`sType` **must** be `VK_STRUCTURE_TYPE_HEADLESS_SURFACE_CREATE_INFO_EXT`
- VUID-VkHeadlessSurfaceCreateInfoEXT-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkHeadlessSurfaceCreateInfoEXT-flags-zero bitmask  
`flags` **must** be `0`

For headless surfaces, `currentExtent` is the reserved value (`0xFFFFFFFF`, `0xFFFFFFFF`). Whatever the application sets a swapchain's `imageExtent` to will be the size of the surface, after the first image is presented.

```
// Provided by VK_EXT_headless_surface
typedef VkFlags VkHeadlessSurfaceCreateFlagsEXT;
```

`VkHeadlessSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

## 37.4. Querying for WSI Support

Not all physical devices will include WSI support. Within a physical device, not all queue families will support presentation. WSI support and compatibility **can** be determined in a platform-neutral manner (which determines support for presentation to a particular surface object) and additionally **may** be determined in platform-specific manners (which determine support for presentation on the specified physical device but do not guarantee support for presentation to a particular surface object).

To determine whether a queue family of a physical device supports presentation to a given surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    VkSurfaceKHR        surface,
    VkBool32*           pSupported);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family.
- `surface` is the surface.
- `pSupported` is a pointer to a `VkBool32`. `VK_TRUE` indicates support, and `VK_FALSE` indicates no support.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-queueFamilyIndex-01269  
`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-surface-parameter  
`surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-pSupported-parameter  
`pSupported` **must** be a valid pointer to a `VkBool32` value
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-commonparent  
Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same `VkInstance`

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

### 37.4.1. Android Platform

On Android, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Android-specific query for these capabilities.

### 37.4.2. Wayland Platform

To determine whether a queue family of a physical device supports presentation to a Wayland compositor, call:

```
// Provided by VK_KHR_wayland_surface
VkBool32 vkGetPhysicalDeviceWaylandPresentationSupportKHR(
    VkPhysicalDevice      physicalDevice,
    uint32_t              queueFamilyIndex,
    struct wl_display*     display);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `display` is a pointer to the `wl_display` associated with a Wayland compositor.

This platform-specific function **can** be called prior to creating a surface.

## Valid Usage

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-queueFamilyIndex-01306 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

## Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-physicalDevice-parameter

**physicalDevice** must be a valid [VkPhysicalDevice](#) handle

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-display-parameter **display** must be a valid pointer to a [wl\\_display](#) value

### 37.4.3. Win32 Platform

To determine whether a queue family of a physical device supports presentation to the Microsoft Windows desktop, call:

```
// Provided by VK_KHR_win32_surface
VkBool32 vkGetPhysicalDeviceWin32PresentationSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex);
```

- **physicalDevice** is the physical device.
- **queueFamilyIndex** is the queue family index.

This platform-specific function **can** be called prior to creating a surface.

#### Valid Usage

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-queueFamilyIndex-01309 **queueFamilyIndex** must be less than [pQueueFamilyPropertyCount](#) returned by [vkGetPhysicalDeviceQueueFamilyProperties](#) for the given **physicalDevice**

#### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-physicalDevice-parameter **physicalDevice** must be a valid [VkPhysicalDevice](#) handle

### 37.4.4. XCB Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkBool32 vkGetPhysicalDeviceXcbPresentationSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    xcb_connection_t*    connection,
    xcb_visualid_t       visual_id);
```

- **physicalDevice** is the physical device.

- `queueFamilyIndex` is the queue family index.
- `connection` is a pointer to an `xcb_connection_t` to the X server.
- `visual_id` is an X11 visual (`xcb_visualid_t`).

This platform-specific function **can** be called prior to creating a surface.

### Valid Usage

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-queueFamilyIndex-01312  
`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-connection-parameter `connection` **must** be a valid pointer to an `xcb_connection_t` value

## 37.4.5. Xlib Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkBool32 vkGetPhysicalDeviceXlibPresentationSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    Display*            dpy,
    VisualID             visualID);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dpy` is a pointer to an Xlib `Display` connection to the server.
- `visualID` is an X11 visual (`VisualID`).

This platform-specific function **can** be called prior to creating a surface.

### Valid Usage

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-queueFamilyIndex-01315  
`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-dpy-parameter **dpy** **must** be a valid pointer to a [Display](#) value

## 37.4.6. DirectFB Platform

To determine whether a queue family of a physical device supports presentation with DirectFB library, call:

```
// Provided by VK_EXT_directfb_surface
VkBool32 vkGetPhysicalDeviceDirectFBPresentationSupportEXT(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    IDirectFB*          dfb);
```

- **physicalDevice** is the physical device.
- **queueFamilyIndex** is the queue family index.
- **dfb** is a pointer to the [IDirectFB](#) main interface of DirectFB.

This platform-specific function **can** be called prior to creating a surface.

### Valid Usage

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-queueFamilyIndex-04119 **queueFamilyIndex** **must** be less than [pQueueFamilyPropertyCount](#) returned by [vkGetPhysicalDeviceQueueFamilyProperties](#) for the given **physicalDevice**

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-dfb-parameter **dfb** **must** be a valid pointer to an [IDirectFB](#) value

## 37.4.7. Metal Platform

On Apple platforms with Metal support, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no Apple-specific query for these capabilities.

## 37.5. Surface Queries

The capabilities of a swapchain targeting a surface are the intersection of the capabilities of the WSI platform, the native window or display, and the physical device. The resulting capabilities **can** be obtained with the queries listed below in this section.

### NOTE

In addition to the surface capabilities as obtained by surface queries below, swapchain images are also subject to ordinary image creation limits as reported by [vkGetPhysicalDeviceImageFormatProperties](#). As an application is instructed by the appropriate Valid Usage sections, both the surface capabilities and the image creation limits have to be satisfied whenever swapchain images are created.

### 37.5.1. Surface Capabilities

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

### WARNING

This functionality is superseded by [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceCapabilitiesKHR(
    VkPhysicalDevice physicalDevice,
    VkSurfaceKHR surface,
    VkSurfaceCapabilitiesKHR* pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created. See [vkCreateSwapchainKHR](#) for details of swapchain creation.
- **surface** is the surface that will be associated with the swapchain.
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilitiesKHR](#) structure in which the capabilities are returned.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-06211 **surface** must be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-physicalDevice-parameter **physicalDevice** must be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-parameter **surface** must be a valid [VkSurfaceKHR](#) handle

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-pSurfaceCapabilities-parameter **pSurfaceCapabilities** **must** be a valid pointer to a [VkSurfaceCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-commonparent  
Both of **physicalDevice**, and **surface** **must** have been created, allocated, or retrieved from the same [VkInstance](#)

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkSurfaceCapabilitiesKHR](#) structure is defined as:

### WARNING

This functionality is superseded by [VK\\_KHR\\_get\\_surface\\_capabilities2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceCapabilitiesKHR {
    uint32_t          minImageCount;
    uint32_t          maxImageCount;
    VkExtent2D        currentExtent;
    VkExtent2D        minImageExtent;
    VkExtent2D        maxImageExtent;
    uint32_t          maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR supportedTransforms;
    VkSurfaceTransformFlagBitsKHR currentTransform;
    VkCompositeAlphaFlagsKHR supportedCompositeAlpha;
    VkImageUsageFlags supportedUsageFlags;
} VkSurfaceCapabilitiesKHR;
```

- **minImageCount** is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- **maxImageCount** is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to **minImageCount**. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.

- **currentExtent** is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- **minImageExtent** contains the smallest valid swapchain extent for the surface on the specified device. The **width** and **height** of the extent will each be less than or equal to the corresponding **width** and **height** of **currentExtent**, unless **currentExtent** has the special value described above.
- **maxImageExtent** contains the largest valid swapchain extent for the surface on the specified device. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of **minImageExtent**. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of **currentExtent**, unless **currentExtent** has the special value described above.
- **maxImageArrayLayers** is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- **supportedTransforms** is a bitmask of **VkSurfaceTransformFlagBitsKHR** indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- **currentTransform** is **VkSurfaceTransformFlagBitsKHR** value indicating the surface's current transform relative to the presentation engine's natural orientation.
- **supportedCompositeAlpha** is a bitmask of **VkCompositeAlphaFlagBitsKHR**, representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- **supportedUsageFlags** is a bitmask of **VkImageUsageFlagBits** representing the ways the application **can** use the presentable images of a swapchain created with **VkPresentModeKHR** set to **VK\_PRESENT\_MODE\_FIFO\_LATEST\_READY\_KHR**, **VK\_PRESENT\_MODE\_IMMEDIATE\_KHR**, **VK\_PRESENT\_MODE\_MAILBOX\_KHR**, **VK\_PRESENT\_MODE\_FIFO\_KHR** or **VK\_PRESENT\_MODE\_FIFO\_RELAXED\_KHR** for the surface on the specified device. **VK\_IMAGE\_USAGE\_COLOR\_ATTACHMENT\_BIT** **must** be included in the set. Implementations **may** support additional usages.

|      |                                                                                                                                                                                                                                                                                                    |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE | Supported usage flags of a presentable image when using <b>VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR</b> or <b>VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR</b> presentation mode are provided by <b>VkSharedPresentSurfaceCapabilities2KHR</b> or <b>VkSharedPresentSurfaceCapabilitiesKHR</b> . |
| NOTE | Formulas such as $\min(N, \text{maxImageCount})$ are not correct, since <b>maxImageCount</b> <b>may</b> be zero.                                                                                                                                                                                   |

To query the basic capabilities of a surface defined by the core or extensions, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceCapabilities2KHR(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    VkSurfaceCapabilities2KHR*         pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **pSurfaceInfo** is a pointer to a [VkPhysicalDeviceSurfaceInfo2KHR](#) structure describing the surface and other fixed parameters that would be consumed by [vkCreateSwapchainKHR](#).
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilities2KHR](#) structure in which the capabilities are returned.

[vkGetPhysicalDeviceSurfaceCapabilities2KHR](#) behaves similarly to [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06521  
**pSurfaceInfo->surface** **must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06522  
**pSurfaceInfo->surface** **must** be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-02671  
If a [VkSurfaceCapabilitiesFullScreenExclusiveEXT](#) structure is included in the **pNext** chain of **pSurfaceCapabilities**, a [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure **must** be included in the **pNext** chain of **pSurfaceInfo**
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07776  
If a [VkSurfacePresentModeCompatibilityKHR](#) structure is included in the **pNext** chain of **pSurfaceCapabilities**, a [VkSurfacePresentModeKHR](#) structure **must** be included in the **pNext** chain of **pSurfaceInfo**
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07777  
If a [VkSurfacePresentScalingCapabilitiesKHR](#) structure is included in the **pNext** chain of **pSurfaceCapabilities**, a [VkSurfacePresentModeKHR](#) structure **must** be included in the **pNext** chain of **pSurfaceInfo**

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-physicalDevice-parameter  
**physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-parameter  
**pSurfaceInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceSurfaceInfo2KHR](#)

structure

- `VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceCapabilities-parameter pSurfaceCapabilities` **must** be a valid pointer to a `VkSurfaceCapabilities2KHR` structure

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPhysicalDeviceSurfaceInfo2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkPhysicalDeviceSurfaceInfo2KHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceKHR       surface;
} VkPhysicalDeviceSurfaceInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surface` is the surface that will be associated with the swapchain.

The members of `VkPhysicalDeviceSurfaceInfo2KHR` correspond to the arguments to `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`, with `sType` and `pNext` added for extensibility.

Additional capabilities of a surface **may** be available to swapchains created with different full-screen exclusive settings - particularly if exclusive full-screen access is application controlled. These additional capabilities **can** be queried by adding a `VkSurfaceFullScreenExclusiveInfoEXT` structure to the `pNext` chain of this structure when used to query surface properties. Additionally, for Win32 surfaces with application controlled exclusive full-screen access, chaining a `VkSurfaceFullScreenExclusiveWin32InfoEXT` structure **may** also report additional surface capabilities. These additional capabilities only apply to swapchains created with the same parameters included in the `pNext` chain of `VkSwapchainCreateInfoKHR`.

## Valid Usage

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-02672  
If the `pNext` chain includes a `VkSurfaceFullScreenExclusiveInfoEXT` structure with its `fullScreenExclusive` member set to `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT`, and `surface` was created using `vkCreateWin32SurfaceKHR`, a `VkSurfaceFullScreenExclusiveWin32InfoEXT` structure **must** be included in the `pNext` chain
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-surface-07919  
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be a valid `VkSurfaceKHR` handle

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SURFACE_INFO_2_KHR`
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkSurfaceFullScreenExclusiveInfoEXT`, `VkSurfaceFullScreenExclusiveWin32InfoEXT`, or `VkSurfacePresentModeKHR`
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

If the `pNext` chain of `VkSwapchainCreateInfoKHR` includes a `VkSurfaceFullScreenExclusiveInfoEXT` structure, then that structure specifies the application's preferred full-screen transition behavior.

The `VkSurfaceFullScreenExclusiveInfoEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkFullScreenExclusiveEXT fullScreenExclusive;
} VkSurfaceFullScreenExclusiveInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fullScreenExclusive` is a `VkFullScreenExclusiveEXT` value specifying the preferred full-screen transition behavior.

If this structure is not present, `fullScreenExclusive` is considered to be `VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT`.

## Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_INFO_EXT`
- VUID-VkSurfaceFullScreenExclusiveInfoEXT-fullScreenExclusive-parameter  
`fullScreenExclusive` **must** be a valid `VkFullScreenExclusiveEXT` value

## Structure Chaining

### Extends the structures

- `VkPhysicalDeviceSurfaceInfo2KHR`
- `VkSwapchainCreateInfoKHR`

Possible values of `VkSurfaceFullScreenExclusiveInfoEXT::fullScreenExclusive` are:

```
// Provided by VK_EXT_full_screen_exclusive
typedef enum VkFullScreenExclusiveEXT {
    VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT = 0,
    VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT = 1,
    VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT = 2,
    VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT = 3,
} VkFullScreenExclusiveEXT;
```

- `VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT` specifies that the implementation **should** determine the appropriate full-screen method by whatever means it deems appropriate.
- `VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT` specifies that the implementation **may** use full-screen exclusive mechanisms when available. Such mechanisms **may** result in better performance and/or the availability of different presentation capabilities, but **may** require a more disruptive transition during swapchain initialization, first presentation and/or destruction.
- `VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT` specifies that the implementation **should** avoid using full-screen mechanisms which rely on disruptive transitions.
- `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT` specifies that the application will manage full-screen exclusive mode by using the `vkAcquireFullScreenExclusiveModeEXT` and `vkReleaseFullScreenExclusiveModeEXT` commands.

The `VkSurfaceFullScreenExclusiveWin32InfoEXT` structure is defined as:

```
// Provided by VK_KHR_win32_surface with VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveWin32InfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    HMONITOR            hmonitor;
} VkSurfaceFullScreenExclusiveWin32InfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hmonitor` is the Win32 `HMONITOR` handle identifying the display to create the surface with.

**NOTE** If `hmonitor` is invalidated (e.g. the monitor is unplugged) during the lifetime of a swapchain created with this structure, operations on that swapchain will return `VK_ERROR_OUT_OF_DATE_KHR`.

**NOTE** It is the responsibility of the application to change the display settings of the targeted Win32 display using the appropriate platform APIs. Such changes **may** alter the surface capabilities reported for the created surface.

### Valid Usage

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-hmonitor-02673  
`hmonitor` **must** be a valid `HMONITOR`

### Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_WIN32_INFO_EXT`

### Structure Chaining

#### Extends the structures

- `VkPhysicalDeviceSurfaceInfo2KHR`
- `VkSwapchainCreateInfoKHR`

The `VkSurfaceCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceCapabilities2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkSurfaceCapabilitiesKHR surfaceCapabilities;
} VkSurfaceCapabilities2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **surfaceCapabilities** is a **VkSurfaceCapabilitiesKHR** structure describing the capabilities of the specified surface.

Only usage flags representable in **VkImageUsageFlagBits** are returned in **surfaceCapabilities.supportedUsageFlags**. If the **pNext** chain includes a **VkImageUsageFlags2CreateInfoKHR** structure, all usage flags are returned in **VkImageUsageFlags2CreateInfoKHR::usage**.

### Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2KHR-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_SURFACE\_CAPABILITIES\_2\_KHR**
- VUID-VkSurfaceCapabilities2KHR-pNext-pNext  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkImageUsageFlags2CreateInfoKHR**, **VkPresentTimingSurfaceCapabilitiesEXT**, **VkSharedPresentSurfaceCapabilities2KHR**, **VkSharedPresentSurfaceCapabilitiesKHR**, **VkSurfaceCapabilitiesFullScreenExclusiveEXT**, **VkSurfaceCapabilitiesPresentId2KHR**, **VkSurfaceCapabilitiesPresentWait2KHR**, **VkSurfacePresentModeCompatibilityKHR**, **VkSurfacePresentScalingCapabilitiesKHR**, **VkSurfaceProtectedCapabilitiesKHR**, or **VkSwapchainFlagsSurfaceCapabilitiesEXT**
- VUID-VkSurfaceCapabilities2KHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique

An application queries if a protected **VkSurfaceKHR** is displayable on a specific windowing system using **VkSurfaceProtectedCapabilitiesKHR**, which **can** be passed in **pNext** parameter of **VkSurfaceCapabilities2KHR**.

The **VkSurfaceProtectedCapabilitiesKHR** structure is defined as:

```
// Provided by VK_KHR_surface_protected_capabilities
typedef struct VkSurfaceProtectedCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supportsProtected;
} VkSurfaceProtectedCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportsProtected` specifies whether a protected swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` for a particular windowing system **can** be displayed on screen or not. If `supportsProtected` is `VK_TRUE`, then creation of swapchains with the `VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR` flag set **must** be supported for `surface`.

### Valid Usage (Implicit)

- VUID-VkSurfaceProtectedCapabilitiesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_PROTECTED_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkSurfacePresentScalingCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentScalingCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPresentScalingFlagsKHR supportedPresentScaling;
    VkPresentGravityFlagsKHR supportedPresentGravityX;
    VkPresentGravityFlagsKHR supportedPresentGravityY;
    VkExtent2D          minScaledImageExtent;
    VkExtent2D          maxScaledImageExtent;
} VkSurfacePresentScalingCapabilitiesKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentScalingCapabilitiesKHR
typedef VkSurfacePresentScalingCapabilitiesKHR VkSurfacePresentScalingCapabilitiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedPresentScaling` is a bitmask of `VkPresentScalingFlagBitsKHR` representing the scaling methods supported by the surface, or `0` if application-defined scaling is not supported.
- `supportedPresentGravityX` is a bitmask of `VkPresentGravityFlagBitsKHR` representing the X-axis pixel gravity supported by the surface, or `0` if Vulkan-defined pixel gravity is not supported for the X axis.
- `supportedPresentGravityY` is a bitmask of `VkPresentGravityFlagBitsKHR` representing the Y-axis

pixel gravity supported by the surface, or 0 if Vulkan-defined pixel gravity is not supported for the Y axis.

- **minScaledImageExtent** contains the smallest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in **supportedPresentScaling** is used, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface. The **width** and **height** of the extent will each be smaller than or equal to the corresponding **width** and **height** of **VkSurfaceCapabilitiesKHR::minImageExtent**.
- **maxScaledImageExtent** contains the largest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in **supportedPresentScaling** is used, or the special value described above for **minScaledImageExtent**. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of **VkSurfaceCapabilitiesKHR::maxImageExtent**.

To query the set of supported scaling modes for a given present mode, add a **VkSurfacePresentModeKHR** structure in the **pNext** chain of **VkPhysicalDeviceSurfaceInfo2KHR** when calling **vkGetPhysicalDeviceSurfaceCapabilities2KHR**. The implementation **must** return the same values in **VkSurfacePresentScalingCapabilitiesKHR** for any of the compatible present modes as obtained through **VkSurfacePresentModeCompatibilityKHR**.

The application **can** specify the scaling mode when creating a swapchain through the use of **VkSwapchainPresentScalingCreateInfoKHR**.

### Valid Usage (Implicit)

- VUID-VkSurfacePresentScalingCapabilitiesKHR-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_SURFACE\_PRESENT\_SCALING\_CAPABILITIES\_KHR**
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentScaling-parameter  
If **supportedPresentScaling** is not 0, **supportedPresentScaling** **must** be a valid combination of **VkPresentScalingFlagBitsKHR** values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityX-parameter  
If **supportedPresentGravityX** is not 0, **supportedPresentGravityX** **must** be a valid combination of **VkPresentGravityFlagBitsKHR** values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityY-parameter  
If **supportedPresentGravityY** is not 0, **supportedPresentGravityY** **must** be a valid combination of **VkPresentGravityFlagBitsKHR** values

### Structure Chaining

#### Extends the structure

- **VkSurfaceCapabilities2KHR**

Bits which **may** be set in **VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling**, specifying scaling modes supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentScalingFlagBitsKHR {
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR = 0x00000001,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR = 0x00000002,
    VK_PRESENT_SCALING_STRETCH_BIT_KHR = 0x00000004,
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_EXT = VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_EXT =
VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR,
    VK_PRESENT_SCALING_STRETCH_BIT_EXT = VK_PRESENT_SCALING_STRETCH_BIT_KHR,
} VkPresentScalingFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagBitsKHR
typedef VkPresentScalingFlagBitsKHR VkPresentScalingFlagBitsEXT;
```

- [VK\\_PRESENT\\_SCALING\\_ONE\\_TO\\_ONE\\_BIT\\_KHR](#) specifies that no scaling occurs, and pixels in the swapchain image are mapped to one and only one pixel in the surface. The mapping between pixels is defined by the chosen presentation gravity.
- [VK\\_PRESENT\\_SCALING\\_ASPECT\\_RATIO\\_STRETCH\\_BIT\\_KHR](#) specifies that the swapchain image will be minified or magnified such that at least one of the resulting width or height is equal to the corresponding surface dimension, and the other resulting dimension is less than or equal to the corresponding surface dimension, with the aspect ratio of the resulting image being identical to that of the original swapchain image.
- [VK\\_PRESENT\\_SCALING\\_STRETCH\\_BIT\\_KHR](#) specifies that the swapchain image will be minified or magnified such that the resulting image dimensions are equal to those of the surface.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentScalingFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagsKHR
typedef VkPresentScalingFlagsKHR VkPresentScalingFlagsEXT;
```

[VkPresentScalingFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkPresentScalingFlagBitsKHR](#).

Bits which **may** be set in the [VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX](#) or [supportedPresentGravityY](#) fields, specifying the gravity of presented pixels supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentGravityFlagBitsKHR {
    VK_PRESENT_GRAVITY_MIN_BIT_KHR = 0x00000001,
    VK_PRESENT_GRAVITY_MAX_BIT_KHR = 0x00000002,
    VK_PRESENT_GRAVITY_CENTERED_BIT_KHR = 0x00000004,
    VK_PRESENT_GRAVITY_MIN_BIT_EXT = VK_PRESENT_GRAVITY_MIN_BIT_KHR,
    VK_PRESENT_GRAVITY_MAX_BIT_EXT = VK_PRESENT_GRAVITY_MAX_BIT_KHR,
    VK_PRESENT_GRAVITY_CENTERED_BIT_EXT = VK_PRESENT_GRAVITY_CENTERED_BIT_KHR,
} VkPresentGravityFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagBitsKHR
typedef VkPresentGravityFlagBitsKHR VkPresentGravityFlagBitsEXT;
```

- [VK\\_PRESENT\\_GRAVITY\\_MIN\\_BIT\\_KHR](#) means that the pixels will gravitate towards the top or left side of the surface.
- [VK\\_PRESENT\\_GRAVITY\\_MAX\\_BIT\\_KHR](#) means that the pixels will gravitate towards the bottom or right side of the surface.
- [VK\\_PRESENT\\_GRAVITY\\_CENTERED\\_BIT\\_KHR](#) means that the pixels will be centered in the surface.

If the value in [VkSurfaceCapabilitiesKHR::currentTransform](#) is not [VK\\_SURFACE\\_TRANSFORM\\_IDENTITY\\_BIT\\_KHR](#), it is implementation-defined whether the gravity configuration applies to the presented image before or after transformation.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentGravityFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagsKHR
typedef VkPresentGravityFlagsKHR VkPresentGravityFlagsEXT;
```

[VkPresentGravityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkPresentGravityFlagBitsKHR](#).

The [VkSurfacePresentModeKHR](#) structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPresentModeKHR    presentMode;
} VkSurfacePresentModeKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeKHR
typedef VkSurfacePresentModeKHR VkSurfacePresentModeEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **presentMode** is the presentation mode the swapchain will use.

If the [VkSurfacePresentModeKHR](#) structure is included in the **pNext** chain of [VkPhysicalDeviceSurfaceInfo2KHR](#), the values returned in [VkSurfaceCapabilitiesKHR::minImageCount](#), [VkSurfaceCapabilitiesKHR::maxImageCount](#), [VkSurfacePresentScalingCapabilitiesKHR::minScaledImageExtent](#), and [VkSurfacePresentScalingCapabilitiesKHR::maxScaledImageExtent](#) are valid only for the specified **presentMode**. If **presentMode** is [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#), the per-present mode image counts **must** both be one. The per-present mode image counts **may** be less-than or greater-than the image counts returned when [VkSurfacePresentModeKHR](#) is not provided.

#### NOTE

If [VkSwapchainPresentModesCreateInfoKHR](#) is provided to swapchain creation, the requirements for forward progress may be less strict. For example, a FIFO swapchain might only require 2 images to guarantee forward progress, but a MAILBOX one might require 4. Without the per-present image counts, such an implementation would have to return 4 in [VkSurfaceCapabilitiesKHR::minImageCount](#), which pessimizes FIFO. Conversely, an implementation may return a low number for **minImageCount**, but internally bump the image count when application queries [vkGetSwapchainImagesKHR](#), which can surprise applications, and is not discoverable until swapchain creation. Using [VkSurfacePresentModeKHR](#) and [VkSwapchainPresentModesCreateInfoKHR](#) together effectively removes this problem.

[VkSwapchainPresentModesCreateInfoKHR](#) is required for the specification to be backwards compatible with applications that do not know about, or make use of this feature.

### Valid Usage

- VUID-VkSurfacePresentModeKHR-presentMode-07780  
**presentMode** **must** be a value reported by [vkGetPhysicalDeviceSurfacePresentModesKHR](#) for the specified surface

### Valid Usage (Implicit)

- VUID-VkSurfacePresentModeKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_PRESENT\\_MODE\\_KHR](#)

- VUID-VkSurfacePresentModeKHR-presentMode-parameter  
`presentMode` **must** be a valid [VkPresentModeKHR](#) value

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceSurfaceInfo2KHR](#)

The [VkSurfacePresentModeCompatibilityKHR](#) structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeCompatibilityKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           presentModeCount;
    VkPresentModeKHR*  pPresentModes;
} VkSurfacePresentModeCompatibilityKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeCompatibilityKHR
typedef VkSurfacePresentModeCompatibilityKHR VkSurfacePresentModeCompatibilityEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is an integer related to the number of present modes available or queried, as described below.
- `pPresentModes` is a pointer to an array of [VkPresentModeKHR](#) in which present modes compatible with a given present mode are returned.

If `pPresentModes` is `NULL`, then the number of present modes that are compatible with the one specified in [VkSurfacePresentModeKHR](#) is returned in `presentModeCount`. Otherwise, `presentModeCount` **must** be set by the application to the number of elements in the `pPresentModes` array, and on return is overwritten with the number of values actually written to `pPresentModes`. If the value of `presentModeCount` is less than the number of compatible present modes that are supported, at most `presentModeCount` values will be written to `pPresentModes`. The implementation **must** include the present mode passed to [VkSurfacePresentModeKHR](#) in `pPresentModes`, unless `presentModeCount` is zero.

To query the set of present modes compatible with a given initial present mode, add a [VkSurfacePresentModeKHR](#) structure in the `pNext` chain of [VkPhysicalDeviceSurfaceInfo2KHR](#) when calling [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#).

The application **can** create a swapchain whose present mode **can** be modified through the use of [VkSwapchainPresentModesCreateInfoKHR](#).

## Valid Usage (Implicit)

- VUID-VkSurfacePresentModeCompatibilityKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_COMPATIBILITY_KHR`
- VUID-VkSurfacePresentModeCompatibilityKHR-pPresentModes-parameter  
If `presentModeCount` is not 0, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` `VkPresentModeKHR` values

## Structure Chaining

### Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkSharedPresentSurfaceCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkImageUsageFlags  sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sharedPresentSupportedUsageFlags` is a bitmask of `VkImageUsageFlagBits` representing the ways the application **can** use the shared presentable image from a swapchain created with `VkPresentModeKHR` set to `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` for the surface on the specified device. `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the `pNext` chain of `VkSurfaceCapabilities2KHR` to determine supported usage when using `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` presentation mode.

## Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilitiesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR`

## Structure Chaining

### Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSharedPresentSurfaceCapabilities2KHR](#) structure is defined as:

```
// Provided by VK_KHR_extended_flags with VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilities2KHR {
    VkStructureType      sType;
    void*                pNext;
    VkImageUsageFlags2KHR sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilities2KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [sharedPresentSupportedUsageFlags](#) is a bitmask of [VkImageUsageFlagBits2KHR](#) representing the ways the application **can** use the shared presentable image from a swapchain created with [VkPresentModeKHR](#) set to [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) for the surface on the specified device. [VK\\_IMAGE\\_USAGE\\_2\\_COLOR\\_ATTACHMENT\\_BIT\\_KHR](#) **must** be included in the set but implementations **may** support additional usages.

This structure **can** be included in the [pNext](#) chain of [VkSurfaceCapabilities2KHR](#) to determine supported usage when using [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) presentation mode.

## Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilities2KHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_SHARED\\_PRESENT\\_SURFACE\\_CAPABILITIES\\_2\\_KHR](#)

## Structure Chaining

### Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSwapchainFlagsSurfaceCapabilitiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_swapchain
typedef struct VkSwapchainFlagsSurfaceCapabilitiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkSwapchainCreateFlagsKHR    swapchainSupportedFlags;
} VkSwapchainFlagsSurfaceCapabilitiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainSupportedFlags** is a bitmask of [VkSwapchainCreateFlagsKHR](#) representing the supported flags in [VkSwapchainCreateInfoKHR](#) when creating a swapchain for the surface on the specified device. If a [VkSurfacePresentModeKHR](#) structure is included in the **pNext** chain of [pSurfaceInfo](#) in [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#), this value represents the supported flags for the specified present mode and those compatible with it as returned in [VkSurfacePresentModeCompatibilityKHR](#).

### Valid Usage (Implicit)

- VUID-VkSwapchainFlagsSurfaceCapabilitiesEXT-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_FLAGS\\_SURFACE\\_CAPABILITIES\\_EXT](#)

### Structure Chaining

#### Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSurfaceCapabilitiesFullScreenExclusiveEXT](#) structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceCapabilitiesFullScreenExclusiveEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fullScreenExclusiveSupported;
} VkSurfaceCapabilitiesFullScreenExclusiveEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **fullScreenExclusiveSupported** is a boolean describing whether the surface is able to make use of exclusive full-screen access.

This structure **can** be included in the **pNext** chain of [VkSurfaceCapabilities2KHR](#) to determine support for exclusive full-screen access. If **fullScreenExclusiveSupported** is [VK\\_FALSE](#), it indicates that exclusive full-screen access is not obtainable for this surface.

Applications **must** not attempt to create swapchains with `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT` set if `fullScreenExclusiveSupported` is `VK_FALSE`.

### Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesFullScreenExclusiveEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_FULL_SCREEN_EXCLUSIVE_EXT`

### Structure Chaining

#### Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkSurfaceCapabilitiesPresentId2KHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkSurfaceCapabilitiesPresentId2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2Supported;
} VkSurfaceCapabilitiesPresentId2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2Supported` is a boolean describing whether the surface is able to support the present-ID extension

This structure **can** be included in the `pNext` chain of `VkSurfaceCapabilities2KHR` to determine support for present-wait. If `presentId2Supported` is `VK_FALSE`, it indicates that attaching an ID to presentation requests is not possible for this surface.

Applications **must** not attempt to include `VkPresentId2KHR` in the `pNext` chain of a `VkPresentInfoKHR` if `presentId2Supported` is `VK_FALSE`.

### Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentId2KHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_ID_2_KHR`

## Structure Chaining

### Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSurfaceCapabilitiesPresentWait2KHR](#) structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkSurfaceCapabilitiesPresentWait2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2Supported;
} VkSurfaceCapabilitiesPresentWait2KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [presentWait2Supported](#) is a boolean describing whether the surface is able to support the present-wait extension

This structure **can** be included in the [pNext](#) chain of [VkSurfaceCapabilities2KHR](#) to determine support for present-wait. If [presentWait2Supported](#) is [VK\\_FALSE](#), it indicates that waiting for presentation is not possible for this surface.

Applications **must** not attempt to call [vkWaitForPresent2KHR](#) on a swapchain if [presentWait2Supported](#) is [VK\\_FALSE](#).

## Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentWait2KHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_CAPABILITIES\\_PRESENT\\_WAIT\\_2\\_KHR](#)

## Structure Chaining

### Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkPresentTimingSurfaceCapabilitiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingSurfaceCapabilitiesEXT {
    VkStructureType      sType;
    void*                 pNext;
    VkBool32              presentTimingSupported;
    VkBool32              presentAtAbsoluteTimeSupported;
    VkBool32              presentAtRelativeTimeSupported;
    VkPresentStageFlagsEXT presentStageQueries;
} VkPresentTimingSurfaceCapabilitiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentTimingSupported` indicates whether querying presentation timestamps is supported for a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface`.
- `presentAtAbsoluteTimeSupported` indicates whether a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` supports presenting images with absolute times.
- `presentAtRelativeTimeSupported` indicates whether a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` supports presenting images with relative times.
- `presentStageQueries` is a bitmask of `VkPresentStageFlagBitsEXT` indicating which present stages a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` is able to provide timing information for.

If `presentTimingSupported` is `VK_TRUE`, the implementation **must** also advertise support for at least the `VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT` present stage in `presentStageQueries`.

### Valid Usage (Implicit)

- VUID-VkPresentTimingSurfaceCapabilitiesEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMING_SURFACE_CAPABILITIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkSurfaceCapabilities2KHR`

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

```
// Provided by VK_EXT_display_surface_counter
VkResult vkGetPhysicalDeviceSurfaceCapabilities2EXT(
    VkPhysicalDevice          physicalDevice,
    VkSurfaceKHR              surface,
    VkSurfaceCapabilities2EXT* pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **surface** is the surface that will be associated with the swapchain.
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilities2EXT](#) structure in which the capabilities are returned.

[vkGetPhysicalDeviceSurfaceCapabilities2EXT](#) behaves similarly to [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), with the ability to return extended information by adding extending structures to the **pNext** chain of its **pSurfaceCapabilities** parameter.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-06211  
**surface must** be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-physicalDevice-parameter  
**physicalDevice must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-parameter  
**surface must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-pSurfaceCapabilities-parameter  
**pSurfaceCapabilities must** be a valid pointer to a [VkSurfaceCapabilities2EXT](#) structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-commonparent  
Both of **physicalDevice**, and **surface must** have been created, allocated, or retrieved from the same [VkInstance](#)

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)

- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkSurfaceCapabilities2EXT](#) structure is defined as:

```
// Provided by VK_EXT_display_surface_counter
typedef struct VkSurfaceCapabilities2EXT {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             minImageCount;
    uint32_t             maxImageCount;
    VkExtent2D           currentExtent;
    VkExtent2D           minImageExtent;
    VkExtent2D           maxImageExtent;
    uint32_t             maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR supportedTransforms;
    VkSurfaceTransformFlagBitsKHR currentTransform;
    VkCompositeAlphaFlagsKHR supportedCompositeAlpha;
    VkImageUsageFlags    supportedUsageFlags;
    VkSurfaceCounterFlagsEXT supportedSurfaceCounters;
} VkSurfaceCapabilities2EXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minImageCount](#) is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- [maxImageCount](#) is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to [minImageCount](#). A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.
- [currentExtent](#) is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- [minImageExtent](#) contains the smallest valid swapchain extent for the surface on the specified device. The [width](#) and [height](#) of the extent will each be less than or equal to the corresponding [width](#) and [height](#) of [currentExtent](#), unless [currentExtent](#) has the special value described above.
- [maxImageExtent](#) contains the largest valid swapchain extent for the surface on the specified device. The [width](#) and [height](#) of the extent will each be greater than or equal to the corresponding [width](#) and [height](#) of [minImageExtent](#). The [width](#) and [height](#) of the extent will each be greater than or equal to the corresponding [width](#) and [height](#) of [currentExtent](#), unless [currentExtent](#) has the special value described above.
- [maxImageArrayLayers](#) is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.

- **supportedTransforms** is a bitmask of [VkSurfaceTransformFlagBitsKHR](#) indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- **currentTransform** is [VkSurfaceTransformFlagBitsKHR](#) value indicating the surface's current transform relative to the presentation engine's natural orientation.
- **supportedCompositeAlpha** is a bitmask of [VkCompositeAlphaFlagBitsKHR](#), representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- **supportedUsageFlags** is a bitmask of [VkImageUsageFlagBits](#) representing the ways the application **can** use the presentable images of a swapchain created with [VkPresentModeKHR](#) set to [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#), [VK\\_PRESENT\\_MODE\\_IMMEDIATE\\_KHR](#), [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#), [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) for the surface on the specified device. [VK\\_IMAGE\\_USAGE\\_COLOR\\_ATTACHMENT\\_BIT](#) **must** be included in the set. Implementations **may** support additional usages.
- **supportedSurfaceCounters** is a bitmask of [VkSurfaceCounterFlagBitsEXT](#) indicating the supported surface counter types. It **must** not include [VK\\_SURFACE\\_COUNTER\\_VBLANK\\_BIT\\_EXT](#) unless the surface queried is a [display surface](#)

### Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2EXT-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_CAPABILITIES\\_2\\_EXT](#)
- VUID-VkSurfaceCapabilities2EXT-pNext-pNext  
**pNext must** be `NULL`

Bits which **can** be set in [VkSurfaceCapabilities2EXT::supportedSurfaceCounters](#), indicating supported surface counter types, are:

```
// Provided by VK_EXT_display_surface_counter
typedef enum VkSurfaceCounterFlagBitsEXT {
    VK_SURFACE_COUNTER_VBLANK_BIT_EXT = 0x00000001,
    // VK_SURFACE_COUNTER_VBLANK_EXT is a legacy alias
    VK_SURFACE_COUNTER_VBLANK_EXT = VK_SURFACE_COUNTER_VBLANK_BIT_EXT,
} VkSurfaceCounterFlagBitsEXT;
```

- [VK\\_SURFACE\\_COUNTER\\_VBLANK\\_BIT\\_EXT](#) specifies a counter incrementing once every time a vertical blanking period occurs on the display associated with the surface.

```
// Provided by VK_EXT_display_surface_counter
typedef VkFlags VkSurfaceCounterFlagsEXT;
```

`VkSurfaceCounterFlagsEXT` is a bitmask type for setting a mask of zero or more `VkSurfaceCounterFlagBitsEXT`.

Bits which **may** be set in `VkSurfaceCapabilitiesKHR::supportedTransforms` indicating the presentation transforms supported for the surface on the specified device, and possible values of `VkSurfaceCapabilitiesKHR::currentTransform` indicating the surface's current transform relative to the presentation engine's natural orientation, are:

```
// Provided by VK_KHR_surface
typedef enum VkSurfaceTransformFlagBitsKHR {
    VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR = 0x00000001,
    VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR = 0x00000002,
    VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR = 0x00000004,
    VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR = 0x00000008,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR = 0x00000010,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR = 0x00000020,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR = 0x00000040,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR = 0x00000080,
    VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR = 0x00000100,
} VkSurfaceTransformFlagBitsKHR;
```

- `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` specifies that image content is presented without being transformed.
- `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR` specifies that image content is rotated 90 degrees clockwise.
- `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR` specifies that image content is rotated 180 degrees clockwise.
- `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR` specifies that image content is rotated 270 degrees clockwise.
- `VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR` specifies that image content is mirrored horizontally.
- `VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR` specifies that image content is mirrored horizontally, then rotated 90 degrees clockwise.
- `VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR` specifies that image content is mirrored horizontally, then rotated 180 degrees clockwise.
- `VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR` specifies that image content is mirrored horizontally, then rotated 270 degrees clockwise.
- `VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR` specifies that the presentation transform is not specified, and is instead determined by platform-specific considerations and mechanisms outside Vulkan.

```
// Provided by VK_KHR_display, VK_KHR_surface
typedef VkFlags VkSurfaceTransformFlagsKHR;
```

`VkSurfaceTransformFlagsKHR` is a bitmask type for setting a mask of zero or more `VkSurfaceTransformFlagBitsKHR`.

The `supportedCompositeAlpha` member is of type `VkCompositeAlphaFlagBitsKHR`, containing the following values:

```
// Provided by VK_KHR_surface
typedef enum VkCompositeAlphaFlagBitsKHR {
    VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR = 0x00000002,
    VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR = 0x00000004,
    VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR = 0x00000008,
} VkCompositeAlphaFlagBitsKHR;
```

These values are described as follows:

- `VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR`: The alpha component, if it exists, of the images is ignored in the compositing process. Instead, the image is treated as if it has a constant alpha of 1.0.
- `VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR`: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are expected to already be multiplied by the alpha component by the application.
- `VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR`: The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are not expected to already be multiplied by the alpha component by the application; instead, the compositor will multiply the non-alpha components of the image by the alpha component during compositing.
- `VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR`: The way in which the presentation engine treats the alpha component in the images is unknown to the Vulkan API. Instead, the application is responsible for setting the composite alpha blending mode using native window system commands. If the application does not set the blending mode using native window system commands, then a platform-specific default will be used.

```
// Provided by VK_KHR_surface
typedef VkFlags VkCompositeAlphaFlagsKHR;
```

`VkCompositeAlphaFlagsKHR` is a bitmask type for setting a mask of zero or more `VkCompositeAlphaFlagBitsKHR`.

### 37.5.2. Surface Format Support

To query the supported swapchain format-color space pairs for a surface, call:

#### WARNING

This functionality is superseded by `vkGetPhysicalDeviceSurfaceFormats2KHR`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceFormatsKHR(
    VkPhysicalDevice          physicalDevice,
    VkSurfaceKHR              surface,
    uint32_t*                 pSurfaceFormatCount,
    VkSurfaceFormatKHR*       pSurfaceFormats);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created. See [vkCreateSwapchainKHR](#) for details of swapchain creation.
- **surface** is the surface that will be associated with the swapchain.
- **pSurfaceFormatCount** is a pointer to an integer related to the number of format pairs available or queried, as described below.
- **pSurfaceFormats** is either **NULL** or a pointer to an array of **VkSurfaceFormatKHR** structures.

If **pSurfaceFormats** is **NULL**, then the number of format pairs supported for the given **surface** is returned in **pSurfaceFormatCount**. Otherwise, **pSurfaceFormatCount** **must** point to a variable set by the application to the number of elements in the **pSurfaceFormats** array, and on return the variable is overwritten with the number of structures actually written to **pSurfaceFormats**. If the value of **pSurfaceFormatCount** is less than the number of format pairs supported, at most **pSurfaceFormatCount** structures will be written, and **VK\_INCOMPLETE** will be returned instead of **VK\_SUCCESS**, to indicate that not all the available format pairs were returned.

The number of format pairs supported **must** be greater than or equal to 1. **pSurfaceFormats** **must** not contain an entry whose value for **format** is **VK\_FORMAT\_UNDEFINED**.

If **pSurfaceFormats** includes an entry whose value for **colorSpace** is **VK\_COLOR\_SPACE\_SRGB\_NONLINEAR\_KHR** and whose value for **format** is a UNORM (or SRGB) format and the corresponding SRGB (or UNORM) format is a color renderable format for **VK\_IMAGE\_TILING\_OPTIMAL**, then **pSurfaceFormats** **must** also contain an entry with the same value for **colorSpace** and **format** equal to the corresponding SRGB (or UNORM) format.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06524  
**surface** **must** be a valid **VkSurfaceKHR** handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06525  
**surface** **must** be supported by **physicalDevice**, as reported by **vkGetPhysicalDeviceSurfaceSupportKHR** or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-physicalDevice-parameter  
**physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-parameter

If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be a valid `VkSurfaceKHR` handle

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormatCount-parameter `pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormats-parameter  
If the value referenced by `pSurfaceFormatCount` is not 0, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` `VkSurfaceFormatKHR` structures
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-commonparent  
Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkInstance`

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSurfaceFormatKHR` structure is defined as:

### WARNING

This functionality is superseded by `VK_KHR_get_surface_capabilities2`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceFormatKHR {
    VkFormat      format;
    VkColorSpaceKHR  colorSpace;
} VkSurfaceFormatKHR;
```

- `format` is a `VkFormat` that is compatible with the specified surface.
- `colorSpace` is a presentation `VkColorSpaceKHR` that is compatible with the surface.

To query the supported swapchain format tuples for a surface, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceFormats2KHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    uint32_t*                 pSurfaceFormatCount,
    VkSurfaceFormat2KHR*      pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for `vkCreateSwapchainKHR`.
- `pSurfaceInfo` is a pointer to a `VkPhysicalDeviceSurfaceInfo2KHR` structure describing the surface and other fixed parameters that would be consumed by `vkCreateSwapchainKHR`.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format tuples available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of `VkSurfaceFormat2KHR` structures.

`vkGetPhysicalDeviceSurfaceFormats2KHR` behaves similarly to `vkGetPhysicalDeviceSurfaceFormatsKHR`, with the ability to be extended via `pNext` chains.

If `pSurfaceFormats` is `NULL`, then the number of format tuples supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format tuples supported, at most `pSurfaceFormatCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06521  
`pSurfaceInfo->surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06522  
`pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-parameter  
`pSurfaceInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceSurfaceInfo2KHR` structure
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormatCount-parameter  
`pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormats-parameter  
If the value referenced by `pSurfaceFormatCount` is not 0, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` `VkSurfaceFormat2KHR` structures

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSurfaceFormat2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceFormat2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkSurfaceFormatKHR surfaceFormat;
} VkSurfaceFormat2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceFormat` is a `VkSurfaceFormatKHR` structure describing a format-color space pair that is compatible with the specified surface.

If the `imageCompressionControlSwapchain` feature is supported and a `VkImageCompressionPropertiesEXT` structure is included in the `pNext` chain of this structure, then it will be filled with the compression properties that are supported for the `surfaceFormat`.

## Valid Usage

- VUID-VkSurfaceFormat2KHR-pNext-06750  
If the `VK_EXT_image_compression_control_swapchain` extension is not supported, the `pNext` chain **must** not include an `VkImageCompressionPropertiesEXT` structure

### Valid Usage (Implicit)

- VUID-VkSurfaceFormat2KHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_FORMAT\\_2\\_KHR](#)
- VUID-VkSurfaceFormat2KHR-pNext-pNext  
**pNext** **must** be [NULL](#) or a pointer to a valid instance of [VkImageCompressionPropertiesEXT](#)
- VUID-VkSurfaceFormat2KHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique

While the **format** of a presentable image refers to the encoding of each pixel, the **colorSpace** determines how the presentation engine interprets the pixel values. A color space in this document refers to a specific color space (defined by the chromaticities of its primaries and a white point in CIE Lab), and transfer functions indicating the mapping between the image data and the colorimetry with respect to the given color space.

Possible values of [VkSurfaceFormatKHR::colorSpace](#), specifying the color spaces that a presentation engine can accept, are:

```

// Provided by VK_KHR_surface
typedef enum VkColorSpaceKHR {
    VK_COLOR_SPACE_SRGB_NONLINEAR_KHR = 0,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT = 1000104001,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT = 1000104002,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT = 1000104003,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT = 1000104004,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_LINEAR_EXT = 1000104005,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_NONLINEAR_EXT = 1000104006,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT2020_LINEAR_EXT = 1000104007,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_ST2084_EXT = 1000104008,
    // Provided by VK_EXT_swapchain_colorspace
    // VK_COLOR_SPACE_DOLBYVISION_EXT is legacy, but no reason was given in the API XML
    VK_COLOR_SPACE_DOLBYVISION_EXT = 1000104009,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_HLG_EXT = 1000104010,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT = 1000104011,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT = 1000104012,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_PASS_THROUGH_EXT = 1000104013,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT = 1000104014,
    // VK_COLORSPACE_SRGB_NONLINEAR_KHR is a legacy alias
    VK_COLORSPACE_SRGB_NONLINEAR_KHR = VK_COLOR_SPACE_SRGB_NONLINEAR_KHR,
    // Provided by VK_EXT_swapchain_colorspace
    // VK_COLOR_SPACE_DCI_P3_LINEAR_EXT is a legacy alias
    VK_COLOR_SPACE_DCI_P3_LINEAR_EXT = VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT,
} VkColorSpaceKHR;

```

- [VK\\_COLOR\\_SPACE\\_SRGB\\_NONLINEAR\\_KHR](#) specifies support for the images in sRGB color space, encoded according to the sRGB specification.
- [VK\\_COLOR\\_SPACE\\_DISPLAY\\_P3\\_NONLINEAR\\_EXT](#) specifies support for the images in Display-P3 color space, encoded using a Display-P3 transfer function.
- [VK\\_COLOR\\_SPACE\\_EXTENDED\\_SRGB\\_LINEAR\\_EXT](#) specifies support for the images in extended sRGB color space, encoded using a linear transfer function.
- [VK\\_COLOR\\_SPACE\\_EXTENDED\\_SRGB\\_NONLINEAR\\_EXT](#) specifies support for the images in extended sRGB color space, encoded according to the scRGB specification.

- [VK\\_COLOR\\_SPACE\\_DISPLAY\\_P3\\_LINEAR\\_EXT](#) specifies support for the images in Display-P3 color space, encoded using a linear transfer function.
- [VK\\_COLOR\\_SPACE\\_DCI\\_P3\\_NONLINEAR\\_EXT](#) specifies support for the images in DCI-P3 color space, encoded according to the DCI-P3 specification. Note that values in such an image are interpreted as XYZ encoded color data by the presentation engine.
- [VK\\_COLOR\\_SPACE\\_BT709\\_LINEAR\\_EXT](#) specifies support for the images in BT709 color space, encoded using a linear transfer function.
- [VK\\_COLOR\\_SPACE\\_BT709\\_NONLINEAR\\_EXT](#) specifies support for the images in BT709 color space, encoded according to the BT709 specification.
- [VK\\_COLOR\\_SPACE\\_BT2020\\_LINEAR\\_EXT](#) specifies support for the images in BT2020 color space, encoded using a linear transfer function.
- [VK\\_COLOR\\_SPACE\\_HDR10\\_ST2084\\_EXT](#) specifies support for the images in HDR10 (BT2020) color space, encoded according to SMPTE ST2084 Perceptual Quantizer (PQ) specification.
- [VK\\_COLOR\\_SPACE\\_HDR10\\_HLG\\_EXT](#) specifies support for the images in HDR10 (BT2020) color space, encoded according to the Hybrid Log Gamma (HLG) specification.
- [VK\\_COLOR\\_SPACE\\_ADOBERGB\\_LINEAR\\_EXT](#) specifies support for images in Adobe RGB color space, encoded using a linear transfer function.
- [VK\\_COLOR\\_SPACE\\_ADOBERGB\\_NONLINEAR\\_EXT](#) specifies support for the images in Adobe RGB color space, encoded according to the Adobe RGB specification (approximately Gamma 2.2).
- [VK\\_COLOR\\_SPACE\\_PASS\\_THROUGH\\_EXT](#) specifies that color components are used “as is”. This is intended to allow applications to supply data for color spaces not described here.

#### NOTE

In the initial release of the [VK\\_KHR\\_surface](#) and [VK\\_KHR\\_swapchain](#) extensions, the token [VK\\_COLORSPACE\\_SRGB\\_NONLINEAR\\_KHR](#) was used. Starting in the 2016-05-13 updates to the extension branches, matching release 1.0.13 of the core API specification, [VK\\_COLOR\\_SPACE\\_SRGB\\_NONLINEAR\\_KHR](#) is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

#### NOTE

In older versions of this extension [VK\\_COLOR\\_SPACE\\_DISPLAY\\_P3\\_LINEAR\\_EXT](#) was misnamed [VK\\_COLOR\\_SPACE\\_DCI\\_P3\\_LINEAR\\_EXT](#). This has been updated to indicate that it uses RGB color encoding, not XYZ. The old name is legacy but is maintained for backwards compatibility.

#### NOTE

In older versions of the [VK\\_EXT\\_swapchain\\_colorspace](#) extension, [VK\\_COLOR\\_SPACE\\_DOLBYVISION\\_EXT](#) was exposed. The intent was to indicate the presentation engine shall decode an image using the SMPTE ST 2084 Perceptual Quantizer (PQ) EOTF, and then apply a proprietary OOTF to process the image. However, Dolby Vision profile 8.4 describes an encoding using the Hybrid Log Gamma (HLG) OETF, and there is no swapchain extension for signaling Dolby Vision metadata to be used by a proprietary OOTF. This enum is legacy but is maintained for backwards compatibility.

**NOTE**

For a traditional “Linear” or non-gamma transfer function color space use [VK\\_COLOR\\_SPACE\\_PASS\\_THROUGH\\_EXT](#).

**NOTE**

On Wayland, [VK\\_COLOR\\_SPACE\\_PASS\\_THROUGH\\_EXT](#) can be used to disable color management by the WSI on a surface, which makes it possible for the application to create a `wp_color_management_surface_v1` object without triggering a `surface_exists` protocol error.

See [vkCreateWaylandSurfaceKHR](#)

The presentation engine interprets the pixel values of the R, G, and B components as having been encoded using an appropriate transfer function. Applications **should** ensure that the appropriate transfer function has been applied. [Texel encode](#) requires that all implementations implicitly apply the sRGB EOTF<sup>1</sup> on R, G, and B components when shaders write to an sRGB pixel format image, which is useful for sRGB color spaces. For sRGB color spaces with other pixel formats, or other non-linear color spaces, applications **can** apply the transfer function explicitly in a shader. The A channel is always interpreted as linearly encoded.

This extension defines enums for [VkColorSpaceKHR](#) that correspond to the following color spaces:

*Table 50. Color Spaces and Attributes*

| Name          | Red Primary  | Green Primary | Blue Primary | White-point          | Transfer function |
|---------------|--------------|---------------|--------------|----------------------|-------------------|
| DCI-P3        | 1.000, 0.000 | 0.000, 1.000  | 0.000, 0.000 | 0.3333, 0.3333       | DCI P3            |
| Display-P3    | 0.680, 0.320 | 0.265, 0.690  | 0.150, 0.060 | 0.3127, 0.3290 (D65) | Display-P3        |
| BT709         | 0.640, 0.330 | 0.300, 0.600  | 0.150, 0.060 | 0.3127, 0.3290 (D65) | BT709             |
| sRGB          | 0.640, 0.330 | 0.300, 0.600  | 0.150, 0.060 | 0.3127, 0.3290 (D65) | sRGB              |
| extended sRGB | 0.640, 0.330 | 0.300, 0.600  | 0.150, 0.060 | 0.3127, 0.3290 (D65) | scRGB             |
| HDR10_ST2084  | 0.708, 0.292 | 0.170, 0.797  | 0.131, 0.046 | 0.3127, 0.3290 (D65) | ST2084 PQ         |
| HDR10_HLG     | 0.708, 0.292 | 0.170, 0.797  | 0.131, 0.046 | 0.3127, 0.3290 (D65) | HLG               |
| Adobe RGB     | 0.640, 0.330 | 0.210, 0.710  | 0.150, 0.060 | 0.3127, 0.3290 (D65) | Adobe RGB         |

The transfer functions are described in the “Transfer Functions” chapter of the [Khronos Data Format Specification](#).

Except Display-P3 OETF, which is:

$$E = \begin{cases} 1.055 \times L^{\frac{1}{2.4}} - 0.055 & \text{for } 0.0030186 \leq L \leq 1 \\ 12.92 \times L & \text{for } 0 \leq L < 0.0030186 \end{cases}$$

where L is the linear value of a color component and E is the encoded value (as stored in the image in memory).

**NOTE** For most uses, the sRGB OETF is equivalent.

### 37.5.3. Surface Presentation Mode Support

To query the supported presentation modes for a surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfacePresentModesKHR(
    VkPhysicalDevice      physicalDevice,
    VkSurfaceKHR          surface,
    uint32_t*             pPresentModeCount,
    VkPresentModeKHR*     pPresentModes);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created. See [vkCreateSwapchainKHR](#) for details of swapchain creation.
- **surface** is the surface that will be associated with the swapchain.
- **pPresentModeCount** is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- **pPresentModes** is either **NULL** or a pointer to an array of [VkPresentModeKHR](#) values, indicating the supported presentation modes.

If **pPresentModes** is **NULL**, then the number of presentation modes supported for the given **surface** is returned in **pPresentModeCount**. Otherwise, **pPresentModeCount** **must** point to a variable set by the application to the number of elements in the **pPresentModes** array, and on return the variable is overwritten with the number of values actually written to **pPresentModes**. If the value of **pPresentModeCount** is less than the number of presentation modes supported, at most **pPresentModeCount** values will be written, and [VK\\_INCOMPLETE](#) will be returned instead of [VK\\_SUCCESS](#), to indicate that not all the available modes were returned.

#### Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06524  
**surface** **must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06525  
**surface** **must** be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

## Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-parameter  
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModeCount-parameter  
`pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModes-parameter  
If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` `VkPresentModeKHR` values
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-commonparent  
Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkInstance`

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To query the supported presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkGetPhysicalDeviceSurfacePresentModes2EXT(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    uint32_t*                 pPresentModeCount,
    VkPresentModeKHR*         pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for `vkCreateSwapchainKHR`.

- `pSurfaceInfo` is a pointer to a `VkPhysicalDeviceSurfaceInfo2KHR` structure describing the surface and other fixed parameters that would be consumed by `vkCreateSwapchainKHR`.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of `VkPresentModeKHR` values, indicating the supported presentation modes.

`vkGetPhysicalDeviceSurfacePresentModes2EXT` behaves similarly to `vkGetPhysicalDeviceSurfacePresentModesKHR`, with the ability to specify extended inputs via chained input structures.

### Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06521  
`pSurfaceInfo->surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06522  
`pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-parameter  
`pSurfaceInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceSurfaceInfo2KHR` structure
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModeCount-parameter  
`pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModes-parameter  
If the value referenced by `pPresentModeCount` is not 0, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` `VkPresentModeKHR` values

### Return Codes

#### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

Possible values of elements of the [vkGetPhysicalDeviceSurfacePresentModesKHR::pPresentModes](#) array, indicating the supported presentation modes for a surface, are:

```
// Provided by VK_KHR_surface
typedef enum VkPresentModeKHR {
    VK_PRESENT_MODE_IMMEDIATE_KHR = 0,
    VK_PRESENT_MODE_MAILBOX_KHR = 1,
    VK_PRESENT_MODE_FIFO_KHR = 2,
    VK_PRESENT_MODE_FIFO_RELAXED_KHR = 3,
    // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR = 1000111000,
    // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR = 1000111001,
    // Provided by VK_KHR_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_KHR = 1000361000,
    // Provided by VK_EXT_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_EXT = VK_PRESENT_MODE_FIFO_LATEST_READY_KHR,
} VkPresentModeKHR;
```

- [VK\\_PRESENT\\_MODE\\_IMMEDIATE\\_KHR](#) specifies that the presentation engine does not wait for a vertical blanking period to update the current image, meaning this mode **may** result in visible tearing. No internal queuing of presentation requests is needed, as the requests are applied immediately.
- [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#) specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application. One request is removed from the queue and processed during each vertical blanking period in which the queue is non-empty.
- [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty. This is the only value of [presentMode](#) that is **required** to be supported.
- [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) specifies that the presentation engine generally waits for the next vertical blanking period to update the current image. If a vertical blanking period has already passed since the last update of the current image then the presentation engine does not wait for another vertical blanking period for the update, meaning this mode **may** result in visible tearing in this case. This mode is useful for reducing visual stutter with an application

that will mostly present a new image before the next vertical blanking period, but may occasionally be late, and present a new image just after the next vertical blanking period. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during or after each vertical blanking period in which the queue is non-empty.

- [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#) specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue. At each vertical blanking period, the presentation engine dequeues all successive requests that are ready to be presented from the beginning of the queue. If using the [presentAtAbsoluteTime](#) feature to provide a target present time, the presentation engine checks the specified time for each image. If the target present time is less-than or equal-to the current time, the presentation engine dequeues the image and checks the next one. The image of the last dequeued request is presented. The other dequeued requests are dropped.
- [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine is only required to update the current image after a new presentation request is received. Therefore the application **must** make a presentation request whenever an update is required. However, the presentation engine **may** update the current image at any point, meaning this mode **may** result in visible tearing.
- [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine periodically updates the current image on its regular refresh cycle. The application is only required to make one initial presentation request, after which the presentation engine **must** update the current image without any need for further presentation requests. The application **can** indicate the image contents have been updated by making a presentation request, but this does not guarantee the timing of when it will be updated. This mode **may** result in visible tearing if rendering to the image is not timed correctly.

The supported [VkImageUsageFlagBits](#) of the presentable images of a swapchain created for a surface **may** differ depending on the presentation mode, and can be determined as per the table below:

Table 51. Presentable Image Usage Queries

| Presentation mode                                         | Image usage flags                                                                       |
|-----------------------------------------------------------|-----------------------------------------------------------------------------------------|
| <a href="#">VK_PRESENT_MODE_IMMEDIATE_KHR</a>             | <a href="#">VkSurfaceCapabilitiesKHR::supportedUsageFlags</a>                           |
| <a href="#">VK_PRESENT_MODE_MAILBOX_KHR</a>               | <a href="#">VkSurfaceCapabilitiesKHR::supportedUsageFlags</a>                           |
| <a href="#">VK_PRESENT_MODE_FIFO_KHR</a>                  | <a href="#">VkSurfaceCapabilitiesKHR::supportedUsageFlags</a>                           |
| <a href="#">VK_PRESENT_MODE_FIFO_RELAXED_KHR</a>          | <a href="#">VkSurfaceCapabilitiesKHR::supportedUsageFlags</a>                           |
| <a href="#">VK_PRESENT_MODE_FIFO_LATEST_READY_KHR</a>     | <a href="#">VkSurfaceCapabilitiesKHR::supportedUsageFlags</a>                           |
| <a href="#">VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR</a> | <a href="#">VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags</a> |

| Presentation mode                             | Image usage flags                                                       |
|-----------------------------------------------|-------------------------------------------------------------------------|
| VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR | VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags |

#### NOTE

For reference, the mode indicated by [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) is equivalent to the behavior of {wgl|glX|egl}SwapBuffers with a swap interval of 1, while the mode indicated by [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) is equivalent to the behavior of {wgl|glX}SwapBuffers with a swap interval of -1 (from the {WGL|GLX}\_EXT\_swap\_control\_tear extensions).

## 37.6. Full Screen Exclusive Control

Swapchains created with [fullScreenExclusive](#) set to [VK\\_FULL\\_SCREEN\\_EXCLUSIVE\\_APPLICATION\\_CONTROLLED\\_EXT](#) **must** acquire and release exclusive full-screen access explicitly, using the following commands.

To acquire exclusive full-screen access for a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkAcquireFullScreenExclusiveModeEXT(
    VkDevice device,
    VkSwapchainKHR swapchain);
```

- [device](#) is the device associated with [swapchain](#).
- [swapchain](#) is the swapchain to acquire exclusive full-screen access for.

### Valid Usage

- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02674 [swapchain](#) **must** not be in the retired state
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02675 [swapchain](#) **must** be a swapchain created with a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure, with [fullScreenExclusive](#) set to [VK\\_FULL\\_SCREEN\\_EXCLUSIVE\\_APPLICATION\\_CONTROLLED\\_EXT](#)
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02676 [swapchain](#) **must** not currently have exclusive full-screen access

A return value of [VK\\_SUCCESS](#) indicates that the [swapchain](#) successfully acquired exclusive full-screen access. The swapchain will retain this exclusivity until either the application releases exclusive full-screen access with [vkReleaseFullScreenExclusiveModeEXT](#), destroys the swapchain, or if any of the swapchain commands return [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#) indicating that the mode was lost because of platform-specific changes.

If the swapchain was unable to acquire exclusive full-screen access to the display then `VK_ERROR_INITIALIZATION_FAILED` is returned. An application **can** attempt to acquire exclusive full-screen access again for the same swapchain even if this command fails, or if `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` has been returned by a swapchain command.

### Valid Usage (Implicit)

- `VUID-vkAcquireFullScreenExclusiveModeEXT-device-parameter`  
`device` **must** be a valid `VkDevice` handle
- `VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parameter`  
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- `VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parent`  
`swapchain` **must** have been created, allocated, or retrieved from `device`

### Return Codes

#### Success

- `VK_SUCCESS`

#### Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To release exclusive full-screen access from a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkReleaseFullScreenExclusiveModeEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to release exclusive full-screen access from.

#### NOTE

Applications will not be able to present to `swapchain` after this call until exclusive full-screen access is reacquired. This is usually useful to handle when an application is minimized or otherwise intends to stop presenting for a time.

### Valid Usage

- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02677  
**swapchain** **must** not be in the retired state
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02678  
**swapchain** **must** be a swapchain created with a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure, with **fullScreenExclusive** set to [VK\\_FULL\\_SCREEN\\_EXCLUSIVE\\_APPLICATION\\_CONTROLLED\\_EXT](#)

### Valid Usage (Implicit)

- VUID-vkReleaseFullScreenExclusiveModeEXT-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parameter  
**swapchain** **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parent  
**swapchain** **must** have been created, allocated, or retrieved from **device**

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

## 37.7. Device Group Queries

A logical device that represents multiple physical devices **may** support presenting from images on more than one physical device, or combining images from multiple physical devices.

To query these capabilities, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupPresentCapabilitiesKHR(
    VkDevice device,
    VkDeviceGroupPresentCapabilitiesKHR* pDeviceGroupPresentCapabilities);
```

- **device** is the logical device.
- **pDeviceGroupPresentCapabilities** is a pointer to a **VkDeviceGroupPresentCapabilitiesKHR** structure in which the device's capabilities are returned.

### Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-device-parameter **device** must be a valid **VkDevice** handle
- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-pDeviceGroupPresentCapabilities-parameter **pDeviceGroupPresentCapabilities** must be a valid pointer to a **VkDeviceGroupPresentCapabilitiesKHR** structure

### Return Codes

#### Success

- **VK\_SUCCESS**

#### Failure

- **VK\_ERROR\_OUT\_OF\_DEVICE\_MEMORY**
- **VK\_ERROR\_OUT\_OF\_HOST\_MEMORY**
- **VK\_ERROR\_UNKNOWN**
- **VK\_ERROR\_VALIDATION\_FAILED**

The **VkDeviceGroupPresentCapabilitiesKHR** structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef struct VkDeviceGroupPresentCapabilitiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t presentMask[VK_MAX_DEVICE_GROUP_SIZE];
    VkDeviceGroupPresentModeFlagsKHR modes;
} VkDeviceGroupPresentCapabilitiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMask` is an array of `VK_MAX_DEVICE_GROUP_SIZE` `uint32_t` masks, where the mask at element `i` is non-zero if physical device `i` has a presentation engine, and where bit `j` is set in element `i` if physical device `i` **can** present swapchain images from physical device `j`. If element `i` is non-zero, then bit `i` **must** be set.
- `modes` is a bitmask of `VkDeviceGroupPresentModeFlagBitsKHR` indicating which device group presentation modes are supported.

`modes` always has `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR` set.

The present mode flags are also used when presenting an image, in `VkDeviceGroupPresentInfoKHR::mode`.

If a device group only includes a single physical device, then `modes` **must** equal `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

### Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentCapabilitiesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR`
- VUID-VkDeviceGroupPresentCapabilitiesKHR-pNext-pNext  
`pNext` **must** be `NULL`

Bits which **may** be set in `VkDeviceGroupPresentCapabilitiesKHR::modes`, indicating which device group presentation modes are supported, are:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef enum VkDeviceGroupPresentModeFlagBitsKHR {
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR = 0x00000001,
    VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR = 0x00000002,
    VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR = 0x00000004,
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR = 0x00000008,
} VkDeviceGroupPresentModeFlagBitsKHR;
```

- `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR` specifies that any physical device with a presentation engine **can** present its own swapchain images.
- `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR` specifies that any physical device with a presentation engine **can** present swapchain images from any physical device in its `presentMask`.
- `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR` specifies that any physical device with a presentation engine **can** present the sum of swapchain images from any physical devices in its `presentMask`.
- `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR` specifies that multiple physical devices with a presentation engine **can** each present their own swapchain images.

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef VkFlags VkDeviceGroupPresentModeFlagsKHR;
```

`VkDeviceGroupPresentModeFlagsKHR` is a bitmask type for setting a mask of zero or more `VkDeviceGroupPresentModeFlagBitsKHR`.

Some surfaces **may** not be capable of using all the device group present modes.

To query the supported device group present modes for a particular surface, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupSurfacePresentModesKHR(
    VkDevice device,
    VkSurfaceKHR surface,
    VkDeviceGroupPresentModeFlagsKHR* pModes);
```

- `device` is the logical device.
- `surface` is the surface.
- `pModes` is a pointer to a `VkDeviceGroupPresentModeFlagsKHR` in which the supported device group present modes for the surface are returned.

The modes returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded. These modes **must** be a subset of the modes returned by `vkGetDeviceGroupPresentCapabilitiesKHR`.

### Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-06212  
`surface` **must** be supported by all physical devices associated with `device`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-parameter  
`surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-pModes-parameter  
`pModes` **must** be a valid pointer to a `VkDeviceGroupPresentModeFlagsKHR` value
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-commonparent  
Both of `device`, and `surface` **must** have been created, allocated, or retrieved from the same

## Host Synchronization

- Host access to **surface** **must** be externally synchronized

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To query the supported device group presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive with VK_KHR_device_group or VK_VERSION_1_1
VkResult vkGetDeviceGroupSurfacePresentModes2EXT(
    VkDevice device,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    VkDeviceGroupPresentModeFlagsKHR* pModes);
```

- **device** is the logical device.
- **pSurfaceInfo** is a pointer to a `VkPhysicalDeviceSurfaceInfo2KHR` structure describing the surface and other fixed parameters that would be consumed by `vkCreateSwapchainKHR`.
- **pModes** is a pointer to a `VkDeviceGroupPresentModeFlagsKHR` in which the supported device group present modes for the surface are returned.

`vkGetDeviceGroupSurfacePresentModes2EXT` behaves similarly to `vkGetDeviceGroupSurfacePresentModesKHR`, with the ability to specify extended inputs via chained input structures.

## Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-06213  
**pSurfaceInfo->surface** **must** be supported by all physical devices associated with **device**, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-

specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-parameter  
**pSurfaceInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceSurfaceInfo2KHR](#) structure
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pModes-parameter  
**pModes** **must** be a valid pointer to a [VkDeviceGroupPresentModeFlagsKHR](#) value

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

When using [VK\\_DEVICE\\_GROUP\\_PRESENT\\_MODE\\_LOCAL\\_MULTI\\_DEVICE\\_BIT\\_KHR](#), the application **may** need to know which regions of the surface are used when presenting locally on each physical device. Presentation of swapchain images to this surface need only have valid contents in the regions returned by this command.

To query a set of rectangles used in presentation on the physical device, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetPhysicalDevicePresentRectanglesKHR(
    VkPhysicalDevice    physicalDevice,
    VkSurfaceKHR        surface,
    uint32_t*          pRectCount,
    VkRect2D*          pRects);
```

- **physicalDevice** is the physical device.
- **surface** is the surface.
- **pRectCount** is a pointer to an integer related to the number of rectangles available or queried, as

described below.

- `pRects` is either `NULL` or a pointer to an array of `VkRect2D` structures.

If `pRects` is `NULL`, then the number of rectangles used when presenting the given `surface` is returned in `pRectCount`. Otherwise, `pRectCount` **must** point to a variable set by the application to the number of elements in the `pRects` array, and on return the variable is overwritten with the number of structures actually written to `pRects`. If the value of `pRectCount` is less than the number of rectangles, at most `pRectCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available rectangles were returned.

The values returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded.

The rectangles returned by this command **must** not overlap.

### Valid Usage

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-06211  
`surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-parameter  
`surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRectCount-parameter  
`pRectCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRects-parameter  
If the value referenced by `pRectCount` is not 0, and `pRects` is not `NULL`, `pRects` **must** be a valid pointer to an array of `pRectCount` `VkRect2D` structures
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-commonparent  
Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same `VkInstance`

### Host Synchronization

- Host access to `surface` **must** be externally synchronized

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

## 37.8. Present Timing Queries

Traditional game and real-time-animation applications frequently use [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) so that presentable images are updated during the vertical blanking period of a given refresh cycle (RC) of the presentation engine's display. On fixed refresh rate displays, this avoids the visual anomaly known as tearing.

However, synchronizing the presentation of images with the RC does not prevent all forms of visual anomalies. Stuttering occurs when the geometry for each presentable image is not accurately positioned for when that image will be displayed. The geometry may appear to move too little some RCs, and too much for others. Sometimes the animation appears to freeze, when the same image is used for more RCs than other images.

In order to minimize stuttering, an application needs to: 1) render and present images at a consistent rate that is, on fixed refresh rate displays, a multiple of the presentation engine's refresh rate; 2) correctly position its geometry for when the presentable image will be displayed to the user. The [VK\\_EXT\\_present\\_timing](#) extension allows an application to satisfy these needs.

The presentation engine's display typically refreshes the pixels that are displayed to the user on a periodic basis. This period **may** be fixed (Fixed Refresh Rate, FRR) or variable (Variable Refresh Rate, VRR).

In order to collect timing information about presentation, a swapchain needs an internal queue to store asynchronously updated results until applications collect them.

To allocate the swapchain's internal timing results queue, call:

```
// Provided by VK_EXT_present_timing
VkResult vkSetSwapchainPresentTimingQueueSizeEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t          size);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to allocate a results queue for.
- **size** is the requested number of slots in the internal results queue.

If this function is called multiple times, the internal queue is reallocated to fit the new **size**. If the new **size** is less than the current number of outstanding results, **VK\_NOT\_READY** is returned and no allocation is performed.

### Valid Usage

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-12229  
**swapchain** **must** have been created with **VkSwapchainCreateInfoKHR::flags** containing **VK\_SWAPCHAIN\_CREATE\_PRESENT\_TIMING\_BIT\_EXT**

### Valid Usage (Implicit)

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-device-parameter  
**device** **must** be a valid **VkDevice** handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parameter  
**swapchain** **must** be a valid **VkSwapchainKHR** handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parent  
**swapchain** **must** have been created, allocated, or retrieved from **device**

### Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

### Return Codes

#### Success

- **VK\_NOT\_READY**
- **VK\_SUCCESS**

#### Failure

- **VK\_ERROR\_OUT\_OF\_DEVICE\_MEMORY**
- **VK\_ERROR\_OUT\_OF\_HOST\_MEMORY**
- **VK\_ERROR\_UNKNOWN**
- **VK\_ERROR\_VALIDATION\_FAILED**

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's timing properties are modified.

To query the presentation engine's current timing properties for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimingPropertiesEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkSwapchainTimingPropertiesEXT* pSwapchainTimingProperties,
    uint64_t*         pSwapchainTimingPropertiesCounter);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to obtain timing properties for.
- **pSwapchainTimingProperties** is a pointer to an instance of the **VkSwapchainTimingPropertiesEXT** structure.
- **pSwapchainTimingPropertiesCounter** is **NULL** or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.

If **vkGetSwapchainTimingPropertiesEXT** returns **VK\_NOT\_READY**, the implementation was not able to determine the current refresh cycle duration. Some platforms **may** not provide timing properties until after at least one image has been presented to the **swapchain**. If timing properties change for the **swapchain**, these platforms **may** not provide updated results until after at least one additional image has been presented to the **swapchain**.

### Valid Usage (Implicit)

- VUID-vkGetSwapchainTimingPropertiesEXT-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parameter **swapchain** **must** be a valid **VkSwapchainKHR** handle
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingProperties-parameter **pSwapchainTimingProperties** **must** be a valid pointer to a **VkSwapchainTimingPropertiesEXT** structure
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingPropertiesCounter-parameter  
If **pSwapchainTimingPropertiesCounter** is not **NULL**, **pSwapchainTimingPropertiesCounter** **must** be a valid pointer to a **uint64\_t** value
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parent **swapchain** **must** have been created, allocated, or retrieved from **device**

### Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

## Return Codes

### Success

- [VK\\_NOT\\_READY](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkSwapchainTimingPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimingPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           refreshDuration;
    uint64_t           refreshInterval;
} VkSwapchainTimingPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [refreshDuration](#) is zero or an indication of the duration of a refresh cycle.
- [refreshInterval](#) is zero or a duration in nanoseconds indicating the interval between refresh cycle durations.

If [refreshDuration](#) is zero, the presentation engine is not able to determine the duration of the refresh cycle. Similarly, if [refreshInterval](#) is zero, the presentation engine is not able to determine whether it is operating in VRR mode.

Otherwise, if [refreshInterval](#) is the same as [refreshDuration](#), the presentation engine is operating in FRR mode. In this case, [refreshDuration](#) is the number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If [refreshInterval](#) is [UINT64\\_MAX](#), the presentation engine is operating in VRR mode, and [refreshDuration](#) is the minimum number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If [refreshDuration](#) and [refreshInterval](#) are not zero, [refreshInterval](#) is a factor of [refreshDuration](#).

## Valid Usage (Implicit)

- VUID-VkSwapchainTimingPropertiesEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_TIMING_PROPERTIES_EXT`
- VUID-VkSwapchainTimingPropertiesEXT-pNext-pNext  
`pNext` **must** be `NULL`

### NOTE

Some display technologies allow the vblank interval to be decoupled from the display's effective refresh rate. In other words, presented images are visible for a fixed duration (`refreshDuration`) that is a multiple of the vblank interval (`refreshInterval`) which **may** be much smaller. This allows such displays, for example, to effectively operate at a fixed refresh rate with the ability to quickly change that refresh rate to adapt to the current system's workload.

Note that `VkSwapchainTimingPropertiesEXT` only represents the current swapchain's view of those capabilities, which **may** differ from the actual hardware capabilities, based e.g. on the current surface properties. For example, swapchains that render to a windowed surface requiring complex composition **may** not be able to reach their display hardware's full potential.

The rate at which an application renders and presents new images is known as the image present rate (IPR, a.k.a. frame rate). The inverse of IPR, or the duration between each image present, is the image present duration (IPD).

In order to provide a smooth, stutter-free animation on non-VRR displays, an application needs its IPD to be a multiple of `refreshInterval` that is at least equal to `refreshDuration`.

For example, if a FRR display has a set 60Hz refresh rate, where `refreshDuration` is equal to `refreshInterval`, `refreshDuration` will be a value in nanoseconds that is approximately equal to 16.67ms. In such a case, an application will want an IPD of 16.67ms (1X multiplier of `refreshInterval`), or 33.33ms (2X multiplier of `refreshInterval`), or 50.0ms (3X multiplier of `refreshInterval`), etc.

### NOTE

In order to determine a target IPD for a display (i.e. a multiple of `refreshInterval`), an application needs to determine when its images are actually displayed.

Consider an application that has an initial target IPD of 16.67ms (1X multiplier of `refreshDuration`). It will therefore position the geometry of a new image 16.67ms later than the previous image.

If this application is running on slower hardware, so that it actually takes 20ms to render each new image, the images will not be displayed to the user every 16.67ms, nor every 20ms, which will create visual anomalies. In this case, it is better for the application to adjust its target IPD to 33.33ms (i.e. a 2X multiplier of `refreshDuration`), and tell the presentation engine to not present images any sooner than every 33.33ms. This will allow the geometry to be correctly positioned for each

presentable image.

On VRR displays, where `refreshInterval` is `UINT64_MAX`, applications **should** target an IPD that is at least equal to `refreshDuration`.

Adjustments to an application's IPD may be needed because different views of an application's geometry can take different amounts of time to render. For example, looking at the sky may take less time to render than looking at multiple, complex items in a room.

In general, it is good to not frequently change IPD, as that can cause visual anomalies.

Adjustments to a larger IPD because of late images should happen quickly, but adjustments to a smaller IPD should only happen if the periodic feedback of `VkPastPresentationTimingEXT` values indicates that the target IPD can be durably achieved.

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's list of supported time domains for a swapchain is modified.

To query the time domains supported by the presentation engine for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimeDomainPropertiesEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkSwapchainTimeDomainPropertiesEXT* pSwapchainTimeDomainProperties,
    uint64_t*         pTimeDomainsCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain time domain properties for.
- `pSwapchainTimeDomainProperties` is a pointer to an instance of the `VkSwapchainTimeDomainPropertiesEXT` structure.
- `pTimeDomainsCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domain properties counter.

If upon return `VkSwapchainTimeDomainPropertiesEXT::timeDomainCount` is smaller than the number of time domains supported for the given `swapchain`, `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS` to indicate that not all the available values were returned.

### Valid Usage (Implicit)

- VUID-vkGetSwapchainTimeDomainPropertiesEXT-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle

- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pSwapchainTimeDomainProperties-parameter  
`pSwapchainTimeDomainProperties` **must** be a valid pointer to a `VkSwapchainTimeDomainPropertiesEXT` structure
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-pTimeDomainsCounter-parameter  
If `pTimeDomainsCounter` is not `NULL`, `pTimeDomainsCounter` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parent  
`swapchain` **must** have been created, allocated, or retrieved from `device`

## Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSwapchainTimeDomainPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimeDomainPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           timeDomainCount;
    VkTimeDomainKHR*   pTimeDomains;
    uint64_t*          pTimeDomainIds;
} VkSwapchainTimeDomainPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timeDomainCount` is an integer related to the number of time domains available or queried, as

described below.

- **pTimeDomains** is a pointer to an array of **VkTimeDomainKHR** values representing time domains that are available for the swapchain.
- **pTimeDomainIds** is a pointer to an array of unique identifiers for each time domain.

When calling **vkGetSwapchainTimeDomainPropertiesEXT**, if **pTimeDomains** is **NULL** and **pTimeDomainIds** is **NULL**, then the number of time domains supported for the given **swapchain** is returned in **timeDomainCount**. Otherwise, **timeDomainCount** **must** specify the number of elements in **pTimeDomains** and **pTimeDomainIds**, and on return is overwritten with the number of values actually written to each array.

Implementations **must** advertise support for at least one time domain of **VK\_TIME\_DOMAIN\_PRESENT\_STAGE\_LOCAL\_EXT**.

#### NOTE

Due to the dynamic nature of their underlying **VkSurfaceKHR** properties, swapchains may need to expose multiple swapchain-local opaque time domains using the same **VkTimeDomainKHR** value over time, for example when a surface is moved from one display hardware to another. Arbitrary identifiers, provided in **timeDomainIds**, are used by the implementation to differentiate opaque time domains of identical scopes.

### Valid Usage

- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12370  
**pTimeDomains** and **pTimeDomainIds** **must** both be **NULL** or both not be **NULL**
- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12371  
If **pTimeDomains** and **pTimeDomainIds** are not **NULL**, then **timeDomainCount** **must** not be zero

### Valid Usage (Implicit)

- VUID-VkSwapchainTimeDomainPropertiesEXT-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_SWAPCHAIN\_TIME\_DOMAIN\_PROPERTIES\_EXT**
- VUID-VkSwapchainTimeDomainPropertiesEXT-pNext-pNext  
**pNext** **must** be **NULL**

Because of the asynchronous nature of the presentation engine, the timing information for a given **vkQueuePresentKHR** command **may** only become available some time after the presentation has occurred. These time values **should** be asynchronously queried, and are returned if available. All time values are in nanoseconds, according to the time-domain being used.

To asynchronously query the presentation engine for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetPastPresentationTimingEXT(
    VkDevice device,
    const VkPastPresentationTimingInfoEXT* pPastPresentationTimingInfo,
    VkPastPresentationTimingPropertiesEXT* pPastPresentationTimingProperties);
```

- `device` is the device associated with `swapchain`.
- `pPastPresentationTimingInfo` is a pointer to an instance of the `VkPastPresentationTimingInfoEXT` structure.
- `pPastPresentationTimingProperties` is a pointer to an instance of the `VkPastPresentationTimingPropertiesEXT` structure.

If upon return the value of `VkPastPresentationTimingPropertiesEXT::presentationTimingCount` is less than the number of available timing records for the given `VkPastPresentationTimingInfoEXT::swapchain`, `VK_INCOMPLETE` is returned instead of `VK_SUCCESS` to indicate that not all the available values were returned.

Upon return, zero or more slots of the `swapchain` internal timing results queue, equal to the number of entries written to `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` for which `reportComplete` is `VK_TRUE`, are made available for future `vkQueuePresentKHR` calls. Elements of `pPresentationTimings` are arranged in ascending order of present ids.

Timing information **may** become available out of order with regards to their associated `vkQueuePresentKHR` order. `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` **can** be set in `VkPastPresentationTimingInfoEXT::flags` to allow `vkGetPastPresentationTimingEXT` to return results in that same order. Otherwise, results are returned in the order of their associated `vkQueuePresentKHR` calls.

There is no requirement for any precise timing relationship between the completion of a present stage and the availability of any associated timing information. However, results **must** be made available in finite time.

As an exception to the normal rules for objects which are externally synchronized, `swapchain` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR` and `vkCreateSwapchainKHR` with `swapchain` used as an `oldSwapchain`. Access to the swapchain timing information **must** be atomic within the implementation.

## Valid Usage

- VUID-vkGetPastPresentationTimingEXT-flags-12230  
If `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` is set in `VkPastPresentationTimingInfoEXT::flags`, the `presentStageCount` value of each element of `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` **must** be at least the maximum number of present stages set in `VkPresentTimingInfoEXT::presentStageQueries` among all `vkQueuePresentKHR` calls, with a non-zero `presentStageQueries`, for which complete results have not been returned yet by a previous call

- VUID-vkGetPastPresentationTimingEXT-flags-12231

If `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` is not set in `VkPastPresentationTimingInfoEXT::flags`, the `presentStageCount` value of each element of `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` **must** be at least the number of present stages set in `VkPresentTimingInfoEXT::presentStageQueries` for the earliest call to `vkQueuePresentKHR`, with a non-zero `presentStageQueries`, that corresponds to that element's index and for which complete results have not been returned yet by a previous call

## Valid Usage (Implicit)

- VUID-vkGetPastPresentationTimingEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingInfo-parameter  
`pPastPresentationTimingInfo` **must** be a valid pointer to a valid `VkPastPresentationTimingInfoEXT` structure
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingProperties-parameter  
`pPastPresentationTimingProperties` **must** be a valid pointer to a `VkPastPresentationTimingPropertiesEXT` structure

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPastPresentationTimingInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    VkPastPresentationTimingFlagsEXT flags;
    VkSwapchainKHR            swapchain;
} VkPastPresentationTimingInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPastPresentationTimingFlagBitsEXT` specifying options for queries of past presentation timing information.
- `swapchain` is the swapchain to obtain presentation timing information for.

### Valid Usage (Implicit)

- VUID-VkPastPresentationTimingInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_INFO_EXT`
- VUID-VkPastPresentationTimingInfoEXT-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkPastPresentationTimingInfoEXT-flags-parameter  
If `flags` is not `0`, `flags` **must** be a valid combination of `VkPastPresentationTimingFlagBitsEXT` values
- VUID-VkPastPresentationTimingInfoEXT-swapchain-parameter  
`swapchain` **must** be a valid `VkSwapchainKHR` handle

### Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPastPresentationTimingFlagsEXT;
```

`VkPastPresentationTimingFlagsEXT` is a bitmask type for setting a mask of zero or more `VkPastPresentationTimingFlagBitsEXT`.

Bits which **can** be set in `VkPastPresentationTimingInfoEXT::flags`, specifying options for queries of past presentation timing information, are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPastPresentationTimingFlagBitsEXT {
    VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT = 0x00000001,
    VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT = 0x00000002,
} VkPastPresentationTimingFlagBitsEXT;
```

- `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` specifies that `vkGetPastPresentationTimingEXT` **may** return partial results for presentation requests that have not completed all requested present stages.
- `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` specifies that `vkGetPastPresentationTimingEXT` **may** return results out of order with respect to the

presentation order.

The `VkPastPresentationTimingPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingPropertiesEXT {
    VkStructureType      sType;
    void*                pNext;
    uint64_t             timingPropertiesCounter;
    uint64_t             timeDomainsCounter;
    uint32_t             presentationTimingCount;
    VkPastPresentationTimingEXT* pPresentationTimings;
} VkPastPresentationTimingPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timingPropertiesCounter` is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.
- `timeDomainsCounter` is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domains list counter.
- `presentationTimingCount` is an integer related to the number of `VkPastPresentationTimingEXT` structures available or queried, as described below.
- `pPresentationTimings` is `NULL` or a pointer to an array of `VkPastPresentationTimingEXT` structures.

When calling `vkGetPastPresentationTimingEXT`, if `pPresentationTimings` is `NULL`, then the number of available timing records for the given `swapchain` is returned in `presentationTimingCount`. Otherwise, `presentationTimingCount` **must** specify the number of elements in the `pPresentationTimings` array, and on return is overwritten with the number of structures actually written to `pPresentationTimings`.

if `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` is specified in `VkPastPresentationTimingInfoEXT::flags`, `vkGetPastPresentationTimingEXT` **may** return incomplete results, containing only information for a subset of the requested present stages. Further calls to `vkGetPastPresentationTimingEXT` will keep providing all available results for a previously incomplete entry until it is complete.

The implementation **must** return a `VkPastPresentationTimingEXT` for every `vkQueuePresentKHR` referencing `swapchain` where a non-zero `VkPresentTimingInfoEXT::presentStageQueries` was specified and at least one present stage has available results.

### Valid Usage (Implicit)

- VUID-VkPastPresentationTimingPropertiesEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_PROPERTIES_EXT`
- VUID-VkPastPresentationTimingPropertiesEXT-pNext-pNext

**pNext must be NULL**

#### NOTE

The presentation engine **may** change the timing properties of the **swapchain** for a variety of reasons.

This **may** occur, for example, if the window system changes its mode, including the refresh rate of the display. Another example is if an application's surface is being composited with other windows of a window system, and then the surface's window becomes a borderless, full-screen window. While composited, the timing properties **may** be FRR, and while full-screen, the timing properties **may** be VRR.

The available time domains for a swapchain **may** change for similar or identical reasons. Therefore, it is possible that the same event will cause both the swapchain's internal timing properties counter and time domains list counter to update.

The **VkPastPresentationTimingEXT** structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           presentId;
    uint64_t           targetTime;
    uint32_t           presentStageCount;
    VkPresentStageTimeEXT* pPresentStages;
    VkTimeDomainKHR    timeDomain;
    uint64_t           timeDomainId;
    VkBool32           reportComplete;
} VkPastPresentationTimingEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentId** is zero or a value that was given to a previous **vkQueuePresentKHR** command via **VkPresentId2KHR::pPresentIds**.
- **targetTime** is the application-provided target absolute time or duration of the associated presentation request in **VkPresentTimingInfoEXT::targetTime**.
- **presentStageCount** is a count of items contained in **pPresentStages**.
- **pPresentStages** a pointer to an array of **VkPresentStageTimeEXT** providing timing information for the presentation request associated with **presentId**.
- **timeDomain** is the time domain used by the presentation engine to report times in **pPresentStages**.
- **timeDomainId** is the id associated with **timeDomain**.
- **reportComplete** is **VK\_TRUE** if the presentation engine has reported all the requested results in **pPresentStages**.

When calling `vkGetPastPresentationTimingEXT`, the implementation sets `presentStageCount` to the number of present stages it has written results for. If `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` was specified in `VkPastPresentationTimingInfoEXT::flags`, the implementation **may** return an incomplete report containing fewer present stage results than were queried by the associated presentation request. Otherwise, results for all the present stages queried by the presentation request are written by the implementation.

Timing information for some present stages **may** have a time value of 0, indicating that results for that present stage are not available.

For systems with multiple entities operating within the presentation engine, such as multiple displays, `pPresentStages` will return timing results for one entity which has been affected by the presentation.

`timeDomainId` **may** be different than the time domain that was specified in `VkPresentTimingInfoEXT::timeDomainId` if the requirements for using this time domain could not be met at the time the presentation engine processed the presentation request. In such a case, the presentation engine **may** pick a time domain to fall back to, if one is available, and report results in that domain. Applications **can** continue to use this fallback time domain in future `vkQueuePresentKHR` calls, or they **can** call `vkGetSwapchainTimeDomainPropertiesEXT` to choose from the currently supported time domains.

### Valid Usage (Implicit)

- VUID-VkPastPresentationTimingEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_EXT`
- VUID-VkPastPresentationTimingEXT-pNext-pNext  
`pNext` **must** be `NULL`

The `VkPresentStageTimeEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentStageTimeEXT {
    VkPresentStageFlagsEXT    stage;
    uint64_t                  time;
} VkPresentStageTimeEXT;
```

- `stage` is a `VkPresentStageFlagsEXT` value specifying a present stage.
- `time` is a time in nanoseconds associated with the `stage`.

## 37.9. Present Wait

Applications wanting to control the pacing of the application by monitoring when presentation processes have completed to limit the number of outstanding images queued for presentation, need to have a method of being signaled during the presentation process.

Providing a mechanism which allows applications to block, waiting for a specific step of the presentation process to complete allows them to control the amount of outstanding work (and hence the potential lag in responding to user input or changes in the rendering environment).

The `VK_KHR_present_wait2` extension allows applications to tell the presentation engine at the `vkQueuePresentKHR` call that it plans on waiting for presentation by passing a `VkPresentId2KHR` structure. The `presentId` passed in that structure may then be passed to a future `vkWaitForPresent2KHR` call to cause the application to block until that presentation is finished.

This functionality was originally provided by the `VK_KHR_present_wait` extension, which has been deprecated and replaced by `VK_KHR_present_wait2`.

The `VkPresentWait2InfoKHR` structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPresentWait2InfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentId;
    uint64_t           timeout;
} VkPresentWait2InfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` is the presentation `presentId` to wait for.
- `timeout` is the timeout period in units of nanoseconds. `timeout` is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

### Valid Usage (Implicit)

- VUID-VkPresentWait2InfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_WAIT_2_INFO_KHR`
- VUID-VkPresentWait2InfoKHR-pNext-pNext  
`pNext` **must** be `NULL`

## 37.10. WSI Swapchain

A swapchain object (a.k.a. swapchain) provides the ability to present rendering results to a surface. Swapchain objects are represented by `VkSwapchainKHR` handles:

```
// Provided by VK_KHR_swapchain
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSwapchainKHR)
```

A swapchain is an abstraction for an array of presentable images that are associated with a surface. The presentable images are represented by `VkImage` objects created by the platform. One image (which **can** be an array image for multiview/stereoscopic-3D surfaces) is displayed at a time, but multiple images **can** be queued for presentation. An application renders to the image, and then queues the image for presentation to the surface.

A native window **cannot** be associated with more than one non-retired swapchain at a time. Further, swapchains **cannot** be created for native windows that have a non-Vulkan graphics API surface associated with them.

**NOTE**

The presentation engine is an abstraction for the platform's compositor or display engine.

The presentation engine **may** be synchronous or asynchronous with respect to the application and/or logical device.

Some implementations **may** use the device's graphics queue or dedicated presentation hardware to perform presentation.

The presentable images of a swapchain are owned by the presentation engine. An application **can** acquire use of a presentable image from the presentation engine. Use of a presentable image **must** occur only after the image is returned by `vkAcquireNextImageKHR`, and before it is released by `vkQueuePresentKHR`. This includes transitioning the image layout and rendering commands.

An application **can** acquire use of a presentable image with `vkAcquireNextImageKHR`. After acquiring a presentable image and before modifying it, the application **must** use a synchronization primitive to ensure that the presentation engine has finished reading from the image. The application **can** then transition the image's layout, queue rendering commands to it, etc. Finally, the application presents the image with `vkQueuePresentKHR`, which releases the acquisition of the image. The application **can** also release the acquisition of the image through `vkReleaseSwapchainImagesKHR`, if the image is not in use by the device, and skip the present operation.

The presentation engine controls the order in which presentable images are acquired for use by the application.

**NOTE**

This allows the platform to handle situations which require out-of-order return of images after presentation. At the same time, it allows the application to generate command buffers referencing all of the images in the swapchain at initialization time, rather than in its main loop.

How this all works is described below.

If a swapchain is created with `presentMode` set to either `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`, a single presentable image **can** be acquired, referred to as a shared presentable image. A shared presentable image **may** be concurrently accessed by the application and the presentation engine, without transitioning the image's layout after it is initially presented.

- With [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#), the presentation engine is only required to update to the latest contents of a shared presentable image after a present. The application **must** call `vkQueuePresentKHR` to guarantee an update. However, the presentation engine **may** update from it at any time.
- With [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#), the presentation engine will automatically present the latest contents of a shared presentable image during every refresh cycle. The application is only required to make one initial call to `vkQueuePresentKHR`, after which the presentation engine will update from it without any need for further present calls. The application **can** indicate the image contents have been updated by calling `vkQueuePresentKHR`, but this does not guarantee the timing of when updates will occur.

The presentation engine **may** access a shared presentable image at any time after it is first presented. To avoid tearing, an application **should** coordinate access with the presentation engine. This requires presentation engine timing information through platform-specific mechanisms and ensuring that color attachment writes are made available during the portion of the presentation engine's refresh cycle they are intended for.

#### NOTE

The [VK\\_KHR\\_shared\\_presentable\\_image](#) extension does not provide functionality for determining the timing of the presentation engine's refresh cycles.

In order to query a swapchain's status when rendering to a shared presentable image, call:

```
// Provided by VK_KHR_shared_presentable_image
VkResult vkGetSwapchainStatusKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.

### Valid Usage (Implicit)

- VUID-vkGetSwapchainStatusKHR-device-parameter `device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parameter `swapchain` **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

## Return Codes

### Success

- [VK\\_SUBOPTIMAL\\_KHR](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The possible return values for [vkGetSwapchainStatusKHR](#) **should** be interpreted as follows:

- [VK\\_SUCCESS](#) specifies the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's [VkPresentModeKHR](#).
- [VK\\_SUBOPTIMAL\\_KHR](#) the swapchain no longer matches the surface properties exactly, but the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's [VkPresentModeKHR](#).
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) the surface has changed in such a way that it is no longer compatible with the swapchain.
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#) the surface is no longer available.

### NOTE

The swapchain state **may** be cached by implementations, so applications **should** regularly call [vkGetSwapchainStatusKHR](#) when using a swapchain with [VkPresentModeKHR](#) equal to [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#).

To create a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkCreateSwapchainKHR(
    VkDevice                                device,
    const VkSwapchainCreateInfoKHR*         pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkSwapchainKHR*                         pSwapchain);
```

- [device](#) is the device to create the swapchain for.

- **pCreateInfo** is a pointer to a [VkSwapchainCreateInfoKHR](#) structure specifying the parameters of the created swapchain.
- **pAllocator** is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSwapchain** is a pointer to a [VkSwapchainKHR](#) handle in which the created swapchain object will be returned.

As mentioned above, if **vkCreateSwapchainKHR** succeeds, it will return a handle to a swapchain containing an array of at least **pCreateInfo->minImageCount** presentable images.

While acquired by the application, presentable images **can** be used in any way that equivalent non-presentable images **can** be used. A presentable image is equivalent to a non-presentable image created with the following [VkImageCreateInfo](#) parameters:

| <b>VkImageCreateInfo Field</b> | <b>Value</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>format</b>                  | <b>pCreateInfo-&gt;imageFormat</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>extent</b>                  | { <b>pCreateInfo-&gt;imageExtent.width</b> , <b>pCreateInfo-&gt;imageExtent.height</b> , 1}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>mipLevels</b>               | 1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>arrayLayers</b>             | <b>pCreateInfo-&gt;imageArrayLayers</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>samples</b>                 | <a href="#">VK_SAMPLE_COUNT_1_BIT</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| VkImageCreateInfo Field | Value                              |
|-------------------------|------------------------------------|
| tiling                  | VK_IMAGE_TILING_OPTIMAL            |
| usage                   | pCreateInfo->imageUsage            |
| sharingMode             | pCreateInfo->imageSharingMode      |
| queueFamilyIndexCount   | pCreateInfo->queueFamilyIndexCount |
| pQueueFamilyIndices     | pCreateInfo->pQueueFamilyIndices   |
| initialLayout           | VK_IMAGE_LAYOUT_UNDEFINED          |

The `pCreateInfo->surface` **must** not be destroyed until after the swapchain is destroyed.

If `oldSwapchain` is `VK_NULL_HANDLE`, and the native window referred to by `pCreateInfo->surface` is already associated with a Vulkan swapchain, `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR` **must** be returned.

If `oldSwapchain` is a valid swapchain and there are outstanding calls to `vkWaitForPresent2KHR`, then `vkCreateSwapchainKHR` **may** block until those calls complete.

If the native window referred to by `pCreateInfo->surface` is already associated with a non-Vulkan graphics API surface, `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR` **must** be returned.

The native window referred to by `pCreateInfo->surface` **must** not become associated with a non-Vulkan graphics API surface before all associated Vulkan swapchains have been destroyed.

`vkCreateSwapchainKHR` will return `VK_ERROR_DEVICE_LOST` if the logical device was lost. The `VkSwapchainKHR` is a child of the `device`, and **must** be destroyed before the `device`. However, `VkSurfaceKHR` is not a child of any `VkDevice` and is not affected by the lost device. After successfully recreating a `VkDevice`, the same `VkSurfaceKHR` **can** be used to create a new `VkSwapchainKHR`, provided the previous one was destroyed.

If the `oldSwapchain` parameter of `pCreateInfo` is a valid swapchain, which has exclusive full-screen access, that access is released from `pCreateInfo->oldSwapchain`. If the command succeeds in this case, the newly created swapchain will automatically acquire exclusive full-screen access from `pCreateInfo->oldSwapchain`.

#### NOTE

This implicit transfer is intended to avoid exiting and entering full-screen exclusive mode, which may otherwise cause unwanted visual updates to the display.

In some cases, swapchain creation **may** fail if exclusive full-screen mode is requested for application control, but for some implementation-specific reason exclusive full-screen access is unavailable for the particular combination of parameters provided. If this occurs, `VK_ERROR_INITIALIZATION_FAILED` will be returned.

#### NOTE

In particular, it will fail if the `imageExtent` member of `pCreateInfo` does not match the extents of the monitor. Other reasons for failure may include the application not being set as high-dpi aware, or if the physical device and monitor are not compatible in this mode.

## Valid Usage (Implicit)

- VUID-vkCreateSwapchainKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreateSwapchainKHR-pCreateInfo-parameter  
**pCreateInfo** **must** be a valid pointer to a valid [VkSwapchainCreateInfoKHR](#) structure
- VUID-vkCreateSwapchainKHR-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateSwapchainKHR-pSwapchain-parameter  
**pSwapchain** **must** be a valid pointer to a [VkSwapchainKHR](#) handle
- VUID-vkCreateSwapchainKHR-device-queuecount  
The device **must** have been created with at least **1** queue

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_COMPRESSION\\_EXHAUSTED\\_EXT](#)
- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_INITIALIZATION\\_FAILED](#)
- [VK\\_ERROR\\_NATIVE\\_WINDOW\\_IN\\_USE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkSwapchainCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkSwapchainCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkSwapchainCreateFlagsKHR flags;
    VkSurfaceKHR         surface;
    uint32_t             minImageCount;
    VkFormat             imageFormat;
    VkColorSpaceKHR      imageColorSpace;
    VkExtent2D           imageExtent;
    uint32_t             imageArrayLayers;
    VkImageUsageFlags    imageUsage;
    VkSharingMode         imageSharingMode;
    uint32_t             queueFamilyIndexCount;
    const uint32_t*       pQueueFamilyIndices;
    VkSurfaceTransformFlagBitsKHR preTransform;
    VkCompositeAlphaFlagBitsKHR compositeAlpha;
    VkPresentModeKHR      presentMode;
    VkBool32             clipped;
    VkSwapchainKHR        oldSwapchain;
} VkSwapchainCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkSwapchainCreateFlagBitsKHR](#) indicating parameters of the swapchain creation.
- **surface** is the surface onto which the swapchain will present images. If the creation succeeds, the swapchain becomes associated with **surface**.
- **minImageCount** is the minimum number of presentable images that the application needs. The implementation will either create the swapchain with at least that many images, or it will fail to create the swapchain.
- **imageFormat** is a [VkFormat](#) value specifying the format the swapchain image(s) will be created with.
- **imageColorSpace** is a [VkColorSpaceKHR](#) value specifying the way the swapchain interprets image data.
- **imageExtent** is the size (in pixels) of the swapchain image(s). The behavior is platform-dependent if the image extent does not match the surface's **currentExtent** as returned by [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#).

#### NOTE

On some platforms, it is normal that **maxImageExtent** **may** become **(0, 0)**, for example when the window is minimized. In such a case, it is not possible to create a swapchain due to the Valid Usage requirements, unless scaling is selected through [VkSwapchainPresentScalingCreateInfoKHR](#), if supported.

- **imageArrayLayers** is the number of views in a multiview/stereo surface. For non-stereoscopic-3D

applications, this value is 1.

- **imageUsage** is a bitmask of **VkImageUsageFlagBits** describing the intended usage of the (acquired) swapchain images.
- **imageSharingMode** is the sharing mode used for the image(s) of the swapchain.
- **queueFamilyIndexCount** is the number of queue families having access to the image(s) of the swapchain when **imageSharingMode** is **VK\_SHARING\_MODE\_CONCURRENT**.
- **pQueueFamilyIndices** is a pointer to an array of queue family indices having access to the images(s) of the swapchain when **imageSharingMode** is **VK\_SHARING\_MODE\_CONCURRENT**.
- **preTransform** is a **VkSurfaceTransformFlagBitsKHR** value describing the transform, relative to the presentation engine's natural orientation, applied to the image content prior to presentation. If it does not match the **currentTransform** value returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR**, the presentation engine will transform the image content as part of the presentation operation.
- **compositeAlpha** is a **VkCompositeAlphaFlagBitsKHR** value indicating the alpha compositing mode to use when this surface is composited together with other surfaces on certain window systems.
- **presentMode** is the presentation mode the swapchain will use. A swapchain's present mode determines how incoming present requests will be processed and queued internally.
- **clipped** specifies whether the Vulkan implementation is allowed to discard rendering operations that affect regions of the surface that are not visible.
  - If **clipped** is **VK\_TRUE**, the presentable images associated with the swapchain **may** not own all of their pixels. Pixels in the presentable images that correspond to regions of the target surface obscured by another window on the desktop, or subject to some other clipping mechanism will have undefined content when read back. Fragment shaders **may** not execute for these pixels, and thus any side effects they would have had will not occur. Setting **VK\_TRUE** does not guarantee any clipping will occur, but allows more efficient presentation methods to be used on some platforms.
  - If **clipped** is **VK\_FALSE**, presentable images associated with the swapchain will own all of the pixels they contain.

#### NOTE

Applications **should** set this value to **VK\_TRUE** if they do not expect to read back the content of presentable images before presenting them or after reacquiring them, and if their fragment shaders do not have any side effects that require them to run for all pixels in the presentable image.

- **oldSwapchain** is **VK\_NULL\_HANDLE**, or the existing non-retired swapchain currently associated with **surface**. Providing a valid **oldSwapchain** **may** aid in the resource reuse, and also allows the application to still present any images that are already acquired from it.

Upon calling **vkCreateSwapchainKHR** with an **oldSwapchain** that is not **VK\_NULL\_HANDLE**, **oldSwapchain** is retired — even if creation of the new swapchain fails. The new swapchain is created in the non-retired state whether or not **oldSwapchain** is **VK\_NULL\_HANDLE**.

Upon calling **vkCreateSwapchainKHR** with an **oldSwapchain** that is not **VK\_NULL\_HANDLE**, any images from **oldSwapchain** that are not acquired by the application **may** be freed by the implementation,

which **may** occur even if creation of the new swapchain fails. The application **can** destroy **oldSwapchain** to free all memory associated with **oldSwapchain**.

#### NOTE

Multiple retired swapchains **can** be associated with the same **VkSurfaceKHR** through multiple uses of **oldSwapchain** that outnumber calls to **vkDestroySwapchainKHR**.

After **oldSwapchain** is retired, the application **can** pass to **vkQueuePresentKHR** any images it had already acquired from **oldSwapchain**. E.g., an application may present an image from the old swapchain before an image from the new swapchain is ready to be presented. As usual, **vkQueuePresentKHR** **may** fail if **oldSwapchain** has entered a state that causes **VK\_ERROR\_OUT\_OF\_DATE\_KHR** to be returned.

The application **can** continue to use a shared presentable image obtained from **oldSwapchain** until a presentable image is acquired from the new swapchain, as long as it has not entered a state that causes it to return **VK\_ERROR\_OUT\_OF\_DATE\_KHR**.

**imageUsage** defines the **effective usage flags** for the swapchain image(s). If the **pNext** chain includes a **VkImageUsageFlags2CreateInfoKHR** structure, **imageUsage** is ignored, and the effective usage flags are defined by **VkImageUsageFlags2CreateInfoKHR::usage**.

### Valid Usage

- VUID-VkSwapchainCreateInfoKHR-surface-01270  
**surface** **must** be a surface that is supported by the device as determined using **vkGetPhysicalDeviceSurfaceSupportKHR**
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01272  
**minImageCount** **must** be less than or equal to the value returned in the **maxImageCount** member of the **VkSurfaceCapabilitiesKHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR** for the surface if the returned **maxImageCount** is not zero
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10155  
If the **swapchainMaintenance1** feature is not enabled, then the **pNext** chain **must** not include a **VkSwapchainPresentModesCreateInfoKHR** structure
- VUID-VkSwapchainCreateInfoKHR-presentMode-02839  
If **presentMode** is not **VK\_PRESENT\_MODE\_SHARED\_DEMAND\_REFRESH\_KHR** nor **VK\_PRESENT\_MODE\_SHARED\_CONTINUOUS\_REFRESH\_KHR**, then **minImageCount** **must** be greater than or equal to the value returned in the **minImageCount** member of the **VkSurfaceCapabilitiesKHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR** for the surface
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01383  
**minImageCount** **must** be **1** if **presentMode** is either **VK\_PRESENT\_MODE\_SHARED\_DEMAND\_REFRESH\_KHR** or **VK\_PRESENT\_MODE\_SHARED\_CONTINUOUS\_REFRESH\_KHR**
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01273  
**imageFormat** and **imageColorSpace** **must** match the **format** and **colorSpace** members, respectively, of one of the **VkSurfaceFormatKHR** structures returned by

`vkGetPhysicalDeviceSurfaceFormatsKHR` for the surface

- VUID-VkSwapchainCreateInfoKHR-pNext-07781

If a `VkSwapchainPresentScalingCreateInfoKHR` structure was not included in the `pNext` chain, or it is included and `VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior` is zero then `imageExtent` **must** be between `minImageExtent` and `maxImageExtent`, inclusive, where `minImageExtent` and `maxImageExtent` are members of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface

- VUID-VkSwapchainCreateInfoKHR-pNext-07782

If a `VkSwapchainPresentScalingCreateInfoKHR` structure was included in the `pNext` chain and `VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior` is not zero then `imageExtent` **must** be between `minScaledImageExtent` and `maxScaledImageExtent`, inclusive, where `minScaledImageExtent` and `maxScaledImageExtent` are members of the `VkSurfacePresentScalingCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface and `presentMode`

- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10157

If the `swapchainMaintenance1` feature is not enabled, then `flags` **must** not include `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR`

- VUID-VkSwapchainCreateInfoKHR-imageExtent-01689

`imageExtent` members `width` and `height` **must** both be non-zero

- VUID-VkSwapchainCreateInfoKHR-imageArrayLayers-01275

`imageArrayLayers` **must** be greater than 0 and less than or equal to the `maxImageArrayLayers` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface

- VUID-VkSwapchainCreateInfoKHR-presentMode-01427

If `presentMode` is `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`, `VK_PRESENT_MODE_IMMEDIATE_KHR`, `VK_PRESENT_MODE_MAILBOX_KHR`, `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR`, `imageUsage` **must** be a subset of the supported usage flags present in the `supportedUsageFlags` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for `surface`

- VUID-VkSwapchainCreateInfoKHR-imageUsage-01384

If `presentMode` is `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`, `imageUsage` **must** be a subset of the supported usage flags present in the `sharedPresentSupportedUsageFlags` member of the `VkSharedPresentSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for `surface`

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01277

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01278

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, `queueFamilyIndexCount` **must** be greater than 1

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01428

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of

`pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties` or `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create `device`

- VUID-VkSwapchainCreateInfoKHR-preTransform-01279  
`preTransform` **must** be one of the bits present in the `supportedTransforms` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-01280  
`compositeAlpha` **must** be one of the bits present in the `supportedCompositeAlpha` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01281  
`presentMode` **must** be one of the `VkPresentModeKHR` values returned by `vkGetPhysicalDeviceSurfacePresentModesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-presentModeFifoLatestReady-10161  
If the `presentModeFifoLatestReady` feature is not enabled, `presentMode` **must** not be `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`
- VUID-VkSwapchainCreateInfoKHR-physicalDeviceCount-01429  
If the logical device was created with `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` equal to 1, `flags` **must** not contain `VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR`
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-01933  
If `oldSwapchain` is not `VK_NULL_HANDLE`, `oldSwapchain` **must** be a non-retired swapchain associated with native window referred to by `surface`
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01778  
The implied image creation parameters of the swapchain **must** be supported as reported by `vkGetPhysicalDeviceImageFormatProperties` or `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-VkSwapchainCreateInfoKHR-flags-03168  
If `flags` contains `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` then the `pNext` chain **must** include a `VkImageFormatListCreateInfo` structure with a `viewFormatCount` greater than zero and `pViewFormats` **must** have an element equal to `imageFormat`
- VUID-VkSwapchainCreateInfoKHR-pNext-04099  
If a `VkImageFormatListCreateInfo` structure was included in the `pNext` chain and `VkImageFormatListCreateInfo::viewFormatCount` is not zero then all of the formats in `VkImageFormatListCreateInfo::pViewFormats` **must** be compatible with the `format` as described in the compatibility table
- VUID-VkSwapchainCreateInfoKHR-flags-04100  
If `flags` does not contain `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` and the `pNext` chain include a `VkImageFormatListCreateInfo` structure then `VkImageFormatListCreateInfo::viewFormatCount` **must** be 0 or 1
- VUID-VkSwapchainCreateInfoKHR-flags-03187

If **flags** contains **VK\_SWAPCHAIN\_CREATE\_PROTECTED\_BIT\_KHR**, then **VkSurfaceProtectedCapabilitiesKHR::supportsProtected** **must** be **VK\_TRUE** in the **VkSurfaceProtectedCapabilitiesKHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilities2KHR** for **surface**

- VUID-VkSwapchainCreateInfoKHR-pNext-02679

If the **pNext** chain includes a **VkSurfaceFullScreenExclusiveInfoEXT** structure with its **fullScreenExclusive** member set to **VK\_FULL\_SCREEN\_EXCLUSIVE\_APPLICATION\_CONTROLLED\_EXT**, and **surface** was created using **vkCreateWin32SurfaceKHR**, a **VkSurfaceFullScreenExclusiveWin32InfoEXT** structure **must** be included in the **pNext** chain

- VUID-VkSwapchainCreateInfoKHR-pNext-06752

If the **imageCompressionControlSwapchain** feature is not enabled, the **pNext** chain **must** not include an **VkImageCompressionControlEXT** structure

- VUID-VkSwapchainCreateInfoKHR-multisampledRenderToSwapchain-12447

If the **multisampledRenderToSwapchain** feature is not enabled, **flags** **must** not contain **VK\_SWAPCHAIN\_CREATE\_MULTISAMPLED\_RENDER\_TO\_SINGLE\_SAMPLED\_BIT\_EXT**

- VUID-VkSwapchainCreateInfoKHR-flags-12448

**flags** **must** be a subset of flags returned in **VkSwapchainFlagsSurfaceCapabilitiesEXT::swapchainSupportedFlags**, given **VkSwapchainCreateInfoKHR::presentMode** in **VkSurfacePresentModeKHR**

- VUID-VkSwapchainCreateInfoKHR-presentTiming-12232

If none of the **presentTiming**, **presentAtAbsoluteTime**, or **presentAtRelativeTime** features are enabled, **flags** **must** not contain **VK\_SWAPCHAIN\_CREATE\_PRESENT\_TIMING\_BIT\_EXT**

## Valid Usage (Implicit)

- VUID-VkSwapchainCreateInfoKHR-sType-sType

**sType** **must** be **VK\_STRUCTURE\_TYPE\_SWAPCHAIN\_CREATE\_INFO\_KHR**

- VUID-VkSwapchainCreateInfoKHR-pNext-pNext

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkDeviceGroupSwapchainCreateInfoKHR**, **VkImageCompressionControlEXT**, **VkImageFormatListCreateInfo**, **VkImageUsageFlags2CreateInfoKHR**, **VkSurfaceFullScreenExclusiveInfoEXT**, **VkSurfaceFullScreenExclusiveWin32InfoEXT**, **VkSwapchainCounterCreateInfoEXT**, **VkSwapchainPresentModesCreateInfoKHR**, or **VkSwapchainPresentScalingCreateInfoKHR**

- VUID-VkSwapchainCreateInfoKHR-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkSwapchainCreateInfoKHR-flags-parameter

If **flags** is not 0, **flags** **must** be a valid combination of **VkSwapchainCreateFlagBitsKHR** values

- VUID-VkSwapchainCreateInfoKHR-surface-parameter

**surface** **must** be a valid **VkSurfaceKHR** handle

- VUID-VkSwapchainCreateInfoKHR-imageFormat-parameter

**imageFormat** **must** be a valid [VkFormat](#) value

- VUID-VkSwapchainCreateInfoKHR-imageColorSpace-parameter  
**imageColorSpace** **must** be a valid [VkColorSpaceKHR](#) value
- VUID-VkSwapchainCreateInfoKHR-imageUsage-parameter  
**imageUsage** **must** be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-parameter  
**imageSharingMode** **must** be a valid [VkSharingMode](#) value
- VUID-VkSwapchainCreateInfoKHR-preTransform-parameter  
**preTransform** **must** be a valid [VkSurfaceTransformFlagBitsKHR](#) value
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-parameter  
**compositeAlpha** **must** be a valid [VkCompositeAlphaFlagBitsKHR](#) value
- VUID-VkSwapchainCreateInfoKHR-presentMode-parameter  
**presentMode** **must** be a valid [VkPresentModeKHR](#) value
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-parameter  
If **oldSwapchain** is not [VK\\_NULL\\_HANDLE](#), **oldSwapchain** **must** be a valid [VkSwapchainKHR](#) handle
- VUID-VkSwapchainCreateInfoKHR-commonparent  
Both of **oldSwapchain**, and **surface** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkInstance](#)

## Host Synchronization

- Host access to **surface** **must** be externally synchronized
- Host access to **oldSwapchain** **must** be externally synchronized

Bits which **can** be set in [VkSwapchainCreateInfoKHR::flags](#), specifying parameters of swapchain creation, are:

```

// Provided by VK_KHR_swapchain
typedef enum VkSwapchainCreateFlagBitsKHR {
    // Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
    VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR = 0x00000001,
    // Provided by VK_VERSION_1_1 with VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_swapchain_mutable_format
    VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR = 0x00000004,
    // Provided by VK_EXT_present_timing
    VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT = 0x00000200,
    // Provided by VK_KHR_present_id2
    VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR = 0x00000400,
    // Provided by VK_KHR_present_wait2
    VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR = 0x00000800,
    // Provided by VK_KHR_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR = 0x00000008,
    // Provided by VK_EXT_multisampled_render_to_swapchain
    VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT = 0x00000100,
    // Provided by VK_EXT_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT =
VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR,
} VkSwapchainCreateFlagBitsKHR;

```

- [VK\\_SWAPCHAIN\\_CREATE\\_SPLIT\\_INSTANCE\\_BIND\\_REGIONS\\_BIT\\_KHR](#) specifies that images created from the swapchain (i.e. with the `swapchain` member of [VkImageSwapchainCreateInfoKHR](#) set to this swapchain's handle) **must** use [VK\\_IMAGE\\_CREATE\\_SPLIT\\_INSTANCE\\_BIND\\_REGIONS\\_BIT](#).
- [VK\\_SWAPCHAIN\\_CREATE\\_PROTECTED\\_BIT\\_KHR](#) specifies that images created from the swapchain are protected images.
- [VK\\_SWAPCHAIN\\_CREATE\\_MUTABLE\\_FORMAT\\_BIT\\_KHR](#) specifies that the images of the swapchain **can** be used to create a [VkImageView](#) with a different format than what the swapchain was created with. The list of allowed image view formats is specified by adding a [VkImageFormatListCreateInfo](#) structure to the `pNext` chain of [VkSwapchainCreateInfoKHR](#). In addition, this flag also specifies that the swapchain **can** be created with usage flags that are not supported for the format the swapchain is created with but are supported for at least one of the allowed image view formats.
- [VK\\_SWAPCHAIN\\_CREATE\\_DEFERRED\\_MEMORY\\_ALLOCATION\\_BIT\\_KHR](#) specifies that the implementation **may** defer allocation of memory associated with each swapchain image until its index is to be returned from [vkAcquireNextImageKHR](#) or [vkAcquireNextImage2KHR](#) for the first time.
- [VK\\_SWAPCHAIN\\_CREATE\\_PRESENT\\_ID\\_2\\_BIT\\_KHR](#) specifies that applications **can** include the [VkPresentId2KHR](#) structure in the `pNext` chain of the [VkPresentInfoKHR](#) structure to associate an identifier with each presentation request.
- [VK\\_SWAPCHAIN\\_CREATE\\_PRESENT\\_WAIT\\_2\\_BIT\\_KHR](#) specifies that applications **can** use [vkWaitForPresent2KHR](#) to wait for the presentation engine to have begun presentation of the

presentation request associated with `VkPresentWait2InfoKHR::presentId` on `swapchain`.

- `VK_SWAPCHAIN_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT` specifies that an image **can** be used with multisampled rendering as a single-sampled render pass attachment
- `VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT` specifies that features supported by the swapchain device in `VkPhysicalDevicePresentTimingFeaturesEXT` **can** be used to collect timing information or schedule presentation requests at specific times.

```
// Provided by VK_KHR_swapchain
typedef VkFlags VkSwapchainCreateFlagsKHR;
```

`VkSwapchainCreateFlagsKHR` is a bitmask type for setting a mask of zero or more `VkSwapchainCreateFlagBitsKHR`.

If the `pNext` chain of `VkSwapchainCreateInfoKHR` includes a `VkDeviceGroupSwapchainCreateInfoKHR` structure, then that structure includes a set of device group present modes that the swapchain **can** be used with.

The `VkDeviceGroupSwapchainCreateInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupSwapchainCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkDeviceGroupPresentModeFlagsKHR    modes;
} VkDeviceGroupSwapchainCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `modes` is a bitfield of modes that the swapchain **can** be used with.

If this structure is not present, `modes` is considered to be `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

### Valid Usage (Implicit)

- VUID-VkDeviceGroupSwapchainCreateInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR`
- VUID-VkDeviceGroupSwapchainCreateInfoKHR-modes-parameter  
`modes` **must** be a valid combination of `VkDeviceGroupPresentModeFlagBitsKHR` values

## Structure Chaining

### Extends the structure

- [VkSwapchainCreateInfoKHR](#)

If the `pNext` chain of [VkSwapchainCreateInfoKHR](#) includes a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure, then that structure specifies the application's preferred full-screen presentation behavior. If this structure is not present, `fullScreenExclusive` is considered to be `VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT`.

To enable surface counters when creating a swapchain, add a [VkSwapchainCounterCreateInfoEXT](#) structure to the `pNext` chain of [VkSwapchainCreateInfoKHR](#). [VkSwapchainCounterCreateInfoEXT](#) is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkSwapchainCounterCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkSurfaceCounterFlagsEXT surfaceCounters;
} VkSwapchainCounterCreateInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCounters` is a bitmask of [VkSurfaceCounterFlagBitsEXT](#) specifying surface counters to enable for the swapchain.

## Valid Usage

- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-01244  
The bits in `surfaceCounters` **must** be supported by [VkSwapchainCreateInfoKHR::surface](#), as reported by [vkGetPhysicalDeviceSurfaceCapabilities2EXT](#)

## Valid Usage (Implicit)

- VUID-VkSwapchainCounterCreateInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_COUNTER_CREATE_INFO_EXT`
- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-parameter  
If `surfaceCounters` is not `0`, `surfaceCounters` **must** be a valid combination of [VkSurfaceCounterFlagBitsEXT](#) values

## Structure Chaining

### Extends the structure

- [VkSwapchainCreateInfoKHR](#)

The requested counters become active when the first presentation command for the associated swapchain is processed by the presentation engine. To query the value of an active counter, use:

```
// Provided by VK_EXT_display_control
VkResult vkGetSwapchainCounterEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkSurfaceCounterFlagBitsEXT counter,
    uint64_t*         pCounterValue);
```

- `device` is the [VkDevice](#) associated with `swapchain`.
- `swapchain` is the swapchain from which to query the counter value.
- `counter` is a [VkSurfaceCounterFlagBitsEXT](#) value specifying the counter to query.
- `pCounterValue` will return the current value of the counter.

If a counter is not available because the swapchain is out of date, the implementation **may** return [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#).

## Valid Usage

- VUID-vkGetSwapchainCounterEXT-swapchain-01245  
One or more present commands on `swapchain` **must** have been processed by the presentation engine

## Valid Usage (Implicit)

- VUID-vkGetSwapchainCounterEXT-device-parameter  
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetSwapchainCounterEXT-swapchain-parameter  
`swapchain` **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetSwapchainCounterEXT-counter-parameter  
`counter` **must** be a valid [VkSurfaceCounterFlagBitsEXT](#) value
- VUID-vkGetSwapchainCounterEXT-pCounterValue-parameter  
`pCounterValue` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainCounterEXT-swapchain-parent  
`swapchain` **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To specify compression properties for the swapchain images in this swapchain, add a [VkImageCompressionControlEXT](#) structure to the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure.

Applications **can** modify the presentation mode used by the swapchain on a per-presentation basis. However, all presentation modes the application intends to use with the swapchain **must** be specified at swapchain creation time. To specify more than one presentation mode when creating a swapchain, include the [VkSwapchainPresentModesCreateInfoKHR](#) structure in the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure.

The [VkSwapchainPresentModesCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModesCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           presentModeCount;
    const VkPresentModeKHR* pPresentModes;
} VkSwapchainPresentModesCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModesCreateInfoKHR
typedef VkSwapchainPresentModesCreateInfoKHR VkSwapchainPresentModesCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [presentModeCount](#) is the number of presentation modes provided.
- [pPresentModes](#) is a list of presentation modes with [presentModeCount](#) entries

## Valid Usage

- VUID-VkSwapchainPresentModesCreateInfoKHR-None-07762  
Each entry in pPresentModes **must** be one of the [VkPresentModeKHR](#) values returned by [vkGetPhysicalDeviceSurfacePresentModesKHR](#) for the surface
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeFifoLatestReady-10160  
If the [presentModeFifoLatestReady](#) feature is not enabled, pPresentModes **must** not contain [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#)
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-07763  
The entries in pPresentModes **must** be a subset of the present modes returned in [VkSurfacePresentModeCompatibilityKHR::pPresentModes](#), given [VkSwapchainCreateInfoKHR::presentMode](#) in [VkSurfacePresentModeKHR](#)
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentMode-07764  
[VkSwapchainCreateInfoKHR::presentMode](#) **must** be included in pPresentModes

## Valid Usage (Implicit)

- VUID-VkSwapchainPresentModesCreateInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_PRESENT\\_MODES\\_CREATE\\_INFO\\_KHR](#)
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-parameter  
[pPresentModes](#) **must** be a valid pointer to an array of [presentModeCount](#) valid [VkPresentModeKHR](#) values
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeCount-arraylength  
[presentModeCount](#) **must** be greater than 0

## Structure Chaining

### Extends the structure

- [VkSwapchainCreateInfoKHR](#)

When an application presents a swapchain image with dimensions different than those of the target surface, different behavior is possible on different platforms per their respective specifications:

- Presentation fails and [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) is returned
- Scaling is done and [VK\\_SUCCESS](#) or [VK\\_SUBOPTIMAL\\_KHR](#) is returned
- Unspecified scaling using an arbitrary combination of stretching, centering and/or clipping.

Applications **can** define specific behavior when creating a swapchain by including the [VkSwapchainPresentScalingCreateInfoKHR](#) structure in the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure.

The `VkSwapchainPresentScalingCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentScalingCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkPresentScalingFlagsKHR scalingBehavior;
    VkPresentGravityFlagsKHR presentGravityX;
    VkPresentGravityFlagsKHR presentGravityY;
} VkSwapchainPresentScalingCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentScalingCreateInfoKHR
typedef VkSwapchainPresentScalingCreateInfoKHR VkSwapchainPresentScalingCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `scalingBehavior` is `0` or the scaling method to use when the dimensions of the surface and swapchain images differ.
- `presentGravityX` is `0` or the x-axis direction in which swapchain image pixels gravitate relative to the surface when `scalingBehavior` does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.
- `presentGravityY` is `0` or the y-axis direction in which swapchain image pixels gravitate relative to the surface when `scalingBehavior` does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.

If `scalingBehavior` is `0`, the result of presenting a swapchain image with dimensions that do not match the surface dimensions is implementation and platform-dependent. If `presentGravityX` or `presentGravityY` are `0`, the presentation gravity **must** match that defined by the native platform surface on platforms which define surface gravity.

### Valid Usage

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07765  
If `presentGravityX` is `0`, `presentGravityY` **must** be `0`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07766  
If `presentGravityX` is not `0`, `presentGravityY` **must** not be `0`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07767  
`scalingBehavior` **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07768  
`presentGravityX` **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07769  
`presentGravityY` **must** not have more than one bit set

- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07770  
`scalingBehavior` **must** be 0 or a valid scaling method for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling`, given `VkSwapchainCreateInfoKHR::presentMode` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07771  
 If the swapchain is created with `VkSwapchainPresentModesCreateInfoKHR`, `scalingBehavior` **must** be 0 or a valid scaling method for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling`, given each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07772  
`presentGravityX` **must** be 0 or a valid x-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX`, given `VkSwapchainCreateInfoKHR::presentMode` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07773  
 If the swapchain is created with `VkSwapchainPresentModesCreateInfoKHR`, `presentGravityX` **must** be 0 or a valid x-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX`, given each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07774  
`presentGravityY` **must** be 0 or a valid y-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY`, given `VkSwapchainCreateInfoKHR::presentMode` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07775  
 If the swapchain is created with `VkSwapchainPresentModesCreateInfoKHR`, `presentGravityY` **must** be 0 or a valid y-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY`, given each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-swapchainMaintenance1-10154  
 If the `swapchainMaintenance1` feature is not enabled, then `scalingBehavior`, `presentGravityX`, and `presentGravityY` **must** be 0

### Valid Usage (Implicit)

- VUID-VkSwapchainPresentScalingCreateInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_SCALING_CREATE_INFO_KHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-parameter  
 If `scalingBehavior` is not 0, `scalingBehavior` **must** be a valid combination of `VkPresentScalingFlagBitsKHR` values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-parameter

If `presentGravityX` is not 0, `presentGravityX` **must** be a valid combination of `VkPresentGravityFlagBitsKHR` values

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-parameter

If `presentGravityY` is not 0, `presentGravityY` **must** be a valid combination of `VkPresentGravityFlagBitsKHR` values

## Structure Chaining

### Extends the structure

- `VkSwapchainCreateInfoKHR`

To destroy a swapchain object call:

```
// Provided by VK_KHR_swapchain
void vkDestroySwapchainKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the `VkDevice` associated with `swapchain`.
- `swapchain` is the swapchain to destroy.
- `pAllocator` is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see [Memory Allocation](#)).

The application **must** not destroy a swapchain until after completion of all outstanding operations on images that were acquired from the swapchain. `swapchain` and all associated `VkImage` handles are destroyed, and **must** not be acquired or used any more by the application. The memory of each `VkImage` will only be freed after that image is no longer used by the presentation engine. For example, if one image of the swapchain is being displayed in a window, the memory for that image **may** not be freed until the window is destroyed, or another swapchain is created for the window. Destroying the swapchain does not invalidate the parent `VkSurfaceKHR`, and a new swapchain **can** be created with it.

When a swapchain associated with a display surface is destroyed, if the image most recently presented to the display surface is from the swapchain being destroyed, then either any display resources modified by presenting images from any swapchain associated with the display surface **must** be reverted by the implementation to their state prior to the first present performed on one of these swapchains, or such resources **must** be left in their current state.

If `swapchain` has exclusive full-screen access, it is released before the swapchain is destroyed.

## Valid Usage

- VUID-vkDestroySwapchainKHR-swapchain-01282

All uses of presentable images acquired from **swapchain** **must** have completed execution

- VUID-vkDestroySwapchainKHR-swapchain-01283

If **VkAllocationCallbacks** were provided when **swapchain** was created, a compatible set of callbacks **must** be provided here

- VUID-vkDestroySwapchainKHR-swapchain-01284

If no **VkAllocationCallbacks** were provided when **swapchain** was created, **pAllocator** **must** be **NULL**

## Valid Usage (Implicit)

- VUID-vkDestroySwapchainKHR-device-parameter

**device** **must** be a valid **VkDevice** handle

- VUID-vkDestroySwapchainKHR-swapchain-parameter

If **swapchain** is not **VK\_NULL\_HANDLE**, **swapchain** **must** be a valid **VkSwapchainKHR** handle

- VUID-vkDestroySwapchainKHR-pAllocator-parameter

If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure

- VUID-vkDestroySwapchainKHR-swapchain-parent

If **swapchain** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

## Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

When the **VK\_KHR\_display\_swapchain** extension is enabled, multiple swapchains that share presentable images are created by calling:

```
// Provided by VK_KHR_display_swapchain
VkResult vkCreateSharedSwapchainsKHR(
    VkDevice          device,
    uint32_t          swapchainCount,
    const VkSwapchainCreateInfoKHR* pCreateInfos,
    const VkAllocationCallbacks*   pAllocator,
    VkSwapchainKHR*    pSwapchains);
```

- **device** is the device to create the swapchains for.
- **swapchainCount** is the number of swapchains to create.
- **pCreateInfos** is a pointer to an array of **VkSwapchainCreateInfoKHR** structures specifying the parameters of the created swapchains.

- **pAllocator** is the allocator used for host memory allocated for the swapchain objects when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSwapchains** is a pointer to an array of [VkSwapchainKHR](#) handles in which the created swapchain objects will be returned.

[vkCreateSharedSwapchainsKHR](#) is similar to [vkCreateSwapchainKHR](#), except that it takes an array of [VkSwapchainCreateInfoKHR](#) structures, and returns an array of swapchain objects.

The swapchain creation parameters that affect the properties and number of presentable images **must** match between all the swapchains. If the displays used by any of the swapchains do not use the same presentable image layout or are incompatible in a way that prevents sharing images, swapchain creation will fail with the result code [VK\\_ERROR\\_INCOMPATIBLE\\_DISPLAY\\_KHR](#). If any error occurs, no swapchains will be created. Images presented to multiple swapchains **must** be re-acquired from all of them before being modified. After destroying one or more of the swapchains, the remaining swapchains and the presentable images **can** continue to be used.

### Valid Usage (Implicit)

- VUID-vkCreateSharedSwapchainsKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreateSharedSwapchainsKHR-pCreateInfos-parameter  
**pCreateInfos** **must** be a valid pointer to an array of **swapchainCount** valid [VkSwapchainCreateInfoKHR](#) structures
- VUID-vkCreateSharedSwapchainsKHR-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateSharedSwapchainsKHR-pSwapchains-parameter  
**pSwapchains** **must** be a valid pointer to an array of **swapchainCount** [VkSwapchainKHR](#) handles
- VUID-vkCreateSharedSwapchainsKHR-device-queuecount  
The device **must** have been created with at least **1** queue
- VUID-vkCreateSharedSwapchainsKHR-swapchainCount-arraylength  
**swapchainCount** **must** be greater than **0**

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_INCOMPATIBLE\\_DISPLAY\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)

- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To obtain the array of presentable images associated with a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkGetSwapchainImagesKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t*         pSwapchainImageCount,
    VkImage*          pSwapchainImages);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.
- `pSwapchainImageCount` is a pointer to an integer related to the number of presentable images available or queried, as described below.
- `pSwapchainImages` is either `NULL` or a pointer to an array of `VkImage` handles.

If `pSwapchainImages` is `NULL`, then the number of presentable images for `swapchain` is returned in `pSwapchainImageCount`. Otherwise, `pSwapchainImageCount` **must** point to a variable set by the application to the number of elements in the `pSwapchainImages` array, and on return the variable is overwritten with the number of structures actually written to `pSwapchainImages`. If the value of `pSwapchainImageCount` is less than the number of presentable images for `swapchain`, at most `pSwapchainImageCount` structures will be written, and [VK\\_INCOMPLETE](#) will be returned instead of [VK\\_SUCCESS](#), to indicate that not all the available presentable images were returned.

### Valid Usage (Implicit)

- VUID-vkGetSwapchainImagesKHR-device-parameter `device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetSwapchainImagesKHR-swapchain-parameter `swapchain` **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetSwapchainImagesKHR-pSwapchainImageCount-parameter `pSwapchainImageCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetSwapchainImagesKHR-pSwapchainImages-parameter  
If the value referenced by `pSwapchainImageCount` is not 0, and `pSwapchainImages` is not `NULL`, `pSwapchainImages` **must** be a valid pointer to an array of `pSwapchainImageCount` [VkImage](#) handles
- VUID-vkGetSwapchainImagesKHR-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

### NOTE

By knowing all presentable images used in the swapchain, the application can create command buffers that reference these images prior to entering its main rendering loop. However, command buffers are not allowed to reference presentable images created with [VK\\_SWAPCHAIN\\_CREATE\\_DEFERRED\\_MEMORY\\_ALLOCATION\\_BIT\\_KHR](#) until their indices have been returned from [vkAcquireNextImageKHR](#) at least once.

Images returned by [vkGetSwapchainImagesKHR](#) are fully backed by memory before they are passed to the application, as if they are each bound completely and contiguously to a single [VkDeviceMemory](#) object, unless the swapchain is created with the [VK\\_SWAPCHAIN\\_CREATE\\_DEFERRED\\_MEMORY\\_ALLOCATION\\_BIT\\_KHR](#) flag. All presentable images are initially in the [VK\\_IMAGE\\_LAYOUT\\_UNDEFINED](#) layout, thus before using presentable images, the application **must** transition them to a valid layout for the intended use.

Further, the lifetime of presentable images is controlled by the implementation, so applications **must** not destroy a presentable image. See [vkDestroySwapchainKHR](#) for further details on the lifetime of presentable images.

Images **can** also be created by using [vkCreateImage](#) with [VkImageSwapchainCreateInfoKHR](#) and bound to swapchain memory using [vkBindImageMemory2](#) with [VkBindImageMemorySwapchainInfoKHR](#). These images **can** be used anywhere swapchain images are used, and are useful in logical devices with multiple physical devices to create peer memory bindings of swapchain memory. These images and bindings have no effect on what memory is presented. Unlike images retrieved from [vkGetSwapchainImagesKHR](#), these images **must** be destroyed with [vkDestroyImage](#).

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_KHR_swapchain
VkResult vkAcquireNextImageKHR(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    uint64_t                timeout,
    VkSemaphore              semaphore,
    VkFence                  fence,
    uint32_t*                pImageIndex);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the non-retired swapchain from which an image is being acquired.
- **timeout** specifies how long the function waits, in nanoseconds, if no image is available.
- **semaphore** is **VK\_NULL\_HANDLE** or a semaphore defining a **semaphore signal operation**.
- **fence** is **VK\_NULL\_HANDLE** or a fence to signal.
- **pImageIndex** is a pointer to a **uint32\_t** in which the index of the next image to use (i.e. an index into the array of images returned by **vkGetSwapchainImagesKHR**) is returned.

If the **swapchain** has been created with the **VK\_SWAPCHAIN\_CREATE\_DEFERRED\_MEMORY\_ALLOCATION\_BIT\_KHR** flag, the image whose index is returned in **pImageIndex** will be fully backed by memory before this call returns to the application, as if it is bound completely and contiguously to a single **VkDeviceMemory** object.

If **semaphore** defines a **semaphore signal operation**, its first **synchronization scope** includes acquisition of the image.

### Valid Usage

- VUID-vkAcquireNextImageKHR-swapchain-01285  
**swapchain** **must** not be in the retired state
- VUID-vkAcquireNextImageKHR-semaphore-01286  
If **semaphore** is not **VK\_NULL\_HANDLE**, it **must** be unsignaled
- VUID-vkAcquireNextImageKHR-semaphore-01779  
If **semaphore** is not **VK\_NULL\_HANDLE**, it **must** not have any uncompleted signal or wait operations pending
- VUID-vkAcquireNextImageKHR-fence-01287  
If **fence** is not **VK\_NULL\_HANDLE**, **fence** **must** be unsignaled
- VUID-vkAcquireNextImageKHR-fence-10066  
If **fence** is not **VK\_NULL\_HANDLE**, **fence** **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkAcquireNextImageKHR-semaphore-01780  
**semaphore** and **fence** **must** not both be equal to **VK\_NULL\_HANDLE**
- VUID-vkAcquireNextImageKHR-surface-07783  
If **forward progress** cannot be guaranteed for the **surface** used to create the **swapchain**

member of `pAcquireInfo`, `timeout` **must** not be `UINT64_MAX`

- `VUID-vkAcquireNextImageKHR-semaphore-03265`  
`semaphore` **must** have a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`

### Valid Usage (Implicit)

- `VUID-vkAcquireNextImageKHR-device-parameter`  
`device` **must** be a valid `VkDevice` handle
- `VUID-vkAcquireNextImageKHR-swapchain-parameter`  
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- `VUID-vkAcquireNextImageKHR-semaphore-parameter`  
If `semaphore` is not `VK_NULL_HANDLE`, `semaphore` **must** be a valid `VkSemaphore` handle
- `VUID-vkAcquireNextImageKHR-fence-parameter`  
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** be a valid `VkFence` handle
- `VUID-vkAcquireNextImageKHR-pImageIndex-parameter`  
`pImageIndex` **must** be a valid pointer to a `uint32_t` value
- `VUID-vkAcquireNextImageKHR-swapchain-parent`  
`swapchain` **must** have been created, allocated, or retrieved from `device`
- `VUID-vkAcquireNextImageKHR-semaphore-parent`  
If `semaphore` is a valid handle, it **must** have been created, allocated, or retrieved from `device`
- `VUID-vkAcquireNextImageKHR-fence-parent`  
If `fence` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `swapchain` **must** be externally synchronized
- Host access to `semaphore` **must** be externally synchronized
- Host access to `fence` **must** be externally synchronized

### Return Codes

#### Success

- `VK_NOT_READY`
- `VK_SUBOPTIMAL_KHR`
- `VK_SUCCESS`
- `VK_TIMEOUT`

#### Failure

- `VK_ERROR_DEVICE_LOST`

- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

If an image is acquired successfully, [vkAcquireNextImageKHR](#) **must** either return [VK\\_SUCCESS](#) or [VK\\_SUBOPTIMAL\\_KHR](#). The implementation **may** return [VK\\_SUBOPTIMAL\\_KHR](#) if the swapchain no longer matches the surface properties exactly, but **can** still be used for presentation.

When successful, [vkAcquireNextImageKHR](#) acquires a presentable image from [swapchain](#) that an application **can** use, and sets [pImageIndex](#) to the index of that image within the swapchain. The presentation engine **may** not have finished reading from the image at the time it is acquired, so the application **must** use [semaphore](#) and/or [fence](#) to ensure that the image layout and contents are not modified until the presentation engine reads have completed. Once [vkAcquireNextImageKHR](#) successfully acquires an image, the semaphore signal operation referenced by [semaphore](#), if not [VK\\_NULL\\_HANDLE](#), and the fence signal operation referenced by [fence](#), if not [VK\\_NULL\\_HANDLE](#), are submitted for execution. If [vkAcquireNextImageKHR](#) does not successfully acquire an image, [semaphore](#) and [fence](#) are unaffected. The order in which images are acquired is implementation-dependent, and **may** be different than the order the images were presented.

If [timeout](#) is zero, then [vkAcquireNextImageKHR](#) does not wait, and will either successfully acquire an image, or fail and return [VK\\_NOT\\_READY](#) if no image is available.

If the specified timeout period expires before an image is acquired, [vkAcquireNextImageKHR](#) returns [VK\\_TIMEOUT](#). If [timeout](#) is [UINT64\\_MAX](#), the timeout period is treated as infinite, and [vkAcquireNextImageKHR](#) will block until an image is acquired or an error occurs.

Let  $S$  be the number of images in [swapchain](#). If [swapchain](#) is created with [VkSwapchainPresentModesCreateInfoKHR](#), let  $M$  be the maximum of the values in [VkSurfaceCapabilitiesKHR::minImageCount](#) when queried with each present mode in [VkSwapchainPresentModesCreateInfoKHR::pPresentModes](#) in [VkSurfacePresentModeKHR](#). Otherwise, let  $M$  be the value of [VkSurfaceCapabilitiesKHR::minImageCount](#) without a [VkSurfacePresentModeKHR](#) as part of the query input.

[vkAcquireNextImageKHR](#) **should** not be called if the number of images that the application has currently acquired is greater than  $S-M$ . If [vkAcquireNextImageKHR](#) is called when the number of images that the application has currently acquired is less than or equal to  $S-M$ , [vkAcquireNextImageKHR](#) **must** return in finite time with an allowed [VkResult](#) code.

#### NOTE

Returning a result in finite time guarantees that the implementation cannot deadlock an application, or suspend its execution indefinitely with correct API usage. Acquiring too many images at once may block indefinitely, which is covered by valid usage when attempting to use [UINT64\\_MAX](#). For example, a scenario here is

when a compositor holds on to images which are currently being presented, and there are not any vacant images left to be acquired.

If the swapchain images no longer match native surface properties, either [VK\\_SUBOPTIMAL\\_KHR](#) or [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) **must** be returned. If [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) is returned, no image is acquired and attempts to present previously acquired images to the swapchain will also fail with [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#). Applications need to create a new swapchain for the surface to continue presenting if [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) is returned.

**NOTE** [VK\\_SUBOPTIMAL\\_KHR](#) **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain in this state, or to re-create the swapchain to better match the platform surface properties.

If device loss occurs (see [Lost Device](#)) before the timeout has expired, [vkAcquireNextImageKHR](#) **must** return in finite time with either one of the allowed success codes, or [VK\\_ERROR\\_DEVICE\\_LOST](#).

If [semaphore](#) is not [VK\\_NULL\\_HANDLE](#), the semaphore **must** be unsignaled, with no signal or wait operations pending. It will become signaled when the application **can** use the image.

**NOTE** Use of [semaphore](#) allows rendering operations to be recorded and submitted before the presentation engine has completed its use of the image.

If [fence](#) is not equal to [VK\\_NULL\\_HANDLE](#), the fence **must** be unsignaled, with no signal operations pending. It will become signaled when the application **can** use the image.

**NOTE** Applications **should** not rely on [vkAcquireNextImageKHR](#) blocking in order to meter their rendering speed. The implementation **may** return from this function immediately regardless of how many presentation requests are queued, and regardless of when queued presentation requests will complete relative to the call. Instead, applications **can** use [fence](#) to meter their frame generation work to match the presentation rate.

An application **must** wait until either the [semaphore](#) or [fence](#) is signaled before accessing the image's data.

**NOTE** When the presentable image will be accessed by some stage S, the recommended idiom for ensuring correct synchronization is:

- The [VkSubmitInfo](#) used to submit the image layout transition for execution includes [vkAcquireNextImageKHR::semaphore](#) in its [pWaitSemaphores](#) member, with the corresponding element of [pWaitDstStageMask](#) including S.
- The [synchronization command](#) that performs any necessary image layout transition includes S in both the [srcStageMask](#) and [dstStageMask](#).

After a successful return, the image indicated by [pImageIndex](#) and its data will be unmodified compared to when it was presented.

**NOTE**

Exclusive ownership of presentable images corresponding to a swapchain created with `VK_SHARING_MODE_EXCLUSIVE` as defined in [Resource Sharing](#) is not altered by a call to `vkAcquireNextImageKHR`. That means upon the first acquisition from such a swapchain presentable images are not owned by any queue family, while at subsequent acquisitions the presentable images remain owned by the queue family the image was previously presented on.

The possible return values for `vkAcquireNextImageKHR` depend on the `timeout` provided:

- `VK_SUCCESS` is returned if an image became available.
- `VK_ERROR_SURFACE_LOST_KHR` is returned if the surface becomes no longer available.
- `VK_NOT_READY` is returned if `timeout` is zero and no image was available.
- `VK_TIMEOUT` is returned if `timeout` is greater than zero and less than `UINT64_MAX`, and no image became available within the time allowed.
- `VK_SUBOPTIMAL_KHR` **may** be returned if an image became available, and the swapchain no longer matches the surface properties exactly, but **can** still be used to present to the surface successfully.

**NOTE**

This **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain indefinitely or temporarily in this state, or to re-create the swapchain to better match the platform surface properties.

- `VK_ERROR_OUT_OF_DATE_KHR` is returned if the surface has changed in such a way that it is no longer compatible with the swapchain, and further presentation requests using the swapchain will fail. Applications **must** query the new surface properties and recreate their swapchain if they wish to continue presenting to the surface.

If the native surface and presented image sizes no longer match, presentation **may** fail unless the swapchain is created with a non-zero value in `VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior`. If presentation does succeed, the mapping from the presented image to the native surface is defined by the `VkSwapchainPresentScalingCreateInfoKHR` structure if provided. Otherwise it is implementation-defined. It is the application's responsibility to detect surface size changes and react appropriately. If presentation fails because of a mismatch in the surface and presented image sizes, a `VK_ERROR_OUT_OF_DATE_KHR` error will be returned.

**NOTE**

For example, consider a 4x3 window/surface that gets resized to be 3x4 (taller than wider). On some window systems, the portion of the window/surface that was previously and still is visible (the 3x3 part) will contain the same contents as before, while the remaining parts of the window will have undefined contents. Other window systems **may** squash/stretch the image to fill the new window size without any undefined contents, or apply some other mapping.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
VkResult vkAcquireNextImage2KHR(
    VkDevice device,
    const VkAcquireNextImageInfoKHR* pAcquireInfo,
    uint32_t* pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `pAcquireInfo` is a pointer to a `VkAcquireNextImageInfoKHR` structure containing parameters of the acquire.
- `pImageIndex` is a pointer to a `uint32_t` value specifying the index of the next image to use.

If the `swapchain` has been created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR` flag, the image whose index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application.

### Valid Usage

- VUID-vkAcquireNextImage2KHR-surface-07784  
If `forward progress` cannot be guaranteed for the `surface` used to create `swapchain`, the `timeout` member of `pAcquireInfo` **must** not be `UINT64_MAX`

### Valid Usage (Implicit)

- VUID-vkAcquireNextImage2KHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkAcquireNextImage2KHR-pAcquireInfo-parameter  
`pAcquireInfo` **must** be a valid pointer to a valid `VkAcquireNextImageInfoKHR` structure
- VUID-vkAcquireNextImage2KHR-pImageIndex-parameter  
`pImageIndex` **must** be a valid pointer to a `uint32_t` value

### Return Codes

#### Success

- `VK_NOT_READY`
- `VK_SUBOPTIMAL_KHR`
- `VK_SUCCESS`
- `VK_TIMEOUT`

#### Failure

- `VK_ERROR_DEVICE_LOST`

- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkAcquireNextImageInfoKHR](#) structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkAcquireNextImageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint64_t           timeout;
    VkSemaphore         semaphore;
    VkFence             fence;
    uint32_t           deviceMask;
} VkAcquireNextImageInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [swapchain](#) is a non-retired swapchain from which an image is acquired.
- [timeout](#) specifies how long the function waits, in nanoseconds, if no image is available.
- [semaphore](#) is [VK\\_NULL\\_HANDLE](#) or a semaphore that defines a [semaphore signal operation](#).
- [fence](#) is [VK\\_NULL\\_HANDLE](#) or a fence to signal.
- [deviceMask](#) is a mask of physical devices for which the swapchain image will be ready to use when the semaphore or fence is signaled.

If [vkAcquireNextImageKHR](#) is used, the device mask is considered to include all physical devices in the logical device.

#### NOTE

[vkAcquireNextImage2KHR](#) signals at most one semaphore, even if the application requests waiting for multiple physical devices to be ready via the [deviceMask](#). However, only a single physical device **can** wait on that semaphore, since the semaphore becomes unsignaled when the wait succeeds. For other physical devices to wait for the image to be ready, it is necessary for the application to submit semaphore signal operation(s) to that first physical device to signal additional semaphore(s) after the wait succeeds, which the other physical device(s) **can** wait upon.

## Valid Usage

- VUID-VkAcquireNextImageInfoKHR-swapchain-01675  
**swapchain** **must** not be in the retired state
- VUID-VkAcquireNextImageInfoKHR-semaphore-01288  
If **semaphore** is not [VK\\_NULL\\_HANDLE](#), it **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-semaphore-01781  
If **semaphore** is not [VK\\_NULL\\_HANDLE](#), it **must** not have any uncompleted signal or wait operations pending
- VUID-VkAcquireNextImageInfoKHR-fence-01289  
If **fence** is not [VK\\_NULL\\_HANDLE](#), **fence** **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-fence-10067  
If **fence** is not [VK\\_NULL\\_HANDLE](#), **fence** **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-VkAcquireNextImageInfoKHR-semaphore-01782  
**semaphore** and **fence** **must** not both be equal to [VK\\_NULL\\_HANDLE](#)
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01290  
**deviceMask** **must** be a valid device mask
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01291  
**deviceMask** **must** not be zero
- VUID-VkAcquireNextImageInfoKHR-semaphore-03266  
**semaphore** **must** have a [VkSemaphoreType](#) of [VK\\_SEMAPHORE\\_TYPE\\_BINARY](#)

## Valid Usage (Implicit)

- VUID-VkAcquireNextImageInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_ACQUIRE\\_NEXT\\_IMAGE\\_INFO\\_KHR](#)
- VUID-VkAcquireNextImageInfoKHR-pNext-pNext  
**pNext** **must** be [NULL](#)
- VUID-VkAcquireNextImageInfoKHR-swapchain-parameter  
**swapchain** **must** be a valid [VkSwapchainKHR](#) handle
- VUID-VkAcquireNextImageInfoKHR-semaphore-parameter  
If **semaphore** is not [VK\\_NULL\\_HANDLE](#), **semaphore** **must** be a valid [VkSemaphore](#) handle
- VUID-VkAcquireNextImageInfoKHR-fence-parameter  
If **fence** is not [VK\\_NULL\\_HANDLE](#), **fence** **must** be a valid [VkFence](#) handle
- VUID-VkAcquireNextImageInfoKHR-commonparent  
Each of **fence**, **semaphore**, and **swapchain** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

## Host Synchronization

- Host access to **swapchain** **must** be externally synchronized
- Host access to **semaphore** **must** be externally synchronized
- Host access to **fence** **must** be externally synchronized

After queueing all rendering commands and transitioning the image to the correct layout, to queue an image for presentation, call:

```
// Provided by VK_KHR_swapchain
VkResult vkQueuePresentKHR(
    VkQueue queue,
    const VkPresentInfoKHR* pPresentInfo);
```

- **queue** is a queue that is capable of presentation to the target surface's platform on the same device as the image's swapchain.
- **pPresentInfo** is a pointer to a **VkPresentInfoKHR** structure specifying parameters of the presentation.

### NOTE

There is no requirement for an application to present images in the same order that they were acquired - applications can arbitrarily present any image that is currently acquired.

### NOTE

The origin of the native orientation of the surface coordinate system is not specified in the Vulkan specification; it depends on the platform. For most platforms the origin is by default upper-left, meaning the pixel of the presented **VkImage** at coordinates (0,0) would appear at the upper left pixel of the platform surface (assuming **VK\_SURFACE\_TRANSFORM\_IDENTITY\_BIT\_KHR**, and the display standing the right way up).

The result codes **VK\_ERROR\_OUT\_OF\_DATE\_KHR** and **VK\_SUBOPTIMAL\_KHR** have the same meaning when returned by **vkQueuePresentKHR** as they do when returned by **vkAcquireNextImageKHR**. If any **swapchain** member of **pPresentInfo** was created with **VK\_FULL\_SCREEN\_EXCLUSIVE\_APPLICATION\_CONTROLLED\_EXT**, **VK\_ERROR\_FULL\_SCREEN\_EXCLUSIVE\_MODE\_LOST\_EXT** will be returned if that swapchain does not have exclusive full-screen access, possibly for implementation-specific reasons outside of the application's control. If multiple swapchains are presented, the result code is determined by applying the following rules in order:

- If the device is lost, **VK\_ERROR\_DEVICE\_LOST** is returned.
- If any of the target surfaces are no longer available the error **VK\_ERROR\_SURFACE\_LOST\_KHR** is returned.
- If any of the presents would have a result of **VK\_ERROR\_OUT\_OF\_DATE\_KHR** if issued separately then **VK\_ERROR\_OUT\_OF\_DATE\_KHR** is returned.

- If any of the presents would have a result of `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT` if issued separately then `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT` is returned.
- If any of the presents would have a result of `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` if issued separately then `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` is returned.
- If any of the presents would have a result of `VK_SUBOPTIMAL_KHR` if issued separately then `VK_SUBOPTIMAL_KHR` is returned.
- Otherwise `VK_SUCCESS` is returned.

Any writes to memory backing the images referenced by the `pImageIndices` and `pSwapchains` members of `pPresentInfo`, that are available before `vkQueuePresentKHR` is executed, are automatically made visible to the read access performed by the presentation engine. This automatic visibility operation for an image happens-after the semaphore wait operation, and happens-before the presentation engine accesses the image.

Presentation is a read-only operation that will not affect the content of the presentable images. Upon reacquiring the image and transitioning it away from the `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` layout, the contents will be the same as they were prior to transitioning the image to the present source layout and presenting it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

Calls to `vkQueuePresentKHR` **may** block, but **must** return in finite time. The processing of the presentation happens in issue order with other queue operations, but semaphores **must** be used to ensure that prior rendering and other commands in the specified queue complete before the presentation begins. The presentation command itself does not delay processing of subsequent commands on the queue. However, presentation requests sent to a particular queue are always performed in order. Exact presentation timing is controlled by the semantics of the presentation engine and native platform in use.

If an image is presented to a swapchain created from a display surface, the mode of the associated display will be updated, if necessary, to match the mode specified when creating the display surface. The mode switch and presentation of the specified image will be performed as one atomic operation.

Queueing an image for presentation defines a set of *queue operations*, including waiting on the semaphores and submitting a presentation request to the presentation engine. However, the scope of this set of queue operations does not include the actual processing of the image by the presentation engine.

If `vkQueuePresentKHR` fails to enqueue the corresponding set of queue operations, it **may** return `VK_ERROR_OUT_OF_HOST_MEMORY` or `VK_ERROR_OUT_OF_DEVICE_MEMORY`. If it does, the implementation **must** ensure that the state and contents of any resources or synchronization primitives referenced is unaffected by the call or its failure.

If `vkQueuePresentKHR` fails in such a way that the implementation is unable to make that guarantee, the implementation **must** return `VK_ERROR_DEVICE_LOST`.

However, if the presentation request is rejected by the presentation engine with an error [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#), [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#), [VK\\_ERROR\\_PRESENT\\_TIMING\\_QUEUE\\_FULL\\_EXT](#), or [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#), the set of queue operations are still considered to be enqueued and thus any [semaphore wait operation](#) specified in [VkPresentInfoKHR](#) will execute when the corresponding queue operation is complete.

[vkQueuePresentKHR](#) releases the acquisition of the images referenced by [imageIndices](#). The queue family corresponding to the queue [vkQueuePresentKHR](#) is executed on **must** have ownership of the presented images as defined in [Resource Sharing](#). [vkQueuePresentKHR](#) does not alter the queue family ownership, but the presented images **must** not be used again before they have been reacquired using [vkAcquireNextImageKHR](#).

#### NOTE

The application **can** continue to present any acquired images from a retired swapchain as long as the swapchain has not entered a state that causes [vkQueuePresentKHR](#) to return [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#).

### Valid Usage

- VUID-vkQueuePresentKHR-pSwapchains-01292  
Each element of [pSwapchains](#) member of [pPresentInfo](#) **must** be a swapchain that is created for a surface for which presentation is supported from [queue](#) as determined using a call to [vkGetPhysicalDeviceSurfaceSupportKHR](#)
- VUID-vkQueuePresentKHR-pSwapchains-01293  
If more than one member of [pSwapchains](#) was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same display mode
- VUID-vkQueuePresentKHR-pWaitSemaphores-01294  
When a semaphore wait operation referring to a binary semaphore defined by the elements of the [pWaitSemaphores](#) member of [pPresentInfo](#) executes on [queue](#), there **must** be no other queues waiting on the same semaphore
- VUID-vkQueuePresentKHR-pWaitSemaphores-03267  
All elements of the [pWaitSemaphores](#) member of [pPresentInfo](#) **must** be created with a [VkSemaphoreType](#) of [VK\\_SEMAPHORE\\_TYPE\\_BINARY](#)
- VUID-vkQueuePresentKHR-pWaitSemaphores-03268  
All elements of the [pWaitSemaphores](#) member of [pPresentInfo](#) **must** reference a semaphore signal operation that has been submitted for execution and any [semaphore signal operations](#) on which it depends **must** have also been submitted for execution

### Valid Usage (Implicit)

- VUID-vkQueuePresentKHR-queue-parameter  
[queue](#) **must** be a valid [VkQueue](#) handle
- VUID-vkQueuePresentKHR-pPresentInfo-parameter  
[pPresentInfo](#) **must** be a valid pointer to a valid [VkPresentInfoKHR](#) structure

## Host Synchronization

- Host access to **queue** **must** be externally synchronized if it was not created with [VK\\_DEVICE\\_QUEUE\\_CREATE INTERNALLY SYNCHRONIZED\\_BIT\\_KHR](#)

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| -                     | -                 | -                  | Any                   | -            |

## Return Codes

### Success

- [VK\\_SUBOPTIMAL\\_KHR](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_PRESENT\\_TIMING\\_QUEUE\\_FULL\\_EXT](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkPresentInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           waitSemaphoreCount;
    const VkSemaphore* pWaitSemaphores;
    uint32_t           swapchainCount;
    const VkSwapchainKHR* pSwapchains;
    const uint32_t*     pImageIndices;
    VkResult*          pResults;
} VkPresentInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **waitSemaphoreCount** is the number of semaphores to wait for before issuing the present request. The number **may** be zero.
- **pWaitSemaphores** is **NULL** or a pointer to an array of [VkSemaphore](#) objects with **waitSemaphoreCount** entries, and specifies the semaphores to wait for before issuing the present request.
- **swapchainCount** is the number of swapchains being presented to by this command.
- **pSwapchains** is a pointer to an array of [VkSwapchainKHR](#) objects with **swapchainCount** entries.
- **pImageIndices** is a pointer to an array of indices into the array of each swapchain's presentable images, with **swapchainCount** entries. Each entry in this array identifies the image to present on the corresponding entry in the **pSwapchains** array.
- **pResults** is a pointer to an array of [VkResult](#) typed elements with **swapchainCount** entries. Applications that do not need per-swapchain results **can** use **NULL** for **pResults**. If non-**NULL**, each entry in **pResults** will be set to the [VkResult](#) for presenting the swapchain corresponding to the same index in **pSwapchains**.

Before an application **can** present an image, the image's layout **must** be transitioned to the [VK\\_IMAGE\\_LAYOUT\\_PRESENT\\_SRC\\_KHR](#) layout, or for a shared presentable image the [VK\\_IMAGE\\_LAYOUT\\_SHARED\\_PRESENT\\_KHR](#) layout.

#### NOTE

When transitioning the image to the appropriate layout, there is no need to delay subsequent processing, or perform any visibility operations (as [vkQueuePresentKHR](#) performs automatic visibility operations). To achieve this, the **dstAccessMask** member of the [VkImageMemoryBarrier](#) **should** be **0**, and the **dstStageMask** parameter **should** be [VK\\_PIPELINE\\_STAGE\\_BOTTOM\\_OF\\_PIPE\\_BIT](#).

The second [synchronization scope](#) of each [semaphore wait operation](#) defined by this structure includes presentation of each image indicated by **pSwapchains** and **pImageIndices**.

### Valid Usage

- VUID-VkPresentInfoKHR-pSwapchain-09231

Elements of **pSwapchain** **must** be unique

- VUID-VkPresentInfoKHR-pImageIndices-01430

Each element of **pImageIndices** **must** be the index of a presentable image acquired from the swapchain specified by the corresponding element of the **pSwapchains** array, and the presented image subresource **must** be in the **VK\_IMAGE\_LAYOUT\_PRESENT\_SRC\_KHR** or **VK\_IMAGE\_LAYOUT\_SHARED\_PRESENT\_KHR** layout at the time the operation is executed on a **VkDevice**

- VUID-VkPresentInfoKHR-pNext-06235

If a **VkPresentIdKHR** structure is included in the **pNext** chain, and the **presentId** feature is not enabled, each **presentIds** entry in that structure **must** be NULL

- VUID-VkPresentInfoKHR-swapchainMaintenance1-10158

If the **swapchainMaintenance1** feature is not enabled, then the **pNext** chain **must** not include a **VkSwapchainPresentFenceInfoKHR** structure

- VUID-VkPresentInfoKHR-pSwapchains-09199

If any element of the **pSwapchains** array has been created with **VkSwapchainPresentModesCreateInfoKHR**, all of the elements of this array **must** be created with **VkSwapchainPresentModesCreateInfoKHR**

- VUID-VkPresentInfoKHR-pNext-10821

If a **VkPresentId2KHR** structure is included in the **pNext** chain, and the **presentId2** feature is not enabled, each **presentIds** entry in that structure **must** be zero

- VUID-VkPresentInfoKHR-presentId2Supported-10822

If a **VkPresentId2KHR** structure is included and contains non-zero **presentIds**, **presentId2Supported** **must** be **VK\_TRUE** in the **VkSurfaceCapabilitiesPresentId2KHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilities2KHR** for the **surface**

## Valid Usage (Implicit)

- VUID-VkPresentInfoKHR-sType-sType

**sType** **must** be **VK\_STRUCTURE\_TYPE\_PRESENT\_INFO\_KHR**

- VUID-VkPresentInfoKHR-pNext-pNext

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkDeviceGroupPresentInfoKHR**, **VkDisplayPresentInfoKHR**, **VkFrameBoundaryEXT**, **VkPresentId2KHR**, **VkPresentIdKHR**, **VkPresentRegionsKHR**, **VkPresentTimingsInfoEXT**, **VkSwapchainPresentFenceInfoKHR**, or **VkSwapchainPresentModeInfoKHR**

- VUID-VkPresentInfoKHR-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkPresentInfoKHR-pWaitSemaphores-parameter

If **waitSemaphoreCount** is not 0, **pWaitSemaphores** **must** be a valid pointer to an array of **waitSemaphoreCount** valid **VkSemaphore** handles

- VUID-VkPresentInfoKHR-pSwapchains-parameter

**pSwapchains** **must** be a valid pointer to an array of **swapchainCount** valid **VkSwapchainKHR** handles

- VUID-VkPresentInfoKHR-pImageIndices-parameter  
`pImageIndices` **must** be a valid pointer to an array of `swapchainCount uint32_t` values
- VUID-VkPresentInfoKHR-pResults-parameter  
If `pResults` is not `NULL`, `pResults` **must** be a valid pointer to an array of `swapchainCount VkResult` values
- VUID-VkPresentInfoKHR-swapchainCount-arraylength  
`swapchainCount` **must** be greater than `0`
- VUID-VkPresentInfoKHR-commonparent  
Both of the elements of `pSwapchains`, and the elements of `pWaitSemaphores` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

## Host Synchronization

- Host access to each member of `pWaitSemaphores` **must** be externally synchronized
- Host access to each member of `pSwapchains` **must** be externally synchronized

When the `VK_KHR_incremental_present` extension is enabled, additional fields **can** be specified that allow an application to specify that only certain rectangular regions of the presentable images of a swapchain are changed. This is an optimization hint that a presentation engine **may** use to only update the region of a surface that is actually changing. The application still **must** ensure that all pixels of a presented image contain the desired values, in case the presentation engine ignores this hint. An application **can** provide this hint by adding a `VkPresentRegionsKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentRegionsKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionsKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkPresentRegionKHR* pRegions;
} VkPresentRegionsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pRegions` is `NULL` or a pointer to an array of `VkPresentRegionKHR` elements with `swapchainCount` entries. If not `NULL`, each element of `pRegions` contains the region that has changed since the last present to the swapchain in the corresponding entry in the `VkPresentInfoKHR::pSwapchains` array.

## Valid Usage

- VUID-VkPresentRegionsKHR-swapchainCount-01260  
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentRegionsKHR` structure

## Valid Usage (Implicit)

- VUID-VkPresentRegionsKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR`
- VUID-VkPresentRegionsKHR-pRegions-parameter  
If `pRegions` is not `NULL`, `pRegions` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentRegionKHR` structures
- VUID-VkPresentRegionsKHR-swapchainCount-arraylength  
`swapchainCount` **must** be greater than 0

## Structure Chaining

### Extends the structure

- `VkPresentInfoKHR`

For a given image and swapchain, the region to present is specified by the `VkPresentRegionKHR` structure, which is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionKHR {
    uint32_t      rectangleCount;
    const VkRectLayerKHR* pRectangles;
} VkPresentRegionKHR;
```

- `rectangleCount` is the number of rectangles in `pRectangles`, or zero if the entire image has changed and should be presented.
- `pRectangles` is either `NULL` or a pointer to an array of `VkRectLayerKHR` structures. The `VkRectLayerKHR` structure is the framebuffer coordinates, plus layer, of a portion of a presentable image that has changed and **must** be presented. If non-`NULL`, each entry in `pRectangles` is a rectangle of the given image that has changed since the last image was presented to the given swapchain. The rectangles **must** be specified relative to `VkSurfaceCapabilitiesKHR::currentTransform`, regardless of the swapchain's `preTransform`. The presentation engine will apply the `preTransform` transformation to the rectangles, along with any further transformation it applies to the image content.

## Valid Usage (Implicit)

- VUID-VkPresentRegionKHR-pRectangles-parameter

If **rectangleCount** is not 0, and **pRectangles** is not NULL, **pRectangles** **must** be a valid pointer to an array of **rectangleCount** valid **VkRectLayerKHR** structures

The **VkRectLayerKHR** structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkRectLayerKHR {
    VkOffset2D    offset;
    VkExtent2D    extent;
    uint32_t      layer;
} VkRectLayerKHR;
```

- **offset** is the origin of the rectangle, in pixels.
- **extent** is the size of the rectangle, in pixels.
- **layer** is the layer of the image. For images with only one layer, the value of **layer** **must** be 0.

Some platforms allow the size of a surface to change, and then scale the pixels of the image to fit the surface. **VkRectLayerKHR** specifies pixels of the swapchain's image(s), which will be constant for the life of the swapchain.

## Valid Usage

- VUID-VkRectLayerKHR-offset-04864

The sum of **offset** and **extent**, after being transformed according to the **preTransform** member of the **VkSwapchainCreateInfoKHR** structure, **must** be no greater than the **imageExtent** member of the **VkSwapchainCreateInfoKHR** structure passed to **vkCreateSwapchainKHR**

- VUID-VkRectLayerKHR-layer-01262

**layer** **must** be less than the **imageArrayLayers** member of the **VkSwapchainCreateInfoKHR** structure passed to **vkCreateSwapchainKHR**

When the **VK\_KHR\_display\_swapchain** extension is enabled, additional fields **can** be specified when presenting an image to a swapchain by setting **VkPresentInfoKHR::pNext** to point to a **VkDisplayPresentInfoKHR** structure.

The **VkDisplayPresentInfoKHR** structure is defined as:

```
// Provided by VK_KHR_display_swapchain
typedef struct VkDisplayPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkRect2D           srcRect;
    VkRect2D           dstRect;
    VkBool32           persistent;
} VkDisplayPresentInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **srcRect** is a rectangular region of pixels to present. It **must** be a subset of the image being presented. If **VkDisplayPresentInfoKHR** is not specified, this region will be assumed to be the entire presentable image.
- **dstRect** is a rectangular region within the visible region of the swapchain's display mode. If **VkDisplayPresentInfoKHR** is not specified, this region will be assumed to be the entire visible region of the swapchain's mode. If the specified rectangle is a subset of the display mode's visible region, content from display planes below the swapchain's plane will be visible outside the rectangle. If there are no planes below the swapchain's, the area outside the specified rectangle will be black. If portions of the specified rectangle are outside of the display's visible region, pixels mapping only to those portions of the rectangle will be discarded.
- **persistent**: If this is **VK\_TRUE**, the display engine will enable buffered mode on displays that support it. This allows the display engine to stop sending content to the display until a new image is presented. The display will instead maintain a copy of the last presented image. This allows less power to be used, but **may** increase presentation latency. If **VkDisplayPresentInfoKHR** is not specified, persistent mode will not be used.

If the extent of the **srcRect** and **dstRect** are not equal, the presented pixels will be scaled accordingly.

### Valid Usage

- VUID-VkDisplayPresentInfoKHR-srcRect-01257  
**srcRect** **must** specify a rectangular region that is a subset of the image being presented
- VUID-VkDisplayPresentInfoKHR-dstRect-01258  
**dstRect** **must** specify a rectangular region that is a subset of the **visibleRegion** parameter of the display mode the swapchain being presented uses
- VUID-VkDisplayPresentInfoKHR-persistentContent-01259  
If the **persistentContent** member of the **VkDisplayPropertiesKHR** structure returned by **vkGetPhysicalDeviceDisplayPropertiesKHR** for the display the present operation targets is **VK\_FALSE**, then **persistent** **must** be **VK\_FALSE**

## Valid Usage (Implicit)

- VUID-VkDisplayPresentInfoKHR-sType-sType  
**sType** must be `VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR`

## Structure Chaining

### Extends the structure

- `VkPresentInfoKHR`

If the **pNext** chain of `VkPresentInfoKHR` includes a `VkDeviceGroupPresentInfoKHR` structure, then that structure includes an array of device masks and a device group present mode.

The `VkDeviceGroupPresentInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupPresentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 swapchainCount;
    const uint32_t*          pDeviceMasks;
    VkDeviceGroupPresentModeFlagsKHR mode;
} VkDeviceGroupPresentInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **swapchainCount** is zero or the number of elements in **pDeviceMasks**.
- **pDeviceMasks** is a pointer to an array of device masks, one for each element of `VkPresentInfoKHR::pSwapchains`.
- **mode** is a `VkDeviceGroupPresentModeFlagsKHR` value specifying the device group present mode that will be used for this present.

If **mode** is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of **pDeviceMasks** selects which instance of the swapchain image is presented. Each element of **pDeviceMasks** **must** have exactly one bit set, and the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If **mode** is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of **pDeviceMasks** selects which instance of the swapchain image is presented. Each element of **pDeviceMasks** **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If **mode** is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of **pDeviceMasks**

selects which instances of the swapchain image are component-wise summed and the sum of those images is presented. If the sum in any component is outside the representable range, the value of that component is undefined. Each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then each element of `pDeviceMasks` selects which instance(s) of the swapchain images are presented. For each bit set in each element of `pDeviceMasks`, the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If `VkDeviceGroupPresentInfoKHR` is not provided or `swapchainCount` is zero then the masks are considered to be 1. If `VkDeviceGroupPresentInfoKHR` is not provided, `mode` is considered to be `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

### Valid Usage

- VUID-VkDeviceGroupPresentInfoKHR-swapchainCount-01297  
`swapchainCount` **must** equal 0 or `VkPresentInfoKHR::swapchainCount`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01298  
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-mode-01299  
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01300  
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01301  
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then for each bit set in each element of `pDeviceMasks`, the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-01302  
The value of each element of `pDeviceMasks` **must** be equal to the device mask passed in `VkAcquireNextImageInfoKHR::deviceMask` when the image index was last acquired
- VUID-VkDeviceGroupPresentInfoKHR-mode-01303  
`mode` **must** have exactly one bit set, and that bit **must** have been included in `VkDeviceGroupSwapchainCreateInfoKHR::modes`

### Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentInfoKHR-sType-sType

**sType** must be `VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR`

- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-parameter  
If **swapchainCount** is not 0, **pDeviceMasks** must be a valid pointer to an array of **swapchainCount** `uint32_t` values
- VUID-VkDeviceGroupPresentInfoKHR-mode-parameter  
**mode** must be a valid `VkDeviceGroupPresentModeFlagBitsKHR` value

## Structure Chaining

### Extends the structure

- `VkPresentInfoKHR`

When the `presentAtAbsoluteTime` or `presentAtRelativeTime` feature is enabled, an application **can** instruct the presentation engine to attempt to display an image at a specified time, or for a minimum duration, by including the `VkPresentTimingsInfoEXT` structure in the **pNext** chain of the `VkPresentInfoKHR` structure.

The `VkPresentTimingsInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingsInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkPresentTimingInfoEXT* pTimingInfos;
} VkPresentTimingsInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **swapchainCount** is the number of swapchains being presented to by this command.
- **pTimingInfos** is `NULL` or a pointer to an array of `VkPresentTimingInfoEXT` elements with **swapchainCount** entries. If not `NULL`, each element of **pTimingInfos** contains timing information for the presentation of the image corresponding to the entry in the `VkPresentInfoKHR::pImageIndices` array.

## Valid Usage

- VUID-VkPresentTimingsInfoEXT-swapchainCount-12233  
**swapchainCount** must be equal to `VkPresentInfoKHR::swapchainCount`
- VUID-VkPresentTimingsInfoEXT-pSwapchains-12234  
All swapchains in `VkPresentInfoKHR::pSwapchains` must have been created with the `VkSwapchainCreateInfoKHR::flags` field containing `VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT`

- VUID-VkPresentTimingsInfoEXT-pSwapchains-12235

For each member of `VkPresentInfoKHR::pSwapchains`, if the associated `VkPresentTimingInfoEXT::targetTime` is not zero, the swapchain's current present mode **must** be `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`, `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR`

## Valid Usage (Implicit)

- VUID-VkPresentTimingsInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMINGS_INFO_EXT`
- VUID-VkPresentTimingsInfoEXT-pTimingInfos-parameter  
If `pTimingInfos` is not `NULL`, `pTimingInfos` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentTimingInfoEXT` structures
- VUID-VkPresentTimingsInfoEXT-swapchainCount-arraylength  
`swapchainCount` **must** be greater than 0

## Structure Chaining

### Extends the structure

- `VkPresentInfoKHR`

The `VkPresentTimingInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkPresentTimingInfoFlagsEXT flags;
    uint64_t           targetTime;
    uint64_t           timeDomainId;
    VkPresentStageFlagsEXT presentStageQueries;
    VkPresentStageFlagsEXT targetTimeDomainPresentStage;
} VkPresentTimingInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPresentTimingInfoFlagBitsEXT` specifying options for how to interpret the timing information.
- `targetTime` is zero or a value specifying the target present time or duration, in nanoseconds, of the presentation request.
- `timeDomainId` is the id of the time domain used to specify the absolute target present time and the timing results obtained in a subsequent `vkGetPastPresentationTimingEXT` call for the

current presentation request.

- `presentStageQueries` is zero or a valid `VkPresentStageFlagsEXT` value indicating which present stages the presentation engine will collect timing information for.
- `targetTimeDomainPresentStage` is a valid `VkPresentStageFlagsEXT` specifying a single present stage used to interpret `targetTime`.

If `targetTime` is not zero, the implementation attempts to align the `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` present stage of that presentation request with the time specified in `targetTime` according to the time domain used. If `VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT` is not set in `flags`, it indicates that the application would strictly prefer the image to not be visible before `targetTime` has lapsed.

If `targetTime` is not zero and `timeDomainId` is associated with a `VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT` time domain, `targetTimeDomainPresentStage` is used to specify which present stage's time domain `targetTime` is specified for. Otherwise, `targetTimeDomainPresentStage` is ignored.

If `presentStageQueries` is not zero, a slot in the swapchain's internal results queue is reserved to hold the requested present timing data until the application retrieves them. If no slots are available, or if `vkSetSwapchainPresentTimingQueueSizeEXT` was never called, presentation fails and returns `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT`.

#### NOTE

Some platforms, due to hardware or system limitations, **may** not be able to accurately time `targetTime` with the actual physical event of the image becoming visible on the display. However, those timing capabilities **may** still be useful and result in improved animation quality.

As such, the `presentAtAbsoluteTime` and `presentAtRelativeTime` features do not provide a strict guarantee regarding the completion of the `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` present stage relative to the `targetTime`, and implementations **must** strive to make it as consistent and accurate as possible.

#### NOTE

Applications that specify an absolute present time **should** regularly rebase their calculations for their next target time on the feedback from `vkGetPastPresentationTimingEXT` to compensate for accumulated precision errors or potential clock drift. It is recommended that when targeting the time of a vertical blanking period, applications set `VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT` to allow the implementation to compensate for small precision errors that may cause an image to be displayed one refresh cycle later than intended.

Some implementations **may** not provide timing data for the `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` present stage. Applications **should** use the supported present stage nearest to it to compute a desired target presentation time.

## Valid Usage

- VUID-VkPresentTimingInfoEXT-targetTime-12236

If `targetTime` is not zero and `flags` does not contain `VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT`, the `presentAtAbsoluteTime` feature **must** be enabled and the `presentAtAbsoluteTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be `VK_TRUE`

- VUID-VkPresentTimingInfoEXT-targetTime-12237

If `targetTime` is not zero and `flags` contains `VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT`, the `presentAtRelativeTime` feature **must** be enabled and the `presentAtRelativeTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be `VK_TRUE`

- VUID-VkPresentTimingInfoEXT-timeDomainId-12238

If `timeDomainId` is associated with a `VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT` time domain, and `targetTime` is not zero, `targetTimeDomainPresentStage` **must** be a single `VkPresentStageFlagsEXT` value

- VUID-VkPresentTimingInfoEXT-timeDomainId-12400

`timeDomainId` **must** be an id previously returned by `vkGetSwapchainTimeDomainPropertiesEXT`

## Valid Usage (Implicit)

- VUID-VkPresentTimingInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMING_INFO_EXT`

- VUID-VkPresentTimingInfoEXT-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkPresentTimingInfoEXT-flags-parameter

If `flags` is not 0, `flags` **must** be a valid combination of `VkPresentTimingInfoFlagBitsEXT` values

- VUID-VkPresentTimingInfoEXT-presentStageQueries-parameter

If `presentStageQueries` is not 0, `presentStageQueries` **must** be a valid combination of `VkPresentStageFlagBitsEXT` values

- VUID-VkPresentTimingInfoEXT-targetTimeDomainPresentStage-parameter

If `targetTimeDomainPresentStage` is not 0, `targetTimeDomainPresentStage` **must** be a valid combination of `VkPresentStageFlagBitsEXT` values

Bits which **can** be set in `VkPresentTimingInfoEXT::flags`, specifying options for how to interpret timing information:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentTimingInfoFlagBitsEXT {
    VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT = 0x00000001,
    VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT = 0x00000002,
} VkPresentTimingInfoFlagBitsEXT;
```

- [VK\\_PRESENT\\_TIMING\\_INFO\\_PRESENT\\_AT\\_RELATIVE\\_TIME\\_BIT\\_EXT](#) specifies that `VkPresentTimingInfoEXT::targetTime` is to be interpreted as a relative time from the previous presentation's [VK\\_PRESENT\\_STAGE\\_IMAGE\\_FIRST\\_PIXEL\\_VISIBLE\\_BIT\\_EXT](#) stage. If the `swapchain` has never been used to present an image, the provided `targetTime` is ignored.
- [VK\\_PRESENT\\_TIMING\\_INFO\\_PRESENT\\_AT\\_NEAREST\\_REFRESH\\_CYCLE\\_BIT\\_EXT](#) specifies that the application would prefer the image to be presented earlier than the time specified in `VkPresentTimingInfoEXT::targetTime` if that time falls within the first half of a refresh cycle. In that case, the presentation engine **may** choose to display the image at the start of that refresh cycle.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentTimingInfoFlagsEXT;
```

`VkPresentTimingInfoFlagsEXT` is a bitmask type for setting a mask of zero or more [VkPresentTimingInfoFlagBitsEXT](#).

Presenting an image to the user typically involves multiple stages. Bits which **can** be set to specify present stages are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentStageFlagBitsEXT {
    VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT = 0x00000001,
    VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT = 0x00000002,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT = 0x00000004,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT = 0x00000008,
} VkPresentStageFlagBitsEXT;
```

- [VK\\_PRESENT\\_STAGE\\_QUEUE\\_OPERATIONS\\_END\\_BIT\\_EXT](#) marks the end of the set of queue operations enqueued by `vkQueuePresentKHR` on the provided `VkQueue` for a presentation request.
- [VK\\_PRESENT\\_STAGE\\_REQUEST\\_DEQUEUED\\_BIT\\_EXT](#) is the stage after which the presentation request has been dequeued from the swapchain's internal presentation request queue, if any, as specified by the present mode associated with that request.
- [VK\\_PRESENT\\_STAGE\\_IMAGE\\_FIRST\\_PIXEL\\_OUT\\_BIT\\_EXT](#) is the stage after which data for the first pixel of the presentation request associated with the image has left the presentation engine for a display hardware.
- [VK\\_PRESENT\\_STAGE\\_IMAGE\\_FIRST\\_PIXEL\\_VISIBLE\\_BIT\\_EXT](#) is the stage after which a display hardware has made the first pixel visible for the presentation request associated with the image

to be presented.

**NOTE**

The set of queue operations delimited by [VK\\_PRESENT\\_STAGE\\_QUEUE\\_OPERATIONS\\_END\\_BIT\\_EXT](#) includes the wait for the semaphores specified in [VkPresentInfoKHR::pWaitSemaphores](#), if any, and any work implicitly enqueued by the implementation.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentStageFlagsEXT;
```

[VkPresentStageFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkPresentStageFlagBitsEXT](#).

The [VkPresentIdKHR](#) structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPresentIdKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*     pPresentIds;
} VkPresentIdKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [swapchainCount](#) is the number of swapchains being presented to the [vkQueuePresentKHR](#) command.
- [pPresentIds](#) is `NULL` or a pointer to an array of [uint64\\_t](#) with [swapchainCount](#) entries. If not `NULL`, each non-zero value in [pPresentIds](#) specifies the present id to be associated with the presentation of the swapchain with the same index in the [vkQueuePresentKHR](#) call.

For applications to be able to reference specific presentation events queued by a call to [vkQueuePresentKHR](#), an identifier needs to be associated with them. When the [presentId](#) feature is enabled, applications **can** include the [VkPresentIdKHR](#) structure in the [pNext](#) chain of the [VkPresentInfoKHR](#) structure to supply identifiers.

Each [VkSwapchainKHR](#) has a [presentId](#) associated with it. This value is initially zero when the [VkSwapchainKHR](#) is created.

When a [VkPresentIdKHR](#) structure with a non-`NULL` [pPresentIds](#) is included in the [pNext](#) chain of a [VkPresentInfoKHR](#) structure, each [pSwapchains](#) entry has a [presentId](#) associated in the [pPresentIds](#) array at the same index as the swapchain in the [pSwapchains](#) array. If this [presentId](#) is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated [presentId](#). A non-zero [presentId](#) **must** be greater than any non-zero [presentId](#) passed previously by the application for the same swapchain.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the `presentId` value, but implementations **should** make this as close as possible to the presentation of the first pixel in the new image to the user.

### Valid Usage

- VUID-VkPresentIdKHR-swapchainCount-04998  
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where this `VkPresentIdKHR` is in the `pNext` chain of the `VkPresentInfoKHR` structure
- VUID-VkPresentIdKHR-presentIds-04999  
Each non-zero entry in `presentIds` **must** be greater than all previously submitted present ids for the associated swapchain in `VkPresentInfoKHR::pSwapchains`

### Valid Usage (Implicit)

- VUID-VkPresentIdKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_ID_KHR`
- VUID-VkPresentIdKHR-pPresentIds-parameter  
If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount uint64_t` values
- VUID-VkPresentIdKHR-swapchainCount-arraylength  
`swapchainCount` **must** be greater than `0`

### Structure Chaining

#### Extends the structure

- `VkPresentInfoKHR`

When the `presentWait` feature is enabled, an application **can** wait for an image to be presented to the user by first specifying a `presentId` for the target presentation by adding a `VkPresentIdKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait
VkResult vkWaitForPresentKHR(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    uint64_t                presentId,
    uint64_t                timeout);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain on which an image was queued for presentation.

- **presentId** is the presentation presentId to wait for.
- **timeout** is the timeout period in units of nanoseconds. **timeout** is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

The call to **vkWaitForPresentKHR** will block until either the presentId associated with **swapchain** is greater than or equal to **presentId**, or **timeout** nanoseconds passes. When the swapchain becomes OUT\_OF\_DATE, the call will either return **VK\_SUCCESS** (if the image was delivered to the presentation engine and may have been presented to the user) or will return early with status **VK\_ERROR\_OUT\_OF\_DATE\_KHR** (if the image could not be presented to the user).

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the presentId value, but implementations **should** make this as close as possible to the presentation of the first pixel in the next image being presented to the user.

For **VK\_PRESENT\_MODE\_MAILBOX\_KHR** (or other present mode where images may be replaced in the presentation queue) any wait of this type associated with such an image **must** be signaled no later than a wait associated with the replacing image would be signaled.

As an exception to the normal rules for objects which are externally synchronized, the **swapchain** passed to **vkWaitForPresentKHR** **may** be simultaneously used by other threads in calls to functions other than **vkDestroySwapchainKHR**. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

### Valid Usage

- VUID-vkWaitForPresentKHR-swapchain-04997  
**swapchain** **must** not be in the retired state
- VUID-vkWaitForPresentKHR-presentWait-06234  
The **presentWait** feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkWaitForPresentKHR-device-parameter  
**device** **must** be a valid **VkDevice** handle
- VUID-vkWaitForPresentKHR-swapchain-parameter  
**swapchain** **must** be a valid **VkSwapchainKHR** handle
- VUID-vkWaitForPresentKHR-swapchain-parent  
**swapchain** **must** have been created, allocated, or retrieved from **device**

### Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

## Return Codes

### Success

- [VK\\_SUBOPTIMAL\\_KHR](#)
- [VK\\_SUCCESS](#)
- [VK\\_TIMEOUT](#)

### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkPresentId2KHR](#) structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPresentId2KHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*     pPresentIds;
} VkPresentId2KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [swapchainCount](#) is the number of swapchains being presented to the [vkQueuePresentKHR](#) command.
- [pPresentIds](#) is [NULL](#) or a pointer to an array of [uint64\\_t](#) with [swapchainCount](#) entries. If not [NULL](#), each non-zero value in [pPresentIds](#) specifies the present id to be associated with the presentation of the swapchain with the same index in the [vkQueuePresentKHR](#) call.

For applications to be able to reference specific presentation events queued by a call to [vkQueuePresentKHR](#), an identifier needs to be associated with them.

When the [VkSurfaceCapabilitiesPresentId2KHR](#) surface capability is present for a surface, applications **can** include the [VkPresentId2KHR](#) structure in the [pNext](#) chain of the [VkPresentInfoKHR](#) structure to associate an identifier with each presentation request. The [pPresentIds](#) provides an identifier for the swapchain present at the corresponding index in [VkPresentInfoKHR](#)'s [pSwapchains](#)

array.

If this `presentId` is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated `presentId`. A non-zero `presentId` **must** be greater than any non-zero `presentId` passed previously by the application for the same swapchain.

If a non-zero `presentId` was provided, this may be used with [vkWaitForPresent2KHR](#) for the application to synchronize against the presentation engine's processing of the presentation request.

#### NOTE

The ID namespace used by this extension **must** be shared with other extensions that allow the application to provide a 64-bit monotonically increasing presentation ID, such as the original `VK_KHR_present_id`.

This is to allow existing extensions that depend on `VK_KHR_present_id` to use `VK_KHR_present_id2` provided IDs without change, as well as to simplify writing future extensions that require application provided presentation IDs.

### Valid Usage

- VUID-VkPresentId2KHR-swapchainCount-10818  
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where this `VkPresentId2KHR` is in the `pNext` chain of the `VkPresentInfoKHR` structure
- VUID-VkPresentId2KHR-presentIds-10819  
Each non-zero entry in `presentIds` **must** be greater than all previously submitted present ids for the associated swapchain in `VkPresentInfoKHR::pSwapchains`
- VUID-VkPresentId2KHR-None-10820  
The swapchain must have been created with `VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR` bit set in the `VkSwapchainCreateFlagBitsKHR` field

### Valid Usage (Implicit)

- VUID-VkPresentId2KHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_ID_2_KHR`
- VUID-VkPresentId2KHR-pPresentIds-parameter  
If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount uint64_t` values
- VUID-VkPresentId2KHR-swapchainCount-arraylength  
`swapchainCount` **must** be greater than 0

## Structure Chaining

### Extends the structure

- [VkPresentInfoKHR](#)

When the [VkSurfaceCapabilitiesPresentWait2KHR](#) surface capability is present for a given surface, an application **can** wait for an image to be presented to the user by first specifying a [presentId](#) for the target presentation by adding a [VkPresentId2KHR](#) structure to the [pNext](#) chain of the [VkPresentInfoKHR](#) structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait2
VkResult vkWaitForPresent2KHR(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    const VkPresentWait2InfoKHR* pPresentWait2Info);
```

- [device](#) is the device associated with [swapchain](#).
- [swapchain](#) is the non-retired swapchain on which an image was queued for presentation.
- [pPresentWait2Info](#) is a pointer to a [VkPresentWait2InfoKHR](#) structure specifying the parameters of the wait.

[vkWaitForPresent2KHR](#) waits for the presentation engine to have begun presentation of the presentation request associated with the [VkPresentWait2InfoKHR::presentId](#) on [swapchain](#), or for [VkPresentWait2InfoKHR::timeout](#) to have expired.

The wait request will complete when the timeout expires, or after the corresponding presentation request has either taken effect within the presentation engine or has been replaced without presentation.

The timing relationship between the presentation of the image to the user and the wait request completing is implementation-dependent due to variations in window system implementations.

If the [swapchain](#) becomes [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) either before or during this call, the call **may** either return [VK\\_SUCCESS](#) (if the image was delivered to the presentation engine and **may** have been presented to the user) or return early with status [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) (if the image could not be presented to the user).

As an exception to the normal rules for objects which are externally synchronized, the [swapchain](#) passed to [vkWaitForPresent2KHR](#) **may** be simultaneously used by other threads in calls to functions other than [vkDestroySwapchainKHR](#). Access to the swapchain data associated with this extension **must** be atomic within the implementation.

## Valid Usage

- VUID-vkWaitForPresent2KHR-presentWait2-10814  
The [presentWait2](#) feature **must** be enabled

- VUID-vkWaitForPresent2KHR-None-10815

The [VkSurfaceCapabilitiesPresentWait2KHR](#) surface capability **must** be present for the underlying surface

- VUID-vkWaitForPresent2KHR-None-10816

The `swapchain` must have been created with [VK\\_SWAPCHAIN\\_CREATE\\_PRESENT\\_WAIT\\_2\\_BIT\\_KHR](#) bit set in the `VkSwapchainCreateFlagBitsKHR` field

- VUID-vkWaitForPresent2KHR-presentId-10817

The `presentId` value **must** have been associated with a [vkQueuePresentKHR](#) request on the `swapchain` which returned a non-error value

## Valid Usage (Implicit)

- VUID-vkWaitForPresent2KHR-device-parameter  
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkWaitForPresent2KHR-swapchain-parameter  
`swapchain` **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkWaitForPresent2KHR-pPresentWait2Info-parameter  
`pPresentWait2Info` **must** be a valid pointer to a valid [VkPresentWait2InfoKHR](#) structure
- VUID-vkWaitForPresent2KHR-swapchain-parent  
`swapchain` **must** have been created, allocated, or retrieved from `device`

## Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

## Return Codes

### Success

- [VK\\_SUBOPTIMAL\\_KHR](#)
- [VK\\_SUCCESS](#)
- [VK\\_TIMEOUT](#)

### Failure

- [VK\\_ERROR\\_DEVICE\\_LOST](#)
- [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)

- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkSwapchainPresentModeInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModeInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             swapchainCount;
    const VkPresentModeKHR* pPresentModes;
} VkSwapchainPresentModeInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModeInfoKHR
typedef VkSwapchainPresentModeInfoKHR VkSwapchainPresentModeInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [swapchainCount](#) is the number of swapchains being presented to by this command.
- [pPresentModes](#) is a list of presentation modes with [swapchainCount](#) entries.

If the [pNext](#) chain of [VkPresentInfoKHR](#) includes a [VkSwapchainPresentModeInfoKHR](#) structure, then that structure defines the presentation modes used for the current and subsequent presentation operations.

When the application changes present modes with [VkSwapchainPresentModeInfoKHR](#), images that have already been queued for presentation will continue to be presented according to the previous present mode. The current image being queued for presentation and subsequent images will be presented according to the new present mode. The behavior during the transition between the two modes is defined as follows.

- Transition from [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) to [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#): the presentation engine updates the shared presentable image according to the behavior of [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#).
- Transition from [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) to [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#): the presentation engine **may** update the shared presentable image or defer that to its regular refresh cycle, according to the behavior of [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#).
- Transition between [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) and [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#): Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period will follow the new mode for current and subsequent images.

- Transition from [VK\\_PRESENT\\_MODE\\_IMMEDIATE\\_KHR](#) to [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#) : As all prior present requests in the [VK\\_PRESENT\\_MODE\\_IMMEDIATE\\_KHR](#) mode are applied immediately, there are no outstanding present operations in this mode, and current and subsequent images are appended to the FIFO queue and presented according to the new mode.
- Transition from [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#) to [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#) : Presentation in FIFO modes require waiting for the next vertical blanking period, with [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#) allowing the pending present operation to be replaced by a new one. In this case, the current present operation will replace the pending present operation and is applied according to the new mode.
- Transition from [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#) to [VK\\_PRESENT\\_MODE\\_IMMEDIATE\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#): If the FIFO queue is empty, presentation is done according to the behavior of the new mode. If there are present operations in the FIFO queue, once the last present operation is performed based on the respective vertical blanking period, the current and subsequent updates are applied according to the new mode.
- Transition between [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_FIFO\\_RELAXED\\_KHR](#), and [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#): Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period and dequeuing requests will follow the new mode for current and subsequent images.
- The behavior during transition between any other present modes, if possible, is implementation defined.

### Valid Usage

- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-07760  
[swapchainCount](#) **must** be equal to [VkPresentInfoKHR::swapchainCount](#)
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-07761  
Each entry in [pPresentModes](#) **must** be a presentation mode specified in [VkSwapchainPresentModesCreateInfoKHR::pPresentModes](#) when creating the entry's corresponding swapchain

### Valid Usage (Implicit)

- VUID-VkSwapchainPresentModeInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_PRESENT\\_MODE\\_INFO\\_KHR](#)
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-parameter  
[pPresentModes](#) **must** be a valid pointer to an array of [swapchainCount](#) valid [VkPresentModeKHR](#) values
- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-arraylength  
[swapchainCount](#) **must** be greater than 0

## Structure Chaining

### Extends the structure

- [VkPresentInfoKHR](#)

The `VkSwapchainPresentFenceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentFenceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkFence*      pFences;
} VkSwapchainPresentFenceInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentFenceInfoKHR
typedef VkSwapchainPresentFenceInfoKHR VkSwapchainPresentFenceInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pFences` is a list of fences with `swapchainCount` entries. Each entry **must** be [VK\\_NULL\\_HANDLE](#) or the handle of a fence to signal when the relevant operations on the associated swapchain have completed.

The set of *queue operations* defined by queuing an image for presentation, as well as operations performed by the presentation engine, access the payloads of objects associated with the presentation operation. The associated objects include:

- The swapchain image, its implicitly bound memory, and any other resources bound to that memory.
- The wait semaphores specified when queuing the image for presentation.

The application **can** provide a fence that the implementation will signal after all such queue operations have completed, and after the presentation engine has taken a reference to the payloads of all objects provided in `VkPresentInfoKHR` that the presentation engine accesses as part of the present operation. The fence **may** not wait for the present operation to complete. For all binary wait semaphores imported by the presentation engine using the equivalent of reference transference, as described in [Importing Semaphore Payloads](#), this fence **must** not signal until all such semaphore payloads have been reset by the presentation engine.

The application **can** destroy the wait semaphores associated with a given presentation operation when at least one of the associated fences is signaled, and **can** destroy the swapchain when the

fences associated with all past presentation requests referring to that swapchain have signaled.

Fences associated with presentations to the same swapchain on the same [VkQueue](#) **must** be signaled in the same order as the present operations.

To specify a fence for each swapchain in a present operation, include the [VkSwapchainPresentFenceInfoKHR](#) structure in the [pNext](#) chain of the [VkPresentInfoKHR](#) structure.

### Valid Usage

- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-07757  
[swapchainCount](#) **must** be equal to [VkPresentInfoKHR::swapchainCount](#)
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07758  
Each element of [pFences](#) that is not [VK\\_NULL\\_HANDLE](#) **must** be unsignaled
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07759  
Each element of [pFences](#) that is not [VK\\_NULL\\_HANDLE](#) **must** not be associated with any other queue command that has not yet completed execution on that queue

### Valid Usage (Implicit)

- VUID-VkSwapchainPresentFenceInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_PRESENT\\_FENCE\\_INFO\\_KHR](#)
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-parameter  
[pFences](#) **must** be a valid pointer to an array of [swapchainCount](#) valid or [VK\\_NULL\\_HANDLE](#) [VkFence](#) handles
- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-arraylength  
[swapchainCount](#) **must** be greater than 0

### Structure Chaining

#### Extends the structure

- [VkPresentInfoKHR](#)

To release images previously acquired through [vkAcquireNextImage2KHR](#) or [vkAcquireNextImageKHR](#), call:

```
// Provided by VK_KHR_swapchain_maintenance1
VkResult vkReleaseSwapchainImagesKHR(
    VkDevice device,
    const VkReleaseSwapchainImagesInfoKHR* pReleaseInfo);
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to vkReleaseSwapchainImagesKHR
VkResult vkReleaseSwapchainImagesEXT(
    VkDevice device,
    const VkReleaseSwapchainImagesInfoKHR* pReleaseInfo);
```

- **device** is the device associated with [VkReleaseSwapchainImagesInfoKHR::swapchain](#).
- **pReleaseInfo** is a pointer to a [VkReleaseSwapchainImagesInfoKHR](#) structure containing parameters of the release.

Only images that are not in use by the device **can** be released.

Releasing images is a read-only operation that will not affect the content of the released images. Upon reacquiring the image, the image contents and its layout will be the same as they were prior to releasing it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

#### NOTE

This functionality is useful during swapchain recreation, where acquired images from the old swapchain can be released instead of presented.

### Valid Usage

- VUID-vkReleaseSwapchainImagesKHR-swapchainMaintenance1-10159  
Feature [swapchainMaintenance1](#) **must** be enabled

### Valid Usage (Implicit)

- VUID-vkReleaseSwapchainImagesKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkReleaseSwapchainImagesKHR-pReleaseInfo-parameter  
**pReleaseInfo** **must** be a valid pointer to a valid [VkReleaseSwapchainImagesInfoKHR](#) structure

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The `VkReleaseSwapchainImagesInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkReleaseSwapchainImagesInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR      swapchain;
    uint32_t           imageIndexCount;
    const uint32_t*     pImageIndices;
} VkReleaseSwapchainImagesInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkReleaseSwapchainImagesInfoKHR
typedef VkReleaseSwapchainImagesInfoKHR VkReleaseSwapchainImagesInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is a swapchain to which images are being released.
- `imageIndexCount` is the number of image indices to be released.
- `pImageIndices` is a pointer to an array of indices into the array of `swapchain`'s presentable images, with `imageIndexCount` entries.

### Valid Usage

- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07785  
Each element of `pImageIndices` **must** be the index of a presentable image acquired from the swapchain specified by `swapchain`
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07786  
All uses of presentable images identified by elements of `pImageIndices` **must** have completed execution

### Valid Usage (Implicit)

- VUID-VkReleaseSwapchainImagesInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_RELEASE_SWAPCHAIN_IMAGES_INFO_KHR`
- VUID-VkReleaseSwapchainImagesInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkReleaseSwapchainImagesInfoKHR-swapchain-parameter  
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-parameter  
`pImageIndices` **must** be a valid pointer to an array of `imageIndexCount` `uint32_t` values

- VUID-VkReleaseSwapchainImagesInfoKHR-imageIndexCount-arraylength  
`imageIndexCount` **must** be greater than 0

## Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

## 37.11. HDR Metadata

This section describes how to improve color reproduction of content to better reproduce colors as seen on the display used to originally optimize the content.

To provide HDR metadata to an implementation, call:

```
// Provided by VK_EXT_hdr_metadata
void vkSetHdrMetadataEXT(
    VkDevice          device,
    uint32_t          swapchainCount,
    const VkSwapchainKHR* pSwapchains,
    const VkHdrMetadataEXT* pMetadata);
```

- `device` is the logical device where the swapchain(s) were created.
- `swapchainCount` is the number of swapchains included in `pSwapchains`.
- `pSwapchains` is a pointer to an array of `swapchainCount` `VkSwapchainKHR` handles.
- `pMetadata` is a pointer to an array of `swapchainCount` `VkHdrMetadataEXT` structures.

The metadata will be applied to the specified `VkSwapchainKHR` objects at the next `vkQueuePresentKHR` call using that `VkSwapchainKHR` object. The metadata will persist until a subsequent `vkSetHdrMetadataEXT` changes it.

## Valid Usage (Implicit)

- VUID-vkSetHdrMetadataEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetHdrMetadataEXT-pSwapchains-parameter  
`pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid `VkSwapchainKHR` handles
- VUID-vkSetHdrMetadataEXT-pMetadata-parameter  
`pMetadata` **must** be a valid pointer to an array of `swapchainCount` valid `VkHdrMetadataEXT` structures
- VUID-vkSetHdrMetadataEXT-swapchainCount-arraylength  
`swapchainCount` **must** be greater than 0

- VUID-vkSetHdrMetadataEXT-pSwapchains-parent  
Each element of **pSwapchains** **must** have been created, allocated, or retrieved from **device**

## Host Synchronization

- Host access to each member of **pSwapchains** **must** be externally synchronized

The **VkHdrMetadataEXT** structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkHdrMetadataEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkXYColorEXT       displayPrimaryRed;
    VkXYColorEXT       displayPrimaryGreen;
    VkXYColorEXT       displayPrimaryBlue;
    VkXYColorEXT       whitePoint;
    float              maxLuminance;
    float              minLuminance;
    float              maxContentLightLevel;
    float              maxFrameAverageLightLevel;
} VkHdrMetadataEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **displayPrimaryRed** is a **VkXYColorEXT** structure specifying the red primary of the display used to optimize the content
- **displayPrimaryGreen** is a **VkXYColorEXT** structure specifying the green primary of the display used to optimize the content
- **displayPrimaryBlue** is a **VkXYColorEXT** structure specifying the blue primary of the display used to optimize the content
- **whitePoint** is a **VkXYColorEXT** structure specifying the white-point of the display used to optimize the content
- **maxLuminance** is the maximum luminance of the display used to optimize the content in nits
- **minLuminance** is the minimum luminance of the display used to optimize the content in nits
- **maxContentLightLevel** is the value in nits of the desired luminance for the brightest pixels in the displayed image.
- **maxFrameAverageLightLevel** is the value in nits of the average luminance of the frame which has the brightest average luminance anywhere in the content.

If any of the above values are unknown, they **can** be set to 0.

**NOTE** | The meta-data provided here is intended to be used as defined in the SMPTE 2086,

CTA 861.3 and CIE 15:2004 specifications. The validity and use of this data is outside the scope of Vulkan.

### Valid Usage (Implicit)

- VUID-VkHdrMetadataEXT-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_HDR\\_METADATA\\_EXT](#)
- VUID-VkHdrMetadataEXT-pNext-pNext  
**pNext** must be [NULL](#)

The [VkXYColorEXT](#) structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkXYColorEXT {
    float    x;
    float    y;
} VkXYColorEXT;
```

- **x** is the x chromaticity coordinate.
- **y** is the y chromaticity coordinate.

Chromaticity coordinates are as specified in CIE 15:2004 “Calculation of chromaticity coordinates” (Section 7.3) and are limited to between 0 and 1 for real colors.

# Chapter 38. Deferred Host Operations

Certain Vulkan commands are inherently expensive for the host CPU to execute. It is often desirable to offload such work onto background threads, and to parallelize the work across multiple CPUs. The concept of *deferred operations* allows applications and drivers to coordinate the execution of expensive host commands using an application-managed thread pool.

The [VK\\_KHR\\_deferred\\_host\\_operations](#) extension defines the infrastructure and usage patterns for *deferrable commands*, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on [VK\\_KHR\\_deferred\\_host\\_operations](#). This specification will refer to such extensions as *deferral extensions*.

## 38.1. Requesting Deferral

When an application requests an operation deferral, the implementation **may** defer the operation. When deferral is requested and the implementation defers any operation, the implementation **must** return [VK\\_OPERATION\\_DEFERRED\\_KHR](#) as the success code if no errors occurred. When deferral is requested, the implementation **should** defer the operation when the workload is significant, however if the implementation chooses not to defer any of the requested operations and instead executes all of them immediately, the implementation **must** return [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#) as the success code if no errors occurred.

A deferred operation is created *complete* with an initial result value of [VK\\_SUCCESS](#). The deferred operation becomes *pending* when an operation has been successfully deferred with that deferred operation object.

A deferred operation is considered pending until the deferred operation completes. A pending deferred operation becomes *complete* when it has been fully executed by one or more threads. Pending deferred operations will never complete until they are *joined* by an application thread, using [vkDeferredOperationJoinKHR](#). Applications **can** join multiple threads to the same deferred operation, enabling concurrent execution of subtasks within that operation.

The application **can** query the status of a [VkDeferredOperationKHR](#) using the [vkGetDeferredOperationMaxConcurrencyKHR](#) or [vkGetDeferredOperationResultKHR](#) commands.

Parameters to the command requesting a deferred operation **may** be accessed by the implementation at any time until the deferred operation enters the complete state. The application **must** obey the following rules while a deferred operation is pending:

- Externally synchronized parameters **must** not be accessed.
- Pointer parameters **must** not be modified (e.g. reallocated/freed).
- The contents of pointer parameters which **may** be read by the command **must** not be modified.
- The contents of pointer parameters which **may** be written by the command **must** not be read.
- Vulkan object parameters **must** not be passed as externally synchronized parameters to any other command.

When the deferred operation is complete, the application **should** call [vkGetDeferredOperationResultKHR](#) to obtain the [VkResult](#) indicating success or failure of the operation. The [VkResult](#) value returned will be one of the values that the command requesting the deferred operation is able to return. Writes to output parameters of the requesting command will happen-before the deferred operation is complete.

When a deferral is requested for a command, the implementation **may** perform memory management operations on the allocator supplied to [vkCreateDeferredOperationKHR](#) for the deferred operation object, as described in the [Memory Allocation](#) chapter. Such allocations **must** occur on the thread which requests deferral.

If an allocator was supplied for the deferred command at the time of the deferral request, then the implementation **may** perform memory management operations on this allocator during the execution of [vkDeferredOperationJoinKHR](#). These operations **may** occur concurrently and **may** be performed by any joined thread. The application **must** ensure that the supplied allocator is able to operate correctly under these conditions.

## 38.2. Deferred Host Operations API

The [VkDeferredOperationKHR](#) handle is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeferredOperationKHR)
```

This handle refers to a tracking structure which manages the execution state for a deferred command.

To construct the tracking object for a deferred command, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkCreateDeferredOperationKHR(
    VkDevice device,
    const VkAllocationCallbacks* pAllocator,
    VkDeferredOperationKHR* pDeferredOperation);
```

- [device](#) is the device which owns [operation](#).
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pDeferredOperation](#) is a pointer to a handle in which the created [VkDeferredOperationKHR](#) is returned.

### Valid Usage (Implicit)

- VUID-vkCreateDeferredOperationKHR-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDeferredOperationKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VUID-vkCreateDeferredOperationKHR-pDeferredOperation-parameter`  
`pDeferredOperation` **must** be a valid pointer to a `VkDeferredOperationKHR` handle
- `VUID-vkCreateDeferredOperationKHR-device-queuecount`  
The device **must** have been created with at least `1` queue

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To assign a thread to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkDeferredOperationJoinKHR(
    VkDevice                device,
    VkDeferredOperationKHR  operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation that the calling thread should work on.

The `vkDeferredOperationJoinKHR` command will execute a portion of the deferred operation on the calling thread.

The return value will be one of the following:

- A return value of `VK_SUCCESS` indicates that `operation` is complete. The application **should** use `vkGetDeferredOperationResultKHR` to retrieve the result of `operation`.
- A return value of `VK_THREAD_DONE_KHR` indicates that the deferred operation is not complete, but there is no work remaining to assign to threads. Future calls to `vkDeferredOperationJoinKHR` are not necessary and will simply harm performance. This situation **may** occur when other threads executing `vkDeferredOperationJoinKHR` are about to complete `operation`, and the implementation is unable to partition the workload any further.
- A return value of `VK_THREAD_IDLE_KHR` indicates that the deferred operation is not complete, and there is no work for the thread to do at the time of the call. This situation **may** occur if the operation encounters a temporary reduction in parallelism. By returning `VK_THREAD_IDLE_KHR`, the implementation is signaling that it expects that more opportunities for parallelism will emerge as execution progresses, and that future calls to

`vkDeferredOperationJoinKHR` **can** be beneficial. In the meantime, the application **can** perform other work on the calling thread.

Implementations **must** guarantee forward progress by enforcing the following invariants:

1. If only one thread has invoked `vkDeferredOperationJoinKHR` on a given operation, that thread **must** execute the operation to completion and return `VK_SUCCESS`.
2. If multiple threads have concurrently invoked `vkDeferredOperationJoinKHR` on the same operation, then at least one of them **must** complete the operation and return `VK_SUCCESS`.

### Valid Usage (Implicit)

- VUID-vkDeferredOperationJoinKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkDeferredOperationJoinKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkDeferredOperationJoinKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

### Return Codes

#### Success

- `VK_SUCCESS`
- `VK_THREAD_DONE_KHR`
- `VK_THREAD_IDLE_KHR`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

When a deferred operation is completed, the application **can** destroy the tracking object by calling:

```
// Provided by VK_KHR_deferred_host_operations
void vkDestroyDeferredOperationKHR(
    VkDevice                device,
    VkDeferredOperationKHR  operation,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the device which owns `operation`.
- `operation` is the completed operation to be destroyed.

- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

### Valid Usage

- VUID-vkDestroyDeferredOperationKHR-operation-03434  
If `VkAllocationCallbacks` were provided when `operation` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDeferredOperationKHR-operation-03435  
If no `VkAllocationCallbacks` were provided when `operation` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyDeferredOperationKHR-operation-03436  
`operation` **must** be completed

### Valid Usage (Implicit)

- VUID-vkDestroyDeferredOperationKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyDeferredOperationKHR-operation-parameter  
If `operation` is not `VK_NULL_HANDLE`, `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkDestroyDeferredOperationKHR-pAllocator-parameter  
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyDeferredOperationKHR-operation-parent  
If `operation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `operation` **must** be externally synchronized

To query the number of additional threads that can usefully be joined to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
uint32_t vkGetDeferredOperationMaxConcurrencyKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation to be queried.

The returned value is the maximum number of threads that can usefully execute a deferred

operation concurrently, reported for the state of the deferred operation at the point this command is called. This value is intended to be used to better schedule work onto available threads. Applications **can** join any number of threads to the deferred operation and expect it to eventually complete, though excessive joins **may** return `VK_THREAD_DONE_KHR` immediately, performing no useful work.

If `operation` is complete, `vkGetDeferredOperationMaxConcurrencyKHR` returns zero.

If `operation` is currently joined to any threads, the value returned by this command **may** immediately be out of date.

If `operation` is pending, implementations **must** not return zero unless at least one thread is currently executing `vkDeferredOperationJoinKHR` on `operation`. If there are such threads, the implementation **should** return an estimate of the number of additional threads which it could profitably use.

Implementations **may** return  $2^{32}-1$  to indicate that the maximum concurrency is unknown and cannot be easily derived. Implementations **may** return values larger than the maximum concurrency available on the host CPU. In these situations, an application **should** clamp the return value rather than oversubscribing the machine.

#### NOTE

The recommended usage pattern for applications is to query this value once, after deferral, and schedule no more than the specified number of threads to join the operation. Each time a joined thread receives `VK_THREAD_IDLE_KHR`, the application should schedule an additional join at some point in the future, but is not required to do so.

### Valid Usage (Implicit)

- VUID-vkGetDeferredOperationMaxConcurrencyKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

The `vkGetDeferredOperationResultKHR` function is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkGetDeferredOperationResultKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the operation whose deferred result is being queried.

If no command has been deferred on `operation`, `vkGetDeferredOperationResultKHR` returns `VK_SUCCESS`.

If the deferred operation is pending, `vkGetDeferredOperationResultKHR` returns `VK_NOT_READY`.

If the deferred operation is complete, it returns the appropriate return value from the original command. This value **must** be one of the `VkResult` values which could have been returned by the original command if the operation had not been deferred.

### Valid Usage (Implicit)

- VUID-vkGetDeferredOperationResultKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeferredOperationResultKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkGetDeferredOperationResultKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

### Return Codes

#### Success

- `VK_NOT_READY`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

# Chapter 39. Private Data

The private data extension provides a way for users to associate arbitrary application-defined data with Vulkan objects. This association is accomplished by storing 64-bit unsigned integers of application-defined data in private data slots. A private data slot represents a storage allocation for one data item for each child object of the device.

An application **can** reserve private data slots at device creation. To reserve private data slots, insert a [VkDevicePrivateDataCreateInfo](#) in the **pNext** chain in [VkDeviceCreateInfo](#) before device creation. Multiple [VkDevicePrivateDataCreateInfo](#) structures **can** be chained together, and the sum of the requested slots will be reserved. This is an exception to the specified valid usage for [structure pointer chains](#). Reserving slots in this manner is not strictly necessary but it **may** improve performance.

Private data slots are represented by [VkPrivateDataSlot](#) handles:

```
// Provided by VK_VERSION_1_3
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPrivateDataSlot)
```

To create a private data slot, call:

```
// Provided by VK_VERSION_1_3
VkResult vkCreatePrivateDataSlot(
    VkDevice                device,
    const VkPrivateDataSlotCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkPrivateDataSlot* pPrivateDataSlot);
```

- **device** is the logical device associated with the creation of the object(s) holding the private data slot.
- **pCreateInfo** is a pointer to a [VkPrivateDataSlotCreateInfo](#) structure.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pPrivateDataSlot** is a pointer to a [VkPrivateDataSlot](#) handle in which the resulting private data slot is returned.

## Valid Usage

- VUID-vkCreatePrivateDataSlot-privateData-04564  
The **privateData** feature **must** be enabled

## Valid Usage (Implicit)

- VUID-vkCreatePrivateDataSlot-device-parameter  
**device** **must** be a valid [VkDevice](#) handle

- VUID-vkCreatePrivateDataSlot-pCreateInfo-parameter  
**pCreateInfo** **must** be a valid pointer to a valid [VkPrivateDataSlotCreateInfo](#) structure
- VUID-vkCreatePrivateDataSlot-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreatePrivateDataSlot-pPrivateDataSlot-parameter  
**pPrivateDataSlot** **must** be a valid pointer to a [VkPrivateDataSlot](#) handle
- VUID-vkCreatePrivateDataSlot-device-queuecount  
The device **must** have been created with at least **1** queue

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkPrivateDataSlotCreateInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPrivateDataSlotCreateInfo {
    VkStructureType      sType;
    const void*          pNext;
    VkPrivateDataSlotCreateFlags flags;
} VkPrivateDataSlotCreateInfo;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkPrivateDataSlotCreateFlagBits](#) specifying additional parameters of the private data slot.

## Valid Usage

### Valid Usage (Implicit)

- VUID-VkPrivateDataSlotCreateInfo-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_PRIVATE\\_DATA\\_SLOT\\_CREATE\\_INFO](#)

- VUID-VkPrivateDataSlotCreateInfo-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkPrivateDataSlotCreateInfo-flags-zeroBitmask  
`flags` **must** be `0`

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPrivateDataSlotCreateFlags;
```

`VkPrivateDataSlotCreateFlags` is a bitmask type for setting a mask of zero or more `VkPrivateDataSlotCreateFlagBits`.

To destroy a private data slot, call:

```
// Provided by VK_VERSION_1_3
void vkDestroyPrivateDataSlot(
    VkDevice                device,
    VkPrivateDataSlot       privateDataSlot,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device associated with the creation of the object(s) holding the private data slot.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `privateDataSlot` is the private data slot to destroy.

### Valid Usage

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04062  
If `VkAllocationCallbacks` were provided when `privateDataSlot` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04063  
If no `VkAllocationCallbacks` were provided when `privateDataSlot` was created, `pAllocator` **must** be `NULL`

### Valid Usage (Implicit)

- VUID-vkDestroyPrivateDataSlot-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parameter  
If `privateDataSlot` is not `VK_NULL_HANDLE`, `privateDataSlot` **must** be a valid `VkPrivateDataSlot` handle
- VUID-vkDestroyPrivateDataSlot-pAllocator-parameter  
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid

[VkAllocationCallbacks](#) structure

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parent

If `privateDataSlot` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Host Synchronization

- Host access to `privateDataSlot` **must** be externally synchronized

To store application-defined data in a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
VkResult vkSetPrivateData(
    VkDevice          device,
    VkObjectType      objectType,
    uint64_t          objectHandle,
    VkPrivateDataSlot privateDataSlot,
    uint64_t          data);
```

- `device` is the device that created the object.
- `objectType` is a [VkObjectType](#) specifying the type of object to associate data with.
- `objectHandle` is a handle to the object to associate data with.
- `privateDataSlot` is a handle to a [VkPrivateDataSlot](#) specifying location of private data storage.
- `data` is application-defined data to associate the object with. This data will be stored at `privateDataSlot`.

## Valid Usage

- VUID-vkSetPrivateData-objectHandle-04016  
`objectHandle` **must** be `device` or a child of `device`
- VUID-vkSetPrivateData-objectHandle-04017  
`objectHandle` **must** be a valid handle to an object of type `objectType`

## Valid Usage (Implicit)

- VUID-vkSetPrivateData-device-parameter  
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkSetPrivateData-objectType-parameter  
`objectType` **must** be a valid [VkObjectType](#) value
- VUID-vkSetPrivateData-privateDataSlot-parameter  
`privateDataSlot` **must** be a valid [VkPrivateDataSlot](#) handle

- VUID-vkSetPrivateData-privateDataSlot-parent  
`privateDataSlot` **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To retrieve application-defined data from a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
void vkGetPrivateData(
    VkDevice                device,
    VkObjectType            objectType,
    uint64_t                objectHandle,
    VkPrivateDataSlot       privateDataSlot,
    uint64_t*               pData);
```

- `device` is the device that created the object.
- `objectType` is a `VkObjectType` specifying the type of object data is associated with.
- `objectHandle` is a handle to the object data is associated with.
- `privateDataSlot` is a handle to a `VkPrivateDataSlot` specifying location of private data pointer storage.
- `pData` is a pointer to specify where application-defined data is returned. `0` will be written in the absence of a previous call to `vkSetPrivateData` using the object specified by `objectHandle`.

### NOTE

Due to platform details on Android, implementations might not be able to reliably return `0` from calls to `vkGetPrivateData` for `VkSwapchainKHR` objects on which `vkSetPrivateData` has not previously been called. This erratum is exclusive to the Android platform and objects of type `VkSwapchainKHR`.

## Valid Usage

- VUID-vkGetPrivateData-objectType-04018  
`objectHandle` **must** be `device` or a child of `device`
- VUID-vkGetPrivateData-objectHandle-09498  
`objectHandle` **must** be a valid handle to an object of type `objectType`

## Valid Usage (Implicit)

- VUID-vkGetPrivateData-device-parameter  
**device** must be a valid [VkDevice](#) handle
- VUID-vkGetPrivateData-objectType-parameter  
**objectType** must be a valid [VkObjectType](#) value
- VUID-vkGetPrivateData-privateDataSlot-parameter  
**privateDataSlot** must be a valid [VkPrivateDataSlot](#) handle
- VUID-vkGetPrivateData-pData-parameter  
**pData** must be a valid pointer to a [uint64\\_t](#) value
- VUID-vkGetPrivateData-privateDataSlot-parent  
**privateDataSlot** must have been created, allocated, or retrieved from **device**

# Chapter 40. Acceleration Structures

## 40.1. Acceleration Structures

*Acceleration structures* are data structures used by the implementation to efficiently manage scene geometry as it is [traversed during a ray tracing query](#). The application is responsible for managing acceleration structure objects (see [Acceleration Structures](#)), including allocation, destruction, executing builds or updates, and synchronizing resources used during ray tracing queries.

There are two types of acceleration structures, *top level acceleration structures* and *bottom level acceleration structures*.

An acceleration structure is considered to be constructed if an [acceleration structure build command](#) or [copy command](#) has been executed with the given acceleration structure as the destination.

Figure 22. Acceleration Structure

### Caption

The diagram shows the relationship between top and bottom level acceleration structures.

### 40.1.1. Geometry

*Geometries* refer to a triangle, or axis-aligned bounding box.

A triangle is a fundamental geometric primitive defined by three vertices in 3D space, forming a flat, planar surface.

An axis-aligned bounding box (AABB) is a rectangular box defined by two points (minimum and maximum corners) that encloses a 3D object or scene. Its faces are aligned with the coordinate axes, making intersection tests efficient for spatial partitioning and acceleration structures.

### 40.1.2. Top Level Acceleration Structures

Opaque acceleration structure for an array of instances. The descriptor or device address referencing this is the starting point for traversal.

The top level acceleration structure takes a reference to any bottom level acceleration structure referenced by its instances. Those bottom level acceleration structure objects **must** be valid when the top level acceleration structure is accessed.

### 40.1.3. Bottom Level Acceleration Structures

Opaque acceleration structure for an array of geometries.

### 40.1.4. Acceleration Structure Update Rules

The API defines two types of operations to produce acceleration structures from geometry:

- A *build* operation is used to construct an acceleration structure.
- An *update* operation is used to modify an existing acceleration structure.

An update operation imposes certain constraints on the input, in exchange for considerably faster execution. When performing an update, the application is required to provide a full description of the acceleration structure, but is prohibited from changing anything other than instance definitions, transform matrices, and vertex or AABB positions. All other aspects of the description **must** exactly match the one from the original build.

More precisely, the application **must** not use an update operation to do any of the following:

- Change primitives or instances from *active* to *inactive*, or vice versa (as defined in [Inactive Primitives and Instances](#)).
- Change the index or vertex formats of triangle geometry.
- Change triangle geometry transform pointers from null to non-null or vice versa.
- Change the number of geometries or instances in the structure.
- Change the geometry flags for any geometry in the structure.
- Change the number of vertices or primitives for any geometry in the structure.

If the original acceleration structure was built using opacity micromaps and [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_DATA\\_UPDATE\\_BIT\\_EXT](#) was set in **flags**, the application **must** provide a micromap matching the original micromap in structure with only opacity values updated. The application is prohibited from changing anything

other than the specific opacity values assigned to the triangles.

More precisely, the application **must** not use an update operation to do any of the following:

- Remove micromaps or [VkOpacityMicromapSpecialIndexKHR](#) values from a geometry which previously had them, or vice versa.
- Change between use of [VkOpacityMicromapSpecialIndexKHR](#) values and explicit micro-map triangles.
- Change the subdivision level or format of the micromap triangle associated with any acceleration-structure triangle.

Acceleration structures constructed by deserialization with [vkCmdCopyMemoryToAccelerationStructureKHR](#) and originally built with the [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_DATA\\_UPDATE\\_BIT\\_EXT](#) flag **must** provide a micromap deserialized using the exact serialized output of the micromap that was originally referenced by the serialized acceleration structure.

#### NOTE

If applications need to update micromap data referenced by a deserialized acceleration structure, then it must originally build the acceleration structure with the [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_UPDATE\\_BIT\\_KHR](#) flag and perform a full micromap update.

If the original acceleration structure was built using opacity micromaps and [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_UPDATE\\_BIT\\_KHR](#) was set in **flags**, the application **must** provide a micromap to the update operation.

A [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_DATA\\_UPDATE\\_BIT\\_EXT](#) or [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_UPDATE\\_BIT\\_KHR](#) operation transfers the reference in the acceleration structure to the new micromap unless [VkMicromapBuildSizesInfoEXT::discardable](#) is [VK\\_TRUE](#).

If the original acceleration structure was built using opacity micromaps and neither opacity micromap update flag is set, the application **must** provide the original micromap to the update operation or the deserialized micromap from the original micromap's exact serialized data if the original acceleration structure was deserialized prior.

### 40.1.5. Inactive Primitives and Instances

Acceleration structures allow the use of particular input values to signal *inactive* primitives or instances.

An *inactive* triangle is one for which the first (X) component of any vertex is NaN. If any other vertex component is NaN, and the first is not, the behavior is undefined. If the vertex format does not have a NaN representation, then all triangles are considered active.

An *inactive* instance is one whose acceleration structure reference is **0**.

An *inactive* AABB is one for which the minimum X coordinate is NaN. If any other component is

NaN, and the first is not, the behavior is undefined.

In the above definitions, “NaN” refers to any type of NaN. Signaling, non-signaling, quiet, loud, or otherwise.

An inactive object is considered invisible to all rays, and **should** not be represented in the acceleration structure. Implementations **should** ensure that the presence of inactive objects does not seriously degrade traversal performance.

Inactive objects are counted in the auto-generated index sequences which are provided to shaders via **InstanceId** and **PrimitiveId** SPIR-V decorations. This allows objects in the scene to change freely between the active and inactive states, without affecting the layout of any arrays which are being indexed using the ID values.

Any transition between the active and inactive states requires a full acceleration structure rebuild. Applications **must** not perform an acceleration structure update where an object is active in the source acceleration structure but would be inactive in the destination, or vice versa.

#### 40.1.6. Degenerate Primitives and Instances

*Degenerate* primitives and instances behave differently to [inactive primitives and instances](#), and are defined as:

- triangles that have one or more vertices whose respective (X), (Y), (Z) components are identical, or have three vertices that have at least two of the (X), (Y), or (Z) components identical, therefore forming a line or point. Degenerate triangles do not generate any intersections.
- AABBs whose **minX=maxX**, **minY=maxY**, and **minZ=maxZ**. Degenerate AABBs **may** invoke the intersection shader.
- instances that reference bottom level acceleration structures that contain no active primitives. When building an acceleration structure, implementations **should** treat degenerate instances as though they are a point at the instance origin, specified by [VkAccelerationStructureInstanceKHR::transform](#).

Unlike *inactive* primitives and instances, *degenerate* primitives and instances **may** transition from the degenerate to the non-degenerate state, or vice versa, when performing an acceleration structure update.

If an acceleration structure is built without [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_UPDATE\\_BIT\\_KHR](#) set in [VkAccelerationStructureBuildGeometryInfoKHR::flags](#), degenerate primitives **may** be discarded. Primitives that are defined with the same index value for more than one vertex **can** always be discarded.

#### 40.1.7. Building Acceleration Structures

To build acceleration structures call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresKHR(
    VkCommandBuffer                      commandBuffer,
    uint32_t                             infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkAccelerationStructureBuildGeometryInfoKHR` structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

The `vkCmdBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

#### NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkCmdBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. Similarly, the application **cannot** build a bottom-level acceleration structure in the same `vkCmdBuildAccelerationStructuresKHR` call as the associated micromaps are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

The input buffers passed to this commands will be referenced by the implementation for the duration of this command's execution on the device.

After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained. Micromaps **must** always be fully-self-contained.

The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of future commands, provided proper synchronization is used as described below.

#### NOTE

A `VkAccelerationStructureBuildRangeInfoKHR` structure is not used when building an acceleration structure with any of the following geometry types, and **must** be NULL: **\*\*** `VK_GEOMETRY_TYPE_MICROMAP_KHR`

#### NOTE

The required alignment of the device addresses passed in to parameters below

might not be provided by the base address of a `VkBuffer` created with the correct usage flags and must still be manually aligned by the application code.

Accesses to the acceleration structure scratch buffers as identified by the `VkAccelerationStructureBuildGeometryInfoKHR::scratchData` buffer device addresses **must** be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of (`VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` | `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`). Accesses to each `VkAccelerationStructureBuildGeometryInfoKHR::srcAccelerationStructure` and `VkAccelerationStructureBuildGeometryInfoKHR::dstAccelerationStructure` **must** be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` or `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`, as appropriate.

Accesses to other input buffers as identified by any used values of `VkAccelerationStructureGeometryMicromapDataKHR::data`, `VkAccelerationStructureGeometryMicromapDataKHR::triangleArray`, `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData`, `VkAccelerationStructureGeometryTrianglesDataKHR::indexData`, `VkAccelerationStructureGeometryTrianglesDataKHR::transformData`, `VkAccelerationStructureGeometryAabbsDataKHR::data`, and `VkAccelerationStructureGeometryInstancesDataKHR::data` **must** be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_SHADER_READ_BIT`.

## Valid Usage

- VUID-vkCmdBuildAccelerationStructuresKHR-accelerationStructure-08923  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11543  
Each element of `ppBuildRangeInfos[i]` **must** be a valid pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures if the `pInfos[i].type` is not one of:
  - `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-11544  
For each element of `pInfos[i]` whose `pGeometries` or `ppGeometries` members have a `geometryType` of `VK_GEOMETRY_TYPE_MICROMAP_KHR`, `ppBuildRangeInfos[i]` **must** be `NULL`
- VUID-vkCmdBuildAccelerationStructuresKHR-mode-11545  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, its `mode` **must** equal `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-11546  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, its `srcAccelerationStructure` **must** be `VK_NULL_HANDLE`

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11547  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11548  
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by any `VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap` member included in the `pNext` chain of any `geometry.triangles` member of any element of `pGeometries` or `ppGeometries` in any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-11549  
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any `VkAccelerationStructureTrianglesOpacityMicromapKHR::micromap` member included in the `pNext` chain of any `geometry.triangles` member of any element of `pGeometries` or `ppGeometries` in any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11550  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, its `data` and `triangleArray` members **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11551  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, the buffers from which the buffer device addresses for its `data` and `triangleArray` members are queried **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11552  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, its `data` and `triangleArray` members **must** be a multiple of 128
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11553  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, each element of its `triangleArray` member **must** specify an access within the range of the `VkBuffer` that `data` was retrieved from, given by `[dataOffset, dataOffset + triangleSize]` where `triangleSize` is calculated using its `format` and `subdivisionLevel` members rounded up to the nearest byte
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11554  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, the range of `[triangleArray, triangleArray + (triangleArrayStride * numTriangles)]` **must** be within the range of the `VkBuffer` from which the `triangleArray` member was retrieved

from, where *numTriangles* is the sum of **count** of all elements of **pUsageCounts** or **ppUsageCounts**

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11555

For each element of **pInfos[i].pGeometries** or **pInfos[i].ppGeometries**, if it includes a **VkAccelerationStructureGeometryMicromapDataKHR** structure in its **pNext** chain, each element of its **geometry.triangleArray** member **must** have a **format** with a valid value from **VkOpacityMicromapFormatKHR**

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11556

For each element of **pInfos[i].pGeometries** or **pInfos[i].ppGeometries**, if it includes a **VkAccelerationStructureGeometryMicromapDataKHR** structure in its **pNext** chain, for each element of its **triangleArray** member with a **format** equal to **VK\_OPACITY\_MICROMAP\_FORMAT\_2\_STATE\_KHR**, **subdivisionLevel** **must** be less than or equal to **maxOpacity2StateSubdivisionLevel**

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11575

For each element of **pInfos[i].pGeometries** or **pInfos[i].ppGeometries** with a **geometryType** equal to **VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR**, if its **geometry.triangles** member includes a **VkAccelerationStructureTrianglesOpacityMicromapKHR** structure in its **pNext** chain, the micromap's **indexType** member is not **VK\_INDEX\_TYPE\_NONE\_KHR**, and **micromap** is not **VK\_NULL\_HANDLE**, for each *index* in **indexBuffer[j]** greater than zero where *j* is within the range  $[0, \text{numTrianglesInGeometry} - 1]$  where *numTrianglesInGeometry* is equal to **ppBuildRangeInfos[i] → primitiveCount**, *index* plus **baseTriangle** **must** be less than or equal to *numTriangles*, where *numTriangles* is given by the sum of all **count** parameters in the **pUsageCounts** or **ppUsageCounts** provided to the micromap's build command

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11577

For each element of **pInfos[i].pGeometries** or **pInfos[i].ppGeometries** with a **geometryType** equal to **VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR**, if its **geometry.triangles** member includes a **VkAccelerationStructureTrianglesOpacityMicromapKHR** structure in its **pNext** chain, and the micromap's **indexType** member is not **VK\_INDEX\_TYPE\_NONE\_KHR**, **indexBuffer**  $(\text{indexStride} * \text{numTrianglesInGeometry})$  **must** be within the range of the **VkBuffer** from which the **indexBuffer** device address was obtained from where *numTrianglesInGeometry* is equal to **ppBuildRangeInfos[i] → primitiveCount**

- VUID-vkCmdBuildAccelerationStructuresKHR-indexBuffer-11578

For each element of **pInfos[i].pGeometries** or **pInfos[i].ppGeometries** with a **geometryType** equal to **VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR**, if its **geometry.triangles** member includes a **VkAccelerationStructureTrianglesOpacityMicromapKHR** structure in its **pNext** chain, the micromap's **indexType** member is not **VK\_INDEX\_TYPE\_NONE\_KHR**, and **micromap** is **VK\_NULL\_HANDLE**, for each *index* in **indexBuffer[j]** where *j* is within the range from  $[0, \text{numTrianglesInGeometry} - 1]$ , *index* **must** be a valid **VkOpacityMicromapSpecialIndexKHR** value where *numTrianglesInGeometry* is equal to **ppBuildRangeInfos[i] → primitiveCount**

- VUID-vkCmdBuildAccelerationStructuresKHR-mode-04628

The **mode** member of each element of **pInfos** **must** be a valid **VkBuildAccelerationStructureModeKHR** value

- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-04629  
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-04630  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03708  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `srcAccelerationStructure` **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03403  
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03698  
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03800  
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03707  
For each element of `pInfos`, its `dstAccelerationStructure` member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03699  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03700  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03663  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, inactive primitives in its `srcAccelerationStructure` member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03664

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made `inactive`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03709

For each element of `pInfos`, if an acceleration structure is referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, it **must** be fully backed by physical memory

- VUID-vkCmdBuildAccelerationStructuresKHR-None-03407

The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03701

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03702

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed

by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03763

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03764  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03765  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03766  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03767  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03768  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-primitiveCount-03769  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03801  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of

`VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12258

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` must be in the buffer device address range of the same buffer, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12259

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` must be in the buffer device address range of the same buffer, where `N` is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-geometry-03673

The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried must have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12260

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and the size reported by `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` must be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12261

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and the size reported by `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` must be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03710  
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03804  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03711  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to:
  - the `size of the format` specified in `vertexFormat`, in bytes, if that format is a `packed format`
  - the `component size` of the format specified in `vertexFormat`, in bytes, if that format is not a `packed format`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03806  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03712  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to the size in bytes of the type in `indexType`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03808  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03810  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to `16` bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03811  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03714  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to `8` bytes

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03715  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03716  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03717  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03813  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12281  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be 0 or a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10607  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR` is set in `VkAccelerationStructureInstanceKHR::flags` then `geometry.instances.data.deviceAddress` **must** refer to an acceleration structure that was built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags`
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-09547  
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11701  
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in the `geometry.triangles.pNext` chain with a valid `micromap` member, then the `micromap` member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11624  
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in the `geometry.triangles.pNext` chain with a valid `micromap` member, then the `micromap` member **must** have been built with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11625

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with a valid `micromap` member

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11626

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with its `micromap` member equal to `VK_NULL_HANDLE`, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with its `micromap` member equal to `VK_NULL_HANDLE`

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11627

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was not built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** not be included in the in the `geometry.triangles.pNext` chain

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11628

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` was originally built without the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` flag, and `srcAccelerationStructure` was constructed by deserialization with `vkCmdCopyMemoryToAccelerationStructureKHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with a `micromap` that was deserialized from the serialized data of the `micromap` in the original build of `srcAccelerationStructure`

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11629

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` was originally built without either the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` or the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` flags, and `srcAccelerationStructure` was not constructed by deserialization with `vkCmdCopyMemoryToAccelerationStructureKHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with the same `micromap` handle as the original build

- VUID-vkCmdBuildAccelerationStructuresKHR-micromap-11632

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, then its `micromap` member **must** have been constructed prior to this command's execution on the device

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10904

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be 0

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10905

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10126

For each `pInfos[i]`, `dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to either:

- the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and with each element of the `pMaxPrimitiveCounts` array greater than or equal to the equivalent `ppBuildRangeInfos[i][j].primitiveCount` values for `j` in `[0, pInfos[i].geometryCount)` or,
- the result of querying the corresponding `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, if updating a compacted acceleration structure

## Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-parameter **pInfos** **must** be a valid pointer to an array of **infoCount** valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter **ppBuildRangeInfos** **must** be a valid pointer to an array of **infoCount** [VkAccelerationStructureBuildRangeInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#) operations
- VUID-vkCmdBuildAccelerationStructuresKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresKHR-videocoding  
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresKHR-infoCount-arraylength  
**infoCount** **must** be greater than 0

## Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdBuildAccelerationStructuresKHR is not affected by [conditional rendering](#)

To build acceleration structures with some parameters sourced on the device call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresIndirectKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkDeviceAddress*         pIndirectDeviceAddresses,
    const uint32_t*                pIndirectStrides,
    const uint32_t* const*         ppMaxPrimitiveCounts);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build.
- `pInfos` is a pointer to an array of `infoCount` [VkAccelerationStructureBuildGeometryInfoKHR](#) structures defining the geometry used to build each acceleration structure.
- `pIndirectDeviceAddresses` is a pointer to an array of `infoCount` buffer device addresses which point to `pInfos[i].geometryCount` [VkAccelerationStructureBuildRangeInfoKHR](#) structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.
- `pIndirectStrides` is a pointer to an array of `infoCount` byte strides between elements of `pIndirectDeviceAddresses`.
- `ppMaxPrimitiveCounts` is a pointer to an array of `infoCount` pointers to arrays of `pInfos[i].geometryCount` values indicating the maximum number of primitives that will be built by this command for each geometry.

Accesses to any device memory referenced by this command **must** be synchronized as with [vkCmdBuildAccelerationStructuresKHR](#).

Accesses to any element of `pIndirectDeviceAddresses` **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_BIT\\_KHR](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_INDIRECT\\_COMMAND\\_READ\\_BIT](#).

## Valid Usage

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-accelerationStructureIndirectBuild-03650  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureIndirectBuild` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-mode-04628  
The `mode` member of each element of `pInfos` **must** be a valid [VkBuildAccelerationStructureModeKHR](#) value

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-srcAccelerationStructure-04629  
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-04630  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03708  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `srcAccelerationStructure` **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03403  
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03698  
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03800  
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03707  
For each element of `pInfos`, its `dstAccelerationStructure` member **must** be fully backed by physical memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03699  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03700  
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03663  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, inactive primitives in its `srcAccelerationStructure` member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03664

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made `inactive`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03709

For each element of `pInfos`, if an acceleration structure is referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, it **must** be fully backed by physical memory

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-None-03407

The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03701

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03702

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed

by this command

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03763

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03764  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03765  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03766  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03767  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03768  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-primitiveCount-03769  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03801  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of

`VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppMaxPrimitiveCounts[i][j]` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12258

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12259

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-geometry-03673

The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12260

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and the size reported by `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12261

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and the size reported by `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03710  
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03804  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03711  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to:
  - the `size of the format` specified in `vertexFormat`, in bytes, if that format is a `packed format`
  - the `component size` of the format specified in `vertexFormat`, in bytes, if that format is not a `packed format`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03806  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03712  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to the size in bytes of the type in `indexType`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03808  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03810  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03811  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03714  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to 8 bytes

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03715  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03716  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03717  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03813  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12281  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be 0 or a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10607  
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR` is set in `VkAccelerationStructureInstanceKHR::flags` then `geometry.instances.data.deviceAddress` **must** refer to an acceleration structure that was built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-09547  
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11701  
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in the `geometry.triangles.pNext` chain with a valid `micromap` member, then the `micromap` member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11624  
For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in the `geometry.triangles.pNext` chain with a valid `micromap` member, then the `micromap` member **must** have been built with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11625

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with a valid `micromap` member

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11626

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with its `micromap` member equal to `VK_NULL_HANDLE`, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with its `micromap` member equal to `VK_NULL_HANDLE`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11627

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was not built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** not be included in the in the `geometry.triangles.pNext` chain

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11628

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` was originally built without the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` flag, and `srcAccelerationStructure` was constructed by deserialization with `vkCmdCopyMemoryToAccelerationStructureKHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with a `micromap` that was deserialized from the serialized data of the `micromap` in the original build of `srcAccelerationStructure`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11629**  
 For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` was originally built without either the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` or the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` flags, and `srcAccelerationStructure` was not constructed by deserialization with `vkCmdCopyMemoryToAccelerationStructureKHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and the same geometry in the original build of `srcAccelerationStructure` was built with an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in its `geometry.triangles.pNext` chain with a valid `micromap` member, then an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` **must** be included in the in the `geometry.triangles.pNext` chain with the same `micromap` handle as the original build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-micromap-11632**  
 For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, then its `micromap` member **must** have been constructed prior to this command's execution on the device
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10904**  
 For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10905**  
 For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03646**  
 For each element of `pIndirectDeviceAddresses[i]`, all device addresses between `pIndirectDeviceAddresses[i]` and `pIndirectDeviceAddresses[i] + (pInfos[i].geometryCount × pIndirectStrides[i]) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03647**  
 For each element of `pIndirectDeviceAddresses`, the buffer from which it was queried **must** have been created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03648**  
 Each element of `pIndirectDeviceAddresses` **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-03787**  
 Each element of `pIndirectStrides` **must** be a multiple of 4

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03651  
Each [VkAccelerationStructureBuildRangeInfoKHR](#) structure referenced by any element of [pIndirectDeviceAddresses](#) **must** be a valid [VkAccelerationStructureBuildRangeInfoKHR](#) structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03652  
[pInfos\[i\].dstAccelerationStructure](#) **must** have been created with a value of [VkAccelerationStructureCreateInfoKHR::size](#) greater than or equal to the memory size required by the build operation, as returned by [vkGetAccelerationStructureBuildSizesKHR](#) with [pBuildInfo](#) = [pInfos\[i\]](#) and [pMaxPrimitiveCounts](#) = [ppMaxPrimitiveCounts\[i\]](#)
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-03653  
Each [ppMaxPrimitiveCounts\[i\]\[j\]](#) **must** be greater than or equal to the [primitiveCount](#) value specified by the [VkAccelerationStructureBuildRangeInfoKHR](#) structure located at [pIndirectDeviceAddresses\[i\] + \(j × pIndirectStrides\[i\]\)](#)
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-type-11557  
For any element of [pInfos](#), its [type](#) member **must** not be [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#)

### Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-parameter  
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-parameter  
[pInfos](#) **must** be a valid pointer to an array of [infoCount](#) valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-parameter  
[pIndirectDeviceAddresses](#) **must** be a valid pointer to an array of [infoCount](#) [VkDeviceAddress](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-parameter  
[pIndirectStrides](#) **must** be a valid pointer to an array of [infoCount](#) [uint32\\_t](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-parameter  
[ppMaxPrimitiveCounts](#) **must** be a valid pointer to an array of [infoCount](#) [uint32\\_t](#) values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-recording  
[commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#) operations
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-suspended  
This command **must** not be called between suspended render pass instances

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-videocoding  
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-infoCount-arraylength  
**infoCount** **must** be greater than 0

## Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdBuildAccelerationStructuresIndirectKHR is not affected by [conditional rendering](#)

The **VkAccelerationStructureBuildGeometryInfoKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildGeometryInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkAccelerationStructureTypeKHR type;
    VkBuildAccelerationStructureFlagsKHR flags;
    VkBuildAccelerationStructureModeKHR mode;
    VkAccelerationStructureKHR     srcAccelerationStructure;
    VkAccelerationStructureKHR     dstAccelerationStructure;
    uint32_t                       geometryCount;
    const VkAccelerationStructureGeometryKHR* pGeometries;
    const VkAccelerationStructureGeometryKHR* const* ppGeometries;
    VkDeviceOrHostAddressKHR       scratchData;
} VkAccelerationStructureBuildGeometryInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **type** is a **VkAccelerationStructureTypeKHR** value specifying the type of acceleration structure

being built.

- **flags** is a bitmask of [VkBuildAccelerationStructureFlagBitsKHR](#) specifying additional parameters of the acceleration structure.
- **mode** is a [VkBuildAccelerationStructureModeKHR](#) value specifying the type of operation to perform.
- **srcAccelerationStructure** is a pointer to an existing acceleration structure that is to be used to update the **dstAccelerationStructure** acceleration structure when **mode** is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#).
- **dstAccelerationStructure** is a pointer to the target acceleration structure for the build.
- **geometryCount** specifies the number of geometries that will be built into **dstAccelerationStructure**.
- **pGeometries** is a pointer to an array of [VkAccelerationStructureGeometryKHR](#) structures.
- **ppGeometries** is a pointer to an array of pointers to [VkAccelerationStructureGeometryKHR](#) structures.
- **scratchData** is the device or host address of memory that will be used as scratch memory for the build.

Only one of **pGeometries** or **ppGeometries** can be a valid pointer, the other **must** be **NULL**. Each element of the non-**NULL** array describes the data used to build each acceleration structure geometry.

For bottom-level acceleration structures, the index of each element of the **pGeometries** or **ppGeometries** members of [VkAccelerationStructureBuildGeometryInfoKHR](#) is used as the *geometry index* during ray traversal. The geometry index is available in ray shaders via the [RayGeometryIndexKHR](#) built-in, and is [used to determine hit and intersection shaders executed during traversal](#). The geometry index is available to ray queries via the [OpRayQueryGetIntersectionGeometryIndexKHR](#) instruction.

Members **srcAccelerationStructure** and **dstAccelerationStructure** may be the same or different for an update operation (when **mode** is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#)). If they are the same, the update happens in-place. Otherwise, the target acceleration structure is updated and the source is not modified.

### Valid Usage

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03654  
**type** **must** not be [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_GENERIC\\_KHR](#)
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-03788  
If **geometryCount** is not 0, exactly one of **pGeometries** or **ppGeometries** **must** be a valid pointer, the other **must** be **NULL**
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03789  
If **type** is [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_TOP\\_LEVEL\\_KHR](#), the **geometryType** member of elements of either **pGeometries** or **ppGeometries** **must** be [VK\\_GEOMETRY\\_TYPE\\_INSTANCES\\_KHR](#)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03790  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, **geometryCount** **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03791  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` the **geometryType** member of elements of either **pGeometries** or **ppGeometries** **must** not be `VK_GEOMETRY_TYPE_INSTANCES_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03792  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then the **geometryType** member of each geometry in either **pGeometries** or **ppGeometries** **must** be the same
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03793  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then **geometryCount** **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxGeometryCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03794  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the **geometryType** member of either **pGeometries** or **ppGeometries** is `VK_GEOMETRY_TYPE_AABBS_KHR`, the total number of AABBs in all geometries **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03795  
If **type** is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the **geometryType** member of either **pGeometries** or **ppGeometries** is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the total number of triangles in all geometries **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-03796  
If **flags** has the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR` bit set, then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR` bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11558  
If **flags** has the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` bit set then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` bit set
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11709  
If **flags** has the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11710  
If **flags** has the

`VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_KHR` bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` or `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11711  
If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_KHR` bit set, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` or `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-micromap-11559  
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, the `VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap` feature **must** be enabled
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryCount-11560  
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, `geometryCount` **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11561  
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** be `VK_GEOMETRY_TYPE_MICROMAP_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-geometryType-11707  
If `type` is not `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** not be `VK_GEOMETRY_TYPE_MICROMAP_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-11562  
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, `flags` **must** only include the following bits:
  - `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR`
  - `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR`
  - `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR`
  - `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-11563  
If `flags` includes `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, `type` **must** be `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11712  
If `flags` includes `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, each element of its `pUsageCounts` or `ppUsageCounts` members **must** have its `format` member equal to `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11564  
If `flags` does not include `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, for

each element of its `pUsageCounts` or `ppUsageCounts` members, if its `format` member is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR`, its `subdivisionLevel` member **must** be less than or equal to `maxOpacity4StateSubdivisionLevel`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11565  
If `flags` includes `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, for each element of its `pUsageCounts` or `ppUsageCounts` members, its `subdivisionLevel` member **must** be less than or equal to `maxOpacityLossy4StateSubdivisionLevel`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-format-11713  
If `flags` includes `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, each element of its `triangleArray` member **must** have its `format` member equal to `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11566  
If `flags` does not include `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, for each element of its `triangleArray` member, if its `format` member is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR`, its `subdivisionLevel` member **must** be less than or equal to `maxOpacity4StateSubdivisionLevel`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-subdivisionLevel-11567  
If `flags` includes `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`, for each element of `pGeometries` or `ppGeometries`, if it includes a `VkAccelerationStructureGeometryMicromapDataKHR` structure in its `pNext` chain, for each element of its `triangleArray` member, its `subdivisionLevel` member **must** be less than or equal to `maxOpacityLossy4StateSubdivisionLevel`

## Valid Usage (Implicit)

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-parameter  
`type` **must** be a valid `VkAccelerationStructureTypeKHR` value
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-parameter  
If `flags` is not `0`, `flags` **must** be a valid combination of `VkBuildAccelerationStructureFlagBitsKHR` values
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-parameter

If `geometryCount` is not 0, and `pGeometries` is not `NULL`, `pGeometries` **must** be a valid pointer to an array of `geometryCount` valid `VkAccelerationStructureGeometryKHR` structures

- `VOID-VkAccelerationStructureBuildGeometryInfoKHR-ppGeometries-parameter`  
If `geometryCount` is not 0, and `ppGeometries` is not `NULL`, `ppGeometries` **must** be a valid pointer to an array of `geometryCount` valid pointers to valid `VkAccelerationStructureGeometryKHR` structures
- `VOID-VkAccelerationStructureBuildGeometryInfoKHR-commonparent`  
Both of `dstAccelerationStructure`, and `srcAccelerationStructure` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkBuildAccelerationStructureModeKHR` enumeration is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureModeKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR = 0,
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR = 1,
} VkBuildAccelerationStructureModeKHR;
```

- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR` specifies that the destination acceleration structure will be built using the specified geometries.
- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` specifies that the destination acceleration structure will be built using data in a source acceleration structure, updated by the specified geometries.

The `VkDeviceOrHostAddressKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressKHR {
    VkDeviceAddress    deviceAddress;
    void*              hostAddress;
} VkDeviceOrHostAddressKHR;
```

- `deviceAddress` is a buffer device address as returned by the `vkGetBufferDeviceAddressKHR` command.
- `hostAddress` is a host memory address.

The `VkDeviceOrHostAddressConstKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkDeviceOrHostAddressConstKHR {
    VkDeviceAddress    deviceAddress;
    const void*         hostAddress;
} VkDeviceOrHostAddressConstKHR;
```

- **deviceAddress** is a buffer device address as returned by the [vkGetBufferDeviceAddressKHR](#) command.
- **hostAddress** is a const host memory address.

The [VkAccelerationStructureGeometryKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkGeometryTypeKHR        geometryType;
    VkAccelerationStructureGeometryDataKHR geometry;
    VkGeometryFlagsKHR       flags;
} VkAccelerationStructureGeometryKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **geometryType** describes which type of geometry this [VkAccelerationStructureGeometryKHR](#) refers to.
- **geometry** is a [VkAccelerationStructureGeometryDataKHR](#) union describing the geometry data for the relevant geometry type.
- **flags** is a bitmask of [VkGeometryFlagBitsKHR](#) values describing additional properties of how the geometry should be built.

### Valid Usage

- VUID-VkAccelerationStructureGeometryKHR-micromap-11568  
If **geometryType** is [VK\\_GEOMETRY\\_TYPE\\_MICROMAP\\_KHR](#), **pNext** chain **must** include a single [VkAccelerationStructureGeometryMicromapDataKHR](#) structure
- VUID-VkAccelerationStructureGeometryKHR-flags-11569  
If **geometryType** is [VK\\_GEOMETRY\\_TYPE\\_MICROMAP\\_KHR](#), **flags** **must** be 0

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_GEOMETRY\\_KHR](#)
- VUID-VkAccelerationStructureGeometryKHR-pNext-pNext  
**pNext** **must** be **NULL** or a pointer to a valid instance of [VkAccelerationStructureGeometryMicromapDataKHR](#)
- VUID-VkAccelerationStructureGeometryKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkAccelerationStructureGeometryKHR-geometryType-parameter  
**geometryType** **must** be a valid [VkGeometryTypeKHR](#) value

- VUID-VkAccelerationStructureGeometryKHR-triangles-parameter  
If `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `triangles` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryTrianglesDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-aabbs-parameter  
If `geometryType` is `VK_GEOMETRY_TYPE_AABBS_KHR`, the `aabbs` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryAabbsDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-instances-parameter  
If `geometryType` is `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the `instances` member of `geometry` **must** be a valid `VkAccelerationStructureGeometryInstancesDataKHR` structure
- VUID-VkAccelerationStructureGeometryKHR-flags-parameter  
If `flags` is not 0, `flags` **must** be a valid combination of `VkGeometryFlagBitsKHR` values

The `VkAccelerationStructureGeometryDataKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkAccelerationStructureGeometryDataKHR {
    VkAccelerationStructureGeometryTrianglesDataKHR    triangles;
    VkAccelerationStructureGeometryAabbsDataKHR        aabbs;
    VkAccelerationStructureGeometryInstancesDataKHR    instances;
} VkAccelerationStructureGeometryDataKHR;
```

- `triangles` is a `VkAccelerationStructureGeometryTrianglesDataKHR` structure.
- `aabbs` is a `VkAccelerationStructureGeometryAabbsDataKHR` structure.
- `instances` is a `VkAccelerationStructureGeometryInstancesDataKHR` structure.

The `VkAccelerationStructureGeometryTrianglesDataKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryTrianglesDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkFormat                 vertexFormat;
    VkDeviceOrHostAddressConstKHR vertexData;
    VkDeviceSize             vertexStride;
    uint32_t                 maxVertex;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexData;
    VkDeviceOrHostAddressConstKHR transformData;
} VkAccelerationStructureGeometryTrianglesDataKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the `VkFormat` of each vertex element.
- `vertexData` is a device or host address of memory containing vertex data for this geometry.

- **vertexStride** is the stride in bytes between each vertex.
- **maxVertex** is the number of vertices in **vertexData** minus one.
- **indexType** is the **VkIndexType** of each index element.
- **indexData** is a device or host address of memory containing index data for this geometry. When **indexType** is **VK\_INDEX\_TYPE\_NONE\_KHR** it **must** be **NULL**.
- **transformData** is a device or host address to memory containing an optional reference to a **VkTransformMatrixKHR** structure describing a transformation from the space in which the vertices in this geometry are described to the space in which the acceleration structure is defined.

#### NOTE

Unlike the stride for vertex buffers in **VkVertexInputBindingDescription** for graphics pipelines which must not exceed **maxVertexInputBindingStride**, **vertexStride** for acceleration structure geometry is instead restricted to being a 32-bit value.

### Valid Usage

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03735  
**vertexStride** **must** be a multiple of the size in bytes of the smallest component of **vertexFormat**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03819  
**vertexStride** **must** be less than or equal to  $2^{32}-1$
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-03797  
The **format** **features** of **vertexFormat** **must** contain **VK\_FORMAT\_FEATURE\_ACCELERATION\_STRUCTURE\_VERTEX\_BUFFER\_BIT\_KHR**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-03798  
**indexType** **must** be **VK\_INDEX\_TYPE\_UINT16**, **VK\_INDEX\_TYPE\_UINT32**, or **VK\_INDEX\_TYPE\_NONE\_KHR**

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_ACCELERATION\_STRUCTURE\_GEOMETRY\_TRIANGLES\_DATA\_KHR**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-pNext-pNext  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkAccelerationStructureTrianglesOpacityMicromapEXT** or **VkAccelerationStructureTrianglesOpacityMicromapKHR**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-parameter

**vertexFormat** must be a valid [VkFormat](#) value

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-parameter **indexType** must be a valid [VkIndexType](#) value

The [VkAccelerationStructureTrianglesOpacityMicromapKHR](#) structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapKHR {
    VkStructureType      sType;
    void*                pNext;
    VkIndexType          indexType;
    VkDeviceAddress      indexBuffer;
    VkDeviceSize         indexStride;
    uint32_t             baseTriangle;
    VkAccelerationStructureKHR micromap;
} VkAccelerationStructureTrianglesOpacityMicromapKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **indexType** is the type of triangle indices used when indexing this micromap
- **indexBuffer** is the address containing the triangle indices
- **indexStride** is the byte stride between triangle indices
- **baseTriangle** is the base value added to the non-negative triangle indices
- **micromap** is the handle to the micromap object to include in this geometry

If [VkAccelerationStructureTrianglesOpacityMicromapKHR](#) is included in the **pNext** chain of a [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from **indexBuffer** using **indexType** and **indexStride** if present. If **indexType** is [VK\\_INDEX\\_TYPE\\_NONE\\_KHR](#), then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from [VkOpacityMicromapSpecialIndexKHR](#) then that triangle behaves as described for that special value in [Ray Opacity Micromap](#).

Otherwise that triangle uses the opacity micromap information from **micromap** at that index plus **baseTriangle**.

### Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-11570  
**indexType** must be [VK\\_INDEX\\_TYPE\\_UINT8](#), [VK\\_INDEX\\_TYPE\\_UINT16](#), [VK\\_INDEX\\_TYPE\\_UINT32](#), or [VK\\_INDEX\\_TYPE\\_NONE\\_KHR](#)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11571  
If `indexType` is `VK_INDEX_TYPE_NONE_KHR`, `indexBuffer` **must** be 0
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexBuffer-11572  
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `indexBuffer` **must** be a valid `VkDeviceAddress`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11573  
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexStride-11574  
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `indexStride` **must** be less than or equal to  $2^{32}-1$
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-geometry-11576  
If `indexType` is `VK_INDEX_TYPE_NONE_KHR`, for each triangle index in the geometry, index plus `baseTriangle` **must** be less than or equal to `numTriangles`, where `numTriangles` is given by the sum of all `count` parameters in the `pUsageCounts` or `ppUsageCounts` provided to the micromap's build command
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-11579  
If `indexType` is `VK_INDEX_TYPE_NONE_KHR`, `micromap` **must** not be `VK_NULL_HANDLE`

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_KHR`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-indexType-parameter  
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapKHR-micromap-parameter  
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkAccelerationStructureKHR` handle

### Structure Chaining

#### Extends the structure

- `VkAccelerationStructureGeometryTrianglesDataKHR`

The `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapEXT {
    VkStructureType          sType;
    void*                    pNext;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexBuffer;
    VkDeviceSize             indexStride;
    uint32_t                 baseTriangle;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkMicromapEXT            micromap;
} VkAccelerationStructureTrianglesOpacityMicromapEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is a device or host address of memory containing the triangle indices. When `indexType` is `VK_INDEX_TYPE_NONE_KHR` it **must** be `NULL`.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.
- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesOpacityMicromapEXT` is included in the `pNext` chain of a `VkAccelerationStructureGeometryTrianglesDataKHR` structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride` if present. If `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from `VkOpacityMicromapSpecialIndexEXT` then that triangle behaves as described for that special value in [Ray Opacity Micromap](#).

Otherwise that triangle uses the opacity micromap information from micromap at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection and special index handling **must** be equal to the sum of matching `count` provided.

If `micromap` is `VK_NULL_HANDLE`, then every value read from `indexBuffer` **must** be one of the values in `VkOpacityMicromapSpecialIndexEXT`.

### Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-07335  
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10719  
`indexType` **must** be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_KHR`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10722  
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10723  
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then `indexStride` **must** be less than or equal to  $2^{32}-1$
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-format-11679  
If `micromap` is not `VK_NULL_HANDLE`, the `type` used to construct `micromap` is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, the `format` member of each element of `pUsageCounts` or `ppUsageCounts` **must** be a valid value from `VkOpacityMicromapFormatEXT`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11680  
If `micromap` is not `VK_NULL_HANDLE`, the `type` used to build `micromap` is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of `pUsageCounts` or `ppUsageCounts` with `format` equal to `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT`, `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-subdivisionLevel-11681  
If `micromap` is not `VK_NULL_HANDLE`, the `type` used to build `micromap` is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of `pUsageCounts` or `ppUsageCounts` with `format` equal to `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`, `subdivisionLevel` **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_EXT`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-parameter  
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-parameter  
If `usageCountsCount` is not `0`, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid

pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-ppUsageCounts-parameter  
If `usageCountsCount` is not 0, and `ppUsageCounts` is not NULL, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-micromap-parameter  
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkMicromapEXT` handle

## Structure Chaining

### Extends the structure

- `VkAccelerationStructureGeometryTrianglesDataKHR`

The `VkOpacityMicromapSpecialIndexKHR` enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkOpacityMicromapSpecialIndexKHR {
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR = -1,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR = -2,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR = -3,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR = -4,
    // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR,
    // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR,
    // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR,
    // Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT =
VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR,
} VkOpacityMicromapSpecialIndexKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkOpacityMicromapSpecialIndexKHR
typedef VkOpacityMicromapSpecialIndexKHR VkOpacityMicromapSpecialIndexEXT;
```

- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR` specifies that the entire triangle is fully transparent.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR` specifies that the entire triangle is fully opaque.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR` specifies that the entire triangle is unknown-transparent.

- [VK\\_OPACITY\\_MICROMAP\\_SPECIAL\\_INDEX\\_FULLY\\_UNKNOWN\\_OPAQUE\\_KHR](#) specifies that the entire triangle is unknown-opaque.

The [VkAccelerationStructureSerializedBlockTypeKHR](#) enumeration is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkAccelerationStructureSerializedBlockTypeKHR {
    VK_ACCELERATION_STRUCTURE_SERIALIZED_BLOCK_TYPE_OPACITY_MICROMAP_KHR = 0,
} VkAccelerationStructureSerializedBlockTypeKHR;
```

- [VK\\_ACCELERATION\\_STRUCTURE\\_SERIALIZED\\_BLOCK\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#) specifies that the block contains opacity micromaps.

The [VkTransformMatrixKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkTransformMatrixKHR {
    float    matrix[3][4];
} VkTransformMatrixKHR;
```

- `matrix` is a 3x4 row-major affine transformation matrix.

### Valid Usage

- VUID-VkTransformMatrixKHR-matrix-03799  
The first three columns of `matrix` **must** define an invertible 3x3 matrix

The [VkAccelerationStructureGeometryAabbsDataKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryAabbsDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceSize              stride;
} VkAccelerationStructureGeometryAabbsDataKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `data` is a device or host address of memory containing [VkAabbPositionsKHR](#) structures containing position data for each axis-aligned bounding box in the geometry.
- `stride` is the stride in bytes between each entry in `data`. The stride **must** be a multiple of 8.

## Valid Usage

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03545  
**stride** must be a multiple of 8
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03820  
**stride** must be less than or equal to  $2^{32}-1$

## Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_GEOMETRY\\_AABBS\\_DATA\\_KHR](#)
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-pNext-pNext  
**pNext** must be NULL

The [VkAabbPositionsKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAabbPositionsKHR {
    float    minX;
    float    minY;
    float    minZ;
    float    maxX;
    float    maxY;
    float    maxZ;
} VkAabbPositionsKHR;
```

- **minX** is the x position of one opposing corner of a bounding box.
- **minY** is the y position of one opposing corner of a bounding box.
- **minZ** is the z position of one opposing corner of a bounding box.
- **maxX** is the x position of the other opposing corner of a bounding box.
- **maxY** is the y position of the other opposing corner of a bounding box.
- **maxZ** is the z position of the other opposing corner of a bounding box.

## Valid Usage

- VUID-VkAabbPositionsKHR-minX-03546  
**minX** must be less than or equal to **maxX**
- VUID-VkAabbPositionsKHR-minY-03547  
**minY** must be less than or equal to **maxY**
- VUID-VkAabbPositionsKHR-minZ-03548

**minZ** must be less than or equal to **maxZ**

The **VkAccelerationStructureGeometryInstancesDataKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryInstancesDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkBool32                 arrayOfPointers;
    VkDeviceOrHostAddressConstKHR data;
} VkAccelerationStructureGeometryInstancesDataKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **arrayOfPointers** specifies whether **data** is used as an array of addresses or just an array.
- **data** is either the address of an array of device or host addresses referencing individual **VkAccelerationStructureInstanceKHR** structures if **arrayOfPointers** is **VK\_TRUE**, or the address of an array of **VkAccelerationStructureInstanceKHR** structures. Addresses and **VkAccelerationStructureInstanceKHR** structures are tightly packed.

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryInstancesDataKHR-sType-sType **must** be **VK\_STRUCTURE\_TYPE\_ACCELERATION\_STRUCTURE\_GEOMETRY\_INSTANCES\_DATA\_KHR**
- VUID-VkAccelerationStructureGeometryInstancesDataKHR-pNext-pNext **pNext must** be **NULL**

*Acceleration structure instances* **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location. Multiple instances **can** point to the same bottom level acceleration structure.

An acceleration structure instance is defined by the structure:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureInstanceKHR {
    VkTransformMatrixKHR    transform;
    uint32_t                instanceCustomIndex:24;
    uint32_t                mask:8;
    uint32_t                instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t                accelerationStructureReference;
} VkAccelerationStructureInstanceKHR;
```

- **transform** is a [VkTransformMatrixKHR](#) structure describing a transformation to be applied to the acceleration structure.
- **instanceCustomIndex** is a 24-bit application-specified index value accessible to ray shaders in the [InstanceCustomIndexKHR](#) built-in.
- **mask** is an 8-bit visibility mask for the geometry. The instance **may** only be hit if **Cull Mask & instance.mask != 0**
- **instanceShaderBindingTableRecordOffset** is a 24-bit offset used in calculating the hit shader binding table index.
- **flags** is an 8-bit mask of [VkGeometryInstanceFlagBitsKHR](#) values to apply to this instance.
- **accelerationStructureReference** is either :
  - a device address containing the value obtained from [vkGetAccelerationStructureDeviceAddressKHR](#) for a bottom level acceleration structure (used by device operations which reference acceleration structures)
  - a [VkAccelerationStructureKHR](#) object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- **instanceCustomIndex** and **mask** occupy the same memory as if a single **uint32\_t** was specified in their place
  - **instanceCustomIndex** occupies the 24 least significant bits of that memory
  - **mask** occupies the 8 most significant bits of that memory
- **instanceShaderBindingTableRecordOffset** and **flags** occupy the same memory as if a single **uint32\_t** was specified in their place
  - **instanceShaderBindingTableRecordOffset** occupies the 24 least significant bits of that memory
  - **flags** occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

### Valid Usage

- VUID-VkAccelerationStructureInstanceKHR-micromap-11580  
If **flags** includes [VK\\_GEOMETRY\\_INSTANCE\\_FORCE\\_OPACITY\\_MICROMAP\\_2\\_STATE\\_BIT\\_KHR](#) or [VK\\_GEOMETRY\\_INSTANCE\\_DISABLE\\_OPACITY\\_MICROMAPS\\_BIT\\_KHR](#), the [VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap](#) or [VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap](#) feature **must** be enabled
- VUID-VkAccelerationStructureInstanceKHR-flags-11581  
If **flags** includes [VK\\_GEOMETRY\\_INSTANCE\\_DISABLE\\_OPACITY\\_MICROMAPS\\_BIT\\_KHR](#), the **flags** used to build the acceleration structure referenced by **accelerationStructureReference** **must** have included

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureInstanceKHR-flags-parameter

If **flags** is not 0, **flags** **must** be a valid combination of [VkGeometryInstanceFlagBitsKHR](#) values

Possible values of **flags** in the instance modifying the behavior of that instance are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryInstanceFlagBitsKHR {
    VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR = 0x00000002,
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR = 0x00000004,
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR = 0x00000008,
    // Provided by VK_KHR_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR = 0x00000010,
    // Provided by VK_KHR_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR = 0x00000020,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR =
VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT =
VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR,
    // Provided by VK_EXT_opacity_micromap
    // VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT =
VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT =
VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR,
    // Provided by VK_EXT_opacity_micromap
    // VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT =
VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT,
} VkGeometryInstanceFlagBitsKHR;
```

- [VK\\_GEOMETRY\\_INSTANCE\\_TRIANGLE\\_FACING\\_CULL\\_DISABLE\\_BIT\\_KHR](#) disables face culling for this instance.
- [VK\\_GEOMETRY\\_INSTANCE\\_TRIANGLE\\_FLIP\\_FACING\\_BIT\\_KHR](#) specifies that the [facing determination](#) for geometry in this instance is inverted. Because the facing is determined in object space, an instance transform does not change the winding, but a geometry transform does.
- [VK\\_GEOMETRY\\_INSTANCE\\_FORCE\\_OPAQUE\\_BIT\\_KHR](#) causes this instance to act as though

`VK_GEOMETRY_OPAQUE_BIT_KHR` were specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V `NoOpaqueKHR` ray flag.

- `VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` causes this instance to act as though `VK_GEOMETRY_OPAQUE_BIT_KHR` were not specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V `OpaqueKHR` ray flag.
- `VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR` forces the micromap format to 2 state mode as described in [traversal](#).
- `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_KHR` disables any opacity micromaps referenced by acceleration structures referenced by this instance as described in [traversal](#).

`VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` and `VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR` **must** not be used in the same flag.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryInstanceFlagsKHR;
```

`VkGeometryInstanceFlagsKHR` is a bitmask type for setting a mask of zero or more `VkGeometryInstanceFlagBitsKHR`.

`VkAccelerationStructureBuildRangeInfoKHR` is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildRangeInfoKHR {
    uint32_t    primitiveCount;
    uint32_t    primitiveOffset;
    uint32_t    firstVertex;
    uint32_t    transformOffset;
} VkAccelerationStructureBuildRangeInfoKHR;
```

- `primitiveCount` defines the number of primitives for a corresponding acceleration structure geometry.
- `primitiveOffset` defines an offset in bytes into the memory where primitive data is defined.
- `firstVertex` is the index of the first vertex to build from for triangle geometry.
- `transformOffset` defines an offset in bytes into the memory where a transform matrix is defined.

The primitive count and primitive offset are interpreted differently depending on the `VkGeometryTypeKHR` used:

- For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `primitiveCount` is the number of triangles to be built, where each triangle is treated as 3 vertices.
  - If the geometry uses indices, `primitiveCount` × 3 indices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices.

- If the geometry does not use indices, `primitiveCount` × 3 vertices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData`, starting at an offset of `primitiveOffset` + `VkAccelerationStructureGeometryTrianglesDataKHR::vertexStride` × `firstVertex`.
- If `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` is not `NULL`, a single `VkTransformMatrixKHR` structure is consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData`, at an offset of `transformOffset`. This matrix describes a transformation from the space in which the vertices for all triangles in this geometry are described to the space in which the acceleration structure is defined.
- For geometries of type `VK_GEOMETRY_TYPE_AABBS_KHR`, `primitiveCount` is the number of axis-aligned bounding boxes. `primitiveCount` `VkAabbPositionsKHR` structures are consumed from `VkAccelerationStructureGeometryAabbsDataKHR::data`, starting at an offset of `primitiveOffset`.
- For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `primitiveCount` is the number of acceleration structures. `primitiveCount` `VkAccelerationStructureInstanceKHR` structures are consumed from `VkAccelerationStructureGeometryInstancesDataKHR::data`, starting at an offset of `primitiveOffset`.

### Valid Usage

- VUID-VkAccelerationStructureBuildRangeInfoKHR-vertexData-10418  
The number of vertices consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData` **must** be less than or equal to `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex` + 1
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03656  
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry uses indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData` **must** be a multiple of the element size of `VkAccelerationStructureGeometryTrianglesDataKHR::indexType`
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03657  
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry does not use indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData` **must** be a multiple of:
  - the size of the format specified in `VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`, if that format is a packed format
  - the component size of the `VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`, if that format is not a packed format
- VUID-VkAccelerationStructureBuildRangeInfoKHR-maxVertex-10774  
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry uses indices, then `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex` **must** be greater than or equal to `firstVertex` plus the maximum index value found in the `VkAccelerationStructureGeometryTrianglesDataKHR::indexData` in the range `[primitiveOffset, primitiveOffset`

`primitiveCount x 3]`

- VUID-VkAccelerationStructureBuildRangeInfoKHR-None-10775

For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry does not use indices, then `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex` **must** be greater than or equal to `firstVertex + primitiveCount x 3 - 1`

- VUID-VkAccelerationStructureBuildRangeInfoKHR-transformOffset-03658

For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the offset `transformOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` **must** be a multiple of 16

- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03659

For geometries of type `VK_GEOMETRY_TYPE_AABBS_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryAabbsDataKHR::data` **must** be a multiple of 8

- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03660

For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryInstancesDataKHR::data` **must** be a multiple of 16

### 40.1.8. Copying Acceleration Structures

An additional command exists for copying acceleration structures without updating their contents. The acceleration structure object **can** be compacted in order to improve performance. Before copying, an application **must** query the size of the resulting acceleration structure.

To query acceleration structure size parameters call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdWriteAccelerationStructuresPropertiesKHR(
    VkCommandBuffer          commandBuffer,
    uint32_t                 accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType              queryType,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be

synchronized with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR`.

- If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then the value written out is the number of bytes required by a compacted acceleration structure.
- If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then the value written out is the number of bytes required by a serialized acceleration structure.
- If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, then the value written out is the number of bytes required by the acceleration structure.
- `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR` specifies a serialization acceleration structure pointer count query.

### Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructure-08924  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02493  
`queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02494  
The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-query-04880  
The sum of `firstQuery` plus `accelerationStructureCount` **must** be less than or equal to the number of queries in `queryPool`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11684  
All acceleration structures in `pAccelerationStructures` **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431  
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-06742  
`queryType` **must** be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-12425  
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-buffer-03736

Each element of **pAccelerationStructures** **must** be fully backed by physical memory

### Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-parameter **commandBuffer** **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter **pAccelerationStructures** **must** be a valid pointer to an array of **accelerationStructureCount** valid **VkAccelerationStructureKHR** handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-parameter **queryType** **must** be a valid **VkQueryType** value
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-parameter **queryPool** **must** be a valid **VkQueryPool** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-recording **commandBuffer** **must** be in the **recording state**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-cmdpool  
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK\_QUEUE\_COMPUTE\_BIT** operations
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-videocoding  
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength  
**accelerationStructureCount** **must** be greater than 0
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commonparent  
Each of **commandBuffer**, **queryPool**, and the elements of **pAccelerationStructures** **must** have been created, allocated, or retrieved from the same **VkDevice**

### Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdWriteAccelerationStructuresPropertiesKHR is not affected by [conditional rendering](#)

To copy an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureKHR(
    VkCommandBuffer                commandBuffer,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a [VkCopyAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command copies the `pInfo->src` acceleration structure to the `pInfo->dst` acceleration structure in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_COPY\\_BIT\\_KHR](#) pipeline stage or the [VK\\_PIPELINE\\_STAGE\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_BIT\\_KHR](#) pipeline stage, and an access type of [VK\\_ACCESS\\_ACCELERATION\\_STRUCTURE\\_READ\\_BIT\\_KHR](#) or [VK\\_ACCESS\\_ACCELERATION\\_STRUCTURE\\_WRITE\\_BIT\\_KHR](#) as appropriate.

## Valid Usage

- VUID-vkCmdCopyAccelerationStructureKHR-accelerationStructure-08925  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureKHR-src-11633  
The source acceleration structure `pInfo->src` **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdCopyAccelerationStructureKHR-src-11634  
If the source acceleration structure `pInfo->src` was constructed through deserialization, all micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized

data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device

### Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyAccelerationStructureKHR-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkCopyAccelerationStructureInfoKHR](#) structure
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#) operations
- VUID-vkCmdCopyAccelerationStructureKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureKHR-videocoding  
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

### Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

### Conditional Rendering

vkCmdCopyAccelerationStructureKHR is not affected by [conditional rendering](#)

The [VkCopyAccelerationStructureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the source acceleration structure for the copy.
- **dst** is the target acceleration structure for the copy.
- **mode** is a [VkCopyAccelerationStructureModeKHR](#) value specifying additional operations to perform during the copy.

## Valid Usage

- VUID-VkCopyAccelerationStructureInfoKHR-mode-03410  
**mode** **must** be [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_COMPACT\\_KHR](#) or [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_CLONE\\_KHR](#)
- VUID-VkCopyAccelerationStructureInfoKHR-src-03411  
If **mode** is [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_COMPACT\\_KHR](#), **src** **must** have been constructed with [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_COMPACTION\\_BIT\\_KHR](#) in the build
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03718  
The range of **src** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03719  
The range of **dst** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-dst-07791  
The range of memory backing **dst** that is accessed by this command **must** not overlap the memory backing **src** that is accessed by this command
- VUID-VkCopyAccelerationStructureInfoKHR-mode-12418  
If **mode** is [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_CLONE\\_KHR](#), the memory pointed to by **dst** **must** be at least as large as the size of **src**, as reported by [vkWriteAccelerationStructuresPropertiesKHR](#) or [vkCmdWriteAccelerationStructuresPropertiesKHR](#) with a query type of [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SIZE\\_KHR](#)
- VUID-VkCopyAccelerationStructureInfoKHR-mode-12419  
If **mode** is [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_COMPACT\\_KHR](#), the memory pointed to by **dst** **must** be at least as large as the compacted size of **src**, as reported by [vkWriteAccelerationStructuresPropertiesKHR](#) or [vkCmdWriteAccelerationStructuresPropertiesKHR](#) with a query type of

### Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureInfoKHR-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_COPY\\_ACCELERATION\\_STRUCTURE\\_INFO\\_KHR](#)
- VUID-VkCopyAccelerationStructureInfoKHR-pNext-pNext  
**pNext must** be `NULL`
- VUID-VkCopyAccelerationStructureInfoKHR-src-parameter  
**src must** be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyAccelerationStructureInfoKHR-dst-parameter  
**dst must** be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyAccelerationStructureInfoKHR-mode-parameter  
**mode must** be a valid [VkCopyAccelerationStructureModeKHR](#) value
- VUID-VkCopyAccelerationStructureInfoKHR-commonparent  
Both of **dst**, and **src must** have been created, allocated, or retrieved from the same [VkDevice](#)

Possible values of **mode** specifying additional operations to perform during the copy, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkCopyAccelerationStructureModeKHR {
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR = 0,
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR = 1,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR = 2,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR = 3,
} VkCopyAccelerationStructureModeKHR;
```

- [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_CLONE\\_KHR](#) creates a direct copy of the acceleration structure specified in **src** into the one specified by **dst**. The **dst** acceleration structure **must** have been created with the same parameters as **src** with the exception of **size**, which **must** at least as large as the queried [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SIZE\\_KHR](#) size . If **src** contains references to other acceleration structures, **dst** will reference the same acceleration structures.
- [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_COMPACT\\_KHR](#) creates a more compact version of an acceleration structure **src** into **dst**. The acceleration structure **dst must** have been created with a size at least as large as that returned by [vkCmdWriteAccelerationStructuresPropertiesKHR](#), or [vkWriteAccelerationStructuresPropertiesKHR](#) after the build of the acceleration structure specified by **src**. If **src** contains references to other acceleration structures, **dst** will reference the same acceleration structures.

- [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_SERIALIZE\\_KHR](#) serializes the acceleration structure to a semi-opaque format which can be reloaded on a compatible implementation.
- [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_DESERIALIZE\\_KHR](#) deserializes the semi-opaque serialization format in the buffer to the acceleration structure. After deserialization, the destination acceleration structure is treated as having the same acceleration structure type as the originally serialized acceleration structure.

To copy an acceleration structure to device memory call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureToMemoryKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a [VkCopyAccelerationStructureToMemoryInfoKHR](#) structure defining the copy operation.

Accesses to `pInfo->src` must be synchronized with the [VK\\_PIPELINE\\_STAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_COPY\\_BIT\\_KHR](#) pipeline stage or the [VK\\_PIPELINE\\_STAGE\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_BIT\\_KHR](#) pipeline stage, and an access type of [VK\\_ACCESS\\_ACCELERATION\\_STRUCTURE\\_READ\\_BIT\\_KHR](#). Accesses to the buffer indicated by `pInfo->dst.deviceAddress` must be synchronized with the [VK\\_PIPELINE\\_STAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_COPY\\_BIT\\_KHR](#) pipeline stage or the [VK\\_PIPELINE\\_STAGE\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_BIT\\_KHR](#) pipeline stage, and an access type of [VK\\_ACCESS\\_TRANSFER\\_WRITE\\_BIT](#).

This command produces the same results as [vkCopyAccelerationStructureToMemoryKHR](#), but writes its result to a device address, and is executed on the device rather than the host. The output may not necessarily be bit-for-bit identical, but it can be equally used by either [vkCmdCopyMemoryToAccelerationStructureKHR](#) or [vkCopyMemoryToAccelerationStructureKHR](#).

The defined header structure for the serialized data consists of:

- [VK\\_UUID\\_SIZE](#) bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- [VK\\_UUID\\_SIZE](#) bytes of data identifying the compatibility for comparison using [vkGetDeviceAccelerationStructureCompatibilityKHR](#)

For a top-level or bottom-level acceleration structure, this is followed by:

- A 64-bit integer of the total size matching the value queried using [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SERIALIZATION\\_SIZE\\_KHR](#)
- A 64-bit integer of the deserialized size to be passed in to `VkAccelerationStructureCreateInfoKHR::size`

For a top-level acceleration structure, the remainder of the serialized header consists of:

- A 64-bit integer of the count of the number of acceleration structure handles following. This

value matches the value queried using [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SERIALIZATION\\_BOTTOM\\_LEVEL\\_POINTERS\\_KHR](#). For top-level acceleration structures this number is implementation-dependent; the number of and ordering of the handles may not match the instance descriptions which were used to build the acceleration structure.

The corresponding handles matching the values returned by [vkGetAccelerationStructureDeviceAddressKHR](#) are tightly packed in the buffer following the count. The application is expected to store a mapping between those handles and the original application-generated bottom-level acceleration structures to provide when deserializing.

For a bottom-level acceleration structure, the remainder of the serialized header consists of:

- A 64-bit integer consisting of two packed 32 bit values. The high 32 bits are 0xFFFFFFFF to indicate a block-based format, and the low 32 bits contain the number of serialized blocks that follow
- For each block:
  - A 32-bit unsigned integer indicating the block type corresponding to values in the [VkAccelerationStructureSerializedBlockTypeKHR](#) enumeration
  - A 32-bit reserved value for alignment
  - A 64-bit unsigned integer indicating the number of block buffer device addresses that follow the block header
  - An array of 64-bit buffer device addresses, with the count matching the previous value

If the block type is [VK\\_ACCELERATION\\_STRUCTURE\\_SERIALIZED\\_BLOCK\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#), the corresponding buffer device addresses are tightly packed in the buffer and match the values returned by [vkGetBufferDeviceAddressKHR](#) for the underlying buffer objects for the opacity micromaps. An implementation **may** either return **NULL** for a geometry with no opacity micromap or only return valid device address entries in the array. Similar to the above, the application **must** provide a mapping between the valid buffer device addresses and the original application-generated opacity micromaps when deserializing. If the implementation returned **NULL** addresses for geometry without micromaps, the application **must** provide **NULL** device addresses mapped to those when deserializing.

The addresses of micromaps provided to deserializing **must** be compatible with the micromaps that were used for building the acceleration structure that was serialized. They **must** be created before deserializing with identical **type** and **createFlags** except for the [VK\\_ACCELERATION\\_STRUCTURE\\_CREATE\\_DEVICE\\_ADDRESS\\_CAPTURE\\_REPLAY\\_BIT\\_KHR](#) flag set.

Before using the deserialized acceleration structure, the micromaps **must** be deserialized using the exact serialized output of the micromap that was originally referenced by the serialized acceleration structure, or, if the acceleration structure was originally built with the [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_OPACITY\\_MICROMAP\\_UPDATE\\_BIT\\_KHR](#), the application **may** replace the micromap with a newly constructed micromap, using the normal update rules.

The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

### Valid Usage

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-accelerationStructure-08926  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03739  
`pInfo->dst.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03740  
`pInfo->dst.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-11699  
If `pInfo->src` was built with a `type` of `VK_ACCELERATION_STRUCTURE_TYPE_OPACITY_MICROMAP_KHR`, `pInfo->dst.deviceAddress` **must** be aligned to 128 bytes

### Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureToMemoryInfoKHR` structure
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-videocoding  
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdCopyAccelerationStructureToMemoryKHR is not affected by [conditional rendering](#)

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureToMemoryInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureToMemoryInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the source acceleration structure for the copy.
- **dst** is the device or host address of memory which is the target for the copy.
- **mode** is a [VkCopyAccelerationStructureModeKHR](#) value specifying additional operations to perform during the copy.

## Valid Usage

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-04959  
The source acceleration structure **src** **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-11582  
If the source acceleration structure **src** was constructed through deserialization, all micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-dst-03561  
The memory pointed to by **dst** **must** be at least as large as the serialization size of **src**, as reported by [vkWriteAccelerationStructuresPropertiesKHR](#) or

`vkCmdWriteAccelerationStructuresPropertiesKHR` with a query type of `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-03412  
`mode` **must** be `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-11714  
The range of `src` accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-11715  
The range of `dst` accessed by this command **must** be fully backed by physical memory

### Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_TO_MEMORY_INFO_KHR`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-parameter  
`src` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-parameter  
`mode` **must** be a valid `VkCopyAccelerationStructureModeKHR` value

To copy device memory to an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyMemoryToAccelerationStructureKHR(
    VkCommandBuffer                commandBuffer,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a `VkCopyMemoryToAccelerationStructureInfoKHR` structure defining the copy operation.

Accesses to `pInfo->dst` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`. Accesses to the buffer indicated by `pInfo->src.deviceAddress` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access type of `VK_ACCESS_TRANSFER_READ_BIT`.

This command can accept acceleration structures produced by either `vkCmdCopyAccelerationStructureToMemoryKHR` or `vkCopyAccelerationStructureToMemoryKHR`.

The structure provided as input to deserialize is as described in [vkCmdCopyAccelerationStructureToMemoryKHR](#), with any acceleration structure handles filled in with the newly-queried handles to bottom level acceleration structures created before deserialization. These do not need to be built at deserialize time, but **must** be created.

The application **must** also provide any required micromap addresses in the header as described in [vkCmdCopyAccelerationStructureToMemoryKHR](#).

### Valid Usage

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-accelerationStructure-08927  
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure](#) feature **must** be enabled
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03742  
[pInfo->src.deviceAddress](#) **must** be a valid [VkDeviceAddress](#)
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03743  
[pInfo->src.deviceAddress](#) **must** be aligned to 256 bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-11700  
If the serialized acceleration structure in [pInfo->src](#) was originally built with a type of [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#), [pInfo->src.deviceAddress](#) **must** be aligned to 128 bytes

### Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-parameter  
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-parameter  
[pInfo](#) **must** be a valid pointer to a valid [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-recording  
[commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#) operations
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdCopyMemoryToAccelerationStructureKHR` is not affected by [conditional rendering](#)

The `VkCopyMemoryToAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyMemoryToAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyMemoryToAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address of memory containing the source data for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

If the serialized data in `src` represents a top-level acceleration structure, `dst` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`.

If the serialized data in `src` represents a bottom-level acceleration structure, `dst` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either

### Valid Usage

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-04960  
The source memory pointed to by **src** **must** contain data previously serialized using [vkCmdCopyAccelerationStructureToMemoryKHR](#), potentially modified to relocate acceleration structure references as described in that command
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-03413  
**mode** **must** be [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_DESERIALIZE\\_KHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pInfo-03414  
The data in **src** **must** have a format compatible with the destination physical device as returned by [vkGetDeviceAccelerationStructureCompatibilityKHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-03746  
**dst** **must** have been created with a **size** greater than or equal to that used to serialize the data in **src**
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11716  
The range of **src** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11717  
The range of **dst** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-11583  
If the serialized acceleration structure in **src** is bottom-level, each block in the header **must** have a type that corresponds to a valid value in [VkAccelerationStructureSerializedBlockTypeKHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11584  
If the serialized acceleration structure in **src** is bottom-level, and any block in the header has a type of [VK\\_ACCELERATION\\_STRUCTURE\\_SERIALIZED\\_BLOCK\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#) the [VkPhysicalDeviceOpacityMicromapFeaturesKHR::micromap](#) feature **must** be enabled
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-11585  
If the serialized acceleration structure in **src** is bottom-level, every device address in each block in the header with type [VK\\_ACCELERATION\\_STRUCTURE\\_SERIALIZED\\_BLOCK\\_TYPE\\_OPACITY\\_MICROMAP\\_KHR](#) **must** point to a valid [VkDeviceAddress](#) that was retrieved by [vkGetBufferDeviceAddressKHR](#) for the underlying buffer objects of [compatible micromaps](#) constructed on the [VkDevice](#) when the command is executed

### Valid Usage (Implicit)

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_COPY\\_MEMORY\\_TO\\_ACCELERATION\\_STRUCTURE\\_INFO\\_KHR](#)

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pNext-pNext  
**pNext must** be **NULL**
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-parameter  
**dst must** be a valid **VkAccelerationStructureKHR** handle
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-parameter  
**mode must** be a valid **VkCopyAccelerationStructureModeKHR** value

To check if a serialized acceleration structure is compatible with the current device call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetDeviceAccelerationStructureCompatibilityKHR(
    VkDevice device,
    const VkAccelerationStructureVersionInfoKHR* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- **device** is the device to check the version against.
- **pVersionInfo** is a pointer to a **VkAccelerationStructureVersionInfoKHR** structure specifying version information to check against the device.
- **pCompatibility** is a pointer to a **VkAccelerationStructureCompatibilityKHR** value in which compatibility information is returned.

### Valid Usage

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-accelerationStructure-08928  
The **VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure** feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-device-parameter  
**device must** be a valid **VkDevice** handle
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pVersionInfo-parameter  
**pVersionInfo must** be a valid pointer to a valid **VkAccelerationStructureVersionInfoKHR** structure
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pCompatibility-parameter  
**pCompatibility must** be a valid pointer to a **VkAccelerationStructureCompatibilityKHR** value

The **VkAccelerationStructureVersionInfoKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureVersionInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkAccelerationStructureVersionInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pVersionData** is a pointer to the version header of an acceleration structure as defined in [vkCmdCopyAccelerationStructureToMemoryKHR](#)

#### NOTE

**pVersionData** is a *pointer* to an array of  $2 \times \text{VK\_UUID\_SIZE}$  **uint8\_t** values instead of two **VK\_UUID\_SIZE** arrays as the expected use case for this member is to be pointed at the header of a previously serialized acceleration structure (via [vkCmdCopyAccelerationStructureToMemoryKHR](#) or [vkCopyAccelerationStructureToMemoryKHR](#)) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureVersionInfoKHR-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_VERSION\\_INFO\\_KHR](#)
- VUID-VkAccelerationStructureVersionInfoKHR-pNext-pNext  
**pNext must** be **NULL**
- VUID-VkAccelerationStructureVersionInfoKHR-pVersionData-parameter  
**pVersionData must** be a valid pointer to an array of  $2 \times \text{VK\_UUID\_SIZE}$  **uint8\_t** values

Possible values of **pCompatibility** returned by [vkGetDeviceAccelerationStructureCompatibilityKHR](#) are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCompatibilityKHR {
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR = 0,
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR = 1,
} VkAccelerationStructureCompatibilityKHR;
```

- [VK\\_ACCELERATION\\_STRUCTURE\\_COMPATIBILITY\\_COMPATIBLE\\_KHR](#) if the **pVersionData** version acceleration structure is compatible with **device**.
- [VK\\_ACCELERATION\\_STRUCTURE\\_COMPATIBILITY\\_INCOMPATIBLE\\_KHR](#) if the **pVersionData** version acceleration structure is not compatible with **device**.

## 40.2. Host Acceleration Structure Operations

Implementations are also required to provide host implementations of the acceleration structure operations if the `accelerationStructureHostCommands` feature is enabled:

- `vkBuildAccelerationStructuresKHR` corresponding to `vkCmdBuildAccelerationStructuresKHR`
- `vkCopyAccelerationStructureKHR` corresponding to `vkCmdCopyAccelerationStructureKHR`
- `vkCopyAccelerationStructureToMemoryKHR` corresponding to `vkCmdCopyAccelerationStructureToMemoryKHR`
- `vkCopyMemoryToAccelerationStructureKHR` corresponding to `vkCmdCopyMemoryToAccelerationStructureKHR`
- `vkWriteAccelerationStructuresPropertiesKHR` corresponding to `vkCmdWriteAccelerationStructuresPropertiesKHR`

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All acceleration structures used by the host commands **must** be bound to host-visible memory, and all input data for acceleration structure builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map acceleration structure memory when using the host commands.

### NOTE

The `vkBuildAccelerationStructuresKHR` and `vkCmdBuildAccelerationStructuresKHR` **may** use different algorithms, and thus are not required to produce identical structures. The structures produced by these two commands **may** exhibit different memory footprints or traversal performance, but should strive to be similar where possible.

Apart from these details, the host and device operations are interchangeable. For example, an application **can** use `vkBuildAccelerationStructuresKHR` to build a structure, compact it on the device using `vkCmdCopyAccelerationStructureKHR`, and serialize the result using `vkCopyAccelerationStructureToMemoryKHR`.

The exception to this are acceleration structures that are created with the `VkAccelerationStructureCreateInfo2KHR` command as they are backed by a `VkDeviceAddress` and therefore are not valid to be used with host commands.

### NOTE

For efficient execution, acceleration structures manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build acceleration structures on the host, call:

### WARNING

This functionality is superseded by `vkCmdBuildAccelerationStructuresKHR`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkBuildAccelerationStructuresKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    uint32_t infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `device` is the `VkDevice` for which the acceleration structures are being built.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkAccelerationStructureBuildGeometryInfoKHR` structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

This command fulfills the same task as `vkCmdBuildAccelerationStructuresKHR` but is executed by the host.

The `vkBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

#### NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

### Valid Usage

- VUID-vkBuildAccelerationStructuresKHR-accelerationStructureHostCommands-03581  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkBuildAccelerationStructuresKHR-mode-04628  
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkBuildAccelerationStructuresKHR-srcAccelerationStructure-04629  
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid

[VkAccelerationStructureKHR](#) handle

- VUID-vkBuildAccelerationStructuresKHR-pInfos-04630  
For each element of [pInfos](#), if its [mode](#) member is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#), its [srcAccelerationStructure](#) member **must** not be [VK\\_NULL\\_HANDLE](#)
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03708  
For each element of [pInfos](#), if its [mode](#) member is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#), [srcAccelerationStructure](#) **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03403  
The [srcAccelerationStructure](#) member of any element of [pInfos](#) **must** not be the same acceleration structure as the [dstAccelerationStructure](#) member of any other element of [pInfos](#)
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03698  
The [dstAccelerationStructure](#) member of any element of [pInfos](#) **must** not be the same acceleration structure as the [dstAccelerationStructure](#) member of any other element of [pInfos](#)
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03800  
The [dstAccelerationStructure](#) member of any element of [pInfos](#) **must** be a valid [VkAccelerationStructureKHR](#) handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03707  
For each element of [pInfos](#), its [dstAccelerationStructure](#) member **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03699  
For each element of [pInfos](#), if its [type](#) member is [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_TOP\\_LEVEL\\_KHR](#), its [dstAccelerationStructure](#) member **must** have been created with a value of [VkAccelerationStructureCreateInfoKHR::type](#) equal to either [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_TOP\\_LEVEL\\_KHR](#) or [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_GENERIC\\_KHR](#)
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03700  
For each element of [pInfos](#), if its [type](#) member is [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_BOTTOM\\_LEVEL\\_KHR](#), its [dstAccelerationStructure](#) member **must** have been created with a value of [VkAccelerationStructureCreateInfoKHR::type](#) equal to either [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_BOTTOM\\_LEVEL\\_KHR](#) or [VK\\_ACCELERATION\\_STRUCTURE\\_TYPE\\_GENERIC\\_KHR](#)
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03663  
For each element of [pInfos](#), if its [mode](#) member is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#), [inactive primitives](#) in its [srcAccelerationStructure](#) member **must** not be made active
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03664  
For each element of [pInfos](#), if its [mode](#) member is [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MODE\\_UPDATE\\_KHR](#), [active primitives](#) in its [srcAccelerationStructure](#) member **must** not be made [inactive](#)

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03709  
For each element of `pInfos`, if an acceleration structure is referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, it **must** be fully backed by physical memory
- VUID-vkBuildAccelerationStructuresKHR-None-03407  
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03701  
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03702  
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03703  
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-scratchData-03704  
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-scratchData-03705  
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03706  
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03667  
For each element of `pInfos`, if its `mode` member is

`VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03668  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03758  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03759  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03760  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03761  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03762  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03763  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03764  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or

`ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03765

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03766

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03767

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10126

For each `pInfos[i]`, `dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to either:

- the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and with each element of the `pMaxPrimitiveCounts` array greater than or equal to the equivalent `ppBuildRangeInfos[i][j].primitiveCount` values for `j` in `[0,pInfos[i].geometryCount)` or,
  - the result of querying the corresponding `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, if updating a compacted acceleration structure
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-03678  
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-11702  
Each element of `ppBuildRangeInfos[i]` **must** be a valid pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-11703  
For each element of `pInfos`, its `dstAccelerationStructure` member **must** have been created with `vkCreateAccelerationStructureKHR`
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-03722  
For each element of `pInfos`, its `dstAccelerationStructure` member **must** be bound to host-visible device memory
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-11706  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have been created with `vkCreateAccelerationStructureKHR`
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-03723  
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to host-visible device memory
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-11704  
For each element of `pInfos`, the acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** have been created with `vkCreateAccelerationStructureKHR`
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-03724  
For each element of `pInfos`, each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to host-visible device memory
  - VUID-vkBuildAccelerationStructuresKHR-pInfos-12244  
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos`

[i].scratchData.hostAddress + N - 1 **must** be valid host memory, where N is given by the buildScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count

- VUID-vkBuildAccelerationStructuresKHR-pInfos-12245

If pInfos[i].mode is VK\_BUILD\_ACCELERATION\_STRUCTURE\_MODE\_UPDATE\_KHR, and N is not 0, all addresses between pInfos[i].scratchData.hostAddress and pInfos[i].scratchData.hostAddress + N - 1 **must** be valid host memory, where N is given by the updateScratchSize member of the VkAccelerationStructureBuildSizesInfoKHR structure returned from a call to vkGetAccelerationStructureBuildSizesKHR with an identical VkAccelerationStructureBuildGeometryInfoKHR structure and primitive count

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03771

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR, geometry.triangles.vertexData.hostAddress **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03772

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR, if geometry.triangles.indexType is not VK\_INDEX\_TYPE\_NONE\_KHR, geometry.triangles.indexData.hostAddress **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03773

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_TRIANGLES\_KHR, if geometry.triangles.transformData.hostAddress is not 0, it **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03774

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_AABBS\_KHR, geometry.aabbs.data.hostAddress **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03775

For each element of pInfos, its dstAccelerationStructure member **must** be bound to memory that was not allocated with multiple instances

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03776

For each element of pInfos, if its mode member is VK\_BUILD\_ACCELERATION\_STRUCTURE\_MODE\_UPDATE\_KHR the buffer used to create its srcAccelerationStructure member **must** be bound to memory that was not allocated with multiple instances

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03777

For each element of pInfos, each acceleration structure referenced by the geometry.instances.data member of any element of pGeometries or ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_INSTANCES\_KHR **must** be bound to memory that was not allocated with multiple instances

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03778

For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK\_GEOMETRY\_TYPE\_INSTANCES\_KHR, geometry.instances.data.hostAddress **must** be a

valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03779

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.hostAddress` **must** be a valid `VkAccelerationStructureKHR` object

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10892

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.hostAddress` **must** be 0

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11821

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.hostAddress` **must** not be 0

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11705

For any element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapKHR` in the `geometry.triangles.pNext` chain its `micromap` member **must** be `VK_NULL_HANDLE`

## Valid Usage (Implicit)

- VUID-vkBuildAccelerationStructuresKHR-device-parameter

`device` **must** be a valid `VkDevice` handle

- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parameter

If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle

- VUID-vkBuildAccelerationStructuresKHR-pInfos-parameter

`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkAccelerationStructureBuildGeometryInfoKHR` structures

- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter

`ppBuildRangeInfos` **must** be a valid pointer to an array of `infoCount` `VkAccelerationStructureBuildRangeInfoKHR` structures

- VUID-vkBuildAccelerationStructuresKHR-infoCount-arraylength

`infoCount` **must** be greater than 0

- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parent

If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- [VK\\_OPERATION\\_DEFERRED\\_KHR](#)
- [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To copy or compact an acceleration structure on the host, call:

#### WARNING

This functionality is superseded by [vkCmdCopyAccelerationStructureKHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- [device](#) is the device which owns the acceleration structures.
- [deferredOperation](#) is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- [pInfo](#) is a pointer to a [VkCopyAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyAccelerationStructureKHR](#) but is executed by the host.

## Valid Usage

- VUID-vkCopyAccelerationStructureKHR-accelerationStructureHostCommands-03582  
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-03678  
Any previous deferred operation that was associated with [deferredOperation](#) **must** be complete
- VUID-vkCopyAccelerationStructureKHR-buffer-03727

**pInfo->src** must be bound to host-visible device memory

- VUID-vkCopyAccelerationStructureKHR-buffer-03728

**pInfo->dst** must be bound to host-visible device memory

- VUID-vkCopyAccelerationStructureKHR-buffer-03780

**pInfo->src** must be bound to memory that was not allocated with multiple instances

- VUID-vkCopyAccelerationStructureKHR-buffer-03781

**pInfo->dst** must be bound to memory that was not allocated with multiple instances

- VUID-vkCopyAccelerationStructureKHR-src-11586

The source acceleration structure **pInfo->src** must have been constructed prior to the execution of this command

- VUID-vkCopyAccelerationStructureKHR-src-11587

If the source acceleration structure **pInfo->src** was constructed through deserialization, all micromap arrays the acceleration structure references that were not replaced by an acceleration structure update command must have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command

- VUID-vkCopyAccelerationStructureKHR-src-11588

**pInfo->src** must have been created with [vkCreateAccelerationStructureKHR](#)

- VUID-vkCopyAccelerationStructureKHR-dst-11589

**pInfo->dst** must have been created with [vkCreateAccelerationStructureKHR](#)

## Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureKHR-device-parameter

**device** must be a valid [VkDevice](#) handle

- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parameter

If **deferredOperation** is not [VK\\_NULL\\_HANDLE](#), **deferredOperation** must be a valid [VkDeferredOperationKHR](#) handle

- VUID-vkCopyAccelerationStructureKHR-pInfo-parameter

**pInfo** must be a valid pointer to a valid [VkCopyAccelerationStructureInfoKHR](#) structure

- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parent

If **deferredOperation** is a valid handle, it must have been created, allocated, or retrieved from **device**

## Return Codes

### Success

- [VK\\_OPERATION\\_DEFERRED\\_KHR](#)
- [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To copy host accessible memory to an acceleration structure, call:

#### WARNING

This functionality is superseded by [vkCmdCopyMemoryToAccelerationStructureKHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyMemoryToAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- `device` is the device which owns `pInfo->dst`.
- `deferredOperation` is an optional [VkDeferredOperationKHR](#) to request deferral for this command.
- `pInfo` is a pointer to a [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyMemoryToAccelerationStructureKHR](#) but is executed by the host.

This command can accept acceleration structures produced by either [vkCmdCopyAccelerationStructureToMemoryKHR](#) or [vkCopyAccelerationStructureToMemoryKHR](#).

### Valid Usage

- VUID-vkCopyMemoryToAccelerationStructureKHR-accelerationStructureHostCommands-03583  
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-03678  
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03729  
`pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03750  
`pInfo->src.hostAddress` **must** be aligned to 16 bytes

- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03730  
**pInfo->dst** **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03782  
**pInfo->dst** **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMemoryToAccelerationStructureKHR-dst-11677  
**pInfo->dst** **must** have been created with [vkCreateAccelerationStructureKHR](#)

### Valid Usage (Implicit)

- VUID-vkCopyMemoryToAccelerationStructureKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parameter  
If **deferredOperation** is not [VK\\_NULL\\_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-parameter  
**pInfo** **must** be a valid pointer to a valid [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parent  
If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

### Return Codes

#### Success

- [VK\\_OPERATION\\_DEFERRED\\_KHR](#)
- [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#)
- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To copy an acceleration structure to host accessible memory, call:

#### WARNING

This functionality is superseded by [vkCmdCopyAccelerationStructureToMemoryKHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureToMemoryKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyAccelerationStructureToMemoryInfoKHR` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyAccelerationStructureToMemoryKHR` but is executed by the host.

This command produces the same results as `vkCmdCopyAccelerationStructureToMemoryKHR`, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either `vkCmdCopyMemoryToAccelerationStructureKHR` or `vkCopyMemoryToAccelerationStructureKHR`.

### Valid Usage

- VUID-vkCopyAccelerationStructureToMemoryKHR-accelerationStructureHostCommands-03584  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-03678  
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03731  
`pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03732  
`pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03751  
`pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyAccelerationStructureToMemoryKHR-buffer-03783  
`pInfo->src` **must** not be bound to memory that was allocated with multiple instances
- VUID-vkCopyAccelerationStructureToMemoryKHR-src-11678  
`pInfo->src` **must** have been created with `vkCreateAccelerationStructureKHR`

## Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureToMemoryKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parameter  
If **deferredOperation** is not [VK\\_NULL\\_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-parameter  
**pInfo** **must** be a valid pointer to a valid [VkCopyAccelerationStructureToMemoryInfoKHR](#) structure
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parent  
If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

## Return Codes

### Success

- [VK\\_OPERATION\\_DEFERRED\\_KHR](#)
- [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To query acceleration structure size parameters on the host, call:

### WARNING

This functionality is superseded by [vkCmdWriteAccelerationStructuresPropertiesKHR](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_KHR_acceleration_structure
VkResult vkWriteAccelerationStructuresPropertiesKHR(
    VkDevice device,
    uint32_t accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType queryType,
    size_t dataSize,
    void* pData,
    size_t stride);
```

- `device` is the device which owns the acceleration structures in `pAccelerationStructures`.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as `vkCmdWriteAccelerationStructuresPropertiesKHR` but is executed by the host.

### Valid Usage

- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureHostCommands-03585  
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431  
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06742  
`queryType` **must** be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-12425  
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03736  
Each element of `pAccelerationStructures` **must** be fully backed by physical memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03448  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03449  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03450

If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`

- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03451  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06731  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06732  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06733  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06734  
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-03452  
`dataSize` **must** be greater than or equal to `accelerationStructureCount*stride`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03733  
Each element of `pAccelerationStructures` **must** be bound to host-visible device memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11592  
Each acceleration structure in `pAccelerationStructures` **must** have been created with `vkCreateAccelerationStructureKHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03784  
Each element of `pAccelerationStructures` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11591  
All acceleration structures in `pAccelerationStructures` **must** have been constructed prior to the execution of this command

### Valid Usage (Implicit)

- VUID-vkWriteAccelerationStructuresPropertiesKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter  
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid `VkAccelerationStructureKHR` handles
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-parameter  
`queryType` **must** be a valid `VkQueryType` value

- VUID-vkWriteAccelerationStructuresPropertiesKHR-pData-parameter  
**pData** **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength  
**accelerationStructureCount** **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-arraylength  
**dataSize** **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parent  
Each element of **pAccelerationStructures** **must** have been created, allocated, or retrieved from **device**

## Return Codes

### Success

- **VK\_SUCCESS**

### Failure

- **VK\_ERROR\_OUT\_OF\_DEVICE\_MEMORY**
- **VK\_ERROR\_OUT\_OF\_HOST\_MEMORY**
- **VK\_ERROR\_UNKNOWN**
- **VK\_ERROR\_VALIDATION\_FAILED**

# Chapter 41. Micromap

## 41.1. Micromaps

*Acceleration structures* store and organize geometry for ray tracing, but in some cases it is beneficial to include some information within the geometry, particularly for triangles. A *micromap* organizes this data around a map of values corresponding to subdivided microtriangles which can be added to a triangle geometry when building a *bottom level acceleration structure*.

An *opacity micromap* is a type of micromap which stores information to control intersection opacity as described in [Ray Opacity Micromap](#).

A micromap is considered to be constructed if a [micromap build command](#) or [copy command](#) has been executed with the given micromap as the destination.

### 41.1.1. Building Micromaps

Micromaps created with [VK\\_KHR\\_opacity\\_micromap](#), which are represented by [VkAccelerationStructureKHR](#) objects, are built with [device build commands](#).

When building micromaps with [vkCmdBuildAccelerationStructuresKHR](#), a [VkAccelerationStructureGeometryMicromapDataKHR](#) structure can be added to the [pNext](#) chain of [VkAccelerationStructureGeometryKHR](#) to specify the data used to build the micromap.

The [VkAccelerationStructureGeometryMicromapDataKHR](#) structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkAccelerationStructureGeometryMicromapDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageKHR* pUsageCounts;
    const VkMicromapUsageKHR* const* ppUsageCounts;
    VkDeviceAddress          data;
    VkDeviceAddress          triangleArray;
    VkDeviceSize             triangleArrayStride;
} VkAccelerationStructureGeometryMicromapDataKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [usageCountsCount](#) specifies the number of usage counts structures that will be used to determine the size of this micromap.
- [pUsageCounts](#) is a pointer to an array of [VkMicromapUsageKHR](#) structures.
- [ppUsageCounts](#) is a pointer to an array of pointers to [VkMicromapUsageKHR](#) structures.
- [data](#) is the device address to memory which contains the data for the micromap.

- `triangleArray` is the device address to memory containing the `VkMicromapTriangleKHR` data
- `triangleArrayStride` is the stride in bytes between each element of `triangleArray`

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total counts used to build each micromap. Each element contains a `count` which is the number of micromap triangles of that `format` and `subdivisionLevel` contained in the micromap. Multiple elements with the same `format` and `subdivisionLevel` are allowed and the total count for that `format` and `subdivisionLevel` is the sum of the `count` for each element.

Each micromap triangle refers to one element in `triangleArray` which contains the `format` and `subdivisionLevel` for that particular triangle as well as a `dataOffset` in bytes which is the location relative to `data` where that triangle's micromap data begins. The data at `triangleArray` is laid out as a 4 byte unsigned integer for the `dataOffset` followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile `VkMicromapTriangleKHR` to match this pattern.

For opacity micromaps, the data at `data` is packed as either one bit per element for `VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR` or two bits per element for `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR` and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in [Ray Opacity Micromap](#).

### Valid Usage

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-pUsageCounts-11642  
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-count-11643  
The total sum of `count` from all elements of `pUsageCounts` and `ppUsageCounts` **must** be less than or equal to `maxMicromapTriangles`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-subdivisionLevel-11645  
For each member of `pUsageCounts` or `ppUsageCounts`, if `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR`, `subdivisionLevel` **must** be less than or equal to `maxOpacity2StateSubdivisionLevel`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-triangleArrayStride-11646  
`triangleArrayStride` **must** be greater than or equal to 8 bytes
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-triangleArrayStride-11647  
`triangleArrayStride` **must** be a multiple of 4 bytes

### Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MICROMAP_DATA_KHR`
- VUID-VkAccelerationStructureGeometryMicromapDataKHR-pUsageCounts-parameter  
If `usageCountsCount` is not 0, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid

pointer to an array of `usageCountsCount` valid `VkMicromapUsageKHR` structures

- VUID-VkAccelerationStructureGeometryMicromapDataKHR-ppUsageCounts-parameter  
If `usageCountsCount` is not 0, and `ppUsageCounts` is not NULL, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to valid `VkMicromapUsageKHR` structures

## Structure Chaining

### Extends the structure

- `VkAccelerationStructureGeometryKHR`

The `VkMicromapUsageKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkMicromapUsageKHR {
    uint32_t      count;
    uint32_t      subdivisionLevel;
    VkOpacityMicromapFormatKHR format;
} VkMicromapUsageKHR;
```

- `count` is the number of triangles in the usage format defined by the `subdivisionLevel` and `format` below in the micromap
- `subdivisionLevel` is the subdivision level of this usage format
- `format` is the format of this usage format

The `format` is interpreted based on the `type` of the micromap using it.

## Valid Usage (Implicit)

- VUID-VkMicromapUsageKHR-format-parameter  
`format` **must** be a valid `VkOpacityMicromapFormatKHR` value

The `VkMicromapUsageEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapUsageEXT {
    uint32_t      count;
    uint32_t      subdivisionLevel;
    uint32_t      format;
} VkMicromapUsageEXT;
```

- `count` is the number of triangles in the usage format defined by the `subdivisionLevel` and `format` below in the micromap

- `subdivisionLevel` is the subdivision level of this usage format
- `format` is the format of this usage format

The `format` is interpreted based on the `type` of the micromap using it.

The `VkMicromapTriangleKHR` structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkMicromapTriangleKHR {
    uint32_t    dataOffset;
    uint16_t    subdivisionLevel;
    uint16_t    format;
} VkMicromapTriangleKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkMicromapTriangleKHR
typedef VkMicromapTriangleKHR VkMicromapTriangleEXT;
```

- `dataOffset` is the offset in bytes of the start of the data for this triangle. This is a byte aligned value.
- `subdivisionLevel` is the subdivision level of this triangle
- `format` is the format of this triangle

The `format` is interpreted based on the `type` of the micromap using it.

Formats which **can** be set in `VkMicromapUsageKHR::format` and `VkMicromapTriangleKHR::format` for micromap builds, are:

```
// Provided by VK_KHR_opacity_micromap
typedef enum VkOpacityMicromapFormatKHR {
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR = 1,
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR = 2,
// Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT = VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR,
// Provided by VK_EXT_opacity_micromap
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT = VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR,
} VkOpacityMicromapFormatKHR;
```

```
// Provided by VK_EXT_opacity_micromap
// Equivalent to VkOpacityMicromapFormatKHR
typedef VkOpacityMicromapFormatKHR VkOpacityMicromapFormatEXT;
```

- `VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR` specifies that the given micromap format has one bit per subtriangle encoding either fully opaque or fully transparent.

- [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_4\\_STATE\\_KHR](#) specifies that the given micromap format has two bits per subtriangle encoding four modes which can be interpreted as described in [Ray Opacity Micromap](#).

**NOTE** For compactness, these values are stored as 16-bit in some structures.

To build micromaps represented as a [VkMicromapEXT](#) object call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdBuildMicromapsEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                 infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` structures that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` [VkMicromapBuildInfoEXT](#) structures defining the data used to build each micromap.

The `vkCmdBuildMicromapsEXT` command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

**NOTE** This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

The input buffers passed to this command will be referenced by the implementation for the duration of the command's execution on the device. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by this command's execution on the device as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure, provided proper synchronization is used as described below.

Accesses to the micromap scratch buffers as identified by the [VkMicromapBuildInfoEXT::scratchData](#) buffer device addresses **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of ([VK\\_ACCESS\\_2\\_MICROMAP\\_READ\\_BIT\\_EXT](#) | [VK\\_ACCESS\\_2\\_MICROMAP\\_WRITE\\_BIT\\_EXT](#)). Accesses to [VkMicromapBuildInfoEXT::dstMicromap](#) **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_2\\_MICROMAP\\_WRITE\\_BIT\\_EXT](#).

Accesses to other input buffers as identified by any used values of [VkMicromapBuildInfoEXT::data](#) or [VkMicromapBuildInfoEXT::triangleArray](#) **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_SHADER\\_READ\\_BIT](#).

## Valid Usage

- VUID-vkCmdBuildMicromapsEXT-pInfos-07461

For each `pInfos[i]`, `dstMicromap` **must** have been created with a value of `VkMicromapCreateInfoEXT::size` greater than or equal to the memory size required by the build operation, as returned by `vkGetMicromapBuildSizesEXT` with `pBuildInfo = pInfos[i]`

- VUID-vkCmdBuildMicromapsEXT-mode-07462

The `mode` member of each element of `pInfos` **must** be a valid `VkBuildMicromapModeEXT` value

- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07463

The `dstMicromap` member of any element of `pInfos` **must** be a valid `VkMicromapEXT` handle

- VUID-vkCmdBuildMicromapsEXT-pInfos-07464

For each element of `pInfos` its `type` member **must** match the value of `VkMicromapCreateInfoEXT::type` when its `dstMicromap` was created

- VUID-vkCmdBuildMicromapsEXT-micromap-11648

The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap` feature **must** be enabled

- VUID-vkCmdBuildMicromapsEXT-pInfos-07508

For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to device memory

- VUID-vkCmdBuildMicromapsEXT-pInfos-07509

If `pInfos[i].mode` is `VK_BUILD_MICROMAP_MODE_BUILD_EXT`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the `buildScratchSize` member of the `VkMicromapBuildSizesInfoEXT` structure returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure and primitive count

- VUID-vkCmdBuildMicromapsEXT-data-07510

The buffers from which the buffer device addresses for all of the `data` and `triangleArray` members of all `pInfos[i]` are queried **must** have been created with the `VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT` usage flag set

- VUID-vkCmdBuildMicromapsEXT-pInfos-07511

For each element of `pInfos[i]` the buffer from which the buffer device address `pInfos[i].scratchData.deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildMicromapsEXT-pInfos-07512

For each element of `pInfos`, if the value of `VkMicromapBuildSizesInfoEXT::buildScratchSize`, returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure, is not 0, `scratchData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildMicromapsEXT-pInfos-10896

For each element of `pInfos`, `data.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildMicromapsEXT-pInfos-10897  
For each element of `pInfos`, `triangleArray.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07514  
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07515  
For each element of `pInfos`, its `triangleArray.deviceAddress` and `data.deviceAddress` members **must** be a multiple of `256`
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-11649  
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by the execution of this command on the device
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-11650  
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by the execution of this command on the device
- VUID-vkCmdBuildMicromapsEXT-scratchData-11651  
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by the execution of this command on the device **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by the execution of this command on the device

### Valid Usage (Implicit)

- VUID-vkCmdBuildMicromapsEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-parameter  
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkMicromapBuildInfoEXT` structures
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-recording  
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdBuildMicromapsEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildMicromapsEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildMicromapsEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdBuildMicromapsEXT-infoCount-arraylength  
**infoCount** **must** be greater than 0

## Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdBuildMicromapsEXT is not affected by [conditional rendering](#)

The **VkMicromapBuildInfoEXT** structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkMicromapTypeEXT        type;
    VkBuildMicromapFlagsEXT  flags;
    VkBuildMicromapModeEXT   mode;
    VkMicromapEXT            dstMicromap;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceOrHostAddressKHR      scratchData;
    VkDeviceOrHostAddressConstKHR triangleArray;
    VkDeviceSize                  triangleArrayStride;
} VkMicromapBuildInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- **type** is a [VkMicromapTypeEXT](#) value specifying the type of micromap being built.
- **flags** is a bitmask of [VkBuildMicromapFlagBitsEXT](#) specifying additional parameters of the micromap.
- **mode** is a [VkBuildMicromapModeEXT](#) value specifying the type of operation to perform.
- **dstMicromap** is a pointer to the target micromap for the build.
- **usageCountsCount** specifies the number of usage counts structures that will be used to determine the size of this micromap.
- **pUsageCounts** is a pointer to an array of [VkMicromapUsageEXT](#) structures.
- **ppUsageCounts** is a pointer to an array of pointers to [VkMicromapUsageEXT](#) structures.
- **data** is the device or host address of memory which contains the data for the micromap.
- **scratchData** is the device or host address of memory that will be used as scratch memory for the build.
- **triangleArray** is the device or host address of memory containing the [VkMicromapTriangleEXT](#) data
- **triangleArrayStride** is the stride in bytes between each element of **triangleArray**

Only one of **pUsageCounts** or **ppUsageCounts** **can** be a valid pointer, the other **must** be **NULL**. The elements of the non-**NULL** array describe the total counts used to build each micromap. Each element contains a **count** which is the number of micromap triangles of that **format** and **subdivisionLevel** contained in the micromap. Multiple elements with the same **format** and **subdivisionLevel** are allowed and the total count for that **format** and **subdivisionLevel** is the sum of the **count** for each element.

Each micromap triangle refers to one element in **triangleArray** which contains the **format** and **subdivisionLevel** for that particular triangle as well as a **dataOffset** in bytes which is the location relative to **data** where that triangle's micromap data begins. The data at **triangleArray** is laid out as a 4 byte unsigned integer for the **dataOffset** followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile [VkMicromapTriangleEXT](#) to match this pattern.

For opacity micromaps, the data at **data** is packed as either one bit per element for [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_2\\_STATE\\_EXT](#) or two bits per element for [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_4\\_STATE\\_EXT](#) and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in [Ray Opacity Micromap](#).

### Valid Usage

- VUID-VkMicromapBuildInfoEXT-pUsageCounts-07516  
Only one of **pUsageCounts** or **ppUsageCounts** **can** be a valid pointer, the other **must** be **NULL**
- VUID-VkMicromapBuildInfoEXT-format-11652  
If **type** is [VK\\_MICROMAP\\_TYPE\\_OPACITY\\_MICROMAP\\_EXT](#), for each member of **pUsageCounts** or **ppUsageCounts**, **format** **must** be a valid value from [VkOpacityMicromapFormatEXT](#)

- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11654  
If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of **pUsageCounts** or **ppUsageCounts**, if **format** is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT`, **subdivisionLevel** **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11655  
If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of **pUsageCounts** or **ppUsageCounts**, if **format** is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`, **subdivisionLevel** **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-format-11657  
If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of **triangleArray**, **format** **must** be a valid value from `VkOpacityMicromapFormatEXT`
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11659  
If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of **triangleArray**, if **format** is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT`, **subdivisionLevel** **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`
- VUID-VkMicromapBuildInfoEXT-subdivisionLevel-11660  
If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT`, for each member of **triangleArray**, if **format** is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`, **subdivisionLevel** **must** be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`

## Valid Usage (Implicit)

- VUID-VkMicromapBuildInfoEXT-sType-sType  
**sType** **must** be `VK_STRUCTURE_TYPE_MICROMAP_BUILD_INFO_EXT`
- VUID-VkMicromapBuildInfoEXT-pNext-pNext  
**pNext** **must** be `NULL`
- VUID-VkMicromapBuildInfoEXT-type-parameter  
**type** **must** be a valid `VkMicromapTypeEXT` value
- VUID-VkMicromapBuildInfoEXT-flags-parameter  
If **flags** is not `0`, **flags** **must** be a valid combination of `VkBuildMicromapFlagBitsEXT` values
- VUID-VkMicromapBuildInfoEXT-pUsageCounts-parameter  
If **usageCountsCount** is not `0`, and **pUsageCounts** is not `NULL`, **pUsageCounts** **must** be a valid pointer to an array of **usageCountsCount** `VkMicromapUsageEXT` structures
- VUID-VkMicromapBuildInfoEXT-ppUsageCounts-parameter  
If **usageCountsCount** is not `0`, and **ppUsageCounts** is not `NULL`, **ppUsageCounts** **must** be a valid pointer to an array of **usageCountsCount** valid pointers to `VkMicromapUsageEXT` structures

Bits which **can** be set in `VkMicromapBuildInfoEXT::flags` specifying additional parameters for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapFlagBitsEXT {
    VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT = 0x00000001,
    VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT = 0x00000002,
    VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT = 0x00000004,
} VkBuildMicromapFlagBitsEXT;
```

- `VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT` specifies that the given micromap build **should** prioritize trace performance over build time.
- `VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT` specifies that the given micromap build **should** prioritize build time over trace performance.
- `VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT` specifies that the micromap **can** act as the source for a `copy micromap command` with `mode` of `VK_COPY_MICROMAP_MODE_COMPACT_EXT` to produce a compacted micromap.

```
// Provided by VK_EXT_opacity_micromap
typedef VkFlags VkBuildMicromapFlagsEXT;
```

`VkBuildMicromapFlagsEXT` is a bitmask type for setting a mask of zero or more `VkBuildMicromapFlagBitsEXT`.

The `VkBuildMicromapModeEXT` enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapModeEXT {
    VK_BUILD_MICROMAP_MODE_BUILD_EXT = 0,
} VkBuildMicromapModeEXT;
```

- `VK_BUILD_MICROMAP_MODE_BUILD_EXT` specifies that the destination micromap will be built using the specified data.

### 41.1.2. Copying Micromaps

Micromaps created with `VK_KHR_opacity_micromap`, which are represented by `VkAccelerationStructureKHR` objects, are copied with `device copy commands`.

For `VkMicromapEXT`, an additional command exists for copying micromaps without updating their contents. Before copying, an application **must** query the size of the resulting micromap.

To query `VkMicromapEXT` size parameters call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdWriteMicromapsPropertiesEXT(
    VkCommandBuffer                commandBuffer,
    uint32_t                       micromapCount,
    const VkMicromapEXT*           pMicromaps,
    VkQueryType                    queryType,
    VkQueryPool                   queryPool,
    uint32_t                       firstQuery);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **micromapCount** is the count of micromaps for which to query the property.
- **pMicromaps** is a pointer to an array of existing previously built micromaps.
- **queryType** is a **VkQueryType** value specifying the type of queries managed by the pool.
- **queryPool** is the query pool that will manage the results of the query.
- **firstQuery** is the first query index within the query pool that will contain the **micromapCount** number of results.

Accesses to any of the micromaps listed in **pMicromaps** **must** be **synchronized** with the **VK\_PIPELINE\_STAGE\_2\_MICROMAP\_BUILD\_BIT\_EXT** pipeline stage and an **access type** of **VK\_ACCESS\_2\_MICROMAP\_READ\_BIT\_EXT**.

- If **queryType** is **VK\_QUERY\_TYPE\_MICROMAP\_SERIALIZATION\_SIZE\_EXT**, then the value written out is the number of bytes required by a serialized micromap.
- If **queryType** is **VK\_QUERY\_TYPE\_MICROMAP\_COMPACTED\_SIZE\_EXT**, then the value written out is the number of bytes required by a compacted micromap.

## Valid Usage

- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07525  
**queryPool** **must** have been created with a **queryType** matching **queryType**
- VUID-vkCmdWriteMicromapsPropertiesEXT-None-12417  
All queries used by this command **must** be *unavailable*
- VUID-vkCmdWriteMicromapsPropertiesEXT-buffer-07527  
The **buffer** used to create each micromap in **pMicromaps** **must** be bound to device memory
- VUID-vkCmdWriteMicromapsPropertiesEXT-query-07528  
The sum of **query** plus **micromapCount** **must** be less than or equal to the number of queries in **queryPool**
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-11662  
All micromaps in **pMicromaps** **must** have been constructed prior to the execution of this command on the device
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07502  
All micromaps in **pMicromaps** **must** have been constructed with **VK\_BUILD\_MICROMAP\_ALLOW\_COMPACTION\_BIT\_EXT** if **queryType** is

VK\_QUERY\_TYPE\_MICROMAP\_COMPACTED\_SIZE\_EXT

- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-07503

`queryType` **must** be `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`, or `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`

### Valid Usage (Implicit)

- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-parameter  
`pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid `VkMicromapEXT` handles
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-parameter  
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-recording  
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdWriteMicromapsPropertiesEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteMicromapsPropertiesEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteMicromapsPropertiesEXT-videocoding  
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteMicromapsPropertiesEXT-micromapCount-arraylength  
`micromapCount` **must** be greater than 0
- VUID-vkCmdWriteMicromapsPropertiesEXT-commonparent  
Each of `commandBuffer`, `queryPool`, and the elements of `pMicromaps` **must** have been created, allocated, or retrieved from the same `VkDevice`

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdWriteMicromapsPropertiesEXT is not affected by [conditional rendering](#)

To copy a [VkMicromapEXT](#) call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapEXT(
    VkCommandBuffer                commandBuffer,
    const VkCopyMicromapInfoEXT*  pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a [VkCopyMicromapInfoEXT](#) structure defining the copy operation.

This command copies the `pInfo->src` micromap to the `pInfo->dst` micromap in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_2\\_MICROMAP\\_READ\\_BIT\\_EXT](#) or [VK\\_ACCESS\\_2\\_MICROMAP\\_WRITE\\_BIT\\_EXT](#) as appropriate.

## Valid Usage

- VUID-vkCmdCopyMicromapEXT-buffer-07529  
The `buffer` used to create `pInfo->src` **must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-buffer-07530  
The `buffer` used to create `pInfo->dst` **must must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-src-07532  
The source micromap `src` **must** have been constructed prior to the execution of this command on the device

## Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyMicromapEXT-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapInfoEXT` structure
- VUID-vkCmdCopyMicromapEXT-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdCopyMicromapEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyMicromapEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapEXT-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdCopyMicromapEXT` is not affected by `conditional rendering`

The `VkCopyMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapEXT        src;
    VkMicromapEXT        dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the source micromap for the copy.
- **dst** is the target micromap for the copy.
- **mode** is a [VkCopyMicromapModeEXT](#) value specifying additional operations to perform during the copy.

### Valid Usage

- VUID-VkCopyMicromapInfoEXT-mode-07531  
**mode must be** [VK\\_COPY\\_MICROMAP\\_MODE\\_COMPACT\\_EXT](#) or [VK\\_COPY\\_MICROMAP\\_MODE\\_CLONE\\_EXT](#)
- VUID-VkCopyMicromapInfoEXT-mode-07533  
 If **mode** is [VK\\_COPY\\_MICROMAP\\_MODE\\_COMPACT\\_EXT](#), **src must** have been constructed with [VK\\_BUILD\\_MICROMAP\\_ALLOW\\_COMPACTION\\_BIT\\_EXT](#) in the build

### Valid Usage (Implicit)

- VUID-VkCopyMicromapInfoEXT-sType-sType  
**sType must be** [VK\\_STRUCTURE\\_TYPE\\_COPY\\_MICROMAP\\_INFO\\_EXT](#)
- VUID-VkCopyMicromapInfoEXT-pNext-pNext  
**pNext must be** **NULL**
- VUID-VkCopyMicromapInfoEXT-src-parameter  
**src must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapInfoEXT-dst-parameter  
**dst must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapInfoEXT-commonparent  
 Both of **dst**, and **src must** have been created, allocated, or retrieved from the same [VkDevice](#)

Possible values of **mode** specifying additional operations to perform during the copy, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkCopyMicromapModeEXT {
    VK_COPY_MICROMAP_MODE_CLONE_EXT = 0,
    VK_COPY_MICROMAP_MODE_SERIALIZE_EXT = 1,
    VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT = 2,
    VK_COPY_MICROMAP_MODE_COMPACT_EXT = 3,
} VkCopyMicromapModeEXT;
```

- [VK\\_COPY\\_MICROMAP\\_MODE\\_CLONE\\_EXT](#) creates a direct copy of the micromap specified in `src` into the one specified by `dst`. The `dst` micromap **must** have been created with the same parameters as `src`.
- [VK\\_COPY\\_MICROMAP\\_MODE\\_SERIALIZE\\_EXT](#) serializes the micromap to a semi-opaque format which can be reloaded on a compatible implementation.
- [VK\\_COPY\\_MICROMAP\\_MODE\\_DESERIALIZE\\_EXT](#) deserializes the semi-opaque serialization format in the buffer to the micromap.
- [VK\\_COPY\\_MICROMAP\\_MODE\\_COMPACT\\_EXT](#) creates a more compact version of a micromap `src` into `dst`. The micromap `dst` **must** have been created with a size at least as large as that returned by [vkCmdWriteMicromapsPropertiesEXT](#) after the build of the micromap specified by `src`.

To copy a [VkMicromapEXT](#) to device memory call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapToMemoryEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMicromapToMemoryInfoEXT* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is an a pointer to a [VkCopyMicromapToMemoryInfoEXT](#) structure defining the copy operation.

Accesses to `pInfo->src` **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_2\\_MICROMAP\\_READ\\_BIT\\_EXT](#). Accesses to the buffer indicated by `pInfo->dst` **must** be synchronized with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an access type of [VK\\_ACCESS\\_TRANSFER\\_WRITE\\_BIT](#).

This command produces the same results as [vkCopyMicromapToMemoryEXT](#), but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but is equally compatible for use with either [vkCmdCopyMemoryToMicromapEXT](#) or [vkCopyMemoryToMicromapEXT](#).

The defined header structure for the serialized data consists of:

- [VK\\_UUID\\_SIZE](#) bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- [VK\\_UUID\\_SIZE](#) bytes of data identifying the compatibility for comparison using

## vkGetDeviceMicromapCompatibilityEXT

The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

### Valid Usage

- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07536  
`pInfo->dst.deviceAddress` **must** be a valid [VkDeviceAddress](#)
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07537  
`pInfo->dst.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMicromapToMemoryEXT-buffer-07539  
The `buffer` used to create `pInfo->src` **must** be bound to device memory

### Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid [VkCopyMicromapToMemoryInfoEXT](#) structure
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-recording  
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-cmdpool  
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#) operations
- VUID-vkCmdCopyMicromapToMemoryEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapToMemoryEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapToMemoryEXT-videocoding  
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the [VkCommandPool](#) that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

vkCmdCopyMicromapToMemoryEXT is not affected by [conditional rendering](#)

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapToMemoryInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapEXT        src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapToMemoryInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **src** is the source micromap for the copy
- **dst** is the device or host address of memory which is the target for the copy
- **mode** is a [VkCopyMicromapModeEXT](#) value specifying additional operations to perform during the copy.

## Valid Usage

- VUID-VkCopyMicromapToMemoryInfoEXT-src-07540  
The source micromap **src** **must** have been constructed prior to the execution of this command
- VUID-VkCopyMicromapToMemoryInfoEXT-dst-07541  
The memory pointed to by **dst** **must** be at least as large as the serialization size of **src**, as reported by [vkWriteMicromapsPropertiesEXT](#) or [vkCmdWriteMicromapsPropertiesEXT](#) with a query type of `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-07542  
**mode** **must** be `VK_COPY_MICROMAP_MODE_SERIALIZE_EXT`

### Valid Usage (Implicit)

- VUID-VkCopyMicromapToMemoryInfoEXT-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_COPY\\_MICROMAP\\_TO\\_MEMORY\\_INFO\\_EXT](#)
- VUID-VkCopyMicromapToMemoryInfoEXT-pNext-pNext  
**pNext** **must** be `NULL`
- VUID-VkCopyMicromapToMemoryInfoEXT-src-parameter  
**src** **must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-parameter  
**mode** **must** be a valid [VkCopyMicromapModeEXT](#) value

To copy device memory to a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMemoryToMicromapEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMemoryToMicromapInfoEXT* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a [VkCopyMemoryToMicromapInfoEXT](#) structure defining the copy operation.

Accesses to **pInfo->dst** **must** be [synchronized](#) with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an [access type](#) of [VK\\_ACCESS\\_2\\_MICROMAP\\_WRITE\\_BIT\\_EXT](#). Accesses to the buffer indicated by **pInfo->src** **must** be synchronized with the [VK\\_PIPELINE\\_STAGE\\_2\\_MICROMAP\\_BUILD\\_BIT\\_EXT](#) pipeline stage and an access type of [VK\\_ACCESS\\_TRANSFER\\_READ\\_BIT](#).

This command **can** accept micromaps produced by either [vkCopyMicromapToMemoryEXT](#) or [vkCmdCopyMicromapToMemoryEXT](#).

### Valid Usage

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07543  
**pInfo->src.deviceAddress** **must** be a valid [VkDeviceAddress](#)
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07544  
**pInfo->src.deviceAddress** **must** be aligned to `256` bytes
- VUID-vkCmdCopyMemoryToMicromapEXT-buffer-07546  
The **buffer** used to create **pInfo->dst** **must** be bound to device memory

### Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-recording  
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyMemoryToMicromapEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToMicromapEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToMicromapEXT-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdCopyMemoryToMicromapEXT` is not affected by `conditional rendering`

The `VkCopyMemoryToMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMemoryToMicromapInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkMicromapEXT         dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMemoryToMicromapInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the device or host address of memory containing the source data for the copy.
- **dst** is the target micromap for the copy.
- **mode** is a [VkCopyMicromapModeEXT](#) value specifying additional operations to perform during the copy.

### Valid Usage

- VUID-VkCopyMemoryToMicromapInfoEXT-src-07547  
The source memory pointed to by **src** **must** contain data previously serialized using [vkCmdCopyMicromapToMemoryEXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-07548  
**mode** **must** be [VK\\_COPY\\_MICROMAP\\_MODE\\_DESERIALIZE\\_EXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-src-07549  
The data in **src** **must** have a format compatible with the destination physical device as returned by [vkGetDeviceMicromapCompatibilityEXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-07550  
**dst** **must** have been created with a **size** greater than or equal to that used to serialize the data in **src**

### Valid Usage (Implicit)

- VUID-VkCopyMemoryToMicromapInfoEXT-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_COPY\\_MEMORY\\_TO\\_MICROMAP\\_INFO\\_EXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-pNext-pNext  
**pNext** **must** be **NULL**
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-parameter  
**dst** **must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-parameter  
**mode** **must** be a valid [VkCopyMicromapModeEXT](#) value

To check if a serialized [VkMicromapEXT](#) is compatible with the current device call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetDeviceMicromapCompatibilityEXT(
    VkDevice device,
    const VkMicromapVersionInfoEXT* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- **device** is the device to check the version against.
- **pVersionInfo** is a pointer to a [VkMicromapVersionInfoEXT](#) structure specifying version information to check against the device.
- **pCompatibility** is a pointer to a [VkAccelerationStructureCompatibilityKHR](#) value in which compatibility information is returned.

### Valid Usage

- VUID-vkGetDeviceMicromapCompatibilityEXT-micromap-11666  
The [VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromap](#) feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkGetDeviceMicromapCompatibilityEXT-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceMicromapCompatibilityEXT-pVersionInfo-parameter  
**pVersionInfo** **must** be a valid pointer to a valid [VkMicromapVersionInfoEXT](#) structure
- VUID-vkGetDeviceMicromapCompatibilityEXT-pCompatibility-parameter  
**pCompatibility** **must** be a valid pointer to a [VkAccelerationStructureCompatibilityKHR](#) value

The [VkMicromapVersionInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapVersionInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*     pVersionData;
} VkMicromapVersionInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pVersionData** is a pointer to the version header of a micromap as defined in [vkCmdCopyMicromapToMemoryEXT](#)

**NOTE**

`pVersionData` is a *pointer* to an array of  $2 \times \text{VK\_UUID\_SIZE}$  `uint8_t` values instead of two `VK_UUID_SIZE` arrays as the expected use case for this member is to be pointed at the header of a previously serialized micromap that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

### Valid Usage (Implicit)

- `VUID-VkMicromapVersionInfoEXT-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_VERSION_INFO_EXT`
- `VUID-VkMicromapVersionInfoEXT-pNext-pNext`  
`pNext` **must** be `NULL`
- `VUID-VkMicromapVersionInfoEXT-pVersionData-parameter`  
`pVersionData` **must** be a valid pointer to an array of  $2 \times \text{VK\_UUID\_SIZE}$  `uint8_t` values

## 41.2. Host Micromap Operations

Implementations are also required to provide host implementations of the micromap operations if the `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature is enabled:

- `vkBuildMicromapsEXT` corresponding to `vkCmdBuildMicromapsEXT`
- `vkCopyMicromapEXT` corresponding to `vkCmdCopyMicromapEXT`
- `vkCopyMicromapToMemoryEXT` corresponding to `vkCmdCopyMicromapToMemoryEXT`
- `vkCopyMemoryToMicromapEXT` corresponding to `vkCmdCopyMemoryToMicromapEXT`
- `vkWriteMicromapsPropertiesEXT` corresponding to `vkCmdWriteMicromapsPropertiesEXT`

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All micromaps used by the host commands **must** be bound to host-visible memory, and all input data for micromap builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map micromap memory when using the host commands.

**NOTE**

The `vkBuildMicromapsEXT` and `vkCmdBuildMicromapsEXT` **may** use different algorithms, and thus are not required to produce identical structures.

Apart from these details, the host and device operations are interchangeable.

**NOTE**

For efficient execution, micromaps manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build `VkMicromapEXT` on the host, call:

**WARNING**

This functionality is superseded by `vkCmdBuildMicromapsEXT`. See [Legacy](#)

[Functionality](#) for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkBuildMicromapsEXT(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    uint32_t infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- **device** is the **VkDevice** for which the micromaps are being built.
- **deferredOperation** is an optional **VkDeferredOperationKHR** to [request deferral](#) for this command.
- **infoCount** is the number of micromaps to build. It specifies the number of the **pInfos** that **must** be provided.
- **pInfos** is a pointer to an array of **infoCount** **VkMicromapBuildInfoEXT** structures defining the geometry used to build each micromap.

This command fulfills the same task as [vkCmdBuildMicromapsEXT](#) but is executed by the host.

The **vkBuildMicromapsEXT** command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

**NOTE** This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

The input buffers passed to this command will be referenced by the implementation for the duration of the command. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure.

### Valid Usage

- VUID-vkBuildMicromapsEXT-pInfos-07461  
For each **pInfos[i]**, **dstMicromap** **must** have been created with a value of **VkMicromapCreateInfoEXT::size** greater than or equal to the memory size required by the build operation, as returned by [vkGetMicromapBuildSizesEXT](#) with **pBuildInfo** = **pInfos[i]**
- VUID-vkBuildMicromapsEXT-mode-07462  
The **mode** member of each element of **pInfos** **must** be a valid **VkBuildMicromapModeEXT** value
- VUID-vkBuildMicromapsEXT-dstMicromap-07463  
The **dstMicromap** member of any element of **pInfos** **must** be a valid **VkMicromapEXT** handle

- VUID-vkBuildMicromapsEXT-pInfos-07464  
For each element of `pInfos` its `type` member **must** match the value of `VkMicromapCreateInfoEXT::type` when its `dstMicromap` was created
- VUID-vkBuildMicromapsEXT-pInfos-07552  
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to host-visible device memory
- VUID-vkBuildMicromapsEXT-pInfos-07553  
For each element of `pInfos`, all referenced addresses of `pInfos[i].data.hostAddress` **must** be valid host memory
- VUID-vkBuildMicromapsEXT-pInfos-07554  
For each element of `pInfos`, all referenced addresses of `pInfos[i].triangleArray.hostAddress` **must** be valid host memory
- VUID-vkBuildMicromapsEXT-micromapHostCommands-07555  
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkBuildMicromapsEXT-pInfos-07556  
If `pInfos[i].mode` is `VK_BUILD_MICROMAP_MODE_BUILD_EXT`, and `N` is not `0`, then all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where `N` is given by the value of `VkMicromapBuildSizesInfoEXT::buildScratchSize` returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure
- VUID-vkBuildMicromapsEXT-pInfos-07557  
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildMicromapsEXT-dstMicromap-11667  
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildMicromapsEXT-dstMicromap-11668  
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkBuildMicromapsEXT-scratchData-11669  
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

### Valid Usage (Implicit)

- VUID-vkBuildMicromapsEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle

- VUID-vkBuildMicromapsEXT-deferredOperation-parameter  
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkBuildMicromapsEXT-pInfos-parameter  
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkMicromapBuildInfoEXT` structures
- VUID-vkBuildMicromapsEXT-infoCount-arraylength  
`infoCount` **must** be greater than 0
- VUID-vkBuildMicromapsEXT-deferredOperation-parent  
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To copy or compact a `VkMicromapEXT` on the host, call:

### WARNING

This functionality is superseded by `vkCmdCopyMicromapEXT`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMicromapInfoEXT*            pInfo);
```

- `device` is the device which owns the micromaps.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to [request deferral](#) for this command.
- `pInfo` is a pointer to a `VkCopyMicromapInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMicromapEXT` but is executed by the host.

## Valid Usage

- VUID-vkCopyMicromapEXT-deferredOperation-03678  
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapEXT-buffer-07558  
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-buffer-07559  
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-micromapHostCommands-07560  
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapEXT-buffer-07561  
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-buffer-07562  
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-src-11670  
The source micromap `src` **must** have been constructed prior to the execution of this command

## Valid Usage (Implicit)

- VUID-vkCopyMicromapEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMicromapEXT-deferredOperation-parameter  
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMicromapEXT-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapInfoEXT` structure
- VUID-vkCopyMicromapEXT-deferredOperation-parent  
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

To copy host accessible [VkMicromapEXT](#) to a micromap, call:

#### WARNING

This functionality is superseded by [vkCmdCopyMemoryToMicromapEXT](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMemoryToMicromapEXT(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyMemoryToMicromapInfoEXT* pInfo);
```

- **device** is the device which owns **pInfo->dst**.
- **deferredOperation** is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- **pInfo** is a pointer to a [VkCopyMemoryToMicromapInfoEXT](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyMemoryToMicromapEXT](#) but is executed by the host.

This command **can** accept micromaps produced by either [vkCmdCopyMicromapToMemoryEXT](#) or [vkCopyMicromapToMemoryEXT](#).

### Valid Usage

- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-03678  
Any previous deferred operation that was associated with **deferredOperation** **must** be complete
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07563  
**pInfo->src.hostAddress** **must** be a valid host pointer
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07564  
**pInfo->src.hostAddress** **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToMicromapEXT-buffer-07565  
The **buffer** used to create **pInfo->dst** **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToMicromapEXT-micromapHostCommands-07566

The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled

- VUID-vkCopyMemoryToMicromapEXT-buffer-07567

The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

### Valid Usage (Implicit)

- VUID-vkCopyMemoryToMicromapEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parameter  
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMemoryToMicromapEXT-pInfo-parameter  
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parent  
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

### Return Codes

#### Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To copy a `VkMicromapEXT` to host accessible memory, call:

#### WARNING

This functionality is superseded by `vkCmdCopyMicromapToMemoryEXT`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapToMemoryEXT(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyMicromapToMemoryInfoEXT* pInfo);
```

- **device** is the device which owns **pInfo->src**.
- **deferredOperation** is an optional **VkDeferredOperationKHR** to **request deferral** for this command.
- **pInfo** is a pointer to a **VkCopyMicromapToMemoryInfoEXT** structure defining the copy operation.

This command fulfills the same task as **vkCmdCopyMicromapToMemoryEXT** but is executed by the host.

This command produces the same results as **vkCmdCopyMicromapToMemoryEXT**, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but is compatible for use with either **vkCmdCopyMemoryToMicromapEXT** or **vkCopyMemoryToMicromapEXT**.

### Valid Usage

- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-03678  
Any previous deferred operation that was associated with **deferredOperation** **must** be complete
- VUID-vkCopyMicromapToMemoryEXT-buffer-07568  
The **buffer** used to create **pInfo->src** **must** be bound to host-visible device memory
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07569  
**pInfo->dst.hostAddress** **must** be a valid host pointer
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07570  
**pInfo->dst.hostAddress** **must** be aligned to 16 bytes
- VUID-vkCopyMicromapToMemoryEXT-micromapHostCommands-07571  
The **VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands** feature **must** be enabled
- VUID-vkCopyMicromapToMemoryEXT-buffer-07572  
The **buffer** used to create **pInfo->src** **must** be bound to memory that was not allocated with multiple instances

### Valid Usage (Implicit)

- VUID-vkCopyMicromapToMemoryEXT-device-parameter  
**device** **must** be a valid **VkDevice** handle
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parameter

If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle

- `VUID-vkCopyMicromapToMemoryEXT-pInfo-parameter`  
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapToMemoryInfoEXT` structure
- `VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parent`  
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To query `VkMicromapEXT` size parameters on the host, call:

### WARNING

This functionality is superseded by `vkCmdWriteMicromapsPropertiesEXT`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_opacity_micromap
VkResult vkWriteMicromapsPropertiesEXT(
    VkDevice          device,
    uint32_t          micromapCount,
    const VkMicromapEXT* pMicromaps,
    VkQueryType        queryType,
    size_t             dataSize,
    void*              pData,
    size_t             stride);
```

- `device` is the device which owns the micromaps in `pMicromaps`.
- `micromapCount` is the count of micromaps for which to query the property.
- `pMicromaps` is a pointer to an array of existing previously built micromaps.
- `queryType` is a `VkQueryType` value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.

- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as `vkCmdWriteMicromapsPropertiesEXT` but is executed by the host.

### Valid Usage

- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07502  
All micromaps in `pMicromaps` **must** have been constructed with `VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT` if `queryType` is `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`
- VUID-vkWriteMicromapsPropertiesEXT-queryType-07503  
`queryType` **must** be `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`, or `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10071  
If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10072  
If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-07576  
`dataSize` **must** be greater than or equal to `micromapCount*stride`
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07577  
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to host-visible device memory
- VUID-vkWriteMicromapsPropertiesEXT-micromapHostCommands-07578  
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07579  
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-11671  
All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command

### Valid Usage (Implicit)

- VUID-vkWriteMicromapsPropertiesEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parameter

**pMicromaps** **must** be a valid pointer to an array of **micromapCount** valid **VkMicromapEXT** handles

- VUID-vkWriteMicromapsPropertiesEXT-queryType-parameter **queryType** **must** be a valid **VkQueryType** value
- VUID-vkWriteMicromapsPropertiesEXT-pData-parameter **pData** **must** be a valid pointer to an array of **dataSize** bytes
- VUID-vkWriteMicromapsPropertiesEXT-micromapCount-arraylength **micromapCount** **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-arraylength **dataSize** **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parent  
Each element of **pMicromaps** **must** have been created, allocated, or retrieved from **device**

## Return Codes

### Success

- **VK\_SUCCESS**

### Failure

- **VK\_ERROR\_OUT\_OF\_DEVICE\_MEMORY**
- **VK\_ERROR\_OUT\_OF\_HOST\_MEMORY**
- **VK\_ERROR\_UNKNOWN**
- **VK\_ERROR\_VALIDATION\_FAILED**

## Chapter 42. Ray Traversal

The ray traversal process identifies and handles intersections between a ray and geometries in an acceleration structure.

Ray traversal cannot be started by a Vulkan API command directly - a shader **must** execute `OpRayQueryProceedKHR` or a `pipeline trace ray` instruction . When the `rayTracingPipeline` feature is enabled, `OpTraceRayKHR` **can** be used for `ray tracing` in a `ray tracing pipeline`. When the `rayQuery` feature is enabled, `OpRayQueryProceedKHR` **can** be used in any shader stage.

Figure 23. Ray tracing traversal

## 42.1. Ray Intersection Candidate Determination

Once tracing begins, rays are first tested against instances in a top-level acceleration structure. A ray that intersects an instance will be transformed into the space of the instance to continue traversal within that instance; therefore the transform matrix stored in the instance **must** be invertible.

In case multiple instances are intersected by a ray, the ray transformation into the space of the instance is invariant under the order in which these instances are encountered in the top-level acceleration structure.

### NOTE

Applying multiple forward and reverse transforms to a ray to transition from one instance to another could result in accumulated errors. Thus an implementation should behave as if the ray is transformed from the origin for each instance independently.

Next, rays are tested against geometries in a bottom-level acceleration structure to determine if a hit occurred between them, initially based only on their geometric properties (i.e. their vertices). The implementation performs similar operations to that of rasterization, but with the effective viewport determined by the parameters of the ray, and the geometry transformed into a space determined by that viewport.

The vertices of each primitive are transformed from acceleration structure space **as** to ray space **r** according to the ray origin and direction as follows:

$$\begin{pmatrix} x_r \\ y_r \\ z_r \end{pmatrix} = \begin{pmatrix} a_x^2(1-c) + c & a_x a_y(1-c) - s a_z & a_x a_z(1-c) + s a_y \\ a_x a_y(1-c) + s a_z & a_y^2(1-c) + c & a_y a_z(1-c) - s a_x \\ a_x a_z(1-c) - s a_y & a_y a_z(1-c) + s a_x & a_z^2(1-c) + c \end{pmatrix} \begin{pmatrix} x_{as} - o_x \\ y_{as} - o_y \\ z_{as} - o_z \end{pmatrix}$$

**a** is the axis of rotation from the unnormalized ray direction vector **d** to the axis vector **k**:

$$\mathbf{a} = \begin{cases} \frac{\mathbf{d} \times \mathbf{k}}{\|\mathbf{d} \times \mathbf{k}\|} & \text{if } \|\mathbf{d} \times \mathbf{k}\| \neq 0 \\ \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix} & \text{if } \|\mathbf{d} \times \mathbf{k}\| = 0 \end{cases}$$

*s* and *c* are the sine and cosine of the angle of rotation about **a** from **d** to **k**:

$$c = \frac{\mathbf{d} \cdot \mathbf{k}}{\|\mathbf{d}\|}$$
$$s = \sqrt{1 - c^2}$$

**k** is the unit vector:

$$\mathbf{k} = \begin{pmatrix} 0 \\ 0 \\ -1 \end{pmatrix}$$

$\mathbf{o}$  and  $\mathbf{d}$  are the ray origin and unnormalized direction, respectively; the vector described by  $x_{as}$ ,  $y_{as}$ , and  $z_{as}$  is any position in acceleration structure space; and the vector described by  $x_r$ ,  $y_r$ , and  $z_r$  is the same position in ray space.

An *intersection candidate* is a unique point of intersection between a ray and a geometric primitive. For any primitive that has within its bounds a position  $\mathbf{xyz}_{as}$  such that

$$\begin{aligned} x_r &= 0 \\ y_r &= 0 \\ t_{min} &< -\frac{z_r}{\|\mathbf{d}\|} < t_{max} && \text{if the primitive is a triangle,} \\ t_{min} &\leq -\frac{z_r}{\|\mathbf{d}\|} \leq t_{max} && \text{otherwise} \end{aligned}$$

(where  $t = -\frac{z_r}{\|\mathbf{d}\|}$ ), an intersection candidate exists.

Triangle primitive bounds consist of all points on the plane formed by the three vertices and within the bounds of the edges between the vertices, subject to the watertightness constraints below. AABB primitive bounds consist of all points within an implementation-defined bound which includes the specified box.

#### NOTE

The bounds of the AABB including all points internal to the bound implies that a ray started within the AABB will hit that AABB.

Figure 24. Ray intersection candidate

The determination of this condition is performed in an implementation specific manner, and **may** be performed with floating-point operations. Due to the complexity and number of operations involved, inaccuracies are expected, particularly as the scale of values involved begins to diverge. Implementations **should** take efforts to maintain as much precision as possible.

#### NOTE

One very common case is when geometries are close to each other at some distance from the origin in acceleration structure space, where an effect similar to “z-fighting” is likely to be observed. Applications can mitigate this by ensuring their detailed geometries remain close to the origin.

Another likely case is when the origin of a ray is set to a position on a previously intersected surface, and its  $t_{min}$  is zero or near zero; an intersection may be detected

on the emitting surface. This case can usually be mitigated by offsetting  $t_{\min}$  slightly.

In the case of AABB geometries, implementations **may** increase their size in an acceleration structure in order to mitigate precision issues. This **may** result in false positive intersections being reported to the application.

For triangle intersection candidates, the b and c [barycentric coordinates](#) on the triangle where the above condition is met are made available to future shading. If the ray was traced with a [pipeline trace ray](#) instruction, these values are available as a vector of 2 32-bit floating-point values in the [HitAttributeKHR](#) storage class. These values are included in the triangle intersection candidate.

Once an intersection candidate is determined, it proceeds through the following operations, in order:

1. [Ray Intersection Culling](#)
2. [Ray Intersection Confirmation](#)
3. [Ray Closest Hit Determination](#)
4. [Ray Result Determination](#)

The sections below describe the exact details of these tests. There is no ordering guarantee between operations performed on different intersection candidates.

#### 42.1.1. Watertightness

For a set of triangles with identical transforms, within a single instance:

- Any set of two or more triangles where all triangles have one vertex with an identical position value, that vertex is a *shared vertex*.
- Any set of two triangles with two shared vertices that were specified in the same [winding order](#) in each triangle have a *shared edge* defined by those vertices.

A *closed fan* is a set of three or more triangles where:

- All triangles in the set have the same shared vertex as one of their vertices.
- All edges that include the above vertex are shared edges.
- All above shared edges are shared by exactly two triangles from the set.
- No two triangles in the set intersect, except at shared edges.
- Every triangle in the set is joined to every other triangle in the set by a series of the above shared edges.

Implementations **should** not double-hit or miss when a ray intersects a shared edge, or a shared vertex of a closed fan.

#### NOTE

Because of the complexity of a definition of watertightness the language above does not list a **must** requirement but it is expected and tested that implementations will perform watertight intersection tests.

## 42.2. Ray Intersection Culling

Candidate intersections go through several phases of culling before confirmation as an actual hit. There is no particular ordering dependency between the different culling operations.

### 42.2.1. Ray Primitive Culling

If the `rayTraversalPrimitiveCulling` or `rayQuery` features are enabled, the `SkipTrianglesKHR` and `SkipAABBsKHR` ray flags **can** be specified when tracing a ray. `SkipTrianglesKHR` and `SkipAABBsKHR` are mutually exclusive. `SkipTrianglesKHR` is also mutually exclusive with `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR`.

If `SkipTrianglesKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipTrianglesKHR` was included in their `Ray Flags` operand.

If `SkipAABBsKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with an AABB primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipAABBsKHR` was included in their `Ray Flags` operand.

### 42.2.2. Ray Mask Culling

Instances **can** be made invisible to particular rays based on the value of `VkAccelerationStructureInstanceKHR::mask` used to add that instance to a top-level acceleration structure, and the `Cull Mask` parameter used to trace the ray.

For the instance which is intersected, if `mask & Cull Mask == 0`, the intersection is dropped, and no further processing occurs.

### 42.2.3. Ray Face Culling

As in `polygon rasterization`, one of the stages of ray traversal is to determine if a triangle primitive is back- or front-facing, and primitives **can** be culled based on that facing.

If the intersection candidate is with an AABB primitive, this operation is skipped.

#### Determination

When a ray intersects a triangle primitive, the order that vertices are specified for the polygon affects whether the ray intersects the front or back face. Front or back facing is determined in the same way as they are for `rasterization`, based on the sign of the polygon's area but using the ray space coordinates instead of framebuffer coordinates. One way to compute this area is:

$$a = -\frac{1}{2} \sum_{i=0}^{n-1} x_r^i y_r^{i \oplus 1} - x_r^{i \oplus 1} y_r^i$$

where  $x_i^i$  and  $y_i^i$  are the x and y ray space coordinates of the ith vertex of the n-vertex polygon (vertices are numbered starting at zero for the purposes of this computation) and  $i \neq 1$  is  $(i + 1) \bmod n$ .

By default, if a is negative then the intersection is with the front face of the triangle, otherwise it is with the back face. If `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` is included in `VkAccelerationStructureInstanceKHR::flags` for the instance containing the intersected triangle, this determination is reversed. Additionally, if a is 0, the intersection candidate is treated as not intersecting with any face, irrespective of the sign.

#### NOTE

In a left-handed coordinate system, an intersection will be with the front face of a triangle if the vertices of the triangle, as defined in index order, appear from the ray's perspective in a clockwise rotation order. `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` was previously annotated as `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` because of this.

If the ray was traced with a `pipeline trace ray` instruction, the `HitKindKHR` built-in is set to `HitKindFrontFacingTriangleKHR` if the intersection is with front-facing geometry, and `HitKindBackFacingTriangleKHR` if the intersection is with back-facing geometry, for shader stages considering this intersection.

If the ray was traced with `OpRayQueryProceedKHR`, `OpRayQueryGetIntersectionFrontFaceKHR` will return true for intersection candidates with front faces, or false for back faces.

### Culling

If `CullBackFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the back face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

If `CullFrontFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the front face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

This culling is disabled if `VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR` was included in `VkAccelerationStructureInstanceKHR::flags` for the instance which the intersected geometry belongs to.

Intersection candidates that have not intersected with any face ( $a == 0$ ) are unconditionally culled, irrespective of ray flags and geometry instance flags.

The `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR` `Ray Flags` are mutually exclusive.

#### 42.2.4. Ray Opacity Culling

Each geometry in the acceleration structure **may** be considered either opaque or non-opaque. Opaque geometries continue through traversal as normal, whereas non-opaque geometries need to

be either confirmed or discarded by shader code. Intersection candidates **can** also be culled based on their opacity.

## Determination

If the geometry includes an opacity micromap, the intersection candidate is determined as opaque or non-opaque as described in [Ray Opacity Micromap](#). If the result of the opacity micromap operation is *ignored*, the candidate is considered neither opaque or non-opaque and execution instead proceeds with enumerating the next candidate. Otherwise, the intersection candidate is determined as opaque if [VK\\_GEOMETRY\\_OPAQUE\\_BIT\\_KHR](#) was included in the [VkAccelerationStructureGeometryKHR::flags](#) when the geometry it intersected with was built.

Setting [VK\\_GEOMETRY\\_INSTANCE\\_FORCE\\_OPAQUE\\_BIT\\_KHR](#) in [VkAccelerationStructureInstanceKHR::flags](#) will override all non-opaque geometries in the instance to be considered opaque. Similarly, setting [VK\\_GEOMETRY\\_INSTANCE\\_FORCE\\_NO\\_OPAQUE\\_BIT\\_KHR](#) will override all opaque geometries in the instance to be considered non-opaque.

Including [OpaqueKHR](#) in the [Ray Flags](#) parameter when tracing a ray or initializing a ray query object overrides all non-opaque geometries to behave as if they are opaque, ignoring any build instance flag overrides. Similarly, [NoOpaqueKHR](#) overrides all opaque geometries to behave as if they are non-opaque.

## Culling

If [CullOpaqueKHR](#) is included in the [Ray Flags](#) parameter when tracing a ray or initializing a ray query object, an intersection with geometry considered to be opaque is dropped and execution proceeds with enumerating the next candidate. Similarly, [CullNoOpaqueKHR](#) drops intersections with geometry considered to be non-opaque.

The [OpaqueKHR](#), [NoOpaqueKHR](#), [CullOpaqueKHR](#), and [CullNoOpaqueKHR](#) [Ray Flags](#) are mutually exclusive.

## Ray Query

The opacity of geometries is determined as described above by [OpRayQueryProceedKHR](#) when using it to trace rays.

Intersection candidates with AABB geometry cause proceed to return **true**, incomplete traversal, in order for the shader to confirm the hit. To query the opacity that was determined by proceed, [OpRayQueryGetIntersectionCandidateAABBOpaqueKHR](#) **can** be used.

Intersection candidates with triangle geometry that cause proceed to return **true** have been determined to be non-opaque. Intersection candidates with opaque triangle geometry continues execution without causing proceed to return.

### 42.2.5. Ray Opacity Micromap

A [VK\\_GEOMETRY\\_TYPE\\_TRIANGLES\\_KHR](#) geometry in the acceleration structure **may** have an opacity micromap associated with it to give finer-grained opacity information.

If the intersection candidate is with a geometry with an associated opacity micromap and [VK\\_GEOMETRY\\_INSTANCE\\_DISABLE\\_OPACITY\\_MICROMAPS\\_BIT\\_KHR](#) is not set in its instance then the micromap is used to determine geometry opacity instead of the [VK\\_GEOMETRY\\_OPAQUE\\_BIT\\_KHR](#) flag in the geometry.

Using an acceleration structure that contains opacity micromap data requires the shader or pipeline to declare that it does so. For traversals performed by [pipeline trace ray](#) instructions the pipeline **must** be created with [VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_KHR](#). For traversals performed by [OpRayQueryProceedKHR](#) where [VK\\_EXT\\_opacity\\_micromap](#) is not enabled, the shader **must** declare the [OpacityMicromapIdKHR](#) execution mode with its specialization-constant operand equal to [VK\\_TRUE](#). If [VK\\_EXT\\_opacity\\_micromap](#) is enabled, [OpRayQueryProceedKHR](#) traversal always uses opacity micromap data without the [OpacityMicromapIdKHR](#) execution mode being declared. This applies whenever [VK\\_EXT\\_opacity\\_micromap](#) is enabled, including when [VK\\_KHR\\_opacity\\_micromap](#) is enabled as well. A shader executed in a ray tracing pipeline that itself performs ray query operations is subject to both requirements independently, each applying only to the traversal it governs.

#### NOTE

These declarations are requirements, not a means of disabling opacity micromaps. Traversing an acceleration structure that contains opacity micromap data without the applicable declaration has undefined results, and is not equivalent to ignoring the opacity micromap data. To traverse such an acceleration structure without applying its opacity micromaps, set [VK\\_GEOMETRY\\_INSTANCE\\_DISABLE\\_OPACITY\\_MICROMAPS\\_BIT\\_KHR](#) in the instance instead.

The opacity information in the micromap object is accessed using the candidate intersection  $u$  and  $v$  coordinates. The integer  $u$  and  $v$  are computed from  $\lceil u \rceil + \lceil v \rceil$ , clamping  $\lceil u \rceil$  as needed to keep the sum less than or equal to  $1 \ll \text{subdivisionlevel}$ . These values are mapped into a linear index with a space filling curve which is defined recursively by traversing into the sub-triangle nearest vertex 0, then the middle triangle with ordering flipped, then nearest vertex 1, then nearest vertex 2 with ordering flipped.

Figure 25. Example ordering for micromap data

## Caption

In the [ordering for micromap data](#) diagram, the dot in each sub-triangle indicates the entry point of the curve and the arrows show the traversal order through its children at the next subdivision level.

### NOTE

This encoding is spatially coherent, purely hierarchical, and allows a bit-parallel conversion between barycentric address and index values.

See the [Reference Code](#) implementing this mapping.

The result of the opacity micromap lookup and operations is to treat the intersection as opaque, non-opaque, or ignored.

If the associated opacity micromap has format [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_2\\_STATE\\_KHR](#), each element of the micromap is represented by a single bit at the index derived above.

If the associated opacity micromap has format [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_4\\_STATE\\_KHR](#), each element is represented by a two bit value at the index derived above.

If the micromap was built with [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_MICROMAP\\_LOSSY\\_BIT\\_KHR](#) and has a format of [VK\\_OPACITY\\_MICROMAP\\_FORMAT\\_4\\_STATE\\_KHR](#), the implementation **may** substitute any element's state value with [VK\\_OPACITY\\_MICROMAP\\_SPECIAL\\_INDEX\\_FULLY\\_UNKNOWN\\_TRANSPARENT\\_KHR](#) or [VK\\_OPACITY\\_MICROMAP\\_SPECIAL\\_INDEX\\_FULLY\\_UNKNOWN\\_OPAQUE\\_KHR](#). The application **should** accept the hit if the element was built with [VK\\_OPACITY\\_MICROMAP\\_SPECIAL\\_INDEX\\_FULLY\\_OPAQUE\\_KHR](#) and ignore the hit if the element was built with [VK\\_OPACITY\\_MICROMAP\\_SPECIAL\\_INDEX\\_FULLY\\_TRANSPARENT\\_KHR](#).

The implementation, on an identically created instance and device, **must** perform any lossy substitutions invariantly with respect to acceleration structures and micromaps constructed with an equivalent shape and data.

The final result of the opacity micromap lookup operation is determined as shown in the following table based on the format and retrieved value from the micromap:

| 4 State value | 2 State value | Special index value                                                     | Result  |
|---------------|---------------|-------------------------------------------------------------------------|---------|
| 0             | 0             | <a href="#">VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR</a> | Ignored |
| 1             | 1             | <a href="#">VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR</a>      | Opaque  |

| 4 State value | 2 State value | Special index value                                             | Result     |
|---------------|---------------|-----------------------------------------------------------------|------------|
| 2             |               | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR | Non-opaque |
| 3             |               | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR      | Non-opaque |

Unless if the `VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_KHR` flag is included in the instance flags of the candidate intersection or `ForceOpacityMicromap2StateEXT` is included in the ray flags on the ray, in which case the opacity micromap information is interpreted in 2 state override mode , including if lossy substitutions were made, and the final result of the opacity lookup operation is instead determined as shown in the following table:

| 4 State value | 2 State value | Special index value                                             | Result  |
|---------------|---------------|-----------------------------------------------------------------|---------|
| 0             | 0             | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_KHR         | Ignored |
| 1             | 1             | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_KHR              | Opaque  |
| 2             |               | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_KHR | Ignored |
| 3             |               | VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_KHR      | Opaque  |

#### NOTE

The Force2state override never evaluates to *non-opaque* result, even when lossy substitutions are made. While lossy substitutions can affect the final result of Force2state, this behavior preserves the invariance guarantees required for lossy substitutions.

If the result of the micromap lookup is to treat the intersection candidate as ignored, no further processing of that candidate is done and execution proceeds with enumerating the next candidate.

## 42.3. Ray Intersection Confirmation

Depending on the opacity of intersected geometry and whether it is a triangle or an AABB, candidate intersections are further processed to determine the eventual hit result. Candidates

generated from AABB intersections run through the same confirmation process as triangle hits.

For ray queries, the candidate intersection and committed intersection are distinct states. A candidate intersection is available only while `OpRayQueryProceedKHR` has returned `true`, and identifies the intersection currently requiring shader evaluation. Calling `OpRayQueryGenerateIntersectionKHR` or `OpRayQueryConfirmIntersectionKHR` confirms a hit for [Ray Closest Hit Determination](#), but does not by itself complete traversal. If that confirmed hit becomes the current closest hit, it becomes the ray query's committed intersection. The committed intersection is the closest recorded hit so far, **can** be queried before traversal is complete, and **may** be replaced by a later confirmed hit that is closer.

### 42.3.1. AABB Intersection Candidates

For an intersection candidate with an AABB geometry generated by [Ray Intersection Candidate Determination](#), shader code is executed to determine whether any hits should be reported to the traversal infrastructure; no further processing of this intersection candidate occurs. The occurrence of an AABB intersection candidate does not guarantee the ray intersects the application-provided AABB. To avoid propagating false intersections the application **should** verify the intersection candidate before reporting any hits and only report intersections within the bounds of the desired geometry. Reporting an intersection outside the AABB either through the implementation giving a conservative bound or reporting a t out of range is legal but **may** result in unpredictable closest hit results.

If the ray was traced with a [pipeline trace ray](#) instruction, an [intersection shader](#) is invoked from the [Shader Binding Table](#) according to the [specified indexing](#) for the intersected geometry. If this shader calls `OpReportIntersectionKHR`, a new intersection candidate is generated as described [below](#). If the intersection shader is `VK_SHADER_UNUSED_KHR` (which is only allowed for a zero shader group) then no further processing of the intersection candidate occurs.

Each new candidate generated as a result of this processing is a generated intersection candidate from the intersection with AABB geometry, with a t value equal to the `Hit` parameter of the `OpReportIntersectionKHR` instruction. The generated intersection candidate includes the values stored in variables with the `HitAttributeKHR` storage class at the time `OpReportIntersectionKHR` is executed. The new generated candidate is then independently run through [Ray Intersection Confirmation](#) as a [generated intersection](#).

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `true`. The resulting ray query has a candidate intersection type of `RayQueryCandidateIntersectionAABBKHR`. `OpRayQueryGenerateIntersectionKHR` **can** be called to report a generated hit for [Ray Closest Hit Determination](#). If that hit becomes the current closest hit, the ray query's committed intersection type is `RayQueryCommittedIntersectionGeneratedKHR`. Further ray query processing **can** be continued by executing `OpRayQueryProceedKHR` with the same ray query, or intersection **can** be terminated with `OpRayQueryTerminateKHR`. Unlike rays traced with a [pipeline trace ray](#) instruction, candidates generated in this way skip generated intersection candidate confirmation; applications **should** make this determination before generating the intersection.

This operation **may** be executed multiple times for the same intersection candidate.

### 42.3.2. Triangle and Generated Intersection Candidates

For triangle and [generated intersection candidates](#), additional shader code **may** be executed based on the intersection's opacity.

If the intersection is opaque, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

For non-opaque intersection candidates, shader code is executed to determine whether a hit occurred or not.

If the ray was traced with a [pipeline trace ray](#) instruction, an [any-hit shader](#) is invoked from the [Shader Binding Table](#) according to the specified indexing. If this shader calls [OpIgnoreIntersectionKHR](#), the candidate is dropped and no further processing of the candidate occurs. If the [any-hit shader](#) identified is [VK\\_SHADER\\_UNUSED\\_KHR](#), the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

If the ray was traced with [OpRayQueryProceedKHR](#), control is returned to the shader which executed [OpRayQueryProceedKHR](#), returning [true](#). As only triangle candidates participate in this operation with ray queries, the resulting candidate intersection type is always [RayQueryCandidateIntersectionTriangleKHR](#). [OpRayQueryConfirmIntersectionKHR](#) **can** be called on the ray query to confirm the candidate as a hit for [Ray Closest Hit Determination](#). If that hit becomes the current closest hit, the ray query's committed intersection type is [RayQueryCommittedIntersectionTriangleKHR](#). Further ray query processing **can** be continued by executing [OpRayQueryProceedKHR](#) with the same ray query, or intersection **can** be terminated with [OpRayQueryTerminateKHR](#). If [OpRayQueryConfirmIntersectionKHR](#) has not been executed, the candidate is dropped and no further processing of the candidate occurs.

This operation **may** be executed multiple times for the same intersection candidate unless [VK\\_GEOMETRY\\_NO\\_DUPLICATE\\_ANY\\_HIT\\_INVOCATION\\_BIT\\_KHR](#) was specified for the intersected geometry.

## 42.4. Ray Closest Hit Determination

Unless the ray was traced with the [TerminateOnFirstHitKHR](#) ray flag, the implementation **must** track the closest confirmed hit until all geometries have been tested and either confirmed or dropped.

After an intersection candidate is confirmed, its  $t$  value is compared to  $t_{\max}$  to determine which intersection is closer, where  $t$  is the parametric distance along the ray at which the intersection occurred.

- If  $t < t_{\max}$ ,  $t_{\max}$  is set to  $t$  and the candidate is set as the current closest hit.
- If  $t > t_{\max}$ , the candidate is dropped and no further processing of that candidate occurs.
- If  $t = t_{\max}$ , the candidate **may** be set as the current closest hit or dropped.

For ray queries, the current closest hit is the current committed intersection. When a confirmed hit is set as the current closest hit, values returned by [OpRayQueryGetIntersection\\*KHR](#) instructions with [Intersection](#) set to [RayQueryCommittedIntersectionKHR](#) are updated to describe that hit. If no closest hit has been identified, the committed intersection type is [RayQueryCommittedIntersectionNoneKHR](#).

If `TerminateOnFirstHitKHR` was included in the `Ray Flags` used to trace the ray, once the first hit is confirmed, the ray trace is terminated.

## 42.5. Ray Result Determination

Once all candidates have finished processing the prior stages, or if the ray is forcibly terminated, the final result of the ray trace is determined.

If a closest hit result was identified by [Ray Closest Hit Determination](#), a closest hit has occurred, otherwise the final result is a miss.

For rays traced with `pipeline trace ray` instructions which **can** invoke a closest hit shader, if a closest hit result was identified, a `closest hit shader` is invoked from the [Shader Binding Table](#) according to the [specified indexing](#) for the intersected geometry. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if either the ray flags included `SkipClosestHitShaderKHR`, or if the `closest hit shader` identified is `VK_SHADER_UNUSED_KHR`.

For rays traced with a `pipeline trace ray` instruction where no hit result was identified, the `miss shader` identified by the `Miss Index` parameter of the instruction is invoked. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if the miss shader identified is `VK_SHADER_UNUSED_KHR`.

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `false`. No candidate intersection is available after this result is returned. If a closest hit was identified by [Ray Closest Hit Determination](#), the ray query's committed intersection is the final result and has a committed intersection type of `RayQueryCommittedIntersectionGeneratedKHR` or `RayQueryCommittedIntersectionTriangleKHR`. If no closest hit was identified, the committed intersection type will be `RayQueryCommittedIntersectionNoneKHR`.

No further processing of a ray query occurs after this result is determined.

# Chapter 43. Ray Tracing

Ray tracing uses a separate rendering pipeline from both the graphics and compute pipelines (see [Ray Tracing Pipeline](#)).

Figure 26. Ray tracing pipeline execution

## Caption

Interaction between the different shader stages in the ray tracing pipeline

Within the ray tracing pipeline, a [pipeline trace ray](#) instruction **can** be called to perform a [ray traversal](#) that invokes the various ray tracing shader stages during its execution. The relationship between the ray tracing pipeline object and the geometries present in the acceleration structure traversed is passed into the ray tracing command in a [VkBuffer](#) object known as a *shader binding table*. [OpExecuteCallableKHR](#) can also be used in ray tracing pipelines to invoke a [callable shader](#).

During execution, control alternates between scheduling and other operations. The scheduling functionality is implementation-specific and is responsible for workload execution. The shader stages are programmable. [Traversal](#), which refers to the process of traversing acceleration structures to find potential intersections of rays with geometry, is fixed function.

The programmable portions of the pipeline are exposed in a single-ray programming model, with each invocation handling one ray at a time. Memory operations **can** be synchronized using standard memory barriers. The [Workgroup](#) scope and variables with a storage class of [Workgroup](#) **must** not be used in the ray tracing pipeline.

## 43.1. Shader Call Instructions

A *shader call* is an instruction which **may** cause execution to continue elsewhere by creating one or more invocations that execute a different shader stage.

The following table lists all shader call instructions and which stages each one **can** directly call.

| Instruction                        | Intersection | Any-Hit | Closest Hit | Miss | Callable |
|------------------------------------|--------------|---------|-------------|------|----------|
| OpTraceRayKHR                      | X            | X       | X           | X    |          |
| OpReportIntersectionKHR            |              | X       |             |      |          |
| OpExecuteCallableKHR               |              |         |             |      | X        |
| OpHitObjectExecuteShaderEXT        |              |         | X           | X    |          |
| OpHitObjectTraceRayEXT             | X            | X       |             |      |          |
| OpHitObjectReorderExecuteShaderEXT |              |         | X           | X    |          |
| OpHitObjectTraceReorderExecuteEXT  | X            | X       | X           | X    |          |

The invocations created by shader call instructions are grouped into subgroups by the implementation. Those subgroups **may** be unrelated to the subgroup of the parent invocation.

*Pipeline trace ray instructions* **can** be used recursively; invoked shaders **can** themselves execute pipeline trace ray instructions, to a maximum depth defined by the `maxRayRecursionDepth` limit.

Shaders directly invoked from the API always have a recursion depth of 0; each shader executed by a pipeline trace ray instruction has a recursion depth one higher than the recursion depth of the shader which invoked it. Applications **must** not invoke a shader with a recursion depth greater than the value of `maxPipelineRayRecursionDepth` specified in the pipeline.

There is no explicit recursion limit for other shader call instructions which may recurse (e.g. `OpExecuteCallableKHR`) but there is an upper bound determined by the `stack size`.

An *invocation repack instruction* is a ray tracing instruction where the implementation **may** change the set of invocations that are executing. When a repack instruction is encountered, the invocation is suspended and a new invocation begins and executes the instruction. After executing the repack instruction (which **may** result in other ray tracing shader stages executing) the new invocation ends and the original invocation is resumed, but it **may** be resumed in a different subgroup or at a different `SubgroupLocalInvocationId` within the same subgroup.

The `OpTraceRayKHR`, `OpReorderThreadWithHintEXT`, `OpReorderThreadWithHitObjectEXT`, `OpHitObjectTraceRayEXT`, `OpHitObjectReorderExecuteShaderEXT`, `OpHitObjectTraceReorderExecuteEXT`, `OpReportIntersectionKHR`, and `OpExecuteCallableKHR` instructions are invocation repack instructions.

The invocations that are executing before a shader call instruction, after the instruction, or are created by the instruction, are `shader-call-related`.

If the implementation changes the composition of subgroups, the values of `SubgroupSize`, `SubgroupLocalInvocationId`, and builtin variables that are derived from them (`SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, `SubgroupLtMask`) **must** be changed accordingly by the invocation repack instruction. The application **must** use `Volatile semantics` on these `BuiltIn`

variables when used in the ray generation, closest hit, miss, intersection, and callable shaders. Similarly, the application **must** use **Volatile** semantics on any **RayTmaxKHR** decorated **Builtin** used in an intersection shader.

**Subgroup operations** are permitted in the programmable ray tracing shader stages. However, shader call instructions place a bound on where results of subgroup instructions or subgroup-scoped instructions that execute the dynamic instance of that instruction are potentially valid. For example, care **must** be taken when using the result of a ballot operation that was computed before an invocation repack instruction, after that repack instruction. The ballot **may** be incorrect as the set of invocations could have changed.

**NOTE** While the **SubgroupSize** built-in is required to be declared **Volatile**, its value will never change unless **VK\_PIPELINE\_SHADER\_STAGE\_CREATE\_ALLOW\_VARYING\_SUBGROUP\_SIZE\_BIT** is set on pipeline creation, as without that bit set, its value is required to match that of **VkPhysicalDeviceSubgroupProperties::subgroupSize**.

For clock operations, the value of a **Subgroup** scoped **OpReadClockKHR** read before the dynamic instance of a repack instruction **should** not be compared to the result of that clock instruction after the repack instruction.

When a ray tracing shader executes a dynamic instance of an invocation repack instruction which results in another ray tracing shader being invoked, their instructions are related by **shader-call-order**.

For ray tracing invocations that are **shader-call-related**:

- **memory operations** on **StorageBuffer**, **Image**, and **ShaderRecordBufferKHR** storage classes **can** be synchronized using the **ShaderCallKHR** scope.
- the **CallableDataKHR**, **IncomingCallableDataKHR**, **RayPayloadKHR**, **HitAttributeKHR**, and **IncomingRayPayloadKHR** storage classes are **system-synchronized** and no application availability and visibility operations are required.
- memory operations within a single invocation before and after the shader call instruction are ordered by **program-order** and do not require explicit synchronization.

## 43.2. Ray Tracing Commands

*Ray tracing commands* provoke work in the ray tracing pipeline. Ray tracing commands are recorded into a command buffer and when executed by a queue will produce work that executes according to the bound ray tracing pipeline. A ray tracing pipeline **must** be bound to a command buffer before any ray tracing commands are recorded in that command buffer.

To dispatch ray tracing use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysKHR(
    VkCommandBuffer                                commandBuffer,
    const VkStridedDeviceAddressRegionKHR*          pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*          pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*          pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR*          pCallableShaderBindingTable,
    uint32_t                                          width,
    uint32_t                                          height,
    uint32_t                                          depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the ray generation shader stage.
- `pMissShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the callable shader stage.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

When the command is executed, a ray generation group of `width × height × depth` rays is assembled.

## Valid Usage

- VUID-vkCmdTraceRaysKHR-None-08606  
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysKHR-None-08600  
If a `bound shader` was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysKHR-commandBuffer-02707  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource
- VUID-vkCmdTraceRaysKHR-None-08114  
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created

with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysKHR-None-08115

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysKHR-None-08116

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysKHR-None-08117

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysKHR-None-08119

If a descriptor is dynamically used with a `VkPipeline` created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, or a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysKHR-magFilter-04553

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysKHR-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysKHR-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysKHR-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysKHR-unnormalizedCoordinates-09635  
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdTraceRaysKHR-None-08609  
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdTraceRaysKHR-None-08610  
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdTraceRaysKHR-None-08611  
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdTraceRaysKHR-None-06479  
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdTraceRaysKHR-None-02691  
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-07888  
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-02692  
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysKHR-None-02693  
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysKHR-filterCubic-02694  
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysKHR-filterCubicMinmax-02695

Any [VkImageView](#) being sampled with [VK\\_FILTER\\_CUBIC\\_EXT](#) with a reduction mode of either [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MIN](#) or [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MAX](#) as a result of this command **must** have a [VkImageViewType](#) and format that supports cubic filtering together with minmax filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07027

For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysKHR-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysKHR-None-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdTraceRaysKHR-None-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysKHR-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#) or a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysKHR-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdTraceRaysKHR-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this

command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08612

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-storageBuffers-06936

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08613

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-viewType-07752

If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysKHR-format-07753

If a `VkImageView` or `VkBufferView` is accessed as a result of this command, then the `numeric type` of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysKHR-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysKHR-SampledType-04470  
If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysKHR-SampledType-04471  
If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysKHR-SampledType-04472  
If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysKHR-SampledType-04473  
If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04474  
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04475  
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysKHR-None-07288  
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdTraceRaysKHR-None-09600  
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysKHR-micromap-11636  
If an acceleration structure is accessed as a result of this command through an `OpRayQueryProceedKHR` operation, the `VK_EXT_opacity_micromap` extension is not enabled, and the acceleration structure is built using geometry with a `VkAccelerationStructureTrianglesOpacityMicromapKHR` structure included in its `pNext` chain, the shader **must** have specified a `OpacityMicromapIdKHR` execution mode with its specialization constant operand equal to `VK_TRUE`
- VUID-vkCmdTraceRaysKHR-micromap-11637  
If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the

acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device

- VUID-vkCmdTraceRaysKHR-micromap-11638

If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both `VkOpacityMicromapSpecialIndexKHR` values and indices into an associated micromap array, any `VkPipeline` bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes `VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR`

- VUID-vkCmdTraceRaysKHR-micromap-11639

If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both `VkOpacityMicromapSpecialIndexKHR` values and indices into an associated micromap array, any `VkShaderEXT` that accessed the descriptor **must** not have been created with `flags` that includes `VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT`

- VUID-vkCmdTraceRaysKHR-None-12472

Descriptors dynamically accessed in bound descriptor heaps **must** be valid

- VUID-vkCmdTraceRaysKHR-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or

[VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdTraceRaysKHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysKHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysKHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysKHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysKHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysKHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysKHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a

descriptor mapping, a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysKHR-None-11309

If a **bound shader** was created as a **VkShaderEXT** with the **VK\_SHADER\_CREATE\_DESCRIPTOR\_HEAP\_BIT\_EXT** flag or as part of a pipeline with the **VK\_PIPELINE\_CREATE\_2\_DESCRIPTOR\_HEAP\_BIT\_EXT** flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by **vkCmdBind\*HeapEXT** commands

- VUID-vkCmdTraceRaysKHR-None-11372

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either **VK\_PIPELINE\_ROBUSTNESS\_BUFFER\_BEHAVIOR\_ROBUST\_BUFFER\_ACCESS** or **VK\_PIPELINE\_ROBUSTNESS\_BUFFER\_BEHAVIOR\_ROBUST\_BUFFER\_ACCESS\_2** for **uniformBuffers**, the **robustBufferAccess2** feature is not enabled, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via **VkDeviceAddressRangeKHR** when the descriptor was written

- VUID-vkCmdTraceRaysKHR-None-11373

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either **VK\_PIPELINE\_ROBUSTNESS\_BUFFER\_BEHAVIOR\_ROBUST\_BUFFER\_ACCESS** or **VK\_PIPELINE\_ROBUSTNESS\_BUFFER\_BEHAVIOR\_ROBUST\_BUFFER\_ACCESS\_2** for **storageBuffers**, the **robustBufferAccess2** feature is not enabled, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by **VkDeviceAddressRangeKHR** when the descriptor was written

- VUID-vkCmdTraceRaysKHR-None-11374

If the **robustBufferAccess2** feature is not enabled, the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by **VkDeviceAddressRangeKHR** when the descriptor was written

- VUID-vkCmdTraceRaysKHR-pBindInfo-11375

If any **bound shader** uses an embedded sampler via a **descriptor mapping**, the value of **pBindInfo->reservedRangeSize** set for **vkCmdBindSamplerHeapEXT** **must** be greater than or equal to **minSamplerHeapReservedRangeWithEmbedded**

- VUID-vkCmdTraceRaysKHR-None-11376

If a **bound shader** was created as a **VkShaderEXT** with the **VK\_SHADER\_CREATE\_DESCRIPTOR\_HEAP\_BIT\_EXT** flag or as part of a pipeline with the **VK\_PIPELINE\_CREATE\_2\_DESCRIPTOR\_HEAP\_BIT\_EXT** flag, and that shader statically uses a push constant value, that value **must** have been set by **vkCmdPushDataEXT**

- VUID-vkCmdTraceRaysKHR-None-11398

If a **bound shader** was created with a **descriptor mapping** using **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_DATA\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_DATA\_EXT**,

VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT,  
VK\_DESCRIPTOR\_MAPPING\_SOURCE\_RESOURCE\_HEAP\_DATA\_EXT, or  
VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses a resource using that mapping, the access **must** not be out of bounds

- VUID-vkCmdTraceRaysKHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK\\_BUFFER\\_USAGE\\_UNIFORM\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysKHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK\\_BUFFER\\_USAGE\\_UNIFORM\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysKHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_RESOURCE\\_HEAP\\_DATA\\_EXT](#) and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysKHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK\\_BUFFER\\_USAGE\\_STORAGE\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysKHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a

storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdTraceRaysKHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#)

- VUID-vkCmdTraceRaysKHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysKHR-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK\\_BUFFER\\_CREATE\\_PROTECTED\\_BIT](#) create flag set

- VUID-vkCmdTraceRaysKHR-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK\\_BUFFER\\_CREATE\\_PROTECTED\\_BIT](#) create flag set

- VUID-vkCmdTraceRaysKHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-None-09458

If the bound ray tracing pipeline state was created with the [VK\\_DYNAMIC\\_STATE\\_RAY\\_TRACING\\_PIPELINE\\_STACK\\_SIZE\\_KHR](#) dynamic state enabled then [vkCmdSetRayTracingPipelineStackSizeKHR](#) **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysKHR-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysKHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a [recursion depth](#) greater than the value of [maxPipelineRayRecursionDepth](#) used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-commandBuffer-03635

[commandBuffer](#) **must** not be a protected command buffer

- VUID-vkCmdTraceRaysKHR-micromap-11640

If a [VK\\_DESCRIPTOR\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_KHR](#) descriptor is accessed as a result of this command, the access is not through an [OpRayQueryProceedKHR](#) operation, and the acceleration structure is built using geometry with a [VkAccelerationStructureTrianglesOpacityMicromapKHR](#) or [VkAccelerationStructureTrianglesOpacityMicromapEXT](#) structure included in its [pNext](#) chain, the [VkPipeline](#) bound to the pipeline bind point used by this command **must** have been created with [flags](#) that includes [VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_KHR](#)

- VUID-vkCmdTraceRaysKHR-size-04023

The [size](#) member of [pRayGenShaderBindingTable](#) **must** be equal to its [stride](#) member

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03681

[pRayGenShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03682

[pRayGenShaderBindingTable->deviceAddress](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment](#)

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03684

[pMissShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03685

[pMissShaderBindingTable->deviceAddress](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment](#)

- VUID-vkCmdTraceRaysKHR-stride-03686

[pMissShaderBindingTable->stride](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment](#)

- VUID-vkCmdTraceRaysKHR-stride-04029

[pMissShaderBindingTable->stride](#) **must** be less than or equal to [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride](#)

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03688

[pHitShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the

application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03689  
`pHitShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysKHR-stride-03690  
`pHitShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysKHR-stride-04035  
`pHitShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03692  
`pCallableShaderBindingTable->deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03693  
`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysKHR-stride-03694  
`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysKHR-stride-04041  
`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysKHR-flags-03511  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the entries in the table identified by `pMissShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03512  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03513  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03514  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a

result of this command in order to execute an intersection shader **must** not be zero

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysKHR-width-03638

`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`

- VUID-vkCmdTraceRaysKHR-height-03639

`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`

- VUID-vkCmdTraceRaysKHR-depth-03640

`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`

- VUID-vkCmdTraceRaysKHR-width-03641

`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

## Valid Usage (Implicit)

- VUID-vkCmdTraceRaysKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdTraceRaysKHR-pRaygenShaderBindingTable-parameter  
`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-parameter  
`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-parameter  
`pHitShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-parameter  
`pCallableShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdTraceRaysKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysKHR-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdTraceRaysKHR` is not affected by [conditional rendering](#)

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirectKHR(
    VkCommandBuffer                commandBuffer,
    const VkStridedDeviceAddressRegionKHR* pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pCallableShaderBindingTable,
    VkDeviceAddress                 indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the ray generation shader stage.

- `pMissShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the callable shader stage.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a `VkTraceRaysIndirectCommandKHR` structure containing the trace ray parameters.

`vkCmdTraceRaysIndirectKHR` behaves similarly to `vkCmdTraceRaysKHR` except that the ray trace query dimensions are read by the device from `indirectDeviceAddress` during execution.

### Valid Usage

- VUID-vkCmdTraceRaysIndirectKHR-None-08606  
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirectKHR-None-08600  
If a `bound shader` was created with a pipeline layout and statically uses a set  $n$ , a descriptor set **must** have been bound to  $n$  at the same pipeline bind point, with layouts compatible for set  $n$  with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-02707  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource
- VUID-vkCmdTraceRaysIndirectKHR-None-08114  
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by [descriptor validity](#) by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-None-08115  
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-None-08116  
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-None-08117  
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-None-08119

If a descriptor is dynamically used with a `VkPipeline` created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, or a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirectKHR-magFilter-04553

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdTraceRaysIndirectKHR-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdTraceRaysIndirectKHR-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdTraceRaysIndirectKHR-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any

of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdTraceRaysIndirectKHR-None-06479  
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-None-02691  
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-None-07888  
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-None-02692  
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-None-02693  
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysIndirectKHR-filterCubic-02694  
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirectKHR-filterCubicMinmax-02695  
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07027  
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07028  
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07029  
For any `VkBufferView` being written as a storage texel buffer where the image format

field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-08601

If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader

- VUID-vkCmdTraceRaysIndirectKHR-None-10068

For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirectKHR-imageLayout-00344

If an image descriptor is accessed by a shader, the `VkImageLayout` **must** match the subresource accessible from the `VkImageView` as defined by the `image layout matching rules` or a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirectKHR-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdTraceRaysIndirectKHR-uniformBuffers-06935

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08612

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-storageBuffers-06936

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not

access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08613

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-viewType-07752

If a **VkImageView** is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysIndirectKHR-format-07753

If a **VkImageView** or **VkBufferView** is accessed as a result of this command, then the **numeric type** of the view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08795

If a **VkImageView** created with a format other than **VK\_FORMAT\_A8\_UNORM** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08796

If a **VkImageView** created with the format **VK\_FORMAT\_A8\_UNORM** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-04469

If a **VkBufferView** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04470

If a **VkImageView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04471

If a **VkImageView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04472

If a **VkBufferView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04474  
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04475  
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysIndirectKHR-None-07288  
Any shader invocation executed by this command **must terminate**
- VUID-vkCmdTraceRaysIndirectKHR-None-09600  
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11636  
If an acceleration structure is accessed as a result of this command through an `OpRayQueryProceedKHR` operation, the `VK_EXT_opacity_micromap` extension is not enabled, and the acceleration structure is built using geometry with a `VkAccelerationStructureTrianglesOpacityMicromapKHR` structure included in its `pNext` chain, the shader **must** have specified a `OpacityMicromapIdKHR` execution mode with its specialization constant operand equal to `VK_TRUE`
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11637  
If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11638  
If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both `VkOpacityMicromapSpecialIndexKHR` values and indices into an associated micromap array, any `VkPipeline` bound to the pipeline bind point used by this command **must** not have been created with `flags` that includes `VK_PIPELINE_CREATE_2_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_KHR`
- VUID-vkCmdTraceRaysIndirectKHR-micromap-11639  
If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both `VkOpacityMicromapSpecialIndexKHR` values and indices into an associated micromap array, any `VkShaderEXT` that accessed the descriptor **must** not have been created with

`flags` that includes  
`VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT`

- VUID-vkCmdTraceRaysIndirectKHR-None-12472  
Descriptors dynamically accessed in bound descriptor heaps **must** be valid
- VUID-vkCmdTraceRaysIndirectKHR-None-11297  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_PUSH\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_SHADER\\_RECORD\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-None-11298  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_PUSH\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_SHADER\\_RECORD\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-None-11299  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_PUSH\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_SHADER\\_RECORD\\_INDEX\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-None-11300  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirectKHR-None-11301  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset

specified by each mapping

- VUID-vkCmdTraceRaysIndirectKHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysIndirectKHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirectKHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysIndirectKHR-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK\\_SHADER\\_CREATE\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag or as part of a pipeline with the [VK\\_PIPELINE\\_CREATE\\_2\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind\\*HeapEXT](#) commands

- VUID-vkCmdTraceRaysIndirectKHR-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS](#) or [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS\\_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS](#) or [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS\\_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK\\_SHADER\\_CREATE\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag or as part of a pipeline with the [VK\\_PIPELINE\\_CREATE\\_2\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_DATA\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_DATA\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_RESOURCE\\_HEAP\\_DATA\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK\\_BUFFER\\_USAGE\\_UNIFORM\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#),

VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT, or  
VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK\_BUFFER\_USAGE\_UNIFORM\_BUFFER\_BIT usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT, VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT, or VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdTraceRaysIndirectKHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT, VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT, or VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the VK\_BUFFER\_USAGE\_STORAGE\_BUFFER\_BIT usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT, VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT, or VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to `minStorageBufferOffsetAlignment`

- VUID-vkCmdTraceRaysIndirectKHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT, VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT, or VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT, and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#)

- VUID-vkCmdTraceRaysIndirectKHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation,

with an identically defined color

- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11455

If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT**, or **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT**, the address that the resource is mapped to **must** have been queried from a buffer created without the **VK\_BUFFER\_CREATE\_PROTECTED\_BIT** create flag set

- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11456

If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_HEAP\_WITH\_INDIRECT\_INDEX\_EXT** or **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_HEAP\_WITH\_INDIRECT\_INDEX\_ARRAY\_EXT**, the address of the indirect memory **must** have been queried from a buffer created without the **VK\_BUFFER\_CREATE\_PROTECTED\_BIT** create flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirectKHR-None-09458

If the bound ray tracing pipeline state was created with the **VK\_DYNAMIC\_STATE\_RAY\_TRACING\_PIPELINE\_STACK\_SIZE\_KHR** dynamic state enabled then **vkCmdSetRayTracingPipelineStackSizeKHR** **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysIndirectKHR-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT**, the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysIndirectKHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a **recursion depth** greater than the value of **maxPipelineRayRecursionDepth** used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-03635

**commandBuffer** **must** not be a protected command buffer

- VUID-vkCmdTraceRaysIndirectKHR-micromap-11640

If a **VK\_DESCRIPTOR\_TYPE\_ACCELERATION\_STRUCTURE\_KHR** descriptor is accessed as a result of this command, the access is not through an **OpRayQueryProceedKHR** operation, and the acceleration structure is built using geometry with a **VkAccelerationStructureTrianglesOpacityMicromapKHR** or **VkAccelerationStructureTrianglesOpacityMicromapEXT** structure included in its **pNext** chain, the **VkPipeline** bound to the pipeline bind point used by this command **must** have

been created with flags that includes  
[VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_KHR](#)

- VUID-vkCmdTraceRaysIndirectKHR-size-04023  
The **size** member of **pRayGenShaderBindingTable** **must** be equal to its **stride** member
- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03681  
**pRayGenShaderBindingTable->deviceAddress** **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03682  
**pRayGenShaderBindingTable->deviceAddress** **must** be a multiple of **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment**
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03684  
**pMissShaderBindingTable->deviceAddress** **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03685  
**pMissShaderBindingTable->deviceAddress** **must** be a multiple of **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment**
- VUID-vkCmdTraceRaysIndirectKHR-stride-03686  
**pMissShaderBindingTable->stride** **must** be a multiple of **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment**
- VUID-vkCmdTraceRaysIndirectKHR-stride-04029  
**pMissShaderBindingTable->stride** **must** be less than or equal to **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride**
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03688  
**pHitShaderBindingTable->deviceAddress** **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03689  
**pHitShaderBindingTable->deviceAddress** **must** be a multiple of **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment**
- VUID-vkCmdTraceRaysIndirectKHR-stride-03690  
**pHitShaderBindingTable->stride** **must** be a multiple of **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment**
- VUID-vkCmdTraceRaysIndirectKHR-stride-04035  
**pHitShaderBindingTable->stride** **must** be less than or equal to **VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride**
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03692  
**pCallableShaderBindingTable->deviceAddress** **must** be a device address allocated to the application from a buffer created with the [VK\\_BUFFER\\_USAGE\\_SHADER\\_BINDING\\_TABLE\\_BIT\\_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03693

`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysIndirectKHR-stride-03694  
`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04041  
`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-flags-03511  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the entries in the table identified by `pMissShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03512  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03513  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03514  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an intersection shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04735  
Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04736  
Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03633  
`indirectDeviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03634  
`indirectDeviceAddress` **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03636  
All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommandKHR) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdTraceRaysIndirectKHR-rayTracingPipelineTraceRaysIndirect-03637  
The `rayTracingPipelineTraceRaysIndirect` feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysIndirectKHR-pRaygenShaderBindingTable-parameter  
`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-parameter  
`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-parameter  
`pHitShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-parameter  
`pCallableShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-parameter  
`indirectDeviceAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysIndirectKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirectKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirectKHR-videocoding  
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally

synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdTraceRaysIndirectKHR` is not affected by [conditional rendering](#)

The `VkTraceRaysIndirectCommandKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommandKHR {
    uint32_t    width;
    uint32_t    height;
    uint32_t    depth;
} VkTraceRaysIndirectCommandKHR;
```

- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommandKHR` have the same meaning as the similarly named parameters of `vkCmdTraceRaysKHR`.

## Valid Usage

- VUID-VkTraceRaysIndirectCommandKHR-width-03638  
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`
- VUID-VkTraceRaysIndirectCommandKHR-height-03639  
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`
- VUID-VkTraceRaysIndirectCommandKHR-depth-03640  
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`
- VUID-VkTraceRaysIndirectCommandKHR-width-03641  
`width × height × depth` **must** be less than or equal to

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirect2KHR(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a `VkTraceRaysIndirectCommand2KHR` structure containing the trace ray parameters.

`vkCmdTraceRaysIndirect2KHR` behaves similarly to `vkCmdTraceRaysIndirectKHR` except that shader binding table parameters as well as dispatch dimensions are read by the device from `indirectDeviceAddress` during execution.

### Valid Usage

- VUID-vkCmdTraceRaysIndirect2KHR-None-08606  
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-None-08600  
If a `bound shader` was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-02707  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource
- VUID-vkCmdTraceRaysIndirect2KHR-None-08114  
Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by [descriptor validity](#) by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-08115  
If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-08116  
Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdTraceRaysIndirect2KHR-None-08117  
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK\\_PIPELINE\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#)
- VUID-vkCmdTraceRaysIndirect2KHR-None-08119  
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK\\_PIPELINE\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#), or a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-04553  
If a [VkSampler](#) created with [magFilter](#) or [minFilter](#) equal to [VK\\_FILTER\\_LINEAR](#), [reductionMode](#) equal to [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_WEIGHTED\\_AVERAGE](#), and [compareEnable](#) equal to [VK\\_FALSE](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_LINEAR\\_BIT](#)
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-09598  
If a [VkSampler](#) created with [magFilter](#) or [minFilter](#) equal to [VK\\_FILTER\\_LINEAR](#) and [reductionMode](#) equal to either [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MIN](#) or [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MAX](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_MINMAX\\_BIT](#)
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-04770  
If a [VkSampler](#) created with [mipmapMode](#) equal to [VK\\_SAMPLER\\_MIPMAP\\_MODE\\_LINEAR](#), [reductionMode](#) equal to [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_WEIGHTED\\_AVERAGE](#), and [compareEnable](#) equal to [VK\\_FALSE](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_LINEAR\\_BIT](#)
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-09599  
If a [VkSampler](#) created with [mipmapMode](#) equal to [VK\\_SAMPLER\\_MIPMAP\\_MODE\\_LINEAR](#) and [reductionMode](#) equal to either [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MIN](#) or [VK\\_SAMPLER\\_REDUCTION\\_MODE\\_MAX](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_MINMAX\\_BIT](#)
- VUID-vkCmdTraceRaysIndirect2KHR-unnormalizedCoordinates-09635  
If a [VkSampler](#) created with [unnormalizedCoordinates](#) equal to [VK\\_TRUE](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [levelCount](#) and [layerCount](#) **must** be 1
- VUID-vkCmdTraceRaysIndirect2KHR-None-08609  
If a [VkSampler](#) created with [unnormalizedCoordinates](#) equal to [VK\\_TRUE](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [viewType](#) **must** be [VK\\_IMAGE\\_VIEW\\_TYPE\\_1D](#) or [VK\\_IMAGE\\_VIEW\\_TYPE\\_2D](#)
- VUID-vkCmdTraceRaysIndirect2KHR-None-08610  
If a [VkSampler](#) created with [unnormalizedCoordinates](#) equal to [VK\\_TRUE](#) is used to sample a [VkImageView](#) as a result of this command, then the sampler **must** not be used with any

of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdTraceRaysIndirect2KHR-None-08611  
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdTraceRaysIndirect2KHR-None-06479  
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02691  
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-07888  
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02692  
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02693  
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubic-02694  
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubicMinmax-02695  
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07027  
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdTraceRaysIndirect2KHR-None-10068

For each array of resources that is used by a [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirect2KHR-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#) or a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirect2KHR-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdTraceRaysIndirect2KHR-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS](#) or [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS\\_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirect2KHR-storageBuffers-06936  
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS](#) or [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS\\_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-None-08613  
If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-viewType-07752  
If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdTraceRaysIndirect2KHR-format-07753  
If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the [numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08795  
If a [VkImageView](#) created with a format other than [VK\\_FORMAT\\_A8\\_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08796  
If a [VkImageView](#) created with the format [VK\\_FORMAT\\_A8\\_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-04469  
If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04470  
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04471  
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04472  
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction

**must** have a **Width** of 64

- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04473

If a **VkBufferView** with a **VkFormat** that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32

- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04474

If the **sparseImageInt64Atomics** feature is not enabled, **VkImage** objects created with the **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04475

If the **sparseImageInt64Atomics** feature is not enabled, **VkBuffer** objects created with the **VK\_BUFFER\_CREATE\_SPARSE\_RESIDENCY\_BIT** flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command

- VUID-vkCmdTraceRaysIndirect2KHR-None-07288

Any shader invocation executed by this command **must** **terminate**

- VUID-vkCmdTraceRaysIndirect2KHR-None-09600

If a descriptor with type equal to any of **VK\_DESCRIPTOR\_TYPE\_SAMPLED\_IMAGE**, **VK\_DESCRIPTOR\_TYPE\_STORAGE\_IMAGE**, or **VK\_DESCRIPTOR\_TYPE\_INPUT\_ATTACHMENT** is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11636

If an acceleration structure is accessed as a result of this command through an **OpRayQueryProceedKHR** operation, the **VK\_EXT\_opacity\_micromap** extension is not enabled, and the acceleration structure is built using geometry with a **VkAccelerationStructureTrianglesOpacityMicromapKHR** structure included in its **pNext** chain, the shader **must** have specified a **OpacityMicromapIdKHR** execution mode with its specialization constant operand equal to **VK\_TRUE**

- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11637

If an acceleration structure is accessed as a result of this command and the acceleration structure was constructed through deserialization, all micromap arrays referenced by the acceleration structure that were not replaced by an acceleration structure update command **must** have been deserialized using the serialized data of the corresponding micromaps used to originally build the acceleration structure prior to the execution of this command on the device

- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11638

If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an **indexBuffer** containing both **VkOpacityMicromapSpecialIndexKHR** values and indices into an associated micromap array, any **VkPipeline** bound to the pipeline bind point used by this command **must** not have been created with **flags** that includes **VK\_PIPELINE\_CREATE\_2\_OPACITY\_MICROMAP\_DISALLOW\_MIXED\_SPECIAL\_INDEX\_BIT\_KHR**

- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11639

If an acceleration structure is accessed as a result of this command and the acceleration structure is built using geometry with an `indexBuffer` containing both `VkOpacityMicromapSpecialIndexKHR` values and indices into an associated micromap array, any `VkShaderEXT` that accessed the descriptor **must** not have been created with `flags` that includes `VK_SHADER_CREATE_OPACITY_MICROMAP_DISALLOW_MIXED_SPECIAL_INDEX_BIT_EXT`

- VUID-vkCmdTraceRaysIndirect2KHR-None-12472

Descriptors dynamically accessed in bound descriptor heaps **must** be valid

- VUID-vkCmdTraceRaysIndirect2KHR-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirect2KHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound

to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirect2KHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysIndirect2KHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirect2KHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysIndirect2KHR-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK\\_SHADER\\_CREATE\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag or as part of a pipeline with the [VK\\_PIPELINE\\_CREATE\\_2\\_DESCRIPTOR\\_HEAP\\_BIT\\_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind\\*HeapEXT](#) commands

- VUID-vkCmdTraceRaysIndirect2KHR-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK\\_PIPELINE\\_ROBUSTNESS\\_BUFFER\\_BEHAVIOR\\_ROBUST\\_BUFFER\\_ACCESS](#) or

`VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-None-11373

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag

set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK\\_BUFFER\\_USAGE\\_UNIFORM\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_RESOURCE\\_HEAP\\_DATA\\_EXT](#) and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK\\_BUFFER\\_USAGE\\_STORAGE\\_BUFFER\\_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#)

- VUID-vkCmdTraceRaysIndirect2KHR-index-11450  
If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color
- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11455  
If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_PUSH\\_ADDRESS\\_EXT](#), [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_INDIRECT\\_ADDRESS\\_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK\\_BUFFER\\_CREATE\\_PROTECTED\\_BIT](#) create flag set
- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11456  
If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_EXT](#) or [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_HEAP\\_WITH\\_INDIRECT\\_INDEX\\_ARRAY\\_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK\\_BUFFER\\_CREATE\\_PROTECTED\\_BIT](#) create flag set
- VUID-vkCmdTraceRaysIndirect2KHR-None-03429  
Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-None-09458  
If the bound ray tracing pipeline state was created with the [VK\\_DYNAMIC\\_STATE\\_RAY\\_TRACING\\_PIPELINE\\_STACK\\_SIZE\\_KHR](#) dynamic state enabled then [vkCmdSetRayTracingPipelineStackSizeKHR](#) **must** have been called in the current command buffer prior to this trace command
- VUID-vkCmdTraceRaysIndirect2KHR-None-11319  
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK\\_DESCRIPTOR\\_MAPPING\\_SOURCE\\_SHADER\\_RECORD\\_ADDRESS\\_EXT](#), the value of the address at the expected location in shader record data **must** be a valid address
- VUID-vkCmdTraceRaysIndirect2KHR-maxPipelineRayRecursionDepth-03679  
This command **must** not cause a shader call instruction to be executed from a shader invocation with a [recursion depth](#) greater than the value of [maxPipelineRayRecursionDepth](#) used to create the bound ray tracing pipeline
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-03635  
[commandBuffer](#) **must** not be a protected command buffer
- VUID-vkCmdTraceRaysIndirect2KHR-micromap-11640

If a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` descriptor is accessed as a result of this command, the access is not through an `OpRayQueryProceedKHR` operation, and the acceleration structure is built using geometry with a `VkAccelerationStructureTrianglesOpacityMicromapKHR` or `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure included in its `pNext` chain, the `VkPipeline` bound to the pipeline bind point used by this command **must** have been created with `flags` that includes `VK_PIPELINE_CREATE_RAY_TRACING_OPACITY_MICROMAP_BIT_KHR`

- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03633  
`indirectDeviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03634  
`indirectDeviceAddress` **must** be a multiple of 4
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03636  
All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommand2KHR) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingPipelineTraceRaysIndirect2-03637  
The `rayTracingPipelineTraceRaysIndirect2` feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-parameter  
`indirectDeviceAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysIndirect2KHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirect2KHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirect2KHR-videocoding  
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT  | Action       |

## Conditional Rendering

`vkCmdTraceRaysIndirect2KHR` is not affected by [conditional rendering](#)

The `VkTraceRaysIndirectCommand2KHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommand2KHR {
    VkDeviceAddress    raygenShaderRecordAddress;
    VkDeviceSize       raygenShaderRecordSize;
    VkDeviceAddress    missShaderBindingTableAddress;
    VkDeviceSize       missShaderBindingTableSize;
    VkDeviceSize       missShaderBindingTableStride;
    VkDeviceAddress    hitShaderBindingTableAddress;
    VkDeviceSize       hitShaderBindingTableSize;
    VkDeviceSize       hitShaderBindingTableStride;
    VkDeviceAddress    callableShaderBindingTableAddress;
    VkDeviceSize       callableShaderBindingTableSize;
    VkDeviceSize       callableShaderBindingTableStride;
    uint32_t           width;
    uint32_t           height;
    uint32_t           depth;
} VkTraceRaysIndirectCommand2KHR;
```

- `raygenShaderRecordAddress` is a `VkDeviceAddress` of the ray generation shader binding table record used by this command.
- `raygenShaderRecordSize` is a `VkDeviceSize` number of bytes corresponding to the ray generation shader binding table record at base address `raygenShaderRecordAddress`.
- `missShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the miss shader binding table used by this command.
- `missShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the miss shader binding table at `missShaderBindingTableAddress` that may be accessed by this command.

- `missShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the miss shader binding table.
- `hitShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the hit shader binding table used by this command.
- `hitShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the hit shader binding table at `hitShaderBindingTableAddress` that may be accessed by this command.
- `hitShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the hit shader binding table.
- `callableShaderBindingTableAddress` is a `VkDeviceAddress` of the first record in the callable shader binding table used by this command.
- `callableShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the callable shader binding table at `callableShaderBindingTableAddress` that may be accessed by this command.
- `callableShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the callable shader binding table.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommand2KHR` have the same meaning as the similarly named parameters of `vkCmdTraceRaysKHR`.

Indirect shader binding table buffer parameters **must** satisfy the same memory alignment and binding requirements as their counterparts in `vkCmdTraceRaysIndirectKHR` and `vkCmdTraceRaysKHR`.

### Valid Usage

- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03681  
`raygenShaderRecordAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03682  
`raygenShaderRecordAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03684  
`missShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03685  
`missShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`

- VUID-VkTraceRaysIndirectCommand2KHR-stride-03686  
`missShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04029  
`missShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03688  
`hitShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03689  
`hitShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03690  
`hitShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04035  
`hitShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03692  
`callableShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03693  
`callableShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03694  
`callableShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04041  
`callableShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03511  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the entries in the table identified by `missShaderBindingTableAddress` accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03512  
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `hitShaderBindingTableAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03513

If the bound ray tracing pipeline was created with **flags** that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by **hitShaderBindingTableAddress** accessed as a result of this command in order to execute a closest hit shader **must** not be zero

- VUID-VkTraceRaysIndirectCommand2KHR-flags-03514

If the bound ray tracing pipeline was created with **flags** that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by **hitShaderBindingTableAddress** accessed as a result of this command in order to execute an intersection shader **must** not be zero

- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by **hitShaderBindingTableAddress** accessed by this call from a geometry with a **geometryType** of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by **hitShaderBindingTableAddress** accessed by this call from a geometry with a **geometryType** of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`

- VUID-VkTraceRaysIndirectCommand2KHR-width-03638

**width** **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`

- VUID-VkTraceRaysIndirectCommand2KHR-height-03639

**height** **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`

- VUID-VkTraceRaysIndirectCommand2KHR-depth-03640

**depth** **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`

- VUID-VkTraceRaysIndirectCommand2KHR-width-03641

**width × height × depth** **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

## Valid Usage (Implicit)

- VUID-VkTraceRaysIndirectCommand2KHR-raygenShaderRecordAddress-parameter **raygenShaderRecordAddress** **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-missShaderBindingTableAddress-parameter **missShaderBindingTableAddress** **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-hitShaderBindingTableAddress-parameter **hitShaderBindingTableAddress** **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-callableShaderBindingTableAddress-parameter

`callableShaderBindingTableAddress` **must** be a valid `VkDeviceAddress` value

## 43.3. Shader Binding Table

A *shader binding table* is a resource which establishes the relationship between the ray tracing pipeline and the acceleration structures that were built for the ray tracing pipeline. It indicates the shaders that operate on each geometry in an acceleration structure. In addition, it contains the resources accessed by each shader, including indices of textures, buffer device addresses, and constants. The application allocates and manages *shader binding tables* as `VkBuffer` objects.

Each entry in the shader binding table consists of `shaderGroupHandleSize` bytes of data, either as queried by `vkGetRayTracingShaderGroupHandlesKHR` to refer to those specified shaders, or all zeros to refer to a zero shader group. A zero shader group behaves as though it is a shader group consisting entirely of `VK_SHADER_UNUSED_KHR`. The remainder of the data specified by the stride is application-visible data that can be referenced by a `ShaderRecordBufferKHR` block in the shader.

The shader binding tables to use in a ray tracing pipeline are passed to the `vkCmdTraceRaysKHR`, or `vkCmdTraceRaysIndirectKHR` commands. Shader binding tables are read-only in shaders that are executing on the ray tracing pipeline.

Shader variables identified with the `ShaderRecordBufferKHR` storage class are used to access the provided shader binding table. Such variables **must** be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in [Offset and Stride Assignment](#).

The `Offset` decoration for any member of a `Block`-decorated variable in the `ShaderRecordBufferKHR` storage class **must** not cause the space required for that variable to extend outside the range `[0, maxStorageBufferRange)`.

Accesses to the shader binding table from ray tracing pipelines **must** be [synchronized](#) with the `VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR` pipeline stage and an [access type](#) of `VK_ACCESS_SHADER_READ_BIT`.

### NOTE

Because different shader record buffers can be associated with the same shader, a shader variable with `ShaderRecordBufferKHR` storage class will not be dynamically uniform if different invocations of the same shader can reference different data in the shader record buffer, such as if the same shader occurs twice in the shader binding table with a different shader record buffer. In this case, if the `DescriptorHeapEXT` capability is not declared, when indexing resources based on values in the `ShaderRecordBufferKHR` storage class, the index should be decorated as `NonUniform`.

### 43.3.1. Indexing Rules

In order to execute the correct shaders and access the correct resources during a ray tracing dispatch, the implementation **must** be able to locate shader binding table entries at various stages of execution. This is accomplished by defining a set of indexing rules that compute shader binding table record positions relative to the buffer's base address in memory. The application **must** organize the contents of the shader binding table's memory in a way that application of the indexing rules will lead to correct records.

#### Ray Generation Shaders

Only one ray generation shader is executed per ray tracing dispatch.

For `vkCmdTraceRaysKHR`, the location of the ray generation shader is specified by the `pRaygenShaderBindingTable->deviceAddress` parameter—there is no indexing. All data accessed **must** be less than `pRaygenShaderBindingTable->size` bytes from `deviceAddress`. `pRaygenShaderBindingTable->stride` is unused, and **must** be equal to `pRaygenShaderBindingTable->size`.

#### Hit Shaders

The base for the computation of intersection, any-hit, and closest hit shader locations is the `instanceShaderBindingTableRecordOffset` value stored with each instance of a top-level acceleration structure (`VkAccelerationStructureInstanceKHR`). This value determines the beginning of the shader binding table records for a given instance.

In the following rule, `geometryIndex` refers to the `geometry index` of the intersected geometry within the instance.

The `sbtRecordOffset` and `sbtRecordStride` values are passed in as parameters to `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, these correspond to the `SBTOffset` and `SBTStride` parameters to the `pipeline trace ray` instructions.

The result of this computation is then added to `pHitShaderBindingTable->deviceAddress`, a device address passed to `vkCmdTraceRaysKHR`.

For `vkCmdTraceRaysKHR`, the complete rule to compute a hit shader binding table record address in the `pHitShaderBindingTable` is:

$$\text{pHitShaderBindingTable->deviceAddress} + \text{pHitShaderBindingTable->stride} \times (\text{instanceShaderBindingTableRecordOffset} + \text{geometryIndex} \times \text{sbtRecordStride} + \text{sbtRecordOffset})$$

All data accessed **must** be less than `pHitShaderBindingTable->size` bytes from the base address.

#### Miss Shaders

A miss shader is executed whenever a ray query fails to find an intersection for the given scene geometry. Multiple miss shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of miss shader locations is `pMissShaderBindingTable->deviceAddress`, a device address passed into `vkCmdTraceRaysKHR`.

The `missIndex` value is passed in as a parameter to `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `MissIndex` parameter to the `pipeline trace ray` instructions.

For `vkCmdTraceRaysKHR`, the complete rule to compute a miss shader binding table record address in the `pMissShaderBindingTable` is:

$$\text{pMissShaderBindingTable->deviceAddress} + \text{pMissShaderBindingTable->stride} \times \text{missIndex}$$

All data accessed **must** be less than `pMissShaderBindingTable->size` bytes from the base address.

### Callable Shaders

A callable shader is executed when requested by a ray tracing shader. Multiple callable shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of callable shader locations is `pCallableShaderBindingTable->deviceAddress`, a device address passed into `vkCmdTraceRaysKHR`.

The `sbtRecordIndex` value is passed in as a parameter to `executeCallableEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `SBTIndex` parameter to the `OpExecuteCallableKHR` instruction.

For `vkCmdTraceRaysKHR`, the complete rule to compute a callable shader binding table record address in the `pCallableShaderBindingTable` is:

$$\text{pCallableShaderBindingTable->deviceAddress} + \text{pCallableShaderBindingTable->stride} \times \text{sbtRecordIndex}$$

All data accessed **must** be less than `pCallableShaderBindingTable->size` bytes from the base address.

## 43.4. Ray Tracing Pipeline Stack

Ray tracing pipelines have a potentially large set of shaders which **may** be invoked in various call chain combinations to perform ray tracing. To store parameters for a given shader execution, an implementation **may** use a stack of data in memory. This stack **must** be sized to the sum of the stack sizes of all shaders in any call chain executed by the application.

If the stack size is not set explicitly, the stack size for a pipeline is:

$$\text{rayGenStackMax} + \min(1, \text{maxPipelineRayRecursionDepth}) \times \max(\text{closestHitStackMax}, \text{missStackMax}, \text{intersectionStackMax} + \text{anyHitStackMax}) + \max(0, \text{maxPipelineRayRecursionDepth} - 1) \times \max(\text{closestHitStackMax}, \text{missStackMax}) + 2 \times \text{callableStackMax}$$

where `rayGenStackMax`, `closestHitStackMax`, `missStackMax`, `anyHitStackMax`, `intersectionStackMax`, and `callableStackMax` are the maximum stack values queried by the respective shader stages for any shaders in any shader groups defined by the pipeline.

This stack size is potentially significant, so an application **may** want to provide a more accurate stack size after pipeline compilation. The value that the application provides is the maximum value of the sum of all shaders in a call chain across all possible call chains, taking into account any application specific knowledge about the properties of the call chains.

For example, if an application has two types of closest hit and miss shaders that it can use but the first level of rays will only use the first kind (possibly reflection) and the second level will only use the second kind (occlusion or shadow ray, for example) then the application can compute the stack size by something similar to:

#### NOTE

```
rayGenStack + max(closestHit1Stack, miss1Stack) + max(closestHit2Stack, miss2Stack)
```

This is guaranteed to be no larger than the default stack size computation which assumes that both call levels may be the larger of the two.

## 43.5. Ray Tracing Capture Replay

In a similar way to [bufferDeviceAddressCaptureReplay](#), the `rayTracingPipelineShaderGroupHandleCaptureReplay` feature allows the querying of opaque data which **can** be used in a future replay.

During the capture phase, capture/replay tools are expected to query opaque data for shader group handle replay using [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#).

Providing the opaque data during replay, using [VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle](#) at pipeline creation time, causes the implementation to generate identical shader group handles to those in the capture phase, allowing capture/replay tools to reuse previously recorded shader binding table buffer contents or to obtain the same handles by calling [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#) again.

# Chapter 44. Memory Decompression

Commands that **can** be used to decompress memory between one or more memory regions are [vkCmdDecompressMemoryEXT](#), and [vkCmdDecompressMemoryIndirectCountEXT](#).

To decompress memory containing compressed data, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryEXT(
    VkCommandBuffer                commandBuffer,
    const VkDecompressMemoryInfoEXT* pDecompressMemoryInfoEXT);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDecompressMemoryInfoEXT` is a pointer to a [VkDecompressMemoryInfoEXT](#) structure describing the decompression parameters.

## Valid Usage

- VUID-vkCmdDecompressMemoryEXT-memoryDecompression-11761  
The `memoryDecompression` feature **must** be enabled

## Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDecompressMemoryEXT-pDecompressMemoryInfoEXT-parameter  
`pDecompressMemoryInfoEXT` **must** be a valid pointer to a valid [VkDecompressMemoryInfoEXT](#) structure
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-recording  
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-cmdpool  
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support [VK\\_QUEUE\\_COMPUTE\\_BIT](#), or [VK\\_QUEUE\\_GRAPHICS\\_BIT](#) operations
- VUID-vkCmdDecompressMemoryEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryEXT-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                         | Command Type |
|-----------------------|-------------------|--------------------|---------------------------------------------------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT<br>VK_QUEUE_GRAPHICS_BIT<br>VK_QUEUE_HIP | Action       |

## Conditional Rendering

`vkCmdDecompressMemoryEXT` is not affected by [conditional rendering](#)

The `VkDecompressMemoryInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkMemoryDecompressionMethodFlagsEXT decompressionMethod;
    uint32_t                    regionCount;
    const VkDecompressMemoryRegionEXT* pRegions;
} VkDecompressMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsEXT` with a single bit set specifying the method used to decompress data.
- `regionCount` is the number of regions to decompress.
- `pRegions` is a pointer to an array of `VkDecompressMemoryRegionEXT` structures specifying the regions to decompress.

Each memory region specified in `pRegions` is decompressed from the source to the destination address based on the decompression method specified in `decompressionMethod`. If any of the specified source and destination regions overlap in memory, then the results of decompression are

undefined.

### Valid Usage

- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-07690  
The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11762  
If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT`, then for each element of `pRegions`, `decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11763  
`decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods`

### Valid Usage (Implicit)

- VUID-VkDecompressMemoryInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DECOMPRESS_MEMORY_INFO_EXT`
- VUID-VkDecompressMemoryInfoEXT-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-parameter  
`decompressionMethod` **must** be a valid combination of `VkMemoryDecompressionMethodFlagBitsEXT` values
- VUID-VkDecompressMemoryInfoEXT-pRegions-parameter  
`pRegions` **must** be a valid pointer to an array of `regionCount` `VkDecompressMemoryRegionEXT` structures
- VUID-VkDecompressMemoryInfoEXT-regionCount-arraylength  
`regionCount` **must** be greater than 0

The `VkDecompressMemoryRegionEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryRegionEXT {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       compressedSize;
    VkDeviceSize       decompressedSize;
} VkDecompressMemoryRegionEXT;
```

- `srcAddress` is the address where compressed data is stored.
- `dstAddress` is the destination address where decompressed data will be written.
- `compressedSize` is the size of compressed data in bytes.

- `decompressedSize` is the size of decompressed data in bytes.

Accesses to compressed and decompressed data specified in `srcAddress` and `dstAddress` **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_MEMORY_DECOMPRESSION_BIT_EXT` pipeline stage with `access type` of `VK_ACCESS_2_MEMORY_DECOMPRESSION_READ_BIT_EXT` or `VK_ACCESS_2_MEMORY_DECOMPRESSION_WRITE_BIT_EXT`.

### Valid Usage

- VUID-VkDecompressMemoryRegionEXT-srcAddress-07685  
`srcAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07686  
The memory range defined by `srcAddress` and `compressedSize` **must** be contained within the size of the buffer bound to `srcAddress`, minus the offset of `srcAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07687  
`dstAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07688  
The memory range defined by `dstAddress` and `decompressedSize` **must** be contained within the size of the buffer bound to `dstAddress`, minus the offset of `dstAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-07689  
`decompressedSize` **must** be large enough to hold the decompressed data based on the `decompressionMethod`
- VUID-VkDecompressMemoryRegionEXT-compressedSize-11795  
`compressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-11796  
`decompressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07691  
The memory range defined by `srcAddress` and `compressedSize` **must** not overlap the memory range defined by `dstAddress` and `decompressedSize`
- VUID-VkDecompressMemoryRegionEXT-srcAddress-11764  
`srcAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT` usage flag set
- VUID-VkDecompressMemoryRegionEXT-dstAddress-11765  
`dstAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT` usage flag set

### Valid Usage (Implicit)

- VUID-VkDecompressMemoryRegionEXT-srcAddress-parameter  
`srcAddress` **must** be a valid `VkDeviceAddress` value

- VUID-VkDecompressMemoryRegionEXT-dstAddress-parameter  
`dstAddress` **must** be a valid `VkDeviceAddress` value

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryIndirectCountEXT(
    VkCommandBuffer                commandBuffer,
    VkMemoryDecompressionMethodFlagsEXT decompressionMethod,
    VkDeviceAddress                indirectCommandsAddress,
    VkDeviceAddress                indirectCommandsCountAddress,
    uint32_t                       maxDecompressionCount,
    uint32_t                       stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsEXT` with a single bit set specifying the method used to decompress data.
- `indirectCommandsAddress` is the device address containing decompression parameters laid out as an array of `VkDecompressMemoryRegionEXT` structures.
- `indirectCommandsCountAddress` is the device address containing a 32-bit integer value specifying the decompression count.
- `maxDecompressionCount` is the maximum number of decompressions that will be executed. The actual number of executed decompressions is the minimum of the count specified in `indirectCommandsCountAddress` and `maxDecompressionCount`.
- `stride` is the byte stride between successive sets of decompression parameters located starting from `indirectCommandsAddress`.

Each region specified in `indirectCommandsAddress` is decompressed from the source to destination region based on the specified `decompressionMethod`.

### Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountEXT-None-07692  
The `memoryDecompression` feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07694  
`indirectCommandsAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07695  
`indirectCommandsAddress` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07697  
`indirectCommandsCountAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07698  
`indirectCommandsCountAddress` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07699  
The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-11794  
All device addresses between `indirectCommandsAddress` and `indirectCommandsAddress + (stride × (count stored in indirectCommandsCountAddress)) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-07690  
The `decompressionMethod` **must** have a single bit set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-stride-11767  
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkDecompressMemoryRegionEXT)`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-maxDecompressionCount-11768  
`maxDecompressionCount` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11769  
If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT`, then all values in `VkDecompressMemoryRegionEXT::decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11810  
`decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods`

### Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-parameter  
`decompressionMethod` **must** be a valid combination of `VkMemoryDecompressionMethodFlagBitsEXT` values
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-parameter  
`indirectCommandsAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-parameter  
`indirectCommandsCountAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdDecompressMemoryIndirectCountEXT-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryIndirectCountEXT-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryIndirectCountEXT-videocoding  
This command **must** only be called outside of a video coding scope

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                         | Command Type |
|-----------------------|-------------------|--------------------|-----------------------------------------------|--------------|
| Primary<br>Secondary  | Outside           | Outside            | VK_QUEUE_COMPUTE_BIT<br>VK_QUEUE_GRAPHICS_BIT | Action       |

## Conditional Rendering

`vkCmdDecompressMemoryIndirectCountEXT` is not affected by `conditional rendering`

Bits which **can** be set in `VkDecompressMemoryRegionEXT::decompressionMethod` specifying the decompression method to select, or returned in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods` specifying the available decompression methods are:

```

// Provided by VK_EXT_memory_decompression
// Flag bits for VkMemoryDecompressionMethodFlagBitsEXT
typedef VkFlags64 VkMemoryDecompressionMethodFlagBitsEXT;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT = 0x00000001ULL;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV = 0x00000001ULL;

```

- [VK\\_MEMORY\\_DECOMPRESSION\\_METHOD\\_GDEFLATE\\_1\\_0\\_BIT\\_EXT](#) specifies that the GDeflate 1.0 algorithm is used to decompress data.

```

// Provided by VK_EXT_memory_decompression
typedef VkFlags64 VkMemoryDecompressionMethodFlagsEXT;

```

[VkMemoryDecompressionMethodFlagsEXT](#) is a bitmask type for specifying a mask of one or more [VkMemoryDecompressionMethodFlagBitsEXT](#).

# Chapter 45. Video Coding

Vulkan implementations **may** expose one or more queue families supporting video coding operations. These operations are performed by recording them into a command buffer within a [video coding scope](#), and submitting them to queues with compatible video coding capabilities.

The Vulkan video functionalities are designed to be made available through a set of APIs built on top of each other, consisting of:

- A core API providing common video coding functionalities,
- APIs providing codec-independent video decode and video encode related functionalities, respectively,
- Additional codec-specific APIs built on top of those.

This chapter details the fundamental components and operations of these.

## 45.1. Video Picture Resources

In the context of video coding, multidimensional arrays of image data that **can** be used as the source or target of video coding operations are referred to as *video picture resources*. They **may** store additional metadata that includes implementation-private information used during the execution of video coding operations, as discussed later.

Video picture resources are backed by [VkImage](#) objects. Individual subregions of [VkImageView](#) objects created from such resources **can** be used as [decode output pictures](#), [encode input pictures](#), [reconstructed pictures](#), and/or [reference pictures](#).

The parameters of a video picture resource are specified using a [VkVideoPictureResourceInfoKHR](#) structure.

The [VkVideoPictureResourceInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoPictureResourceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D         codedOffset;
    VkExtent2D         codedExtent;
    uint32_t           baseArrayLayer;
    VkImageView         imageViewBinding;
} VkVideoPictureResourceInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `codedOffset` is the offset in texels of the image subregion to use.
- `codedExtent` is the size in pixels of the coded image data.

- `baseArrayLayer` is the array layer of the image view specified in `imageViewBinding` to use as the video picture resource.
- `imageViewBinding` is an image view representing the video picture resource.

The image subresource referred to by such a structure is defined as the image array layer index specified in `baseArrayLayer` relative to the image subresource range the image view specified in `imageViewBinding` was created with.

The meaning of the `codedOffset` and `codedExtent` depends on the command and context the video picture resource is used in, as well as on the used `video profile` and corresponding codec-specific semantics, as described later.

A video picture resource is uniquely defined by the image subresource referred to by an instance of this structure, together with the `codedOffset` and `codedExtent` members that identify the image subregion within the image subresource referenced corresponding to the video picture resource according to the particular codec-specific semantics.

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. As a result, given an effective image subregion corresponding to a video picture resource, the actual image subregion accessed **may** be larger than that as it **may** include additional padding texels due to the picture access granularity. Any writes performed by video coding operations to such padding texels will result in undefined texel values.

Two video picture resources match if they refer to the same image subresource and they specify identical `codedOffset` and `codedExtent` values.

### Valid Usage

- VUID-VkVideoPictureResourceInfoKHR-baseArrayLayer-07175  
`baseArrayLayer` **must** be less than the `VkImageViewCreateInfo::subresourceRange.layerCount` specified when the image view `imageViewBinding` was created

### Valid Usage (Implicit)

- VUID-VkVideoPictureResourceInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR`
- VUID-VkVideoPictureResourceInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkVideoPictureResourceInfoKHR-imageViewBinding-parameter  
`imageViewBinding` **must** be a valid `VkImageView` handle

## 45.2. Decoded Picture Buffer

An integral part of video coding pipelines is the reconstruction of pictures from a compressed video bitstream. A *reconstructed picture* is a [video picture resource](#) resulting from this process.

Such reconstructed pictures **can** be used as *reference pictures* in subsequent video coding operations to provide predictions of the values of samples of subsequently decoded or encoded pictures. The correct use of such reconstructed pictures as reference pictures is driven by the video compression standard, the implementation, and the application-specific use cases.

The list of reference pictures used to provide such predictions within a single video coding operation is referred to as the list of *active reference pictures*.

The *decoded picture buffer (DPB)* is an indexed data structure that maintains the set of reference pictures available to be used in video coding operations. Individual indexed entries of the DPB are referred to as the *decoded picture buffer (DPB) slots*. The range of valid DPB slot indices is between zero and  $N-1$ , where  $N$  is the capacity of the DPB. Each DPB slot **can** refer to a reference picture containing a *video frame* or **can** refer to up to two reference pictures containing the top and/or bottom *fields* that, when both present, together represent a full *video frame*.

In Vulkan, the state and the backing store of the DPB is separated as follows:

- The state of individual DPB slots is maintained by [video session](#) objects.
- The backing store of DPB slots is provided by subregions of [VkImage](#) objects used as [video picture resources](#).

In addition, the implementation **may** also maintain opaque metadata associated with DPB slots, including:

- *Reference picture metadata* corresponding to the video picture resource associated with the DPB slot.

Such metadata **may** be stored by the implementation as part of the DPB slot state maintained by the video session, or as part of the video picture resource backing the DPB slot.

Any metadata stored in the video picture resources backing DPB slots are independent of the video session used to store it, hence such video picture resources **can** be shared with other video sessions. Correspondingly, any metadata that is dependent on the video session will always be stored as part of the DPB slot state maintained by that video session.

The responsibility of managing the DPB is split between the application and the implementation as follows:

- The application maintains the association between [DPB slot](#) indices and corresponding [video picture resources](#).
- The implementation maintains global and per-slot opaque [reference picture metadata](#).

In addition, the application is also responsible for managing the mapping between the codec-specific picture IDs and DPB slots, and any other codec-specific states unless otherwise specified.

### 45.2.1. DPB Slot States

At a given time, each DPB slot is either in *active* or *inactive* state. Initially, all DPB slots managed by a [video session](#) are in *inactive* state.

A DPB slot **can** be *activated* by using it as the target of picture reconstruction in a video coding operation with the reconstructed picture requested to be set up as a reference picture, according to the codec-specific semantics, changing its state to *active* and associating it with a *picture reference* to the [reconstructed pictures](#).

Some video coding standards allow multiple picture references to be associated with a single DPB slot. In this case the state of the individual picture references **can** be independently updated.

#### NOTE

As an example, H.264 decoding allows associating a separate top field and bottom field picture with the same DPB slot.

As part of reference picture setup, the implementation **may** also generate [reference picture metadata](#). Such reference picture metadata is specific to each picture reference associated with the DPB slot.

If such a video coding operation completes successfully, the activated DPB slot will have a *valid picture reference* and the [reconstructed picture](#) is associated with the DPB slot. This is true even if the DPB slot is used as the target of a picture reconstruction that only sets up a top field or bottom field reference picture and thus does not yet refer to a complete frame. However, if any data provided as input to such a video coding operation is not compliant with the video compression standard used, that video coding operation **may** complete unsuccessfully, in which case the activated DPB slot will have an *invalid picture reference*. This is true even if the DPB slot previously had a valid picture reference to a top field or bottom field reference picture, but the reconstruction of the other field corresponding to the DPB slot failed.

The application **can** use [queries](#) to get feedback about the outcome of video coding operations and use the resulting [VkQueryResultStatusKHR](#) value to determine whether the video coding operation completed successfully (result status is positive) or unsuccessfully (result status is negative).

Using a [reference picture](#) associated with a DPB slot that has an *invalid picture reference* as an [active reference picture](#) in subsequent video coding operations is legal, however, the contents of the outputs of such operations are undefined, and any DPB slots activated by such video coding operations will also have an *invalid picture reference*. This is true even if such video coding operations **may** otherwise complete successfully.

A DPB slot **can** also be *deactivated* by the application, changing its state to *inactive* and invalidating any picture references and [reference picture metadata](#) associated with the DPB slot.

If an already active DPB slot is used as the target of picture reconstruction in a video coding operation, but the decoded picture is not requested to be set up as a reference picture, according to the codec-specific semantics, no reference picture setup happens and the corresponding picture reference and [reference picture metadata](#) is invalidated within the DPB slot. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

If an already active DPB slot is used as the target of picture reconstruction when decoding a field picture that is not marked as reference, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then the DPB slot is deactivated.
- If the DPB slot is not currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the decoded picture is a bottom field picture, then the other field picture association of the DPB slot, if any, is not disturbed.
- If the DPB slot is currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is currently associated with a bottom field picture and the decoded picture is a bottom field picture, then that picture association is invalidated, without disturbing the other field picture association, if any. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

A DPB slot **can** be activated with a new frame even if it is already active. In this case all previous associations of the DPB slots with [reference pictures](#) are replaced with an association with the [reconstructed picture](#) used to activate it.

If an already active DPB slot is activated with a reconstructed field picture, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then that association is replaced with an association with the reconstructed field picture used to activate it.
- If the DPB slot is not currently associated with a top field picture and the DPB slot is activated with a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the DPB slot is activated with a bottom field picture, then the DPB slot is associated with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.
- If the DPB slot is currently associated with a top field picture and the DPB slot is activated with a new top field picture, or if the DPB slot is currently associated with a bottom field picture and the DPB slot is activated with a new bottom field picture, then that association is replaced with an association with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.

## 45.3. Video Profiles

The `VkVideoProfileInfoKHR` structure is defined as follows:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoCodecOperationFlagsKHR videoCodecOperation;
    VkVideoChromaSubsamplingFlagsKHR chromaSubsampling;
    VkVideoComponentBitDepthFlagsKHR lumaBitDepth;
    VkVideoComponentBitDepthFlagsKHR chromaBitDepth;
} VkVideoProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoCodecOperation` is a `VkVideoCodecOperationFlagBitsKHR` value specifying a video codec operation.
- `chromaSubsampling` is a bitmask of `VkVideoChromaSubsamplingFlagBitsKHR` specifying video chroma subsampling information.
- `lumaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video luma bit depth information.
- `chromaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video chroma bit depth information.

Video profiles are provided as input to video capability queries such as `vkGetPhysicalDeviceVideoCapabilitiesKHR` or `vkGetPhysicalDeviceVideoFormatPropertiesKHR`, as well as when creating resources to be used by video coding operations such as images, buffers, query pools, and video sessions.

The full description of a video profile is specified by an instance of this structure, and the codec-specific and auxiliary structures provided in its `pNext` chain.

When this structure is specified as an input parameter to `vkGetPhysicalDeviceVideoCapabilitiesKHR`, or through the `pProfiles` member of a `VkVideoProfileListInfoKHR` structure in the `pNext` chain of the input parameter of a query command such as `vkGetPhysicalDeviceVideoFormatPropertiesKHR` or `vkGetPhysicalDeviceImageFormatProperties2`, the following error codes indicate specific causes of the failure of the query operation:

- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR` specifies that the requested video picture layout (e.g. through the `pictureLayout` member of a `VkVideoDecodeH264ProfileInfoKHR` structure included in the `pNext` chain of `VkVideoProfileInfoKHR`) is not supported.
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR` specifies that a video profile operation specified by `videoCodecOperation` is not supported.
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR` specifies that video format parameters specified by `chromaSubsampling`, `lumaBitDepth`, or `chromaBitDepth` are not supported.
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR` specifies that the codec-specific parameters corresponding to the video codec operation are not supported.

## Valid Usage

- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07013  
`chromaSubsampling` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-07014  
`lumaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07015  
If `chromaSubsampling` is not `VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR`, then `chromaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07179  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07180  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10791  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeVP9ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-09256  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07181  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07182  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH265ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10262  
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeAV1ProfileInfoKHR` structure

## Valid Usage (Implicit)

- VUID-VkVideoProfileInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR`
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-parameter  
`videoCodecOperation` **must** be a valid `VkVideoCodecOperationFlagBitsKHR` value
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-parameter  
`chromaSubsampling` **must** be a valid combination of `VkVideoChromaSubsamplingFlagBitsKHR` values

- VUID-VkVideoProfileInfoKHR-lumaBitDepth-parameter  
`lumaBitDepth` **must** be a valid combination of `VkVideoComponentBitDepthFlagBitsKHR` values
- VUID-VkVideoProfileInfoKHR-chromaBitDepth-parameter  
If `chromaBitDepth` is not 0, `chromaBitDepth` **must** be a valid combination of `VkVideoComponentBitDepthFlagBitsKHR` values

## Structure Chaining

### Extends the structure

- `VkQueryPoolCreateInfo`

Possible values of `VkVideoProfileInfoKHR::videoCodecOperation`, specifying the type of video coding operation and video compression standard used by a video profile, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodecOperationFlagBitsKHR {
    VK_VIDEO_CODEC_OPERATION_NONE_KHR = 0,
    // Provided by VK_KHR_video_encode_h264
    VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR = 0x00010000,
    // Provided by VK_KHR_video_encode_h265
    VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR = 0x00020000,
    // Provided by VK_KHR_video_decode_h264
    VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_decode_h265
    VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_decode_av1
    VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_av1
    VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR = 0x00040000,
    // Provided by VK_KHR_video_decode_vp9
    VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR = 0x00000008,
} VkVideoCodecOperationFlagBitsKHR;
```

- `VK_VIDEO_CODEC_OPERATION_NONE_KHR` specifies that no video codec operations are supported.
- `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` specifies support for H.264 decode operations.
- `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` specifies support for H.265 decode operations.
- `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR` specifies support for VP9 decode operations.
- `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` specifies support for AV1 decode operations.

- [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) specifies support for [H.264](#) encode operations.
- [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) specifies support for [H.265](#) encode operations.
- [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_AV1\\_BIT\\_KHR](#) specifies support for [AV1](#) encode operations.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodecOperationFlagsKHR;
```

[VkVideoCodecOperationFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoCodecOperationFlagBitsKHR](#).

The video format chroma subsampling is defined with the following enums:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoChromaSubsamplingFlagBitsKHR {
    VK_VIDEO_CHROMA_SUBSAMPLING_INVALID_KHR = 0,
    VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR = 0x00000001,
    VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR = 0x00000002,
    VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR = 0x00000004,
    VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR = 0x00000008,
} VkVideoChromaSubsamplingFlagBitsKHR;
```

- [VK\\_VIDEO\\_CHROMA\\_SUBSAMPLING\\_MONOCHROME\\_BIT\\_KHR](#) specifies that the format is monochrome.
- [VK\\_VIDEO\\_CHROMA\\_SUBSAMPLING\\_420\\_BIT\\_KHR](#) specified that the format is 4:2:0 chroma subsampled, i.e. the two chroma components are sampled horizontally and vertically at half the sample rate of the luma component.
- [VK\\_VIDEO\\_CHROMA\\_SUBSAMPLING\\_422\\_BIT\\_KHR](#) - the format is 4:2:2 chroma subsampled, i.e. the two chroma components are sampled horizontally at half the sample rate of luma component.
- [VK\\_VIDEO\\_CHROMA\\_SUBSAMPLING\\_444\\_BIT\\_KHR](#) - the format is 4:4:4 chroma sampled, i.e. all three components of the  $Y'C_B C_R$  format are sampled at the same rate, thus there is no chroma subsampling.

Chroma subsampling is described in more detail in the [Chroma Reconstruction](#) section.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoChromaSubsamplingFlagsKHR;
```

[VkVideoChromaSubsamplingFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoChromaSubsamplingFlagBitsKHR](#).

Possible values for the video format component bit depth are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoComponentBitDepthFlagBitsKHR {
    VK_VIDEO_COMPONENT_BIT_DEPTH_INVALID_KHR = 0,
    VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR = 0x00000001,
    VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR = 0x00000004,
    VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR = 0x00000010,
} VkVideoComponentBitDepthFlagBitsKHR;
```

- [VK\\_VIDEO\\_COMPONENT\\_BIT\\_DEPTH\\_8\\_BIT\\_KHR](#) specifies a component bit depth of 8 bits.
- [VK\\_VIDEO\\_COMPONENT\\_BIT\\_DEPTH\\_10\\_BIT\\_KHR](#) specifies a component bit depth of 10 bits.
- [VK\\_VIDEO\\_COMPONENT\\_BIT\\_DEPTH\\_12\\_BIT\\_KHR](#) specifies a component bit depth of 12 bits.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoComponentBitDepthFlagsKHR;
```

[VkVideoComponentBitDepthFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoComponentBitDepthFlagBitsKHR](#).

Additional information about the video decode use case **can** be provided by adding a [VkVideoDecodeUsageInfoKHR](#) structure to the `pNext` chain of [VkVideoProfileInfoKHR](#).

The [VkVideoDecodeUsageInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeUsageInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoDecodeUsageFlagsKHR videoUsageHints;
} VkVideoDecodeUsageInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of [VkVideoDecodeUsageFlagBitsKHR](#) specifying hints about the intended use of the video decode profile.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeUsageInfoKHR-sType-sType  
`sType` **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_USAGE\\_INFO\\_KHR](#)
- VUID-VkVideoDecodeUsageInfoKHR-videoUsageHints-parameter  
If `videoUsageHints` is not 0, `videoUsageHints` **must** be a valid combination of [VkVideoDecodeUsageFlagBitsKHR](#) values

## Structure Chaining

### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

The following bits **can** be specified in [VkVideoDecodeUsageInfoKHR::videoUsageHints](#) as a hint about the video decode use case:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeUsageFlagBitsKHR {
    VK_VIDEO_DECODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR = 0x00000002,
    VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR = 0x00000004,
} VkVideoDecodeUsageFlagBitsKHR;
```

- [VK\\_VIDEO\\_DECODE\\_USAGE\\_TRANSCODING\\_BIT\\_KHR](#) specifies that video decoding is intended to be used in conjunction with video encoding to transcode a video bitstream with the same and/or different codecs.
- [VK\\_VIDEO\\_DECODE\\_USAGE\\_OFFLINE\\_BIT\\_KHR](#) specifies that video decoding is intended to be used to consume a local video bitstream.
- [VK\\_VIDEO\\_DECODE\\_USAGE\\_STREAMING\\_BIT\\_KHR](#) specifies that video decoding is intended to be used to consume a video bitstream received as a continuous flow over network.

#### NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeUsageFlagsKHR;
```

[VkVideoDecodeUsageFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoDecodeUsageFlagBitsKHR](#).

Additional information about the video encode use case **can** be provided by adding a [VkVideoEncodeUsageInfoKHR](#) structure to the [pNext](#) chain of [VkVideoProfileInfoKHR](#).

The [VkVideoEncodeUsageInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeUsageInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoEncodeUsageFlagsKHR videoUsageHints;
    VkVideoEncodeContentFlagsKHR videoContentHints;
    VkVideoEncodeTuningModeKHR tuningMode;
} VkVideoEncodeUsageInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **videoUsageHints** is a bitmask of [VkVideoEncodeUsageFlagBitsKHR](#) specifying hints about the intended use of the video encode profile.
- **videoContentHints** is a bitmask of [VkVideoEncodeContentFlagBitsKHR](#) specifying hints about the content to be encoded using the video encode profile.
- **tuningMode** is a [VkVideoEncodeTuningModeKHR](#) value specifying the tuning mode to use when encoding with the video profile.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeUsageInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_USAGE\\_INFO\\_KHR](#)
- VUID-VkVideoEncodeUsageInfoKHR-videoUsageHints-parameter  
If **videoUsageHints** is not **0**, **videoUsageHints** **must** be a valid combination of [VkVideoEncodeUsageFlagBitsKHR](#) values
- VUID-VkVideoEncodeUsageInfoKHR-videoContentHints-parameter  
If **videoContentHints** is not **0**, **videoContentHints** **must** be a valid combination of [VkVideoEncodeContentFlagBitsKHR](#) values
- VUID-VkVideoEncodeUsageInfoKHR-tuningMode-parameter  
If **tuningMode** is not **0**, **tuningMode** **must** be a valid [VkVideoEncodeTuningModeKHR](#) value

### Structure Chaining

#### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

The following bits **can** be specified in [VkVideoEncodeUsageInfoKHR::videoUsageHints](#) as a hint about the video encode use case:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeUsageFlagBitsKHR {
    VK_VIDEO_ENCODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR = 0x00000008,
} VkVideoEncodeUsageFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_USAGE\\_TRANSCODING\\_BIT\\_KHR](#) specifies that video encoding is intended to be used in conjunction with video decoding to transcode a video bitstream with the same and/or different codecs.
- [VK\\_VIDEO\\_ENCODE\\_USAGE\\_STREAMING\\_BIT\\_KHR](#) specifies that video encoding is intended to be used to produce a video bitstream that is expected to be sent as a continuous flow over network.
- [VK\\_VIDEO\\_ENCODE\\_USAGE\\_RECORDING\\_BIT\\_KHR](#) specifies that video encoding is intended to be used for real-time recording for offline consumption.
- [VK\\_VIDEO\\_ENCODE\\_USAGE\\_CONFERENCING\\_BIT\\_KHR](#) specifies that video encoding is intended to be used in a video conferencing scenario.

#### NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeUsageFlagsKHR;
```

[VkVideoEncodeUsageFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeUsageFlagBitsKHR](#).

The following bits **can** be specified in [VkVideoEncodeUsageInfoKHR::videoContentHints](#) as a hint about the encoded video content:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeContentFlagBitsKHR {
    VK_VIDEO_ENCODE_CONTENT_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR = 0x00000004,
} VkVideoEncodeContentFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_CONTENT\\_CAMERA\\_BIT\\_KHR](#) specifies that video encoding is intended to be used to encode camera content.

- [VK\\_VIDEO\\_ENCODE\\_CONTENT\\_DESKTOP\\_BIT\\_KHR](#) specifies that video encoding is intended to be used to encode desktop content.
- [VK\\_VIDEO\\_ENCODE\\_CONTENT\\_RENDERED\\_BIT\\_KHR](#) specified that video encoding is intended to be used to encode rendered (e.g. game) content.

#### NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular content type.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeContentFlagsKHR;
```

[VkVideoEncodeContentFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeContentFlagBitsKHR](#).

Possible video encode tuning mode values are as follows:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeTuningModeKHR {
    VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR = 1,
    VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR = 2,
    VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR = 3,
    VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR = 4,
} VkVideoEncodeTuningModeKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_TUNING\\_MODE\\_DEFAULT\\_KHR](#) specifies the default tuning mode.
- [VK\\_VIDEO\\_ENCODE\\_TUNING\\_MODE\\_HIGH\\_QUALITY\\_KHR](#) specifies that video encoding is tuned for high quality. When using this tuning mode, the implementation **may** compromise the latency of video encoding operations to improve quality.
- [VK\\_VIDEO\\_ENCODE\\_TUNING\\_MODE\\_LOW\\_LATENCY\\_KHR](#) specifies that video encoding is tuned for low latency. When using this tuning mode, the implementation **may** compromise quality to increase the performance and lower the latency of video encode operations.
- [VK\\_VIDEO\\_ENCODE\\_TUNING\\_MODE\\_ULTRA\\_LOW\\_LATENCY\\_KHR](#) specifies that video encoding is tuned for ultra-low latency. When using this tuning mode, the implementation **may** compromise quality to maximize the performance and minimize the latency of video encoding operations.
- [VK\\_VIDEO\\_ENCODE\\_TUNING\\_MODE\\_LOSSLESS\\_KHR](#) specifies that video encoding is tuned for lossless encoding. When using this tuning mode, video encode operations produce lossless output.

The [VkVideoProfileListInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileListInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             profileCount;
    const VkVideoProfileInfoKHR* pProfiles;
} VkVideoProfileListInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **profileCount** is the number of elements in the **pProfiles** array.
- **pProfiles** is a pointer to an array of [VkVideoProfileInfoKHR](#) structures.

#### NOTE

Video transcoding is an example of a use case that necessitates the specification of multiple profiles in various contexts.

When the application provides a video decode profile and one or more video encode profiles in the profile list, the implementation ensures that any capabilities returned or resources created are suitable for the video transcoding use cases without the need for manual data transformations.

### Valid Usage

- VUID-VkVideoProfileListInfoKHR-pProfiles-06813  
**pProfiles** **must** not contain more than one element whose **videoCodecOperation** member specifies a decode operation

### Valid Usage (Implicit)

- VUID-VkVideoProfileListInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_PROFILE\\_LIST\\_INFO\\_KHR](#)
- VUID-VkVideoProfileListInfoKHR-pProfiles-parameter  
If **profileCount** is not 0, **pProfiles** **must** be a valid pointer to an array of **profileCount** valid [VkVideoProfileInfoKHR](#) structures

### Structure Chaining

#### Extends the structures

- [VkBufferCreateInfo](#)
- [VkImageCreateInfo](#)
- [VkPhysicalDeviceImageFormatInfo2](#)
- [VkPhysicalDeviceVideoFormatInfoKHR](#)

## 45.4. Video Capabilities

### 45.4.1. Video Coding Capabilities

To query video coding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoCapabilitiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkVideoProfileInfoKHR* pVideoProfile,
    VkVideoCapabilitiesKHR*    pCapabilities);
```

- **physicalDevice** is the physical device from which to query the video decode or encode capabilities.
- **pVideoProfile** is a pointer to a [VkVideoProfileInfoKHR](#) structure.
- **pCapabilities** is a pointer to a [VkVideoCapabilitiesKHR](#) structure in which the capabilities are returned.

If the [video profile](#) described by **pVideoProfile** is supported by the implementation, then this command returns [VK\\_SUCCESS](#) and **pCapabilities** is filled with the capabilities supported with the specified video profile. Otherwise, one of the [video-profile-specific error codes](#) are returned.

#### Valid Usage

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07183  
If **pVideoProfile->videoCodecOperation** specifies a decode operation, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07184  
If **pVideoProfile->videoCodecOperation** is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H264\\_BIT\\_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH264CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07185  
If **pVideoProfile->videoCodecOperation** is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H265\\_BIT\\_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH265CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10792  
If **pVideoProfile->videoCodecOperation** is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_VP9\\_BIT\\_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeVP9CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-09257  
If **pVideoProfile->videoCodecOperation** is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_AV1\\_BIT\\_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeAV1CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07186

If `pVideoProfile->videoCodecOperation` specifies an encode operation, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeCapabilitiesKHR` structure

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07187  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeH264CapabilitiesKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07188  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeH265CapabilitiesKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10263  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeAV1CapabilitiesKHR` structure

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-parameter `pVideoProfile` **must** be a valid pointer to a valid `VkVideoProfileInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pCapabilities-parameter `pCapabilities` **must** be a valid pointer to a `VkVideoCapabilitiesKHR` structure

### Return Codes

#### Success

- `VK_SUCCESS`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`

The `VkVideoCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkVideoCapabilityFlagsKHR  flags;
    VkDeviceSize          minBitstreamBufferOffsetAlignment;
    VkDeviceSize          minBitstreamBufferSizeAlignment;
    VkExtent2D            pictureAccessGranularity;
    VkExtent2D            minCodedExtent;
    VkExtent2D            maxCodedExtent;
    uint32_t              maxDpbSlots;
    uint32_t              maxActiveReferencePictures;
    VkExtensionProperties  stdHeaderVersion;
} VkVideoCapabilitiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of **VkVideoCapabilityFlagBitsKHR** specifying capability flags.
- **minBitstreamBufferOffsetAlignment** is the minimum alignment for bitstream buffer offsets.
- **minBitstreamBufferSizeAlignment** is the minimum alignment for bitstream buffer range sizes.
- **pictureAccessGranularity** is the granularity at which image access to video picture resources happen.
- **minCodedExtent** is the minimum width and height of the coded frames.
- **maxCodedExtent** is the maximum width and height of the coded frames.
- **maxDpbSlots** is the maximum number of **DPB slots** supported by a single video session.
- **maxActiveReferencePictures** is the maximum number of **active reference pictures** a single video coding operation **can** use.
- **stdHeaderVersion** is a **VkExtensionProperties** structure reporting the Video Std header name and version supported for the video profile.

#### NOTE

It is common for video compression standards to allow using all reference pictures associated with active DPB slots as active reference pictures, hence for video decode profiles the values returned in **maxDpbSlots** and **maxActiveReferencePictures** are often equal. Similarly, in case of video decode profiles supporting field pictures the value of **maxActiveReferencePictures** often equals **maxDpbSlots** × 2.

### Valid Usage (Implicit)

- VUID-VkVideoCapabilitiesKHR-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_VIDEO\_CAPABILITIES\_KHR**
- VUID-VkVideoCapabilitiesKHR-pNext-pNext  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of **VkVideoDecodeAV1CapabilitiesKHR**,

|                                                  |                                   |
|--------------------------------------------------|-----------------------------------|
| VkVideoDecodeCapabilitiesKHR,                    | VkVideoDecodeH264CapabilitiesKHR, |
| VkVideoDecodeH265CapabilitiesKHR,                | VkVideoDecodeVP9CapabilitiesKHR,  |
| VkVideoEncodeAV1CapabilitiesKHR,                 |                                   |
| VkVideoEncodeAV1QuantizationMapCapabilitiesKHR,  | VkVideoEncodeCapabilitiesKHR,     |
| VkVideoEncodeFeedback2CapabilitiesKHR,           | VkVideoEncodeH264CapabilitiesKHR, |
| VkVideoEncodeH264QuantizationMapCapabilitiesKHR, |                                   |
| VkVideoEncodeH265CapabilitiesKHR,                |                                   |
| VkVideoEncodeH265QuantizationMapCapabilitiesKHR, |                                   |
| VkVideoEncodeIntraRefreshCapabilitiesKHR,        |                                   |
| VkVideoEncodeQuantizationMapCapabilitiesKHR      | or                                |

- VUID-VkVideoCapabilitiesKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique

Bits which **can** be set in `VkVideoCapabilitiesKHR::flags` are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCapabilityFlagBitsKHR {
    VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR = 0x00000002,
} VkVideoCapabilityFlagBitsKHR;
```

- `VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR` specifies that video sessions support producing and consuming protected content.
- `VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR` indicates that the **video picture resources** associated with the **DPB slots** of a video session **can** be backed by separate **VkImage** objects. If this capability flag is not present, then all DPB slots of a video session **must** be associated with video picture resources backed by the same **VkImage** object (e.g. using different layers of the same image).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCapabilityFlagsKHR;
```

`VkVideoCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoCapabilityFlagBitsKHR`.

#### 45.4.2. Video Format Capabilities

To enumerate the supported video formats and corresponding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoFormatPropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceVideoFormatInfoKHR* pVideoFormatInfo,
    uint32_t*                 pVideoFormatPropertyCount,
    VkVideoFormatPropertiesKHR* pVideoFormatProperties);
```

- `physicalDevice` is the physical device from which to query the video format properties.
- `pVideoFormatInfo` is a pointer to a `VkPhysicalDeviceVideoFormatInfoKHR` structure specifying the usage and video profiles for which supported image formats and capabilities are returned.
- `pVideoFormatPropertyCount` is a pointer to an integer related to the number of video format properties available or queried, as described below.
- `pVideoFormatProperties` is a pointer to an array of `VkVideoFormatPropertiesKHR` structures in which supported image formats and capabilities are returned.

If `pVideoFormatProperties` is `NULL`, then the number of video format properties supported for the given `physicalDevice` is returned in `pVideoFormatPropertyCount`. Otherwise, `pVideoFormatPropertyCount` **must** point to a variable set by the application to the number of elements in the `pVideoFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pVideoFormatProperties`. If the value of `pVideoFormatPropertyCount` is less than the number of video format properties supported, at most `pVideoFormatPropertyCount` values will be written to `pVideoFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

Video format properties are always queried with respect to a specific set of video profiles. These are specified by chaining the `VkVideoProfileListInfoKHR` structure to `pVideoFormatInfo`.

For most use cases, the images are used by a single video session and a single video profile is provided. For a use case such as video transcoding, where a decode session output image **can** be used as encode input in one or more encode sessions, multiple video profiles corresponding to the video sessions that will share the image **must** be provided.

If any of the `video profiles` specified via `VkVideoProfileListInfoKHR::pProfiles` are not supported, then this command returns one of the `video-profile-specific error codes`. Furthermore, if `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` includes any image usage flags not supported by the specified video profiles, then this command returns `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

If the decode capability flags include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, then querying video format properties that support both decode DPB and output usage **can** be done by including both `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` and `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` in `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage`. However, even in this case, querying video format properties with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` including only `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` will also return formats supporting both.

**NOTE**

This enables application to be able to query all formats supporting [VK\\_IMAGE\\_USAGE\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#) and/or [VK\\_IMAGE\\_USAGE\\_VIDEO\\_DECODE\\_DST\\_BIT\\_KHR](#) by just including one of the flags, respectively, regardless of whether the implementation supports [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_COINCIDE\\_BIT\\_KHR](#), [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_DISTINCT\\_BIT\\_KHR](#), or both. This makes enumerating decode DPB and output formats simpler and unified.

The [imageUsage](#) member of the [VkPhysicalDeviceVideoFormatInfoKHR](#) structure specifies the expected video usage flags that the returned video formats **must** support. Correspondingly, the [imageUsageFlags](#) member of each [VkVideoFormatPropertiesKHR](#) structure returned will contain at least the same set of image usage flags.

If the [pNext](#) chain includes a [VkImageUsageFlags2CreateInfoKHR](#) structure, [usage](#) from that structure specifies the expected video usage flags instead of [VkPhysicalDeviceVideoFormatInfoKHR::imageUsage](#).

If the implementation supports using images of a particular format in operations other than video decode/encode then the [imageUsageFlags](#) member of the corresponding [VkVideoFormatPropertiesKHR](#) structure returned will include additional image usage flags indicating that.

**NOTE**

For most use cases, only decode or encode related usage flags are going to be specified. For a use case such as transcode, if the image were to be shared between decode and encode session(s), then both decode and encode related usage flags **can** be set.

Multiple [VkVideoFormatPropertiesKHR](#) entries **may** be returned with the same [format](#) member with different [componentMapping](#), [imageType](#), or [imageTiling](#) values, as described later.

If [VkPhysicalDeviceVideoFormatInfoKHR::imageUsage](#) includes [VK\\_IMAGE\\_USAGE\\_VIDEO\\_ENCODE\\_QUANTIZATION\\_DELTA\\_MAP\\_BIT\\_KHR](#) or [VK\\_IMAGE\\_USAGE\\_VIDEO\\_ENCODE\\_EMPHASIS\\_MAP\\_BIT\\_KHR](#), multiple [VkVideoFormatPropertiesKHR](#) entries **may** be returned with the same [format](#), [componentMapping](#), [imageType](#), and [imageTiling](#) member values, but different [quantizationMapTexelSize](#) returned in the [VkVideoFormatQuantizationMapPropertiesKHR](#) structure, if one is included in the [VkVideoFormatPropertiesKHR::pNext](#) chain, when the queried [quantization map type](#) supports multiple distinct [quantization map texel sizes](#).

In addition, a different set of [VkVideoFormatPropertiesKHR](#) entries **may** be returned depending on the [imageUsage](#) member of the [VkPhysicalDeviceVideoFormatInfoKHR](#) structure, even for the same set of video profiles, for example, based on whether encode input, encode DPB, decode output, and/or decode DPB usage is requested.

The application **can** select the parameters returned in the [VkVideoFormatPropertiesKHR](#) entries and use compatible parameters when creating the input, output, and DPB images. The implementation will report all image creation and usage flags that are valid for images used with the requested video profiles but applications **should** create images only with those that are necessary for the

particular use case.

Before creating an image, the application **can** obtain the complete set of supported image format features by calling `vkGetPhysicalDeviceImageFormatProperties2` using parameters derived from the members of one of the reported `VkVideoFormatPropertiesKHR` entries and adding the same `VkVideoProfileListInfoKHR` structure to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

The following applies to all `VkVideoFormatPropertiesKHR` entries returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR`:

- `vkGetPhysicalDeviceFormatProperties2` **must** succeed when called with `VkVideoFormatPropertiesKHR::format`
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_OPTIMAL`, then the `optimalTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#) section.
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_LINEAR`, then the `linearTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#) section.
- `vkGetPhysicalDeviceImageFormatProperties2` **must** succeed when called with a `VkPhysicalDeviceImageFormatInfo2` structure containing the following information:
  - The `pNext` chain including the same `VkVideoProfileListInfoKHR` structure used to call `vkGetPhysicalDeviceVideoFormatPropertiesKHR`.
  - `format` set to the value of `VkVideoFormatPropertiesKHR::format`.
  - `type` set to the value of `VkVideoFormatPropertiesKHR::imageType`.
  - `tiling` set to the value of `VkVideoFormatPropertiesKHR::imageTiling`.
  - `usage` set to the value of `VkVideoFormatPropertiesKHR::imageUsageFlags`.
  - `flags` set to the value of `VkVideoFormatPropertiesKHR::imageCreateFlags`.

The `componentMapping` member of `VkVideoFormatPropertiesKHR` defines the ordering of the Y'C<sub>B</sub>C<sub>R</sub> color channels from the perspective of the video codec operations specified in `VkVideoProfileListInfoKHR`. For example, if the implementation produces video decode output with the format `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` where the blue and red chrominance channels are swapped then the `componentMapping` member of the corresponding `VkVideoFormatPropertiesKHR` structure will have the following member values:

```
components.r = VK_COMPONENT_SWIZZLE_B;           // Cb component
components.g = VK_COMPONENT_SWIZZLE_IDENTITY;    // Y component
components.b = VK_COMPONENT_SWIZZLE_R;           // Cr component
components.a = VK_COMPONENT_SWIZZLE_IDENTITY;    // unused, defaults to 1.0
```

## Valid Usage

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-06812  
The `pNext` chain of `pVideoFormatInfo` **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0

## Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatInfo-parameter `pVideoFormatInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceVideoFormatInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatPropertyCount-parameter `pVideoFormatPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatProperties-parameter  
If the value referenced by `pVideoFormatPropertyCount` is not 0, and `pVideoFormatProperties` is not `NULL`, `pVideoFormatProperties` **must** be a valid pointer to an array of `pVideoFormatPropertyCount` `VkVideoFormatPropertiesKHR` structures

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceVideoFormatInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkPhysicalDeviceVideoFormatInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  imageUsage;
} VkPhysicalDeviceVideoFormatInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageUsage** is a bitmask of [VkImageUsageFlagBits](#) specifying the intended usage of the video images.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_FORMAT\\_INFO\\_KHR](#)
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-pNext-pNext  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkImageUsageFlags2CreateInfoKHR](#) or [VkVideoProfileListInfoKHR](#)
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-parameter  
**imageUsage** **must** be a valid combination of [VkImageUsageFlagBits](#) values

The [VkVideoFormatPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoFormatPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            format;
    VkComponentMapping  componentMapping;
    VkImageCreateFlags  imageCreateFlags;
    VkImageType         imageType;
    VkImageTiling       imageTiling;
    VkImageUsageFlags  imageUsageFlags;
} VkVideoFormatPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is a [VkFormat](#) that specifies the format that **can** be used with the specified video profiles and image usages.

- `componentMapping` defines the color channel order used for the format. `format` along with `componentMapping` describe how the color channels are ordered when producing video decoder output or are expected to be ordered in video encoder input, when applicable. If the `format` reported does not require component swizzling then all members of `componentMapping` will be set to `VK_COMPONENT_SWIZZLE_IDENTITY`.
- `imageCreateFlags` is a bitmask of `VkImageCreateFlagBits` specifying the supported image creation flags for the format.
- `imageType` is a `VkImageType` that specifies the image type the format **can** be used with.
- `imageTiling` is a `VkImageTiling` that specifies the image tiling the format **can** be used with.
- `imageUsageFlags` is a bitmask of `VkImageUsageFlagBits` specifying the supported image usage flags for the format.

Only create flags representable in `VkImageCreateFlagBits` are returned in `imageCreateFlags`. If the `pNext` chain includes a `VkImageCreateFlags2CreateInfoKHR` structure, all create flags are returned in `VkImageCreateFlags2CreateInfoKHR::flags`.

Only usage flags representable in `VkImageUsageFlagBits` are returned in `imageUsageFlags`. If the `pNext` chain includes a `VkImageUsageFlags2CreateInfoKHR` structure, all usage flags are returned in `VkImageUsageFlags2CreateInfoKHR::usage`.

### Valid Usage (Implicit)

- VUID-VkVideoFormatPropertiesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR`
- VUID-VkVideoFormatPropertiesKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkImageCreateFlags2CreateInfoKHR`, `VkImageUsageFlags2CreateInfoKHR`, `VkVideoFormatAV1QuantizationMapPropertiesKHR`, `VkVideoFormatH265QuantizationMapPropertiesKHR`, or `VkVideoFormatQuantizationMapPropertiesKHR`
- VUID-VkVideoFormatPropertiesKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

The *list of supported video format properties* for a set of image usage flags with respect to a `video profile` is defined as the list of `VkVideoFormatPropertiesKHR` structures and any structures included in its `pNext` chain, obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `VkImageUsageFlags` in question and the `VkPhysicalDeviceVideoFormatInfoKHR::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing a single array element specifying the `VkVideoProfileInfoKHR` structure chain describing the video profile in question.

## 45.5. Video Sessions

Video sessions are objects that represent and maintain the state needed to perform video decode or encode operations using a specific video profile.

In case of video encode profiles this includes the current [rate control](#) configuration and the currently set [video encode quality level](#).

Video sessions are represented by `VkVideoSessionKHR` handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionKHR)
```

### 45.5.1. Creating a Video Session

To create a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionKHR(
    VkDevice                                device,
    const VkVideoSessionCreateInfoKHR*      pCreateInfo,
    const VkAllocationCallbacks*           pAllocator,
    VkVideoSessionKHR*                      pVideoSession);
```

- `device` is the logical device that creates the video session.
- `pCreateInfo` is a pointer to a `VkVideoSessionCreateInfoKHR` structure containing parameters to be used to create the video session.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pVideoSession` is a pointer to a `VkVideoSessionKHR` handle in which the resulting video session object is returned.

The resulting video session object is said to be created with the video codec operation specified in `pCreateInfo->pVideoProfile->videoCodecOperation`.

The name and version of the codec-specific Video Std header to be used with the video session is specified by the `VkExtensionProperties` structure pointed to by `pCreateInfo->pStdHeaderVersion`. If a non-existent or unsupported Video Std header version is specified in `pCreateInfo->pStdHeaderVersion->specVersion`, then this command returns `VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR`.

Video session objects are created in *uninitialized* state. In order to transition the video session into *initial* state, the application **must** issue a `vkCmdControlVideoCodingKHR` command with `VkVideoCodingControlInfoKHR::flags` including `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR`.

Video session objects also maintain the [state](#) of the DPB. The number of DPB slots usable with the created video session is specified in `pCreateInfo->maxDpbSlots`, and each slot is initially in the [inactive state](#).

Each [DPB slot](#) maintained by the created video session **can** refer to a [reference picture](#) representing a video frame.

In addition, if the `videoCodecOperation` member of the `VkVideoProfileInfoKHR` structure pointed to

by `pCreateInfo->pVideoProfile` is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pictureLayout` member of the `VkVideoDecodeH264ProfileInfoKHR` structure provided in the `VkVideoProfileInfoKHR::pNext` chain is not `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR`, then the created video session supports *interlaced* frames and each DPB slot maintained by the created video session **can** instead refer to separate top field and bottom field *reference pictures* that together **can** represent a full video frame. In this case, it is up to the application, driven by the video content, whether it associates any individual DPB slot with separate top and/or bottom field pictures or a single picture representing a full frame.

The created video session **can** be used to perform video coding operations using video frames up to the maximum size specified in `pCreateInfo->maxCodedExtent`. The minimum frame size allowed is implicitly derived from `VkVideoCapabilitiesKHR::minCodedExtent`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pCreateInfo->pVideoProfile`. Accordingly, the created video session is said to be created with a `minCodedExtent` equal to that.

In case of video session objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

#### NOTE

Applications **should** not rely on the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

### Valid Usage (Implicit)

- VUID-vkCreateVideoSessionKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateVideoSessionKHR-pCreateInfo-parameter  
`pCreateInfo` **must** be a valid pointer to a valid `VkVideoSessionCreateInfoKHR` structure
- VUID-vkCreateVideoSessionKHR-pAllocator-parameter  
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateVideoSessionKHR-pVideoSession-parameter  
`pVideoSession` **must** be a valid pointer to a `VkVideoSessionKHR` handle
- VUID-vkCreateVideoSessionKHR-device-queuecount  
The device **must** have been created with at least `1` queue

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_INITIALIZATION\\_FAILED](#)
- [VK\\_ERROR\\_INVALID\\_VIDEO\\_STD\\_PARAMETERS\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)
- [VK\\_ERROR\\_VIDEO\\_STD\\_VERSION\\_NOT\\_SUPPORTED\\_KHR](#)

The [VkVideoSessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 queueFamilyIndex;
    VkVideoSessionCreateFlagsKHR flags;
    const VkVideoProfileInfoKHR* pVideoProfile;
    VkFormat                 pictureFormat;
    VkExtent2D               maxCodedExtent;
    VkFormat                 referencePictureFormat;
    uint32_t                 maxDpbSlots;
    uint32_t                 maxActiveReferencePictures;
    const VkExtensionProperties* pStdHeaderVersion;
} VkVideoSessionCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` is the index of the queue family the created video session will be used with.
- `flags` is a bitmask of [VkVideoSessionCreateFlagBitsKHR](#) specifying creation flags.
- `pVideoProfile` is a pointer to a [VkVideoProfileInfoKHR](#) structure specifying the video profile the created video session will be used with.
- `pictureFormat` is the image format the created video session will be used with. If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` is the image format of [decode output pictures](#) usable with the created video session. If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` is the image format of [encode input pictures](#) usable with the created video session.

- `maxCodedExtent` is the maximum width and height of the coded frames the created video session will be used with.
- `referencePictureFormat` is the image format of `reference pictures` stored in the `DPB` the created video session will be used with.
- `maxDpbSlots` is the maximum number of `DPB Slots` that **can** be used with the created video session.
- `maxActiveReferencePictures` is the maximum number of `active reference pictures` that **can** be used in a single video coding operation using the created video session.
- `pStdHeaderVersion` is a pointer to a `VkExtensionProperties` structure requesting the Video Std header version to use for the `videoCodecOperation` specified in `pVideoProfile`.

## Valid Usage

- VUID-VkVideoSessionCreateInfoKHR-protectedMemory-07189  
If the `protectedMemory` feature is not enabled or if `VkVideoCapabilitiesKHR::flags` does not include `VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR`
- VUID-VkVideoSessionCreateInfoKHR-flags-08371  
If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then `videoMaintenance1` **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10398  
If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, then `videoMaintenance2` **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10399  
If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, then `pVideoProfile->videoCodecOperation` **must** specify a decode operation
- VUID-VkVideoSessionCreateInfoKHR-flags-10264  
If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`, then the `videoEncodeQuantizationMap` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-flags-10265  
If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`, then `pVideoProfile->videoCodecOperation` **must** specify an encode operation
- VUID-VkVideoSessionCreateInfoKHR-flags-10266  
If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`, then it **must** not also include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`

- VUID-VkVideoSessionCreateInfoKHR-flags-10267  
If `VkVideoEncodeCapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`
- VUID-VkVideoSessionCreateInfoKHR-flags-10268  
If `VkVideoEncodeCapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-11759  
`pVideoProfile->videoCodecOperation` **must** be supported by the queue family index specified in `queueFamilyIndex`, as reported in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-04845  
`pVideoProfile` **must** be a `supported video profile`
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04847  
`maxDpbSlots` **must** be less than or equal to `VkVideoCapabilitiesKHR::maxDpbSlots`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxActiveReferencePictures-04849  
`maxActiveReferencePictures` **must** be less than or equal to `VkVideoCapabilitiesKHR::maxActiveReferencePictures`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04850  
If either `maxDpbSlots` or `maxActiveReferencePictures` is 0, then both **must** be 0
- VUID-VkVideoSessionCreateInfoKHR-maxCodedExtent-04851  
`maxCodedExtent` **must** be between `VkVideoCapabilitiesKHR::minCodedExtent` and `VkVideoCapabilitiesKHR::maxCodedExtent`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-04852  
If `pVideoProfile->videoCodecOperation` specifies a decode operation and `maxActiveReferencePictures` is greater than 0, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-06814  
If `pVideoProfile->videoCodecOperation` specifies an encode operation and `maxActiveReferencePictures` is greater than 0, then `referencePictureFormat` **must** be one of

the supported decode DPB formats, as returned by then `referencePictureFormat` **must** be one of the supported encode DPB formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04853

If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` **must** be one of the supported decode output formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04854

If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` **must** be one of the supported encode input formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10835

If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure, and its `intraRefreshMode` member is not `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`, then the `videoEncodeIntraRefresh` feature **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10836

If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure, and its `intraRefreshMode` member is not `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`, then `intraRefreshMode` **must** specify one of the bits included in `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07190

`pStdHeaderVersion->extensionName` **must** match `VkVideoCapabilitiesKHR::stdHeaderVersion.extensionName`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07191

`pStdHeaderVersion->specVersion` **must** be less than or equal to `VkVideoCapabilitiesKHR::stdHeaderVersion.specVersion`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10793  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `videoDecodeVP9` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08251  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of this structure includes a `VkVideoEncodeH264SessionCreateInfoKHR` structure, then its `maxLevelIdc` member **must** be less than or equal to `VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08252  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of this structure includes a `VkVideoEncodeH265SessionCreateInfoKHR` structure, then its `maxLevelIdc` member **must** be less than or equal to `VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10269  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `videoEncodeAV1` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10270  
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pNext` chain of this structure includes a `VkVideoEncodeAV1SessionCreateInfoKHR` structure, then its `maxLevel` member **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxLevel`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified in `pVideoProfile`

### Valid Usage (Implicit)

- VUID-VkVideoSessionCreateInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR`
- VUID-VkVideoSessionCreateInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1SessionCreateInfoKHR`, `VkVideoEncodeH264SessionCreateInfoKHR`, `VkVideoEncodeH265SessionCreateInfoKHR`, or `VkVideoEncodeSessionIntraRefreshCreateInfoKHR`
- VUID-VkVideoSessionCreateInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoSessionCreateInfoKHR-flags-parameter  
If `flags` is not 0, `flags` **must** be a valid combination of `VkVideoSessionCreateFlagBitsKHR` values

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-parameter  
**pVideoProfile** **must** be a valid pointer to a valid [VkVideoProfileInfoKHR](#) structure
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-parameter  
**pictureFormat** **must** be a valid [VkFormat](#) value
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-parameter  
**referencePictureFormat** **must** be a valid [VkFormat](#) value
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-parameter  
**pStdHeaderVersion** **must** be a valid pointer to a valid [VkExtensionProperties](#) structure

Bits which **can** be set in [VkVideoSessionCreateInfoKHR::flags](#) are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoSessionCreateFlagBitsKHR {
    VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_maintenance1
    VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000008,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR = 0x00000010,
    // Provided by VK_KHR_video_decode_queue with VK_KHR_video_maintenance2
    VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR = 0x00000020,
} VkVideoSessionCreateFlagBitsKHR;
```

- [VK\\_VIDEO\\_SESSION\\_CREATE\\_PROTECTED\\_CONTENT\\_BIT\\_KHR](#) specifies that the video session uses protected video content.
- [VK\\_VIDEO\\_SESSION\\_CREATE\\_ALLOW\\_ENCODE\\_PARAMETER\\_OPTIMIZATIONS\\_BIT\\_KHR](#) specifies that the implementation is allowed to [override](#) video session parameters and other codec-specific encoding parameters to optimize video encode operations based on the use case information specified in the [video profile](#) and the used [video encode quality level](#).

#### NOTE

Not specifying [VK\\_VIDEO\\_SESSION\\_CREATE\\_ALLOW\\_ENCODE\\_PARAMETER\\_OPTIMIZATIONS\\_BIT\\_KHR](#) does not guarantee that the implementation will not do any codec-specific parameter overrides, as certain overrides are necessary for the correct operation of the video encoder implementation due to limitations to the available encoding tools on that implementation. This flag, however, enables the implementation to apply further optimizing overrides.

- [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#) specifies that queries within video coding scopes using the created video session are [executed inline](#) with video coding operations.
- [VK\\_VIDEO\\_SESSION\\_CREATE\\_ALLOW\\_ENCODE\\_QUANTIZATION\\_DELTA\\_MAP\\_BIT\\_KHR](#) specifies that the video session **can** be used to encode pictures with [quantization delta maps](#).

- [VK\\_VIDEO\\_SESSION\\_CREATE\\_ALLOW\\_ENCODE\\_EMPHASIS\\_MAP\\_BIT\\_KHR](#) specifies that the video session **can** be used to encode pictures with [emphasis maps](#).
- [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_SESSION\\_PARAMETERS\\_BIT\\_KHR](#) specifies that the application **can** specify video session parameters inline with video decode operations instead of sourcing them from the bound [video session parameters](#) object.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionCreateFlagsKHR;
```

[VkVideoSessionCreateFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoSessionCreateFlagBitsKHR](#).

## 45.5.2. Destroying a Video Session

To destroy a video session, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    const VkAllocationCallbacks* pAllocator);
```

- [device](#) is the logical device that destroys the video session.
- [videoSession](#) is the video session to destroy.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.

### Valid Usage

- VUID-vkDestroyVideoSessionKHR-videoSession-07192  
All submitted commands that refer to [videoSession](#) **must** have completed execution
- VUID-vkDestroyVideoSessionKHR-videoSession-07193  
If [VkAllocationCallbacks](#) were provided when [videoSession](#) was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionKHR-videoSession-07194  
If no [VkAllocationCallbacks](#) were provided when [videoSession](#) was created, [pAllocator](#) **must** be [NULL](#)

### Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionKHR-device-parameter  
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyVideoSessionKHR-videoSession-parameter  
If [videoSession](#) is not [VK\\_NULL\\_HANDLE](#), [videoSession](#) **must** be a valid

[VkVideoSessionKHR](#) handle

- VUID-vkDestroyVideoSessionKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- VUID-vkDestroyVideoSessionKHR-videoSession-parent

If `videoSession` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

## Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

### 45.5.3. Video Session Memory Association

After creating a video session object, and before the object **can** be used to record video coding operations into command buffers using it, the application **must** allocate and bind device memory to the video session. Device memory is allocated separately (see [Device Memory](#)) and then associated with the video session.

Video sessions **may** have multiple memory bindings identified by unique unsigned integer values. Appropriate device memory **must** be bound to each such memory binding before using the video session to record command buffer commands with it.

To determine the memory requirements for a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetVideoSessionMemoryRequirementsKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    uint32_t*               pMemoryRequirementsCount,
    VkVideoSessionMemoryRequirementsKHR* pMemoryRequirements);
```

- `device` is the logical device that owns the video session.
- `videoSession` is the video session to query.
- `pMemoryRequirementsCount` is a pointer to an integer related to the number of memory binding requirements available or queried, as described below.
- `pMemoryRequirements` is `NULL` or a pointer to an array of [VkVideoSessionMemoryRequirementsKHR](#) structures in which the memory binding requirements of the video session are returned.

If `pMemoryRequirements` is `NULL`, then the number of memory bindings required for the video session is returned in `pMemoryRequirementsCount`. Otherwise, `pMemoryRequirementsCount` **must** point to a variable set by the application to the number of elements in the `pMemoryRequirements` array, and on return the variable is overwritten with the number of memory binding requirements actually

written to `pMemoryRequirements`. If `pMemoryRequirementsCount` is less than the number of memory bindings required for the video session, then at most `pMemoryRequirementsCount` elements will be written to `pMemoryRequirements`, and `VK_INCOMPLETE` will be returned, instead of `VK_SUCCESS`, to indicate that not all required memory binding requirements were returned.

### Valid Usage (Implicit)

- VUID-vkGetVideoSessionMemoryRequirementsKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parameter `videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirementsCount-parameter `pMemoryRequirementsCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirements-parameter  
If the value referenced by `pMemoryRequirementsCount` is not 0, and `pMemoryRequirements` is not `NULL`, `pMemoryRequirements` **must** be a valid pointer to an array of `pMemoryRequirementsCount` `VkVideoSessionMemoryRequirementsKHR` structures
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parent `videoSession` **must** have been created, allocated, or retrieved from `device`

### Return Codes

#### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkVideoSessionMemoryRequirementsKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionMemoryRequirementsKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryBindIndex;
    VkMemoryRequirements memoryRequirements;
} VkVideoSessionMemoryRequirementsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `memoryBindIndex` is the index of the memory binding.
- `memoryRequirements` is a `VkMemoryRequirements` structure in which the requested memory binding requirements for the binding index specified by `memoryBindIndex` are returned.

### Valid Usage (Implicit)

- VUID-VkVideoSessionMemoryRequirementsKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR`
- VUID-VkVideoSessionMemoryRequirementsKHR-pNext-pNext  
`pNext` **must** be `NULL`

To attach memory to a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkBindVideoSessionMemoryKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    uint32_t                bindSessionMemoryInfoCount,
    const VkBindVideoSessionMemoryInfoKHR* pBindSessionMemoryInfos);
```

- `device` is the logical device that owns the video session.
- `videoSession` is the video session to be bound with device memory.
- `bindSessionMemoryInfoCount` is the number of elements in `pBindSessionMemoryInfos`.
- `pBindSessionMemoryInfos` is a pointer to an array of `bindSessionMemoryInfoCount` `VkBindVideoSessionMemoryInfoKHR` structures specifying memory regions to be bound to specific memory bindings of the video session.

The valid usage statements below refer to the `VkMemoryRequirements` structure corresponding to a specific element of `pBindSessionMemoryInfos`, which is defined as follows:

- If the `memoryBindIndex` member of the element of `pBindSessionMemoryInfos` in question matches the `memoryBindIndex` member of one of the elements returned in `pMemoryRequirements` when `vkGetVideoSessionMemoryRequirementsKHR` is called with the same `videoSession` and with `pMemoryRequirementsCount` equal to `bindSessionMemoryInfoCount`, then the `memoryRequirements` member of that element of `pMemoryRequirements` is the `VkMemoryRequirements` structure corresponding to the element of `pBindSessionMemoryInfos` in question.
- Otherwise the element of `pBindSessionMemoryInfos` in question is said to not have a corresponding `VkMemoryRequirements` structure.

### Valid Usage

- VUID-vkBindVideoSessionMemoryKHR-videoSession-07195  
The memory binding of `videoSession` identified by the `memoryBindIndex` member of any element of `pBindSessionMemoryInfos` **must** not already be backed by a memory object

- VUID-vkBindVideoSessionMemoryKHR-memoryBindIndex-07196  
The `memoryBindIndex` member of each element of `pBindSessionMemoryInfos` **must** be unique within `pBindSessionMemoryInfos`
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07197  
Each element of `pBindSessionMemoryInfos` **must** have a corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07198  
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memory` member of that element of `pBindSessionMemoryInfos` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07199  
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memoryOffset` member of that element of `pBindSessionMemoryInfos` **must** be an integer multiple of the `alignment` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07200  
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memorySize` member of that element of `pBindSessionMemoryInfos` **must** equal the `size` member of the corresponding `VkMemoryRequirements` structure

### Valid Usage (Implicit)

- VUID-vkBindVideoSessionMemoryKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parameter  
`videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-parameter  
`pBindSessionMemoryInfos` **must** be a valid pointer to an array of `bindSessionMemoryInfoCount` valid `VkBindVideoSessionMemoryInfoKHR` structures
- VUID-vkBindVideoSessionMemoryKHR-bindSessionMemoryInfoCount-arraylength  
`bindSessionMemoryInfoCount` **must** be greater than 0
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parent  
`videoSession` **must** have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkBindVideoSessionMemoryInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkBindVideoSessionMemoryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           memoryBindIndex;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
    VkDeviceSize        memorySize;
} VkBindVideoSessionMemoryInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [memoryBindIndex](#) is the memory binding index to bind memory to.
- [memory](#) is the allocated device memory to be bound to the video session's memory binding with index [memoryBindIndex](#).
- [memoryOffset](#) is the start offset of the region of [memory](#) which is to be bound.
- [memorySize](#) is the size in bytes of the region of [memory](#), starting from [memoryOffset](#) bytes, to be bound.

## Valid Usage

- VUID-VkBindVideoSessionMemoryInfoKHR-memoryOffset-07201  
[memoryOffset](#) **must** be less than the size of [memory](#)
- VUID-VkBindVideoSessionMemoryInfoKHR-memorySize-07202  
[memorySize](#) **must** be less than or equal to the size of [memory](#) minus [memoryOffset](#)

## Valid Usage (Implicit)

- VUID-VkBindVideoSessionMemoryInfoKHR-sType-sType

**sType** must be `VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR`

- `VUID-VkBindVideoSessionMemoryInfoKHR-pNext-pNext`  
**pNext** must be `NULL`
- `VUID-VkBindVideoSessionMemoryInfoKHR-memory-parameter`  
**memory** must be a valid `VkDeviceMemory` handle

## 45.6. Video Profile Compatibility

Resources and query pools used with a particular video session **must** be compatible with the `video profile` the video session was created with.

A `VkBuffer` is compatible with a video profile if it was created with the `VkBufferCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkBufferCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`

A `VkBuffer` is also compatible with a video profile if it was created with `VkBufferCreateInfo::flags` including `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.

A `VkImage` is compatible with a video profile if it was created with the `VkImageCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkImageCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`

A `VkImage` is also compatible with a video profile if all of the following conditions are true for the `VkImageCreateInfo` structure the image was created with:

- `VkImageCreateInfo::flags` included  
`VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.

- The list of `VkVideoFormatPropertiesKHR` structures, obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `VkImageCreateInfo::usage` the image was created with and the `VkPhysicalDeviceVideoFormatInfoKHR::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing a single array element specifying the `VkVideoProfileInfoKHR` structure chain describing the video profile in question, contains an element for which all of the following conditions are true with respect to the `VkImageCreateInfo` structure the image was created with:

- `VkImageCreateInfo::format` equals `VkVideoFormatPropertiesKHR::format`.
- `VkImageCreateInfo::flags` only contains `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and/or bits also set in `VkVideoFormatPropertiesKHR::imageCreateFlags`.

**NOTE**

Specifying `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` when creating decode output pictures or encode input pictures is always supported when the `videoMaintenance1` feature is enabled, regardless of the supported `VkImageCreateFlags` reported in `VkVideoFormatPropertiesKHR::imageCreateFlags`. Accordingly, implementations **should** not report `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` in `VkVideoFormatPropertiesKHR::imageCreateFlags` for any video format.

- `VkImageCreateInfo::imageType` equals `VkVideoFormatPropertiesKHR::imageType`.
- `VkImageCreateInfo::tiling` equals `VkVideoFormatPropertiesKHR::imageTiling`.
- `VkImageCreateInfo::usage` only contains bits also set in `VkVideoFormatPropertiesKHR::imageUsageFlags`, or `VkImageCreateInfo::flags` includes `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT`.

**NOTE**

While some of these rules allow creating buffer or image resources that **may** be compatible with any video profile, applications **should** still prefer to include the specific video profiles the buffer or image resource is expected to be used with (through a `VkVideoProfileListInfoKHR` structure included in the `pNext` chain of the corresponding create info structure) whenever the information about the complete set of video profiles is available at resource creation time, to enable the implementation to optimize the created resource for the specific use case. In the absence of that information, the implementation **may** have to make conservative decisions about the memory requirements or representation of the resource.

A `VkImageView` is compatible with a video profile if the `VkImage` it was created from is also compatible with that video profile.

A `VkQueryPool` is compatible with a video profile if it was created with the `VkQueryPoolCreateInfo::pNext` chain including a `VkVideoProfileInfoKHR` structure chain describing the same video profile, and `VkQueryPoolCreateInfo::queryType` having one of the following values:

- `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`
- `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`

## 45.7. Video Session Parameters

Video session parameters objects **can** store preprocessed codec-specific parameters used with a compatible video session, and enable reducing the number of parameters needed to be provided and processed by the implementation while recording video coding operations into command buffers.

Parameters stored in such objects are *immutable* to facilitate the concurrent use of the stored parameters in multiple threads. At the same time, new parameters **can** be added to existing objects using the [vkUpdateVideoSessionParametersKHR](#) command.

In order to support concurrent use of the stored immutable parameters while also allowing the video session parameters object to be extended with new parameters, each video session parameters object maintains an *update sequence counter* that is set to 0 at object creation time and **must** be incremented by each subsequent update operation.

Certain video sequences that adhere to particular video compression standards permit updating previously supplied parameters. If a parameter update is necessary, the application has the following options:

- Cache the set of parameters on the application side and create a new video session parameters object adding all the parameters with appropriate changes, as necessary; or
- Create a new video session parameters object providing only the updated parameters and the previously used object as the template, which ensures that parameters not specified at creation time will be copied unmodified from the template object.

The actual types of parameters that **can** be stored and the capacity for individual parameter types, and the methods of initializing, updating, and referring to individual parameters are specific to the video codec operation the video session parameters object was created with.

- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H264\\_BIT\\_KHR](#) these are defined in the [H.264 Decode Parameter Sets](#) section.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H265\\_BIT\\_KHR](#) these are defined in the [H.265 Decode Parameter Sets](#) section.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_VP9\\_BIT\\_KHR](#) there are no defined parameter sets and therefore do not use video session parameters objects.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_AV1\\_BIT\\_KHR](#) these are defined in the [AV1 Decode Parameter Sets](#) section.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) these are defined in the [H.264 Encode Parameter Sets](#) section.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) these are defined in the [H.265 Encode Parameter Sets](#) section.
- For [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_AV1\\_BIT\\_KHR](#) these are defined in the [AV1 Encode Parameter Sets](#) section.

Video session parameters objects created with an encode operation are further specialized based

on the [video encode quality level](#) the video session parameters are used with, as implementations **may** apply different sets of [parameter overrides](#) depending on the used quality level. This enables implementations to store the potentially optimized set of parameters in these objects, further limiting the necessary processing required while recording video encode operations into command buffers.

Video session parameters are represented by `VkVideoSessionParametersKHR` handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionParametersKHR)
```

### 45.7.1. Creating Video Session Parameters

To create a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionParametersKHR(
    VkDevice                                device,
    const VkVideoSessionParametersCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkVideoSessionParametersKHR*              pVideoSessionParameters);
```

- `device` is the logical device that creates the video session parameters object.
- `pCreateInfo` is a pointer to `VkVideoSessionParametersCreateInfoKHR` structure containing parameters to be used to create the video session parameters object.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.
- `pVideoSessionParameters` is a pointer to a `VkVideoSessionParametersKHR` handle in which the resulting video session parameters object is returned.

The resulting video session parameters object is said to be created with the video codec operation `pCreateInfo->videoSession` was created with.

Video session parameters objects created with an encode operation are always created with respect to a [video encode quality level](#). By default, the created video session parameters objects are created with quality level zero, unless otherwise specified by including a `VkVideoEncodeQualityLevelInfoKHR` structure in the `pCreateInfo->pNext` chain, in which case the video session parameters object is created with the quality level specified in `VkVideoEncodeQualityLevelInfoKHR::qualityLevel`.

If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then it will be used as a template for constructing the new video session parameters object. This happens by first adding any parameters according to the additional creation parameters provided in the `pCreateInfo->pNext` chain, followed by adding any parameters from the template object that have a key that does not match the key of any of the already added parameters.

For video session parameters objects created with an encode operation, the template object

specified in `pCreateInfo->videoSessionParametersTemplate` **must** have been created with the same video encode quality level as the newly created object.

**NOTE**

This means that codec-specific parameters stored in video session parameters objects **can** only be reused across different video encode quality levels by re-specifying them, as previously created video session parameters against other quality levels **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied parameter overrides) **may** no longer be available in them for the purposes of constructing the derived object.

Video session parameters objects are only compatible with quantization maps if they are created with `pCreateInfo->flags` including `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`.

Video session parameters objects created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` against a video session object that was created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR` are created with a specific compatible quantization map texel size specified in the `quantizationMapTexelSize` member of the `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure included in the `pNext` chain of `pCreateInfo`.

**NOTE**

This means that the quantization map texel size that such a video session parameters object is compatible with is fixed for the lifetime of the object. Applications have to create separate video session parameters objects to use different quantization map texel sizes with a single video session object. This is necessary because the used quantization map texel size may affect the parameter overrides the implementation has to perform and thus the final values of the used codec-specific parameters.

For video session parameters objects created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** also have been created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` and the same compatible quantization map texel size specified in `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR::quantizationMapTexelSize`.

**NOTE**

This means that codec-specific parameters stored in video session parameters objects **can** only be reused with different quantization map texel sizes by re-specifying them, as previously created video session parameters against other quantization map texel sizes **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied parameter overrides) **may** no longer be available in them for the purposes of constructing the derived object.

For video session parameters objects created without `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** also have been created without `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing [H.264 SPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id` and `pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing [H.265 VPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing [H.265 SPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the

`pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;

- If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing [H.265 PPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the created video session parameters object will contain a single [AV1 sequence header](#) represented by a `StdVideoAV1SequenceHeader` structure specified through the `pStdSequenceHeader` member of the `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain. As such video session parameters objects **can** only contain a single [AV1 sequence header](#), it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing [H.264 SPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session

parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id` and `pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing `H.265 VPS` entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing `H.265 SPS` entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing `H.265 PPS` entries, as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
  - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the created video session parameters object will contain a single `AV1 sequence header` specified through the members of the `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain. As such video session parameters objects **can** only contain a single `AV1 sequence header`, it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

In case of video session parameters objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified

Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

#### NOTE

Applications **should** not rely on the [VK\\_ERROR\\_INVALID\\_VIDEO\\_STD\\_PARAMETERS\\_KHR](#) error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

### Valid Usage (Implicit)

- VUID-vkCreateVideoSessionParametersKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkCreateVideoSessionParametersKHR-pCreateInfo-parameter  
**pCreateInfo** **must** be a valid pointer to a valid [VkVideoSessionParametersCreateInfoKHR](#) structure
- VUID-vkCreateVideoSessionParametersKHR-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateVideoSessionParametersKHR-pVideoSessionParameters-parameter  
**pVideoSessionParameters** **must** be a valid pointer to a [VkVideoSessionParametersKHR](#) handle
- VUID-vkCreateVideoSessionParametersKHR-device-queuecount  
The device **must** have been created with at least **1** queue

### Return Codes

#### Success

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkVideoSessionParametersCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersCreateInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkVideoSessionParametersCreateFlagsKHR flags;
    VkVideoSessionParametersKHR videoSessionParametersTemplate;
    VkVideoSessionKHR         videoSession;
} VkVideoSessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoSessionParametersCreateFlagBitsKHR` specifying create flags.
- `videoSessionParametersTemplate` is `VK_NULL_HANDLE` or a valid handle to a `VkVideoSessionParametersKHR` object used as a template for constructing the new video session parameters object.
- `videoSession` is the video session object against which the video session parameters object is going to be created.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then let `StdVideoH264SequenceParameterSet spsAddList[]` be the list of `H.264 SPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it with `seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then let `StdVideoH264PictureParameterSet ppsAddList[]` be the list of `H.264 PPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it with `seq_parameter_set_id` or `pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.

- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265VideoParameterSet vpsAddList[]` be the list of `H.265 VPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added to `vpsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it with `vps_video_parameter_set_id` not matching any of the entries already in `vpsAddList` is added to `vpsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265SequenceParameterSet spsAddList[]` be the list of `H.265 SPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it with `sps_video_parameter_set_id` or `sps_seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265PictureParameterSet ppsAddList[]` be the list of `H.265 PPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, or `pps_pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with an encode operation, then let `uint32_t qualityLevel` be the `video encode quality level` of the created video session parameters object, defined as follows:
  - If the `pNext` chain of this structure includes a `VkVideoEncodeQualityLevelInfoKHR` structure, then `qualityLevel` is equal to `VkVideoEncodeQualityLevelInfoKHR::qualityLevel`.
  - Otherwise `qualityLevel` is `0`
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264SequenceParameterSet spsAddList[]` be the list of `H.264 SPS` entries to add to the

created video session parameters object, defined as follows:

- If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
- If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it with `seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264PictureParameterSet ppsAddList[]` be the list of `H.264 PPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it with `seq_parameter_set_id` or `pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265VideoParameterSet vpsAddList[]` be the list of `H.265 VPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added to `vpsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it with `vps_video_parameter_set_id` not matching any of the entries already in `vpsAddList` is added to `vpsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265SequenceParameterSet spsAddList[]` be the list of `H.265 SPS` entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it with `sps_video_parameter_set_id` or `sps_seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.

- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265PictureParameterSet ppsAddList[]` be the list of H.265 PPS entries to add to the created video session parameters object, defined as follows:
  - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
  - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, or `pps_pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.

## Valid Usage

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-04855  
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, it **must** have been created against `videoSession`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-08310  
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `videoSession` was created with an encode operation, then `qualityLevel` **must** equal the video encode quality level `videoSessionParametersTemplate` was created with
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10271  
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `videoSession` **must** have been created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10272  
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10273  
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` and `videoSession` was created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`, then the list of video format properties supported for the image usage flag `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` **must** have an element for which `VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize` equals the `quantizationMapTexelSize` member of the `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10274

If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` and `videoSession` was created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`, then the list of video format properties supported for the image usage flag `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR` **must** have an element for which `VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize` equals the `quantizationMapTexelSize` member of the `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10275  
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `videoSessionParametersTemplate` **must** have been created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10276  
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `videoSessionParametersTemplate` **must** have been created with the same quantization map texel size as the one specified in the `quantizationMapTexelSize` member of the `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10277  
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `flags` does not include `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `videoSessionParametersTemplate` **must** have been created without `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07203  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07204  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07205  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07206  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07207  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07208  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07209  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10794  
`videoSession` **must** not have been created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09258  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09259  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07210  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04839  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04840

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07211

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04841

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04842

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04843

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08319

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `num_tile_columns_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, for each element of `ppsAddList`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08320

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `num_tile_rows_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, for each element of `ppsAddList`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10278

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10279

If `videoSession` was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10280

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `stdOperatingPointCount` member of the `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure included in the `pNext` chain **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxOperatingPoints`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with

## Valid Usage (Implicit)

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1SessionParametersCreateInfoKHR`, `VkVideoDecodeH264SessionParametersCreateInfoKHR`, `VkVideoDecodeH265SessionParametersCreateInfoKHR`, `VkVideoEncodeAV1SessionParametersCreateInfoKHR`, `VkVideoEncodeH264SessionParametersCreateInfoKHR`, `VkVideoEncodeH265SessionParametersCreateInfoKHR`, `VkVideoEncodeQualityLevelInfoKHR`, or `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkVideoSessionParametersCreateInfoKHR-flags-parameter

If `flags` is not `0`, `flags` **must** be a valid combination of `VkVideoSessionParametersCreateFlagBitsKHR` values

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-parameter

If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, `videoSessionParametersTemplate` **must** be a valid `VkVideoSessionParametersKHR` handle

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-parameter

`videoSession` **must** be a valid `VkVideoSessionKHR` handle

- VUID-VkVideoSessionParametersCreateInfoKHR-commonparent

Both of `videoSession`, and `videoSessionParametersTemplate` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Bits which **can** be set in `VkVideoSessionParametersCreateInfoKHR::flags` are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoSessionParametersCreateFlagBitsKHR {
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR =
    0x00000001,
} VkVideoSessionParametersCreateFlagBitsKHR;
```

- [VK\\_VIDEO\\_SESSION\\_PARAMETERS\\_CREATE\\_QUANTIZATION\\_MAP\\_COMPATIBLE\\_BIT\\_KHR](#) specifies that the created video session parameters object **can** be used with [quantization maps](#).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionParametersCreateFlagsKHR;
```

[VkVideoSessionParametersCreateFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoSessionParametersCreateFlagBitsKHR](#).

The [VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [quantizationMapTexelSize](#) specifies the [quantization map texel size](#) a video session parameters object created with [VK\\_VIDEO\\_SESSION\\_PARAMETERS\\_CREATE\\_QUANTIZATION\\_MAP\\_COMPATIBLE\\_BIT\\_KHR](#) is compatible with.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_QUANTIZATION\\_MAP\\_SESSION\\_PARAMETERS\\_CREATE\\_INFO\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

## 45.7.2. Destroying Video Session Parameters

To destroy a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionParametersKHR(
    VkDevice          device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the video session parameters object.
- **videoSessionParameters** is the video session parameters object to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

### Valid Usage

- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07212  
All submitted commands that refer to **videoSessionParameters** **must** have completed execution
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07213  
If **VkAllocationCallbacks** were provided when **videoSessionParameters** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07214  
If no **VkAllocationCallbacks** were provided when **videoSessionParameters** was created, **pAllocator** **must** be **NULL**

### Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionParametersKHR-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parameter  
If **videoSessionParameters** is not [VK\\_NULL\\_HANDLE](#), **videoSessionParameters** **must** be a valid [VkVideoSessionParametersKHR](#) handle
- VUID-vkDestroyVideoSessionParametersKHR-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parent  
If **videoSessionParameters** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

## Host Synchronization

- Host access to `videoSessionParameters` **must** be externally synchronized

### 45.7.3. Updating Video Session Parameters

To update video session parameters object with new parameters, call:

```
// Provided by VK_KHR_video_queue
VkResult vkUpdateVideoSessionParametersKHR(
    VkDevice device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkVideoSessionParametersUpdateInfoKHR* pUpdateInfo);
```

- `device` is the logical device that updates the video session parameters.
- `videoSessionParameters` is the video session parameters object to update.
- `pUpdateInfo` is a pointer to a `VkVideoSessionParametersUpdateInfoKHR` structure specifying the parameter update information.

After a successful call to this command, the `update sequence counter` of `videoSessionParameters` is changed to the value specified in `pUpdateInfo->updateSequenceCount`.

#### NOTE

As each update issued to a video session parameters object needs to specify the next available update sequence count value, concurrent updates of the same video session parameters object are inherently disallowed. However, recording video coding operations to command buffers referring to parameters previously added to the video session parameters object is allowed, even if there is a concurrent update in progress adding some new entries to the object.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The `H.264 SPS` entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`.
- The `H.264 PPS` entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The `H.265 VPS` entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`.

- The [H.265 SPS](#) entries specified in [VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs](#).
- The [H.265 PPS](#) entries specified in [VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs](#).

If [videoSessionParameters](#) was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) and the [pUpdateInfo->pNext](#) chain includes a [VkVideoEncodeH264SessionParametersAddInfoKHR](#) structure, then this command adds the following parameter entries to [videoSessionParameters](#):

- The [H.264 SPS](#) entries specified in [VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs](#).
- The [H.264 PPS](#) entries specified in [VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs](#).

If [videoSessionParameters](#) was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) and the [pUpdateInfo->pNext](#) chain includes a [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure, then this command adds the following parameter entries to [videoSessionParameters](#):

- The [H.265 VPS](#) entries specified in [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs](#).
- The [H.265 SPS](#) entries specified in [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs](#).
- The [H.265 PPS](#) entries specified in [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs](#).

In case of video session parameters objects created with a video encode operation, implementations **may** return the [VK\\_ERROR\\_INVALID\\_VIDEO\\_STD\\_PARAMETERS\\_KHR](#) error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

|             |                                                                                                                                                                                                                                                                           |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>NOTE</b> | Applications <b>should</b> not rely on the <a href="#">VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR</a> error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases. |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Valid Usage

- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-07215  
[pUpdateInfo->updateSequenceCount](#) **must** equal the current [update sequence counter](#) of [videoSessionParameters](#) plus one
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07216  
If [videoSessionParameters](#) was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07217

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07218

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07219

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07220

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07221

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdVPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07222

If `videoSessionParameters` was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07223

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07224

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07225

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-09260

`videoSessionParameters` **must** not have been created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07226

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06441

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the

VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdSPSCount

videoSessionParameters was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07227

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06442

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdPPSCount`  
`videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07228

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06443

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdVPSCount`  
`videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07229

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06444

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the

[VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdSPSCount](#)

`videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07230  
If `videoSessionParameters` was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) and the `pNext` chain of `pUpdateInfo` includes a [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs](#)
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06445  
If `videoSessionParameters` was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#), then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the [VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdPPSCount](#)  
`videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08321  
If `videoSessionParameters` was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) and the `pNext` chain of `pUpdateInfo` includes a [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure, then `num_tile_columns_minus1` **must** be less than [VkVideoEncodeH265CapabilitiesKHR::maxTiles.width](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile `videoSessionParameters` was created with, for each element of [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs](#)
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08322  
If `videoSessionParameters` was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#) and the `pNext` chain of `pUpdateInfo` includes a [VkVideoEncodeH265SessionParametersAddInfoKHR](#) structure, then `num_tile_rows_minus1` **must** be less than [VkVideoEncodeH265CapabilitiesKHR::maxTiles.height](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile `videoSessionParameters` was created with, for each element of [VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs](#)
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-10281  
`videoSessionParameters` **must** not have been created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_AV1\\_BIT\\_KHR](#)

## Valid Usage (Implicit)

- VUID-vkUpdateVideoSessionParametersKHR-device-parameter  
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parameter  
`videoSessionParameters` **must** be a valid [VkVideoSessionParametersKHR](#) handle

- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-parameter  
`pUpdateInfo` **must** be a valid pointer to a valid `VkVideoSessionParametersUpdateInfoKHR` structure
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parent  
`videoSessionParameters` **must** have been created, allocated, or retrieved from `device`

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkVideoSessionParametersUpdateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersUpdateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           updateSequenceCount;
} VkVideoSessionParametersUpdateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `updateSequenceCount` is the new `update sequence count` to set for the video session parameters object.

## Valid Usage (Implicit)

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR`
- VUID-VkVideoSessionParametersUpdateInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeH264SessionParametersAddInfoKHR`, `VkVideoDecodeH265SessionParametersAddInfoKHR`, `VkVideoEncodeH264SessionParametersAddInfoKHR`, or

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique

## 45.8. Video Coding Scope

Applications **can** record video coding commands for a video session only within a video coding scope.

To begin a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdBeginVideoCodingKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoBeginCodingInfoKHR* pBeginInfo);
```

- **commandBuffer** is the command buffer in which to record the command.
- **pBeginInfo** is a pointer to a [VkVideoBeginCodingInfoKHR](#) structure specifying the parameters of the video coding scope, including the video session and video session parameters object to use.

After beginning a video coding scope, the video session object specified in **pBeginInfo->videoSession** is *bound* to the command buffer, and the command buffer is ready to record video coding operations. Similarly, if **pBeginInfo->videoSessionParameters** is not **VK\_NULL\_HANDLE**, it is also *bound* to the command buffer, and video coding operations **can** refer to the codec-specific parameters stored in it.

This command also establishes the set of *bound reference picture resources* that **can** be used as [reconstructed pictures](#) or [reference pictures](#) within the video coding scope. Each element of this set consists of a [video picture resource](#) and the [DPB slot](#) index associated with it, if there is one.

The set of bound reference picture resources is immutable within a video coding scope, however, the DPB slot index associated with any of the bound reference picture resources **can** change during the video coding scope in response to video coding operations.

The [VkVideoReferenceSlotInfoKHR](#) structures provided as the elements of **pBeginInfo->pReferenceSlots** are interpreted by this command as follows:

- If **slotIndex** is non-negative and **pPictureResource** is not **NULL**, then the [video picture resource](#) defined by the [VkVideoPictureResourceInfoKHR](#) structure pointed to by **pPictureResource** is added to the set of bound reference picture resources and is associated with the DPB slot index specified in **slotIndex**.
- If **slotIndex** is non-negative and **pPictureResource** is **NULL**, then the DPB slot with index **slotIndex** is [deactivated](#) by this command.
- If **slotIndex** is negative and **pPictureResource** is not **NULL**, then the [video picture resource](#) defined by the [VkVideoPictureResourceInfoKHR](#) structure pointed to by **pPictureResource** is added to the set of bound reference picture resources without an associated DPB slot. Such a picture

resource **can** be subsequently used as a [reconstructed picture](#) to associate it with a DPB slot.

- If `slotIndex` is negative and `pPictureResource` is `NULL`, then the element is ignored.

#### NOTE

It is possible for multiple bound reference picture resources to be associated with the same DPB slot index, or for a single bound reference picture to refer to multiple separate reference pictures. For example, in case of an [H.264 decode profile](#) with [interlaced frame support](#) a single DPB slot can refer to two separate pictures for the top and bottom fields. Depending on the picture layout used by the [H.264 decode profile](#), the following special cases **may** arise:

- If the picture layout is [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_INTERLEAVED\\_LINES\\_BIT\\_KHR](#), then the top and bottom field pictures are physically co-located in the same video picture resource with even scanlines corresponding to the top field and odd scanlines corresponding to the bottom field, respectively.
- If the picture layout is [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_SEPARATE\\_PLANES\\_BIT\\_KHR](#), then the top and bottom field pictures are stored in separate video picture resources (in separate subregions of the same image layer, in separate layers of the same image, or in entirely separate images), hence two elements of [VkVideoBeginCodingInfoKHR::pReferenceSlots](#) **can** contain the same `slotIndex` but specify different video picture resources in their `pPictureResource` members.

All non-negative `slotIndex` values specified in the elements of `pBeginInfo->pReferenceSlots` **must** identify DPB slots of the video session that are in the [active state](#) at the time this command is executed on the device.

#### NOTE

The application does not have to specify an entry in `pBeginInfo->pReferenceSlots` corresponding to all active DPB slots of the video session, but only for those which are intended to be used in the video coding scope. This way the application can avoid any potential runtime cost associated with binding the corresponding picture resources to the command buffer.

In case of a video encode session, the application is also responsible for providing information about the current [rate control state](#) configured for the video session by including an instance of the [VkVideoEncodeRateControlInfoKHR](#) structure in the `pNext` chain of `pBeginInfo`. If no [VkVideoEncodeRateControlInfoKHR](#) is included, then the presence of an empty [VkVideoEncodeRateControlInfoKHR](#) structure is implied which indicates that the current [rate control mode](#) is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#). The specified state **must match** the effective rate control state configured for the video session at the time the recorded command is executed on the device.

#### NOTE

Including an instance of the [VkVideoEncodeRateControlInfoKHR](#) structure in the `pNext` chain of `pBeginInfo` does not change the rate control state configured for the video session, but only specifies the expected rate control state configured at the time the recorded command is executed on the device which allows the implementation to have information about the configured rate control state at

command buffer recording time. In order to change the current rate control state of a video session, the application has to issue an appropriate [vkCmdControlVideoCodingKHR](#) command as described in the [Video Coding Control](#) and [Rate Control State](#) sections.

## Valid Usage

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-11760  
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** have been created with the same queue family index that [pBeginInfo->videoSession](#) was created with
- VUID-vkCmdBeginVideoCodingKHR-None-07232  
There **must** be no [active](#) queries
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07233  
If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, then [pBeginInfo->videoSession](#) **must** not have been created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_PROTECTED\\_CONTENT\\_BIT\\_KHR](#)
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07234  
If [commandBuffer](#) is a protected command buffer and [protectedNoFault](#) is not supported, then [pBeginInfo->videoSession](#) **must** have been created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_PROTECTED\\_CONTENT\\_BIT\\_KHR](#)
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07235  
If [commandBuffer](#) is an unprotected command buffer, [protectedNoFault](#) is not supported, and the [pPictureResource](#) member of any element of [pBeginInfo->pReferenceSlots](#) is not [NULL](#), then [pPictureResource->imageViewBinding](#) for that element **must** not specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07236  
If [commandBuffer](#) is a protected command buffer [protectedNoFault](#) is not supported, and the [pPictureResource](#) member of any element of [pBeginInfo->pReferenceSlots](#) is not [NULL](#), then [pPictureResource->imageViewBinding](#) for that element **must** specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-slotIndex-07239  
If the [slotIndex](#) member of any element of [pBeginInfo->pReferenceSlots](#) is not negative, then it **must** specify the index of a DPB slot that is in the [active state](#) in [pBeginInfo->videoSession](#) at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pPictureResource-07265  
Each video picture resource specified by any non-[NULL](#) [pPictureResource](#) member specified in the elements of [pBeginInfo->pReferenceSlots](#) for which [slotIndex](#) is not negative **must** [match](#) one of the video picture resources currently associated with the DPB slot index of [pBeginInfo->videoSession](#) specified by [slotIndex](#) at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08253  
If [pBeginInfo->videoSession](#) was created with a video encode operation and the [pNext](#) chain of [pBeginInfo](#) does not include an instance of the [VkVideoEncodeRateControlInfoKHR](#) structure, then the [rate control mode](#) configured for

`pBeginInfo->videoSession` at the time the command is executed on the device **must** be `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08254  
If `pBeginInfo->videoSession` was created with a video encode operation and the `pNext` chain of `pBeginInfo` includes an instance of the `VkVideoEncodeRateControlInfoKHR` structure, then it **must match** the rate control state configured for `pBeginInfo->videoSession` at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08255  
If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH264GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08256  
If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH265GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-10282  
If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeAV1CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeAV1GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

### Valid Usage (Implicit)

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-parameter  
`pBeginInfo` **must** be a valid pointer to a valid `VkVideoBeginCodingInfoKHR` structure

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-recording  
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK\\_QUEUE\\_VIDEO\\_DECODE\\_BIT\\_KHR](#), or [VK\\_QUEUE\\_VIDEO\\_ENCODE\\_BIT\\_KHR](#) operations
- VUID-vkCmdBeginVideoCodingKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBeginVideoCodingKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginVideoCodingKHR-videocoding  
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginVideoCodingKHR-bufferlevel  
`commandBuffer` **must** be a primary `VkCommandBuffer`

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                          | Command Type |
|-----------------------|-------------------|--------------------|----------------------------------------------------------------|--------------|
| Primary               | Outside           | Outside            | VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | Action State |

## Conditional Rendering

`vkCmdBeginVideoCodingKHR` is not affected by [conditional rendering](#)

The [VkVideoBeginCodingInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoBeginCodingInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoBeginCodingFlagsKHR flags;
    VkVideoSessionKHR        videoSession;
    VkVideoSessionParametersKHR videoSessionParameters;
    uint32_t                 referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoBeginCodingInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **videoSession** is the video session object to be bound for the processing of the video commands.
- **videoSessionParameters** is **VK\_NULL\_HANDLE** or a handle of a **VkVideoSessionParametersKHR** object to be used for the processing of the video commands. If **VK\_NULL\_HANDLE**, then no video session parameters object is bound for the duration of the video coding scope.
- **referenceSlotCount** is the number of elements in the **pReferenceSlots** array.
- **pReferenceSlots** is a pointer to an array of **VkVideoReferenceSlotInfoKHR** structures specifying the information used to determine the set of **bound reference picture resources** for the video coding scope and their initial association with **DPB slot** indices.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- Let **VkOffset2D codedOffsetGranularity** be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the **x** and **y** members of **codedOffsetGranularity** are 0.
  - If **videoSession** was created with an **H.264 decode profile** with a **VkVideoDecodeH264ProfileInfoKHR::pictureLayout** of **VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_SEPARATE\_PLANES\_BIT\_KHR**, then **codedOffsetGranularity** is equal to **VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity**, as returned by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for that video profile.

## Valid Usage

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07237  
**videoSession** **must** have memory bound to all of its memory bindings returned by **vkGetVideoSessionMemoryRequirementsKHR** for **videoSession**
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-04856  
Each non-negative **VkVideoReferenceSlotInfoKHR::slotIndex** specified in the elements of **pReferenceSlots** **must** be less than the **VkVideoSessionCreateInfoKHR::maxDpbSlots**

specified when `videoSession` was created

- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07238  
Each video picture resource corresponding to any non-NULL `pPictureResource` member specified in the elements of `pReferenceSlots` **must** be `unique` within `pReferenceSlots`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07240  
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** be `compatible` with the video profile `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07241  
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the format of the image view specified in `pPictureResource->imageViewBinding` for that element **must** match the `VkVideoSessionCreateInfoKHR::referencePictureFormat` `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07242  
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedOffset` member **must** be an integer multiple of `codedOffsetGranularity`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07243  
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedExtent` member **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-flags-07244  
If `VkVideoCapabilitiesKHR::flags` does not include `VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, then `pPictureResource->imageViewBinding` of all elements of `pReferenceSlots` with a non-NULL `pPictureResource` member **must** specify image views created from the same image
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07245  
If `videoSession` was created with a decode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` usage flag set
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07246  
If `videoSession` was created with an encode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR` usage flag set
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07247  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`, unless the `videoMaintenance2` feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07248  
If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then `videoSessionParameters`

**must** not be `VK_NULL_HANDLE`, unless the `videoMaintenance2` feature is enabled

- VUID-VkVideoBeginCodingInfoKHR-videoSession-09261

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`, unless the `videoMaintenance2` feature is enabled

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07249

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07250

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSession-10283

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `videoSessionParameters` **must** not be `VK_NULL_HANDLE`

- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-04857

If `videoSessionParameters` is not `VK_NULL_HANDLE`, it **must** have been created with `videoSession` specified in `VkVideoSessionParametersCreateInfoKHR::videoSession`

## Valid Usage (Implicit)

- VUID-VkVideoBeginCodingInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR`

- VUID-VkVideoBeginCodingInfoKHR-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1GopRemainingFrameInfoKHR`, `VkVideoEncodeAV1RateControlInfoKHR`, `VkVideoEncodeH264GopRemainingFrameInfoKHR`, `VkVideoEncodeH264RateControlInfoKHR`, `VkVideoEncodeH265GopRemainingFrameInfoKHR`, `VkVideoEncodeH265RateControlInfoKHR`, or `VkVideoEncodeRateControlInfoKHR`

- VUID-VkVideoBeginCodingInfoKHR-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkVideoBeginCodingInfoKHR-flags-zerobitmask

`flags` **must** be 0

- VUID-VkVideoBeginCodingInfoKHR-videoSession-parameter

`videoSession` **must** be a valid `VkVideoSessionKHR` handle

- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-parameter

If `videoSessionParameters` is not `VK_NULL_HANDLE`, `videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle

- VUID-VkVideoBeginCodingInfoKHR-pReferenceSlots-parameter  
If `referenceSlotCount` is not 0, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid `VkVideoReferenceSlotInfoKHR` structures
- VUID-VkVideoBeginCodingInfoKHR-commonparent  
Both of `videoSession`, and `videoSessionParameters` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoBeginCodingFlagsKHR;
```

`VkVideoBeginCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkVideoReferenceSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoReferenceSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  slotIndex;
    const VkVideoPictureResourceInfoKHR* pPictureResource;
} VkVideoReferenceSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `slotIndex` is the index of the `DPB slot` or a negative integer value.
- `pPictureResource` is `NULL` or a pointer to a `VkVideoPictureResourceInfoKHR` structure describing the `video picture resource` associated with the `DPB slot` index specified by `slotIndex`.

### Valid Usage (Implicit)

- VUID-VkVideoReferenceSlotInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR`
- VUID-VkVideoReferenceSlotInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1DpbSlotInfoKHR`, `VkVideoDecodeH264DpbSlotInfoKHR`, `VkVideoDecodeH265DpbSlotInfoKHR`, `VkVideoEncodeAV1DpbSlotInfoKHR`, `VkVideoEncodeH264DpbSlotInfoKHR`, `VkVideoEncodeH265DpbSlotInfoKHR`, or `VkVideoReferenceIntraRefreshInfoKHR`
- VUID-VkVideoReferenceSlotInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoReferenceSlotInfoKHR-pPictureResource-parameter  
If `pPictureResource` is not `NULL`, `pPictureResource` **must** be a valid pointer to a valid

To end a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdEndVideoCodingKHR(
    VkCommandBuffer                      commandBuffer,
    const VkVideoEndCodingInfoKHR*      pEndCodingInfo);
```

- **commandBuffer** is the command buffer in which to record the command.
- **pEndCodingInfo** is a pointer to a [VkVideoEndCodingInfoKHR](#) structure specifying the parameters for ending the video coding scope.

After ending a video coding scope, the video session object, the optional video session parameters object, and all [reference picture resources](#) previously bound by the corresponding [vkCmdBeginVideoCodingKHR](#) command are *unbound*.

### Valid Usage

- VUID-vkCmdEndVideoCodingKHR-None-07251  
There **must** be no [active](#) queries

### Valid Usage (Implicit)

- VUID-vkCmdEndVideoCodingKHR-commandBuffer-parameter  
**commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdEndVideoCodingKHR-pEndCodingInfo-parameter  
**pEndCodingInfo** **must** be a valid pointer to a valid [VkVideoEndCodingInfoKHR](#) structure
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-recording  
**commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK\\_QUEUE\\_VIDEO\\_DECODE\\_BIT\\_KHR](#), or [VK\\_QUEUE\\_VIDEO\\_ENCODE\\_BIT\\_KHR](#) operations
- VUID-vkCmdEndVideoCodingKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdEndVideoCodingKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdEndVideoCodingKHR-videocoding  
This command **must** only be called inside of a video coding scope
- VUID-vkCmdEndVideoCodingKHR-bufferlevel  
**commandBuffer** **must** be a primary [VkCommandBuffer](#)

## Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                          | Command Type    |
|-----------------------|-------------------|--------------------|----------------------------------------------------------------|-----------------|
| Primary               | Outside           | Inside             | VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | Action<br>State |

## Conditional Rendering

**vkCmdEndVideoCodingKHR** is not affected by [conditional rendering](#)

The **VkVideoEndCodingInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoEndCodingInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEndCodingFlagsKHR flags;
} VkVideoEndCodingInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.

## Valid Usage (Implicit)

- VUID-VkVideoEndCodingInfoKHR-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_VIDEO\_END\_CODING\_INFO\_KHR**
- VUID-VkVideoEndCodingInfoKHR-pNext-pNext  
**pNext** **must** be **NULL**
- VUID-VkVideoEndCodingInfoKHR-flags-zero bitmask

**flags must be 0**

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoEndCodingFlagsKHR;
```

`VkVideoEndCodingFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

## 45.9. Video Coding Control

To apply dynamic controls to the bound video session object, call:

```
// Provided by VK_KHR_video_queue
void vkCmdControlVideoCodingKHR(
    VkCommandBuffer                commandBuffer,
    const VkVideoCodingControlInfoKHR* pCodingControlInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pCodingControlInfo` is a pointer to a `VkVideoCodingControlInfoKHR` structure specifying the control parameters.

The control parameters provided in this call are applied to the video session at the time the command executes on the device and are in effect until a subsequent call to this command with the same video session bound changes the corresponding control parameters.

A newly created video session **must** be reset before performing video coding operations using it by including `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR` in `pCodingControlInfo->flags`. The reset operation also returns all DPB slots of the video session to the `inactive state`. Correspondingly, any DPB slot index associated with the `bound reference picture resources` is removed.

For encode sessions, the reset operation returns `rate control` configuration to implementation default settings and sets the `video encode quality level` to zero.

After video coding operations are performed using a video session, the reset operation **can** be used to return the video session to the same *initial* state as after the reset of a newly created video session. This **can** be used, for example, when different video sequences are needed to be processed with the same video session object.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the command replaces the `rate control` configuration maintained by the video session with the configuration specified in the `VkVideoEncodeRateControlInfoKHR` structure included in the `pCodingControlInfo->pNext` chain.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`, then the command changes the current `video encode quality level` to the value specified in the `qualityLevel` member of the

[VkVideoEncodeQualityLevelInfoKHR](#) structure included in the [pCodingControlInfo->pNext](#) chain.

### Valid Usage

- VUID-vkCmdControlVideoCodingKHR-flags-07017  
If [pCodingControlInfo->flags](#) does not include [VK\\_VIDEO\\_CODING\\_CONTROL\\_RESET\\_BIT\\_KHR](#), then the bound video session **must** not be in [uninitialized](#) state at the time the command is executed on the device
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-08243  
If the bound video session was not created with an encode operation, then [pCodingControlInfo->flags](#) **must** not include [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_RATE\\_CONTROL\\_BIT\\_KHR](#) or [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_QUALITY\\_LEVEL\\_BIT\\_KHR](#)

### Valid Usage (Implicit)

- VUID-vkCmdControlVideoCodingKHR-commandBuffer-parameter  
[commandBuffer](#) **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-parameter  
[pCodingControlInfo](#) **must** be a valid pointer to a valid [VkVideoCodingControlInfoKHR](#) structure
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-recording  
[commandBuffer](#) **must** be in the [recording state](#)
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-cmdpool  
The [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** support [VK\\_QUEUE\\_VIDEO\\_DECODE\\_BIT\\_KHR](#), or [VK\\_QUEUE\\_VIDEO\\_ENCODE\\_BIT\\_KHR](#) operations
- VUID-vkCmdControlVideoCodingKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdControlVideoCodingKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdControlVideoCodingKHR-videocoding  
This command **must** only be called inside of a video coding scope
- VUID-vkCmdControlVideoCodingKHR-bufferlevel  
[commandBuffer](#) **must** be a primary [VkCommandBuffer](#)

### Host Synchronization

- Host access to [commandBuffer](#) **must** be externally synchronized
- Host access to the [VkCommandPool](#) that [commandBuffer](#) was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                          | Command Type |
|-----------------------|-------------------|--------------------|----------------------------------------------------------------|--------------|
| Primary               | Outside           | Inside             | VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | Action       |

## Conditional Rendering

vkCmdControlVideoCodingKHR is not affected by [conditional rendering](#)

The `VkVideoCodingControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCodingControlInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoCodingControlFlagsKHR flags;
} VkVideoCodingControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoCodingControlFlagsKHR` specifying control flags.

## Valid Usage

- VUID-VkVideoCodingControlInfoKHR-flags-07018  
If `flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeRateControlInfoKHR` structure
- VUID-VkVideoCodingControlInfoKHR-flags-08349  
If `flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeQualityLevelInfoKHR` structure

## Valid Usage (Implicit)

- VUID-VkVideoCodingControlInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR`

- **VUID-VkVideoCodingControlInfoKHR-pNext-pNext**  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkVideoEncodeAV1RateControlInfoKHR](#), [VkVideoEncodeH264RateControlInfoKHR](#), [VkVideoEncodeH265RateControlInfoKHR](#), [VkVideoEncodeQualityLevelInfoKHR](#), or [VkVideoEncodeRateControlInfoKHR](#)
- **VUID-VkVideoCodingControlInfoKHR-sType-unique**  
The **sType** value of each structure in the **pNext** chain **must** be unique
- **VUID-VkVideoCodingControlInfoKHR-flags-parameter**  
**flags** **must** be a valid combination of [VkVideoCodingControlFlagBitsKHR](#) values

Bits which **can** be set in [VkVideoCodingControlInfoKHR::flags](#), specifying the video coding control parameters to be modified, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodingControlFlagBitsKHR {
    VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR = 0x00000004,
} VkVideoCodingControlFlagBitsKHR;
```

- [VK\\_VIDEO\\_CODING\\_CONTROL\\_RESET\\_BIT\\_KHR](#) specifies a request for the bound video session to be reset before other coding control parameters are applied.
- [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_RATE\\_CONTROL\\_BIT\\_KHR](#) specifies that the coding control parameters include video encode rate control parameters (see [VkVideoEncodeRateControlInfoKHR](#)).
- [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_QUALITY\\_LEVEL\\_BIT\\_KHR](#) specifies that the coding control parameters include video encode quality level parameters (see [VkVideoEncodeQualityLevelInfoKHR](#)).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodingControlFlagsKHR;
```

[VkVideoCodingControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoCodingControlFlagBitsKHR](#).

## 45.10. Inline Queries

If a video session was created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#), beginning queries using commands such as [vkCmdBeginQuery](#) within a video coding scope is not allowed. Instead, queries are executed inline by including an instance of the [VkVideoInlineQueryInfoKHR](#) structure in the **pNext** chain of the parameters of one of the video coding commands, with its **queryPool** member set to a valid [VkQueryPool](#) handle.

The `VkVideoInlineQueryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkVideoInlineQueryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkQueryPool         queryPool;
    uint32_t            firstQuery;
    uint32_t            queryCount;
} VkVideoInlineQueryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queryPool` is `VK_NULL_HANDLE` or a valid handle to a `VkQueryPool` object that will manage the results of the queries.
- `firstQuery` is the query index within the query pool that will contain the query results for the first video coding operation. The query results of subsequent video coding operations will be contained by subsequent query indices.
- `queryCount` is the number of queries to execute.

#### NOTE

In practice, if `queryPool` is not `VK_NULL_HANDLE`, then `queryCount` will always have to match the number of video coding operations issued by the video coding command this structure is specified to, meaning that using inline queries in a video coding command will always execute a query for each issued video coding operation.

This structure **can** be included in the `pNext` chain of the input parameter structure of video coding commands.

- In the `pNext` chain of the `pDecodeInfo` parameter of the `vkCmdDecodeVideoKHR` command to execute a query for each video decode operation issued by the command.
- In the `pNext` chain of the `pEncodeInfo` parameter of the `vkCmdEncodeVideoKHR` command to execute a query for each video encode operation issued by the command.

### Valid Usage

- VUID-VkVideoInlineQueryInfoKHR-queryPool-08372  
If `queryPool` is not `VK_NULL_HANDLE`, then `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-08373  
If `queryPool` is not `VK_NULL_HANDLE`, then the sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

### Valid Usage (Implicit)

- VUID-VkVideoInlineQueryInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_INLINE_QUERY_INFO_KHR`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-parameter  
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` **must** be a valid `VkQueryPool` handle

### Structure Chaining

#### Extends the structures

- `VkVideoDecodeInfoKHR`
- `VkVideoEncodeInfoKHR`

## 45.11. Video Decode Operations

Video decode operations consume compressed video data from a video bitstream buffer and zero or more reference pictures, and produce a *decode output picture* and an optional *reconstructed picture*.

#### NOTE

Such decode output pictures can be shared with the *Decoded Picture Buffer*, and can also be used as the *input* of video encode operations, with graphics or compute operations, or with *Window System Integration* APIs, depending on the capabilities of the implementation.

Video decode operations **may** access the following resources in the `VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR` stage:

- The source video bitstream buffer range and the image subregions corresponding to the list of *active reference pictures* with access `VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR`.
- The image subregions corresponding to the target *decode output picture* and *reconstructed picture* with access `VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR`.

The image subresource of each *video picture resource* accessed by the video decode operation is specified using a corresponding `VkVideoPictureResourceInfoKHR` structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video decode operation only as *decode output picture*, then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout .
- If the image subresource is used in the video decode operation both as *decode output picture* and *reconstructed picture*, then it **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout .

- If the image subresource is used in the video decode operation only as [reconstructed picture](#), then it **must** be in the [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DPB\\_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout .
- If the image subresource is used in the video decode operation as a [reference picture](#), then it **must** be in the [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DPB\\_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout .

A video decode operation **may** complete unsuccessfully. In this case the [decode output picture](#) will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

#### 45.11.1. Codec-Specific Semantics

The following aspects of video decode operations are codec-specific:

- The interpretation of the contents of the source video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [decode output picture](#) and the generation of picture data to the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H264\\_BIT\\_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [H.264 Decode Operations](#) section.
- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H265\\_BIT\\_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [H.265 Decode Operations](#) section.
- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_VP9\\_BIT\\_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [VP9 Decode Operations](#) section.
- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_AV1\\_BIT\\_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [AV1 Decode Operations](#) section.

#### 45.11.2. Video Decode Operation Steps

Each video decode operation performs the following steps in the [VK\\_PIPELINE\\_STAGE\\_2\\_VIDEO\\_DECODE\\_BIT\\_KHR](#) stage:

1. Reads the encoded video data from the source video bitstream buffer range.
2. Performs picture reconstruction of the encoded video data according to the [codec-specific semantics](#), applying any prediction data read from the [active reference pictures](#) in the process;
3. Writes the decoded picture data to the [decode output picture](#), and optionally to the [reconstructed picture](#), if one is specified and is different from the decode output picture, according to the [codec-specific semantics](#);
4. If [reference picture setup](#) is requested, the [DPB slot index](#) specified in the [reconstructed picture information](#) is [activated](#) with the [reconstructed picture](#).

When [reconstructed picture information](#) is provided, the specified [DPB slot](#) index is associated with the corresponding [bound reference picture resource](#), regardless of whether [reference picture setup](#) is requested.

### 45.11.3. Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying a decode operation, the [VkVideoDecodeCapabilitiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video decoding.

The [VkVideoDecodeCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoDecodeCapabilityFlagsKHR flags;
} VkVideoDecodeCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkVideoDecodeCapabilityFlagBitsKHR](#) describing the supported video decoding capabilities.

#### Valid Usage (Implicit)

- VUID-VkVideoDecodeCapabilitiesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_CAPABILITIES\\_KHR](#)

#### Structure Chaining

##### Extends the structure

- [VkVideoCapabilitiesKHR](#)

Bits which **may** be set in `VkVideoDecodeCapabilitiesKHR::flags`, indicating the decoding capabilities supported, are:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeCapabilityFlagBitsKHR {
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR = 0x00000002,
} VkVideoDecodeCapabilityFlagBitsKHR;
```

- `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR` specifies support for using the same video picture resource as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.
- `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` specifies support for using distinct video picture resources as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.

**NOTE**

Some video profiles allow using distinct video picture resources as the reconstructed picture and decode output picture in specific video decode operations even when the video decode profile does not support `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`. Even if the implementation only reports coincide, the decode output picture for [film grain](#) enabled frames must be a different video picture resource from the reconstructed picture because film grain is applied outside of the coding loop.

Implementations are only **required** to support one of [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_COINCIDE\\_BIT\\_KHR](#) and [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_DISTINCT\\_BIT\\_KHR](#). Accordingly, applications **should** handle both cases to maximize portability.

**NOTE**

If both [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_COINCIDE\\_BIT\\_KHR](#) and [VK\\_VIDEO\\_DECODE\\_CAPABILITY\\_DPB\\_AND\\_OUTPUT\\_DISTINCT\\_BIT\\_KHR](#) are supported, an application can choose to create separate images for decode DPB and decode output. E.g. in cases when linear tiling is preferred (and supported) for the decode output picture and the DPB requires optimal tiling, this avoids the need for a separate copy at the expense of additional memory bandwidth requirements during decoding.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeCapabilityFlagsKHR;
```

`VkVideoDecodeCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more [VkVideoDecodeCapabilityFlagBitsKHR](#).

## 45.11.4. Video Decode Commands

To launch video decode operations, call:

```
// Provided by VK_KHR_video_decode_queue
void vkCmdDecodeVideoKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoDecodeInfoKHR* pDecodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pDecodeInfo` is a pointer to a `VkVideoDecodeInfoKHR` structure specifying the parameters of the video decode operations.

Each call issues one or more video decode operations. The implicit parameter `opCount` corresponds to the number of video decode operations issued by the command. After calling this command, the `active query index` of each `active` query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video decode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video decode operation issued by it.

### Active Reference Picture Information

The list of `active reference pictures` used by a video decode operation is a list of image subregions used as the source of `reference picture` data and related parameters, and is derived from the `VkVideoReferenceSlotInfoKHR` structures provided as the elements of the `pDecodeInfo->pReferenceSlots` array. For each element of `pDecodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the `codec-specific semantics`. Each element of this list contains the following information:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reference picture.
- The `DPB slot` index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

### Reconstructed Picture Information

Information related to the optional `reconstructed picture` used by a video decode operation is derived from the `VkVideoReferenceSlotInfoKHR` structure pointed to by `pDecodeInfo->pSetupReferenceSlot`, if not `NULL`, as defined by the `codec-specific semantics`, and consists of the following:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reconstructed picture.
- The `DPB slot` index to use for picture reconstruction.

- The codec-specific reference information related to the reconstructed picture.

Specifying a valid `VkVideoReferenceSlotInfoKHR` structure in `pDecodeInfo->pSetupReferenceSlot` is always required, unless the video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero. However, the DPB slot identified by `pDecodeInfo->pSetupReferenceSlot->slotIndex` is only **activated** with the **reconstructed picture** specified in `pDecodeInfo->pSetupReferenceSlot->pPictureResource` if reference picture setup is requested according to the **codec-specific semantics**.

If reconstructed picture information is specified, and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` refers to a **video picture resource** different than that of the **decode output picture**, but reference picture setup is not requested, the contents of the **video picture resource** corresponding to the reconstructed picture will be undefined after the video decode operation.

#### NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video decode operation even when the reconstructed picture is not marked for future reference.

### Decode Output Picture Information

Information related to the **decode output picture** used by a video decode operation is derived from `pDecodeInfo->dstPictureResource` and any codec-specific parameters provided in the `pDecodeInfo->pNext` chain, as defined by the **codec-specific semantics**, and consists of the following:

- The image subregion within the image subresource **referred** to by the **video picture resource** used as the decode output picture.
- The codec-specific picture information related to the decode output picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video decode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pDecodeInfo->referenceSlotCount`.
  - If the bound video session was created with an **H.264 decode profile**, then let `activeReferencePictureCount` be the value of `pDecodeInfo->referenceSlotCount` plus the number of elements of the `pDecodeInfo->pReferenceSlots` array that have a `VkVideoDecodeH264DpbSlotInfoKHR` structure included in their `pNext` chain with both `pStdReferenceInfo->flags.top_field_flag` and `pStdReferenceInfo->flags.bottom_field_flag` set.

#### NOTE

This means that the elements of `pDecodeInfo->pReferenceSlots` that include both a top and bottom field reference are counted as two separate active reference pictures, as described in the **active reference picture list construction rules for H.264 decode operations**.

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of

`codedOffsetGranularity` are 0.

- If the bound video session was created with an [H.264 decode profile](#) with a [VkVideoDecodeH264ProfileInfoKHR::pictureLayout](#) of [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_SEPARATE\\_PLANES\\_BIT\\_KHR](#), then `codedOffsetGranularity` is equal to [VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for that video profile.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the [VkVideoSessionCreateInfoKHR::maxDpbSlots](#) the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
  - If `pDecodeInfo->pSetupReferenceSlot` is not NULL, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If the bound video session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain.
  - For each element of `pDecodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element. If the bound video session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pNext` chain of the corresponding element of `pDecodeInfo->pReferenceSlots`.
- Let `uint32_t dpbTopFieldUseCount[]` and `uint32_t dpbBottomFieldUseCount[]` be arrays of size `maxDpbSlots`, where `maxDpbSlots` is the [VkVideoSessionCreateInfoKHR::maxDpbSlots](#) the bound video session was created with, with each element indicating the number of times the top field or the bottom field, respectively, associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the arrays be 0.
  - If the bound video session object was created with an [H.264 decode profile](#) and `pDecodeInfo->pSetupReferenceSlot` is not NULL, then perform the following:
    - If `pStdReferenceInfo->flags.top_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
    - If `pStdReferenceInfo->flags.bottom_field_flag` is set in the [VkVideoDecodeH264DpbSlotInfoKHR](#) structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
  - If the bound video session object was created with an [H.264 decode profile](#), then perform the following for each element of `pDecodeInfo->pReferenceSlots`:
    - If `pStdReferenceInfo->flags.top_field_flag` is set in the

`VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pNext` chain of the element, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.

- If `pStdReferenceInfo->flags.bottom_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pNext` chain of the element, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.

## Valid Usage

- VUID-vkCmdDecodeVideoKHR-None-08249  
The bound video session **must** have been created with a decode operation
- VUID-vkCmdDecodeVideoKHR-None-07011  
The bound video session **must** not be in `uninitialized` state at the time the command is executed on the device
- VUID-vkCmdDecodeVideoKHR-opCount-07134  
For each `active` query, the `active query index` corresponding to the query type of that query plus `opCount` **must** be less than or equal to the `last activatable query index` corresponding to the query type of that query plus one
- VUID-vkCmdDecodeVideoKHR-pNext-08365  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then `VkVideoInlineQueryInfoKHR::queryCount` **must** equal `opCount`
- VUID-vkCmdDecodeVideoKHR-pNext-08366  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then all the queries used by the command, as specified by the `VkVideoInlineQueryInfoKHR` structure, **must** be *unavailable*
- VUID-vkCmdDecodeVideoKHR-queryType-08367  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then the `queryType` used to create the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`
- VUID-vkCmdDecodeVideoKHR-queryPool-08368  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-queryType-08369

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `queryType` used to create the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07135  
`pDecodeInfo->srcBuffer` **must** be `compatible` with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07136  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->srcBuffer` **must** not be a protected buffer
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07138  
`pDecodeInfo->srcBufferOffset` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07139  
`pDecodeInfo->srcBufferRange` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07140  
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `VkVideoDecodeCapabilitiesKHR::flags` does not include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** not match
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07141  
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and none of the following is true:
  - `VkVideoDecodeCapabilitiesKHR::flags` includes `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
  - the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport` set to `VK_TRUE`, and `film grain` is enabled for the decoded picture

then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** match

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07142  
`pDecodeInfo->dstPictureResource.imageViewBinding` **must** be **compatible** with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07143  
The format of `pDecodeInfo->dstPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07144  
`pDecodeInfo->dstPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07145  
`pDecodeInfo->dstPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07146  
`pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` usage flag set
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07147  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** not have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07148  
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-08376  
`pDecodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07170  
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07173  
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07149  
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** **match** one of the **bound reference picture resource**
- VUID-vkCmdDecodeVideoKHR-activeReferencePictureCount-07150  
`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-slotIndex-07256  
The `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session

was created

- VUID-vkCmdDecodeVideoKHR-codedOffset-07257

The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07151

The `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must match** one of the `bound reference picture resource` associated with the DPB slot index specified in the `slotIndex` member of that element

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07264

Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pDecodeInfo->pReferenceSlots` **must** be `unique` within `pDecodeInfo->pReferenceSlots`

- VUID-vkCmdDecodeVideoKHR-dpbFrameUseCount-07176

All elements of `dpbFrameUseCount` **must** be less than or equal to 1

- VUID-vkCmdDecodeVideoKHR-dpbTopFieldUseCount-07177

All elements of `dpbTopFieldUseCount` **must** be less than or equal to 1

- VUID-vkCmdDecodeVideoKHR-dpbBottomFieldUseCount-07178

All elements of `dpbBottomFieldUseCount` **must** be less than or equal to 1

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10801

If `pDecodeInfo->pSetupReferenceSlot` is `NULL` or `pDecodeInfo->pSetupReferenceSlot->pPictureResource` does not `refer` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10802

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` `refers` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10803

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource `referred` to by `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pPictureResource-10804

The image subresource `referred` to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be in the

`VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pNext-07152

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeH264PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-None-07258

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, then the `decode output picture` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pSliceOffsets-07153

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then all elements of the `pSliceOffsets` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-None-10400

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`
- the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure
- the `pStdSPS` member of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`
- the `pStdPPS` member of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`

- VUID-vkCmdDecodeVideoKHR-StdVideoH264SequenceParameterSet-07154

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` , unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure, and its `pStdSPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10401

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR`

structure with a non-NULL `pStdSPS` member, then `pStdSPS->seq_parameter_set_id` **must** equal `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH264PictureParameterSet-07155

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure, and its `pStdPPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10402

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure with a non-NULL `pStdPPS` member, then `pStdPPS->seq_parameter_set_id` and `pStdPPS->pic_parameter_set_id` **must** equal `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`, respectively, provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07156

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07259

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `reconstructed picture` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pNext-07157

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain of each element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07260

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, then each `active reference picture` corresponding to the

elements of `pDecodeInfo->pReferenceSlots` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07261

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a frame, then the `reconstructed picture` **must** also represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07262

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a top field, then the `reconstructed picture` **must** also represent a top field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07263

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a bottom field, then the `reconstructed picture` **must** also represent a bottom field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07266

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and an `active reference picture` corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a frame, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a frame picture `matching` the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07267

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and an `active reference picture` corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a top field, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a top field picture `matching` the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07268

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and an `active reference picture` corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a bottom field, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a bottom field picture `matching` the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pNext-07158

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeH265PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pSliceSegmentOffsets-07159

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then all elements of the `pSliceSegmentOffsets` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-None-10403

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`
- the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure
- the `pStdVPS` member of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`
- the `pStdSPS` member of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`
- the `pStdPPS` member of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`

- VUID-vkCmdDecodeVideoKHR-StdVideoH265VideoParameterSet-07160

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure, and its `pStdVPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10404

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure with a non-`NULL` `pStdVPS` member, then `pStdVPS->vps_video_parameter_set_id` **must** equal `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH265SequenceParameterSet-07161

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and

`StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure, and its `pStdSPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10405

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure with a non-`NULL` `pStdSPS` member, then `pStdSPS->sps_video_parameter_set_id` and `pStdSPS->sps_seq_parameter_set_id` **must** equal `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH265PictureParameterSet-07162

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure, and its `pStdPPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10406

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure with a non-`NULL` `pStdPPS` member, then `pStdPPS->sps_video_parameter_set_id`, `pStdPPS->pps_seq_parameter_set_id`, and `pStdPPS->pps_pic_parameter_set_id` **must** equal `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07163

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and `pDecodeInfo-`

`pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pNext-07164

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain of each element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pNext-10805

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeVP9PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-uncompressedHeaderOffset-10806

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `uncompressedHeaderOffset` member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-compressedHeaderOffset-10807

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `compressedHeaderOffset` member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-tilesOffset-10808

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `tilesOffset` member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-10809

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then each element of the `referenceNameSlotIndices` array member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** either be negative or **must** equal the `slotIndex` member of one of the elements of `pDecodeInfo->pReferenceSlots`

- VUID-vkCmdDecodeVideoKHR-slotIndex-10810

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** equal one of the elements of the `referenceNameSlotIndices` array member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-filmGrainSupport-09248

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport` set to `VK_FALSE`, then `film grain` **must** not be enabled for the decoded picture

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09249

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and `film grain` is enabled for the decoded picture, then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** not `match`

- VUID-vkCmdDecodeVideoKHR-pNext-09250

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeAV1PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-frameHeaderOffset-09251

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `frameHeaderOffset` member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09253

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then all elements of the `pTileOffsets` member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09252

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then for each element `i` of the `pTileOffsets` and `pTileSizes` members of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` the sum of `pTileOffsets[i]` and `pTileSizes[i]` **must** be less than or equal to `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09254

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pNext-09255

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain of each element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-09262

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then each element of the `referenceNameSlotIndices` array member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** either be negative or **must** equal the `slotIndex` member of one of the elements of `pDecodeInfo->pReferenceSlots`

- VUID-vkCmdDecodeVideoKHR-slotIndex-09263

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** equal one of the elements of the

`referenceNameSlotIndices` array member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-None-10407

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`
- the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeAV1InlineSessionParametersInfoKHR` structure
- the `pStdSequenceHeader` member of the `VkVideoDecodeAV1InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`

### Valid Usage (Implicit)

- VUID-vkCmdDecodeVideoKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-parameter  
`pDecodeInfo` **must** be a valid pointer to a valid `VkVideoDecodeInfoKHR` structure
- VUID-vkCmdDecodeVideoKHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdDecodeVideoKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_DECODE_BIT_KHR` operations
- VUID-vkCmdDecodeVideoKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecodeVideoKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecodeVideoKHR-videocoding  
This command **must** only be called inside of a video coding scope
- VUID-vkCmdDecodeVideoKHR-bufferlevel  
`commandBuffer` **must** be a primary `VkCommandBuffer`

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types         | Command Type |
|-----------------------|-------------------|--------------------|-------------------------------|--------------|
| Primary               | Outside           | Inside             | VK_QUEUE_VIDEO_DECODE_BIT_KHR | Action       |

## Conditional Rendering

vkCmdDecodeVideoKHR is not affected by [conditional rendering](#)

The `VkVideoDecodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkVideoDecodeFlagsKHR     flags;
    VkBuffer                  srcBuffer;
    VkDeviceSize              srcBufferOffset;
    VkDeviceSize              srcBufferRange;
    VkVideoPictureResourceInfoKHR dstPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t                  referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoDecodeInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `srcBuffer` is the source video bitstream buffer to read the encoded bitstream from.
- `srcBufferOffset` is the starting offset in bytes from the start of `srcBuffer` to read the encoded bitstream from.
- `srcBufferRange` is the size in bytes of the encoded bitstream to decode from `srcBuffer`, starting from `srcBufferOffset`.
- `dstPictureResource` is the video picture resource to use as the [decode output picture](#).
- `pSetupReferenceSlot` is `NULL` or a pointer to a `VkVideoReferenceSlotInfoKHR` structure specifying the [reconstructed picture information](#).
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of `VkVideoReferenceSlotInfoKHR` structures

describing the DPB slots and corresponding [reference picture](#) resources to use in this video decode operation (the set of [active reference pictures](#)).

### Valid Usage

- VUID-VkVideoDecodeInfoKHR-srcBuffer-07165  
`srcBuffer` **must** have been created with the `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR` usage flag set
- VUID-VkVideoDecodeInfoKHR-srcBufferOffset-07166  
`srcBufferOffset` **must** be less than the size of `srcBuffer`
- VUID-VkVideoDecodeInfoKHR-srcBufferRange-07167  
`srcBufferRange` **must** be less than or equal to the size of `srcBuffer` minus `srcBufferOffset`
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07168  
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07169  
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoDecodeInfoKHR-slotIndex-07171  
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pPictureResource-07172  
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

### Valid Usage (Implicit)

- VUID-VkVideoDecodeInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR`
- VUID-VkVideoDecodeInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1InlineSessionParametersInfoKHR`, `VkVideoDecodeAV1PictureInfoKHR`, `VkVideoDecodeH264InlineSessionParametersInfoKHR`, `VkVideoDecodeH264PictureInfoKHR`, `VkVideoDecodeH265InlineSessionParametersInfoKHR`, `VkVideoDecodeH265PictureInfoKHR`, `VkVideoDecodeVP9PictureInfoKHR`, or `VkVideoInlineQueryInfoKHR`
- VUID-VkVideoDecodeInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoDecodeInfoKHR-flags-zero bitmask  
`flags` **must** be 0
- VUID-VkVideoDecodeInfoKHR-srcBuffer-parameter  
`srcBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkVideoDecodeInfoKHR-dstPictureResource-parameter  
`dstPictureResource` **must** be a valid `VkVideoPictureResourceInfoKHR` structure

- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-parameter  
If `pSetupReferenceSlot` is not `NULL`, `pSetupReferenceSlot` **must** be a valid pointer to a valid `VkVideoReferenceSlotInfoKHR` structure
- VUID-VkVideoDecodeInfoKHR-pReferenceSlots-parameter  
If `referenceSlotCount` is not `0`, `pReferenceSlots` **must** be a valid pointer to an array of `referenceSlotCount` valid `VkVideoReferenceSlotInfoKHR` structures

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeFlagsKHR;
```

`VkVideoDecodeFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

## 45.12. H.264 Decode Operations

Video decode operations using an [H.264 decode profile](#) **can** be used to decode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

### NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH264SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
  - The `StdVideoH264PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
  - The `StdVideoDecodeH264PictureInfo` structure specifying the [H.264 picture information](#).
  - The `StdVideoDecodeH264ReferenceInfo` structures specifying the [H.264 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [H.264 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [H.264 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.264 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.264 Specification](#), as described above, and the [DPB slots](#)

associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

### 45.12.1. H.264 Decode Bitstream Data Access

If the target [decode output picture](#) is a frame, then the video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice headers and data of a picture representing an entire frame, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the [ITU-T H.264 Specification](#), respectively.

If the target [decode output picture](#) is a field, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing a field, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the [ITU-T H.264 Specification](#), respectively.

The offsets provided in [VkVideoDecodeH264PictureInfoKHR::pSliceOffsets](#) **should** specify the starting offsets corresponding to each slice header within the video bitstream buffer range.

### 45.12.2. H.264 Decode Picture Data Access

The effective [imageOffset](#) and [imageExtent](#) corresponding to a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) used in video decode operations with an [H.264 decode profile](#) are defined as follows:

- [imageOffset](#) is ([codedOffset.x](#),[codedOffset.y](#)) and [imageExtent](#) is ([codedExtent.width](#),[codedExtent.height](#)), if the picture represents a frame.
- [imageOffset](#) is ([codedOffset.x](#),[codedOffset.y](#)) and [imageExtent](#) is ([codedExtent.width](#),[codedExtent.height](#)), if the picture represents a field and the picture layout of the used [H.264 decode profile](#) is [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_INTERLEAVED\\_LINES\\_BIT\\_KHR](#).
- [imageOffset](#) is ([codedOffset.x](#),[codedOffset.y](#)) and [imageExtent](#) is ([codedExtent.width](#),[codedExtent.height](#) / 2), if the picture represents a field and the picture layout of the used [H.264 decode profile](#) is [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_SEPARATE\\_PLANES\\_BIT\\_KHR](#).

Where [codedOffset](#) and [codedExtent](#) are the members of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

However, accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). This means that the complete image subregion accessed by video coding operations using an [H.264 decode profile](#) for the video picture resource is defined as the set of texels within the coordinate range:

$([\text{startX}, \text{endX}], [\text{startY}, \text{endY}])$

Where:

- `startX` equals `imageOffset.x` rounded down to the nearest integer multiple of `pictureAccessGranularity.width`;
- `endX` equals `imageOffset.x + imageExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `startY` equals `imageOffset.y` rounded down to the nearest integer multiple of `pictureAccessGranularity.height`;
- `endY` equals `imageOffset.y + imageExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure.

In case of video decode operations using an `H.264 decode profile`, any access to a picture at the coordinates `(x,y)`, as defined by the `ITU-T H.264 Specification`, is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates specified below:

- `(x,y)`, if the accessed picture represents a frame.
- `(x,y × 2)`, if the accessed picture represents a top field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- `(x,y × 2 + 1)`, if the accessed picture represents a bottom field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- `(x,y)`, if the accessed picture represents a top field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.
- `(codedOffset.x + x, codedOffset.y + y)`, if the accessed picture represents a bottom field and the picture layout of the used `H.264 decode profile` is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Where `codedOffset` is the member of the corresponding `VkVideoPictureResourceInfoKHR` structure.

### 45.12.3. H.264 Decode Profile

A video profile supporting H.264 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and adding a `VkVideoDecodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264ProfileInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    StdVideoH264ProfileIdc    stdProfileIdc;
    VkVideoDecodeH264PictureLayoutFlagBitsKHR pictureLayout;
} VkVideoDecodeH264ProfileInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stdProfileIdc** is a [StdVideoH264ProfileIdc](#) value specifying the H.264 codec profile IDC, where enum constant [STD\\_VIDEO\\_H264\\_PROFILE\\_IDC\\_BASELINE](#) identifies the Constrained Baseline profile as defined in A.2.1.1 of the [ITU-T H.264 Specification](#), and all other values correspond to profiles defined in section A.2 of the [ITU-T H.264 Specification](#).
- **pictureLayout** is a [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#) value specifying the picture layout used by the H.264 video sequence to be decoded.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH264ProfileInfoKHR-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_H264\\_PROFILE\\_INFO\\_KHR](#)
- VUID-VkVideoDecodeH264ProfileInfoKHR-pictureLayout-parameter  
If **pictureLayout** is not **0**, **pictureLayout** must be a valid [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#) value

### Structure Chaining

#### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

The H.264 video decode picture layout flags are defined as follows:

```
// Provided by VK_KHR_video_decode_h264
typedef enum VkVideoDecodeH264PictureLayoutFlagBitsKHR {
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR = 0,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR =
0x00000001,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR =
0x00000002,
} VkVideoDecodeH264PictureLayoutFlagBitsKHR;
```

- [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_PROGRESSIVE\\_KHR](#) specifies support for progressive content. This flag has the value `0`.
- [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_INTERLEAVED\\_LINES\\_BIT\\_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to the top field are decoded to the even-numbered lines within the picture resource, and all lines belonging to the bottom field are decoded to the odd-numbered lines within the picture resource.
- [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_SEPARATE\\_PLANES\\_BIT\\_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to a field are grouped together in a single image subregion, and the two fields comprising the frame **can** be stored in separate image subregions of the same image subresource or in separate image subresources.

```
// Provided by VK_KHR_video_decode_h264
typedef VkFlags VkVideoDecodeH264PictureLayoutFlagsKHR;
```

[VkVideoDecodeH264PictureLayoutFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#).

#### 45.12.4. H.264 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.264 decode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoDecodeH264CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoDecodeH264CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoH264LevelIdc maxLevelIdc;
    VkOffset2D          fieldOffsetGranularity;
} VkVideoDecodeH264CapabilitiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a [StdVideoH264LevelIdc](#) value indicating the maximum H.264 level supported by the profile, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).
- `fieldOffsetGranularity` is the minimum alignment for [VkVideoPictureResourceInfoKHR::codedOffset](#) specified for a [video picture resource](#) when using the picture layout [VK\\_VIDEO\\_DECODE\\_H264\\_PICTURE\\_LAYOUT\\_INTERLACED\\_SEPARATE\\_PLANES\\_BIT\\_KHR](#).

## Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264CapabilitiesKHR-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_CAPABILITIES_KHR`

## Structure Chaining

### Extends the structure

- `VkVideoCapabilitiesKHR`

## 45.12.5. H.264 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` can contain the following types of parameters:

### H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#);
- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the [ITU-T H.264 Specification](#);
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;

- `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

**NOTE**

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

## H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoDecodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of `H.264 SPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `maxStdPPSCount` is the maximum number of `H.264 PPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter  
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` must be a valid pointer to a valid `VkVideoDecodeH264SessionParametersAddInfoKHR` structure

### Structure Chaining

#### Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoDecodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t                 stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoDecodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the [H.264 SPS](#) entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the [H.264 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a [video session parameters](#) object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the [video session parameters](#) object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

## Valid Usage

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04825  
The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04826  
The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

## Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter`  
If `stdSPSCount` is not 0, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter`  
If `stdPPSCount` is not 0, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

## Structure Chaining

### Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

## Inline Parameter Sets

In case of `video sessions` created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, the application **can** also specify the active parameter sets *inline* by including an instance of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure in the `pNext` chain of `VkVideoDecodeInfoKHR`.

The `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH264InlineSessionParametersInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoH264SequenceParameterSet* pStdSPS;
    const StdVideoH264PictureParameterSet*  pStdPPS;
} VkVideoDecodeH264InlineSessionParametersInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSPS` is `NULL` or a pointer to an instance of the `StdVideoH264SequenceParameterSet` structure describing the *active H.264 SPS*.
- `pStdPPS` is `NULL` or a pointer to an instance of the `StdVideoH264PictureParameterSet` structure describing the *active H.264 PPS*.

If `pStdSPS` or `pStdPPS` is not `NULL`, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding parameter sets being sourced from the bound video session parameters object.

### Valid Usage (Implicit)

- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_INLINE_SESSION_PARAMETERS_INFO_KHR`
- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdSPS-parameter`  
If `pStdSPS` is not `NULL`, `pStdSPS` must be a valid pointer to a valid `StdVideoH264SequenceParameterSet` value
- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdPPS-parameter`  
If `pStdPPS` is not `NULL`, `pStdPPS` must be a valid pointer to a valid `StdVideoH264PictureParameterSet` value

### Structure Chaining

#### Extends the structure

- `VkVideoDecodeInfoKHR`

## 45.12.6. H.264 Decoding Parameters

The `VkVideoDecodeH264PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264PictureInfo* pStdPictureInfo;
    uint32_t           sliceCount;
    const uint32_t*     pSliceOffsets;
} VkVideoDecodeH264PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH264PictureInfo` structure specifying [H.264 picture information](#).
- `sliceCount` is the number of elements in `pSliceOffsets`.
- `pSliceOffsets` is a pointer to an array of `sliceCount` offsets specifying the start offset of the slices of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to

[vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [H.264 decode operation](#).

## Decode Output Picture Information

When this structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- If [pStdPictureInfo->flags.field\\_pic\\_flag](#) is not set, then the picture represents a frame.
- If [pStdPictureInfo->flags.field\\_pic\\_flag](#) is set, then the picture represents a field. Specifically:
  - If [pStdPictureInfo->flags.bottom\\_field\\_flag](#) is not set, then the picture represents the top field of the frame.
  - If [pStdPictureInfo->flags.bottom\\_field\\_flag](#) is set, then the picture represents the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.264 picture information](#) provided in [pStdPictureInfo](#).

## Std Picture Information

The members of the [StdVideoDecodeH264PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are interpreted as follows:

- [reserved1](#) and [reserved2](#) are used only for padding purposes and are otherwise ignored;
- [flags.is\\_intra](#) as defined in section 3.73 of the [ITU-T H.264 Specification](#);
- [flags.is\\_reference](#) as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- [flags.complementary\\_field\\_pair](#) as defined in section 3.35 of the [ITU-T H.264 Specification](#);
- [seq\\_parameter\\_set\\_id](#) and [pic\\_parameter\\_set\\_id](#) are used to identify the active parameter sets, as described below;
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of [StdVideoDecodeH264PictureInfo::flags.is\\_reference](#). If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in [pDecodeInfo->pSetupReferenceSlot->slotIndex](#). If [StdVideoDecodeH264PictureInfo::flags.is\\_reference](#) is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

## Active Parameter Sets

The members of the [StdVideoDecodeH264PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are used to select the active parameter sets to use from the specified [inline parameter sets](#) or from the bound video session parameters object, as follows:

- The *active SPS* is the [SPS](#) identified by the key specified in [StdVideoDecodeH264PictureInfo](#)

`::seq_parameter_set_id`.

- The *active PPS* is the `PPS` identified by the key specified by the pair constructed from `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and any of the active parameter sets are specified `inline`, then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

### Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264PictureInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR`
- `VUID-VkVideoDecodeH264PictureInfoKHR-pStdPictureInfo-parameter`  
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264PictureInfo` value
- `VUID-VkVideoDecodeH264PictureInfoKHR-pSliceOffsets-parameter`  
`pSliceOffsets` **must** be a valid pointer to an array of `sliceCount uint32_t` values
- `VUID-VkVideoDecodeH264PictureInfoKHR-sliceCount-arraylength`  
`sliceCount` **must** be greater than 0

### Structure Chaining

#### Extends the structure

- `VkVideoDecodeInfoKHR`

The `VkVideoDecodeH264DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH264ReferenceInfo` structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.264 decode operation](#).

## Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one or two elements are added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a frame reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture is added as a top field reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a bottom field reference to the list of active reference pictures.
- For each added reference picture, the corresponding image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- Each added reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- Each added reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

### NOTE

When both the top and bottom field of an interlaced frame currently associated with a DPB slot is intended to be used as an active reference picture and both fields are stored in the same image subregion (which is the case when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR` which stores the two fields at even and odd scanlines of the same image subregion), both references have to be provided through a single `VkVideoReferenceSlotInfoKHR` structure that has both `flags.top_field_flag` and `flags.bottom_field_flag` set in the `StdVideoDecodeH264ReferenceInfo` structure pointed to by the `pStdReferenceInfo` member of the `VkVideoDecodeH264DpbSlotInfoKHR` structure included in the corresponding `VkVideoReferenceSlotInfoKHR` structure's `pNext` chain. However, this approach can only be used when both fields are stored in the same image subregion. If that is not the case (e.g. when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR` which requires separate `codedOffset` values for the two fields and also allows storing the two fields of a frame in separate image layers or entirely separate images), then a separate `VkVideoReferenceSlotInfoKHR` structure needs to be provided for referencing the two fields, each only setting one of `flags.top_field_flag` or `flags.bottom_field_flag`, and providing the appropriate video picture resource information in `VkVideoReferenceSlotInfoKHR::pPictureResource`.

## Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a frame.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture represents a field, specifically, the top field of the frame.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a field, specifically, the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

## Std Reference Information

The members of the `StdVideoDecodeH264ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.top_field_flag` is used to indicate whether the reference is used as top field reference;
- `flags.bottom_field_flag` is used to indicate whether the reference is used as bottom field reference;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- `flags.is_non_existing` is used to indicate whether the picture is marked as “non-existing” as defined in section 8.2.5.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

## Valid Usage (Implicit)

- `VOID-VkVideoDecodeH264DpbSlotInfoKHR-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR`
- `VOID-VkVideoDecodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter` `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264ReferenceInfo` value

## Structure Chaining

### Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

## 45.12.7. H.264 Decode Requirements

This section describes the **required** H.264 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_H264\\_BIT\\_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR::videoCodecOperations](#).

Table 52. Required *Video Std Header Versions*

| Video Std Header Name                             | Version |
|---------------------------------------------------|---------|
| <a href="#">vulkan_video_codec_h264std_decode</a> | 1.0.0   |

Table 53. Required Video Capabilities

| Video Capability                                  | Requirement                                                                                                                                              | Requirement Type <sup>1</sup> |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <a href="#">VkVideoCapabilitiesKHR</a>            |                                                                                                                                                          |                               |
| <a href="#">flags</a>                             | -                                                                                                                                                        | min                           |
| <a href="#">minBitstreamBufferOffsetAlignment</a> | 4096                                                                                                                                                     | max                           |
| <a href="#">minBitstreamBufferSizeAlignment</a>   | 4096                                                                                                                                                     | max                           |
| <a href="#">pictureAccessGranularity</a>          | (64,64)                                                                                                                                                  | max                           |
| <a href="#">minCodedExtent</a>                    | -                                                                                                                                                        | max                           |
| <a href="#">maxCodedExtent</a>                    | -                                                                                                                                                        | min                           |

| Video Capability       | Requirement                                                                                               | Requirement Type <sup>1</sup> |
|------------------------|-----------------------------------------------------------------------------------------------------------|-------------------------------|
| fieldOffsetGranularity | (0,0) except for profiles using<br>VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR | implementation-dependent      |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

## 45.13. H.265 Decode Operations

Video decode operations using an [H.265 decode profile](#) **can** be used to decode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

### NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of [ITU-T H.265 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).
  - The `StdVideoH265SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.265 sequence parameter set](#).
  - The `StdVideoH265PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.265 picture parameter set](#).
  - The `StdVideoDecodeH265PictureInfo` structure specifying the [H.265 picture information](#).
  - The `StdVideoDecodeH265ReferenceInfo` structures specifying the [H.265 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [H.265 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [H.265 Decode Picture Data Access](#) section.

- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.265 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.265 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

#### 45.13.1. H.265 Decode Bitstream Data Access

The video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice segment headers and data of a picture representing a frame, as defined in sections 7.3.6 and 7.3.8, and this data is interpreted as defined in sections 7.4.7 and 7.4.9 of the [ITU-T H.265 Specification](#), respectively.

The offsets provided in [VkVideoDecodeH265PictureInfoKHR::pSliceSegmentOffsets](#) **should** specify the starting offsets corresponding to each slice segment header within the video bitstream buffer range.

#### 45.13.2. H.265 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [H.265 decode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video decode operations using an [H.265 decode profile](#), any access to a picture at the coordinates  $(x, y)$ , as defined by the [ITU-T H.265 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates  $(x, y)$ .

### 45.13.3. H.265 Decode Profile

A video profile supporting H.265 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and adding a `VkVideoDecodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoDecodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

#### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265ProfileInfoKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR`

#### Structure Chaining

##### Extends the structures

- `VkQueryPoolCreateInfo`
- `VkVideoProfileInfoKHR`

### 45.13.4. H.265 Decode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an H.265 decode profile, the `VkVideoCapabilitiesKHR::pNext` chain must include a `VkVideoDecodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeH265CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoH265LevelIdc    maxLevelIdc;
} VkVideoDecodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265CapabilitiesKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoCapabilitiesKHR`

## 45.13.5. H.265 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` can contain the following types of parameters:

### H.265 Video Parameter Sets (VPS)

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as

follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
  - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
  - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
  - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
  - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

## H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:

- `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
      - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
      - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
    - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
      - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
      - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
    - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
  - all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);

- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

## H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdVPSCount;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoDecodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH265SessionParametersCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxStdVPSCount** is the maximum number of [H.265 VPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **maxStdSPSCount** is the maximum number of [H.265 SPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **maxStdPPSCount** is the maximum number of [H.265 PPS](#) entries the created [VkVideoSessionParametersKHR](#) **can** contain.
- **pParametersAddInfo** is **NULL** or a pointer to a [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure specifying H.265 parameters to add upon object creation.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_H265\\_SESSION\\_PARAMETERS\\_CREATE\\_INFO\\_KHR](#)
- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter  
If **pParametersAddInfo** is not **NULL**, **pParametersAddInfo** **must** be a valid pointer to a valid [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure

### Structure Chaining

#### Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

The [VkVideoDecodeH265SessionParametersAddInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSSs;
    uint32_t                 stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSSs;
    uint32_t                 stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSSs;
} VkVideoDecodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSSs` array.
- `pStdVPSSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSSs` array.
- `pStdSPSSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSSs` array.
- `pStdPPSSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the H.265 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

## Valid Usage

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04833  
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSSs` **must** be unique within `pStdVPSSs`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04834  
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`

members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04835

The triplet constructed from the `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` members of each `StdVideoH265PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

## Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdVPSSs-parameter  
If `stdVPSCount` is not 0, `pStdVPSSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdSPSSs-parameter  
If `stdSPSCount` is not 0, `pStdSPSSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdPPSSs-parameter  
If `stdPPSCount` is not 0, `pStdPPSSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

## Structure Chaining

### Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

## Inline Parameter Sets

In case of `video sessions` created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, the application **can** also specify the active parameter sets *inline* by including an instance of the `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure in the `pNext` chain of `VkVideoDecodeInfoKHR`.

The `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH265InlineSessionParametersInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoH265VideoParameterSet* pStdVPS;
    const StdVideoH265SequenceParameterSet* pStdSPS;
    const StdVideoH265PictureParameterSet* pStdPPS;
} VkVideoDecodeH265InlineSessionParametersInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pStdVPS** is **NULL** or a pointer to an instance of the **StdVideoH265VideoParameterSet** structure describing the **active H.265 VPS**.
- **pStdSPS** is **NULL** or a pointer to an instance of the **StdVideoH265SequenceParameterSet** structure describing the **active H.265 SPS**.
- **pStdPPS** is **NULL** or a pointer to an instance of the **StdVideoH265PictureParameterSet** structure describing the **active H.265 PPS**.

If **pStdVPS**, **pStdSPS**, or **pStdPPS** is not **NULL**, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding active parameter sets being sourced from the bound video session parameters object.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-sType-sType **must** be **VK\_STRUCTURE\_TYPE\_VIDEO\_DECODE\_H265\_INLINE\_SESSION\_PARAMETERS\_INFO\_KHR**
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdVPS-parameter  
If **pStdVPS** is not **NULL**, **pStdVPS** **must** be a valid pointer to a valid **StdVideoH265VideoParameterSet** value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdSPS-parameter  
If **pStdSPS** is not **NULL**, **pStdSPS** **must** be a valid pointer to a valid **StdVideoH265SequenceParameterSet** value
- VUID-VkVideoDecodeH265InlineSessionParametersInfoKHR-pStdPPS-parameter  
If **pStdPPS** is not **NULL**, **pStdPPS** **must** be a valid pointer to a valid **StdVideoH265PictureParameterSet** value

### Structure Chaining

#### Extends the structure

### 45.13.6. H.265 Decoding Parameters

The `VkVideoDecodeH265PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeH265PictureInfo* pStdPictureInfo;
    uint32_t                 sliceSegmentCount;
    const uint32_t*          pSliceSegmentOffsets;
} VkVideoDecodeH265PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH265PictureInfo` structure specifying [H.265 picture information](#).
- `sliceSegmentCount` is the number of elements in `pSliceSegmentOffsets`.
- `pSliceSegmentOffsets` is a pointer to an array of `sliceSegmentCount` offsets specifying the start offset of the slice segments of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an [H.265 decode operation](#).

#### Decode Output Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

#### Std Picture Information

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.IdrPicFlag` as defined in section 3.67 of the [ITU-T H.265 Specification](#);
- `flags.IsReference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are

used to identify the active parameter sets, as described below;

- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `NumBitsForSTRefPicSetInSlice` is the number of bits used in `st_ref_pic_set` when `short_term_ref_pic_set_sps_flag` is 0, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);
- `NumDeltaPocsOfRefRpsIdx` is the value of `NumDeltaPocs[RefRpsIdx]` when `short_term_ref_pic_set_sps_flag` is 1, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](#);
- `RefPicSetStCurrBefore`, `RefPicSetStCurrAfter`, and `RefPicSetLtCurr` are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
- all other members are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoDecodeH265PictureInfo::flags.IsReference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the corresponding [DPB slot](#). If `StdVideoDecodeH265PictureInfo::flags.IsReference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

### Active Parameter Sets

The members of the `StdVideoDecodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the specified [inline parameter sets](#) or from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`.

If the bound video session was created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_SESSION\\_PARAMETERS\\_BIT\\_KHR](#) and any of the active parameter sets are specified [inline](#), then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

### Valid Usage (Implicit)

- `VUID-VkVideoDecodeH265PictureInfoKHR-sType-sType`  
`sType` must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_H265\\_PICTURE\\_INFO\\_KHR](#)
- `VUID-VkVideoDecodeH265PictureInfoKHR-pStdPictureInfo-parameter`

`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265PictureInfo` value

- `VOID-VkVideoDecodeH265PictureInfoKHR-pSliceSegmentOffsets-parameter`  
`pSliceSegmentOffsets` **must** be a valid pointer to an array of `sliceSegmentCount uint32_t` values
- `VOID-VkVideoDecodeH265PictureInfoKHR-sliceSegmentCount-arraylength`  
`sliceSegmentCount` **must** be greater than 0

## Structure Chaining

### Extends the structure

- `VkVideoDecodeInfoKHR`

The `VkVideoDecodeH265DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265DpbSlotInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    const StdVideoDecodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH265DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH265ReferenceInfo` structure specifying reference picture information described in section 8.3 of the [ITU-T H.265 Specification](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.265 decode operation](#).

### Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

## Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR` `::pSetupReferenceSlot`, the information related to the **reconstructed picture** is defined as follows:

- The image subregion used is determined according to the [H.265 Decode Picture Data Access](#) section.
- If **reference picture setup** is requested, then the reconstructed picture is used to **activate** the **DPB slot** with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the **H.265 reference information** provided in `pStdReferenceInfo`.

## Std Reference Information

The members of the `StdVideoDecodeH265ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 8.3 of the [ITU-T H.265 Specification](#).

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265DpbSlotInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB_SLOT_INFO_KHR`
- VUID-VkVideoDecodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH265ReferenceInfo` value

### Structure Chaining

#### Extends the structure

- `VkVideoReferenceSlotInfoKHR`

## 45.13.7. H.265 Decode Requirements

This section describes the **required** H.265 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 54. Required *Video Std Header Versions*

| Video Std Header Name             | Version |
|-----------------------------------|---------|
| vulkan_video_codec_h265std_decode | 1.0.0   |

Table 55. Required Video Capabilities

| Video Capability                        | Requirement                                                                                                                 | Requirement Type <sup>1</sup> |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>VkVideoCapabilitiesKHR</b>           |                                                                                                                             |                               |
| flags                                   | -                                                                                                                           | min                           |
| minBitstreamBufferOffsetAlignment       | 4096                                                                                                                        | max                           |
| minBitstreamBufferSizeAlignment         | 4096                                                                                                                        | max                           |
| pictureAccessGranularity                | (64,64)                                                                                                                     | max                           |
| minCodedExtent                          | -                                                                                                                           | max                           |
| maxCodedExtent                          | -                                                                                                                           | min                           |
| maxDpbSlots                             | 0                                                                                                                           | min                           |
| maxActiveReferencePictures              | 0                                                                                                                           | min                           |
| <b>VkVideoDecodeCapabilitiesKHR</b>     |                                                                                                                             |                               |
| flags                                   | VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or<br>VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR | min                           |
| <b>VkVideoDecodeH265CapabilitiesKHR</b> |                                                                                                                             |                               |
| maxLevelIdc                             | STD_VIDEO_H265_LEVEL_IDC_1_0                                                                                                | min                           |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

## 45.14. VP9 Decode Operations

Video decode operations using an [VP9 decode profile](#) can be used to decode elementary video stream sequences compliant with the [VP9 Specification](#).

### NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of the [VP9 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the [StdVideoDecodeVP9PictureInfo](#) structure specifying the [VP9 picture information](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [VP9 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [VP9 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [VP9 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [VP9 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

#### 45.14.1. VP9 Decode Bitstream Data Access

The video bitstream buffer range **should** contain the bitstream that represents an entire frame, as defined in section 6.1, and this data is interpreted as defined in section 7.1 of the [VP9 Specification](#), respectively.

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::uncompressedHeaderOffset](#) **should** specify the starting offset of the uncompressed header of the frame, as defined in section 6.2 of the [VP9 Specification](#).

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::compressedHeaderOffset](#) **should** specify the starting offset of the compressed header of the frame, as defined in section 6.3 of the [VP9 Specification](#).

The offset specified in [VkVideoDecodeVP9PictureInfoKHR::tilesOffset](#) **should** specify the starting offset of the frame tile data, as defined in section 6.4 of the [VP9 Specification](#).

#### 45.14.2. VP9 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [VP9 decode profile](#) is defined as the set of texels within the coordinate range:

([0,endX), [0,endY))

Where:

- endX equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- endY equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video decode operations using an `VP9 decode profile`, any access to a picture at the coordinates (x,y), as defined by the `VP9 Specification`, is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates (x,y).

### 45.14.3. VP9 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 7.4.12 of the `VP9 Specification`. The VP9 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoVP9ReferenceName`:

- `STD_VIDEO_VP9_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 8.5.1 of the `VP9 Specification`.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 8.5.2 of the `VP9 Specification`:
  - `STD_VIDEO_VP9_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
  - `STD_VIDEO_VP9_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
  - `STD_VIDEO_VP9_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

### 45.14.4. VP9 Decode Profile

A video profile supporting VP9 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR` and adding a `VkVideoDecodeVP9ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeVP9ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoVP9Profile  stdProfile;
} VkVideoDecodeVP9ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoVP9Profile` value specifying the VP9 codec profile, as defined in section 7.2 of the [VP9 Specification](#).

### Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9ProfileInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_VP9_PROFILE_INFO_KHR`

### Structure Chaining

#### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

## 45.14.5. VP9 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [VP9 decode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoDecodeVP9CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeVP9CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoVP9Level    maxLevel;
} VkVideoDecodeVP9CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevel` is a `StdVideoVP9Level` value specifying the maximum VP9 level supported by the profile, as defined in section A.1 of the [VP9 Specification](#).

## Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9CapabilitiesKHR-sType-sType  
sType must be VK\_STRUCTURE\_TYPE\_VIDEO\_DECODE\_VP9\_CAPABILITIES\_KHR

## Structure Chaining

### Extends the structure

- [VkVideoCapabilitiesKHR](#)

## 45.14.6. VP9 Decoding Parameters

The [VkVideoDecodeVP9PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkVideoDecodeVP9PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeVP9PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR];
    uint32_t                  uncompressedHeaderOffset;
    uint32_t                  compressedHeaderOffset;
    uint32_t                  tilesOffset;
} VkVideoDecodeVP9PictureInfoKHR;
```

- sType is a [VkStructureType](#) value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- pStdPictureInfo is a pointer to a [StdVideoDecodeVP9PictureInfo](#) structure specifying [VP9 picture information](#).
- referenceNameSlotIndices is an array of three ([VK\\_MAX\\_VIDEO\\_VP9\\_REFERENCES\\_PER\\_FRAME\\_KHR](#), which is equal to the Video Std definition [STD\\_VIDEO\\_VP9\\_REFS\\_PER\\_FRAME](#)) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [VP9 reference name](#) used for inter coding. In particular, the DPB slot index for the VP9 reference name [frame](#) is specified in [referenceNameSlotIndices\[frame - STD\\_VIDEO\\_VP9\\_REFERENCE\\_NAME\\_LAST\\_FRAME\]](#).
- uncompressedHeaderOffset is the byte offset of the uncompressed frame header, as defined in section 6.2 of the [VP9 Specification](#).
- compressedHeaderOffset is the byte offset of the compressed frame header, as defined in section 6.3 of the [VP9 Specification](#).
- tilesOffset is the byte offset of the frame tile data, as defined in section 6.4 of the [VP9 Specification](#).

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an `VP9 decode operation`.

### Decode Output Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the `decode output picture` is defined as follows:

- The image subregion used is determined according to the `VP9 Decode Picture Data Access` section.
- The decode output picture is associated with the `VP9 picture information` provided in `pStdPictureInfo`.

### Std Picture Information

The members of the `StdVideoDecodeVP9PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `ref_frame_sign_bias_mask` is a bitmask where bit index `i` corresponds to `ref_frame_sign_bias[i]` as defined in section 7.2 of the `VP9 Specification`;
- the `StdVideoVP9ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
  - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
  - all other members of `StdVideoVP9ColorConfig` are interpreted as defined in sections 6.2, 6.2.2, and 7.2.2 of the `VP9 Specification`;
- the `StdVideoVP9LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `update_ref_delta` is a bitmask where bit index `i` is interpreted as the value of `update_ref_delta` corresponding to element `i` of `loop_filter_ref_deltas` as defined in section 7.2.8 of the `VP9 Specification`;
  - `update_mode_delta` is a bitmask where bit index `i` is interpreted as the value of `update_mode_delta` corresponding to element `i` of `loop_filter_mode_deltas` as defined in section 7.2.8 of the `VP9 Specification`;
  - all other members of `StdVideoVP9LoopFilter` are interpreted as defined in section 7.2.8 of the `VP9 Specification`;

#### NOTE

If the syntax elements corresponding to `loop_filter_ref_deltas` and `loop_filter_mode_deltas` are not present, the application should specify the previous values, as defined in section 7.2.8 of the `VP9 Specification`.

- if `flags.segmentation_enabled` is set, then the `StdVideoVP9Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;

- the elements of **FeatureEnabled** are bitmasks where bit index *j* of element *i* corresponds to **FeatureEnabled[i][j]** as defined in section 6.2.11 of the [VP9 Specification](#);
- **FeatureData** is interpreted as defined in section 6.2.11 of the [VP9 Specification](#);
- all other members of **StdVideoVP9Segmentation** are interpreted as defined in section 7.2.10 of the [VP9 Specification](#);
- all other members are interpreted as defined in section 7.2 of the [VP9 Specification](#).

Reference picture setup is controlled by the value of **StdVideoDecodeVP9PictureInfo::refresh\_frame\_flags**. If it is not zero and a **reconstructed picture** is specified, then the latter is used as the target of picture reconstruction to **activate** the **DPB slot** specified in **pDecodeInfo->pSetupReferenceSlot->slotIndex**. If **StdVideoDecodeVP9PictureInfo::refresh\_frame\_flags** is zero, but a **reconstructed picture** is specified, then the corresponding picture reference associated with the **DPB slot** is invalidated, as described in the [DPB Slot States](#) section.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeVP9PictureInfoKHR-sType-sType **sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_VP9\\_PICTURE\\_INFO\\_KHR](#)
- VUID-VkVideoDecodeVP9PictureInfoKHR-pStdPictureInfo-parameter **pStdPictureInfo** **must** be a valid pointer to a valid **StdVideoDecodeVP9PictureInfo** value

### Structure Chaining

#### Extends the structure

- [VkVideoDecodeInfoKHR](#)

#### NOTE

VP9 decode operations do not need any std reference information to be specified for the active reference pictures and the optional reconstructed picture. Accordingly, no DPB slot info structure exists in the API that would need to be chained to the corresponding [VkVideoReferenceSlotInfoKHR](#) structures and no **StdVideoDecodeVP9ReferenceInfo** structure exists in the VP9 Video Std Headers.

[VK\\_MAX\\_VIDEO\\_VP9\\_REFERENCES\\_PER\\_FRAME\\_KHR](#) is the length of the array of DPB slot or VP9 reference names passed in [VkVideoDecodeVP9PictureInfoKHR::referenceNameSlotIndices](#).

```
#define VK_MAX_VIDEO_VP9_REFERENCES_PER_FRAME_KHR 3U
```

## 45.14.7. VP9 Decode Requirements

This section describes the **required** VP9 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_VP9\\_BIT\\_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR](#)

`::videoCodecOperations.`

Table 56. Required *Video Std Header Versions*

| Video Std Header Name                         | Version |
|-----------------------------------------------|---------|
| <code>vulkan_video_codec_vp9std_decode</code> | 1.0.0   |

Table 57. Required Video Capabilities

| Video Capability                               | Requirement                                                                                                                                         | Requirement Type <sup>1</sup> |
|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>VkVideoCapabilitiesKHR</b>                  |                                                                                                                                                     |                               |
| <code>flags</code>                             | -                                                                                                                                                   | min                           |
| <code>minBitstreamBufferOffsetAlignment</code> | 4096                                                                                                                                                | max                           |
| <code>minBitstreamBufferSizeAlignment</code>   | 4096                                                                                                                                                | max                           |
| <code>pictureAccessGranularity</code>          | (64,64)                                                                                                                                             | max                           |
| <code>minCodedExtent</code>                    | -                                                                                                                                                   | max                           |
| <code>maxCodedExtent</code>                    | -                                                                                                                                                   | min                           |
| <code>maxDpbSlots</code>                       | 0                                                                                                                                                   | min                           |
| <code>maxActiveReferencePictures</code>        | 0                                                                                                                                                   | min                           |
| <b>VkVideoDecodeCapabilitiesKHR</b>            |                                                                                                                                                     |                               |
| <code>flags</code>                             | VK_VIDEO_DECODE_C<br>APABILITY_DPB_AND<br>_OUTPUT_COINCIDE_<br>BIT_KHR or<br>VK_VIDEO_DECODE_C<br>APABILITY_DPB_AND<br>_OUTPUT_DISTINCT_<br>BIT_KHR | min                           |
| <b>VkVideoDecodeVP9CapabilitiesKHR</b>         |                                                                                                                                                     |                               |
| <code>maxLevel</code>                          | STD_VIDEO_VP9_LEVEL_2<br>_0                                                                                                                         | min                           |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

## 45.15. AV1 Decode Operations

Video decode operations using an [AV1 decode profile](#) **can** be used to decode elementary video stream sequences compliant with the [AV1 Specification](#).

**NOTE**

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 7 of the [AV1 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoAV1SequenceHeader` structure stored in the bound video session parameters object specifying the [active sequence header](#).
  - The `StdVideoDecodeAV1PictureInfo` structure specifying the [AV1 picture information](#).
  - The `StdVideoDecodeAV1ReferenceInfo` structures specifying the [AV1 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [AV1 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [AV1 Decode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [AV1 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [AV1 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

### 45.15.1. AV1 Decode Bitstream Data Access

The video bitstream buffer range **should** contain one or more frame OBUs, comprised of a frame header OBU and tile group OBU, that together represent an entire frame, as defined in sections 5.10, 5.9, and 5.11, and this data is interpreted as defined in sections 6.9, 6.8, and 6.10 of the [AV1 Specification](#), respectively.

The offset specified in `VkVideoDecodeAV1PictureInfoKHR::frameHeaderOffset` **should** specify the starting offset of the frame header OBU of the frame.

**NOTE**

When the tiles of the frame are encoded into multiple tile groups, each frame OBU has a separate frame header OBU but their content is expected to match per the requirements of the [AV1 Specification](#). Accordingly, the offset specified in `frameHeaderOffset` **can** be the offset of any of the otherwise identical frame header OBUs when multiple tile groups are present.

The offsets and sizes provided in `VkVideoDecodeAV1PictureInfoKHR::pTileOffsets` and `VkVideoDecodeAV1PictureInfoKHR::pTileSizes`, respectively, **should** specify the starting offsets and

sizes corresponding to each tile within the video bitstream buffer range.

### 45.15.2. AV1 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. Accordingly, the complete image subregion of a `decode output picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `AV1 decode profile` is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video decode operations using an `AV1 decode profile`, any access to a picture at the coordinates  $(x, y)$ , as defined by the `AV1 Specification`, is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates  $(x, y)$ .

### 45.15.3. AV1 Reference Names and Semantics

Individual reference frames used in the decoding process have different semantics, as defined in section 6.10.24 of the `AV1 Specification`. The AV1 semantics associated with a reference picture are indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the `AV1 Specification`.
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the `AV1 Specification`:
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference

- `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME` identifies the `ALTREF2_FRAME` reference
- `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

#### 45.15.4. AV1 Decode Profile

A video profile supporting AV1 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and adding a `VkVideoDecodeAV1ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeAV1ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoAV1Profile stdProfile;
    VkBool32           filmGrainSupport;
} VkVideoDecodeAV1ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfile` is a `StdVideoAV1Profile` value specifying the AV1 codec profile, as defined in section A.2 of the [AV1 Specification](#).
- `filmGrainSupport` specifies whether AV1 film grain, as defined in section 7.8.3 of the [AV1 Specification](#), can be used with the video profile. When this member is `VK_TRUE`, video session objects created against the video profile will be able to decode pictures that have film grain enabled.

#### NOTE

Enabling `filmGrainSupport` may increase the memory requirements of video sessions and/or video picture resources on some implementations.

#### Valid Usage (Implicit)

- `UID-VkVideoDecodeAV1ProfileInfoKHR-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PROFILE_INFO_KHR`

#### Structure Chaining

##### Extends the structures

- `VkQueryPoolCreateInfo`

- [VkVideoProfileInfoKHR](#)

### 45.15.5. AV1 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [AV1 decode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoDecodeAV1CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoDecodeAV1CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoAV1Level    maxLevel;
} VkVideoDecodeAV1CapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxLevel](#) is a [StdVideoAV1Level](#) value specifying the maximum AV1 level supported by the profile, as defined in section A.3 of the [AV1 Specification](#).

#### Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1CapabilitiesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_AV1\\_CAPABILITIES\\_KHR](#)

#### Structure Chaining

##### Extends the structure

- [VkVideoCapabilitiesKHR](#)

### 45.15.6. AV1 Decode Parameter Sets

[Video session parameters](#) objects created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_AV1\\_BIT\\_KHR](#) contain a single instance of the following parameter set:

#### AV1 Sequence Header

Represented by [StdVideoAV1SequenceHeader](#) structures and interpreted as follows:

- [flags.reserved](#) and [reserved1](#) are used only for padding purposes and are otherwise ignored;

- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
  - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
  - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of the [AV1 Specification](#);
- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the [AV1 Specification](#);
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the [AV1 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1SessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
} VkVideoDecodeAV1SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is a pointer to a `StdVideoAV1SequenceHeader` structure describing the [AV1 sequence header](#) entry to store in the created object.

#### NOTE

As AV1 video session parameters objects will only ever contain a single AV1 sequence header, this has to be specified at object creation time and such video session parameters objects cannot be updated using the `vkUpdateVideoSessionParametersKHR` command. When a new AV1 sequence header is decoded from the input video bitstream the application needs to create a new video session parameters object to store it.

### Valid Usage (Implicit)

- VOID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR`

- VUID-VkVideoDecodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter  
**pStdSequenceHeader** **must** be a valid pointer to a valid **StdVideoAV1SequenceHeader** value

## Structure Chaining

### Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

### Inline Parameter Sets

In case of [video sessions](#) created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_DECODE\\_AV1\\_BIT\\_KHR](#) and with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_SESSION\\_PARAMETERS\\_BIT\\_KHR](#), the application **can** also specify the active [sequence header](#) *inline* by including an instance of the [VkVideoDecodeAV1InlineSessionParametersInfoKHR](#) structure in the **pNext** chain of [VkVideoDecodeInfoKHR](#).

The [VkVideoDecodeAV1InlineSessionParametersInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeAV1InlineSessionParametersInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
} VkVideoDecodeAV1InlineSessionParametersInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pStdSequenceHeader** is **NULL** or a pointer to an instance of the [StdVideoAV1SequenceHeader](#) structure describing the [active AV1 sequence header](#).

If **pStdSequenceHeader** is not **NULL**, the issued video decode operations will use the specified sequence header parameters instead of the active sequence header being sourced from the bound video session parameters object.

## Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_AV1\\_INLINE\\_SESSION\\_PARAMETERS\\_INFO\\_KHR](#)
- VUID-VkVideoDecodeAV1InlineSessionParametersInfoKHR-pStdSequenceHeader-parameter  
 If **pStdSequenceHeader** is not **NULL**, **pStdSequenceHeader** **must** be a valid pointer to a valid

## Structure Chaining

### Extends the structure

- [VkVideoDecodeInfoKHR](#)

## 45.15.7. AV1 Decoding Parameters

The [VkVideoDecodeAV1PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeAV1PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    uint32_t                  frameHeaderOffset;
    uint32_t                  tileCount;
    const uint32_t*           pTileOffsets;
    const uint32_t*           pTileSizes;
} VkVideoDecodeAV1PictureInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [pStdPictureInfo](#) is a pointer to a [StdVideoDecodeAV1PictureInfo](#) structure specifying [AV1 picture information](#).
- [referenceNameSlotIndices](#) is an array of seven ([VK\\_MAX\\_VIDEO\\_AV1\\_REFERENCES\\_PER\\_FRAME\\_KHR](#), which is equal to the Video Std definition [STD\\_VIDEO\\_AV1\\_REFS\\_PER\\_FRAME](#)) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [AV1 reference name](#) used for inter coding. In particular, the DPB slot index for the AV1 reference name [frame](#) is specified in [referenceNameSlotIndices\[frame - STD\\_VIDEO\\_AV1\\_REFERENCE\\_NAME\\_LAST\\_FRAME\]](#).
- [frameHeaderOffset](#) is the byte offset of the AV1 frame header OBU, as defined in section 5.9 of the [AV1 Specification](#), within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).
- [tileCount](#) is the number of elements in [pTileOffsets](#) and [pTileSizes](#).
- [pTileOffsets](#) is a pointer to an array of [tileCount](#) integers specifying the byte offset of the tiles of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).
- [pTileSizes](#) is a pointer to an array of [tileCount](#) integers specifying the byte size of the tiles of the picture within the video bitstream buffer range specified in [VkVideoDecodeInfoKHR](#).

This structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to

[vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [AV1 decode operation](#).

## Decode Output Picture Information

When this structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [AV1 picture information](#) provided in [pStdPictureInfo](#).

## Std Picture Information

The members of the [StdVideoDecodeAV1PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are interpreted as follows:

- [flags.reserved](#), [reserved1](#), and [reserved2](#) are used only for padding purposes and are otherwise ignored;
- [flags.apply\\_grain](#) indicates that film grain is enabled for the decoded picture, as defined in section 6.8.20 of the [AV1 Specification](#);
- [OrderHint](#), [OrderHints](#), and [expectedFrameId](#) are interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- the [StdVideoAV1TileInfo](#) structure pointed to by [pTileInfo](#) is interpreted as follows:
  - [flags.reserved](#) and [reserved1](#) are used only for padding purposes and are otherwise ignored;
  - [pMiColStarts](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [MiColStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);
  - [pMiRowStarts](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [MiRowStarts](#) defined in section 6.8.14 of the [AV1 Specification](#);

### NOTE

Historically some applications incorrectly specified the values in [pMiColStarts](#) and [pMiRowStarts](#) in terms of superblocks instead of mode info blocks, therefore it is recommended for implementations to ignore the values specified in [pMiColStarts](#) and [pMiRowStarts](#). Instead, the values should be calculated based on [flags.uniform\\_tile\\_spacing\\_flag](#), [pWidthInSbsMinus1](#), [pHeightInSbsMinus1](#), the [sequence header](#) parameter [flags.use\\_128x128\\_superblock](#), and the coded extent of the decoded picture.

- [pWidthInSbsMinus1](#) is a pointer to an array of [TileCols](#) number of unsigned integers that corresponds to [width\\_in\\_sbs\\_minus\\_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
- [pHeightInSbsMinus1](#) is a pointer to an array of [TileRows](#) number of unsigned integers that corresponds to [height\\_in\\_sbs\\_minus\\_1](#) defined in section 6.8.14 of the [AV1 Specification](#);
- all other members of [StdVideoAV1TileInfo](#) are interpreted as defined in section 6.8.14 of

the [AV1 Specification](#);

- the `StdVideoAV1Quantization` structure pointed to by `pQuantization` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the [AV1 Specification](#);
- if `flags.segmentation_enabled` is set, then the `StdVideoAV1Segmentation` structure pointed to by `pSegmentation` is interpreted as follows:
  - the elements of `FeatureEnabled` are bitmasks where bit index *j* of element *i* corresponds to `FeatureEnabled[i][j]` as defined in section 5.9.14 of the [AV1 Specification](#);
  - `FeatureData` is interpreted as defined in section 5.9.14 of the [AV1 Specification](#);
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `update_ref_delta` is a bitmask where bit index *i* is interpreted as the value of `update_ref_delta` corresponding to element *i* of `loop_filter_ref_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
  - `update_mode_delta` is a bitmask where bit index *i* is interpreted as the value of `update_mode_delta` corresponding to element *i* of `loop_filter_mode_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
  - all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the [AV1 Specification](#);

**NOTE**

If the syntax elements corresponding to `loop_filter_ref_deltas` and `loop_filter_mode_deltas` are not present or otherwise defined according to section 5.9.11 of the [AV1 Specification](#), the application should specify the previous values, as defined in section 6.8.10 of the [AV1 Specification](#).

- if `flags.enable_cdef` is set in the [active sequence header](#), then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
  - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the [AV1 Specification](#);
  - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the [AV1 Specification](#);
- if `flags.UsesLr` is set in the [active sequence header](#), then the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
  - `LoopRestorationSize[plane]` is interpreted as  $\log_2(\text{size}) - 5$ , where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the [AV1 Specification](#).
  - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the [AV1 Specification](#);
- the members of the `StdVideoAV1GlobalMotion` structure pointed to by `pGlobalMotion` are interpreted as defined in section 7.10 of the [AV1 Specification](#);
- if `flags.film_grain_params_present` is set in the [active sequence header](#), then the

`StdVideoAV1FilmGrain` structure pointed to by `pFilmGrain` is interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoAV1FilmGrain` are interpreted as defined in section 6.8.20 of the [AV1 Specification](#);
- all other members are interpreted as defined in section 6.8 of the [AV1 Specification](#).

When [film grain is enabled](#) for the decoded frame, the `flags.update_grain` and `film_grain_params_ref_idx` values specified in `StdVideoAV1FilmGrain` are ignored by AV1 decode operations and the `load_grain_params` function, as defined in section 6.8.20 of the [AV1 Specification](#), is not executed. Instead, the application is responsible for specifying the effective film grain parameters for the frame in `StdVideoAV1FilmGrain`.

When [film grain is enabled](#) for the decoded frame, the application is required to specify a different decode output picture resource in `VkVideoDecodeInfoKHR::dstPictureResource` compared to the reconstructed picture specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->pPictureResource` even if the implementation does not report support for `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR` in `VkVideoDecodeCapabilitiesKHR::flags` for the video decode profile.

Reference picture setup is controlled by the value of `StdVideoDecodeAV1PictureInfo::refresh_frame_flags`. If it is not zero and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoDecodeAV1PictureInfo::refresh_frame_flags` is zero, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

### Active Parameter Sets

The *active sequence header* is the [AV1 sequence header](#) stored in the bound video session parameters object , unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the active sequence header is specified [inline](#). .

### Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1PictureInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_PICTURE_INFO_KHR`
- VUID-VkVideoDecodeAV1PictureInfoKHR-pStdPictureInfo-parameter  
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1PictureInfo` value
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileOffsets-parameter  
`pTileOffsets` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-pTileSizes-parameter  
`pTileSizes` **must** be a valid pointer to an array of `tileCount uint32_t` values
- VUID-VkVideoDecodeAV1PictureInfoKHR-tileCount-arraylength  
`tileCount` **must** be greater than 0

## Structure Chaining

### Extends the structure

- [VkVideoDecodeInfoKHR](#)

[VK\\_MAX\\_VIDEO\\_AV1\\_REFERENCES\\_PER\\_FRAME\\_KHR](#) is the length of the array of DPB slot or AV1 reference names passed in [VkVideoDecodeAV1PictureInfoKHR::referenceNameSlotIndices](#).

```
#define VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR 7U
```

The [VkVideoDecodeAV1DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_av1
typedef struct VkVideoDecodeAV1DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeAV1ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeAV1DpbSlotInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pStdReferenceInfo](#) is a pointer to a [StdVideoDecodeAV1ReferenceInfo](#) structure specifying [AV1 reference information](#).

This structure is specified in the [pNext](#) chain of [VkVideoDecodeInfoKHR::pSetupReferenceSlot](#), if not [NULL](#), and the [pNext](#) chain of the elements of [VkVideoDecodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [AV1 decode operation](#).

### Active Reference Picture Information

When this structure is specified in the [pNext](#) chain of the elements of [VkVideoDecodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video decode operation for each element of [VkVideoDecodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the [slotIndex](#) member of the corresponding element of [VkVideoDecodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [AV1 reference information](#) provided in [pStdReferenceInfo](#).

### Reconstructed Picture Information

When this structure is specified in the [pNext](#) chain of [VkVideoDecodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

## Std Reference Information

The members of the `StdVideoDecodeAV1ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.disable_frame_end_update_cdf` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `flags.segmentation_enabled` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- `frame_type` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);

### NOTE

The `frame_type` member is defined with the type `uint8_t`, but it takes the same values defined in the `StdVideoAV1FrameType` enumeration type as `StdVideoDecodeAV1PictureInfo::frame_type`.

- `RefFrameSignBias` is a bitmask where bit index `i` corresponds to `RefFrameSignBias[i]` as defined in section 6.8.2 of the [AV1 Specification](#);
- `OrderHint` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `SavedOrderHints` is interpreted as defined in section 7.20 of the [AV1 Specification](#).

### NOTE

When the AV1 reference information is provided for the reconstructed picture, certain parameters (e.g. `frame_type`) are specified both in the [AV1 picture information](#) and in the AV1 reference information. This is necessary because unlike the AV1 picture information, which is only used for the purposes of the video decode operation in question, the AV1 reference information specified for the reconstructed picture **may** be associated with the activated DPB slot, meaning that some implementations **may** maintain it as part of the [reference picture metadata](#) corresponding to the video picture resource associated with the DPB slot. When the AV1 reference information is provided for an active reference picture, the specified parameters correspond to the parameters specified when the DPB slot was activated (set up) with the reference picture, as usual, in order to communicate these parameters for implementations that do not maintain any subset of these parameters as part of the DPB slot's [reference picture metadata](#).

## Valid Usage (Implicit)

- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_AV1_DPB_SLOT_INFO_KHR`
- VUID-VkVideoDecodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter  
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeAV1ReferenceInfo` value

## Structure Chaining

### Extends the structure

- `VkVideoReferenceSlotInfoKHR`

## 45.15.8. AV1 Decode Requirements

This section describes the **required** AV1 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 58. Required *Video Std Header Versions*

| Video Std Header Name                         | Version |
|-----------------------------------------------|---------|
| <code>vulkan_video_codec_av1std_decode</code> | 1.0.0   |

Table 59. Required Video Capabilities

| Video Capability                               | Requirement | Requirement Type <sup>1</sup> |
|------------------------------------------------|-------------|-------------------------------|
| <code>VkVideoCapabilitiesKHR</code>            |             |                               |
| <code>flags</code>                             | -           | min                           |
| <code>minBitstreamBufferOffsetAlignment</code> | 4096        | max                           |
| <code>minBitstreamBufferSizeAlignment</code>   | 4096        | max                           |
| <code>pictureAccessGranularity</code>          | (64,64)     | max                           |
| <code>minCodedExtent</code>                    | -           | max                           |
| <code>maxCodedExtent</code>                    | -           | min                           |
| <code>maxDpbSlots</code>                       | 0           | min                           |
| <code>maxActiveReferencePictures</code>        | 0           | min                           |
| <code>VkVideoDecodeCapabilitiesKHR</code>      |             |                               |

| Video Capability                | Requirement                                                                                                                 | Requirement Type <sup>1</sup> |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| flags                           | VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or<br>VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR | min                           |
| VkVideoDecodeAV1CapabilitiesKHR |                                                                                                                             |                               |
| maxLevel                        | STD_VIDEO_AV1_LEVEL_2_0                                                                                                     | min                           |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

## 45.16. Video Encode Operations

Video encode operations consume an *encode input picture* and zero or more reference pictures, and produce compressed video data to a video bitstream buffer and an optional *reconstructed picture*.

### NOTE

Such encode input pictures can be used as the *output* of video decode operations, with graphics or compute operations, or with *Window System Integration* APIs, depending on the capabilities of the implementation.

Video encode operations **may** access the following resources in the *VK\_PIPELINE\_STAGE\_2\_VIDEO\_ENCODE\_BIT\_KHR* stage:

- The image subregions corresponding to the source *encode input picture* and *active reference pictures* with access *VK\_ACCESS\_2\_VIDEO\_ENCODE\_READ\_BIT\_KHR*.
- The destination video bitstream buffer range and the optional *reconstructed picture* with access *VK\_ACCESS\_2\_VIDEO\_ENCODE\_WRITE\_BIT\_KHR*.
- The image subregion corresponding to a *quantization map* used in the video encode operation with access *VK\_ACCESS\_2\_VIDEO\_ENCODE\_READ\_BIT\_KHR*.

The image subresource of each *video picture resource* accessed by the video encode operation is specified using a corresponding *VkVideoPictureResourceInfoKHR* structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video encode operation as an *encode input picture*, then it **must** be in the *VK\_IMAGE\_LAYOUT\_VIDEO\_ENCODE\_SRC\_KHR* layout, unless the *unifiedImageLayoutsVideo* feature is enabled, in which case it **may** be in the

[VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout .

- If the image subresource is used in the video encode operation as a [reconstructed picture](#) or [reference picture](#), then it **must** be in the [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_DPB\\_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout .
- If the image subresource is used in the video encode operation as a [quantization map](#), then it **must** be in the [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_QUANTIZATION\\_MAP\\_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout .

A video encode operation **may** complete unsuccessfully. In this case the target video bitstream buffer will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed-picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

If a video encode operation completes successfully and the codec-specific parameters provided by the application adhere to the syntactic and semantic requirements defined in the corresponding video compression standard, then the target video bitstream buffer will contain compressed video data after the execution of the video encode operation according to the respective [codec-specific semantics](#).

#### 45.16.1. Codec-Specific Semantics

The following aspects of video encode operations are codec-specific:

- The compressed video data written to the target video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [encode input picture](#) and the interpretation of the picture data referred to by the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.
- Certain aspects of [rate control](#).

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.264 Encode Operations](#) section.
- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the [H.265 Encode Operations](#) section.
- If the used video codec operation is [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_AV1\\_BIT\\_KHR](#), then the codec-specific aspects of the video encoding process are performed as defined in the

## Video Encode Parameter Overrides

Implementations supporting video encode operations for any particular video codec operation often support only a subset of the available encoding tools defined by the corresponding video compression standards. Accordingly, certain implementation-dependent limitations **may** apply to codec-specific parameters provided through the structures defined in the Video Std headers corresponding to the used video codec operation.

Exposing all of these restrictions on particular codec-specific parameter values or combinations thereof in the form of application-queryable capabilities is impractical, hence this specification allows implementations to *override* the value of any of the codec-specific parameters, unless otherwise specified, as long as all of the following conditions are met:

- If the application-provided codec-specific parameters adhere to the syntactic and semantic requirements and rules defined by the used video compression standard, and thus would be usable to produce a video bitstream compliant with that standard, then the codec-specific parameters resulting from the process of implementation overrides **must** also adhere to the same requirements and rules, and any video bitstream produced using the overridden parameters **must** also be compliant.
- The overridden codec-specific parameter values **must** not have an impact on the codec-independent behaviors defined for video encode operations.
- The implementation **must** not override any codec-specific parameters specified to a command that **may** cause application-provided codec-specific parameters specified to subsequent commands to no longer adhere to the semantic requirements and rules defined by the used video compression standard, unless the implementation also overrides those parameters to adhere to any such requirements and rules.
- The overridden codec-specific parameter values **must** not have an impact on the codec-specific picture data access semantics.
- The overridden codec-specific parameter values **may** change the contents of the codec-specific bitstream elements produced by video encode operations or otherwise retrieved by the application (e.g. using the [vkGetEncodedVideoSessionParametersKHR](#) command) but **must** still adhere to the codec-specific semantics defined for that video codec operation, including, but not limited to, the number, type, and order of the encoded codec-specific bitstream elements.

Besides codec-specific parameter overrides performed for implementation-dependent reasons, applications **can** enable the implementation to apply additional [optimizing overrides](#) that **may** improve the efficiency or performance of video encoding operations. However, implementations **must** meet the conditions listed above even in case of such optimizing overrides.

### NOTE

Unless the application opts in for optimizing overrides, implementations are not expected to override any of the codec-specific parameters, except when such overrides are necessary for the correct operation of video encoder implementation due to limitations to the available encoding tools on that implementation.

## 45.16.2. Video Encode Operation Steps

Each video encode operation performs the following steps in the `VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR` stage:

1. Reads the input picture data from the `encode input picture`;
2. Determine derived encoding quality parameters according to the `codec-specific semantics` and the current `rate control` state;
3. Compresses the input picture data according to the `codec-specific semantics`, applying any prediction data read from the `active reference pictures` and rate control restrictions in the process;
4. Writes the encoded bitstream data to the destination video bitstream buffer range;
5. Performs picture reconstruction of the encoded video data according to the `codec-specific semantics`, applying any prediction data read from the `active reference pictures` in the process, if a `reconstructed picture` is specified and `reference picture setup` is requested;
6. If `reference picture setup` is requested, the `DPB slot index` specified in the `reconstructed picture information` is `activated` with the `reconstructed picture`;
7. Writes the reconstructed picture data to the `reconstructed picture`, if one is specified, according to the `codec-specific semantics`.

When `reconstructed picture information` is provided, the specified `DPB slot` index is associated with the corresponding `bound reference picture resource`, regardless of whether `reference picture setup` is requested.

## 45.16.3. Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specifying an encode operation, the `VkVideoEncodeCapabilitiesKHR` structure **must** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encoding.

The `VkVideoEncodeCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeCapabilityFlagsKHR flags;
    VkVideoEncodeRateControlModeFlagsKHR rateControlModes;
    uint32_t            maxRateControlLayers;
    uint64_t            maxBitrate;
    uint32_t            maxQualityLevels;
    VkExtent2D          encodeInputPictureGranularity;
    VkVideoEncodeFeedbackFlagsKHR supportedEncodeFeedbackFlags;
} VkVideoEncodeCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeCapabilityFlagBitsKHR` describing supported encoding features.
- `rateControlModes` is a bitmask of `VkVideoEncodeRateControlModeFlagBitsKHR` indicating supported `rate control modes`.
- `maxRateControlLayers` indicates the maximum number of `rate control layers` supported.
- `maxBitrate` indicates the maximum supported bitrate.
- `maxQualityLevels` indicates the number of discrete `video encode quality levels` supported. Implementations **must** support at least one quality level.
- `encodeInputPictureGranularity` indicates the granularity at which `encode input picture` data is encoded and **may** indicate a texel granularity up to the size of the largest supported codec-specific coding block. This capability does not impose any valid usage constraints on the application, however, depending on the contents of the encode input picture, it **may** have effects on the encoded bitstream, as described in more detail below.
- `supportedEncodeFeedbackFlags` is a bitmask of `VkVideoEncodeFeedbackFlagBitsKHR` values specifying the supported flags for `video encode feedback queries`.

Implementations **must** include support for at least `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR` and `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR` in `supportedEncodeFeedbackFlags`.

`encodeInputPictureGranularity` provides information about the way `encode input picture` data is used as input to video encode operations. In particular, some implementations **may** not be able to limit the set of texels used to encode the output video bitstream to the image subregion specified in the `VkVideoPictureResourceInfoKHR` structure corresponding to the encode input picture (i.e. to the resolution of the image data to encode specified in its `codedExtent` member).

#### NOTE

For example, the application requests the coded extent to be 1920x1080, but the implementation is only able to source the encode input picture data at the granularity of the codec-specific coding block size which is 16x16 pixels (or as otherwise indicated in `encodeInputPictureGranularity`). In this example, the content is horizontally aligned with the coding block size, but not vertically aligned with it. Thus encoding of the last row of coding blocks will be impacted by the contents of the input image at texel rows 1080 to 1087 (the latter being the next row which is vertically aligned with the coding block size, assuming a zero-based texel row index).

If `codedExtent` rounded up to the next integer multiple of `encodeInputPictureGranularity` is greater than the extent of the image subresource specified for the `encode input picture`, then the texel values corresponding to texel coordinates outside of the bounds of the image subresource **may** be undefined. However, implementations **should** use well-defined default values for such texels in order to maximize the encoding efficiency for the last coding block row/column, and/or to ensure consistent encoding results across repeated encoding of the same input content. Nonetheless, the

values used for such texels **must** not have an effect on whether the video encode operation produces a compliant bitstream, and **must** not have any other effects on the encoded picture data beyond what **may** otherwise result from using these texel values as input to any compression algorithm, as defined in the used video compression standard.

#### NOTE

While not required, it is generally a good practice for applications to make sure that the image subresource used for the encode input picture has an extent that is an integer multiple of the codec-specific coding block size (or at least `encodeInputPictureGranularity`) and that this padding area is filled with known values in order to improve encoding efficiency, portability, and reproducibility.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeCapabilitiesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeCapabilitiesKHR::flags`, indicating the encoding tools supported, are:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeCapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR =
0x00000002,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR = 0x00000008,
} VkVideoEncodeCapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR` specifies that the implementation supports the use of `VkVideoEncodeInfoKHR::precedingExternallyEncodedBytes`.
- `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` specifies that the implementation is able to detect and report when the destination video bitstream buffer range provided by the application is not sufficiently large to fit the encoded bitstream data produced by a video encode operation by reporting the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code.

**NOTE**

Some implementations **may** not be able to reliably detect insufficient bitstream buffer range conditions in all situations. Such implementations will not report support for the [VK\\_VIDEO\\_ENCODE\\_CAPABILITY\\_INSUFFICIENT\\_BITSTREAM\\_BUFFER\\_RANGE\\_DETECTION\\_BIT\\_KHR](#) encode capability flag for the video profile, but **may** still report the [VK\\_QUERY\\_RESULT\\_STATUS\\_INSUFFICIENT\\_BITSTREAM\\_BUFFER\\_RANGE\\_KHR](#) query result status code in certain cases. Applications **should** always check for the specific query result status code [VK\\_QUERY\\_RESULT\\_STATUS\\_INSUFFICIENT\\_BITSTREAM\\_BUFFER\\_RANGE\\_KHR](#) even when this encode capability flag is not supported by the implementation for the video profile in question. However, applications **must** not assume that a different negative query result status code indicating an unsuccessful completion of a video encode operation is not the result of an insufficient bitstream buffer condition unless this encode capability flag is supported.

- [VK\\_VIDEO\\_ENCODE\\_CAPABILITY\\_QUANTIZATION\\_DELTA\\_MAP\\_BIT\\_KHR](#) specifies support for using quantization delta maps.
- [VK\\_VIDEO\\_ENCODE\\_CAPABILITY\\_EMPHASIS\\_MAP\\_BIT\\_KHR](#) specifies support for using emphasis maps.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeCapabilityFlagsKHR;
```

[VkVideoEncodeCapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeCapabilityFlagBitsKHR](#).

The [VkVideoEncodeFeedback2CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_feedback2
typedef struct VkVideoEncodeFeedback2CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPerPartitionFeedbackEntries;
    VkVideoEncodePerPartitionFeedbackFlagsKHR
supportedPerPartitionEncodeFeedbackFlags;
} VkVideoEncodeFeedback2CapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxPerPartitionFeedbackEntries](#) specifies the maximum number of picture partitions for which the implementation supports capturing per picture partition video encode feedback values.
- [supportedPerPartitionEncodeFeedbackFlags](#) is a bitmask of [VkVideoEncodePerPartitionFeedbackFlagBitsKHR](#) values specifying the set of per picture partition video encode feedback values supported by [video encode feedback queries](#).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeFeedback2CapabilitiesKHR-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_2\\_CAPABILITIES\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkVideoCapabilitiesKHR](#)

## 45.16.4. Video Encode Quality Levels

Implementations **can** support more than one video encode quality levels for a video encode profile, which control the number and type of implementation-specific encoding tools and algorithms utilized in the encoding process.

#### NOTE

Generally, using higher video encode quality levels **may** produce higher quality video streams at the cost of additional processing time. However, as the final quality of an encoded picture depends on the contents of the [encode input picture](#), the contents of the [active reference pictures](#), the codec-specific encode parameters, and the particular implementation-specific tools used corresponding to the individual video encode quality levels, there are no guarantees that using a higher video encode quality level will always produce a higher quality encoded picture for any given set of inputs.

To query properties for a specific video encode quality level supported by a video encode profile, call:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR* pQualityLevelInfo,
    VkVideoEncodeQualityLevelPropertiesKHR* pQualityLevelProperties);
```

- **physicalDevice** is the physical device to query the video encode quality level properties for.
- **pQualityLevelInfo** is a pointer to a [VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR](#) structure specifying the video encode profile and quality level to query properties for.
- **pQualityLevelProperties** is a pointer to a [VkVideoEncodeQualityLevelPropertiesKHR](#) structure in which the properties are returned.

### Valid Usage

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-

08257

If `pQualityLevelInfo->pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pQualityLevelProperties` **must** include a `VkVideoEncodeH264QualityLevelPropertiesKHR` structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-08258

If `pQualityLevelInfo->pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pQualityLevelProperties` **must** include a `VkVideoEncodeH265QualityLevelPropertiesKHR` structure

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-10305

If `pQualityLevelInfo->pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of `pQualityLevelProperties` **must** include a `VkVideoEncodeAV1QualityLevelPropertiesKHR` structure

## Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-parameter  
`pQualityLevelInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelProperties-parameter  
`pQualityLevelProperties` **must** be a valid pointer to a `VkVideoEncodeQualityLevelPropertiesKHR` structure

## Return Codes

### Success

- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`

- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_CODEC\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_FORMAT\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_OPERATION\\_NOT\\_SUPPORTED\\_KHR](#)

The [VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const VkVideoProfileInfoKHR* pVideoProfile;
    uint32_t           qualityLevel;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pVideoProfile](#) is a pointer to a [VkVideoProfileInfoKHR](#) structure specifying the video profile to query the video encode quality level properties for.
- [qualityLevel](#) is the video encode quality level to query properties for.

### Valid Usage

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08259  
[pVideoProfile](#) **must** be a [supported video profile](#)
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-08260  
[pVideoProfile->videoCodecOperation](#) **must** specify an encode operation
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-qualityLevel-08261  
[qualityLevel](#) **must** be less than [VkVideoEncodeCapabilitiesKHR::maxQualityLevels](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile specified in [pVideoProfile](#)

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_ENCODE\\_QUALITY\\_LEVEL\\_INFO\\_KHR](#)
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pNext-pNext  
[pNext](#) **must** be [NULL](#)
- VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-parameter  
[pVideoProfile](#) **must** be a valid pointer to a valid [VkVideoProfileInfoKHR](#) structure

The `VkVideoEncodeQualityLevelPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeRateControlModeFlagBitsKHR preferredRateControlMode;
    uint32_t            preferredRateControlLayerCount;
} VkVideoEncodeQualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlMode` is a `VkVideoEncodeRateControlModeFlagBitsKHR` value indicating the preferred `rate control mode` to use with the video encode quality level.
- `preferredRateControlLayerCount` indicates the preferred number of `rate control layers` to use with the video encode quality level.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-sType `must` be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1QualityLevelPropertiesKHR`, `VkVideoEncodeH264QualityLevelPropertiesKHR`, or `VkVideoEncodeH265QualityLevelPropertiesKHR`
- VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

The `VkVideoEncodeQualityLevelInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            qualityLevel;
} VkVideoEncodeQualityLevelInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `qualityLevel` is the used video encode quality level.

This structure **can** be specified in the following places:

- In the **pNext** chain of [VkVideoSessionParametersCreateInfoKHR](#) to specify the video encode quality level to use for a video session parameters object created for a video encode session. If no instance of this structure is included in the **pNext** chain of [VkVideoSessionParametersCreateInfoKHR](#), then the video session parameters object is created with a video encode quality level of zero.
- In the **pNext** chain of [VkVideoCodingControlInfoKHR](#) to change the video encode quality level state of the bound video session.

### Valid Usage

- VUID-VkVideoEncodeQualityLevelInfoKHR-qualityLevel-08311  
**qualityLevel** **must** be less than [VkVideoEncodeCapabilitiesKHR::maxQualityLevels](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile

### Valid Usage (Implicit)

- VUID-VkVideoEncodeQualityLevelInfoKHR-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_QUALITY\\_LEVEL\\_INFO\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkVideoCodingControlInfoKHR](#)
- [VkVideoSessionParametersCreateInfoKHR](#)

## 45.16.5. Retrieving Encoded Session Parameters

Any codec-specific parameters stored in video session parameters objects **may** need to be separately encoded and included in the final video bitstream data, depending on the used video compression standard. In such cases the application **must** call the [vkGetEncodedVideoSessionParametersKHR](#) command to retrieve the encoded parameter data from the used video session parameters object in order to be able to produce a compliant video bitstream.

#### NOTE

This is needed because implementations **may** have changed some of the codec-specific parameters stored in the video session parameters object, as defined in the [Video Encode Parameter Overrides](#) section. In addition, the [vkGetEncodedVideoSessionParametersKHR](#) command enables the application to retrieve the encoded parameter data without having to encode these codec-specific parameters manually.

Encoded parameter data **can** be retrieved from a video session parameters object created with a

video encode operation using the command:

```
// Provided by VK_KHR_video_encode_queue
VkResult vkGetEncodedVideoSessionParametersKHR(
    VkDevice device,
    const VkVideoEncodeSessionParametersGetInfoKHR* pVideoSessionParametersInfo,
    VkVideoEncodeSessionParametersFeedbackInfoKHR* pFeedbackInfo,
    size_t* pDataSize,
    void* pData);
```

- `device` is the logical device that owns the video session parameters object.
- `pVideoSessionParametersInfo` is a pointer to a `VkVideoEncodeSessionParametersGetInfoKHR` structure specifying the parameters of the encoded parameter data to retrieve.
- `pFeedbackInfo` is either `NULL` or a pointer to a `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure in which feedback about the requested parameter data is returned.
- `pDataSize` is a pointer to a `size_t` value related to the amount of encode parameter data returned, as described below.
- `pData` is either `NULL` or a pointer to a buffer to write the encoded parameter data to.

If `pData` is `NULL`, then the size of the encoded parameter data, in bytes, that **can** be retrieved is returned in `pDataSize`. Otherwise, `pDataSize` **must** point to a variable set by the application to the size of the buffer, in bytes, pointed to by `pData`, and on return the variable is overwritten with the number of bytes actually written to `pData`. If `pDataSize` is less than the size of the encoded parameter data that **can** be retrieved, then no data will be written to `pData`, zero will be written to `pDataSize`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that no encoded parameter data was returned.

If `pFeedbackInfo` is not `NULL` then the members of the `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure and any additional structures included in its `pNext` chain that are applicable to the video session parameters object specified in `pVideoSessionParametersInfo->videoSessionParameters` will be filled with feedback about the requested parameter data on all successful calls to this command.

|      |                                                                                                                                                                                                                                                                                                                                                     |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE | This includes the cases when <code>pData</code> is <code>NULL</code> or when <code>VK_INCOMPLETE</code> is returned by the command, and enables the application to determine whether the implementation <code>override</code> any of the requested video session parameters without actually needing to retrieve the encoded parameter data itself. |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|      |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE | <p>This query does not behave consistently with the behavior described in <a href="#">Opaque Binary Data Results</a>, for historical reasons.</p> <p>If the amount of data available is larger than the passed <code>pDataSize</code>, the query returns a <code>VK_INCOMPLETE</code> success status instead of a <code>VK_ERROR_NOT_ENOUGH_SPACE_KHR</code> error status, and writes zero to <code>pDataSize</code>.</p> |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Valid Usage

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08359  
`pVideoSessionParametersInfo->videoSessionParameters` **must** have been created with an encode operation
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08262  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH264SessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08263  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08264  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then for the `VkVideoEncodeH264SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `VkVideoEncodeH264SessionParametersGetInfoKHR::stdSPSId` and `VkVideoEncodeH264SessionParametersGetInfoKHR::stdPPSId`, respectively
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08265  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pVideoSessionParametersInfo` **must** include a `VkVideoEncodeH265SessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08266  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdVPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08267  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdSPS` member is `VK_TRUE`, then

`pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId` and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, respectively

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-08268  
If `pVideoSessionParametersInfo->videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then for the `VkVideoEncodeH265SessionParametersGetInfoKHR` structure included in the `pNext` chain of `pVideoSessionParametersInfo`, if its `writeStdPPS` member is `VK_TRUE`, then `pVideoSessionParametersInfo->videoSessionParameters` **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `VkVideoEncodeH265SessionParametersGetInfoKHR::stdVPSId`, `VkVideoEncodeH265SessionParametersGetInfoKHR::stdSPSId`, and `VkVideoEncodeH265SessionParametersGetInfoKHR::stdPPSId`, respectively

## Valid Usage (Implicit)

- VUID-vkGetEncodedVideoSessionParametersKHR-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-parameter  
`pVideoSessionParametersInfo` **must** be a valid pointer to a valid `VkVideoEncodeSessionParametersGetInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pFeedbackInfo-parameter  
If `pFeedbackInfo` is not `NULL`, `pFeedbackInfo` **must** be a valid pointer to a `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure
- VUID-vkGetEncodedVideoSessionParametersKHR-pDataSize-parameter  
`pDataSize` **must** be a valid pointer to a `size_t` value
- VUID-vkGetEncodedVideoSessionParametersKHR-pData-parameter  
If the value referenced by `pDataSize` is not 0, and `pData` is not `NULL`, `pData` **must** be a valid pointer to an array of `pDataSize` bytes

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`

- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The `VkVideoEncodeSessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoSessionParametersKHR    videoSessionParameters;
} VkVideoEncodeSessionParametersGetInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoSessionParameters` is the [VkVideoSessionParametersKHR](#) object to retrieve encoded parameter data from.

Depending on the used video encode operation, additional codec-specific structures **may** need to be included in the `pNext` chain of this structure to identify the specific video session parameters to retrieve encoded parameter data for, as described in the corresponding sections.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_SESSION\\_PARAMETERS\\_GET\\_INFO\\_KHR](#)
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of [VkVideoEncodeH264SessionParametersGetInfoKHR](#) or [VkVideoEncodeH265SessionParametersGetInfoKHR](#)
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-videoSessionParameters-parameter  
`videoSessionParameters` **must** be a valid [VkVideoSessionParametersKHR](#) handle

The `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasOverrides;
} VkVideoEncodeSessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasOverrrides` indicates whether any of the requested parameter data were `overridden` by the implementation.

Depending on the used video encode operation, additional codec-specific structures **can** be included in the `pNext` chain of this structure to capture codec-specific feedback information about the requested parameter data, as described in the corresponding sections.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionParametersFeedbackInfoKHR` or `VkVideoEncodeH265SessionParametersFeedbackInfoKHR`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

## 45.16.6. Video Encode Commands

To launch video encode operations, call:

```
// Provided by VK_KHR_video_encode_queue
void vkCmdEncodeVideoKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoEncodeInfoKHR* pEncodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEncodeInfo` is a pointer to a `VkVideoEncodeInfoKHR` structure specifying the parameters of the video encode operations.

Each call issues one or more video encode operations. The implicit parameter `opCount` corresponds to the number of video encode operations issued by the command. After calling this command, the `active query index` of each `active` query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video encode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pEncodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video encode operation

issued by it.

### Active Reference Picture Information

The list of [active reference pictures](#) used by a video encode operation is a list of image subregions used as the source of [reference picture](#) data and related parameters, and is derived from the [VkVideoReferenceSlotInfoKHR](#) structures provided as the elements of the [pEncodeInfo->pReferenceSlots](#) array. For each element of [pEncodeInfo->pReferenceSlots](#), one or more elements are added to the active reference picture list, as defined by the [codec-specific semantics](#). Each element of this list contains the following information:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the reference picture.
- The [DPB slot](#) index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

### Reconstructed Picture Information

Information related to the optional [reconstructed picture](#) used by a video encode operation is derived from the [VkVideoReferenceSlotInfoKHR](#) structure pointed to by [pEncodeInfo->pSetupReferenceSlot](#), if not [NULL](#), as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the reconstructed picture.
- The [DPB slot](#) index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid [VkVideoReferenceSlotInfoKHR](#) structure in [pEncodeInfo->pSetupReferenceSlot](#) is always required, unless the video session was created with [VkVideoSessionCreateInfoKHR::maxDpbSlots](#) equal to zero. However, the DPB slot identified by [pEncodeInfo->pSetupReferenceSlot->slotIndex](#) is only [activated](#) with the [reconstructed picture](#) specified in [pEncodeInfo->pSetupReferenceSlot->pPictureResource](#) if reference picture setup is requested according to the [codec-specific semantics](#).

If reconstructed picture information is specified, but reference picture setup is not requested, according to the codec-specific semantics, the contents of the [video picture resource](#) corresponding to the reconstructed picture will be undefined after the video encode operation.

#### NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video encode operation even when the reconstructed picture is not marked for future reference.

### Encode Input Picture Information

Information related to the [encode input picture](#) used by a video encode operation is derived from [pEncodeInfo->srcPictureResource](#) and any codec-specific parameters provided in the [pEncodeInfo->pNext](#) chain, as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource referred to by the video picture resource used as the encode input picture.
- The codec-specific picture information related to the encoded picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let `uint32_t activeReferencePictureCount` be the size of the list of active reference pictures used by the video encode operation. Unless otherwise defined, `activeReferencePictureCount` is set to the value of `pEncodeInfo->referenceSlotCount`.
- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
  - If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pEncodeInfo->pSetupReferenceSlot->slotIndex`.
  - For each element of `pEncodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element.
- If there is a bound video session parameters object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then let `VkExtent2D quantizationMapTexelSize` be the quantization map texel size the bound video session parameters object was created with.
- Let `VkExtent2D maxCodingBlockSize` be the maximum codec-specific coding block size that **may** be used by the video encode operation.
  - If the bound video session object was created with an `H.264 encode profile`, then let `maxCodingBlockSize` be equal to the size of an H.264 macroblock, i.e. {16,16}.
  - If the bound video session object was created with an `H.265 encode profile`, then let `maxCodingBlockSize` be equal to the maximum H.265 coding block size that **may** be used by the video encode operation derived as the maximum of the CTB sizes corresponding to the `VkVideoEncodeH265CtbSizeFlagBitsKHR` bits set in `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with.
  - If the bound video session object was created with an `AV1 encode profile`, then let `maxCodingBlockSize` be equal to the maximum AV1 superblock size that **may** be used by the video encode operation derived as the maximum of the superblock sizes corresponding to the `VkVideoEncodeAV1SuperblockSizeFlagBitsKHR` bits set in `VkVideoEncodeAV1CapabilitiesKHR::superblockSizes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with.
  - Otherwise, `maxCodingBlockSize` is undefined.

- If `maxCodingBlockSize` is defined, then let `VkExtent2D minCodingBlockExtent` be the coded extent of the `encode input picture` expressed in terms of codec-specific coding blocks, assuming the maximum size of such coding blocks, as defined by `maxCodingBlockSize`, calculated from the value of the `codedExtent` member of `pEncodeInfo->srcPictureResource` as follows:
  - `minCodingBlockExtent.width = (codedExtent.width / maxCodingBlockSize.width - 1) * maxCodingBlockSize.width`
  - `minCodingBlockExtent.height = (codedExtent.height / maxCodingBlockSize.height - 1) * maxCodingBlockSize.height`
- If the bound video session object was created with an `H.264 encode profile`, then:
  - Let `StdVideoH264PictureType h264PictureType` be the picture type of the encoded picture set to the value of `pStdPictureInfo->primary_pic_type` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain.
  - Let `StdVideoH264PictureType h264L0PictureTypes[]` and `StdVideoH264PictureType h264L1PictureTypes[]` be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If `pStdPictureInfo->pRefLists` specified in the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is not `NULL`, then for each reference index specified in the elements of the `pStdPictureInfo->pRefLists->RefPicList0` and `pStdPictureInfo->pRefLists->RefPicList1` arrays, if the reference index is not `STD_VIDEO_H264_NO_REFERENCE_PICTURE`, `pStdReferenceInfo->primary_pic_type` is added to `h264L0PictureTypes` or `h264L1PictureTypes`, respectively, where `pStdReferenceInfo` is the member of the `VkVideoEncodeH264DpbSlotInfoKHR` structure included in the `pNext` chain of the element of `pEncodeInfo->pReferenceSlots` for which `slotIndex` equals the reference index in question.
- If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and with the `intra refresh mode` `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeIntraRefreshInfoKHR` structure, then let `uint32_t intraRefreshH264SliceIndex` be the `intra refresh index` specified in `VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex`. Otherwise `intraRefreshH264SliceIndex` is not defined.
- If the bound video session object was created with an `H.265 encode profile`, then:
  - Let `StdVideoH265PictureType h265PictureType` be the picture type of the encoded picture set to the value of `pStdPictureInfo->pic_type` specified in the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain.
  - Let `StdVideoH265PictureType h265L0PictureTypes[]` and `StdVideoH265PictureType h265L1PictureTypes[]` be the picture types of the reference pictures in the L0 and L1 reference lists, respectively. If `pStdPictureInfo->pRefLists` specified in the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is not `NULL`, then for each reference index specified in the elements of the `pStdPictureInfo->pRefLists->RefPicList0` and `pStdPictureInfo->pRefLists->RefPicList1` arrays, if the reference index is not `STD_VIDEO_H265_NO_REFERENCE_PICTURE`, `pStdReferenceInfo->pic_type` is added to `h265L0PictureTypes` or `h265L1PictureTypes`, respectively, where `pStdReferenceInfo` is the member of the `VkVideoEncodeH265DpbSlotInfoKHR` structure included in the `pNext`

chain of the element of `pEncodeInfo->pReferenceSlots` for which `slotIndex` equals the reference index in question.

- If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with the intra refresh mode `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeIntraRefreshInfoKHR` structure, then let `uint32_t intraRefreshH265SliceSegmentIndex` be the intra refresh index specified in `VkVideoEncodeIntraRefreshInfoKHR::intraRefreshIndex`. Otherwise `intraRefreshH265SliceSegmentIndex` is not defined.
- If the bound video session object was created with an AV1 encode profile, then:
  - If the `primaryReferenceCdfOnly` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pEncodeInfo->pNext` chain is set to `VK_TRUE`, then let `int32_t cdfOnlyReferenceIndex` be the value of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->primary_ref_frame`.
  - Otherwise let `int32_t cdfOnlyReferenceIndex` be -1.

## Valid Usage

- VUID-vkCmdEncodeVideoKHR-None-08250  
The bound video session **must** have been created with an encode operation
- VUID-vkCmdEncodeVideoKHR-None-07012  
The bound video session **must** not be in `uninitialized` state at the time the command is executed on the device
- VUID-vkCmdEncodeVideoKHR-None-08318  
If there is a bound video session parameters object, then it **must** have been created with the currently set `video encode quality level` for the bound video session at the time the command is executed on the device
- VUID-vkCmdEncodeVideoKHR-opCount-07174  
For each `active` query, the `active query index` corresponding to the query type of that query plus `opCount` **must** be less than or equal to the `last activatable query index` corresponding to the query type of that query plus one
- VUID-vkCmdEncodeVideoKHR-pNext-08360  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pEncodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then `VkVideoInlineQueryInfoKHR::queryCount` **must** equal `opCount`
- VUID-vkCmdEncodeVideoKHR-pNext-08361  
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pEncodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then all the queries used by the command, as specified by the `VkVideoInlineQueryInfoKHR` structure, **must** be *unavailable*

- VUID-vkCmdEncodeVideoKHR-queryType-08362

If the bound video session was created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#), then the `queryType` used to create the `queryPool` specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo` **must** be [VK\\_QUERY\\_TYPE\\_RESULT\\_STATUS\\_ONLY\\_KHR](#) or [VK\\_QUERY\\_TYPE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_KHR](#)

- VUID-vkCmdEncodeVideoKHR-queryPool-08363

If the bound video session was created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#), then the `queryPool` specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo` **must** have been created with a [VkVideoProfileInfoKHR](#) structure included in the `pNext` chain of [VkQueryPoolCreateInfo](#) identical to the one specified in [VkVideoSessionCreateInfoKHR::pVideoProfile](#) the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-queryType-08364

If the bound video session was created with [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#), and the `queryType` used to create the `queryPool` specified in the [VkVideoInlineQueryInfoKHR](#) structure included in the `pNext` chain of `pEncodeInfo` is [VK\\_QUERY\\_TYPE\\_RESULT\\_STATUS\\_ONLY\\_KHR](#), then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports [result status queries](#), as indicated by [VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport](#)

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08201

`pEncodeInfo->dstBuffer` **must** be [compatible](#) with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08202

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->dstBuffer` **must** not be a protected buffer

- VUID-vkCmdEncodeVideoKHR-commandBuffer-08203

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->dstBuffer` **must** be a protected buffer

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08204

`pEncodeInfo->dstBufferOffset` **must** be an integer multiple of [VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08205

`pEncodeInfo->dstBufferRange` **must** be an integer multiple of [VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08206

`pEncodeInfo->srcPictureResource.imageViewBinding` **must** be [compatible](#) with the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08207

The format of `pEncodeInfo->srcPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08208  
`pEncodeInfo->srcPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08209  
`pEncodeInfo->srcPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08210  
`pEncodeInfo->srcPictureResource.imageViewBinding` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` usage flag set
- VUID-vkCmdEncodeVideoKHR-commandBuffer-08211  
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pEncodeInfo->srcPictureResource.imageViewBinding` **must** not have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08377  
`pEncodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08213  
If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08214  
If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08215  
If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must** `match` one of the `bound reference picture resource`
- VUID-vkCmdEncodeVideoKHR-activeReferencePictureCount-08216  
`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-slotIndex-08217  
The `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdEncodeVideoKHR-codedOffset-08218  
The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdEncodeVideoKHR-pPictureResource-08219  
The `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** `match` one of the `bound reference picture resource` associated with the DPB slot index

specified in the `slotIndex` member of that element

- VUID-vkCmdEncodeVideoKHR-pPictureResource-08220

Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pEncodeInfo->pReferenceSlots` **must** be **unique** within `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-dpbFrameUseCount-08221

All elements of `dpbFrameUseCount` **must** be less than or equal to 1

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10811

The image subresource **referred** to by `pEncodeInfo->srcPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR` layout at the time the video encode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10812

If `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource **referred** to by `pEncodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout at the time the video encode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdEncodeVideoKHR-pPictureResource-10813

The image subresource **referred** to by the `pPictureResource` member of each element of `pEncodeInfo->pReferenceSlots` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layout at the time the video encode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10306

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR`, then the bound video session **must** have been created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10307

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR`, then the bound video session **must** have been created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10308

If the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `pEncodeInfo->flags` **must** not include `VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10309

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeQuantizationMapInfoKHR` structure with its `quantizationMap` member specifying a valid `VkImageView` handle

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10310  
If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR`, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain **must** be compatible with the video profile the bound video session was created with
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10311  
If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR`, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` usage flag set
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10312  
If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR`, then the `VkImageView` specified by the `quantizationMap` member of the `VkVideoEncodeQuantizationMapInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR` usage flag set
- VUID-vkCmdEncodeVideoKHR-pNext-10313  
If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo`, its `quantizationMap` member is not `VK_NULL_HANDLE`, `commandBuffer` is an unprotected command buffer, and `protectedNoFault` is not supported, then `VkVideoEncodeQuantizationMapInfoKHR::quantizationMap` **must** not have been created from a protected image
- VUID-vkCmdEncodeVideoKHR-pNext-10314  
If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo` and its `quantizationMap` member is not `VK_NULL_HANDLE`, then the image subresource range referenced by `quantizationMap` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_ENCODE_QUANTIZATION_MAP_KHR` layout at the time the video encode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout
- VUID-vkCmdEncodeVideoKHR-pNext-10315  
If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo` and its `quantizationMap` member is not `VK_NULL_HANDLE`, and there is a bound video session parameters object, then the bound video session parameters object **must** have been created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`
- VUID-vkCmdEncodeVideoKHR-pNext-10316  
If an instance of the `VkVideoEncodeQuantizationMapInfoKHR` structure is included in the `pNext` chain of `pEncodeInfo`, its `quantizationMap` member is not `VK_NULL_HANDLE`, and there is a bound video session parameters object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `quantizationMapExtent` **must** equal `pEncodeInfo->srcPictureResource.codedExtent /`

quantizationMapTexelSize

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10837

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intra refresh mode` the bound video session was created with **must** not be `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10838

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then `pEncodeInfo->activeReferencePictureCount` **must** be less than or equal to `VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshActiveReferencePictures`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10839

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeIntraRefreshInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10840

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intraRefreshCycleDuration` member of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be zero

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10841

If `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `intraRefreshIndex` member of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than `VkVideoEncodeIntraRefreshInfoKHR::intraRefreshCycleDuration`

- VUID-vkCmdEncodeVideoKHR-pNext-10842

If the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` includes a `VkVideoReferenceIntraRefreshInfoKHR` structure with a non-zero `dirtyIntraRefreshRegions` member, then `pEncodeInfo->flags` **must** include `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-pNext-10843

If the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` includes a `VkVideoReferenceIntraRefreshInfoKHR` structure with a non-zero `dirtyIntraRefreshRegions` member, then for each such element `dirtyIntraRefreshRegions` **must** equal `intraRefreshCycleDuration` minus `intraRefreshIndex` where `intraRefreshCycleDuration` and `intraRefreshIndex` are the members of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pNext-10844

If the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeIntraRefreshInfoKHR` structure, then its `intraRefreshCycleDuration` member **must** be zero or **must** be between 2 and `VkVideoEncodeIntraRefreshCapabilitiesKHR::maxIntraRefreshCycleDuration`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pNext-08225

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of

**pEncodeInfo** must include a [VkVideoEncodeH264PictureInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-StdVideoH264SequenceParameterSet-08226

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH264SequenceParameterSet](#) entry with [seq\\_parameter\\_set\\_id](#) matching [StdVideoEncodeH264PictureInfo::seq\\_parameter\\_set\\_id](#) that is provided in the [pStdPictureInfo](#) member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-StdVideoH264PictureParameterSet-08227

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH264PictureParameterSet](#) entry with [seq\\_parameter\\_set\\_id](#) and [pic\\_parameter\\_set\\_id](#) matching [StdVideoEncodeH264PictureInfo::seq\\_parameter\\_set\\_id](#) and [StdVideoEncodeH264PictureInfo::pic\\_parameter\\_set\\_id](#), respectively, that are provided in the [pStdPictureInfo](#) member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08228

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) and [pEncodeInfo->pSetupReferenceSlot](#) is not [NULL](#), then the [pNext](#) chain of [pEncodeInfo->pSetupReferenceSlot](#) **must** include a [VkVideoEncodeH264DpbSlotInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-pNext-08229

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), then the [pNext](#) chain of each element of [pEncodeInfo->pReferenceSlots](#) **must** include a [VkVideoEncodeH264DpbSlotInfoKHR](#) structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08269

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) and the current [rate control mode](#) is not [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#), then [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) **must** be zero for each element of the [pNaluSliceEntries](#) member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-constantQp-08270

If the bound video session was created with the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#) and the current [rate control mode](#) is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#), then [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) **must** be between [VkVideoEncodeH264CapabilitiesKHR::minQp](#) and [VkVideoEncodeH264CapabilitiesKHR::maxQp](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile the bound video session was created with, for each element of the [pNaluSliceEntries](#) member of the [VkVideoEncodeH264PictureInfoKHR](#) structure included in the [pNext](#) chain of [pEncodeInfo](#)

- VUID-vkCmdEncodeVideoKHR-constantQp-08271

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` **must** have the same value for each element of the `pNaluSliceEntries` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08302

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `naluSliceEntryCount` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.width` multiplied by `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-naluSliceEntryCount-08312

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceEntryCount` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10845

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and with an `intra refresh mode` other than `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and `VkVideoEncodeIntraRefreshCapabilitiesKHR::partitionIndependentIntraRefreshRegions` is `VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceEntryCount` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** equal 1

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10846

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and with the `intra refresh mode` `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, and `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `naluSliceEntryCount` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** equal the `intraRefreshCycleDuration` member of the `VkVideoEncodeIntraRefreshInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-intraRefreshH264SliceIndex-10847

If `intraRefreshH264SliceIndex` is defined, then `pNaluSliceEntries[intraRefreshH264SliceIndex].pStdSliceHeader->slice_type` **must** be `STD_VIDEO_H264_SLICE_TYPE_I` in the `VkVideoEncodeH264PictureInfoKHR` structure

included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10848

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and with the `intra refresh mode` `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and `VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions` is `VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceEntryCount` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-h264PictureType-10849

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, `h264PictureType` is `STD_VIDEO_H264_PICTURE_TYPE_B`, and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR`, then `pEncodeInfo->flags` **must** not include `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-flags-10850

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR`, then `pNaluSliceEntries[i].pStdSliceHeader->slice_type` **must** be identical for all elements `i` of the `pNaluSliceEntries` member of the `VkVideoEncodeH264PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`, except for element index `i` equal to `intraRefreshH264SliceIndex`, if `intraRefreshH264SliceIndex` is defined

- VUID-vkCmdEncodeVideoKHR-pNext-08352

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08339

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the `StdVideoEncodeH264ReferenceListsInfo` structure pointed to by `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists` **must** either be `STD_VIDEO_H264_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08353  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH264PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array members of the `StdVideoEncodeH264ReferenceListsInfo` structure pointed to by `VkVideoEncodeH264PictureInfoKHR::pStdPictureInfo->pRefLists`
- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08340  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_P`
- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08341  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::maxBPictureL0ReferenceCount` and `VkVideoEncodeH264CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h264PictureType` and each element of `h264L0PictureTypes` and `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`
- VUID-vkCmdEncodeVideoKHR-flags-08342  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h264L0PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`
- VUID-vkCmdEncodeVideoKHR-flags-08343  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and `VkVideoEncodeH264CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h264L1PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`
- VUID-vkCmdEncodeVideoKHR-pNext-08230  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeH265PictureInfoKHR` structure
- VUID-vkCmdEncodeVideoKHR-StdVideoH265VideoParameterSet-08231  
If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH265SequenceParameterSet-08232

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-StdVideoH265PictureParameterSet-08233

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-08234

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-08235

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeH265DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQp-08272

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** be zero for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08273

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then

`VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-constantQp-08274

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp` **must** have the same value for each element of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08307

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.width` multiplied by `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-naluSliceSegmentEntryCount-08313

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10851

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with an `intra refresh mode` other than `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and `VkVideoEncodeIntraRefreshCapabilitiesKHR::partitionIndependentIntraRefreshRegions` is `VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** equal 1

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10852

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with the `intra refresh mode` `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, and

`pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** equal `VkVideoEncodeIntraRefreshInfoKHR::intraRefreshCycleDuration`

- VUID-vkCmdEncodeVideoKHR-intraRefreshH265SliceSegmentIndex-10853

If `intraRefreshH265SliceSegmentIndex` is defined, then `pNaluSliceSegmentEntries[intraRefreshH265SliceSegmentIndex].pStdSliceSegmentHeader->slice_type` **must** be `STD_VIDEO_H265_SLICE_TYPE_I` in the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10854

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and with the `intra refresh mode` `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR`, `pEncodeInfo->flags` includes `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`, and `VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions` is `VK_FALSE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `naluSliceSegmentEntryCount` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be less than or equal to `minCodingBlockExtent.height`

- VUID-vkCmdEncodeVideoKHR-h265PictureType-10855

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, `h265PictureType` is `STD_VIDEO_H265_PICTURE_TYPE_B`, and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR`, then `pEncodeInfo->flags` **must** not include `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-flags-10856

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR`, then `pNaluSliceSegmentEntries[i].pStdSliceSegmentHeader->slice_type` **must** be identical for all elements `i` of the `pNaluSliceSegmentEntries` member of the `VkVideoEncodeH265PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`, except for element index `i` equal to `intraRefreshH265SliceSegmentIndex`, if `intraRefreshH265SliceSegmentIndex` is defined

- VUID-vkCmdEncodeVideoKHR-pNext-08354

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** not be `NULL`

- VUID-vkCmdEncodeVideoKHR-pNext-08344

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` is not `NULL`, then each element of the `RefPicList0` and `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists` **must** either be `STD_VIDEO_H265_NO_REFERENCE_PICTURE` or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-pNext-08355

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain of `pEncodeInfo` includes a `VkVideoEncodeH265PictureInfoKHR` structure, and `pEncodeInfo->referenceSlotCount` is greater than zero, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `RefPicList0` or `RefPicList1` array members of the `StdVideoEncodeH265ReferenceListsInfo` structure pointed to by `VkVideoEncodeH265PictureInfoKHR::pStdPictureInfo->pRefLists`

- VUID-vkCmdEncodeVideoKHR-maxPPictureL0ReferenceCount-08345

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxPPictureL0ReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_P`

- VUID-vkCmdEncodeVideoKHR-maxBPictureL0ReferenceCount-08346

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::maxBPictureL0ReferenceCount` and `VkVideoEncodeH265CapabilitiesKHR::maxL1ReferenceCount` are both zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `h265PictureType` and each element of `h265L0PictureTypes` and `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08347

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then each element of `h265L0PictureTypes` **must** not be `STD_VIDEO_H264_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-flags-08348

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and `VkVideoEncodeH265CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session

was created with, then each element of `h265L1PictureTypes` **must** not be `STD_VIDEO_H265_PICTURE_TYPE_B`

- VUID-vkCmdEncodeVideoKHR-pNext-10317

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of `pEncodeInfo` **must** include a `VkVideoEncodeAV1PictureInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10318

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` **must** include a `VkVideoEncodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-pNext-10319

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of each element of `pEncodeInfo->pReferenceSlots` **must** include a `VkVideoEncodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdEncodeVideoKHR-constantQIndex-10320

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the `constantQIndex` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be zero

- VUID-vkCmdEncodeVideoKHR-constantQIndex-10321

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the `constantQIndex` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-flags-10322

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->flags.frame_size_override_flag` **must** be zero for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-flags-10323

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by

`vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `pEncodeInfo->srcPictureResource.codedExtent.width` **must** equal `StdVideoAV1SequenceHeader::max_frame_width_minus_1 + 1` of the `active AV1 sequence header`

- VUID-vkCmdEncodeVideoKHR-flags-10324

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then `pEncodeInfo->srcPictureResource.codedExtent.height` **must** equal `StdVideoAV1SequenceHeader::max_frame_height_minus_1 + 1` of the `active AV1 sequence header`

- VUID-vkCmdEncodeVideoKHR-flags-10325

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then for each element `i` of `pEncodeInfo->pReferenceSlots` `pEncodeInfo->pReferenceSlots[i].pPictureResource->codedExtent` **must** match `pEncodeInfo->srcPictureResource.codedExtent`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10326

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->frame_type` **must** be `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10327

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pStdPictureInfo->frame_type` for the `pStdPictureInfo` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`, then `VkVideoEncodeAV1PictureInfoKHR::predictionMode` **must** be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR`

- VUID-vkCmdEncodeVideoKHR-maxSingleReferenceCount-10328

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::maxSingleReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10329

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR`, then there **must** be at least one non-negative element of `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` with element index `i` that does not equal `cdfOnlyReferenceIndex` and for which bit index `i` is set in `VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-maxUnidirectionalCompoundReferenceCount-10330

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::maxUnidirectionalCompoundReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10331

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR`, then there **must** be at least two non-negative elements of `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` with element indices `i` and `j` where  $(i,j) \in \{(0,1),(0,2),(0,3),(4,6)\}$ , such that neither element equals `cdfOnlyReferenceIndex` and for which bit indices `i` and `j` are set in `VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-maxBidirectionalCompoundReferenceCount-10332

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `VkVideoEncodeAV1CapabilitiesKHR::maxBidirectionalCompoundReferenceCount` is zero, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** not be `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR`

- VUID-vkCmdEncodeVideoKHR-predictionMode-10333

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR`, then

there **must** be at least two non-negative elements of `VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices` with element indices  $i \in \{0,1,2,3\}$  and  $j \in \{4,5,6\}$ , respectively, such that neither element equals `cdlOnlyReferenceIndex`, and for which bit indices  $i$  and  $j$  are set in `VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-predictionMode-10857

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the `predictionMode` member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR` or `VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR`, and `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR`, then `pEncodeInfo->flags` **must** not include `VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR`

- VUID-vkCmdEncodeVideoKHR-referenceNameSlotIndices-10334

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then each element of the `referenceNameSlotIndices` array member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** either be negative or **must** equal the `slotIndex` member of one of the elements of `pEncodeInfo->pReferenceSlots`

- VUID-vkCmdEncodeVideoKHR-slotIndex-10335

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `slotIndex` member of each element of `pEncodeInfo->pReferenceSlots` **must** equal one of the elements of the `referenceNameSlotIndices` array member of the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10336

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pExtensionHeader->temporal_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10337

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pExtensionHeader->spatial_id` **must** be less than

`VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10338

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` and the `pExtensionHeader` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** both be `NULL` or not `NULL`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10339

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pExtensionHeader->temporal_id` **must** equal `pStdPictureInfo->pExtensionHeader->temporal_id` in the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-10340

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for the `VkVideoEncodeAV1DpbSlotInfoKHR` structure included in the `pNext` chain of `pEncodeInfo->pSetupReferenceSlot` is not `NULL`, then `pExtensionHeader->spatial_id` **must** equal `pStdPictureInfo->pExtensionHeader->spatial_id` in the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo`

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10341

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for any of the `VkVideoEncodeAV1DpbSlotInfoKHR` structures included in the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` is not `NULL`, then `pExtensionHeader->temporal_id` **must** be less than `VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pExtensionHeader-10342

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pExtensionHeader` member of `VkVideoEncodeAV1DpbSlotInfoKHR::pStdReferenceInfo` for any of the `VkVideoEncodeAV1DpbSlotInfoKHR` structures included in the `pNext` chain of any element of `pEncodeInfo->pReferenceSlots` is not `NULL`, then `pExtensionHeader->spatial_id` **must** be

less than `VkVideoEncodeAV1CapabilitiesKHR::maxSpatialLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10343

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileCols` **must** be greater than 0

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10344

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileRows` **must** be greater than 0

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10345

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileCols` **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10346

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pTileInfo->TileRows` **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10347

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pEncodeInfo->srcPictureResource.codedExtent.width / pTileInfo->TileCols` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minTileSize.width` and `VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.width`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pTileInfo-10348

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and the `pTileInfo` member of `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` is not `NULL`, then `pEncodeInfo->srcPictureResource.codedExtent.height / pTileInfo->TileRows` **must** be between `VkVideoEncodeAV1CapabilitiesKHR::minTileSize.height` and `VkVideoEncodeAV1CapabilitiesKHR::maxTileSize.height`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with

- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10349  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->flags.segmentation_enabled` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be zero
- VUID-vkCmdEncodeVideoKHR-pStdPictureInfo-10350  
If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `VkVideoEncodeAV1PictureInfoKHR::pStdPictureInfo->pSegmentation` for the `VkVideoEncodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pEncodeInfo` **must** be `NULL`

### Valid Usage (Implicit)

- VUID-vkCmdEncodeVideoKHR-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEncodeVideoKHR-pEncodeInfo-parameter  
`pEncodeInfo` **must** be a valid pointer to a valid `VkVideoEncodeInfoKHR` structure
- VUID-vkCmdEncodeVideoKHR-commandBuffer-recording  
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdEncodeVideoKHR-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdEncodeVideoKHR-renderpass  
This command **must** only be called outside of a render pass instance
- VUID-vkCmdEncodeVideoKHR-suspended  
This command **must** not be called between suspended render pass instances
- VUID-vkCmdEncodeVideoKHR-videocoding  
This command **must** only be called inside of a video coding scope
- VUID-vkCmdEncodeVideoKHR-bufferlevel  
`commandBuffer` **must** be a primary `VkCommandBuffer`

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types         | Command Type |
|-----------------------|-------------------|--------------------|-------------------------------|--------------|
| Primary               | Outside           | Inside             | VK_QUEUE_VIDEO_ENCODE_BIT_KHR | Action       |

## Conditional Rendering

`vkCmdEncodeVideoKHR` is not affected by [conditional rendering](#)

The `VkVideoEncodeInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    VkVideoEncodeFlagsKHR       flags;
    VkBuffer                    dstBuffer;
    VkDeviceSize                dstBufferOffset;
    VkDeviceSize                dstBufferRange;
    VkVideoPictureResourceInfoKHR srcPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t                    referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
    uint32_t                    precedingExternallyEncodedBytes;
} VkVideoEncodeInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeFlagBitsKHR` indicating video encode command flags.
- `dstBuffer` is the destination video bitstream buffer to write the encoded bitstream to.
- `dstBufferOffset` is the starting offset in bytes from the start of `dstBuffer` to write the encoded bitstream to.

- `dstBufferRange` is the maximum bitstream size in bytes that **can** be written to `dstBuffer`, starting from `dstBufferOffset`.
- `srcPictureResource` is the video picture resource to use as the **encode input picture**.
- `pSetupReferenceSlot` is `NULL` or a pointer to a `VkVideoReferenceSlotInfoKHR` structure specifying the **reconstructed picture information**.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of `VkVideoReferenceSlotInfoKHR` structures describing the DPB slots and corresponding **reference picture** resources to use in this video encode operation (the set of **active reference pictures**).
- `precedingExternallyEncodedBytes` is the number of bytes externally encoded by the application to the video bitstream and is used to update the internal state of the implementation's **rate control** algorithm to account for the bitrate budget consumed by these externally encoded bytes.

### Valid Usage

- VUID-VkVideoEncodeInfoKHR-dstBuffer-08236  
`dstBuffer` **must** have been created with the `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR` usage flag set
- VUID-VkVideoEncodeInfoKHR-dstBufferOffset-08237  
`dstBufferOffset` **must** be less than the size of `dstBuffer`
- VUID-VkVideoEncodeInfoKHR-dstBufferRange-08238  
`dstBufferRange` **must** be less than or equal to the size of `dstBuffer` minus `dstBufferOffset`
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08239  
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-08240  
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoEncodeInfoKHR-slotIndex-08241  
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoEncodeInfoKHR-pPictureResource-08242  
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

### Valid Usage (Implicit)

- VUID-VkVideoEncodeInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR`
- VUID-VkVideoEncodeInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1PictureInfoKHR`, `VkVideoEncodeH264PictureInfoKHR`, `VkVideoEncodeH265PictureInfoKHR`, `VkVideoEncodeIntraRefreshInfoKHR`, `VkVideoEncodeQuantizationMapInfoKHR`, or `VkVideoInlineQueryInfoKHR`

- VUID-VkVideoEncodeInfoKHR-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkVideoEncodeInfoKHR-flags-parameter  
If **flags** is not 0, **flags** **must** be a valid combination of **VkVideoEncodeFlagBitsKHR** values
- VUID-VkVideoEncodeInfoKHR-dstBuffer-parameter  
**dstBuffer** **must** be a valid **VkBuffer** handle
- VUID-VkVideoEncodeInfoKHR-srcPictureResource-parameter  
**srcPictureResource** **must** be a valid **VkVideoPictureResourceInfoKHR** structure
- VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-parameter  
If **pSetupReferenceSlot** is not NULL, **pSetupReferenceSlot** **must** be a valid pointer to a valid **VkVideoReferenceSlotInfoKHR** structure
- VUID-VkVideoEncodeInfoKHR-pReferenceSlots-parameter  
If **referenceSlotCount** is not 0, **pReferenceSlots** **must** be a valid pointer to an array of **referenceSlotCount** valid **VkVideoReferenceSlotInfoKHR** structures

Bits which **can** be set in **VkVideoEncodeInfoKHR::flags**, specifying video encode flags, are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoEncodeFlagBitsKHR {
    // Provided by VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_INTRA_REFRESH_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_WITH_EMPHASIS_MAP_BIT_KHR = 0x00000002,
} VkVideoEncodeFlagBitsKHR;
```

- **VK\_VIDEO\_ENCODE\_WITH\_QUANTIZATION\_DELTA\_MAP\_BIT\_KHR** specifies the use of a quantization delta map in the issued video encode operations.
- **VK\_VIDEO\_ENCODE\_WITH\_EMPHASIS\_MAP\_BIT\_KHR** specifies the use of an emphasis map in the issued video encode operations.
- **VK\_VIDEO\_ENCODE\_INTRA\_REFRESH\_BIT\_KHR** enables intra refresh for the encoded picture.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFlagsKHR;
```

**VkVideoEncodeFlagsKHR** is a bitmask type for setting a mask of zero or more **VkVideoEncodeFlagBitsKHR**.

## 45.17. Video Encode Intra Refresh

Encoding a picture with intra refresh enables encoding a subset of the coding blocks produced for an **encode input picture** with intra prediction.

**NOTE**

This enables the application to perform a decoder refresh through a series of pictures instead of a single picture. In conjunction with [restricting reference picture prediction](#), this enables avoiding error propagation across refresh cycles without introducing sudden spikes in the bitrate. This is achieved by amortizing the bitstream consumption of the refresh across a series of subsequent pictures.

An *intra refresh cycle* is a series of encode operations using intra refresh that contain at least one encode operation for any subregion of the coded extent that encoded the subregion with intra prediction.

The *intra refresh cycle duration* is the number of encode operations in an intra refresh cycle.

Figure 27. Intra refresh cycle duration

For the purposes of performing an intra refresh cycle, the coded extent is divided into a set of *intra refresh regions*. The number of intra refresh regions for a given intra refresh cycle equals the intra refresh cycle duration.

Implementations **may** partition the coded extent into intra refresh regions in an implementation-specific manner, unless otherwise specified. The following is true for the resulting set of intra refresh regions:

- Each intra refresh region encompasses entire coding blocks.
- Any intra refresh region **may** be non-rectangular.
- Some intra refresh regions **may** be empty.
- The union of intra refresh regions of a given partitioning covers the entire coded extent.

**NOTE**

While intra refresh regions are generally disjoint, there may be overlap between distinct intra refresh regions of a given partitioning in order to accommodate for any filtering that may need to be applied across coding blocks of neighboring intra refresh regions.

Figure 28. Examples of picture partitioning into intra refresh regions

An intra refresh cycle is performed by encoding subsequent pictures with intra refresh, each encoding subsequent intra refresh regions using intra prediction. This inherently defines an ordering of encode operations within an intra refresh cycle. Therefore each encode operation in an intra refresh cycle has an *intra refresh index* that provides the following information:

- The intra refresh index of an encode operation using intra refresh is the ordinal index of the intra refresh region being encoded using intra prediction.
- The intra refresh index of an encode operation using intra refresh inherently tells the number of intra refresh regions already refreshed by previous encode operations of the intra refresh cycle.

**NOTE**

For AV1 encoding, applications should consider setting the `error_resilient_mode` flag for the first frame encoded as part of the intra refresh cycle in order to avoid any error propagation of CDF data.

An intra refresh region of a picture encoded using intra refresh is considered *clean* once the encode operation within the intra refresh cycle that encoded that intra refresh region using intra prediction is complete. Otherwise, the intra refresh region is considered *dirty*.

The number of *dirty intra refresh regions* of a picture encoded using intra refresh is always one less than the difference between the intra refresh cycle duration and the intra refresh index used to encode that picture.

**NOTE**

As the intra refresh cycle progresses, each subsequent picture encoded with intra refresh will have fewer dirty intra refresh regions. Consequently, the final encode operation of the intra refresh cycle will produce an encoded picture with no more dirty intra refresh regions.

### 45.17.1. Intra Refresh Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specifying an encode operation, the `VkVideoEncodeIntraRefreshCapabilitiesKHR` structure **can** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encode intra refresh.

The `VkVideoEncodeIntraRefreshCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshCapabilitiesKHR {
    VkStructureType             sType;
    void*                       pNext;
    VkVideoEncodeIntraRefreshModeFlagsKHR intraRefreshModes;
    uint32_t                    maxIntraRefreshCycleDuration;
    uint32_t                    maxIntraRefreshActiveReferencePictures;
    VkBool32                    partitionIndependentIntraRefreshRegions;
    VkBool32                    nonRectangularIntraRefreshRegions;
} VkVideoEncodeIntraRefreshCapabilitiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **intraRefreshModes** is a bitmask of **VkVideoEncodeIntraRefreshModeFlagBitsKHR** values indicating the set of supported **intra refresh modes**.
- **maxIntraRefreshCycleDuration** specifies the maximum supported **intra refresh cycle duration**.
- **maxIntraRefreshActiveReferencePictures** is the maximum number of **active reference pictures** when encoding pictures with **intra refresh** enabled. This capability indicates additional restrictions beyond the maximum number of **active reference pictures** supported by the video profile, as reported in **VkVideoCapabilitiesKHR::maxActiveReferencePictures** and the maximum requested at video session creation time in **VkVideoSessionCreateInfoKHR::maxActiveReferencePictures**.
- **partitionIndependentIntraRefreshRegions** specifies whether the implementation supports intra refresh regions that are independent of the picture partitioning used during encoding. If it is **VK\_TRUE**, then pictures **can** be encoded with multiple picture partitions, independent of the used intra refresh mode. Otherwise, pictures **cannot** be encoded with multiple picture partitions with any intra refresh mode other than **VK\_VIDEO\_ENCODE\_INTRA\_REFRESH\_MODE\_PER\_PICTURE\_PARTITION\_BIT\_KHR**.

#### NOTE

This capability is only indicative for **AV1 encode profiles** and does not impose any restrictions on the application as implementations may change the application requested picture partitioning according to implementation-specific restrictions.

- **nonRectangularIntraRefreshRegions** specifies whether the implementation supports non-rectangular intra refresh regions.

#### NOTE

If this capability is not supported, then using per picture partition intra refresh may impose additional restrictions on the number of picture partitions a picture can be encoded with.

## 45.17.2. Intra Refresh Modes

The intra refresh modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef enum VkVideoEncodeIntraRefreshModeFlagBitsKHR {
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR = 0,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_PER_PICTURE_PARTITION_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_BASED_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_ROW_BASED_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_BLOCK_COLUMN_BASED_BIT_KHR = 0x00000008,
} VkVideoEncodeIntraRefreshModeFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_NONE\\_KHR](#) specifies that intra refresh **must** not be used.
- [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_PER\\_PICTURE\\_PARTITION\\_BIT\\_KHR](#) specifies the use of *per picture partition intra refresh*. In this mode each intra refresh region *i* corresponds to the encoded picture partition *i*.
- [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_BASED\\_BIT\\_KHR](#) specifies the use of any *block-based intra refresh*. In this mode each intra refresh region encompasses a set of coding blocks, independent of encoded picture partitions but without any additional guarantees on the granularity at which the picture is split into intra refresh regions. When using this mode, the set of coding blocks comprising the intra refresh regions and the direction of intra refresh are implementation-defined.
- [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_ROW\\_BASED\\_BIT\\_KHR](#) specifies the use of *block-row-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block rows.
- [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_COLUMN\\_BASED\\_BIT\\_KHR](#) specifies the use of *block-column-based intra refresh*. This mode is a block-based intra refresh mode where each intra refresh region encompasses a set of coding block columns.

Implementations reporting support for [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_ROW\\_BASED\\_BIT\\_KHR](#) and/or [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_COLUMN\\_BASED\\_BIT\\_KHR](#) in [VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes](#) are also **required** to report support for [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_BASED\\_BIT\\_KHR](#).

## NOTE

Both block-row-based and block-column-based intra refresh are just specific types of block-based intra refresh that provide additional guarantees about the granularity at which the picture is split into intra refresh regions, therefore implementations supporting either block-row-based or block-column-based intra refresh inherently support block-based intra refresh. Applications can use [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_BLOCK\\_BASED\\_BIT\\_KHR](#) on such implementations when they do not have any preference for a more specific block-based mode and would rather leave the decision about the division into intra refresh regions to the implementation.

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef VkFlags VkVideoEncodeIntraRefreshModeFlagsKHR;
```

[VkVideoEncodeIntraRefreshModeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeIntraRefreshModeFlagBitsKHR](#).

The used intra refresh mode is selected at [video session creation time](#) by including an instance of the [VkVideoEncodeSessionIntraRefreshCreateInfoKHR](#) structure in the [pNext](#) chain of the [VkVideoSessionCreateInfoKHR](#) structure and specifying one of the supported intra refresh modes, as returned in [VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes](#), in its [intraRefreshMode](#) member.

The [VkVideoEncodeSessionIntraRefreshCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeSessionIntraRefreshCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeIntraRefreshModeFlagBitsKHR  intraRefreshMode;
} VkVideoEncodeSessionIntraRefreshCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [intraRefreshMode](#) is a [VkVideoEncodeIntraRefreshModeFlagBitsKHR](#) specifying the used [intra refresh mode](#).

## Valid Usage (Implicit)

- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_SESSION\\_INTRA\\_REFRESH\\_CREATE\\_INFO\\_KHR](#)
- VUID-VkVideoEncodeSessionIntraRefreshCreateInfoKHR-intraRefreshMode-parameter If [intraRefreshMode](#) is not [0](#), [intraRefreshMode](#) **must** be a valid [VkVideoEncodeIntraRefreshModeFlagBitsKHR](#) value

## Structure Chaining

### Extends the structure

- [VkVideoSessionCreateInfoKHR](#)

### 45.17.3. Encoding Pictures with Intra Refresh

If the video encode operation is issued with the [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_BIT\\_KHR](#) flag, the picture will be encoded with intra refresh, resulting in the [intra refresh region](#) identified by the specified [intra refresh index](#) to be encoded with intra prediction.

Intra refresh parameters are specified to video encode operations by including an instance of the [VkVideoEncodeIntraRefreshInfoKHR](#) structure in the [pNext](#) chain of the [VkVideoEncodeInfoKHR](#) structure specified to the video encode command.

The [VkVideoEncodeIntraRefreshInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoEncodeIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           intraRefreshCycleDuration;
    uint32_t           intraRefreshIndex;
} VkVideoEncodeIntraRefreshInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [intraRefreshCycleDuration](#) is the used [intra refresh cycle duration](#).
- [intraRefreshIndex](#) is the [intra refresh index](#) of the encoded picture.

## Valid Usage (Implicit)

- VUID-VkVideoEncodeIntraRefreshInfoKHR-sType-sType  
[sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_INFO\\_KHR](#)

## Structure Chaining

### Extends the structure

- [VkVideoEncodeInfoKHR](#)

### 45.17.4. Referencing Pictures Encoded with Intra Refresh

When using pictures encoded with intra refresh as an [active reference picture](#) in a video encode

operation, applications **may** want to limit the set of [intra refresh regions](#) of the reference picture that are used to predict samples of the encoded picture to exclude [dirty intra refresh regions](#) of the reference picture in question.

**NOTE**

This enables the application to avoid error propagation from previous refresh cycles by only using already refreshed (clean) intra refresh regions for sample prediction.

In order to limit the set of [intra refresh regions](#) of an [active reference picture](#) used for sample prediction, the application **must** specify an instance of the [VkVideoReferenceIntraRefreshInfoKHR](#) structure in the [pNext](#) chain of the [VkVideoReferenceSlotInfoKHR](#) structure specifying the active reference picture in question.

The [VkVideoReferenceIntraRefreshInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkVideoReferenceIntraRefreshInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           dirtyIntraRefreshRegions;
} VkVideoReferenceIntraRefreshInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [dirtyIntraRefreshRegions](#) is the number of [dirty intra refresh regions](#) in the reference picture.

### Valid Usage (Implicit)

- VUID-VkVideoReferenceIntraRefreshInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_REFERENCE\\_INTRA\\_REFRESH\\_INFO\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

In order to use active reference pictures with a non-zero number of dirty intra refresh regions and therefore limit sample prediction to clean intra refresh regions, the currently encoded picture **must** be encoded with intra refresh enabled.

When limiting sample prediction to clean intra refresh regions of a reference picture with a non-zero number of [dirty intra refresh regions](#), the number of dirty intra refresh regions **must** equal the used [intra refresh cycle duration](#) minus the [intra refresh index](#) of the encoded picture.

**NOTE**

This has the practical effect that pictures can only reference the previous picture

within the intra refresh cycle or pictures outside of the intra refresh cycle.

Given an **active reference picture** with **dirtyIntraRefreshRegions** number of **dirty intra refresh regions** and an **intra refresh cycle duration** of **intraRefreshCycleDuration**, the samples within intra refresh region index *i* of the encoded picture are allowed to be predicted by samples within intra refresh region index *j* of the active reference picture in question if and only if any of the following conditions are true:

- The picture is encoded with **VK\_VIDEO\_ENCODE\_INTRA\_REFRESH\_BIT\_KHR** and *i* is greater than the **intraRefreshIndex** of the encoded picture.
- The picture is encoded with **VK\_VIDEO\_ENCODE\_INTRA\_REFRESH\_BIT\_KHR**, *i* is less than the **intraRefreshIndex** of the encoded picture, and *j* is less than the difference of **intraRefreshCycleDuration** and **dirtyIntraRefreshRegions**.

Even if a particular intra refresh region is allowed to be used for sample prediction, as defined above, implementations may not always support sample prediction from the given intra refresh region.

Some implementations may only support sample prediction from a single set of intra refresh regions across the entire set of active reference pictures. For example, when encoding a picture with two active reference pictures, one with no dirty intra refresh regions, and one with some dirty intra refresh regions, sample prediction may not happen from those intra refresh regions of the first active reference picture which are marked dirty in the second active reference picture.

#### NOTE

Other implementations may have the additional restriction that the set of intra refresh regions to use for sample prediction across the entire set of active reference pictures is implied from the intra refresh index of the currently encoded picture, further restricting the set of intra refresh regions that such implementations can use for sample prediction. For example, when encoding a picture with intra refresh using an active reference picture that has no dirty intra refresh regions, sample prediction may not happen from intra refresh regions of the active reference picture which have an index greater than or equal to the currently encoded picture's intra refresh index, even though those intra refresh regions were not marked as dirty.

None of these implementation limitations will have an effect on application behavior from the perspective of correctness, but they may negatively impact the encoding efficiency.

## 45.18. Video Encode Rate Control

The size of the encoded bitstream data produced by video encode operations is a function of the following set of constraints:

- The capabilities of the compression algorithms defined and employed by the used video compression standard;

- Restrictions imposed by the selected [video profile](#) according to the rules defined by the used video compression standard;
- Further restrictions imposed by the [capabilities](#) supported by the implementation for the selected [video profile](#);
- The image data in the [encode input picture](#) and the set of [active reference pictures](#) (as these affect the effectiveness of the compression algorithms employed by the video encode operations);
- The set of codec-specific and codec-independent encoding parameters provided by the application.

These also inherently define the set of decoder capabilities required for reconstructing and processing the picture data in the encoded bitstream.

Video coding uses *bitrate* as the quantitative metric associated with encoded bitstream data size which expresses the rate at which video bitstream data **can** be transferred or processed, measured in number of bits per second. This bitrate is both a function of the encoded bitstream data size of the encoded pictures as well as the *frame rate* used by the video sequence.

Rate control algorithms are used by video encode operations to enable adjusting encoding parameters to achieve a target bitrate, or otherwise directly or indirectly control the bitrate of the generated video bitstream data. These algorithms are usually not defined by the used video compression standard, although some video compression standards do provide non-normative guidelines for implementations.

Accordingly, this specification does not mandate implementations to produce identical encoded bitstream data outputs in response to video encode operations, however, it does define a set of codec-independent and codec-specific parameters that enable the application to control the behavior of the rate control algorithms supported by the implementation. Some of these parameters guarantee certain implementation behavior while others provide guidance for implementations to apply various rate control heuristics.

#### NOTE

Applications need to make sure that they configure rate control parameters appropriately and that they follow the promises made to the implementation through parameters providing guidance for the implementation's rate control algorithms and heuristics in order to be able to get the desired rate control behavior and to be able to hit the set bitrate targets. In addition, the behavior of rate control may also differ across implementations even if the capabilities of the used video profile match between those implementations. This may happen due to implementations applying different rate control algorithms or heuristics internally, and thus even the same set of guidance parameter values may have different effects on the rate control behavior across implementations.

### 45.18.1. Rate Control Modes

After a video session is reset to the [initial state](#), the default behavior and parameters of video encode rate control are entirely implementation-dependent and the application **cannot** affect the bitrate or quality parameters of the encoded bitstream data produced by video encode operations

unless the application changes the rate control configuration of the video session, as described in the [Video Coding Control](#) section.

For each supported [video profile](#), the implementation **may** expose a set of *rate control modes* that are available for use by the application when encoding bitstreams targeting that video profile. These modes allow using different rate control algorithms that fall into one of the following two categories:

1. Per-operation rate control
2. Stream-level rate control

In case of *per-operation rate control*, the bitrate of the generated video bitstream data is indirectly controlled by quality, size, or other encoding parameters specified by the application for each individual video encode operation.

In case of *stream-level rate control*, the application **can** directly specify target bitrates besides other encoding parameters to control the behavior of the rate control algorithm used by the implementation across multiple video encode operations.

The rate control modes are defined with the following enums:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeRateControlModeFlagBitsKHR {
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR = 0x00000004,
} VkVideoEncodeRateControlModeFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#) specifies the use of implementation-specific rate control.
- [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#) specifies that rate control is disabled and the application will specify per-operation rate control parameters controlling the encoding quality. In this mode implementations will encode pictures independently of the output bitrate of prior video encode operations.
  - When using an [H.264 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH264NaluSliceInfoKHR::constantQp](#) to control the quality of the encoded picture.
  - When using an [H.265 encode profile](#), implementations will use the QP value specified in [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) to control the quality of the encoded picture.
  - When using an [AV1 encode profile](#), implementations will use the quantizer index value specified in [VkVideoEncodeAV1PictureInfoKHR::constantQIndex](#) to control the quality of the encoded picture.
- [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_CBR\\_BIT\\_KHR](#) specifies the use of constant bitrate (CBR) rate control mode. In this mode the implementation will attempt to produce the encoded

bitstream at a constant bitrate while conforming to the constraints of other rate control parameters.

- [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_VBR\\_BIT\\_KHR](#) specifies the use of variable bitrate (VBR) rate control mode. In this mode the implementation will produce the encoded bitstream at a variable bitrate according to the constraints of other rate control parameters.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlModeFlagsKHR;
```

[VkVideoEncodeRateControlModeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeRateControlModeFlagBitsKHR](#).

## 45.18.2. Leaky Bucket Model

Video encoding implementations use the *leaky bucket model* for stream-level rate control. The leaky bucket is a concept referring to the interface between the video encoder and the consumer (for example, a network connection), where the video encoder produces encoded bitstream data corresponding to the encoded pictures and adds them in the leaky bucket while its content are drained by the consumer.

Analogously, a similar leaky bucket is considered to exist at the input interface of a video decoder, into which encoded bitstream data is continuously added and is subsequently consumed by the video decoder. It is desirable to avoid overflowing or underflowing this leaky bucket because:

- In case of an underflow, the video decoder will be unable to consume encoded bitstream data in order to decode pictures (and optionally display them).
- In case of an overflow, the leaky bucket will be unable to accommodate more encoded bitstream data and such data **may** need to be thrown away, leading to the loss of the corresponding encoded pictures.

These requirements **can** be satisfied by imposing various constraints on the encoder-side leaky bucket to avoid its overflow or underflow, depending on the used rate control algorithm and codec parameters. However, enumerating these constraints is outside the scope of this specification.

The term *virtual buffer* is often used as an alternative to refer to the leaky bucket.

This virtual buffer model is defined by the following parameters:

- The bitrate (**R**) at which the encoded bitstream is expected to be processed.
- The size (**B**) of the virtual buffer.
- The initial occupancy (**F**) of the virtual buffer.

In this model the virtual buffer is used to smooth out fluctuations in the bitrate of the encoded bitstream over time without experiencing buffer overflow or underflow, as long as the bitrate of the encoded stream does not diverge from the target bitrate for extended periods of time.

This buffering **may** inherently impose a processing delay, as the goal of the model is to enable

decoders maintain a consistent processing rate of an encoded bitstream with varying data rate.

The initial or start-up delay (**D**) is computed as:

$$D = F / R$$

**NOTE**

Applications need to configure the virtual buffer with sufficient size to avoid or minimize buffer overflows and underflows while also keeping it small enough to meet their latency goals.

### 45.18.3. Rate Control Layers

Some video compression standards and [video profiles](#) allow associating encoded pictures with specific *video coding layers*. The name, identification, and semantics associated with such video coding layers are defined by the corresponding video compression standards.

Analogously, stream-level rate control **can** be configured to use one or more *rate control layers*:

- When a single rate control layer is configured, it is applied to all encoded pictures, regardless of the picture's video coding layer. In this case the distribution of the available bitrate budget across video coding layers is implementation-dependent.
- When multiple rate control layers are configured, each rate control layer is applied to the corresponding video coding layer, i.e. only across encoded pictures pertaining to the corresponding video coding layer.

Individual rate control layers are identified using *layer indices* between zero and **N-1**, where **N** is the number of active rate control layers.

Rate control layers are only applicable when using [stream-level rate control modes](#).

### 45.18.4. Rate Control State

Rate control state is maintained by the implementation in the [video session](#) objects and its parameters are specified using an instance of the `VkVideoEncodeRateControlInfoKHR` structure. The complete rate control state of a video session is defined by the following set of parameters:

- The values of the members of the `VkVideoEncodeRateControlInfoKHR` structure used to configure the rate control state.
- The values of the members of any `VkVideoEncodeRateControlLayerInfoKHR` structures specified in `VkVideoEncodeRateControlInfoKHR::pLayers` used to configure the state of individual [rate control layers](#).
- If the video session was created with an [H.264 encode profile](#):
  - The values of the members of the `VkVideoEncodeH264RateControlInfoKHR` structure, if one is specified in the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` used to configure the rate control state.
  - The values of the members of any `VkVideoEncodeH264RateControlLayerInfoKHR` structures

included in the **pNext** chain of a [VkVideoEncodeRateControlLayerInfoKHR](#) structure used to configure the state of a rate control layer.

- If the video session was created with an [H.265 encode profile](#):
  - The values of the members of the [VkVideoEncodeH265RateControlInfoKHR](#) structure, if one is specified in the **pNext** chain of the [VkVideoEncodeRateControlInfoKHR](#) used to configure the rate control state.
  - The values of the members of any [VkVideoEncodeH265RateControlLayerInfoKHR](#) structures included in the **pNext** chain of a [VkVideoEncodeRateControlLayerInfoKHR](#) structure used to configure the state of a rate control layer.
- If the video session was created with an [AV1 encode profile](#):
  - The values of the members of the [VkVideoEncodeAV1RateControlInfoKHR](#) structure, if one is specified in the **pNext** chain of the [VkVideoEncodeRateControlInfoKHR](#) used to configure the rate control state.
  - The values of the members of any [VkVideoEncodeAV1RateControlLayerInfoKHR](#) structures included in the **pNext** chain of a [VkVideoEncodeRateControlLayerInfoKHR](#) structure used to configure the state of a rate control layer.

Two rate control states match if all the parameters listed above match between them.

The [VkVideoEncodeRateControlInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeRateControlFlagsKHR    flags;
    VkVideoEncodeRateControlModeFlagBitsKHR    rateControlMode;
    uint32_t                 layerCount;
    const VkVideoEncodeRateControlLayerInfoKHR* pLayers;
    uint32_t                 virtualBufferSizeInMs;
    uint32_t                 initialVirtualBufferSizeInMs;
} VkVideoEncodeRateControlInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **rateControlMode** is a [VkVideoEncodeRateControlModeFlagBitsKHR](#) value specifying the [rate control mode](#).
- **layerCount** specifies the number of [rate control layers](#) to use.
- **pLayers** is a pointer to an array of **layerCount** [VkVideoEncodeRateControlLayerInfoKHR](#) structures, each specifying the rate control configuration of the corresponding rate control layer.
- **virtualBufferSizeInMs** is the size in milliseconds of the virtual buffer used by the

implementation's rate control algorithm for the [leaky bucket model](#), with respect to the average bitrate of the stream calculated by summing the values of the `averageBitrate` members of the elements of the `pLayers` array.

- `initialVirtualBufferSizeInMs` is the initial occupancy in milliseconds of the virtual buffer used by the implementation's rate control algorithm for the [leaky bucket model](#).

If `layerCount` is zero then the values of `virtualBufferSizeInMs` and `initialVirtualBufferSizeInMs` are ignored.

This structure **can** be specified in the following places:

- In the `pNext` chain of `VkVideoBeginCodingInfoKHR` to specify the current rate control state expected to be configured when beginning a [video coding scope](#).
- In the `pNext` chain of `VkVideoCodingControlInfoKHR` to change the rate control configuration of the bound video session.

Including this structure in the `pNext` chain of `VkVideoCodingControlInfoKHR` and including `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR` in `VkVideoCodingControlInfoKHR::flags` enables updating the rate control configuration of the bound video session. This replaces the entire rate control configuration of the bound video session and **may** reset the state of all enabled rate control layers to an initial state according to the codec-specific rate control semantics defined in the corresponding sections listed below.

When `layerCount` is greater than one, multiple [rate control layers](#) are configured, and each rate control layer is applied to the corresponding video coding layer identified by the index of the corresponding element of `pLayer`.

- If the video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then this index specifies the H.264 temporal layer ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then this index specifies the H.265 temporal ID of the video coding layer the rate control layer is applied to.
- If the video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then this index specifies the AV1 temporal ID of the temporal layer the rate control layer is applied to.

Additional structures providing codec-specific rate control parameters **can** be included in the `pNext` chain of `VkVideoCodingControlInfoKHR` depending on the [video profile](#) the bound video session was created. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)
- [AV1 Encode Rate Control](#)

The new rate control configuration takes effect when the corresponding

[vkCmdControlVideoCodingKHR](#) is executed on the device, and only impacts video encode operations that follow in execution order.

## Valid Usage

- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08248  
If `rateControlMode` is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#) or [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#), then `layerCount` **must** be 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08275  
If `rateControlMode` is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_CBR\\_BIT\\_KHR](#) or [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_VBR\\_BIT\\_KHR](#), then `layerCount` **must** be greater than 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08244  
If `rateControlMode` is not [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#), then it **must** specify one of the bits included in [VkVideoEncodeCapabilitiesKHR::rateControlModes](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08245  
`layerCount` member **must** be less than or equal to [VkVideoEncodeCapabilitiesKHR::maxRateControlLayers](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08276  
For each element of `pLayers`, its `averageBitrate` member **must** be between 1 and [VkVideoEncodeCapabilitiesKHR::maxBitrate](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-08277  
For each element of `pLayers`, its `maxBitrate` member **must** be between 1 and [VkVideoEncodeCapabilitiesKHR::maxBitrate](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08356  
If `rateControlMode` is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_CBR\\_BIT\\_KHR](#), then for each element of `pLayers`, its `averageBitrate` member **must** equal its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-08278  
If `rateControlMode` is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_VBR\\_BIT\\_KHR](#), then for each element of `pLayers`, its `averageBitrate` member **must** be less than or equal to its `maxBitrate` member
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08357  
If `layerCount` is not zero, then `virtualBufferSizeInMs` **must** be greater than zero
- VUID-VkVideoEncodeRateControlInfoKHR-layerCount-08358  
If `layerCount` is not zero, then `initialVirtualBufferSizeInMs` **must** be less than or equal to `virtualBufferSizeInMs`
- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07022

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeH264RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount`

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-07025

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeH265RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeH265RateControlInfoKHR::subLayerCount`

- VUID-VkVideoEncodeRateControlInfoKHR-videoCodecOperation-10351

If the `videoCodecOperation` of the used video profile is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the `pNext` chain this structure is included in also includes an instance of the `VkVideoEncodeAV1RateControlInfoKHR` structure, and `layerCount` is greater than 1, then `layerCount` **must** equal `VkVideoEncodeAV1RateControlInfoKHR::temporalLayerCount`

## Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeRateControlInfoKHR-flags-zero bitmask  
`flags` **must** be 0
- VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-parameter  
If `rateControlMode` is not 0, `rateControlMode` **must** be a valid `VkVideoEncodeRateControlModeFlagBitsKHR` value
- VUID-VkVideoEncodeRateControlInfoKHR-pLayers-parameter  
If `layerCount` is not 0, `pLayers` **must** be a valid pointer to an array of `layerCount` valid `VkVideoEncodeRateControlLayerInfoKHR` structures

## Structure Chaining

### Extends the structures

- `VkVideoBeginCodingInfoKHR`
- `VkVideoCodingControlInfoKHR`

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlFlagsKHR;
```

`VkVideoEncodeRateControlFlagsKHR` is a bitmask type for setting a mask, but currently reserved for

future use.

## Rate Control Layer State

The configuration of individual rate control layers is specified using an instance of the `VkVideoEncodeRateControlLayerInfoKHR` structure.

The `VkVideoEncodeRateControlLayerInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           averageBitrate;
    uint64_t           maxBitrate;
    uint32_t           frameRateNumerator;
    uint32_t           frameRateDenominator;
} VkVideoEncodeRateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is a pointer to a structure extending this structure.
- `averageBitrate` is the average `bitrate` to be targeted by the implementation's rate control algorithm.
- `maxBitrate` is the peak `bitrate` to be targeted by the implementation's rate control algorithm.
- `frameRateNumerator` is the numerator of the frame rate assumed by the implementation's rate control algorithm.
- `frameRateDenominator` is the denominator of the frame rate assumed by the implementation's rate control algorithm.

### NOTE

The ability of the implementation's rate control algorithm to be able to match the requested average and/or peak bitrates **may** be limited by the set of other codec-independent and codec-specific rate control parameters specified by the application, the input content, as well as the application conforming to the rate control guidance provided to the implementation, as described [earlier](#).

Additional structures providing codec-specific rate control parameters **can** be included in the `pNext` chain of `VkVideoEncodeRateControlLayerInfoKHR` depending on the `video profile` the bound video session was created with. For further details see:

- [Video Coding Control](#)
- [H.264 Encode Rate Control](#)
- [H.265 Encode Rate Control](#)
- [AV1 Encode Rate Control](#)

### Valid Usage

- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateNumerator-08350  
`frameRateNumerator` **must** be greater than zero
- VUID-VkVideoEncodeRateControlLayerInfoKHR-frameRateDenominator-08351  
`frameRateDenominator` **must** be greater than zero

### Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR`
- VUID-VkVideoEncodeRateControlLayerInfoKHR-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeAV1RateControlLayerInfoKHR`, `VkVideoEncodeH264RateControlLayerInfoKHR`, or `VkVideoEncodeH265RateControlLayerInfoKHR`
- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

## 45.19. Video Encode Quantization Maps

Quantization maps are `VkImage` objects that are used in video encode operations to control the relative quantization parameter values across the encoded picture. Each texel in the quantization map controls the relative quantization parameter values used to encode the corresponding rectangular block of texels in the `encode input picture`.

The size of the rectangular block of texels each quantization map texel covers is referred to as the *quantization map texel size*.

The extent of the image subresource used as a quantization map when encoding a picture with a coded extent of `(width,height)` thus has to be at least `(⌈width / texelSize.width⌉, ⌈height / texelSize.height⌉)`, where `texelSize` is the used quantization map texel size.

In particular, the quantization map texel at location `(x,y)` contains relative quantization parameter values used when encoding the `texelSize` sized rectangular block of the `encode input picture` starting at the texel location `(x × texelSize.width, y × texelSize.height)`.

The quantization map texel size does not always match the size of the codec-specific coding blocks used during encoding. Furthermore, some video compression standards allow the size of the codec-specific coding blocks to vary across the encoded picture. In order to accommodate for such mismatches between the granularity at which quantization parameters are stored in quantization maps and the granularity at which they are applied to codec-specific coding blocks during encoding, the following mapping rules are applied to define the quantization map texel value corresponding to a given codec-specific coding block with a size `(width,height)` at the texel location `(x,y)` in the `encode input picture`:

- If the size of the codec-specific coding block matches the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location ( $x / \text{texelSize.width}, y / \text{texelSize.height}$ ).
- If the size of the codec-specific coding block is smaller than the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block is the texel value at the texel location ( $\lceil x / \text{texelSize.width} \rceil, \lceil y / \text{texelSize.height} \rceil$ ).
- If the size of the codec-specific coding block is larger than the used quantization map texel size, then the fetched quantization map value corresponding to the codec-specific coding block **may** be any value determined as the linear interpolation of the quantization map texel values in the subregion starting at texel location ( $x / \text{texelSize.width}, y / \text{texelSize.height}$ ) with a size ( $\lceil \text{width} / \text{texelSize.width} \rceil, \lceil \text{height} / \text{texelSize.height} \rceil$ ).

The actual control parameters stored in the quantization map depend on its type. This specification supports the following types of quantization maps:

- [Quantization delta maps](#)
- [Emphasis maps](#)

### 45.19.1. Quantization Delta Maps

Quantization delta maps contain values that directly affect the codec-specific quantization parameter values used to encode the corresponding block of the [encode input picture](#).

Quantization delta maps **can** be used in conjunction with any [rate control mode](#), including [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#).

Due to their codec-specific nature, they are described in more detail in the corresponding codec-specific section for video encode operations that support them. In particular:

- The behavior of quantization delta maps used with an [H.264 encode profile](#) is described in the [H.264 Encode Quantization](#) and [H.264 QP Delta Maps](#) sections.
- The behavior of quantization delta maps used with an [H.265 encode profile](#) is described in the [H.265 Encode Quantization](#) and [H.265 QP Delta Maps](#) sections.
- The behavior of quantization delta maps used with an [AV1 encode profile](#) is described in the [AV1 Encode Quantization](#) and [AV1 Quantizer Index Delta Maps](#) sections.

This specification does not support quantization delta maps for any other video encode operation.

### 45.19.2. Emphasis Maps

Emphasis maps contain values that indirectly affect the codec-specific quantization parameter values used to encode the corresponding block of the [encode input picture](#).

The texels of emphasis maps contain values that provide input to the encoder implementation about the relative importance (emphasis) of regions of the encoded pictures in order to enable the implementation's rate control algorithm to allocate more bitrate budget for regions of the encoded picture with higher emphasis values than to those with lower emphasis values.

Emphasis maps **can** only be used when the current [rate control mode](#) configured for the video session is not [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#) or [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#).

As these emphasis values only control the otherwise implementation-specific behavior of the used rate control algorithm, this specification does not impose additional restrictions on implementations beyond the ones outlined in the corresponding codec-specific sections describing quantization behavior:

- The behavior of emphasis maps used with an [H.264 encode profile](#) is described in the [H.264 Encode Quantization](#) section.
- The behavior of emphasis maps used with an [H.265 encode profile](#) is described in the [H.265 Encode Quantization](#) section.
- The behavior of emphasis maps used with an [AV1 encode profile](#) is described in the [AV1 Encode Quantization](#) section.

This specification does not support emphasis maps for any other video encode operation.

Emphasis maps always have single channel unsigned normalized integer formats and implementations are **required** to support the [VK\\_FORMAT\\_R8\\_UNORM](#) format for emphasis maps, as reported in [VkVideoFormatPropertiesKHR::format](#), when the video encode profile supports [VK\\_VIDEO\\_ENCODE\\_CAPABILITY\\_EMPHASIS\\_MAP\\_BIT\\_KHR](#).

### 45.19.3. Quantization Map Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying an encode operation, the [VkVideoEncodeQuantizationMapCapabilitiesKHR](#) structure **can** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video encode quantization maps.

The [VkVideoEncodeQuantizationMapCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         maxQuantizationMapExtent;
} VkVideoEncodeQuantizationMapCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxQuantizationMapExtent](#) indicates the maximum supported width and height of quantization maps.

#### Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapCapabilitiesKHR-sType-sType

`sType` must be  
`VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_CAPABILITIES_KHR`

## Structure Chaining

### Extends the structure

- `VkVideoCapabilitiesKHR`

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities of an [H.264 encode profile](#), the `VkVideoEncodeH264QuantizationMapCapabilitiesKHR` structure **can** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve additional video encode quantization map capabilities specific to H.264 encode profiles.

The `VkVideoEncodeH264QuantizationMapCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH264QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQpDelta;
    int32_t             maxQpDelta;
} VkVideoEncodeH264QuantizationMapCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQpDelta` indicates the minimum QP delta value supported for [H.264 QP delta maps](#).
- `maxQpDelta` indicates the maximum QP delta value supported for [H.264 QP delta maps](#).

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QuantizationMapCapabilitiesKHR-sType-sType  
`sType` must be  
`VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUANTIZATION_MAP_CAPABILITIES_KHR`

## Structure Chaining

### Extends the structure

- `VkVideoCapabilitiesKHR`

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities of an [H.265 encode profile](#), the `VkVideoEncodeH265QuantizationMapCapabilitiesKHR` structure **can** be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve additional video encode

quantization map capabilities specific to H.265 encode profiles.

The `VkVideoEncodeH265QuantizationMapCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeH265QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQpDelta;
    int32_t             maxQpDelta;
} VkVideoEncodeH265QuantizationMapCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQpDelta` indicates the minimum QP delta value supported for [H.265 QP delta maps](#).
- `maxQpDelta` indicates the maximum QP delta value supported for [H.265 QP delta maps](#).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QuantizationMapCapabilitiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUANTIZATION_MAP_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- [VkVideoCapabilitiesKHR](#)

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities of an [AV1 encode profile](#), the `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR` structure **can** be included in the `pNext` chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve additional video encode quantization map capabilities specific to AV1 encode profiles.

The `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeAV1QuantizationMapCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    int32_t             minQIndexDelta;
    int32_t             maxQIndexDelta;
} VkVideoEncodeAV1QuantizationMapCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minQIndexDelta` indicates the minimum quantizer index delta value supported for [AV1 quantizer index delta maps](#).
- `maxQIndexDelta` indicates the maximum quantizer index delta value supported for [AV1 quantizer index delta maps](#).

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeAV1QuantizationMapCapabilitiesKHR-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUANTIZATION_MAP_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- [VkVideoCapabilitiesKHR](#)

## 45.19.4. Quantization Map Format Properties

When calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#), the [VkVideoFormatQuantizationMapPropertiesKHR](#) structure **can** be included in the `pNext` chain of the [VkVideoFormatPropertiesKHR](#) structure to retrieve video format properties specific to video encode quantization maps.

The [VkVideoFormatQuantizationMapPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatQuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoFormatQuantizationMapPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMapTexelSize` indicates the [quantization map texel size](#) of the video format, i.e. the number of pixels corresponding to each quantization map texel.

The values returned in this structure are only defined if the allowed image usage flags returned in [VkVideoFormatPropertiesKHR::imageUsageFlags](#) for this video format include [VK\\_IMAGE\\_USAGE\\_VIDEO\\_ENCODE\\_QUANTIZATION\\_DELTA\\_MAP\\_BIT\\_KHR](#) or [VK\\_IMAGE\\_USAGE\\_VIDEO\\_ENCODE\\_EMPHASIS\\_MAP\\_BIT\\_KHR](#).

Implementations **may** support multiple quantization map texel sizes for a particular video format

which is indicated by [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#) returning multiple entries with different [quantizationMapTexelSize](#) values.

### Valid Usage (Implicit)

- [VUID-VkVideoFormatQuantizationMapPropertiesKHR-sType-sType](#) [sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_FORMAT\\_QUANTIZATION\\_MAP\\_PROPERTIES\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkVideoFormatPropertiesKHR](#)

When calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#), the [VkVideoFormatH265QuantizationMapPropertiesKHR](#) structure **can** be included in the [pNext](#) chain of the [VkVideoFormatPropertiesKHR](#) structure to retrieve video format properties specific to video encode quantization maps used with an [H.265 encode profile](#).

The [VkVideoFormatH265QuantizationMapPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatH265QuantizationMapPropertiesKHR {
    VkStructureType      sType;
    void*                 pNext;
    VkVideoEncodeH265CtbSizeFlagsKHR compatibleCtbSizes;
} VkVideoFormatH265QuantizationMapPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [compatibleCtbSizes](#) is a bitmask of [VkVideoEncodeH265CtbSizeFlagBitsKHR](#) indicating the CTB sizes that quantization maps using this video format are compatible with.

#### NOTE

The value of [compatibleCtbSizes](#) does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with CTB sizes not included in [compatibleCtbSizes](#) but otherwise supported by the used video profile, as indicated by [VkVideoEncodeH265CapabilitiesKHR::ctbSizes](#). In particular, using smaller [quantization map texel sizes](#) may prevent implementations from encoding with larger CTB sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in [VkVideoFormatPropertiesKHR::imageUsageFlags](#) for this video format include

VK\_IMAGE\_USAGE\_VIDEO\_ENCODE\_QUANTIZATION\_DELTA\_MAP\_BIT\_KHR  
VK\_IMAGE\_USAGE\_VIDEO\_ENCODE\_EMPHASIS\_MAP\_BIT\_KHR.

or

### Valid Usage (Implicit)

- VUID-VkVideoFormatH265QuantizationMapPropertiesKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_VIDEO\_FORMAT\_H265\_QUANTIZATION\_MAP\_PROPERTIES\_KHR

### Structure Chaining

#### Extends the structure

- [VkVideoFormatPropertiesKHR](#)

When calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#), the [VkVideoFormatAV1QuantizationMapPropertiesKHR](#) structure **can** be included in the **pNext** chain of the [VkVideoFormatPropertiesKHR](#) structure to retrieve video format properties specific to video encode quantization maps used with an [AV1 encode profile](#).

The [VkVideoFormatAV1QuantizationMapPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_quantization_map
typedef struct VkVideoFormatAV1QuantizationMapPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR compatibleSuperblockSizes;
} VkVideoFormatAV1QuantizationMapPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **compatibleSuperblockSizes** is a bitmask of [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#) indicating the AV1 superblock sizes that quantization maps using this video format are compatible with.

#### NOTE

The value of **compatibleSuperblockSizes** does not limit the use of the specific quantization map format, but does limit the implementation in being able to encode pictures with superblock sizes not included in **compatibleSuperblockSizes** but otherwise supported by the used video profile, as indicated by [VkVideoEncodeAV1CapabilitiesKHR::superblockSizes](#). In particular, using smaller [quantization map texel sizes](#) may prevent implementations from encoding with larger superblock sizes which may have a negative impact on the efficiency of the encoder.

The values returned in this structure are only defined if the allowed image usage flags returned in

`VkVideoFormatPropertiesKHR::imageUsageFlags` for this video format include or `VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`.

### Valid Usage (Implicit)

- VUID-VkVideoFormatAV1QuantizationMapPropertiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_AV1_QUANTIZATION_MAP_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoFormatPropertiesKHR`

## 45.19.5. Encoding with Quantization Maps

The `VkVideoEncodeQuantizationMapInfoKHR` structure **can** be included in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to the `vkCmdEncodeVideoKHR` command to specify the quantization map used by the issued video encode operations.

The `VkVideoEncodeQuantizationMapInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageView         quantizationMap;
    VkExtent2D         quantizationMapExtent;
} VkVideoEncodeQuantizationMapInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMap` specifies the image view to use as the quantization map.
- `quantizationMapExtent` specifies the extent of the image subregion of `quantizationMap` to use as the quantization map starting at offset (0,0).

### Valid Usage

- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10352 `quantizationMapExtent.width` must be less than or equal to the width of `quantizationMap`
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMapExtent-10353 `quantizationMapExtent.height` must be less than or equal to the height of `quantizationMap`

### Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_INFO_KHR`
- VUID-VkVideoEncodeQuantizationMapInfoKHR-quantizationMap-parameter  
If `quantizationMap` is not `VK_NULL_HANDLE`, `quantizationMap` **must** be a valid `VkImageView` handle

### Structure Chaining

#### Extends the structure

- `VkVideoEncodeInfoKHR`

## 45.20. H.264 Encode Operations

Video encode operations using an [H.264 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

#### NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH264SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
  - The `StdVideoH264PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
  - The `StdVideoEncodeH264PictureInfo` structure specifying the [H.264 picture information](#).
  - The `StdVideoEncodeH264SliceHeader` structures specifying the [H.264 slice header parameters](#) for each encoded H.264 slice.
  - The `StdVideoEncodeH264ReferenceInfo` structures specifying the [H.264 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.264 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.264 Encode Picture Data Access](#) section.

- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.264 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.264 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

### 45.20.1. H.264 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.264 encode parameters specified in the following Video Std structures:

- `StdVideoH264SequenceParameterSet`
- `StdVideoH264PictureParameterSet`
- `StdVideoEncodeH264PictureInfo`
- `StdVideoEncodeH264SliceHeader`
- `StdVideoEncodeH264ReferenceInfo`

All such H.264 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.264 encode parameters:

- `StdVideoEncodeH264PictureInfo::primary_pic_type`
- `StdVideoEncodeH264SliceHeader::slice_type`

If the `videoMaintenance2` feature is enabled, implementations **must** not override any of the following H.264 encode parameters:

- the following parameters specified in `StdVideoH264SequenceParameterSet`:
  - `flags.vui_parameters_present_flag`
  - `profile_idc`
  - `level_idc`
  - `chroma_format_idc`
- the following parameters specified in the `StdVideoH264SequenceParameterSetVui` structure pointed to by `StdVideoH264SequenceParameterSet::pSequenceParameterSetVui`:
  - `flags.aspect_ratio_info_present_flag`
  - `flags.overscan_info_present_flag`
  - `flags.overscan_appropriate_flag`
  - `flags.video_signal_type_present_flag`
  - `flags.video_full_range_flag`
  - `flags.color_description_present_flag`

- `flags.chroma_loc_info_present_flag`
- `flags.timing_info_present_flag`
- `flags.fixed_frame_rate_flag`
- `aspect_ratio_idc`
- `sar_width`
- `sar_height`
- `video_format`
- `colour_primaries`
- `transfer_characteristics`
- `matrix_coefficients`
- `num_units_in_tick`
- `time_scale`
- `chroma_sample_loc_type_top_field`
- `chroma_sample_loc_type_bottom_field`

In case of H.264 encode parameters stored in [video session parameters](#) objects, applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.264 parameter sets in the bitstream in order to be able to produce a compliant H.264 video bitstream using the H.264 encode parameters stored in the video session parameters object.

In case of any H.264 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK\\_VIDEO\\_ENCODE\\_FEEDBACK\\_BITSTREAM\\_HAS\\_OVERRIDES\\_BIT\\_KHR](#) video encode feedback query flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those H.264 encode parameters.

## 45.20.2. H.264 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice headers and data of the encoded picture, in the format defined in sections 7.3.3 and 7.3.4, according to the semantics defined in sections 7.4.3 and 7.4.4 of the [ITU-T H.264 Specification](#), respectively. The number of VCL NAL units written is specified by `VkVideoEncodeH264PictureInfoKHR::naluSliceEntryCount`.

In addition, if `VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu` is `VK_TRUE` for the video encode operation, then an additional prefix NAL unit is written before each VCL NAL unit corresponding to individual slices in the format defined in section 7.3.2.12, according to the semantics defined in section 7.4.2.12 of the [ITU-T H.264 Specification](#), respectively.

### 45.20.3. H.264 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. Accordingly, the complete image subregion of a `encode input picture`, `reference picture`, or `reconstructed picture` accessed by video coding operations using an `H.264 encode profile` is defined as the set of texels within the coordinate range:

$$([0, \text{endX}), [0, \text{endY}))$$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video encode operations using an `H.264 encode profile`, any access to a picture at the coordinates `(x,y)`, as defined by the `ITU-T H.264 Specification`, is an access to the image subresource `referred` to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates `(x,y)`.

Implementations **may** choose not to access some or all texels within particular `reference pictures` available to a video encode operation (e.g. due to `video encode parameter overrides` restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

### 45.20.4. H.264 Frame, Picture, and Slice

H.264 pictures are partitioned into slices, as defined in section 6.3 of the `ITU-T H.264 Specification`.

For the purposes of this specification, the H.264 slices comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an `H.264 encode profile` **can** encode slices of different types, as defined in section 7.4.3 of the `ITU-T H.264 Specification`, by specifying the corresponding enumeration constant value in `StdVideoEncodeH264SliceHeader::slice_type` in the `H.264 slice header parameters` from the Video Std enumeration type `StdVideoH264SliceType`:

- `STD_VIDEO_H264_SLICE_TYPE_P` indicates that the slice is a *P slice* as defined in section 3.109 of the `ITU-T H.264 Specification`.
- `STD_VIDEO_H264_SLICE_TYPE_B` indicates that the slice is a *B slice* as defined in section 3.9 of the

[ITU-T H.264 Specification](#).

- `STD_VIDEO_H264_SLICE_TYPE_I` indicates that the slice is an *I slice* as defined in section 3.66 of the [ITU-T H.264 Specification](#).

Pictures constructed from such slices **can** be of different types, as defined in section 7.4.2.4 of the [ITU-T H.264 Specification](#). Video encode operations using an [H.264 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH264PictureInfo::primary_pic_type` in the [H.264 picture information](#) from the Video Std enumeration type `StdVideoH264PictureType`:

- `STD_VIDEO_H264_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H264_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.69 of the [ITU-T H.264 Specification](#). A frame consisting of an IDR picture is also referred to as an *IDR frame*.

#### 45.20.5. H.264 Coding Blocks

H.264 encode supports a single type of coding block called a *macroblock*, as defined in section 3.84 of the [ITU-T H.264 Specification](#).

An H.264 macroblock is considered *skipped* when the value of `mb_type` for the macroblock equals `P_Skip` or `B_Skip`, as defined in section 7.4.5 of the [ITU-T H.264 Specification](#).

#### 45.20.6. H.264 Encode Profile

A video profile supporting H.264 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and adding a `VkVideoEncodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH264ProfileIdc stdProfileIdc;
} VkVideoEncodeH264ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `stdProfileIdc` is a `StdVideoH264ProfileIdc` value specifying the H.264 codec profile IDC, where enum constant `STD_VIDEO_H264_PROFILE_IDC_BASELINE` identifies the Constrained Baseline profile as defined in A.2.1.1 of the [ITU-T H.264 Specification](#), and all other values correspond to profiles defined in section A.2 of the [ITU-T H.264 Specification](#).

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264ProfileInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PROFILE_INFO_KHR`

### Structure Chaining

#### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

## 45.20.7. H.264 Encode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.264 encode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoEncodeH264CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeH264CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoEncodeH264CapabilityFlagsKHR flags;
    StdVideoH264LevelIdc maxLevelIdc;
    uint32_t            maxSliceCount;
    uint32_t            maxPPictureL0ReferenceCount;
    uint32_t            maxBPictureL0ReferenceCount;
    uint32_t            maxL1ReferenceCount;
    uint32_t            maxTemporalLayerCount;
    VkBool32            expectDyadicTemporalLayerPattern;
    int32_t             minQp;
    int32_t             maxQp;
    VkBool32            prefersGopRemainingFrames;
    VkBool32            requiresGopRemainingFrames;
    VkVideoEncodeH264StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeH264CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **flags** is a bitmask of [VkVideoEncodeH264CapabilityFlagBitsKHR](#) indicating supported H.264 encoding capabilities.
- **maxLevelIdc** is a [StdVideoH264LevelIdc](#) value indicating the maximum H.264 level supported by the profile, where enum constant [STD\\_VIDEO\\_H264\\_LEVEL\\_IDC\\_<major>\\_<minor>](#) identifies H.264 level [<major>.<minor>](#) as defined in section A.3 of the [ITU-T H.264 Specification](#).
- **maxSliceCount** indicates the maximum number of slices that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slices that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- **maxPPictureL0ReferenceCount** indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

**NOTE**

As implementations **may override** the reference lists, **maxPPictureL0ReferenceCount** does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if **maxPPictureL0ReferenceCount** is zero, then the use of P pictures is not allowed.

- **maxBPictureL0ReferenceCount** indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [B pictures](#).
- **maxL1ReferenceCount** indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of [B pictures](#) is supported.

**NOTE**

As implementations **may override** the reference lists, **maxBPictureL0ReferenceCount** and **maxL1ReferenceCount** does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if **maxBPictureL0ReferenceCount** and **maxL1ReferenceCount** are both zero, then the use of B pictures is not allowed.

- **maxTemporalLayerCount** indicates the maximum number of H.264 temporal layers supported by the implementation.
- **expectDyadicTemporalLayerPattern** indicates that the implementation's rate control algorithms expect the application to use a [dyadic temporal layer pattern](#) when encoding multiple temporal layers.
- **minQp** indicates the minimum QP value supported.
- **maxQp** indicates the maximum QP value supported.
- **prefersGopRemainingFrames** indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- **requiresGopRemainingFrames** indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- **stdSyntaxFlags** is a bitmask of [VkVideoEncodeH264StdFlagBitsKHR](#) indicating capabilities related to H.264 syntax elements.

## Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264CapabilitiesKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_CAPABILITIES_KHR`

## Structure Chaining

### Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesKHR::flags`, indicating the H.264 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR = 0x00000100,
    // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000400,
    // Provided by VK_KHR_video_encode_h264 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H264_CAPABILITY_MB_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000200,
} VkVideoEncodeH264CapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR` specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the `nal_hrd_parameters_present_flag` or `vcl_hrd_parameters_present_flag` members of `StdVideoH264SpsVuiFlags` are set to 1 in the `active` SPS.
- `VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` specifies that if `StdVideoH264PpsFlags::weighted_pred_flag` is set to 1 or `StdVideoH264PictureParameterSet::weighted_bipred_idc` is set to `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT` in the `active` PPS when encoding a P picture or B picture, respectively, then the implementation is able to internally decide syntax for `pred_weight_table`, as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#), and the application is not **required** to provide a weight table in the `H.264 slice header parameters`.
- `VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_KHR` specifies that each slice in a frame with multiple slices may begin or finish at any offset in a macroblock row. If not supported, all slices in the frame **must** begin at the start of a macroblock row (and hence each

slice **must** finish at the end of a macroblock row). When a picture is encoded with [intra refresh](#), encoding non-rectangular slices also requires: support for the [VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions](#) capability.

- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_DIFFERENT\\_SLICE\\_TYPE\\_BIT\\_KHR](#) specifies that when a frame is encoded with multiple slices, the implementation allows encoding each slice with a different [StdVideoEncodeH264SliceHeader::slice\\_type](#) specified in the [H.264 slice header parameters](#). If not supported, all slices of the frame **must** be encoded with the same [slice\\_type](#) which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the [intra refresh mode](#) [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_PER\\_PICTURE\\_PARTITION\\_BIT\\_KHR](#), then the currently refreshed slice **must** specify the [slice\\_type](#) [STD\\_VIDEO\\_H264\\_SLICE\\_TYPE\\_I](#) and **can** differ from the [slice\\_type](#) of the other slices regardless of whether [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_DIFFERENT\\_SLICE\\_TYPE\\_BIT\\_KHR](#) is supported.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_B\\_FRAME\\_IN\\_L0\\_LIST\\_BIT\\_KHR](#) specifies support for using a [B frame](#) as L0 reference, as specified in [StdVideoEncodeH264ReferenceListsInfo::RefPicList0](#) in the [H.264 picture information](#).
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_B\\_FRAME\\_IN\\_L1\\_LIST\\_BIT\\_KHR](#) specifies support for using a [B frame](#) as L1 reference, as specified in [StdVideoEncodeH264ReferenceListsInfo::RefPicList1](#) in the [H.264 picture information](#).
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_PER\\_PICTURE\\_TYPE\\_MIN\\_MAX\\_QP\\_BIT\\_KHR](#) specifies support for specifying different QP values in the members of [VkVideoEncodeH264QpKHR](#).
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_PER\\_SLICE\\_CONSTANT\\_QP\\_BIT\\_KHR](#) specifies support for specifying different constant QP values for each slice.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_GENERATE\\_PREFIX\\_NALU\\_BIT\\_KHR](#) specifies support for generating prefix NAL units by setting [VkVideoEncodeH264PictureInfoKHR::generatePrefixNalu](#) to [VK\\_TRUE](#).
- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_MB\\_QP\\_DIFF\\_WRAPAROUND\\_BIT\\_KHR](#) specifies support for wraparound during the calculation of the QP values of subsequently encoded macroblocks, as defined in equation 7-37 of the [ITU-T H.264 Specification](#). If not supported, equation 7-37 of the [ITU-T H.264 Specification](#) is effectively reduced to the following:

$$QP_Y = QP_{Y,PREV} + mb\_qp\_delta$$

**NOTE**

The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the  $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$  range.

- [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_B\\_PICTURE\\_INTRA\\_REFRESH\\_BIT\\_KHR](#) specifies support for encoding [B pictures](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264CapabilityFlagsKHR;
```

[VkVideoEncodeH264CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH264CapabilityFlagBitsKHR](#).

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the H.264 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR = 0x00000080,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR = 0x00000100,
    VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR = 0x00000200,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR = 0x00000400,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR = 0x00000800,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR = 0x00001000,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR = 0x00002000,
    VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR = 0x00004000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR = 0x00008000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR = 0x00010000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_PARTIAL_BIT_KHR = 0x00020000,
    VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_KHR = 0x00080000,
    VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR = 0x00100000,
} VkVideoEncodeH264StdFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::separate_colour_plane_flag` in the SPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::qprime_y_zero_transform_bypass_flag` in the SPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided values for `StdVideoH264SpsFlags::seq_scaling_matrix_present_flag` in the SPS and `StdVideoH264PpsFlags::pic_scaling_matrix_present_flag` in the PPS when any of those values are 1.
- `VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::chroma_qp_index_offset` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::second_chroma_qp_index_offset` in the PPS when that value is non-zero.

- `VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::pic_init_qp_minus26` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::weighted_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the PPS when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PictureParameterSet::weighted_bipred_idc` in the PPS when that value is `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_IMPLICIT`.
- `VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::transform_8x8_mode_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeaderFlags::direct_spatial_mv_pred_flag` in the H.264 slice header parameters when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports CAVLC entropy coding, as defined in section 9.2 of the ITU-T H.264 Specification, and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the PPS when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_KHR` specifies whether the implementation supports CABAC entropy coding, as defined in section 9.3 of the ITU-T H.264 Specification, and thus supports using the application-provided value for `StdVideoH264PpsFlags::entropy_coding_mode_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264SpsFlags::direct_8x8_inference_flag` in the SPS when that value is 0.
- `VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH264PpsFlags::constrained_intra_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the H.264 slice header parameters when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_DISABLED`.
- `VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH264SliceHeader::disable_deblocking_filter_idc` in the H.264 slice header parameters when that value is `STD_VIDEO_H264_DISABLE_DEBLOCKING_FILTER_IDC_ENABLED`.

- [VK\\_VIDEO\\_ENCODE\\_H264\\_STD\\_DEBLOCKING\\_FILTER\\_PARTIAL\\_BIT\\_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH264SliceHeader::disable\\_deblocking\\_filter\\_idc](#) in the [H.264 slice header parameters](#) when that value is [STD\\_VIDEO\\_H264\\_DISABLE\\_DEBLOCKING\\_FILTER\\_IDC\\_PARTIAL](#).
- [VK\\_VIDEO\\_ENCODE\\_H264\\_STD\\_SLICE\\_QP\\_DELTA\\_BIT\\_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH264SliceHeader::slice\\_qp\\_delta](#) in the [H.264 slice header parameters](#) when that value is identical across the slices of the encoded frame.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_STD\\_DIFFERENT\\_SLICE\\_QP\\_DELTA\\_BIT\\_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoEncodeH264SliceHeader::slice\\_qp\\_delta](#) in the [H.264 slice header parameters](#) when that value is different across the slices of the encoded frame.

These capability flags provide information to the application about specific H.264 syntax element values that the implementation supports without having to [override](#) them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.264 syntax elements.

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264StdFlagsKHR;
```

[VkVideoEncodeH264StdFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH264StdFlagBitsKHR](#).

#### 45.20.8. H.264 Encode Quality Level Properties

When calling [vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specified as [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), the [VkVideoEncodeH264QualityLevelPropertiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoEncodeQualityLevelPropertiesKHR](#) structure to retrieve additional video encode quality level properties specific to H.264 encoding.

The [VkVideoEncodeH264QualityLevelPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QualityLevelPropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeH264RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                 preferredGopFrameCount;
    uint32_t                 preferredIdrPeriod;
    uint32_t                 preferredConsecutiveBFrameCount;
    uint32_t                 preferredTemporalLayerCount;
    VkVideoEncodeH264QpKHR   preferredConstantQp;
    uint32_t                 preferredMaxL0ReferenceCount;
    uint32_t                 preferredMaxL1ReferenceCount;
    VkBool32                 preferredStdEntropyCodingModeFlag;
} VkVideoEncodeH264QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeH264RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::gopFrameCount`.
- `preferredIdrPeriod` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::idrPeriod`.
- `preferredConsecutiveBFrameCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::consecutiveBFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for `VkVideoEncodeH264RateControlInfoKHR::temporalLayerCount`.
- `preferredConstantQp` indicates the preferred values to use for `VkVideoEncodeH264NaluSliceInfoKHR::constantQp` for each picture type when using `rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxL0ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L0.
- `preferredMaxL1ReferenceCount` indicates the preferred maximum number of reference pictures to use in the reference list L1.
- `preferredStdEntropyCodingModeFlag` indicates the preferred value to use for `entropy_coding_mode_flag` in `StdVideoH264PpsFlags`.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH264QualityLevelPropertiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUALITY_LEVEL_PROPERTIES_KHR`

## Structure Chaining

### Extends the structure

- [VkVideoEncodeQualityLevelPropertiesKHR](#)

## 45.20.9. H.264 Encode Session

Additional parameters can be specified when creating a video session with an H.264 encode profile by including an instance of the [VkVideoEncodeH264SessionCreateInfoKHR](#) structure in the [pNext](#) chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeH264SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH264LevelIdc maxLevelIdc;
} VkVideoEncodeH264SessionCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [useMaxLevelIdc](#) indicates whether the value of [maxLevelIdc](#) should be used by the implementation. When it is [VK\\_FALSE](#), the implementation ignores the value of [maxLevelIdc](#) and uses the value of [VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc](#), as reported by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile.
- [maxLevelIdc](#) is a [StdVideoH264LevelIdc](#) value specifying the upper bound on the H.264 level for the video bitstreams produced by the created video session, where enum constant [STD\\_VIDEO\\_H264\\_LEVEL\\_IDC\\_<major>\\_<minor>](#) identifies H.264 level [<major>.<minor>](#) as defined in section A.3 of the [ITU-T H.264 Specification](#).

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionCreateInfoKHR-sType-sType [sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_H264\\_SESSION\\_CREATE\\_INFO\\_KHR](#)

## Structure Chaining

### Extends the structure

- [VkVideoSessionCreateInfoKHR](#)

## 45.20.10. H.264 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` can contain the following types of parameters:

### H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#);
- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the [ITU-T H.264 Specification](#);
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - `flags.colour_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

#### NOTE

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section

E.2.2 of the [ITU-T H.264 Specification](#);

- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

## H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.264 parameter sets into the video session parameters object. Applications need to use the [vkGetEncodedVideoSessionParametersKHR](#) command to determine whether any implementation overrides happened and to retrieve the encoded H.264 parameter sets in order to be able to produce a compliant H.264 video bitstream.

Such H.264 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the [VK\\_VIDEO\\_ENCODE\\_FEEDBACK\\_BITSTREAM\\_HAS\\_OVERRIDES\\_BIT\\_KHR](#) video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a [video session parameters](#) object is created with the codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoEncodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of `H.264 SPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `maxStdPPSCount` is the maximum number of `H.264 PPS` entries the created `VkVideoSessionParametersKHR` can contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersCreateInfoKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoEncodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter  
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` must be a valid pointer to a valid `VkVideoEncodeH264SessionParametersAddInfoKHR` structure

### Structure Chaining

#### Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoEncodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersAddInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t                 stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoEncodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the [H.264 SPS](#) entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the [H.264 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a [video session parameters](#) object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the [video session parameters](#) object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

## Valid Usage

- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04837  
The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-None-04838  
The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

## Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- `VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter`  
If `stdSPSCount` is not `0`, and `pStdSPSs` is not `NULL`, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- `VUID-VkVideoEncodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter`  
If `stdPPSCount` is not `0`, and `pStdPPSs` is not `NULL`, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

## Structure Chaining

### Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

The `VkVideoEncodeH264SessionParametersGetInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t           stdSPSId;
    uint32_t           stdPPSId;
} VkVideoEncodeH264SessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `writeStdSPS` indicates whether the encoded `H.264 sequence parameter set` identified by `stdSPSId` is requested to be retrieved.
- `writeStdPPS` indicates whether the encoded `H.264 picture parameter set` identified by the pair constructed from `stdSPSId` and `stdPPSId` is requested to be retrieved.
- `stdSPSId` specifies the H.264 sequence parameter set ID used to identify the retrieved H.264 sequence and/or picture parameter set(s).
- `stdPPSId` specifies the H.264 picture parameter set ID used to identify the retrieved H.264 picture parameter set when `writeStdPPS` is `VK_TRUE`.

When this structure is specified in the `pNext` chain of the `VkVideoEncodeSessionParametersGetInfoKHR` structure passed to

[vkGetEncodedVideoSessionParametersKHR](#), the command will write encoded parameter data to the output buffer in the following order:

1. The [H.264 sequence parameter set](#) identified by `stdSPSId`, if `writeStdSPS` is [VK\\_TRUE](#).
2. The [H.264 picture parameter set](#) identified by the pair constructed from `stdSPSId` and `stdPPSId`, if `writeStdPPS` is [VK\\_TRUE](#).

### Valid Usage

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-writeStdSPS-08279  
At least one of `writeStdSPS` and `writeStdPPS` **must** be [VK\\_TRUE](#)

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersGetInfoKHR-sType-sType  
`sType` **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_H264\\_SESSION\\_PARAMETERS\\_GET\\_INFO\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkVideoEncodeSessionParametersGetInfoKHR](#)

The [VkVideoEncodeH264SessionParametersFeedbackInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH264SessionParametersFeedbackInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasStdSPSOverrides` indicates whether any of the parameters of the requested [H.264 sequence parameter set](#), if one was requested via [VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdSPS](#), were [overridden](#) by the implementation.
- `hasStdPPSOverrides` indicates whether any of the parameters of the requested [H.264 picture parameter set](#), if one was requested via [VkVideoEncodeH264SessionParametersGetInfoKHR::writeStdPPS](#), were [overridden](#) by the implementation.

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersFeedbackInfoKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_VIDEO\_ENCODE\_H264\_SESSION\_PARAMETERS\_FEEDBACK\_INFO\_KHR

## Structure Chaining

### Extends the structure

- [VkVideoEncodeSessionParametersFeedbackInfoKHR](#)

## 45.20.11. H.264 Encoding Parameters

The [VkVideoEncodeH264PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264PictureInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    uint32_t                    naluSliceEntryCount;
    const VkVideoEncodeH264NaluSliceInfoKHR* pNaluSliceEntries;
    const StdVideoEncodeH264PictureInfo* pStdPictureInfo;
    VkBool32                    generatePrefixNalu;
} VkVideoEncodeH264PictureInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **naluSliceEntryCount** is the number of elements in **pNaluSliceEntries**.
- **pNaluSliceEntries** is a pointer to an array of **naluSliceEntryCount** [VkVideoEncodeH264NaluSliceInfoKHR](#) structures specifying the parameters of the individual H.264 slices to encode for the input picture.
- **pStdPictureInfo** is a pointer to a [StdVideoEncodeH264PictureInfo](#) structure specifying [H.264 picture information](#).
- **generatePrefixNalu** controls whether prefix NALUs are generated before slice NALUs into the target bitstream, as defined in sections 7.3.2.12 and 7.4.2.12 of the [ITU-T H.264 Specification](#).

This structure is specified in the **pNext** chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#) to specify the codec-specific picture information for an [H.264 encode operation](#).

### Encode Input Picture Information

When this structure is specified in the **pNext** chain of the [VkVideoEncodeInfoKHR](#) structure

passed to `vkCmdEncodeVideoKHR`, the information related to the `encode input picture` is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The `encode input picture` is associated with the [H.264 picture information](#) provided in `pStdPictureInfo`.

## Std Picture Information

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.IdrPicFlag` as defined in section 7.4.1 of the [ITU-T H.264 Specification](#);
- `flags.is_reference` as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `primary_pic_type` as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- `PicOrderCnt` as defined in section 8.2 of the [ITU-T H.264 Specification](#);
- `temporal_id` as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264ReferenceListsInfo` structure that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
  - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
  - `RefPicList0` and `RefPicList1` as defined in section 8.2.4 of the [ITU-T H.264 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H264_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
  - if `refList0ModOpCount` is not zero, then `pRefList0ModOperations` is a pointer to an array of `refList0ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L0 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
  - if `refList1ModOpCount` is not zero, then `pRefList1ModOperations` is a pointer to an array of `refList1ModOpCount` number of `StdVideoEncodeH264RefListModEntry` structures specifying the modification parameters for the reference list L1 as defined in section 7.4.3.1 of the [ITU-T H.264 Specification](#);
  - if `refPicMarkingOpCount` is not zero, then `refPicMarkingOperations` is a pointer to an array of `refPicMarkingOpCount` number of `StdVideoEncodeH264RefPicMarkingEntry` structures specifying the reference picture marking parameters as defined in section 7.4.3.3 of the

## ITU-T H.264 Specification;

- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH264PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH264PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

### Active Parameter Sets

The members of the `StdVideoEncodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active SPS* is the [SPS](#) identified by the key specified in `StdVideoEncodeH264PictureInfo::seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH264PictureInfo::seq_parameter_set_id` and `StdVideoEncodeH264PictureInfo::pic_parameter_set_id`.

H.264 encoding uses *explicit weighted sample prediction* for a slice, as defined in section 8.4.2.3 of the [ITU-T H.264 Specification](#), if any of the following conditions are true for the active [PPS](#) and the `pStdSliceHeader` member of the corresponding element of `pNaluSliceEntries`:

- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceHeader->slice_type` is `STD_VIDEO_H264_SLICE_TYPE_B` and `weighted_bipred_idc` in the active PPS equals `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT`.

### Valid Usage

- VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-08301  
`naluSliceEntryCount` **must** be between 1 and `VkVideoEncodeH264CapabilitiesKHR::maxSliceCount`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08304  
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_KHR`, then `generatePrefixNalu` **must** be `VK_FALSE`
- VUID-VkVideoEncodeH264PictureInfoKHR-flags-08314  
If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR` and the slice corresponding to any element of `pNaluSliceEntries` uses [explicit](#)

weighted sample prediction, then `VkVideoEncodeH264NaluSliceInfoKHR::pStdSliceHeader->pWeightTable` **must** not be `NULL` for that element of `pNaluSliceEntries`

## Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264PictureInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PICTURE_INFO_KHR`
- `VUID-VkVideoEncodeH264PictureInfoKHR-pNaluSliceEntries-parameter`  
`pNaluSliceEntries` **must** be a valid pointer to an array of `naluSliceEntryCount` valid `VkVideoEncodeH264NaluSliceInfoKHR` structures
- `VUID-VkVideoEncodeH264PictureInfoKHR-pStdPictureInfo-parameter`  
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264PictureInfo` value
- `VUID-VkVideoEncodeH264PictureInfoKHR-naluSliceEntryCount-arraylength`  
`naluSliceEntryCount` **must** be greater than `0`

## Structure Chaining

### Extends the structure

- `VkVideoEncodeInfoKHR`

The `VkVideoEncodeH264NaluSliceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264NaluSliceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    int32_t             constantQp;
    const StdVideoEncodeH264SliceHeader* pStdSliceHeader;
} VkVideoEncodeH264NaluSliceInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceHeader` is a pointer to a `StdVideoEncodeH264SliceHeader` structure specifying `H.264 slice header parameters` for the slice.

## Std Slice Header Parameters

The members of the `StdVideoEncodeH264SliceHeader` structure pointed to by `pStdSliceHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;

- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH264WeightTable` that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoEncodeH264WeightTable` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

### Valid Usage (Implicit)

- `VOID-VkVideoEncodeH264NaluSliceInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_NALU_SLICE_INFO_KHR`
- `VOID-VkVideoEncodeH264NaluSliceInfoKHR-pNext-pNext`  
`pNext` **must** be `NULL`
- `VOID-VkVideoEncodeH264NaluSliceInfoKHR-pStdSliceHeader-parameter`  
`pStdSliceHeader` **must** be a valid pointer to a valid `StdVideoEncodeH264SliceHeader` value

The `VkVideoEncodeH264DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoEncodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoEncodeH264ReferenceInfo` structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.264 encode operation](#).

### Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of `VkVideoEncodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoEncodeInfoKHR::pReferenceSlots`.

- The reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

## Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.264 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

## Std Reference Information

The members of the `StdVideoEncodeH264ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- `primary_pic_type` as defined in section 7.4.2 of the [ITU-T H.264 Specification](#);
- `long_term_pic_num` and `long_term_frame_idx` as defined in section 7.4.3 of the [ITU-T H.264 Specification](#);
- `temporal_id` as defined in section G.7.4.1.1 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264DpbSlotInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_DPB_SLOT_INFO_KHR`
- VUID-VkVideoEncodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH264ReferenceInfo` value

## Structure Chaining

### Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

## 45.20.12. H.264 Encode Rate Control

### Group of Pictures

In case of H.264 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

Text is not SVG - cannot display

Figure 29. H.264 regular GOP starting with an I frame

When [IDR frames](#) are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.264 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

#### Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

Figure 30. H.264 flat reference pattern

## Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
  1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  2. The algorithm is executed recursively for the following frame sequences:
    - The B frames of the original sequence preceding the frame in the middle, if any.
    - The B frames of the original sequence following the frame in the middle, if any.

Figure 31. H.264 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.264 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the H.264 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most

common temporal layer pattern used is as follows:

### Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is  $2^{n-1}$ , where  $n$  is the number of temporal layers.
- The  $i^{\text{th}}$  frame in the temporal GOP uses temporal ID  $t$ , if and only if the index of the least significant bit set in  $i$  equals  $n-t-1$ , except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The  $i^{\text{th}}$  frame in the temporal GOP uses the  $r^{\text{th}}$  frame as reference, where  $r$  is calculated from  $i$  by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 32. H.264 dyadic temporal layer pattern

#### NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH264RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeH264RateControlFlagsKHR flags;
    uint32_t           gopFrameCount;
    uint32_t           idrPeriod;
    uint32_t           consecutiveBFrameCount;
    uint32_t           temporalLayerCount;
} VkVideoEncodeH264RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH264RateControlFlagBitsKHR` specifying H.264 rate control flags.
- `gopFrameCount` is the number of frames within a **group of pictures (GOP)** intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two **IDR frames** (see **IDR period**). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within the **GOP**.
- `temporalLayerCount` specifies the number of H.264 temporal layers that the application intends to use.

When an instance of this structure is included in the `pNext` chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, and `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see **Video Coding Control**).

If `flags` includes `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`, then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

#### NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

### Valid Usage

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08280

If `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_KHR`, then `flags` **must** not contain `VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR`.

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08281

If `flags` contains `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` or `VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`, then it **must** also contain

## VK\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_REGULAR\_GOP\_BIT\_KHR

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08282

If **flags** contains **VK\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_REFERENCE\_PATTERN\_FLAT\_BIT\_KHR**, then it **must** not also contain **VK\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_REFERENCE\_PATTERN\_DYADIC\_BIT\_KHR**

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-08283

If **flags** contains **VK\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_REGULAR\_GOP\_BIT\_KHR**, then **gopFrameCount** **must** be greater than 0

- VUID-VkVideoEncodeH264RateControlInfoKHR-idrPeriod-08284

If **idrPeriod** is not 0, then it **must** be greater than or equal to **gopFrameCount**

- VUID-VkVideoEncodeH264RateControlInfoKHR-consecutiveBFrameCount-08285

If **consecutiveBFrameCount** is not 0, then it **must** be less than **gopFrameCount**

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlInfoKHR-sType-sType

**sType** **must** be **VK\_STRUCTURE\_TYPE\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_INFO\_KHR**

- VUID-VkVideoEncodeH264RateControlInfoKHR-flags-parameter

If **flags** is not 0, **flags** **must** be a valid combination of **VkVideoEncodeH264RateControlFlagBitsKHR** values

## Structure Chaining

### Extends the structures

- **VkVideoBeginCodingInfoKHR**
- **VkVideoCodingControlInfoKHR**

Bits which **can** be set in **VkVideoEncodeH264RateControlInfoKHR::flags**, specifying H.264 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h264
typedef enum VkVideoEncodeH264RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
    0x00000010,
} VkVideoEncodeH264RateControlFlagBitsKHR;
```

- **VK\_VIDEO\_ENCODE\_H264\_RATE\_CONTROL\_ATTEMPT\_HRD\_COMPLIANCE\_BIT\_KHR** specifies

that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the [ITU-T H.264 Specification](#).

- [VK\\_VIDEO\\_ENCODE\\_H264\\_RATE\\_CONTROL\\_REGULAR\\_GOP\\_BIT\\_KHR](#) specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the [gopFrameCount](#), [idrPeriod](#), and [consecutiveBFrameCount](#) members of the [VkVideoEncodeH264RateControlInfoKHR](#) structure.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_FLAT\\_BIT\\_KHR](#) specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#) specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.
- [VK\\_VIDEO\\_ENCODE\\_H264\\_RATE\\_CONTROL\\_TEMPORAL\\_LAYER\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#) specifies that the application intends to follow a [dyadic temporal layer pattern](#).

```
// Provided by VK_KHR_video_encode_h264
typedef VkFlags VkVideoEncodeH264RateControlFlagsKHR;
```

[VkVideoEncodeH264RateControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH264RateControlFlagBitsKHR](#).

## Rate Control Layers

The [VkVideoEncodeH264RateControlLayerInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264RateControlLayerInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkBool32             useMinQp;
    VkVideoEncodeH264QpKHR minQp;
    VkBool32             useMaxQp;
    VkVideoEncodeH264QpKHR maxQp;
    VkBool32             useMaxFrameSize;
    VkVideoEncodeH264FrameSizeKHR maxFrameSize;
} VkVideoEncodeH264RateControlLayerInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [useMinQp](#) indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in [minQp](#).
- [minQp](#) specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when [useMinQp](#) is [VK\\_TRUE](#).
- [useMaxQp](#) indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in [maxQp](#).
- [maxQp](#) specifies the upper bounds on the QP values, for each picture type, that the

implementation's rate control algorithm will use when `useMaxQp` is `VK_TRUE`.

- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each picture type.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each picture type, when `useMaxFrameSize` is `VK_TRUE`.

When used, the values in `minQp` and `maxQp` guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.
- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH264RateControlLayerInfoKHR`.

#### NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `pLayers` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, it specifies the H.264-specific rate control parameters of the rate control layer corresponding to that element of `pLayers`.

### Valid Usage

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08286  
If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08287  
If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH264CapabilitiesKHR::minQp` and `VkVideoEncodeH264CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08288  
If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH264CapabilitiesKHR::flags`, as returned by

[vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_PER\\_PICTURE\\_TYPE\\_MIN\\_MAX\\_QP\\_BIT\\_KHR](#), then the [qpI](#), [qpP](#), and [qpB](#) members of [minQp](#) **must** all specify the same value

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMaxQp-08289  
If [useMaxQp](#) is [VK\\_TRUE](#) and [VkVideoEncodeH264CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_PER\\_PICTURE\\_TYPE\\_MIN\\_MAX\\_QP\\_BIT\\_KHR](#), then the [qpI](#), [qpP](#), and [qpB](#) members of [maxQp](#) **must** all specify the same value
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-useMinQp-08374  
If [useMinQp](#) and [useMaxQp](#) are both [VK\\_TRUE](#), then the [qpI](#), [qpP](#), and [qpB](#) members of [minQp](#) **must** all be less than or equal to the respective members of [maxQp](#)

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_H264\\_RATE\\_CONTROL\\_LAYER\\_INFO\\_KHR](#)
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-minQp-parameter  
[minQp](#) **must** be a valid [VkVideoEncodeH264QpKHR](#) structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxQp-parameter  
[maxQp](#) **must** be a valid [VkVideoEncodeH264QpKHR](#) structure
- VUID-VkVideoEncodeH264RateControlLayerInfoKHR-maxFrameSize-parameter  
[maxFrameSize](#) **must** be a valid [VkVideoEncodeH264FrameSizeKHR](#) structure

## Structure Chaining

### Extends the structure

- [VkVideoEncodeRateControlLayerInfoKHR](#)

The [VkVideoEncodeH264QpKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH264QpKHR;
```

- [qpI](#) is the QP to be used for [I](#) pictures.
- [qpP](#) is the QP to be used for [P](#) pictures.
- [qpB](#) is the QP to be used for [B](#) pictures.

The `VkVideoEncodeH264FrameSizeKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH264FrameSizeKHR;
```

- `frameISize` is the size in bytes to be used for **I** pictures.
- `framePSize` is the size in bytes to be used for **P** pictures.
- `frameBSize` is the size in bytes to be used for **B** pictures.

### GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the **group of pictures (GOP)**.

The `VkVideoEncodeH264GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h264
typedef struct VkVideoEncodeH264GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingI;
    uint32_t            gopRemainingP;
    uint32_t            gopRemainingB;
} VkVideoEncodeH264GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of **I frames** the implementation's rate control algorithm **should** assume to be remaining in the **GOP** prior to executing the video encode operation.
- `gopRemainingP` specifies the number of **P frames** the implementation's rate control algorithm **should** assume to be remaining in the **GOP** prior to executing the video encode operation.
- `gopRemainingB` specifies the number of **B frames** the implementation's rate control algorithm **should** assume to be remaining in the **GOP** prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH264CapabilitiesKHR`

`::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH264CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264GopRemainingFrameInfoKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_GOP_REMAINING_FRAME_INFO_KHR`

### Structure Chaining

## H.264 QP Delta Maps

Quantization delta maps used with an [H.264 encode profile](#) are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the [quantization parameters](#) of the encoded picture.

Accordingly, H.264 QP delta maps always have single channel integer formats, as reported in `VkVideoFormatPropertiesKHR::format`.

When the [rate control mode](#) is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, the QP delta values are added to the per slice constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

## H.264 Encode Quantization

Performing H.264 encode operations involves the process of assigning QP values to individual H.264 macroblocks. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`, then the QP value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of `VkVideoEncodeH264QuantizationMapCapabilitiesKHR`, then the QP value used for the macroblock becomes undefined.
- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the QP value is initialized from the constant QP value specified for the [H.264 slice](#) the macroblock is part of.
  - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of `VkVideoEncodeH264QuantizationMapCapabilitiesKHR`, then the QP value used for the macroblock becomes undefined.
- If the configured rate control mode is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the QP value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the macroblock, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of `VkVideoEncodeH264QuantizationMapCapabilitiesKHR`, then the QP value used for the macroblock becomes undefined.
  - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the QP value based on the emphasis value corresponding to the macroblock, as [fetched from the quantization map](#), according to the following equation:

$$QP_{\text{new}} = f(QP_{\text{prev}}, e)$$

Where  $QP_{\text{new}}$  is the resulting QP value,  $QP_{\text{prev}}$  is the previously determined QP value,  $e$  is the emphasis value corresponding to the macroblock, and  $f$  is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QP, e_1) \geq f(QP, e_2)$$

#### NOTE

This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

- If clamping to minimum QP values is enabled in the applied rate control layer, then the QP

value is clamped to the corresponding minimum QP value.

- If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.
- If [VK\\_VIDEO\\_ENCODE\\_H264\\_CAPABILITY\\_MB\\_QP\\_DIFF\\_WRAPAROUND\\_BIT\\_KHR](#) is not supported, then the determined QP value is clamped in such a way that the [mb\\_qp\\_delta](#) value of the encoded macroblock complies to the [modified version](#) of equation 7-37 of the [ITU-T H.264 Specification](#).

#### NOTE

The effect of this is that the maximum QP difference across subsequent macroblocks is limited to the  $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$  range and only has an observable change in behavior when the video encode operation is issued with a [QP delta map](#).

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the [minQp](#) and [maxQp](#) members of [VkVideoEncodeH264CapabilitiesKHR](#).

### 45.20.13. H.264 Encode Requirements

This section described the **required** H.264 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H264\\_BIT\\_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR::videoCodecOperations](#).

Table 60. Required [Video Std Header Versions](#)

| <code>nonRectangularIntraRefreshRegions</code>       | -              | implementation-dependent      |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

3

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQpDelta` **must** be greater than `minQpDelta`.

4

If the `videoMaintenance2` feature is supported.

5

If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.

6

If the `videoEncodeFeedback2` feature is supported.

7

If `maxPerPartitionFeedbackEntries` is greater than zero.

## 45.21. H.265 Encode Operations

Video encode operations using an [H.265 encode profile](#) **can** be used to encode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

**NOTE**

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.265 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).
  - The `StdVideoH265SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.265 sequence parameter set](#).
  - The `StdVideoH265PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.265 picture parameter set](#).
  - The `StdVideoEncodeH265PictureInfo` structure specifying the [H.265 picture information](#).
  - The `StdVideoEncodeH265SliceSegmentHeader` structures specifying the [H.265 slice segment header parameters](#) for each encoded H.265 slice segment.
  - The `StdVideoEncodeH265ReferenceInfo` structures specifying the [H.265 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [H.265 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [H.265 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.265 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.265 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

### 45.21.1. H.265 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the H.265 encode parameters specified in the following Video Std structures:

- `StdVideoH265VideoParameterSet`
- `StdVideoH265SequenceParameterSet`
- `StdVideoH265PictureParameterSet`
- `StdVideoEncodeH265PictureInfo`
- `StdVideoEncodeH265SliceSegmentHeader`

- `StdVideoEncodeH265ReferenceInfo`

All such H.265 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following H.265 encode parameters:

- `StdVideoEncodeH265PictureInfo::pic_type`
- `StdVideoEncodeH265SliceSegmentHeader::slice_type`

If the `videoMaintenance2` feature is enabled, implementations **must** not override any of the following H.265 encode parameters:

- the following parameters specified in the `StdVideoH265ProfileTierLevel` structure pointed to by `StdVideoH265VideoParameterSet::pProfileTierLevel` and `StdVideoH265SequenceParameterSet::pProfileTierLevel`:
  - `flags.general_tier_flag`
  - `flags.general_progressive_source_flag`, if set to 1
  - `flags.general_interlaced_source_flag`, if set to 0
  - `flags.general_frame_only_constraint_flag`
  - `general_profile_idc`
  - `general_level_idc`
- the following parameters specified in `StdVideoH265SequenceParameterSet`:
  - `chroma_format_idc`
- the following parameters specified in the `StdVideoH265SequenceParameterSetVui` structure pointed to by `StdVideoH265SequenceParameterSet::pSequenceParameterSetVui`:
  - `flags.aspect_ratio_info_present_flag`
  - `flags.overscan_info_present_flag`
  - `flags.overscan_appropriate_flag`
  - `flags.video_signal_type_present_flag`
  - `flags.video_full_range_flag`
  - `flags.colour_description_present_flag`
  - `flags.chroma_loc_info_present_flag`
  - `flags.neutral_chroma_indication_flag`
  - `flags.field_seq_flag`
  - `flags.frame_field_info_present_flag`
  - `flags.default_display_window_flag`
  - `flags.vui_timing_info_present_flag`
  - `flags.vui_poc_proportional_to_timing_flag`
  - `aspect_ratio_idc`

- `sar_width`
- `sar_height`
- `video_format`
- `colour primaries`
- `transfer_characteristics`
- `matrix_coeffs`
- `chroma_sample_loc_type_top_field`
- `chroma_sample_loc_type_bottom_field`
- `def_disp_win_left_offset`
- `def_disp_win_right_offset`
- `def_disp_win_top_offset`
- `def_disp_win_bottom_offset`
- `vui_num_units_in_tick`
- `vui_time_scale`
- `vui_num_ticks_poc_diff_one_minus1`

In case of a `video session parameters` object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, the following H.265 `SPS` and `PPS` parameters **may** be overridden by the implementation according to the `quantization map texel size` the video session parameters object was created with:

- `StdVideoH265SequenceParameterSet::log2_min_luma_coding_block_size_minus3`
- `StdVideoH265SequenceParameterSet::log2_diff_max_min_luma_coding_block_size`
- `StdVideoH265SequenceParameterSet::log2_min_pcm_luma_coding_block_size_minus3`
- `StdVideoH265SequenceParameterSet::log2_diff_max_min_pcm_luma_coding_block_size`
- `StdVideoH265PictureParameterSet::diff_cu_qp_delta_depth`

This **may** be necessary in order to limit the set of H.265 coding unit and coding tree unit sizes used during picture encoding to those that are supported by the implementation when using the specific quantization map texel size.

In case of H.265 encode parameters stored in `video session parameters` objects, applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded H.265 parameter sets in the bitstream in order to be able to produce a compliant H.265 video bitstream using the H.265 encode parameters stored in the video session parameters object.

In case of any H.265 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` `video encode feedback query` flag, the application **can** use such queries to retrieve feedback about whether any

implementation overrides have been applied to those H.265 encode parameters.

### 45.21.2. H.265 Encode Bitstream Data Access

Each video encode operation writes one or more VCL NAL units comprising of slice segment headers and data of the encoded picture, in the format defined in sections 7.3.6 and 7.3.8, according to the semantics defined in sections 7.4.7 and 7.4.9 of the [ITU-T H.265 Specification](#), respectively. The number of VCL NAL units written is specified by [VkVideoEncodeH265PictureInfoKHR::naluSliceSegmentEntryCount](#).

### 45.21.3. H.265 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [encode input picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [H.265 encode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video encode operations using an [H.265 encode profile](#), any access to a picture at the coordinates  $(x, y)$ , as defined by the [ITU-T H.265 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates  $(x, y)$ .

Implementations **may** choose not to access some or all texels within particular [reference pictures](#) available to a video encode operation (e.g. due to [video encode parameter overrides](#) restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

### 45.21.4. H.265 Frame, Picture, Slice Segments, and Tiles

H.265 pictures consist of one or more slices, slice segments, and tiles, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#).

For the purposes of this specification, the H.265 slice segments comprising a picture are referred to as the *picture partitions* of the picture.

Video encode operations using an [H.265 encode profile](#) **can** encode slice segments of different types, as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#), by specifying the corresponding enumeration constant value in `StdVideoEncodeH265SliceSegmentHeader::slice_type` in the [H.265 slice segment header parameters](#) from the Video Std enumeration type `StdVideoH265SliceType`:

- `STD_VIDEO_H265_SLICE_TYPE_B` indicates that the slice segment is part of a *B slice* as defined in section 3.12 of the [ITU-T H.265 Specification](#).
- `STD_VIDEO_H265_SLICE_TYPE_P` indicates that the slice segment is part of a *P slice* as defined in section 3.111 of the [ITU-T H.265 Specification](#).
- `STD_VIDEO_H265_SLICE_TYPE_I` indicates that the slice segment is part of an *I slice* as defined in section 3.74 of the [ITU-T H.265 Specification](#).

Pictures constructed from such slice segments **can** be of different types, as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#). Video encode operations using an [H.265 encode profile](#) **can** encode pictures of a specific type by specifying the corresponding enumeration constant value in `StdVideoEncodeH265PictureInfo::pic_type` in the [H.265 picture information](#) from the Video Std enumeration type `StdVideoH265PictureType`:

- `STD_VIDEO_H265_PICTURE_TYPE_P` indicates that the picture is a *P picture*. A frame consisting of a P picture is also referred to as a *P frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_B` indicates that the picture is a *B picture*. A frame consisting of a B picture is also referred to as a *B frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_I` indicates that the picture is an *I picture*. A frame consisting of an I picture is also referred to as an *I frame*.
- `STD_VIDEO_H265_PICTURE_TYPE_IDR` indicates that the picture is a special type of I picture called an *IDR picture* as defined in section 3.67 of the [ITU-T H.265 Specification](#). A frame consisting of an IDR picture is also referred to as an *IDR frame*.

#### 45.21.5. H.265 Coding Blocks

H.265 encode supports two types of coding blocks:

- *Coding tree unit*, as defined in section 3.35 of the [ITU-T H.265 Specification](#).
- *Coding unit*, as defined in section 3.36 of the [ITU-T H.265 Specification](#).

An H.265 coding unit is considered *skipped* when the value of `cu_skip_flag` for the coding unit equals 1, as defined in section 7.4.95 of the [ITU-T H.265 Specification](#).

#### 45.21.6. H.265 Encode Profile

A video profile supporting H.265 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and adding a `VkVideoEncodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoEncodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265ProfileInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_KHR`

### Structure Chaining

#### Extends the structures

- `VkQueryPoolCreateInfo`
- `VkVideoProfileInfoKHR`

## 45.21.7. H.265 Encode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an [H.265 encode profile](#), the `VkVideoCapabilitiesKHR::pNext` chain **must** include a `VkVideoEncodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoEncodeH265CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265CapabilitiesKHR {
    VkStructureType           sType;
    void*                     pNext;
    VkVideoEncodeH265CapabilityFlagsKHR flags;
    StdVideoH265LevelIdc      maxLevelIdc;
    uint32_t                  maxSliceSegmentCount;
    VkExtent2D                maxTiles;
    VkVideoEncodeH265CtbSizeFlagsKHR ctbSizes;
    VkVideoEncodeH265TransformBlockSizeFlagsKHR transformBlockSizes;
    uint32_t                  maxPPictureL0ReferenceCount;
    uint32_t                  maxBPictureL0ReferenceCount;
    uint32_t                  maxL1ReferenceCount;
    uint32_t                  maxSubLayerCount;
    VkBool32
expectDyadicTemporalSubLayerPattern;
    int32_t                   minQp;
    int32_t                   maxQp;
    VkBool32                  prefersGopRemainingFrames;
    VkBool32                  requiresGopRemainingFrames;
    VkVideoEncodeH265StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265CapabilityFlagBitsKHR` indicating supported H.265 encoding capabilities.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).
- `maxSliceSegmentCount` indicates the maximum number of slice segments that **can** be encoded for a single picture. Further restrictions **may** apply to the number of slice segments that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `maxTiles` indicates the maximum number of H.265 tile columns and rows, as defined in sections 3.175 and 3.176 of the [ITU-T H.265 Specification](#) that **can** be encoded for a single picture. Further restrictions **may** apply to the number of H.265 tiles that **can** be encoded for a single picture depending on other capabilities and codec-specific rules.
- `ctbSizes` is a bitmask of `VkVideoEncodeH265CtbSizeFlagBitsKHR` describing the supported CTB sizes.
- `transformBlockSizes` is a bitmask of `VkVideoEncodeH265TransformBlockSizeFlagBitsKHR` describing the supported transform block sizes.
- `maxPPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [P pictures](#).

**NOTE** As implementations **may** [override](#) the reference lists,

`maxPPictureL0ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 reference list for P pictures. However, if `maxPPictureL0ReferenceCount` is zero, then the use of P pictures is not allowed. In case of H.265 encoding, pictures **can** be encoded using only forward prediction even if P pictures are not supported, as the [ITU-T H.265 Specification](#) supports *generalized P & B frames* (also known as low delay B frames) whereas B frames **can** refer to past frames through both the L0 and L1 reference lists.

- `maxBPictureL0ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L0 for [B pictures](#).
- `maxL1ReferenceCount` indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of [B pictures](#) is supported.

**NOTE**

As implementations **may** [override](#) the reference lists, `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` does not limit the number of elements that the application **can** specify in the L0 and L1 reference lists for B pictures. However, if `maxBPictureL0ReferenceCount` and `maxL1ReferenceCount` are both zero, then the use of B pictures is not allowed.

- `maxSubLayerCount` indicates the maximum number of H.265 sub-layers supported by the implementation.
- `expectDyadicTemporalSubLayerPattern` indicates that the implementation's rate control algorithms expect the application to use a [dyadic temporal sub-layer pattern](#) when encoding multiple temporal sub-layers.
- `minQp` indicates the minimum QP value supported.
- `maxQp` indicates the maximum QP value supported.
- `prefersGopRemainingFrames` indicates that the implementation's rate control algorithm prefers the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- `requiresGopRemainingFrames` indicates that the implementation's rate control algorithm requires the application to specify the number of frames of each type [remaining](#) in the current [group of pictures](#) when beginning a [video coding scope](#).
- `stdSyntaxFlags` is a bitmask of [VkVideoEncodeH265StdFlagBitsKHR](#) indicating capabilities related to H.265 syntax elements.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265CapabilitiesKHR-sType-sType  
`sType` **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITIES\\_KHR](#)

## Structure Chaining

### Extends the structure

- [VkVideoCapabilitiesKHR](#)

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::flags](#), indicating the H.265 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_KHR = 0x00000010,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_KHR = 0x00000020,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR = 0x00000040,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_KHR =
0x00000080,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_KHR =
0x00000100,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_KHR =
0x00000200,
    // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_PICTURE_INTRA_REFRESH_BIT_KHR = 0x00000800,
    // Provided by VK_KHR_video_encode_h265 with VK_KHR_video_encode_quantization_map
    VK_VIDEO_ENCODE_H265_CAPABILITY_CU_QP_DIFF_WRAPAROUND_BIT_KHR = 0x00000400,
} VkVideoEncodeH265CapabilityFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_HRD\\_COMPLIANCE\\_BIT\\_KHR](#) specifies whether the implementation **may** be able to generate HRD compliant bitstreams if any of the [nal\\_hrd\\_parameters\\_present\\_flag](#), [vcl\\_hrd\\_parameters\\_present\\_flag](#), or [sub\\_pic\\_hrd\\_params\\_present\\_flag](#) members of [StdVideoH265HrdFlags](#) are set to 1 in the HRD parameters of the [active VPS](#) or [active SPS](#), or if [StdVideoH265SpsVuiFlags::vui\\_hrd\\_parameters\\_present\\_flag](#) is set to 1 in the [active SPS](#).
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_PREDICTION\\_WEIGHT\\_TABLE\\_GENERATED\\_BIT\\_KHR](#) specifies that if the [weighted\\_pred\\_flag](#) or the [weighted\\_bipred\\_flag](#) member of [StdVideoH265PpsFlags](#) is set to 1 in the [active PPS](#) when encoding a [P picture](#) or [B picture](#), respectively, then the implementation is able to internally decide syntax for [pred\\_weight\\_table](#), as defined in section 7.4.7.3 of the [ITU-T H.265 Specification](#), and the application is not **required** to provide a weight table in the [H.265 slice segment header parameters](#).
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_ROW\\_UNALIGNED\\_SLICE\\_SEGMENT\\_BIT\\_KHR](#) specifies that each slice segment in a frame with a single or multiple tiles per slice may begin or finish at any offset in a CTB row. If not supported, all slice segments in such a frame **must** begin at the start of a CTB row (and hence each slice segment **must** finish at the end of a CTB row). Also

indicates that each slice segment in a frame with multiple slices per tile may begin or finish at any offset within the enclosing tile's CTB row. If not supported, slice segments in such a frame **must** begin at the start of the enclosing tile's CTB row (and hence each slice segment **must** finish at the end of the enclosing tile's CTB row). When a picture is encoded with [intra refresh](#), encoding non-rectangular slice segments also requires: support for the [VkVideoEncodeIntraRefreshCapabilitiesKHR::nonRectangularIntraRefreshRegions](#) capability.

- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_DIFFERENT\\_SLICE\\_SEGMENT\\_TYPE\\_BIT\\_KHR](#) specifies that when a frame is encoded with multiple slice segments, the implementation allows encoding each slice segment with a different [StdVideoEncodeH265SliceSegmentHeader::slice\\_type](#) specified in the [H.265 slice segment header parameters](#). If not supported, all slice segments of the frame **must** be encoded with the same [slice\\_type](#) which corresponds to the picture type of the frame. There is one exception to this rule: if the picture is encoded with the [intra refresh mode](#) [VK\\_VIDEO\\_ENCODE\\_INTRA\\_REFRESH\\_MODE\\_PER\\_PICTURE\\_PARTITION\\_BIT\\_KHR](#), then the currently refreshed slice segment **must** specify the [slice\\_type](#) [STD\\_VIDEO\\_H265\\_SLICE\\_TYPE\\_I](#) and **can** differ from the [slice\\_type](#) of the other slice segments regardless of whether [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_DIFFERENT\\_SLICE\\_SEGMENT\\_TYPE\\_BIT\\_KHR](#) is supported.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_B\\_FRAME\\_IN\\_L0\\_LIST\\_BIT\\_KHR](#) specifies support for using a [B frame](#) as L0 reference, as specified in [StdVideoEncodeH265ReferenceListsInfo::RefPicList0](#) in the [H.265 picture information](#).
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_B\\_FRAME\\_IN\\_L1\\_LIST\\_BIT\\_KHR](#) specifies support for using a [B frame](#) as L1 reference, as specified in [StdVideoEncodeH265ReferenceListsInfo::RefPicList1](#) in the [H.265 picture information](#).
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_PER\\_PICTURE\\_TYPE\\_MIN\\_MAX\\_QP\\_BIT\\_KHR](#) specifies support for specifying different QP values in the members of [VkVideoEncodeH265QpKHR](#).
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_PER\\_SLICE\\_SEGMENT\\_CONSTANT\\_QP\\_BIT\\_KHR](#) specifies support for specifying different constant QP values for each slice segment.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_MULTIPLE\\_TILES\\_PER\\_SLICE\\_SEGMENT\\_BIT\\_KHR](#) specifies whether encoding multiple tiles per slice segment, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single tile for each slice segment.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_MULTIPLE\\_SLICE\\_SEGMENTS\\_PER\\_TILE\\_BIT\\_KHR](#) specifies whether encoding multiple slice segments per tile, as defined in section 6.3.1 of the [ITU-T H.265 Specification](#), is supported. If this capability flag is not present, then the implementation is only able to encode a single slice segment for each tile.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_CU\\_QP\\_DIFF\\_WRAPAROUND\\_BIT\\_KHR](#) indicates support for wraparound during the calculation of the QP values of subsequently encoded coding units, as defined in section 7.4.9.14 of the [ITU-T H.265 Specification](#). If not supported, equation 8-283 of the [ITU-T H.265 Specification](#) is effectively reduced to the following:

$$Qp_Y = qP_{Y\_PRED} + CuQpDeltaVal$$

#### NOTE

The effect of this is that the maximum QP difference across subsequent coding units is limited to the  $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$  range.

- [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_B\\_PICTURE\\_INTRA\\_REFRESH\\_BIT\\_KHR](#) specifies support for encoding [B pictures](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CapabilityFlagsKHR;
```

[VkVideoEncodeH265CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265CapabilityFlagBitsKHR](#).

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::stdSyntaxFlags](#), indicating the capabilities related to the H.265 syntax elements, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265StdFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR = 0x00000004,

    VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR = 0x00080000,
    VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR = 0x00100000,
} VkVideoEncodeH265StdFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_H265\\_STD\\_SEPARATE\\_COLOR\\_PLANE\\_FLAG\\_SET\\_BIT\\_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH265SpsFlags::separate\\_colour\\_plane\\_flag](#) in the [SPS](#) when that value is 1.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_STD\\_SAMPLE\\_ADAPTIVE\\_OFFSET\\_ENABLED\\_FLAG\\_SET\\_BIT\\_KHR](#) specifies whether the implementation supports using the application-provided value for [StdVideoH265SpsFlags::sample\\_adaptive\\_offset\\_enabled\\_flag](#) in the [SPS](#) when that value is 1.

- `VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for the `scaling_list_enabled_flag` and `sps_scaling_list_data_present_flag` members of `StdVideoH265SpsFlags` in the SPS, and the application-provided value for `StdVideoH265PpsFlags::pps_scaling_list_data_present_flag` in the PPS when those values are 1.
- `VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::pcm_enable_flag` in the SPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265SpsFlags::sps_temporal_mvp_enabled_flag` in the SPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::init_qp_minus26` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::weighted_bipred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PictureParameterSet::log2_parallel_merge_level_minus2` in the PPS when that value is non-zero.
- `VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::sign_data_hiding_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transform_skip_enabled_flag` in the PPS when that value is 0.
- `VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::pps_slice_chroma_qp_offsets_present_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::transquant_bypass_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::constrained_intra_pred_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_KHR`

specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::entropy_coding_sync_enabled_flag` in the PPS when that value is 1.

- `VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::deblocking_filter_override_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoH265PpsFlags::dependent_slice_segments_enabled_flag` in the PPS when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::dependent_slice_segment_flag` in the H.265 slice segment header parameters when that value is 1.
- `VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta` in the H.265 slice segment header parameters when that value is identical across the slice segments of the encoded frame.
- `VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta` in the H.265 slice segment header parameters when that value is different across the slice segments of the encoded frame.

These capability flags provide information to the application about specific H.265 syntax element values that the implementation supports without having to `override` them and do not otherwise restrict the values that the application **can** specify for any of the mentioned H.265 syntax elements.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265StdFlagsKHR;
```

`VkVideoEncodeH265StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265StdFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeH265CapabilitiesKHR::ctbSizes`, indicating the CTB sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265CtbSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_KHR = 0x00000004,
} VkVideoEncodeH265CtbSizeFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_KHR` specifies that a CTB size of 16x16 is supported.
- `VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_KHR` specifies that a CTB size of 32x32 is

supported.

- [VK\\_VIDEO\\_ENCODE\\_H265\\_CTB\\_SIZE\\_64\\_BIT\\_KHR](#) specifies that a CTB size of 64x64 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265CtbSizeFlagsKHR;
```

[VkVideoEncodeH265CtbSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265CtbSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeH265CtbSizeFlagBitsKHR](#).

Bits which **may** be set in [VkVideoEncodeH265CapabilitiesKHR::transformBlockSizes](#), indicating the transform block sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265TransformBlockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_KHR = 0x00000008,
} VkVideoEncodeH265TransformBlockSizeFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_H265\\_TRANSFORM\\_BLOCK\\_SIZE\\_4\\_BIT\\_KHR](#) specifies that a transform block size of 4x4 is supported.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_TRANSFORM\\_BLOCK\\_SIZE\\_8\\_BIT\\_KHR](#) specifies that a transform block size of 8x8 is supported.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_TRANSFORM\\_BLOCK\\_SIZE\\_16\\_BIT\\_KHR](#) specifies that a transform block size of 16x16 is supported.
- [VK\\_VIDEO\\_ENCODE\\_H265\\_TRANSFORM\\_BLOCK\\_SIZE\\_32\\_BIT\\_KHR](#) specifies that a transform block size of 32x32 is supported.

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265TransformBlockSizeFlagsKHR;
```

[VkVideoEncodeH265TransformBlockSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265TransformBlockSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeH265TransformBlockSizeFlagBitsKHR](#).

## 45.21.8. H.265 Encode Quality Level Properties

When calling [vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specified as [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#), the

[VkVideoEncodeH265QualityLevelPropertiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoEncodeQualityLevelPropertiesKHR](#) structure to retrieve additional video encode quality level properties specific to H.265 encoding.

The [VkVideoEncodeH265QualityLevelPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QualityLevelPropertiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkVideoEncodeH265RateControlFlagsKHR preferredRateControlFlags;
    uint32_t             preferredGopFrameCount;
    uint32_t             preferredIdrPeriod;
    uint32_t             preferredConsecutiveBFrameCount;
    uint32_t             preferredSubLayerCount;
    VkVideoEncodeH265QpKHR preferredConstantQp;
    uint32_t             preferredMaxL0ReferenceCount;
    uint32_t             preferredMaxL1ReferenceCount;
} VkVideoEncodeH265QualityLevelPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [preferredRateControlFlags](#) is a bitmask of [VkVideoEncodeH265RateControlFlagBitsKHR](#) values indicating the preferred flags to use for [VkVideoEncodeH265RateControlInfoKHR::flags](#).
- [preferredGopFrameCount](#) indicates the preferred value to use for [VkVideoEncodeH265RateControlInfoKHR::gopFrameCount](#).
- [preferredIdrPeriod](#) indicates the preferred value to use for [VkVideoEncodeH265RateControlInfoKHR::idrPeriod](#).
- [preferredConsecutiveBFrameCount](#) indicates the preferred value to use for [VkVideoEncodeH265RateControlInfoKHR::consecutiveBFrameCount](#).
- [preferredSubLayerCount](#) indicates the preferred value to use for [VkVideoEncodeH265RateControlInfoKHR::subLayerCount](#).
- [preferredConstantQp](#) indicates the preferred values to use for [VkVideoEncodeH265NaluSliceSegmentInfoKHR::constantQp](#) for each picture type when using rate control mode [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#).
- [preferredMaxL0ReferenceCount](#) indicates the preferred maximum number of reference pictures to use in the reference list L0.
- [preferredMaxL1ReferenceCount](#) indicates the preferred maximum number of reference pictures to use in the reference list L1.

### Valid Usage (Implicit)

- `VOID-VkVideoEncodeH265QualityLevelPropertiesKHR-sType-sType`  
[sType](#) **must**

be

## Structure Chaining

### Extends the structure

- [VkVideoEncodeQualityLevelPropertiesKHR](#)

## 45.21.9. H.265 Encode Session

Additional parameters can be specified when creating a video session with an H.265 encode profile by including an instance of the [VkVideoEncodeH265SessionCreateInfoKHR](#) structure in the `pNext` chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeH265SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevelIdc;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoEncodeH265SessionCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is `VK_FALSE`, the implementation ignores the value of `maxLevelIdc` and uses the value of [VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc](#), as reported by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value specifying the upper bound on the H.265 level for the video bitstreams produced by the created video session, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionCreateInfoKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_KHR`

## Structure Chaining

### Extends the structure

- [VkVideoSessionCreateInfoKHR](#)

## 45.21.10. H.265 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` can contain the following types of parameters:

### H.265 Video Parameter Sets (VPS)

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
  - `reserved` is used only for padding purposes and is otherwise ignored;
  - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
  - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
  - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
  - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
    - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
    - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
  - if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:

- `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

## H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as

defined in section 7.3.4 of the [ITU-T H.265 Specification](#);

- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
  - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
    - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:

- `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
  - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
  - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
  - all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- all other members of `pSequenceParameterSetVui` are interpreted as defined in section E.3.1 of the [ITU-T H.265 Specification](#);
- if `flags.sps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265SequenceParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

## H.265 Picture Parameter Sets (PPS)

Represented by `StdVideoH265PictureParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- the triplet constructed from `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- if `flags.pps_palette_predictor_initializer_present_flag` is set, then the `PredictorPaletteEntries` member of the `StdVideoH265PredictorPaletteEntries` structure

pointed to by `pPredictorPaletteEntries` is interpreted as defined in section 7.4.9.13 of the [ITU-T H.265 Specification](#);

- all other members of `StdVideoH265PictureParameterSet` are interpreted as defined in section 7.4.3.3 of the [ITU-T H.265 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting H.265 parameter sets into the video session parameters object. Applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened and to retrieve the encoded H.265 parameter sets in order to be able to produce a compliant H.265 video bitstream.

Such H.265 parameter set overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a video session parameters object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersCreateInfoKHR {
    VkStructureType             sType;
    const void*                 pNext;
    uint32_t                    maxStdVPSCount;
    uint32_t                    maxStdSPSCount;
    uint32_t                    maxStdPPSCount;
    const VkVideoEncodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoEncodeH265SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdVPSCount` is the maximum number of H.265 VPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdSPSCount` is the maximum number of H.265 SPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of H.265 PPS entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoEncodeH265SessionParametersAddInfoKHR`

structure specifying H.265 parameters to add upon object creation.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoEncodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter  
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoEncodeH265SessionParametersAddInfoKHR` structure

### Structure Chaining

#### Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoEncodeH265SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersAddInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSS;
    uint32_t           stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSs;
    uint32_t           stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSs;
} VkVideoEncodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSS` array.
- `pStdVPSS` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the

[H.265 PPS](#) entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdVPSSs-parameter  
If `stdVPSCount` is not `0`, and `pStdVPSSs` is not `NULL`, `pStdVPSSs` **must** be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdSPSSs-parameter  
If `stdSPSCount` is not `0`, and `pStdSPSSs` is not `NULL`, `pStdSPSSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-pStdPPSSs-parameter  
If `stdPPSCount` is not `0`, and `pStdPPSSs` is not `NULL`, `pStdPPSSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values

### Structure Chaining

#### Extends the structure

- [VkVideoSessionParametersUpdateInfoKHR](#)

### Valid Usage

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06438  
The `vps_video_parameter_set_id` member of each `StdVideoH265VideoParameterSet` structure specified in the elements of `pStdVPSSs` **must** be unique within `pStdVPSSs`
- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06439  
The pair constructed from the `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` members of each `StdVideoH265SequenceParameterSet` structure specified in the elements of

**pStdSPSs must** be unique within **pStdSPSs**

- VUID-VkVideoEncodeH265SessionParametersAddInfoKHR-None-06440

The triplet constructed from the **sps\_video\_parameter\_set\_id**, **pps\_seq\_parameter\_set\_id**, and **pps\_pic\_parameter\_set\_id** members of each **StdVideoH265PictureParameterSet** structure specified in the elements of **pStdPPSs must** be unique within **pStdPPSs**

The **VkVideoEncodeH265SessionParametersGetInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersGetInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           writeStdVPS;
    VkBool32           writeStdSPS;
    VkBool32           writeStdPPS;
    uint32_t            stdVPSId;
    uint32_t            stdSPSId;
    uint32_t            stdPPSId;
} VkVideoEncodeH265SessionParametersGetInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **writeStdVPS** indicates whether the encoded **H.265 video parameter set** identified by **stdVPSId** is requested to be retrieved.
- **writeStdSPS** indicates whether the encoded **H.265 sequence parameter set** identified by the pair constructed from **stdVPSId** and **stdSPSId** is requested to be retrieved.
- **writeStdPPS** indicates whether the encoded **H.265 picture parameter set** identified by the triplet constructed from **stdVPSId**, **stdSPSId**, and **stdPPSId** is requested to be retrieved.
- **stdVPSId** specifies the H.265 video parameter set ID used to identify the retrieved H.265 video, sequence, and/or picture parameter set(s).
- **stdSPSId** specifies the H.265 sequence parameter set ID used to identify the retrieved H.265 sequence and/or picture parameter set(s) when **writeStdSPS** and/or **writeStdPPS** is **VK\_TRUE**.
- **stdPPSId** specifies the H.265 picture parameter set ID used to identify the retrieved H.265 picture parameter set when **writeStdPPS** is **VK\_TRUE**.

When this structure is specified in the **pNext** chain of the **VkVideoEncodeSessionParametersGetInfoKHR** structure passed to **vkGetEncodedVideoSessionParametersKHR**, the command will write encoded parameter data to the output buffer in the following order:

1. The **H.265 video parameter set** identified by **stdVPSId**, if **writeStdVPS** is **VK\_TRUE**.
2. The **H.265 sequence parameter set** identified by the pair constructed from **stdVPSId** and **stdSPSId**, if **writeStdSPS** is **VK\_TRUE**.
3. The **H.265 picture parameter set** identified by the triplet constructed from **stdVPSId**, **stdSPSId**,

and `stdPPSId`, if `writeStdPPS` is `VK_TRUE`.

### Valid Usage

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-writeStdVPS-08290  
At least one of `writeStdVPS`, `writeStdSPS`, and `writeStdPPS` must be `VK_TRUE`

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersGetInfoKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoEncodeSessionParametersGetInfoKHR`

The `VkVideoEncodeH265SessionParametersFeedbackInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersFeedbackInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdVPSOverrides;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH265SessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasStdVPSOverrides` indicates whether any of the parameters of the requested H.265 video parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdVPS`, were overridden by the implementation.
- `hasStdSPSOverrides` indicates whether any of the parameters of the requested H.265 sequence parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdSPS`, were overridden by the implementation.
- `hasStdPPSOverrides` indicates whether any of the parameters of the requested H.265 picture parameter set, if one was requested via `VkVideoEncodeH265SessionParametersGetInfoKHR::writeStdPPS`, were overridden by the implementation.

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersFeedbackInfoKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_VIDEO\_ENCODE\_H265\_SESSION\_PARAMETERS\_FEEDBACK\_INFO\_KHR

## Structure Chaining

### Extends the structure

- [VkVideoEncodeSessionParametersFeedbackInfoKHR](#)

## 45.21.11. H.265 Encoding Parameters

The [VkVideoEncodeH265PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            naluSliceSegmentEntryCount;
    const VkVideoEncodeH265NaluSliceSegmentInfoKHR* pNaluSliceSegmentEntries;
    const StdVideoEncodeH265PictureInfo* pStdPictureInfo;
} VkVideoEncodeH265PictureInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceSegmentEntryCount` is the number of elements in `pNaluSliceSegmentEntries`.
- `pNaluSliceSegmentEntries` is a pointer to an array of `naluSliceSegmentEntryCount` [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structures specifying the parameters of the individual H.265 slice segments to encode for the input picture.
- `pStdPictureInfo` is a pointer to a [StdVideoEncodeH265PictureInfo](#) structure specifying [H.265 picture information](#).

This structure is specified in the `pNext` chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#) to specify the codec-specific picture information for an [H.265 encode operation](#).

### Encode Input Picture Information

When this structure is specified in the `pNext` chain of the [VkVideoEncodeInfoKHR](#) structure passed to [vkCmdEncodeVideoKHR](#), the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#)

section.

- The encode input picture is associated with the [H.265 picture information](#) provided in `pStdPictureInfo`.

## Std Picture Information

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.is_reference` as defined in section 3.132 of the [ITU-T H.265 Specification](#);
- `flags.IrapPicFlag` as defined in section 3.73 of the [ITU-T H.265 Specification](#);
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.discardable_flag` and `cross_layer_bla_flag` as defined in section F.7.4.7.1 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#);
- if `pRefLists` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265ReferenceListsInfo` structure that is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `ref_pic_list_modification_flag_l0` and `ref_pic_list_modification_flag_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
  - `num_ref_idx_l0_active_minus1` and `num_ref_idx_l1_active_minus1` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
  - `RefPicList0` and `RefPicList1` as defined in section 8.3.4 of the [ITU-T H.265 Specification](#) where each element of these arrays either identifies an [active reference picture](#) using its [DPB slot](#) index or contains the value `STD_VIDEO_H265_NO_REFERENCE_PICTURE` to indicate “no reference picture”;
  - `list_entry_l0` and `list_entry_l1` as defined in section 7.4.7.2 of the [ITU-T H.265 Specification](#);
- if `flags.short_term_ref_pic_set_sps_flag` is set, then the `StdVideoH265ShortTermRefPicSet` structure pointed to by `pShortTermRefPicSet` is interpreted as defined for the elements of the `pShortTermRefPicSet` array specified in [H.265 sequence parameter sets](#).
- if `flags.long_term_ref_pics_present_flag` is set in the [active SPS](#), then the `StdVideoEncodeH265LongTermRefPics` structure pointed to by `pLongTermRefPics` is interpreted as follows:
  - `used_by_curr_pic_lt_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_flag[i]` as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);

- all other members of `StdVideoEncodeH265LongTermRefPics` are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#);
- all other members are interpreted as defined in section 7.4.7.1 of the [ITU-T H.265 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeH265PictureInfo::flags.is_reference`. If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeH265PictureInfo::flags.is_reference` is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

## Active Parameter Sets

The members of the `StdVideoEncodeH265PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The *active VPS* is the [VPS](#) identified by the key specified in `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`.
- The *active SPS* is the [SPS](#) identified by the key specified by the pair constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`.
- The *active PPS* is the [PPS](#) identified by the key specified by the triplet constructed from `StdVideoEncodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoEncodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoEncodeH265PictureInfo::pps_pic_parameter_set_id`.

H.265 encoding uses *explicit weighted sample prediction* for a slice segment, as defined in section 8.5.3.3.4 of the [ITU-T H.265 Specification](#), if any of the following conditions are true for the active [PPS](#) and the `pStdSliceSegmentHeader` member of the corresponding element of `pNaluSliceSegmentEntries`:

- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_P` and `weighted_pred_flag` is enabled in the active PPS.
- `pStdSliceSegmentHeader->slice_type` is `STD_VIDEO_H265_SLICE_TYPE_B` and `weighted_bipred_flag` is enabled in the active PPS.

The number of H.265 tiles, as defined in section 3.174 of the [ITU-T H.265 Specification](#), is derived from the `num_tile_columns_minus1` and `num_tile_rows_minus1` members of the active [PPS](#) as follows:

$$(\text{num\_tile\_columns\_minus1} + 1) \times (\text{num\_tile\_rows\_minus1} + 1)$$

## Valid Usage

- `VOID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-08306` `naluSliceSegmentEntryCount` **must** be between 1 and `VkVideoEncodeH265CapabilitiesKHR::maxSliceSegmentCount`, inclusive, as returned by

[vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08323

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_MULTIPLE\\_TILES\\_PER\\_SLICE\\_SEGMENT\\_BIT\\_KHR](#), then [naluSliceSegmentEntryCount](#) **must** be greater than or equal to the number of H.265 tiles in the picture

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08324

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_MULTIPLE\\_SLICE\\_SEGMENTS\\_PER\\_TILE\\_BIT\\_KHR](#), then [naluSliceSegmentEntryCount](#) **must** be less than or equal to the number of H.265 tiles in the picture

- VUID-VkVideoEncodeH265PictureInfoKHR-flags-08316

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_PREDICTION\\_WEIGHT\\_TABLE\\_GENERATED\\_BIT\\_KHR](#) and the slice segment corresponding to any element of [pNaluSliceSegmentEntries](#) uses [explicit weighted sample prediction](#), then [VkVideoEncodeH265NaluSliceSegmentInfoKHR::pStdSliceSegmentHeader->pWeightTable](#) **must** not be [NULL](#) for that element of [pNaluSliceSegmentEntries](#)

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH265PictureInfoKHR-sType-sType

[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_H265\\_PICTURE\\_INFO\\_KHR](#)

- VUID-VkVideoEncodeH265PictureInfoKHR-pNaluSliceSegmentEntries-parameter

[pNaluSliceSegmentEntries](#) **must** be a valid pointer to an array of [naluSliceSegmentEntryCount](#) valid [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structures

- VUID-VkVideoEncodeH265PictureInfoKHR-pStdPictureInfo-parameter

[pStdPictureInfo](#) **must** be a valid pointer to a valid [StdVideoEncodeH265PictureInfo](#) value

- VUID-VkVideoEncodeH265PictureInfoKHR-naluSliceSegmentEntryCount-arraylength

[naluSliceSegmentEntryCount](#) **must** be greater than 0

## Structure Chaining

### Extends the structure

- [VkVideoEncodeInfoKHR](#)

The [VkVideoEncodeH265NaluSliceSegmentInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265NaluSliceSegmentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  constantQp;
    const StdVideoEncodeH265SliceSegmentHeader* pStdSliceSegmentHeader;
} VkVideoEncodeH265NaluSliceSegmentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice segment if the current `rate control mode` configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceSegmentHeader` is a pointer to a `StdVideoEncodeH265SliceSegmentHeader` structure specifying `H.265 slice segment header parameters` for the slice segment.

### Std Slice Segment Header Parameters

The members of the `StdVideoEncodeH265SliceSegmentHeader` structure pointed to by `pStdSliceSegmentHeader` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- if `pWeightTable` is not `NULL`, then it is a pointer to a `StdVideoEncodeH265WeightTable` that is interpreted as follows:
  - `flags.luma_weight_l0_flag`, `flags.chroma_weight_l0_flag`, `flags.luma_weight_l1_flag`, and `flags.chroma_weight_l1_flag` are bitmasks where bit index `i` corresponds to `luma_weight_l0_flag[i]`, `chroma_weight_l0_flag[i]`, `luma_weight_l1_flag[i]`, and `chroma_weight_l1_flag[i]`, respectively, as defined in section 7.4.7.3 of the `ITU-T H.265 Specification`;
  - all other members of `StdVideoEncodeH265WeightTable` are interpreted as defined in section 7.4.7.3 of the `ITU-T H.265 Specification`;
- all other members are interpreted as defined in section 7.4.7.1 of the `ITU-T H.265 Specification`.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_KHR`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoKHR-pStdSliceSegmentHeader-parameter  
`pStdSliceSegmentHeader` **must** be a valid pointer to a valid `StdVideoEncodeH265SliceSegmentHeader` value

The [VkVideoEncodeH265DpbSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoEncodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH265DpbSlotInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a [StdVideoEncodeH265ReferenceInfo](#) structure specifying [H.265 reference information](#).

This structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), if not `NULL`, and the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#) to specify the codec-specific reference picture information for an [H.265 encode operation](#).

### Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of [VkVideoEncodeInfoKHR::pReferenceSlots](#), one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of [VkVideoEncodeInfoKHR::pReferenceSlots](#) as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of [VkVideoEncodeInfoKHR::pReferenceSlots](#).
- The reference picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

### Reconstructed Picture Information

When this structure is specified in the `pNext` chain of [VkVideoEncodeInfoKHR::pSetupReferenceSlot](#), the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [H.265 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in [VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex](#).
- The reconstructed picture is associated with the [H.265 reference information](#) provided in `pStdReferenceInfo`.

### Std Reference Information

The members of the [StdVideoEncodeH265ReferenceInfo](#) structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `flags.unused_for_reference` is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the [ITU-T H.265 Specification](#);
- `pic_type` as defined in section 7.4.3.5 of the [ITU-T H.265 Specification](#);
- `PicOrderCntVal` as defined in section 8.3.1 of the [ITU-T H.265 Specification](#);
- `TemporalId` as defined in section 7.4.2.2 of the [ITU-T H.265 Specification](#).

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter`  
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeH265ReferenceInfo` value

### Structure Chaining

#### Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

## 45.21.12. H.265 Encode Rate Control

### Group of Pictures

In case of H.265 encoding it is common practice to follow a regular pattern of different picture types in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive B frames between I and/or P frames in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always an I or an IDR frame.
2. This is followed by a number of consecutive B frames, as defined above.
3. If the number of frames in the GOP is not reached yet, then the next frame is a P frame and the algorithm continues from step 2.

Text is not SVG - cannot display

Figure 33. H.265 regular GOP starting with an I frame

When **IDR frames** are used in a video sequence, the *IDR period* refers to the distance between subsequent IDR frames.

It is also typical for H.265 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

### Flat Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- Each B frame uses the last non-B frame, in display order, as its forward reference, and uses the next non-B frame, in display order, as its backward reference.

Text is not SVG - cannot display

Figure 34. H.265 flat reference pattern

### Dyadic Reference Pattern

- Each P frame uses the last non-B frame, in display order, as reference.
- The following algorithm is applied to the sequence of consecutive B frames between I and/or P frames in display order:
  1. The B frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  2. The algorithm is executed recursively for the following frame sequences:
    - The B frames of the original sequence preceding the frame in the middle, if any.
    - The B frames of the original sequence following the frame in the middle, if any.

Text is not SVG - cannot display

Figure 35. H.265 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the picture type of individual encoded pictures is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an H.265 encode session is used to encode multiple temporal sub-layers, it is also common practice to follow a regular pattern for the H.265 temporal ID for the encoded pictures in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

#### Dyadic Temporal Sub-Layer Pattern

- The number of frames in the temporal GOP is  $2^{n-1}$ , where  $n$  is the number of temporal sub-layers.
- The  $i^{\text{th}}$  frame in the temporal GOP uses temporal ID  $t$ , if and only if the index of the least significant bit set in  $i$  equals  $n-t-1$ , except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The  $i^{\text{th}}$  frame in the temporal GOP uses the  $r^{\text{th}}$  frame as reference, where  $r$  is calculated from  $i$  by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 36. H.265 dyadic temporal sub-layer pattern

#### NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence B pictures with backward prediction are usually not used.

The `VkVideoEncodeH265RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeH265RateControlFlagsKHR flags;
    uint32_t                  gopFrameCount;
    uint32_t                  idrPeriod;
    uint32_t                  consecutiveBFrameCount;
    uint32_t                  subLayerCount;
} VkVideoEncodeH265RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsKHR` specifying H.265 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two [IDR frames](#) (see [IDR period](#)). If it is 0, the rate control algorithm **may** assume an implementation-dependent IDR period. If it is `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B frames between I and/or P frames within

the [GOP](#).

- [subLayerCount](#) specifies the number of H.265 sub-layers that the application intends to use.

When an instance of this structure is included in the [pNext](#) chain of the [VkVideoCodingControlInfoKHR](#) structure passed to the [vkCmdControlVideoCodingKHR](#) command, and [VkVideoCodingControlInfoKHR::flags](#) includes [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_RATE\\_CONTROL\\_BIT\\_KHR](#), the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

If [VkVideoCodingControlInfoKHR::flags](#) includes [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_ATTEMPT\\_HRD\\_COMPLIANCE\\_BIT\\_KHR](#), then the rate control state is reset to an initial state to meet HRD compliance requirements. Otherwise the new rate control state **may** be applied without a reset depending on the implementation and the specified rate control parameters.

#### NOTE

It would be possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for [consecutiveBFrameCount](#), [idrPeriod](#), and [gopFrameCount](#), but this inferred picture type will not be used by implementations to override the picture type provided to the video encode operation.

### Valid Usage

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08291

If [VkVideoEncodeH265CapabilitiesKHR::flags](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used video profile, does not include [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_HRD\\_COMPLIANCE\\_BIT\\_KHR](#), then [flags](#) **must** not contain [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_ATTEMPT\\_HRD\\_COMPLIANCE\\_BIT\\_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08292

If [VkVideoEncodeH265RateControlInfoKHR::flags](#) contains [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_FLAT\\_BIT\\_KHR](#) or [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#), then it **must** also contain [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REGULAR\\_GOP\\_BIT\\_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08293

If [VkVideoEncodeH265RateControlInfoKHR::flags](#) contains [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_FLAT\\_BIT\\_KHR](#), then it **must** not also contain [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-08294

If [flags](#) contains [VK\\_VIDEO\\_ENCODE\\_H265\\_RATE\\_CONTROL\\_REGULAR\\_GOP\\_BIT\\_KHR](#), then [gopFrameCount](#) **must** be greater than 0

- VUID-VkVideoEncodeH265RateControlInfoKHR-idrPeriod-08295

If [idrPeriod](#) is not 0, then it **must** be greater than or equal to [gopFrameCount](#)

- VUID-VkVideoEncodeH265RateControlInfoKHR-consecutiveBFrameCount-08296  
If `consecutiveBFrameCount` is not 0, then it **must** be less than `gopFrameCount`

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeH265RateControlInfoKHR-flags-parameter  
If `flags` is not 0, `flags` **must** be a valid combination of `VkVideoEncodeH265RateControlFlagBitsKHR` values

## Structure Chaining

### Extends the structures

- `VkVideoBeginCodingInfoKHR`
- `VkVideoCodingControlInfoKHR`

Bits which **can** be set in `VkVideoEncodeH265RateControlInfoKHR::flags`, specifying H.265 rate control flags, are:

```
// Provided by VK_KHR_video_encode_h265
typedef enum VkVideoEncodeH265RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_KHR =
    0x00000010,
} VkVideoEncodeH265RateControlFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_KHR` specifies that rate control **should** attempt to produce an HRD compliant bitstream, as defined in annex C of the ITU-T H.265 Specification.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_KHR` specifies that the application intends to use a `regular GOP structure` according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH265RateControlInfoKHR` structure.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` specifies that the application intends to follow a `flat reference pattern` in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR` specifies that the application intends to follow a `dyadic reference pattern` in the GOP.
- `VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_K`

HR specifies that the application intends to follow a [dyadic temporal sub-layer pattern](#).

```
// Provided by VK_KHR_video_encode_h265
typedef VkFlags VkVideoEncodeH265RateControlFlagsKHR;
```

[VkVideoEncodeH265RateControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeH265RateControlFlagBitsKHR](#).

## Rate Control Layers

The [VkVideoEncodeH265RateControlLayerInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265RateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMinQp;
    VkVideoEncodeH265QpKHR minQp;
    VkBool32           useMaxQp;
    VkVideoEncodeH265QpKHR maxQp;
    VkBool32           useMaxFrameSize;
    VkVideoEncodeH265FrameSizeKHR maxFrameSize;
} VkVideoEncodeH265RateControlLayerInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [useMinQp](#) indicates whether the QP values determined by rate control will be clamped to the lower bounds on the QP values specified in [minQp](#).
- [minQp](#) specifies the lower bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when [useMinQp](#) is [VK\\_TRUE](#).
- [useMaxQp](#) indicates whether the QP values determined by rate control will be clamped to the upper bounds on the QP values specified in [maxQp](#).
- [maxQp](#) specifies the upper bounds on the QP values, for each picture type, that the implementation's rate control algorithm will use when [useMaxQp](#) is [VK\\_TRUE](#).
- [useMaxFrameSize](#) indicates whether the implementation's rate control algorithm **should** use the values specified in [maxFrameSize](#) as the upper bounds on the encoded frame size for each picture type.
- [maxFrameSize](#) specifies the upper bounds on the encoded frame size, for each picture type, when [useMaxFrameSize](#) is [VK\\_TRUE](#).

When used, the values in [minQp](#) and [maxQp](#) guarantee that the effective QP values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of QP values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.
- The upper bounds on the encoded frame size, for each picture type, specified in the `maxFrameSize` member of `VkVideoEncodeH265RateControlLayerInfoKHR`.

#### NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a `VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, it specifies the H.265-specific rate control parameters of the rate control layer corresponding to that element of `players`.

### Valid Usage

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08297  
If `useMinQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08298  
If `useMaxQp` is `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all be between `VkVideoEncodeH265CapabilitiesKHR::minQp` and `VkVideoEncodeH265CapabilitiesKHR::maxQp`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08299  
If `useMinQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMaxQp-08300  
If `useMaxQp` is `VK_TRUE` and `VkVideoEncodeH265CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_KHR`, then the `qpI`, `qpP`, and `qpB` members of `maxQp` **must** all specify the same value
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-useMinQp-08375  
If `useMinQp` and `useMaxQp` are both `VK_TRUE`, then the `qpI`, `qpP`, and `qpB` members of `minQp` **must** all be less than or equal to the respective members of `maxQp`

## Valid Usage (Implicit)

- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-sType-sType **must** be VK\_STRUCTURE\_TYPE\_VIDEO\_ENCODE\_H265\_RATE\_CONTROL\_LAYER\_INFO\_KHR
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-minQp-parameter minQp **must** be a valid VkVideoEncodeH265QpKHR structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxQp-parameter maxQp **must** be a valid VkVideoEncodeH265QpKHR structure
- VUID-VkVideoEncodeH265RateControlLayerInfoKHR-maxFrameSize-parameter maxFrameSize **must** be a valid VkVideoEncodeH265FrameSizeKHR structure

## Structure Chaining

### Extends the structure

- [VkVideoEncodeRateControlLayerInfoKHR](#)

The [VkVideoEncodeH265QpKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265QpKHR {
    int32_t    qpI;
    int32_t    qpP;
    int32_t    qpB;
} VkVideoEncodeH265QpKHR;
```

- qpI is the QP to be used for I pictures.
- qpP is the QP to be used for P pictures.
- qpB is the QP to be used for B pictures.

The [VkVideoEncodeH265FrameSizeKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265FrameSizeKHR {
    uint32_t    frameISize;
    uint32_t    framePSize;
    uint32_t    frameBSize;
} VkVideoEncodeH265FrameSizeKHR;
```

- frameISize is the size in bytes to be used for I frames.
- framePSize is the size in bytes to be used for P frames.
- frameBSize is the size in bytes to be used for B frames.

## GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the [group of pictures \(GOP\)](#).

The `VkVideoEncodeH265GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_h265
typedef struct VkVideoEncodeH265GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingI;
    uint32_t            gopRemainingP;
    uint32_t            gopRemainingB;
} VkVideoEncodeH265GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.
- `gopRemainingI` specifies the number of [I frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingP` specifies the number of [P frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.
- `gopRemainingB` specifies the number of [B frames](#) the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH265CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

## Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265GopRemainingFrameInfoKHR-sType-sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_KHR`

## Structure Chaining

### Extends the structure

- `VkVideoBeginCodingInfoKHR`

## H.265 QP Delta Maps

Quantization delta maps used with an [H.265 encode profile](#) are referred to as *QP delta maps* and their texels contain integer values representing QP delta values that are applied in the process of determining the [quantization parameters](#) of the encoded picture.

Accordingly, H.265 QP delta maps always have single channel integer formats, as reported in `VkVideoFormatPropertiesKHR::format`.

When the [rate control mode](#) is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, the QP delta values are added to the per slice segment constant QP values that, in effect, enable the application to explicitly control the used QP values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the QP delta values **can** be used to offset the QP values that the rate control algorithm would otherwise produce.

## H.265 Encode Quantization

Performing H.265 encode operations involves the process of assigning QP values to individual H.265 coding units. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`, then the QP value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the `minQpDelta` and `maxQpDelta` members of `VkVideoEncodeH265QuantizationMapCapabilitiesKHR`, then the QP value used for the coding unit becomes undefined.
- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the QP value is initialized from the constant QP value specified for the [H.265 slice segment](#) the coding unit is

part of.

- If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#), then the QP value used for the coding unit becomes undefined.
- If the configured rate control mode is not [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DEFAULT\\_KHR](#) or [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#), then the QP value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the QP delta value corresponding to the coding unit, as [fetched from the quantization map](#), is added to the previously determined QP value. If the fetched QP delta value falls outside the supported QP delta value range reported in the [minQpDelta](#) and [maxQpDelta](#) members of [VkVideoEncodeH265QuantizationMapCapabilitiesKHR](#), then the QP value used for the coding unit becomes undefined.
  - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the QP value based on the emphasis value corresponding to the coding unit, as [fetched from the quantization map](#), according to the following equation:

$$QP_{\text{new}} = f(QP_{\text{prev}}, e)$$

Where  $QP_{\text{new}}$  is the resulting QP value,  $QP_{\text{prev}}$  is the previously determined QP value,  $e$  is the emphasis value corresponding to the coding unit, and  $f$  is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QP, e_1) \geq f(QP, e_2)$$

**NOTE**

This means that lower emphasis values will result in higher QP values, whereas higher emphasis values will result in lower QP values, but the function is not strictly decreasing with respect to the input emphasis value for a given input QP value.

- If clamping to minimum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding minimum QP value.
- If clamping to maximum QP values is enabled in the applied rate control layer, then the QP value is clamped to the corresponding maximum QP value.
- If [VK\\_VIDEO\\_ENCODE\\_H265\\_CAPABILITY\\_CU\\_QP\\_DIFF\\_WRAPAROUND\\_BIT\\_KHR](#) is not supported, then the determined QP value is clamped in such a way that the [CuQpDeltaVal](#) value of the encoded coding unit complies to the [modified version](#) of equation 8-283 of the [ITU-T H.265 Specification](#).

**NOTE**

The effect of this is that the maximum QP difference across subsequent coding units is limited to the  $[-(26 + QpBdOffset_Y / 2), 25 + QpBdOffset_Y / 2]$  range and only has an observable change in behavior when the video encode operation is

issued with a [QP delta map](#).

- In all cases, the final QP value is clamped to the QP value range supported by the video profile, as reported in the `minQp` and `maxQp` members of [VkVideoEncodeH265CapabilitiesKHR](#).

### 45.21.13. H.265 Encode Requirements

This section described the **required** H.265 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_H265\\_BIT\\_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR::videoCodecOperations](#).

Table 62. Required *Video Std Header Versions*

| Video Std Header Name                             | Version |
|---------------------------------------------------|---------|
| <a href="#">vulkan_video_codec_h265std_encode</a> | 1.0.0   |

Table 63. Required Video Capabilities

| Video Capability                                  | Requirement                                                                     | Requirement Type <sup>1</sup> |

1

The **Requirement Type** column specifies the requirement is either the minimum value all

implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

- 2
- If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.
- 3
- If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQpDelta` **must** be greater than `minQpDelta`.
- 4
- If the `videoMaintenance2` feature is supported.
- 5
- If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.
- 6
- If the `videoEncodeFeedback2` feature is supported.
- 7
- If `maxPerPartitionFeedbackEntries` is greater than zero.

## 45.22. AV1 Encode Operations

Video encode operations using an [AV1 encode profile](#) can be used to encode elementary video stream sequences compliant with the [AV1 Specification](#).

**NOTE**

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video encode operation steps](#) with the codec-specific semantics defined in section 7 of the [AV1 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoAV1SequenceHeader` structure, the optional `StdVideoEncodeAV1DecoderModelInfo` structure, and the optional array of `StdVideoEncodeAV10peratingPointInfo` structures stored in the bound video session parameters object specifying the [active sequence header](#).
  - The `StdVideoEncodeAV1PictureInfo` structure specifying the [AV1 picture information](#).
  - The `StdVideoEncodeAV1ReferenceInfo` structures specifying the [AV1 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).

- The encoded bitstream data is written to the destination video bitstream buffer range as defined in the [AV1 Encode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [encode input picture](#), [active reference pictures](#), and optional [reconstructed picture](#) is accessed as defined in the [AV1 Encode Picture Data Access](#) section.
- The decision on [reference picture setup](#) is made according to the parameters specified in the [AV1 picture information](#).

If the parameters adhere to the syntactic and semantic requirements defined in the corresponding sections of the [AV1 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video encode operation will complete successfully. Otherwise, the video encode operation **may** complete [unsuccessfully](#).

### 45.22.1. AV1 Encode Parameter Overrides

Implementations **may** override, unless otherwise specified, any of the AV1 encode parameters specified in the following Video Std structures:

- [StdVideoAV1SequenceHeader](#)
- [StdVideoEncodeAV1DecoderModelInfo](#)
- [StdVideoEncodeAV10peratingPointInfo](#)
- [StdVideoEncodeAV1PictureInfo](#)
- [StdVideoEncodeAV1ReferenceInfo](#)

All such AV1 encode parameter overrides **must** fulfill the conditions defined in the [Video Encode Parameter Overrides](#) section.

In addition, implementations **must** not override any of the following AV1 encode parameters:

- the following parameters specified in [StdVideoAV1SequenceHeader](#):
  - [flags.still\\_picture](#)
  - [flags.enable\\_order\\_hint](#)
  - [flags.frame\\_id\\_numbers\\_present\\_flag](#)
  - [flags.film\\_grain\\_params\\_present](#)
  - [flags.timing\\_info\\_present\\_flag](#)
  - [flags.initial\\_display\\_delay\\_present\\_flag](#)
  - [delta\\_frame\\_id\\_length\\_minus\\_2](#)
  - [additional\\_frame\\_id\\_length\\_minus\\_1](#)
  - [order\\_hint\\_bits\\_minus\\_1](#)
- the following parameters specified in the [StdVideoAV1ColorConfig](#) structure pointed to by [StdVideoAV1SequenceHeader::pColorConfig](#):
  - [flags.mono\\_chrome](#)

- `flags.color_range`
- `BitDepth`
- `subsampling_x`
- `subsampling_y`
- `color_primaries`
- `transfer_characteristics`
- `matrix_coefficients`
- `chroma_sample_position`
- the following parameters specified in the `StdVideoAV1TimingInfo` structure pointed to by `StdVideoAV1SequenceHeader::pTimingInfo`:
  - `flags.equal_picture_interval`
  - `num_units_in_display_tick`
  - `time_scale`
  - `num_ticks_per_picture_minus_1`
- the parameters specified in `StdVideoEncodeAV1DecoderModelInfo`
- the parameters specified in `StdVideoEncodeAV1OperatingPointInfo`
- the following parameters specified in `StdVideoEncodeAV1PictureInfo`:
  - `flags.show_frame`
  - `flags.showable_frame`
  - `frame_type`
  - `frame_presentation_time`
  - `current_frame_id`
  - `order_hint`
  - `refresh_frame_flags`
  - `render_width_minus_1`
  - `render_height_minus_1`
  - `ref_order_hint`
  - `ref_frame_idx`
  - `delta_frame_id_minus_1`
- the following parameters specified in the `StdVideoEncodeAV1ExtensionHeader` structure pointed to by `StdVideoEncodeAV1PictureInfo::pExtensionHeader` when `VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader` is set to `VK_TRUE`:
  - `temporal_id`
  - `spatial_id`

If `VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly` is set to `VK_TRUE` for a video encode

operation, the implementation will not override `StdVideoEncodeAV1PictureInfo::primary_ref_frame`.

**NOTE**

Implementations supporting the `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` AV1 syntax element capability reported in `VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags` also guarantee the use of the application-specified value for `StdVideoEncodeAV1PictureInfo::primary_ref_frame`. While support for `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` guarantees that the implementation will not override the application-specified `primary_ref_frame`, it does not mandate the implementation to use the reference picture indicated by `primary_ref_frame` for sample prediction as implementations can always decide to use only a subset of the application-specified reference pictures for sample prediction. This means that implementations supporting `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` may end up using the reference picture indicated by `primary_ref_frame` only for CDF data reference even if the application did not set `VkVideoEncodeAV1PictureInfoKHR::primaryReferenceCdfOnly` to `VK_TRUE`.

If `VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment` is not equal to `{8,8}` for the used video profile, implementations will override the coded picture's resolution and parameters related to the width and height in the following manner:

- Let `w` and `h` be the `codedExtent.width` and `codedExtent.height` of the `VkVideoPictureResourceInfoKHR` structure corresponding to the encode input picture, rounded up to the nearest integer multiple of 8.
- Let `aW` and `aH` be `w` and `h` rounded up to the nearest integer multiple of `codedPictureAlignment.width` and `codedPictureAlignment.height` respectively.
- If `w` equals `aW`, no override will occur. Otherwise the coded width will be `aW`.
- If `h` equals `aH`, no override will occur. Otherwise the coded height will be `aH`.

**NOTE**

The AV1 specification codes all resolutions to an 8x8 alignment, but supports unaligned resolutions through implicit cropping. Thus, if the original coded extent, aligned to 8x8, meets the implementation required alignment, no override needs to occur. Otherwise, the implementation cannot code the requested coded extent, so the final resolution in the bitstream is overridden to be aligned to the implementation required alignment.

For example, consider an implementation that is only able to output bitstreams that are 16x16 aligned (as indicated by `VkVideoEncodeAV1CapabilitiesKHR::codedPictureAlignment`). If an application requests the coded extent to be 1920x1080, the resulting bitstream will be 1920x1088. On the other hand, a request of 1920x1082 will result in no override, since the 8x8 alignment of this resolution (1920x1088) is 16x16 aligned.

In case of a `video session parameters` object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, the following `AV1 sequence header` parameters **may** be overridden by the implementation according to

the [quantization map texel size](#) the video session parameters object was created with:

- `StdVideoAV1SequenceHeader::flags.use_128x128_superblock`

This **may** be necessary to change the AV1 superblock size used during encoding to be compatible with the used quantization map texel size.

In case of AV1 encode parameters stored in [video session parameters](#) objects, applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened. If the query indicates that implementation overrides were applied, then the application needs to retrieve and use the encoded AV1 sequence header in the bitstream in order to be able to produce a compliant AV1 video bitstream using the AV1 encode parameters stored in the video session parameters object.

In case of any AV1 encode parameters stored in the encoded bitstream produced by video encode operations, if the implementation supports the [VK\\_VIDEO\\_ENCODE\\_FEEDBACK\\_BITSTREAM\\_HAS\\_OVERRIDES\\_BIT\\_KHR](#) [video encode feedback query](#) flag, the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to those AV1 encode parameters.

### 45.22.2. AV1 Encode Bitstream Data Access

Each video encode operation writes either:

- A single OBU with `obu_type` equal to `OBU_FRAME` comprising of the frame header and tile data of the encoded picture, or
- An OBU with `obu_type` equal to `OBU_FRAME_HEADER` encapsulating the frame header of the encoded picture, followed by one or more OBUs with `obu_type` equal to `OBU_TILE_GROUP` comprising of the tile data of the encoded picture.

In addition, if `VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader` is set to `VK_TRUE` for the video encode operation, then OBU extension headers are included in the generated bitstream as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the [AV1 Specification](#).

### 45.22.3. AV1 Encode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used [video profile](#). Accordingly, the complete image subregion of a [encode input picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [AV1 encode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of

`pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video encode operations using an [AV1 encode profile](#), any access to a picture at the coordinates (x,y), as defined by the [AV1 Specification](#), is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates (x,y).

Implementations **may** choose not to access some or all texels within particular [reference pictures](#) available to a video encode operation (e.g. due to [video encode parameter overrides](#) restricting the effective set of used reference pictures, or if the encoding algorithm chooses not to use certain subregions of the reference picture data for sample prediction).

#### 45.22.4. AV1 Reference Names and Semantics

Individual reference frames used in the encoding process have different semantics, as defined in section 6.10.24 of the [AV1 Specification](#). The AV1 semantics associated with a reference picture is indicated by the corresponding enumeration constant defined in the Video Std enumeration type `StdVideoAV1ReferenceName`:

- `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME` identifies the reference used for intra coding (`INTRA_FRAME`), as defined in sections 2 and 7.11.2 of the [AV1 Specification](#).
- All other enumeration constants refer to backward or forward references used for inter coding, as defined in sections 2 and 7.11.3 of the [AV1 Specification](#):
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` identifies the `LAST_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST2_FRAME` identifies the `LAST2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_LAST3_FRAME` identifies the `LAST3_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_GOLDEN_FRAME` identifies the `GOLDEN_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_BWDREF_FRAME` identifies the `BWDREF_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF2_FRAME` identifies the `ALTREF2_FRAME` reference
  - `STD_VIDEO_AV1_REFERENCE_NAME_ALTREF_FRAME` identifies the `ALTREF_FRAME` reference

These enumeration constants are not directly used in any APIs but are used to indirectly index into certain Video Std and Vulkan API parameter arrays.

#### 45.22.5. AV1 Prediction Modes

AV1 encoding supports multiple types of prediction modes, as described in section 6.10.24 of the [AV1 Specification](#).

Possible AV1 encode prediction modes are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1PredictionModeKHR {
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_INTRA_ONLY_KHR = 0,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_SINGLE_REFERENCE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_UNIDIRECTIONAL_COMPOUND_KHR = 2,
    VK_VIDEO_ENCODE_AV1_PREDICTION_MODE_BIDIRECTIONAL_COMPOUND_KHR = 3,
} VkVideoEncodeAV1PredictionModeKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_AV1\\_PREDICTION\\_MODE\\_INTRA\\_ONLY\\_KHR](#) specifies the use of *intra-only prediction mode*, used when encoding AV1 frames of type [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_KEY](#) or [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_INTRA\\_ONLY](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_PREDICTION\\_MODE\\_SINGLE\\_REFERENCE\\_KHR](#) specifies the use of *single reference prediction mode*, used when encoding AV1 frames of type [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_INTER](#) or [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_SWITCH](#) with [reference\\_select](#), as defined in section 6.8.23 of the [AV1 Specification](#), equal to 0. When using this prediction mode, the application **must** specify a reference picture for at least one [AV1 reference name](#) in [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) that is supported by the implementation, as reported in [VkVideoEncodeAV1CapabilitiesKHR::singleReferenceNameMask](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_PREDICTION\\_MODE\\_UNIDIRECTIONAL\\_COMPOUND\\_KHR](#) specifies the use of *unidirectional compound prediction mode*, used when encoding AV1 frames of type [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_INTER](#) or [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_SWITCH](#) with [reference\\_select](#), as defined in section 6.8.23 of the [AV1 Specification](#), equal to 1, and both [reference names](#) used for prediction are from the same reference frame group, as defined in section 6.10.24 of the [AV1 Specification](#). When using this prediction mode, the application **must** specify a reference picture for at least two [AV1 reference names](#) in [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) that is supported by the implementation, as reported in [VkVideoEncodeAV1CapabilitiesKHR::unidirectionalCompoundReferenceNameMask](#), where those two reference names are one of the allowed pairs of reference names, as defined in section 5.11.25 of the [AV1 Specification](#), listed below:
  - [LAST\\_FRAME](#) and [LAST2\\_FRAME](#),
  - [LAST\\_FRAME](#) and [LAST3\\_FRAME](#),
  - [LAST\\_FRAME](#) and [GOLDEN\\_FRAME](#), or
  - [BWDREF\\_FRAME](#) and [ALTREF\\_FRAME](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_PREDICTION\\_MODE\\_BIDIRECTIONAL\\_COMPOUND\\_KHR](#) specifies the use of *bidirectional compound prediction mode*, used when encoding AV1 frames of type [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_INTER](#) or [STD\\_VIDEO\\_AV1\\_FRAME\\_TYPE\\_SWITCH](#) with [reference\\_select](#), as defined in section 6.8.23 of the [AV1 Specification](#), equal to 1, and the two [reference names](#) used for prediction are from different reference frame groups, as defined in section 6.10.24 of the [AV1 Specification](#). When using this prediction mode, the application **must** specify a reference picture for at least one [AV1 reference name](#) from each reference frame group in [VkVideoEncodeAV1PictureInfoKHR::referenceNameSlotIndices](#) that is supported by the implementation, as reported in [VkVideoEncodeAV1CapabilitiesKHR::bidirectionalCompoundReferenceNameMask](#).

The effective prediction mode used to encode individual AV1 mode info blocks **may** use simpler prediction modes than the one set by the application for the frame, as allowed by the [AV1 Specification](#), in particular:

- Frames encoded with single reference prediction mode **may** contain mode info blocks encoded with intra-only prediction mode.
- Frames encoded with unidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only or single reference prediction mode.
- Frames encoded with bidirectional compound prediction mode **may** contain mode info blocks encoded with intra-only, single reference, or unidirectional compound prediction mode.

#### 45.22.6. AV1 Frame and Tile

AV1 frames are partitioned into tiles, as defined in section 2 of the [AV1 Specification](#).

For the purposes of this specification, the AV1 tiles comprising a frame are referred to as the *picture partitions* of the frame.

#### 45.22.7. AV1 Coding Blocks

AV1 encode supports two types of coding blocks, as defined in section 2 of the [AV1 Specification](#):

- *Superblock*.
- *Mode info block*.

An AV1 mode info block is considered *skipped* when the value of **skip** for the mode info block is set to **1**, as defined in section 5.11.11 of the [AV1 Specification](#).

#### 45.22.8. AV1 Encode Profile

A video profile supporting AV1 video encode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` and adding a `VkVideoEncodeAV1ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoEncodeAV1ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoAV1Profile stdProfile;
} VkVideoEncodeAV1ProfileInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **stdProfile** is a `StdVideoAV1Profile` value specifying the AV1 codec profile, as defined in section

A.2 of the [AV1 Specification](#).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1ProfileInfoKHR-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_ENCODE\\_AV1\\_PROFILE\\_INFO\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

## 45.22.9. AV1 Encode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [AV1 encode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoEncodeAV1CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoEncodeAV1CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1CapabilitiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeAV1CapabilityFlagsKHR flags;
    StdVideoAV1Level         maxLevel;
    VkExtent2D               codedPictureAlignment;
    VkExtent2D               maxTiles;
    VkExtent2D               minTileSize;
    VkExtent2D               maxTileSize;
    VkVideoEncodeAV1SuperblockSizeFlagsKHR superblockSizes;
    uint32_t                 maxSingleReferenceCount;
    uint32_t                 singleReferenceNameMask;
    uint32_t                 maxUnidirectionalCompoundReferenceCount;
    maxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t                 unidirectionalCompoundReferenceNameMask;
    uint32_t                 maxBidirectionalCompoundReferenceCount;
    uint32_t                 maxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t                 maxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t                 bidirectionalCompoundReferenceNameMask;
    uint32_t                 maxTemporalLayerCount;
    uint32_t                 maxSpatialLayerCount;
    uint32_t                 maxOperatingPoints;
    uint32_t                 minQIndex;
    uint32_t                 maxQIndex;
    VkBool32                 prefersGopRemainingFrames;
    VkBool32                 requiresGopRemainingFrames;
    VkVideoEncodeAV1StdFlagsKHR stdSyntaxFlags;
} VkVideoEncodeAV1CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeAV1CapabilityFlagBitsKHR` indicating supported AV1 encoding capabilities.
- `maxLevel` is a `StdVideoAV1Level` value indicating the maximum AV1 level supported by the profile, as defined in section A.3 of the [AV1 Specification](#).
- `codedPictureAlignment` indicates the alignment at which the implementation will code pictures. This capability does not impose any valid usage constraints on the application. However, depending on the `codedExtent` of the encode input picture resource, this capability **may** result in a change of the resolution of the encoded picture, as described in more detail below.
- `maxTiles` indicates the maximum number of AV1 tile columns and rows the implementation supports.
- `minTileSize` indicates the minimum extent of individual AV1 tiles the implementation supports.

- **maxTileSize** indicates the maximum extent of individual AV1 tiles the implementation supports.
- **superblockSizes** is a bitmask of **VkVideoEncodeAV1SuperblockSizeFlagBitsKHR** values indicating the supported AV1 superblock sizes.
- **maxSingleReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **single reference prediction mode**.
- **singleReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **single reference prediction mode**.
- **maxUnidirectionalCompoundReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **unidirectional compound prediction mode**.
- **maxUnidirectionalCompoundGroup1ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **unidirectional compound prediction mode** from reference frame group 1, as defined in section 6.10.24 of the **AV1 Specification**.
- **unidirectionalCompoundReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **unidirectional compound prediction mode**.
- **maxBidirectionalCompoundReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode**.
- **maxBidirectionalCompoundGroup1ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode** from reference frame group 1, as defined in section 6.10.24 of the **AV1 Specification**.
- **maxBidirectionalCompoundGroup2ReferenceCount** indicates the maximum number of reference pictures the implementation supports when using **bidirectional compound prediction mode** from reference frame group 2, as defined in section 6.10.24 of the **AV1 Specification**.
- **bidirectionalCompoundReferenceNameMask** is a bitmask of supported **AV1 reference names** when using **bidirectional compound prediction mode**.
- **maxTemporalLayerCount** indicates the maximum number of AV1 temporal layers supported by the implementation.
- **maxSpatialLayerCount** indicates the maximum number of AV1 spatial layers supported by the implementation.
- **maxOperatingPoints** indicates the maximum number of AV1 operating points supported by the implementation.
- **minQIndex** indicates the minimum quantizer index value supported.
- **maxQIndex** indicates the maximum quantizer index value supported.
- **prefersGopRemainingFrames** indicates that the implementation's rate control algorithm prefers the application to specify the number of frames in each **AV1 rate control group remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **requiresGopRemainingFrames** indicates that the implementation's rate control algorithm requires the application to specify the number of frames in each **AV1 rate control group remaining** in the current **group of pictures** when beginning a **video coding scope**.
- **stdSyntaxFlags** is a bitmask of **VkVideoEncodeAV1StdFlagBitsKHR** indicating capabilities related to AV1 syntax elements.

`singleReferenceNameMask`, `unidirectionalCompoundReferenceNameMask`, and `bidirectionalCompoundReferenceNameMask` are encoded such that when bit index `i` is set, it indicates support for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i`.

NOTE

These masks indicate which elements of the `referenceNameSlotIndices` member of `VkVideoEncodeAV1PictureInfoKHR` are supported to be used by the implementation. It is important to note that both the bits of these masks and the elements of `referenceNameSlotIndices` are indexed such that the first value specifies the support bit and DPB slot index, respectively, for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME` (i.e. there is no bit or element for `STD_VIDEO_AV1_REFERENCE_NAME_INTRA_FRAME`).

`codedPictureAlignment` provides information about implementation limitations to encode arbitrary resolutions. In particular, some implementations **may** not be able to generate bitstreams aligned to the requirements of the AV1 Specification (8x8). In such cases, the implementation **may** override the width and height of the bitstream, in order to produce a bitstream compliant to the AV1 Specification. If such an override occurs, the encoded resolution of the coded picture is enlarged, with the texel values used for the texel coordinates outside of the bounds of the `codedExtent` of the encode input picture resource being first governed by the rules regarding the `encode input picture granularity`. Any texel values outside of the region described by the encode input picture granularity are implementation-defined. Implementations **should** use well-defined values to minimize impact on the produced encoded content.

NOTE

This capability does not impose additional application requirements. However, these overrides change the effective resolution of the bitstream and add padding pixels. Applications sensitive to such overrides **can** use this capability and the corresponding `override behavior` to compute the cropping needed to reproduce the original input of the encoding and transmit it in a side channel (i.e. by using cropping fields available in a container). Additionally, applications **can** explicitly consider this alignment in their coded extent, to avoid implementation-defined texel values being included in the encoded content.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1CapabilitiesKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_CAPABILITIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoCapabilitiesKHR`

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::flags`, indicating the AV1 encoding capabilities supported, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1CapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR =
0x00000001,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_FRAME_SIZE_OVERRIDE_BIT_KHR = 0x00000008,
    VK_VIDEO_ENCODE_AV1_CAPABILITY_MOTION_VECTOR_SCALING_BIT_KHR = 0x00000010,
    // Provided by VK_KHR_video_encode_av1 with VK_KHR_video_encode_intra_refresh
    VK_VIDEO_ENCODE_AV1_CAPABILITY_COMPOUND_PREDICTION_INTRA_REFRESH_BIT_KHR =
0x00000020,
} VkVideoEncodeAV1CapabilityFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_PER\\_RATE\\_CONTROL\\_GROUP\\_MIN\\_MAX\\_Q\\_INDEX\\_BIT\\_KHR](#) specifies support for specifying different quantizer index values in the members of [VkVideoEncodeAV1QIndexKHR](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_GENERATE\\_OBU\\_EXTENSION\\_HEADER\\_BIT\\_KHR](#) specifies support for generating OBU extension headers, as defined in section 5.3.3 of the [AV1 Specification](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_PRIMARY\\_REFERENCE\\_CDF\\_ONLY\\_BIT\\_KHR](#) specifies support for using the primary reference frame indicated by the value of [StdVideoEncodeAV1PictureInfo::primary\\_ref\\_frame](#) in the [AV1 picture information](#) only for CDF data reference, as defined in section 6.8.2 of the [AV1 Specification](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_FRAME\\_SIZE\\_OVERRIDE\\_BIT\\_KHR](#) specifies support for encoding a picture with a frame size different from the maximum frame size defined in the [active AV1 sequence header](#). If this capability is not supported, then [frame\\_size\\_override\\_flag](#) **must** not be set in the [AV1 picture information](#) of the encoded frame and the coded extent of the [encode input picture](#) **must** match the maximum coded extent allowed by the [active AV1 sequence header](#), i.e. ([max\\_frame\\_width\\_minus\\_1](#) + 1, [max\\_frame\\_height\\_minus\\_1](#) + 1).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_MOTION\\_VECTOR\\_SCALING\\_BIT\\_KHR](#) specifies support for motion vector scaling, as defined in section 7.11.3.3 of the [AV1 Specification](#). If this capability is not supported, then the coded extent of all [active reference pictures](#) **must** match the coded extent of the [encode input picture](#). This capability **may** only be supported by a video profile when [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_FRAME\\_SIZE\\_OVERRIDE\\_BIT\\_KHR](#) is also supported.
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_CAPABILITY\\_COMPOUND\\_PREDICTION\\_INTRA\\_REFRESH\\_BIT\\_KHR](#) specifies support for encoding frames using [unidirectional or bidirectional compound prediction mode](#) with [intra refresh](#) enabled.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1CapabilityFlagsKHR;
```

[VkVideoEncodeAV1CapabilityFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1CapabilityFlagBitsKHR](#).

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::stdSyntaxFlags`, indicating the capabilities related to the AV1 syntax elements, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1StdFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1StdFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_AV1_STD_UNIFORM_TILE_SPACING_FLAG_SET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoAV1TileInfoFlags::uniform_tile_spacing_flag` in the AV1 tile parameters when that value is 1, regardless of the coded extent of the `encode input picture` and the number of tile columns and rows requested in the `TileCols` and `TileRows` members of `StdVideoAV1TileInfo`.
- `VK_VIDEO_ENCODE_AV1_STD_SKIP_MODE_PRESENT_UNSET_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeAV1PictureInfoFlags::skip_mode_present` when that value is 0.
- `VK_VIDEO_ENCODE_AV1_STD_PRIMARY_REF_FRAME_BIT_KHR` specifies whether the implementation supports using the application-provided value for `StdVideoEncodeAV1PictureInfo::primary_ref_frame`.
- `VK_VIDEO_ENCODE_AV1_STD_DELTA_Q_BIT_KHR` specifies whether the implementation supports using the application-provided values for the `DeltaQYDc`, `DeltaQUdc`, `DeltaQUAc`, `DeltaQVDc`, and `DeltaQVAc` members of `StdVideoAV1Quantization`.

These capability flags provide information to the application about specific AV1 syntax element values that the implementation supports without having to `override` them and do not otherwise restrict the values that the application **can** specify for any of the mentioned AV1 syntax elements.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1StdFlagsKHR;
```

`VkVideoEncodeAV1StdFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoEncodeAV1StdFlagBitsKHR`.

Bits which **may** be set in `VkVideoEncodeAV1CapabilitiesKHR::superblockSizes`, indicating the superblock sizes supported by the implementation, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1SuperblockSizeFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_64_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_SUPERBLOCK_SIZE_128_BIT_KHR = 0x00000002,
} VkVideoEncodeAV1SuperblockSizeFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_AV1\\_SUPERBLOCK\\_SIZE\\_64\\_BIT\\_KHR](#) specifies that a superblock size of 64x64 is supported.
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_SUPERBLOCK\\_SIZE\\_128\\_BIT\\_KHR](#) specifies that a superblock size of 128x128 is supported.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1SuperblockSizeFlagsKHR;
```

[VkVideoEncodeAV1SuperblockSizeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#).

Implementations **must** support at least one of [VkVideoEncodeAV1SuperblockSizeFlagBitsKHR](#).

## 45.22.10. AV1 Encode Quality Level Properties

When calling [vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specified as [VK\\_VIDEO\\_CODEC\\_OPERATION\\_ENCODE\\_AV1\\_BIT\\_KHR](#), the [VkVideoEncodeAV1QualityLevelPropertiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoEncodeQualityLevelPropertiesKHR](#) structure to retrieve additional video encode quality level properties specific to AV1 encoding.

The [VkVideoEncodeAV1QualityLevelPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QualityLevelPropertiesKHR {
    VkStructureType          sType;
    void*                    pNext;
    VkVideoEncodeAV1RateControlFlagsKHR preferredRateControlFlags;
    uint32_t                 preferredGopFrameCount;
    uint32_t                 preferredKeyFramePeriod;
    uint32_t                 preferredConsecutiveBipredictiveFrameCount;
    uint32_t                 preferredTemporalLayerCount;
    VkVideoEncodeAV1QIndexKHR preferredConstantQIndex;
    uint32_t                 preferredMaxSingleReferenceCount;
    uint32_t                 preferredSingleReferenceNameMask;
    uint32_t
preferredMaxUnidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxUnidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredUnidirectionalCompoundReferenceNameMask;
    uint32_t
preferredMaxBidirectionalCompoundReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup1ReferenceCount;
    uint32_t
preferredMaxBidirectionalCompoundGroup2ReferenceCount;
    uint32_t
preferredBidirectionalCompoundReferenceNameMask;
} VkVideoEncodeAV1QualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlFlags` is a bitmask of `VkVideoEncodeAV1RateControlFlagBitsKHR` values indicating the preferred flags to use for `VkVideoEncodeAV1RateControlInfoKHR::flags`.
- `preferredGopFrameCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::gopFrameCount`.
- `preferredKeyFramePeriod` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::keyFramePeriod`.
- `preferredConsecutiveBipredictiveFrameCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::consecutiveBipredictiveFrameCount`.
- `preferredTemporalLayerCount` indicates the preferred value to use for `VkVideoEncodeAV1RateControlInfoKHR::temporalLayerCount`.
- `preferredConstantQIndex` indicates the preferred value to use for `VkVideoEncodeAV1PictureInfoKHR::constantQIndex` when using `rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `preferredMaxSingleReferenceCount` indicates the preferred maximum number of reference pictures to use with `single reference prediction mode`.

- `preferredSingleReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [single reference prediction mode](#).
- `preferredMaxUnidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with [unidirectional compound prediction mode](#).
- `preferredMaxUnidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with [unidirectional compound prediction mode](#) from reference frame group 1, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredUnidirectionalCompoundReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [unidirectional compound prediction mode](#).
- `preferredMaxBidirectionalCompoundReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#).
- `preferredMaxBidirectionalCompoundGroup1ReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#) from reference frame group 1, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredMaxBidirectionalCompoundGroup2ReferenceCount` indicates the preferred maximum number of reference pictures to use with [bidirectional compound prediction mode](#) from reference frame group 2, as defined in section 6.10.24 of the [AV1 Specification](#).
- `preferredBidirectionalCompoundReferenceNameMask` is a bitmask of preferred [AV1 reference names](#) when using [bidirectional compound prediction mode](#).

`preferredSingleReferenceNameMask`, `preferredUnidirectionalCompoundReferenceNameMask`, and `preferredBidirectionalCompoundReferenceNameMask` are encoded such that when bit index *i* is set, it indicates preference for using the [AV1 reference name](#) `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i`.

### Valid Usage (Implicit)

- `VOID-VkVideoEncodeAV1QualityLevelPropertiesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_QUALITY_LEVEL_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- [VkVideoEncodeQualityLevelPropertiesKHR](#)

## 45.22.11. AV1 Encode Session

Additional parameters can be specified when creating a video session with an AV1 encode profile by including an instance of the [VkVideoEncodeAV1SessionCreateInfoKHR](#) structure in the `pNext` chain of [VkVideoSessionCreateInfoKHR](#).

The [VkVideoEncodeAV1SessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMaxLevel;
    StdVideoAV1Level    maxLevel;
} VkVideoEncodeAV1SessionCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevel` indicates whether the value of `maxLevel` should be used by the implementation. When it is set to `VK_FALSE`, the implementation ignores the value of `maxLevel` and uses the value of `VkVideoEncodeAV1CapabilitiesKHR::maxLevel`, as reported by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile.
- `maxLevel` is a `StdVideoAV1Level` value specifying the upper bound on the AV1 level for the video bitstreams produced by the created video session.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionCreateInfoKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_CREATE_INFO_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoSessionCreateInfoKHR`

## 45.22.12. AV1 Encode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR` contain a single instance of the following parameter set:

### AV1 Sequence Header

Represented by `StdVideoAV1SequenceHeader` structures and interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- the `StdVideoAV1ColorConfig` structure pointed to by `pColorConfig` is interpreted as follows:
  - `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
  - all other members of `StdVideoAV1ColorConfig` are interpreted as defined in section 6.4.2 of

the [AV1 Specification](#);

- if `flags.timing_info_present_flag` is set, then the `StdVideoAV1TimingInfo` structure pointed to by `pTimingInfo` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1TimingInfo` are interpreted as defined in section 6.4.3 of the [AV1 Specification](#);
- all other members of `StdVideoAV1SequenceHeader` are interpreted as defined in section 6.4 of the [AV1 Specification](#).

When `StdVideoAV1SequenceHeader::flags.timing_info_present_flag` is set, the AV1 sequence header **can** be amended with AV1 decoder model information, represented by a `StdVideoEncodeAV1DecoderModelInfo` structure and interpreted as follows:

- `reserved1` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV1DecoderModelInfo` are interpreted as defined in section 6.4.4 of the [AV1 Specification](#).

When `StdVideoAV1SequenceHeader::flags.reduced_still_picture_header` is not set, the AV1 sequence header **can** be amended with AV1 operating point information, represented by an array of `StdVideoEncodeAV10operatingPointInfo` structures and interpreted as follows:

- `flags.reserved` is used only for padding purposes and is otherwise ignored;
- all other members of `StdVideoEncodeAV10operatingPointInfo` are interpreted as the corresponding element of the respective arrays defined in section 6.4 of the [AV1 Specification](#).

Implementations **may** override any of these parameters according to the semantics defined in the [Video Encode Parameter Overrides](#) section before storing the resulting AV1 sequence header into the video session parameters object. Applications need to use the `vkGetEncodedVideoSessionParametersKHR` command to determine whether any implementation overrides happened and to retrieve the encoded AV1 sequence header in order to be able to produce a compliant AV1 video bitstream.

The encoded AV1 sequence header retrieved using the `vkGetEncodedVideoSessionParametersKHR` command is encoded as a single OBU with `obu_type` equal to `OBU_SEQUENCE_HEADER`, as defined in section 5.3 of the [AV1 Specification](#).

Such AV1 sequence header overrides **may** also have cascading effects on the implementation overrides applied to the encoded bitstream produced by video encode operations. If the implementation supports the `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` video encode feedback query flag, then the application **can** use such queries to retrieve feedback about whether any implementation overrides have been applied to the encoded bitstream.

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure specifying the contents of the object.

The `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoAV1SequenceHeader* pStdSequenceHeader;
    const StdVideoEncodeAV1DecoderModelInfo* pStdDecoderModelInfo;
    uint32_t                 stdOperatingPointCount;
    const StdVideoEncodeAV1OperatingPointInfo* pStdOperatingPoints;
} VkVideoEncodeAV1SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSequenceHeader` is a pointer to a `StdVideoAV1SequenceHeader` structure describing parameters of the [AV1 sequence header](#) entry to store in the created object.
- `pStdDecoderModelInfo` is `NULL` or a pointer to a `StdVideoEncodeAV1DecoderModelInfo` structure specifying the [AV1 decoder model information](#) to store in the created object.
- `stdOperatingPointCount` is the number of elements in the `pStdOperatingPoints` array.
- `pStdOperatingPoints` is `NULL` or a pointer to an array of `stdOperatingPointCount` number of `StdVideoEncodeAV1OperatingPointInfo` structures specifying the [AV1 operating point information](#) to store in the created object. Each element `i` specifies the parameter values corresponding to element `i` of the syntax elements defined in section 6.4 of the [AV1 Specification](#).

### Valid Usage

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-10288  
`pStdSequenceHeader->flags.film_grain_params_present` **must** be zero

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdSequenceHeader-parameter  
`pStdSequenceHeader` **must** be a valid pointer to a valid `StdVideoAV1SequenceHeader` value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdDecoderModelInfo-parameter  
If `pStdDecoderModelInfo` is not `NULL`, `pStdDecoderModelInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1DecoderModelInfo` value
- VUID-VkVideoEncodeAV1SessionParametersCreateInfoKHR-pStdOperatingPoints-parameter

If `stdOperatingPointCount` is not 0, and `pStdOperatingPoints` is not NULL, `pStdOperatingPoints` **must** be a valid pointer to an array of `stdOperatingPointCount` `StdVideoEncodeAV1OperatingPointInfo` values

## Structure Chaining

### Extends the structure

- [VkVideoSessionParametersCreateInfoKHR](#)

## 45.22.13. AV1 Encoding Parameters

The [VkVideoEncodeAV1PictureInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1PictureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeAV1PredictionModeKHR predictionMode;
    VkVideoEncodeAV1RateControlGroupKHR rateControlGroup;
    uint32_t                 constantQIndex;
    const StdVideoEncodeAV1PictureInfo* pStdPictureInfo;
    int32_t                  referenceNameSlotIndices
[VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR];
    VkBool32                 primaryReferenceCdfOnly;
    VkBool32                 generateOBUExtensionHeader;
} VkVideoEncodeAV1PictureInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `predictionMode` specifies the [AV1 prediction mode](#) to use for the encoded frame.
- `rateControlGroup` specifies the [AV1 rate control group](#) to use for the encoded frame when the current [rate control mode](#) is not [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#). Otherwise it is ignored.
- `constantQIndex` is the quantizer index to use for the encoded frame if the current [rate control mode](#) configured for the video session is [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#).
- `pStdPictureInfo` is a pointer to a [StdVideoEncodeAV1PictureInfo](#) structure specifying [AV1 picture information](#).
- `referenceNameSlotIndices` is an array of seven ([VK\\_MAX\\_VIDEO\\_AV1\\_REFERENCES\\_PER\\_FRAME\\_KHR](#), which is equal to the Video Std definition [STD\\_VIDEO\\_AV1\\_REFS\\_PER\\_FRAME](#)) signed integer values specifying the index of the [DPB slot](#) or a negative integer value for each [AV1 reference name](#) used for inter coding. In particular, the DPB slot index for the AV1 reference name `frame` is specified in `referenceNameSlotIndices`

[frame - STD\_VIDEO\_AV1\_REFERENCE\_NAME\_LAST\_FRAME].

- `primaryReferenceCdfOnly` controls whether the primary reference frame indicated by the value of `pStdPictureInfo->primary_ref_frame` is used only for CDF data reference, as defined in sections 6.8.2 of the [AV1 Specification](#). If set to `VK_TRUE`, then the primary reference frame's picture data will not be used for sample prediction.
- `generateObuExtensionHeader` controls whether OBU extension headers are generated into the target bitstream, as defined in sections 5.3.1, 5.3.2, and 5.3.3 of the [AV1 Specification](#).

This structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR` to specify the codec-specific picture information for an [AV1 encode operation](#).

### Encode Input Picture Information

When this structure is specified in the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to `vkCmdEncodeVideoKHR`, the information related to the [encode input picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- The encode input picture is associated with the [AV1 picture information](#) provided in `pStdPictureInfo`.

### Std Picture Information

The members of the `StdVideoEncodeAV1PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `pSegmentation` **must** be `NULL`

#### NOTE

AV1 segmentation is currently not supported in video encode operations. Accordingly, the application needs to set `flags.segmentation_enabled` to 0 and `pSegmentation` to `NULL`.

- `pTileInfo` is `NULL` or a pointer to a `StdVideoAV1TileInfo` structure specifying [AV1 tile parameters](#);
- the `StdVideoAV1Quantization` structure pointed to by `pQuantization` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - all other members of `StdVideoAV1Quantization` are interpreted as defined in section 6.8.11 of the [AV1 Specification](#);
- the `StdVideoAV1LoopFilter` structure pointed to by `pLoopFilter` is interpreted as follows:
  - `flags.reserved` is used only for padding purposes and is otherwise ignored;
  - `update_ref_delta` is a bitmask where bit index *i* is interpreted as the value of `update_ref_delta` corresponding to element *i* of `loop_filter_ref_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);

- `update_mode_delta` is a bitmask where bit index `i` is interpreted as the value of `update_mode_delta` corresponding to element `i` of `loop_filter_mode_deltas` as defined in section 6.8.10 of the [AV1 Specification](#);
- all other members of `StdVideoAV1LoopFilter` are interpreted as defined in section 6.8.10 of the [AV1 Specification](#);
- if `flags.enable_cdef` is set in the [active sequence header](#), then the members of the `StdVideoAV1CDEF` structure pointed to by `pCDEF` are interpreted as follows:
  - `cdef_y_sec_strength` and `cdef_uv_sec_strength` are the bitstream values of the corresponding syntax elements defined in section 5.9.19 of the [AV1 Specification](#);
  - all other members of `StdVideoAV1CDEF` are interpreted as defined in section 6.10.14 of the [AV1 Specification](#);
- if `flags.UsesLr` is set in the [active sequence header](#), then the `StdVideoAV1LoopRestoration` structure pointed to by `pLoopRestoration` is interpreted as follows:
  - `LoopRestorationSize[plane]` is interpreted as  $\log_2(\text{size}) - 5$ , where `size` is the value of `LoopRestorationSize[plane]` as defined in section 6.10.15 of the [AV1 Specification](#);
  - all other members of `StdVideoAV1LoopRestoration` are defined as in section 6.10.15 of the [AV1 Specification](#);
- the members of the `StdVideoAV1GlobalMotion` structure pointed to by `pGlobalMotion` are interpreted as defined in section 7.10 of the [AV1 Specification](#);
- `pExtensionHeader` is `NULL` or a pointer to a `StdVideoEncodeAV1ExtensionHeader` structure whose `temporal_id` and `spatial_id` members specify the temporal and spatial layer ID of the reference frame, respectively (these IDs are encoded into the OBU extension header if `VkVideoEncodeAV1PictureInfoKHR::generateObuExtensionHeader` is set to `VK_TRUE` for the encode operation);
- if `flags.buffer_removal_time_present_flag` is set, then `pBufferRemovalTimes` is a pointer to an array of `N` number of unsigned integer values specifying the elements of the `buffer_removal_time` array, as defined in section 6.8.2 of the [AV1 Specification](#), where `N` is the number of operating points specified for the [active sequence header](#) through `VkVideoEncodeAV1SessionParametersCreateInfoKHR::stdOperatingPointCount`;
- all other members are interpreted as defined in section 6.8 of the [AV1 Specification](#).

Reference picture setup is controlled by the value of `StdVideoEncodeAV1PictureInfo::refresh_frame_flags`. If it is not zero and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in `pEncodeInfo->pSetupReferenceSlot->slotIndex`. If `StdVideoEncodeAV1PictureInfo::refresh_frame_flags` is zero, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

## Std Tile Parameters

Specifying AV1 tile parameters is optional. If `StdVideoEncodeAV1PictureInfo::pTileInfo` is `NULL`, then the implementation determines the values of AV1 tile parameters defined in section 6.8.14 of the [AV1 Specification](#) in an implementation-dependent manner. If `StdVideoEncodeAV1PictureInfo::pTileInfo` is not `NULL`, then the members of the `StdVideoAV1TileInfo` structure pointed to by `StdVideoEncodeAV1PictureInfo::pTileInfo` are

interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `TileCols` and `TileRows` specify the number of tile columns and tile rows as defined in section 6.8.14 of the [AV1 Specification](#);
- `tile_size_bytes_minus_1` is ignored, as its value, as defined in section 6.8.14 of the [AV1 Specification](#), is determined as the result of the encoding process;
- `pMiColStarts` and `pMiRowStarts` are ignored, as the elements of the `MiColStarts` and `MiRowStarts` arrays defined in section 6.8.14 of the [AV1 Specification](#) are determined by the implementation based on the tile widths and heights determined by the implementation or specified through the `pWidthInSbsMinus1` and `pHeightInSbsMinus1` arrays, respectively;
- `pWidthInSbsMinus1` is `NULL` or a pointer to an array of `TileCols` number of unsigned integers that corresponds to `width_in_sbs_minus_1` defined in section 6.8.14 of the [AV1 Specification](#);
- `pHeightInSbsMinus1` is `NULL` or is a pointer to an array of `TileRows` number of unsigned integers that corresponds to `height_in_sbs_minus_1` defined in section 6.8.14 of the [AV1 Specification](#);
- all other members of `StdVideoAV1TileInfo` are interpreted as defined in section 6.8.14 of the [AV1 Specification](#).

If `flags.uniform_tile_spacing_flag` is set, then `pWidthInSbsMinus1` and `pHeightInSbsMinus1` are ignored.

If `flags.uniform_tile_spacing_flag` is not set and `pWidthInSbsMinus1` is `NULL`, then the width of individual tile columns is determined in an implementation-dependent manner.

If `flags.uniform_tile_spacing_flag` is not set and `pHeightInSbsMinus1` is `NULL`, then the height of individual tile rows is determined in an implementation-dependent manner.

#### NOTE

In general, implementations are expected to respect the application-specified AV1 tile parameters. However, as implementations may have restrictions on the combination of tile column and row counts, and tile widths and heights with respect to the extent of the encoded frame beyond the restrictions specified in the [AV1 Specification](#) and this specification (through video profile capabilities), certain parameter combinations may require the implementation to [override](#) them in order to conform to such implementation-specific limitations.

### Active Parameter Sets

The *active sequence header* is the [AV1 sequence header](#) stored in the bound video session parameters object.

### Valid Usage

- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10289  
If `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PRIMARY_REFERENCE_CDF_ONLY_BIT_KHR`, then `primaryReferenceCdfOnly` must be `VK_FALSE`

- VUID-VkVideoEncodeAV1PictureInfoKHR-primaryReferenceCdfOnly-10290  
If `primaryReferenceCdfOnly` is set to `VK_TRUE`, then `pStdPictureInfo->primary_ref_frame` **must** be less than `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-10291  
If `pStdPictureInfo->primary_ref_frame` is less than `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR`, then `referenceNameSlotIndices[pStdPictureInfo->primary_ref_frame]` **must** not be negative
- VUID-VkVideoEncodeAV1PictureInfoKHR-flags-10292  
If `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_GENERATE_OBU_EXTENSION_HEADER_BIT_KHR`, then `generateObuExtensionHeader` **must** be `VK_FALSE`
- VUID-VkVideoEncodeAV1PictureInfoKHR-generateObuExtensionHeader-10293  
If `generateObuExtensionHeader` is set to `VK_TRUE`, then `pStdPictureInfo->pExtensionHeader` **must** not be `NULL`

## Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1PictureInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_PICTURE_INFO_KHR`
- VUID-VkVideoEncodeAV1PictureInfoKHR-predictionMode-parameter  
`predictionMode` **must** be a valid `VkVideoEncodeAV1PredictionModeKHR` value
- VUID-VkVideoEncodeAV1PictureInfoKHR-rateControlGroup-parameter  
`rateControlGroup` **must** be a valid `VkVideoEncodeAV1RateControlGroupKHR` value
- VUID-VkVideoEncodeAV1PictureInfoKHR-pStdPictureInfo-parameter  
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1PictureInfo` value

## Structure Chaining

### Extends the structure

- `VkVideoEncodeInfoKHR`

The `VkVideoEncodeAV1DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoEncodeAV1ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeAV1DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoEncodeAV1ReferenceInfo` structure specifying [AV1 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [AV1 encode operation](#).

### Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoEncodeInfoKHR::pReferenceSlots`, one element is added to the list of [active reference pictures](#) used by the video encode operation for each element of `VkVideoEncodeInfoKHR::pReferenceSlots` as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- The reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoEncodeInfoKHR::pReferenceSlots`.
- The reference picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

### Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoEncodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- The image subregion used is determined according to the [AV1 Encode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoEncodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [AV1 reference information](#) provided in `pStdReferenceInfo`.

### Std Reference Information

The members of the `StdVideoEncodeAV1ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.reserved` and `reserved1` are used only for padding purposes and are otherwise ignored;
- `flags.disable_frame_end_update_cdf` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `flags.segmentation_enabled` is interpreted as defined in section 6.8.13 of the [AV1 Specification](#);
- `RefFrameId` is interpreted as the element of the `RefFrameId` array defined in section 6.8.2 of the [AV1 Specification](#) corresponding to the reference frame;
- `frame_type` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);
- `OrderHint` is interpreted as defined in section 6.8.2 of the [AV1 Specification](#);

- `pExtensionHeader` is `NULL` or a pointer to a `StdVideoEncodeAV1ExtensionHeader` structure whose `temporal_id` and `spatial_id` members specify the temporal and spatial layer ID of the reference frame, respectively.

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeAV1DpbSlotInfoKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoEncodeAV1DpbSlotInfoKHR-pStdReferenceInfo-parameter`  
`pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoEncodeAV1ReferenceInfo` value

### Structure Chaining

#### Extends the structure

- `VkVideoReferenceSlotInfoKHR`

## 45.22.14. AV1 Encode Rate Control

### Group of Pictures

In case of AV1 encoding it is common practice to follow a regular pattern of frame types and prediction directions in display order when encoding subsequent frames. This pattern is referred to as the *group of pictures* (GOP).

The [AV1 Specification](#), unlike some other video compression standards, does not restrict the direction in display order of the referenced frames based on the used frame type or [AV1 prediction mode](#). Accordingly, this specification introduces the concept of *rate control groups* for which the application **can** specify separate rate control configuration parameters. When encoding a frame, the application specifies the rate control group the encoded frame belongs to through a `VkVideoEncodeAV1RateControlGroupKHR` value in `VkVideoEncodeAV1PictureInfoKHR::rateControlGroup`. This value is then used by the implementation's rate control algorithm to determine which rate control configuration parameters apply to it.

Possible AV1 encode rate control groups are as follows:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlGroupKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR = 0,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR = 1,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR = 2,
} VkVideoEncodeAV1RateControlGroupKHR;
```

- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR` **should** be specified when encoding AV1 frames that use intra-only prediction (e.g. when encoding AV1 frames of type `STD_VIDEO_AV1_FRAME_TYPE_KEY` or `STD_VIDEO_AV1_FRAME_TYPE_INTRA_ONLY`).

- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` **should** be specified when encoding AV1 frames that only have forward references in display order.
- `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` **should** be specified when encoding AV1 frames that have backward references in display order.

**NOTE**

While the application can specify any rate control group for any frame, regardless of the frame type, prediction mode, or prediction direction, specifying a rate control group that does not reflect the prediction direction used by the encoded frame may result in unexpected behavior of the implementation's rate control algorithm.

A regular GOP is defined by the following parameters:

- The number of frames in the GOP;
- The number of consecutive frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` between frames encoded with other rate control groups in display order.

Frame types in a regular GOP follow each other in display order according to the following algorithm:

1. The first frame is always a frame encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR`.
2. This is followed by a number of consecutive frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR`.
3. If the number of frames in the GOP is not reached yet, then the next frame is a frame encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` and the algorithm continues from step 2.

Figure 37. AV1 regular GOP starting with an intra-only frame

When frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` are used in a video sequence, the *key frame period* refers to the distance between subsequent frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY`.

It is also typical for AV1 encoding to use specific reference picture usage patterns across the frames of the GOP. The two most common reference patterns used are as follows:

## Flat Reference Pattern

- Each frame encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_PREDICTIVE\\_KHR](#) refers to the last frame that was not encoded using [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#), in display order, as its forward reference.
- Each frame encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#) refers to the last frame that was not encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#), in display order, as its forward reference, and refers to the next frame that was not encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#), in display order, as its backward reference.

Figure 38. AV1 flat reference pattern

## Dyadic Reference Pattern

- Each frame encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_PREDICTIVE\\_KHR](#) refers to the last frame that was not encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#), in display order, as its forward reference.
- The following algorithm is applied to the sequence of consecutive frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#) between frames using other [rate control groups](#) in display order:
  - The frame in the middle of this sequence uses the frame preceding the sequence as its forward reference, and uses the frame following the sequence as its backward reference.
  - The algorithm is executed recursively for the following frame sequences:
    - The frames of the original sequence preceding the frame in the middle, if any.
    - The frames of the original sequence following the frame in the middle, if any.

Figure 39. AV1 dyadic reference pattern

The application **can** provide guidance to the implementation's rate control algorithm about the structure of the GOP used by the application. Any such guidance about the GOP and its structure does not mandate that specific GOP structure to be used by the application, as the frame type and the selected [rate control group](#) is still application-controlled, however, any deviation from the provided guidance **may** result in undesired rate control behavior including, but not limited, to the implementation not being able to conform to the expected average or target bitrates, or other rate control parameters specified by the application.

When an AV1 encode session is used to encode multiple temporal layers, it is also common practice to follow a regular pattern for the AV1 temporal ID for the encoded frames in display order when encoding subsequent frames. This pattern is referred to as the *temporal GOP*. The most common temporal layer pattern used is as follows:

### Dyadic Temporal Layer Pattern

- The number of frames in the temporal GOP is  $2^{n-1}$ , where  $n$  is the number of temporal layers.
- The  $i^{\text{th}}$  frame in the temporal GOP uses temporal ID  $t$ , if and only if the index of the least significant bit set in  $i$  equals  $n-t-1$ , except for the first frame, which is the only frame in the temporal GOP using temporal ID zero.
- The  $i^{\text{th}}$  frame in the temporal GOP uses the  $r^{\text{th}}$  frame as reference, where  $r$  is calculated from  $i$  by clearing the least significant bit set in it, except for the first frame in the temporal GOP, which uses the first frame of the previous temporal GOP, if any, as reference.

Text is not SVG - cannot display

Figure 40. AV1 dyadic temporal layer pattern

#### NOTE

Multi-layer rate control and multi-layer coding are typically used for streaming cases where low latency is expected, hence frames usually do not use backward references in display order.

The `VkVideoEncodeAV1RateControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoEncodeAV1RateControlFlagsKHR flags;
    uint32_t                 gopFrameCount;
    uint32_t                 keyFramePeriod;
    uint32_t                 consecutiveBipredictiveFrameCount;
    uint32_t                 temporalLayerCount;
} VkVideoEncodeAV1RateControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeAV1RateControlFlagBitsKHR` specifying AV1 rate control flags.
- `gopFrameCount` is the number of frames within a [group of pictures \(GOP\)](#) intended to be used by the application. If it is set to 0, the rate control algorithm **may** assume an implementation-dependent GOP length. If it is set to `UINT32_MAX`, the GOP length is treated as infinite.
- `keyFramePeriod` is the interval, in terms of number of frames, between two frames with the AV1 frame type `STD_VIDEO_AV1_FRAME_TYPE_KEY` (see [key frame period](#)). If it is set to 0, the rate control algorithm **may** assume an implementation-dependent key frame period. If it is set to `UINT32_MAX`, the key frame period is treated as infinite.

- **consecutiveBipredictiveFrameCount** is the number of consecutive frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` between frames encoded with other **rate control groups** within the **GOP**.
- **temporalLayerCount** specifies the number of AV1 temporal layers that the application intends to use.

When an instance of this structure is included in the **pNext** chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, and `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, the parameters in this structure are used as guidance for the implementation's rate control algorithm (see [Video Coding Control](#)).

### Valid Usage

- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10294  
If **flags** contains `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR` or `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`, then it **must** also contain `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10295  
If **flags** contains `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR`, then it **must** not also contain `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-10296  
If **flags** contains `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR`, then **gopFrameCount** **must** be greater than 0
- VUID-VkVideoEncodeAV1RateControlInfoKHR-keyFramePeriod-10297  
If **keyFramePeriod** is not 0, then it **must** be greater than or equal to **gopFrameCount**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-consecutiveBipredictiveFrameCount-10298  
If **consecutiveBipredictiveFrameCount** is not 0, then it **must** be less than **gopFrameCount**
- VUID-VkVideoEncodeAV1RateControlInfoKHR-temporalLayerCount-10299  
**temporalLayerCount** **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxTemporalLayerCount`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlInfoKHR-sType-sType  
**sType** **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_INFO_KHR`
- VUID-VkVideoEncodeAV1RateControlInfoKHR-flags-parameter  
If **flags** is not 0, **flags** **must** be a valid combination of `VkVideoEncodeAV1RateControlFlagBitsKHR` values

## Structure Chaining

### Extends the structures

- [VkVideoBeginCodingInfoKHR](#)
- [VkVideoCodingControlInfoKHR](#)

Bits which **can** be set in [VkVideoEncodeAV1RateControlInfoKHR::flags](#), specifying AV1 rate control flags, are:

```
// Provided by VK_KHR_video_encode_av1
typedef enum VkVideoEncodeAV1RateControlFlagBitsKHR {
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REGULAR_GOP_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_KHR =
0x00000002,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_AV1_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_KHR = 0x00000008,
} VkVideoEncodeAV1RateControlFlagBitsKHR;
```

- [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_REGULAR\\_GOP\\_BIT\\_KHR](#) specifies that the application intends to use a [regular GOP structure](#) according to the parameters specified in the [gopFrameCount](#) and [keyFramePeriod](#) members of the [VkVideoEncodeAV1RateControlInfoKHR](#) structure.
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_TEMPORAL\\_LAYER\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#) specifies that the application intends to follow a [dyadic temporal layer pattern](#).
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_FLAT\\_BIT\\_KHR](#) specifies that the application intends to follow a [flat reference pattern](#) in the GOP.
- [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_REFERENCE\\_PATTERN\\_DYADIC\\_BIT\\_KHR](#) specifies that the application intends to follow a [dyadic reference pattern](#) in the GOP.

```
// Provided by VK_KHR_video_encode_av1
typedef VkFlags VkVideoEncodeAV1RateControlFlagsKHR;
```

[VkVideoEncodeAV1RateControlFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeAV1RateControlFlagBitsKHR](#).

### Rate Control Layers

The [VkVideoEncodeAV1RateControlLayerInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1RateControlLayerInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useMinQIndex;
    VkVideoEncodeAV1QIndexKHR minQIndex;
    VkBool32           useMaxQIndex;
    VkVideoEncodeAV1QIndexKHR maxQIndex;
    VkBool32           useMaxFrameSize;
    VkVideoEncodeAV1FrameSizeKHR maxFrameSize;
} VkVideoEncodeAV1RateControlLayerInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the lower bounds on the quantizer index values specified in `minQIndex`.
- `minQIndex` specifies the lower bounds on the quantizer index values, for each `rate control group`, that the implementation's rate control algorithm will use when `useMinQIndex` is set to `VK_TRUE`.
- `useMaxQIndex` indicates whether the quantizer index values determined by rate control will be clamped to the upper bounds on the quantizer index values specified in `maxQIndex`.
- `maxQIndex` specifies the upper bounds on the quantizer index values, for each `rate control group`, that the implementation's rate control algorithm will use when `useMaxQIndex` is set to `VK_TRUE`.
- `useMaxFrameSize` indicates whether the implementation's rate control algorithm **should** use the values specified in `maxFrameSize` as the upper bounds on the encoded frame size for each `rate control group`.
- `maxFrameSize` specifies the upper bounds on the encoded frame size, for each `rate control group`, when `useMaxFrameSize` is set to `VK_TRUE`.

When used, the values in `minQIndex` and `maxQIndex` guarantee that the effective quantizer index values used by the implementation will respect those lower and upper bounds, respectively. However, limiting the range of quantizer index values that the implementation is able to use will also limit the capabilities of the implementation's rate control algorithm to comply to other constraints. In particular, the implementation **may** not be able to comply to the following:

- The average and/or peak `bitrate` values to be used for the encoded bitstream specified in the `averageBitrate` and `maxBitrate` members of the `VkVideoEncodeRateControlLayerInfoKHR` structure.
- The upper bounds on the encoded frame size, for each `rate control group`, specified in the `maxFrameSize` member of `VkVideoEncodeAV1RateControlLayerInfoKHR`.

#### NOTE

In general, applications need to configure rate control parameters appropriately in order to be able to get the desired rate control behavior, as described in the [Video Encode Rate Control](#) section.

When an instance of this structure is included in the `pNext` chain of a

`VkVideoEncodeRateControlLayerInfoKHR` structure specified in one of the elements of the `players` array member of the `VkVideoEncodeRateControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command, `VkVideoCodingControlInfoKHR::flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, and the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, it specifies the AV1-specific rate control parameters of the rate control layer corresponding to that element of `pLayers`.

### Valid Usage

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10300  
If `useMinQIndex` is `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10301  
If `useMinQIndex` is `VK_TRUE` and `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10302  
If `useMaxQIndex` is `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `maxQIndex` **must** all be between `VkVideoEncodeAV1CapabilitiesKHR::minQIndex` and `VkVideoEncodeAV1CapabilitiesKHR::maxQIndex`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMaxQIndex-10303  
If `useMaxQIndex` is `VK_TRUE` and `VkVideoEncodeAV1CapabilitiesKHR::flags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile, does not include `VK_VIDEO_ENCODE_AV1_CAPABILITY_PER_RATE_CONTROL_GROUP_MIN_MAX_Q_INDEX_BIT_KHR`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `maxQIndex` **must** all specify the same value
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-useMinQIndex-10304  
If `useMinQIndex` and `useMaxQIndex` are both `VK_TRUE`, then the `intraQIndex`, `predictiveQIndex`, and `bipredictiveQIndex` members of `minQIndex` **must** all be less than or equal to the respective members of `maxQIndex`

### Valid Usage (Implicit)

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_RATE_CONTROL_LAYER_INFO_KHR`

- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-minQIndex-parameter **minQIndex** **must** be a valid [VkVideoEncodeAV1QIndexKHR](#) structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxQIndex-parameter **maxQIndex** **must** be a valid [VkVideoEncodeAV1QIndexKHR](#) structure
- VUID-VkVideoEncodeAV1RateControlLayerInfoKHR-maxFrameSize-parameter **maxFrameSize** **must** be a valid [VkVideoEncodeAV1FrameSizeKHR](#) structure

## Structure Chaining

### Extends the structure

- [VkVideoEncodeRateControlLayerInfoKHR](#)

The [VkVideoEncodeAV1QIndexKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1QIndexKHR {
    uint32_t    intraQIndex;
    uint32_t    predictiveQIndex;
    uint32_t    bipredictiveQIndex;
} VkVideoEncodeAV1QIndexKHR;
```

- **intraQIndex** is the quantizer index to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_INTRA\\_KHR](#).
- **predictiveQIndex** is the quantizer index to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_PREDICTIVE\\_KHR](#).
- **bipredictiveQIndex** is the quantizer index to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#).

The [VkVideoEncodeAV1FrameSizeKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1FrameSizeKHR {
    uint32_t    intraFrameSize;
    uint32_t    predictiveFrameSize;
    uint32_t    bipredictiveFrameSize;
} VkVideoEncodeAV1FrameSizeKHR;
```

- **intraFrameSize** is the size in bytes to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_INTRA\\_KHR](#).
- **predictiveFrameSize** is the size in bytes to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_PREDICTIVE\\_KHR](#).
- **bipredictiveFrameSize** is the size in bytes to be used for frames encoded with [VK\\_VIDEO\\_ENCODE\\_AV1\\_RATE\\_CONTROL\\_GROUP\\_BIPREDICTIVE\\_KHR](#).

## GOP Remaining Frames

Besides session level rate control configuration, the application **can** specify the number of frames per frame type remaining in the [group of pictures \(GOP\)](#).

The `VkVideoEncodeAV1GopRemainingFrameInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkVideoEncodeAV1GopRemainingFrameInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           useGopRemainingFrames;
    uint32_t            gopRemainingIntra;
    uint32_t            gopRemainingPredictive;
    uint32_t            gopRemainingBipredictive;
} VkVideoEncodeAV1GopRemainingFrameInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm **should** use the values specified in `gopRemainingIntra`, `gopRemainingPredictive`, and `gopRemainingBipredictive`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingIntra`, `gopRemainingPredictive`, and `gopRemainingBipredictive` are ignored.
- `gopRemainingIntra` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_INTRA_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.
- `gopRemainingPredictive` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_PREDICTIVE_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.
- `gopRemainingBipredictive` specifies the number of frames encoded with `VK_VIDEO_ENCODE_AV1_RATE_CONTROL_GROUP_BIPREDICTIVE_KHR` the implementation's rate control algorithm **should** assume to be remaining in the [GOP](#) prior to executing the next video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoBeginCodingInfoKHR` is only mandatory if the `VkVideoEncodeAV1CapabilitiesKHR::requiresGopRemainingFrames` reported for the used [video profile](#) is `VK_TRUE`. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a [regular GOP structure](#), these values **may** provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeAV1CapabilitiesKHR::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm **may** deviate from the one expected by the application.

### Valid Usage (Implicit)

- `VOID-VkVideoEncodeAV1GopRemainingFrameInfoKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_AV1_GOP_REMAINING_FRAME_INFO_KHR`

### Structure Chaining

#### Extends the structure

- `VkVideoBeginCodingInfoKHR`

## AV1 Quantizer Index Delta Maps

Quantization delta maps used with an [AV1 encode profile](#) are referred to as *quantizer index delta maps* and their texels contain integer values representing quantizer index delta values that are applied in the process of determining the [quantizer indices](#) of the encoded picture.

Accordingly, AV1 quantizer index delta maps always have single channel integer formats, as reported in `VkVideoFormatPropertiesKHR::format`.

When the [rate control mode](#) is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, the quantizer index delta values are added to the constant quantizer index value that, in effect, enable the application to explicitly control the used quantizer index values at the granularity of the used [quantization map texel size](#).

For all other [rate control modes](#), the quantizer index delta values **can** be used to offset the quantizer index values that the rate control algorithm would otherwise produce.

## AV1 Encode Quantization

Performing AV1 encode operations involves the process of assigning quantizer index values to individual AV1 mode info blocks. This process depends on the used [rate control mode](#), as well as other encode and rate control parameters, as described below:

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`, then the quantizer index value is initialized by the implementation-specific default rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the

`minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.

- If the configured rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the quantizer index value is initialized from the constant quantizer index value specified for the encoded frame.
  - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.
- If the configured rate control mode is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, then the quantizer index value is initialized by the corresponding rate control algorithm.
  - If the video encode operation is issued with a [quantization delta map](#), the quantizer index delta value corresponding to the mode info block, as [fetched from the quantization map](#), is added to the previously determined quantizer index value. If the fetched quantizer index delta value falls outside the supported quantizer index delta value range reported in the `minQIndexDelta` and `maxQIndexDelta` members of `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, then the quantizer index value used for the mode info block becomes undefined.
  - If the video encode operation is issued with an [emphasis map](#), the rate control will adjust the quantizer index value based on the emphasis value corresponding to the mode info block, as [fetched from the quantization map](#), according to the following equation:

$$QIndex_{new} = f(QIndex_{prev}, e)$$

Where  $QIndex_{new}$  is the resulting quantizer index value,  $QIndex_{prev}$  is the previously determined quantizer index value,  $e$  is the emphasis value corresponding to the macroblock, and  $f$  is an implementation-defined function for which the following implication is true:

$$e_1 < e_2 \Rightarrow f(QIndex, e_1) \geq f(QIndex, e_2)$$

**NOTE**

This means that lower emphasis values will result in higher quantizer index values, whereas higher emphasis values will result in lower quantizer index values, but the function is not strictly decreasing with respect to the input emphasis value for a given input quantizer index value.

- If clamping to minimum quantizer index values is enabled in the applied rate control layer, then the quantizer index value is clamped to the corresponding minimum quantizer index value.
- If clamping to maximum quantizer index values is enabled in the applied rate control layer,

then the quantizer index value is clamped to the corresponding maximum quantizer index value.

- In all cases, the final quantizer index value is clamped to the minimum and maximum quantizer index values supported by the video profile.

## 45.22.15. AV1 Encode Requirements

This section described the **required** AV1 encoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

Table 64. Required *Video Std Header Versions*

| Video Std Header Name                         | Version |
|-----------------------------------------------|---------|
| <code>vulkan_video_codec_av1std_encode</code> | 1.0.0   |

| maxOperatingPoints                                    | 0                       | min                           |
| minQIndex                                             | -                       | max                           |
| maxQIndex                                             | -                       | min                           |
| prefersGopRemainingFrames                             | -                       | implementation-dependent      |
| requiresGopRemainingFrames                            | -                       | implementation-dependent      |
| stdSyntaxFlags                                        | -                       | min                           |
| <b>VkVideoEncodeQuantizationMapCapabilitiesKHR</b>    |                         |                               |
| maxQuantizationMapExtent                              | - <sup>6</sup>          | min                           |
| <b>VkVideoEncodeAV1QuantizationMapCapabilitiesKHR</b> |                         |                               |
| minQIndexDelta                                        | - <sup>7</sup>          | max                           |
| maxQIndexDelta                                        | - <sup>7</sup>          | min                           |
| <b>VkVideoEncodeIntraRefreshCapabilitiesKHR</b>       |                         |                               |
| intraRefreshModes                                     | 0                       | min                           |
| maxIntraRefreshCycleDuration                          | 2 <sup>9</sup>          | min                           |
| maxIntraRefreshActiveReferencePictures                | 1 <sup>9</sup>          | min                           |

| Video Capability                                     | Requirement | Requirement Type <sup>1</sup> |
|------------------------------------------------------|-------------|-------------------------------|
| <code>partitionIndependentIntraRefreshRegions</code> | -           | implementation-dependent      |
| <code>nonRectangularIntraRefreshRegions</code>       | -           | implementation-dependent      |

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2

These masks **must** only have bits set in the least significant `VK_MAX_VIDEO_AV1_REFERENCES_PER_FRAME_KHR` bits (bit index *i* indicates support for the AV1 reference name `STD_VIDEO_AV1_REFERENCE_NAME_LAST_FRAME + i` when using the corresponding AV1 prediction mode), and **must** have at least as many bits set in any `*ReferenceNameMask` capability as the value of the corresponding `max*ReferenceCount` capability.

3

If greater than zero, it **must** be at least 2.

4

`maxUnidirectionalCompoundGroup1ReferenceCount` **must** be less than or equal to `maxUnidirectionalCompoundReferenceCount`

5

The sum of `maxBidirectionalCompoundGroup1ReferenceCount` and `maxBidirectionalCompoundGroup2ReferenceCount` **must** be greater than or equal to `maxBidirectionalCompoundReferenceCount`

6

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, then the `width` and `height` members of `maxQuantizationMapExtent` **must** be greater than zero.

7

If `VkVideoCapabilitiesKHR::flags` includes `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, then `maxQIndexDelta` **must** be greater than `minQIndexDelta`.

8

If the `videoMaintenance2` feature is supported.

**9**

If `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes` is not zero.

**10**

If the `videoEncodeFeedback2` feature is supported.

**11**

If `maxPerPartitionFeedbackEntries` is greater than zero.

# Chapter 46. Extending Vulkan

New functionality **may** be added to Vulkan via either new extensions or new versions of the core, or new versions of an extension in some cases.

This chapter describes how Vulkan is versioned, how compatibility is affected between different versions, and compatibility rules that are followed by the Vulkan Working Group.

## 46.1. Functionality Levels

Functionality in Vulkan is divided into several different levels; global, instance-level, physical-device-level, and device-level.

- [VkInstance](#) and any objects created from a [VkInstance](#) other than [VkPhysicalDevice](#) are instance-level.
- [VkPhysicalDevice](#) is the only physical-device-level object.
- [VkDevice](#) and any objects created from a [VkDevice](#) are device-level.

The level of a command is the same as the level of its first parameter - if the first parameter is not a [dispatchable handle](#), it is a global command. Different levels of functionality **may** be advertised in different ways.

## 46.2. Instance and Device Versions

Starting with Vulkan 1.1, there are separate versions advertised for the Vulkan instance, and for each device supported on the system. This allows a system with multiple devices to advertise all devices at their full capabilities, even if those devices do not support the same version of Vulkan.

The instance version indicates which global and instance-level functionality is supported, while each device version indicates the physical-device-level and device-level functionality supported.

The instance version **can** be queried by calling [vkEnumerateInstanceVersion](#). Querying for this function via [vkGetInstanceProcAddr](#) will return [NULL](#) on implementations that only support Vulkan 1.0 functionality.

The device version **can** be queried by calling [vkGetPhysicalDeviceProperties](#) or [vkGetPhysicalDeviceProperties2](#), and is returned in [VkPhysicalDeviceProperties::apiVersion](#), encoded as described in [Version Numbers](#).

## 46.3. Core Versions

The Vulkan Specification is regularly updated with bug fixes and clarifications. Occasionally new functionality is added to the core and at some point it is expected that there will be a desire to perform a large, breaking change to the API. In order to indicate to developers how and when these changes are made to the specification, and to provide a way to identify each set of changes, the Vulkan API maintains a version number.

### 46.3.1. Version Numbers

The Vulkan version number comprises four parts indicating the variant, major, minor and patch version of the Vulkan API Specification.

The *variant* indicates the variant of the Vulkan API supported by the implementation. This is always 0 for the Vulkan API.

#### NOTE

A non-zero variant indicates the API is a variant of the Vulkan API and applications will typically need to be modified to run against it. The variant field was a later addition to the version number, added in version 1.2.175 of the Specification. As Vulkan uses variant 0, this change is fully backwards compatible with the previous version number format for Vulkan implementations. New version number macros have been added for this change and the old macros marked as legacy. For existing applications using the older format and macros, an implementation with non-zero variant will decode as a very high Vulkan version. The high version number should be detectable by applications performing suitable version checking.

The *major version* indicates a significant change in the API, which will encompass a wholly new version of the specification.

The *minor version* indicates the incorporation of new functionality into the core specification.

The *patch version* indicates bug fixes, clarifications, and language improvements have been incorporated into the specification.

Compatibility guarantees made about versions of the API sharing any of the same version numbers are documented in [Core Versions](#)

The version number is used in several places in the API. In each such use, the version numbers are packed into a 32-bit integer as follows:

- The variant is a 3-bit integer packed into bits 31-29.
- The major version is a 7-bit integer packed into bits 28-22.
- The minor version number is a 10-bit integer packed into bits 21-12.
- The patch version number is a 12-bit integer packed into bits 11-0.

**VK\_API\_VERSION\_VARIANT** extracts the API variant number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_VARIANT(version) ((uint32_t)(version) >> 29U)
```

**VK\_API\_VERSION\_MAJOR** extracts the API major version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MAJOR(version) (((uint32_t)(version) >> 22U) & 0x7FU)
```

**VK\_VERSION\_MAJOR** extracts the API major version number from a packed version number:

**WARNING**

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MAJOR(version) ((uint32_t)(version) >> 22U)
```

**VK\_API\_VERSION\_MINOR** extracts the API minor version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

**VK\_VERSION\_MINOR** extracts the API minor version number from a packed version number:

**WARNING**

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

**VK\_API\_VERSION\_PATCH** extracts the API patch version number from a packed version number:

```
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

**VK\_VERSION\_PATCH** extracts the API patch version number from a packed version number:

**WARNING**

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

**VK\_MAKE\_API\_VERSION** constructs an API version number.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_API_VERSION(variant, major, minor, patch) \
    (((uint32_t)(variant)) << 29U) | (((uint32_t)(major)) << 22U) | \
    (((uint32_t)(minor)) << 12U) | ((uint32_t)(patch)))
```

- **variant** is the variant number.

- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

**VK\_MAKE\_VERSION** constructs an API version number.

#### WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
#define VK_MAKE_VERSION(major, minor, patch) \
    (((uint32_t)(major)) << 22U) | (((uint32_t)(minor)) << 12U) | \
    ((uint32_t)(patch)))
```

- **major** is the major version number.
- **minor** is the minor version number.
- **patch** is the patch version number.

**VK\_API\_VERSION\_1\_0** returns the API version number for Vulkan 1.0.0.

```
// Provided by VK_VERSION_1_0
// Vulkan 1.0 version number
#define VK_API_VERSION_1_0 VK_MAKE_API_VERSION(0, 1, 0, 0)// Patch version should
always be set to 0
```

**VK\_API\_VERSION\_1\_1** returns the API version number for Vulkan 1.1.0.

```
// Provided by VK_VERSION_1_1
// Vulkan 1.1 version number
#define VK_API_VERSION_1_1 VK_MAKE_API_VERSION(0, 1, 1, 0)// Patch version should
always be set to 0
```

**VK\_API\_VERSION\_1\_2** returns the API version number for Vulkan 1.2.0.

```
// Provided by VK_VERSION_1_2
// Vulkan 1.2 version number
#define VK_API_VERSION_1_2 VK_MAKE_API_VERSION(0, 1, 2, 0)// Patch version should
always be set to 0
```

**VK\_API\_VERSION\_1\_3** returns the API version number for Vulkan 1.3.0.

```
// Provided by VK_VERSION_1_3
// Vulkan 1.3 version number
#define VK_API_VERSION_1_3 VK_MAKE_API_VERSION(0, 1, 3, 0)// Patch version should
always be set to 0
```

**VK\_API\_VERSION\_1\_4** returns the API version number for Vulkan 1.4.0.

```
// Provided by VK_VERSION_1_4
// Vulkan 1.4 version number
#define VK_API_VERSION_1_4 VK_MAKE_API_VERSION(0, 1, 4, 0)// Patch version should
always be set to 0
```

## 46.4. Layers

When a layer is enabled, it inserts itself into the call chain for Vulkan commands the layer is interested in. Layers **can** be used for a variety of tasks that extend the base behavior of Vulkan beyond what is required by the specification - such as call logging, tracing, validation, or providing additional extensions.

### NOTE

For example, an implementation is not expected to check that the value of enums used by the application fall within allowed ranges. Instead, a validation layer would do those checks and flag issues. This avoids a performance penalty during production use of the application because those layers would not be enabled in production.

### NOTE

Vulkan layers **may** wrap object handles (i.e. return a different handle value to the application than that generated by the implementation). This is generally discouraged, as it increases the probability of incompatibilities with new extensions. The validation layers wrap handles in order to track the proper use and destruction of each object. See the [“Architecture of the Vulkan Loader Interfaces”](#) document for additional information.

To query the available layers, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceLayerProperties(
    uint32_t*                pPropertyCount,
    VkLayerProperties*        pProperties);
```

- **pPropertyCount** is a pointer to an integer related to the number of layer properties available or queried, as described below.
- **pProperties** is either **NULL** or a pointer to an array of **VkLayerProperties** structures.

If **pProperties** is **NULL**, then the number of layer properties available is returned in **pPropertyCount**.

Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of available layers may change at any time due to actions outside of the Vulkan implementation, so two calls to `vkEnumerateInstanceLayerProperties` with the same parameters **may** return different results, or retrieve different `pPropertyCount` values or `pProperties` contents. Once an instance has been created, the layers enabled for that instance will continue to be enabled and valid for the lifetime of that instance, even if some of them become unavailable for future instances.

### Valid Usage (Implicit)

- VUID-vkEnumerateInstanceLayerProperties-pPropertyCount-parameter  
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceLayerProperties-pProperties-parameter  
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

### Return Codes

#### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkLayerProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkLayerProperties {
    char        layerName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
    uint32_t    implementationVersion;
    char        description[VK_MAX_DESCRIPTION_SIZE];
} VkLayerProperties;
```

- `layerName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated

UTF-8 string which is the name of the layer. Use this name in the `ppEnabledLayerNames` array passed in the `VkInstanceCreateInfo` structure to enable this layer for an instance.

- `specVersion` is the Vulkan version the layer was written to, encoded as described in [Version Numbers](#).
- `implementationVersion` is the version of this layer. It is an integer, increasing with backward compatible changes.
- `description` is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which provides additional details that **can** be used by the application to identify the layer.

`VK_MAX_EXTENSION_NAME_SIZE` is the length in `char` values of an array containing a layer or extension name string, as returned in `VkLayerProperties::layerName`, `VkExtensionProperties::extensionName`, and other queries.

```
#define VK_MAX_EXTENSION_NAME_SIZE    256U
```

`VK_MAX_DESCRIPTION_SIZE` is the length in `char` values of an array containing a string with additional descriptive information about a query, as returned in `VkLayerProperties::description` and other queries.

```
#define VK_MAX_DESCRIPTION_SIZE       256U
```

To enable a layer, the name of the layer **should** be added to the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

Loader implementations **may** provide mechanisms outside the Vulkan API for enabling specific layers. Layers enabled through such a mechanism are *implicitly enabled*, while layers enabled by including the layer name in the `ppEnabledLayerNames` member of `VkInstanceCreateInfo` are *explicitly enabled*. Implicitly enabled layers are loaded before explicitly enabled layers, such that implicitly enabled layers are closer to the application, and explicitly enabled layers are closer to the driver. Except where otherwise specified, implicitly enabled and explicitly enabled layers differ only in the way they are enabled, and the order in which they are loaded. Explicitly enabling a layer that is implicitly enabled results in this layer being loaded as an implicitly enabled layer; it has no additional effect.

To enumerate device layers, call:

#### WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceLayerProperties(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkLayerProperties*         pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkLayerProperties` structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of layers enumerated by `vkEnumerateDeviceLayerProperties` **must** be exactly the sequence of layers enabled for the instance. The members of `VkLayerProperties` for each enumerated layer **must** be the same as the properties when the layer was enumerated by `vkEnumerateInstanceLayerProperties`.

#### NOTE

Due to platform details on Android, `vkEnumerateDeviceLayerProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

### Valid Usage (Implicit)

- VUID-vkEnumerateDeviceLayerProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkEnumerateDeviceLayerProperties-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceLayerProperties-pProperties-parameter  
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

### Return Codes

#### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `ppEnabledLayerNames` and `enabledLayerCount` members of `VkDeviceCreateInfo` are legacy and their values **must** be ignored by implementations. However, for compatibility, only an empty list of layers or a list that exactly matches the sequence enabled at instance creation time are valid, and validation layers **should** issue diagnostics for other cases.

Regardless of the enabled layer list provided in `VkDeviceCreateInfo`, the sequence of layers active for a device will be exactly the sequence of layers enabled when the parent instance was created.

## 46.5. Extensions

Extensions **may** define new Vulkan commands, structures, and enumerants. For compilation purposes, the interfaces defined by registered extensions, including new structures and enumerants as well as function pointer types for new commands, are defined in the Khronos-supplied `vulkan_core.h` together with the core API. However, commands defined by extensions **may** not be available for static linking - in which case function pointers to these commands **should** be queried at runtime as described in [Command Function Pointers](#). Extensions **may** be provided by layers as well as by a Vulkan implementation.

Because extensions **may** extend or change the behavior of the Vulkan API, extension authors **should** add support for their extensions to the Khronos validation layers. This is especially important for new commands whose parameters have been wrapped by the validation layers. See the “[Architecture of the Vulkan Loader Interfaces](#)” document for additional information.

### NOTE

To enable an instance extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

To enable a device extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkDeviceCreateInfo` when creating a `VkDevice`.

Physical-Device-Level functionality does not have any enabling mechanism and **can** be used as long as the `VkPhysicalDevice` supports the device extension as determined by `vkEnumerateDeviceExtensionProperties`.

Enabling an extension (with no further use of that extension) does not change the behavior of functionality exposed by the core Vulkan API or any other extension, other than making valid the use of the commands, enums and structures defined by that extension.

Valid Usage sections for individual commands and structures do not currently contain which extensions have to be enabled in order to make their use valid, although they might do so in the future. It is defined only in the [Valid Usage for Extensions](#) section.

### 46.5.1. Instance Extensions

Instance extensions add new [global or instance-level functionality](#) to the API, outside of the core specification. Instance extensions **may** also add [physical-device-level functionality](#).

To query the available instance extensions, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceExtensionProperties(
    const char*          pLayerName,
    uint32_t*            pPropertyCount,
    VkExtensionProperties* pProperties);
```

- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkExtensionProperties` structures.

When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the instance extensions provided by that layer are returned.

If `pProperties` is `NULL`, then the number of extensions properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of extension properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Because the list of available layers may change externally between calls to `vkEnumerateInstanceExtensionProperties`, two calls may retrieve different results if a `pLayerName` is available in one call but not in another. The extensions supported by a layer may also change between two calls, e.g. if the layer implementation is replaced by a different version between those calls.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

### Valid Usage (Implicit)

- VUID-vkEnumerateInstanceExtensionProperties-pLayerName-parameter  
If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateInstanceExtensionProperties-pPropertyCount-parameter  
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceExtensionProperties-pProperties-parameter  
If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_LAYER\\_NOT\\_PRESENT](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

## 46.5.2. Device Extensions

Device extensions add new [device-level functionality](#) to the API, outside of the core specification. If Vulkan 1.1 or [VK\\_KHR\\_get\\_physical\\_device\\_properties2](#) is required by the extension, it **may** also add new [physical-device-level functionality](#).

To query the extensions available to a given physical device, call:

```
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceExtensionProperties(
    VkPhysicalDevice    physicalDevice,
    const char*         pLayerName,
    uint32_t*           pPropertyCount,
    VkExtensionProperties* pProperties);
```

- [physicalDevice](#) is the physical device that will be queried.
- [pLayerName](#) is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- [pPropertyCount](#) is a pointer to an integer related to the number of extension properties available or queried, and is treated in the same fashion as the [vkEnumerateInstanceExtensionProperties::pPropertyCount](#) parameter.
- [pProperties](#) is either `NULL` or a pointer to an array of [VkExtensionProperties](#) structures.

When [pLayerName](#) parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When [pLayerName](#) is the name of a layer, the device extensions provided by that layer are returned.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

If the [VK\\_KHR\\_ray\\_tracing\\_pipeline](#) extension is advertised as supported by this query, the

`VK_KHR_pipeline_library` extension **must** also be supported.

If the `VK_EXT_descriptor_heap` extension is advertised as supported by this query, the `VK_KHR_shader_untyped_pointers` extension **must** also be supported.

#### NOTE

Due to platform details on Android, `vkEnumerateDeviceExtensionProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behavior will only be observed by layer implementations, and not the underlying Vulkan driver.

### Valid Usage (Implicit)

- VUID-vkEnumerateDeviceExtensionProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkEnumerateDeviceExtensionProperties-pLayerName-parameter  
If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string
- VUID-vkEnumerateDeviceExtensionProperties-pPropertyCount-parameter  
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceExtensionProperties-pProperties-parameter  
If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

### Return Codes

#### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

#### Failure

- `VK_ERROR_LAYER_NOT_PRESENT`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkExtensionProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkExtensionProperties {
    char        extensionName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t    specVersion;
} VkExtensionProperties;
```

- `extensionName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the extension.
- `specVersion` is the version of this extension. It is an integer, incremented with backward compatible changes.

## 46.6. Extension Dependencies

Some extensions are dependent on other extensions, or on specific core API versions, to function. To enable extensions with dependencies, any *required extensions* **must** also be enabled through the same API mechanisms when creating an instance with `vkCreateInstance` or a device with `vkCreateDevice`. Each extension which has such dependencies documents them in the [appendix summarizing that extension](#).

If an extension is supported (as queried by `vkEnumerateInstanceExtensionProperties` or `vkEnumerateDeviceExtensionProperties`), then *required extensions* of that extension **must** also be supported for the same instance or physical device.

Any device extension that has an instance extension dependency that is not enabled by `vkCreateInstance` is considered to be unsupported, hence it **must** not be returned by `vkEnumerateDeviceExtensionProperties` for any `VkPhysicalDevice` child of the instance. Instance extensions do not have dependencies on device extensions.

If a required extension has been [promoted](#) to another extension or to a core API version, then as a *general* rule, the dependency is also satisfied by the promoted extension or core version. This will be true so long as any features required by the original extension are also required or enabled by the promoted extension or core version. However, in some cases an extension is promoted while making some of its features optional in the promoted extension or core version. In this case, the dependency **may** not be satisfied. The only way to be certain is to look at the descriptions of the original dependency and the promoted version in the [Layers & Extensions](#) and [Core Revisions](#) appendices.

### NOTE

There is metadata in `vk.xml` describing some aspects of promotion, especially `requires`, `promotedto` and `deprecatedby` attributes of `<extension>` tags. However, the metadata does not yet fully describe this scenario. In the future, we may extend the XML schema to describe the full set of extensions and versions satisfying a dependency. As discussed in more detail for [Promotion](#) below, when an extension is promoted it does not mean that a mechanical substitution of an extension API by the corresponding promoted API will work in exactly the same fashion; be supported at runtime; or even exist.

## 46.7. Compatibility Guarantees (Informative)

This section is marked as informal as there is no binding responsibility on implementations of the Vulkan API - these guarantees are however a contract between the Vulkan Working Group and developers using this Specification.

## 46.7.1. Core Versions

Each of the [major](#), [minor](#), and [patch versions](#) of the Vulkan specification provide different compatibility guarantees.

### Patch Versions

A difference in the patch version indicates that a set of bug fixes or clarifications have been made to the Specification. Informative enums returned by Vulkan commands that will not affect the runtime behavior of a valid application may be added in a patch version (e.g. [VkVendorId](#)).

The specification's patch version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the patch version being increased by 1. Patch versions are applied to all minor versions, even if a given minor version is not affected by the provoking change.

Specifications with different patch versions but the same major and minor version are *fully compatible* with each other - such that a valid application written against one will work with an implementation of another.

#### NOTE

If a patch version includes a bug fix or clarification that could have a significant impact on developer expectations, these will be highlighted in the change log. Generally the Vulkan Working Group tries to avoid these kinds of changes, instead fixing them in either an extension or core version.

### Minor Versions

Changes in the minor version of the specification indicate that new functionality has been added to the core specification. This will usually include new interfaces in the header, and **may** also include behavior changes and bug fixes. Core functionality **may** be marked as legacy in a minor version, but will not be obsoleted or removed.

The specification's minor version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the minor version being increased by 1. Changes that can be accommodated in a patch version will not increase the minor version.

Specifications with a lower minor version are *backwards compatible* with an implementation of a specification with a higher minor version for core functionality and extensions issued with the KHR vendor tag. Vendor and multi-vendor extensions are not guaranteed to remain functional across minor versions, though in general they are with few exceptions - see [Obsolescence](#) for more information.

### Major Versions

A difference in the major version of specifications indicates a large set of changes which will likely include interface changes, behavioral changes, removal of [legacy functionality](#), and the modification, addition, or replacement of other functionality.

The specification's major version is monotonically increasing; any change to the specification as

described above will result in the major version being increased. Changes that can be accommodated in a patch or minor version will not increase the major version.

The Vulkan Working Group intends to only issue a new major version of the Specification in order to realize significant improvements to the Vulkan API that will necessarily require breaking compatibility.

A new major version will likely include a wholly new version of the specification to be issued - which could include an overhaul of the versioning semantics for the minor and patch versions. The patch and minor versions of a specification are therefore not meaningful across major versions. If a major version of the specification includes similar versioning semantics, it is expected that the patch and the minor version will be reset to 0 for that major version.

## 46.7.2. Extensions

A KHR extension **must** be able to be enabled alongside any other KHR extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A multi-vendor extension **should** be able to be enabled alongside any KHR extension or other multi-vendor extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **should** be able to be enabled alongside any KHR extension, multi-vendor extension, or other vendor extension from the same vendor, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension **may** be able to be enabled alongside vendor extensions from another vendor.

The one other exception to this is if a vendor or multi-vendor extension is [made obsolete](#) by either a core version or another extension, which will be highlighted in the [extension appendix](#).

### Promotion

Extensions, or features of an extension, **may** be promoted to a new [core version of the API](#), or a newer extension which an equal or greater number of implementors are in favor of.

#### NOTE

Structure and enumerated types defined in extensions that were promoted to core in a later version of Vulkan are defined in terms of the equivalent Vulkan core interfaces in that version and its successors. This affects the Vulkan Specification, the Vulkan header files, and the corresponding XML Registry.

When extension functionality is promoted, minor changes **may** be introduced, limited to the following:

- Naming
- Non-intrusive parameter changes
- [Feature advertisement/enablement](#)
- Combining structure parameters into larger structures
- Author ID suffixes changed or removed

#### NOTE

If extension functionality is promoted, there is no guarantee of direct compatibility,

however it should require little effort to port code from the original feature to the promoted one.

The Vulkan Working Group endeavors to ensure that larger changes are marked as either **deprecated** or **obsoleted** as appropriate, and can do so retroactively if necessary.

Extensions that are promoted are listed as being promoted in their extension appendices, with reference to where they were promoted to.

When an extension is promoted, any backwards compatibility aliases which exist in the extension will **not** be promoted.

#### NOTE

As a hypothetical example, if the `VK_KHR_surface` extension were promoted to part of a future core version, the `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR` token defined by that extension would be promoted to `VK_COLOR_SPACE_SRGB_NONLINEAR`. However, the `VK_COLORSPACE_SRGB_NONLINEAR_KHR` token aliases `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR`. The `VK_COLORSPACE_SRGB_NONLINEAR_KHR` would not be promoted, because it is a backwards compatibility alias that exists only due to a naming mistake when the extension was initially published.

## Deprecation

Extensions **may** be marked as **deprecated** when they are no longer intended to be used by applications under certain conditions. Generally, a new feature will become available to solve the use case in another extension or core version of the API, but it is not guaranteed.

#### NOTE

Features that are intended to replace deprecated functionality have no guarantees of compatibility, and applications may require drastic modification in order to make use of the new features.

Extensions that are deprecated are listed as being deprecated in their extension appendices, with an explanation of the deprecation and any related features that are relevant.

## Obsolescence

Occasionally, an extension will be marked as obsolete if a new version of the core API or a new extension is fundamentally incompatible with it. An obsoleted extension **must** not be used with the extension or core version that obsoleted it.

Extensions that are obsoleted are listed as being obsoleted in their extension appendices, with reference to what they were obsoleted by.

## Aliases

When an extension is promoted or deprecated by a newer feature, some or all of its functionality **may** be replicated into the newer feature. Rather than duplication of all the documentation and definitions, the specification instead identifies the identical commands and types as *aliases* of one another. Each alias is mentioned together with the definition it aliases, with the older aliases

marked as “equivalents”. Each alias of the same command has identical behavior, and each alias of the same type has identical meaning - they can be used interchangeably in an application with no compatibility issues.

**NOTE**

For promoted types, the aliased extension type is semantically identical to the new core type. The C99 headers simply `typedef` the older aliases to the promoted types.

For promoted command aliases, however, there are two separate command definitions, due to the fact that the C99 ABI has no way to alias command definitions without resorting to macros. Calling either command will produce identical behavior within the bounds of the specification, and should still invoke the same path in the implementation. Debug tools may use separate commands with different debug behavior; to write the appropriate command name to an output log, for instance.

## Special Use Extensions

Some extensions exist only to support a specific purpose or specific class of application. These are referred to as “special use extensions”. Use of these extensions in applications not meeting the special use criteria is not recommended.

Special use cases are restricted, and only those defined below are used to describe extensions:

Table 66. Extension Special Use Cases

| Special Use         | XML Tag      | Full Description                                                                                                                                                    |
|---------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAD support         | cadsupport   | Extension is intended to support specialized functionality used by CAD/CAM applications.                                                                            |
| D3D support         | d3demulation | Extension is intended to support D3D emulation layers, and applications ported from D3D, by adding functionality specific to D3D.                                   |
| Developer tools     | devtools     | Extension is intended to support developer tools such as capture-replay libraries.                                                                                  |
| Debugging tools     | debugging    | Extension is intended for use by applications when debugging.                                                                                                       |
| OpenGL / ES support | glemulation  | Extension is intended to support OpenGL and/or OpenGL ES emulation layers, and applications ported from those APIs, by adding functionality specific to those APIs. |

Special use extensions are identified in the metadata for each such extension in the [Layers & Extensions](#) appendix, using the name in the “Special Use” column above.

Special use extensions are also identified in `vk.xml` with the short name in “XML Tag” column above, as described in the “API Extensions (`extension` tag)” section of the [registry schema documentation](#).

# Chapter 47. Features

*Features* advertise additional functionality which **can** be enabled in the API. If a feature is *supported* by a physical device, it **must** be *enabled* when creating a [VkDevice](#) in order to use its associated functionality with that [VkDevice](#). If a feature is *unsupported*, that functionality **cannot** be used with that [VkDevice](#).

## NOTE

Features are reported via the extensible structure [VkPhysicalDeviceFeatures2](#), which was added in the [VK\\_KHR\\_get\\_physical\\_device\\_properties2](#) extension and included in Vulkan 1.1. When new features are added in future Vulkan versions or extensions, each extension **should** introduce one new feature structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure.

For convenience, new core versions of Vulkan **may** introduce new unified feature structures for features promoted from extensions. At the same time, the extension's original feature structure (if any) is also promoted to the core API, and is an alias of the extension's structure. This results in multiple names for the same feature: in the original extension's feature structure and the promoted structure alias, in the unified feature structure. When a feature was implicitly supported and enabled in the extension, but an explicit name was added during promotion, then the extension itself acts as an alias for the feature as listed in the table below.

All aliases of the same feature in the core API **must** be reported consistently: either all **must** be reported as supported, or none of them. When a promoted extension is available, any corresponding feature aliases **must** be supported.

Table 67. Extension Feature Aliases

| Extension                                           | Feature(s)                               |
|-----------------------------------------------------|------------------------------------------|
| <a href="#">VK_KHR_shader_draw_parameters</a>       | <a href="#">shaderDrawParameters</a>     |
| <a href="#">VK_KHR_draw_indirect_count</a>          | <a href="#">drawIndirectCount</a>        |
| <a href="#">VK_KHR_sampler_mirror_clamp_to_edge</a> | <a href="#">samplerMirrorClampToEdge</a> |
| <a href="#">VK_EXT_descriptor_indexing</a>          | <a href="#">descriptorIndexing</a>       |
| <a href="#">VK_KHR_push_descriptor</a>              | <a href="#">pushDescriptor</a>           |

To query supported features, call:

## WARNING

This functionality is superseded by [vkGetPhysicalDeviceFeatures2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFeatures(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures* pFeatures);
```

- [physicalDevice](#) is the physical device from which to query the supported features.

- `pFeatures` is a pointer to a `VkPhysicalDeviceFeatures` structure in which the physical device features are returned. For each feature, a value of `VK_TRUE` specifies that the feature is supported on this physical device, and `VK_FALSE` specifies that the feature is not supported.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFeatures-pFeatures-parameter  
`pFeatures` **must** be a valid pointer to a `VkPhysicalDeviceFeatures` structure

Fine-grained features used by a logical device **must** be enabled at `VkDevice` creation time. If a feature is enabled that the physical device does not support, `VkDevice` creation will fail and return `VK_ERROR_FEATURE_NOT_PRESENT`.

The fine-grained features are enabled by passing a pointer to the `VkPhysicalDeviceFeatures` structure via the `pEnabledFeatures` member of the `VkDeviceCreateInfo` structure that is passed into the `vkCreateDevice` call. If a member of `pEnabledFeatures` is `VK_TRUE` or `VK_FALSE`, then the device will be created with the indicated feature enabled or disabled, respectively. Features **can** also be enabled by using the `VkPhysicalDeviceFeatures2` structure.

If an application wishes to enable all features supported by a device, it **can** simply pass in the `VkPhysicalDeviceFeatures` structure that was previously returned by `vkGetPhysicalDeviceFeatures`. To disable an individual feature, the application **can** set the desired member to `VK_FALSE` in the same structure. Setting `pEnabledFeatures` to `NULL` and not including a `VkPhysicalDeviceFeatures2` in the `pNext` chain of `VkDeviceCreateInfo` is equivalent to setting all members of the structure to `VK_FALSE`.

#### NOTE

Some features, such as `robustBufferAccess`, **may** incur a runtime performance cost. Application writers **should** carefully consider the implications of enabling all supported features.

To query supported features defined by the core or extensions, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFeatures2(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceFeatures2
void vkGetPhysicalDeviceFeatures2KHR(
    VkPhysicalDevice          physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

- `physicalDevice` is the physical device from which to query the supported features.
- `pFeatures` is a pointer to a `VkPhysicalDeviceFeatures2` structure in which the physical device features are returned.

Each structure in `pFeatures` and its `pNext` chain contains members corresponding to fine-grained features. Each structure in `pFeatures` and its `pNext` chain contains `VkBool32` members corresponding to fine-grained features. Each such member is returned with a `VK_TRUE` value indicating that feature is supported on this physical device, or a `VK_FALSE` value indicating it is unsupported.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures2-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFeatures2-pFeatures-parameter `pFeatures` **must** be a valid pointer to a `VkPhysicalDeviceFeatures2` structure

The `VkPhysicalDeviceFeatures2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceFeatures2 {
    VkStructureType    sType;
    void*              pNext;
    VkPhysicalDeviceFeatures  features;
} VkPhysicalDeviceFeatures2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceFeatures2
typedef VkPhysicalDeviceFeatures2 VkPhysicalDeviceFeatures2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `features` is a `VkPhysicalDeviceFeatures` structure describing the fine-grained features of the Vulkan 1.0 API.

The `pNext` chain of this structure is used to extend the structure with features defined by extensions. This structure **can** be used in `vkGetPhysicalDeviceFeatures2` or **can** be included in the `pNext` chain of a `VkDeviceCreateInfo` structure, in which case it controls which features are enabled in lieu of `pEnabledFeatures`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFeatures2-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2`

## Structure Chaining

### Extends the structure

- [VkDeviceCreateInfo](#)

The `VkPhysicalDeviceFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceFeatures {
    VkBool32    robustBufferAccess;
    VkBool32    fullDrawIndexUint32;
    VkBool32    imageCubeArray;
    VkBool32    independentBlend;
    VkBool32    geometryShader;
    VkBool32    tessellationShader;
    VkBool32    sampleRateShading;
    VkBool32    dualSrcBlend;
    VkBool32    logicOp;
    VkBool32    multiDrawIndirect;
    VkBool32    drawIndirectFirstInstance;
    VkBool32    depthClamp;
    VkBool32    depthBiasClamp;
    VkBool32    fillModeNonSolid;
    VkBool32    depthBounds;
    VkBool32    wideLines;
    VkBool32    largePoints;
    VkBool32    alphaToOne;
    VkBool32    multiViewport;
    VkBool32    samplerAnisotropy;
    VkBool32    textureCompressionETC2;
    VkBool32    textureCompressionASTC_LDR;
    VkBool32    textureCompressionBC;
    VkBool32    occlusionQueryPrecise;
    VkBool32    pipelineStatisticsQuery;
    VkBool32    vertexPipelineStoresAndAtomics;
    VkBool32    fragmentStoresAndAtomics;
    VkBool32    shaderTessellationAndGeometryPointSize;
    VkBool32    shaderImageGatherExtended;
    VkBool32    shaderStorageImageExtendedFormats;
    VkBool32    shaderStorageImageMultisample;
    VkBool32    shaderStorageImageReadWithoutFormat;
    VkBool32    shaderStorageImageWriteWithoutFormat;
    VkBool32    shaderUniformBufferArrayDynamicIndexing;
    VkBool32    shaderSampledImageArrayDynamicIndexing;
    VkBool32    shaderStorageBufferArrayDynamicIndexing;
    VkBool32    shaderStorageImageArrayDynamicIndexing;
    VkBool32    shaderClipDistance;
    VkBool32    shaderCullDistance;
    VkBool32    shaderFloat64;
```

```

VkBool32    shaderInt64;
VkBool32    shaderInt16;
VkBool32    shaderResourceResidency;
VkBool32    shaderResourceMinLod;
VkBool32    sparseBinding;
VkBool32    sparseResidencyBuffer;
VkBool32    sparseResidencyImage2D;
VkBool32    sparseResidencyImage3D;
VkBool32    sparseResidency2Samples;
VkBool32    sparseResidency4Samples;
VkBool32    sparseResidency8Samples;
VkBool32    sparseResidency16Samples;
VkBool32    sparseResidencyAliased;
VkBool32    variableMultisampleRate;
VkBool32    inheritedQueries;
} VkPhysicalDeviceFeatures;

```

This structure describes the following features:

- **robustBufferAccess** enables **Robust Buffer Access** guarantees for shader buffer accesses.
- **fullDrawIndexUint32** specifies the full 32-bit range of indices is supported for indexed draw calls when using a **VkIndexType** of **VK\_INDEX\_TYPE\_UINT32**. **maxDrawIndexedIndexValue** is the maximum index value that **may** be used (aside from the primitive restart index, which is always  $2^{32}-1$  when the **VkIndexType** is **VK\_INDEX\_TYPE\_UINT32**). If this feature is supported, **maxDrawIndexedIndexValue** **must** be  $2^{32}-1$ ; otherwise it **must** be no smaller than  $2^{24}-1$ . See **maxDrawIndexedIndexValue**.
- **imageCubeArray** specifies whether image views with a **VkImageViewType** of **VK\_IMAGE\_VIEW\_TYPE\_CUBE\_ARRAY** **can** be created, and that the corresponding **SampledCubeArray** and **ImageCubeArray** SPIR-V capabilities **can** be used in shader code.
- **independentBlend** specifies whether the **VkPipelineColorBlendAttachmentState** settings are controlled independently per-attachment. If this feature is not enabled, the **VkPipelineColorBlendAttachmentState** settings for all color attachments **must** be identical. Otherwise, a different **VkPipelineColorBlendAttachmentState** **can** be provided for each bound color attachment.
- **geometryShader** specifies whether geometry shaders are supported. If this feature is not enabled, the **VK\_SHADER\_STAGE\_GEOMETRY\_BIT** and **VK\_PIPELINE\_STAGE\_GEOMETRY\_SHADER\_BIT** enum values **must** not be used. This also specifies whether shader modules **can** declare the **Geometry** capability.
- **tessellationShader** specifies whether tessellation control and evaluation shaders are supported. If this feature is not enabled, the **VK\_SHADER\_STAGE\_TESSELLATION\_CONTROL\_BIT**, **VK\_SHADER\_STAGE\_TESSELLATION\_EVALUATION\_BIT**, **VK\_PIPELINE\_STAGE\_TESSELLATION\_CONTROL\_SHADER\_BIT**, **VK\_PIPELINE\_STAGE\_TESSELLATION\_EVALUATION\_SHADER\_BIT**, and **VK\_STRUCTURE\_TYPE\_PIPELINE\_TESSELLATION\_STATE\_CREATE\_INFO** enum values **must** not be used. This also specifies whether shader modules **can** declare the **Tessellation** capability.
- **sampleRateShading** specifies whether **Sample Shading** and multisample interpolation are

supported. If this feature is not enabled, the `sampleShadingEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure **must** be `VK_FALSE` and the `minSampleShading` member is ignored. This also specifies whether shader modules **can** declare the `SampleRateShading` capability.

- `dualSrcBlend` specifies whether blend operations which take two sources are supported. If this feature is not enabled, the `VK_BLEND_FACTOR_SRC1_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR`, `VK_BLEND_FACTOR_SRC1_ALPHA`, and `VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA` enum values **must** not be used as source or destination blending factors. See [Dual-Source Blending](#).
- `logicOp` specifies whether logic operations are supported. If this feature is not enabled, the `logicOpEnable` member of the `VkPipelineColorBlendStateCreateInfo` structure **must** be `VK_FALSE`, and the `logicOp` member is ignored.
- `multiDrawIndirect` specifies whether multiple draw indirect is supported. If this feature is not enabled, the `drawCount` parameter to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands **must** be 0 or 1. The `maxDrawIndirectCount` member of the `VkPhysicalDeviceLimits` structure **must** also be 1 if this feature is not supported. See [maxDrawIndirectCount](#).
- `drawIndirectFirstInstance` specifies whether indirect drawing calls support the `firstInstance` parameter. If this feature is not enabled, the `firstInstance` member of all `VkDrawIndirectCommand` and `VkDrawIndexedIndirectCommand` structures that are provided to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands **must** be 0.
- `depthClamp` specifies whether depth clamping is supported. If this feature is not enabled, the `depthClampEnable` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be `VK_FALSE`. Otherwise, setting `depthClampEnable` to `VK_TRUE` will enable depth clamping.
- `depthBiasClamp` specifies whether depth bias clamping is supported. If this feature is not enabled, the `depthBiasClamp` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be 0.0 unless the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state is enabled, in which case the `depthBiasClamp` parameter to `vkCmdSetDepthBias` **must** be 0.0.
- `fillModeNonSolid` specifies whether point and wireframe fill modes are supported. If this feature is not enabled, the `VK_POLYGON_MODE_POINT` and `VK_POLYGON_MODE_LINE` enum values **must** not be used.
- `depthBounds` specifies whether depth bounds tests are supported. If this feature is not enabled, the `depthBoundsTestEnable` member of the `VkPipelineDepthStencilStateCreateInfo` structure **must** be `VK_FALSE` unless the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state is enabled, in which case the `depthBoundsTestEnable` parameter to `vkCmdSetDepthBoundsTestEnable` **must** be `VK_FALSE`. When `depthBoundsTestEnable` is `VK_FALSE`, the `minDepthBounds` and `maxDepthBounds` members of the `VkPipelineDepthStencilStateCreateInfo` structure are ignored.
- `wideLines` specifies whether lines with width other than 1.0 are supported. If this feature is not enabled, the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` structure **must** be 1.0 unless the `VK_DYNAMIC_STATE_LINE_WIDTH` dynamic state is enabled, in which case the `lineWidth` parameter to `vkCmdSetLineWidth` **must** be 1.0. When this feature is supported, the range and granularity of supported line widths are indicated by the `lineWidthRange` and `lineWidthGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.
- `largePoints` specifies whether points with size greater than 1.0 are supported. If this feature is

not enabled, only a point size of 1.0 written by a shader is supported. The range and granularity of supported point sizes are indicated by the `pointSizeRange` and `pointSizeGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.

- `alphaToOne` specifies whether the implementation is able to replace the alpha value of the fragment shader color output in the `Multisample Coverage` fragment operation. If this feature is not enabled, then the `alphaToOneEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure **must** be `VK_FALSE`. Otherwise setting `alphaToOneEnable` to `VK_TRUE` will enable alpha-to-one behavior.
- `multiViewport` specifies whether more than one viewport is supported. If this feature is not enabled:
  - The `viewportCount` and `scissorCount` members of the `VkPipelineViewportStateCreateInfo` structure **must** be 1.
  - The `firstViewport` and `viewportCount` parameters to the `vkCmdSetViewport` command **must** be 0 and 1, respectively.
  - The `firstScissor` and `scissorCount` parameters to the `vkCmdSetScissor` command **must** be 0 and 1, respectively.
- `samplerAnisotropy` specifies whether anisotropic filtering is supported. If this feature is not enabled, the `anisotropyEnable` member of the `VkSamplerCreateInfo` structure **must** be `VK_FALSE`.
- `textureCompressionETC2` specifies whether all of the ETC2 and EAC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
  - `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`
  - `VK_FORMAT_EAC_R11_UNORM_BLOCK`
  - `VK_FORMAT_EAC_R11_SNORM_BLOCK`
  - `VK_FORMAT_EAC_R11G11_UNORM_BLOCK`
  - `VK_FORMAT_EAC_R11G11_SNORM_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` **can** be used to check for supported properties of individual formats as normal.

- `textureCompressionASTC_LDR` specifies whether all of the ASTC LDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and

VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_FILTER\_LINEAR\_BIT features **must** be supported in **optimalTilingFeatures** for the following formats:

- VK\_FORMAT\_ASTC\_4x4\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_4x4\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_5x4\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_5x4\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_5x5\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_5x5\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_6x5\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_6x5\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_6x6\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_6x6\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_8x5\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_8x5\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_8x6\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_8x6\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_8x8\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_8x8\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_10x5\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_10x5\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_10x6\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_10x6\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_10x8\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_10x8\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_10x10\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_10x10\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_12x10\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_12x10\_SRGB\_BLOCK
- VK\_FORMAT\_ASTC\_12x12\_UNORM\_BLOCK
- VK\_FORMAT\_ASTC\_12x12\_SRGB\_BLOCK

To query for additional properties, or if the feature is not enabled, **vkGetPhysicalDeviceFormatProperties** and **vkGetPhysicalDeviceImageFormatProperties** **can** be used to check for supported properties of individual formats as normal.

- **textureCompressionBC** specifies whether all of the BC compressed texture formats are supported. If this feature is enabled, then the **VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_BIT**,

VK\_FORMAT\_FEATURE\_BLIT\_SRC\_BIT and  
VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_FILTER\_LINEAR\_BIT features **must** be supported in  
optimalTilingFeatures for the following formats:

- VK\_FORMAT\_BC1\_RGB\_UNORM\_BLOCK
- VK\_FORMAT\_BC1\_RGB\_SRGB\_BLOCK
- VK\_FORMAT\_BC1\_RGBA\_UNORM\_BLOCK
- VK\_FORMAT\_BC1\_RGBA\_SRGB\_BLOCK
- VK\_FORMAT\_BC2\_UNORM\_BLOCK
- VK\_FORMAT\_BC2\_SRGB\_BLOCK
- VK\_FORMAT\_BC3\_UNORM\_BLOCK
- VK\_FORMAT\_BC3\_SRGB\_BLOCK
- VK\_FORMAT\_BC4\_UNORM\_BLOCK
- VK\_FORMAT\_BC4\_SNORM\_BLOCK
- VK\_FORMAT\_BC5\_UNORM\_BLOCK
- VK\_FORMAT\_BC5\_SNORM\_BLOCK
- VK\_FORMAT\_BC6H\_UFLOAT\_BLOCK
- VK\_FORMAT\_BC6H\_SFLOAT\_BLOCK
- VK\_FORMAT\_BC7\_UNORM\_BLOCK
- VK\_FORMAT\_BC7\_SRGB\_BLOCK

To query for additional properties, or if the feature is not enabled,  
vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties **can**  
be used to check for supported properties of individual formats as normal.

- **occlusionQueryPrecise** specifies whether occlusion queries returning actual sample counts are supported. Occlusion queries are created in a **VkQueryPool** by specifying the **queryType** of **VK\_QUERY\_TYPE\_OCCLUSION** in the **VkQueryPoolCreateInfo** structure which is passed to **vkCreateQueryPool**. If this feature is enabled, queries of this type **can** enable **VK\_QUERY\_CONTROL\_PRECISE\_BIT** in the **flags** parameter to **vkCmdBeginQuery**. If this feature is not supported, the implementation supports only boolean occlusion queries. When any samples are passed, boolean queries will return a non-zero result value, otherwise a result value of zero is returned. When this feature is enabled and **VK\_QUERY\_CONTROL\_PRECISE\_BIT** is set, occlusion queries will report the actual number of samples passed.
- **pipelineStatisticsQuery** specifies whether the pipeline statistics queries are supported. If this feature is not enabled, queries of type **VK\_QUERY\_TYPE\_PIPELINE\_STATISTICS** **cannot** be created, and none of the **VkQueryPipelineStatisticFlagBits** bits **can** be set in the **pipelineStatistics** member of the **VkQueryPoolCreateInfo** structure.
- **vertexPipelineStoresAndAtomics** specifies whether storage buffers and images support stores and atomic operations in the vertex, tessellation, and geometry shader stages. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by these stages in shader modules **must** be decorated with the **NonWritable** decoration (or the **readonly**

memory qualifier in GLSL).

- **fragmentStoresAndAtomics** specifies whether storage buffers and images support stores and atomic operations in the fragment shader stage. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by the fragment stage in shader modules **must** be decorated with the **NonWritable** decoration (or the **readonly** memory qualifier in GLSL).
- **shaderTessellationAndGeometryPointSize** specifies whether the **PointSize** built-in decoration is available in the tessellation control, tessellation evaluation, and geometry shader stages. If this feature is not enabled, members decorated with the **PointSize** built-in decoration **must** not be read from or written to and all points written from a tessellation or geometry shader will have a size of 1.0. This also specifies whether shader modules **can** declare the **TessellationPointSize** capability for tessellation control and evaluation shaders, or if the shader modules **can** declare the **GeometryPointSize** capability for geometry shaders. An implementation supporting this feature **must** also support one or both of the **tessellationShader** or **geometryShader** features.
- **shaderImageGatherExtended** specifies whether the extended set of image gather instructions are available in shader code. If this feature is not enabled, the **OpImage\*Gather** instructions do not support the **Offset** and **ConstOffsets** operands. This also specifies whether shader modules **can** declare the **ImageGatherExtended** capability.
- **shaderStorageImageExtendedFormats** specifies whether all the “storage image extended formats” below are supported; if this feature is supported, then the **VK\_FORMAT\_FEATURE\_STORAGE\_IMAGE\_BIT** **must** be supported in **optimalTilingFeatures** for the following formats:
  - **VK\_FORMAT\_R16G16\_SFLOAT**
  - **VK\_FORMAT\_B10G11R11\_UFLOAT\_PACK32**
  - **VK\_FORMAT\_R16\_SFLOAT**
  - **VK\_FORMAT\_R16G16B16A16\_UNORM**
  - **VK\_FORMAT\_A2B10G10R10\_UNORM\_PACK32**
  - **VK\_FORMAT\_R16G16\_UNORM**
  - **VK\_FORMAT\_R8G8\_UNORM**
  - **VK\_FORMAT\_R16\_UNORM**
  - **VK\_FORMAT\_R8\_UNORM**
  - **VK\_FORMAT\_R16G16B16A16\_SNORM**
  - **VK\_FORMAT\_R16G16\_SNORM**
  - **VK\_FORMAT\_R8G8\_SNORM**
  - **VK\_FORMAT\_R16\_SNORM**
  - **VK\_FORMAT\_R8\_SNORM**
  - **VK\_FORMAT\_R16G16\_SINT**
  - **VK\_FORMAT\_R8G8\_SINT**
  - **VK\_FORMAT\_R16\_SINT**
  - **VK\_FORMAT\_R8\_SINT**

- [VK\\_FORMAT\\_A2B10G10R10\\_UINT\\_PACK32](#)
- [VK\\_FORMAT\\_R16G16\\_UINT](#)
- [VK\\_FORMAT\\_R8G8\\_UINT](#)
- [VK\\_FORMAT\\_R16\\_UINT](#)
- [VK\\_FORMAT\\_R8\\_UINT](#)

#### NOTE

[shaderStorageImageExtendedFormats](#) feature only adds a guarantee of format support, which is specified for the whole physical device. Therefore enabling or disabling the feature via [vkCreateDevice](#) has no practical effect.

To query for additional properties, or if the feature is not supported, [vkGetPhysicalDeviceFormatProperties](#) and [vkGetPhysicalDeviceImageFormatProperties](#) **can** be used to check for supported properties of individual formats, as usual rules allow.

[VK\\_FORMAT\\_R32G32\\_UINT](#), [VK\\_FORMAT\\_R32G32\\_SINT](#), and [VK\\_FORMAT\\_R32G32\\_SFLOAT](#) from [StorageImageExtendedFormats](#) SPIR-V capability, are already covered by core Vulkan [mandatory format support](#).

- [shaderStorageImageMultisample](#) specifies whether multisampled storage images are supported. If this feature is not enabled, images that are created with the [VK\\_IMAGE\\_USAGE\\_STORAGE\\_BIT](#) usage flag set **must** be created with [samples](#) equal to [VK\\_SAMPLE\\_COUNT\\_1\\_BIT](#). This also specifies whether shader modules **can** declare the [StorageImageMultisample](#) and [ImageMSArray](#) capabilities.
- [shaderStorageImageReadWithoutFormat](#) specifies whether storage images and storage texel buffers require a format qualifier to be specified when reading. [shaderStorageImageReadWithoutFormat](#) applies only to formats listed in the [storage without format](#) list.
- [shaderStorageImageWriteWithoutFormat](#) specifies whether storage images and storage texel buffers require a format qualifier to be specified when writing. [shaderStorageImageWriteWithoutFormat](#) applies only to formats listed in the [storage without format](#) list.
- [shaderUniformBufferArrayDynamicIndexing](#) specifies whether arrays of uniform buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER](#) or [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER\\_DYNAMIC](#) **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the [UniformBufferArrayDynamicIndexing](#) capability.
- [shaderSampledImageArrayDynamicIndexing](#) specifies whether arrays of samplers or sampled images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of [VK\\_DESCRIPTOR\\_TYPE\\_SAMPLER](#), [VK\\_DESCRIPTOR\\_TYPE\\_COMBINED\\_IMAGE\\_SAMPLER](#), or [VK\\_DESCRIPTOR\\_TYPE\\_SAMPLED\\_IMAGE](#) **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader

modules **can** declare the `SampledImageArrayDynamicIndexing` capability.

- `shaderStorageBufferArrayDynamicIndexing` specifies whether arrays of storage buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageBufferArrayDynamicIndexing` capability.
- `shaderStorageImageArrayDynamicIndexing` specifies whether arrays of storage images **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules **can** declare the `StorageImageArrayDynamicIndexing` capability.
- `shaderClipDistance` specifies whether clip distances are supported in shader code. If this feature is not enabled, any members decorated with the `ClipDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `ClipDistance` capability.
- `shaderCullDistance` specifies whether cull distances are supported in shader code. If this feature is not enabled, any members decorated with the `CullDistance` built-in decoration **must** not be read from or written to in shader modules. This also specifies whether shader modules **can** declare the `CullDistance` capability.
- `shaderFloat64` specifies whether 64-bit floats (doubles) are supported in shader code. If this feature is not enabled, 64-bit floating-point types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Float64` capability. Declaring and using 64-bit floats is enabled for all storage classes that SPIR-V allows with the `Float64` capability.
- `shaderInt64` specifies whether 64-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 64-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Int64` capability. Declaring and using 64-bit integers is enabled for all storage classes that SPIR-V allows with the `Int64` capability.
- `shaderInt16` specifies whether 16-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 16-bit integer types **must** not be used in shader code. This also specifies whether shader modules **can** declare the `Int16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int16` SPIR-V capability: Declaring and using 16-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `shaderResourceResidency` specifies whether image operations that return resource residency information are supported in shader code. If this feature is not enabled, the `OpImageSparse*` instructions **must** not be used in shader code. This also specifies whether shader modules **can** declare the `SparseResidency` capability. The feature requires at least one of the `sparseResidency*` features to be supported.
- `shaderResourceMinLod` specifies whether image operations specifying the minimum resource LOD are supported in shader code. If this feature is not enabled, the `MinLod` image operand **must** not

be used in shader code. This also specifies whether shader modules **can** declare the **MinLod** capability.

- **sparseBinding** specifies whether resource memory **can** be managed at opaque sparse block level instead of at the object level. If this feature is not enabled, resource memory **must** be bound only on a per-object basis using the **vkBindBufferMemory** and **vkBindImageMemory** commands. In this case, buffers and images **must** not be created with **VK\_BUFFER\_CREATE\_SPARSE\_BINDING\_BIT** and **VK\_IMAGE\_CREATE\_SPARSE\_BINDING\_BIT** set in the **flags** member of the **VkBufferCreateInfo** and **VkImageCreateInfo** structures, respectively. Otherwise resource memory **can** be managed as described in **Sparse Resource Features**.
- **sparseResidencyBuffer** specifies whether the device **can** access partially resident buffers. If this feature is not enabled, buffers **must** not be created with **VK\_BUFFER\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkBufferCreateInfo** structure.
- **sparseResidencyImage2D** specifies whether the device **can** access partially resident 2D images with 1 sample per pixel. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_2D** and **samples** set to **VK\_SAMPLE\_COUNT\_1\_BIT** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidencyImage3D** specifies whether the device **can** access partially resident 3D images. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_3D** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency2Samples** specifies whether the physical device **can** access partially resident 2D images with 2 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_2D** and **samples** set to **VK\_SAMPLE\_COUNT\_2\_BIT** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency4Samples** specifies whether the physical device **can** access partially resident 2D images with 4 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_2D** and **samples** set to **VK\_SAMPLE\_COUNT\_4\_BIT** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency8Samples** specifies whether the physical device **can** access partially resident 2D images with 8 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_2D** and **samples** set to **VK\_SAMPLE\_COUNT\_8\_BIT** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidency16Samples** specifies whether the physical device **can** access partially resident 2D images with 16 samples per pixel. If this feature is not enabled, images with an **imageType** of **VK\_IMAGE\_TYPE\_2D** and **samples** set to **VK\_SAMPLE\_COUNT\_16\_BIT** **must** not be created with **VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT** set in the **flags** member of the **VkImageCreateInfo** structure.
- **sparseResidencyAliased** specifies whether the physical device **can** correctly access data aliased into multiple locations. If this feature is not enabled, the

`VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` enum values **must** not be used in `flags` members of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively.

- `variableMultisampleRate` specifies whether all pipelines that will be bound to a command buffer during a subpass which uses no attachments **must** have the same value for `VkPipelineMultisampleStateCreateInfo::rasterizationSamples`. If set to `VK_TRUE`, the implementation supports variable multisample rates in a subpass which uses no attachments. If set to `VK_FALSE`, then all pipelines bound in such a subpass **must** have the same multisample rate. This has no effect in situations where a subpass uses any attachments.
- `inheritedQueries` specifies whether a secondary command buffer **may** be executed while a query is active.

The `VkPhysicalDeviceVulkan11Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan11Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
    VkBool32           protectedMemory;
    VkBool32           samplerYcbcrConversion;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceVulkan11Features;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the `storageBuffer8BitAccess` or `uniformAndStorageBuffer8BitAccess` features are enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.
- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects

unless the `uniformAndStorageBuffer8BitAccess` are enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess` capability.

- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless the `storagePushConstant8` feature is enabled or they are accessed in 32-bit multiples if the `shaderUntypedPointers` feature is enabled. This also specifies whether shader modules **can** declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageInputOutput16` capability.
- `multiview` specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- `multiviewGeometryShader` specifies whether the implementation supports multiview rendering within a render pass, with `geometry shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- `multiviewTessellationShader` specifies whether the implementation supports multiview rendering within a render pass, with `tessellation shaders`. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.
- `variablePointersStorageBuffer` specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.
- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.
- `protectedMemory` specifies whether `protected memory` is supported.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y'C<sub>B</sub>C<sub>R</sub> conversion is not supported, and samplers using sampler Y'C<sub>B</sub>C<sub>R</sub> conversion **must** not be used.
- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_shader_draw_parameters` extension or the `DrawParameters` capability.

If the `VkPhysicalDeviceVulkan11Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan11Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceVulkan11Features-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_1_FEATURES`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVulkan12Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan12Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerMirrorClampToEdge;
    VkBool32           drawIndirectCount;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
    VkBool32           shaderBufferInt64Atomics;
    VkBool32           shaderSharedInt64Atomics;
    VkBool32           shaderFloat16;
    VkBool32           shaderInt8;

```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **samplerMirrorClampToEdge** indicates whether the implementation supports the [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#) sampler address mode. If this feature is not enabled, the [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#) sampler address mode **must** not be used.
- **drawIndirectCount** indicates whether the implementation supports the [vkCmdDrawIndirectCount](#) and [vkCmdDrawIndexedIndirectCount](#) functions. If this feature is not enabled, these functions **must** not be used.
- **storageBuffer8BitAccess** indicates whether objects in the [StorageBuffer](#), [ShaderRecordBufferKHR](#), or [PhysicalStorageBuffer](#) storage class with the **Block** decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the [shaderUntypedPointer](#) feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the [storageBuffer16BitAccess](#) feature is enabled. This also indicates whether shader modules **can** declare the [StorageBuffer8BitAccess](#) capability.
- **uniformAndStorageBuffer8BitAccess** indicates whether objects in the [Uniform](#) storage class with the **Block** decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the [shaderUntypedPointers](#) feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the [uniformAndStorageBuffer16BitAccess](#) feature is enabled. This also indicates whether shader modules **can** declare the [UniformAndStorageBuffer8BitAccess](#) capability.
- **storagePushConstant8** indicates whether objects in the [PushConstant](#) storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the [shaderUntypedPointers](#) feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the [storagePushConstant16](#) feature is enabled. This also indicates

whether shader modules **can** declare the `StoragePushConstant8` capability.

- `shaderBufferInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.
- `shaderSharedInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.
- `shaderFloat16` indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `shaderInt8` indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.
- `descriptorIndexing` indicates whether the implementation supports the minimum set of descriptor indexing features as described in the [Feature Requirements](#) section. Enabling this feature when `vkCreateDevice` is called does not imply the other minimum descriptor indexing features are also enabled. Those other descriptor indexing features **must** be enabled individually as needed by the application.
- `shaderInputAttachmentArrayDynamicIndexing` indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.
- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.
- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform

integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.

- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.
- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.
- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled,

`VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.

- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` **must** not be used.
- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` **must** not be used.
- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.
- `samplerFilterMinmax` indicates whether the implementation supports a minimum set of required formats supporting min/max filtering as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements. If this feature is not enabled, then `VkSamplerReductionModeCreateInfo` **must** only use `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.
- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using `scalar alignment`.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.
- `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See [Standard Buffer Layout](#).
- `shaderSubgroupExtendedTypes` is a boolean specifying whether subgroup operations can use 8-bit

integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in [group operations](#) with [subgroup scope](#), if the implementation supports the types.

- [separateDepthStencilLayouts](#) indicates whether the implementation supports a [VkImageMemoryBarrier](#) for a depth/stencil image with only one of [VK\\_IMAGE\\_ASPECT\\_DEPTH\\_BIT](#) or [VK\\_IMAGE\\_ASPECT\\_STENCIL\\_BIT](#) set, and whether [VK\\_IMAGE\\_LAYOUT\\_DEPTH\\_ATTACHMENT\\_OPTIMAL](#), [VK\\_IMAGE\\_LAYOUT\\_DEPTH\\_READ\\_ONLY\\_OPTIMAL](#), [VK\\_IMAGE\\_LAYOUT\\_STENCIL\\_ATTACHMENT\\_OPTIMAL](#), or [VK\\_IMAGE\\_LAYOUT\\_STENCIL\\_READ\\_ONLY\\_OPTIMAL](#) can be used.
- [hostQueryReset](#) indicates that the implementation supports resetting queries from the host with [vkResetQueryPool](#).
- [timelineSemaphore](#) indicates whether semaphores created with a [VkSemaphoreType](#) of [VK\\_SEMAPHORE\\_TYPE\\_TIMELINE](#) are supported.
- [bufferDeviceAddress](#) indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from [vkGetBufferDeviceAddress](#).
- [bufferDeviceAddressCaptureReplay](#) indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- [bufferDeviceAddressMultiDevice](#) indicates that the implementation supports the [bufferDeviceAddress](#), [rayTracingPipeline](#) and [rayQuery](#) features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.
- [vulkanMemoryModel](#) indicates whether shader modules **can** declare the [VulkanMemoryModel](#) capability.
- [vulkanMemoryModelDeviceScope](#) indicates whether the Vulkan Memory Model can use [Device](#) scope synchronization. This also indicates whether shader modules **can** declare the [VulkanMemoryModelDeviceScope](#) capability.
- [vulkanMemoryModelAvailabilityVisibilityChains](#) indicates whether the Vulkan Memory Model can use [availability and visibility chains](#) with more than one element.
- [shaderOutputViewportIndex](#) indicates whether the implementation supports the [ShaderViewportIndex](#) SPIR-V capability enabling variables decorated with the [ViewportIndex](#) built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the [ViewportIndex](#) built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- [shaderOutputLayer](#) indicates whether the implementation supports the [ShaderLayer](#) SPIR-V capability enabling variables decorated with the [Layer](#) built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the [Layer](#) built-in decoration **must** not be used on outputs in mesh, vertex or tessellation evaluation shaders.
- If [subgroupBroadcastDynamicId](#) is [VK\\_TRUE](#), the “Id” operand of [OpGroupNonUniformBroadcast](#) **can** be dynamically uniform within a subgroup, and the “Index” operand of [OpGroupNonUniformQuadBroadcast](#) **can** be dynamically uniform within the derivative group. If it is [VK\\_FALSE](#), these operands **must** be constants.

If the [VkPhysicalDeviceVulkan12Features](#) structure is included in the [pNext](#) chain of the

[VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVulkan12Features](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan12Features-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VULKAN\\_1\\_2\\_FEATURES](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceVulkan13Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceVulkan13Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
    VkBool32           pipelineCreationCacheControl;
    VkBool32           privateData;
    VkBool32           shaderDemoteToHelperInvocation;
    VkBool32           shaderTerminateInvocation;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
    VkBool32           synchronization2;
    VkBool32           textureCompressionASTC_HDR;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
    VkBool32           dynamicRendering;
    VkBool32           shaderIntegerDotProduct;
    VkBool32           maintenance4;
} VkPhysicalDeviceVulkan13Features;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [robustImageAccess](#) enables [Robust Image Access](#) guarantees for shader image accesses.

- `inlineUniformBlock` indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not be used.
- `descriptorBindingInlineUniformBlockUpdateAfterBind` indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.
- `pipelineCreationCacheControl` indicates that the implementation supports:
  - The following **can** be used in `Vk*PipelineCreateInfo::flags`:
    - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`
    - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
  - The following **can** be used in `VkPipelineCacheCreateInfo::flags`:
    - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`
- `privateData` indicates whether the implementation supports private data. See [Private Data](#).
- `shaderDemoteToHelperInvocation` indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.
- `shaderTerminateInvocation` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_terminate_invocation` extension.
- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in compute shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.
- `synchronization2` indicates whether the implementation supports the new set of synchronization commands introduced in `VK_KHR_synchronization2`.
- `textureCompressionASTC_HDR` indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features **must** be supported in `optimalTilingFeatures` for the following formats:
  - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`

- [VK\\_FORMAT\\_ASTC\\_8x8\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_10x5\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_10x6\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_10x8\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_10x10\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_12x10\\_SFLOAT\\_BLOCK](#)
- [VK\\_FORMAT\\_ASTC\\_12x12\\_SFLOAT\\_BLOCK](#)

To query for additional properties, or if the feature is not enabled, [vkGetPhysicalDeviceFormatProperties](#) and [vkGetPhysicalDeviceImageFormatProperties](#) **can** be used to check for supported properties of individual formats as normal.

- [shaderZeroInitializeWorkgroupMemory](#) specifies whether the implementation supports initializing a variable in Workgroup storage class.
- [dynamicRendering](#) specifies that the implementation supports dynamic render pass instances using the [vkCmdBeginRendering](#) command.
- [shaderIntegerDotProduct](#) specifies whether shader modules **can** declare the [DotProductInputAllKHR](#), [DotProductInput4x8BitKHR](#), [DotProductInput4x8BitPackedKHR](#) and [DotProductKHR](#) capabilities.
- [maintenance4](#) indicates that the implementation supports the following:
  - The application **may** destroy a [VkPipelineLayout](#) object immediately after using it to create another object.
  - [LocalSizeId](#) **can** be used as an alternative to [LocalSize](#) to specify the local workgroup size with specialization constants.
  - Images created with identical creation parameters will always have the same alignment requirements.
  - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
  - Push constants do not have to be initialized before they are dynamically accessed.
  - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the [VkPhysicalDeviceVulkan13Features](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVulkan13Features](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan13Features-sType-sType

**sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_3_FEATURES`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceVulkan14Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVulkan14Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
    VkBool32           shaderFloatControls2;
    VkBool32           shaderExpectAssume;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
    VkBool32           indexTypeUint8;
    VkBool32           dynamicRenderingLocalRead;
    VkBool32           maintenance5;
    VkBool32           maintenance6;
    VkBool32           pipelineProtectedAccess;
    VkBool32           pipelineRobustness;
    VkBool32           hostImageCopy;
    VkBool32           pushDescriptor;
} VkPhysicalDeviceVulkan14Features;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **globalPriorityQuery** indicates whether the implementation supports the ability to query global queue priorities.
- **shaderSubgroupRotate** specifies whether shader modules **can** declare the `GroupNonUniformRotateKHR` capability.

- `shaderSubgroupRotateClustered` specifies whether shader modules **can** use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.
- `shaderExpectAssume` specifies whether shader modules **can** declare the `ExpectAssumeKHR` capability.
- `rectangularLines` indicates whether the implementation supports [rectangular line rasterization](#).
- `bresenhamLines` indicates whether the implementation supports [Bresenham-style line rasterization](#).
- `smoothLines` indicates whether the implementation supports [smooth line rasterization](#).
- `stippledRectangularLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR` lines.
- `stippledBresenhamLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_BRESENHAM` lines.
- `stippledSmoothLines` indicates whether the implementation supports [stippled line rasterization](#) with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH` lines.
- `vertexAttributeInstanceRateDivisor` specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- `vertexAttributeInstanceRateZeroDivisor` specifies whether a zero value for `VkVertexInputBindingDivisorDescription::divisor` is supported.
- `indexTypeUint8` indicates that `VK_INDEX_TYPE_UINT8` can be used with `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the `vkCmdBeginRendering` command.
- `maintenance5` indicates that the implementation supports the following:
  - The ability to expose support for the optional format `VK_FORMAT_A1B5G5R5_UNORM_PACK16`.
  - The ability to expose support for the optional format `VK_FORMAT_A8_UNORM`.
  - A property to indicate that multisample coverage operations are performed after sample counting in `EarlyFragmentTests` mode.
  - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using `VkBufferUsageFlags2CreateInfo`.
  - A new function `vkCmdBindIndexBuffer2`, allowing a range of memory to be bound as an index buffer.
  - `vkGetDeviceProcAddr` will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
  - `vkCmdBindVertexBuffers2` supports using `VK_WHOLE_SIZE` in the `pSizes` parameter.
  - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
  - `VkShaderModuleCreateInfo` **can** be added as a chained structure to pipeline creation via

`VkPipelineShaderStageCreateInfo`, rather than having to create a shader module.

- A function `vkGetRenderingAreaGranularity` to query the optimal render area for a dynamic rendering instance.
- A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `vkGetDeviceImageSubresourceLayout` allows an application to perform a `vkGetImageSubresourceLayout` query without having to create an image.
- `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`.
- A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.
- Two properties to indicate the non-strict line rasterization algorithm used.
- Two new flags words `VkPipelineCreateFlagBits2` and `VkBufferUsageFlagBits2`.
- Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
- Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.
- **maintenance6** indicates that the implementation supports the following:
  - `VK_NULL_HANDLE` **can** be used when binding an index buffer
  - `VkBindMemoryStatus` **can** be included in the `pNext` chain of the `VkBindBufferMemoryInfo` and `VkBindImageMemoryInfo` structures, enabling applications to retrieve `VkResult` values for individual memory binding operations.
  - `VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers` property to indicate that the implementation supports creating image views with `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` where the `layerCount` member of `subresourceRange` is greater than 1.
  - `VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount` property which indicates the maximum number of descriptors required for sampled images with `Y'CBCR` conversion.
  - A `VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs` property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.
- **pipelineProtectedAccess** indicates whether the implementation supports specifying protected access on individual pipelines.
- **pipelineRobustness** indicates that robustness **can** be requested on a per-pipeline-stage granularity.
- **hostImageCopy** indicates that the implementation supports copying from host memory to images using the `vkCopyMemoryToImage` command, copying from images to host memory using the `vkCopyImageToMemory` command, and copying between images using the `vkCopyImageToImage` command.

- `pushDescriptor` indicates that the implementation supports push descriptors.

If the `VkPhysicalDeviceVulkan14Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVulkan14Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan14Features-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_4_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVariablePointersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceVariablePointersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           variablePointersStorageBuffer;
    VkBool32           variablePointers;
} VkPhysicalDeviceVariablePointersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeatures;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointersFeaturesKHR;
```

```
// Provided by VK_KHR_variable_pointers
// Equivalent to VkPhysicalDeviceVariablePointersFeatures
typedef VkPhysicalDeviceVariablePointersFeatures
VkPhysicalDeviceVariablePointerFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `variablePointersStorageBuffer` specifies whether the implementation supports the SPIR-V `VariablePointersStorageBuffer` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_variable_pointers` extension or the `VariablePointersStorageBuffer` capability.
- `variablePointers` specifies whether the implementation supports the SPIR-V `VariablePointers` capability. When this feature is not enabled, shader modules **must** not declare the `VariablePointers` capability.

If the `VkPhysicalDeviceVariablePointersFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVariablePointersFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage

- VUID-VkPhysicalDeviceVariablePointersFeatures-variablePointers-01431  
If `variablePointers` is enabled then `variablePointersStorageBuffer` **must** also be enabled

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVariablePointersFeatures-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMultiviewFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiview;
    VkBool32           multiviewGeometryShader;
    VkBool32           multiviewTessellationShader;
} VkPhysicalDeviceMultiviewFeatures;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewFeatures
typedef VkPhysicalDeviceMultiviewFeatures VkPhysicalDeviceMultiviewFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **multiview** specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass **must** always be zero.
- **multiviewGeometryShader** specifies whether the implementation supports multiview rendering within a render pass, with [geometry shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a geometry shader.
- **multiviewTessellationShader** specifies whether the implementation supports multiview rendering within a render pass, with [tessellation shaders](#). If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include any tessellation shaders.

If the [VkPhysicalDeviceMultiviewFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMultiviewFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewGeometryShader-00580  
If **multiviewGeometryShader** is enabled then **multiview** **must** also be enabled
- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewTessellationShader-00581  
If **multiviewTessellationShader** is enabled then **multiview** **must** also be enabled

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewFeatures-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MULTIVIEW\\_FEATURES](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderAtomicFloatFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float
typedef struct VkPhysicalDeviceShaderAtomicFloatFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat32Atomics;
    VkBool32           shaderBufferFloat32AtomicAdd;
    VkBool32           shaderBufferFloat64Atomics;
    VkBool32           shaderBufferFloat64AtomicAdd;
    VkBool32           shaderSharedFloat32Atomics;
    VkBool32           shaderSharedFloat32AtomicAdd;
    VkBool32           shaderSharedFloat64Atomics;
    VkBool32           shaderSharedFloat64AtomicAdd;
    VkBool32           shaderImageFloat32Atomics;
    VkBool32           shaderImageFloat32AtomicAdd;
    VkBool32           sparseImageFloat32Atomics;
    VkBool32           sparseImageFloat32AtomicAdd;
} VkPhysicalDeviceShaderAtomicFloatFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderBufferFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic operations on storage buffers.
- **shaderBufferFloat64Atomics** indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat64AtomicAdd** indicates whether shaders **can** perform 64-bit floating-point add atomic operations on storage buffers.

- `shaderSharedFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic operations on shared and payload memory.
- `shaderSharedFloat64Atomics` indicates whether shaders **can** perform 64-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- `shaderSharedFloat64AtomicAdd` indicates whether shaders **can** perform 64-bit floating-point add atomic operations on shared and payload memory.
- `shaderImageFloat32Atomics` indicates whether shaders **can** perform 32-bit floating-point load, store, and exchange atomic image operations.
- `shaderImageFloat32AtomicAdd` indicates whether shaders **can** perform 32-bit floating-point add atomic image operations.
- `sparseImageFloat32Atomics` indicates whether 32-bit floating-point load, store, and exchange atomic operations **can** be used on sparse images.
- `sparseImageFloat32AtomicAdd` indicates whether 32-bit floating-point add atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloatFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_atomic_float2
typedef struct VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferFloat16Atomics;
    VkBool32           shaderBufferFloat16AtomicAdd;
    VkBool32           shaderBufferFloat16AtomicMinMax;
    VkBool32           shaderBufferFloat32AtomicMinMax;
    VkBool32           shaderBufferFloat64AtomicMinMax;
    VkBool32           shaderSharedFloat16Atomics;
    VkBool32           shaderSharedFloat16AtomicAdd;
    VkBool32           shaderSharedFloat16AtomicMinMax;
    VkBool32           shaderSharedFloat32AtomicMinMax;
    VkBool32           shaderSharedFloat64AtomicMinMax;
    VkBool32           shaderImageFloat32AtomicMinMax;
    VkBool32           sparseImageFloat32AtomicMinMax;
} VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderBufferFloat16Atomics** indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat16AtomicAdd** indicates whether shaders **can** perform 16-bit floating-point add atomic operations on storage buffers.
- **shaderBufferFloat16AtomicMinMax** indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on storage buffers.
- **shaderBufferFloat32AtomicMinMax** indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on storage buffers.
- **shaderBufferFloat64AtomicMinMax** indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on storage buffers.
- **shaderSharedFloat16Atomics** indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat16AtomicAdd** indicates whether shaders **can** perform 16-bit floating-point add atomic operations on shared and payload memory.
- **shaderSharedFloat16AtomicMinMax** indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on shared and payload memory.
- **shaderSharedFloat32AtomicMinMax** indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on shared and payload memory.
- **shaderSharedFloat64AtomicMinMax** indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on shared and payload memory.
- **shaderImageFloat32AtomicMinMax** indicates whether shaders **can** perform 32-bit floating-point

min and max atomic image operations.

- `sparseImageFloat32AtomicMinMax` indicates whether 32-bit floating-point min and max atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_2_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderAtomicInt64Features` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderAtomicInt64Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderBufferInt64Atomics;
    VkBool32           shaderSharedInt64Atomics;
} VkPhysicalDeviceShaderAtomicInt64Features;
```

```
// Provided by VK_KHR_shader_atomic_int64
// Equivalent to VkPhysicalDeviceShaderAtomicInt64Features
typedef VkPhysicalDeviceShaderAtomicInt64Features
VkPhysicalDeviceShaderAtomicInt64FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed

integer atomic operations on buffers.

- `shaderSharedInt64Atomics` indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.

If the `VkPhysicalDeviceShaderAtomicInt64Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderAtomicInt64Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicInt64Features-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_INT64_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_image_atomic_int64
typedef struct VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderImageInt64Atomics;
    VkBool32           sparseImageInt64Atomics;
} VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderImageInt64Atomics` indicates whether shaders **can** support 64-bit unsigned and signed integer atomic operations on images.
- `sparseImageInt64Atomics` indicates whether 64-bit integer atomics **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicInt64FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceShaderAtomicInt64FeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SHADER\\_IMAGE\\_ATOMIC\\_INT64\\_FEATURES\\_EXT](#) [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SHADER\\_IMAGE\\_ATOMIC\\_INT64\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevice8BitStorageFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDevice8BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer8BitAccess;
    VkBool32           uniformAndStorageBuffer8BitAccess;
    VkBool32           storagePushConstant8;
} VkPhysicalDevice8BitStorageFeatures;
```

```
// Provided by VK_KHR_8bit_storage
// Equivalent to VkPhysicalDevice8BitStorageFeatures
typedef VkPhysicalDevice8BitStorageFeatures VkPhysicalDevice8BitStorageFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [storageBuffer8BitAccess](#) indicates whether objects in the [StorageBuffer](#), [ShaderRecordBufferKHR](#), or [PhysicalStorageBuffer](#) storage class with the [Block](#) decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the [shaderUntypedPointer](#) feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the [storageBuffer16BitAccess](#) feature is enabled. This also indicates whether shader modules **can** declare the [StorageBuffer8BitAccess](#) capability.

- `uniformAndStorageBuffer8BitAccess` indicates whether objects in the `Uniform` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the `shaderUntypedPointers` feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the `uniformAndStorageBuffer16BitAccess` feature is enabled. This also indicates whether shader modules **can** declare the `UniformAndStorageBuffer8BitAccess` capability.
- `storagePushConstant8` indicates whether objects in the `PushConstant` storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects unless the `shaderUntypedPointers` feature is enabled and they are accessed in 32-bit multiples or 16-bit multiples if the `storagePushConstant16` feature is enabled. This also indicates whether shader modules **can** declare the `StoragePushConstant8` capability.

If the `VkPhysicalDevice8BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevice8BitStorageFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevice8BitStorageFeatures-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_8BIT_STORAGE_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevice16BitStorageFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevice16BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
} VkPhysicalDevice16BitStorageFeatures;
```

```
// Provided by VK_KHR_16bit_storage
// Equivalent to VkPhysicalDevice16BitStorageFeatures
typedef VkPhysicalDevice16BitStorageFeatures VkPhysicalDevice16BitStorageFeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **storageBuffer16BitAccess** specifies whether objects in the [StorageBuffer](#), [ShaderRecordBufferKHR](#), or [PhysicalStorageBuffer](#) storage class with the **Block** decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the [storageBuffer8BitAccess](#) or [uniformAndStorageBuffer8BitAccess](#) features are enabled or they are accessed in 32-bit multiples if the [shaderUntypedPointers](#) feature is enabled. This also specifies whether shader modules **can** declare the [StorageBuffer16BitAccess](#) capability.
- **uniformAndStorageBuffer16BitAccess** specifies whether objects in the [Uniform](#) storage class with the **Block** decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects unless the [uniformAndStorageBuffer8BitAccess](#) are enabled or they are accessed in 32-bit multiples if the [shaderUntypedPointers](#) feature is enabled. This also specifies whether shader modules **can** declare the [UniformAndStorageBuffer16BitAccess](#) capability.
- **storagePushConstant16** specifies whether objects in the [PushConstant](#) storage class **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members **must** not be used in such objects unless the [storagePushConstant8](#) feature is enabled or they are accessed in 32-bit multiples if the [shaderUntypedPointers](#) feature is enabled. This also specifies whether shader modules **can** declare the [StoragePushConstant16](#) capability.
- **storageInputOutput16** specifies whether objects in the [Input](#) and [Output](#) storage classes **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the [StorageInputOutput16](#) capability.

If the [VkPhysicalDevice16BitStorageFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevice16BitStorageFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDevice16BitStorageFeatures-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_16BIT\\_STORAGE\\_FEATURES](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderFloat16Int8Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderFloat16Int8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat16;
    VkBool32           shaderInt8;
} VkPhysicalDeviceShaderFloat16Int8Features;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceShaderFloat16Int8FeaturesKHR;
```

```
// Provided by VK_KHR_shader_float16_int8
// Equivalent to VkPhysicalDeviceShaderFloat16Int8Features
typedef VkPhysicalDeviceShaderFloat16Int8Features
VkPhysicalDeviceFloat16Int8FeaturesKHR;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderFloat16** indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the **Float16** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Float16** SPIR-V capability: Declaring and using 16-bit floats in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.
- **shaderInt8** indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the **Int8** capability. However, this only enables a subset of the storage classes that SPIR-V allows for the **Int8** SPIR-V capability: Declaring and using 8-bit integers in the **Private**, **Workgroup** (for non-Block variables), and **Function** storage classes is enabled, while declaring them in the interface storage classes (e.g., **UniformConstant**, **Uniform**, **StorageBuffer**, **Input**, **Output**, and **PushConstant**) is not enabled.

If the `VkPhysicalDeviceShaderFloat16Int8Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFloat16Int8Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT16_INT8_FEATURES` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT16_INT8_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderClockFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_clock
typedef struct VkPhysicalDeviceShaderClockFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupClock;
    VkBool32           shaderDeviceClock;
} VkPhysicalDeviceShaderClockFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupClock` indicates whether shaders **can** perform `Subgroup` scoped clock reads.
- `shaderDeviceClock` indicates whether shaders **can** perform `Device` scoped clock reads.

If the `VkPhysicalDeviceShaderClockFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderClockFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderClockFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CLOCK_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSamplerYcbcrConversionFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           samplerYcbcrConversion;
} VkPhysicalDeviceSamplerYcbcrConversionFeatures;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkPhysicalDeviceSamplerYcbcrConversionFeatures
typedef VkPhysicalDeviceSamplerYcbcrConversionFeatures
VkPhysicalDeviceSamplerYcbcrConversionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `samplerYcbcrConversion` specifies whether the implementation supports `sampler Y'CBCR conversion`. If `samplerYcbcrConversion` is `VK_FALSE`, `sampler Y'CBCR conversion` is not supported, and samplers using `sampler Y'CBCR conversion` **must** not be used.

If the `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSamplerYcbcrConversionFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerYcbcrConversionFeatures-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_SAMPLER\_YCBCR\_CONVERSION\_FEATURES

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceProtectedMemoryFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedMemory;
} VkPhysicalDeviceProtectedMemoryFeatures;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [protectedMemory](#) specifies whether [protected memory](#) is supported.

If the [VkPhysicalDeviceProtectedMemoryFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceProtectedMemoryFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryFeatures-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_PROTECTED\_MEMORY\_FEATURES

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           advancedBlendCoherentOperations;
} VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [advancedBlendCoherentOperations](#) specifies whether blending using [advanced blend operations](#) is guaranteed to execute atomically and in [primitive order](#). If this is `VK_TRUE`, [VK\\_ACCESS\\_COLOR\\_ATTACHMENT\\_READ\\_NONCOHERENT\\_BIT\\_EXT](#) is treated the same as [VK\\_ACCESS\\_COLOR\\_ATTACHMENT\\_READ\\_BIT](#), and advanced blending needs no additional synchronization over basic blending. If this is `VK_FALSE`, then memory dependencies are required to guarantee order between two advanced blending operations that occur on the same sample.

If the [VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_BLEND\\_OPERATION\\_ADVANCED\\_FEATURES\\_EXT](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceConditionalRenderingFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_conditional_rendering
typedef struct VkPhysicalDeviceConditionalRenderingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           conditionalRendering;
    VkBool32           inheritedConditionalRendering;
} VkPhysicalDeviceConditionalRenderingFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [conditionalRendering](#) specifies whether conditional rendering is supported.
- [inheritedConditionalRendering](#) specifies whether a secondary command buffer **can** be executed while conditional rendering is active in the primary command buffer.

If the [VkPhysicalDeviceConditionalRenderingFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceConditionalRenderingFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceConditionalRenderingFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_CONDITIONAL\\_RENDERING\\_FEATURES\\_EXT](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceShaderDrawParametersFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceShaderDrawParametersFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDrawParameters;
} VkPhysicalDeviceShaderDrawParametersFeatures;
```

```
// Provided by VK_VERSION_1_1
// Equivalent to VkPhysicalDeviceShaderDrawParametersFeatures
typedef VkPhysicalDeviceShaderDrawParametersFeatures
VkPhysicalDeviceShaderDrawParameterFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderDrawParameters` specifies whether the implementation supports the SPIR-V `DrawParameters` capability. When this feature is not enabled, shader modules **must** not declare the `SPV_KHR_shader_draw_parameters` extension or the `DrawParameters` capability.

If the `VkPhysicalDeviceShaderDrawParametersFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderDrawParametersFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDrawParametersFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DRAW_PARAMETERS_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMeshShaderFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           taskShader;
    VkBool32           meshShader;
    VkBool32           multiviewMeshShader;
    VkBool32           primitiveFragmentShadingRateMeshShader;
    VkBool32           meshShaderQueries;
} VkPhysicalDeviceMeshShaderFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `taskShader` specifies whether task shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_TASK_BIT_EXT` and `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT` enum values **must** not be used.
- `meshShader` specifies whether mesh shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_MESH_BIT_EXT` and `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT` enum values **must** not be used.
- `multiviewMeshShader` specifies whether the implementation supports `multiview` rendering within a render pass, with mesh shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask **must** not include a mesh shader.
- `primitiveFragmentShadingRateMeshShader` indicates that the implementation supports the `primitive fragment shading rate` in mesh shaders.
- `meshShaderQueries` indicates that the implementation supports creating query pools using the `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT` query type and statistic queries containing the `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT` and `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT` flags

If the `VkPhysicalDeviceMeshShaderFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMeshShaderFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-multiviewMeshShader-07032  
If `multiviewMeshShader` is enabled then `VkPhysicalDeviceMultiviewFeaturesKHR::multiview` **must** also be enabled
- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-primitiveFragmentShadingRateMeshShader-07033  
If `primitiveFragmentShadingRateMeshShader` is enabled then

`VkPhysicalDeviceFragmentShadingRateFeaturesKHR::primitiveFragmentShadingRate` **must** also be enabled

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceMemoryDecompressionFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryDecompression;
} VkPhysicalDeviceMemoryDecompressionFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryDecompression` indicates whether memory decompression is supported.

If the `VkPhysicalDeviceMemoryDecompressionFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMemoryDecompressionFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The [VkPhysicalDeviceDescriptorIndexingFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderInputAttachmentArrayDynamicIndexing;
    VkBool32           shaderUniformTexelBufferArrayDynamicIndexing;
    VkBool32           shaderStorageTexelBufferArrayDynamicIndexing;
    VkBool32           shaderUniformBufferArrayNonUniformIndexing;
    VkBool32           shaderSampledImageArrayNonUniformIndexing;
    VkBool32           shaderStorageBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageImageArrayNonUniformIndexing;
    VkBool32           shaderInputAttachmentArrayNonUniformIndexing;
    VkBool32           shaderUniformTexelBufferArrayNonUniformIndexing;
    VkBool32           shaderStorageTexelBufferArrayNonUniformIndexing;
    VkBool32           descriptorBindingUniformBufferUpdateAfterBind;
    VkBool32           descriptorBindingSampledImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageImageUpdateAfterBind;
    VkBool32           descriptorBindingStorageBufferUpdateAfterBind;
    VkBool32           descriptorBindingUniformTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingStorageTexelBufferUpdateAfterBind;
    VkBool32           descriptorBindingUpdateUnusedWhilePending;
    VkBool32           descriptorBindingPartiallyBound;
    VkBool32           descriptorBindingVariableDescriptorCount;
    VkBool32           runtimeDescriptorArray;
} VkPhysicalDeviceDescriptorIndexingFeatures;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingFeatures
typedef VkPhysicalDeviceDescriptorIndexingFeatures
VkPhysicalDeviceDescriptorIndexingFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderInputAttachmentArrayDynamicIndexing** indicates whether arrays of input attachments **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or

the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayDynamicIndexing` capability.

- `shaderUniformTexelBufferArrayDynamicIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayDynamicIndexing` capability.
- `shaderStorageTexelBufferArrayDynamicIndexing` indicates whether arrays of storage texel buffers **can** be indexed by integer expressions that are dynamically uniform within either the subgroup or the invocation group in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayDynamicIndexing` capability.
- `shaderUniformBufferArrayNonUniformIndexing` indicates whether arrays of uniform buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformBufferArrayNonUniformIndexing` capability.
- `shaderSampledImageArrayNonUniformIndexing` indicates whether arrays of samplers or sampled images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `SampledImageArrayNonUniformIndexing` capability.
- `shaderStorageBufferArrayNonUniformIndexing` indicates whether arrays of storage buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageBufferArrayNonUniformIndexing` capability.
- `shaderStorageImageArrayNonUniformIndexing` indicates whether arrays of storage images **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageImageArrayNonUniformIndexing` capability.
- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader

code. This also indicates whether shader modules **can** declare the `InputAttachmentArrayNonUniformIndexing` capability.

- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `UniformTexelBufferArrayNonUniformIndexing` capability.
- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers **can** be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` **must** not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules **can** declare the `StorageTexelBufferArrayNonUniformIndexing` capability.
- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.
- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.
- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.
- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.
- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.
- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` **must** not be used.
- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not

enabled, [VK\\_DESCRIPTOR\\_BINDING\\_PARTIALLY\\_BOUND\\_BIT](#) **must** not be used.

- [descriptorBindingVariableDescriptorCount](#) indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, [VK\\_DESCRIPTOR\\_BINDING\\_VARIABLE\\_DESCRIPTOR\\_COUNT\\_BIT](#) **must** not be used.
- [runtimeDescriptorArray](#) indicates whether the implementation supports the SPIR-V [RuntimeDescriptorArray](#) capability. If this feature is not enabled, descriptors **must** not be declared in runtime arrays.

If the [VkPhysicalDeviceDescriptorIndexingFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDescriptorIndexingFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingFeatures-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DESCRIPTOR\\_INDEXING\\_FEATURES](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indirectMemoryCopy;
    VkBool32           indirectMemoryToImageCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [indirectMemoryCopy](#) indicates whether [indirect memory to memory copies](#) are supported.
- [indirectMemoryToImageCopy](#) indicates whether [indirect memory to image copies](#) are supported.

If the `VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCopyMemoryIndirectFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_KHR` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVertexAttributeDivisorFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexAttributeInstanceRateDivisor;
    VkBool32           vertexAttributeInstanceRateZeroDivisor;
} VkPhysicalDeviceVertexAttributeDivisorFeatures;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorFeatures
typedef VkPhysicalDeviceVertexAttributeDivisorFeatures
VkPhysicalDeviceVertexAttributeDivisorFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexAttributeInstanceRateDivisor` specifies whether vertex attribute fetching may be repeated in the case of instanced rendering.
- `vertexAttributeInstanceRateZeroDivisor` specifies whether a zero value for `VkVertexInputBindingDivisorDescription::divisor` is supported.

If the `VkPhysicalDeviceVertexAttributeDivisorFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVertexAttributeDivisorFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceASTCDecodeFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_astc_decode_mode
typedef struct VkPhysicalDeviceASTCDecodeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           decodeModeSharedExponent;
} VkPhysicalDeviceASTCDecodeFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decodeModeSharedExponent` indicates whether the implementation supports decoding ASTC compressed formats to `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32` internal precision.

If the `VkPhysicalDeviceASTCDecodeFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceASTCDecodeFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceASTCDecodeFeaturesEXT-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceTransformFeedbackFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           transformFeedback;
    VkBool32           geometryStreams;
} VkPhysicalDeviceTransformFeedbackFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `transformFeedback` indicates whether the implementation supports transform feedback and shader modules can declare the `TransformFeedback` capability.
- `geometryStreams` indicates whether the implementation supports the `GeometryStreams` SPIR-V capability.

If the `VkPhysicalDeviceTransformFeedbackFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTransformFeedbackFeaturesEXT`, it must add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackFeaturesEXT-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceVulkanMemoryModelFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkanMemoryModelFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vulkanMemoryModel;
    VkBool32           vulkanMemoryModelDeviceScope;
    VkBool32           vulkanMemoryModelAvailabilityVisibilityChains;
} VkPhysicalDeviceVulkanMemoryModelFeatures;
```

```
// Provided by VK_KHR_vulkan_memory_model
// Equivalent to VkPhysicalDeviceVulkanMemoryModelFeatures
typedef VkPhysicalDeviceVulkanMemoryModelFeatures
VkPhysicalDeviceVulkanMemoryModelFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [vulkanMemoryModel](#) indicates whether shader modules **can** declare the [VulkanMemoryModel](#) capability.
- [vulkanMemoryModelDeviceScope](#) indicates whether the Vulkan Memory Model can use [Device](#) scope synchronization. This also indicates whether shader modules **can** declare the [VulkanMemoryModelDeviceScope](#) capability.
- [vulkanMemoryModelAvailabilityVisibilityChains](#) indicates whether the Vulkan Memory Model can use [availability and visibility chains](#) with more than one element.

If the [VkPhysicalDeviceVulkanMemoryModelFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVulkanMemoryModelFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceVulkanMemoryModelFeatures-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES`

## Structure Chaining

### Extends the structures

The `VkPhysicalDeviceInlineUniformBlockFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           inlineUniformBlock;
    VkBool32           descriptorBindingInlineUniformBlockUpdateAfterBind;
} VkPhysicalDeviceInlineUniformBlockFeatures;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `inlineUniformBlock` indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` **must** not be used.
- `descriptorBindingInlineUniformBlockUpdateAfterBind` indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

If the `VkPhysicalDeviceInlineUniformBlockFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceInlineUniformBlockFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

The `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_compute_shader_derivatives
typedef struct VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           computeDerivativeGroupQuads;
    VkBool32           computeDerivativeGroupLinear;
} VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeDerivativeGroupQuads` indicates that the implementation supports the `ComputeDerivativeGroupQuadsKHR` SPIR-V capability.
- `computeDerivativeGroupLinear` indicates that the implementation supports the `ComputeDerivativeGroupLinearKHR` SPIR-V capability.

See [Quad shader scope](#) for more information.

If the `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR-sType-sType **must** be

## Structure Chaining

The [VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderBarycentric;
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [fragmentShaderBarycentric](#) indicates that the implementation supports the [BaryCoordKHR](#) and [BaryCoordNoPerspKHR](#) SPIR-V fragment shader built-ins and supports the [PerVertexKHR](#) SPIR-V decoration on fragment shader input variables.

See [Barycentric Interpolation](#) for more information.

If the [VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMap;
    VkBool32           fragmentDensityMapDynamic;
    VkBool32           fragmentDensityMapNonSubsampledImages;
} VkPhysicalDeviceFragmentDensityMapFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [fragmentDensityMap](#) specifies whether the implementation supports render passes with a fragment density map attachment. If this feature is not enabled and the [pNext](#) chain of [VkRenderPassCreateInfo](#) includes a [VkRenderPassFragmentDensityMapCreateInfoEXT](#) structure, [fragmentDensityMapAttachment](#) **must** be `VK_ATTACHMENT_UNUSED`.
- [fragmentDensityMapDynamic](#) specifies whether the implementation supports dynamic fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` **must** not be included in [VkImageViewCreateInfo::flags](#).
- [fragmentDensityMapNonSubsampledImages](#) specifies whether the implementation supports regular non-subsampled image attachments with fragment density map render passes. If this feature is not enabled, render passes with a [fragment density map attachment](#) **must** only have [subsampled attachments](#) bound.

If the [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

`sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentDensityMapDeferred;
} VkPhysicalDeviceFragmentDensityMap2FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapDeferred` specifies whether the implementation supports deferred reads of fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT` must not be included in `VkImageViewCreateInfo::flags`.

If the `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT`, it must add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceScalarBlockLayoutFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           scalarBlockLayout;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **scalarBlockLayout** indicates that the implementation supports the layout of resource blocks in shaders using [scalar alignment](#).

If the [VkPhysicalDeviceScalarBlockLayoutFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceScalarBlockLayoutFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

} VkPhysicalDeviceUniformBufferStandardLayoutFeatures;
```

```
// Provided by VK_KHR_uniform_buffer_standard_layout
// Equivalent to VkPhysicalDeviceUniformBufferStandardLayoutFeatures
typedef VkPhysicalDeviceUniformBufferStandardLayoutFeatures
VkPhysicalDeviceUniformBufferStandardLayoutFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **uniformBufferStandardLayout** indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See [Standard Buffer Layout](#).

If the [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceUniformBufferStandardLayoutFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceDepthClipEnableFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPhysicalDeviceDepthClipEnableFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipEnable;
} VkPhysicalDeviceDepthClipEnableFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClipEnable` indicates that the implementation supports setting the depth clipping operation explicitly via the `VkPipelineRasterizationDepthClipStateCreateInfoEXT` pipeline state. Otherwise depth clipping is only enabled when `VkPipelineRasterizationStateCreateInfo::depthClampEnable` is `VK_FALSE`.

If the `VkPhysicalDeviceDepthClipEnableFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClipEnableFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_memory_priority
typedef struct VkPhysicalDeviceMemoryPriorityFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryPriority;
} VkPhysicalDeviceMemoryPriorityFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryPriority` indicates that the implementation supports memory priorities specified at memory allocation time via `VkMemoryPriorityAllocateInfoEXT`.

If the `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMemoryPriorityFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceMemoryPriorityFeaturesEXT-sType-sType](#) [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MEMORY\\_PRIORITY\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceBufferDeviceAddressFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceBufferDeviceAddressFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           bufferDeviceAddress;
    VkBool32           bufferDeviceAddressCaptureReplay;
    VkBool32           bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeatures;
```

```
// Provided by VK_KHR_buffer_device_address
// Equivalent to VkPhysicalDeviceBufferDeviceAddressFeatures
typedef VkPhysicalDeviceBufferDeviceAddressFeatures
VkPhysicalDeviceBufferDeviceAddressFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [bufferDeviceAddress](#) indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from [vkGetBufferDeviceAddress](#).
- [bufferDeviceAddressCaptureReplay](#) indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
- [bufferDeviceAddressMultiDevice](#) indicates that the implementation supports the

`bufferDeviceAddress` , `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses **must** not be queried on a logical device created with more than one physical device.

#### NOTE

`bufferDeviceAddressMultiDevice` exists to allow certain legacy platforms to be able to support `bufferDeviceAddress` without needing to support shared GPU virtual addresses for multi-device configurations.

See `vkGetBufferDeviceAddress` for more information.

If the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceBufferDeviceAddressFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES` must be `VkPhysicalDeviceBufferDeviceAddressFeatures.sType`

### Structure Chaining

#### Extends the structures

The `VkPhysicalDeviceImagelessFramebufferFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceImagelessFramebufferFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imagelessFramebuffer;
} VkPhysicalDeviceImagelessFramebufferFeatures;
```

```
// Provided by VK_KHR_imageless_framebuffer
// Equivalent to VkPhysicalDeviceImagelessFramebufferFeatures
typedef VkPhysicalDeviceImagelessFramebufferFeatures
VkPhysicalDeviceImagelessFramebufferFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.

If the `VkPhysicalDeviceImagelessFramebufferFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImagelessFramebufferFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImagelessFramebufferFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGELESS_FRAMEBUFFER_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_fragment_shader_interlock
typedef struct VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fragmentShaderSampleInterlock;
    VkBool32           fragmentShaderPixelInterlock;
    VkBool32           fragmentShaderShadingRateInterlock;
} VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentShaderSampleInterlock` indicates that the implementation supports the `FragmentShaderSampleInterlockEXT` SPIR-V capability.
- `fragmentShaderPixelInterlock` indicates that the implementation supports the `FragmentShaderPixelInterlockEXT` SPIR-V capability.

- `fragmentShaderShadingRateInterlock` indicates that the implementation supports the `FragmentShaderShadingRateInterlockEXT` SPIR-V capability.

If the `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_INTERLOCK_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrix;
    VkBool32           cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrix` indicates that the implementation supports the `CooperativeMatrixKHR` SPIR-V capability.
- `cooperativeMatrixRobustBufferAccess` indicates that the implementation supports `robust buffer access` for SPIR-V `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceCooperativeMatrixFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceCooperativeMatrixFeaturesKHR-sType-sType](#) [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_COOPERATIVE\\_MATRIX\\_FEATURES\\_KHR](#)

### Structure Chaining

- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_cooperative_matrix_maintenance1
typedef struct VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           cooperativeMatrixProperties2;
    VkBool32           cooperativeMatrixReductions;
    VkBool32           cooperativeMatrixConversions;
    VkBool32           cooperativeMatrixPerElementOperations;
    VkBool32           cooperativeMatrixGetCoordinate;
} VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [cooperativeMatrixProperties2](#) indicates that the implementation supports the [vkGetPhysicalDeviceCooperativeMatrixProperties2EXT](#) command.
- [cooperativeMatrixReductions](#) indicates that the implementation supports the [CooperativeMatrixReductionsEXT](#) SPIR-V capability. This allows performing (row, column, 2x2, or all element) reductions on matrices.
- [cooperativeMatrixConversions](#) indicates that the implementation supports the [CooperativeMatrixConversionsEXT](#) SPIR-V capability. This allows converting accumulator matrices to A or B matrices.
- [cooperativeMatrixPerElementOperations](#) indicates that the implementation supports the

`CooperativeMatrixPerElementOperationsEXT` SPIR-V capability. This allows performing element-wise operations on matrix elements using a callback function.

- `cooperativeMatrixGetCoordinate` indicates that the implementation supports the `CooperativeMatrixGetCoordinateEXT` SPIR-V capability. This allows querying locations for a matrix element.

If the `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceShaderLongVectorFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_long_vector
typedef struct VkPhysicalDeviceShaderLongVectorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           longVector;
} VkPhysicalDeviceShaderLongVectorFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `longVector` indicates that the implementation supports the `LongVectorEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderLongVectorFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderLongVectorFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupExtendedTypes;
} VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_extended_types
// Equivalent to VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
typedef VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
VkPhysicalDeviceShaderSubgroupExtendedTypesFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderSubgroupExtendedTypes](#) is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in [group operations](#) with [subgroup scope](#), if the implementation supports the types.

If the [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostQueryReset;
} VkPhysicalDeviceHostQueryResetFeatures;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [hostQueryReset](#) indicates that the implementation supports resetting queries from the host with [vkResetQueryPool](#).

If the [VkPhysicalDeviceHostQueryResetFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceHostQueryResetFeatures](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

The [VkPhysicalDeviceTimelineSemaphoreFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           timelineSemaphore;
} VkPhysicalDeviceTimelineSemaphoreFeatures;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreFeatures
typedef VkPhysicalDeviceTimelineSemaphoreFeatures
VkPhysicalDeviceTimelineSemaphoreFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.

If the `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTimelineSemaphoreFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_internally_synchronized_queues
typedef struct VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           internallySynchronizedQueues;
} VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `internallySynchronizedQueues` indicates that `VK_DEVICE_QUEUE_CREATE_INTERNALLY_SYNCHRONIZED_BIT_KHR` can be used to make queues internally synchronized.

If the `VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceInternallySynchronizedQueuesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceIndexTypeUint8Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceIndexTypeUint8Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           indexTypeUint8;
} VkPhysicalDeviceIndexTypeUint8Features;
```

```
// Provided by VK_KHR_index_type_uint8
// Equivalent to VkPhysicalDeviceIndexTypeUint8Features
typedef VkPhysicalDeviceIndexTypeUint8Features
VkPhysicalDeviceIndexTypeUint8FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexTypeUint8` indicates that `VK_INDEX_TYPE_UINT8` can be used with `vkCmdBindIndexBuffer2` and `vkCmdBindIndexBuffer`.

If the `VkPhysicalDeviceIndexTypeUint8Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceIndexTypeUint8Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitive_topology_list_restart
typedef struct VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            primitiveTopologyListRestart;
    VkBool32            primitiveTopologyPatchListRestart;
} VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveTopologyListRestart` indicates that list type primitives, `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY` and `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, **can** use the primitive restart index value in index buffers.
- `primitiveTopologyPatchListRestart` indicates that the `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` topology **can** use the primitive restart index value in index buffers.

If the `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           separateDepthStencilLayouts;
} VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures;
```

```
// Provided by VK_KHR_separate_depth_stencil_layouts
// Equivalent to VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
typedef VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
VkPhysicalDeviceSeparateDepthStencilLayoutsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.

If the `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

The `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineExecutableInfo;
} VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineExecutableInfo` indicates that the implementation supports reporting properties and statistics about the pipeline executables associated with a compiled pipeline.

If the `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderDemoteToHelperInvocation;
} VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderDemoteToHelperInvocation` indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.

If the `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

```
// Provided by VK_EXT_attachment_feedback_loop_dynamic_state
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopDynamicState;
} VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopDynamicState` specifies whether dynamic feedback loops are supported.

If the `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           legacyVertexAttributes;
} VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `legacyVertexAttributes` specifies whether compatibility features for vertex attributes are supported when using dynamic vertex input state.

If the `VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT` structure is included in the `pNext` chain of

the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceTextureCompressionASTCHDRFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTextureCompressionASTCHDRFeatures {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            textureCompressionASTC_HDR;
} VkPhysicalDeviceTextureCompressionASTCHDRFeatures;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [textureCompressionASTC\\_HDR](#) indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_BIT](#), [VK\\_FORMAT\\_FEATURE\\_BLIT\\_SRC\\_BIT](#) and [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_LINEAR\\_BIT](#) features **must** be supported in [optimalTilingFeatures](#) for the following formats:
  - [VK\\_FORMAT\\_ASTC\\_4x4\\_SFLOAT\\_BLOCK](#)
  - [VK\\_FORMAT\\_ASTC\\_5x4\\_SFLOAT\\_BLOCK](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5\\_SFLOAT\\_BLOCK](#)
  - [VK\\_FORMAT\\_ASTC\\_6x5\\_SFLOAT\\_BLOCK](#)
  - [VK\\_FORMAT\\_ASTC\\_6x6\\_SFLOAT\\_BLOCK](#)

- `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
- `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats as normal.

If the `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceTextureCompressionASTCHDRFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceTextureCompressionASTCHDRFeatures-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXTURE_COMPRESSION_ASTC_HDR_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_texture_compression_astc_3d
typedef struct VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           textureCompressionASTC_3D;
} VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **textureCompressionASTC\_3D** indicates whether all of the ASTC 3D compressed texture formats are supported. If this feature is enabled, then the [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_BIT](#), [VK\\_FORMAT\\_FEATURE\\_BLIT\\_SRC\\_BIT](#) and [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_LINEAR\\_BIT](#) features **must** be supported in [optimalTilingFeatures](#) for the following formats:
  - [VK\\_FORMAT\\_ASTC\\_3x3x3\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_3x3x3\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_3x3x3\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x3x3\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x3x3\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x3x3\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x3\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x3\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x3\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x4\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x4\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_4x4x4\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x4x4\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x4x4\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x4x4\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x4\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x4\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x4\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x5\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x5\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_5x5x5\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x5x5\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x5x5\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x5x5\\_SFLOAT\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x6x5\\_UNORM\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x6x5\\_SRGB\\_BLOCK\\_EXT](#)
  - [VK\\_FORMAT\\_ASTC\\_6x6x5\\_SFLOAT\\_BLOCK\\_EXT](#)

- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_UNORM\\_BLOCK\\_EXT](#)
- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_SRGB\\_BLOCK\\_EXT](#)
- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_SFLOAT\\_BLOCK\\_EXT](#)

If the [VkPhysicalDeviceTextureCompressionASTC3DFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceTextureCompressionASTC3DFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceTextureCompressionASTC3DFeaturesEXT-sType-sType](#)  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_TEXTURE\\_COMPRESSION\\_ASTC\\_3D\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceLineRasterizationFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceLineRasterizationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rectangularLines;
    VkBool32           bresenhamLines;
    VkBool32           smoothLines;
    VkBool32           stippledRectangularLines;
    VkBool32           stippledBresenhamLines;
    VkBool32           stippledSmoothLines;
} VkPhysicalDeviceLineRasterizationFeatures;
```

```
// Provided by VK_KHR_line_rasterization
// Equivalent to VkPhysicalDeviceLineRasterizationFeatures
typedef VkPhysicalDeviceLineRasterizationFeatures
VkPhysicalDeviceLineRasterizationFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rectangularLines` indicates whether the implementation supports `rectangular line rasterization`.
- `bresenhamLines` indicates whether the implementation supports `Bresenham-style line rasterization`.
- `smoothLines` indicates whether the implementation supports `smooth line rasterization`.
- `stippledRectangularLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR` lines.
- `stippledBresenhamLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_BRESENHAM` lines.
- `stippledSmoothLines` indicates whether the implementation supports `stippled line rasterization` with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH` lines.

If the `VkPhysicalDeviceLineRasterizationFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceLineRasterizationFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLineRasterizationFeatures-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           subgroupSizeControl;
    VkBool32           computeFullSubgroups;
} VkPhysicalDeviceSubgroupSizeControlFeatures;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSizeControl` indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
- `computeFullSubgroups` indicates whether the implementation supports requiring full subgroups in compute shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.

If the `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSubgroupSizeControlFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

#### NOTE

The `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure was added in version 2 of the `VK_EXT_subgroup_size_control` extension. Version 1 implementations of this extension will not fill out the features structure but applications may assume that both `subgroupSizeControl` and `computeFullSubgroups` are supported if the extension is supported. (See also the [Feature Requirements](#) section.) Applications are advised to add a `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure to the `pNext` chain of `VkDeviceCreateInfo` to enable the features regardless of the version of the extension supported by the implementation. If the implementation only supports version 1, it will safely ignore the `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure.

Vulkan 1.3 implementations always support the features structure.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_FEATURES`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructureFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           accelerationStructure;
    VkBool32           accelerationStructureCaptureReplay;
    VkBool32           accelerationStructureIndirectBuild;
    // accelerationStructureHostCommands is legacy, but no reason was given in the API
    XML
    VkBool32           accelerationStructureHostCommands;
    VkBool32           descriptorBindingAccelerationStructureUpdateAfterBind;
} VkPhysicalDeviceAccelerationStructureFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructure` indicates whether the implementation supports the acceleration structure functionality. See [Acceleration Structures](#).
- `accelerationStructureCaptureReplay` indicates whether the implementation supports saving and reusing acceleration structure device addresses, e.g. for trace capture and replay.
- `accelerationStructureIndirectBuild` indicates whether the implementation supports indirect acceleration structure build commands, e.g. [vkCmdBuildAccelerationStructuresIndirectKHR](#).
- `accelerationStructureHostCommands` indicates whether the implementation supports host side acceleration structure commands, e.g. [vkBuildAccelerationStructuresKHR](#), [vkCopyAccelerationStructureKHR](#), [vkCopyAccelerationStructureToMemoryKHR](#), [vkCopyMemoryToAccelerationStructureKHR](#), [vkWriteAccelerationStructuresPropertiesKHR](#).
- `descriptorBindingAccelerationStructureUpdateAfterBind` indicates whether the implementation supports updating acceleration structure descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used with `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`.

If the [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#), it

**must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_FEATURES_KHR` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceRayTracingPipelineFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelineFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPipeline;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplay;
    VkBool32           rayTracingPipelineShaderGroupHandleCaptureReplayMixed;
    VkBool32           rayTracingPipelineTraceRaysIndirect;
    VkBool32           rayTraversalPrimitiveCulling;
} VkPhysicalDeviceRayTracingPipelineFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingPipeline` indicates whether the implementation supports the ray tracing pipeline functionality. See [Ray Tracing](#).
- `rayTracingPipelineShaderGroupHandleCaptureReplay` indicates whether the implementation supports saving and reusing shader group handles, e.g. for trace capture and replay.
- `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` indicates whether the implementation supports reuse of shader group handles being arbitrarily mixed with creation of non-reused shader group handles. If this is [VK\\_FALSE](#), all reused shader group handles **must** be specified before any non-reused handles **may** be created.
- `rayTracingPipelineTraceRaysIndirect` indicates whether the implementation supports indirect ray tracing commands, e.g. [vkCmdTraceRaysIndirectKHR](#).
- `rayTraversalPrimitiveCulling` indicates whether the implementation supports [primitive culling](#)

during ray traversal.

If the `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingPipelineFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03575  
If `rayTracingPipelineShaderGroupHandleCaptureReplayMixed` is `VK_TRUE`, `rayTracingPipelineShaderGroupHandleCaptureReplay` **must** also be `VK_TRUE`

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceRayQueryFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_query
typedef struct VkPhysicalDeviceRayQueryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayQuery;
} VkPhysicalDeviceRayQueryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayQuery` indicates whether the implementation supports ray query (`OpRayQueryProceedKHR`) functionality.

If the `VkPhysicalDeviceRayQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayQueryFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRayQueryFeaturesKHR-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1
typedef struct VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingMaintenance1;
    VkBool32           rayTracingPipelineTraceRaysIndirect2;
} VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingMaintenance1` indicates that the implementation supports the following:
  - The `CullMaskKHR` SPIR-V builtin using the `SPV_KHR_ray_cull_mask` SPIR-V extension.
  - Additional acceleration structure property queries: `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTER_S_KHR` and `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`.
  - A new access flag `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`.
  - A new pipeline stage flag bit `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`
- `rayTracingPipelineTraceRaysIndirect2` indicates whether the implementation supports the extended indirect ray tracing command `vkCmdTraceRaysIndirect2KHR`.

If the `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MAINTENANCE_1_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_feedback2
typedef struct VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeFeedback2;
} VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeFeedback2` specifies that the implementation supports `per picture partition feedback` and the following additional `video encode feedback flags`, as reported in `VkVideoEncodeFeedback2CapabilitiesKHR` and/or `VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags`, respectively:
  - `VK_VIDEO_ENCODE_FEEDBACK_AVERAGE_QUANTIZATION_BIT_KHR`.
  - `VK_VIDEO_ENCODE_FEEDBACK_MIN_QUANTIZATION_BIT_KHR`.
  - `VK_VIDEO_ENCODE_FEEDBACK_MAX_QUANTIZATION_BIT_KHR`.
  - `VK_VIDEO_ENCODE_FEEDBACK_INTRA_PIXELS_BIT_KHR`.
  - `VK_VIDEO_ENCODE_FEEDBACK_INTER_PIXELS_BIT_KHR`.

- [VK\\_VIDEO\\_ENCODE\\_FEEDBACK\\_SKIPPED\\_PIXELS\\_BIT\\_KHR](#).
- [VK\\_VIDEO\\_ENCODE\\_FEEDBACK\\_PICTURE\\_PARTITION\\_COUNT\\_BIT\\_KHR](#).

#### NOTE

Support for [videoEncodeFeedback2](#) does not indicate that all video encode profiles support per picture partition feedback and the new video encode feedback flags. Support for individual video encode profiles is subject to video-profile-specific capabilities.

If the [VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVideoEncodeFeedback2FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_2\\_FEATURES\\_KHR](#) [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_2\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeQuantizationMap;
} VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [videoEncodeQuantizationMap](#) indicates that the implementation supports [video encode quantization maps](#).

#### NOTE

Support for [videoEncodeQuantizationMap](#) does not indicate that all video encode

profiles support quantization maps. Support for quantization maps for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUANTIZATION_MAP_FEATURES_KHR` must be the `sType` of the `VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR` structure.

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_intra_refresh
typedef struct VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeIntraRefresh;
} VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoEncodeIntraRefresh` specifies that the implementation supports `video encode intra refresh`.

#### NOTE

Support for `videoEncodeIntraRefresh` does not indicate that all video encode profiles support intra refresh. Support for intra refresh for any specific video encode profile is subject to video-profile-specific capabilities.

If the `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR` structure is included in the `pNext` chain

of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeIntraRefreshFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_INTRA_REFRESH_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkPhysicalDeviceVideoMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance1;
} VkPhysicalDeviceVideoMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoMaintenance1` indicates that the implementation supports the following:
  - The new buffer creation flag `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.
  - The new image creation flag `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.
  - The new video session creation flag `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`.

If the `VkPhysicalDeviceVideoMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoMaintenance1FeaturesKHR`, it **must**

add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceVideoMaintenance1FeaturesKHR-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_MAINTENANCE_1_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoMaintenance2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance2
typedef struct VkPhysicalDeviceVideoMaintenance2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoMaintenance2;
} VkPhysicalDeviceVideoMaintenance2FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoMaintenance2` specifies that the implementation supports the following:
  - Support for issuing `video coding control` commands against video decode sessions without a bound video session parameters object.
  - The new video session creation flag `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` for video decode sessions.
  - Required support for the `rate control mode` `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR` for the following video encode profiles:
    - `H.264 encode profiles`;
    - `H.265 encode profiles`;
    - `AV1 encode profiles`.
  - Additional guarantees on Video Std parameters used with video encode profiles that the

implementations support without the need to [override](#) them.

If the [VkPhysicalDeviceVideoMaintenance2FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVideoMaintenance2FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_MAINTENANCE\\_2\\_FEATURES\\_KHR](#) [sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_VIDEO\\_MAINTENANCE\\_2\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceVideoEncodeAV1FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_encode_av1
typedef struct VkPhysicalDeviceVideoEncodeAV1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoEncodeAV1;
} VkPhysicalDeviceVideoEncodeAV1FeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [videoEncodeAV1](#) indicates that the implementation supports [AV1 encode operations](#).

If the [VkPhysicalDeviceVideoEncodeAV1FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVideoEncodeAV1FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoEncodeAV1FeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_AV1_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_vp9
typedef struct VkPhysicalDeviceVideoDecodeVP9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           videoDecodeVP9;
} VkPhysicalDeviceVideoDecodeVP9FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoDecodeVP9` specifies that the implementation supports `VP9 decode operations`.

If the `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceVideoDecodeVP9FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoDecodeVP9FeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_DECODE_VP9_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state
typedef struct VkPhysicalDeviceExtendedDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState;
} VkPhysicalDeviceExtendedDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [extendedDynamicState](#) indicates that the implementation supports the following dynamic states:
  - [VK\\_DYNAMIC\\_STATE\\_CULL\\_MODE](#)
  - [VK\\_DYNAMIC\\_STATE\\_FRONT\\_FACE](#)
  - [VK\\_DYNAMIC\\_STATE\\_PRIMITIVE\\_TOPOLOGY](#)
  - [VK\\_DYNAMIC\\_STATE\\_VIEWPORT\\_WITH\\_COUNT](#)
  - [VK\\_DYNAMIC\\_STATE\\_SCISSOR\\_WITH\\_COUNT](#)
  - [VK\\_DYNAMIC\\_STATE\\_VERTEX\\_INPUT\\_BINDING\\_STRIDE](#)
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_TEST\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_WRITE\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_COMPARE\\_OP](#)
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_BOUNDS\\_TEST\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_STENCIL\\_TEST\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_STENCIL\\_OP](#)

If the [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicStateFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicStateFeaturesEXT-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_EXTENDED\_DYNAMIC\_STATE\_FEATURES\_EXT

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state2
typedef struct VkPhysicalDeviceExtendedDynamicState2FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState2;
    VkBool32           extendedDynamicState2LogicOp;
    VkBool32           extendedDynamicState2PatchControlPoints;
} VkPhysicalDeviceExtendedDynamicState2FeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [extendedDynamicState2](#) indicates that the implementation supports the following dynamic states:
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_BIAS\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_PRIMITIVE\\_RESTART\\_ENABLE](#)
  - [VK\\_DYNAMIC\\_STATE\\_RASTERIZER\\_DISCARD\\_ENABLE](#)
- [extendedDynamicState2LogicOp](#) indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_LOGIC\\_OP\\_EXT](#)
- [extendedDynamicState2PatchControlPoints](#) indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_PATCH\\_CONTROL\\_POINTS\\_EXT](#)

If the [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicState2FeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState2FeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_DYNAMIC\\_STATE\\_2\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedDynamicState3TessellationDomainOrigin;
    VkBool32           extendedDynamicState3DepthClampEnable;
    VkBool32           extendedDynamicState3PolygonMode;
    VkBool32           extendedDynamicState3RasterizationSamples;
    VkBool32           extendedDynamicState3SampleMask;
    VkBool32           extendedDynamicState3AlphaToCoverageEnable;
    VkBool32           extendedDynamicState3AlphaToOneEnable;
    VkBool32           extendedDynamicState3LogicOpEnable;
    VkBool32           extendedDynamicState3ColorBlendEnable;
    VkBool32           extendedDynamicState3ColorBlendEquation;
    VkBool32           extendedDynamicState3ColorWriteMask;
    VkBool32           extendedDynamicState3RasterizationStream;
    VkBool32           extendedDynamicState3ConservativeRasterizationMode;
    VkBool32           extendedDynamicState3ExtraPrimitiveOverestimationSize;
    VkBool32           extendedDynamicState3DepthClipEnable;
    VkBool32           extendedDynamicState3SampleLocationsEnable;
    VkBool32           extendedDynamicState3ColorBlendAdvanced;
    VkBool32           extendedDynamicState3ProvokingVertexMode;
    VkBool32           extendedDynamicState3LineRasterizationMode;
    VkBool32           extendedDynamicState3LineStippleEnable;
    VkBool32           extendedDynamicState3DepthClipNegativeOneToOne;
    VkBool32           extendedDynamicState3ViewportWScalingEnable;
    VkBool32           extendedDynamicState3ViewportSwizzle;
    VkBool32           extendedDynamicState3CoverageToColorEnable;
    VkBool32           extendedDynamicState3CoverageToColorLocation;
    VkBool32           extendedDynamicState3CoverageModulationMode;
    VkBool32           extendedDynamicState3CoverageModulationTableEnable;
    VkBool32           extendedDynamicState3CoverageModulationTable;
    VkBool32           extendedDynamicState3CoverageReductionMode;
    VkBool32           extendedDynamicState3RepresentativeFragmentTestEnable;
    VkBool32           extendedDynamicState3ShadingRateImageEnable;
} VkPhysicalDeviceExtendedDynamicState3FeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **extendedDynamicState3TessellationDomainOrigin** indicates that the implementation supports the following dynamic state:
  - **VK\_DYNAMIC\_STATE\_TESSELLATION\_DOMAIN\_ORIGIN\_EXT**
- **extendedDynamicState3DepthClampEnable** indicates that the implementation supports the following dynamic state:
  - **VK\_DYNAMIC\_STATE\_DEPTH\_CLAMP\_ENABLE\_EXT**

- `extendedDynamicState3PolygonMode` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_POLYGON_MODE_EXT`
- `extendedDynamicState3RasterizationSamples` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`
- `extendedDynamicState3SampleMask` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`
- `extendedDynamicState3AlphaToCoverageEnable` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT`
- `extendedDynamicState3AlphaToOneEnable` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT`
- `extendedDynamicState3LogicOpEnable` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEnable` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`
- `extendedDynamicState3ColorBlendEquation` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`
- `extendedDynamicState3ColorWriteMask` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`
- `extendedDynamicState3RasterizationStream` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`
- `extendedDynamicState3ConservativeRasterizationMode` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
- `extendedDynamicState3ExtraPrimitiveOverestimationSize` indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`
- `extendedDynamicState3DepthClipEnable` indicates that the implementation supports the following dynamic state:

- [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_CLIP\\_ENABLE\\_EXT](#)
- `extendedDynamicState3SampleLocationsEnable` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_SAMPLE\\_LOCATIONS\\_ENABLE\\_EXT](#)
- `extendedDynamicState3ColorBlendAdvanced` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COLOR\\_BLEND\\_ADVANCED\\_EXT](#)
- `extendedDynamicState3ProvokingVertexMode` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_PROVOKING\\_VERTEX\\_MODE\\_EXT](#)
- `extendedDynamicState3LineRasterizationMode` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_LINE\\_RASTERIZATION\\_MODE\\_EXT](#)
- `extendedDynamicState3LineStippleEnable` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_LINE\\_STIPPLE\\_ENABLE\\_EXT](#)
- `extendedDynamicState3DepthClipNegativeOneToOne` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_CLIP\\_NEGATIVE\\_ONE\\_TO\\_ONE\\_EXT](#)
- `extendedDynamicState3ViewportWScalingEnable` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_VIEWPORT\\_W\\_SCALING\\_ENABLE\\_NV](#)
- `extendedDynamicState3ViewportSwizzle` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_VIEWPORT\\_SWIZZLE\\_NV](#)
- `extendedDynamicState3CoverageToColorEnable` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_TO\\_COLOR\\_ENABLE\\_NV](#)
- `extendedDynamicState3CoverageToColorLocation` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_TO\\_COLOR\\_LOCATION\\_NV](#)
- `extendedDynamicState3CoverageModulationMode` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_MODULATION\\_MODE\\_NV](#)
- `extendedDynamicState3CoverageModulationTableEnable` indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_MODULATION\\_TABLE\\_ENABLE\\_NV](#)
- `extendedDynamicState3CoverageModulationTable` indicates that the implementation supports the

following dynamic state:

- [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_MODULATION\\_TABLE\\_NV](#)
- [extendedDynamicState3CoverageReductionMode](#) indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_COVERAGE\\_REDUCTION\\_MODE\\_NV](#)
- [extendedDynamicState3RepresentativeFragmentTestEnable](#) indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_REPRESENTATIVE\\_FRAGMENT\\_TEST\\_ENABLE\\_NV](#)
- [extendedDynamicState3ShadingRateImageEnable](#) indicates that the implementation supports the following dynamic state:
  - [VK\\_DYNAMIC\\_STATE\\_SHADING\\_RATE\\_IMAGE\\_ENABLE\\_NV](#)

If the [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState3FeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_DYNAMIC\\_STATE\\_3\\_FEATURES\\_EXT](#)

### Structure Chaining
