with `WorldRayOriginKHR` **must** be declared using the `Input` `Storage Class`
- VUID-WorldRayOriginKHR-WorldRayOriginKHR-04433
  The variable decorated with `WorldRayOriginKHR` **must** be declared as a three-component vector of 32-bit floating-point values

`WorldToObjectKHR`

A variable decorated with the `WorldToObjectKHR` decoration will contain the current world-to-object transformation matrix, which is determined by the instance of the current intersection.

Valid Usage

- VUID-WorldToObjectKHR-WorldToObjectKHR-04434
  The `WorldToObjectKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-WorldToObjectKHR-WorldToObjectKHR-04435
  The variable decorated with `WorldToObjectKHR` **must** be declared using the `Input` `Storage Class`
- VUID-WorldToObjectKHR-WorldToObjectKHR-04436
  The variable decorated with `WorldToObjectKHR` **must** be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

`HitIsSphereNV`

A variable decorated with the `HitIsSphereNV` decoration will contain a non-zero value if the current ray hit a sphere primitive or zero otherwise.

Valid Usage

- VUID-HitIsSphereNV-HitIsSphereNV-10513
  The `HitIsSphereNV` decoration **must** be used only within the `AnyHitKHR`, or `ClosestHitKHR`

Execution Model

- VUID-HitIsSphereNV-HitIsSphereNV-10514
  The variable decorated with HitIsSphereNV **must** be declared using the Input Storage Class
- VUID-HitIsSphereNV-HitIsSphereNV-10515
  The variable decorated with HitIsSphereNV **must** be declared as a boolean value

HitIsLSSNV

A variable decorated with the HitIsLSSNV decoration will contain a non-zero value if the current ray hit a LSS primitive or zero otherwise.

Valid Usage

- VUID-HitIsLSSNV-HitIsLSSNV-10516
  The HitIsLSSNV decoration **must** be used only within the AnyHitKHR, or ClosestHitKHR Execution Model
- VUID-HitIsLSSNV-HitIsLSSNV-10517
  The variable decorated with HitIsLSSNV **must** be declared using the Input Storage Class
- VUID-HitIsLSSNV-HitIsLSSNV-10518
  The variable decorated with HitIsLSSNV **must** be declared as a boolean value

HitSpherePositionNV

A variable decorated with the HitSpherePositionNV decoration will contain the position of sphere primitive intersected by current ray.

Valid Usage

- VUID-HitSpherePositionNV-HitSpherePositionNV-10519
  The HitSpherePositionNV decoration **must** be used only within the AnyHitKHR, or ClosestHitKHR Execution Model
- VUID-HitSpherePositionNV-HitSpherePositionNV-10520
  The variable decorated with HitSpherePositionNV **must** be declared using the Input Storage Class
- VUID-HitSpherePositionNV-HitSpherePositionNV-10521
  The variable decorated with HitSpherePositionNV **must** be declared as a three-component vector of 32-bit floating-point values

HitSphereRadiusNV

A variable decorated with the HitSphereRadiusNV decoration will contain the radius of sphere primitive intersected by current ray.

Valid Usage

- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10522
  The `HitSphereRadiusNV` decoration **must** be used only within the `AnyHitKHR`, or `ClosestHitKHR` Execution Model
- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10523
  The variable decorated with `HitSphereRadiusNV` **must** be declared using the `Input` Storage Class
- VUID-HitSphereRadiusNV-HitSphereRadiusNV-10524
  The variable decorated with `HitSphereRadiusNV` **must** be declared as a scalar 32-bit floating-point value

`HitLSSPositionsNV`

A variable decorated with the `HitLSSPositionsNV` decoration will contain the position of the LSS primitive intersected by current ray.

Valid Usage

- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10525
  The `HitLSSPositionsNV` decoration **must** be used only within the `AnyHitKHR`, or `ClosestHitKHR` Execution Model
- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10526
  The variable decorated with `HitLSSPositionsNV` **must** be declared using the `Input` Storage Class
- VUID-HitLSSPositionsNV-HitLSSPositionsNV-10527
  The variable decorated with `HitLSSPositionsNV` **must** be declared as an array of size two, containing three-component vector of 32-bit floating-point values

`HitLSSRadiiNV`

A variable decorated with the `HitLSSRadiiNV` decoration will contain the radii of LSS primitive intersected by current ray.

Valid Usage

- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10528
  The `HitLSSRadiiNV` decoration **must** be used only within the `AnyHitKHR`, or `ClosestHitKHR` Execution Model
- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10529
  The variable decorated with `HitLSSRadiiNV` **must** be declared using the `Input` Storage Class
- VUID-HitLSSRadiiNV-HitLSSRadiiNV-10530
  The variable decorated with `HitLSSRadiiNV` **must** be declared as an array of size two, containing 32-bit floating-point values

`ClusterIDNV`

A variable decorated with the `ClusterIDNV` decoration will contain the triangle cluster ID of a hit triangle in a cluster acceleration structure if the current ray hit a triangle primitive or `-1` otherwise.

Valid Usage

- VUID-ClusterIDNV-ClusterIDNV-10531
  The `ClusterIDNV` decoration **must** be used only within the `AnyHitKHR`, or `ClosestHitKHR` `Execution Model`
- VUID-ClusterIDNV-ClusterIDNV-10532
  The variable decorated with `ClusterIDNV` **must** be declared using the `Input` `Storage Class`
- VUID-ClusterIDNV-ClusterIDNV-10533
  The variable decorated with `ClusterIDNV` **must** be declared as a scalar 32-bit integer value

Chapter 20. Sampling

Sampling is performed on images, typically in conjunction with a sampler, to return a value based on a neighborhood of texels in an image.

Sampling instructions include the functionality of the following SPIR-V Image Instructions:

- `OpImageSample*` and `OpImageSparseSample*` read one or more neighboring texels of the image, and filter the texel values based on the state of the sampler.
  - Instructions with `ImplicitLod` in the name determine the LOD used in the sampling operation based on the coordinates used in neighboring fragments.
  - Instructions with `ExplicitLod` in the name determine the LOD used in the sampling operation based on additional coordinates.
  - Instructions with `Proj` in the name apply homogeneous projection to the coordinates.
- `OpImageFetch` and `OpImageSparseFetch` return a single texel of the image. No sampler is used.
- `OpImage*Gather`, and `OpImageSparse*Gather` read neighboring texels and return a single component of each.
- `OpImage*Dref*` instructions apply depth comparison on the texel values.
- `OpImageSparse*` instructions additionally return a sparse residency code.
- `OpImageQueryLod` returns the LOD parameters that would be used in a sample operation. The actual operation is not performed.

20.1. Sampling Coordinate Systems

There are three sampling coordinate systems used in this chapter:

- Normalized Sampling Coordinates
- Unnormalized Sampling Coordinates
- Integer Sampling Coordinates

SPIR-V `OpImageFetch`, and `OpImageSparseFetch` instructions use integer sampling coordinates.

Other image instructions **can** use either normalized or unnormalized sampling coordinates (selected by the `unnormalizedCoordinates` state of the sampler used in the instruction), but there are limitations on what operations, image state, and sampler state is supported. Normalized coordinates are logically converted to unnormalized as part of image operations, and certain steps are only performed on normalized coordinates. The array layer coordinate is always treated as unnormalized even when other coordinates are normalized.

20.1.1. Normalized Sampling Coordinates

Normalized sampling coordinates are referred to as (s,t,r,q,a), with the coordinates having the following meanings:

- s: Coordinate in the first dimension of an image.
- t: Coordinate in the second dimension of an image.
- r: Coordinate in the third dimension of an image.
  - (s,t,r) are interpreted as a direction vector for Cube images.
- q: Fourth coordinate, for homogeneous (projective) coordinates.
- a: Coordinate for array layer.

The values s,t,r,q,a are all floating-point values. Values of s,t,r in the normalized range [0.0,1.0] and a in the range [0.0, layers - 1] correspond to locations in the image being sampled, where layers is the dimension of the image with the same name. The value q is used as a divisor for each of s,t,r, rather than directly corresponding to a location in an image.

The coordinates are extracted from the SPIR-V operand based on the dimensionality of the image variable and type of instruction. For `Proj` instructions, the components are in order (s, [t,] [r,] q), with t and r being conditionally present based on the `Dim` of the image. For non-`Proj` instructions, the coordinates are (s [,t] [,r] [,a]), with t and r being conditionally present based on the `Dim` of the image and a being conditionally present based on the `Arrayed` property of the image. Projective image instructions are not supported on `Arrayed` images.

20.1.2. Unnormalized Sampling Coordinates

Unnormalized sampling coordinates are referred to as (u,v,w,a), with the coordinates having the following meanings:

- u: Coordinate in the first dimension of an image.
- v: Coordinate in the second dimension of an image.
- w: Coordinate in the third dimension of an image.
- a: Coordinate for array layer.

The values u,v,w,a are all floating-point values, with values in the ranges [0.0,width), [0.0, height), [0.0, depth), and [0,layers-1] corresponding to locations in the image being sampled. The values width, height, depth, and layers are the dimensions of the accessed image.

Only the u and v coordinates are directly extracted from the SPIR-V operand, because only 1D and 2D (non-`Arrayed`) dimensionalities support unnormalized coordinates. The components are in order (u [,v]), with v being conditionally present when the dimensionality is 2D. When normalized coordinates are converted to unnormalized coordinates, all four coordinates are used.

20.1.3. Integer Sampling Coordinates

Integer sampling coordinates are referred to as (i,j,k,l,n), with the coordinates having the following meanings:

- i: Coordinate in the first dimension of an image.
- j: Coordinate in the second dimension of an image.

- k: Coordinate in the third dimension of an image.
- l: Coordinate for array layer.
- n: Index of the sample within the texel.

The values i,j,k,l,n are all integer values, with values in the ranges [0,width), [0, height), [0, depth), [0,layers), and [0,samples) corresponding to locations in the image being sampled. The values width, height, depth, layers, and samples are the dimensions of the accessed image.

They are extracted from the SPIR-V operand in order (i [,j] [,k] [,l] [,n]), with j and k conditionally present based on the `Dim` of the image, and l conditionally present based on the `Arrayed` property of the image. n is conditionally present and is taken from the `Sample` image operand.

Integer coordinates are used as image coordinates to perform an image read after sampling calculations, directly translating each coordinate as follows:

- i → x
- j → y
- k → z
- l → layer
- n → sample

level is calculated separately via the `Lod` image operand if present, or is set to 0 otherwise.

Integer sampling coordinates are used as image coordinates to perform an image read after sampling calculations, directly translating each coordinate as follows:

- x = i
- y = j
- z = k
- layer = l + VkImageSubresourceRange::`baseArrayLayer`
- sample = n

20.1.4. Sampling Coordinate Diagrams

The following diagrams illustrate the different sampling coordinate systems for 2D images.

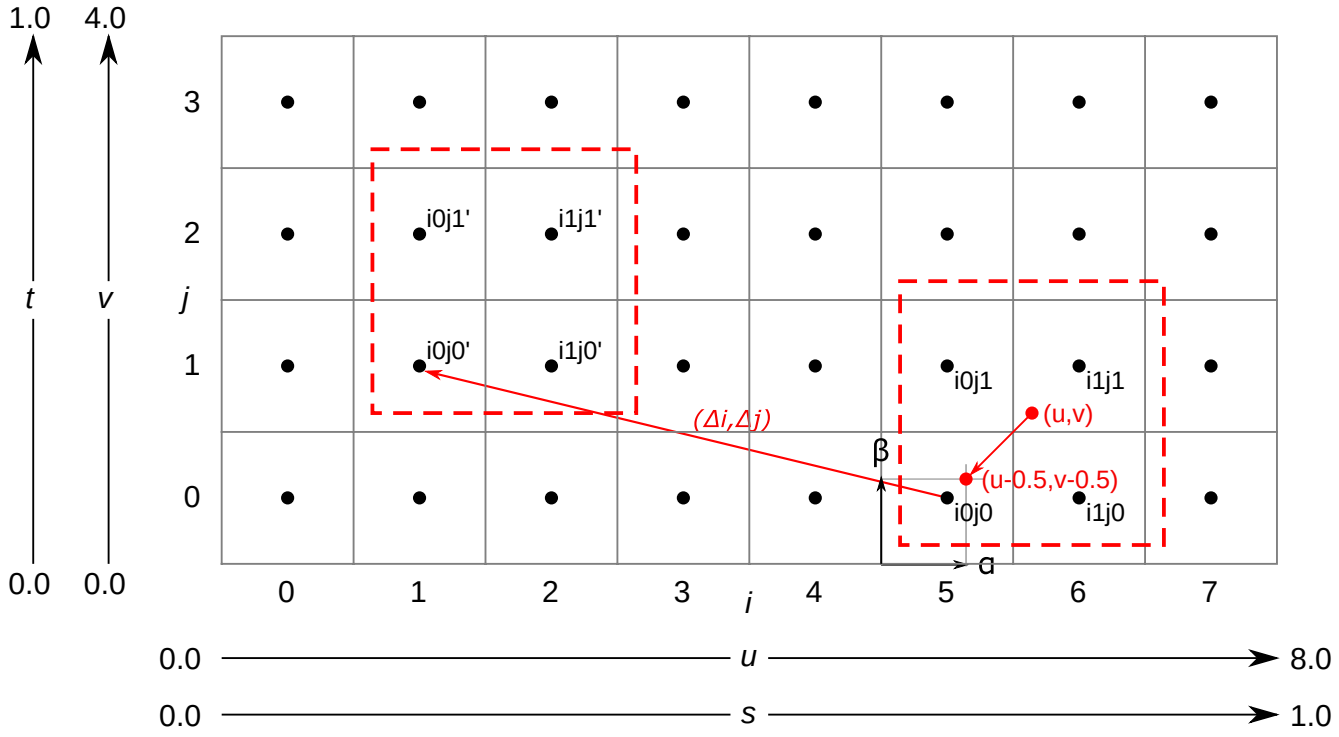

Figure 3. Texel Coordinate Systems, Linear Filtering

The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Normalized texel coordinates:
  - The s coordinate goes from 0.0 to 1.0.
  - The t coordinate goes from 0.0 to 1.0.
- Unnormalized texel coordinates:
  - The u coordinate within the range 0.0 to 8.0 is within the image, otherwise it is outside the image.
  - The v coordinate within the range 0.0 to 4.0 is within the image, otherwise it is outside the image.
- Integer texel coordinates:
  - The i coordinate within the range 0 to 7 addresses texels within the image, otherwise it is outside the image.
  - The j coordinate within the range 0 to 3 addresses texels within the image, otherwise it is outside the image.
- Also shown for linear filtering:
  - Given the unnormalized coordinates (u,v), the four texels selected are i_0j_0, i_1j_0, i_0j_1, and i_1j_1.
  - The fractions α and β.
  - Given the offset Δ_i and Δ_j, the four texels selected by the offset are $i_0j'_0$, $i_1j'_0$, $i_0j'_1$, and $i_1j'_1$.

NOTE For formats with reduced-resolution components, Δ_i and Δ_j are relative to the resolution of the highest-resolution component, and therefore may be divided by two relative to the unnormalized coordinate space of the lower-resolution components.

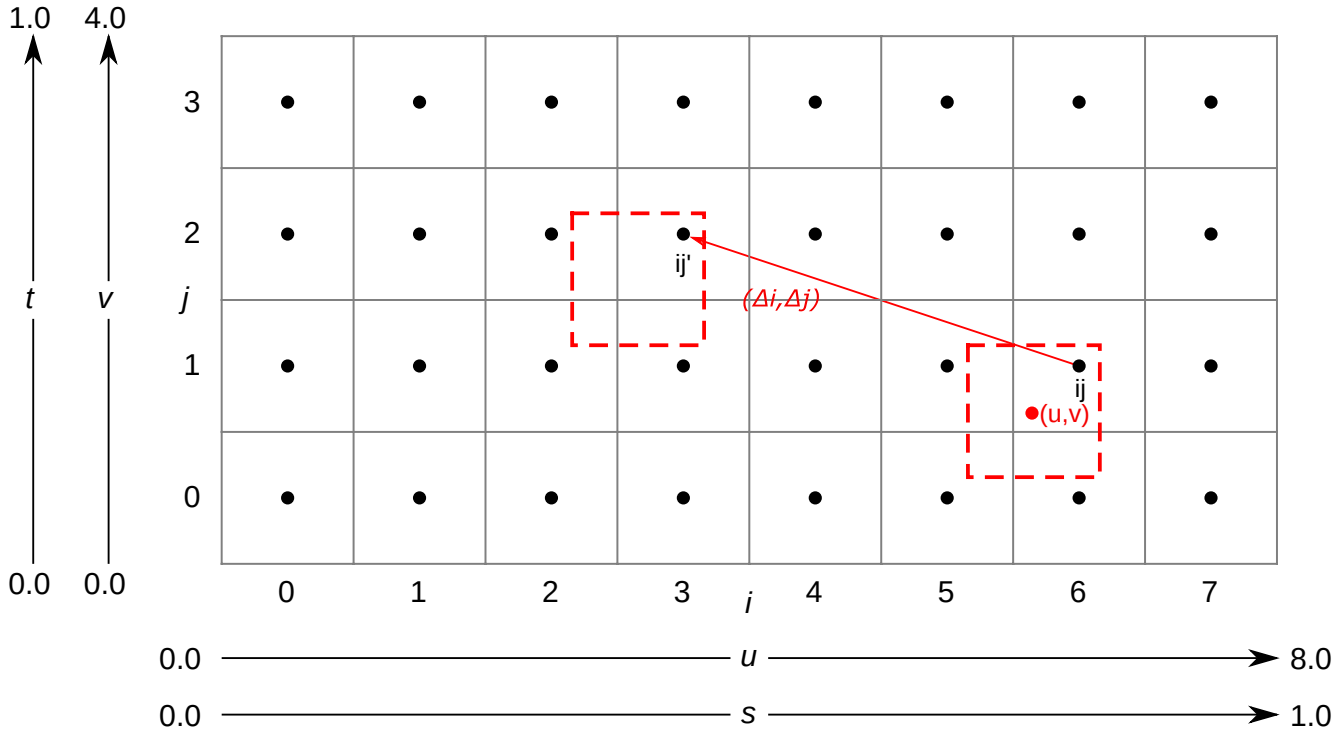

Figure 4. Texel Coordinate Systems, Nearest Filtering

The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Texel coordinates as above. Also shown for nearest filtering:
  - Given the unnormalized coordinates (u,v), the texel selected is ij.
  - Given the offset Δ_i and Δ_j, the texel selected by the offset is ij'.

20.2. Sampling Operations

Sampling instructions are SPIR-V image instructions that read from an image with a sampler. *Sampling operations* are a set of steps that are performed on state, coordinates, and texel values while processing a sampling instruction, and which are common to some or all sampling instructions. They include the following steps, which are performed in the listed order:

- Validation operations
  - Instruction/Format/Sampler/Image validation
  - Coordinate validation
  - Layout validation
  - Cube Map Edge Handling
- Border Replacement
- Texel Reads
- Depth comparison
- Component swizzle
- Chroma reconstruction
- Y'C_BC_R conversion

For sampling instructions involving multiple texels (for sampling or gathering), these steps are applied for each texel that is used in the instruction. Depending on the type of sampling instruction, other steps are conditionally performed between these steps or involving multiple coordinate or texel values.

If Chroma Reconstruction is implicit, Texel Filtering instead takes place during chroma reconstruction, before sampler $Y'C_BC_R$ conversion occurs.

20.2.1. Texel Input Validation Operations

Texel input validation operations inspect instruction/image/sampler state or coordinates, and in certain circumstances cause the texel value to be replaced or become undefined. There are a series of validations that the texel undergoes.

Instruction/Format/Sampler/Image View Validation

There are a number of cases where a SPIR-V instruction **can** mismatch with the sampler, the image view, or both, and a number of further cases where the sampler **can** mismatch with the image view. In such cases the value of the texel returned is poison.

These cases include:

- The sampler `borderColor` is an integer type and the image view `format` is not one of the VkFormat integer types or a stencil component of a depth/stencil format.
- The sampler `borderColor` is a float type and the image view `format` is not one of the VkFormat float types or a depth component of a depth/stencil format.
- The sampler `borderColor` is one of the opaque black colors (VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK or VK_BORDER_COLOR_INT_OPAQUE_BLACK) and the image view VkComponentSwizzle for any of the VkComponentMapping components is not the identity swizzle, and VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::`borderColorSwizzleFromImage` feature is not enabled, and VkSamplerBorderColorComponentMappingCreateInfoEXT is not specified.
- VkSamplerBorderColorComponentMappingCreateInfoEXT::`components`, if specified, has a component swizzle that does not match the component swizzle of the image view, and either component swizzle is not a form of identity swizzle.
- VkSamplerBorderColorComponentMappingCreateInfoEXT::`srgb`, if specified, does not match the sRGB encoding of the image view.
- The sampler `borderColor` is a custom color (VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT) and the supplied VkSamplerCustomBorderColorCreateInfoEXT::`customBorderColor` is outside the bounds of the values representable in the image view's `format`.
- The sampler `borderColor` is a custom color (VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT) and the image view VkComponentSwizzle for any of the VkComponentMapping components is not the identity swizzle, and VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::`borderColorSwizzleFromImage` feature is not enabled, and VkSamplerBorderColorComponentMappingCreateInfoEXT is not specified.

- The VkImageLayout of any subresource in the image view does not match the VkDescriptorImageInfo::imageLayout used to write the image descriptor.
- The SPIR-V Image Format is not compatible with the image view's or buffer view's format.
- The sampler unnormalizedCoordinates is VK_TRUE and any of the limitations of unnormalized coordinates are violated.
- The sampler was created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT and the image was not created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT.
- The sampler was not created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT and the image was created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT.
- The sampler was created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT and is used with a function that is not OpImageSampleImplicitLod or OpImageSampleExplicitLod, or is used with operands Offset or ConstOffsets.
- The SPIR-V instruction is one of the OpImage*Dref* instructions and the sampler compareEnable is VK_FALSE
- The SPIR-V instruction is not one of the OpImage*Dref* instructions and the sampler compareEnable is VK_TRUE
- The SPIR-V instruction is one of the OpImage*Dref* instructions, the image view format is one of the depth/stencil formats, and the image view aspect is not VK_IMAGE_ASPECT_DEPTH_BIT.
- The SPIR-V instruction's image variable's properties are not compatible with the image view:
  - If the image view's viewType is VK_IMAGE_VIEW_TYPE_1D_ARRAY or VK_IMAGE_VIEW_TYPE_2D_ARRAY, and the image was not created with VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR, then the instruction **must** have Arrayed = 1.
  - If the image view's viewType is VK_IMAGE_VIEW_TYPE_1D or VK_IMAGE_VIEW_TYPE_2D, and the image was not created with VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR, the instruction **must** have Arrayed = 0.
  - If the image view's viewType is VK_IMAGE_VIEW_TYPE_1D_ARRAY or VK_IMAGE_VIEW_TYPE_2D_ARRAY and Arrayed = 0, the image view **must** have been created with a single layer.
  - If the image view's viewType is VK_IMAGE_VIEW_TYPE_CUBE_ARRAY then the instruction **must** have Arrayed = 1.
  - If the image view's viewType is VK_IMAGE_VIEW_TYPE_CUBE then the instruction **must** have Arrayed = 0.
  - If the image was created with VkImageCreateInfo::samples equal to VK_SAMPLE_COUNT_1_BIT, the instruction **must** have MS = 0.
  - If the image was created with VkImageCreateInfo::samples not equal to VK_SAMPLE_COUNT_1_BIT, the instruction **must** have MS = 1.
  - If the Sampled Type of the OpTypeImage does not match the SPIR-V Type.

    - If the signedness of any read or sample operation does not match the signedness of the image's format.
- The sampler was created with a specified VkSamplerCustomBorderColorCreateInfoEXT::`format` which does not match the VkFormat of the image view(s) it is sampling.
- The sampler is sampling an image view of VK_FORMAT_B4G4R4A4_UNORM_PACK16, VK_FORMAT_B5G6R5_UNORM_PACK16, or VK_FORMAT_B5G5R5A1_UNORM_PACK16 format without a specified VkSamplerCustomBorderColorCreateInfoEXT::`format`.

If the underlying `VkImage` format has an X component in its format description, undefined values are read from those bits.

NOTE

If the `VkImage` format and `VkImageView` format are the same, these bits will be unused by format conversion and this will have no effect. However, if the `VkImageView` format is different, then some bits of the result may be undefined. For example, when a VK_FORMAT_R10X6_UNORM_PACK16 `VkImage` is sampled via a VK_FORMAT_R16_UNORM `VkImageView`, the low 6 bits of the value before format conversion are undefined and format conversion may return a range of different values.

NOTE

When accessing storage images or texel buffers, there are many valid usage statements that prevent the `OpTypeImage` and VkFormat from being different with respect to things such as numeric type, number of components, etc. Texel output validation covers cases such as using `R32ui` with VK_FORMAT_R8_UINT that for historical reasons are not considered invalid usage, but still result in undefined values. Validation layers will provide a warning in these undefined value cases.

NOTE

Some implementations will return undefined values in the case where a sampler uses a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT, the sampler is used with operands `Offset`, `ConstOffset`, or `ConstOffsets`, and the value of the offset is larger than or equal to the corresponding width, height, or depth of any accessed image level.

This behavior was not tested prior to Vulkan conformance test suite version 1.3.8.0. Affected implementations will have a conformance test waiver for this issue.

Layout Validation

If all planes of a *disjoint multi-planar* image are not in the same image layout, the image **must** not be sampled with sampler $Y'C_BC_R$ conversion enabled.

Coordinate Validation

Once the normalized or unnormalized coordinates have been converted to integer image coordinates, the integer coordinates are validated as image coordinates, as outlined in Image Coordinate Validation, converted as follows:

- x = i
- y = j
- z = k
- layer = l
- sample = n
- level = d

Cube Map Edge Handling

When sampling a cube map, if the image coordinates are out of bounds of the selected cube map face, the following steps are performed.

> **NOTE** This does not occur when using VK_FILTER_NEAREST filtering within a mip level, since VK_FILTER_NEAREST is treated as using VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE.

- Cube Map Edge Texel
  - If the texel lies beyond the selected cube map face in either only x or only y, then the coordinates (x,y,layer) are transformed to select the adjacent texel from the appropriate neighboring face.
- Cube Map Corner Texel
  - If the texel lies beyond the selected cube map face in both x and y, then there is no unique neighboring face from which to read that texel. The texel **should** be replaced by the average of the three values of the adjacent texels in each incident face. However, implementations **may** replace the cube map corner texel by other methods. The methods are subject to the constraint that for linear filtering if the three available texels have the same value, the resulting filtered texel **must** have that value, and for cubic filtering if the twelve available samples have the same value, the resulting filtered texel **must** have that value.

20.2.2. Border Replacement

If the sampler includes a border, out of bounds texels are replaced with a value based on the image format and the `borderColor` of the sampler. The border color is:

Table 25. Border Color B, Custom Border Color VkSamplerCustomBorderColorCreateInfoEXT ::customBorderColor U

Sampler `borderColor`	**Corresponding Border Color**
VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 0.0]$
VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK	$[B_r, B_g, B_b, B_a] = [0.0, 0.0, 0.0, 1.0]$
VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE	$[B_r, B_g, B_b, B_a] = [1.0, 1.0, 1.0, 1.0]$
VK_BORDER_COLOR_INT_TRANSPARENT_BLACK	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 0]$
VK_BORDER_COLOR_INT_OPAQUE_BLACK	$[B_r, B_g, B_b, B_a] = [0, 0, 0, 1]$

Sampler `borderColor`	Corresponding Border Color
VK_BORDER_COLOR_INT_OPAQUE_WHITE	$[B_r, B_g, B_b, B_a] = [1, 1, 1, 1]$
VK_BORDER_COLOR_FLOAT_CUSTOM_EXT	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$
VK_BORDER_COLOR_INT_CUSTOM_EXT	$[B_r, B_g, B_b, B_a] = [U_r, U_g, U_b, U_a]$

The custom border color (U) **may** be rounded by implementations prior to texel replacement, but the error introduced by such a rounding **must** not exceed one ULP of the image's `format`.

NOTE The names `VK_BORDER_COLOR_*_TRANSPARENT_BLACK`, `VK_BORDER_COLOR_*_OPAQUE_BLACK`, and `VK_BORDER_COLOR_*_OPAQUE_WHITE` are meant to describe which components are zeros and ones in the vocabulary of compositing, and are not meant to imply that the numerical value of VK_BORDER_COLOR_INT_OPAQUE_WHITE is a saturating value for integers.

This is substituted for the texel value by replacing the number of components in the image format

Table 26. Border Texel Components After Replacement

Texel Aspect or Format	Component Assignment
Depth aspect	$D = B_r$
Stencil aspect	$S = B_r$†
One component color format	$Color_r = B_r$
Two component color format	$[Color_r,Color_g] = [B_r,B_g]$
Three component color format	$[Color_r,Color_g,Color_b] = [B_r,B_g,B_b]$
Four component color format	$[Color_r,Color_g,Color_b,Color_a] = [B_r,B_g,B_b,B_a]$
Single component alpha format	$[Color_r,Color_g,Color_b, Color_a] = [0,0,0,B_a]$

† $S = B_g$ **may** be substituted as the replacement method by the implementation when VkSamplerCreateInfo::`borderColor` is VK_BORDER_COLOR_INT_CUSTOM_EXT and VkSamplerCustomBorderColorCreateInfoEXT::`format` is VK_FORMAT_UNDEFINED. Implementations **should** use $S = B_r$ as the replacement method.

If `rgba4OpaqueBlackSwizzled` is VK_FALSE, the implementation **may** swap the blue and alpha channels when sampling non-custom border colors with the VK_FORMAT_B4G4R4A4_UNORM_PACK16 format, or the red and alpha channels with the VK_FORMAT_R4G4B4A4_UNORM_PACK16 format.

NOTE As VK_FORMAT_B4G4R4A4_UNORM_PACK16 is required by Vulkan, support must be advertised for this format. Some Vulkan implementations on Apple hardware implement these formats through a hardware format with a different channel order, swizzled to match Vulkan's expectations. Unfortunately the swizzle cannot be readily applied to the fixed border colors - resulting in the apparent channel swap. For most standard border colors this does not result in a modification to the sampled output. However, `VK_BORDER_COLOR_*_OPAQUE_BLACK` will instead be sampled as transparent red or blue. If the `customBorderColorWithoutFormat` feature is

> supported and enabled, this functionality is expected to work without issue, but this feature may come with a performance cost.

When border color replacement occurs, texel reads are skipped, and the replaced color is used for ongoing operations instead.

20.2.3. Texel Reads

A texel is read from an image, performed as outlined in Image Reads, using the converted image coordinates.

The returned components of each texel are then processed by further input operations.

20.2.4. Depth Compare Operation

If the image view has a depth/stencil format, the depth component is selected by the `aspectMask`, and the operation is an `OpImage*Dref*` instruction, a depth comparison is performed. The result is 1.0 if the comparison evaluates to true, and 0.0 otherwise. This value replaces the depth component D.

The compare operation is selected by the VkCompareOp value set by VkSamplerCreateInfo ::`compareOp`. The reference value from the SPIR-V operand D_{ref} and the texel depth value D_{tex} are used as the *reference* and *test* values, respectively, in that operation.

If the image being sampled has an unsigned normalized fixed-point format, then D_{ref} is clamped to [0,1] before the compare operation.

If the value of `magFilter` is VK_FILTER_LINEAR, or the value of `minFilter` is VK_FILTER_LINEAR, then D may be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value **must** be in the range [0,1] and should be proportional to, or a weighted average of, the number of comparison passes or failures.

20.2.5. Component Swizzle

All texel input instructions apply a *swizzle* based on:

- the VkComponentSwizzle enums in the `components` member of the VkImageViewCreateInfo structure for the image being read if sampler $Y'C_BC_R$ conversion is not enabled, and
- the VkComponentSwizzle enums in the `components` member of the VkSamplerYcbcrConversionCreateInfo structure for the sampler $Y'C_BC_R$ conversion if sampler $Y'C_BC_R$ conversion is enabled.

The swizzle **can** rearrange the components of the texel, or substitute zero or one for any components. It is defined as follows for each color component:

$$Color'_{component} = \begin{cases} Color_r & \text{for RED swizzle} \\ Color_g & \text{for GREEN swizzle} \\ Color_b & \text{for BLUE swizzle} \\ Color_a & \text{for ALPHA swizzle} \\ 0 & \text{for ZERO swizzle} \\ one & \text{for ONE swizzle} \\ identity & \text{for IDENTITY swizzle} \end{cases}$$

where:

$$one = \begin{cases} 1.0\text{f} & \text{for floating-point components} \\ 1 & \text{for integer components} \end{cases}$$

$$identity = \begin{cases} Color_r & \text{for } component = r \\ Color_g & \text{for } component = g \\ Color_b & \text{for } component = b \\ Color_a & \text{for } component = a \end{cases}$$

If the border color is one of the VK_BORDER_COLOR_*_OPAQUE_BLACK enums and the VkComponentSwizzle is not the identity swizzle for all components, the value of the texel after swizzle is undefined.

If the image view has a depth/stencil format and the VkComponentSwizzle is VK_COMPONENT_SWIZZLE_ONE, and VkPhysicalDeviceMaintenance5Properties ::depthStencilSwizzleOneSupport is not VK_TRUE, the value of the texel after swizzle is undefined.

20.2.6. Sparse Residency

OpImageSparse* instructions return a structure which includes a *residency code* indicating whether any texels accessed by the instruction are sparse unbound texels. This code **can** be interpreted by the OpImageSparseTexelsResident instruction which converts the residency code to a boolean value.

20.2.7. Chroma Reconstruction

In some color models, the color representation is defined in terms of monochromatic light intensity (often called “luma”) and color differences relative to this intensity, often called “chroma”. It is common for color models other than RGB to represent the chroma components at lower spatial resolution than the luma component. This approach is used to take advantage of the eye’s lower spatial sensitivity to color compared with its sensitivity to brightness. Less commonly, the same approach is used with additive color, since the green component dominates the eye’s sensitivity to light intensity and the spatial sensitivity to color introduced by red and blue is lower.

Lower-resolution components are “downsampled” by resizing them to a lower spatial resolution than the component representing luminance. This process is also commonly known as “chroma subsampling”. There is one luminance sample in each texture texel, but each chrominance sample may be shared among several texels in one or both texture dimensions.

- “_444” formats do not spatially downsample chroma values compared with luma: there are

unique chroma samples for each texel.

- "_422" formats have downsampling in the x dimension (corresponding to u or s coordinates): they are sampled at half the resolution of luma in that dimension.
- "_420" formats have downsampling in the x dimension (corresponding to u or s coordinates) and the y dimension (corresponding to v or t coordinates): they are sampled at half the resolution of luma in both dimensions.

The process of reconstructing a full color value for texture access involves accessing both chroma and luma values at the same location. To generate the color accurately, the values of the lower-resolution components at the location of the luma samples are reconstructed from the lower-resolution sample locations, an operation known here as "chroma reconstruction" irrespective of the actual color model.

The location of the chroma samples relative to the luma coordinates is determined by the xChromaOffset and yChromaOffset members of the VkSamplerYcbcrConversionCreateInfo structure used to create the sampler $Y'C_BC_R$ conversion.

The following diagrams show the relationship between unnormalized (u,v) coordinates and (i,j) integer texel positions in the luma component (shown in black, with circles showing integer sample positions) and the texel coordinates of reduced-resolution chroma components, shown as crosses in red.

NOTE

If the chroma values are reconstructed at the locations of the luma samples by means of interpolation, chroma samples from outside the image bounds are needed; these are determined according to Wrapping Operation. These diagrams represent this by showing the bounds of the "chroma texel" extending beyond the image bounds, and including additional chroma sample positions where required for interpolation. The limits of a sample for NEAREST sampling is shown as a grid.

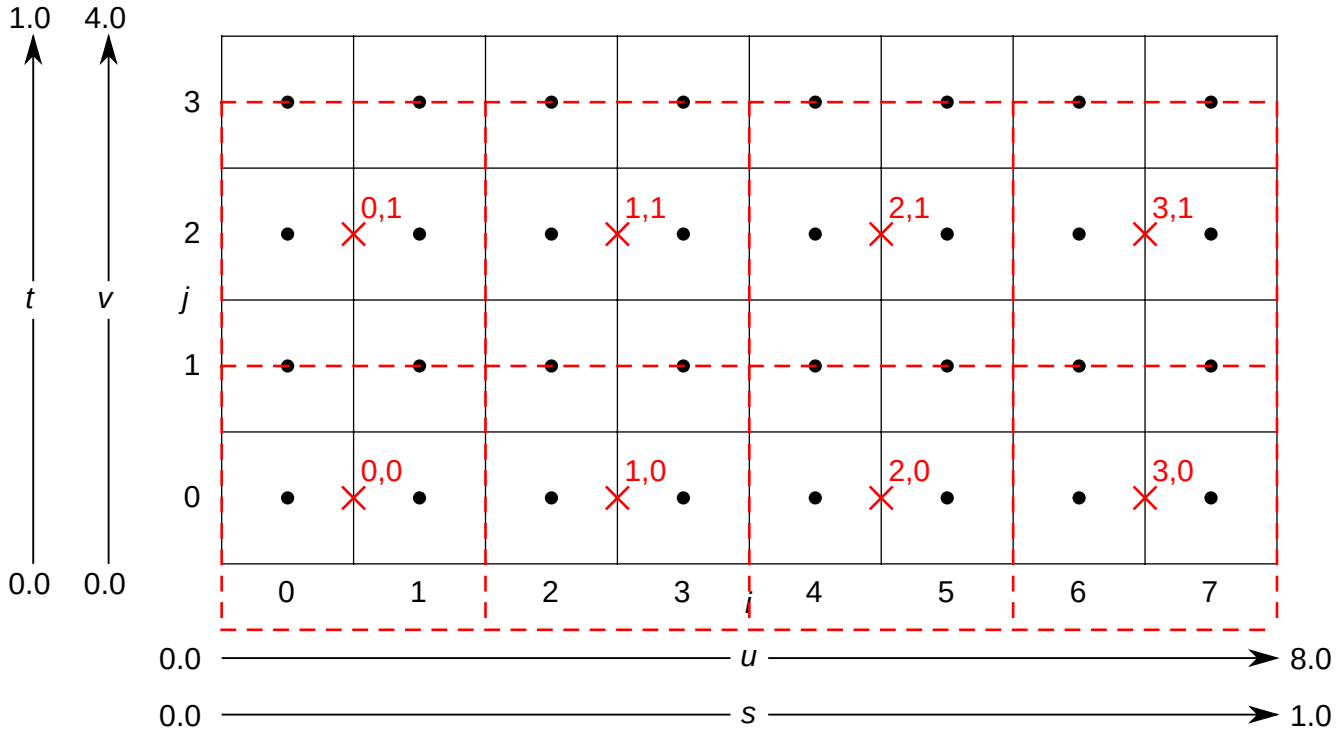

Figure 8. 420 downsampling, xChromaOffset=MIDPOINT, yChromaOffset=COSITED_EVEN

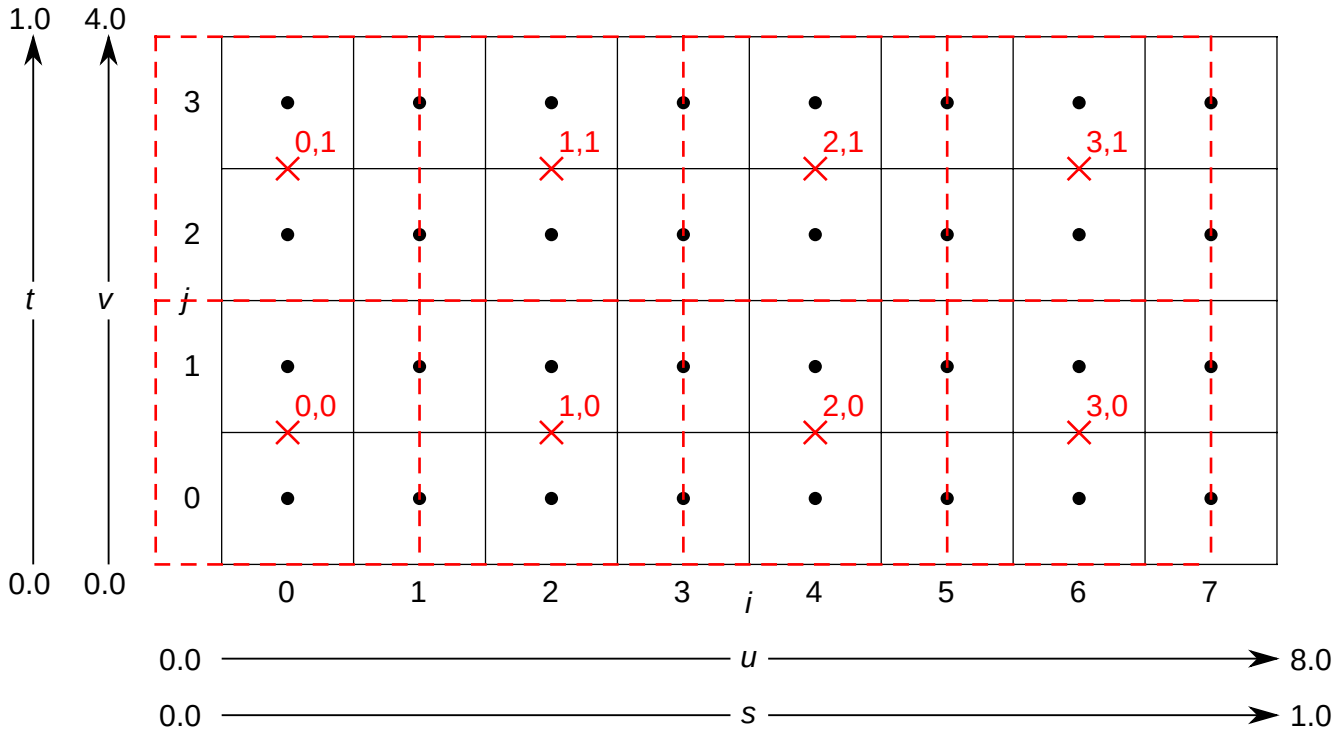

Figure 9. 420 downsampling, xChromaOffset=COSITED_EVEN, yChromaOffset=MIDPOINT

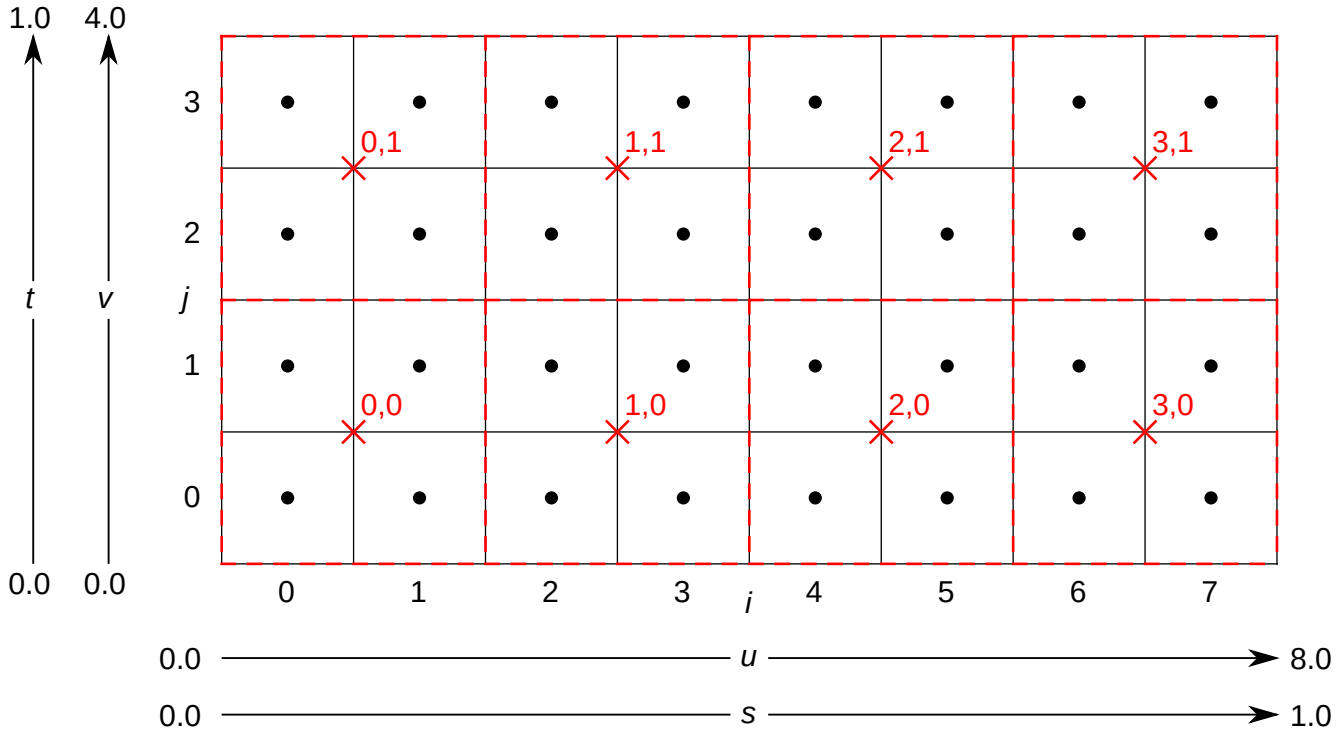

Figure 10. 420 downsampling, xChromaOffset=MIDPOINT, yChromaOffset=MIDPOINT

Reconstruction is implemented in one of two ways:

If the format of the image that is to be sampled sets VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT, or the VkSamplerYcbcrConversionCreateInfo's `forceExplicitReconstruction` is VK_TRUE, reconstruction is performed as an explicit step independent of filtering, described in the Explicit Reconstruction section.

If the format of the image that is to be sampled does not set VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT and if the VkSamplerYcbcrConversionCreateInfo's `forceExplicitReconstruction` is VK_FALSE, reconstruction is performed as an implicit part of filtering prior to color model conversion, with no separate post-conversion texel filtering step, as described in the Implicit Reconstruction section.

Explicit Reconstruction

- If the `chromaFilter` member of the VkSamplerYcbcrConversionCreateInfo structure is VK_FILTER_NEAREST:
  - If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a "`_422`" format), the $\tau_{ijk}[level]$ values accessed by texel filtering are reconstructed as follows:

$$\tau_R{}'(i,\ j) = \tau_R(\lfloor i \times 0.5 \rfloor,\ j)[level]$$
$$\tau_B{}'(i,\ j) = \tau_B(\lfloor i \times 0.5 \rfloor,\ j)[level]$$

  - If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a "`_420`" format), the $\tau_{ijk}[level]$ values accessed by texel filtering are reconstructed as follows:

$$\tau_R{}'(i,\ j) = \tau_R(\lfloor i \times 0.5 \rfloor,\ \lfloor j \times 0.5 \rfloor)[level]$$
$$\tau_B{}'(i,\ j) = \tau_B(\lfloor i \times 0.5 \rfloor,\ \lfloor j \times 0.5 \rfloor)[level]$$

NOTE `xChromaOffset` and `yChromaOffset` have no effect if `chromaFilter` is VK_FILTER_NEAREST for explicit reconstruction.

- If the `chromaFilter` member of the VkSamplerYcbcrConversionCreateInfo structure is VK_FILTER_LINEAR:
  - If the format's R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a "`_422`" format):
    - If `xChromaOffset` is VK_CHROMA_LOCATION_COSITED_EVEN:

$$\tau_{RB}{}'(i,\ j) = \begin{cases} \tau_{RB}(\lfloor i \times 0.5 \rfloor,\ j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor,\ j)[level] + \\ 0.5 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1,\ j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

    - If `xChromaOffset` is VK_CHROMA_LOCATION_MIDPOINT:

$$\tau_{RB}{}'(i,\ j) = \begin{cases} 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor - 1,\ j)[level] + \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor,\ j)[level], & 0.5 \times i = \lfloor 0.5 \times i \rfloor \\ 0.75 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor,\ j)[level] + \\ 0.25 \times \tau_{RB}(\lfloor i \times 0.5 \rfloor + 1,\ j)[level], & 0.5 \times i \neq \lfloor 0.5 \times i \rfloor \end{cases}$$

  - If the format's R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a "`_420`" format), a similar relationship applies. Due to the number of options, these formulae are expressed more concisely as follows:

$$i_{RB} = \begin{cases} 0.5 \times (i) & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times (i - 0.5) & \text{xChromaOffset=MIDPOINT} \end{cases}$$
$$j_{RB} = \begin{cases} 0.5 \times (j) & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times (j - 0.5) & \text{yChromaOffset=MIDPOINT} \end{cases}$$
$$i_{floor} = \lfloor i_{RB} \rfloor$$
$$j_{floor} = \lfloor j_{RB} \rfloor$$
$$i_{frac} = i_{RB} - i_{floor}$$
$$j_{frac} = j_{RB} - j_{floor}$$

$$\begin{aligned} \tau_{RB}{}'(i,\ j) = {} & \tau_{RB}(i_{floor},\ j_{floor})[level] && \times (1 - i_{frac}) && \times && (1 - j_{frac}) + \\ & \tau_{RB}(1 + i_{floor},\ j_{floor})[level] && \times (i_{frac}) && \times && (1 - j_{frac}) + \\ & \tau_{RB}(i_{floor},\ 1 + j_{floor})[level] && \times (1 - i_{frac}) && \times && (j_{frac}) + \\ & \tau_{RB}(1 + i_{floor},\ 1 + j_{floor})[level] && \times (i_{frac}) && \times && (j_{frac}) \end{aligned}$$

NOTE In the case where the texture itself is bilinearly interpolated as described in Texel Filtering, thus requiring four full-color samples for the filtering operation, and where the reconstruction of these samples uses bilinear interpolation in the chroma

components due to chromaFilter=VK_FILTER_LINEAR, up to nine chroma samples may be required, depending on the sample location.

Implicit Reconstruction

Implicit reconstruction takes place by the samples being interpolated, as required by the filter settings of the sampler, except that chromaFilter takes precedence for the chroma samples.

If chromaFilter is VK_FILTER_NEAREST, an implementation **may** behave as if xChromaOffset and yChromaOffset were both VK_CHROMA_LOCATION_MIDPOINT, irrespective of the values set.

NOTE This will not have any visible effect if the locations of the luma samples coincide with the location of the samples used for rasterization.

The sample coordinates are adjusted by the downsample factor of the component (such that, for example, the sample coordinates are divided by two if the component has a downsample factor of two relative to the luma component):

$$u_{RB}'(422/420) = \begin{cases} 0.5 \times (u + 0.5), & \text{xChromaOffset=COSITED_EVEN} \\ 0.5 \times u, & \text{xChromaOffset=MIDPOINT} \end{cases}$$

$$v_{RB}'(420) = \begin{cases} 0.5 \times (v + 0.5), & \text{yChromaOffset=COSITED_EVEN} \\ 0.5 \times v, & \text{yChromaOffset=MIDPOINT} \end{cases}$$

20.2.8. Sampler $Y'C_BC_R$ Conversion

Sampler $Y'C_BC_R$ conversion performs the following operations on sampled data, in order:

1. Sampler $Y'C_BC_R$ Component Swizzle
2. Sampler $Y'C_BC_R$ Range Expansion
3. Sampler $Y'C_BC_R$ Model Conversion

An implementation **may** combine the range expansion and model conversion into a single mathematical operation.

These operations are applied to color component values after sampling operations which are not specific to sampler $Y'C_BC_R$ conversion have completed.

Sampler $Y'C_BC_R$ Component Swizzle

Rather than the component swizzle performed as part of sampling, which is banned for $Y'C_BC_R$ image views used with sampler $Y'C_BC_R$ conversion, the component swizzle specified by VkSamplerYcbcrConversionCreateInfo::components is applied to the sampled data instead. This is applied in the same way as the component swizzle usually performed during sampling.

Sampler $Y'C_BC_R$ Range Expansion

Sampler $Y'C_BC_R$ range expansion is not applied if ycbcrModel is VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY.

For other values of ycbcrModel, range expansion applies independently to each component of the sampled data. For the purposes of range expansion and $Y'C_BC_R$ model conversion, the R and B components contain color difference (chroma) values and the G component contains luma. The A component is not modified by sampler $Y'C_BC_R$ range expansion.

The range expansion to be applied is defined by the ycbcrRange member of the VkSamplerYcbcrConversionCreateInfo structure:

- If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_FULL, the following transformations are applied:

$$
\begin{aligned}
Y' &= C'_{rgba}[G] \\
C_B &= C'_{rgba}[B] - \frac{2^{(n-1)}}{(2^n)-1} \\
C_R &= C'_{rgba}[R] - \frac{2^{(n-1)}}{(2^n)-1}
\end{aligned}
$$

> **NOTE**
>
> These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.
>
> Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan **may** also be updated to maintain parity.

- If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_NARROW, the following transformations are applied:

$$
\begin{aligned}
Y' &= \frac{C'_{rgba}[G] \times (2^n - 1) - 16 \times 2^{n-8}}{219 \times 2^{n-8}} \\
C_B &= \frac{C'_{rgba}[B] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}} \\
C_R &= \frac{C'_{rgba}[R] \times (2^n - 1) - 128 \times 2^{n-8}}{224 \times 2^{n-8}}
\end{aligned}
$$

> **NOTE**
>
> These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.

- n is the bit-depth of the components in the format.

The precision of the operations performed during range expansion **must** be at least that of the source format.

An implementation **may** clamp the results of these range expansion operations such that Y' falls in the range [0,1], and/or such that C_B and C_R fall in the range [-0.5,0.5].

Sampler $Y'C_BC_R$ Model Conversion

The range-expanded values are converted between color models, according to the color model

conversion specified in the `ycbcrModel` member:

VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY

The color components are not modified by the color model conversion since they are assumed already to represent the desired color model in which the shader is operating; $Y'C_BC_R$ range expansion is also ignored.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY

The color components are not modified by the color model conversion and are assumed to be treated as though in $Y'C_BC_R$ form both in memory and in the shader; $Y'C_BC_R$ range expansion is applied to the components as for other $Y'C_BC_R$ models, with the vector (C_R,Y',C_B,A) provided to the shader.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709

The color components are transformed from a $Y'C_BC_R$ representation to an R'G'B' representation as described in the "BT.709 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601

The color components are transformed from a $Y'C_BC_R$ representation to an R'G'B' representation as described in the "BT.601 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.

VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020

The color components are transformed from a $Y'C_BC_R$ representation to an R'G'B' representation as described in the "BT.2020 $Y'C_BC_R$ conversion" section of the Khronos Data Format Specification.

In this operation, each output component is dependent on each input component.

An implementation **may** clamp the R'G'B' results of these conversions to the range [0,1].

The precision of the operations performed during model conversion **must** be at least that of the source format.

The alpha component is not modified by these model conversions.

NOTE

Sampling operations in a non-linear color space can introduce color and intensity shifts at sharp transition boundaries. To avoid this issue, the technically precise color correction sequence described in the "Introduction to Color Conversions" chapter of the Khronos Data Format Specification may be performed as follows:

- Calculate the unnormalized texel coordinates corresponding to the desired sample position.
- For a `minFilter` or `magFilter` of VK_FILTER_NEAREST:
  1. Calculate (*i*,*j*) for the sample location as described under the "nearest filtering" formulae in (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection
  2. Calculate the normalized texel coordinates corresponding to these integer coordinates.

3. Sample using sampler $Y'C_BC_R$ conversion at this location.

- For a `minFilter` or `magFilter` of VK_FILTER_LINEAR:

  1. Calculate $(i_{[0,1]},j_{[0,1]})$ for the sample location as described under the "linear filtering" formulae in (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection
  2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
  3. Sample using sampler $Y'C_BC_R$ conversion at each of these locations.
  4. Convert the non-linear A'R'G'B' outputs of the $Y'C_BC_R$ conversions to linear ARGB values as described in the "Transfer Functions" chapter of the Khronos Data Format Specification.
  5. Interpolate the linear ARGB values using the α and β values described in the "linear filtering" section of (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection and the equations in Texel Filtering.

The additional calculations and, especially, additional number of sampling operations in the VK_FILTER_LINEAR case can be expected to have a performance impact compared with using the outputs directly. Since the variations from "correct" results are subtle for most content, the application author should determine whether a more costly implementation is strictly necessary.

If `chromaFilter`, and `minFilter` or `magFilter` are both VK_FILTER_NEAREST, these operations are redundant and sampling using sampler $Y'C_BC_R$ conversion at the desired sample coordinates will produce the "correct" results without further processing.

20.3. Normalized Texel Coordinate Operations

If the image sampler instruction provides normalized texel coordinates, some of the following operations are performed.

20.3.1. Projection Operation

For `Proj` image operations, the normalized texel coordinates (s,t,r,q,a) and (if present) the D_{ref} coordinate are transformed as follows:

$$s = \frac{s}{q}, \qquad \text{for 1D, 2D, or 3D image}$$

$$t = \frac{t}{q}, \qquad \text{for 2D or 3D image}$$

$$r = \frac{r}{q}, \qquad \text{for 3D image}$$

$$D_{ref} = \frac{D_{ref}}{q}, \qquad \text{if provided}$$

20.3.2. Derivative Image Operations

Derivatives are used for LOD selection. These derivatives are either implicit (in an `ImplicitLod` image instruction in a mesh, task, compute, or fragment shader) or explicit (provided explicitly by shader to the image instruction in any shader).

For implicit derivatives image instructions, the derivatives of texel coordinates are calculated in the same manner as derivative operations. That is:

$$\begin{aligned}
\partial s / \partial x &= dPdx(s), & \partial s / \partial y &= dPdy(s), && \text{for 1D, 2D, Cube, or 3D image} \\
\partial t / \partial x &= dPdx(t), & \partial t / \partial y &= dPdy(t), && \text{for 2D, Cube, or 3D image} \\
\partial r / \partial x &= dPdx(r), & \partial r / \partial y &= dPdy(r), && \text{for Cube or 3D image}
\end{aligned}$$

Partial derivatives not defined above for certain image dimensionalities are set to zero.

For explicit LOD image instructions, if the **optional** SPIR-V operand `Grad` is provided, then the operand values are used for the derivatives. The number of components present in each derivative for a given image dimensionality matches the number of partial derivatives computed above.

If the **optional** SPIR-V operand `Lod` is provided, then derivatives are set to zero, the cube map derivative transformation is skipped, and the scale factor operation is skipped. Instead, the floating-point scalar coordinate is directly assigned to λ_{base} as described in LOD Operation.

If the image or sampler object used by an implicit derivative image instruction is not uniform across the quad and `quadDivergentImplicitLod` is not supported, then the derivative and LOD values are undefined. Implicit derivatives are well-defined when the image and sampler and control flow are uniform across the quad, even if they diverge between different quads.

If `quadDivergentImplicitLod` is supported, then derivatives and implicit LOD values are well-defined even if the image or sampler object are not uniform within a quad. The derivatives are computed as specified above, and the implicit LOD calculation proceeds for each shader invocation using its respective image and sampler object.

20.3.3. Cube Map Face Selection and Transformations

For cube map image instructions, the (s,t,r) coordinates are treated as a direction vector (r_x,r_y,r_z). The direction vector is used to select a cube map face. The direction vector is transformed to a per-face texel coordinate system (s_{face},t_{face}), The direction vector is also used to transform the derivatives to per-face derivatives.

20.3.4. Cube Map Face Selection

The direction vector selects one of the cube map's faces based on the largest magnitude coordinate direction (the major axis direction). Since two or more coordinates **can** have identical magnitude, the implementation **must** have rules to disambiguate this situation.

The rules **should** have as the first rule that r_z wins over r_y and r_x, and the second rule that r_y wins over r_x. An implementation **may** choose other rules, but the rules **must** be deterministic and depend only on (r_x,r_y,r_z).

The layer number (corresponding to a cube map face), the coordinate selections for s_c, t_c, r_c, and the selection of derivatives, are determined by the major axis direction as specified in the following two tables.

Table 27. Cube Map Face and Coordinate Selection

Major Axis Direction	Layer Number	Cube Map Face	s_c	t_c	r_c
$+r_x$	0	Positive X	$-r_z$	$-r_y$	r_x
$-r_x$	1	Negative X	$+r_z$	$-r_y$	r_x
$+r_y$	2	Positive Y	$+r_x$	$+r_z$	r_y
$-r_y$	3	Negative Y	$+r_x$	$-r_z$	r_y
$+r_z$	4	Positive Z	$+r_x$	$-r_y$	r_z
$-r_z$	5	Negative Z	$-r_x$	$-r_y$	r_z

Table 28. Cube Map Derivative Selection

Major Axis Direction	$\partial s_c / \partial x$	$\partial s_c / \partial y$	$\partial t_c / \partial x$	$\partial t_c / \partial y$	$\partial r_c / \partial x$	$\partial r_c / \partial y$
$+r_x$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$
$-r_x$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$
$+r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$	$+\partial r_y / \partial x$	$+\partial r_y / \partial y$
$-r_y$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$
$+r_z$	$+\partial r_x / \partial x$	$+\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$+\partial r_z / \partial x$	$+\partial r_z / \partial y$
$-r_z$	$-\partial r_x / \partial x$	$-\partial r_x / \partial y$	$-\partial r_y / \partial x$	$-\partial r_y / \partial y$	$-\partial r_z / \partial x$	$-\partial r_z / \partial y$

20.3.5. Cube Map Coordinate Transformation

$$s_{face} = \frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2}$$
$$t_{face} = \frac{1}{2} \times \frac{t_c}{|r_c|} + \frac{1}{2}$$

20.3.6. Cube Map Derivative Transformation

The partial derivatives of the Cube Map Coordinate Transformations can be computed as:

$$\begin{aligned}\frac{\partial s_{face}}{\partial x} &= \frac{\partial}{\partial x}\left(\frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2}\right) \\ &= \frac{1}{2} \times \frac{\partial}{\partial x}\left(\frac{s_c}{|r_c|}\right) \\ &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial x - s_c \times \partial r_c / \partial x}{(r_c)^2}\right)\end{aligned}$$

The other derivatives are simplified similarly, resulting in

$$\begin{aligned}\frac{\partial s_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial s_c / \partial y - s_c \times \partial r_c / \partial y}{(r_c)^2}\right) \\ \frac{\partial t_{face}}{\partial x} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial x - t_c \times \partial r_c / \partial x}{(r_c)^2}\right) \\ \frac{\partial t_{face}}{\partial y} &= \frac{1}{2} \times \left(\frac{|r_c| \times \partial t_c / \partial y - t_c \times \partial r_c / \partial y}{(r_c)^2}\right)\end{aligned}$$

20.3.7. Scale Factor Operation, LOD Operation and Image Level(s) Selection

LOD selection **can** be either explicit (provided explicitly by the image instruction) or implicit (determined from a scale factor calculated from the derivatives). The LOD **must** be computed with `mipmapPrecisionBits` of accuracy.

Scale Factor Operation

The magnitude of the derivatives are calculated by:

$m_{ux} = |\partial s/\partial x| \times w_{base}$

$m_{vx} = |\partial t/\partial x| \times h_{base}$

$m_{wx} = |\partial r/\partial x| \times d_{base}$

$m_{uy} = |\partial s/\partial y| \times w_{base}$

$m_{vy} = |\partial t/\partial y| \times h_{base}$

$m_{wy} = |\partial r/\partial y| \times d_{base}$

where:

$\partial t/\partial x = \partial t/\partial y = 0$ (for 1D images)

$\partial r/\partial x = \partial r/\partial y = 0$ (for 1D, 2D, or Cube images)

and:

w_{base} = image.w

h_{base} = image.h

d_{base} = image.d

(for the `baseMipLevel`, from the image descriptor).

A point sampled in screen space has an elliptical footprint in texture space. The minimum and maximum scale factors (ρ_{min}, ρ_{max}) **should** be the minor and major axes of this ellipse.

The *scale factors* ρ_x and ρ_y, calculated from the magnitude of the derivatives in x and y, are used to compute the minimum and maximum scale factors.

ρ_x and ρ_y **may** be approximated with functions f_x and f_y, subject to the following constraints:

$$f_x \text{is continuous and monotonically increasing in each of} m_{ux},\ m_{vx},\ \text{and} m_{wx}$$
$$f_y \text{is continuous and monotonically increasing in each of} m_{uy},\ m_{vy},\ \text{and} m_{wy}$$

$$\max(|m_{ux}|,\ |m_{vx}|,\ |m_{wx}|) \le f_x \le \sqrt{2}(|m_{ux}| + |m_{vx}| + |m_{wx}|)$$
$$\max(|m_{uy}|,\ |m_{vy}|,\ |m_{wy}|) \le f_y \le \sqrt{2}(|m_{uy}| + |m_{vy}| + |m_{wy}|)$$

The minimum and maximum scale factors (ρ_{min},ρ_{max}) are determined by:

$\rho_{max} = \max(\rho_x, \rho_y)$

$\rho_{min} = \min(\rho_x, \rho_y)$

The ratio of anisotropy is determined by:

$\eta = \min(\rho_{max}/\rho_{min}, \max_{Aniso})$

where:

$sampler.max_{Aniso}$ = `maxAnisotropy` (from sampler descriptor)

$limits.max_{Aniso}$ = `maxSamplerAnisotropy` (from physical device limits)

$max_{Aniso} = \min(sampler.max_{Aniso}, limits.max_{Aniso})$

If $\rho_{max} = \rho_{min} = 0$, then all the partial derivatives are zero, the fragment's footprint in texel space is a point, and η **should** be treated as 1. If $\rho_{max} \neq 0$ and $\rho_{min} = 0$ then all partial derivatives along one axis are zero, the fragment's footprint in texel space is a line segment, and η **should** be treated as max_{Aniso}. However, anytime the footprint is small in texel space the implementation **may** use a smaller value of η, even when ρ_{min} is zero or close to zero. If either VkPhysicalDeviceFeatures ::`samplerAnisotropy` or VkSamplerCreateInfo::`anisotropyEnable` are VK_FALSE, max_{Aniso} is set to 1.

If $\eta = 1$, sampling is isotropic. If $\eta > 1$, sampling is anisotropic.

The sampling rate (N) is derived as:

$N = \lceil \eta \rceil$

An implementation **may** round N up to the nearest supported sampling rate. An implementation **may** use the value of N as an approximation of η.

LOD Operation

The LOD parameter λ is computed as follows:

$$\lambda_{base}(x, y) = \begin{cases} shaderOp.Lod & \text{(from optional SPIR-V operand)} \\ \log_2\left(\frac{\rho_{max}}{\eta}\right) & \text{otherwise} \end{cases}$$

$$\lambda'(x, y) = \lambda_{base} + \text{clamp}\left(sampler.bias + shaderOp.bias, -maxSamplerLodBias, maxSamplerLodBias\right)$$

$$\lambda = \begin{cases} lod_{max}, & \lambda' > lod_{max} \\ \lambda', & lod_{min} \leq \lambda' \leq lod_{max} \\ lod_{min}, & \lambda' < lod_{min} \\ undefined, & lod_{min} > lod_{max} \end{cases}$$

where:

$$sampler.bias = mipLodBias \quad \text{(from sampler descriptor)}$$

$$shaderOp.bias = \begin{cases} Bias & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$$

$$sampler.lod_{min} = minLod \quad \text{(from sampler descriptor)}$$

$$shaderOp.lod_{min} = \begin{cases} MinLod & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$$

$$lod_{min} = \max(sampler.lod_{min}, shaderOp.lod_{min})$$

$$lod_{max} = maxLod \quad \text{(from sampler descriptor)}$$

and maxSamplerLodBias is the value of the VkPhysicalDeviceLimits feature `maxSamplerLodBias`.

Image Level(s) Selection

The image level(s) d, d_{hi}, and d_{lo} which texels are read from are determined by an image-level parameter d_l, which is computed based on the LOD parameter, as follows:

$$d_l = \begin{cases} nearest(d'), & \text{mipmapMode is VK_SAMPLER_MIPMAP_MODE_NEAREST} \\ d', & \text{otherwise} \end{cases}$$

where:

$$d' = max(level_{base} + \text{clamp}(\lambda, 0, q), minLod_{imageView})$$

$$nearest(d') = \begin{cases} \lceil d' + 0.5 \rceil - 1, & \text{preferred} \\ \lfloor d' + 0.5 \rfloor, & \text{alternative} \end{cases}$$

and:

$$minLod_{imageView} = \begin{cases} minLodFloat_{imageView}, & \text{preferred} \\ minLodInteger_{imageView}, & \text{alternative} \end{cases}$$
$$level_{base} = baseMipLevel$$
$$q = levelCount - 1$$

`baseMipLevel` and `levelCount` are taken from the `subresourceRange` of the image view.

$minLod_{imageView}$ **must** be less or equal to $level_{base}$ + q.

If the sampler's `mipmapMode` is VK_SAMPLER_MIPMAP_MODE_NEAREST, then the level selected is d = d_l.

If the sampler's `mipmapMode` is VK_SAMPLER_MIPMAP_MODE_LINEAR, two neighboring levels are selected:

$$d_{hi} = \lfloor d_l \rfloor$$
$$d_{lo} = min(d_{hi} + 1, level_{base} + q)$$
$$\delta = d_l - d_{hi}$$

δ is the fractional value, quantized to the number of mipmap precision bits, used for linear filtering between levels.

20.3.8. (s,t,r,q,a) to (u,v,w,a) Transformation

The normalized texel coordinates are scaled by the image level dimensions and the array layer is selected.

This transformation is performed once for each level used in filtering (either d, or d_{hi} and d_{lo}).

$$u(x,\ y) = s(x,\ y) \times width_{scale} + \Delta_i$$

$$v(x,\ y) = \begin{cases} 0 & \text{for 1D images} \\ t(x,\ y) \times height_{scale} + \Delta_j & \text{otherwise} \end{cases}$$

$$w(x,\ y) = \begin{cases} 0 & \text{for 2D or Cube images} \\ r(x,\ y) \times depth_{scale} + \Delta_k & \text{otherwise} \end{cases}$$

$$a(x,\ y) = \begin{cases} a(x,\ y) & \text{for array images} \\ 0 & \text{otherwise} \end{cases}$$

where:

$width_{scale} = width_{level}$

$height_{scale} = height_{level}$

$depth_{scale} = depth_{level}$

and where (Δ_i, Δ_j, Δ_k) are taken from the image instruction if it includes a `ConstOffset` or `Offset` operand, otherwise they are taken to be zero.

Operations then proceed to Unnormalized Texel Coordinate Operations.

20.4. Unnormalized Texel Coordinate Operations

20.4.1. (u,v,w,a) to (i,j,k,l,n) Transformation and Array Layer Selection

The unnormalized texel coordinates are transformed to integer texel coordinates relative to the selected mipmap level.

The layer index l is computed as:

l = clamp(RNE(a), 0, `layerCount` - 1) + `baseArrayLayer`

where `layerCount` is the number of layers in the image subresource range of the image view, `baseArrayLayer` is the first layer from the subresource range, and where:

$$\text{RNE}\,(a) = \begin{cases} \text{roundTiesToEven}\,(a) & \text{preferred, from IEEE Std 754-2008 Floating-Point Arithmetic} \\ \lfloor a + 0.5 \rfloor & \text{alternative} \end{cases}$$

The sample index n is assigned the value 0.

Nearest filtering (VK_FILTER_NEAREST) computes the integer texel coordinates that the unnormalized coordinates lie within:

$$
\begin{aligned}
i &= \lfloor u + shift \rfloor \\
j &= \lfloor v + shift \rfloor \\
k &= \lfloor w + shift \rfloor
\end{aligned}
$$

where:

shift = 0.0

Linear filtering (VK_FILTER_LINEAR) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0 or i_1, j_0 or j_1, k_0 or k_1, as well as weights α, β, and γ.

$$
\begin{aligned}
i_0 &= \lfloor u - shift \rfloor \\
i_1 &= i_0 + 1 \\
j_0 &= \lfloor v - shift \rfloor \\
j_1 &= j_0 + 1 \\
k_0 &= \lfloor w - shift \rfloor \\
k_1 &= k_0 + 1
\end{aligned}
$$

$$
\begin{aligned}
\alpha &= \text{frac}\,(u - shift) \\
\beta &= \text{frac}\,(v - shift) \\
\gamma &= \text{frac}\,(w - shift)
\end{aligned}
$$

where:

shift = 0.5

and where:

$$
\text{frac}\,(x) = x - \lfloor x \rfloor
$$

where the number of fraction bits retained is specified by VkPhysicalDeviceLimits ::subTexelPrecisionBits.

Cubic filtering (VK_FILTER_CUBIC_EXT) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of i_0, i_1, i_2 or i_3, j_0, j_1, j_2 or j_3, k_0, k_1, k_2 or k_3, as well as weights α, β, and γ.

$$
\begin{aligned}
i_0 &= \lfloor u - \frac{3}{2} \rfloor & i_1 &= i_0 + 1 & i_2 &= i_1 + 1 & i_3 &= i_2 + 1 \\
j_0 &= \lfloor v - \frac{3}{2} \rfloor & j_1 &= j_0 + 1 & j_2 &= j_1 + 1 & j_3 &= j_2 + 1 \\
k_0 &= \lfloor w - \frac{3}{2} \rfloor & k_1 &= k_0 + 1 & k_2 &= k_1 + 1 & k_3 &= k_2 + 1
\end{aligned}
$$

$$\alpha = \text{frac}\left(u - \frac{1}{2}\right)$$

$$\beta = \text{frac}\left(v - \frac{1}{2}\right)$$

$$\gamma = \text{frac}\left(w - \frac{1}{2}\right)$$

where:

$$\text{frac}(x) = x - \lfloor x \rfloor$$

where the number of fraction bits retained is specified by `VkPhysicalDeviceLimits::subTexelPrecisionBits`.

20.5. Integer Texel Coordinate Operations

The `OpImageFetch` and `OpImageFetchSparse` SPIR-V instructions **may** supply a LOD from which texels are to be fetched using the optional SPIR-V operand `Lod`. Other integer-coordinate operations **must** not. If the `Lod` is provided then it **must** be an integer.

The image level selected is:

$$d = level_{base} + \begin{cases} Lod & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases}$$

If d does not lie in the range [`baseMipLevel`, `baseMipLevel + levelCount`) or d is less than $\text{minLodInteger}_{\text{imageView}}$, then any values fetched are zero if the `robustImageAccess2` feature is enabled, otherwise are undefined, and any writes (if supported) are discarded.

20.6. Image Sample Operations

20.6.1. Wrapping Operation

If the used sampler was created without VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT, `Cube` images ignore the wrap modes specified in the sampler. Instead, if VK_FILTER_NEAREST is used within a mip level then VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE is used, and if VK_FILTER_LINEAR is used within a mip level then sampling at the edges is performed as described earlier in the Cube map edge handling section.

The first integer texel coordinate i is transformed based on the `addressModeU` parameter of the sampler.

$$i = \begin{cases} i \bmod size & \text{for repeat} \\ (size-1) - \text{mirror}\left((i \bmod (2 \times size)) - size\right) & \text{for mirrored repeat} \\ \text{clamp}\left(i,\ 0,\ size-1\right) & \text{for clamp to edge} \\ \text{clamp}\left(i,\ -1,\ size\right) & \text{for clamp to border} \\ \text{clamp}\left(\text{mirror}\left(i\right),\ 0,\ size-1\right) & \text{for mirror clamp to edge} \end{cases}$$

where:

$$\text{mirror}\left(n\right) = \begin{cases} n & \text{for } n \geq 0 \\ -(1+n) & \text{otherwise} \end{cases}$$

j (for 2D and Cube image) and k (for 3D image) are similarly transformed based on the `addressModeV` and `addressModeW` parameters of the sampler, respectively.

20.6.2. Texel Gathering

SPIR-V instructions with `Gather` in the name return a vector derived from 4 texels in the base level of the image view.

The rules for the VK_FILTER_LINEAR minification filter are applied to identify the four selected texels for `OpImage*Gather` .

If an `OpImage*Gather` operation does not use the `ConstOffsets` image operand then the four texels form the 2 × 2 rectangle used for texture filtering:

$$\begin{aligned} \tau[R] &= \tau_{i0\,j1}[level_{base}][comp] \\ \tau[G] &= \tau_{i1\,j1}[level_{base}][comp] \\ \tau[B] &= \tau_{i1\,j0}[level_{base}][comp] \\ \tau[A] &= \tau_{i0\,j0}[level_{base}][comp] \end{aligned}$$

If an `OpImage*Gather` operation uses the `ConstOffsets` image operand then the offsets allow a custom filter to be defined:

$$\begin{aligned} \tau[R] &= \tau_{i0\,j0\,+\,\Delta_0}[level_{base}][comp] \\ \tau[G] &= \tau_{i0\,j0\,+\,\Delta_1}[level_{base}][comp] \\ \tau[B] &= \tau_{i0\,j0\,+\,\Delta_2}[level_{base}][comp] \\ \tau[A] &= \tau_{i0\,j0\,+\,\Delta_3}[level_{base}][comp] \end{aligned}$$

where:

$$\tau[level_{base}][comp] = \begin{cases} \tau[level_{base}][R], & \text{for } comp = 0 \\ \tau[level_{base}][G], & \text{for } comp = 1 \\ \tau[level_{base}][B], & \text{for } comp = 2 \\ \tau[level_{base}][A], & \text{for } comp = 3 \end{cases}$$

$comp$ from SPIR-V operand Component

Each texel is then converted to an RGBA value according to component substitution and then swizzled.

`OpImage*Gather` **must** not be used on a sampled image with sampler $Y'C_BC_R$ conversion enabled.

If $level_{base}$ < $minLodInteger_{imageView}$, then any values fetched are zero if the `robustImageAccess2` feature is enabled. Otherwise values are undefined.

20.6.3. Texel Filtering

Texel filtering is first performed for each level (either d or d_{hi} and d_{lo}).

If λ is less than or equal to zero, the texture is said to be *magnified*, and the filter mode within a mip level is selected by the `magFilter` in the sampler. If λ is greater than zero, the texture is said to be *minified*, and the filter mode within a mip level is selected by the `minFilter` in the sampler.

Texel Nearest Filtering

Within a mip level, VK_FILTER_NEAREST filtering selects a single value using the (i, j, k) texel coordinates, with all texels taken from layer l.

$$\tau[level] = \begin{cases} \tau_{ijk}[level], & \text{for 3D image} \\ \tau_{ij}[level], & \text{for 2D or Cube image} \\ \tau_{i}[level], & \text{for 1D image} \end{cases}$$

Texel Linear Filtering

Within a mip level, VK_FILTER_LINEAR filtering combines 8 (for 3D), 4 (for 2D or Cube), or 2 (for 1D) texel values, together with their linear weights. The linear weights are derived from the fractions computed earlier:

$$\begin{aligned} w_{i_0} &= (1-\alpha) \\ w_{i_1} &= (\alpha) \\ w_{j_0} &= (1-\beta) \\ w_{j_1} &= (\beta) \\ w_{k_0} &= (1-\gamma) \\ w_{k_1} &= (\gamma) \end{aligned}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The VkSamplerReductionModeCreateInfo::`reductionMode` **can** control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, a weighted average is computed:

$$\tau_{3D} = \sum_{k=k_0}^{k_1} \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)(w_k)\tau_{ijk}$$

$$\tau_{2D} = \sum_{j=j_0}^{j_1} \sum_{i=i_0}^{i_1} (w_i)(w_j)\tau_{ij}$$

$$\tau_{1D} = \sum_{i=i_0}^{i_1} (w_i)\tau_i$$

However, if the reduction mode is VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Cubic Filtering

Within a mip level, VK_FILTER_CUBIC_EXT, filtering computes a weighted average of 64 (for 3D), 16 (for 2D), or 4 (for 1D) texel values, together with their Catmull-Rom weights.

Catmull-Rom weights are derived from the fractions computed earlier.

$$\begin{bmatrix} w_{i_0} & w_{i_1} & w_{i_2} & w_{i_3} \end{bmatrix} = \frac{1}{2}\begin{bmatrix} 1 & \alpha & \alpha^2 & \alpha^3 \end{bmatrix}\begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{j_0} & w_{j_1} & w_{j_2} & w_{j_3} \end{bmatrix} = \frac{1}{2}\begin{bmatrix} 1 & \beta & \beta^2 & \beta^3 \end{bmatrix}\begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

$$\begin{bmatrix} w_{k_0} & w_{k_1} & w_{k_2} & w_{k_3} \end{bmatrix} = \frac{1}{2}\begin{bmatrix} 1 & \gamma & \gamma^2 & \gamma^3 \end{bmatrix}\begin{bmatrix} 0 & 2 & 0 & 0 \\ -1 & 0 & 1 & 0 \\ 2 & -5 & 4 & -1 \\ -1 & 3 & -3 & 1 \end{bmatrix}$$

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The VkSamplerReductionModeCreateInfo::`reductionMode` **can** control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE , a weighted average is computed:

$$\tau_{3D} = \sum_{k=j_0}^{k_3} \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)(w_k)\tau_{ijk}$$
$$\tau_{2D} = \sum_{j=j_0}^{j_3} \sum_{i=i_0}^{i_3} (w_i)(w_j)\tau_{ij}$$
$$\tau_{1D} = \sum_{i=i_0}^{i_3} (w_i)\tau_i$$

However, if the reduction mode is VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

Texel Mipmap Filtering

VK_SAMPLER_MIPMAP_MODE_NEAREST filtering returns the value of a single mipmap level,

$\tau = \tau[d]$.

VK_SAMPLER_MIPMAP_MODE_LINEAR filtering combines the values of multiple mipmap levels (τ[hi] and τ[lo]), together with their linear weights.

The linear weights are derived from the fraction computed earlier:

$$w_{hi} = (1 - \delta)$$
$$w_{lo} = (\delta)$$

The values of multiple mipmap levels, together with their weights, are combined to produce a final filtered value.

The VkSamplerReductionModeCreateInfo::`reductionMode` **can** control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, a weighted average is computed:

$$\tau = (w_{hi})\tau[hi] + (w_{lo})\tau[lo]$$

However, if the reduction mode is VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

Texel Anisotropic Filtering

Anisotropic filtering is enabled by the `anisotropyEnable` in the sampler. When enabled, the image filtering scheme accounts for a degree of anisotropy.

The particular scheme for anisotropic texture filtering is implementation-dependent. Implementations **should** consider the `magFilter`, `minFilter` and `mipmapMode` of the sampler to control the specifics of the anisotropic filtering scheme used. In addition, implementations **should** consider `minLod` and `maxLod` of the sampler.

For historical reasons, vendor implementations of anisotropic filtering interpret these sampler parameters in different ways, particularly in corner cases such as `magFilter`, `minFilter` of VK_FILTER_NEAREST or `maxAnisotropy` equal to 1.0. Applications should not expect consistent behavior in such cases, and should use anisotropic filtering only with parameters which are expected to give a quality improvement relative to `LINEAR` filtering.

The following describes one particular approach to implementing anisotropic filtering for the 2D Image case; implementations **may** choose other methods:

Given a `magFilter`, `minFilter` of VK_FILTER_LINEAR and a `mipmapMode` of VK_SAMPLER_MIPMAP_MODE_NEAREST:

NOTE

Instead of a single isotropic sample, N isotropic samples are sampled within the image footprint of the image level d to approximate an anisotropic filter. The sum $\tau_{2Daniso}$ is defined using the single isotropic $\tau_{2D}(u,v)$ at level d.

$$\tau_{2Daniso} = \frac{1}{N}\sum_{i=1}^{N} \tau_{2D}\left(u\left(x - \frac{1}{2} + \frac{i}{N+1}, y\right), v\left(x - \frac{1}{2} + \frac{i}{N+1}, y\right)\right), \quad \text{when } \rho_x > \rho_y$$

$$\tau_{2Daniso} = \frac{1}{N}\sum_{i=1}^{N} \tau_{2D}\left(u\left(x, y - \frac{1}{2} + \frac{i}{N+1}\right), v\left(x, y - \frac{1}{2} + \frac{i}{N+1}\right)\right), \quad \text{when } \rho_y \geq \rho_x$$

When VkSamplerReductionModeCreateInfo::`reductionMode` is VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE, the above summation is used. However, if the reduction mode is VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

20.7. Image Operation Steps

Each step described in this chapter is performed by a subset of the image instructions:

- Texel Input Validation Operations, Format Conversion, Texel Replacement, Conversion to RGBA, and Component Swizzle: Performed by all sampling instructions.
- Depth Comparison: Performed by `OpImage*Dref` instructions.
- Projection: Performed by all `OpImage*Proj` instructions.
- Derivative Image Operations, Cube Map Operations, Scale Factor Operation, LOD Operation and Image Level(s) Selection, and Texel Anisotropic Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- (s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and (u,v,w,a) to (i,j,k,l,n) Transformation And

Array Layer Selection: Performed by all `OpImageSample`, `OpImageSparseSample`, and `OpImage*Gather` instructions.

- Texel Gathering: Performed by `OpImage*Gather` instructions.
- Texel Filtering: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- Sparse Residency: Performed by all `OpImageSparse*` instructions.

20.8. LOD Query

`OpImageQueryLod` returns the LOD parameters that would be used in a sampling instruction with the given image and coordinates. If the descriptor that would be accessed is a null descriptor then (0,0) is returned. Otherwise, the steps described in this chapter are performed as if for `OpImageSampleImplicitLod`, up to Scale Factor Operation, LOD Operation and Image Level(s) Selection. The return value is the vector (d_l - $level_{base}$, λ'). These values **may** be subject to implementation-specific maxima and minima for very large, out-of-range values.

Chapter 21. Fragment Density Map Operations

21.1. Fragment Density Map Operations Overview

When a fragment is generated in a render pass that has a fragment density map attachment, its area is determined by the properties of the local framebuffer region that the fragment occupies. The framebuffer is divided into a uniform grid of these local regions, and their fragment area property is derived from the density map with the following operations:

- Fetch density value
  - Component swizzle
  - Component mapping
- Fragment area conversion
  - Fragment area filter
  - Fragment area clamp

21.2. Fetch Density Value

Each local framebuffer region at center coordinate (x,y) reads a texel from the fragment density map.

First, the local framebuffer region center coordinate (x,y) is offset by the value specified in VkRenderPassFragmentDensityMapOffsetEndInfoEXT. If no offset is specified, then the default offset (0,0) is used. The offset coordinate (x',y') is computed as follows:

$$x' = x - pFragmentDensityOffsets[layer]_x$$
$$y' = y - pFragmentDensityOffsets[layer]_y$$

NOTE

The offset is relative to the fragment density map, so it is subtracted from the framebuffer coordinates to make the adjustment relative to the framebuffer.

In other words, applying a positive offset in the x component will shift the fragment density map to the right relative to the framebuffer. This means the framebuffer coordinates need to undergo a shift to the left.

The offset fragment coordinate (x',y') reads a texel from the fragment density map at image coordinates (x,y,0,layer,0,0), where (x,y) are calculated as:

$$x = \text{clamp}\left(\left\lfloor \frac{x'}{fragmentDensityTexelSize_{width}} \right\rfloor, 0, fragmentDensityMap_{width} - 1\right)$$

$$y = \text{clamp}\left(\left\lfloor \frac{y'}{fragmentDensityTexelSize_{height}} \right\rfloor, 0, fragmentDensityMap_{height} - 1\right)$$

Where the size of each region in the framebuffer is:

$$fragmentDensityTexelSize'_{width} = 2^{\lceil \log_2(\lfloor \frac{framebuffer_{width}}{fragmentDensityMap_{width}} \rfloor) \rceil}$$

$$fragmentDensityTexelSize'_{height} = 2^{\lceil \log_2(\lfloor \frac{framebuffer_{height}}{fragmentDensityMap_{height}} \rfloor) \rceil}$$

NOTE

The original spec did not include the floor in the equation above. Implementations have shipped with and without the floor. Given that the earliest implementations shipped with the floor, the spec now reflects that as most content was written with this behavior.

All implementations exposing support for version 3 or greater of the extension **must** implement with the floor included.

If using vkCmdBeginRendering, then $framebuffer_{width}$ and $framebuffer_{height}$ are defined as:

$$framebuffer_{width} = renderAreaOffset_{x} plus renderAreaExtent_{width}$$

$$framebuffer_{height} = renderAreaOffset_{y} plus renderAreaExtent_{height}$$

using VkRenderingInfo::`renderArea`.

This region is subject to the limits in `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` and therefore the final region size is clamped:

$$fragmentDensityTexelSize_{width} = \text{clamp}(fragmentDensityTexelSize'_{width}, minFragmentDensityTexelSize_{width}, maxFragmentDensityTexelSize_{width})$$

$$fragmentDensityTexelSize_{height} = \text{clamp}(fragmentDensityTexelSize'_{height}, minFragmentDensityTexelSize_{height}, maxFragmentDensityTexelSize_{height})$$

When multiview is enabled for the render pass and the fragment density map attachment view was created with `layerCount` greater than 1, the layer used for offsets and for fetching from the fragment density map is:

$$layer = baseArrayLayer + ViewIndex$$

Otherwise:

$$layer = baseArrayLayer$$

The texel fetched from the density map at (x,y,0,layer,0,0) is next converted to density with the

following operations.

21.2.1. Component Swizzle

The `components` member of VkImageViewCreateInfo is applied to the fetched texel as defined in Image component swizzle.

21.2.2. Component Mapping

The swizzled texel's components are mapped to a density value:

$$densityValue_{xy} = (C'_r, C'_g)$$

21.3. Fragment Area Conversion

Fragment area for the framebuffer region is undefined if the density fetched is not a normalized floating-point value greater than `0.0`. Otherwise, the fetched fragment area for that region is derived as:

$$fragmentArea_{wh} = \frac{1.0}{densityValue_{xy}}$$

21.3.1. Fragment Area Filter

Optionally, the implementation **may** fetch additional density map texels in an implementation defined window around (i,j). The texels follow the standard conversion steps up to and including fragment area conversion.

A single fetched fragment area for the framebuffer region is chosen by the implementation and **must** have an area between the *min* and *max* areas of the fetched set.

21.3.2. Fragment Area Clamp

The implementation **may** clamp the fetched fragment area to one that it supports. The clamped fragment area **must** have a size less than or equal to the original fetched value. Implementations **may** vary the supported set of fragment areas per framebuffer region. Fragment area (1,1) **must** always be in the supported set.

NOTE

For example, if the fetched fragment area is (1,4) but the implementation only supports areas of {(1,1),(2,2)}, it could choose to clamp the area to (2,2) since it has the same size as (1,4). While this would produce fragments that have lower quality strictly in the x-axis, the overall density is maintained.

The clamped fragment area is assigned to the corresponding framebuffer region.

Chapter 22. Queries

Queries provide a mechanism to return information about the processing of a sequence of Vulkan commands. Query operations are asynchronous, and as such, their results are not returned immediately. Instead, their results, and their availability status are stored in a Query Pool. The state of these queries **can** be read back on the host, or copied to a buffer object on the device.

The supported query types are:

- Occlusion Queries
- Pipeline Statistics Queries
- Timestamp Queries
- Result Status Queries
- Video Encode Feedback Queries
- Performance Queries
- Transform Feedback Queries
- Mesh Shader Queries

Several additional queries with specific purposes associated with ray tracing are available if the corresponding extensions are supported, as described for VkQueryType.

22.1. Query Pools

Queries are managed using *query pool* objects. Each query pool is a collection of a specific number of queries of a particular type.

Query pools are represented by `VkQueryPool` handles:

```
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkQueryPool)
```

To create a query pool, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateQueryPool(
    VkDevice                                    device,
    const VkQueryPoolCreateInfo*                pCreateInfo,
    const VkAllocationCallbacks*                pAllocator,
    VkQueryPool*                                pQueryPool);
```

- `device` is the logical device that creates the query pool.
- `pCreateInfo` is a pointer to a VkQueryPoolCreateInfo structure containing the number and type of queries to be managed by the pool.

- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pQueryPool` is a pointer to a VkQueryPool handle in which the resulting query pool object is returned.

Valid Usage

- VUID-vkCreateQueryPool-device-09663
  `device` **must** support at least one queue family with one of the VK_QUEUE_VIDEO_ENCODE_BIT_KHR, VK_QUEUE_VIDEO_DECODE_BIT_KHR, VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT capabilities

Valid Usage (Implicit)

- VUID-vkCreateQueryPool-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCreateQueryPool-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkQueryPoolCreateInfo structure
- VUID-vkCreateQueryPool-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkCreateQueryPool-pQueryPool-parameter
  `pQueryPool` **must** be a valid pointer to a VkQueryPool handle
- VUID-vkCreateQueryPool-device-queuecount
  The device **must** have been created with at least 1 queue

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkQueryPoolCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkQueryPoolCreateInfo {
    VkStructureType                 sType;
    const void*                     pNext;
    VkQueryPoolCreateFlags          flags;
    VkQueryType                     queryType;
    uint32_t                        queryCount;
    VkQueryPipelineStatisticFlags   pipelineStatistics;
} VkQueryPoolCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkQueryPoolCreateFlagBits
- `queryType` is a VkQueryType value specifying the type of queries managed by the pool.
- `queryCount` is the number of queries managed by the pool.
- `pipelineStatistics` is a bitmask of VkQueryPipelineStatisticFlagBits specifying which counters will be returned in queries on the new pool, as described below in Pipeline Statistics Queries. `pipelineStatistics` is ignored if `queryType` is not VK_QUERY_TYPE_PIPELINE_STATISTICS.

Valid Usage

- VUID-VkQueryPoolCreateInfo-queryType-00791
  If the `pipelineStatisticsQuery` feature is not enabled, `queryType` **must** not be VK_QUERY_TYPE_PIPELINE_STATISTICS
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07068
  If the `meshShaderQueries` feature is not enabled, `queryType` **must** not be VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT
- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07069
  If the `meshShaderQueries` feature is not enabled, and `queryType` is VK_QUERY_TYPE_PIPELINE_STATISTICS, `pipelineStatistics` **must** not contain VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT or VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT
- VUID-VkQueryPoolCreateInfo-queryType-00792
  If `queryType` is VK_QUERY_TYPE_PIPELINE_STATISTICS, `pipelineStatistics` **must** be a valid combination of VkQueryPipelineStatisticFlagBits values
- VUID-VkQueryPoolCreateInfo-queryType-09534
  If `queryType` is VK_QUERY_TYPE_PIPELINE_STATISTICS, `pipelineStatistics` **must** not be zero
- VUID-VkQueryPoolCreateInfo-queryType-03222
  If `queryType` is VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the `pNext` chain **must** include a VkQueryPoolPerformanceCreateInfoKHR structure
- VUID-VkQueryPoolCreateInfo-queryCount-02763

queryCount **must** be greater than 0

- VUID-VkQueryPoolCreateInfo-queryType-11839
  If queryType is VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then at least one of the queue families of the device **must** support result status queries, as indicated by VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport
- VUID-VkQueryPoolCreateInfo-pNext-10779
  If the pNext chain includes a VkVideoProfileInfoKHR structure and its videoCodecOperation member is VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the videoDecodeVP9 feature **must** be enabled
- VUID-VkQueryPoolCreateInfo-queryType-07133
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then the pNext chain **must** include a VkVideoProfileInfoKHR structure with videoCodecOperation specifying an encode operation
- VUID-VkQueryPoolCreateInfo-queryType-07906
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then the pNext chain **must** include a VkQueryPoolVideoEncodeFeedbackCreateInfoKHR structure
- VUID-VkQueryPoolCreateInfo-queryType-07907
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, and the pNext chain includes a VkVideoProfileInfoKHR structure and a VkQueryPoolVideoEncodeFeedbackCreateInfoKHR structure, then VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags **must** not contain any bits that are not set in VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile described by VkVideoProfileInfoKHR and its pNext chain
- VUID-VkQueryPoolCreateInfo-queryType-12437
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and the pNext chain includes a VkQueryPoolVideoEncodeFeedbackCreateInfoKHR structure with its encodeFeedbackFlags member containing VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR, or VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR, then videoEncodeFeedback2 **must** be enabled
- VUID-VkQueryPoolCreateInfo-queryType-12438
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and the pNext chain includes a VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure with a non-zero maxPerPartitionFeedbackEntries member, then videoEncodeFeedback2 **must** be enabled
- VUID-VkQueryPoolCreateInfo-queryType-12439
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and the pNext chain includes a VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure with a non-zero maxPerPartitionFeedbackEntries member, then

VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR::perPartitionEncodeFeedbackFlags **must** not be zero

- VUID-VkQueryPoolCreateInfo-queryType-12440
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and the pNext chain includes a VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure, then its maxPerPartitionFeedbackEntries **must** be less than or equal to VkVideoEncodeFeedback2CapabilitiesKHR::maxPerPartitionFeedbackEntries, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile described by VkVideoProfileInfoKHR and its pNext chain
- VUID-VkQueryPoolCreateInfo-queryType-12441
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and the pNext chain includes a VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure, then its perPartitionEncodeFeedbackFlags **must** not contain any bits that are not set in VkVideoEncodeFeedback2CapabilitiesKHR::supportedPerPartitionEncodeFeedbackFlags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile described by VkVideoProfileInfoKHR and its pNext chain
- VUID-VkQueryPoolCreateInfo-pNext-10248
  If the pNext chain includes a VkVideoProfileInfoKHR structure and its videoCodecOperation member is VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR, then the videoEncodeAV1 feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkQueryPoolCreateInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO
- VUID-VkQueryPoolCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain **must** be either NULL or a pointer to a valid instance of VkQueryPoolPerformanceCreateInfoKHR, VkQueryPoolVideoEncodeFeedbackCreateInfoKHR, VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR, VkVideoDecodeAV1ProfileInfoKHR, VkVideoDecodeH264ProfileInfoKHR, VkVideoDecodeH265ProfileInfoKHR, VkVideoDecodeUsageInfoKHR, VkVideoDecodeVP9ProfileInfoKHR, VkVideoEncodeAV1ProfileInfoKHR, VkVideoEncodeH264ProfileInfoKHR, VkVideoEncodeH265ProfileInfoKHR, VkVideoEncodeUsageInfoKHR, or VkVideoProfileInfoKHR
- VUID-VkQueryPoolCreateInfo-sType-unique
  The sType value of each structure in the pNext chain **must** be unique
- VUID-VkQueryPoolCreateInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkQueryPoolCreateFlagBits values
- VUID-VkQueryPoolCreateInfo-queryType-parameter
  queryType **must** be a valid VkQueryType value

Bits which **can** be set in VkQueryPoolCreateInfo::flags, specifying options for query pools, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryPoolCreateFlagBits {
  // Provided by VK_KHR_maintenance9
    VK_QUERY_POOL_CREATE_RESET_BIT_KHR = 0x00000001,
} VkQueryPoolCreateFlagBits;
```

- VK_QUERY_POOL_CREATE_RESET_BIT_KHR specifies that queries in the query pool are initialized on creation and do not need to be reset before first use.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPoolCreateFlags;
```

VkQueryPoolCreateFlags is a bitmask type for setting a mask of zero or more VkQueryPoolCreateFlagBits.

The VkQueryPoolPerformanceCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkQueryPoolPerformanceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           queueFamilyIndex;
    uint32_t           counterIndexCount;
    const uint32_t*    pCounterIndices;
} VkQueryPoolPerformanceCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- queueFamilyIndex is the queue family index to create this performance query pool for.
- counterIndexCount is the length of the pCounterIndices array.
- pCounterIndices is a pointer to an array of indices into the vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR::pCounters to enable in this performance query pool.

Valid Usage

- VUID-VkQueryPoolPerformanceCreateInfoKHR-queueFamilyIndex-03236
  queueFamilyIndex **must** be a valid queue family index of the device
- VUID-VkQueryPoolPerformanceCreateInfoKHR-performanceCounterQueryPools-03237
  The performanceCounterQueryPools feature **must** be enabled
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-03321
  Each element of pCounterIndices **must** be in the range of counters reported by vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR for the queue family

specified in queueFamilyIndex

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceCreateInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR
- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-parameter
  pCounterIndices **must** be a valid pointer to an array of counterIndexCount uint32_t values
- VUID-VkQueryPoolPerformanceCreateInfoKHR-counterIndexCount-arraylength
  counterIndexCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkQueryPoolCreateInfo

To query the number of passes required to query a performance query pool on a physical device, call:

```
// Provided by VK_KHR_performance_query
void vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    VkPhysicalDevice                            physicalDevice,
    const VkQueryPoolPerformanceCreateInfoKHR*  pPerformanceQueryCreateInfo,
    uint32_t*                                   pNumPasses);
```

- physicalDevice is the handle to the physical device whose queue family performance query counter properties will be queried.
- pPerformanceQueryCreateInfo is a pointer to a VkQueryPoolPerformanceCreateInfoKHR of the performance query that is to be created.
- pNumPasses is a pointer to an integer related to the number of passes required to query the performance query pool, as described below.

The pPerformanceQueryCreateInfo member VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex **must** be a queue family of physicalDevice. The number of passes required to capture the counters specified in the pPerformanceQueryCreateInfo member VkQueryPoolPerformanceCreateInfoKHR ::pCounters is returned in pNumPasses.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-physicalDevice-parameter
  physicalDevice **must** be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pPerformanceQueryCreateInfo-parameter
  `pPerformanceQueryCreateInfo` **must** be a valid pointer to a valid VkQueryPoolPerformanceCreateInfoKHR structure
- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-pNumPasses-parameter
  `pNumPasses` **must** be a valid pointer to a `uint32_t` value

To destroy a query pool, call:

```
// Provided by VK_VERSION_1_0
void vkDestroyQueryPool(
    VkDevice                                    device,
    VkQueryPool                                 queryPool,
    const VkAllocationCallbacks*                pAllocator);
```

- `device` is the logical device that destroys the query pool.
- `queryPool` is the query pool to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyQueryPool-queryPool-00793
  All submitted commands that refer to `queryPool` **must** have completed execution
- VUID-vkDestroyQueryPool-queryPool-00794
  If `VkAllocationCallbacks` were provided when `queryPool` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyQueryPool-queryPool-00795
  If no `VkAllocationCallbacks` were provided when `queryPool` was created, `pAllocator` **must** be `NULL`

NOTE

Applications **can** verify that `queryPool` **can** be destroyed by checking that `vkGetQueryPoolResults`() without the VK_QUERY_RESULT_PARTIAL_BIT flag returns VK_SUCCESS for all queries that are used in command buffers submitted for execution.

Valid Usage (Implicit)

- VUID-vkDestroyQueryPool-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkDestroyQueryPool-queryPool-parameter
  If `queryPool` is not VK_NULL_HANDLE, `queryPool` **must** be a valid VkQueryPool handle

- VUID-vkDestroyQueryPool-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyQueryPool-queryPool-parent
  If `queryPool` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `queryPool` **must** be externally synchronized

Possible values of VkQueryPoolCreateInfo::`queryType`, specifying the type of queries managed by the pool, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryType {
    VK_QUERY_TYPE_OCCLUSION = 0,
    VK_QUERY_TYPE_PIPELINE_STATISTICS = 1,
    VK_QUERY_TYPE_TIMESTAMP = 2,
  // Provided by VK_KHR_video_queue
    VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR = 1000023000,
  // Provided by VK_EXT_transform_feedback
    VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT = 1000028004,
  // Provided by VK_KHR_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR = 1000116000,
  // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR = 1000150000,
  // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR = 1000150001,
  // Provided by VK_KHR_video_encode_queue
    VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR = 1000299000,
  // Provided by VK_EXT_mesh_shader
    VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT = 1000328000,
  // Provided by VK_EXT_primitives_generated_query
    VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT = 1000382000,
  // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR =
1000386000,
  // Provided by VK_KHR_ray_tracing_maintenance1
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR = 1000386001,
  // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT = 1000396000,
  // Provided by VK_EXT_opacity_micromap
    VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT = 1000396001,
} VkQueryType;
```

- VK_QUERY_TYPE_OCCLUSION specifies an occlusion query.

- VK_QUERY_TYPE_PIPELINE_STATISTICS specifies a pipeline statistics query.
- VK_QUERY_TYPE_TIMESTAMP specifies a timestamp query.
- VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR specifies a performance query.
- VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT specifies a transform feedback query.
- VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT specifies a primitives generated query.
- VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR specifies a acceleration structure size query for use with vkCmdWriteAccelerationStructuresPropertiesKHR or vkWriteAccelerationStructuresPropertiesKHR.
- VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR specifies a serialization acceleration structure size query.
- VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR specifies an acceleration structure size query for use with vkCmdWriteAccelerationStructuresPropertiesKHR or vkWriteAccelerationStructuresPropertiesKHR.
- VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR specifies a serialization acceleration structure pointer count query.
- VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR specifies a result status query.
- VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR specifies a video encode feedback query.
- VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT specifies a generated mesh primitives query.
- VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT specifies a micromap query to get the size required by a serialized micromap.
- VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT specifies a micromap query to get the size required by a compacted micromap.

22.2. Query Operation

The operation of queries is controlled by the commands vkCmdBeginQuery, vkCmdEndQuery, vkCmdBeginQueryIndexedEXT, vkCmdEndQueryIndexedEXT, vkCmdResetQueryPool, vkCmdCopyQueryPoolResults, vkCmdWriteAccelerationStructuresPropertiesKHR, vkCmdWriteMicromapsPropertiesEXT, vkCmdCopyQueryPoolResultsToMemoryKHR, vkCmdWriteTimestamp2, and vkCmdWriteTimestamp.

In order for a `VkCommandBuffer` to record query management commands, the queue family for which its `VkCommandPool` was created **must** support the appropriate type of operations (graphics, compute) suitable for the query type of a given query pool.

Each query in a query pool has a status that is either *unavailable* or *available*, and also has state to store the numerical results of a query operation of the type requested when the query pool was created. Resetting a query via vkCmdResetQueryPool or vkResetQueryPool sets the status to unavailable and makes the numerical results undefined. A query is made available by the operation of vkCmdEndQuery, vkCmdEndQueryIndexedEXT, vkCmdWriteAccelerationStructuresPropertiesKHR, vkCmdWriteMicromapsPropertiesEXT, vkCmdWriteTimestamp2, or vkCmdWriteTimestamp. Both the availability status and numerical

results **can** be retrieved by calling either vkGetQueryPoolResults or vkCmdCopyQueryPoolResults.

After query pool creation, where VK_QUERY_POOL_CREATE_RESET_BIT_KHR was not set in VkQueryPoolCreateInfo::`flags` each query is in an uninitialized state and **must** be reset before it is used. Queries **must** also be reset between uses.

If a logical device includes multiple physical devices, then each command that writes a query **must** execute on a single physical device, and any call to vkCmdBeginQuery **must** execute the corresponding vkCmdEndQuery command on the same physical device.

To reset a range of queries in a query pool on a queue, call:

```
// Provided by VK_VERSION_1_0
void vkCmdResetQueryPool(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery,
    uint32_t                                    queryCount);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the handle of the query pool managing the queries being reset.
- `firstQuery` is the initial query index to reset.
- `queryCount` is the number of queries to reset.

When executed on a queue, this command sets the status of query indices [`firstQuery`, `firstQuery` + `queryCount` - 1] to unavailable.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur earlier in submission order.

The second synchronization scope includes all commands which reference the queries in `queryPool` indicated by `firstQuery` and `queryCount` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command sets the status of query indices [`firstQuery`, `firstQuery` + `queryCount` - 1] to unavailable for each pass of `queryPool`, as indicated by a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR.

NOTE

Because `vkCmdResetQueryPool` resets all the passes of the indicated queries, applications must not record a `vkCmdResetQueryPool` command for a `queryPool` created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR in a command buffer that needs to be submitted multiple times as indicated by a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR. Otherwise

applications will never be able to complete the recorded queries.

Valid Usage

- VUID-vkCmdResetQueryPool-firstQuery-09436
  `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdResetQueryPool-firstQuery-09437
  The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdResetQueryPool-None-02841
  All queries used by the command **must** not be active
- VUID-vkCmdResetQueryPool-firstQuery-02862
  If `queryPool` was created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains begin commands for a query from the set of queries [`firstQuery`, `firstQuery` + `queryCount` - 1]

Valid Usage (Implicit)

- VUID-vkCmdResetQueryPool-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdResetQueryPool-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdResetQueryPool-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdResetQueryPool-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdResetQueryPool-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdResetQueryPool-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdResetQueryPool-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdResetQueryPool-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdResetQueryPool is not affected by conditional rendering

To reset a range of queries in a query pool on the host, call:

```
// Provided by VK_VERSION_1_2
void vkResetQueryPool(
    VkDevice                                    device,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery,
    uint32_t                                    queryCount);
```

- `device` is the logical device that owns the query pool.
- `queryPool` is the handle of the query pool managing the queries being reset.
- `firstQuery` is the initial query index to reset.
- `queryCount` is the number of queries to reset.

This command sets the status of query indices [`firstQuery`, `firstQuery` + `queryCount` - 1] to unavailable.

If queryPool is VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR this command sets the status of query indices [firstQuery, firstQuery + queryCount - 1] to unavailable for each pass.

Valid Usage

- VUID-vkResetQueryPool-firstQuery-09436
  firstQuery **must** be less than the number of queries in queryPool
- VUID-vkResetQueryPool-firstQuery-09437
  The sum of firstQuery and queryCount **must** be less than or equal to the number of queries in queryPool
- VUID-vkResetQueryPool-None-02665
  The hostQueryReset feature **must** be enabled
- VUID-vkResetQueryPool-firstQuery-02741
  Submitted commands that refer to the range specified by firstQuery and queryCount in queryPool **must** have completed execution
- VUID-vkResetQueryPool-firstQuery-02742
  The range of queries specified by firstQuery and queryCount in queryPool **must** not be in use by calls to vkGetQueryPoolResults or vkResetQueryPool in other threads

Valid Usage (Implicit)

- VUID-vkResetQueryPool-device-parameter
  device **must** be a valid VkDevice handle
- VUID-vkResetQueryPool-queryPool-parameter
  queryPool **must** be a valid VkQueryPool handle
- VUID-vkResetQueryPool-queryPool-parent
  queryPool **must** have been created, allocated, or retrieved from device

Once queries are reset and ready for use, query commands **can** be issued to a command buffer. Pipeline statistics queries count pipeline stage invocations, occlusion queries count drawn samples, resulting from commands that are recorded between a vkCmdBeginQuery command and a vkCmdEndQuery command within a specified command buffer, effectively scoping a set of dispatching and/or drawing commands. Timestamp queries write timestamps to a query pool. Performance queries record performance counters to a query pool.

A query **must** begin and end in the same command buffer, although if it is a primary command buffer, and the inheritedQueries feature is enabled, it **can** execute secondary command buffers during the query operation. For a secondary command buffer to be executed while an occlusion query or pipeline statistics query is active, it **must** set the occlusionQueryEnable, queryFlags, and/or pipelineStatistics members of VkCommandBufferInheritanceInfo to conservative values, as described in the Command Buffer Recording section. A query **must** either begin and end inside the same subpass of a render pass instance, or **must** both begin and end outside of a render pass instance (i.e. contain entire render pass instances).

If queries are used while executing a render pass instance that has multiview enabled, the query uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask in the subpass the query is used in. How the numerical results of the query are distributed among the queries is implementation-dependent. For example, some implementations **may** write each view's results to a distinct query, while other implementations **may** write the total result to the first query and write zero to the other queries. However, the sum of the results in all the queries **must** accurately reflect the total result of the query summed over all views. Applications **can** sum the results from all the queries to compute the total result.

Queries used with multiview rendering **must** not span subpasses, i.e. they **must** begin and end in the same subpass.

A query **must** either begin and end inside the same video coding scope, or **must** both begin and end outside of a video coding scope and **must** not contain entire video coding scopes.

To begin a query, call:

```
// Provided by VK_VERSION_1_0
void vkCmdBeginQuery(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    query,
    VkQueryControlFlags                         flags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of VkQueryControlFlagBits specifying constraints on the types of queries that **can** be performed.

If the `queryType` of the pool is VK_QUERY_TYPE_OCCLUSION and `flags` contains VK_QUERY_CONTROL_PRECISE_BIT, an implementation **must** return a result that matches the actual number of samples passed. This is described in more detail in Occlusion Queries.

Calling `vkCmdBeginQuery` is equivalent to calling vkCmdBeginQueryIndexedEXT with the `index` parameter set to zero.

After beginning a query, that query is considered *active* within the command buffer it was called in until that same query is ended. Queries active in a primary command buffer when secondary command buffers are executed are considered active for those secondary command buffers.

Furthermore, if the query is started within a video coding scope, the following command buffer states are initialized for the query type:

- The *active_query_index* is set to the value specified by `query`.
- The *last activatable query index* is also set to the value specified by `query`.

Each video coding operation stores a result to the query corresponding to the current active query

index, followed by incrementing the active query index. If the active query index gets incremented past the last activatable query index, issuing any further video coding operations results in undefined behavior.

NOTE	In practice, this means that currently no more than a single video coding operation **must** be issued between a begin and end query pair.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in submission order.

The second synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQuery-None-00807
  All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQuery-queryType-02804
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_TIMESTAMP
- VUID-vkCmdBeginQuery-queryType-04728
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR
- VUID-vkCmdBeginQuery-queryType-06741
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR
- VUID-vkCmdBeginQuery-queryType-08972
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT, or VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT
- VUID-vkCmdBeginQuery-queryType-00800
  If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not VK_QUERY_TYPE_OCCLUSION, `flags` **must** not contain VK_QUERY_CONTROL_PRECISE_BIT
- VUID-vkCmdBeginQuery-query-00802
  `query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdBeginQuery-queryType-00803
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_OCCLUSION, the

VkCommandPool that commandBuffer was allocated from **must** support graphics operations

- VUID-vkCmdBeginQuery-queryType-00804
  If the queryType used to create queryPool was VK_QUERY_TYPE_PIPELINE_STATISTICS and any of the pipelineStatistics indicate graphics operations, the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-00805
  If the queryType used to create queryPool was VK_QUERY_TYPE_PIPELINE_STATISTICS and any of the pipelineStatistics indicate compute operations, the VkCommandPool that commandBuffer was allocated from **must** support compute operations
- VUID-vkCmdBeginQuery-commandBuffer-01885
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBeginQuery-query-00808
  If called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in queryPool
- VUID-vkCmdBeginQuery-queryType-07126
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then the VkCommandPool that commandBuffer was allocated from **must** have been created with a queue family index that supports result status queries, as indicated by VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport
- VUID-vkCmdBeginQuery-None-07127
  If there is a bound video session, then there **must** be no active queries
- VUID-vkCmdBeginQuery-None-08370
  If there is a bound video session, then it **must** not have been created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR
- VUID-vkCmdBeginQuery-queryType-07128
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR and there is a bound video session, then queryPool **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdBeginQuery-queryType-07129
  If the queryType used to create queryPool was VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then there **must** be a bound video session
- VUID-vkCmdBeginQuery-queryType-07130
  If the queryType used to create queryPool was VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and there is a bound video session, then queryPool **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdBeginQuery-queryType-07131

If the queryType used to create queryPool was not VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then there **must** be no bound video session

- VUID-vkCmdBeginQuery-queryPool-01922
  queryPool **must** have been created with a queryType that differs from that of any queries that are active within commandBuffer
- VUID-vkCmdBeginQuery-queryType-07070
  If the queryType used to create queryPool was VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-02327
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-02328
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT then VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries **must** be supported
- VUID-vkCmdBeginQuery-queryType-06687
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQuery-queryType-06688
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT then primitivesGeneratedQuery **must** be enabled
- VUID-vkCmdBeginQuery-queryPool-07289
  If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then the VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex queryPool was created with **must** equal the queue family index of the VkCommandPool that commandBuffer was allocated from
- VUID-vkCmdBeginQuery-queryPool-03223
  If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the profiling lock **must** have been held before vkBeginCommandBuffer was called on commandBuffer
- VUID-vkCmdBeginQuery-queryPool-03224
  If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one of the counters used to create queryPool was VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR, the query begin **must** be the first recorded command in commandBuffer

- VUID-vkCmdBeginQuery-queryPool-03225
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one of the counters used to create `queryPool` was VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR, the begin command **must** not be recorded within a render pass instance
- VUID-vkCmdBeginQuery-queryPool-03226
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and another query pool with a `queryType` VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled
- VUID-vkCmdBeginQuery-None-02863
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQuery-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBeginQuery-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdBeginQuery-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkQueryControlFlagBits values
- VUID-vkCmdBeginQuery-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBeginQuery-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdBeginQuery-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginQuery-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdBeginQuery is not affected by conditional rendering

To begin an indexed query, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdBeginQueryIndexedEXT(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    query,
    VkQueryControlFlags                         flags,
    uint32_t                                    index);
```

- commandBuffer is the command buffer into which this command will be recorded.
- queryPool is the query pool that will manage the results of the query.
- query is the query index within the query pool that will contain the results.
- flags is a bitmask of VkQueryControlFlagBits specifying constraints on the types of queries that **can** be performed.
- index is the query type specific index. When the query type is VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT or VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index represents the vertex stream.

The vkCmdBeginQueryIndexedEXT command operates the same as the vkCmdBeginQuery command,

except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur earlier in submission order.

The second synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

Valid Usage

- VUID-vkCmdBeginQueryIndexedEXT-None-00807
  All queries used by the command **must** be *unavailable*
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02804
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_TIMESTAMP
- VUID-vkCmdBeginQueryIndexedEXT-queryType-04728
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06741
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR or VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR
- VUID-vkCmdBeginQueryIndexedEXT-queryType-08972
  The `queryType` used to create `queryPool` **must** not be VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT, or VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00800
  If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not VK_QUERY_TYPE_OCCLUSION, `flags` **must** not contain VK_QUERY_CONTROL_PRECISE_BIT
- VUID-vkCmdBeginQueryIndexedEXT-query-00802
  `query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00803
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_OCCLUSION, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-00804
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_PIPELINE_STATISTICS and any of the `pipelineStatistics` indicate graphics operations, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations

- VUID-vkCmdBeginQueryIndexedEXT-queryType-00805
  If the queryType used to create queryPool was VK_QUERY_TYPE_PIPELINE_STATISTICS and any of the pipelineStatistics indicate compute operations, the VkCommandPool that commandBuffer was allocated from **must** support compute operations
- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-01885
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdBeginQueryIndexedEXT-query-00808
  If called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in queryPool
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07126
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then the VkCommandPool that commandBuffer was allocated from **must** have been created with a queue family index that supports result status queries, as indicated by VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport
- VUID-vkCmdBeginQueryIndexedEXT-None-07127
  If there is a bound video session, then there **must** be no active queries
- VUID-vkCmdBeginQueryIndexedEXT-None-08370
  If there is a bound video session, then it **must** not have been created with VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07128
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR and there is a bound video session, then queryPool **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07129
  If the queryType used to create queryPool was VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then there **must** be a bound video session
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07130
  If the queryType used to create queryPool was VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR and there is a bound video session, then queryPool **must** have been created with a VkVideoProfileInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo identical to the one specified in VkVideoSessionCreateInfoKHR::pVideoProfile the bound video session was created with
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07131
  If the queryType used to create queryPool was not VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then there **must** be no bound video session
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-04753
  If the queryPool was created with the same queryType as that of another active query

within commandBuffer, then index **must** not match the index used for the active query

- VUID-vkCmdBeginQueryIndexedEXT-queryType-02338
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02339
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT the index parameter **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06692
  If the queryType used to create queryPool was not VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT and not VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index **must** be zero
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06689
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT the VkCommandPool that commandBuffer was allocated from **must** support graphics operations
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06690
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT the index parameter **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06691
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT and the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled, the index parameter **must** be zero
- VUID-vkCmdBeginQueryIndexedEXT-queryType-06693
  If the queryType used to create queryPool was VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT then primitivesGeneratedQuery **must** be enabled
- VUID-vkCmdBeginQueryIndexedEXT-queryType-02341
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT then VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries **must** be supported
- VUID-vkCmdBeginQueryIndexedEXT-queryType-07071
  The queryType used to create queryPool **must** not be VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-07289
  If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then the VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex queryPool was created with **must** equal the queue family index of the VkCommandPool that commandBuffer was allocated

from

- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03223
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the profiling lock **must** have been held before vkBeginCommandBuffer was called on `commandBuffer`
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03224
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one of the counters used to create `queryPool` was VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR, the query begin **must** be the first recorded command in `commandBuffer`
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03225
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one of the counters used to create `queryPool` was VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR, the begin command **must** not be recorded within a render pass instance
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-03226
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and another query pool with a `queryType` VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature **must** be enabled
- VUID-vkCmdBeginQueryIndexedEXT-None-02863
  If `queryPool` was created with a `queryType` of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query

Valid Usage (Implicit)

- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBeginQueryIndexedEXT-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdBeginQueryIndexedEXT-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkQueryControlFlagBits values
- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations

- VUID-vkCmdBeginQueryIndexedEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginQueryIndexedEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginQueryIndexedEXT-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdBeginQueryIndexedEXT is not affected by conditional rendering

Bits which **can** be set in vkCmdBeginQuery::`flags`, specifying constraints on the types of queries that **can** be performed, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryControlFlagBits {
    VK_QUERY_CONTROL_PRECISE_BIT = 0x00000001,
} VkQueryControlFlagBits;
```

- VK_QUERY_CONTROL_PRECISE_BIT specifies the precision of occlusion queries.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryControlFlags;
```

VkQueryControlFlags is a bitmask type for setting a mask of zero or more VkQueryControlFlagBits.

To end a query after the set of desired commands is recorded, call:

```
// Provided by VK_VERSION_1_0
void vkCmdEndQuery(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    query);
```

- commandBuffer is the command buffer into which this command will be recorded.
- queryPool is the query pool that is managing the results of the query.
- query is the query index within the query pool where the result is stored.

The command completes the query in queryPool identified by query, and marks it as available.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in queryPool indicated by query that occur earlier in submission order.

The second synchronization scope includes only the operation of this command.

Calling vkCmdEndQuery is equivalent to calling vkCmdEndQueryIndexedEXT with the index parameter set to zero.

Valid Usage

- VUID-vkCmdEndQuery-None-01923
  All queries used by the command **must** be active
- VUID-vkCmdEndQuery-query-00810
  query **must** be less than the number of queries in queryPool
- VUID-vkCmdEndQuery-commandBuffer-01886
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdEndQuery-query-00812
  If vkCmdEndQuery is called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in queryPool
- VUID-vkCmdEndQuery-queryPool-03227

If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one or more of the counters used to create queryPool was VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR, the vkCmdEndQuery **must** be the last recorded command in commandBuffer

- VUID-vkCmdEndQuery-queryPool-03228
  If queryPool was created with a queryType of VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR and one or more of the counters used to create queryPool was VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR, the vkCmdEndQuery **must** not be recorded within a render pass instance

- VUID-vkCmdEndQuery-None-07007
  If called within a subpass of a render pass instance, the corresponding vkCmdBeginQuery* command **must** have been called previously within the same subpass

Valid Usage (Implicit)

- VUID-vkCmdEndQuery-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdEndQuery-queryPool-parameter
  queryPool **must** be a valid VkQueryPool handle
- VUID-vkCmdEndQuery-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdEndQuery-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdEndQuery-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdEndQuery-commonparent
  Both of commandBuffer, and queryPool **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdEndQuery is not affected by conditional rendering

To end an indexed query after the set of desired drawing or dispatching commands is recorded, call:

```
// Provided by VK_EXT_transform_feedback
void vkCmdEndQueryIndexedEXT(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    query,
    uint32_t                                    index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.
- `index` is the query type specific index.

The command completes the query in `queryPool` identified by `query` and `index`, and marks it as available.

The `vkCmdEndQueryIndexedEXT` command operates the same as the vkCmdEndQuery command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first synchronization scope includes all commands which reference the queries in `queryPool`

indicated by query that occur earlier in submission order.

The second synchronization scope includes only the operation of this command.

Valid Usage

- VUID-vkCmdEndQueryIndexedEXT-None-02342
  All queries used by the command **must** be active
- VUID-vkCmdEndQueryIndexedEXT-query-02343
  query **must** be less than the number of queries in queryPool
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-02344
  commandBuffer **must** not be a protected command buffer
- VUID-vkCmdEndQueryIndexedEXT-query-02345
  If vkCmdEndQueryIndexedEXT is called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in queryPool
- VUID-vkCmdEndQueryIndexedEXT-queryType-06694
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT or VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index parameter **must** be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams
- VUID-vkCmdEndQueryIndexedEXT-queryType-06695
  If the queryType used to create queryPool was not VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT and not VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index **must** be zero
- VUID-vkCmdEndQueryIndexedEXT-queryType-06696
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT or VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, index **must** equal the index used to begin the query
- VUID-vkCmdEndQueryIndexedEXT-None-07007
  If called within a subpass of a render pass instance, the corresponding vkCmdBeginQuery* command **must** have been called previously within the same subpass

Valid Usage (Implicit)

- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdEndQueryIndexedEXT-queryPool-parameter
  queryPool **must** be a valid VkQueryPool handle
- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-recording
  commandBuffer **must** be in the recording state

- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdEndQueryIndexedEXT-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdEndQueryIndexedEXT-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdEndQueryIndexedEXT-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdEndQueryIndexedEXT is not affected by conditional rendering

An application **can** retrieve results either by requesting they be written into application-provided memory, or by requesting they be copied into a `VkBuffer`. In either case, the layout in memory is defined as follows:

- The first query's result is written starting at the first byte requested by the command, and each subsequent query's result begins `stride` bytes later.
- Each query writes results in a tightly packed array of result values as follows:
  - Occlusion queries write one unsigned integer value - the number of samples passed.
  - Pipeline statistics queries write one unsigned integer value for each bit that is enabled in the `pipelineStatistics` when the pool is created, and the statistics values are written in bit order starting from the least significant bit.
  - Timestamp queries write one unsigned integer value.
  - Performance queries write one VkPerformanceCounterResultKHR value for each VkPerformanceCounterKHR in the query.
  - Transform feedback queries write two unsigned integer values; the first integer is the number of primitives successfully written to the corresponding transform feedback buffer and the second is the number of primitives output to the vertex stream, regardless of whether they were successfully captured or not. In other words, if the transform feedback buffer was sized too small for the number of primitives output by the vertex stream, the first integer represents the number of primitives actually written and the second is the number that would have been written if all the transform feedback buffers associated with that vertex stream were large enough.
  - Primitives generated queries write one unsigned integer value: the number of primitives output to the vertex stream, regardless of whether transform feedback is active or not, or whether they were successfully captured by transform feedback or not. This is identical to the second integer result value produced by transform feedback queries if transform feedback is active.
  - Mesh shader queries write a single unsigned integer.
  - Video encode feedback queries write one or more signed or unsigned integer values for each bit that is enabled in VkQueryPoolVideoEncodeFeedbackCreateInfoKHR ::`encodeFeedbackFlags` when the pool is created, and the feedback values are written in bit order starting from the least significant bit, as described here.
- If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is specified, an additional unsigned integer result value is written indicating whether the query's result is available, with any non-zero value indicating that it is available.
- If VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is specified, an additional signed integer result value is written indicating the status of the query result. Positive values indicate success, negative values indicate failure, and zero indicates that the result is not yet available. Specific error codes are as defined in the VkQueryResultStatusKHR enumeration.
- Depending on the query type, additional results are written for each query in a tightly packed array of result values as follows:
  - If per picture partition feedback is requested, video encode feedback queries write one or more integer values after the primary query results for each encoded picture partition for each bit that is enabled in VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR ::`perPartitionEncodeFeedbackFlags` when the pool is created. The feedback values are written in picture-partition-major order and, for each encoded picture partition but at most for VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR::`maxPerPartitionFeedbackEntr`

ies number of picture partitions, in bit order starting from the least significant bit.

NOTE Per picture partition feedback values follow all primary query results, including the availability or result status written as the final element of the primary query results in response to VK_QUERY_RESULT_WITH_AVAILABILITY_BIT or VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, respectively. Implementations will never write more per picture partition results than the maxPerPartitionFeedbackEntries requested when the query pool was created.

- The bit width of all integer result values written by all query types is either 32- or 64-bits, as requested by the command. The only exceptions are the VkPerformanceCounterResultKHR values written by performance queries whose type is determined by the unit member of the corresponding VkPerformanceCounterKHR.
- If more than one query is retrieved and stride is not at least as large as the size of the array of values corresponding to a single query, the values written to memory are undefined.

To retrieve status and results for a set of queries, call:

```
// Provided by VK_VERSION_1_0
VkResult vkGetQueryPoolResults(
    VkDevice                                    device,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery,
    uint32_t                                    queryCount,
    size_t                                      dataSize,
    void*                                       pData,
    VkDeviceSize                                stride,
    VkQueryResultFlags                          flags);
```

- device is the logical device that owns the query pool.
- queryPool is the query pool managing the queries containing the desired results.
- firstQuery is the initial query index.
- queryCount is the number of queries to read.
- dataSize is the size in bytes of the buffer pointed to by pData.
- pData is a pointer to an application-allocated buffer where the results will be written
- stride is the stride in bytes between results for individual queries within pData.
- flags is a bitmask of VkQueryResultFlagBits specifying how and when results are returned.

Any results written for a query are written according to a layout dependent on the query type.

If no bits are set in flags, and all requested queries are in the available state, results are written as an array of 32-bit unsigned integer values. Behavior when not all queries are available is described below.

If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pData`, along with an extra availability or status value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available. The size of the availability or status values is 64 bits if VK_QUERY_RESULT_64_BIT is set in `flags`. Otherwise, it is 32 bits.

If VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `pData`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

VkQueryResultStatusKHR defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

NOTE

If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT or VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is set, the layout of data in the buffer is a *(result,availability)* or *(result,status)* pair for each query returned, and `stride` is the stride between each pair.

Results for any available query written by this command are final and represent the final result of the query. If VK_QUERY_RESULT_PARTIAL_BIT is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If VK_QUERY_RESULT_64_BIT is set, results and, if returned, availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, results for each query are written as an array of the type indicated by VkPerformanceCounterKHR::`storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

If VK_QUERY_RESULT_WAIT_BIT is set, this command defines an execution dependency with any earlier commands that writes one of the identified queries. The first synchronization scope includes all instances of vkCmdEndQuery, vkCmdEndQueryIndexedEXT, vkCmdWriteAccelerationStructuresPropertiesKHR, vkCmdWriteMicromapsPropertiesEXT, vkCmdWriteTimestamp2, and vkCmdWriteTimestamp that reference any query in `queryPool` indicated by `firstQuery` and `queryCount`. The second synchronization scope includes the host operations of this command.

If VK_QUERY_RESULT_WAIT_BIT is not set, vkGetQueryPoolResults **may** return VK_NOT_READY if there are queries in the unavailable state.

NOTE

Applications **must** take care to ensure that use of the VK_QUERY_RESULT_WAIT_BIT bit has the desired effect.

For example, if a query has been used previously and a command buffer records the commands vkCmdResetQueryPool, vkCmdBeginQuery, and vkCmdEndQuery for that query, then the query will remain in the available state until vkResetQueryPool is called or the vkCmdResetQueryPool command executes on a queue. Applications **can** use fences or events to ensure that a query has already been reset before checking for its results or availability status. Otherwise, a stale value could be returned from a previous use of the query.

The above also applies when VK_QUERY_RESULT_WAIT_BIT is used in combination with VK_QUERY_RESULT_WITH_AVAILABILITY_BIT. In this case, the returned availability status **may** reflect the result of a previous use of the query unless vkResetQueryPool is called or the vkCmdResetQueryPool command has been executed since the last use of the query.

A similar situation can arise with the VK_QUERY_RESULT_WITH_STATUS_BIT_KHR flag.

NOTE

Applications **can** double-buffer query pool usage, with a pool per frame, and reset queries at the end of the frame in which they are read.

Valid Usage

- VUID-vkGetQueryPoolResults-firstQuery-09436
  `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkGetQueryPoolResults-firstQuery-09437
  The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkGetQueryPoolResults-queryCount-09438
  If `queryCount` is greater than 1, `stride` **must** not be zero
- VUID-vkGetQueryPoolResults-queryType-09439
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_TIMESTAMP, `flags` **must** not contain VK_QUERY_RESULT_PARTIAL_BIT
- VUID-vkGetQueryPoolResults-queryType-09440
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, `flags` **must** not contain VK_QUERY_RESULT_WITH_AVAILABILITY_BIT, VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, VK_QUERY_RESULT_PARTIAL_BIT, or VK_QUERY_RESULT_64_BIT
- VUID-vkGetQueryPoolResults-queryType-09441

If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the queryPool **must** have been recorded once for each pass as retrieved via a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR

- VUID-vkGetQueryPoolResults-queryType-11874
  If the queryType used to create queryPool was not VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then flags **must** not include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkGetQueryPoolResults-queryType-09442
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then flags **must** include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkGetQueryPoolResults-flags-09443
  If flags includes VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, then it **must** not include VK_QUERY_RESULT_WITH_AVAILABILITY_BIT
- VUID-vkGetQueryPoolResults-None-09401
  All queries used by the command **must** not be uninitialized
- VUID-vkGetQueryPoolResults-flags-02828
  If VK_QUERY_RESULT_64_BIT is not set in flags and the queryType used to create queryPool was not VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then pData **must** be aligned to a multiple of 4
- VUID-vkGetQueryPoolResults-queryCount-12251
  If queryCount is greater than 1, VK_QUERY_RESULT_64_BIT is not set in flags and the queryType used to create queryPool was not VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then stride **must** be a multiple of 4
- VUID-vkGetQueryPoolResults-flags-00815
  If VK_QUERY_RESULT_64_BIT is set in flags then pData **must** be aligned to a multiple of 8
- VUID-vkGetQueryPoolResults-queryCount-12252
  If queryCount is greater than 1 and VK_QUERY_RESULT_64_BIT is set in flags, then stride **must** be a multiple of 8
- VUID-vkGetQueryPoolResults-stride-08993
  If queryCount is greater than 1 and VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is set, stride **must** be large enough to contain the unsigned integer representing availability or status in addition to the query result
- VUID-vkGetQueryPoolResults-queryType-03229
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then pData **must** be aligned to a multiple of the size of VkPerformanceCounterResultKHR
- VUID-vkGetQueryPoolResults-queryCount-12253
  If queryCount is greater than 1 and the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then stride **must** be a multiple of the size of VkPerformanceCounterResultKHR

- VUID-vkGetQueryPoolResults-queryType-04519
  If `queryCount` is greater than 1 and the `queryType` used to create `queryPool` was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then `stride` **must** be large enough to contain the VkQueryPoolPerformanceCreateInfoKHR::`counterIndexCount` used to create `queryPool` times the size of VkPerformanceCounterResultKHR
- VUID-vkGetQueryPoolResults-dataSize-00817
  `dataSize` **must** be large enough to contain the result of each query, as described here

Valid Usage (Implicit)

- VUID-vkGetQueryPoolResults-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkGetQueryPoolResults-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkGetQueryPoolResults-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkGetQueryPoolResults-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkQueryResultFlagBits values
- VUID-vkGetQueryPoolResults-dataSize-arraylength
  `dataSize` **must** be greater than `0`
- VUID-vkGetQueryPoolResults-queryPool-parent
  `queryPool` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- VK_NOT_READY
- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

Bits which **can** be set in vkGetQueryPoolResults::`flags` and vkCmdCopyQueryPoolResults::`flags`, specifying how and when results are returned, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryResultFlagBits {
    VK_QUERY_RESULT_64_BIT = 0x00000001,
    VK_QUERY_RESULT_WAIT_BIT = 0x00000002,
    VK_QUERY_RESULT_WITH_AVAILABILITY_BIT = 0x00000004,
    VK_QUERY_RESULT_PARTIAL_BIT = 0x00000008,
  // Provided by VK_KHR_video_queue
    VK_QUERY_RESULT_WITH_STATUS_BIT_KHR = 0x00000010,
} VkQueryResultFlagBits;
```

- VK_QUERY_RESULT_64_BIT specifies the results will be written as an array of 64-bit unsigned integer values. If this bit is not set, the results will be written as an array of 32-bit unsigned integer values.
- VK_QUERY_RESULT_WAIT_BIT specifies that Vulkan will wait for each query's status to become available before retrieving its results.
- VK_QUERY_RESULT_WITH_AVAILABILITY_BIT specifies that the availability status accompanies the results.
- VK_QUERY_RESULT_PARTIAL_BIT specifies that returning partial results is acceptable.
- VK_QUERY_RESULT_WITH_STATUS_BIT_KHR specifies that the last value returned in the query is a VkQueryResultStatusKHR value. See result status query for information on how an application can determine whether the use of this flag bit is supported.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryResultFlags;
```

VkQueryResultFlags is a bitmask type for setting a mask of zero or more VkQueryResultFlagBits.

Specific status codes that **can** be returned from a query are:

```
// Provided by VK_KHR_video_queue
typedef enum VkQueryResultStatusKHR {
    VK_QUERY_RESULT_STATUS_ERROR_KHR = -1,
    VK_QUERY_RESULT_STATUS_NOT_READY_KHR = 0,
    VK_QUERY_RESULT_STATUS_COMPLETE_KHR = 1,
  // Provided by VK_KHR_video_encode_queue
    VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR = -1000299000,
} VkQueryResultStatusKHR;
```

- VK_QUERY_RESULT_STATUS_NOT_READY_KHR specifies that the query result is not yet available.
- VK_QUERY_RESULT_STATUS_ERROR_KHR specifies that operations did not complete successfully.
- VK_QUERY_RESULT_STATUS_COMPLETE_KHR specifies that operations completed successfully and the query result is available.

- VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR specifies that a video encode operation did not complete successfully due to the destination video bitstream buffer range not being sufficiently large to fit the encoded bitstream data.

To copy query statuses and numerical results directly to buffer memory, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyQueryPoolResultsToMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery,
    uint32_t                                    queryCount,
    const VkStridedDeviceAddressRangeKHR*       pDstRange,
    VkAddressCommandFlagsKHR                    dstFlags,
    VkQueryResultFlags                          queryResultFlags);
```

- commandBuffer is the command buffer into which this command will be recorded.
- queryPool is the query pool managing the queries containing the desired results.
- firstQuery is the initial query index.
- queryCount is the number of queries. firstQuery and queryCount together define a range of queries.
- pDstRange is a pointer to a VkStridedDeviceAddressRangeKHR describing a range of memory addressed with a stride that will receive the results of the copy command.
- dstFlags is a VkAddressCommandFlagsKHR value defining the flags for the destination address range.
- queryResultFlags is a bitmask of VkQueryResultFlagBits specifying how and when results are returned.

Any results written for a query are written according to a layout dependent on the query type.

Results for any query in queryPool identified by firstQuery and queryCount that is available are copied to pDstRange.

If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is set, results for all queries in queryPool identified by firstQuery and queryCount are copied to pDstRange, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is set, results for all queries in queryPool identified by firstQuery and queryCount are copied to pDstRange, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

VkQueryResultStatusKHR defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of the query. If VK_QUERY_RESULT_PARTIAL_BIT is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If VK_QUERY_RESULT_64_BIT is set, results and availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, results for each query are written as an array of the type indicated by VkPerformanceCounterKHR::`storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in submission order. If `flags` does not include VK_QUERY_RESULT_WAIT_BIT, vkCmdEndQueryIndexedEXT, vkCmdWriteTimestamp2, vkCmdEndQuery, and vkCmdWriteTimestamp are excluded from this scope.

The second synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

`vkCmdCopyQueryPoolResultsToMemoryKHR` is considered to be a transfer operation, and its writes to buffer memory **must** be synchronized using VK_PIPELINE_STAGE_TRANSFER_BIT and VK_ACCESS_TRANSFER_WRITE_BIT before using the results.

Valid Usage

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13097
  If the range specified by `pDstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13098
  If the buffer from which the range specified by `pDstRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13099
  If the buffer from which the range specified by `pDstRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13100
  `dstFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `dstFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `dstFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13101
  `dstFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `dstFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `dstFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-firstQuery-09436
  `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-firstQuery-09437
  The sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryCount-09438
  If `queryCount` is greater than 1, `stride` **must** not be zero
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09439
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_TIMESTAMP,

queryResultFlags **must** not contain VK_QUERY_RESULT_PARTIAL_BIT

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09440
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, queryResultFlags **must** not contain VK_QUERY_RESULT_WITH_AVAILABILITY_BIT, VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, VK_QUERY_RESULT_PARTIAL_BIT, or VK_QUERY_RESULT_64_BIT
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09441
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the queryPool **must** have been recorded once for each pass as retrieved via a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-11874
  If the queryType used to create queryPool was not VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then queryResultFlags **must** not include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-09442
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then queryResultFlags **must** include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-09443
  If queryResultFlags includes VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, then it **must** not include VK_QUERY_RESULT_WITH_AVAILABILITY_BIT
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13076
  All queries used by the command **must** not be uninitialized when the command is executed
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-13077
  If VK_QUERY_RESULT_64_BIT is not set in flags then pDstRange->address and pDstRange->stride **must** be multiples of 4
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-flags-13078
  If VK_QUERY_RESULT_64_BIT is set in flags then pDstRange->address and pDstRange->stride **must** be multiples of 8
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13079
  pDstRange->size **must** be large enough to contain the result of each query, as described here
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-13080
  The buffer from which the range defined by pDstRange was queried **must** have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryType-13081
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, VkPhysicalDevicePerformanceQueryPropertiesKHR::allowCommandBufferQueryCopies **must**

be VK_TRUE

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13083
  All queries used by the command **must** not be active
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-None-13084
  All queries used by the command **must** have been made *available* by prior executed commands
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-13085
  `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-pDstRange-parameter
  `pDstRange` **must** be a valid pointer to a valid VkStridedDeviceAddressRangeKHR structure
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-dstFlags-parameter
  If `dstFlags` is not `0`, `dstFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-queryResultFlags-parameter
  If `queryResultFlags` is not `0`, `queryResultFlags` **must** be a valid combination of VkQueryResultFlagBits values
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyQueryPoolResultsToMemoryKHR-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyQueryPoolResultsToMemoryKHR is not affected by conditional rendering

To copy query statuses and numerical results directly to buffer memory, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyQueryPoolResults(
    VkCommandBuffer                             commandBuffer,
    VkQueryPool                                 queryPool,
    uint32_t                                    firstQuery,
    uint32_t                                    queryCount,
    VkBuffer                                    dstBuffer,
    VkDeviceSize                                dstOffset,
    VkDeviceSize                                stride,
    VkQueryResultFlags                          flags);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries. `firstQuery` and `queryCount` together define a range of queries.
- `dstBuffer` is a VkBuffer object that will receive the results of the copy command.
- `dstOffset` is an offset into `dstBuffer`.
- `stride` is the stride in bytes between results for individual queries within `dstBuffer`. The required size of the backing memory for `dstBuffer` is determined as described above for vkGetQueryPoolResults.

- `flags` is a bitmask of VkQueryResultFlagBits specifying how and when results are returned.

Any results written for a query are written according to a layout dependent on the query type.

Results for any query in `queryPool` identified by `firstQuery` and `queryCount` that is available are copied to `dstBuffer`.

If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

VkQueryResultStatusKHR defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of the query. If VK_QUERY_RESULT_PARTIAL_BIT is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If VK_QUERY_RESULT_64_BIT is set, results and availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, results for each query are written as an array of the type indicated by VkPerformanceCounterKHR::`storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value **may** either wrap or saturate. If the `maintenance7` feature is enabled, for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value. If a signed integer query's value overflows the result type, the value is undefined. If a floating-point query's value is not representable as the result type, the value is undefined.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in submission order. If `flags` does not include VK_QUERY_RESULT_WAIT_BIT, vkCmdEndQuery, vkCmdEndQueryIndexedEXT, vkCmdWriteAccelerationStructuresPropertiesKHR, vkCmdWriteMicromapsPropertiesEXT,

vkCmdWriteTimestamp2, and vkCmdWriteTimestamp are excluded from this scope.

The second synchronization scope includes all commands which reference the queries in queryPool indicated by query that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

vkCmdCopyQueryPoolResults is considered to be a transfer operation, and its writes to buffer memory **must** be synchronized using VK_PIPELINE_STAGE_TRANSFER_BIT and VK_ACCESS_TRANSFER_WRITE_BIT before using the results.

Valid Usage

- VUID-vkCmdCopyQueryPoolResults-firstQuery-09436
  firstQuery **must** be less than the number of queries in queryPool
- VUID-vkCmdCopyQueryPoolResults-firstQuery-09437
  The sum of firstQuery and queryCount **must** be less than or equal to the number of queries in queryPool
- VUID-vkCmdCopyQueryPoolResults-queryCount-09438
  If queryCount is greater than 1, stride **must** not be zero
- VUID-vkCmdCopyQueryPoolResults-queryType-09439
  If the queryType used to create queryPool was VK_QUERY_TYPE_TIMESTAMP, flags **must** not contain VK_QUERY_RESULT_PARTIAL_BIT
- VUID-vkCmdCopyQueryPoolResults-queryType-09440
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, flags **must** not contain VK_QUERY_RESULT_WITH_AVAILABILITY_BIT, VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, VK_QUERY_RESULT_PARTIAL_BIT, or VK_QUERY_RESULT_64_BIT
- VUID-vkCmdCopyQueryPoolResults-queryType-09441
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the queryPool **must** have been recorded once for each pass as retrieved via a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR
- VUID-vkCmdCopyQueryPoolResults-queryType-11874
  If the queryType used to create queryPool was not VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR or VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then flags **must** not include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkCmdCopyQueryPoolResults-queryType-09442
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then flags **must** include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR
- VUID-vkCmdCopyQueryPoolResults-flags-09443
  If flags includes VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, then it **must** not include

VK_QUERY_RESULT_WITH_AVAILABILITY_BIT

- VUID-vkCmdCopyQueryPoolResults-None-09402
  All queries used by the command **must** not be uninitialized when the command is executed
- VUID-vkCmdCopyQueryPoolResults-dstOffset-00819
  `dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdCopyQueryPoolResults-flags-00822
  If VK_QUERY_RESULT_64_BIT is not set in `flags` then `dstOffset` **must** be a multiple of `4`
- VUID-vkCmdCopyQueryPoolResults-queryCount-12254
  If `queryCount` is greater than 1 and VK_QUERY_RESULT_64_BIT is not set in `flags` then `stride` **must** be a multiple of `4`
- VUID-vkCmdCopyQueryPoolResults-flags-00823
  If VK_QUERY_RESULT_64_BIT is set in `flags` then `dstOffset` **must** be a multiple of `8`
- VUID-vkCmdCopyQueryPoolResults-queryCount-12255
  If `queryCount` is greater than 1 and VK_QUERY_RESULT_64_BIT is set in `flags` then `stride` **must** be a multiple of `8`
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00824
  `dstBuffer` **must** have enough storage, from `dstOffset`, to contain the result of each query, as described here
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00825
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyQueryPoolResults-dstBuffer-00826
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyQueryPoolResults-queryType-03232
  If the `queryType` used to create `queryPool` was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, VkPhysicalDevicePerformanceQueryPropertiesKHR::`allowCommandBufferQueryCopies` **must** be VK_TRUE
- VUID-vkCmdCopyQueryPoolResults-None-07429
  All queries used by the command **must** not be active
- VUID-vkCmdCopyQueryPoolResults-None-08752
  All queries used by the command **must** have been made *available* by prior executed commands

Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyQueryPoolResults-queryPool-parameter

`queryPool` **must** be a valid VkQueryPool handle

- VUID-vkCmdCopyQueryPoolResults-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdCopyQueryPoolResults-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkQueryResultFlagBits values
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyQueryPoolResults-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdCopyQueryPoolResults-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyQueryPoolResults-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyQueryPoolResults-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyQueryPoolResults-commonparent
  Each of `commandBuffer`, `dstBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdCopyQueryPoolResults is not affected by conditional rendering

Rendering operations such as clears, MSAA resolves, attachment load/store operations, and blits

may count towards the results of queries. This behavior is implementation-dependent and **may** vary depending on the path used within an implementation. For example, some implementations have several types of clears, some of which **may** include vertices and some not.

22.3. Occlusion Queries

Occlusion queries track the number of samples that pass the per-fragment tests for a set of drawing commands. As such, occlusion queries are only available on queue families supporting graphics operations. The application **can** then use these results to inform future rendering decisions. An occlusion query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively. When an occlusion query begins, the count of passing samples always starts at zero. For each drawing command, the count is incremented as described in Sample Counting. If `flags` does not contain VK_QUERY_CONTROL_PRECISE_BIT an implementation **may** generate any non-zero result value for the query if the count of passing samples is non-zero.

NOTE Not setting VK_QUERY_CONTROL_PRECISE_BIT mode **may** be more efficient on some implementations, and **should** be used where it is sufficient to know a boolean result on whether any samples passed the per-fragment tests. In this case, some implementations **may** only return zero or one, regardless of the actual number of samples passing the per-fragment tests.

Setting VK_QUERY_CONTROL_PRECISE_BIT does not guarantee that different implementations return the same number of samples in an occlusion query. Some implementations **may** kill fragments in the pre-rasterization shader stage, and these killed fragments do not contribute to the final result of the query. It is possible that some implementations generate a zero result value for the query, while others generate a non-zero value.

Some implementations **may** track the number of samples that pass the per-fragment tests multiplied for each color output. Such implementation **may** produce inconsistent values if more than one color output is written in the fragment shader.

When an occlusion query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

NOTE If occluding geometry is not drawn first, samples **can** pass the depth test, but still not be visible in a final image.

22.4. Pipeline Statistics Queries

Pipeline statistics queries allow the application to sample a specified set of `VkPipeline` counters. These counters are accumulated by Vulkan for a set of either drawing or dispatching commands while a pipeline statistics query is active. As such, pipeline statistics queries are available on queue families supporting either graphics or compute operations. The availability of pipeline statistics queries is indicated by the `pipelineStatisticsQuery` member of the `VkPhysicalDeviceFeatures` object (see `vkGetPhysicalDeviceFeatures` and `vkCreateDevice` for detecting and requesting this query type on a `VkDevice`).

A pipeline statistics query is begun and ended by calling vkCmdBeginQuery and vkCmdEndQuery, respectively. When a pipeline statistics query begins, all statistics counters are set to zero. While the query is active, the pipeline type determines which set of statistics are available, but these **must** be configured on the query pool when it is created. If a statistic counter is issued on a command buffer that does not support the corresponding operation, or the counter corresponds to a shading stage which is missing from any of the pipelines used while the query is active, the value of that counter is undefined after the query has been made available. At least one statistic counter relevant to the operations supported on the recording command buffer **must** be enabled.

Bits which **can** be set in VkQueryPoolCreateInfo::pipelineStatistics for query pools and in VkCommandBufferInheritanceInfo::pipelineStatistics for secondary command buffers, individually enabling pipeline statistics counters, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkQueryPipelineStatisticFlagBits {
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT = 0x00000001,
    VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT = 0x00000002,
    VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT = 0x00000004,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT = 0x00000008,
    VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT = 0x00000010,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT = 0x00000020,
    VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT = 0x00000040,
    VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT = 0x00000080,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT = 0x00000100,
    VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT =
0x00000200,
    VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT = 0x00000400,
  // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT = 0x00000800,
  // Provided by VK_EXT_mesh_shader
    VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT = 0x00001000,
} VkQueryPipelineStatisticFlagBits;
```

- VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT specifies that queries managed by the pool will count the number of vertices processed by the input assembly stage. Vertices corresponding to incomplete primitives **may** contribute to the count.
- VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT specifies that queries managed by the pool will count the number of primitives processed by the input assembly stage. If primitive restart is enabled, restarting the primitive topology has no effect on the count. Incomplete primitives **may** be counted.
- VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of vertex shader invocations. This counter's value is incremented each time a vertex shader is invoked.
- VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of geometry shader invocations. This counter's value is incremented each time a geometry shader is invoked. In the case of instanced geometry shaders, the geometry shader invocations count is incremented for each separate instanced

invocation.

- VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT specifies that queries managed by the pool will count the number of primitives generated by geometry shader invocations. The counter's value is incremented each time the geometry shader emits a primitive. Restarting primitive topology using the SPIR-V instructions `OpEndPrimitive` or `OpEndStreamPrimitive` has no effect on the geometry shader output primitives count.
- VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of primitives processed by the Primitive Clipping stage of the pipeline. The counter's value is incremented each time a primitive reaches the primitive clipping stage.
- VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT specifies that queries managed by the pool will count the number of primitives output by the Primitive Clipping stage of the pipeline. The counter's value is incremented each time a primitive passes the primitive clipping stage. The actual number of primitives output by the primitive clipping stage for a particular input primitive is implementation-dependent but **must** satisfy the following conditions:
  - If at least one vertex of the input primitive lies inside the clipping volume, and either the primitive is not rasterized according to the Basic Polygon Rasterization rules, or at least one sample point for a fragment lies within the rasterized triangle according to those rules, the counter is incremented by one or more.
  - Otherwise, the counter is incremented by zero or more.
- VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of fragment shader invocations. The counter's value is incremented each time the fragment shader is invoked.
- VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT specifies that queries managed by the pool will count the number of patches processed by the tessellation control shader. The counter's value is incremented once for each patch for which a tessellation control shader is invoked.
- VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of invocations of the tessellation evaluation shader. The counter's value is incremented each time the tessellation evaluation shader is invoked.
- VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT specifies that queries managed by the pool will count the number of compute shader invocations. The counter's value is incremented every time the compute shader is invoked. Implementations **may** skip the execution of certain compute shader invocations or execute additional compute shader invocations for implementation-dependent reasons as long as the results of rendering otherwise remain unchanged.
- VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT specifies that queries managed by the pool will count the number of task shader invocations. The counter's value is incremented every time the task shader is invoked.
- VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT specifies that queries managed by the pool will count the number of mesh shader invocations. The counter's value is incremented every time the mesh shader is invoked.

These values are intended to measure relative statistics on one implementation. Various device architectures will count these values differently. Any or all counters **may** be affected by the issues described in Query Operation.

This counting difference is especially true if the pipeline contains mesh or task shaders, which may affect several of the counters in unexpected ways.

NOTE	For example, tile-based rendering devices **may** need to replay the scene multiple times, affecting some of the counts.

If a pipeline has `rasterizerDiscardEnable` enabled, implementations **may** discard primitives after the final pre-rasterization shader stage. As a result, if `rasterizerDiscardEnable` is enabled, the clipping input and output primitives counters **may** not be incremented.

When a pipeline statistics query finishes, the result for that query is marked as available. The application **can** copy the result to a buffer (via `vkCmdCopyQueryPoolResults`), or request it be put into host memory (via `vkGetQueryPoolResults`).

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPipelineStatisticFlags;
```

`VkQueryPipelineStatisticFlags` is a bitmask type for setting a mask of zero or more VkQueryPipelineStatisticFlagBits.

22.5. Timestamp Queries

Timestamps provide applications with a mechanism for monotonically tracking the execution of commands. A timestamp is an integer value generated by the `VkPhysicalDevice`. Unlike other queries, timestamps do not operate over a range, and so do not use vkCmdBeginQuery or vkCmdEndQuery. The mechanism is built around a set of commands that allow the application to tell the `VkPhysicalDevice` to write timestamp values to a query pool and then either read timestamp values on the host (using vkGetQueryPoolResults) or copy timestamp values to a `VkBuffer` (using vkCmdCopyQueryPoolResults).

The number of valid bits in a timestamp value is determined by the `VkQueueFamilyProperties` ::`timestampValidBits` property of the queue on which the timestamp is written. Timestamps are supported on any queue which reports a non-zero value for `timestampValidBits` via vkGetPhysicalDeviceQueueFamilyProperties. If the `timestampComputeAndGraphics` limit is VK_TRUE, timestamps are supported by every queue family that supports either graphics or compute operations (see VkQueueFamilyProperties).

The number of nanoseconds it takes for a timestamp value to be incremented by 1 **can** be obtained from `VkPhysicalDeviceLimits`::`timestampPeriod` after a call to `vkGetPhysicalDeviceProperties`.

To request a timestamp and write the value to memory, call:

```
// Provided by VK_VERSION_1_3
void vkCmdWriteTimestamp2(
    VkCommandBuffer                             commandBuffer,
    VkPipelineStageFlags2                       stage,
    VkQueryPool                                 queryPool,
    uint32_t                                    query);
```

```
// Provided by VK_KHR_synchronization2
// Equivalent to vkCmdWriteTimestamp2
void vkCmdWriteTimestamp2KHR(
    VkCommandBuffer                             commandBuffer,
    VkPipelineStageFlags2                       stage,
    VkQueryPool                                 queryPool,
    uint32_t                                    query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stage` specifies a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp2` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first synchronization scope includes all commands that occur earlier in submission order. The synchronization scope is limited to operations on the pipeline stage specified by `stage`.

The second synchronization scope includes only the timestamp write operation.

> **NOTE** Implementations may write the timestamp at any stage that is logically later than `stage`.

Any timestamp write that happens-after another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that happens-after another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the VK_TIME_DOMAIN_DEVICE_KHR time domain. If an overflow occurs, the timestamp value **must** wrap back to zero.

If `vkCmdWriteTimestamp2` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask of the subpass or dynamic render pass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is

written to the remaining queries.

- All N queries are timestamp values.

Either way, if two timestamps are written in the same subpass or dynamic render pass with multiview enabled, each of the N consecutive queries written for a timestamp **must** not have a lower value than the queries with corresponding indices written by the timestamp that happens-before unless the value overflows the maximum supported integer bit width of the query.

Valid Usage

- VUID-vkCmdWriteTimestamp2-stage-03929
  If the `geometryShader` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT
- VUID-vkCmdWriteTimestamp2-stage-03930
  If the `tessellationShader` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT or VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT
- VUID-vkCmdWriteTimestamp2-stage-03931
  If the `conditionalRendering` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT
- VUID-vkCmdWriteTimestamp2-stage-03932
  If the `fragmentDensityMap` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT
- VUID-vkCmdWriteTimestamp2-stage-03933
  If the `transformFeedback` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT
- VUID-vkCmdWriteTimestamp2-stage-03934
  If the `meshShader` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT
- VUID-vkCmdWriteTimestamp2-stage-03935
  If the `taskShader` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT
- VUID-vkCmdWriteTimestamp2-stage-07317
  If the `attachmentFragmentShadingRate` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdWriteTimestamp2-stage-07947
  If the `rayTracingPipeline` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR
- VUID-vkCmdWriteTimestamp2-stage-10751
  If the `accelerationStructure` feature is not enabled, `stage` **must** not contain VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR
- VUID-vkCmdWriteTimestamp2-stage-10752
  If the `rayTracingMaintenance1` feature is not enabled, `stage` **must** not contain

VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR

- VUID-vkCmdWriteTimestamp2-stage-11541
  If the VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap feature is not enabled, stage **must** not contain VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT
- VUID-vkCmdWriteTimestamp2-synchronization2-03858
  The synchronization2 feature **must** be enabled
- VUID-vkCmdWriteTimestamp2-stage-03859
  stage **must** only include a single pipeline stage
- VUID-vkCmdWriteTimestamp2-stage-03860
  stage **must** only include stages valid for the queue family that was used to create the command pool that commandBuffer was allocated from
- VUID-vkCmdWriteTimestamp2-queryPool-03861
  queryPool **must** have been created with a queryType of VK_QUERY_TYPE_TIMESTAMP
- VUID-vkCmdWriteTimestamp2-timestampValidBits-03863
  The command pool's queue family **must** support a non-zero timestampValidBits
- VUID-vkCmdWriteTimestamp2-query-04903
  query **must** be less than the number of queries in queryPool
- VUID-vkCmdWriteTimestamp2-None-03864
  All queries used by the command **must** be *unavailable*
- VUID-vkCmdWriteTimestamp2-query-03865
  If vkCmdWriteTimestamp2 is called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in queryPool

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdWriteTimestamp2-stage-parameter
  If stage is not 0, stage **must** be a valid combination of VkPipelineStageFlagBits2 values
- VUID-vkCmdWriteTimestamp2-queryPool-parameter
  queryPool **must** be a valid VkQueryPool handle
- VUID-vkCmdWriteTimestamp2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdWriteTimestamp2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_TRANSFER_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdWriteTimestamp2-suspended
  This command **must** not be called between suspended render pass instances

- VUID-vkCmdWriteTimestamp2-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdWriteTimestamp2 is not affected by conditional rendering

To request a timestamp and write the value to memory, call:

WARNING This functionality is superseded by vkCmdWriteTimestamp2. See Legacy Functionality for more information.

```
// Provided by VK_VERSION_1_0
void vkCmdWriteTimestamp(
    VkCommandBuffer                             commandBuffer,
    VkPipelineStageFlagBits                     pipelineStage,
    VkQueryPool                                 queryPool,
    uint32_t                                    query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pipelineStage` is a VkPipelineStageFlagBits value, specifying a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first synchronization scope includes all commands that occur earlier in submission order. The synchronization scope is limited to operations on the pipeline stage specified by `pipelineStage`.

The second synchronization scope includes only the timestamp write operation.

> **NOTE** Implementations may write the timestamp at any stage that is logically later than `stage`.

Any timestamp write that happens-after another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that happens-after another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the VK_TIME_DOMAIN_DEVICE_KHR time domain. If an overflow occurs, the timestamp value **must** wrap back to zero.

If `vkCmdWriteTimestamp` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at `query`) where N is the number of bits set in the view mask of the subpass or dynamic render pass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries.
- All N queries are timestamp values.

Either way, if two timestamps are written in the same subpass or dynamic render pass with multiview enabled, each of the N consecutive queries written for a timestamp **must** not have a lower value than the queries with corresponding indices written by the timestamp that happens-before unless the value overflows the maximum supported integer bit width of the query.

Valid Usage

- VUID-vkCmdWriteTimestamp-pipelineStage-04074
  `pipelineStage` **must** be a valid stage for the queue family that was used to create the command pool that `commandBuffer` was allocated from
- VUID-vkCmdWriteTimestamp-pipelineStage-04075
  If the `geometryShader` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT

- VUID-vkCmdWriteTimestamp-pipelineStage-04076
  If the `tessellationShader` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT or VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT
- VUID-vkCmdWriteTimestamp-pipelineStage-04077
  If the `conditionalRendering` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT
- VUID-vkCmdWriteTimestamp-pipelineStage-04078
  If the `fragmentDensityMap` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT
- VUID-vkCmdWriteTimestamp-pipelineStage-04079
  If the `transformFeedback` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT
- VUID-vkCmdWriteTimestamp-pipelineStage-04080
  If the `meshShader` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT
- VUID-vkCmdWriteTimestamp-pipelineStage-07077
  If the `taskShader` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT
- VUID-vkCmdWriteTimestamp-fragmentShadingRate-07315
  If the `attachmentFragmentShadingRate` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VUID-vkCmdWriteTimestamp-synchronization2-06489
  If the `synchronization2` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_NONE
- VUID-vkCmdWriteTimestamp-rayTracingPipeline-07944
  If the `rayTracingPipeline` feature is not enabled, `pipelineStage` **must** not be VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR
- VUID-vkCmdWriteTimestamp-queryPool-01416
  `queryPool` **must** have been created with a `queryType` of VK_QUERY_TYPE_TIMESTAMP
- VUID-vkCmdWriteTimestamp-timestampValidBits-00829
  The command pool's queue family **must** support a non-zero `timestampValidBits`
- VUID-vkCmdWriteTimestamp-query-04904
  `query` **must** be less than the number of queries in `queryPool`
- VUID-vkCmdWriteTimestamp-None-00830
  All queries used by the command **must** be *unavailable*
- VUID-vkCmdWriteTimestamp-query-00831
  If `vkCmdWriteTimestamp` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask **must** be less than or equal to the number of queries in `queryPool`

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdWriteTimestamp-pipelineStage-parameter
  `pipelineStage` **must** be a valid VkPipelineStageFlagBits value
- VUID-vkCmdWriteTimestamp-queryPool-parameter
  `queryPool` **must** be a valid VkQueryPool handle
- VUID-vkCmdWriteTimestamp-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdWriteTimestamp-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, VK_QUEUE_TRANSFER_BIT, VK_QUEUE_VIDEO_DECODE_BIT_KHR, or VK_QUEUE_VIDEO_ENCODE_BIT_KHR operations
- VUID-vkCmdWriteTimestamp-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteTimestamp-commonparent
  Both of `commandBuffer`, and `queryPool` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Both	Both	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

vkCmdWriteTimestamp is not affected by conditional rendering

22.6. Performance Queries

Performance queries provide applications with a mechanism for getting performance counter information about the execution of command buffers, render passes, and commands.

Each queue family advertises the performance counters that **can** be queried on a queue of that family via a call to vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR. Implementations **may** limit access to performance counters based on platform requirements or only to specialized drivers for development purposes.

NOTE This may include no performance counters being enumerated, or a reduced set. Please refer to platform-specific documentation for guidance on any such restrictions.

Performance queries use the existing vkCmdBeginQuery and vkCmdEndQuery to control what command buffers, render passes, or commands to get performance information for.

Implementations **may** require multiple passes where the command buffer, render passes, or commands being recorded are the same and are executed on the same queue to record performance counter data. This is achieved by submitting the same batch and providing a VkPerformanceQuerySubmitInfoKHR structure containing a counter pass index. The number of passes required for a given performance query pool **can** be queried via a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR.

NOTE	Command buffers recorded with VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT **must** not be re-submitted. Changing command buffer usage bits **may** affect performance. To avoid this, the application **should** re-record any command buffers with the VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT when multiple counter passes are required.

Performance counter results from a performance query pool **can** be obtained with the command vkGetQueryPoolResults.

The VkPerformanceCounterResultKHR union is defined as:

```
// Provided by VK_KHR_performance_query
typedef union VkPerformanceCounterResultKHR {
    int32_t     int32;
    int64_t     int64;
    uint32_t    uint32;
    uint64_t    uint64;
    float       float32;
    double      float64;
} VkPerformanceCounterResultKHR;
```

- int32 is a 32-bit signed integer value.
- int64 is a 64-bit signed integer value.
- uint32 is a 32-bit unsigned integer value.
- uint64 is a 64-bit unsigned integer value.
- float32 is a 32-bit floating-point value.
- float64 is a 64-bit floating-point value.

Performance query results are returned in an array of VkPerformanceCounterResultKHR unions containing the data associated with each counter in the query, stored in the same order as the counters supplied in pCounterIndices when creating the performance query. VkPerformanceCounterKHR::storage specifies how to parse the counter data.

22.6.1. Profiling Lock

To record and submit a command buffer containing a performance query pool the profiling lock **must** be held. The profiling lock **must** be acquired prior to any call to vkBeginCommandBuffer that will be using a performance query pool. The profiling lock **must** be held while any command buffer containing a performance query pool is in the *recording*, *executable*, or *pending state*. To acquire the profiling lock, call:

```
// Provided by VK_KHR_performance_query
VkResult vkAcquireProfilingLockKHR(
    VkDevice                                    device,
    const VkAcquireProfilingLockInfoKHR*        pInfo);
```

- `device` is the logical device to profile.
- `pInfo` is a pointer to a VkAcquireProfilingLockInfoKHR structure containing information about how the profiling is to be acquired.

Implementations **may** allow multiple actors to hold the profiling lock concurrently.

Valid Usage (Implicit)

- VUID-vkAcquireProfilingLockKHR-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkAcquireProfilingLockKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid VkAcquireProfilingLockInfoKHR structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED
- VK_TIMEOUT

The `VkAcquireProfilingLockInfoKHR` structure is defined as:

```
// Provided by VK_KHR_performance_query
typedef struct VkAcquireProfilingLockInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    VkAcquireProfilingLockFlagsKHR  flags;
    uint64_t                        timeout;
} VkAcquireProfilingLockInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.

- `timeout` indicates how long the function waits, in nanoseconds, if the profiling lock is not available.

Valid Usage (Implicit)

- VUID-VkAcquireProfilingLockInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR
- VUID-VkAcquireProfilingLockInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkAcquireProfilingLockInfoKHR-flags-zerobitmask
  `flags` **must** be `0`

If `timeout` is 0, `vkAcquireProfilingLockKHR` will not block while attempting to acquire the profiling lock. If `timeout` is `UINT64_MAX`, the function will not return until the profiling lock was acquired.

```
// Provided by VK_KHR_performance_query
typedef enum VkAcquireProfilingLockFlagBitsKHR {
} VkAcquireProfilingLockFlagBitsKHR;
```

```
// Provided by VK_KHR_performance_query
typedef VkFlags VkAcquireProfilingLockFlagsKHR;
```

VkAcquireProfilingLockFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

To release the profiling lock, call:

```
// Provided by VK_KHR_performance_query
void vkReleaseProfilingLockKHR(
    VkDevice                                    device);
```

- `device` is the logical device to cease profiling on.

Valid Usage

- VUID-vkReleaseProfilingLockKHR-device-03235
  The profiling lock of `device` **must** have been held via a previous successful call to vkAcquireProfilingLockKHR

Valid Usage (Implicit)

- VUID-vkReleaseProfilingLockKHR-device-parameter

`device` **must** be a valid VkDevice handle

22.7. Transform Feedback Queries

Transform feedback queries track the number of primitives attempted to be written and actually written, by the vertex stream being captured, to a transform feedback buffer. This query is updated during drawing commands while transform feedback is active. The number of primitives actually written will be less than the number attempted to be written if the bound transform feedback buffer size was too small for the number of primitives actually drawn. Primitives are not written beyond the bound range of the transform feedback buffer. A transform feedback query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively to query for vertex stream zero. `vkCmdBeginQueryIndexedEXT` and `vkCmdEndQueryIndexedEXT` **can** be used to begin and end transform feedback queries for any supported vertex stream. When a transform feedback query begins, the count of primitives written and primitives needed starts from zero. For each drawing command, the count is incremented as vertex attribute outputs are captured to the transform feedback buffers while transform feedback is active.

When a transform feedback query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

22.8. Primitives Generated Queries

When a generated primitive query for a vertex stream is active, the primitives-generated count is incremented every time a primitive emitted to that stream reaches the transform feedback stage, whether or not transform feedback is active. A primitives generated query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively to query for vertex stream zero. `vkCmdBeginQueryIndexedEXT` and `vkCmdEndQueryIndexedEXT` **can** be used to begin and end primitives generated queries for any supported vertex stream. When a primitives generated query begins, the count of primitives generated starts from zero.

When a primitives generated query finishes, the result for that query is marked as available. The application **can** then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

NOTE The result of this query is typically identical to VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT, but the primitives generated query is deterministic, i.e. it must be identical to the number of primitives processed. VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT may vary for implementation-dependent reasons, e.g. the same primitive may be processed multiple times for purposes of clipping.

22.9. Mesh Shader Queries

When a generated mesh primitives query is active, the mesh-primitives-generated count is

incremented every time a primitive emitted from the mesh shader stage reaches the fragment shader stage. When a generated mesh primitives query begins, the mesh-primitives-generated count starts from zero.

Mesh and task shader pipeline statistics queries function the same way that invocation queries work for other shader stages, counting the number of times the respective shader stage has been run. When the statistics query begins, the invocation counters start from zero.

22.10. Result Status Queries

Result status queries serve a single purpose: allowing the application to determine whether a set of operations have completed successfully or not, as indicated by the VkQueryResultStatusKHR value written when retrieving the result of a query using the VK_QUERY_RESULT_WITH_STATUS_BIT_KHR flag.

Unlike other query types, result status queries do not track or maintain any other data beyond the completion status, thus no other data is written when retrieving their results.

Support for result status queries is indicated by VkQueueFamilyQueryResultStatusPropertiesKHR ::`queryResultStatusSupport` , as returned by vkGetPhysicalDeviceQueueFamilyProperties2 for the queue family in question.

22.11. Video Encode Feedback Queries

Video encode feedback queries allow the application to capture feedback values generated by video encode operations. As such, video encode feedback queries are available on queue families supporting video encode operations. The availability of individual video encode feedback values is indicated by the bits of VkVideoEncodeCapabilitiesKHR::`supportedEncodeFeedbackFlags`, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the queries are intended to be used with.

The set of enabled video encode feedback values **must** be configured on the query pool when it is created using the `encodeFeedbackFlags` member of the VkQueryPoolVideoEncodeFeedbackCreateInfoKHR structure included in the `pNext` chain of VkQueryPoolCreateInfo.

The `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkQueryPoolVideoEncodeFeedbackCreateInfoKHR {
    VkStructureType                  sType;
    const void*                      pNext;
    VkVideoEncodeFeedbackFlagsKHR    encodeFeedbackFlags;
} VkQueryPoolVideoEncodeFeedbackCreateInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `encodeFeedbackFlags` is a bitmask of VkVideoEncodeFeedbackFlagBitsKHR values specifying the set of enabled video encode feedback values captured by queries of the new pool.

Valid Usage (Implicit)

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-sType-sType `sType` **must** be VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_FEEDBACK_CREATE_INFO_KHR
- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-parameter `encodeFeedbackFlags` **must** be a valid combination of VkVideoEncodeFeedbackFlagBitsKHR values

Structure Chaining

Extends the structure

- VkQueryPoolCreateInfo

Bits which **can** be set in VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::`encodeFeedbackFlags` for video encode feedback query pools are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeFeedbackFlagBitsKHR {
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR = 0x00000004,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR = 0x00000008,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR = 0x00000010,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR = 0x00000020,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR = 0x00000040,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR = 0x00000080,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR = 0x00000100,
  // Provided by VK_KHR_video_encode_feedback2
    VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR = 0x00000200,
} VkVideoEncodeFeedbackFlagBitsKHR;
```

- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR specifies that queries managed by the pool will capture the byte offset of the bitstream data written by the video encode operation to the bitstream buffer specified in VkVideoEncodeInfoKHR::`dstBuffer` relative to the offset specified in VkVideoEncodeInfoKHR::`dstBufferOffset`. For the first video

encode operation issued by any video encode command, this value will always be zero, meaning that bitstream data is always written to the buffer specified in VkVideoEncodeInfoKHR::`dstBuffer` starting from the offset specified in VkVideoEncodeInfoKHR::`dstBufferOffset`.

- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR specifies that queries managed by the pool will capture the number of bytes written by the video encode operation to the bitstream buffer specified in VkVideoEncodeInfoKHR::`dstBuffer`.
- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR specifies that queries managed by the pool will capture a boolean value indicating that the data written to the bitstream buffer specified in VkVideoEncodeInfoKHR::`dstBuffer` contains overridden parameters.
- VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR specifies that queries managed by the pool will capture the average quantization used across the encoded coding blocks.
- VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR specifies that queries managed by the pool will capture the minimum quantization used across the encoded coding blocks.
- VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR specifies that queries managed by the pool will capture the maximum quantization used across the encoded coding blocks.
- VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR specifies that queries managed by the pool will capture the number of pixels encoded as intra blocks, including or excluding any skipped blocks, as described below.
- VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR specifies that queries managed by the pool will capture the number of pixels encoded as inter blocks, including or excluding any skipped blocks, as described below.
- VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR specifies that queries managed by the pool will capture the number of pixels encoded as skipped blocks.
- VK_VIDEO_ENCODE_FEEDBACK_PICTURE_PARTITION_COUNT_BIT_KHR specifies that queries managed by the pool will capture the number of encoded picture partitions.

The average, minimum, and maximum quantization values captured when VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR, and/or VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR are specified, respectively, depend on the used video profile:

- In case of H.264 encode profiles, this value is a signed integer indicating the average, minimum, or maximum QP used across the encoded coding blocks, respectively.
- In case of H.265 encode profiles this value is a signed integer indicating the average, minimum, or maximum QP used across the encoded coding blocks, respectively.
- In case of AV1 encode profiles this value is an unsigned integer indicating the average, minimum, or maximum quantizer index used across the encoded coding blocks, respectively.

The rounding mode used to calculate the average value captured when VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR is specified is undefined.

The number of pixels captured when VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR, VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR, and/or VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR are specified include padding pixels beyond the requested coded extent that are part of the complete coding blocks encoded for the picture.

If VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR is not supported for a video encode profile, then the results captured for VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR will always include pixels in any intra or inter blocks, respectively, that are encoded as skipped blocks. Otherwise, the behavior depends on the used video profile:

- In case of H.264 encode profiles, skipped blocks are always inter blocks and the results captured for VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR will always include pixels encoded as skipped blocks.

  NOTE Implementations that would otherwise not count skipped pixels as inter pixels can simply sum the captured non-skipped inter pixel count and skipped pixel counts in the reported value for VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR.

- In case of H.265 encode profiles, skipped blocks are always inter blocks and the results captured for VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR will always include pixels encoded as skipped blocks.

  NOTE Implementations that would otherwise not count skipped pixels as inter pixels can simply sum the captured non-skipped inter pixel count and skipped pixel counts in the reported value for VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR.

- In case of AV1 encode profiles, both inter and intra blocks **can** be skipped blocks. Implementations **should** include any pixels encoded as skipped intra or inter blocks in the results captured for VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR, respectively, if possible. However, some implementations **may** not be able to do so if they do not differentiate between skipped intra and inter blocks. Therefore, in case of AV1 encode profiles that do support VK_VIDEO_ENCODE_FEEDBACK_SKIPPED_PIXELS_BIT_KHR implementations **must** either include skipped pixels part of intra and inter blocks in both or neither of the results captured by VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR, respectively.

  NOTE Applications can detect whether the reported intra and inter pixel counts include the skipped pixels or not, by checking whether the sum of the intra and pixel pixels adds up to the coded extent padded to entire coding blocks.

When retrieving the results of video encode feedback queries, the values corresponding to each enabled video encode feedback are written in the order of the bits defined above, followed by an optional value indicating availability or result status if

VK_QUERY_RESULT_WITH_AVAILABILITY_BIT or VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is specified, respectively. If per picture partition feedback is enabled, this is followed by the values corresponding to each enabled per picture partition video encode feedback for each encoded picture partition but at most for VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR ::maxPerPartitionFeedbackEntries number of picture partitions, in picture-partition-major order.

If the result status of a video encode feedback query is negative, then the results of all enabled video encode feedback values will be undefined.

NOTE

Applications should always specify VK_QUERY_RESULT_WITH_STATUS_BIT_KHR when retrieving the results of video encode feedback queries and ignore such undefined video encode feedback values for any unsuccessfully completed video encode operations.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFeedbackFlagsKHR;
```

VkVideoEncodeFeedbackFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeFeedbackFlagBitsKHR.

22.11.1. Per Picture Partition Feedback

If the videoEncodeFeedback2 feature is enabled, video encode feedback queries also allow the application to capture additional feedback values for each picture partition generated by video encode operations. The availability of individual per picture partition video encode feedback values is indicated by the bits of VkVideoEncodeFeedback2CapabilitiesKHR ::supportedPerPartitionEncodeFeedbackFlags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR for the video profile the queries are intended to be used with.

The set of enabled per picture partition video encode feedback values **must** be configured on the query pool at the time of its creation by using the perPartitionEncodeFeedbackFlags member of the VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure included in the pNext chain of VkQueryPoolCreateInfo.

The VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_video_encode_feedback2
typedef struct VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR {
    VkStructureType                                 sType;
    const void*                                     pNext;
    uint32_t                                        maxPerPartitionFeedbackEntries;
    VkVideoEncodePerPartitionFeedbackFlagsKHR       perPartitionEncodeFeedbackFlags;
} VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.

- `maxPerPartitionFeedbackEntries` specifies the maximum number of picture partitions for which per picture partition video encode feedback values **can** be captured by queries of the new pool.
- `perPartitionEncodeFeedbackFlags` is a bitmask of VkVideoEncodePerPartitionFeedbackFlagBitsKHR values specifying the set of enabled per picture partition video encode feedback values captured by queries of the new pool.

Valid Usage (Implicit)

- VUID-VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_CREATE_INFO_KHR
- VUID-VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR-perPartitionEncodeFeedbackFlags-parameter
  If `perPartitionEncodeFeedbackFlags` is not `0`, `perPartitionEncodeFeedbackFlags` **must** be a valid combination of VkVideoEncodePerPartitionFeedbackFlagBitsKHR values

Structure Chaining

Extends the structure

- VkQueryPoolCreateInfo

Bits which **can** be set in VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR::`perPartitionEncodeFeedbackFlags` for video encode feedback query pools are:

```
// Provided by VK_KHR_video_encode_feedback2
typedef enum VkVideoEncodePerPartitionFeedbackFlagBitsKHR {
    VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_STATUS_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR =
0x00000004,
} VkVideoEncodePerPartitionFeedbackFlagBitsKHR;
```

- VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_STATUS_BIT_KHR specifies that queries managed by the pool will capture the result status of each encoded picture partition. These result status values are reported as VkQueryResultStatusKHR values, similar to result status queries but indicate the result status of the encoding of individual picture partitions instead of that of the whole video encode operation.
- VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR specifies that queries managed by the pool will capture the byte offset of the bitstream data of the corresponding picture partition written to the bitstream buffer specified in VkVideoEncodeInfoKHR::`dstBuffer` relative to the offset specified in VkVideoEncodeInfoKHR::`dstBufferOffset`.

- VK_VIDEO_ENCODE_PER_PARTITION_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR specifies that queries managed by the pool will capture the number of bytes written by the video encode operation for the corresponding picture partition to the bitstream buffer specified in VkVideoEncodeInfoKHR::dstBuffer.

The bitstream offsets reported for subsequent picture partitions are always monotonically increasing and the bitstream buffer ranges corresponding to individual picture partitions do not overlap.

NOTE

The bitstream range corresponding to the entire frame, as reported through the VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR feedback values may contain additional data such as frame headers. In addition, certain implementations or video compression standards may have additional payloads in between subsequent picture partitions. For example, AV1 bitstreams contain the tile_size_minus_1 syntax element in between subsequent tiles that are not part of the actual tile data. Therefore the specification only guarantees monotonically increasing offsets and non-overlapping ranges for picture partitions but does not guarantee that the picture partition ranges are tightly packed or that the union of the picture partition ranges covers the entire range of the bitstream output.

When retrieving the results of video encode feedback queries with per picture partition video encode feedback values, the values corresponding to each enabled per picture partition video encode feedback are written for each encoded picture partition in the order of the bits defined above, in picture-partition-major order.

If the video encode operation results in more encoded picture partitions than the maxPerPartitionFeedbackEntries specified in the VkQueryPoolVideoEncodePerPartitionFeedbackCreateInfoKHR structure the query pool was created with, then the per picture partition feedback values corresponding to additional picture partitions are not available for retrieval.

If the per picture partition feedback status is negative, then all other per partition feedback values corresponding to that picture partition will be undefined. Specifically, implementations **may** report a per picture partition feedback status of VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR for the picture partition(s) whose encoded bitstream data no longer fit into the destination video bitstream buffer range.

```
// Provided by VK_KHR_video_encode_feedback2
typedef VkFlags VkVideoEncodePerPartitionFeedbackFlagsKHR;
```

VkVideoEncodePerPartitionFeedbackFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodePerPartitionFeedbackFlagBitsKHR.

Chapter 23. Clear Commands

23.1. Clearing Images Outside a Render Pass Instance

Color and depth/stencil images **can** be cleared outside a render pass instance using vkCmdClearColorImage or vkCmdClearDepthStencilImage, respectively. These commands are only allowed outside of a render pass instance.

To clear one or more subranges of a color image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearColorImage(
    VkCommandBuffer                             commandBuffer,
    VkImage                                     image,
    VkImageLayout                               imageLayout,
    const VkClearColorValue*                    pColor,
    uint32_t                                    rangeCount,
    const VkImageSubresourceRange*              pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_GENERAL or VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL.
- `pColor` is a pointer to a VkClearColorValue structure containing the values that the image subresource ranges will be cleared to (see Clear Values below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of VkImageSubresourceRange structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in Image Views.

Each specified range in `pRanges` is cleared to the value specified by `pColor`.

Valid Usage

- VUID-vkCmdClearColorImage-image-01993
  The format features of `image` **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-vkCmdClearColorImage-image-00002
  `image` **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdClearColorImage-image-01545
  `image` **must** not use any of the formats that require a sampler $Y'C_BC_R$ conversion
- VUID-vkCmdClearColorImage-image-00003
  If `image` is non-sparse then it **must** be bound completely and contiguously to a single

VkDeviceMemory object

- VUID-vkCmdClearColorImage-imageLayout-00004
  imageLayout **must** specify the layout of the image subresource ranges of image specified in pRanges at the time this command is executed on a VkDevice
- VUID-vkCmdClearColorImage-imageLayout-01394
  imageLayout **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL or VK_IMAGE_LAYOUT_GENERAL
- VUID-vkCmdClearColorImage-aspectMask-02498
  The VkImageSubresourceRange::aspectMask members of the elements of the pRanges array **must** each only include VK_IMAGE_ASPECT_COLOR_BIT
- VUID-vkCmdClearColorImage-baseMipLevel-01470
  The VkImageSubresourceRange::baseMipLevel members of the elements of the pRanges array **must** each be less than the mipLevels specified in VkImageCreateInfo when image was created
- VUID-vkCmdClearColorImage-pRanges-01692
  For each VkImageSubresourceRange element of pRanges, if the levelCount member is not VK_REMAINING_MIP_LEVELS, then baseMipLevel + levelCount **must** be less than or equal to the mipLevels specified in VkImageCreateInfo when image was created
- VUID-vkCmdClearColorImage-baseArrayLayer-01472
  The VkImageSubresourceRange::baseArrayLayer members of the elements of the pRanges array **must** each be less than the arrayLayers specified in VkImageCreateInfo when image was created
- VUID-vkCmdClearColorImage-pRanges-01693
  For each VkImageSubresourceRange element of pRanges, if the layerCount member is not VK_REMAINING_ARRAY_LAYERS, then baseArrayLayer + layerCount **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when image was created
- VUID-vkCmdClearColorImage-image-00007
  image **must** not have a compressed or depth/stencil format
- VUID-vkCmdClearColorImage-pColor-04961
  pColor **must** be a valid pointer to a VkClearColorValue union
- VUID-vkCmdClearColorImage-commandBuffer-01805
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, image **must** not be a protected image
- VUID-vkCmdClearColorImage-commandBuffer-01806
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, **must** not be an unprotected image
- VUID-vkCmdClearColorImage-image-09678
  If image's format has components other than R and G, it **must** not have a 64-bit component width

Valid Usage (Implicit)

- VUID-vkCmdClearColorImage-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdClearColorImage-image-parameter
  `image` **must** be a valid VkImage handle
- VUID-vkCmdClearColorImage-imageLayout-parameter
  `imageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdClearColorImage-pRanges-parameter
  `pRanges` **must** be a valid pointer to an array of `rangeCount` valid VkImageSubresourceRange structures
- VUID-vkCmdClearColorImage-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdClearColorImage-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, or VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdClearColorImage-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearColorImage-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearColorImage-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearColorImage-rangeCount-arraylength
  `rangeCount` **must** be greater than `0`
- VUID-vkCmdClearColorImage-commonparent
  Both of `commandBuffer`, and `image` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdClearColorImage is not affected by conditional rendering

To clear one or more subranges of a depth/stencil image, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearDepthStencilImage(
    VkCommandBuffer                             commandBuffer,
    VkImage                                     image,
    VkImageLayout                               imageLayout,
    const VkClearDepthStencilValue*             pDepthStencil,
    uint32_t                                    rangeCount,
    const VkImageSubresourceRange*              pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and **must** be VK_IMAGE_LAYOUT_GENERAL or VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL.
- `pDepthStencil` is a pointer to a VkClearDepthStencilValue structure containing the values that the depth and stencil image subresource ranges will be cleared to (see Clear Values below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of VkImageSubresourceRange structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in Image Views.

Valid Usage

- VUID-vkCmdClearDepthStencilImage-image-01994
  The format features of `image` **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-vkCmdClearDepthStencilImage-pRanges-02658
  If the `aspect` member of any element of `pRanges` includes VK_IMAGE_ASPECT_STENCIL_BIT, and `image` was created with separate stencil usage, it must have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set

- VUID-vkCmdClearDepthStencilImage-pRanges-02659
  If the `aspect` member of any element of `pRanges` includes VK_IMAGE_ASPECT_STENCIL_BIT, and `image` was not created with separate stencil usage, the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag **must** have been set in the VkImageCreateInfo::`usage` used to create `image`
- VUID-vkCmdClearDepthStencilImage-pRanges-02660
  If the `aspect` member of any element of `pRanges` includes VK_IMAGE_ASPECT_DEPTH_BIT, `image` **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdClearDepthStencilImage-image-00010
  If `image` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdClearDepthStencilImage-imageLayout-00011
  `imageLayout` **must** specify the layout of the image subresource ranges of `image` specified in `pRanges` at the time this command is executed on a `VkDevice`
- VUID-vkCmdClearDepthStencilImage-imageLayout-00012
  `imageLayout` **must** be either of VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL or VK_IMAGE_LAYOUT_GENERAL
- VUID-vkCmdClearDepthStencilImage-aspectMask-02824
  The VkImageSubresourceRange::`aspectMask` member of each element of the `pRanges` array **must** not include bits other than VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdClearDepthStencilImage-image-02825
  If the `image`'s format does not have a stencil component, then the VkImageSubresourceRange::`aspectMask` member of each element of the `pRanges` array **must** not include the VK_IMAGE_ASPECT_STENCIL_BIT bit
- VUID-vkCmdClearDepthStencilImage-image-02826
  If the `image`'s format does not have a depth component, then the VkImageSubresourceRange::`aspectMask` member of each element of the `pRanges` array **must** not include the VK_IMAGE_ASPECT_DEPTH_BIT bit
- VUID-vkCmdClearDepthStencilImage-baseMipLevel-01474
  The VkImageSubresourceRange::`baseMipLevel` members of the elements of the `pRanges` array **must** each be less than the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-vkCmdClearDepthStencilImage-pRanges-01694
  For each VkImageSubresourceRange element of `pRanges`, if the `levelCount` member is not VK_REMAINING_MIP_LEVELS, then `baseMipLevel` + `levelCount` **must** be less than or equal to the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-vkCmdClearDepthStencilImage-baseArrayLayer-01476
  The VkImageSubresourceRange::`baseArrayLayer` members of the elements of the `pRanges` array **must** each be less than the `arrayLayers` specified in VkImageCreateInfo when `image` was created
- VUID-vkCmdClearDepthStencilImage-pRanges-01695

For each VkImageSubresourceRange element of pRanges, if the layerCount member is not VK_REMAINING_ARRAY_LAYERS, then baseArrayLayer + layerCount **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when image was created

- VUID-vkCmdClearDepthStencilImage-image-00014
  image **must** have a depth/stencil format
- VUID-vkCmdClearDepthStencilImage-commandBuffer-01807
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, image **must** not be a protected image
- VUID-vkCmdClearDepthStencilImage-commandBuffer-01808
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, image **must** not be an unprotected image

Valid Usage (Implicit)

- VUID-vkCmdClearDepthStencilImage-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdClearDepthStencilImage-image-parameter
  image **must** be a valid VkImage handle
- VUID-vkCmdClearDepthStencilImage-imageLayout-parameter
  imageLayout **must** be a valid VkImageLayout value
- VUID-vkCmdClearDepthStencilImage-pDepthStencil-parameter
  pDepthStencil **must** be a valid pointer to a valid VkClearDepthStencilValue structure
- VUID-vkCmdClearDepthStencilImage-pRanges-parameter
  pRanges **must** be a valid pointer to an array of rangeCount valid VkImageSubresourceRange structures
- VUID-vkCmdClearDepthStencilImage-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdClearDepthStencilImage-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations
- VUID-vkCmdClearDepthStencilImage-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdClearDepthStencilImage-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearDepthStencilImage-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearDepthStencilImage-rangeCount-arraylength
  rangeCount **must** be greater than 0
- VUID-vkCmdClearDepthStencilImage-commonparent
  Both of commandBuffer, and image **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdClearDepthStencilImage is not affected by conditional rendering

Clears outside render pass instances are treated as transfer operations for the purposes of memory barriers.

23.2. Clearing Images Inside a Render Pass Instance

To clear one or more regions of color and depth/stencil attachments inside a render pass instance, call:

```
// Provided by VK_VERSION_1_0
void vkCmdClearAttachments(
    VkCommandBuffer                             commandBuffer,
    uint32_t                                    attachmentCount,
    const VkClearAttachment*                    pAttachments,
    uint32_t                                    rectCount,
    const VkClearRect*                          pRects);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `attachmentCount` is the number of entries in the `pAttachments` array.
- `pAttachments` is a pointer to an array of VkClearAttachment structures defining the attachments to clear and the clear values to use.
- `rectCount` is the number of entries in the `pRects` array.
- `pRects` is a pointer to an array of VkClearRect structures defining regions to clear for every attachment in `pAttachments`.

If the render pass has a fragment density map attachment, clears follow the operations of fragment density maps as if each clear region was a primitive which generates fragments. The clear color is applied to all pixels inside each fragment's area regardless if the pixels lie outside of the clear region. Clears **may** have a different set of supported fragment areas than draws.

Unlike other clear commands, vkCmdClearAttachments is not a transfer command. It performs its operations in rasterization order. For color attachments, the operations are executed as color attachment writes, by the VK_PIPELINE_STAGE_COLOR_ATTACHMENT_OUTPUT_BIT stage. For depth/stencil attachments, the operations are executed as depth writes and stencil writes by the VK_PIPELINE_STAGE_EARLY_FRAGMENT_TESTS_BIT and VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT stages.

`vkCmdClearAttachments` is not affected by the bound pipeline state.

NOTE	It is generally preferable to clear attachments by using the VK_ATTACHMENT_LOAD_OP_CLEAR load operation at the start of rendering, as it is more efficient on some implementations.

If any attachment's `aspectMask` to be cleared is not backed by an image view, the clear has no effect on that aspect.

If an attachment being cleared refers to an image view created with an `aspectMask` equal to one of VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT or VK_IMAGE_ASPECT_PLANE_2_BIT, it is considered to be VK_IMAGE_ASPECT_COLOR_BIT for purposes of this command, and **must** be cleared with the VK_IMAGE_ASPECT_COLOR_BIT aspect as specified by image view creation.

Valid Usage

- VUID-vkCmdClearAttachments-aspectMask-07884
  If the current render pass instance does not use dynamic rendering, and the `aspectMask` member of any element of `pAttachments` contains VK_IMAGE_ASPECT_DEPTH_BIT, the current subpass instance's depth-stencil attachment **must** be either VK_ATTACHMENT_UNUSED or the attachment `format` **must** contain a depth component
- VUID-vkCmdClearAttachments-aspectMask-07885
  If the current render pass instance does not use dynamic rendering, and the `aspectMask` member of any element of `pAttachments` contains VK_IMAGE_ASPECT_STENCIL_BIT, the current subpass instance's depth-stencil attachment **must** be either VK_ATTACHMENT_UNUSED or the attachment `format` **must** contain a stencil component
- VUID-vkCmdClearAttachments-aspectMask-07271
  If the `aspectMask` member of any element of `pAttachments` contains VK_IMAGE_ASPECT_COLOR_BIT, the `colorAttachment` **must** be a valid color attachment index in the current render pass instance
- VUID-vkCmdClearAttachments-rect-02682
  The `rect` member of each element of `pRects` **must** have an `extent.width` greater than `0`
- VUID-vkCmdClearAttachments-rect-02683

The `rect` member of each element of `pRects` **must** have an `extent.height` greater than `0`

- VUID-vkCmdClearAttachments-pRects-00016
  The rectangular region specified by each element of `pRects` **must** be contained within the render area of the current render pass instance
- VUID-vkCmdClearAttachments-pRects-06937
  The layers specified by each element of `pRects` **must** be contained within every attachment that `pAttachments` refers to, i.e. for each element of `pRects`, VkClearRect ::`baseArrayLayer` + VkClearRect::`layerCount` **must** be less than or equal to the number of layers rendered to in the current render pass instance
- VUID-vkCmdClearAttachments-layerCount-01934
  The `layerCount` member of each element of `pRects` **must** not be `0`
- VUID-vkCmdClearAttachments-commandBuffer-02504
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, each attachment to be cleared **must** not be a protected image
- VUID-vkCmdClearAttachments-commandBuffer-02505
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, each attachment to be cleared **must** not be an unprotected image
- VUID-vkCmdClearAttachments-baseArrayLayer-00018
  If the render pass instance this is recorded in uses multiview, then `baseArrayLayer` **must** be zero and `layerCount` **must** be one
- VUID-vkCmdClearAttachments-colorAttachment-09503
  The `colorAttachment` member of each element of `pAttachments` **must** not identify a color attachment that is currently mapped to VK_ATTACHMENT_UNUSED in `commandBuffer` via VkRenderingAttachmentLocationInfo
- VUID-vkCmdClearAttachments-None-09679
  If the attachment format has components other than R and G, it **must** not have a 64-bit component width

Valid Usage (Implicit)

- VUID-vkCmdClearAttachments-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdClearAttachments-pAttachments-parameter
  `pAttachments` **must** be a valid pointer to an array of `attachmentCount` valid VkClearAttachment structures
- VUID-vkCmdClearAttachments-pRects-parameter
  `pRects` **must** be a valid pointer to an array of `rectCount` VkClearRect structures
- VUID-vkCmdClearAttachments-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdClearAttachments-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_GRAPHICS_BIT operations

- VUID-vkCmdClearAttachments-renderpass
  This command **must** only be called inside of a render pass instance
- VUID-vkCmdClearAttachments-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdClearAttachments-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdClearAttachments-attachmentCount-arraylength
  `attachmentCount` **must** be greater than `0`
- VUID-vkCmdClearAttachments-rectCount-arraylength
  `rectCount` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

vkCmdClearAttachments is affected by conditional rendering

The `VkClearRect` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearRect {
    VkRect2D    rect;
    uint32_t    baseArrayLayer;
    uint32_t    layerCount;
} VkClearRect;
```

- `rect` is the two-dimensional region to be cleared.
- `baseArrayLayer` is the first layer to be cleared.
- `layerCount` is the number of layers to clear.

The layers [baseArrayLayer, baseArrayLayer + layerCount) counting from the base layer of the attachment image view are cleared.

The VkClearAttachment structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearAttachment {
    VkImageAspectFlags    aspectMask;
    uint32_t              colorAttachment;
    VkClearValue          clearValue;
} VkClearAttachment;
```

- aspectMask is a mask selecting the color, depth and/or stencil aspects of the attachment to be cleared.
- colorAttachment is only meaningful if VK_IMAGE_ASPECT_COLOR_BIT is set in aspectMask, in which case it is an index into the bound color attachments.
- clearValue is the color or depth/stencil value to clear the attachment to, as described in Clear Values below.

Valid Usage

- VUID-VkClearAttachment-aspectMask-00019
  If aspectMask includes VK_IMAGE_ASPECT_COLOR_BIT, it **must** not include VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkClearAttachment-aspectMask-00020
  aspectMask **must** not include VK_IMAGE_ASPECT_METADATA_BIT
- VUID-VkClearAttachment-aspectMask-02246
  aspectMask **must** not include VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT for any index *i*

Valid Usage (Implicit)

- VUID-VkClearAttachment-aspectMask-parameter
  aspectMask **must** be a valid combination of VkImageAspectFlagBits values

23.3. Clear Values

The VkClearColorValue structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearColorValue {
    float       float32[4];
    int32_t     int32[4];
    uint32_t    uint32[4];
} VkClearColorValue;
```

- `float32` are the color clear values when the format of the image or attachment is one of the numeric formats with a numeric type that is floating-point. Floating-point values are automatically converted to the format of the image, with the clear value being treated as linear if the image is sRGB.
- `int32` are the color clear values when the format of the image or attachment has a numeric type that is signed integer (`SINT`). Signed integer values are converted to the format of the image by casting to the smaller type (with negative 32-bit values mapping to negative values in the smaller type). If the integer clear value is not representable in the target type (e.g. would overflow in conversion to that type), the clear value is undefined.
- `uint32` are the color clear values when the format of the image or attachment has a numeric type that is unsigned integer (`UINT`). Unsigned integer values are converted to the format of the image by casting to the integer type with fewer bits.

The four array elements of the clear color map to R, G, B, and A components of image formats, in order.

If the image has more than one sample, the same value is written to all samples for any pixels being cleared.

If the image or attachment format has a 64-bit component width, the first 2 array elements of each of the arrays above are reinterpreted as a single 64-bit element for the R component. The next 2 array elements are used in the same way for the G component. In other words, the union behaves as if it had the following additional members:

```
double float64[2];
int64_t int64[2];
uint64_t uint64[2];
```

The `VkClearDepthStencilValue` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkClearDepthStencilValue {
    float       depth;
    uint32_t    stencil;
} VkClearDepthStencilValue;
```

- `depth` is the clear value for the depth aspect of the depth/stencil attachment. It is a floating-point value which is automatically converted to the attachment's format.

- `stencil` is the clear value for the stencil aspect of the depth/stencil attachment. It is a 32-bit integer value which is converted to the attachment's format by taking the appropriate number of LSBs.

Valid Usage

- VUID-VkClearDepthStencilValue-depth-00022
  Unless the `VK_EXT_depth_range_unrestricted` extension is enabled `depth` **must** be between `0.0` and `1.0`, inclusive

The `VkClearValue` union is defined as:

```
// Provided by VK_VERSION_1_0
typedef union VkClearValue {
    VkClearColorValue           color;
    VkClearDepthStencilValue    depthStencil;
} VkClearValue;
```

- `color` specifies the color image clear values to use when clearing a color image or attachment.
- `depthStencil` specifies the depth and stencil clear values to use when clearing a depth/stencil image or attachment.

This union is used where part of the API requires either color or depth/stencil clear values, depending on the attachment, and defines the initial clear values in the VkRenderPassBeginInfo structure.

23.4. Filling Memory

To fill a memory range with a fixed 4-byte bit pattern, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdFillMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    const VkDeviceAddressRangeKHR*              pDstRange,
    VkAddressCommandFlagsKHR                    dstFlags,
    uint32_t                                    data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDstRange` is a pointer to the VkDeviceAddressRangeKHR selecting the memory range to be filled.
- `dstFlags` is a VkAddressCommandFlagsKHR value defining the copy flags for the destination address range.
- `data` is the 4-byte word written repeatedly to the destination range to fill `size` bytes of data.

NOTE The bit pattern of `data` is determined by the host endianness. For example, an

unsigned integer value of 1 will result in a different bit pattern on a little endian machine compared to a big endian machine.

Valid Usage

- VUID-vkCmdFillMemoryKHR-pDstRange-13097
  If the range specified by pDstRange is not bound completely to memory when accessed, dstFlags **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13098
  If the buffer from which the range specified by pDstRange was created with VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, dstFlags **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13099
  If the buffer from which the range specified by pDstRange was created without VK_BUFFER_CREATE_PROTECTED_BIT, and protectedNoFault is not supported, dstFlags **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdFillMemoryKHR-dstFlags-13100
  dstFlags **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing pDstRange, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, dstFlags **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing pDstRange, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, dstFlags **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdFillMemoryKHR-dstFlags-13101
  dstFlags **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing pDstRange, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, dstFlags **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdFillMemoryKHR-pDstRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing pDstRange, was created without

VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `dstFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR

- VUID-vkCmdFillMemoryKHR-dstRange-13000
  The buffer from which `dstRange` was queried **must** have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag
- VUID-vkCmdFillMemoryKHR-pDstRange-13001
  `pDstRange->address` **must** be a multiple of 4
- VUID-vkCmdFillMemoryKHR-pDstRange-13002
  `pDstRange->size` **must** be a multiple of 4
- VUID-vkCmdFillMemoryKHR-commandBuffer-13003
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdFillMemoryKHR-commandBuffer-13004
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdFillMemoryKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdFillMemoryKHR-pDstRange-parameter
  `pDstRange` **must** be a valid pointer to a valid VkDeviceAddressRangeKHR structure
- VUID-vkCmdFillMemoryKHR-dstFlags-parameter
  If `dstFlags` is not `0`, `dstFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-vkCmdFillMemoryKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdFillMemoryKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdFillMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdFillMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdFillMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdFillMemoryKHR is not affected by conditional rendering

23.5. Updating Memory

To update device memory inline in a command buffer, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdUpdateMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    const VkDeviceAddressRangeKHR*              pDstRange,
    VkAddressCommandFlagsKHR                    dstFlags,
    VkDeviceSize                                dataSize,
    const void*                                 pData);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pDstRange is a pointer to the VkDeviceAddressRangeKHR selecting the memory range to be updated.
- dstFlags is a VkAddressCommandFlagsKHR value defining the copy flags for the destination address range.
- dataSize is the number of bytes to update, and **must** be a multiple of 4.
- pData is a pointer to the source data for the buffer update, and **must** be at least dataSize bytes in size.

The source data is copied from pData to the command buffer when the command is called, and then copied to dstRange when the command is executed on a device.

NOTE Due to the data being copied into command buffers, memory range copies are recommended for larger data transfers, to avoid excessive memory consumption.

Valid Usage

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13097
  If the range specified by `pDstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13098
  If the buffer from which the range specified by `pDstRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13099
  If the buffer from which the range specified by `pDstRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-dstFlags-13100
  `dstFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `dstFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `dstFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-dstFlags-13101
  `dstFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `dstFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `pDstRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `dstFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-dstRange-13005

The buffer from which `dstRange` was queried **must** have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag

- VUID-vkCmdUpdateMemoryKHR-pDstRange-13006
  `pDstRange->address` **must** be a multiple of 4
- VUID-vkCmdUpdateMemoryKHR-pDstRange-13007
  `pDstRange->size` **must** be less than or equal to 65536
- VUID-vkCmdUpdateMemoryKHR-dataSize-13008
  `dataSize` **must** be less than or equal to `pDstRange->size`
- VUID-vkCmdUpdateMemoryKHR-dataSize-13009
  `dataSize` **must** be a multiple of 4
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-13010
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-13011
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdUpdateMemoryKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdUpdateMemoryKHR-pDstRange-parameter
  `pDstRange` **must** be a valid pointer to a valid VkDeviceAddressRangeKHR structure
- VUID-vkCmdUpdateMemoryKHR-dstFlags-parameter
  If `dstFlags` is not `0`, `dstFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-vkCmdUpdateMemoryKHR-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdUpdateMemoryKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdUpdateMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdateMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdUpdateMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdUpdateMemoryKHR-dataSize-arraylength
  `dataSize` **must** be greater than `0`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdUpdateMemoryKHR is not affected by conditional rendering

23.6. Filling Buffers

To clear buffer data, call:

```
// Provided by VK_VERSION_1_0
void vkCmdFillBuffer(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    dstBuffer,
    VkDeviceSize                                dstOffset,
    VkDeviceSize                                size,
    uint32_t                                    data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is the buffer to be filled.
- `dstOffset` is the byte offset into the buffer at which to start filling, and **must** be a multiple of 4.
- `size` is the number of bytes to fill, and **must** be either a multiple of 4, or VK_WHOLE_SIZE to fill the range from `offset` to the end of the buffer. If VK_WHOLE_SIZE is used and the remaining size of the buffer is not a multiple of 4, then the nearest smaller multiple is used.
- `data` is the 4-byte word written repeatedly to the buffer to fill `size` bytes of data. The data word is written to memory according to the host endianness.

`vkCmdFillBuffer` is treated as a “transfer” operation for the purposes of synchronization barriers. It is only compatible with buffers created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set.

Valid Usage

- VUID-vkCmdFillBuffer-dstOffset-00024
  `dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdFillBuffer-dstOffset-00025
  `dstOffset` **must** be a multiple of `4`
- VUID-vkCmdFillBuffer-size-00026
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be greater than `0`
- VUID-vkCmdFillBuffer-size-00027
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-vkCmdFillBuffer-size-00028
  If `size` is not equal to VK_WHOLE_SIZE, `size` **must** be a multiple of `4`
- VUID-vkCmdFillBuffer-dstBuffer-00029
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdFillBuffer-apiVersion-07894
  If the VK_KHR_maintenance1 extension is not enabled and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, the VkCommandPool that `commandBuffer` was allocated from **must** support graphics or compute operations
- VUID-vkCmdFillBuffer-dstBuffer-00031
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdFillBuffer-commandBuffer-01811
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdFillBuffer-commandBuffer-01812
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdFillBuffer-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdFillBuffer-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdFillBuffer-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdFillBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT

operations

- VUID-vkCmdFillBuffer-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdFillBuffer-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdFillBuffer-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdFillBuffer-commonparent
  Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdFillBuffer is not affected by conditional rendering

23.7. Updating Buffers

To update buffer data inline in a command buffer, call:

```
// Provided by VK_VERSION_1_0
void vkCmdUpdateBuffer(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    dstBuffer,
    VkDeviceSize                                dstOffset,
    VkDeviceSize                                dataSize,
    const void*                                 pData);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is a handle to the buffer to be updated.
- `dstOffset` is the byte offset into the buffer to start updating, and **must** be a multiple of 4.
- `dataSize` is the number of bytes to update, and **must** be a multiple of 4.
- `pData` is a pointer to the source data for the buffer update, and **must** be at least `dataSize` bytes in size.

`dataSize` **must** be less than or equal to 65536 bytes. For larger updates, applications **can** use buffer to buffer copies.

NOTE

Buffer updates performed with `vkCmdUpdateBuffer` first copy the data into command buffer memory when the command is recorded (which requires additional storage and may incur an additional allocation), and then copy the data from the command buffer into `dstBuffer` when the command is executed on a device.

The additional cost of this functionality compared to buffer to buffer copies means it should only be used for very small amounts of data, and is why it is limited to at most 65536 bytes. Applications **can** work around this restriction by issuing multiple `vkCmdUpdateBuffer` commands to different ranges of the same buffer, but doing so is not recommended.

The source data is copied from `pData` to the command buffer when the command is called.

`vkCmdUpdateBuffer` is only allowed outside of a render pass. This command is treated as a "transfer" operation for the purposes of synchronization barriers. The VK_BUFFER_USAGE_TRANSFER_DST_BIT **must** be specified in `usage` of VkBufferCreateInfo in order for the buffer to be compatible with `vkCmdUpdateBuffer`.

Valid Usage

- VUID-vkCmdUpdateBuffer-dstOffset-00032
  `dstOffset` **must** be less than the size of `dstBuffer`
- VUID-vkCmdUpdateBuffer-dataSize-00033
  `dataSize` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-vkCmdUpdateBuffer-dstBuffer-00034
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set

- VUID-vkCmdUpdateBuffer-dstBuffer-00035
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdUpdateBuffer-dstOffset-00036
  `dstOffset` **must** be a multiple of `4`
- VUID-vkCmdUpdateBuffer-dataSize-00037
  `dataSize` **must** be less than or equal to `65536`
- VUID-vkCmdUpdateBuffer-dataSize-00038
  `dataSize` **must** be a multiple of `4`
- VUID-vkCmdUpdateBuffer-commandBuffer-01813
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdUpdateBuffer-commandBuffer-01814
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdUpdateBuffer-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdUpdateBuffer-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdUpdateBuffer-pData-parameter
  `pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkCmdUpdateBuffer-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdUpdateBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdUpdateBuffer-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdUpdateBuffer-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdUpdateBuffer-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdUpdateBuffer-dataSize-arraylength
  `dataSize` **must** be greater than `0`
- VUID-vkCmdUpdateBuffer-commonparent
  Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdUpdateBuffer is not affected by conditional rendering

NOTE The `pData` parameter was of type `uint32_t*` instead of `void*` prior to version 1.0.19 of the Specification and VK_HEADER_VERSION 19 of the Vulkan Header Files. This was a historical anomaly, as the source data may be of other types.

Chapter 24. Copy Commands

An application **can** copy buffer and image data using several methods described in this chapter, depending on the type of data transfer.

All copy commands are treated as “transfer” operations for the purposes of synchronization barriers.

All copy commands that have a source format with an X component in its format description read undefined values from those bits.

All copy commands that have a destination format with an X component in its format description write undefined values to those bits.

24.1. Copying Data Between Memory Ranges

To copy data between memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyDeviceMemoryInfoKHR*            pCopyMemoryInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryInfo` a pointer to a VkCopyDeviceMemoryInfoKHR structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyMemoryKHR-commandBuffer-13012
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `srcCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyMemoryKHR-commandBuffer-13013
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `dstCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyMemoryKHR-commandBuffer-13014
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, the `dstCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMemoryKHR-pCopyMemoryInfo-parameter
  If `pCopyMemoryInfo` is not `NULL`, `pCopyMemoryInfo` **must** be a valid pointer to a valid VkCopyDeviceMemoryInfoKHR structure
- VUID-vkCmdCopyMemoryKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyMemoryKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyMemoryKHR is not affected by conditional rendering

The `VkCopyDeviceMemoryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkCopyDeviceMemoryInfoKHR {
    VkStructureType                 sType;
    const void*                     pNext;
    uint32_t                        regionCount;
    const VkDeviceMemoryCopyKHR*    pRegions;
} VkCopyDeviceMemoryInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `regionCount` is the number of copies to be performed.
- `pRegions` is a pointer to an array of VkDeviceMemoryCopyKHR structures describing individual copy operations between two memory ranges.

Valid Usage

- VUID-VkCopyDeviceMemoryInfoKHR-srcRange-13015
  The range of memory backing the address range defined by the `srcRange` member of any element of `pRegions` **must** not overlap the memory backing the address range defined by the `srcRange` or `dstRange` of any element of `pRegions`

Valid Usage (Implicit)

- VUID-VkCopyDeviceMemoryInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_INFO_KHR
- VUID-VkCopyDeviceMemoryInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyDeviceMemoryInfoKHR-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkDeviceMemoryCopyKHR structures
- VUID-VkCopyDeviceMemoryInfoKHR-regionCount-arraylength
  `regionCount` **must** be greater than `0`

The `VkDeviceMemoryCopyKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDeviceMemoryCopyKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkDeviceAddressRangeKHR     srcRange;
    VkAddressCommandFlagsKHR    srcFlags;
    VkDeviceAddressRangeKHR     dstRange;
    VkAddressCommandFlagsKHR    dstFlags;
} VkDeviceMemoryCopyKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcRange` is a VkDeviceAddressRangeKHR structure defining the source memory to copy from.
- `srcFlags` is a VkAddressCommandFlagsKHR value defining the copy flags for the source address range.
- `dstRange` is a VkDeviceAddressRangeKHR structure defining the destination memory to copy to.
- `dstFlags` is a VkAddressCommandFlagsKHR value defining the copy flags for the destination address range.

This structure defines a copy operation where `srcRange.size` bytes will be copied from `srcRange.address` to `dstRange.address`.

Valid Usage

- VUID-VkDeviceMemoryCopyKHR-srcRange-13097
  If the range specified by `srcRange` is not bound completely to memory when accessed, `srcFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcRange-13098
  If the buffer from which the range specified by `srcRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `srcFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcRange-13099
  If the buffer from which the range specified by `srcRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `srcFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcFlags-13100
  `srcFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `srcRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `srcFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or

VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-VkDeviceMemoryCopyKHR-srcRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `srcRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `srcFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcFlags-13101
  `srcFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `srcRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `srcFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-srcRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `srcRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `srcFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13097
  If the range specified by `dstRange` is not bound completely to memory when accessed, `dstFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13098
  If the buffer from which the range specified by `dstRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13099
  If the buffer from which the range specified by `dstRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `dstFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstFlags-13100
  `dstFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `dstRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `dstFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13123

If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing dstRange, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, dstFlags **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-VkDeviceMemoryCopyKHR-dstFlags-13101
  dstFlags **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing dstRange, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, dstFlags **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-dstRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing dstRange, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, dstFlags **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryCopyKHR-size-13016
  The size member of dstRange **must** be greater than or equal to the size member of srcRange
- VUID-VkDeviceMemoryCopyKHR-srcRange-13017
  The buffer from which srcRange was queried **must** have been created with VK_BUFFER_USAGE_TRANSFER_SRC_BIT
- VUID-VkDeviceMemoryCopyKHR-dstRange-13018
  The buffer from which dstRange was queried **must** have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT

Valid Usage (Implicit)

- VUID-VkDeviceMemoryCopyKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEVICE_MEMORY_COPY_KHR
- VUID-VkDeviceMemoryCopyKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkDeviceMemoryCopyKHR-srcFlags-parameter
  If srcFlags is not 0, srcFlags **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-VkDeviceMemoryCopyKHR-dstFlags-parameter
  If dstFlags is not 0, dstFlags **must** be a valid combination of VkAddressCommandFlagBitsKHR values

24.2. Copying Data Between Buffers

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBuffer(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    srcBuffer,
    VkBuffer                                    dstBuffer,
    uint32_t                                    regionCount,
    const VkBufferCopy*                         pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcBuffer` is the source buffer.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferCopy structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source buffer to the destination region of the destination buffer.

Valid Usage

- VUID-vkCmdCopyBuffer-commandBuffer-01822
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01823
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer-commandBuffer-01824
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyBuffer-srcOffset-00113
  The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-vkCmdCopyBuffer-dstOffset-00114
  The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-vkCmdCopyBuffer-size-00115
  The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-vkCmdCopyBuffer-size-00116
  The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`

- VUID-vkCmdCopyBuffer-pRegions-00117
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region
- VUID-vkCmdCopyBuffer-pRegions-12482
  Each memory location accessed by this command **must** not be accessed by more than one destination region
- VUID-vkCmdCopyBuffer-srcBuffer-00118
  `srcBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-vkCmdCopyBuffer-srcBuffer-00119
  If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyBuffer-dstBuffer-00120
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyBuffer-dstBuffer-00121
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyBuffer-srcBuffer-parameter
  `srcBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdCopyBuffer-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdCopyBuffer-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkBufferCopy structures
- VUID-vkCmdCopyBuffer-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyBuffer-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBuffer-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBuffer-videocoding
  This command **must** only be called outside of a video coding scope

- VUID-vkCmdCopyBuffer-regionCount-arraylength
  `regionCount` **must** be greater than `0`
- VUID-vkCmdCopyBuffer-commonparent
  Each of `commandBuffer`, `dstBuffer`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyBuffer is not affected by conditional rendering

The `VkBufferCopy` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferCopy {
    VkDeviceSize    srcOffset;
    VkDeviceSize    dstOffset;
    VkDeviceSize    size;
} VkBufferCopy;
```

- `srcOffset` is the starting offset in bytes from the start of `srcBuffer`.
- `dstOffset` is the starting offset in bytes from the start of `dstBuffer`.
- `size` is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy-size-01988
  The `size` **must** be greater than `0`

A more extensible version of the copy buffer command is defined below.

To copy data between buffer objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBuffer2(
    VkCommandBuffer                             commandBuffer,
    const VkCopyBufferInfo2*                    pCopyBufferInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyBuffer2
void vkCmdCopyBuffer2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyBufferInfo2*                    pCopyBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferInfo` is a pointer to a VkCopyBufferInfo2 structure describing the copy parameters.

Each source region specified by `pCopyBufferInfo->pRegions` is copied from the source buffer to the destination region of the destination buffer.

Valid Usage

- VUID-vkCmdCopyBuffer2-commandBuffer-01822
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01823
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBuffer2-commandBuffer-01824
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer2-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyBuffer2-pCopyBufferInfo-parameter

pCopyBufferInfo **must** be a valid pointer to a valid VkCopyBufferInfo2 structure

- VUID-vkCmdCopyBuffer2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyBuffer2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyBuffer2-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBuffer2-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBuffer2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyBuffer2 is not affected by conditional rendering

The VkCopyBufferInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferInfo2 {
    VkStructureType         sType;
    const void*             pNext;
    VkBuffer                srcBuffer;
    VkBuffer                dstBuffer;
    uint32_t                regionCount;
    const VkBufferCopy2*    pRegions;
} VkCopyBufferInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyBufferInfo2
typedef VkCopyBufferInfo2 VkCopyBufferInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferCopy2 structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferInfo2-srcOffset-00113
  The `srcOffset` member of each element of `pRegions` **must** be less than the size of `srcBuffer`
- VUID-VkCopyBufferInfo2-dstOffset-00114
  The `dstOffset` member of each element of `pRegions` **must** be less than the size of `dstBuffer`
- VUID-VkCopyBufferInfo2-size-00115
  The `size` member of each element of `pRegions` **must** be less than or equal to the size of `srcBuffer` minus `srcOffset`
- VUID-VkCopyBufferInfo2-size-00116
  The `size` member of each element of `pRegions` **must** be less than or equal to the size of `dstBuffer` minus `dstOffset`
- VUID-VkCopyBufferInfo2-pRegions-00117
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region
- VUID-VkCopyBufferInfo2-pRegions-12482
  Each memory location accessed by this command **must** not be accessed by more than one destination region
- VUID-VkCopyBufferInfo2-srcBuffer-00118
  `srcBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_SRC_BIT usage flag set

- VUID-VkCopyBufferInfo2-srcBuffer-00119
  If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferInfo2-dstBuffer-00120
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-VkCopyBufferInfo2-dstBuffer-00121
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

Valid Usage (Implicit)

- VUID-VkCopyBufferInfo2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2
- VUID-VkCopyBufferInfo2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyBufferInfo2-srcBuffer-parameter
  `srcBuffer` **must** be a valid VkBuffer handle
- VUID-VkCopyBufferInfo2-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-VkCopyBufferInfo2-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkBufferCopy2 structures
- VUID-VkCopyBufferInfo2-regionCount-arraylength
  `regionCount` **must** be greater than `0`
- VUID-VkCopyBufferInfo2-commonparent
  Both of `dstBuffer`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

The `VkBufferCopy2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferCopy2 {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceSize       srcOffset;
    VkDeviceSize       dstOffset;
    VkDeviceSize       size;
} VkBufferCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkBufferCopy2
typedef VkBufferCopy2 VkBufferCopy2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcOffset` is the starting offset in bytes from the start of `srcBuffer`.
- `dstOffset` is the starting offset in bytes from the start of `dstBuffer`.
- `size` is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy2-size-01988
  The `size` **must** be greater than `0`

Valid Usage (Implicit)

- VUID-VkBufferCopy2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_COPY_2
- VUID-VkBufferCopy2-pNext-pNext
  `pNext` **must** be `NULL`

24.3. Copying Data Between Images

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImage(
    VkCommandBuffer                             commandBuffer,
    VkImage                                     srcImage,
    VkImageLayout                               srcImageLayout,
    VkImage                                     dstImage,
    VkImageLayout                               dstImageLayout,
    uint32_t                                    regionCount,
    const VkImageCopy*                          pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the current layout of the source image subresource.
- `dstImage` is the destination image.

- `dstImageLayout` is the current layout of the destination image subresource.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkImageCopy structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination image.

If any region accesses a depth aspect in `dstImage` and the `VK_EXT_depth_range_unrestricted` extension is not enabled, values copied from `srcImage` outside of the range [0,1] will be written as undefined values to the destination image.

Copy regions for each image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

The texels in the images are accessed as follows.

Texels at each coordinate (x,y,z,layer) in a image subresource are accessed, where:

x is in the range [offset.x, offset.x + extent.width),

y is in the range [offset.y, offset.y + extent.height),

z is in the range [offset.z, offset.z + extent.depth),

layer is in the range [subresource.baseArrayLayer, subresource.baseArrayLayer + subresource.layerCount)

where for `srcImage`, *offset*, *extent*, and *subresource* are `srcOffset`, `extent`, and `srcSubresource` for each region, respectively.

For `dstImage`, *offset*, *extent* , and *subresource* are `dstOffset`, `extent`, and `dstSubresource` for each region, respectively, where `dstOffset` and `extent` are first size-adjusted if the format of the destination image has a different block extent than the format of the source image (e.g. one is a compressed format).

Multi-planar images **can** only be copied on a per-plane basis, and the subresources used in each region when copying to or from such images **must** specify only one plane, though different regions **can** specify different planes. When copying planes of multi-planar images, the format considered is the compatible format for that plane, rather than the format of the multi-planar image.

Image data **can** be copied between images with different image types. If one image is VK_IMAGE_TYPE_3D and the other image is VK_IMAGE_TYPE_2D with multiple layers, then each slice is copied to or from a different layer; `depth` slices in the 3D image correspond to `layerCount` layers in the 2D image, with an effective `depth` of `1` used for the 2D image. If the `maintenance5` feature

is enabled, all other combinations are allowed and function as if 1D images are 2D images with a height of 1. Otherwise, other combinations of image types are disallowed.

The memory locations accessed by the source and destination images overlap if they alias each other, both `srcSubresource` and `dstSubresource` overlap the aliased range, and any of the following are true:

- Their contents are not able to be interpreted in consistent ways
- If the aliased regions are *host-accessible*, their accessed regions defined above overlap, where the memory locations accessed by the texels of a linear image is according to its VkSubresourceLayout
- Otherwise, their accessed texel ranges share any of the same texel coordinates

The memory locations of an image overlap if those two ranges share any of the same texel coordinates in the same image aspects.

Valid Usage

- VUID-vkCmdCopyImage-commandBuffer-01825
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01826
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage-commandBuffer-01827
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyImage-commandBuffer-10217
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the `maintenance10` feature is not enabled, for each element of `pRegions`, where the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT, the `aspectMask` of `dstSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage-commandBuffer-11782
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT and the `aspectMask` of `dstSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `dstImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-commandBuffer-11783
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of `pRegions` the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT and the `aspectMask` of

dstSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR

- VUID-vkCmdCopyImage-commandBuffer-11784
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of srcSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of dstSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-commandBuffer-11785
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask member of srcSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of dstSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-commandBuffer-12449
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and srcSubresource.aspectMask or dstSubresource.aspectMask of any element of pRegions contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT, then both srcImage and dstImage **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-vkCmdCopyImage-commandBuffer-10218
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the maintenance10 feature is not enabled, for each element of pRegions, where the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT then the aspectMask of srcSubresource **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage-commandBuffer-11786
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-commandBuffer-11787
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-commandBuffer-11788
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support

VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImage-commandBuffer-11789
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage-pRegions-00124
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified by pRegions and accessed according to Copy Image Addressing
- VUID-vkCmdCopyImage-pRegions-12484
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by pRegions and accessed according to Copy Image Addressing
- VUID-vkCmdCopyImage-srcImage-01995
  The format features of srcImage **must** contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT
- VUID-vkCmdCopyImage-srcImageLayout-00128
  srcImageLayout **must** specify the layout of the image subresources of srcImage specified in pRegions at the time this command is executed on a VkDevice
- VUID-vkCmdCopyImage-srcImageLayout-01917
  srcImageLayout **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-vkCmdCopyImage-srcImage-09460
  If srcImage and dstImage are the same, and any elements of pRegions contains the srcSubresource and dstSubresource with matching mipLevel and overlapping array layers, then the srcImageLayout and dstImageLayout **must** be VK_IMAGE_LAYOUT_GENERAL or VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VUID-vkCmdCopyImage-dstImage-01996
  The format features of dstImage **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-vkCmdCopyImage-dstImageLayout-00133
  dstImageLayout **must** specify the layout of the image subresources of dstImage specified in pRegions at the time this command is executed on a VkDevice
- VUID-vkCmdCopyImage-dstImageLayout-01395
  dstImageLayout **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-vkCmdCopyImage-srcImage-01548
  If the VkFormat of each of srcImage and dstImage is not a multi-planar format, the VkFormat of each of srcImage and dstImage **must** be size-compatible

- VUID-vkCmdCopyImage-None-01549
  In a copy to or from a plane of a multi-planar image, the VkFormat of the image and plane **must** be compatible according to the description of compatible planes for the plane being copied
- VUID-vkCmdCopyImage-srcImage-09247
  If the VkFormat of each of `srcImage` and `dstImage` is a compressed image format, the formats **must** have the same texel block extent
- VUID-vkCmdCopyImage-srcImage-00136
  The sample count of `srcImage` and `dstImage` **must** match
- VUID-vkCmdCopyImage-srcOffset-01783
  The `srcOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyImage-dstOffset-01784
  The `dstOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyImage-srcImage-01551
  If neither `srcImage` nor `dstImage` has a multi-planar format and the `maintenance8` feature is not enabled then for each element of `pRegions`, `srcSubresource.aspectMask` and `dstSubresource.aspectMask` **must** match
- VUID-vkCmdCopyImage-pRegions-12201
  For each element of `pRegions` where `srcSubresource.aspectMask` and `dstSubresource.aspectMask` each contain at least one of VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT, `srcSubresource.aspectMask` and `dstSubresource.aspectMask` **must** match
- VUID-vkCmdCopyImage-srcSubresource-10214
  If `srcSubresource.aspectMask` is VK_IMAGE_ASPECT_COLOR_BIT, then `dstSubresource.aspectMask` **must** not contain both VK_IMAGE_ASPECT_DEPTH_BIT and VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage-dstSubresource-10215
  If `dstSubresource.aspectMask` is VK_IMAGE_ASPECT_COLOR_BIT, then `srcSubresource.aspectMask` **must** not contain both VK_IMAGE_ASPECT_DEPTH_BIT and VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage-srcImage-08713
  If `srcImage` has a multi-planar format, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-vkCmdCopyImage-dstImage-08714
  If `dstImage` has a multi-planar format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-vkCmdCopyImage-srcImage-01556
  If `srcImage` has a multi-planar format and the `dstImage` does not have a multi-planar image format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be

VK_IMAGE_ASPECT_COLOR_BIT

- VUID-vkCmdCopyImage-dstImage-01557
  If dstImage has a multi-planar format and the srcImage does not have a multi-planar image format, then for each element of pRegions, srcSubresource.aspectMask **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-vkCmdCopyImage-srcSubresource-10211
  If srcSubresource.aspectMask is VK_IMAGE_ASPECT_COLOR_BIT and dstSubresource.aspectMask is VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT, then the VkFormat values of srcImage and dstImage **must** be compatible according to the list of compatible depth-stencil and color formats
- VUID-vkCmdCopyImage-srcSubresource-10212
  If srcSubresource.aspectMask is VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT and dstSubresource.aspectMask is VK_IMAGE_ASPECT_COLOR_BIT, then the VkFormat values of srcImage and dstImage **must** be compatible according to the list of compatible depth-stencil and color formats
- VUID-vkCmdCopyImage-apiVersion-07932
  If the VK_KHR_maintenance1 extension is not enabled, or VkPhysicalDeviceProperties ::apiVersion is less than Vulkan 1.1, and either srcImage or dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer and dstSubresource.baseArrayLayer **must** both be 0, and srcSubresource.layerCount and dstSubresource.layerCount **must** both be 1
- VUID-vkCmdCopyImage-srcImage-04443
  If srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer **must** be 0 and srcSubresource.layerCount **must** be 1
- VUID-vkCmdCopyImage-dstImage-04444
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstSubresource.baseArrayLayer **must** be 0 and dstSubresource.layerCount **must** be 1
- VUID-vkCmdCopyImage-aspectMask-00142
  For each element of pRegions, srcSubresource.aspectMask **must** specify aspects present in srcImage
- VUID-vkCmdCopyImage-aspectMask-00143
  For each element of pRegions, dstSubresource.aspectMask **must** specify aspects present in dstImage
- VUID-vkCmdCopyImage-srcOffset-00144
  For each element of pRegions, srcOffset.x and (extent.width + srcOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified srcSubresource of srcImage
- VUID-vkCmdCopyImage-srcOffset-00145
  For each element of pRegions, srcOffset.y and (extent.height + srcOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified srcSubresource of srcImage
- VUID-vkCmdCopyImage-srcImage-00146
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.y

must be `0` and `extent.height` **must** be `1`

- VUID-vkCmdCopyImage-srcOffset-00147
  If `srcImage` is of type VK_IMAGE_TYPE_3D, then for each element of `pRegions`, `srcOffset.z` and (`extent.depth` + `srcOffset.z`) **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `srcSubresource` of `srcImage`
- VUID-vkCmdCopyImage-srcImage-01785
  If `srcImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `srcOffset.z` **must** be `0` and `extent.depth` **must** be `1`
- VUID-vkCmdCopyImage-dstImage-01786
  If `dstImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `dstOffset.z` **must** be `0`
- VUID-vkCmdCopyImage-srcImage-10907
  If either the VkFormat of each of `srcImage` and `dstImage` is not a compressed image format, and `dstImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-vkCmdCopyImage-srcImage-01787
  If `srcImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `srcOffset.z` **must** be `0`
- VUID-vkCmdCopyImage-dstImage-01788
  If `dstImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `dstOffset.z` **must** be `0`
- VUID-vkCmdCopyImage-apiVersion-07933
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same VkImageType
- VUID-vkCmdCopyImage-apiVersion-08969
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-vkCmdCopyImage-srcImage-07743
  If `srcImage` and `dstImage` have a different VkImageType, and the `maintenance5` feature is not enabled, one **must** be VK_IMAGE_TYPE_3D and the other **must** be VK_IMAGE_TYPE_2D
- VUID-vkCmdCopyImage-srcImage-08793
  If `srcImage` and `dstImage` have the same VkImageType, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are VK_REMAINING_ARRAY_LAYERS, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match
- VUID-vkCmdCopyImage-srcImage-08794
  If `srcImage` and `dstImage` have the same VkImageType, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is VK_REMAINING_ARRAY_LAYERS, the other member **must** be either VK_REMAINING_ARRAY_LAYERS or equal to the `arrayLayers` member of the VkImageCreateInfo used to create the image minus `baseArrayLayer`
- VUID-vkCmdCopyImage-srcImage-01790

If srcImage and dstImage are both of type VK_IMAGE_TYPE_2D, then for each element of pRegions, extent.depth **must** be 1

- VUID-vkCmdCopyImage-srcImage-01791
  If srcImage is of type VK_IMAGE_TYPE_2D, and dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, extent.depth **must** equal srcSubresource.layerCount
- VUID-vkCmdCopyImage-dstImage-01792
  If dstImage is of type VK_IMAGE_TYPE_2D, and srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, extent.depth **must** equal dstSubresource.layerCount
- VUID-vkCmdCopyImage-dstOffset-00150
  For each element of pRegions, dstOffset.x and (extent.width + dstOffset.x), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the width of the specified dstSubresource of dstImage
- VUID-vkCmdCopyImage-dstOffset-00151
  For each element of pRegions, dstOffset.y and (extent.height + dstOffset.y), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage
- VUID-vkCmdCopyImage-dstImage-00152
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffset.y **must** be 0
- VUID-vkCmdCopyImage-srcImage-10908
  If either the VkFormat of each of srcImage and dstImage is not a compressed image format, and dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, extent.height **must** be 1, where extent is adjusted for size-compatibility
- VUID-vkCmdCopyImage-dstOffset-00153
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstOffset.z and (extent.depth + dstOffset.z), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage
- VUID-vkCmdCopyImage-pRegions-07278
  For each element of pRegions, srcOffset.x **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-vkCmdCopyImage-pRegions-07279
  For each element of pRegions, srcOffset.y **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-vkCmdCopyImage-pRegions-07280
  For each element of pRegions, srcOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-vkCmdCopyImage-pRegions-07281
  For each element of pRegions, dstOffset.x **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-vkCmdCopyImage-pRegions-07282
  For each element of pRegions, dstOffset.y **must** be a multiple of the texel block extent height of the VkFormat of dstImage

- VUID-vkCmdCopyImage-pRegions-07283
  For each element of pRegions, dstOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-vkCmdCopyImage-srcImage-01728
  For each element of pRegions, if the sum of srcOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-vkCmdCopyImage-srcImage-01729
  For each element of pRegions, if the sum of srcOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-vkCmdCopyImage-srcImage-01730
  For each element of pRegions, if the sum of srcOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-vkCmdCopyImage-aspect-06662
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or srcImage was not created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-vkCmdCopyImage-aspect-06663
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or dstImage was not created with separate stencil usage, dstImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyImage-aspect-06664
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and srcImage was created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-vkCmdCopyImage-aspect-06665
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and dstImage was created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyImage-srcImage-07966
  If srcImage is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdCopyImage-srcSubresource-07967
  The srcSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when srcImage was created
- VUID-vkCmdCopyImage-srcSubresource-07968
  If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS,

`srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `srcImage` was created

- VUID-vkCmdCopyImage-srcImage-07969
  `srcImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-vkCmdCopyImage-dstImage-07966
  If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyImage-dstSubresource-07967
  The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `dstImage` was created
- VUID-vkCmdCopyImage-dstSubresource-07968
  If `dstSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `dstSubresource.baseArrayLayer` + `dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `dstImage` was created
- VUID-vkCmdCopyImage-dstImage-07969
  `dstImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

Valid Usage (Implicit)

- VUID-vkCmdCopyImage-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyImage-srcImage-parameter
  `srcImage` **must** be a valid VkImage handle
- VUID-vkCmdCopyImage-srcImageLayout-parameter
  `srcImageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdCopyImage-dstImage-parameter
  `dstImage` **must** be a valid VkImage handle
- VUID-vkCmdCopyImage-dstImageLayout-parameter
  `dstImageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdCopyImage-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkImageCopy structures
- VUID-vkCmdCopyImage-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyImage-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations

- VUID-vkCmdCopyImage-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImage-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyImage-regionCount-arraylength
  `regionCount` **must** be greater than `0`
- VUID-vkCmdCopyImage-commonparent
  Each of `commandBuffer`, `dstImage`, and `srcImage` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImage is not affected by conditional rendering

The `VkImageCopy` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageCopy {
    VkImageSubresourceLayers    srcSubresource;
    VkOffset3D                  srcOffset;
    VkImageSubresourceLayers    dstSubresource;
    VkOffset3D                  dstOffset;
    VkExtent3D                  extent;
} VkImageCopy;
```

- `srcSubresource` and `dstSubresource` are VkImageSubresourceLayers structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy-apiVersion-07940
  If the VK_KHR_sampler_ycbcr_conversion extension is not enabled, and VkPhysicalDeviceProperties::`apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-apiVersion-07941
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy-extent-06668
  `extent.width` **must** not be 0
- VUID-VkImageCopy-extent-06669
  `extent.height` **must** not be 0
- VUID-VkImageCopy-extent-06670
  `extent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy-srcSubresource-parameter
  `srcSubresource` **must** be a valid VkImageSubresourceLayers structure
- VUID-VkImageCopy-dstSubresource-parameter
  `dstSubresource` **must** be a valid VkImageSubresourceLayers structure

The `VkImageSubresourceLayers` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceLayers {
    VkImageAspectFlags    aspectMask;
    uint32_t              mipLevel;
    uint32_t              baseArrayLayer;
    uint32_t              layerCount;
} VkImageSubresourceLayers;
```

- `aspectMask` is a combination of VkImageAspectFlagBits, selecting the color, depth and/or stencil aspects to be copied.
- `mipLevel` is the mipmap level to copy
- `baseArrayLayer` and `layerCount` are the starting layer and number of layers to copy.

Valid Usage

- VUID-VkImageSubresourceLayers-aspectMask-00167
  If `aspectMask` contains VK_IMAGE_ASPECT_COLOR_BIT, it **must** not contain either of VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkImageSubresourceLayers-aspectMask-00168
  `aspectMask` **must** not contain VK_IMAGE_ASPECT_METADATA_BIT
- VUID-VkImageSubresourceLayers-aspectMask-02247
  `aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index *i*
- VUID-VkImageSubresourceLayers-layerCount-09243
  If the `maintenance5` feature is not enabled, `layerCount` **must** not be VK_REMAINING_ARRAY_LAYERS
- VUID-VkImageSubresourceLayers-layerCount-01700
  If `layerCount` is not VK_REMAINING_ARRAY_LAYERS, it **must** be greater than 0

Valid Usage (Implicit)

- VUID-VkImageSubresourceLayers-aspectMask-parameter
  `aspectMask` **must** be a valid combination of VkImageAspectFlagBits values

A more extensible version of the copy image command is defined below.

To copy data between image objects, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImage2(
    VkCommandBuffer                             commandBuffer,
    const VkCopyImageInfo2*                     pCopyImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyImage2
void vkCmdCopyImage2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyImageInfo2*                     pCopyImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageInfo` is a pointer to a VkCopyImageInfo2 structure describing the copy parameters.

This command is functionally identical to vkCmdCopyImage, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImage2-commandBuffer-01825
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01826
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyImage2-commandBuffer-01827
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyImage2-commandBuffer-10217
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the `maintenance10` feature is not enabled, for each element of `pCopyImageInfo->pRegions`, where the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT, the `aspectMask` of `dstSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage2-commandBuffer-11782
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT and the `aspectMask` of `dstSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `dstImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage2-commandBuffer-11783
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of `pCopyImageInfo->pRegions` the `aspectMask` member of `srcSubresource` is VK_IMAGE_ASPECT_COLOR_BIT and the `aspectMask` of `dstSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `dstImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR

- VUID-vkCmdCopyImage2-commandBuffer-11784
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of srcSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of dstSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage2-commandBuffer-11785
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of srcSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of dstSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage2-commandBuffer-12449
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and srcSubresource.aspectMask or dstSubresource.aspectMask of any element of pCopyImageInfo->pRegions contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT, then both srcImage and dstImage **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-vkCmdCopyImage2-commandBuffer-10218
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the maintenance10 feature is not enabled, for each element of pCopyImageInfo->pRegions, where the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT then the aspectMask of srcSubresource **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImage2-commandBuffer-11786
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage2-commandBuffer-11787
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImage2-commandBuffer-11788
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support

VK_QUEUE_COMPUTE_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImage2-commandBuffer-11789
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyImageInfo->pRegions the aspectMask member of dstSubresource is VK_IMAGE_ASPECT_COLOR_BIT and the aspectMask of srcSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyImage2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyImage2-pCopyImageInfo-parameter
  pCopyImageInfo **must** be a valid pointer to a valid VkCopyImageInfo2 structure
- VUID-vkCmdCopyImage2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyImage2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyImage2-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImage2-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImage2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImage2 is not affected by conditional rendering

The VkCopyImageInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageInfo2 {
    VkStructureType        sType;
    const void*            pNext;
    VkImage                srcImage;
    VkImageLayout          srcImageLayout;
    VkImage                dstImage;
    VkImageLayout          dstImageLayout;
    uint32_t               regionCount;
    const VkImageCopy2*    pRegions;
} VkCopyImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyImageInfo2
typedef VkCopyImageInfo2 VkCopyImageInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- srcImage is the source image.
- srcImageLayout is the current layout of the source image subresource.
- dstImage is the destination image.
- dstImageLayout is the current layout of the destination image subresource.
- regionCount is the number of regions to copy.
- pRegions is a pointer to an array of VkImageCopy2 structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageInfo2-pRegions-00124
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified by `pRegions` and accessed according to Copy Image Addressing
- VUID-VkCopyImageInfo2-pRegions-12484
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by `pRegions` and accessed according to Copy Image Addressing
- VUID-VkCopyImageInfo2-srcImage-01995
  The format features of `srcImage` **must** contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT
- VUID-VkCopyImageInfo2-srcImageLayout-00128
  `srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageInfo2-srcImageLayout-01917
  `srcImageLayout` **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-VkCopyImageInfo2-srcImage-09460
  If `srcImage` and `dstImage` are the same, and any elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` **must** be VK_IMAGE_LAYOUT_GENERAL or VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VUID-VkCopyImageInfo2-dstImage-01996
  The format features of `dstImage` **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-VkCopyImageInfo2-dstImageLayout-00133
  `dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageInfo2-dstImageLayout-01395
  `dstImageLayout` **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-VkCopyImageInfo2-srcImage-01548
  If the VkFormat of each of `srcImage` and `dstImage` is not a multi-planar format, the VkFormat of each of `srcImage` and `dstImage` **must** be size-compatible
- VUID-VkCopyImageInfo2-None-01549
  In a copy to or from a plane of a multi-planar image, the VkFormat of the image and plane **must** be compatible according to the description of compatible planes for the plane being copied
- VUID-VkCopyImageInfo2-srcImage-09247
  If the VkFormat of each of `srcImage` and `dstImage` is a compressed image format, the formats **must** have the same texel block extent
- VUID-VkCopyImageInfo2-srcImage-00136

The sample count of `srcImage` and `dstImage` **must** match

- VUID-VkCopyImageInfo2-srcOffset-01783
  The `srcOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-VkCopyImageInfo2-dstOffset-01784
  The `dstOffset` and `extent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-VkCopyImageInfo2-srcImage-01551
  If neither `srcImage` nor `dstImage` has a multi-planar format and the `maintenance8` feature is not enabled then for each element of `pRegions`, `srcSubresource.aspectMask` and `dstSubresource.aspectMask` **must** match
- VUID-VkCopyImageInfo2-pRegions-12201
  For each element of `pRegions` where `srcSubresource.aspectMask` and `dstSubresource.aspectMask` each contain at least one of VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT, `srcSubresource.aspectMask` and `dstSubresource.aspectMask` **must** match
- VUID-VkCopyImageInfo2-srcSubresource-10214
  If `srcSubresource.aspectMask` is VK_IMAGE_ASPECT_COLOR_BIT, then `dstSubresource.aspectMask` **must** not contain both VK_IMAGE_ASPECT_DEPTH_BIT and VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkCopyImageInfo2-dstSubresource-10215
  If `dstSubresource.aspectMask` is VK_IMAGE_ASPECT_COLOR_BIT, then `srcSubresource.aspectMask` **must** not contain both VK_IMAGE_ASPECT_DEPTH_BIT and VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-VkCopyImageInfo2-srcImage-08713
  If `srcImage` has a multi-planar format, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyImageInfo2-dstImage-08714
  If `dstImage` has a multi-planar format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyImageInfo2-srcImage-01556
  If `srcImage` has a multi-planar format and the `dstImage` does not have a multi-planar image format, then for each element of `pRegions`, `dstSubresource.aspectMask` **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-VkCopyImageInfo2-dstImage-01557
  If `dstImage` has a multi-planar format and the `srcImage` does not have a multi-planar image format, then for each element of `pRegions`, `srcSubresource.aspectMask` **must** be VK_IMAGE_ASPECT_COLOR_BIT
- VUID-VkCopyImageInfo2-srcSubresource-10211
  If `srcSubresource.aspectMask` is VK_IMAGE_ASPECT_COLOR_BIT and `dstSubresource.aspectMask` is VK_IMAGE_ASPECT_DEPTH_BIT or

VK_IMAGE_ASPECT_STENCIL_BIT, then the VkFormat values of srcImage and dstImage **must** be compatible according to the list of compatible depth-stencil and color formats

- VUID-VkCopyImageInfo2-srcSubresource-10212
  If srcSubresource.aspectMask is VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT and dstSubresource.aspectMask is VK_IMAGE_ASPECT_COLOR_BIT, then the VkFormat values of srcImage and dstImage **must** be compatible according to the list of compatible depth-stencil and color formats
- VUID-VkCopyImageInfo2-apiVersion-07932
  If the VK_KHR_maintenance1 extension is not enabled, or VkPhysicalDeviceProperties ::apiVersion is less than Vulkan 1.1, and either srcImage or dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer and dstSubresource.baseArrayLayer **must** both be 0, and srcSubresource.layerCount and dstSubresource.layerCount **must** both be 1
- VUID-VkCopyImageInfo2-srcImage-04443
  If srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer **must** be 0 and srcSubresource.layerCount **must** be 1
- VUID-VkCopyImageInfo2-dstImage-04444
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstSubresource.baseArrayLayer **must** be 0 and dstSubresource.layerCount **must** be 1
- VUID-VkCopyImageInfo2-aspectMask-00142
  For each element of pRegions, srcSubresource.aspectMask **must** specify aspects present in srcImage
- VUID-VkCopyImageInfo2-aspectMask-00143
  For each element of pRegions, dstSubresource.aspectMask **must** specify aspects present in dstImage
- VUID-VkCopyImageInfo2-srcOffset-00144
  For each element of pRegions, srcOffset.x and (extent.width + srcOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified srcSubresource of srcImage
- VUID-VkCopyImageInfo2-srcOffset-00145
  For each element of pRegions, srcOffset.y and (extent.height + srcOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified srcSubresource of srcImage
- VUID-VkCopyImageInfo2-srcImage-00146
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.y **must** be 0 and extent.height **must** be 1
- VUID-VkCopyImageInfo2-srcOffset-00147
  If srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcOffset.z and (extent.depth + srcOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified srcSubresource of srcImage
- VUID-VkCopyImageInfo2-srcImage-01785
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.z **must** be 0 and extent.depth **must** be 1

- VUID-VkCopyImageInfo2-dstImage-01786
  If `dstImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `dstOffset.z` **must** be `0`
- VUID-VkCopyImageInfo2-srcImage-10907
  If either the VkFormat of each of `srcImage` and `dstImage` is not a compressed image format, and `dstImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-srcImage-01787
  If `srcImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `srcOffset.z` **must** be `0`
- VUID-VkCopyImageInfo2-dstImage-01788
  If `dstImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `dstOffset.z` **must** be `0`
- VUID-VkCopyImageInfo2-apiVersion-07933
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, `srcImage` and `dstImage` **must** have the same VkImageType
- VUID-VkCopyImageInfo2-apiVersion-08969
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, `srcImage` or `dstImage` is of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-srcImage-07743
  If `srcImage` and `dstImage` have a different VkImageType, and the `maintenance5` feature is not enabled, one **must** be VK_IMAGE_TYPE_3D and the other **must** be VK_IMAGE_TYPE_2D
- VUID-VkCopyImageInfo2-srcImage-08793
  If `srcImage` and `dstImage` have the same VkImageType, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are VK_REMAINING_ARRAY_LAYERS, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match
- VUID-VkCopyImageInfo2-srcImage-08794
  If `srcImage` and `dstImage` have the same VkImageType, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is VK_REMAINING_ARRAY_LAYERS, the other member **must** be either VK_REMAINING_ARRAY_LAYERS or equal to the `arrayLayers` member of the VkImageCreateInfo used to create the image minus `baseArrayLayer`
- VUID-VkCopyImageInfo2-srcImage-01790
  If `srcImage` and `dstImage` are both of type VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `extent.depth` **must** be `1`
- VUID-VkCopyImageInfo2-srcImage-01791
  If `srcImage` is of type VK_IMAGE_TYPE_2D, and `dstImage` is of type VK_IMAGE_TYPE_3D, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`
- VUID-VkCopyImageInfo2-dstImage-01792
  If `dstImage` is of type VK_IMAGE_TYPE_2D, and `srcImage` is of type VK_IMAGE_TYPE_3D, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`

- VUID-VkCopyImageInfo2-dstOffset-00150
  For each element of pRegions, dstOffset.x and (extent.width + dstOffset.x), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the width of the specified dstSubresource of dstImage
- VUID-VkCopyImageInfo2-dstOffset-00151
  For each element of pRegions, dstOffset.y and (extent.height + dstOffset.y), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage
- VUID-VkCopyImageInfo2-dstImage-00152
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffset.y **must** be 0
- VUID-VkCopyImageInfo2-srcImage-10908
  If either the VkFormat of each of srcImage and dstImage is not a compressed image format, and dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, extent.height **must** be 1, where extent is adjusted for size-compatibility
- VUID-VkCopyImageInfo2-dstOffset-00153
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstOffset.z and (extent.depth + dstOffset.z), where extent is adjusted for size-compatibility, **must** both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage
- VUID-VkCopyImageInfo2-pRegions-07278
  For each element of pRegions, srcOffset.x **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageInfo2-pRegions-07279
  For each element of pRegions, srcOffset.y **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageInfo2-pRegions-07280
  For each element of pRegions, srcOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-VkCopyImageInfo2-pRegions-07281
  For each element of pRegions, dstOffset.x **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-VkCopyImageInfo2-pRegions-07282
  For each element of pRegions, dstOffset.y **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-VkCopyImageInfo2-pRegions-07283
  For each element of pRegions, dstOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-VkCopyImageInfo2-srcImage-01728
  For each element of pRegions, if the sum of srcOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageInfo2-srcImage-01729

For each element of pRegions, if the sum of srcOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-VkCopyImageInfo2-srcImage-01730
  For each element of pRegions, if the sum of srcOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-VkCopyImageInfo2-aspect-06662
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or srcImage was not created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-VkCopyImageInfo2-aspect-06663
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or dstImage was not created with separate stencil usage, dstImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-VkCopyImageInfo2-aspect-06664
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and srcImage was created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-VkCopyImageInfo2-aspect-06665
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and dstImage was created with separate stencil usage, srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-VkCopyImageInfo2-srcImage-07966
  If srcImage is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-VkCopyImageInfo2-srcSubresource-07967
  The srcSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when srcImage was created
- VUID-VkCopyImageInfo2-srcSubresource-07968
  If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, srcSubresource.baseArrayLayer + srcSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created
- VUID-VkCopyImageInfo2-srcImage-07969
  srcImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyImageInfo2-dstImage-07966
  If dstImage is non-sparse then the image or each specified *disjoint* plane **must** be bound

completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyImageInfo2-dstSubresource-07967
  The dstSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyImageInfo2-dstSubresource-07968
  If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyImageInfo2-dstImage-07969
  dstImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

Valid Usage (Implicit)

- VUID-VkCopyImageInfo2-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2
- VUID-VkCopyImageInfo2-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyImageInfo2-srcImage-parameter
  srcImage **must** be a valid VkImage handle
- VUID-VkCopyImageInfo2-srcImageLayout-parameter
  srcImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyImageInfo2-dstImage-parameter
  dstImage **must** be a valid VkImage handle
- VUID-VkCopyImageInfo2-dstImageLayout-parameter
  dstImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyImageInfo2-pRegions-parameter
  pRegions **must** be a valid pointer to an array of regionCount valid VkImageCopy2 structures
- VUID-VkCopyImageInfo2-regionCount-arraylength
  regionCount **must** be greater than 0
- VUID-VkCopyImageInfo2-commonparent
  Both of dstImage, and srcImage **must** have been created, allocated, or retrieved from the same VkDevice

The VkImageCopy2 structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkImageCopy2 {
    VkStructureType             sType;
    const void*                 pNext;
    VkImageSubresourceLayers    srcSubresource;
    VkOffset3D                  srcOffset;
    VkImageSubresourceLayers    dstSubresource;
    VkOffset3D                  dstOffset;
    VkExtent3D                  extent;
} VkImageCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkImageCopy2
typedef VkImageCopy2 VkImageCopy2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcSubresource` and `dstSubresource` are VkImageSubresourceLayers structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial `x`, `y`, and `z` offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkImageCopy2-apiVersion-07940
  If the VK_KHR_sampler_ycbcr_conversion extension is not enabled, and VkPhysicalDeviceProperties::`apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy2-apiVersion-07941
  If the VK_KHR_maintenance1 extension is not enabled, and VkPhysicalDeviceProperties ::`apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match
- VUID-VkImageCopy2-extent-06668
  `extent.width` **must** not be 0
- VUID-VkImageCopy2-extent-06669
  `extent.height` **must** not be 0
- VUID-VkImageCopy2-extent-06670
  `extent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageCopy2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_COPY_2
- VUID-VkImageCopy2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageCopy2-srcSubresource-parameter
  `srcSubresource` **must** be a valid VkImageSubresourceLayers structure
- VUID-VkImageCopy2-dstSubresource-parameter
  `dstSubresource` **must** be a valid VkImageSubresourceLayers structure

24.4. Copying Data Between Memory Ranges and Images

To copy data from an image to memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyMemoryToImageKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyDeviceMemoryImageInfoKHR*       pCopyMemoryInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryInfo` a pointer to a VkCopyDeviceMemoryImageInfoKHR structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13102
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `addressCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13103
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** not have been created with VK_IMAGE_CREATE_PROTECTED_BIT
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13104
  If the `maintenance11` feature is not enabled, and the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the `addressRange.pname`:address member of any element of `pCopyMemoryInfo->pRegions` **must** be a multiple of 4
- VUID-vkCmdCopyMemoryToImageKHR-imageOffset-13105
  The `imageOffset` and `imageExtent` members of each element of `pCopyMemoryInfo->pRegions`

must respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties

- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13106
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, for each element of `pCopyMemoryInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyMemoryToImageKHR-imageLayout-13019
  The `imageLayout` member of each element of `pCopyMemoryInfo->pRegions` **must** be VK_IMAGE_LAYOUT_GENERAL, VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, or VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL
- VUID-vkCmdCopyMemoryToImageKHR-pCopyMemoryInfo-13020
  `pCopyMemoryInfo->image` **must** have been created with VK_IMAGE_USAGE_TRANSFER_DST_BIT
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-13021
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** have been created with VK_IMAGE_CREATE_PROTECTED_BIT
- VUID-vkCmdCopyMemoryToImageKHR-None-13022
  If VK_EXT_depth_range_unrestricted is not enabled, for each element of `pCopyMemoryInfo->pRegions` whose `imageSubresource` contains a depth aspect, each data element in its `addressRange` **must** be in the range [0,1]
- VUID-vkCmdCopyMemoryToImageKHR-addressRange-13128
  At least one buffer containing the total address range specified by the `addressRange` member of each element of `pCopyMemoryInfo->pRegions` **must** have been created with VK_BUFFER_USAGE_TRANSFER_SRC_BIT

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMemoryToImageKHR-pCopyMemoryInfo-parameter
  If `pCopyMemoryInfo` is not `NULL`, `pCopyMemoryInfo` **must** be a valid pointer to a valid VkCopyDeviceMemoryImageInfoKHR structure
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyMemoryToImageKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyMemoryToImageKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToImageKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdCopyMemoryToImageKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyMemoryToImageKHR is not affected by conditional rendering

To copy data from an image to memory ranges, call:

```
// Provided by VK_KHR_device_address_commands
void vkCmdCopyImageToMemoryKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyDeviceMemoryImageInfoKHR*       pCopyMemoryInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyMemoryInfo` a pointer to a VkCopyDeviceMemoryImageInfoKHR structure describing the copies to perform.

Valid Usage

- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13102
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the `addressCopyFlags` member of all elements of `pCopyMemoryInfo->pRegions` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13103
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `pCopyMemoryInfo->image` **must** not have been created with

VK_IMAGE_CREATE_PROTECTED_BIT

- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13104
  If the maintenance11 feature is not enabled, and the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the addressRange.pname:address member of any element of pCopyMemoryInfo->pRegions **must** be a multiple of 4
- VUID-vkCmdCopyImageToMemoryKHR-imageOffset-13105
  The imageOffset and imageExtent members of each element of pCopyMemoryInfo->pRegions **must** respect the image transfer granularity requirements of commandBuffer's command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13106
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, for each element of pCopyMemoryInfo->pRegions, the aspectMask member of imageSubresource **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImageToMemoryKHR-imageLayout-13023
  The imageLayout member of each element of pCopyMemoryInfo->pRegions **must** be VK_IMAGE_LAYOUT_GENERAL, VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, or VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL
- VUID-vkCmdCopyImageToMemoryKHR-pCopyMemoryInfo-13024
  pCopyMemoryInfo->image **must** have been created with VK_IMAGE_USAGE_TRANSFER_SRC_BIT
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-13025
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, the addressCopyFlags member of all elements of pCopyMemoryInfo->pRegions **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-vkCmdCopyImageToMemoryKHR-addressRange-13129
  At least one buffer containing the total address range specified by the addressRange member of each element of pCopyMemoryInfo->pRegions **must** have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyImageToMemoryKHR-pCopyMemoryInfo-parameter
  If pCopyMemoryInfo is not NULL, pCopyMemoryInfo **must** be a valid pointer to a valid VkCopyDeviceMemoryImageInfoKHR structure
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyImageToMemoryKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support

VK_QUEUE_TRANSFER_BIT operations

- VUID-vkCmdCopyImageToMemoryKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToMemoryKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImageToMemoryKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImageToMemoryKHR is not affected by conditional rendering

The `VkCopyDeviceMemoryImageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkCopyDeviceMemoryImageInfoKHR {
    VkStructureType                       sType;
    const void*                           pNext;
    VkImage                               image;
    uint32_t                              regionCount;
    const VkDeviceMemoryImageCopyKHR*     pRegions;
} VkCopyDeviceMemoryImageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the base image accessed by the copy command.
- `regionCount` is the number of copies to be performed.

- `pRegions` is a pointer to an array of VkDeviceMemoryImageCopyKHR structures describing individual copy operations between two memory ranges.

Valid Usage

- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRange-13027
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified in `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-12473
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageLayout-13028
  The `imageLayout` member of each element of `pRegions` **must** specify the layout of the image subresource specified for that element of `pRegions` at the time this command is executed on a VkDevice
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07966
  If `image` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `image` was created
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `image` was created
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07969
  `image` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07973
  `image` **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07979
  If `image` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageOffset-09104
  For each element of `pRegions`, `imageOffset.z` and (`imageExtent.depth` + `imageOffset.z`) **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `image`
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07980
  If `image` is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of

pRegions, imageOffset.z **must** be 0 and imageExtent.depth **must** be 1

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07274
  For each element of pRegions, imageOffset.x **must** be a multiple of the texel block extent width of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07275
  For each element of pRegions, imageOffset.y **must** be a multiple of the texel block extent height of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07276
  For each element of pRegions, imageOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by imageSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by imageSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask **must** specify aspects present in image
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07981
  If image has a multi-planar format, then for each element of pRegions, imageSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-07983
  If image is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer **must** be 0 and imageSubresource.layerCount **must** be 1
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRowLength-09106
  For each element of pRegions, addressRowLength **must** be a multiple of the texel block extent width of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressImageHeight-09107
  For each element of pRegions, addressImageHeight **must** be a multiple of the texel block extent height of the VkFormat of image
- VUID-VkCopyDeviceMemoryImageInfoKHR-addressRowLength-09108
  For each element of pRegions, addressRowLength divided by the texel block extent width and then multiplied by the texel block size of image **must** be less than or equal to 2^{31}-1
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13029
  If image does not have either a depth/stencil format or a multi-planar format, then for

each element of pRegions, addressRange.address **must** be a multiple of the texel block size

- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13030
  If image has a multi-planar format, then for each element of pRegions, addressRange.address **must** be a multiple of the element size of the compatible format for the format and the aspectMask of the imageSubresource as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-13031
  If image has a depth/stencil format, the addressRange.address member of any element of pRegions **must** be a multiple of 4
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-13032
  The image region specified by each element of pRegions **must** be contained within the specified imageSubresource of image

Valid Usage (Implicit)

- VUID-VkCopyDeviceMemoryImageInfoKHR-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_IMAGE_INFO_KHR
- VUID-VkCopyDeviceMemoryImageInfoKHR-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyDeviceMemoryImageInfoKHR-image-parameter
  image **must** be a valid VkImage handle
- VUID-VkCopyDeviceMemoryImageInfoKHR-pRegions-parameter
  pRegions **must** be a valid pointer to an array of regionCount valid VkDeviceMemoryImageCopyKHR structures
- VUID-VkCopyDeviceMemoryImageInfoKHR-regionCount-arraylength
  regionCount **must** be greater than 0

The VkDeviceMemoryImageCopyKHR structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkDeviceMemoryImageCopyKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkDeviceAddressRangeKHR     addressRange;
    VkAddressCommandFlagsKHR    addressFlags;
    uint32_t                    addressRowLength;
    uint32_t                    addressImageHeight;
    VkImageSubresourceLayers    imageSubresource;
    VkImageLayout               imageLayout;
    VkOffset3D                  imageOffset;
    VkExtent3D                  imageExtent;
} VkDeviceMemoryImageCopyKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `addressRange` is a VkDeviceAddressRangeKHR structure defining the address range accessed by the copy operation.
- `addressFlags` is a VkAddressCommandFlagsKHR value defining the copy flags for the source address range.
- `addressRowLength` specifies the total number of texels in the address range representing a row of texels in the x dimension. Each new row of pixels in the copy will be read at an offset increment by this number of texels.
- `addressImageHeight` specifies the total number of rows of texels in the address range representing a 2D slice of texels in the x and y dimensions. Each new 2D slice of pixels in the copy will be read at an offset increment by this number of rows of texels.
- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.
- `imageLayout` is the VkImageLayout of the image subresource accessed by this copy.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure defines a copy operation where `srcRange.size` bytes will be copied from `srcRange.address` to `dstRange.address`.

Valid Usage

- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13097
  If the range specified by `addressRange` is not bound completely to memory when accessed, `addressFlags` **must** not include VK_ADDRESS_COMMAND_FULLY_BOUND_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13098
  If the buffer from which the range specified by `addressRange` was created with VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13099
  If the buffer from which the range specified by `addressRange` was created without VK_BUFFER_CREATE_PROTECTED_BIT, and `protectedNoFault` is not supported, `addressFlags` **must** not include VK_ADDRESS_COMMAND_PROTECTED_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-13100
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13122
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR

or VK_ADDRESS_COMMAND_UNKNOWN_STORAGE_BUFFER_USAGE_BIT_KHR

- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13123
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_STORAGE_BUFFER_BIT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_STORAGE_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-13101
  `addressFlags` **must** not include both VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR and VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13124
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created with VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR or VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-addressRange-13125
  If any buffer, which is bound to a range of VkDeviceMemory that overlaps the range backing `addressRange`, was created without VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT, `addressFlags` **must** not include VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR
- VUID-VkDeviceMemoryImageCopyKHR-size-13037
  The `size` member of `addressRange` **must** be large enough to contain all address locations that are accessed by this copy according to Buffer and Image Addressing
- VUID-VkDeviceMemoryImageCopyKHR-addressRowLength-09101
  `addressRowLength` **must** be `0`, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkDeviceMemoryImageCopyKHR-addressImageHeight-09102
  `addressImageHeight` **must** be `0`, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkDeviceMemoryImageCopyKHR-aspectMask-09103
  The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06659
  `imageExtent.width` **must** not be 0
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06660
  `imageExtent.height` **must** not be 0
- VUID-VkDeviceMemoryImageCopyKHR-imageExtent-06661
  `imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkDeviceMemoryImageCopyKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_DEVICE_MEMORY_IMAGE_COPY_KHR
- VUID-VkDeviceMemoryImageCopyKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkDeviceMemoryImageCopyKHR-addressFlags-parameter
  If `addressFlags` is not `0`, `addressFlags` **must** be a valid combination of VkAddressCommandFlagBitsKHR values
- VUID-VkDeviceMemoryImageCopyKHR-imageSubresource-parameter
  `imageSubresource` **must** be a valid VkImageSubresourceLayers structure
- VUID-VkDeviceMemoryImageCopyKHR-imageLayout-parameter
  `imageLayout` **must** be a valid VkImageLayout value

24.5. Copying Data Between Buffers and Images

Data **can** be copied between buffers and images, enabling applications to load and store data between images and application-defined offsets in buffer memory.

When copying between an address or a buffer and an image, texels in the image and bytes in memory are accessed as follows.

Texels at each coordinate (x,y,z,layer) in a image subresource are accessed, where:

x is in the range [`imageOffset.x`, `imageOffset.x` + `imageExtent.width`),

y is in the range [`imageOffset.y`, `imageOffset.y` + `imageExtent.height`),

z is in the range [`imageOffset.z`, `imageOffset.z` + `imageExtent.depth`),

layer is in the range [`imageSubresource.baseArrayLayer`, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount`)

For each (x,y,z,layer) coordinate in the image, bytes in memory are accessed at offsets in the range [texelOffset, texelOffset + blockSize), where:

texelOffset = baseAddress + (⌊(x - imageOffset.x) / blockWidth⌋ × blockSize) + (⌊(y - imageOffset.y) / blockHeight⌋ × rowExtent) + (⌊(z - imageOffset.z) / blockDepth⌋ × sliceExtent) + ((layer - `imageSubresource.baseArrayLayer`) × layerExtent)

rowExtent = ⌈ max(`bufferRowLength`, `imageExtent.width`) / blockWidth ⌉ × blockSize

sliceExtent = ⌈ max(`bufferImageHeight`, `imageExtent.height`) / blockHeight ⌉ × rowExtent

layerExtent = ⌈ `imageExtent.depth` / blockDepth ⌉ × sliceExtent

and where blockSize, blockWidth, blockHeight, and blockDepth are the texel block size and extents of the image's format, and baseAddress is either the supplied address for the copy, or the address of the buffer plus any supplied `bufferOffset` value.

When copying between a buffer and the depth or stencil aspect of an image, data in the buffer is assumed to be laid out as separate planes rather than interleaved. Addressing calculations are thus performed for a different format than the base image, according to the aspect, as described in the following table:

Table 29. Depth/Stencil Aspect Copy

Base Format	Depth Aspect Format	Stencil Aspect Format
VK_FORMAT_D16_UNORM	VK_FORMAT_D16_UNORM	-
VK_FORMAT_X8_D24_UNORM_PACK32	VK_FORMAT_X8_D24_UNORM_PACK32	-
VK_FORMAT_D32_SFLOAT	VK_FORMAT_D32_SFLOAT	-
VK_FORMAT_S8_UINT	-	VK_FORMAT_S8_UINT
VK_FORMAT_D16_UNORM_S8_UINT	VK_FORMAT_D16_UNORM	VK_FORMAT_S8_UINT
VK_FORMAT_D24_UNORM_S8_UINT	VK_FORMAT_X8_D24_UNORM_PACK32	VK_FORMAT_S8_UINT
VK_FORMAT_D32_SFLOAT_S8_UINT	VK_FORMAT_D32_SFLOAT	VK_FORMAT_S8_UINT

When copying between a buffer and any plane of a multi-planar image, addressing calculations are performed using the compatible format for that plane, rather than the format of the multi-planar image.

Each texel block is copied from one resource to the other according to the above addressing equations.

The memory locations accessed by a buffer and image overlap if they alias each other, the `imageSubresource` overlaps the aliased range, and either: * their contents are not interpreted in consistent ways, or * their accessed regions defined above overlap, where the memory locations accessed by the texels of a linear image is according to its VkSubresourceLayout

The memory locations of an image overlap if those two ranges share any of the same texel coordinates in the same image aspects.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyBufferToImage(
    VkCommandBuffer                             commandBuffer,
    VkBuffer                                    srcBuffer,
    VkImage                                     dstImage,
    VkImageLayout                               dstImageLayout,
    uint32_t                                    regionCount,
    const VkBufferImageCopy*                    pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcBuffer` is the source buffer.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferImageCopy structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source buffer to the destination region of the destination image according to the addressing calculations for each resource. If any region accesses a depth aspect in `dstImage` and the `VK_EXT_depth_range_unrestricted` extension is not enabled, values copied from `srcBuffer` outside of the range [0,1] will be written as undefined values to the destination image.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyBufferToImage-dstImage-07966
  If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyBufferToImage-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `dstImage` was created
- VUID-vkCmdCopyBufferToImage-dstImage-07969
  `dstImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-vkCmdCopyBufferToImage-imageSubresource-07971
  For each element of pRegions, imageOffset.x and (imageExtent.width + imageOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of dstImage
- VUID-vkCmdCopyBufferToImage-imageSubresource-07972
  For each element of pRegions, imageOffset.y and (imageExtent.height + imageOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-07973
  dstImage **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-vkCmdCopyBufferToImage-commandBuffer-01828
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, srcBuffer **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage-commandBuffer-01829
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, dstImage **must** not be a protected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-01830
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, dstImage **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage-commandBuffer-07737
  If the maintenance11 feature is not enabled, and the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the bufferOffset member of any element of pRegions **must** be a multiple of 4
- VUID-vkCmdCopyBufferToImage-imageOffset-07738
  The imageOffset and imageExtent members of each element of pRegions **must** respect the image transfer granularity requirements of commandBuffer's command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyBufferToImage-commandBuffer-07739
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the maintenance10 feature is not enabled, for each element of pRegions, the aspectMask member of imageSubresource **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyBufferToImage-commandBuffer-11778
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyBufferToImage-commandBuffer-11779
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask

member of imageSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR

- VUID-vkCmdCopyBufferToImage-commandBuffer-11780
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyBufferToImage-commandBuffer-11781
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyBufferToImage-pRegions-00171
  srcBuffer **must** be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of pRegions
- VUID-vkCmdCopyBufferToImage-pRegions-00173
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified in pRegions and accessed according to Buffer and Image Addressing
- VUID-vkCmdCopyBufferToImage-pRegions-12483
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by pRegions and accessed according to Buffer and Image Addressing
- VUID-vkCmdCopyBufferToImage-srcBuffer-00174
  srcBuffer **must** have been created with the VK_BUFFER_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-vkCmdCopyBufferToImage-dstImage-01997
  The format features of dstImage **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-vkCmdCopyBufferToImage-srcBuffer-00176
  If srcBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdCopyBufferToImage-dstImage-00177
  dstImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyBufferToImage-dstImageLayout-00180
  dstImageLayout **must** specify the layout of the image subresources of dstImage specified in pRegions at the time this command is executed on a VkDevice
- VUID-vkCmdCopyBufferToImage-dstImageLayout-01396
  dstImageLayout **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR,

VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL

- VUID-vkCmdCopyBufferToImage-pRegions-07931
  If VK_EXT_depth_range_unrestricted is not enabled, for each element of pRegions whose imageSubresource contains a depth aspect, the data in srcBuffer **must** be in the range [0,1]
- VUID-vkCmdCopyBufferToImage-dstImage-07979
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y **must** be 0 and imageExtent.height **must** be 1
- VUID-vkCmdCopyBufferToImage-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-07980
  If dstImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z **must** be 0 and imageExtent.depth **must** be 1
- VUID-vkCmdCopyBufferToImage-dstImage-07274
  For each element of pRegions, imageOffset.x **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-07275
  For each element of pRegions, imageOffset.y **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-07276
  For each element of pRegions, imageOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by imageSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by imageSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-vkCmdCopyBufferToImage-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask **must** specify aspects present in dstImage
- VUID-vkCmdCopyBufferToImage-dstImage-07981
  If dstImage has a multi-planar format, then for each element of pRegions, imageSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-vkCmdCopyBufferToImage-dstImage-07983

If `dstImage` is of type VK_IMAGE_TYPE_3D, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be `0` and `imageSubresource.layerCount` **must** be `1`

- VUID-vkCmdCopyBufferToImage-bufferRowLength-09106
  For each element of `pRegions`, `bufferRowLength` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferImageHeight-09107
  For each element of `pRegions`, `bufferImageHeight` **must** be a multiple of the texel block extent height of the VkFormat of `dstImage`
- VUID-vkCmdCopyBufferToImage-bufferRowLength-09108
  For each element of `pRegions`, `bufferRowLength` divided by the texel block extent width and then multiplied by the texel block size of `dstImage` **must** be less than or equal to 2^{31}-1
- VUID-vkCmdCopyBufferToImage-dstImage-07975
  If `dstImage` does not have either a depth/stencil format or a multi-planar format, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the texel block size
- VUID-vkCmdCopyBufferToImage-dstImage-07976
  If `dstImage` has a multi-planar format, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-vkCmdCopyBufferToImage-dstImage-07978
  If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of `4`

Valid Usage (Implicit)

- VUID-vkCmdCopyBufferToImage-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyBufferToImage-srcBuffer-parameter
  `srcBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdCopyBufferToImage-dstImage-parameter
  `dstImage` **must** be a valid VkImage handle
- VUID-vkCmdCopyBufferToImage-dstImageLayout-parameter
  `dstImageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdCopyBufferToImage-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkBufferImageCopy structures
- VUID-vkCmdCopyBufferToImage-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyBufferToImage-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT

operations

- VUID-vkCmdCopyBufferToImage-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBufferToImage-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBufferToImage-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyBufferToImage-regionCount-arraylength
  `regionCount` **must** be greater than `0`
- VUID-vkCmdCopyBufferToImage-commonparent
  Each of `commandBuffer`, `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyBufferToImage is not affected by conditional rendering

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_0
void vkCmdCopyImageToBuffer(
    VkCommandBuffer                             commandBuffer,
    VkImage                                     srcImage,
    VkImageLayout                               srcImageLayout,
    VkBuffer                                    dstBuffer,
    uint32_t                                    regionCount,
    const VkBufferImageCopy*                    pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferImageCopy structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination buffer according to the addressing calculations for each resource.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-vkCmdCopyImageToBuffer-srcImage-07966
  If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `srcImage` was created
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `srcImage` was created
- VUID-vkCmdCopyImageToBuffer-srcImage-07969
  `srcImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-vkCmdCopyImageToBuffer-imageSubresource-07971
  For each element of `pRegions`, `imageOffset.x` and (`imageExtent.width` + `imageOffset.x`) **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-imageSubresource-07972
  For each element of `pRegions`, `imageOffset.y` and (`imageExtent.height` + `imageOffset.y`) **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `srcImage`

- VUID-vkCmdCopyImageToBuffer-srcImage-07973
  `srcImage` **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT

- VUID-vkCmdCopyImageToBuffer-commandBuffer-01831
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image

- VUID-vkCmdCopyImageToBuffer-commandBuffer-01832
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer

- VUID-vkCmdCopyImageToBuffer-commandBuffer-01833
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer

- VUID-vkCmdCopyImageToBuffer-commandBuffer-07746
  If the `maintenance11` feature is not enabled, and the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of `4`

- VUID-vkCmdCopyImageToBuffer-imageOffset-07747
  The `imageOffset` and `imageExtent` members of each element of `pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties

- VUID-vkCmdCopyImageToBuffer-commandBuffer-10216
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the `maintenance10` feature is not enabled, for each element of `pRegions`, the `aspectMask` member of `imageSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11790
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `srcImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11791
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of `pRegions` the `aspectMask` member of `imageSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `srcImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11792

If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImageToBuffer-commandBuffer-11793
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImageToBuffer-pRegions-00183
  dstBuffer **must** be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of pRegions
- VUID-vkCmdCopyImageToBuffer-pRegions-00184
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified in pRegions and accessed according to Buffer and Image Addressing
- VUID-vkCmdCopyImageToBuffer-pRegions-12485
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by pRegions and accessed according to Buffer and Image Addressing
- VUID-vkCmdCopyImageToBuffer-srcImage-00186
  srcImage **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-vkCmdCopyImageToBuffer-srcImage-01998
  The format features of srcImage **must** contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT
- VUID-vkCmdCopyImageToBuffer-dstBuffer-00191
  dstBuffer **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-vkCmdCopyImageToBuffer-dstBuffer-00192
  If dstBuffer is non-sparse then it **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-00189
  srcImageLayout **must** specify the layout of the image subresources of srcImage specified in pRegions at the time this command is executed on a VkDevice
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-01397
  srcImageLayout **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-vkCmdCopyImageToBuffer-srcImage-07979
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y **must** be 0 and imageExtent.height **must** be 1

- VUID-vkCmdCopyImageToBuffer-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z **must** be 0 and imageExtent.depth **must** be 1
- VUID-vkCmdCopyImageToBuffer-srcImage-07274
  For each element of pRegions, imageOffset.x **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-07275
  For each element of pRegions, imageOffset.y **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-07276
  For each element of pRegions, imageOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by imageSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by imageSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask **must** specify aspects present in srcImage
- VUID-vkCmdCopyImageToBuffer-srcImage-07981
  If srcImage has a multi-planar format, then for each element of pRegions, imageSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-vkCmdCopyImageToBuffer-srcImage-07983
  If srcImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer **must** be 0 and imageSubresource.layerCount **must** be 1
- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09106
  For each element of pRegions, bufferRowLength **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-vkCmdCopyImageToBuffer-bufferImageHeight-09107
  For each element of pRegions, bufferImageHeight **must** be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09108
  For each element of `pRegions`, `bufferRowLength` divided by the texel block extent width and then multiplied by the texel block size of `srcImage` **must** be less than or equal to 2^{31}-1
- VUID-vkCmdCopyImageToBuffer-srcImage-07975
  If `srcImage` does not have either a depth/stencil format or a multi-planar format, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the texel block size
- VUID-vkCmdCopyImageToBuffer-srcImage-07976
  If `srcImage` has a multi-planar format, then for each element of `pRegions`, `bufferOffset` **must** be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-vkCmdCopyImageToBuffer-srcImage-07978
  If `srcImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` **must** be a multiple of `4`

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer-commandBuffer-parameter
  `commandBuffer` **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyImageToBuffer-srcImage-parameter
  `srcImage` **must** be a valid VkImage handle
- VUID-vkCmdCopyImageToBuffer-srcImageLayout-parameter
  `srcImageLayout` **must** be a valid VkImageLayout value
- VUID-vkCmdCopyImageToBuffer-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-vkCmdCopyImageToBuffer-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkBufferImageCopy structures
- VUID-vkCmdCopyImageToBuffer-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyImageToBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyImageToBuffer-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToBuffer-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImageToBuffer-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyImageToBuffer-regionCount-arraylength

`regionCount` **must** be greater than `0`

- VUID-vkCmdCopyImageToBuffer-commonparent
  Each of `commandBuffer`, `dstBuffer`, and `srcImage` **must** have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImageToBuffer is not affected by conditional rendering

For both vkCmdCopyBufferToImage and vkCmdCopyImageToBuffer, each element of `pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBufferImageCopy {
    VkDeviceSize                bufferOffset;
    uint32_t                    bufferRowLength;
    uint32_t                    bufferImageHeight;
    VkImageSubresourceLayers    imageSubresource;
    VkOffset3D                  imageOffset;
    VkExtent3D                  imageExtent;
} VkBufferImageCopy;
```

- `bufferOffset` is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- `bufferRowLength` and `bufferImageHeight` specify in texels a subregion of a larger two- or three-

dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the `imageExtent`.

- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

Valid Usage

- VUID-VkBufferImageCopy-bufferRowLength-09101
  `bufferRowLength` **must** be `0`, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkBufferImageCopy-bufferImageHeight-09102
  `bufferImageHeight` **must** be `0`, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkBufferImageCopy-aspectMask-09103
  The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkBufferImageCopy-imageExtent-06659
  `imageExtent.width` **must** not be 0
- VUID-VkBufferImageCopy-imageExtent-06660
  `imageExtent.height` **must** not be 0
- VUID-VkBufferImageCopy-imageExtent-06661
  `imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy-imageSubresource-parameter
  `imageSubresource` **must** be a valid VkImageSubresourceLayers structure

More extensible versions of the commands to copy between buffers and images are defined below.

To copy data from a buffer object to an image object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyBufferToImage2(
    VkCommandBuffer                             commandBuffer,
    const VkCopyBufferToImageInfo2*             pCopyBufferToImageInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyBufferToImage2
void vkCmdCopyBufferToImage2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyBufferToImageInfo2*             pCopyBufferToImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferToImageInfo` is a pointer to a VkCopyBufferToImageInfo2 structure describing the copy parameters.

This command is functionally identical to vkCmdCopyBufferToImage, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyBufferToImage2-commandBuffer-01828
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01829
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be a protected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01830
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` **must** not be an unprotected image
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07737
  If the `maintenance11` feature is not enabled, and the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the `bufferOffset` member of any element of `pCopyBufferToImageInfo->pRegions` **must** be a multiple of `4`
- VUID-vkCmdCopyBufferToImage2-imageOffset-07738
  The `imageOffset` and `imageExtent` members of each element of `pCopyBufferToImageInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyBufferToImage2-commandBuffer-07739
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the `maintenance10` feature is not enabled, for each element of `pCopyBufferToImageInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11778
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pCopyBufferToImageInfo->pRegions` the `aspectMask` member of `imageSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the

format features of dstImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyBufferToImage2-commandBuffer-11779
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyBufferToImageInfo->pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11780
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of pCopyBufferToImageInfo->pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyBufferToImage2-commandBuffer-11781
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyBufferToImageInfo->pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of dstImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyBufferToImage2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyBufferToImage2-pCopyBufferToImageInfo-parameter
  pCopyBufferToImageInfo **must** be a valid pointer to a valid VkCopyBufferToImageInfo2 structure
- VUID-vkCmdCopyBufferToImage2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyBufferToImage2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyBufferToImage2-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyBufferToImage2-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyBufferToImage2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyBufferToImage2 is not affected by conditional rendering

The `VkCopyBufferToImageInfo2` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferToImageInfo2 {
    VkStructureType             sType;
    const void*                 pNext;
    VkBuffer                    srcBuffer;
    VkImage                     dstImage;
    VkImageLayout               dstImageLayout;
    uint32_t                    regionCount;
    const VkBufferImageCopy2*   pRegions;
} VkCopyBufferToImageInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyBufferToImageInfo2
typedef VkCopyBufferToImageInfo2 VkCopyBufferToImageInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.

- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferImageCopy2 structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyBufferToImageInfo2-pRegions-04565
  The image region specified by each element of `pRegions` **must** be contained within the specified `imageSubresource` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-pRegions-00171
  `srcBuffer` **must** be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of `pRegions`
- VUID-VkCopyBufferToImageInfo2-pRegions-00173
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified in `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyBufferToImageInfo2-pRegions-12483
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00174
  `srcBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-VkCopyBufferToImageInfo2-dstImage-01997
  The format features of `dstImage` **must** contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT
- VUID-VkCopyBufferToImageInfo2-srcBuffer-00176
  If `srcBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-dstImage-00177
  `dstImage` **must** have been created with the VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-00180
  `dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-01396
  `dstImageLayout` **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-VkCopyBufferToImageInfo2-pRegions-07931
  If VK_EXT_depth_range_unrestricted is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` **must** be in the range [0,1]

- VUID-VkCopyBufferToImageInfo2-dstImage-07966
  If `dstImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `dstImage` was created
- VUID-VkCopyBufferToImageInfo2-dstImage-07969
  `dstImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyBufferToImageInfo2-dstImage-07973
  `dstImage` **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-VkCopyBufferToImageInfo2-dstImage-07979
  If `dstImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyBufferToImageInfo2-imageOffset-09104
  For each element of `pRegions`, `imageOffset.z` and (`imageExtent.depth` + `imageOffset.z`) **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07980
  If `dstImage` is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyBufferToImageInfo2-dstImage-07274
  For each element of `pRegions`, `imageOffset.x` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07275
  For each element of `pRegions`, `imageOffset.y` **must** be a multiple of the texel block extent height of the VkFormat of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-07276
  For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the texel block extent depth of the VkFormat of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-00207
  For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-VkCopyBufferToImageInfo2-dstImage-00208
  For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a

multiple of the texel block extent height of the VkFormat of dstImage

- VUID-VkCopyBufferToImageInfo2-dstImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-VkCopyBufferToImageInfo2-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask **must** specify aspects present in dstImage
- VUID-VkCopyBufferToImageInfo2-dstImage-07981
  If dstImage has a multi-planar format, then for each element of pRegions, imageSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyBufferToImageInfo2-dstImage-07983
  If dstImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer **must** be 0 and imageSubresource.layerCount **must** be 1
- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09106
  For each element of pRegions, bufferRowLength **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-VkCopyBufferToImageInfo2-bufferImageHeight-09107
  For each element of pRegions, bufferImageHeight **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-VkCopyBufferToImageInfo2-bufferRowLength-09108
  For each element of pRegions, bufferRowLength divided by the texel block extent width and then multiplied by the texel block size of dstImage **must** be less than or equal to 2^{31}-1
- VUID-VkCopyBufferToImageInfo2-dstImage-07975
  If dstImage does not have either a depth/stencil format or a multi-planar format, then for each element of pRegions, bufferOffset **must** be a multiple of the texel block size
- VUID-VkCopyBufferToImageInfo2-dstImage-07976
  If dstImage has a multi-planar format, then for each element of pRegions, bufferOffset **must** be a multiple of the element size of the compatible format for the format and the aspectMask of the imageSubresource as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-VkCopyBufferToImageInfo2-dstImage-07978
  If dstImage has a depth/stencil format, the bufferOffset member of any element of pRegions **must** be a multiple of 4
- VUID-VkCopyBufferToImageInfo2-pRegions-06223
  For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.x and (imageExtent.width + imageOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of dstImage
- VUID-VkCopyBufferToImageInfo2-pRegions-06224
  For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.y and (imageExtent.height + imageOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of

dstImage

Valid Usage (Implicit)

- VUID-VkCopyBufferToImageInfo2-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2
- VUID-VkCopyBufferToImageInfo2-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyBufferToImageInfo2-srcBuffer-parameter
  srcBuffer **must** be a valid VkBuffer handle
- VUID-VkCopyBufferToImageInfo2-dstImage-parameter
  dstImage **must** be a valid VkImage handle
- VUID-VkCopyBufferToImageInfo2-dstImageLayout-parameter
  dstImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyBufferToImageInfo2-pRegions-parameter
  pRegions **must** be a valid pointer to an array of regionCount valid VkBufferImageCopy2 structures
- VUID-VkCopyBufferToImageInfo2-regionCount-arraylength
  regionCount **must** be greater than 0
- VUID-VkCopyBufferToImageInfo2-commonparent
  Both of dstImage, and srcBuffer **must** have been created, allocated, or retrieved from the same VkDevice

To copy data from an image object to a buffer object, call:

```
// Provided by VK_VERSION_1_3
void vkCmdCopyImageToBuffer2(
    VkCommandBuffer                             commandBuffer,
    const VkCopyImageToBufferInfo2*             pCopyImageToBufferInfo);
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to vkCmdCopyImageToBuffer2
void vkCmdCopyImageToBuffer2KHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyImageToBufferInfo2*             pCopyImageToBufferInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pCopyImageToBufferInfo is a pointer to a VkCopyImageToBufferInfo2 structure describing the copy parameters.

This command is functionally identical to vkCmdCopyImageToBuffer, but includes extensible sub-structures that include sType and pNext parameters, allowing them to be more easily extended.

Valid Usage

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01831
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` **must** not be a protected image
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01832
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be a protected buffer
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01833
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` **must** not be an unprotected buffer
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-07746
  If the `maintenance11` feature is not enabled, and the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the `bufferOffset` member of any element of `pCopyImageToBufferInfo->pRegions` **must** be a multiple of `4`
- VUID-vkCmdCopyImageToBuffer2-imageOffset-07747
  The `imageOffset` and `imageExtent` members of each element of `pCopyImageToBufferInfo->pRegions` **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in VkQueueFamilyProperties
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-10216
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT, and the `maintenance10` feature is not enabled, for each element of `pCopyImageToBufferInfo->pRegions`, the `aspectMask` member of `imageSubresource` **must** not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11790
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `srcImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_COMPUTE_QUEUE_BIT_KHR
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11791
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of `pCopyImageToBufferInfo->pRegions` the `aspectMask` member of `imageSubresource` is VK_IMAGE_ASPECT_DEPTH_BIT, then the format features of `srcImage` **must** contain VK_FORMAT_FEATURE_2_DEPTH_COPY_ON_TRANSFER_QUEUE_BIT_KHR
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11792
  If the queue family used to create the VkCommandPool which `commandBuffer` was allocated from does not support VK_QUEUE_GRAPHICS_BIT but does support VK_QUEUE_COMPUTE_BIT, and in any element of `pCopyImageToBufferInfo->pRegions` the

aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_COMPUTE_QUEUE_BIT_KHR

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-11793
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT and VK_QUEUE_COMPUTE_BIT, but does support VK_QUEUE_TRANSFER_BIT, and in any element of pCopyImageToBufferInfo->pRegions the aspectMask member of imageSubresource is VK_IMAGE_ASPECT_STENCIL_BIT, then the format features of srcImage **must** contain VK_FORMAT_FEATURE_2_STENCIL_COPY_ON_TRANSFER_QUEUE_BIT_KHR

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyImageToBuffer2-pCopyImageToBufferInfo-parameter
  pCopyImageToBufferInfo **must** be a valid pointer to a valid VkCopyImageToBufferInfo2 structure
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-recording
  commandBuffer **must** be in the recording state
- VUID-vkCmdCopyImageToBuffer2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyImageToBuffer2-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyImageToBuffer2-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyImageToBuffer2-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer **must** be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyImageToBuffer2 is not affected by conditional rendering

The VkCopyImageToBufferInfo2 structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageToBufferInfo2 {
    VkStructureType              sType;
    const void*                  pNext;
    VkImage                      srcImage;
    VkImageLayout                srcImageLayout;
    VkBuffer                     dstBuffer;
    uint32_t                     regionCount;
    const VkBufferImageCopy2*    pRegions;
} VkCopyImageToBufferInfo2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkCopyImageToBufferInfo2
typedef VkCopyImageToBufferInfo2 VkCopyImageToBufferInfo2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- srcImage is the source image.
- srcImageLayout is the layout of the source image subresources for the copy.
- dstBuffer is the destination buffer.
- regionCount is the number of regions to copy.
- pRegions is a pointer to an array of VkBufferImageCopy2 structures specifying the regions to copy.

Valid Usage

- VUID-VkCopyImageToBufferInfo2-pRegions-04566
  The image region specified by each element of `pRegions` **must** be contained within the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToBufferInfo2-pRegions-00183
  `dstBuffer` **must** be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of `pRegions`
- VUID-VkCopyImageToBufferInfo2-pRegions-00184
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified in `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyImageToBufferInfo2-pRegions-12485
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyImageToBufferInfo2-srcImage-00186
  `srcImage` **must** have been created with the VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag set
- VUID-VkCopyImageToBufferInfo2-srcImage-01998
  The format features of `srcImage` **must** contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00191
  `dstBuffer` **must** have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag set
- VUID-VkCopyImageToBufferInfo2-dstBuffer-00192
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-00189
  `srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
- VUID-VkCopyImageToBufferInfo2-srcImageLayout-01397
  `srcImageLayout` **must** be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL
- VUID-VkCopyImageToBufferInfo2-srcImage-07966
  If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `srcImage` was created
- VUID-VkCopyImageToBufferInfo2-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of

pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageToBufferInfo2-srcImage-07969
  srcImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyImageToBufferInfo2-srcImage-07973
  srcImage **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-VkCopyImageToBufferInfo2-srcImage-07979
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y **must** be 0 and imageExtent.height **must** be 1
- VUID-VkCopyImageToBufferInfo2-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z **must** be 0 and imageExtent.depth **must** be 1
- VUID-VkCopyImageToBufferInfo2-srcImage-07274
  For each element of pRegions, imageOffset.x **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-07275
  For each element of pRegions, imageOffset.y **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-07276
  For each element of pRegions, imageOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by imageSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by imageSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask **must** specify aspects present in srcImage
- VUID-VkCopyImageToBufferInfo2-srcImage-07981

If srcImage has a multi-planar format, then for each element of pRegions, imageSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit

- VUID-VkCopyImageToBufferInfo2-srcImage-07983
  If srcImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer **must** be 0 and imageSubresource.layerCount **must** be 1
- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09106
  For each element of pRegions, bufferRowLength **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-bufferImageHeight-09107
  For each element of pRegions, bufferImageHeight **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageToBufferInfo2-bufferRowLength-09108
  For each element of pRegions, bufferRowLength divided by the texel block extent width and then multiplied by the texel block size of srcImage **must** be less than or equal to 2^{31}-1
- VUID-VkCopyImageToBufferInfo2-srcImage-07975
  If srcImage does not have either a depth/stencil format or a multi-planar format, then for each element of pRegions, bufferOffset **must** be a multiple of the texel block size
- VUID-VkCopyImageToBufferInfo2-srcImage-07976
  If srcImage has a multi-planar format, then for each element of pRegions, bufferOffset **must** be a multiple of the element size of the compatible format for the format and the aspectMask of the imageSubresource as defined in Compatible Formats of Planes of Multi-Planar Formats
- VUID-VkCopyImageToBufferInfo2-srcImage-07978
  If srcImage has a depth/stencil format, the bufferOffset member of any element of pRegions **must** be a multiple of 4
- VUID-VkCopyImageToBufferInfo2-imageOffset-00197
  For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.x and (imageExtent.width + imageOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of srcImage
- VUID-VkCopyImageToBufferInfo2-imageOffset-00198
  For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.y and (imageExtent.height + imageOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of srcImage

Valid Usage (Implicit)

- VUID-VkCopyImageToBufferInfo2-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2
- VUID-VkCopyImageToBufferInfo2-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyImageToBufferInfo2-srcImage-parameter

`srcImage` **must** be a valid VkImage handle

- VUID-VkCopyImageToBufferInfo2-srcImageLayout-parameter
  `srcImageLayout` **must** be a valid VkImageLayout value
- VUID-VkCopyImageToBufferInfo2-dstBuffer-parameter
  `dstBuffer` **must** be a valid VkBuffer handle
- VUID-VkCopyImageToBufferInfo2-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkBufferImageCopy2 structures
- VUID-VkCopyImageToBufferInfo2-regionCount-arraylength
  `regionCount` **must** be greater than `0`
- VUID-VkCopyImageToBufferInfo2-commonparent
  Both of `dstBuffer`, and `srcImage` **must** have been created, allocated, or retrieved from the same VkDevice

For both vkCmdCopyBufferToImage2 and vkCmdCopyImageToBuffer2, each element of `pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkBufferImageCopy2 {
    VkStructureType             sType;
    const void*                 pNext;
    VkDeviceSize                bufferOffset;
    uint32_t                    bufferRowLength;
    uint32_t                    bufferImageHeight;
    VkImageSubresourceLayers    imageSubresource;
    VkOffset3D                  imageOffset;
    VkExtent3D                  imageExtent;
} VkBufferImageCopy2;
```

```
// Provided by VK_KHR_copy_commands2
// Equivalent to VkBufferImageCopy2
typedef VkBufferImageCopy2 VkBufferImageCopy2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bufferOffset` is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- `bufferRowLength` and `bufferImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image

subresources of the image used for the source or destination image data.

- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure is functionally identical to VkBufferImageCopy, but adds `sType` and `pNext` parameters, allowing it to be more easily extended.

Valid Usage

- VUID-VkBufferImageCopy2-bufferRowLength-09101
  `bufferRowLength` **must** be `0`, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkBufferImageCopy2-bufferImageHeight-09102
  `bufferImageHeight` **must** be `0`, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkBufferImageCopy2-aspectMask-09103
  The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkBufferImageCopy2-imageExtent-06659
  `imageExtent.width` **must** not be 0
- VUID-VkBufferImageCopy2-imageExtent-06660
  `imageExtent.height` **must** not be 0
- VUID-VkBufferImageCopy2-imageExtent-06661
  `imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkBufferImageCopy2-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2
- VUID-VkBufferImageCopy2-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkBufferImageCopy2-imageSubresource-parameter
  `imageSubresource` **must** be a valid VkImageSubresourceLayers structure

The following commands can be used to copy between host memory and images. Bytes in host memory and texels in images are accessed as specified in Copying Data Between Buffers and Images, with buffers replaced with host memory.

To copy data from host memory to an image object, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyMemoryToImage(
    VkDevice                                    device,
    const VkCopyMemoryToImageInfo*              pCopyMemoryToImageInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyMemoryToImage
VkResult vkCopyMemoryToImageEXT(
    VkDevice                                    device,
    const VkCopyMemoryToImageInfo*              pCopyMemoryToImageInfo);
```

- `device` is the device which owns `pCopyMemoryToImageInfo->dstImage`.
- `pCopyMemoryToImageInfo` is a pointer to a VkCopyMemoryToImageInfo structure describing the copy parameters.

This command is functionally similar to vkCmdCopyBufferToImage2, except it is executed on the host and reads from host memory instead of a buffer. The memory of `pCopyMemoryToImageInfo->dstImage` is accessed by the host as if coherent.

NOTE	Because queue submissions automatically make host memory visible to the device, there would not be a need for a memory barrier before using the results of this copy operation on the device.

Valid Usage (Implicit)

- VUID-vkCopyMemoryToImage-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyMemoryToImage-pCopyMemoryToImageInfo-parameter
  `pCopyMemoryToImageInfo` **must** be a valid pointer to a valid VkCopyMemoryToImageInfo structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkCopyMemoryToImageInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyMemoryToImageInfo {
    VkStructureType               sType;
    const void*                   pNext;
    VkHostImageCopyFlags          flags;
    VkImage                       dstImage;
    VkImageLayout                 dstImageLayout;
    uint32_t                      regionCount;
    const VkMemoryToImageCopy*    pRegions;
} VkCopyMemoryToImageInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyMemoryToImageInfo
typedef VkCopyMemoryToImageInfo VkCopyMemoryToImageInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkHostImageCopyFlagBits values describing additional copy parameters.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkMemoryToImageCopy structures specifying the regions to copy.

`vkCopyMemoryToImage` does not check whether the device memory associated with `dstImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that reads from or writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyMemoryToImageInfo-dstImage-09109
  If `dstImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in Binding Resource Memory
- VUID-VkCopyMemoryToImageInfo-dstImage-09111
  If the stencil aspect of `dstImage` is accessed, and `dstImage` was not created with separate stencil usage, `dstImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyMemoryToImageInfo-dstImage-09112

If the stencil aspect of dstImage is accessed, and dstImage was created with separate stencil usage, dstImage **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set

- VUID-VkCopyMemoryToImageInfo-dstImage-09113
  If non-stencil aspects of dstImage are accessed, dstImage **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyMemoryToImageInfo-imageOffset-09114
  If flags contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the x, y, and z members of the imageOffset member of each element of pRegions **must** be 0
- VUID-VkCopyMemoryToImageInfo-dstImage-09115
  If flags contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the imageExtent member of each element of pRegions **must** equal the extents of dstImage identified by imageSubresource
- VUID-VkCopyMemoryToImageInfo-dstImage-07966
  If dstImage is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-VkCopyMemoryToImageInfo-imageSubresource-07967
  The imageSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyMemoryToImageInfo-imageSubresource-07968
  If imageSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, imageSubresource.baseArrayLayer + imageSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyMemoryToImageInfo-dstImage-07969
  dstImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyMemoryToImageInfo-imageSubresource-07971
  For each element of pRegions, imageOffset.x and (imageExtent.width + imageOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of dstImage
- VUID-VkCopyMemoryToImageInfo-imageSubresource-07972
  For each element of pRegions, imageOffset.y and (imageExtent.height + imageOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of dstImage
- VUID-VkCopyMemoryToImageInfo-dstImage-07973
  dstImage **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-VkCopyMemoryToImageInfo-dstImage-07979
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y **must** be 0 and imageExtent.height **must** be 1
- VUID-VkCopyMemoryToImageInfo-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) **must**

both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- VUID-VkCopyMemoryToImageInfo-dstImage-07980
  If `dstImage` is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyMemoryToImageInfo-dstImage-07274
  For each element of `pRegions`, `imageOffset.x` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-07275
  For each element of `pRegions`, `imageOffset.y` **must** be a multiple of the texel block extent height of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-07276
  For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the texel block extent depth of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-00207
  For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-00208
  For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the texel block extent height of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-00209
  For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the texel block extent depth of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-imageSubresource-09105
  For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `dstImage`
- VUID-VkCopyMemoryToImageInfo-dstImage-07981
  If `dstImage` has a multi-planar format, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyMemoryToImageInfo-dstImage-07983
  If `dstImage` is of type VK_IMAGE_TYPE_3D, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be `0` and `imageSubresource.layerCount` **must** be `1`
- VUID-VkCopyMemoryToImageInfo-memoryRowLength-09106
  For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the texel block extent width of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-memoryImageHeight-09107
  For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the texel block extent height of the VkFormat of `dstImage`
- VUID-VkCopyMemoryToImageInfo-memoryRowLength-09108

For each element of pRegions, memoryRowLength divided by the texel block extent width and then multiplied by the texel block size of dstImage **must** be less than or equal to 2^{31}-1

- VUID-VkCopyMemoryToImageInfo-pRegions-09062
  Each memory location accessed by this command **must** not be accessed in both a source region and a destination region, as specified in pRegions and accessed according to Buffer and Image Addressing
- VUID-VkCopyMemoryToImageInfo-pRegions-12474
  Each memory location accessed by this command **must** not be accessed in more than one destination region, as specified by pRegions and accessed according to Buffer and Image Addressing
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-09059
  dstImageLayout **must** specify the current layout of the image subresources of dstImage specified in pRegions
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-09060
  dstImageLayout **must** be one of the image layouts returned in VkPhysicalDeviceHostImageCopyProperties::pCopyDstLayouts
- VUID-VkCopyMemoryToImageInfo-flags-09393
  If flags includes VK_HOST_IMAGE_COPY_MEMCPY_BIT, for each region in pRegions, memoryRowLength and memoryImageHeight **must** both be 0

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_MEMORY_TO_IMAGE_INFO
- VUID-VkCopyMemoryToImageInfo-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyMemoryToImageInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkHostImageCopyFlagBits values
- VUID-VkCopyMemoryToImageInfo-dstImage-parameter
  dstImage **must** be a valid VkImage handle
- VUID-VkCopyMemoryToImageInfo-dstImageLayout-parameter
  dstImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyMemoryToImageInfo-pRegions-parameter
  pRegions **must** be a valid pointer to an array of regionCount valid VkMemoryToImageCopy structures
- VUID-VkCopyMemoryToImageInfo-regionCount-arraylength
  regionCount **must** be greater than 0

Each element of VkCopyMemoryToImageInfo::pRegions is a structure defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkMemoryToImageCopy {
    VkStructureType             sType;
    const void*                 pNext;
    const void*                 pHostPointer;
    uint32_t                    memoryRowLength;
    uint32_t                    memoryImageHeight;
    VkImageSubresourceLayers    imageSubresource;
    VkOffset3D                  imageOffset;
    VkExtent3D                  imageExtent;
} VkMemoryToImageCopy;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkMemoryToImageCopy
typedef VkMemoryToImageCopy VkMemoryToImageCopyEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pHostPointer` is the host memory address which is the source of the copy.
- `memoryRowLength` and `memoryImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the destination image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure is functionally similar to VkBufferImageCopy2, except it defines host memory as the source of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

Valid Usage

- VUID-VkMemoryToImageCopy-pHostPointer-09061
  `pHostPointer` **must** point to memory that is large enough to contain all memory locations that are accessed according to Buffer and Image Addressing
- VUID-VkMemoryToImageCopy-memoryRowLength-09101
  `memoryRowLength` **must** be `0`, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkMemoryToImageCopy-memoryImageHeight-09102
  `memoryImageHeight` **must** be `0`, or greater than or equal to the `height` member of `imageExtent`

- VUID-VkMemoryToImageCopy-aspectMask-09103
  The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkMemoryToImageCopy-imageExtent-06659
  `imageExtent.width` **must** not be 0
- VUID-VkMemoryToImageCopy-imageExtent-06660
  `imageExtent.height` **must** not be 0
- VUID-VkMemoryToImageCopy-imageExtent-06661
  `imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkMemoryToImageCopy-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_MEMORY_TO_IMAGE_COPY
- VUID-VkMemoryToImageCopy-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkMemoryToImageCopy-pHostPointer-parameter
  `pHostPointer` **must** be a pointer value
- VUID-VkMemoryToImageCopy-imageSubresource-parameter
  `imageSubresource` **must** be a valid VkImageSubresourceLayers structure

To copy data from an image object to host memory, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyImageToMemory(
    VkDevice                                    device,
    const VkCopyImageToMemoryInfo*              pCopyImageToMemoryInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyImageToMemory
VkResult vkCopyImageToMemoryEXT(
    VkDevice                                    device,
    const VkCopyImageToMemoryInfo*              pCopyImageToMemoryInfo);
```

- `device` is the device which owns `pCopyImageToMemoryInfo->srcImage`.
- `pCopyImageToMemoryInfo` is a pointer to a VkCopyImageToMemoryInfo structure describing the copy parameters.

This command is functionally similar to vkCmdCopyImageToBuffer2, except it is executed on the host and writes to host memory instead of a buffer. The memory of `pCopyImageToMemoryInfo->srcImage` is accessed by the host as if coherent.

NOTE If the device has written to the image memory, it is not automatically made

> available to the host. Before this copy command can be called, a memory barrier for this image **must** have been issued on the device with the second synchronization scope including VK_PIPELINE_STAGE_HOST_BIT and VK_ACCESS_HOST_READ_BIT.

Valid Usage (Implicit)

- VUID-vkCopyImageToMemory-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyImageToMemory-pCopyImageToMemoryInfo-parameter
  `pCopyImageToMemoryInfo` **must** be a valid pointer to a valid VkCopyImageToMemoryInfo structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkCopyImageToMemoryInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyImageToMemoryInfo {
    VkStructureType               sType;
    const void*                   pNext;
    VkHostImageCopyFlags          flags;
    VkImage                       srcImage;
    VkImageLayout                 srcImageLayout;
    uint32_t                      regionCount;
    const VkImageToMemoryCopy*    pRegions;
} VkCopyImageToMemoryInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyImageToMemoryInfo
typedef VkCopyImageToMemoryInfo VkCopyImageToMemoryInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkHostImageCopyFlagBits values describing additional copy parameters.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkImageToMemoryCopy structures specifying the regions to copy.

`vkCopyImageToMemory` does not check whether the device memory associated with `srcImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

Valid Usage

- VUID-VkCopyImageToMemoryInfo-srcImage-09109
  If `srcImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in Binding Resource Memory
- VUID-VkCopyImageToMemoryInfo-srcImage-09111
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with separate stencil usage, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToMemoryInfo-srcImage-09112
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with separate stencil usage, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToMemoryInfo-srcImage-09113
  If non-stencil aspects of `srcImage` are accessed, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToMemoryInfo-imageOffset-09114
  If `flags` contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` **must** be `0`
- VUID-VkCopyImageToMemoryInfo-srcImage-09115
  If `flags` contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the `imageExtent` member of each element of `pRegions` **must** equal the extents of `srcImage` identified by `imageSubresource`
- VUID-VkCopyImageToMemoryInfo-srcImage-07966
  If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkCopyImageToMemoryInfo-imageSubresource-07967
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `srcImage` was created
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07968
  If `imageSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `imageSubresource.baseArrayLayer` + `imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when `srcImage` was created
- VUID-VkCopyImageToMemoryInfo-srcImage-07969
  `srcImage` **must** not have been created with `flags` containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07971
  For each element of `pRegions`, `imageOffset.x` and (`imageExtent.width` + `imageOffset.x`) **must** both be greater than or equal to `0` and less than or equal to the width of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageSubresource-07972
  For each element of `pRegions`, `imageOffset.y` and (`imageExtent.height` + `imageOffset.y`) **must** both be greater than or equal to `0` and less than or equal to the height of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07973
  `srcImage` **must** have a sample count equal to VK_SAMPLE_COUNT_1_BIT
- VUID-VkCopyImageToMemoryInfo-srcImage-07979
  If `srcImage` is of type VK_IMAGE_TYPE_1D, then for each element of `pRegions`, `imageOffset.y` **must** be `0` and `imageExtent.height` **must** be `1`
- VUID-VkCopyImageToMemoryInfo-imageOffset-09104
  For each element of `pRegions`, `imageOffset.z` and (`imageExtent.depth` + `imageOffset.z`) **must** both be greater than or equal to `0` and less than or equal to the depth of the specified `imageSubresource` of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07980
  If `srcImage` is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of `pRegions`, `imageOffset.z` **must** be `0` and `imageExtent.depth` **must** be `1`
- VUID-VkCopyImageToMemoryInfo-srcImage-07274
  For each element of `pRegions`, `imageOffset.x` **must** be a multiple of the texel block extent width of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07275
  For each element of `pRegions`, `imageOffset.y` **must** be a multiple of the texel block extent height of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07276
  For each element of `pRegions`, `imageOffset.z` **must** be a multiple of the texel block extent depth of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-00207
  For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal

the width of the subresource specified by `imageSubresource`, `extent.width` **must** be a multiple of the texel block extent width of the VkFormat of `srcImage`

- VUID-VkCopyImageToMemoryInfo-srcImage-00208
  For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `imageSubresource`, `extent.height` **must** be a multiple of the texel block extent height of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-00209
  For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` **must** be a multiple of the texel block extent depth of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-imageSubresource-09105
  For each element of `pRegions`, `imageSubresource.aspectMask` **must** specify aspects present in `srcImage`
- VUID-VkCopyImageToMemoryInfo-srcImage-07981
  If `srcImage` has a multi-planar format, then for each element of `pRegions`, `imageSubresource.aspectMask` **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyImageToMemoryInfo-srcImage-07983
  If `srcImage` is of type VK_IMAGE_TYPE_3D, for each element of `pRegions`, `imageSubresource.baseArrayLayer` **must** be `0` and `imageSubresource.layerCount` **must** be `1`
- VUID-VkCopyImageToMemoryInfo-memoryRowLength-09106
  For each element of `pRegions`, `memoryRowLength` **must** be a multiple of the texel block extent width of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-memoryImageHeight-09107
  For each element of `pRegions`, `memoryImageHeight` **must** be a multiple of the texel block extent height of the VkFormat of `srcImage`
- VUID-VkCopyImageToMemoryInfo-memoryRowLength-09108
  For each element of `pRegions`, `memoryRowLength` divided by the texel block extent width and then multiplied by the texel block size of `srcImage` **must** be less than or equal to 2^{31}-1
- VUID-VkImageToMemoryCopy-pRegions-09067
  Each memory location accessed by this command **must** not be accessed in both a source region and a destination region, as specified in `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyImageToMemoryInfo-pRegions-12475
  Each memory location accessed by this command **must** not be accessed in more than one destination region, as specified by `pRegions` and accessed according to Buffer and Image Addressing
- VUID-VkCopyImageToMemoryInfo-srcImageLayout-09064
  `srcImageLayout` **must** specify the current layout of the image subresources of `srcImage` specified in `pRegions`
- VUID-VkCopyImageToMemoryInfo-srcImageLayout-09065
  `srcImageLayout` **must** be one of the image layouts returned in VkPhysicalDeviceHostImageCopyProperties::`pCopySrcLayouts`

- VUID-VkCopyImageToMemoryInfo-flags-09394
  If `flags` includes VK_HOST_IMAGE_COPY_MEMCPY_BIT, for each region in `pRegions`, `memoryRowLength` and `memoryImageHeight` **must** both be 0

Valid Usage (Implicit)

- VUID-VkCopyImageToMemoryInfo-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_IMAGE_TO_MEMORY_INFO
- VUID-VkCopyImageToMemoryInfo-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyImageToMemoryInfo-flags-parameter
  If `flags` is not `0`, `flags` **must** be a valid combination of VkHostImageCopyFlagBits values
- VUID-VkCopyImageToMemoryInfo-srcImage-parameter
  `srcImage` **must** be a valid VkImage handle
- VUID-VkCopyImageToMemoryInfo-srcImageLayout-parameter
  `srcImageLayout` **must** be a valid VkImageLayout value
- VUID-VkCopyImageToMemoryInfo-pRegions-parameter
  `pRegions` **must** be a valid pointer to an array of `regionCount` valid VkImageToMemoryCopy structures
- VUID-VkCopyImageToMemoryInfo-regionCount-arraylength
  `regionCount` **must** be greater than `0`

Each element of VkCopyImageToMemoryInfo::`pRegions` is a structure defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkImageToMemoryCopy {
    VkStructureType             sType;
    const void*                 pNext;
    void*                       pHostPointer;
    uint32_t                    memoryRowLength;
    uint32_t                    memoryImageHeight;
    VkImageSubresourceLayers    imageSubresource;
    VkOffset3D                  imageOffset;
    VkExtent3D                  imageExtent;
} VkImageToMemoryCopy;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkImageToMemoryCopy
typedef VkImageToMemoryCopy VkImageToMemoryCopyEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `pHostPointer` is the host memory address which is the destination of the copy.
- `memoryRowLength` and `memoryImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial `x`, `y`, `z` offsets in texels of the sub-region of the source image data.
- `imageExtent` is the size in texels of the image to copy in `width`, `height` and `depth`.

This structure is functionally similar to VkBufferImageCopy2, except it defines host memory as the target of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

Valid Usage

- VUID-VkImageToMemoryCopy-pHostPointer-09066
  `pHostPointer` **must** point to memory that is large enough to contain all memory locations that are accessed according to Buffer and Image Addressing
- VUID-VkImageToMemoryCopy-memoryRowLength-09101
  `memoryRowLength` **must** be `0`, or greater than or equal to the `width` member of `imageExtent`
- VUID-VkImageToMemoryCopy-memoryImageHeight-09102
  `memoryImageHeight` **must** be `0`, or greater than or equal to the `height` member of `imageExtent`
- VUID-VkImageToMemoryCopy-aspectMask-09103
  The `aspectMask` member of `imageSubresource` **must** only have a single bit set
- VUID-VkImageToMemoryCopy-imageExtent-06659
  `imageExtent.width` **must** not be 0
- VUID-VkImageToMemoryCopy-imageExtent-06660
  `imageExtent.height` **must** not be 0
- VUID-VkImageToMemoryCopy-imageExtent-06661
  `imageExtent.depth` **must** not be 0

Valid Usage (Implicit)

- VUID-VkImageToMemoryCopy-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_IMAGE_TO_MEMORY_COPY
- VUID-VkImageToMemoryCopy-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkImageToMemoryCopy-pHostPointer-parameter
  `pHostPointer` **must** be a pointer value
- VUID-VkImageToMemoryCopy-imageSubresource-parameter

`imageSubresource` **must** be a valid VkImageSubresourceLayers structure

Bits which **can** be set in VkCopyMemoryToImageInfo::`flags`, VkCopyImageToMemoryInfo::`flags`, and VkCopyImageToImageInfo::`flags`, specifying additional copy parameters are:

```
// Provided by VK_VERSION_1_4
typedef enum VkHostImageCopyFlagBits {
    VK_HOST_IMAGE_COPY_MEMCPY_BIT = 0x00000001,
  // VK_HOST_IMAGE_COPY_MEMCPY is a legacy alias
    VK_HOST_IMAGE_COPY_MEMCPY = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
  // Provided by VK_EXT_host_image_copy
    VK_HOST_IMAGE_COPY_MEMCPY_BIT_EXT = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
  // Provided by VK_EXT_host_image_copy
  // VK_HOST_IMAGE_COPY_MEMCPY_EXT is a legacy alias
    VK_HOST_IMAGE_COPY_MEMCPY_EXT = VK_HOST_IMAGE_COPY_MEMCPY_BIT,
} VkHostImageCopyFlagBits;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkHostImageCopyFlagBits
typedef VkHostImageCopyFlagBits VkHostImageCopyFlagBitsEXT;
```

- VK_HOST_IMAGE_COPY_MEMCPY_BIT specifies that no memory layout swizzling is to be applied during data copy. For copies between memory and images, this flag indicates that image data in host memory is swizzled in exactly the same way as the image data on the device. Using this flag indicates that the implementations **may** use a simple memory copy to transfer the data between the host memory and the device memory. The format of the swizzled data in host memory is platform dependent and is not defined in this specification.

```
// Provided by VK_VERSION_1_4
typedef VkFlags VkHostImageCopyFlags;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkHostImageCopyFlags
typedef VkHostImageCopyFlags VkHostImageCopyFlagsEXT;
```

`VkHostImageCopyFlags` is a bitmask type for setting a mask of zero or more VkHostImageCopyFlagBits.

To copy data from an image object to another image object using the host, call:

```
// Provided by VK_VERSION_1_4
VkResult vkCopyImageToImage(
    VkDevice                                    device,
    const VkCopyImageToImageInfo*               pCopyImageToImageInfo);
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to vkCopyImageToImage
VkResult vkCopyImageToImageEXT(
    VkDevice                                    device,
    const VkCopyImageToImageInfo*               pCopyImageToImageInfo);
```

- `device` is the device which owns `pCopyImageToImageInfo->srcImage` and `pCopyImageToImageInfo->dstImage`.
- `pCopyImageToImageInfo` is a pointer to a VkCopyImageToImageInfo structure describing the copy parameters.

This command is functionally similar to vkCmdCopyImage2, except it is executed on the host. The memory of `pCopyImageToImageInfo->srcImage` and `pCopyImageToImageInfo->dstImage` is accessed by the host as if coherent.

NOTE

If the device has written to the memory of `pCopyImageToImageInfo->srcImage`, it is not automatically made available to the host. Before this copy command can be called, a memory barrier for this image **must** have been issued on the device with the second synchronization scope including VK_PIPELINE_STAGE_HOST_BIT and VK_ACCESS_HOST_READ_BIT.

Because queue submissions automatically make host memory visible to the device, there would not be a need for a memory barrier before using the results of this copy operation in `pCopyMemoryToImageInfo->dstImage` on the device.

Valid Usage (Implicit)

- VUID-vkCopyImageToImage-device-parameter
  `device` **must** be a valid VkDevice handle
- VUID-vkCopyImageToImage-pCopyImageToImageInfo-parameter
  `pCopyImageToImageInfo` **must** be a valid pointer to a valid VkCopyImageToImageInfo structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_MEMORY_MAP_FAILED
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The `VkCopyImageToImageInfo` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkCopyImageToImageInfo {
    VkStructureType         sType;
    const void*             pNext;
    VkHostImageCopyFlags    flags;
    VkImage                 srcImage;
    VkImageLayout           srcImageLayout;
    VkImage                 dstImage;
    VkImageLayout           dstImageLayout;
    uint32_t                regionCount;
    const VkImageCopy2*     pRegions;
} VkCopyImageToImageInfo;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkCopyImageToImageInfo
typedef VkCopyImageToImageInfo VkCopyImageToImageInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkHostImageCopyFlagBits values describing additional copy parameters.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkImageCopy2 structures specifying the regions to copy.

`vkCopyImageToImage` does not check whether the device memory associated with `srcImage` or `dstImage` is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Valid Usage

- VUID-VkCopyImageToImageInfo-srcImage-09069
  `srcImage` and `dstImage` **must** have been created with identical image creation parameters
- VUID-VkCopyImageToImageInfo-pRegions-12476
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, as specified by `pRegions` and accessed according to Copy Image Addressing
- VUID-VkCopyImageToImageInfo-pRegions-12477
  Each memory location accessed by this command **must** not be accessed by more than one destination region, as specified by `pRegions` and accessed according to Copy Image Addressing
- VUID-VkCopyImageToImageInfo-srcImage-09109
  If `srcImage` is sparse then all memory ranges accessed by the copy command **must** be bound as described in Binding Resource Memory
- VUID-VkCopyImageToImageInfo-srcImage-09111
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with separate stencil usage, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-srcImage-09112
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with separate stencil usage, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-srcImage-09113
  If non-stencil aspects of `srcImage` are accessed, `srcImage` **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-srcOffset-09114
  If `flags` contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the `x`, `y`, and `z` members of the `srcOffset` member of each element of `pRegions` **must** be `0`
- VUID-VkCopyImageToImageInfo-srcImage-09115
  If `flags` contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the `extent` member of each element of `pRegions` **must** equal the extents of `srcImage` identified by `srcSubresource`
- VUID-VkCopyImageToImageInfo-srcImage-07966
  If `srcImage` is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkCopyImageToImageInfo-srcSubresource-07967
  The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in VkImageCreateInfo when `srcImage` was created
- VUID-VkCopyImageToImageInfo-srcSubresource-07968
  If `srcSubresource.layerCount` is not VK_REMAINING_ARRAY_LAYERS, `srcSubresource.baseArrayLayer` + `srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in VkImageCreateInfo when

srcImage was created

- VUID-VkCopyImageToImageInfo-srcImage-07969
  srcImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
- VUID-VkCopyImageToImageInfo-srcSubresource-07971
  For each element of pRegions, srcOffset.x and (extent.width + srcOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified srcSubresource of srcImage
- VUID-VkCopyImageToImageInfo-srcSubresource-07972
  For each element of pRegions, srcOffset.y and (extent.height + srcOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified srcSubresource of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-07979
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.y **must** be 0 and extent.height **must** be 1
- VUID-VkCopyImageToImageInfo-srcOffset-09104
  For each element of pRegions, srcOffset.z and (extent.depth + srcOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified srcSubresource of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, srcOffset.z **must** be 0 and extent.depth **must** be 1
- VUID-VkCopyImageToImageInfo-srcImage-07274
  For each element of pRegions, srcOffset.x **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-07275
  For each element of pRegions, srcOffset.y **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-07276
  For each element of pRegions, srcOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-00207
  For each element of pRegions, if the sum of srcOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-00208
  For each element of pRegions, if the sum of srcOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of srcImage
- VUID-VkCopyImageToImageInfo-srcImage-00209
  For each element of pRegions, if the sum of srcOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple

of the texel block extent depth of the VkFormat of srcImage

- VUID-VkCopyImageToImageInfo-srcSubresource-09105
  For each element of pRegions, srcSubresource.aspectMask **must** specify aspects present in srcImage
- VUID-VkCopyImageToImageInfo-srcImage-07981
  If srcImage has a multi-planar format, then for each element of pRegions, srcSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyImageToImageInfo-srcImage-07983
  If srcImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, srcSubresource.baseArrayLayer **must** be 0 and srcSubresource.layerCount **must** be 1
- VUID-VkCopyImageToImageInfo-dstImage-09109
  If dstImage is sparse then all memory ranges accessed by the copy command **must** be bound as described in Binding Resource Memory
- VUID-VkCopyImageToImageInfo-dstImage-09111
  If the stencil aspect of dstImage is accessed, and dstImage was not created with separate stencil usage, dstImage **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-dstImage-09112
  If the stencil aspect of dstImage is accessed, and dstImage was created with separate stencil usage, dstImage **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-dstImage-09113
  If non-stencil aspects of dstImage are accessed, dstImage **must** have been created with the VK_IMAGE_USAGE_HOST_TRANSFER_BIT usage flag set
- VUID-VkCopyImageToImageInfo-dstOffset-09114
  If flags contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the x, y, and z members of the dstOffset member of each element of pRegions **must** be 0
- VUID-VkCopyImageToImageInfo-dstImage-09115
  If flags contains VK_HOST_IMAGE_COPY_MEMCPY_BIT, the extent member of each element of pRegions **must** equal the extents of dstImage identified by dstSubresource
- VUID-VkCopyImageToImageInfo-dstImage-07966
  If dstImage is non-sparse then the image or each specified *disjoint* plane **must** be bound completely and contiguously to a single VkDeviceMemory object
- VUID-VkCopyImageToImageInfo-dstSubresource-07967
  The dstSubresource.mipLevel member of each element of pRegions **must** be less than the mipLevels specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyImageToImageInfo-dstSubresource-07968
  If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions **must** be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created
- VUID-VkCopyImageToImageInfo-dstImage-07969

dstImage **must** not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyImageToImageInfo-dstSubresource-07971
  For each element of pRegions, dstOffset.x and (extent.width + dstOffset.x) **must** both be greater than or equal to 0 and less than or equal to the width of the specified dstSubresource of dstImage
- VUID-VkCopyImageToImageInfo-dstSubresource-07972
  For each element of pRegions, dstOffset.y and (extent.height + dstOffset.y) **must** both be greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-07979
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffset.y **must** be 0 and extent.height **must** be 1
- VUID-VkCopyImageToImageInfo-dstOffset-09104
  For each element of pRegions, dstOffset.z and (extent.depth + dstOffset.z) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-07980
  If dstImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, dstOffset.z **must** be 0 and extent.depth **must** be 1
- VUID-VkCopyImageToImageInfo-dstImage-07274
  For each element of pRegions, dstOffset.x **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-07275
  For each element of pRegions, dstOffset.y **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-07276
  For each element of pRegions, dstOffset.z **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-00207
  For each element of pRegions, if the sum of dstOffset.x and extent.width does not equal the width of the subresource specified by dstSubresource, extent.width **must** be a multiple of the texel block extent width of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-00208
  For each element of pRegions, if the sum of dstOffset.y and extent.height does not equal the height of the subresource specified by dstSubresource, extent.height **must** be a multiple of the texel block extent height of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstImage-00209
  For each element of pRegions, if the sum of dstOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth **must** be a multiple of the texel block extent depth of the VkFormat of dstImage
- VUID-VkCopyImageToImageInfo-dstSubresource-09105

For each element of pRegions, dstSubresource.aspectMask **must** specify aspects present in dstImage

- VUID-VkCopyImageToImageInfo-dstImage-07981
  If dstImage has a multi-planar format, then for each element of pRegions, dstSubresource.aspectMask **must** be a single valid multi-planar aspect mask bit
- VUID-VkCopyImageToImageInfo-dstImage-07983
  If dstImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, dstSubresource.baseArrayLayer **must** be 0 and dstSubresource.layerCount **must** be 1
- VUID-VkCopyImageToImageInfo-srcImageLayout-09070
  srcImageLayout **must** specify the current layout of the image subresources of srcImage specified in pRegions
- VUID-VkCopyImageToImageInfo-dstImageLayout-09071
  dstImageLayout **must** specify the current layout of the image subresources of dstImage specified in pRegions
- VUID-VkCopyImageToImageInfo-srcImageLayout-09072
  srcImageLayout **must** be one of the image layouts returned in VkPhysicalDeviceHostImageCopyProperties::pCopySrcLayouts
- VUID-VkCopyImageToImageInfo-dstImageLayout-09073
  dstImageLayout **must** be one of the image layouts returned in VkPhysicalDeviceHostImageCopyProperties::pCopyDstLayouts

Valid Usage (Implicit)

- VUID-VkCopyImageToImageInfo-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_COPY_IMAGE_TO_IMAGE_INFO
- VUID-VkCopyImageToImageInfo-pNext-pNext
  pNext **must** be NULL
- VUID-VkCopyImageToImageInfo-flags-parameter
  If flags is not 0, flags **must** be a valid combination of VkHostImageCopyFlagBits values
- VUID-VkCopyImageToImageInfo-srcImage-parameter
  srcImage **must** be a valid VkImage handle
- VUID-VkCopyImageToImageInfo-srcImageLayout-parameter
  srcImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyImageToImageInfo-dstImage-parameter
  dstImage **must** be a valid VkImage handle
- VUID-VkCopyImageToImageInfo-dstImageLayout-parameter
  dstImageLayout **must** be a valid VkImageLayout value
- VUID-VkCopyImageToImageInfo-pRegions-parameter
  pRegions **must** be a valid pointer to an array of regionCount valid VkImageCopy2 structures
- VUID-VkCopyImageToImageInfo-regionCount-arraylength

regionCount **must** be greater than 0

- VUID-VkCopyImageToImageInfo-commonparent
  Both of dstImage, and srcImage **must** have been created, allocated, or retrieved from the same VkDevice

24.6. Indirect Copies

An application can use indirect copies when the copy parameters are not known during the command buffer creation time.

To copy data between two memory regions by specifying copy parameters indirectly in memory, call:

```
// Provided by VK_KHR_copy_memory_indirect
void vkCmdCopyMemoryIndirectKHR(
    VkCommandBuffer                             commandBuffer,
    const VkCopyMemoryIndirectInfoKHR*          pCopyMemoryIndirectInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pCopyMemoryIndirectInfo is a pointer to a VkCopyMemoryIndirectInfoKHR structure containing the copy parameters, including the number of copies to execute and a strided array of VkCopyMemoryIndirectCommandKHR structures.

Each region specified in the memory referenced by pCopyMemoryIndirectInfo->copyAddressRange is copied from the source region to the specified destination region.

Valid Usage

- VUID-vkCmdCopyMemoryIndirectKHR-indirectMemoryCopy-10935
  The indirectMemoryCopy feature **must** be enabled
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-10936
  The VkCommandPool that commandBuffer was allocated from **must** support at least one of the queue types specified in VkPhysicalDeviceCopyMemoryIndirectPropertiesKHR ::supportedQueues
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-10937
  commandBuffer must not be a protected command buffer

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-parameter
  commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdCopyMemoryIndirectKHR-pCopyMemoryIndirectInfo-parameter
  pCopyMemoryIndirectInfo **must** be a valid pointer to a valid

VkCopyMemoryIndirectInfoKHR structure

- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdCopyMemoryIndirectKHR-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support VK_QUEUE_COMPUTE_BIT, VK_QUEUE_GRAPHICS_BIT, or VK_QUEUE_TRANSFER_BIT operations
- VUID-vkCmdCopyMemoryIndirectKHR-renderpass
  This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryIndirectKHR-suspended
  This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryIndirectKHR-videocoding
  This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_TRANSFER_BIT	Action

Conditional Rendering

vkCmdCopyMemoryIndirectKHR is not affected by conditional rendering

The VkCopyMemoryIndirectInfoKHR structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryIndirectInfoKHR {
    VkStructureType                   sType;
    const void*                       pNext;
    VkAddressCopyFlagsKHR             srcCopyFlags;
    VkAddressCopyFlagsKHR             dstCopyFlags;
    uint32_t                          copyCount;
    VkStridedDeviceAddressRangeKHR    copyAddressRange;
} VkCopyMemoryIndirectInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcCopyFlags` is a VkAddressCopyFlagsKHR value defining the copy flags for the source address range.
- `dstCopyFlags` is a VkAddressCopyFlagsKHR value defining the copy flags for the destination address range.
- `copyCount` is the number of copies to execute, and **can** be zero.
- `copyAddressRange` is a memory region specifying the copy parameters. It is laid out as an array of VkCopyMemoryIndirectCommandKHR structures.

Valid Usage

- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-10938
  If `srcCopyFlags` contains VK_ADDRESS_COPY_SPARSE_BIT_KHR, the source memory regions accessed **must** be bound to memory
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-10939
  If `dstCopyFlags` contains VK_ADDRESS_COPY_SPARSE_BIT_KHR, the destination memory regions accessed **must** be bound to memory
- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-10940
  `srcCopyFlags` **must** not contain VK_ADDRESS_COPY_PROTECTED_BIT_KHR
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-10941
  `dstCopyFlags` **must** not contain VK_ADDRESS_COPY_PROTECTED_BIT_KHR
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10942
  `copyAddressRange.address` **must** be 4 byte aligned
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10943
  `copyAddressRange.stride` **must** be a multiple of `4` and **must** be greater than or equal to sizeof(VkCopyMemoryIndirectCommandKHR)
- VUID-VkCopyMemoryIndirectInfoKHR-copyCount-10944
  `copyCount` **must** be less than or equal to `copyAddressRange.size` / `copyAddressRange.stride`
- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-10945
  Each memory location accessed by this command **must** not be accessed by both a source region and a destination region, and **must** not be accessed by more than one destination

region, as specified in `copyAddressRange`

- VUID-VkCopyMemoryIndirectInfoKHR-copyAddressRange-12210
  `copyAddressRange` **must** be a device address range allocated to the application from a buffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set

Valid Usage (Implicit)

- VUID-VkCopyMemoryIndirectInfoKHR-sType-sType
  `sType` **must** be VK_STRUCTURE_TYPE_COPY_MEMORY_INDIRECT_INFO_KHR
- VUID-VkCopyMemoryIndirectInfoKHR-pNext-pNext
  `pNext` **must** be `NULL`
- VUID-VkCopyMemoryIndirectInfoKHR-srcCopyFlags-parameter
  If `srcCopyFlags` is not `0`, `srcCopyFlags` **must** be a valid combination of VkAddressCopyFlagBitsKHR values
- VUID-VkCopyMemoryIndirectInfoKHR-dstCopyFlags-parameter
  If `dstCopyFlags` is not `0`, `dstCopyFlags` **must** be a valid combination of VkAddressCopyFlagBitsKHR values

The structure describing source and destination memory regions, `VkCopyMemoryIndirectCommandKHR` is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkCopyMemoryIndirectCommandKHR {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       size;
